Failure to maintain a copy of the contingency plan and all its revisions at the facility and to submit a copy to all local police departments, fire departments, hospitals, and State and local emergency response teams that may be called upon to provide emergency services.

Violations

Violation Date: 10/23/2014 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Alameda County Environmental Health
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 04/08/2015.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 06/06/2018 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Alameda County Environmental Health
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 07/11/2018. OBSERVATIONS: The chemical inventory in CERS needs the following corrections: 1. Update the largest container for the diesel to 10,000 gallons and the maximum daily amount to at least 11,680 gallons. 2. Add (2) x 55 gallons of DEF 3. Add all brine and low sulfate tanks. CORRECTIVE ACTIONS: Update and resubmit the entire HMBP to CERS.

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Eval Division: Alameda County Environmental Health
Eval Program: HWLQG
Eval Source: CERS
Eval Notes:

Routine inspection conducted on this RCRA large quantity generator and escorted by Sean Riley (and MacKenzie Loesch for part of the inspection). Mr Riley informs us that the facility is LQG for removing buildings and generating lead and asbestos waste. The facility primarily generates waste from maintaining it's heavy machinery equipment.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 06/06/2018
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Alameda County Environmental Health
Eval Program: HWLQG
Eval Source: CERS
Eval Notes:

On site today with Sean Riley and Todd McHugh, Environmental Managers for Cargill Salt and Jason Wong, Temporary Environmental Engineer. Mr. Riley granted permission to conduct the inspection. Manifests were reviewed for the last three years. All violations noted in this Hazardous Waste Generator inspection report are to be corrected within 30 days and proof of those corrections submitted to this office in the same time frame. CERTIFICATION OF RETURN TO COMPLIANCE I certify that the violation(s) noted in this Hazardous Waste Generator inspection report have been corrected. I have personally examined any documentation attached to the certification to establish that the violations have been corrected. Facility

Name: Cargill Salt Facility Address: 7220 Central Avenue, Newark, CA 94560 PRINT: _____ SIGN: _____ TITLE: _____ DATE: [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

Facility maintains diesel tank for fueling heavy equipment, gasoline for vehicles, and new and used oil due to servicing heavy equipment. One person is assigned to inspect the tanks and maintain the inspection records. MOnthly records impeccably maintained for each tank.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 11/18/2021
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Alameda County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

Alameda County CUPA inspectors Luke Voropaeff and Barbara Jakub were on site to conduct a routine Hazardous Materials Business Plan (HMBP) inspection. The facility walkthrough was conducted on 11/18/2021 and Barbara Jakub returned to review the HMBP paperwork on 12/9/2021. Consent to inspect was provided by the environmental manager, Sean Riley. The inspection report was not written on site due to Alameda County CUPA's social distancing policy during the COVID-19 pandemic. The report was emailed to the environmental manager on 12/13/2021.; Note: data in [EVAL Notes] field for some records is truncated from the source.

File Location: All Files are on GeoTracker or in the Local Agency Database
Site History:

The subject property (Site) is located on the southeastern side of Central Avenue on Bay-filled former tidal flats in Newark, California. The Site is home of Cargill's salt evaporation ponds, which lie adjacent to the subject Site. Prior to 1987, diesel fuel was stored in an aboveground tank in Area 2 for use in vehicles at the facility. In 1987, Cargill Salt discovered that a buried pipeline from the tank had leaked. The tank, pipeline, and soils in the area of the leak were excavated and removed and soil samples were collected in the areas of excavation to document the diesel concentrations. Environmental soil and groundwater investigations have discovered petroleum hydrocarbons (as diesel and gasoline) in low concentrations. Case closure was requested by the Responsible Party (RP) in 2007 (1st Quarter Groundwater Monitoring Report by Crawford Consulting, Inc. June 6, 2007).

Violations

Violation Date: 01/23/2023
Violation Source: CERS
Violation Program: HMRRP
Violation Division: Alameda County Environmental Health
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Notes:

Returned to compliance on 02/15/2023. The business failed to provide annual training to all employees in safety procedures in the event of a release of a hazardous material. Training that met the requirements was not provided within the past year, and thus records were not observed for that year. Provide training to staff that meet requirements of HSC §25505(a)(4) and 19 CCR §2659(a)(4). Training must include items such as methods for safe handling of hazardous materials, evacuation plans, use of the facility's emergency response equipment, and procedures for coordination with local emergency response organizations. It seems that most of these items are covered in the facilities ER Plan, Hazardous Waste Handling, and Haz Comm internal training. Train employees and send training records to inspector to demonstrate compliance. Maintain training records for a minimum of three years.

Violation Description:

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violations

Violation Date: 01/23/2023
Violation Source: CERS
Violation Program: HMRRP
Violation Division: Alameda County Environmental Health
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Notes:

Returned to compliance on 02/06/2023. Observed a 318 cubic feet tank of gaseous argon carbon dioxide. Also observed a 55 gallon drum of lacquer thinner waste on site. These items were not reported in the CERS (California Environmental Reporting System) hazardous material inventory. Update

the CERS inventory to include the items above. Submit accurate chemical inventory information and notify the inspector when this has been completed.

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violations

Violation Date: 01/23/2023 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Alameda County Environmental Health
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 01/23/2023. The hazardous properties section of the hazardous waste label was not completed for used oil and antifreeze. toxic properties, used oil is combustible Fully complete the hazardous waste labels when they must be utilized. Label the used oil and antifreeze as toxic. This was corrected on site.

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 06/27/2018 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Alameda County Environmental Health
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Notes:

Returned to compliance on 08/16/2018. "OBSERVATION: The generator is not performing waste inspections. The generator shall inspect areas used for container storage or transfer, at least weekly, looking for leaking containers and for deterioration of containers and the containment system caused by corrosion and other factors. CORRECTIVE ACTION: Immediately begin conducting the necessary weekly inspections for all hazardous waste containers at this facility.

Violation Description:

Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.

Violations

Violation Date: 07/24/2013 ***Violation Source:*** CERS

Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Notes:

Returned to compliance on 08/16/2018. "OBSERVATION: At the time of inspection, it could not be demonstrated (not necessarily documented) that employees who handle hazardous waste were properly trained. Accumulation start dates were missing from labels or incorrect, numerous labels, containers with waste accumulated on the outside and an open container. The generator must ensure that all employees who handle hazardous waste are thoroughly familiar with proper waste handling and em The last hazardous waste training was documented in 2016.ergency procedures. CORRECTIVE ACTION: Immediately provide training to all employees who handle hazardous waste and submit a copy of the training records to the inspector within 30 days.

Violation Description:

Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.

Violations

Violation Date: 06/27/2018 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Alameda County Environmental Health
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Notes:

Returned to compliance on 08/16/2018. OBSERVATION: One antifreeze drum was not picked up when the other antifreeze was last picked up.A solid drum had an accumulation date of 2014. Facilities who generate less than 1000 kg of hazardous waste per month and do not exceed 6000 kg of waste stored on site at any time may store waste on site up to 180 days. "CORRECTIVE ACTION: Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the Inspector along with a procedures to ensure pickups occur within the alloted time (180 days).

Violation Description:

Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met:
(1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms.

(2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f).

(3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violations

Violation Date: 01/23/2023 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Alameda County Environmental Health
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Notes:

Returned to compliance on 02/09/2023. Manifest 024039299JJK observed on site was not signed by the designated facility (this item was shipped on 8/18/22). Did not observe manifest 022723273JJK on site (this item was shipped on 8/9/21). Keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. By the end of the inspection, the facility was able to locate a copy of the signed 024039299JJK manifest. Email copy of 022723273JJK manifest when it has been located.

Violation Description:

Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.

Violations

Violation Date: 06/25/2015 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Alameda County Environmental Health
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 07/14/2015. OBSERVATION: One 55 gallon container used oil, and one 55 gallon container waste antifreeze not properly labeled. All hazardous waste containers shall be marked with the following information: 1) the words "Hazardous Waste"; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all containers are marked with all the required information. Since it cannot be determined how long the used oil has been on site, immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the CUPA by 7/25/2015.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Regulated Programs

EI ID: 10779571 **EI Description:** Hazardous Waste Generator

EI ID: 10779571 **EI Description:** Chemical Storage Facilities

Violations

Violation Date: 12/21/2018 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Alameda County Environmental Health
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Notes:

Returned to compliance on 08/17/2019. This facility has not maintained an active EPA ID number to manage hazardous waste. Facility's EPA ID #CAL000417841 is currently inactive per Department of Toxics Substance Control (DTSC) Hazardous Waste Tracking System. Reactivate EPA ID number through DTSC Hazardous Waste Tracking System athttp://www.dtsc.ca.gov/IDManifest/ReactivateID.cfm

Violation Description:

Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.

Violations

Violation Date: 02/03/2022 **Violation Source:** CERS
Violation Program: HMRRP **Violation Division:** Alameda County Environmental Health
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Notes:

Violation Description:

Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.

Violations

Violation Date: 10/26/2022 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Alameda County Environmental Health

Citation: 22 CCR 12 66262.20 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.20
Violation Notes:

Returned to compliance on 12/02/2022. Approximately ten (10) 5-gallon containers of waste solvent were transported to the business's service garage at 6995 Central Ave, Newark, CA 94560 without a Uniform Hazardous Waste Manifest. Facility management (Mohammed Omar Tahib) could not recall when or how this waste was transported, but did state that the waste was generated at Giant Bull Custom Auto House, 37600 Sycamore St, Newark, CA 94560. Prepare a Uniform Hazardous Waste Manifest for all future shipments of hazardous waste to an off-site facility. This violation will be closed when a copy of the Uniform Hazardous Waste Manifest for the next shipment of hazardous waste is submitted to Alameda County CUPA. *Please note that this facility generates less than 100 kg of hazardous waste each month and has the option to self-transport its future hazardous waste shipments to a permitted Household Hazardous Waste (HHW) disposal facility without a Uniform Hazardous Waste Manifest, pr... [TRUNCATED: Refer to full Inspection Report]

Violation Description:

Failure to prepare a Uniform Hazardous Waste Manifest and, if necessary, a Continuation Sheet, before the transport of a hazardous waste off-site for transfer, treatment, storage, or disposal.

Violations

Violation Date: 10/26/2022 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Alameda County Environmental Health
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Notes:

The facility failed to establish and submit a Hazardous Materials Business Plan (HMBP) training program to the California Environment Reporting System (CERS). This is a repeated Class II violation that is being elevated to a Class I violation, which may be subject to formal enforcement action. Prepare and submit an HMBP training program to the CERS no later than 12/2/2022. The training must include: • Hazardous materials safety information • Immediate notification contacts to the appropriate local emergency response personnel and to the unified program agency. • Procedures for the mitigation of a release or threatened release to minimize any potential harm or damage to persons, property, or the environment. • Evacuation plans and procedures, including immediate notice, for the business site. Please note that the Emergency Response and Contingency Plan template found in CERS can also be used as a training plan.

Violation Description:

Failure to establish and/or electronically submit an adequate training program in safety procedures in the event of a release or threatened release of a hazardous material. *Verify agricultural handler exemption HSC 25507.1

Violations

Violation Date: 12/21/2018 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Alameda County Environmental Health
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 12/21/2018. OBSERVATION: Facility owner has not submitted a complete and current hazardous material inventory electronically to the California Environmental Reporting System (CERS). Observed the following: a. One 55 gallon drum of new oil b. Five 55 gallon drums of used oil for a total of 275 gallons c. One 55 gallon drum of waste coolant d. Two 30 pound cylinders of Freon R134A CORRECTIVE ACTION: Complete and submit a current hazardous material inventory electronically in the California Environmental Reporting System (CERS) at http://cers.calepa.ca.gov/ within 30 days. Facility corrected on site by submitting above information in CERS.

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violations

Violation Date: 10/26/2022 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Alameda County Environmental Health
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Notes:

The facility failed to operate in a manner that minimizes the release of a hazardous waste to the environment, as observed by: • Unattended paint and waste solvent spills on the shelving, equipment, and floors around the hazardous waste storage area. • Uncontained fine metal powders/dust generated

by autobody repair on the floors, equipment, and shelving throughout the facility. This is a repeated Class II violation that is being elevated to a Class I violation, which may be subject to formal enforcement action. Clean up the uncontained fine metal powders/dust and the spilled paint/waste solvents no later than 11/9/2022. All fine metal powders/dust must be stored in a closed, labeled hazardous waste container unless the facility can prove that it is not hazardous waste. Submit pictures of this to Alameda County CUPA to close the violation.

Violation Description:

Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

Violations

Violation Date: 10/26/2022 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Alameda County Environmental Health
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Notes:

The facility failed to provide initial and annual Hazardous Materials Business Plan (HMBP) training train their employees. This is a repeated Class II violation that is being elevated to a Class I violation, which may be subject to formal enforcement action. Provide and document HMBP training to all facility employees no later than 12/2/2022. Training must be provided annually and training records must be kept on site for a minimum of three (3) years. Submit a copy of the training records to Alameda County CUPA to close this violation.

Violation Description:

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Notes:

Returned to compliance on 12/02/2022. The facility failed to have a registered hazardous waste hauler pick up the following hazardous wastes within 90 days of reaching 100 kg (27 gallons) of total hazardous waste: • Approximately fifteen (15) 5-gallon containers of waste solvent in the hazardous waste storage area. • Approximately ten (10) 5-gallon containers of waste solvent observed in the vegetation behind the damaged vehicles stored in front of the service garage located at 6995 Central Ave, Newark, CA 94560. Contact a registered hazardous waste hauler to remove the waste solvents no later than 12/2/2022. Submit a copy of the corresponding Uniform Hazardous Waste Manifest to Alameda County CUPA to close this violation.

Violation Description:

Failure to send hazardous waste offsite for treatment, storage, or disposal of acute/extremely hazardous waste after the first 1-kilogram threshold amount was accumulated within a 90 day period.

Violation Date: 12/21/2018 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Alameda County Environmental Health
Citation: 22 CCR 16 66266.81(a)(4)(B) - California Code of Regulations, Title 22, Chapter 16, Section(s) 66266.81(a)(4)(B)
Violation Notes:

Returned to compliance on 10/26/2022. The facility is missing disposal records for spent lead-acid batteries from 2016-2018. Facility manager states that the facility uses Pep Boys, Allied, and World Pac to dispose of spent lead-acid batteries. Immediately locate disposal records and receipts for lead-acid batteries for the last three years, maintain them on site, and submit copies to ACDEH within 30 days.

Violation Description:

Failure to retain for at least three years a legible copy of each manifest or bill of lading which identifies spent lead-acid storage batteries shipped to a person who stores the batteries or who uses, reuses, recycles or reclaims the batteries or their components.

Violations

Violation Date: 12/21/2018 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Alameda County Environmental Health
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Notes:

Returned to compliance on 03/06/2019. Observed spills in the following areas:a. oil spills in secondary containment for hazardous waste storage area b. stains from bondo dust from prepping cars inside facility leading from indoors to outside near storm drain.Generator shall maintain and operate facility to minimize fire/explosion/release. Immediately clean up spills and dispose of waste properly. Submit proof of corrective action to ACDEH within 30 days.

Violation Description:

Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

Violations

Violation Date: 12/21/2018 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Alameda County Environmental Health
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Notes:

Returned to compliance on 03/06/2019. Observed the following open hazardous waste containers:a) 5 gallon containers used to drain oil filters All hazardous waste containers shall be closed at all times except when adding or removing wastes. Immediately close these containers and ensure all hazardous waste containers are closed when not adding orremoving wastes. Submit proof of corrective action to ACDEH within 30 days.

Violation Description:

Failure to meet the following container management requirements:
(a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste.
(b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violations

Violation Date: 10/26/2022 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Alameda County Environmental Health
Citation: HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
Violation Notes:

The facility has failed to implement their Hazardous Materials Business Plan (HMBP) when handling hazardous materials at or above the reportable threshold quantities, as evidenced by: • A lack of hazardous materials/hazardous waste safety training. • Unattended paint and solvent spills throughout the hazardous waste storage area. • Uncontained fine metal powders/dust generated by autobody repair throughout the facility. • Approximately ten (10) 5-gallon containers of waste solvent observed outside, along the fence line of the business's service garage at 6995 Central Ave, Newark, CA 94560. • Fire extinguishers without annual service tags (or evidence of annual service/maintenance). • A missing fire extinguisher near the paint booth. • Outdated contact, inventory, and emergency response plan information in the California Environmental Reporting System (CERS). This is a repeated Class II violation that is being elevated to a Class I viol... [TRUNCATED: Refer to full Inspection Report]

Violation Description:

Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.

Violations

Violation Date: 12/21/2018 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Alameda County Environmental Health
Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Notes:

OBSERVATION: As demonstrated by the hazardous waste violations observed at the time of inspection (improper labeling, oil in secondary containment), personnel are not adequately trained to perform their duties in a way that ensures the facility's compliance with hazardous waste laws and regulations, and/or employee training records have not been kept or do not contain all required information. CORRECTIVE ACTION: Conduct training with applicable personnel and document it according to the requirements of 22 CCR 15 66265.16(d). Submit a copy of the documentation to ACDEH within 30 days.

Violation Description:

Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.

Violations

Violation Date: 10/26/2022 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Alameda County Environmental Health
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

The facility failed to submit a complete and accurate Hazardous Materials Business Plan (HMBP) to the California Environmental Reporting System (CERS) at least once every three (3) years. The last submittal was 12/21/2018. This is a repeated Class II violation that is being elevated to a Class I violation, which may be subject to formal enforcement action. Prepare/submit your HMBP to CERS (https://cers.calepa.ca.gov/) no later than 12/2/2022. The HMBP submittal must include: • The facility's information (including business activities and business owner/operator identification) • A complete inventory of the hazardous materials stored onsite • A site map • Emergency response and training plans • Annual training documentation for all facility personnel

Violation Description:

Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violations

Violation Date: 10/26/2022 ***Violation Source:*** CERS

Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Notes:

The facility failed to update their Hazardous Materials Business Plan (HMBP) in the California Environmental Reporting System (CERS) within 30 days of making a substantial change in operations. The facility was previously a service garage and is now an autobody shop. Update your HMBP in CERS so that it accounts for the new business operations no later than 12/2/2022, and within 30 days of any one of the following events: • A 100% or more increase in the quantity of a previously reported hazardous material. • Any handling of a previously unreported hazardous materials at or above reportable quantities. • A change of business address, business ownership, or business name. • A substantial change in the handler's operations that requires modification to any portion of the business plan.

Violation Description:

Failure to electronically update business plan within 30 days of any one of the following events:
A 100 percent or more increase in the quantity of a previously disclosed material.
Any handling of a previously undisclosed hazardous materials at or above reportable quantities.
A change of business address, business ownership, or business name.
A substantial change in the handler's operations that requires modification to any portion of the business plan.

Violations Found: No
Eval General Type: Other/Unknown
Eval Type: Other, not routine, done by local agency
Eval Division: Alameda County Environmental Health
Eval Program: HW
Eval Source: CERS
Eval Notes:

Alameda County CUPA inspector Luke Voropaeff was onsite to conduct a follow-up inspection to the 10/26/2022 Hazardous Waste Generator inspection. Consent to inspect was provided by the manager, Mohammed Omar Tahib. As of today, 12/9/2022, the facility has consolidated the contents of the 5-gallon waste solvent drums left at the 6995 Central Ave, Newark location into a single 55-gallon drum stored just outside the rollup door to the main building at 6995 Central Ave, Newark. This single drum is closed and properly labeled as hazardous waste. The facility has also corrected hazardous waste violations 7, 25, 26, 28, 32, and 77 in the 10/26/2022 Hazardous Waste Generator inspection report. However, all other violations remain uncorrected. Please note that uncorrected violations must be corrected as soon as possible as they are subject to review for further enforcement action. The report for this inspection was emailed to giantbullc... Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

Alameda County CUPA inspector Luke Voropaeff was onsite to conduct a routine Hazardous Materials Business Plan (HMBP) inspection. Consent to inspect was provided by the manager, Mohammed Omar Tahib. • Giant Bull Custom Auto House has changed their business operations from automotive service/repair to autobody repair. • The facility qualifies for the HMBP program because it stores more than 55 gallons of waste solvent and more than 200 cubic feet of shielding gas (75% argon, 25% carbon dioxide) onsite. • The facility has the option to remove itself from the HMBP program requirements by reducing the amount of waste solvent stored onsite to below 55 gallons, and by reducing the amount of shielding gas stored onsite to below 200 cubic feet. The inspection report was not written onsite due to Alameda County CUPA's social distancing policy during the COVID-19 pandemic. It was emailed to giantbullcustomautohouse@gmail.com and daniu1021@gmail.com on 11/2/2022.; Note: data in [EVAL Notes] field for

Violations

Violation Date:	06/27/2018	**Violation Source:**	CERS
Violation Program:	HW	**Violation Division:**	Alameda County Environmental Health
Citation:	22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11		
Violation Notes:			

Returned to compliance on 07/10/2018. OBSERVATIONS: Facility is currently vacuuming up fine grinding waste and disposing of it in the trash. CORRECTIVE ACTIONS: Facility is to either analyze the fine grinding waste for micron size and metals to determine if it meets the hazardous waste criteria or to manage it as a hazardous waste. Facility is to either submit analytical data from a certified lab showing the results of the micron size and the testing of metals in the waste grinding dust or to submit a written statement saying that the grinding dust will be handled as a hazardous waste (closed container, hazardous waste labeling, etc.)

Violation Description:

Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violations

Violation Date:	06/10/2015	**Violation Source:**	CERS
Violation Program:	HMRRP	**Violation Division:**	Alameda County Environmental Health
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)		
Violation Notes:			

Returned to compliance on 08/12/2015. OBSERVATION: The site map submitted to CERS does not include loading areas, internal roads, adjacent streets, storm and sewer drains and evacuation staging areas. CORRECTIVE ACTION: Revise the site map to include all required content and submit electronically in the California Environmental Reporting System (CERS).

Violation Description:

Failure to complete and electronically submit a site map with all required content.

Violations

Violation Date: 06/27/2018 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Alameda County Environmental Health
Citation: 40 CFR 1 262.34(d)(5)(ii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(ii)
Violation Notes:

Returned to compliance on 07/10/2018. OBSERVATION: Generator failed to post, next to the telephone, Emergency Information containing the location of emergency equipment, contact names and numbers. CORRECTIVE ACTION: Facility shall immediately post, next to the telephone, emergency information that contains the required information in accordance with Title 22. Provide a written statement saying this was completed.

Violation Description:

Failure to post the following information next to the telephone:
(A) The name and telephone number of the emergency coordinator;
(B) Location of fire extinguishers and spill control material, and, if present, fire alarm; and
(C) The telephone number of the fire department, unless the facility has a direct alarm.

Violations

Violation Date: 02/22/2023 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Alameda County Environmental Health
Citation: HSC 6.5 25144.6(b) - California Health and Safety Code, Chapter 6.5, Section(s) 25144.6(b)
Violation Notes:

Returned to compliance on 02/22/2023. Observed shop rags that were used with coolant and oil, in an open container without proper labeling. Keep containers containing hazardous waste closed, except when actively filling/emptying the container. The label must contain the following information: "HAZARDOUS WASTE," the initial accumulation start date, the name and address of the generator producing the waste, and the composition and physical state of the wastes. Prior to the inspection report being finalized, photo documentation was received from facility that the waste was in a closed and labeled container. Violation corrected.

Violation Description:

Failure to properly manage reusable soiled textile materials prior to being sent for laundering.

Violations

Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 06/27/2018. OBSERVATION: The hazardous waste label on the 55 gallon oily water drum is missing the hazardous properties and physical state. All hazardous waste containers shall be marked with the following information: 1) the words "Hazardous Waste"; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: The waste oily water drum was relabeled during this inspection. No further action is necessary to correct this violation.

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 06/10/2015 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Alameda County Environmental Health
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 08/12/2015. OBSERVATIONS: The chemical inventory in CERS does not include waste oily water or the coolant stored inside the machines and the largest container size for the recycling unit is incorrect. CORRECTIVE ACTIONS: Facility is to update CERS with the above listed items.

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violations

Violation Date: 06/10/2015 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Alameda County Environmental Health

Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Notes:

Returned to compliance on 08/12/2015. OBSERVATION: Annual training for hazardous materials handling and emergency response procedures has not taken place. CORRECTIVE ACTION: Train all employees in emergency response procedures and train applicable employees in hazardous materials handling procedures. Submit documentation to the CUPA demonstrating that employees have received this training.

Violation Description:

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violations

Violation Date: 02/22/2023 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Alameda County Environmental Health
Citation: 22 CCR 12 66262.34(e) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(e)
Violation Notes:

Returned to compliance on 02/22/2023. Observed waste oil buckets that were not labeled with the accumulation start date. The container must be clearly marked with the initial date that hazardous waste is first placed in the container, the name and address of the generator producing the waste, the composition and physical state of the waste, and toxic properties. This was corrected before the report was finalized. Violation corrected. Prior to the inspection report being finalized, photo documentation was received from facility that the container was properly labeled. Violation corrected.

Violation Description:

Failure to meet the following conditions of satellite accumulation regulations:

• Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator.

• Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accmulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first.

• The generator complies with section 66265.171, 66265.172, and 66265.173(a).

• The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words "Hazardous Waste" including specified information

• Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a "90 day" accumulation area

• 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated

Citation: 22 CCR 23 66273.31(a) - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.31(a)
Violation Notes:

Returned to compliance on 02/22/2023. Did not observe receipts/manifests for e-waste that was disposed of. Ensure that all universal wastes are transferred to an appropriate destination facility and properly disposed. Keep records of proper disposal. Records were emailed to inspector prior to the report being finalized. Violation corrected.

Violation Description:

Failure of the universal waste handler to prevent improper disposal of universal waste, or to transfer universal waste to the appropriate destination facility.

Violations

Violation Date: 02/22/2023 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Alameda County Environmental Health
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Notes:

Returned to compliance on 02/22/2023. A drum of used oil had a bung hole that was open. A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. The hole was closed on site. Violation corrected.

Violation Description:

Failure to meet the following container management requirements:
(a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste.
(b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Eval Source: CERS
Eval Notes:

Alameda County Department of Environmental Health (ACDEH) was onsite to conduct a routine triennial hazardous waste generator (HWG) inspection. ACDEH was granted consent to inspect by Kim Serpa. The facility is a metal/plastic parts manufacturer. Hazardous waste generated includes waste oil, oily debris, and metal shavings. In April, May, June, and August of 2020, it appears that this facility generated over 1000 kilograms of hazardous waste. Spoke to operator who stated that this amount of waste generation was due to the facility switching the type of coolant that they use and having to dispose of all of the old coolant. The facility changes the type of coolant they use every few years, but they don't expect to do as a large of a disposal of old coolant as they did in 2020. Decision made to keep facility as a small quantity generator. Industrial metal recycling disposes of scrap metal waste. All violation cor... RB Case No:	01S0271
Local Case No:	0121
Begin Date:	1/13/1983
Lead Agency:	SAN FRANCISCO BAY RWQCB (REGION 2)

Local Agency:	ALAMEDA COUNTY WATER DISTRICT
CUF Case:	NO
CalEnvScreen Score:	
EPA Region:	9
Qty Rlsd Gallons:	
Potential COC:	Other Chlorinated Hydrocarbons, Trichloroethylene (TCE), Vinyl chloride
How Discovered:	Tank Tightness Test
Stop Method:	Change Operating Procedures, Close and Replace Tank, Repair Tank
Stop Description:	Facility operated until 1994, when Rohm & Haas conducted
Case Worker:	UUU
Military DoD Site:	No
Leak Reported Dt:	1992-10-16 00:00:00
No Further Action Dt:	2010-07-19 00:00:00
Potential Media of Concern:	Other Groundwater (uses other than drinking water)
How Discovered Description:	Tank Integrity Testing found leakage at top of fill risers on two 30,000 gallon USTs that stored vinyl acetate.

Site History:	

Refer to Case Closure Summary dated May 18, 2012, attached to the No Further Action Letter.

GeoTracker Search - Cleanup Action Report (as of October 16, 2023)

Action Type:	IN SITU BIOLOGICAL TREATMENT
Begin Date:	12/1/2007
End Date:	12/1/2008
Phase:	Water
Contaminant Mass Removed:	
Description:	1,1-DCE concentrations decreased from 180 ppb in July 2008 to 1 ppb in Jan. 2009. Vinyl chloide increased from 3 ppn in July 2008 to 10 ppb in Jan 2009.
Action Type:	PUMP & TREAT (P&T) GROUNDWATER
Begin Date:	7/1/1996
End Date:	12/1/1996
Phase:	Water
Contaminant Mass Removed:	2 Pounds
Description:	In 1996, as a result of the low mass removal rate, the groundwater extraction system was shut down with approval from RB staff. Unocal then implemented in-situ technologies in 2002 and 2003.

File Location:
Site History:

The site is a 10.64-acre industrial property that has previously been used for the production of coated fabrics, label-printing, and warehousing. Several chemical companies have occupied the property since it was developed in the mid-1960s: Columbia Coated Fabrics (CCF) (a subsidiary of Borden, Inc.), Stetcher-Traung-Schmidt (STS) (a subsidiary of International Paper), International Paper, Howe Family Trust, BEP Newark L.P./Ellis Partners,

United Logistic Solutions, and Hexion, Inc. From June to September 1986, three subsurface soil and groundwater investigations were conducted following the removal of four USTs containing diesel and fuel oil on June 13, 1986. The results from these three investigations all reported concentrations of contaminants that were below laboratory reporting and/or regulatory limits. An additional site assessment was conducted on June 24, 1986, near the printing press and near the former cooling tower. Detections of hydrocarbon contaminants suggested that further site assessment was needed in these areas. In 1990, a subsurface investigation was conducted at the site, including the advancement of four soil borings (B-1 through B-4), collection of soil samples from each boring, and collection of a water sample from the sump for analysis. In the soil samples analyzed, total petroleum hydrocarbons as diesel (TPH-d) and total oil and gas (TOG) were detected at maximum concentrations of 1,900 milligrams per kilogram (mg/kg) (B-3 at 5 feet bgs) and 2,000 mg/kg (B-4 composite sample), respectively. All other analytes were not detected above laboratory detection limits. In the sump water sample (W-1), TPH-d was detected at 1.3 micrograms per liter (ug/L). In response to these findings, the Alameda County Water District (ACWD) requested further site characterization. A two-phase subsurface investigation took place at the site in December 1991 and June to July 1993 during which elevated levels of hydrocarbon contamination were discovered. During the Phase II subsurface investigation, remediation was also conducted, including the removal of 13 pipes associated with the sump and former ASTs and USTs and removal and disposal of 40 CY of impacted soil excavated from the pipeline corridor. The sump was filled in with concrete and, following conclusion that no further action was needed in the sump area in 1996, demolished and removed from the Source Property. The 1993 Phase II investigation was conducted concurrently with the regulatory closure of the sump area. In November 1994, approximately 54 tons of soil impacted by petroleum hydrocarbons and metals was excavated from the area of the former compressor and disposed off-site. In 1996, two subsurface investigations were performed near the former UST/AST area and in the vicinity of the former drainage ditch (received effluent rinsate from tanks which were used for blending plasticizers). During the 1996 investigations, bis(2-ethylhexyl)phthalate and di-n-octyl phthalate associated with the solvent UST pipes were detected in soil. In the former drainage ditch, semi-volatile organic compounds (SVOCs) and metals were detected above action levels. Since 1996, several phases of soil and groundwater investigations were conducted, including the drilling of 54 exploratory boreholes (B 1 through B 18, B 70 through B 92, B 93 through B 99, and SB 1 through SB 6) and the installation of 16 groundwater monitoring wells [W 1 through W 5, MW 1 through MW 5, W 6 through W 10, and W 11 (screened in the Newark Aquifer)]. Groundwater sampling has been conducted at the site since 1995 and routine groundwater monitoring was conducted from 2000 to 2017.

QUESTIONNAIRE RECEIVED LATITUDE: 37-32, LONGITUDE: 122-02 WASTE TYPE: INK & POLMERIC COAT WASTES. INSPECTION(STATE) ASP INSPECTIONS. FACILITY DRIVE-BY ASP DRIVE-BY. ENFORCEMENT(OTHER) REQUESTED DOCUMENTATION RECEIVED INSPECTION (STATE) SITE INSPECTION BY ASP & RWQCB. 2 SOIL SAMPLES COLLECTED & ANALYZED FOR PCB'S & METALS. EVIDENCE OF SPILLS. FINAL STRATEGY SITE REFFERED: TO RWQCB SITE SCREENING DONE SOURCE ACTIVITY: COMPANY MANUFACTURED POLYVINYL (PVC) CHLORIDE FILM & WALL COVERING. WASTE PROBLEM: PROCESS WASTEWATER HAD BEEN DISCHARGED INTO A STORM DRAIN DITCH TRIBUTARY TO SAN FRANCISCO BAY. PONDING OF WASTEWATER CONTAINING PVC OCCURRED IN AN ADJACENT FIELD. RATIONALE FOR NFA: FIELD AND DITCH WERE CLEANED, FILLED & GRADED IN 3/78. DISCH TO SURFACE WATER CURTAILED. DHS, RWQCB & EPA FILES INDICATE SITE THAT SOURCES OF CONTAMINATION HAVE BEEN REMOVED. EPA COMPLETED REASSESSMENT OF SCREENING SITE INSPECTION AND RECOMMEND NO FURTHER ACTION.

Site History:

The subject property (Site) is located at 6851 Smith Avenue, Newark, California (Figure 1). One 300-gallon gasoline UST was reportedly removed in the late 1970's or early 1980's. No records or permits for the removal of the former UST were located during a Phase I search performed by ENSR International (ENSR), and soil and groundwater testing was not required when the UST was removed. The Site is a commercial manufacturing facility located in a commercial district. Prior to remedial soil excavation, Total petroleum hydrocarbons as gasoline (TPHg) concentrations in well EMW-3 ranged from 1,000 to 5,000 micrograms per liter (ìg/L) and benzene concentrations ranged from 140 to 950 ìg/L. Following remedial soil excavation, well EMW-3 reported significantly lower concentrations of TPHg and benzene. TPHg was not detected above 50 ìg/L during the entire year of 2006 and was reported at 250 ìg/L in June 2007. Benzene was reported at concentrations of 1.0 to 3.0 ìg/L in 2006 and 2007.

Calenviroscreen 4 Score: 60-65%
Site History:

The subject property (Site) is home to Ferma Corp., a general engineering firm that provides large-scale site prep, construction and demolition services. The Site is developed with a single large warehouse and covered in asphalt pavement with some landscaping of trees and grass. The Site is surrounded by expansive, heavy industrial lots with commercial enterprises occupying the bulk of the proximal parcels. Ferma's facility includes vehicular services for a fleet of heavy construction vehicles. A petroleum terminal contains seven (7) underground storage tanks (USTs) used for various fuels, motor oils, gear oil, waste oil, diesel, and unleaded regular gasoline storage. The largest UST (20,000-gal) is the diesel tank, while all others on Site are 1,000-gal or less. The Site has an identified in-groundwater contaminant plume of methyl tert butyl ethylene (MTBE) dating from the pre-1999 UST sytem. The UST overhaul came in 1999 after the 1984 install. The Site has had quarterly-groundwater monitoring since around 2005.

Handler Summary

Importer Activity: No
Mixed Waste Generator: No
Transporter Activity: No
Transfer Facility: No
Onsite Burner Exemption: No
Smelting, Melting and Refining: No
Underground Injection Control: No
Commercial TSD: Yes
Used Oil Transporter: No
Used Oil Transfer Facility: No
Used Oil Processor: No
Used Oil Refiner: Yes
Used Oil Burner: No
Used Oil Market Burner: Yes

Used Oil Spec Marketer: Yes

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 19920227
Handler Name: EVERGREEN OIL INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report
TSD Activity: N

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 19931115
Handler Name: EVERGREEN OIL INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Implementer
TSD Activity: N

Hazardous Waste Handler Details

Sequence No: 2
Receive Date: 19940317
Handler Name: EVERGREEN OIL, INC.
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report
TSD Activity: N

Hazardous Waste Handler Details

Sequence No: 3
Receive Date: 19960327
Handler Name: EVERGREEN OIL, INCORPORATED
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report
TSD Activity: N

Hazardous Waste Handler Details

Handler Name: EVERGREEN OIL INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification
TSD Activity: N

Hazardous Waste Handler Details

Sequence No: 4
Receive Date: 20001012
Handler Name: EVERGREEN OIL, INC.
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report
TSD Activity: Y

Hazardous Waste Handler Details

Sequence No: 5
Receive Date: 20020227
Handler Name: EVERGREEN OIL INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report
TSD Activity: Y

Hazardous Waste Handler Details

Sequence No: 6
Receive Date: 20040325
Handler Name: EVERGREEN OIL, INC.
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report
TSD Activity: Y

Waste Code Details

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Receive Date: 20060228

Handler Name: EVERGREEN OIL, INC.
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report
TSD Activity: Y

Waste Code Details

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 741
Waste Code Description: Liquids with halogenated organic compounds > 1000 mg/l

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D022
Waste Code Description: CHLOROFORM

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS

LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: P011
Waste Code Description: ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE

Hazardous Waste Code: P098
Waste Code Description: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

Hazardous Waste Code: U001
Waste Code Description: ACETALDEHYDE (I) (OR) ETHANAL (I)

Hazardous Waste Code: U007
Waste Code Description: 2-PROPENAMIDE (OR) ACRYLAMIDE

Hazardous Waste Code: U021
Waste Code Description: [1,1'-BIPHENYL]-4,4'-DIAMINE (OR) BENZIDINE

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U122
Waste Code Description: FORMALDEHYDE

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Handler Details

TSD Activity: Y

Waste Code Details

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code:	172
Waste Code Description:	Metal dust (see 121) and machining waste
Hazardous Waste Code:	181
Waste Code Description:	Other inorganic solid waste
Hazardous Waste Code:	212
Waste Code Description:	Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)
Hazardous Waste Code:	213
Waste Code Description:	Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)
Hazardous Waste Code:	214
Waste Code Description:	Unspecified solvent mixture
Hazardous Waste Code:	221
Waste Code Description:	Waste oil and mixed oil
Hazardous Waste Code:	222
Waste Code Description:	Oil/water separation sludge
Hazardous Waste Code:	223
Waste Code Description:	Unspecified oil-containing waste
Hazardous Waste Code:	241
Waste Code Description:	Tank bottom waste
Hazardous Waste Code:	261
Waste Code Description:	Polychlorinated biphenyls and material containing PCB's
Hazardous Waste Code:	291
Waste Code Description:	Latex waste
Hazardous Waste Code:	331
Waste Code Description:	Off-specification, aged, or surplus organics
Hazardous Waste Code:	343
Waste Code Description:	Unspecified organic liquid mixture
Hazardous Waste Code:	352
Waste Code Description:	Other organic solids
Hazardous Waste Code:	512
Waste Code Description:	Other empty containers 30 gallons or more
Hazardous Waste Code:	513
Waste Code Description:	Empty containers less than 30 gallons
Hazardous Waste Code:	551
Waste Code Description:	Laboratory waste chemicals
Hazardous Waste Code:	612
Waste Code Description:	Household waste
Hazardous Waste Code:	721
Waste Code Description:	Liquids with arsenic > 500 mg/l
Hazardous Waste Code:	741
Waste Code Description:	Liquids with halogenated organic compounds > 1000 mg/l
Hazardous Waste Code:	791
Waste Code Description:	Liquids with pH < 2
Hazardous Waste Code:	792
Waste Code Description:	Liquids with pH < 2 with metals
Hazardous Waste Code:	D001
Waste Code Description:	IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D004
Waste Code Description: ARSENIC

Hazardous Waste Code: D005
Waste Code Description: BARIUM

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: D010
Waste Code Description: SELENIUM

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D019
Waste Code Description: CARBON TETRACHLORIDE

Hazardous Waste Code: D027
Waste Code Description: 1,4-DICHLOROBENZENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004

Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: U002
Waste Code Description: 2-PROPANONE (I) (OR) ACETONE (I)

Hazardous Waste Code: U007
Waste Code Description: 2-PROPENAMIDE (OR) ACRYLAMIDE

Hazardous Waste Code: U072
Waste Code Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Hazardous Waste Code: U112
Waste Code Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D036
Waste Code Description: NITROBENZENE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: K048
Waste Code Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K049
Waste Code Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K050
Waste Code Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K051
Waste Code Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K052
Waste Code Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: P022
Waste Code Description: CARBON DISULFIDE

Hazardous Waste Code:	P105
Waste Code Description:	SODIUM AZIDE
Hazardous Waste Code:	U002
Waste Code Description:	2-PROPANONE (I) (OR) ACETONE (I)
Hazardous Waste Code:	U003
Waste Code Description:	ACETONITRILE (I,T)
Hazardous Waste Code:	U019
Waste Code Description:	BENZENE (I,T)
Hazardous Waste Code:	U031
Waste Code Description:	1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)
Hazardous Waste Code:	U041
Waste Code Description:	EPICHLOROHYDRIN (OR) OXIRANE, (CHLOROMETHYL)-
Hazardous Waste Code:	U056
Waste Code Description:	BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)
Hazardous Waste Code:	U057
Waste Code Description:	CYCLOHEXANONE (I)
Hazardous Waste Code:	U070
Waste Code Description:	BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE
Hazardous Waste Code:	U071
Waste Code Description:	BENZENE, 1,3-DICHLORO- (OR) M-DICHLOROBENZENE
Hazardous Waste Code:	U072
Waste Code Description:	BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE
Hazardous Waste Code:	U080
Waste Code Description:	METHANE, DICHLORO- (OR) METHYLENE CHLORIDE
Hazardous Waste Code:	U112
Waste Code Description:	ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)
Hazardous Waste Code:	U122
Waste Code Description:	FORMALDEHYDE
Hazardous Waste Code:	U154
Waste Code Description:	METHANOL (I) (OR) METHYL ALCOHOL (I)
Hazardous Waste Code:	U159
Waste Code Description:	2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)
Hazardous Waste Code:	U165
Waste Code Description:	NAPHTHALENE
Hazardous Waste Code:	U188
Waste Code Description:	PHENOL
Hazardous Waste Code:	U196
Waste Code Description:	PYRIDINE
Hazardous Waste Code:	U211
Waste Code Description:	CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-
Hazardous Waste Code:	U220
Waste Code Description:	BENZENE, METHYL- (OR) TOLUENE
Hazardous Waste Code:	U228
Waste Code Description:	ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE
Hazardous Waste Code:	U239
Waste Code Description:	BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Handler Details

Sequence No: 2
Receive Date: 20150720
Handler Name: SAFETY-KLEEN OF CALIFORNIA INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification
TSD Activity: Y

Waste Code Details

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: 172
Waste Code Description: Metal dust (see 121) and machining waste

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 222
Waste Code Description: Oil/water separation sludge

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 231
Waste Code Description: Pesticide rinse water

Hazardous Waste Code:	241
Waste Code Description:	Tank bottom waste
Hazardous Waste Code:	251
Waste Code Description:	Still bottoms with halogenated organics
Hazardous Waste Code:	252
Waste Code Description:	Other still bottom waste
Hazardous Waste Code:	261
Waste Code Description:	Polychlorinated biphenyls and material containing PCB's
Hazardous Waste Code:	272
Waste Code Description:	Polymeric resin waste
Hazardous Waste Code:	281
Waste Code Description:	Adhesives
Hazardous Waste Code:	291
Waste Code Description:	Latex waste
Hazardous Waste Code:	331
Waste Code Description:	Off-specification, aged, or surplus organics
Hazardous Waste Code:	341
Waste Code Description:	Organic liquids (nonsolvents) with halogens
Hazardous Waste Code:	342
Waste Code Description:	Organic liquids with metals (see 121)
Hazardous Waste Code:	343
Waste Code Description:	Unspecified organic liquid mixture
Hazardous Waste Code:	351
Waste Code Description:	Organic solids with halogens
Hazardous Waste Code:	352
Waste Code Description:	Other organic solids
Hazardous Waste Code:	451
Waste Code Description:	Degreasing sludge
Hazardous Waste Code:	461
Waste Code Description:	Degreasing sludge
Hazardous Waste Code:	491
Waste Code Description:	Unspecified sludge waste
Hazardous Waste Code:	511
Waste Code Description:	Empty pesticide containers 30 gallons or more
Hazardous Waste Code:	512
Waste Code Description:	Other empty containers 30 gallons or more
Hazardous Waste Code:	513
Waste Code Description:	Empty containers less than 30 gallons
Hazardous Waste Code:	551
Waste Code Description:	Laboratory waste chemicals
Hazardous Waste Code:	611
Waste Code Description:	Contaminated soil from site clean-ups
Hazardous Waste Code:	612
Waste Code Description:	Household waste
Hazardous Waste Code:	721
Waste Code Description:	Liquids with arsenic > 500 mg/l

Hazardous Waste Code:	722
Waste Code Description:	Liquids with cadmium > 100 mg/l
Hazardous Waste Code:	723
Waste Code Description:	Liquids with chromium (VI) > 500 mg/l
Hazardous Waste Code:	724
Waste Code Description:	Liquids with lead > 500 mg/l
Hazardous Waste Code:	725
Waste Code Description:	Liquids with mercury > 20 mg/l
Hazardous Waste Code:	726
Waste Code Description:	Liquids with nickel > 134 mg/l
Hazardous Waste Code:	727
Waste Code Description:	Liquids with selenium > 100 mg/l
Hazardous Waste Code:	728
Waste Code Description:	Liquids with thallium > 130 mg/l
Hazardous Waste Code:	741
Waste Code Description:	Liquids with halogenated organic compounds > 1000 mg/l
Hazardous Waste Code:	751
Waste Code Description:	Solids or sludge with halogenated organic comp. > 1000 mg/kg
Hazardous Waste Code:	791
Waste Code Description:	Liquids with pH < 2
Hazardous Waste Code:	792
Waste Code Description:	Liquids with pH < 2 with metals
Hazardous Waste Code:	D001
Waste Code Description:	IGNITABLE WASTE
Hazardous Waste Code:	D002
Waste Code Description:	CORROSIVE WASTE
Hazardous Waste Code:	D003
Waste Code Description:	REACTIVE WASTE
Hazardous Waste Code:	D004
Waste Code Description:	ARSENIC
Hazardous Waste Code:	D005
Waste Code Description:	BARIUM
Hazardous Waste Code:	D006
Waste Code Description:	CADMIUM
Hazardous Waste Code:	D007
Waste Code Description:	CHROMIUM
Hazardous Waste Code:	D008
Waste Code Description:	LEAD
Hazardous Waste Code:	D009
Waste Code Description:	MERCURY
Hazardous Waste Code:	D010
Waste Code Description:	SELENIUM
Hazardous Waste Code:	D011
Waste Code Description:	SILVER
Hazardous Waste Code:	D018
Waste Code Description:	BENZENE

Hazardous Waste Code: D019
Waste Code Description: CARBON TETRACHLORIDE

Hazardous Waste Code: D020
Waste Code Description: CHLORDANE

Hazardous Waste Code: D022
Waste Code Description: CHLOROFORM

Hazardous Waste Code: D027
Waste Code Description: 1,4-DICHLOROBENZENE

Hazardous Waste Code: D028
Waste Code Description: 1,2-DICHLOROETHANE

Hazardous Waste Code: D029
Waste Code Description: 1,1-DICHLOROETHYLENE

Hazardous Waste Code: D030
Waste Code Description: 2,4-DINITROTOLUENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D036
Waste Code Description: NITROBENZENE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON

DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: F037
Waste Code Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: F038
Waste Code Description: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: K048
Waste Code Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K049
Waste Code Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K050
Waste Code Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K051
Waste Code Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K052
Waste Code Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K157
Waste Code Description: WASTEWATERS (INCLUDING SCRUBBER WATERS, CONDENSER WATERS, WASHWATERS, AND SEPARATION WATERS) FROM THE PRODUCTION OF CARBAMATES AND CARBAMOYL OXIMES.

Hazardous Waste Code: P011
Waste Code Description: ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE

Hazardous Waste Code: P012
Waste Code Description: ARSENIC OXIDE AS2O3 (OR) ARSENIC TRIOXIDE

Hazardous Waste Code: P022
Waste Code Description: CARBON DISULFIDE

Hazardous Waste Code: P029
Waste Code Description: COPPER CYANIDE (OR) COPPER CYANIDE CU(CN)

Hazardous Waste Code: P068

Waste Code Description: HYDRAZINE, METHYL- (OR) METHYL HYDRAZINE

Hazardous Waste Code: P098
Waste Code Description: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

Hazardous Waste Code: P105
Waste Code Description: SODIUM AZIDE

Hazardous Waste Code: P106
Waste Code Description: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

Hazardous Waste Code: P120
Waste Code Description: VANADIUM OXIDE V2O5 (OR) VANADIUM PENTOXIDE

Hazardous Waste Code: U001
Waste Code Description: ACETALDEHYDE (I) (OR) ETHANAL (I)

Hazardous Waste Code: U002
Waste Code Description: 2-PROPANONE (I) (OR) ACETONE (I)

Hazardous Waste Code: U003
Waste Code Description: ACETONITRILE (I,T)

Hazardous Waste Code: U007
Waste Code Description: 2-PROPENAMIDE (OR) ACRYLAMIDE

Hazardous Waste Code: U012
Waste Code Description: ANILINE (I,T) (OR) BENZENAMINE (I,T)

Hazardous Waste Code: U019
Waste Code Description: BENZENE (I,T)

Hazardous Waste Code: U021
Waste Code Description: [1,1'-BIPHENYL]-4,4'-DIAMINE (OR) BENZIDINE

Hazardous Waste Code: U031
Waste Code Description: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Hazardous Waste Code: U034
Waste Code Description: ACETALDEHYDE, TRICHLORO- (OR) CHLORAL

Hazardous Waste Code: U041
Waste Code Description: EPICHLOROHYDRIN (OR) OXIRANE, (CHLOROMETHYL)-

Hazardous Waste Code: U043
Waste Code Description: ETHENE, CHLORO- (OR) VINYL CHLORIDE

Hazardous Waste Code: U044
Waste Code Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Hazardous Waste Code: U052
Waste Code Description: CRESOL (CRESYLIC ACID) (OR) PHENOL, METHYL-

Hazardous Waste Code: U056
Waste Code Description: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

Hazardous Waste Code: U057
Waste Code Description: CYCLOHEXANONE (I)

Hazardous Waste Code: U070
Waste Code Description: BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE

Hazardous Waste Code: U071
Waste Code Description: BENZENE, 1,3-DICHLORO- (OR) M-DICHLOROBENZENE

Hazardous Waste Code: U072
Waste Code Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Hazardous Waste Code: U080

Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U105
Waste Code Description: 2,4-DINITROTOLUENE (OR) BENZENE, 1-METHYL-2,4-DINITRO-

Hazardous Waste Code: U106
Waste Code Description: 2,6-DINITROTOLUENE (OR) BENZENE, 2-METHYL-1,3-DINITRO-

Hazardous Waste Code: U112
Waste Code Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Hazardous Waste Code: U117
Waste Code Description: ETHANE, 1,1'-OXYBIS-(I) (OR) ETHYL ETHER (I)

Hazardous Waste Code: U122
Waste Code Description: FORMALDEHYDE

Hazardous Waste Code: U134
Waste Code Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Hazardous Waste Code: U151
Waste Code Description: MERCURY

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U165
Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U183
Waste Code Description: BENZENE, PENTACHLORO- (OR) PENTACHLOROBENZENE

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U196
Waste Code Description: PYRIDINE

Hazardous Waste Code: U201
Waste Code Description: 1,3-BENZENEDIOL (OR) RESORCINOL

Hazardous Waste Code: U211
Waste Code Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Hazardous Waste Code: U218
Waste Code Description: ETHANETHIOAMIDE (OR) THIOACETAMIDE

Hazardous Waste Code: U219
Waste Code Description: THIOUREA

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Code: U404
Waste Code Description: ETHANAMINE, N,N-DIETHYL- (OR) TRIETHYLAMINE

Hazardous Waste Handler Details

Sequence No: 6
Receive Date: 20160301
Handler Name: SAFETY-KLEEN OF CALIFORNIA
Federal Waste Generator Code: 1

Generator Code Description: Large Quantity Generator

TSD Activity: Y

Waste Code Details

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 162
Waste Code Description: Other spent catalyst

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 222
Waste Code Description: Oil/water separation sludge

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: 252
Waste Code Description: Other still bottom waste

Hazardous Waste Code: 261
Waste Code Description: Polychlorinated biphenyls and material containing PCB's

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 342
Waste Code Description: Organic liquids with metals (see 121)

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 512
Waste Code Description: Other empty containers 30 gallons or more

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: 612
Waste Code Description: Household waste

Hazardous Waste Code: 731
Waste Code Description: Liquids with polychlorinated biphenyls > 50 mg/l

Hazardous Waste Code: 741
Waste Code Description: Liquids with halogenated organic compounds > 1000 mg/l

Waste Code Description: 1,4-DICHLOROBENZENE

Hazardous Waste Code: D028
Waste Code Description: 1,2-DICHLOROETHANE

Hazardous Waste Code: D029
Waste Code Description: 1,1-DICHLOROETHYLENE

Hazardous Waste Code: D030
Waste Code Description: 2,4-DINITROTOLUENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D036
Waste Code Description: NITROBENZENE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: K048
Waste Code Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K049
Waste Code Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K050
Waste Code Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K051
Waste Code Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K052
Waste Code Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: U002
Waste Code Description: 2-PROPANONE (I) (OR) ACETONE (I)

Hazardous Waste Code: U003
Waste Code Description: ACETONITRILE (I,T)

Hazardous Waste Code: U019
Waste Code Description: BENZENE (I,T)

Hazardous Waste Code: U031
Waste Code Description: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Hazardous Waste Code: U041
Waste Code Description: EPICHLOROHYDRIN (OR) OXIRANE, (CHLOROMETHYL)-

Hazardous Waste Code: U044
Waste Code Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Hazardous Waste Code: U056
Waste Code Description: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

Hazardous Waste Code: U057
Waste Code Description: CYCLOHEXANONE (I)

Hazardous Waste Code: U070
Waste Code Description: BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE

Hazardous Waste Code: U071
Waste Code Description: BENZENE, 1,3-DICHLORO- (OR) M-DICHLOROBENZENE

Hazardous Waste Code: U072
Waste Code Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U112
Waste Code Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U159
Waste Code Description: 2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)

Hazardous Waste Code: U165
Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U196
Waste Code Description: PYRIDINE

Hazardous Waste Code: U211
Waste Code Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Handler Details

Sequence No: 7
Receive Date: 20180213
Handler Name: SAFETY-KLEEN OF CALIFORNIA INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report update with Notification
TSD Activity: Y

Waste Code Details

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: 172
Waste Code Description: Metal dust (see 121) and machining waste

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 222
Waste Code Description: Oil/water separation sludge

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 231
Waste Code Description: Pesticide rinse water

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: 251
Waste Code Description: Still bottoms with halogenated organics

Hazardous Waste Code: 252
Waste Code Description: Other still bottom waste

Hazardous Waste Code: 261
Waste Code Description: Polychlorinated biphenyls and material containing PCB's

Hazardous Waste Code: 272
Waste Code Description: Polymeric resin waste

Hazardous Waste Code: 281
Waste Code Description: Adhesives

Hazardous Waste Code: 291
Waste Code Description: Latex waste

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 341
Waste Code Description: Organic liquids (nonsolvents) with halogens

Hazardous Waste Code: 342
Waste Code Description: Organic liquids with metals (see 121)

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 351
Waste Code Description: Organic solids with halogens

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 451
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 491
Waste Code Description: Unspecified sludge waste

Hazardous Waste Code: 511
Waste Code Description: Empty pesticide containers 30 gallons or more

Hazardous Waste Code: 512
Waste Code Description: Other empty containers 30 gallons or more

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: 611
Waste Code Description: Contaminated soil from site clean-ups

Hazardous Waste Code: 612
Waste Code Description: Household waste

Hazardous Waste Code: 721
Waste Code Description: Liquids with arsenic > 500 mg/l

Hazardous Waste Code: 722
Waste Code Description: Liquids with cadmium > 100 mg/l

Hazardous Waste Code:	723
Waste Code Description:	Liquids with chromium (VI) > 500 mg/l
Hazardous Waste Code:	724
Waste Code Description:	Liquids with lead > 500 mg/l
Hazardous Waste Code:	725
Waste Code Description:	Liquids with mercury > 20 mg/l
Hazardous Waste Code:	726
Waste Code Description:	Liquids with nickel > 134 mg/l
Hazardous Waste Code:	727
Waste Code Description:	Liquids with selenium > 100 mg/l
Hazardous Waste Code:	728
Waste Code Description:	Liquids with thallium > 130 mg/l
Hazardous Waste Code:	741
Waste Code Description:	Liquids with halogenated organic compounds > 1000 mg/l
Hazardous Waste Code:	751
Waste Code Description:	Solids or sludge with halogenated organic comp. > 1000 mg/kg
Hazardous Waste Code:	791
Waste Code Description:	Liquids with pH < 2
Hazardous Waste Code:	792
Waste Code Description:	Liquids with pH < 2 with metals
Hazardous Waste Code:	D001
Waste Code Description:	IGNITABLE WASTE
Hazardous Waste Code:	D002
Waste Code Description:	CORROSIVE WASTE
Hazardous Waste Code:	D003
Waste Code Description:	REACTIVE WASTE
Hazardous Waste Code:	D004
Waste Code Description:	ARSENIC
Hazardous Waste Code:	D005
Waste Code Description:	BARIUM
Hazardous Waste Code:	D006
Waste Code Description:	CADMIUM
Hazardous Waste Code:	D007
Waste Code Description:	CHROMIUM
Hazardous Waste Code:	D008
Waste Code Description:	LEAD
Hazardous Waste Code:	D009
Waste Code Description:	MERCURY
Hazardous Waste Code:	D010
Waste Code Description:	SELENIUM
Hazardous Waste Code:	D011
Waste Code Description:	SILVER
Hazardous Waste Code:	D018
Waste Code Description:	BENZENE
Hazardous Waste Code:	D019
Waste Code Description:	CARBON TETRACHLORIDE

Hazardous Waste Code: D020
Waste Code Description: CHLORDANE

Hazardous Waste Code: D022
Waste Code Description: CHLOROFORM

Hazardous Waste Code: D027
Waste Code Description: 1,4-DICHLOROBENZENE

Hazardous Waste Code: D028
Waste Code Description: 1,2-DICHLOROETHANE

Hazardous Waste Code: D029
Waste Code Description: 1,1-DICHLOROETHYLENE

Hazardous Waste Code: D030
Waste Code Description: 2,4-DINITROTOLUENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D036
Waste Code Description: NITROBENZENE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY

VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: F037
Waste Code Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: F038
Waste Code Description: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: K048
Waste Code Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K049
Waste Code Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K050
Waste Code Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K051
Waste Code Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K052
Waste Code Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K157
Waste Code Description: WASTEWATERS (INCLUDING SCRUBBER WATERS, CONDENSER WATERS, WASHWATERS, AND SEPARATION WATERS) FROM THE PRODUCTION OF CARBAMATES AND CARBAMOYL OXIMES.

Hazardous Waste Code: P011
Waste Code Description: ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE

Hazardous Waste Code: P012
Waste Code Description: ARSENIC OXIDE AS2O3 (OR) ARSENIC TRIOXIDE

Hazardous Waste Code: P022
Waste Code Description: CARBON DISULFIDE

Hazardous Waste Code: P029
Waste Code Description: COPPER CYANIDE (OR) COPPER CYANIDE CU(CN)

Hazardous Waste Code: P068
Waste Code Description: HYDRAZINE, METHYL- (OR) METHYL HYDRAZINE

Hazardous Waste Code: P105
Waste Code Description: SODIUM AZIDE

Hazardous Waste Code: P106
Waste Code Description: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

Hazardous Waste Code: P120
Waste Code Description: VANADIUM OXIDE V2O5 (OR) VANADIUM PENTOXIDE

Hazardous Waste Code: U001
Waste Code Description: ACETALDEHYDE (I) (OR) ETHANAL (I)

Hazardous Waste Code: U002
Waste Code Description: 2-PROPANONE (I) (OR) ACETONE (I)

Hazardous Waste Code: U003
Waste Code Description: ACETONITRILE (I,T)

Hazardous Waste Code: U007
Waste Code Description: 2-PROPENAMIDE (OR) ACRYLAMIDE

Hazardous Waste Code: U012
Waste Code Description: ANILINE (I,T) (OR) BENZENAMINE (I,T)

Hazardous Waste Code: U019
Waste Code Description: BENZENE (I,T)

Hazardous Waste Code: U021
Waste Code Description: [1,1'-BIPHENYL]-4,4'-DIAMINE (OR) BENZIDINE

Hazardous Waste Code: U031
Waste Code Description: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Hazardous Waste Code: U034
Waste Code Description: ACETALDEHYDE, TRICHLORO- (OR) CHLORAL

Hazardous Waste Code: U043
Waste Code Description: ETHENE, CHLORO- (OR) VINYL CHLORIDE

Hazardous Waste Code: U044
Waste Code Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Hazardous Waste Code: U052
Waste Code Description: CRESOL (CRESYLIC ACID) (OR) PHENOL, METHYL-

Hazardous Waste Code: U056
Waste Code Description: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

Hazardous Waste Code: U057
Waste Code Description: CYCLOHEXANONE (I)

Hazardous Waste Code: U070
Waste Code Description: BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE

Hazardous Waste Code: U071
Waste Code Description: BENZENE, 1,3-DICHLORO- (OR) M-DICHLOROBENZENE

Hazardous Waste Code: U072
Waste Code Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U105
Waste Code Description: 2,4-DINITROTOLUENE (OR) BENZENE, 1-METHYL-2,4-DINITRO-

Hazardous Waste Code: U106
Waste Code Description: 2,6-DINITROTOLUENE (OR) BENZENE, 2-METHYL-1,3-DINITRO-

Hazardous Waste Code: U112
Waste Code Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Hazardous Waste Code: U117
Waste Code Description: ETHANE, 1,1'-OXYBIS-(I) (OR) ETHYL ETHER (I)

Hazardous Waste Code: U122
Waste Code Description: FORMALDEHYDE

Hazardous Waste Code: U134
Waste Code Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Hazardous Waste Code: U151
Waste Code Description: MERCURY

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U165
Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U183
Waste Code Description: BENZENE, PENTACHLORO- (OR) PENTACHLOROBENZENE

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U196
Waste Code Description: PYRIDINE

Hazardous Waste Code: U201
Waste Code Description: 1,3-BENZENEDIOL (OR) RESORCINOL

Hazardous Waste Code: U211
Waste Code Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Hazardous Waste Code: U218
Waste Code Description: ETHANETHIOAMIDE (OR) THIOACETAMIDE

Hazardous Waste Code: U219
Waste Code Description: THIOUREA

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Code: U404
Waste Code Description: ETHANAMINE, N,N-DIETHYL- (OR) TRIETHYLAMINE

Hazardous Waste Handler Details

Sequence No: 8
Receive Date: 20200218
Handler Name: SAFETY-KLEEN OF CALIFORNIA INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator

Waste Code Details

Hazardous Waste Code: 121

Waste Code Description:	Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)
Hazardous Waste Code:	122
Waste Code Description:	Alkaline solution without metals (pH > 12.5)
Hazardous Waste Code:	123
Waste Code Description:	Unspecified alkaline solution
Hazardous Waste Code:	132
Waste Code Description:	Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)
Hazardous Waste Code:	133
Waste Code Description:	Aqueous solution with 10% or more total organic residues
Hazardous Waste Code:	134
Waste Code Description:	Aqueous solution with <10% total organic residues
Hazardous Waste Code:	135
Waste Code Description:	Unspecified aqueous solution
Hazardous Waste Code:	141
Waste Code Description:	Off-specification, aged, or surplus inorganics
Hazardous Waste Code:	171
Waste Code Description:	Metal sludge (see 121)
Hazardous Waste Code:	172
Waste Code Description:	Metal dust (see 121) and machining waste
Hazardous Waste Code:	181
Waste Code Description:	Other inorganic solid waste
Hazardous Waste Code:	212
Waste Code Description:	Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)
Hazardous Waste Code:	213
Waste Code Description:	Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)
Hazardous Waste Code:	214
Waste Code Description:	Unspecified solvent mixture
Hazardous Waste Code:	221
Waste Code Description:	Waste oil and mixed oil
Hazardous Waste Code:	222
Waste Code Description:	Oil/water separation sludge
Hazardous Waste Code:	223
Waste Code Description:	Unspecified oil-containing waste
Hazardous Waste Code:	231
Waste Code Description:	Pesticide rinse water
Hazardous Waste Code:	241
Waste Code Description:	Tank bottom waste
Hazardous Waste Code:	251
Waste Code Description:	Still bottoms with halogenated organics
Hazardous Waste Code:	252
Waste Code Description:	Other still bottom waste
Hazardous Waste Code:	261
Waste Code Description:	Polychlorinated biphenyls and material containing PCB's
Hazardous Waste Code:	272
Waste Code Description:	Polymeric resin waste

Hazardous Waste Code:	281
Waste Code Description:	Adhesives
Hazardous Waste Code:	291
Waste Code Description:	Latex waste
Hazardous Waste Code:	331
Waste Code Description:	Off-specification, aged, or surplus organics
Hazardous Waste Code:	341
Waste Code Description:	Organic liquids (nonsolvents) with halogens
Hazardous Waste Code:	342
Waste Code Description:	Organic liquids with metals (see 121)
Hazardous Waste Code:	343
Waste Code Description:	Unspecified organic liquid mixture
Hazardous Waste Code:	351
Waste Code Description:	Organic solids with halogens
Hazardous Waste Code:	352
Waste Code Description:	Other organic solids
Hazardous Waste Code:	451
Waste Code Description:	Degreasing sludge
Hazardous Waste Code:	461
Waste Code Description:	Degreasing sludge
Hazardous Waste Code:	491
Waste Code Description:	Unspecified sludge waste
Hazardous Waste Code:	511
Waste Code Description:	Empty pesticide containers 30 gallons or more
Hazardous Waste Code:	512
Waste Code Description:	Other empty containers 30 gallons or more
Hazardous Waste Code:	513
Waste Code Description:	Empty containers less than 30 gallons
Hazardous Waste Code:	551
Waste Code Description:	Laboratory waste chemicals
Hazardous Waste Code:	611
Waste Code Description:	Contaminated soil from site clean-ups
Hazardous Waste Code:	612
Waste Code Description:	Household waste
Hazardous Waste Code:	721
Waste Code Description:	Liquids with arsenic > 500 mg/l
Hazardous Waste Code:	722
Waste Code Description:	Liquids with cadmium > 100 mg/l
Hazardous Waste Code:	723
Waste Code Description:	Liquids with chromium (VI) > 500 mg/l
Hazardous Waste Code:	724
Waste Code Description:	Liquids with lead > 500 mg/l
Hazardous Waste Code:	725
Waste Code Description:	Liquids with mercury > 20 mg/l
Hazardous Waste Code:	726
Waste Code Description:	Liquids with nickel > 134 mg/l

Hazardous Waste Code:	727
Waste Code Description:	Liquids with selenium > 100 mg/l
Hazardous Waste Code:	728
Waste Code Description:	Liquids with thallium > 130 mg/l
Hazardous Waste Code:	741
Waste Code Description:	Liquids with halogenated organic compounds > 1000 mg/l
Hazardous Waste Code:	751
Waste Code Description:	Solids or sludge with halogenated organic comp. > 1000 mg/kg
Hazardous Waste Code:	791
Waste Code Description:	Liquids with pH < 2
Hazardous Waste Code:	792
Waste Code Description:	Liquids with pH < 2 with metals
Hazardous Waste Code:	D001
Waste Code Description:	IGNITABLE WASTE
Hazardous Waste Code:	D002
Waste Code Description:	CORROSIVE WASTE
Hazardous Waste Code:	D003
Waste Code Description:	REACTIVE WASTE
Hazardous Waste Code:	D004
Waste Code Description:	ARSENIC
Hazardous Waste Code:	D005
Waste Code Description:	BARIUM
Hazardous Waste Code:	D006
Waste Code Description:	CADMIUM
Hazardous Waste Code:	D007
Waste Code Description:	CHROMIUM
Hazardous Waste Code:	D008
Waste Code Description:	LEAD
Hazardous Waste Code:	D009
Waste Code Description:	MERCURY
Hazardous Waste Code:	D010
Waste Code Description:	SELENIUM
Hazardous Waste Code:	D011
Waste Code Description:	SILVER
Hazardous Waste Code:	D018
Waste Code Description:	BENZENE
Hazardous Waste Code:	D019
Waste Code Description:	CARBON TETRACHLORIDE
Hazardous Waste Code:	D020
Waste Code Description:	CHLORDANE
Hazardous Waste Code:	D022
Waste Code Description:	CHLOROFORM
Hazardous Waste Code:	D027
Waste Code Description:	1,4-DICHLOROBENZENE
Hazardous Waste Code:	D028
Waste Code Description:	1,2-DICHLOROETHANE

Hazardous Waste Code: D029
Waste Code Description: 1,1-DICHLOROETHYLENE

Hazardous Waste Code: D030
Waste Code Description: 2,4-DINITROTOLUENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D036
Waste Code Description: NITROBENZENE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: F037
Waste Code Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE

GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: F038
Waste Code Description: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: K048
Waste Code Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K049
Waste Code Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K050
Waste Code Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K051
Waste Code Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K052
Waste Code Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K157
Waste Code Description: WASTEWATERS (INCLUDING SCRUBBER WATERS, CONDENSER WATERS, WASHWATERS, AND SEPARATION WATERS) FROM THE PRODUCTION OF CARBAMATES AND CARBAMOYL OXIMES.

Hazardous Waste Code: P011
Waste Code Description: ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE

Hazardous Waste Code: P012
Waste Code Description: ARSENIC OXIDE AS2O3 (OR) ARSENIC TRIOXIDE

Hazardous Waste Code: P022
Waste Code Description: CARBON DISULFIDE

Hazardous Waste Code: P029
Waste Code Description: COPPER CYANIDE (OR) COPPER CYANIDE CU(CN)

Hazardous Waste Code: P068
Waste Code Description: HYDRAZINE, METHYL- (OR) METHYL HYDRAZINE

Hazardous Waste Code: P098
Waste Code Description: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

Hazardous Waste Code: P105
Waste Code Description: SODIUM AZIDE

Hazardous Waste Code: P106
Waste Code Description: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

Hazardous Waste Code: P120
Waste Code Description: VANADIUM OXIDE V2O5 (OR) VANADIUM PENTOXIDE

Hazardous Waste Code: U001

Waste Code Description: ACETALDEHYDE (I) (OR) ETHANAL (I)

Hazardous Waste Code: U002
Waste Code Description: 2-PROPANONE (I) (OR) ACETONE (I)

Hazardous Waste Code: U003
Waste Code Description: ACETONITRILE (I,T)

Hazardous Waste Code: U007
Waste Code Description: 2-PROPENAMIDE (OR) ACRYLAMIDE

Hazardous Waste Code: U012
Waste Code Description: ANILINE (I,T) (OR) BENZENAMINE (I,T)

Hazardous Waste Code: U019
Waste Code Description: BENZENE (I,T)

Hazardous Waste Code: U021
Waste Code Description: [1,1'-BIPHENYL]-4,4'-DIAMINE (OR) BENZIDINE

Hazardous Waste Code: U031
Waste Code Description: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Hazardous Waste Code: U034
Waste Code Description: ACETALDEHYDE, TRICHLORO- (OR) CHLORAL

Hazardous Waste Code: U043
Waste Code Description: ETHENE, CHLORO- (OR) VINYL CHLORIDE

Hazardous Waste Code: U044
Waste Code Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Hazardous Waste Code: U052
Waste Code Description: CRESOL (CRESYLIC ACID) (OR) PHENOL, METHYL-

Hazardous Waste Code: U056
Waste Code Description: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

Hazardous Waste Code: U057
Waste Code Description: CYCLOHEXANONE (I)

Hazardous Waste Code: U070
Waste Code Description: BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE

Hazardous Waste Code: U071
Waste Code Description: BENZENE, 1,3-DICHLORO- (OR) M-DICHLOROBENZENE

Hazardous Waste Code: U072
Waste Code Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U105
Waste Code Description: 2,4-DINITROTOLUENE (OR) BENZENE, 1-METHYL-2,4-DINITRO-

Hazardous Waste Code: U106
Waste Code Description: 2,6-DINITROTOLUENE (OR) BENZENE, 2-METHYL-1,3-DINITRO-

Hazardous Waste Code: U112
Waste Code Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Hazardous Waste Code: U117
Waste Code Description: ETHANE, 1,1'-OXYBIS-(I) (OR) ETHYL ETHER (I)

Hazardous Waste Code: U122
Waste Code Description: FORMALDEHYDE

Hazardous Waste Code: U134

Waste Code Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Hazardous Waste Code: U151
Waste Code Description: MERCURY

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U165
Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U183
Waste Code Description: BENZENE, PENTACHLORO- (OR) PENTACHLOROBENZENE

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U196
Waste Code Description: PYRIDINE

Hazardous Waste Code: U201
Waste Code Description: 1,3-BENZENEDIOL (OR) RESORCINOL

Hazardous Waste Code: U211
Waste Code Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Hazardous Waste Code: U218
Waste Code Description: ETHANETHIOAMIDE (OR) THIOACETAMIDE

Hazardous Waste Code: U219
Waste Code Description: THIOUREA

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Code: U404
Waste Code Description: ETHANAMINE, N,N-DIETHYL- (OR) TRIETHYLAMINE

Hazardous Waste Handler Details

Sequence No: 9
Receive Date: 20210212
Handler Name: SAFETY-KLEEN OF CALIFORNIA INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report update with Notification
TSD Activity: Y

Waste Code Details

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: 132

Waste Code Description:	Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)
Hazardous Waste Code:	133
Waste Code Description:	Aqueous solution with 10% or more total organic residues
Hazardous Waste Code:	134
Waste Code Description:	Aqueous solution with <10% total organic residues
Hazardous Waste Code:	135
Waste Code Description:	Unspecified aqueous solution
Hazardous Waste Code:	141
Waste Code Description:	Off-specification, aged, or surplus inorganics
Hazardous Waste Code:	171
Waste Code Description:	Metal sludge (see 121)
Hazardous Waste Code:	172
Waste Code Description:	Metal dust (see 121) and machining waste
Hazardous Waste Code:	181
Waste Code Description:	Other inorganic solid waste
Hazardous Waste Code:	212
Waste Code Description:	Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)
Hazardous Waste Code:	213
Waste Code Description:	Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)
Hazardous Waste Code:	214
Waste Code Description:	Unspecified solvent mixture
Hazardous Waste Code:	221
Waste Code Description:	Waste oil and mixed oil
Hazardous Waste Code:	222
Waste Code Description:	Oil/water separation sludge
Hazardous Waste Code:	223
Waste Code Description:	Unspecified oil-containing waste
Hazardous Waste Code:	231
Waste Code Description:	Pesticide rinse water
Hazardous Waste Code:	241
Waste Code Description:	Tank bottom waste
Hazardous Waste Code:	251
Waste Code Description:	Still bottoms with halogenated organics
Hazardous Waste Code:	252
Waste Code Description:	Other still bottom waste
Hazardous Waste Code:	261
Waste Code Description:	Polychlorinated biphenyls and material containing PCB's
Hazardous Waste Code:	272
Waste Code Description:	Polymeric resin waste
Hazardous Waste Code:	281
Waste Code Description:	Adhesives
Hazardous Waste Code:	291
Waste Code Description:	Latex waste
Hazardous Waste Code:	331
Waste Code Description:	Off-specification, aged, or surplus organics
Hazardous Waste Code:	341

Waste Code Description: Organic liquids (nonsolvents) with halogens

Hazardous Waste Code: 342
Waste Code Description: Organic liquids with metals (see 121)

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 351
Waste Code Description: Organic solids with halogens

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 451
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 491
Waste Code Description: Unspecified sludge waste

Hazardous Waste Code: 511
Waste Code Description: Empty pesticide containers 30 gallons or more

Hazardous Waste Code: 512
Waste Code Description: Other empty containers 30 gallons or more

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: 611
Waste Code Description: Contaminated soil from site clean-ups

Hazardous Waste Code: 612
Waste Code Description: Household waste

Hazardous Waste Code: 721
Waste Code Description: Liquids with arsenic > 500 mg/l

Hazardous Waste Code: 722
Waste Code Description: Liquids with cadmium > 100 mg/l

Hazardous Waste Code: 723
Waste Code Description: Liquids with chromium (VI) > 500 mg/l

Hazardous Waste Code: 724
Waste Code Description: Liquids with lead > 500 mg/l

Hazardous Waste Code: 725
Waste Code Description: Liquids with mercury > 20 mg/l

Hazardous Waste Code: 726
Waste Code Description: Liquids with nickel > 134 mg/l

Hazardous Waste Code: 727
Waste Code Description: Liquids with selenium > 100 mg/l

Hazardous Waste Code: 728
Waste Code Description: Liquids with thallium > 130 mg/l

Hazardous Waste Code: 741
Waste Code Description: Liquids with halogenated organic compounds > 1000 mg/l

Hazardous Waste Code: 751

Waste Code Description: Solids or sludge with halogenated organic comp. > 1000 mg/kg

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: 792
Waste Code Description: Liquids with pH < 2 with metals

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D004
Waste Code Description: ARSENIC

Hazardous Waste Code: D005
Waste Code Description: BARIUM

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: D010
Waste Code Description: SELENIUM

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D019
Waste Code Description: CARBON TETRACHLORIDE

Hazardous Waste Code: D020
Waste Code Description: CHLORDANE

Hazardous Waste Code: D022
Waste Code Description: CHLOROFORM

Hazardous Waste Code: D027
Waste Code Description: 1,4-DICHLOROBENZENE

Hazardous Waste Code: D028
Waste Code Description: 1,2-DICHLOROETHANE

Hazardous Waste Code: D029
Waste Code Description: 1,1-DICHLOROETHYLENE

Hazardous Waste Code: D030
Waste Code Description: 2,4-DINITROTOLUENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D036

Waste Code Description: NITROBENZENE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: F037
Waste Code Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: F038
Waste Code Description: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: K048
Waste Code Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K049
Waste Code Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K050
Waste Code Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K051
Waste Code Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K052
Waste Code Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K157
Waste Code Description: WASTEWATERS (INCLUDING SCRUBBER WATERS, CONDENSER WATERS, WASHWATERS, AND SEPARATION WATERS) FROM THE PRODUCTION OF CARBAMATES AND CARBAMOYL OXIMES.

Hazardous Waste Code: P011
Waste Code Description: ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE

Hazardous Waste Code: P012
Waste Code Description: ARSENIC OXIDE AS2O3 (OR) ARSENIC TRIOXIDE

Hazardous Waste Code: P022
Waste Code Description: CARBON DISULFIDE

Hazardous Waste Code: P029
Waste Code Description: COPPER CYANIDE (OR) COPPER CYANIDE CU(CN)

Hazardous Waste Code: P068
Waste Code Description: HYDRAZINE, METHYL- (OR) METHYL HYDRAZINE

Hazardous Waste Code: P098
Waste Code Description: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

Hazardous Waste Code: P105
Waste Code Description: SODIUM AZIDE

Hazardous Waste Code: P106
Waste Code Description: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

Hazardous Waste Code: P120
Waste Code Description: VANADIUM OXIDE V2O5 (OR) VANADIUM PENTOXIDE

Hazardous Waste Code: U001
Waste Code Description: ACETALDEHYDE (I) (OR) ETHANAL (I)

Hazardous Waste Code: U002
Waste Code Description: 2-PROPANONE (I) (OR) ACETONE (I)

Hazardous Waste Code: U003
Waste Code Description: ACETONITRILE (I,T)

Hazardous Waste Code: U007

Waste Code Description: 2-PROPENAMIDE (OR) ACRYLAMIDE

Hazardous Waste Code: U012
Waste Code Description: ANILINE (I,T) (OR) BENZENAMINE (I,T)

Hazardous Waste Code: U019
Waste Code Description: BENZENE (I,T)

Hazardous Waste Code: U021
Waste Code Description: [1,1'-BIPHENYL]-4,4'-DIAMINE (OR) BENZIDINE

Hazardous Waste Code: U031
Waste Code Description: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Hazardous Waste Code: U034
Waste Code Description: ACETALDEHYDE, TRICHLORO- (OR) CHLORAL

Hazardous Waste Code: U043
Waste Code Description: ETHENE, CHLORO- (OR) VINYL CHLORIDE

Hazardous Waste Code: U044
Waste Code Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Hazardous Waste Code: U052
Waste Code Description: CRESOL (CRESYLIC ACID) (OR) PHENOL, METHYL-

Hazardous Waste Code: U056
Waste Code Description: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

Hazardous Waste Code: U057
Waste Code Description: CYCLOHEXANONE (I)

Hazardous Waste Code: U070
Waste Code Description: BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE

Hazardous Waste Code: U071
Waste Code Description: BENZENE, 1,3-DICHLORO- (OR) M-DICHLOROBENZENE

Hazardous Waste Code: U072
Waste Code Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U105
Waste Code Description: 2,4-DINITROTOLUENE (OR) BENZENE, 1-METHYL-2,4-DINITRO-

Hazardous Waste Code: U106
Waste Code Description: 2,6-DINITROTOLUENE (OR) BENZENE, 2-METHYL-1,3-DINITRO-

Hazardous Waste Code: U112
Waste Code Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Hazardous Waste Code: U117
Waste Code Description: ETHANE, 1,1'-OXYBIS-(I) (OR) ETHYL ETHER (I)

Hazardous Waste Code: U122
Waste Code Description: FORMALDEHYDE

Hazardous Waste Code: U134
Waste Code Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Hazardous Waste Code: U151
Waste Code Description: MERCURY

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U165

Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U183
Waste Code Description: BENZENE, PENTACHLORO- (OR) PENTACHLOROBENZENE

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U196
Waste Code Description: PYRIDINE

Hazardous Waste Code: U201
Waste Code Description: 1,3-BENZENEDIOL (OR) RESORCINOL

Hazardous Waste Code: U211
Waste Code Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Hazardous Waste Code: U218
Waste Code Description: ETHANETHIOAMIDE (OR) THIOACETAMIDE

Hazardous Waste Code: U219
Waste Code Description: THIOUREA

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Code: U404
Waste Code Description: ETHANAMINE, N,N-DIETHYL- (OR) TRIETHYLAMINE

Hazardous Waste Handler Details

Sequence No: 10
Receive Date: 20220211
Handler Name: SAFETY-KLEEN OF CALIFORNIA INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report update with Notification
TSD Activity: Y

Waste Code Details

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 135

Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: 172
Waste Code Description: Metal dust (see 121) and machining waste

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 222
Waste Code Description: Oil/water separation sludge

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 231
Waste Code Description: Pesticide rinse water

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: 251
Waste Code Description: Still bottoms with halogenated organics

Hazardous Waste Code: 252
Waste Code Description: Other still bottom waste

Hazardous Waste Code: 261
Waste Code Description: Polychlorinated biphenyls and material containing PCB's

Hazardous Waste Code: 272
Waste Code Description: Polymeric resin waste

Hazardous Waste Code: 281
Waste Code Description: Adhesives

Hazardous Waste Code: 291
Waste Code Description: Latex waste

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 341
Waste Code Description: Organic liquids (nonsolvents) with halogens

Hazardous Waste Code: 342
Waste Code Description: Organic liquids with metals (see 121)

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 351

Waste Code Description: Organic solids with halogens

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 451
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 491
Waste Code Description: Unspecified sludge waste

Hazardous Waste Code: 511
Waste Code Description: Empty pesticide containers 30 gallons or more

Hazardous Waste Code: 512
Waste Code Description: Other empty containers 30 gallons or more

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: 611
Waste Code Description: Contaminated soil from site clean-ups

Hazardous Waste Code: 612
Waste Code Description: Household waste

Hazardous Waste Code: 721
Waste Code Description: Liquids with arsenic > 500 mg/l

Hazardous Waste Code: 722
Waste Code Description: Liquids with cadmium > 100 mg/l

Hazardous Waste Code: 723
Waste Code Description: Liquids with chromium (VI) > 500 mg/l

Hazardous Waste Code: 724
Waste Code Description: Liquids with lead > 500 mg/l

Hazardous Waste Code: 725
Waste Code Description: Liquids with mercury > 20 mg/l

Hazardous Waste Code: 726
Waste Code Description: Liquids with nickel > 134 mg/l

Hazardous Waste Code: 727
Waste Code Description: Liquids with selenium > 100 mg/l

Hazardous Waste Code: 728
Waste Code Description: Liquids with thallium > 130 mg/l

Hazardous Waste Code: 741
Waste Code Description: Liquids with halogenated organic compounds > 1000 mg/l

Hazardous Waste Code: 751
Waste Code Description: Solids or sludge with halogenated organic comp. > 1000 mg/kg

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: 792
Waste Code Description: Liquids with pH < 2 with metals

Hazardous Waste Code: D001

Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D004
Waste Code Description: ARSENIC

Hazardous Waste Code: D005
Waste Code Description: BARIUM

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: D010
Waste Code Description: SELENIUM

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D019
Waste Code Description: CARBON TETRACHLORIDE

Hazardous Waste Code: D020
Waste Code Description: CHLORDANE

Hazardous Waste Code: D022
Waste Code Description: CHLOROFORM

Hazardous Waste Code: D027
Waste Code Description: 1,4-DICHLOROBENZENE

Hazardous Waste Code: D028
Waste Code Description: 1,2-DICHLOROETHANE

Hazardous Waste Code: D029
Waste Code Description: 1,1-DICHLOROETHYLENE

Hazardous Waste Code: D030
Waste Code Description: 2,4-DINITROTOLUENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D036
Waste Code Description: NITROBENZENE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F001

Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: F037
Waste Code Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: F038
Waste Code Description: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE

ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: K048
Waste Code Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K049
Waste Code Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K050
Waste Code Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K051
Waste Code Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K052
Waste Code Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K157
Waste Code Description: WASTEWATERS (INCLUDING SCRUBBER WATERS, CONDENSER WATERS, WASHWATERS, AND SEPARATION WATERS) FROM THE PRODUCTION OF CARBAMATES AND CARBAMOYL OXIMES.

Hazardous Waste Code: P011
Waste Code Description: ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE

Hazardous Waste Code: P012
Waste Code Description: ARSENIC OXIDE AS2O3 (OR) ARSENIC TRIOXIDE

Hazardous Waste Code: P022
Waste Code Description: CARBON DISULFIDE

Hazardous Waste Code: P029
Waste Code Description: COPPER CYANIDE (OR) COPPER CYANIDE CU(CN)

Hazardous Waste Code: P068
Waste Code Description: HYDRAZINE, METHYL- (OR) METHYL HYDRAZINE

Hazardous Waste Code: P098
Waste Code Description: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

Hazardous Waste Code: P105
Waste Code Description: SODIUM AZIDE

Hazardous Waste Code: P106
Waste Code Description: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

Hazardous Waste Code: P120
Waste Code Description: VANADIUM OXIDE V2O5 (OR) VANADIUM PENTOXIDE

Hazardous Waste Code: U001
Waste Code Description: ACETALDEHYDE (I) (OR) ETHANAL (I)

Hazardous Waste Code: U002
Waste Code Description: 2-PROPANONE (I) (OR) ACETONE (I)

Hazardous Waste Code: U003
Waste Code Description: ACETONITRILE (I,T)

Hazardous Waste Code: U007
Waste Code Description: 2-PROPENAMIDE (OR) ACRYLAMIDE

Hazardous Waste Code: U012
Waste Code Description: ANILINE (I,T) (OR) BENZENAMINE (I,T)

Hazardous Waste Code: U019
Waste Code Description: BENZENE (I,T)

Hazardous Waste Code: U021
Waste Code Description: [1,1'-BIPHENYL]-4,4'-DIAMINE (OR) BENZIDINE

Hazardous Waste Code: U031
Waste Code Description: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Hazardous Waste Code: U034
Waste Code Description: ACETALDEHYDE, TRICHLORO- (OR) CHLORAL

Hazardous Waste Code: U043
Waste Code Description: ETHENE, CHLORO- (OR) VINYL CHLORIDE

Hazardous Waste Code: U044
Waste Code Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Hazardous Waste Code: U052
Waste Code Description: CRESOL (CRESYLIC ACID) (OR) PHENOL, METHYL-

Hazardous Waste Code: U056
Waste Code Description: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

Hazardous Waste Code: U057
Waste Code Description: CYCLOHEXANONE (I)

Hazardous Waste Code: U070
Waste Code Description: BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE

Hazardous Waste Code: U071
Waste Code Description: BENZENE, 1,3-DICHLORO- (OR) M-DICHLOROBENZENE

Hazardous Waste Code: U072
Waste Code Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U105
Waste Code Description: 2,4-DINITROTOLUENE (OR) BENZENE, 1-METHYL-2,4-DINITRO-

Hazardous Waste Code: U106
Waste Code Description: 2,6-DINITROTOLUENE (OR) BENZENE, 2-METHYL-1,3-DINITRO-

Hazardous Waste Code: U112
Waste Code Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Hazardous Waste Code: U117
Waste Code Description: ETHANE, 1,1'-OXYBIS-(I) (OR) ETHYL ETHER (I)

Hazardous Waste Code: U122
Waste Code Description: FORMALDEHYDE

Hazardous Waste Code: U134
Waste Code Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Hazardous Waste Code: U151
Waste Code Description: MERCURY

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U165
Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U183
Waste Code Description: BENZENE, PENTACHLORO- (OR) PENTACHLOROBENZENE

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U196
Waste Code Description: PYRIDINE

Hazardous Waste Code: U201
Waste Code Description: 1,3-BENZENEDIOL (OR) RESORCINOL

Hazardous Waste Code: U211
Waste Code Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Hazardous Waste Code: U218
Waste Code Description: ETHANETHIOAMIDE (OR) THIOACETAMIDE

Hazardous Waste Code: U219
Waste Code Description: THIOUREA

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Code: U404
Waste Code Description: ETHANAMINE, N,N-DIETHYL- (OR) TRIETHYLAMINE

Hazardous Waste Handler Details

Sequence No: 11
Receive Date: 20230216
Handler Name: SAFETY-KLEEN OF CALIFORNIA INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report update with Notification

Waste Code Details

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: 172
Waste Code Description: Metal dust (see 121) and machining waste

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 222
Waste Code Description: Oil/water separation sludge

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 231
Waste Code Description: Pesticide rinse water

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: 251
Waste Code Description: Still bottoms with halogenated organics

Hazardous Waste Code: 252
Waste Code Description: Other still bottom waste

Hazardous Waste Code: 261
Waste Code Description: Polychlorinated biphenyls and material containing PCB's

Hazardous Waste Code: 272
Waste Code Description: Polymeric resin waste

Hazardous Waste Code: 281
Waste Code Description: Adhesives

Hazardous Waste Code: 291
Waste Code Description: Latex waste

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 341
Waste Code Description: Organic liquids (nonsolvents) with halogens

Hazardous Waste Code: 342
Waste Code Description: Organic liquids with metals (see 121)

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 351
Waste Code Description: Organic solids with halogens

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 451
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 491
Waste Code Description: Unspecified sludge waste

Hazardous Waste Code: 511
Waste Code Description: Empty pesticide containers 30 gallons or more

Hazardous Waste Code: 512
Waste Code Description: Other empty containers 30 gallons or more

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: 611
Waste Code Description: Contaminated soil from site clean-ups

Hazardous Waste Code: 612
Waste Code Description: Household waste

Hazardous Waste Code: 721
Waste Code Description: Liquids with arsenic > 500 mg/l

Hazardous Waste Code: 722
Waste Code Description: Liquids with cadmium > 100 mg/l

Hazardous Waste Code: 723
Waste Code Description: Liquids with chromium (VI) > 500 mg/l

Hazardous Waste Code: 724
Waste Code Description: Liquids with lead > 500 mg/l

Hazardous Waste Code: 725
Waste Code Description: Liquids with mercury > 20 mg/l

Hazardous Waste Code: 726
Waste Code Description: Liquids with nickel > 134 mg/l

Hazardous Waste Code: 727
Waste Code Description: Liquids with selenium > 100 mg/l

Hazardous Waste Code: 728
Waste Code Description: Liquids with thallium > 130 mg/l

Hazardous Waste Code: 741
Waste Code Description: Liquids with halogenated organic compounds > 1000 mg/l

Hazardous Waste Code: 751
Waste Code Description: Solids or sludge with halogenated organic comp. > 1000 mg/kg

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: 792
Waste Code Description: Liquids with pH < 2 with metals

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D004
Waste Code Description: ARSENIC

Hazardous Waste Code: D005
Waste Code Description: BARIUM

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: D010
Waste Code Description: SELENIUM

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D019
Waste Code Description: CARBON TETRACHLORIDE

Hazardous Waste Code: D020
Waste Code Description: CHLORDANE

Hazardous Waste Code: D022
Waste Code Description: CHLOROFORM

Hazardous Waste Code: D027
Waste Code Description: 1,4-DICHLOROBENZENE

Hazardous Waste Code: D028
Waste Code Description: 1,2-DICHLOROETHANE

Hazardous Waste Code: D029
Waste Code Description: 1,1-DICHLOROETHYLENE

Hazardous Waste Code: D030
Waste Code Description: 2,4-DINITROTOLUENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D036
Waste Code Description: NITROBENZENE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-

1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: F037
Waste Code Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: F038
Waste Code Description: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: K048
Waste Code Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K049
Waste Code Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code:	K050
Waste Code Description:	HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.
Hazardous Waste Code:	K051
Waste Code Description:	API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.
Hazardous Waste Code:	K052
Waste Code Description:	TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.
Hazardous Waste Code:	K157
Waste Code Description:	WASTEWATERS (INCLUDING SCRUBBER WATERS, CONDENSER WATERS, WASHWATERS, AND SEPARATION WATERS) FROM THE PRODUCTION OF CARBAMATES AND CARBAMOYL OXIMES.
Hazardous Waste Code:	P011
Waste Code Description:	ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE
Hazardous Waste Code:	P012
Waste Code Description:	ARSENIC OXIDE AS2O3 (OR) ARSENIC TRIOXIDE
Hazardous Waste Code:	P022
Waste Code Description:	CARBON DISULFIDE
Hazardous Waste Code:	P029
Waste Code Description:	COPPER CYANIDE (OR) COPPER CYANIDE CU(CN)
Hazardous Waste Code:	P068
Waste Code Description:	HYDRAZINE, METHYL- (OR) METHYL HYDRAZINE
Hazardous Waste Code:	P098
Waste Code Description:	POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)
Hazardous Waste Code:	P105
Waste Code Description:	SODIUM AZIDE
Hazardous Waste Code:	P106
Waste Code Description:	SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)
Hazardous Waste Code:	P120
Waste Code Description:	VANADIUM OXIDE V2O5 (OR) VANADIUM PENTOXIDE
Hazardous Waste Code:	U001
Waste Code Description:	ACETALDEHYDE (I) (OR) ETHANAL (I)
Hazardous Waste Code:	U002
Waste Code Description:	2-PROPANONE (I) (OR) ACETONE (I)
Hazardous Waste Code:	U003
Waste Code Description:	ACETONITRILE (I,T)
Hazardous Waste Code:	U007
Waste Code Description:	2-PROPENAMIDE (OR) ACRYLAMIDE
Hazardous Waste Code:	U012
Waste Code Description:	ANILINE (I,T) (OR) BENZENAMINE (I,T)
Hazardous Waste Code:	U019
Waste Code Description:	BENZENE (I,T)
Hazardous Waste Code:	U021
Waste Code Description:	[1,1'-BIPHENYL]-4,4'-DIAMINE (OR) BENZIDINE
Hazardous Waste Code:	U031
Waste Code Description:	1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)
Hazardous Waste Code:	U034
Waste Code Description:	ACETALDEHYDE, TRICHLORO- (OR) CHLORAL
Hazardous Waste Code:	U043
Waste Code Description:	ETHENE, CHLORO- (OR) VINYL CHLORIDE

Hazardous Waste Code: U044
Waste Code Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Hazardous Waste Code: U052
Waste Code Description: CRESOL (CRESYLIC ACID) (OR) PHENOL, METHYL-

Hazardous Waste Code: U056
Waste Code Description: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

Hazardous Waste Code: U057
Waste Code Description: CYCLOHEXANONE (I)

Hazardous Waste Code: U070
Waste Code Description: BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE

Hazardous Waste Code: U071
Waste Code Description: BENZENE, 1,3-DICHLORO- (OR) M-DICHLOROBENZENE

Hazardous Waste Code: U072
Waste Code Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U105
Waste Code Description: 2,4-DINITROTOLUENE (OR) BENZENE, 1-METHYL-2,4-DINITRO-

Hazardous Waste Code: U106
Waste Code Description: 2,6-DINITROTOLUENE (OR) BENZENE, 2-METHYL-1,3-DINITRO-

Hazardous Waste Code: U112
Waste Code Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Hazardous Waste Code: U117
Waste Code Description: ETHANE, 1,1'-OXYBIS-(I) (OR) ETHYL ETHER (I)

Hazardous Waste Code: U122
Waste Code Description: FORMALDEHYDE

Hazardous Waste Code: U134
Waste Code Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Hazardous Waste Code: U151
Waste Code Description: MERCURY

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U165
Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U183
Waste Code Description: BENZENE, PENTACHLORO- (OR) PENTACHLOROBENZENE

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U196
Waste Code Description: PYRIDINE

Hazardous Waste Code: U201
Waste Code Description: 1,3-BENZENEDIOL (OR) RESORCINOL

Hazardous Waste Code: U211
Waste Code Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Hazardous Waste Code: U218
Waste Code Description: ETHANETHIOAMIDE (OR) THIOACETAMIDE

Hazardous Waste Code: U219
Waste Code Description: THIOUREA

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Code: U404
Waste Code Description: ETHANAMINE, N,N-DIETHYL- (OR) TRIETHYLAMINE

Handler Summary

Importer Activity: No
Mixed Waste Generator: No
Transporter Activity: No
Transfer Facility: No
Onsite Burner: No
Smelting, Melting and Refining: No
Underground Injection Control: No
Commercial TSD: Yes
Used Oil Transporter: No
Used Oil Transfer Facility: No
Used Oil Processor: No
Used Oil Refiner: Yes
Used Oil Burner: No
Used Oil Market Burner: Yes
Used Oil Spec Marketer: Yes

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 19920227
Handler Name: EVERGREEN OIL INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 19931115
Handler Name: EVERGREEN OIL INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Implementer

Hazardous Waste Handler Details

Sequence No: 2

Receive Date: 19940317
Handler Name: EVERGREEN OIL, INC.
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report

Hazardous Waste Handler Details

Sequence No: 3
Receive Date: 19960327
Handler Name: EVERGREEN OIL, INCORPORATED
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 19961105
Handler Name: EVERGREEN OIL INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification

Hazardous Waste Handler Details

Sequence No: 4
Receive Date: 20001012
Handler Name: EVERGREEN OIL, INC.
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report

Hazardous Waste Handler Details

Sequence No: 5
Receive Date: 20020227
Handler Name: EVERGREEN OIL INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report

Hazardous Waste Handler Details

Sequence No: 6
Receive Date: 20040325
Handler Name: EVERGREEN OIL, INC.
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report

Waste Code Details

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Handler Details

Sequence No: 7
Receive Date: 20060228
Handler Name: EVERGREEN OIL, INC.
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report

Waste Code Details

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 741
Waste Code Description: Liquids with halogenated organic compounds > 1000 mg/l

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL

BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Handler Details

Sequence No: 8
Receive Date: 20080328
Handler Name: EVERGREEN OIL, INC.

Waste Code Details

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D004
Waste Code Description: ARSENIC

Hazardous Waste Code: D005
Waste Code Description: BARIUM

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: D010
Waste Code Description: SELENIUM

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D022
Waste Code Description: CHLOROFORM

Hazardous Waste Code: D035

Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: P011
Waste Code Description: ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE

Hazardous Waste Code: P098
Waste Code Description: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

Hazardous Waste Code: U001
Waste Code Description: ACETALDEHYDE (I) (OR) ETHANAL (I)

Hazardous Waste Code: U007
Waste Code Description: 2-PROPENAMIDE (OR) ACRYLAMIDE

Hazardous Waste Code: U021
Waste Code Description: [1,1'-BIPHENYL]-4,4'-DIAMINE (OR) BENZIDINE

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U122
Waste Code Description: FORMALDEHYDE

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 20100802
Handler Name: EVERGREEN OIL, INC.

Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report update with Notification

Waste Code Details

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 172
Waste Code Description: Metal dust (see 121) and machining waste

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 222
Waste Code Description: Oil/water separation sludge

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: 261
Waste Code Description: Polychlorinated biphenyls and material containing PCB's

Hazardous Waste Code: 291
Waste Code Description: Latex waste

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 343

Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 512
Waste Code Description: Other empty containers 30 gallons or more

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: 612
Waste Code Description: Household waste

Hazardous Waste Code: 721
Waste Code Description: Liquids with arsenic > 500 mg/l

Hazardous Waste Code: 741
Waste Code Description: Liquids with halogenated organic compounds > 1000 mg/l

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: 792
Waste Code Description: Liquids with pH < 2 with metals

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D004
Waste Code Description: ARSENIC

Hazardous Waste Code: D005
Waste Code Description: BARIUM

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: D010
Waste Code Description: SELENIUM

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D019
Waste Code Description: CARBON TETRACHLORIDE

Hazardous Waste Code: D027

Waste Code Description: 1,4-DICHLOROBENZENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: U002
Waste Code Description: 2-PROPANONE (I) (OR) ACETONE (I)

Hazardous Waste Code: U007
Waste Code Description: 2-PROPENAMIDE (OR) ACRYLAMIDE

Hazardous Waste Code: U072
Waste Code Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Hazardous Waste Code: U112
Waste Code Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Handler Details

Sequence No: 2
Receive Date: 20130314
Handler Name: EVERGREEN OIL, INC.
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report update with Notification

Waste Code Details

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 172
Waste Code Description: Metal dust (see 121) and machining waste

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 222
Waste Code Description: Oil/water separation sludge

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: 261
Waste Code Description: Polychlorinated biphenyls and material containing PCB's

Hazardous Waste Code: 291
Waste Code Description: Latex waste

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 512
Waste Code Description: Other empty containers 30 gallons or more

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: 612
Waste Code Description: Household waste

Hazardous Waste Code: 721
Waste Code Description: Liquids with arsenic > 500 mg/l

Hazardous Waste Code: 741
Waste Code Description: Liquids with halogenated organic compounds > 1000 mg/l

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: 792
Waste Code Description: Liquids with pH < 2 with metals

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D004
Waste Code Description: ARSENIC

Hazardous Waste Code: D005
Waste Code Description: BARIUM

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: D010
Waste Code Description: SELENIUM

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D019
Waste Code Description: CARBON TETRACHLORIDE

Hazardous Waste Code: D027
Waste Code Description: 1,4-DICHLOROBENZENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: U002
Waste Code Description: 2-PROPANONE (I) (OR) ACETONE (I)

Hazardous Waste Code: U007
Waste Code Description: 2-PROPENAMIDE (OR) ACRYLAMIDE

Hazardous Waste Code: U112
Waste Code Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Waste Code Description: MERCURY

Hazardous Waste Code: D010
Waste Code Description: SELENIUM

Hazardous Waste Code: D011

Waste Code Description:	SILVER
Hazardous Waste Code:	D018
Waste Code Description:	BENZENE
Hazardous Waste Code:	D019
Waste Code Description:	CARBON TETRACHLORIDE
Hazardous Waste Code:	D021
Waste Code Description:	CHLOROBENZENE
Hazardous Waste Code:	D022
Waste Code Description:	CHLOROFORM
Hazardous Waste Code:	D027
Waste Code Description:	1,4-DICHLOROBENZENE
Hazardous Waste Code:	D028
Waste Code Description:	1,2-DICHLOROETHANE
Hazardous Waste Code:	D029
Waste Code Description:	1,1-DICHLOROETHYLENE
Hazardous Waste Code:	D030
Waste Code Description:	2,4-DINITROTOLUENE
Hazardous Waste Code:	D035
Waste Code Description:	METHYL ETHYL KETONE
Hazardous Waste Code:	D036
Waste Code Description:	NITROBENZENE
Hazardous Waste Code:	D039
Waste Code Description:	TETRACHLOROETHYLENE
Hazardous Waste Code:	D040
Waste Code Description:	TRICHLORETHYLENE
Hazardous Waste Code:	F001
Waste Code Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	F002
Waste Code Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	F003
Waste Code Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	F004
Waste Code Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS

LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: K048
Waste Code Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K049
Waste Code Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K050
Waste Code Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K051
Waste Code Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K052
Waste Code Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: P022
Waste Code Description: CARBON DISULFIDE

Hazardous Waste Code: P105
Waste Code Description: SODIUM AZIDE

Hazardous Waste Code: U002
Waste Code Description: 2-PROPANONE (I) (OR) ACETONE (I)

Hazardous Waste Code: U003
Waste Code Description: ACETONITRILE (I,T)

Hazardous Waste Code: U019
Waste Code Description: BENZENE (I,T)

Hazardous Waste Code: U031
Waste Code Description: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Hazardous Waste Code: U041
Waste Code Description: EPICHLOROHYDRIN (OR) OXIRANE, (CHLOROMETHYL)-

Hazardous Waste Code: U056
Waste Code Description: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

Hazardous Waste Code: U057
Waste Code Description: CYCLOHEXANONE (I)

Hazardous Waste Code: U070
Waste Code Description: BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE

Hazardous Waste Code: U071
Waste Code Description: BENZENE, 1,3-DICHLORO- (OR) M-DICHLOROBENZENE

Hazardous Waste Code: U072
Waste Code Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U112
Waste Code Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Hazardous Waste Code: U122

Waste Code Description: FORMALDEHYDE

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U159
Waste Code Description: 2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)

Hazardous Waste Code: U165
Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U196
Waste Code Description: PYRIDINE

Hazardous Waste Code: U211
Waste Code Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Waste Code Details

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: 172
Waste Code Description: Metal dust (see 121) and machining waste

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 222
Waste Code Description: Oil/water separation sludge

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 231
Waste Code Description: Pesticide rinse water

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: 251
Waste Code Description: Still bottoms with halogenated organics

Hazardous Waste Code: 252
Waste Code Description: Other still bottom waste

Hazardous Waste Code: 261
Waste Code Description: Polychlorinated biphenyls and material containing PCB's

Hazardous Waste Code: 272
Waste Code Description: Polymeric resin waste

Hazardous Waste Code: 281
Waste Code Description: Adhesives

Hazardous Waste Code: 291
Waste Code Description: Latex waste

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 341
Waste Code Description: Organic liquids (nonsolvents) with halogens

Hazardous Waste Code: 342
Waste Code Description: Organic liquids with metals (see 121)

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 351
Waste Code Description: Organic solids with halogens

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 451
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 491
Waste Code Description: Unspecified sludge waste

Hazardous Waste Code: 511
Waste Code Description: Empty pesticide containers 30 gallons or more

Hazardous Waste Code: 512
Waste Code Description: Other empty containers 30 gallons or more

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: 611
Waste Code Description: Contaminated soil from site clean-ups

Hazardous Waste Code: 612
Waste Code Description: Household waste

Hazardous Waste Code: 721
Waste Code Description: Liquids with arsenic > 500 mg/l

Hazardous Waste Code: 722
Waste Code Description: Liquids with cadmium > 100 mg/l

Hazardous Waste Code: 723
Waste Code Description: Liquids with chromium (VI) > 500 mg/l

Hazardous Waste Code: 724
Waste Code Description: Liquids with lead > 500 mg/l

Hazardous Waste Code: 725
Waste Code Description: Liquids with mercury > 20 mg/l

Hazardous Waste Code: 726
Waste Code Description: Liquids with nickel > 134 mg/l

Hazardous Waste Code: 727
Waste Code Description: Liquids with selenium > 100 mg/l

Hazardous Waste Code: 728
Waste Code Description: Liquids with thallium > 130 mg/l

Hazardous Waste Code: 741
Waste Code Description: Liquids with halogenated organic compounds > 1000 mg/l

Hazardous Waste Code: 751
Waste Code Description: Solids or sludge with halogenated organic comp. > 1000 mg/kg

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: 792
Waste Code Description: Liquids with pH < 2 with metals

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D004
Waste Code Description: ARSENIC

Hazardous Waste Code: D005
Waste Code Description: BARIUM

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: D010
Waste Code Description: SELENIUM

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D019
Waste Code Description: CARBON TETRACHLORIDE

Hazardous Waste Code: D020
Waste Code Description: CHLORDANE

Hazardous Waste Code: D022
Waste Code Description: CHLOROFORM

Hazardous Waste Code: D027
Waste Code Description: 1,4-DICHLOROBENZENE

Hazardous Waste Code: D028
Waste Code Description: 1,2-DICHLOROETHANE

Hazardous Waste Code: D029
Waste Code Description: 1,1-DICHLOROETHYLENE

Hazardous Waste Code: D030
Waste Code Description: 2,4-DINITROTOLUENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D036
Waste Code Description: NITROBENZENE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code:	F002
Waste Code Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	F003
Waste Code Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	F004
Waste Code Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	F005
Waste Code Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	F006
Waste Code Description:	WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.
Hazardous Waste Code:	F037
Waste Code Description:	PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.
Hazardous Waste Code:	F038
Waste Code Description:	PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.
Hazardous Waste Code:	K048
Waste Code Description:	DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code:	K049
Waste Code Description:	SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.
Hazardous Waste Code:	K050
Waste Code Description:	HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.
Hazardous Waste Code:	K051
Waste Code Description:	API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.
Hazardous Waste Code:	K052
Waste Code Description:	TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.
Hazardous Waste Code:	K157
Waste Code Description:	WASTEWATERS (INCLUDING SCRUBBER WATERS, CONDENSER WATERS, WASHWATERS, AND SEPARATION WATERS) FROM THE PRODUCTION OF CARBAMATES AND CARBAMOYL OXIMES.
Hazardous Waste Code:	P011
Waste Code Description:	ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE
Hazardous Waste Code:	P012
Waste Code Description:	ARSENIC OXIDE AS2O3 (OR) ARSENIC TRIOXIDE
Hazardous Waste Code:	P022
Waste Code Description:	CARBON DISULFIDE
Hazardous Waste Code:	P029
Waste Code Description:	COPPER CYANIDE (OR) COPPER CYANIDE CU(CN)
Hazardous Waste Code:	P068
Waste Code Description:	HYDRAZINE, METHYL- (OR) METHYL HYDRAZINE
Hazardous Waste Code:	P098
Waste Code Description:	POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)
Hazardous Waste Code:	P105
Waste Code Description:	SODIUM AZIDE
Hazardous Waste Code:	P106
Waste Code Description:	SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)
Hazardous Waste Code:	P120
Waste Code Description:	VANADIUM OXIDE V2O5 (OR) VANADIUM PENTOXIDE
Hazardous Waste Code:	U001
Waste Code Description:	ACETALDEHYDE (I) (OR) ETHANAL (I)
Hazardous Waste Code:	U002
Waste Code Description:	2-PROPANONE (I) (OR) ACETONE (I)
Hazardous Waste Code:	U003
Waste Code Description:	ACETONITRILE (I,T)
Hazardous Waste Code:	U007
Waste Code Description:	2-PROPENAMIDE (OR) ACRYLAMIDE
Hazardous Waste Code:	U012
Waste Code Description:	ANILINE (I,T) (OR) BENZENAMINE (I,T)
Hazardous Waste Code:	U019
Waste Code Description:	BENZENE (I,T)
Hazardous Waste Code:	U021
Waste Code Description:	[1,1'-BIPHENYL]-4,4'-DIAMINE (OR) BENZIDINE
Hazardous Waste Code:	U031
Waste Code Description:	1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)
Hazardous Waste Code:	U034
Waste Code Description:	ACETALDEHYDE, TRICHLORO- (OR) CHLORAL

Hazardous Waste Code: U041
Waste Code Description: EPICHLOROHYDRIN (OR) OXIRANE, (CHLOROMETHYL)-

Hazardous Waste Code: U043
Waste Code Description: ETHENE, CHLORO- (OR) VINYL CHLORIDE

Hazardous Waste Code: U044
Waste Code Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Hazardous Waste Code: U052
Waste Code Description: CRESOL (CRESYLIC ACID) (OR) PHENOL, METHYL-

Hazardous Waste Code: U056
Waste Code Description: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

Hazardous Waste Code: U057
Waste Code Description: CYCLOHEXANONE (I)

Hazardous Waste Code: U070
Waste Code Description: BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE

Hazardous Waste Code: U071
Waste Code Description: BENZENE, 1,3-DICHLORO- (OR) M-DICHLOROBENZENE

Hazardous Waste Code: U072
Waste Code Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U105
Waste Code Description: 2,4-DINITROTOLUENE (OR) BENZENE, 1-METHYL-2,4-DINITRO-

Hazardous Waste Code: U106
Waste Code Description: 2,6-DINITROTOLUENE (OR) BENZENE, 2-METHYL-1,3-DINITRO-

Hazardous Waste Code: U112
Waste Code Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Hazardous Waste Code: U117
Waste Code Description: ETHANE, 1,1'-OXYBIS-(I) (OR) ETHYL ETHER (I)

Hazardous Waste Code: U122
Waste Code Description: FORMALDEHYDE

Hazardous Waste Code: U134
Waste Code Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Hazardous Waste Code: U151
Waste Code Description: MERCURY

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U165
Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U183
Waste Code Description: BENZENE, PENTACHLORO- (OR) PENTACHLOROBENZENE

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U196
Waste Code Description: PYRIDINE

Hazardous Waste Code: U201
Waste Code Description: 1,3-BENZENEDIOL (OR) RESORCINOL

Hazardous Waste Code: U211
Waste Code Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Hazardous Waste Code: U218
Waste Code Description: ETHANETHIOAMIDE (OR) THIOACETAMIDE

Hazardous Waste Code: U219
Waste Code Description: THIOUREA

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Code: U404
Waste Code Description: ETHANAMINE, N,N-DIETHYL- (OR) TRIETHYLAMINE

Hazardous Waste Handler Details

Sequence No: 6
Receive Date: 20160301
Handler Name: SAFETY-KLEEN OF CALIFORNIA
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report update with Notification

Waste Code Details

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 162
Waste Code Description: Other spent catalyst

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 222
Waste Code Description: Oil/water separation sludge

Hazardous Waste Code: 223

Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: 252
Waste Code Description: Other still bottom waste

Hazardous Waste Code: 261
Waste Code Description: Polychlorinated biphenyls and material containing PCB's

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 342
Waste Code Description: Organic liquids with metals (see 121)

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 512
Waste Code Description: Other empty containers 30 gallons or more

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: 612
Waste Code Description: Household waste

Hazardous Waste Code: 731
Waste Code Description: Liquids with polychlorinated biphenyls > 50 mg/l

Hazardous Waste Code: 741
Waste Code Description: Liquids with halogenated organic compounds > 1000 mg/l

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D004
Waste Code Description: ARSENIC

Hazardous Waste Code: D005
Waste Code Description: BARIUM

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: D010
Waste Code Description: SELENIUM

Hazardous Waste Code: D011

Waste Code Description: SILVER

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D019
Waste Code Description: CARBON TETRACHLORIDE

Hazardous Waste Code: D020
Waste Code Description: CHLORDANE

Hazardous Waste Code: D021
Waste Code Description: CHLOROBENZENE

Hazardous Waste Code: D022
Waste Code Description: CHLOROFORM

Hazardous Waste Code: D027
Waste Code Description: 1,4-DICHLOROBENZENE

Hazardous Waste Code: D028
Waste Code Description: 1,2-DICHLOROETHANE

Hazardous Waste Code: D029
Waste Code Description: 1,1-DICHLOROETHYLENE

Hazardous Waste Code: D030
Waste Code Description: 2,4-DINITROTOLUENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D036
Waste Code Description: NITROBENZENE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND

NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: K048
Waste Code Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K049
Waste Code Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K050
Waste Code Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K051
Waste Code Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K052
Waste Code Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: U002
Waste Code Description: 2-PROPANONE (I) (OR) ACETONE (I)

Hazardous Waste Code: U003
Waste Code Description: ACETONITRILE (I,T)

Hazardous Waste Code: U019
Waste Code Description: BENZENE (I,T)

Hazardous Waste Code: U031
Waste Code Description: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Hazardous Waste Code: U041
Waste Code Description: EPICHLOROHYDRIN (OR) OXIRANE, (CHLOROMETHYL)-

Hazardous Waste Code: U044
Waste Code Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Hazardous Waste Code: U056
Waste Code Description: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

Hazardous Waste Code: U057
Waste Code Description: CYCLOHEXANONE (I)

Hazardous Waste Code: U070
Waste Code Description: BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE

Hazardous Waste Code: U071
Waste Code Description: BENZENE, 1,3-DICHLORO- (OR) M-DICHLOROBENZENE

Hazardous Waste Code: U072
Waste Code Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U112
Waste Code Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Hazardous Waste Code: U154

Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U159
Waste Code Description: 2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)

Hazardous Waste Code: U165
Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U196
Waste Code Description: PYRIDINE

Hazardous Waste Code: U211
Waste Code Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Handler Details

Sequence No: 7
Receive Date: 20180213
Handler Name: SAFETY-KLEEN OF CALIFORNIA INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report update with Notification

Waste Code Details

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: 172
Waste Code Description: Metal dust (see 121) and machining waste

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 222
Waste Code Description: Oil/water separation sludge

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 231
Waste Code Description: Pesticide rinse water

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: 251
Waste Code Description: Still bottoms with halogenated organics

Hazardous Waste Code: 252
Waste Code Description: Other still bottom waste

Hazardous Waste Code: 261
Waste Code Description: Polychlorinated biphenyls and material containing PCB's

Hazardous Waste Code: 272
Waste Code Description: Polymeric resin waste

Hazardous Waste Code: 281
Waste Code Description: Adhesives

Hazardous Waste Code: 291
Waste Code Description: Latex waste

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 341
Waste Code Description: Organic liquids (nonsolvents) with halogens

Hazardous Waste Code: 342
Waste Code Description: Organic liquids with metals (see 121)

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 351
Waste Code Description: Organic solids with halogens

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 451
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 491
Waste Code Description: Unspecified sludge waste

Hazardous Waste Code: 511
Waste Code Description: Empty pesticide containers 30 gallons or more

Hazardous Waste Code: 512
Waste Code Description: Other empty containers 30 gallons or more

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: 611
Waste Code Description: Contaminated soil from site clean-ups

Hazardous Waste Code: 612
Waste Code Description: Household waste

Hazardous Waste Code: 721
Waste Code Description: Liquids with arsenic > 500 mg/l

Hazardous Waste Code: 722
Waste Code Description: Liquids with cadmium > 100 mg/l

Hazardous Waste Code: 723
Waste Code Description: Liquids with chromium (VI) > 500 mg/l

Hazardous Waste Code: 724
Waste Code Description: Liquids with lead > 500 mg/l

Hazardous Waste Code: 725
Waste Code Description: Liquids with mercury > 20 mg/l

Hazardous Waste Code: 726
Waste Code Description: Liquids with nickel > 134 mg/l

Hazardous Waste Code: 727
Waste Code Description: Liquids with selenium > 100 mg/l

Hazardous Waste Code: 728
Waste Code Description: Liquids with thallium > 130 mg/l

Hazardous Waste Code: 741
Waste Code Description: Liquids with halogenated organic compounds > 1000 mg/l

Hazardous Waste Code: 751
Waste Code Description: Solids or sludge with halogenated organic comp. > 1000 mg/kg

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: 792
Waste Code Description: Liquids with pH < 2 with metals

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D004
Waste Code Description: ARSENIC

Hazardous Waste Code: D005
Waste Code Description: BARIUM

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: D010
Waste Code Description: SELENIUM

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D019
Waste Code Description: CARBON TETRACHLORIDE

Hazardous Waste Code: D020
Waste Code Description: CHLORDANE

Hazardous Waste Code: D022
Waste Code Description: CHLOROFORM

Hazardous Waste Code: D027
Waste Code Description: 1,4-DICHLOROBENZENE

Hazardous Waste Code: D028
Waste Code Description: 1,2-DICHLOROETHANE

Hazardous Waste Code: D029
Waste Code Description: 1,1-DICHLOROETHYLENE

Hazardous Waste Code: D030
Waste Code Description: 2,4-DINITROTOLUENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D036
Waste Code Description: NITROBENZENE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-

1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: F037
Waste Code Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: F038
Waste Code Description: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: K048
Waste Code Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K049
Waste Code Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code:	K050
Waste Code Description:	HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.
Hazardous Waste Code:	K051
Waste Code Description:	API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.
Hazardous Waste Code:	K052
Waste Code Description:	TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.
Hazardous Waste Code:	K157
Waste Code Description:	WASTEWATERS (INCLUDING SCRUBBER WATERS, CONDENSER WATERS, WASHWATERS, AND SEPARATION WATERS) FROM THE PRODUCTION OF CARBAMATES AND CARBAMOYL OXIMES.
Hazardous Waste Code:	P011
Waste Code Description:	ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE
Hazardous Waste Code:	P012
Waste Code Description:	ARSENIC OXIDE AS2O3 (OR) ARSENIC TRIOXIDE
Hazardous Waste Code:	P022
Waste Code Description:	CARBON DISULFIDE
Hazardous Waste Code:	P029
Waste Code Description:	COPPER CYANIDE (OR) COPPER CYANIDE CU(CN)
Hazardous Waste Code:	P068
Waste Code Description:	HYDRAZINE, METHYL- (OR) METHYL HYDRAZINE
Hazardous Waste Code:	P105
Waste Code Description:	SODIUM AZIDE
Hazardous Waste Code:	P106
Waste Code Description:	SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)
Hazardous Waste Code:	P120
Waste Code Description:	VANADIUM OXIDE V2O5 (OR) VANADIUM PENTOXIDE
Hazardous Waste Code:	U001
Waste Code Description:	ACETALDEHYDE (I) (OR) ETHANAL (I)
Hazardous Waste Code:	U002
Waste Code Description:	2-PROPANONE (I) (OR) ACETONE (I)
Hazardous Waste Code:	U003
Waste Code Description:	ACETONITRILE (I,T)
Hazardous Waste Code:	U007
Waste Code Description:	2-PROPENAMIDE (OR) ACRYLAMIDE
Hazardous Waste Code:	U012
Waste Code Description:	ANILINE (I,T) (OR) BENZENAMINE (I,T)
Hazardous Waste Code:	U019
Waste Code Description:	BENZENE (I,T)
Hazardous Waste Code:	U021
Waste Code Description:	[1,1'-BIPHENYL]-4,4'-DIAMINE (OR) BENZIDINE
Hazardous Waste Code:	U031
Waste Code Description:	1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)
Hazardous Waste Code:	U034
Waste Code Description:	ACETALDEHYDE, TRICHLORO- (OR) CHLORAL
Hazardous Waste Code:	U043
Waste Code Description:	ETHENE, CHLORO- (OR) VINYL CHLORIDE
Hazardous Waste Code:	U044
Waste Code Description:	CHLOROFORM (OR) METHANE, TRICHLORO-

Hazardous Waste Code: U052
Waste Code Description: CRESOL (CRESYLIC ACID) (OR) PHENOL, METHYL-

Hazardous Waste Code: U056
Waste Code Description: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

Hazardous Waste Code: U057
Waste Code Description: CYCLOHEXANONE (I)

Hazardous Waste Code: U070
Waste Code Description: BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE

Hazardous Waste Code: U071
Waste Code Description: BENZENE, 1,3-DICHLORO- (OR) M-DICHLOROBENZENE

Hazardous Waste Code: U072
Waste Code Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U105
Waste Code Description: 2,4-DINITROTOLUENE (OR) BENZENE, 1-METHYL-2,4-DINITRO-

Hazardous Waste Code: U106
Waste Code Description: 2,6-DINITROTOLUENE (OR) BENZENE, 2-METHYL-1,3-DINITRO-

Hazardous Waste Code: U112
Waste Code Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Hazardous Waste Code: U117
Waste Code Description: ETHANE, 1,1'-OXYBIS-(I) (OR) ETHYL ETHER (I)

Hazardous Waste Code: U122
Waste Code Description: FORMALDEHYDE

Hazardous Waste Code: U134
Waste Code Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Hazardous Waste Code: U151
Waste Code Description: MERCURY

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U165
Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U183
Waste Code Description: BENZENE, PENTACHLORO- (OR) PENTACHLOROBENZENE

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U196
Waste Code Description: PYRIDINE

Hazardous Waste Code: U201
Waste Code Description: 1,3-BENZENEDIOL (OR) RESORCINOL

Hazardous Waste Code: U211
Waste Code Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Hazardous Waste Code: U218
Waste Code Description: ETHANETHIOAMIDE (OR) THIOACETAMIDE

Hazardous Waste Code: U219
Waste Code Description: THIOUREA

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Code: U404
Waste Code Description: ETHANAMINE, N,N-DIETHYL- (OR) TRIETHYLAMINE

Hazardous Waste Handler Details

Sequence No: 8
Receive Date: 20200218
Handler Name: SAFETY-KLEEN OF CALIFORNIA INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report update with Notification

Waste Code Details

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: 172
Waste Code Description: Metal dust (see 121) and machining waste

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 222
Waste Code Description: Oil/water separation sludge

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 231
Waste Code Description: Pesticide rinse water

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: 251
Waste Code Description: Still bottoms with halogenated organics

Hazardous Waste Code: 252
Waste Code Description: Other still bottom waste

Hazardous Waste Code: 261
Waste Code Description: Polychlorinated biphenyls and material containing PCB's

Hazardous Waste Code: 272
Waste Code Description: Polymeric resin waste

Hazardous Waste Code: 281
Waste Code Description: Adhesives

Hazardous Waste Code: 291
Waste Code Description: Latex waste

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 341
Waste Code Description: Organic liquids (nonsolvents) with halogens

Hazardous Waste Code: 342
Waste Code Description: Organic liquids with metals (see 121)

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 351
Waste Code Description: Organic solids with halogens

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 451
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 491
Waste Code Description: Unspecified sludge waste

Hazardous Waste Code: 511
Waste Code Description: Empty pesticide containers 30 gallons or more

Hazardous Waste Code: 512
Waste Code Description: Other empty containers 30 gallons or more

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: 611
Waste Code Description: Contaminated soil from site clean-ups

Hazardous Waste Code: 612
Waste Code Description: Household waste

Hazardous Waste Code: 721
Waste Code Description: Liquids with arsenic > 500 mg/l

Hazardous Waste Code: 722
Waste Code Description: Liquids with cadmium > 100 mg/l

Hazardous Waste Code: 723
Waste Code Description: Liquids with chromium (VI) > 500 mg/l

Hazardous Waste Code: 724
Waste Code Description: Liquids with lead > 500 mg/l

Hazardous Waste Code: 725
Waste Code Description: Liquids with mercury > 20 mg/l

Hazardous Waste Code: 726
Waste Code Description: Liquids with nickel > 134 mg/l

Hazardous Waste Code: 727
Waste Code Description: Liquids with selenium > 100 mg/l

Hazardous Waste Code: 728
Waste Code Description: Liquids with thallium > 130 mg/l

Hazardous Waste Code: 741
Waste Code Description: Liquids with halogenated organic compounds > 1000 mg/l

Hazardous Waste Code: 751
Waste Code Description: Solids or sludge with halogenated organic comp. > 1000 mg/kg

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: 792
Waste Code Description: Liquids with pH < 2 with metals

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D004
Waste Code Description: ARSENIC

Hazardous Waste Code: D005
Waste Code Description: BARIUM

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: D010
Waste Code Description: SELENIUM

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D019
Waste Code Description: CARBON TETRACHLORIDE

Hazardous Waste Code: D020
Waste Code Description: CHLORDANE

Hazardous Waste Code: D022
Waste Code Description: CHLOROFORM

Hazardous Waste Code: D027
Waste Code Description: 1,4-DICHLOROBENZENE

Hazardous Waste Code: D028
Waste Code Description: 1,2-DICHLOROETHANE

Hazardous Waste Code: D029
Waste Code Description: 1,1-DICHLOROETHYLENE

Hazardous Waste Code: D030
Waste Code Description: 2,4-DINITROTOLUENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D036
Waste Code Description: NITROBENZENE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT

SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: F037
Waste Code Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: F038
Waste Code Description: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: K048
Waste Code Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K049
Waste Code Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K050
Waste Code Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K051
Waste Code Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K052
Waste Code Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K157
Waste Code Description: WASTEWATERS (INCLUDING SCRUBBER WATERS, CONDENSER WATERS, WASHWATERS, AND SEPARATION WATERS) FROM THE PRODUCTION OF CARBAMATES AND CARBAMOYL OXIMES.

Hazardous Waste Code: P011

Waste Code Description:	ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE
Hazardous Waste Code:	P012
Waste Code Description:	ARSENIC OXIDE AS2O3 (OR) ARSENIC TRIOXIDE
Hazardous Waste Code:	P022
Waste Code Description:	CARBON DISULFIDE
Hazardous Waste Code:	P029
Waste Code Description:	COPPER CYANIDE (OR) COPPER CYANIDE CU(CN)
Hazardous Waste Code:	P068
Waste Code Description:	HYDRAZINE, METHYL- (OR) METHYL HYDRAZINE
Hazardous Waste Code:	P098
Waste Code Description:	POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)
Hazardous Waste Code:	P105
Waste Code Description:	SODIUM AZIDE
Hazardous Waste Code:	P106
Waste Code Description:	SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)
Hazardous Waste Code:	P120
Waste Code Description:	VANADIUM OXIDE V2O5 (OR) VANADIUM PENTOXIDE
Hazardous Waste Code:	U001
Waste Code Description:	ACETALDEHYDE (I) (OR) ETHANAL (I)
Hazardous Waste Code:	U002
Waste Code Description:	2-PROPANONE (I) (OR) ACETONE (I)
Hazardous Waste Code:	U003
Waste Code Description:	ACETONITRILE (I,T)
Hazardous Waste Code:	U007
Waste Code Description:	2-PROPENAMIDE (OR) ACRYLAMIDE
Hazardous Waste Code:	U012
Waste Code Description:	ANILINE (I,T) (OR) BENZENAMINE (I,T)
Hazardous Waste Code:	U019
Waste Code Description:	BENZENE (I,T)
Hazardous Waste Code:	U021
Waste Code Description:	[1,1'-BIPHENYL]-4,4'-DIAMINE (OR) BENZIDINE
Hazardous Waste Code:	U031
Waste Code Description:	1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)
Hazardous Waste Code:	U034
Waste Code Description:	ACETALDEHYDE, TRICHLORO- (OR) CHLORAL
Hazardous Waste Code:	U043
Waste Code Description:	ETHENE, CHLORO- (OR) VINYL CHLORIDE
Hazardous Waste Code:	U044
Waste Code Description:	CHLOROFORM (OR) METHANE, TRICHLORO-
Hazardous Waste Code:	U052
Waste Code Description:	CRESOL (CRESYLIC ACID) (OR) PHENOL, METHYL-
Hazardous Waste Code:	U056
Waste Code Description:	BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)
Hazardous Waste Code:	U057
Waste Code Description:	CYCLOHEXANONE (I)
Hazardous Waste Code:	U070

Waste Code Description: BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE

Hazardous Waste Code: U071
Waste Code Description: BENZENE, 1,3-DICHLORO- (OR) M-DICHLOROBENZENE

Hazardous Waste Code: U072
Waste Code Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U105
Waste Code Description: 2,4-DINITROTOLUENE (OR) BENZENE, 1-METHYL-2,4-DINITRO-

Hazardous Waste Code: U106
Waste Code Description: 2,6-DINITROTOLUENE (OR) BENZENE, 2-METHYL-1,3-DINITRO-

Hazardous Waste Code: U112
Waste Code Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Hazardous Waste Code: U117
Waste Code Description: ETHANE, 1,1'-OXYBIS-(I) (OR) ETHYL ETHER (I)

Hazardous Waste Code: U122
Waste Code Description: FORMALDEHYDE

Hazardous Waste Code: U134
Waste Code Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Hazardous Waste Code: U151
Waste Code Description: MERCURY

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U165
Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U183
Waste Code Description: BENZENE, PENTACHLORO- (OR) PENTACHLOROBENZENE

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U196
Waste Code Description: PYRIDINE

Hazardous Waste Code: U201
Waste Code Description: 1,3-BENZENEDIOL (OR) RESORCINOL

Hazardous Waste Code: U211
Waste Code Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Hazardous Waste Code: U218
Waste Code Description: ETHANETHIOAMIDE (OR) THIOACETAMIDE

Hazardous Waste Code: U219
Waste Code Description: THIOUREA

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Code: U404

Waste Code Description: ETHANAMINE, N,N-DIETHYL- (OR) TRIETHYLAMINE

Hazardous Waste Handler Details

Sequence No: 9
Receive Date: 20210212
Handler Name: SAFETY-KLEEN OF CALIFORNIA INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report update with Notification

Waste Code Details

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: 172
Waste Code Description: Metal dust (see 121) and machining waste

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 222
Waste Code Description: Oil/water separation sludge

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 231
Waste Code Description: Pesticide rinse water

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: 251
Waste Code Description: Still bottoms with halogenated organics

Hazardous Waste Code: 252
Waste Code Description: Other still bottom waste

Hazardous Waste Code: 261
Waste Code Description: Polychlorinated biphenyls and material containing PCB's

Hazardous Waste Code: 272
Waste Code Description: Polymeric resin waste

Hazardous Waste Code: 281
Waste Code Description: Adhesives

Hazardous Waste Code: 291
Waste Code Description: Latex waste

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 341
Waste Code Description: Organic liquids (nonsolvents) with halogens

Hazardous Waste Code: 342
Waste Code Description: Organic liquids with metals (see 121)

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 351
Waste Code Description: Organic solids with halogens

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 451
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 491
Waste Code Description: Unspecified sludge waste

Hazardous Waste Code: 511
Waste Code Description: Empty pesticide containers 30 gallons or more

Hazardous Waste Code: 512
Waste Code Description: Other empty containers 30 gallons or more

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: 611
Waste Code Description: Contaminated soil from site clean-ups

Hazardous Waste Code: 612
Waste Code Description: Household waste

Hazardous Waste Code: 721
Waste Code Description: Liquids with arsenic > 500 mg/l

Hazardous Waste Code:	722
Waste Code Description:	Liquids with cadmium > 100 mg/l
Hazardous Waste Code:	723
Waste Code Description:	Liquids with chromium (VI) > 500 mg/l
Hazardous Waste Code:	724
Waste Code Description:	Liquids with lead > 500 mg/l
Hazardous Waste Code:	725
Waste Code Description:	Liquids with mercury > 20 mg/l
Hazardous Waste Code:	726
Waste Code Description:	Liquids with nickel > 134 mg/l
Hazardous Waste Code:	727
Waste Code Description:	Liquids with selenium > 100 mg/l
Hazardous Waste Code:	728
Waste Code Description:	Liquids with thallium > 130 mg/l
Hazardous Waste Code:	741
Waste Code Description:	Liquids with halogenated organic compounds > 1000 mg/l
Hazardous Waste Code:	751
Waste Code Description:	Solids or sludge with halogenated organic comp. > 1000 mg/kg
Hazardous Waste Code:	791
Waste Code Description:	Liquids with pH < 2
Hazardous Waste Code:	792
Waste Code Description:	Liquids with pH < 2 with metals
Hazardous Waste Code:	D001
Waste Code Description:	IGNITABLE WASTE
Hazardous Waste Code:	D002
Waste Code Description:	CORROSIVE WASTE
Hazardous Waste Code:	D003
Waste Code Description:	REACTIVE WASTE
Hazardous Waste Code:	D004
Waste Code Description:	ARSENIC
Hazardous Waste Code:	D005
Waste Code Description:	BARIUM
Hazardous Waste Code:	D006
Waste Code Description:	CADMIUM
Hazardous Waste Code:	D007
Waste Code Description:	CHROMIUM
Hazardous Waste Code:	D008
Waste Code Description:	LEAD
Hazardous Waste Code:	D009
Waste Code Description:	MERCURY
Hazardous Waste Code:	D010
Waste Code Description:	SELENIUM
Hazardous Waste Code:	D011
Waste Code Description:	SILVER
Hazardous Waste Code:	D018
Waste Code Description:	BENZENE

Hazardous Waste Code: D019
Waste Code Description: CARBON TETRACHLORIDE

Hazardous Waste Code: D020
Waste Code Description: CHLORDANE

Hazardous Waste Code: D022
Waste Code Description: CHLOROFORM

Hazardous Waste Code: D027
Waste Code Description: 1,4-DICHLOROBENZENE

Hazardous Waste Code: D028
Waste Code Description: 1,2-DICHLOROETHANE

Hazardous Waste Code: D029
Waste Code Description: 1,1-DICHLOROETHYLENE

Hazardous Waste Code: D030
Waste Code Description: 2,4-DINITROTOLUENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D036
Waste Code Description: NITROBENZENE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005

Waste Code Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	F006
Waste Code Description:	WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.
Hazardous Waste Code:	F037
Waste Code Description:	PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.
Hazardous Waste Code:	F038
Waste Code Description:	PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.
Hazardous Waste Code:	K048
Waste Code Description:	DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.
Hazardous Waste Code:	K049
Waste Code Description:	SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.
Hazardous Waste Code:	K050
Waste Code Description:	HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.
Hazardous Waste Code:	K051
Waste Code Description:	API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.
Hazardous Waste Code:	K052
Waste Code Description:	TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.
Hazardous Waste Code:	K157
Waste Code Description:	WASTEWATERS (INCLUDING SCRUBBER WATERS, CONDENSER WATERS, WASHWATERS, AND SEPARATION WATERS) FROM THE PRODUCTION OF CARBAMATES AND CARBAMOYL OXIMES.
Hazardous Waste Code:	P011
Waste Code Description:	ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE
Hazardous Waste Code:	P012
Waste Code Description:	ARSENIC OXIDE AS2O3 (OR) ARSENIC TRIOXIDE
Hazardous Waste Code:	P022
Waste Code Description:	CARBON DISULFIDE
Hazardous Waste Code:	P029
Waste Code Description:	COPPER CYANIDE (OR) COPPER CYANIDE CU(CN)

Hazardous Waste Code:	P068
Waste Code Description:	HYDRAZINE, METHYL- (OR) METHYL HYDRAZINE
Hazardous Waste Code:	P098
Waste Code Description:	POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)
Hazardous Waste Code:	P105
Waste Code Description:	SODIUM AZIDE
Hazardous Waste Code:	P106
Waste Code Description:	SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)
Hazardous Waste Code:	P120
Waste Code Description:	VANADIUM OXIDE V2O5 (OR) VANADIUM PENTOXIDE
Hazardous Waste Code:	U001
Waste Code Description:	ACETALDEHYDE (I) (OR) ETHANAL (I)
Hazardous Waste Code:	U002
Waste Code Description:	2-PROPANONE (I) (OR) ACETONE (I)
Hazardous Waste Code:	U003
Waste Code Description:	ACETONITRILE (I,T)
Hazardous Waste Code:	U007
Waste Code Description:	2-PROPENAMIDE (OR) ACRYLAMIDE
Hazardous Waste Code:	U012
Waste Code Description:	ANILINE (I,T) (OR) BENZENAMINE (I,T)
Hazardous Waste Code:	U019
Waste Code Description:	BENZENE (I,T)
Hazardous Waste Code:	U021
Waste Code Description:	[1,1'-BIPHENYL]-4,4'-DIAMINE (OR) BENZIDINE
Hazardous Waste Code:	U031
Waste Code Description:	1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)
Hazardous Waste Code:	U034
Waste Code Description:	ACETALDEHYDE, TRICHLORO- (OR) CHLORAL
Hazardous Waste Code:	U043
Waste Code Description:	ETHENE, CHLORO- (OR) VINYL CHLORIDE
Hazardous Waste Code:	U044
Waste Code Description:	CHLOROFORM (OR) METHANE, TRICHLORO-
Hazardous Waste Code:	U052
Waste Code Description:	CRESOL (CRESYLIC ACID) (OR) PHENOL, METHYL-
Hazardous Waste Code:	U056
Waste Code Description:	BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)
Hazardous Waste Code:	U057
Waste Code Description:	CYCLOHEXANONE (I)
Hazardous Waste Code:	U070
Waste Code Description:	BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE
Hazardous Waste Code:	U071
Waste Code Description:	BENZENE, 1,3-DICHLORO- (OR) M-DICHLOROBENZENE
Hazardous Waste Code:	U072
Waste Code Description:	BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE
Hazardous Waste Code:	U080
Waste Code Description:	METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U105
Waste Code Description: 2,4-DINITROTOLUENE (OR) BENZENE, 1-METHYL-2,4-DINITRO-

Hazardous Waste Code: U106
Waste Code Description: 2,6-DINITROTOLUENE (OR) BENZENE, 2-METHYL-1,3-DINITRO-

Hazardous Waste Code: U112
Waste Code Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Hazardous Waste Code: U117
Waste Code Description: ETHANE, 1,1'-OXYBIS-(I) (OR) ETHYL ETHER (I)

Hazardous Waste Code: U122
Waste Code Description: FORMALDEHYDE

Hazardous Waste Code: U134
Waste Code Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Hazardous Waste Code: U151
Waste Code Description: MERCURY

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U165
Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U183
Waste Code Description: BENZENE, PENTACHLORO- (OR) PENTACHLOROBENZENE

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U196
Waste Code Description: PYRIDINE

Hazardous Waste Code: U201
Waste Code Description: 1,3-BENZENEDIOL (OR) RESORCINOL

Hazardous Waste Code: U211
Waste Code Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Hazardous Waste Code: U218
Waste Code Description: ETHANETHIOAMIDE (OR) THIOACETAMIDE

Hazardous Waste Code: U219
Waste Code Description: THIOUREA

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Code: U404
Waste Code Description: ETHANAMINE, N,N-DIETHYL- (OR) TRIETHYLAMINE

Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM

PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: F037
Waste Code Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: F038
Waste Code Description: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: K048
Waste Code Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K049
Waste Code Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K050
Waste Code Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K051
Waste Code Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K052
Waste Code Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K157
Waste Code Description: WASTEWATERS (INCLUDING SCRUBBER WATERS, CONDENSER WATERS, WASHWATERS, AND SEPARATION WATERS) FROM THE PRODUCTION OF CARBAMATES AND CARBAMOYL OXIMES.

Hazardous Waste Code: P011
Waste Code Description: ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE

Hazardous Waste Code: P012
Waste Code Description: ARSENIC OXIDE AS2O3 (OR) ARSENIC TRIOXIDE

Hazardous Waste Code: P022
Waste Code Description: CARBON DISULFIDE

Hazardous Waste Code: P029
Waste Code Description: COPPER CYANIDE (OR) COPPER CYANIDE CU(CN)

Hazardous Waste Code: P068
Waste Code Description: HYDRAZINE, METHYL- (OR) METHYL HYDRAZINE

Hazardous Waste Code: P098
Waste Code Description: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

Hazardous Waste Code: P105
Waste Code Description: SODIUM AZIDE

Hazardous Waste Code: P106
Waste Code Description: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

Hazardous Waste Code: P120
Waste Code Description: VANADIUM OXIDE V2O5 (OR) VANADIUM PENTOXIDE

Hazardous Waste Code: U001
Waste Code Description: ACETALDEHYDE (I) (OR) ETHANAL (I)

Hazardous Waste Code: U002
Waste Code Description: 2-PROPANONE (I) (OR) ACETONE (I)

Hazardous Waste Code: U003
Waste Code Description: ACETONITRILE (I,T)

Hazardous Waste Code: U007
Waste Code Description: 2-PROPENAMIDE (OR) ACRYLAMIDE

Hazardous Waste Code: U012
Waste Code Description: ANILINE (I,T) (OR) BENZENAMINE (I,T)

Hazardous Waste Code: U019
Waste Code Description: BENZENE (I,T)

Hazardous Waste Code: U021
Waste Code Description: [1,1'-BIPHENYL]-4,4'-DIAMINE (OR) BENZIDINE

Hazardous Waste Code: U031
Waste Code Description: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Hazardous Waste Code: U034
Waste Code Description: ACETALDEHYDE, TRICHLORO- (OR) CHLORAL

Hazardous Waste Code: U043
Waste Code Description: ETHENE, CHLORO- (OR) VINYL CHLORIDE

Hazardous Waste Code: U044
Waste Code Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Hazardous Waste Code: U052
Waste Code Description: CRESOL (CRESYLIC ACID) (OR) PHENOL, METHYL-

Hazardous Waste Code: U056
Waste Code Description: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

Hazardous Waste Code: U057
Waste Code Description: CYCLOHEXANONE (I)

Hazardous Waste Code: U070
Waste Code Description: BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE

Hazardous Waste Code: U071
Waste Code Description: BENZENE, 1,3-DICHLORO- (OR) M-DICHLOROBENZENE

Hazardous Waste Code: U072
Waste Code Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Hazardous Waste Code: U080
Waste Code Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Hazardous Waste Code: U105
Waste Code Description: 2,4-DINITROTOLUENE (OR) BENZENE, 1-METHYL-2,4-DINITRO-

Hazardous Waste Code: U106
Waste Code Description: 2,6-DINITROTOLUENE (OR) BENZENE, 2-METHYL-1,3-DINITRO-

Hazardous Waste Code: U112
Waste Code Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Hazardous Waste Code: U117
Waste Code Description: ETHANE, 1,1'-OXYBIS-(I) (OR) ETHYL ETHER (I)

Hazardous Waste Code: U122
Waste Code Description: FORMALDEHYDE

Hazardous Waste Code: U134
Waste Code Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Hazardous Waste Code: U151
Waste Code Description: MERCURY

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U165
Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U183
Waste Code Description: BENZENE, PENTACHLORO- (OR) PENTACHLOROBENZENE

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U196
Waste Code Description: PYRIDINE

Hazardous Waste Code: U201
Waste Code Description: 1,3-BENZENEDIOL (OR) RESORCINOL

Hazardous Waste Code: U211
Waste Code Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Hazardous Waste Code: U218
Waste Code Description: ETHANETHIOAMIDE (OR) THIOACETAMIDE

Hazardous Waste Code: U219
Waste Code Description: THIOUREA

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Code: U404
Waste Code Description: ETHANAMINE, N,N-DIETHYL- (OR) TRIETHYLAMINE

Hazardous Waste Handler Details

Sequence No: 11
Receive Date: 20230216
Handler Name: SAFETY-KLEEN OF CALIFORNIA INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report update with Notification

Waste Code Details

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: 172
Waste Code Description: Metal dust (see 121) and machining waste

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 222
Waste Code Description: Oil/water separation sludge

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 231
Waste Code Description: Pesticide rinse water

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: 251
Waste Code Description: Still bottoms with halogenated organics

Hazardous Waste Code: 252
Waste Code Description: Other still bottom waste

Hazardous Waste Code: 261
Waste Code Description: Polychlorinated biphenyls and material containing PCB's

Hazardous Waste Code: 272
Waste Code Description: Polymeric resin waste

Hazardous Waste Code: 281
Waste Code Description: Adhesives

Hazardous Waste Code: 291
Waste Code Description: Latex waste

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 341
Waste Code Description: Organic liquids (nonsolvents) with halogens

Hazardous Waste Code: 342
Waste Code Description: Organic liquids with metals (see 121)

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 351
Waste Code Description: Organic solids with halogens

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 451
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 491
Waste Code Description: Unspecified sludge waste

Hazardous Waste Code: 511
Waste Code Description: Empty pesticide containers 30 gallons or more

Hazardous Waste Code: 512
Waste Code Description: Other empty containers 30 gallons or more

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: 611
Waste Code Description: Contaminated soil from site clean-ups

Hazardous Waste Code: 612
Waste Code Description: Household waste

Hazardous Waste Code: 721
Waste Code Description: Liquids with arsenic > 500 mg/l

Hazardous Waste Code: 722
Waste Code Description: Liquids with cadmium > 100 mg/l

Hazardous Waste Code: 723
Waste Code Description: Liquids with chromium (VI) > 500 mg/l

Hazardous Waste Code: 724
Waste Code Description: Liquids with lead > 500 mg/l

Hazardous Waste Code: 725
Waste Code Description: Liquids with mercury > 20 mg/l

Hazardous Waste Code: 726
Waste Code Description: Liquids with nickel > 134 mg/l

Hazardous Waste Code: 727
Waste Code Description: Liquids with selenium > 100 mg/l

Hazardous Waste Code: 728
Waste Code Description: Liquids with thallium > 130 mg/l

Hazardous Waste Code: 741
Waste Code Description: Liquids with halogenated organic compounds > 1000 mg/l

Hazardous Waste Code: 751
Waste Code Description: Solids or sludge with halogenated organic comp. > 1000 mg/kg

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: 792
Waste Code Description: Liquids with pH < 2 with metals

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D004
Waste Code Description: ARSENIC

Hazardous Waste Code: D005
Waste Code Description: BARIUM

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: D010
Waste Code Description: SELENIUM

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D019
Waste Code Description: CARBON TETRACHLORIDE

Hazardous Waste Code: D020
Waste Code Description: CHLORDANE

Hazardous Waste Code: D022
Waste Code Description: CHLOROFORM

Hazardous Waste Code: D027
Waste Code Description: 1,4-DICHLOROBENZENE

Hazardous Waste Code: D028
Waste Code Description: 1,2-DICHLOROETHANE

Hazardous Waste Code: D029
Waste Code Description: 1,1-DICHLOROETHYLENE

Hazardous Waste Code: D030
Waste Code Description: 2,4-DINITROTOLUENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D036
Waste Code Description: NITROBENZENE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: F037
Waste Code Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE

BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: F038
Waste Code Description: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: K048
Waste Code Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K049
Waste Code Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K050
Waste Code Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K051
Waste Code Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K052
Waste Code Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K157
Waste Code Description: WASTEWATERS (INCLUDING SCRUBBER WATERS, CONDENSER WATERS, WASHWATERS, AND SEPARATION WATERS) FROM THE PRODUCTION OF CARBAMATES AND CARBAMOYL OXIMES.

Hazardous Waste Code: P011
Waste Code Description: ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE

Hazardous Waste Code: P012
Waste Code Description: ARSENIC OXIDE AS2O3 (OR) ARSENIC TRIOXIDE

Hazardous Waste Code: P022
Waste Code Description: CARBON DISULFIDE

Hazardous Waste Code: P029
Waste Code Description: COPPER CYANIDE (OR) COPPER CYANIDE CU(CN)

Hazardous Waste Code: P068
Waste Code Description: HYDRAZINE, METHYL- (OR) METHYL HYDRAZINE

Hazardous Waste Code: P098
Waste Code Description: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

Hazardous Waste Code: P105
Waste Code Description: SODIUM AZIDE

Hazardous Waste Code: P106
Waste Code Description: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

Hazardous Waste Code: P120
Waste Code Description: VANADIUM OXIDE V2O5 (OR) VANADIUM PENTOXIDE

Hazardous Waste Code: U001
Waste Code Description: ACETALDEHYDE (I) (OR) ETHANAL (I)

Hazardous Waste Code: U002
Waste Code Description: 2-PROPANONE (I) (OR) ACETONE (I)

Hazardous Waste Code:	U003
Waste Code Description:	ACETONITRILE (I,T)
Hazardous Waste Code:	U007
Waste Code Description:	2-PROPENAMIDE (OR) ACRYLAMIDE
Hazardous Waste Code:	U012
Waste Code Description:	ANILINE (I,T) (OR) BENZENAMINE (I,T)
Hazardous Waste Code:	U019
Waste Code Description:	BENZENE (I,T)
Hazardous Waste Code:	U021
Waste Code Description:	[1,1'-BIPHENYL]-4,4'-DIAMINE (OR) BENZIDINE
Hazardous Waste Code:	U031
Waste Code Description:	1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)
Hazardous Waste Code:	U034
Waste Code Description:	ACETALDEHYDE, TRICHLORO- (OR) CHLORAL
Hazardous Waste Code:	U043
Waste Code Description:	ETHENE, CHLORO- (OR) VINYL CHLORIDE
Hazardous Waste Code:	U044
Waste Code Description:	CHLOROFORM (OR) METHANE, TRICHLORO-
Hazardous Waste Code:	U052
Waste Code Description:	CRESOL (CRESYLIC ACID) (OR) PHENOL, METHYL-
Hazardous Waste Code:	U056
Waste Code Description:	BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)
Hazardous Waste Code:	U057
Waste Code Description:	CYCLOHEXANONE (I)
Hazardous Waste Code:	U070
Waste Code Description:	BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE
Hazardous Waste Code:	U071
Waste Code Description:	BENZENE, 1,3-DICHLORO- (OR) M-DICHLOROBENZENE
Hazardous Waste Code:	U072
Waste Code Description:	BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE
Hazardous Waste Code:	U080
Waste Code Description:	METHANE, DICHLORO- (OR) METHYLENE CHLORIDE
Hazardous Waste Code:	U105
Waste Code Description:	2,4-DINITROTOLUENE (OR) BENZENE, 1-METHYL-2,4-DINITRO-
Hazardous Waste Code:	U106
Waste Code Description:	2,6-DINITROTOLUENE (OR) BENZENE, 2-METHYL-1,3-DINITRO-
Hazardous Waste Code:	U112
Waste Code Description:	ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)
Hazardous Waste Code:	U117
Waste Code Description:	ETHANE, 1,1'-OXYBIS-(I) (OR) ETHYL ETHER (I)
Hazardous Waste Code:	U122
Waste Code Description:	FORMALDEHYDE
Hazardous Waste Code:	U134
Waste Code Description:	HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)
Hazardous Waste Code:	U151
Waste Code Description:	MERCURY

Hazardous Waste Code: U154
Waste Code Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Hazardous Waste Code: U165
Waste Code Description: NAPHTHALENE

Hazardous Waste Code: U183
Waste Code Description: BENZENE, PENTACHLORO- (OR) PENTACHLOROBENZENE

Hazardous Waste Code: U188
Waste Code Description: PHENOL

Hazardous Waste Code: U196
Waste Code Description: PYRIDINE

Hazardous Waste Code: U201
Waste Code Description: 1,3-BENZENEDIOL (OR) RESORCINOL

Hazardous Waste Code: U211
Waste Code Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Hazardous Waste Code: U218
Waste Code Description: ETHANETHIOAMIDE (OR) THIOACETAMIDE

Hazardous Waste Code: U219
Waste Code Description: THIOUREA

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: U239
Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Code: U404
Waste Code Description: ETHANAMINE, N,N-DIETHYL- (OR) TRIETHYLAMINE

Site Facility Type: OPERATING PERMIT - PERMITTED ACTIVITIES: CONTAINER, TANK STORAGE, TANK TREATMENT, OTHER TREATMENT - PERMIT AUTHORITY: RCRA

Facility History:

QUARTERLY UPDATE:

Quarterly Update Period: July 1 through September 30, 2023

Safety Kleen Newark is regulated by DTSC through a RCRA-Equivalent Hazardous Waste Facility Permit issued September 3, 2021. No regulatory activity occurred during the July 1 through September 30, 2023 quarterly period.

FACILITY DESCRIPTION AND REGULATORY HISTORY

The Safety Kleen Newark facility is located at 6880 Smith Avenue, Newark, Alameda County on a 7-acre site zoned MG (General Industrial) within an urbanized area surrounded by industrial sites. The facility was built in 1985 on a previously undeveloped parcel.

The facility stores and treats hazardous waste in tanks and containers including used oil, RCRA and non-RCRA oily wastewater, waste antifreeze, RCRA fuel and contaminated petroleum products.

The facility initially obtained a Hazardous Waste Facility on October 10, 1985 to store and recycle used oil and for storage and transfer of antifreeze. A Class 3 Permit Modification was issued on May 9, 2002. A new Hazardous Waste Facility Permit was issued on December 1, 2004, and appealed on January 4, 2005. On September 21, 2005, DTSC approved the facility's revised work plan (dated 8/8/2005) for a subsurface site investigation known as a RCRA Facility Investigation (or RFI). On October 26, 2005, DTSC denied the appeal petition of the December 1, 2004 permit. DTSC renewed this facility permit most recently on September 3, 2021, which will remain effective through September 3, 2031.

The 2021 permit authorizes storage and treatment of hazardous waste in tanks and containers including used oil, RCRA and non-RCRA oily waste waters, waste antifreeze, RCRA fuel and contaminated petroleum products. Maximum permitted storage capacities include 52,800 gallons in container in permitted units 13, 14, and 15; 120,000 gallons in 4 railcar unloading stations identified as permitted units 16, 17, 18, and 19. Of these 4 railcar unloading stations, only permitted unit 17 has been constructed as of 2023. The facility is additionally permitted for tank storage in permitted units 1, 2, 3, 4, 5, 6, 7, and 8, which have a cumulative maximum capacity of 214,000 gallons. The facility is also permitted to treat up to 150,685 gallons of wastewater in the facility's wastewater treatment plant (permitted unit 20).

Cleanup Status: ACTIVE AS OF 11/22/2004
Cleanup Oversight Agencies: DTSC - SITE CLEANUP PROGRAM
School District:
Past Use that Caused Contam: OIL FIELD, OIL/WATER SEPARATORS, RECYCLING - USED OIL
Potential Media Affected: SOIL
Potential Contamin of Concern:

CHLORINE
METALS
PETROLEUM
POLYNUCLEAR AROMATIC HYDROCARBONS (PAHS)
VOLATILE ORGANICS (8260B VOCS)

Site History:

Active facility - Permitted: Evergreen Oil, Inc. (EOI) is located at 6880 Smith Avenue, Newark, Alameda County on a 7-acre site zoned MG (General Industrial) within an urbanized area surrounded by industrial sites. The EOI facility was built in 1985 on a previously undeveloped parcel. State Hazardous Waste Permit was issued on October 10, 1985 to store and recycle used oil and for storage and transfer of antifreeze. A Class 3 Permit Modification was issued on May 9, 2002.
The facility is authorized to store and treat hazardous waste in tanks and containers including used oil, RCRA and non RCRA oily waste waters, waste antifreeze, RCRA fuel and contaminated petroleum products. The RCRA permit was issued on 12/01/04. The permit decision was appealed on January 4, 2005.
On September 21, 2005, DTSC approved Evergreen's revised Work plan dated August 8, 2005 for Site Investigation/Geoprobe Sampling, Resource Conservation and Recovery Act (RCRA) Facility Investigation (RFI) which includes the refinery and other areas of the facility.
On October 13, 2005, DTSC approved Evergreen's request dated September 14, 2005 for Class 1 Permit Modification of the December 1, 2004 Hazardous Waste Facility Permit.

On October 26, 2005, DTSC denied the petition for review of the permit renewal and modification decision which was issued by DTSC on December 1, 2004.

CORRECTIVE ACTION:

DTSC received RFI Report in April 2007 and recommended that Evergreen Oil prepare and submit a Ground Water Sampling Plan and Human & Ecological Risk Assessment Plan. The RFI Report provided the results of a subsurface investigation program which included soil and ground water sampling. Soil sampling at the shallow depth of 1 foot did not indicate the soil contamination at most of the areas except couple of exceedances for residential and commercial environmental screening level (ESL) (out of 38 samples) for benzene, Methyl-Tert-Butyl Ether (MTBE) and metals (arsenic and chromium) .. Two (2) out of 4 soil samples collected at the depths ranging from 8 to 13 feet below ground surface results indicated exceeded ESLs for TPH-d, TPH-g, TPH-mo, benzene, xylenes, MTBE, and naphthalene.
Groundwater investigation results indicated that shallow groundwater beneath the site is contaminated by TPH and VOCs. MTBE, TPH-d, TPH-g, TPH-mo, benzene, ethylbenzene, xylenes, tert-butyl-alcohol (TBA), 1, 1-dichloroethane (1, 1-DCA), tetrachloroethene (PCE), and vinyl chloride exceeded the ESL.

The Report concluded that investigation data did not indicate evidence of a significant surface oil contamination or release from the re-refinery area. However, the Report acknowledged that groundwater contamination was present beneath portions of the Facility.

Risk Analysis:
Calculating an estimated potential human health risk for soils at the site will not accurately depict the current potential risk due to the following reasons: 1) the available soil data is over ten years old, as it was collected back in 2006 and not representative of current site conditions including any spills and/or releases that may have occurred since 2006 and the fire that was at the facility. 2) Tox commented, in June 29, 2010 memorandum, that there is a data gap for risk assessment purposes for soil contamination in the deeper soils, since the majority of the soil samples collected at the site were collected at one foot below ground surface (bgs). This data gap must be filled before a meaningful risk assessment can be conducted for human receptors. 3) Furthermore, while the one foot bgs samples did not detect volatile organic compounds (VOCs), only two of the soil samples collected was actually analyzed for VOCs at a depth of 12 feet bgs. Both of these samples have elevated levels of VOCs that were not detected in the one foot samples. Thus, with respect to VOC contamination at the site, there is a data gap from risk assessment purposes. 4) Soil gas samples have not been

collected at the site, and considered a data gap for risk assessment purposes. DTSC recently reviewed a Supplemental Site Investigation/Characterization Plan document. The sampling proposed in this work plan will provide the necessary information that will fill the data gaps needed to properly conduct a human health risk assessment.

Groundwater:

Using the most recent fourth quarter groundwater monitoring data collected in December 26, 2012 the estimated risk to human health due to ingestion of groundwater at monitoring wells MW-1 is 1.4E-5 due to tert-butyl alcohol (TBA), at MW-5 is 5E-6 due to TBA, and MW-6 is 3.4E-6 due to methyl tertiary butyl ether (MTBE). The risk estimated is a quick calculation and does not consider dermal contact with or inhalation of groundwater due to time constraint. Please also not that Newark is located in the Niles Cone, which is part of the Alameda County Water District, a managed groundwater basin for domestic use. All of the groundwater is considered beneficial use and will need to be cleaned up to state standards.

In December 2010, DTSC received Ground Water Monitoring and Sampling Analysis Plan (SAP). DTSC approved the revised SAP in May 2011. RP will submit workplan for additional soil and soil gas sampling by April 2013.
Groundwater
• The groundwater monitoring network was installed in May 2012 and consists of 8 wells all screened in the uppermost aquifer (screened from 7-17 ft bgs). Quarterly groundwater monitoring started in 2012 and 3rd and 4th Quarters, 2012 Groundwater Monitoring Report dated December 7, 2012 and January 23, 2013 received and reviewed by DTSC and Alameda County Water District.
• The most recent sampling event occurred on December 26, 2012.
• The concentrations detected in groundwater from wells throughout the site indicate relatively clean conditions for a site used as a refinery since 1985. However, Newark is located in the Niles Cone, which is part of the Alameda County Water District, a managed groundwater basin for domestic use. All of the groundwater is considered beneficial use and needs to be cleaned up to MCLs.
• Sampling events scheduled this year in March 2013, and June 2013. After June 2013, the sampling program may be modified with concurrence from DTSC and Alameda County Water District (ACWD).
• MTBA, TBA and chloroethane and 1,1-dichloroethane detected above the screening levels.
• TPHd has been detected in one monitoring well at concentrations above the ESL.
• TPHg and TPHmo were not detected above their reporting levels – In the case of TPH-mo, reporting limits were above regulatory screening levels.
• Oil and grease, benzo(a)pyrene, and ethylene glycol were not detected above laboratory reporting limits in any sample.
• No other VOCs detected above screening levels.

Evergreen Oil Inc/Safety Kleen prepared Current Condition Report in 2015b and conducted HHRA in 2016. A supplemental investigation was also conducted in 2016.

Focused Corrective Measure Feasibility Study GW Work Plan was submitted in 2019.

Submitting GW monitoring and sampling reports regularly.

Focused Corrective Measures Study Report for GW Work submitted in 2022 which is under review.

Statement of Basis prepared and sent to management on 12/8.

Draft NOE under preparation/review.

Public outreach documents are under preparation.

Cost estimate (CE) reviewed and comments sent to Safety Kleen. CE validation and BC memos need to be prepared.

Site History:

QUARTERLY UPDATE:

Quarterly Update Period: April through June 2023

Safety Kleen Newark is regulated by DTSC through a RCRA-Equivalent Hazardous Waste Facility Permit issued in September 2021. No regulatory activity occurred during the April through June 2023 quarterly period.

No updates occurred during the second quarter of 2023.

FACILITY DESCRIPTION/ HISTORY

Evergreen Oil, Inc. (EOI) is located at 6880 Smith Avenue, Newark, Alameda County on a 7-acre site zoned MG (General Industrial) within an urbanized area surrounded by industrial sites. The EOI facility was built in 1985 on a previously undeveloped parcel.

The facility stores and treats hazardous waste in tanks and containers including used oil, RCRA and non-RCRA oily waste waters, waste antifreeze, RCRA fuel and contaminated petroleum products. EOI is now called Safety-Kleen of California, Inc.

PERMITTING REGULATORY DESCRIPTION/ HISTORY

State Hazardous Waste Permit was issued on October 10, 1985 to store and recycle used oil and for storage and transfer of antifreeze. A Class 3 Permit Modification was issued on May 9, 2002.

The facility is authorized to store and treat hazardous waste in tanks and containers including used oil, RCRA and non RCRA oily waste waters, waste antifreeze, RCRA fuel and contaminated petroleum products. The RCRA permit was issued on 12/01/04. The permit decision was appealed on January 4, 2005.

On September 21, 2005, DTSC approved Evergreen's revised Work plan dated August 8, 2005 for Site Investigation/Geoprobe Sampling, Resource Conservation and Recovery Act (RCRA) Facility Investigation (RFI) which includes the refinery and other areas of the facility.

On October 13, 2005, DTSC approved Evergreen's request dated September 14, 2005 for Class 1 Permit Modification of the December 1, 2004 Hazardous Waste Facility Permit. On October 26, 2005, DTSC denied the petition for review of the permit renewal and modification decision which was issued by DTSC on December 1, 2004.

This permit authorizes storage and treatment of hazardous waste in tanks and containers including used oil, RCRA and non-RCRA oily waste waters, waste antifreeze, RCRA fuel and contaminated petroleum products, with a maximum capacity of 692,000 gallons; 4 rail cars with storage capacity of 25,000 gallons for each car; 2 roll-off bins with a total storage capacity of 40 cubic yards; 3 storage pads for containers of RCRA and non-RCRA wastes with a maximum capacity equivalent to 1008 55- gallons drums. This permit also authorizes the treatment and storage of used oil in aboveground tanks with a maximum annual throughput of 45 million gallons; 10 million gallons per year of consolidation; solidification and transfer of containerized waste; 5 million gallons per year of RCRA fuel blending, and; 55 million gallon per year of RCRA and non-RCRA wastewater treatment and storage.

Status: OPERATING PERMIT

QUARTERLY UPDATE:

Quarterly Update Period: April through June 2023

Safety Kleen Newark is regulated by DTSC through a RCRA-Equivalent Hazardous Waste Facility Permit issued in September 2021. No regulatory activity occurred during the April through June 2023 quarterly period.

No updates occurred during the second quarter of 2023.

FACILITY DESCRIPTION/ HISTORY

Evergreen Oil, Inc. (EOI) is located at 6880 Smith Avenue, Newark, Alameda County on a 7-acre site zoned MG (General Industrial) within an urbanized area surrounded by industrial sites. The EOI facility was built in 1985 on a previously undeveloped parcel.

The facility stores and treats hazardous waste in tanks and containers including used oil, RCRA and non-RCRA oily waste waters, waste antifreeze, RCRA fuel and contaminated petroleum products. EOI is now called Safety-Kleen of California, Inc.

PERMITTING REGULATORY DESCRIPTION/ HISTORY

State Hazardous Waste Permit was issued on October 10, 1985 to store and recycle used oil and for storage and transfer of antifreeze. A Class 3

Permit Modification was issued on May 9, 2002.

The facility is authorized to store and treat hazardous waste in tanks and containers including used oil, RCRA and non RCRA oily waste waters, waste antifreeze, RCRA fuel and contaminated petroleum products. The RCRA permit was issued on 12/01/04. The permit decision was appealed on January 4, 2005.

On September 21, 2005, DTSC approved Evergreen's revised Work plan dated August 8, 2005 for Site Investigation/Geoprobe Sampling, Resource Conservation and Recovery Act (RCRA) Facility Investigation (RFI) which includes the refinery and other areas of the facility.

On October 13, 2005, DTSC approved Evergreen's request dated September 14, 2005 for Class 1 Permit Modification of the December 1, 2004 Hazardous Waste Facility Permit. On October 26, 2005, DTSC denied the petition for review of the permit renewal and modification decision which was issued by DTSC on December 1, 2004.

This permit authorizes storage and treatment of hazardous waste in tanks and containers including used oil, RCRA and non-RCRA oily waste waters, waste antifreeze, RCRA fuel and contaminated petroleum products, with a maximum capacity of 692,000 gallons; 4 rail cars with storage capacity of 25,000 gallons for each car; 2 roll-off bins with a total storage capacity of 40 cubic yards; 3 storage pads for containers of RCRA and non-RCRA wastes with a maximum capacity equivalent to 1008 55- gallons drums. This permit also authorizes the treatment and storage of used oil in aboveground tanks with a maximum annual throughput of 45 million gallons; 10 million gallons per year of consolidation; solidification and transfer of containerized waste; 5 million gallons per year of RCRA fuel blending, and; 55 million gallon per year of RCRA and non-RCRA wastewater treatment and storage.

Site History:

Historically, the site was used as orchards prior to residential construction. Soil impacted with arsenic, lead and organochlorine pesticides from the agricultural activities and former buildings was removed and disposed off-site prior to entering into a Standard Voluntary Agreement with DTSC. In June 2021, additional soil samples were collected, under DTSC's oversight, in the northwestern portion of the site to address data gaps identified from previous investigations. The analytical data for confirmation samples and additional characterization samples were below the residential screening levels. DTSC determined that no further action (NFA) is adequate and a NFA letter was sent on September 30, 2021. YCH 1/7/2022

HALOGENATED SOLVENTS
LEAD
MERCURY AND COMPOUNDS

Site History:

The James Graham Manufacturing Company owned and operated the site from 1882 to 1953. It was sold to Rheem Manufacturing in 1953. These previous owners manufactured gauge and railroad car parts, and casting and assembly of stove parts. The property was sold to A.O. Smith in 1957. A. O. Smith manufactered water heaters. The manufacturing process included forming of coiled steel into water heater components and finishing and assembly of components and other heater parts from suppliers. A.O. Smith also stored and shipped water heaters from this facility until plant closure in 1985. The buildings were demolished in 1988. The site was vacant until 1999 when it was developed into a gated three-story apartment complex by the current property owner, Sycamore Bay LLC. Site investigation conducted in 1988 to 1989 revealed soil and groundwater contamination. A series of soil and groudwater sampling were conducted from 1988 to 1990 which revealed in soil: total petroleum hydrocarbons as diesel and as gasoline, toluene, xylene, oil and grease, lead, chromium, barium, mercury and zinc. Groundwater samples showed the following contaminants: chromium, 1,2-dichloroethane (1,1-DCA), 1,1 dicloroethylene above drinking water standards. Soil removal activities were conducted under the direct oversight of the Alameda County Department of Environmental Health (ACDEH) from July 1992 to March 1993. The risk-based clean up level used lead was 340 ppm. Approximately 17,600 tons of metal contaminated soil was excavated and disposed offsite. Approximately 11,900 cubic yards of contaminated soil was excavated and hauled for offsite disposal. Groundwater remediation was initiated in 1993 and is still ongoing under the oversight of the Alameda County Water District.

Site History:

This site is currently a wrecking yard and repair shop. Historically, the site reportedly stored and handled hazardous materials including corrosives, petroleum products, and solvents. Surficial contamination was first reported by City of Newark Inspector in 1992. In 2001, a Phase II site assessment reported up to 1,600 mg/kg of lead and 4,000 mg/kg of diesel in the soil samples collected.

Facility Project Sub Type:	
Calenviroscreen 3 Score:	66-70%
Calenviroscreen 4 Score:	60-65%
File Location:	All Files are on GeoTracker or in the Local Agency Database
Site History:	

The Site is located within the eastern corner of Mission Valley Shopping Center, located southwest of the intersection of Mission Boulevard and Santa Teresa Common in a commercial and residential area of Fremont, California (see Figure 1). It is occupied by a single-story, commercial retail building (known as Building A) having various tenant spaces (see Figure 2). An asphalt paved parking area is located along the west side of the building. Landscaped areas, followed by residential areas are located to the north, south, and east of the existing building. The northernmost tenant space of Building A is currently occupied by Nature's B^ Cleaners, a dry cleaning and laundry business. Based on AEI's observations, the current dry cleaner no longer uses a common dry cleaning chemical, tetrachloroethene (PCE). A dry-cleaning machine and solvent storage area observed during investigation activities conducted by AEI in 2001 had been removed by 2016. Since 2016, dry cleaning operations appeared to have changed from the former solvent-based system to a "green-based" system.

Past Use that Caused Contam: MANUFACTURING - OTHER
Potential Media Affected: UNDER INVESTIGATION
Potential Contamin of Concern:

UNDER INVESTIGATION

Site History:

Thoro System Products submitted a Part A application in 1980 for operation of a clay lined evaporation pond used to treat aste water from the formulation of latex paint. Based on inspections and discussions with DTSC a determination was made that the facility had never treated, stored or disposed of hazardous waste onsite.

Status: NO FURTHER ACTION
Program Type: CORRECTIVE ACTION
CalEnviroScreen Score: 60-65%

Site History:

The SWMUs and AOCs identified at the former Peterbilt Motors facility in Newark California have been either remediated, closed under the authority of a regulatory agency (i e DTSC, DHS, City of Newark) or did not require any remediation activities because no releases to the environment occurred Additionally, the groundwater extraction and treatment system, which began operation in 1991 with oversight by the San Francisco Regional Water Quality Control Board, addressed the remediation of the groundwater contamination which resulted from the operation of the facility. As a result of these previous remediation activities, there is no need

for further action, at this facility, by the Department of Toxic Substances Control, under RCRA Corrective Action

Site History:

The Peterbilt Motors Site (Peterbilt/Site) operated a truck manufacturing facility from 1962 until October 1986. The Site's use prior to 1962 is unknown. The hazardous substances used and stored at the Site were: diesel fuel, gasoline, organic solvents, paints, and other organic chemicals. They were stored and/or treated in several areas of the facility: an underground storage tank (UST) area, an aboveground tank farm, four drum storage areas, a wastewater treatment plant including aboveground tanks, and a surface impoundment/waste evaporation pond area. Underground pipelines were used to transfer the hazardous substances between some of these areas. The manufacturing and waste management areas of the facility were closed by Peterbilt during the 1980s and early 1990s. The Site was used for office space, storage, warehousing, and as an engineering prototype test facility from 1986 to 1993. In 1994, property management and remediation responsibilities were transferred to Peterbuilt's parent company, PACCAR. PACCAR used the Site from 1993 to 1995 primarily for warehousing and shipping. The Site was sold to Georgia-Pacific Corporation (GP) on December 11, 1995. GP currently uses the Site as a rail-to-truck wood products distribution facility. Site investigations were conducted at the Site between 1983 to 1995 and addressed six areas of potential concern: 1) the underground storage tank (UST) area, 2) the pipeline/utility conduit area, 3) the aboveground tankfarm/wastewater treatment plant area, 4) the hydraulic lift pit area, 5) the oil spill area, 6) the surface impoundment/waste evaporation ponds area. The six areas were individually remediated under the oversight of various state and local agencies, including Newark Fire Department, San Francisco Regional Water Quality Control Board, the Department of Health Services (DHS -precursor to the Department of Toxic Substances Control or DTSC), and the Alameda County Water District. The SFRWQCB continues to act as lead agency and coordinates with the Alameda County Water District (ACWD) in overseeing groundwater is impacted with VOCs, BTEX, and TPH. The SFRWQCB adopted Order 97-114 (Order) on September 17, 1997 designating a groundwater containment zone.Groundwater monitoring is ongoing.

Site History:

The Holland Oil Site is currently owned by the Pozas Brothers Trucking Company (Pozas) as a truck maintenance facility. The Site contains a warehouse and an office type structure and an asphalt paved area used for tractor-trailer parking. Holland was also previously known as Abe Oil Incorporated (Abe) and as California Oil Recyclers. Between 1984 and 1994, the facility was a trucking terminal owned and operated by Consolidated Freightway. Between 1979 and 1984, the Site was occupied by six aboveground waste oil tanks with a total capacity of 750,000 gallons. These tanks were located within a spill containment area consisting of an earthen floor surrounded by a four-foot highcinder block retaining wall.

Document Type: Site Screening
Date Completed: 4/10/1987
Comments: Completed Site Screening. In September 1984, a soil investigation at the site revealed the presence of total petroleum hydrocarbons as gasoline (TPHg) as high as 12000 ppm and TPH as diesel (TPHd) as high as 4100 ppm. In October 1984, the six waste oil AGTs were removed; approximately 160 cubic yards of soil (up to 5 feet depth) was excavated and disposed offsite. Site cleanup was subsequently reported to the Department of Health Services (DHS), predecessor to the Department of Toxic Substances Control (DTSC) in October 1984.

Site History:

The Holland Oil Site is currently owned by the Pozas Brothers Trucking Company (Pozas) as a truck maintenance facility. The Site contains a warehouse and an office type structure and an asphalt paved area used for tractor-trailer parking. Holland was also previously known as Abe Oil Incorporated (Abe) and as California Oil Recyclers. Between 1984 and 1994, the facility was a trucking terminal owned and operated by Consolidated Freightway. Between 1979 and 1984, the Site was occupied by six aboveground waste oil tanks with a total capacity of 750,000 gallons. These tanks were located within a spill containment area consisting of an earthen floor surrounded by a four-foot highcinder block retaining wall.

Date Completed: 2/7/1984
Comments: Completed PA. Between 1979 and 1984, the site had six above ground tanks (AGTs) with a total capacity of 750,000 gallons used for waste oils. An oil spill resulting from a mechanical hose failure occurred at the site in 1979 and was remediated under the oversight of the Alameda County Department of Environmental Health (ACDEH) and the Newark Fire Department (NFD).

Sub Area Link:
Document Type: Site Screening
Date Completed: 4/10/1987
Comments: Completed Site Screening. In September 1984, a soil investigation at the site revealed the presence of total petroleum hydrocarbons as gasoline (TPHg) as high as 12000 ppm and TPH as diesel (TPHd) as high as 4100 ppm. In October 1984, the six waste oil AGTs were removed; approximately 160 cubic yards of soil (up to 5 feet depth) was excavated and disposed offsite. Site cleanup was subsequently reported to the Department of Health Services (DHS), predecessor to the Department of Toxic Substances Control (DTSC) in October 1984.

Comments: In October 1984, the six waste oil AGTs were removed; approximately 160 cubic yards of soil (up to 5 feet depth) was excavated and disposed offsite. Site cleanup was completed and subsequently reported to the Department of Health Services (DHS), predecessor to DTSC in October 1984. Holland conducted post removal sampling in November 1984 under the oversight of the Newark Fire Department which showed significantly reduced TPH and no detectable levels of PCBs. DHS signed off on the cleanup of the site in a letter dated December 20, 1984 stating no further remedial action will be required for the site.

Site History:

Proposed site development consists of a mix of townhome and single-family residences. Current Property use includes automotive repair, a landscape business, an anodizing shop, recreational vehicle and automotive storage, and offices. Historically, the Property included a pallet storage yard, an auto paint company, a welding service, a marble and granite manufacturer, and companies in the lumber, forestry product, roofing supply, masonry and precast product industries. Numerous phase I and phase II environmental studies have been conducted for the property, primarily between 1990 and 2012.

Site History:

The firm is a brass foundry which smelts brass scraps into cylindrical ingots. Soil sampling has detected elevated levels of lead, copper, nickel, barium and petroleum related compounds The Alameda County Health Department was preparing a preliminary assessment. Additional information is needed to determine the impact to groundwater and whatthreat the soil contaminants pose.

Issued Remedial Action Order to the Leslie Salt Company and FMC Corporation. Approved RAP proposing the removal of all hazardous constituents from the site. Completed FRA. All the material was removed and disposed off-site.

Certified Site.

Background:

Leslie Salt owns the site and leased it to FMC Corporation from 1928 to 1968. During this period, FMC used the site for disposal of their process wastes. These wastes included: off-grade magnesia, dolomite, general rubbish, phosphorus sludges, gypsum and excess catalysts which were used for the production of synthetic rubber. The waste materials were disposed onsite in large piles. The catalyst material contains approximately 1-2% copper (20,000 parts per million) and mercury above the total threshold limit concentration.

Description of Events: The package was unloaded with leakage noted on the box. Examination of the inner container revealed that the container(s) had loose cap(s) and leaked. The leakage was contained. The cap(s) were secured. The carton was wet but otherwise undamaged. The undamaged portion of the package was repacked for return to shipper.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Oct 26, 2023

National Priority List - Proposed: PROPOSED NPL

Sites proposed by the United States Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Oct 26, 2023

Deleted NPL: DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Oct 26, 2023

SEMS List 8R Active Site Inventory: SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the SEMS GIS/REST file layer obtained from EPA's Facility Registry Service.

Government Publication Date: Jan 26, 2024

SEMS List 8R Archive Sites: SEMS ARCHIVE

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

Government Publication Date: Jan 26, 2024

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Jan 1, 2024

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites that have indicated engagement in the treatment, storage, or disposal of hazardous waste which requires a RCRA hazardous waste permit.

Government Publication Date: Jan 1, 2024

RCRA Generator List: RCRA LQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Jan 1, 2024

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Jan 1, 2024

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Jan 1, 2024

RCRA Non-Generators: RCRA NON GEN

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Jan 1, 2024

RCRA Sites with Controls: RCRA CONTROLS

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Jan 1, 2024

Federal Engineering Controls-ECs: FED ENG

List of Engineering controls (ECs) made availabe by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Feb 29, 2024

Federal Institutional Controls- ICs: FED INST

List of Institutional controls (ICs) made available by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Feb 29, 2024

Land Use Control Information System: LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Institutional Control Boundaries at NPL sites: NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

Government Publication Date: Oct 26, 2023

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Feb 20, 2024

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Feb 7, 2024

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

This listing contains facilities that have submitted Facility Response Plans (FRPs) to the U.S. Environmental Protection Agency (EPA). Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit FRPs. Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments. This listing includes FRP facilities from an applicable EPA FOIA file and Homeland Infrastructure Foundation-Level Data (HIFLD) data file.

Government Publication Date: May 2, 2023

Delisted Facility Response Plans: DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: May 2, 2023

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Sep 20, 2023

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

A list of petroleum product and crude oil rail terminals from the U.S. Energy Information Administration (EIA), as well as petroleum terminals sourced from the Federal Communications Commission Data hosted by the Homeland Infrastructure Foundation-Level Database. Data includes operable bulk petroleum product terminals with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil with activity between 2017 and 2018. EIA petroleum product terminal data comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings.

Government Publication Date: Sep 22, 2023

LIEN on Property: SEMS LIEN

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Jan 26, 2024

Superfund Decision Documents: SUPERFUND ROD

This database contains a list of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include completed Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD) for active and archived sites stored in the Superfund Enterprise Management System (SEMS), along with other associated memos and files. This information is maintained and made available by the U.S. Environmental Protection Agency.

Government Publication Date: Dec 26, 2023

Formerly Utilized Sites Remedial Action Program: DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

State

State Response Sites: RESPONSE

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

Government Publication Date: Feb 15, 2024

EnviroStor Database: ENVIROSTOR

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.

Government Publication Date: Feb 15, 2024

Delisted State Response Sites: DELISTED ENVS

Sites removed from the list of State Response Sites made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).

Government Publication Date: Feb 15, 2024

Solid Waste Information System (SWIS): SWF/LF

The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.

Government Publication Date: Feb 15, 2024

Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels: SWRCB SWF

This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.

Government Publication Date: Sep 20, 2006

Waste Management Unit Database: WMUD

The Waste Management Unit Database System tracks and inventories waste management units. CCR Title 27 contains criteria stating that Waste Management Units are classified according to their ability to contain wastes. Containment shall be determined by geology, hydrology, topography, climatology, and other factors relating to the ability of the Unit to protect water quality. Water Code Section 13273.1 requires that operators submit a water quality solid waste assessment test (SWAT) report to address leak status. The WMUDS was last updated by the State Water Resources control board in 2000.

Government Publication Date: Jan 1, 2000

EnviroStor Hazardous Waste Facilities: HWP

A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.

Government Publication Date: Feb 15, 2024

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report: SWAT

In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.

Government Publication Date: Dec 31, 1995

Construction and Demolition Debris Recyclers: C&D DEBRIS RECY

This listing of Construction and Demolition Debris Recyclers is maintained by the California Intergrated Waste Management Board-common C&D materials include lumber, drywall, metals, masonry (brick, concrete, etc.), carpet, plastic, pipe, rocks, dirt, paper, cardboard, or green waste related to land development.

Government Publication Date: Jun 20, 2018

Recycling Centers: RECYCLING

This list of Certified Recycling Centers that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Jan 17, 2024

Listing of Certified Processors: PROCESSORS

This list of Certified Processors that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Jan 17, 2024

Listing of Certified Dropoff, Collection, and Community Service Programs: CONTAINER RECY

This list of Certified Dropoff, Collection, and Community Service Programs (non-buyback) operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Jan 22, 2024

Land Disposal Sites: LDS

Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.

Government Publication Date: Nov 30, 2023

Leaking Underground Fuel Tank Reports: LUST

List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.

Government Publication Date: Nov 30, 2023

Delisted Leaking Storage Tanks: DELISTED LST

List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.

Government Publication Date: Nov 30, 2023

Permitted Underground Storage Tank (UST) in GeoTracker: UST

List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).

Government Publication Date: Feb 15, 2024

Proposed Closure of Underground Storage Tank Cases: UST CLOSURE

This listing includes Proposed Closure of Underground Storage Tank (UST) Cases which are being considered for closure by either the State Water Resources Control Board at a Future Board Meeting or the Executive Director that have been posted for a 60-day public comment period, and Closure of UST Cases with Closure Denials and Approved Orders. The lists are provided by the California Water Boards.

Government Publication Date: Dec 22, 2023

Historical Hazardous Substance Storage Information Database: HHSS

The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.

Government Publication Date: Aug 27, 2015

Statewide Environmental Evaluation and Planning System: UST SWEEPS

The Statewide Environmental Evaluation and Planning System (SWEEPS) is a historical listing of active and inactive underground storage tanks made available by the California State Water Resources Control Board (SWRCB).

Government Publication Date: Oct 1, 1994

Aboveground Storage Tanks: AST

A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

Government Publication Date: Aug 31, 2009

SWRCB Historical Aboveground Storage Tanks: AST SWRCB

A list of aboveground storage tanks made available by the California State Water Resources Control Board (SWRCB). Effective January 1, 2008, the Certified Unified Program Agencies (CUPAs) are vested with the responsibility and authority to implement the Aboveground Petroleum Storage Act (APSA).

Government Publication Date: Dec 1, 2007

Oil and Gas Facility Tanks: TANK OIL GAS

Locations of oil and gas tanks that fall under the jurisdiction of the Geologic Energy Management Division of the California Department of Conservation (CalGEM) (CCR 1760). CalGEM was formerly the Division of Oil, Gas, and Geothermal Resources (DOGGR).

Government Publication Date: Jan 24, 2024

Delisted Storage Tanks: DELISTED TNK

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

Government Publication Date: Mar 26, 2024

California Environmental Reporting System (CERS) Tanks: CERS TANK

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Jan 17, 2024

Delisted California Environmental Reporting System (CERS) Tanks: DELISTED CTNK

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

Government Publication Date: Jan 17, 2024

Historical Hazardous Substance Storage Container Information - Facility Summary: HIST TANK

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in th 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

Government Publication Date: May 27, 1988

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions: LUR

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Feb 15, 2024

CALSITES Database: CALSITES

This historical database was maintained by the Department of Toxic Substance Control (DTSC) for more than a decade. CALSITES contains information on Brownfield properties with confirmed or potential hazardous contamination. In 2006, DTSC introduced EnviroStor as the latest Brownfields site database.

Government Publication Date: May 1, 2004

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions: HLUR

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Government Publication Date: Feb 18, 2021

Deed Restrictions and Land Use Restrictions: DEED

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Nov 30, 2023

Voluntary Cleanup Program: VCP

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Feb 15, 2024

GeoTracker Cleanup Program Sites: CLEANUP SITES

A list of Cleanup Program sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Government Publication Date: Nov 30, 2023

Delisted Cleanup Program Sites: DELISTED CLEANUP

A list of Cleanup Program sites which were once included - and have since been removed from - the list of Cleanup Program Sites in GeoTracker. GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.
Government Publication Date: Nov 30, 2023

Delisted County Records: DELISTED COUNTY
Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.
Government Publication Date: Mar 25, 2024

Tribal

Leaking Underground Storage Tanks on Tribal/Indian Lands: INDIAN LUST
This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 9, which includes California, is made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Oct 25, 2023

Underground Storage Tanks on Tribal/Indian Lands: INDIAN UST
This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 9, which includes California, is made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Oct 25, 2023

Delisted Tribal Leaking Storage Tanks: DELISTED INDIAN LST
Leaking Underground Storage Tank (LUST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian LUST lists made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Oct 25, 2023

Delisted Tribal Underground Storage Tanks: DELISTED INDIAN UST
Underground Storage Tank (UST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian UST lists made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Oct 25, 2023

County

Alameda County - LOP Sites List: LOP ALAMEDA
List of sites in the Alameda County Department of Environmental Health's (ACDEH) Local Oversight Program (LOP). The ACDEH LOP program oversees the investigation and cleanup of hazardous materials releases to the environment under two programs. The Leaking Underground Fuel Tank (LUFT) program is specific to unauthorized releases associated with petroleum underground storage tank systems. The Site Cleanup Program (SCP) oversees the investigation and cleanup of releases from hazardous materials, including but not limited to releases of pesticides, heavy metals, dry cleaner solvents, etc., including redevelopment of sites with residual contamination from historic uses.
Government Publication Date: Jan 16, 2019

Alameda County Contaminated Sites: CONT ALAMEDA
This list of contaminated sites was provided by the Alameda County Department of Environmental Health (ACDEH) up until May 2019. This data is now obtained through the State Water Resources Control Board's GeoTracker. Releases of other types of hazardous materials from underground storage tanks or other releases and/or spills that have contaminated soil, soil vapor, and/or groundwater may be regulated by ACDEH under the Site Cleanup Program, San Francisco Bay Regional Water Board, or by the California Department of Toxic Substance Control. ACDEH under LOP's SCP oversees the cleanup of contaminated property under authority of Health and Safety Code Sections 101480 through 101490.
Government Publication Date: May 27, 2019

Alameda County - UST List: UST ALAMEDA
A list of registered Underground Storage Tanks (USTs) in the County of Alameda. The list is made available by Alameda County Department of Environmental Health.
Government Publication Date: Mar 1, 2024

Alameda County Aboveground Storage Tanks: AST ALAMEDA

This database containing active and inactive aboveground storage tank facilities is maintained by the Alameda County Department of Environmental Health. These aboveground storage tanks contain petroleum-based liquid products such as gasoline, diesel, lubricants, etc. Effective July 1, 2018, tanks in an underground area (TIUGA) are subject to the Aboveground Petroleum Storage Act Program.

Government Publication Date: May 2, 2022

Alameda County - City of Berkeley CUPA Facilities: CUPA BERKELEY

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs at the City of Berkeley in Alameda County. This list is maintained by the Toxics Management Division at the City of Berkeley.

Government Publication Date: Jan 25, 2024

Alameda County - Hayward City CUPA List: CUPA HAYWARD

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Hayward City. This list is maintained by the Hayward City Fire Department.

Government Publication Date: Jul 16, 2019

Alameda County - San Leandro City CUPA Facilities List: CUPA SANLEANDRO

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in San Leandro City, Alameda County. This list is made available by San Leandro City Environmental Services Section.

Government Publication Date: Apr 11, 2019

Alameda County - Union City USTs: UST UNION

A list of Underground Storage Tanks (USTs) in the city of Union in Alameda County. This data is made available by the Environmental Programs Division of Economic & Community Development, Union City.

Government Publication Date: May 3, 2021

Alameda County - Union City CERS CUPA List: CUPA CERS UNION

A list of CERS registered facilities associated with various Certified Unified Program Agency (CUPA) programs in the City of Union. This list is made available by the City of Union Economic and Community Development Department.

Government Publication Date: May 3, 2021

Alameda County - Union City CUPA Facilities: CUPA UNION

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in the City of Union. Includes facilities with active and inactive statuses. This list is made available by the City of Union Economic and Community Development Department.

Government Publication Date: Sep 30, 2020

Alameda County - City of Livermore and Pleasanton UST List: UST LIVERMORE

A list of registered Underground Storage Tank (UST) in City of Livermore and City of Pleasanton, Alameda County. This list is maintained by the Livermore-Pleasanton Fire Department.

Government Publication Date: Feb 16, 2024

Alameda County - City of Livermore and Pleasanton AST List: AST LIVERMORE

A list of registered Aboveground Storage Tank (AST) in City of Livermore and City of Pleasanton, Alameda County. This list is maintained by the Livermore-Pleasanton Fire Department.

Government Publication Date: Feb 16, 2024

Alameda County - City of Livermore and Pleasanton CUPA Facilities: CUPA LIVERMORE

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in City of Livermore and City of Pleasanton in Alameda County. This list is maintained by the Livermore-Pleasanton Fire Department.

Government Publication Date: Feb 16, 2024

Additional Environmental Record Sources

Federal

PFAS Greenhouse Gas Emissions Data: PFAS GHG

The U.S. Environmental Protection Agency's Greenhouse Gas Reporting Program (GHGRP) collects Greenhouse Gas (GHG) data from large emitting facilities (25,000 metric tons of carbon dioxide equivalent (CO2e) per year), and suppliers of fossil fuels and industrial gases that results in GHG emissions when used. Includes GHG emissions data for facilities that emit or have emitted since 2010 chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures by DSSTox. PFAS emissions data has been identified for facilities engaged in the following industrial processes: Aluminum Production (GHGRP Subpart F), HCFC-22 Production and HFC-23 Destruction (Subpart O), Electronics Manufacturing (Subpart I), Fluorinated Gas Production (Subpart L), Magnesium Production (Subpart T), Electrical Transmission and Distribution Equipment Use (Subpart DD), and Manufacture of Electric Transmission and Distribution Equipment (Subpart SS). Over time, other industrial processes with required GHGRP reporting may include PFAS emissions data and the list of reportable gases may change over time.

Government Publication Date: Nov 15, 2023

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Feb 9, 2024

Toxics Release Inventory (TRI) Program: TRIS

The U.S. Environmental Protection Agency's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of toxic chemicals from U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. There are currently 770 individually listed chemicals and 33 chemical categories covered by the TRI Program. Facilities that manufacture, process or otherwise use these chemicals in amounts above established levels must submit annual reporting forms for each chemical. Note that the TRI chemical list does not include all toxic chemicals used in the U.S. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment. This database includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

Government Publication Date: Sep 20, 2023

PFOA/PFOS Contaminated Sites: PFAS NPL

This list of Superfund Sites with Per- and Polyfluoroalkyl Substances (PFAS) detections is made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data, previously the list was obtained by EPA FOIA requests. EPA's Office of Land and Emergency Management and EPA Regional Offices maintain what is known about site investigations, contamination, and remedial actions under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) where PFAS is present in the environment. Limitations: Detections of PFAS at National Priorities List (NPL) sites do not mean that people are at risk from PFAS, are exposed to PFAS, or that the site is the source of the PFAS. The information in the Superfund NPL and Superfund Alternative Agreement (SAA) PFAS detection site list is years old and may not be accurate today. Site information such as site name, site ID, and location has been confirmed for accuracy; however, PFAS-related information such as media sampled, drinking water being above the health advisory, or mitigation efforts has not been verified. For Federal Facilities data, the other Federal agencies (OFA) are the lead agency for their data and provided them to EPA.

Government Publication Date: Mar 19, 2024

Federal Agency Locations with Known or Suspected PFAS Detections: PFAS FED SITES

List of Federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS), made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data. EPA outlines that these data are gathered from several federal entities, such as the Federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration, Department of Transportation, and Department of Energy. The dates this data was extracted for the PFAS Analytic Tools range from March 2022 to September 2023. Sites on this list do not necessarily reflect the source/s of PFAS contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

Government Publication Date: Sep 5, 2023

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Locations for the Known PFAS Contamination Sites are sourced from the PFAS Sites and Community Resources Map, credited to the Northeastern University's PFAS Project Lab, Silent Spring Institute, and the PFAS-REACH team. Disclaimer: The source conveys the data undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Access the following source link for the most current information: https://pfasproject.com/pfas-sites-and-community-resources/

Government Publication Date: May 19, 2023

National Response Center PFAS Spills: ERNS PFAS

This Per- and Poly-Fluoroalkyl Substances (PFAS) Spills dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The National Response Center (NRC), operated by the U.S. Coast Guard, is the designated federal point of contact for reporting all oil, chemical, and other discharges into the environment, for the United States and its territories. This dataset contains NRC spill information from 1990 to the present that is restricted to records associated with PFAS and PFAS-containing materials. Incidents are filtered to include only records with a "Material Involved" or "Incident Description" related to Aqueous Film Forming Foam (AFFF). The keywords used to filter the data included "AFFF," "Fire Fighting Foam," "Aqueous Film Forming Foam," "Fire Suppressant Foam, "PFAS," "PERFL," "PFOA," "PFOS," and "Genx." Limitations: The data from the NRC website contains initial incident data that has not been validated or investigated by a federal/state response agency. Keyword searches may misidentify some incident reports that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS spills/release incidents.

Government Publication Date: Jan 24, 2024

PFAS NPDES Discharge Monitoring: PFAS NPDES

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Government Publication Date: Feb 19, 2024

Perfluorinated Alkyl Substances (PFAS) from Toxic Release Inventory: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a per- or polyfluoroalkyl (PFAS) substance included in the U.S. Environmental Protection Agency's (EPA) consolidated PFAS Master List of PFAS Substances. Encompasses Toxics Release Inventory records included in the EPA PFAS Analytic Tools. The EPA's TRI database currently tracks information on disposal or releases of 770 individually listed toxic chemicals and 33 chemical categories from thousands of U.S. facilities and details about how facilities manage those chemicals through recycling, energy recovery, and treatment. This listing includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

Government Publication Date: Sep 20, 2023

Perfluorinated Alkyl Substances (PFAS) Water Quality: PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

PFAS TSCA Manufacture and Import Facilities: PFAS TSCA

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

Government Publication Date: Jan 5, 2023

PFAS Waste Transfers from RCRA e-Manifest : PFAS E-MANIFEST

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

Government Publication Date: Feb 25, 2024

PFAS Industry Sectors: PFAS IND

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The EPA developed the dataset from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile, but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

Government Publication Date: Dec 4, 2023

Hazardous Materials Information Reporting System: HMIRS

The Hazardous Materials Incident Reporting System (HMIRS) database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration.

Government Publication Date: Nov 26, 2023

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Jul 26, 2023

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).

Government Publication Date: Jan 26, 2024

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS

The Integrated Compliance Information System (ICIS) database contains integrated enforcement and compliance information across most of U.S. Environmental Protection Agency's (EPA) programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained by the EPA Headquarters and at the Regional offices. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Government Publication Date: Aug 26, 2023

Drycleaner Facilities: FED DRYCLEANERS

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. The EPA tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Jan 20, 2024

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Jan 20, 2024

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset which applies to the Fiscal Year 2021 FUDS Inventory.

Government Publication Date: May 15, 2023

FUDS Munitions Response Sites: FUDS MRS

Boundaries of Munitions Response Sites (MRS), published with the Formerly Used Defense Sites (FUDS) Annual Report to Congress (ARC) by the U.S. Army Corps of Engineers (USACE). An MRS is a discrete location within a Munitions response area (MRA) that is known to require a munitions response. An MRA means any area on a defense site that is known or suspected to contain unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC). This data is compiled from the USACE's Geospatial MRS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) MRS dataset.

Government Publication Date: May 15, 2023

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

This list of flagged pipeline incidents is made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types. Accidents reported on hazardous liquid gravity lines (§195.13) and reporting-regulated-only hazardous liquid gathering lines (§195.15) and incidents reported on Type R gas gathering (§192.8(c)) are not included in the flagged incident file data.

Government Publication Date: Nov 6, 2023

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) is provided by the United States Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: May 1, 2023

Surface Mining Control and Reclamation Act Sites: SMCRA

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). This inventory contains information on the type and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The data is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed. Disclaimer: Per the OSMRE, States and tribes who enter their data into eAMLIS (AML Inventory System) may truncate their latitude and longitude so the precise location of usually dangerous AMLs is not revealed in an effort to protect the public from searching for these AMLs, most of which are on private property. If more precise location information is needed, please contact the applicable state/tribe of interest.

Government Publication Date: Jun 13, 2023

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites: LM SITES

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Tile II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: Dec 12, 2023

Alternative Fueling Stations: ALT FUELS

This list of alternative fueling stations is sourced from the Alternative Fuels Data Center (AFDC). The U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG), and Renewable Diesel (R20 and above) fuel type locations.

Government Publication Date: Nov 27, 2023

Superfunds Consent Decrees: CONSENT DECREES

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS) since 2010. CMS may not reflect the latest developments in a case nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Apr 19, 2023

Air Facility System: AFS

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments: SSTS

This national list of active EPA-registered foreign and domestic pesticide and/or device-producing establishments is based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that each producing establishment must place its EPA establishment number on the label or immediate container of each pesticide, active ingredient or device produced. An EPA establishment number on a pesticide product label identifies the EPA registered location where the product was produced. The list of establishments is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Mar 1, 2023

Polychlorinated Biphenyl (PCB) Transformers: PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Oct 30, 2023

State

PFAS Sampling Locations: PFAS SAMPLING

This data is sourced from the State Water Board's GeoTracker Per- and Polyfluoroalkyl Substances (PFAS) Map tool which contains individual sampling points (i.e., soil boring, groundwater monitoring well, drinking water well for municipal drinking water systems, etc.) or a site location with PFAS analytical data. Includes analytical results that are finalized and submitted electronically by the Responsible Parties via GeoTracker's Electronic Submittal of Information Portal, and after it's accepted by a Regional Water Quality Control Board.

Government Publication Date: Jan 2, 2024

Dry Cleaning Facilities: DRYCLEANERS

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

Government Publication Date: Dec 20, 2021

Delisted Drycleaners: DELISTED DRYCLEANERS

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

Government Publication Date: Jan 31, 2022

Non-Toxic Dry Cleaning Incentive Program: DRYC GRANT

A list of grant recipients of the Non-Toxic Dry Cleaning Incentive Program made available by the California Air Resources Board (CARB). The program provides grants to eligible dry cleaning businesses to assist them in transitioning away from PERC machines to alternative non-toxic and non-smog forming technologies.

Government Publication Date: Jan 31, 2022

PFAS GeoTracker Cleanup Sites: PFAS GT CLEANUPS

A list of applicable cleanup sites from the State Water Resources Control Board's (SWRCB) GeoTracker data management system where one or more of the potential contaminants of concern are identified in the PFAS Master List of PFAS Substances made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Nov 30, 2023

PFOA/PFOS Groundwater: PFAS GW

A list of water wells from the Groundwater Ambient Monitoring and Assessment Program (GAMA) Groundwater Information System with the groundwater chemical perfluorooctanoic acid (PFOA) (NL = 0.014 UG/L) or perfluorooctanoic sulfonate (PFOS) (NL = 0.013 UG/L). The GAMA Groundwater Information System search is made available by California Water Boards.

Government Publication Date: Jan 7, 2024

PFAS Investigations: PFAS INVEST

This list of potential Per- and Polyfluoroalkyl Substance (PFAS) sites is compiled from the California State Water Resources Control Board's (SWRCB) PFAS Investigations Map tool. The SWRCB issued investigative orders, per California Water Code (CWC) Section 13267 and/or 13383, to these sites. This does not mean that PFAS has been produced, used, or discharged at these sites. Orders were also issued to the public water systems to sample wells in the vicinity of these locations. The data includes locations for airports, landfills, suspected chrome plating facilities, publicly owned treatment works (aka wastewater treatment plants), bulk fuel terminals, refineries, and military facilities that have potential sources of PFAS.

Government Publication Date: Nov 28, 2022

Hazardous Waste and Substances Site List - Site Cleanup: HWSS CLEANUP

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

Government Publication Date: Mar 15, 2023

Toxic Pit Cleanup Act Sites: TOXIC PITS

The Toxic Pits Cleanup Act (TPCA) list identifies sites suspected of containing hazardous substances where cleanup has not yet been completed. This list was maintained by the State Water Resources Control Board (SWRCB), is not longer maintained, and updates are not planned.

Government Publication Date: Jul 1, 1995

List of Hazardous Waste Facilities Subject to Corrective Action: DTSC HWF

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Government Publication Date: Jul 18, 2016

EnviroStor Inspection, Compliance, and Enforcement: INSP COMP ENF

A list of permitted facilities with inspections and enforcements tracked by the California Department of Toxic Substance Control's (DTSC) EnviroStor data management system.

Government Publication Date: Nov 23, 2023

School Property Evaluation Program Sites: SCH

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Feb 15, 2024

California Hazardous Material Incident Report System (CHMIRS): CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Oct 16, 2023

Historical California Hazardous Material Incident Report System (CHMIRS): HIST CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 1, 1993

Handlers from Hazardous Waste Manifest Data: HAZNET

A list of handlers not otherwise classified as Treatment, Storage, Disposal facilities (TSDF) or generators from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Oct 24, 2016

Generators from Hazardous Waste Manifest Data: HAZ GEN

List of handlers listed as having generated waste from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Dec 31, 2017

TSDF from Hazardous Waste Manifest Data: HAZ TSD

List of Treatment, Storage, and Disposal Facilities (TSDFs) from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Dec 31, 2017

Historical Hazardous Waste Manifest Data: HIST MANIFEST

A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Dec 31, 1992

DTSC Registered Hazardous Waste Transporters: HW TRANSPORT

The California Department of Toxic Substances Control (DTSC) maintains this list of Registered Hazardous Waste Transporters.

Government Publication Date: Jan 2, 2024

Registered Waste Tire Haulers: WASTE TIRE

This list of registered waste tire haulers is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Mar 25, 2024

California Medical Waste Management Program Facility List: MEDICAL WASTE

This list of Medical Waste Management Program Facilities is maintained by the California Department of Public Health. The Medical Waste Management Program (MWMP) regulates the generation, handling, storage, treatment, and disposal of medical waste by providing oversight for the implementation of the Medical Waste Management Act (MWMA). The MWMP permits and inspects all medical waste off-site treatment facilities, medical waste transporters, and medical waste transfer stations. This list contains transporters, treatment, and transfer facilities.

Government Publication Date: Jan 8, 2024

Historical Cortese List: HIST CORTESE

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

Government Publication Date: Nov 13, 2008

Cease and Desist Orders and Cleanup and Abatement Orders: CDO/CAO

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

Government Publication Date: Dec 6, 2021

California Environmental Reporting System (CERS) Hazardous Waste Sites: CERS HAZ

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Jan 17, 2024

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites: DELISTED HAZ

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

Government Publication Date: Nov 29, 2018

Sites in GeoTracker: GEOTRACKER

GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. This is a list of sites in GeoTracker that aren't otherwise categorized as LUST, Land Disposal Sites (LDS), Cleanup Sites, or sites having Waste Discharge Requirements (WDR). This listing includes program types such as Underground Injection Control (UIC), Confined Animal Facilities (CAF), Irrigated Lands Regulatory Program, plans, and non-case information.

Government Publication Date: Nov 30, 2023

Mines Listing: MINE

This list includes mine site locations extracted from the Mines Online database, maintained by the California Department of Conservation. Mines Online (MOL) is an interactive web map designed with GIS features that provide information such as the mine name, mine status, commodity sold, location, and other mine specific data. Please note: Mine location information is provided to assist experts in determining the location of mine operators in accordance with California Civil Code section 1103.4 and reflects information reported by mine operators in annual reports provided under Public Resources Code section 2207. While the Division of Mine Reclamation (DMR) attempts to populate MOL with accurate location information, the DMR cannot guarantee the accuracy of operator reported location information.

Government Publication Date: Jun 16, 2023

Recorded Environmental Cleanup Liens: LIEN

The California Department of Toxic Substance Control (DTSC) maintains this list of liens placed upon real properties. A lien is utilized by the DTSC to obtain reimbursement from responsible parties for costs associated with the remediation of contaminated properties.

Government Publication Date: Dec 18, 2023

Waste Discharge Requirements: WASTE DISCHG

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Government Publication Date: Nov 30, 2023

Toxic Pollutant Emissions Facilities: EMISSIONS

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

Government Publication Date: Dec 31, 2020

Clandestine Drug Lab Sites: CDL

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/clandestine drug laboratories.

Government Publication Date: Jan 19, 2021

Tribal

No Tribal additional environmental record sources available for this State.

County

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

FARALLON CONSULTING

September 13, 2023

Ava Lazor
Alameda County Water District
43885 South Grimmer Boulevard
Fremont, California 94538

RE: DATA GAP INVESTIGATION AND REQUEST FOR SITE CLOSURE
6756 AND 6792 CENTRAL AVENUE
NEWARK, CALIFORNIA
FARALLON PN: 1071-105

Dear Ava Lazor:

Farallon Consulting, L.L.C. (Farallon) has prepared this letter report on behalf of 6756-6792 Central Ave Newark CA LLC (aka Prologis) to present findings from the data gap investigation performed by Farallon and to request case closure for the property at 6756 and 6792 Central Avenue in Newark, California (herein referred to as the Site) (Figure 1). Industrial constituents were identified in soil and groundwater beneath the Site during environmental due diligence activities, as summarized in the Phase I Environmental Site Assessment Report dated June 12, 2019 (2019 Phase I Report).[1] 6756-6792 Central Ave Newark CA LLC became the Site owner in July 2019 and intends to further evaluate Site conditions to determine what actions, if any, are required to remedy the identified industrial impact. The Site was originally entered into the Leaking Underground Storage Tank program under Alameda County Water District (ACWD) oversight, but at the request of ACWD was transferred to the Site Cleanup Program.

This letter report provides a brief background of the Site; a current conceptual site model (CSM); a summary of the scope of work and the results from the temporary groundwater monitoring well installation and groundwater monitoring event conducted on March 2, 2023 in accordance with the ACWD-approved Data Gap Investigation Work Plan[2] prepared by Farallon and the Sampling and Analysis Plan presented as Table 1; Farallon's conclusions

[1] Farallon. 2019. *Phase I Environmental Site Assessment Report, 6756 and 6792 Central Avenue, Newark, California.* Prepared for Prologis. June 12 (2019 Phase I Report).
[2] Farallon. 2022. Letter Report Regarding Data Gap Investigation Work Plan, 6756 and 6792 Central Avenue, Newark, California. From Peter Sims and Scott Allin. To Ava Lazor, ACWD. September 28 (Data Gap Investigation Work Plan).

including a comparison of Site conditions with the Assessment Tool for Closure[3] criteria; and Farallon's recommendations, which include a recommendation for No Further Action status and regulatory case closure for the Site.

SITE BACKGROUND

The Site consists of Alameda County Assessor's Parcel Nos. 92A-2165-14 (2.03 acres), 92A-2165-15 (8.18 acres), 92A-2165-16 (2.79 acres), and 92A-2165-17 (4.23 acres), which total approximately 17.23 acres of land. At the time of the 2019 Phase I Report, the Site was developed with five buildings (a large building consisting of conjoined structures, a large industrial building along Central Avenue, a medium-sized building, and two smaller buildings) constructed in phases between 1946 and 1968 and occupied by industrial tenants. Between 2019 and 2022, all Site buildings except the large industrial building along Central Avenue were demolished in preparation for Site redevelopment with an industrial logistics building. Access to the Site is gained from Central Avenue, west of the Site. Former Site operations included use of two 1,000-gallon underground storage tanks containing bunker fuel and gasoline, and a 20,000-gallon diesel fuel aboveground storage tank and associated fuel islands and piping, all of which were removed from the Site between 1991 and 1993. Evidence of a release was not detected during the removal of the underground storage tanks. A release from the aboveground storage tank was detected and remediated via removal of approximately 311 tons of impacted soil and 2,300 gallons of impacted groundwater. Confirmation samples collected following excavation and dewatering did not contain detectable concentrations of petroleum constituents.

As summarized in the 2019 Phase I Report, Farallon performed an environmental investigation at the Site in phases in April and May 2019, which consisted of collecting soil and reconnaissance groundwater samples for laboratory analysis. The results from the investigation suggested that a release of total petroleum hydrocarbons (TPH) as diesel-range organics (DRO) and as oil-range organics (ORO) from historical operations occurred at the Site. Volatile constituents were not detected in groundwater samples at concentrations exceeding San Francisco Bay Regional Water Quality Control Board (Water Board) vapor intrusion human health risk Environmental Screening Levels (ESLs) for commercial/industrial properties. Previous boring locations are shown on Figure 2.

[3] San Francisco Bay Regional Water Quality Control Board (Water Board). 2009. *Assessment Tool for Closure of Low-Threat Chlorinated Solvent Sites.* July 31 (Assessment Tool for Closure).

After the completion of the 2019 Phase I Report, eight groundwater monitoring wells (MW-1 through MW-8) were installed at the Site, as documented in the letter regarding Groundwater Monitoring Well Installation and Sampling dated April 20, 2020.[4] DRO was detected at a concentration of 3,400 milligrams per kilogram (mg/kg) in the soil sample collected from boring MW-8 at a depth of 3 feet below ground surface (bgs), which exceeds the commercial/industrial ESL of 1,200 mg/kg. ORO and naphthalene were detected at concentrations of 9,700 and 2.7 mg/kg, respectively, in the soil sample collected from boring MW-8 at a depth of 3 feet bgs, which is less than the commercial/industrial ESLs of 180,000 and 17 mg/kg, respectively. The lithology beneath the Site consists of sand and gravel from the surface to depths of approximately 2 to 4 feet bgs, followed by clay and silt to depths of approximately 7.5 to 11 feet bgs, and by silt and sand to depths of approximately 13 to 14 feet bgs, where first-encountered groundwater was observed. This shallow water-bearing zone consists of silty sand and sand, and extends to depths of 19 to 22 feet bgs. Beneath the shallow water-bearing zone, an aquitard of silt and clay corresponding to the Newark Aquiclude was identified, extending to the total depth explored of 25 feet bgs. Monitoring well locations are shown on Figure 2.

Groundwater monitoring data were obtained during four groundwater monitoring events, with the findings summarized in the letter regarding First and Second Quarter 2021 Groundwater Monitoring and Request for Site Closure dated March 24, 2022.[5] Groundwater data collected using low-flow sampling procedures at the Site in 2020 and 2021 indicated that Site groundwater has not been adversely impacted by DRO or polycyclic aromatic hydrocarbons (PAHs) at concentrations exceeding the maximum contaminant level (MCL), with the exception of the results from groundwater samples collected from monitoring wells MW-5 and MW-8 on January 13 and April 6, 2021, which indicated that groundwater impacts appeared to be low threat and limited in areal extent. Data suggest that the DRO impact in groundwater may be from natural organic compounds (NOCs) or hydrocarbon oxidation products (HOPs) at concentrations less than the MCL for HOPs. Data suggest the potential for releases from surrounding properties to have contributed to groundwater impacts at the Site. According to data obtained during five groundwater monitoring events conducted in 2020, 2021, and 2023, the groundwater flow direction at the Site is southwest, with a gradient of 0.001 to 0.004 foot per foot. Groundwater elevation contours

[4] Farallon. 2020. Letter Regarding Groundwater Monitoring Well Installation and Sampling, 6756 and 6792 Central Avenue, Newark, California. From Henry Pietropaoli and Scott Allin. To Douglas Young, ACWD. April 20.
[5] Farallon. 2022. Letter Regarding First and Second Quarter 2021 Groundwater Monitoring and Request for Site Closure, 6756 and 6792 Central Avenue, Newark, California. From Peter Sims and Scott Allin. To Ava Lazor, ACWD. March 24.

and flow direction are shown on Figure 3. Historical laboratory analytical results, monitoring well construction details, and groundwater elevation measurements are presented in Tables 2 through 13. Based on the findings of the previous investigations and groundwater monitoring, Farallon requested case closure under the Water Board Low-Threat Closure Policy.

In the letter regarding Denial of Low-Threat Underground Storage Tank Case Closure Request dated May 20, 2022,[6] ACWD identified four criteria where additional data are required to qualify for case closure:

1) Update the CSM to include a description of the Newark Aquifer, the shallowest regional aquifer in the Site vicinity and a source of drinking water, and describe the potential impacts to the Newark Aquifer from releases at the Site;
2) Conduct additional sampling to delineate the down-gradient extent of the contaminant plume exceeding water quality objectives, and evaluate whether petroleum hydrocarbons detected in groundwater are hydrocarbon oxidation products;
3) Update the vapor intrusion to indoor air risk assessment; and
4) Update the CSM to address the potential discharge of impacted groundwater from the Site to the nearby aquatic habitats of the San Francisco Bay and/or salt ponds.

To fulfill ACWD's four criteria, Farallon prepared the Data Gap Investigation Work Plan, which was revised via email to Ava Lazor of ACWD on October 28, 2022.[7] In addition, because the evidence of a release at the Site originated primarily from the former 10,000-gallon aboveground storage tank, the case was transferred to the Site Cleanup Program, and ACWD stated that suitability for closure of the Site should be evaluated using the Assessment Tool for Closure. Although the criteria outlined in the Assessment Tool for Closure are intended for chlorinated solvent impacted properties, they are applicable to other contaminated properties such as the Site.

The Data Gap Investigation Work Plan included advancing three borings (F-26, F-27, and F-28) on the southwest-adjoining Cargill, Inc. (Cargill) property at 7220 Central Avenue in

[6] ACWD. 2022. Letter Regarding Denial of Low-Threat Underground Storage Tank Case Closure Request, 6756 and 6792 Central Avenue, Newark, California (ACWD Site #0692). From Michelle Myers. To Gavin Polite Fisco, 6756-6792 Central Ave Newark CA LLC. May 20.
[7] Farallon. 2022. Email Regarding 6756 and 6792 Central Avenue, Newark Work Plan. From Peter Sims. To Ava Lazor, ACWD. October 28.

Newark, California identified as Alameda County Assessor's Parcel Nos. 537-0751-007-01, 537-0751-008, and 0920253-002-01. Prologis entered into an access agreement with Cargill to advance borings F-26, F-27, and F-28 at the Cargill property. Cargill provided to Prologis a Soil Removal and Closure Report[8] that documented the removal of soil and groundwater impacted by a release of bunker fuel from three aboveground storage tanks formerly located at the Cargill property. The three former bunker fuel aboveground storage tanks were removed from the Cargill property by approximately 1959. A 1959 aerial photograph reportedly showed an area of dark stained soil around the positions of the former bunker fuel aboveground storage tanks. In the 1960s, a single-story building identified as the Cargill admin building (Figure 2) was built on top of the location of one of the former bunker fuel aboveground storage tanks. Approximately 2,900 tons of soil and 2,000 gallons of water were removed from two remedial excavations proximate to the north and east of the Cargill admin building. Excavation of impacted soil was limited by the presence of the Cargill admin building. Residual bunker fuel impacts left in-place beneath the Cargill admin building were demonstrated by concentrations of TPH in soil samples collected from locations adjoining the Cargill admin building. TPH were detected in sidewall soil samples CSEX1-#1, CSEX1-#7, CSEX2-#1, and CSEX2-#2 at concentrations of 2,200, 3,000, 6,400, and 6,400 mg/kg, respectively, at a depth of approximately 7.5 feet bgs. There is not an ESL established for bunker fuel. Samples CSEX1-#1 and CSEX1-#7 were located north of the Cargill admin building, and samples CSEX2-#1 and CSEX2-#2 were located east of the Cargill admin building.

DATA GAP INVESTIGATION

The following sections provide a summary of the scope of work and results for the implementation of the Data Gap Investigation Work Plan.

1) AND 4) UPDATE THE CONCEPTUAL SITE MODEL

A CSM is presented in Table 14. The CSM presents a set of working hypotheses regarding all aspects of the contaminant release at the Site, including regional and Site geology and hydrogeology; a review of sensitive receptors; constituents of concern (COCs); the release source; a review of contamination identified in soil and groundwater; source removal activities; and a risk evaluation. The CSM presented in Table 14 has been updated to discuss the Newark Aquifer and the nearby aquatic habitats of the salt ponds and San Francisco Bay. The potential for negative impacts to the Newark Aquifer and aquatic

[8] Hydrologic Consultants, Inc. of Colorado. 1998. *Soil Removal and Closure Report, 5.4 Acre Parcel, Cargill Salt, Newark, California Facility.* Prepared for Cargill Salt. July 7.

habitats from historical releases at the Site is evaluated in the CSM and found to be unlikely. As summarized in Table 14, the CSM indicates that significant characterization data gaps do not exist.

2) CONDUCT ADDITIONAL SAMPLING TO DELINEATE THE DOWN-GRADIENT EXTENT OF THE CONTAMINANT PLUME EXCEEDING WATER QUALITY OBJECTIVES, AND EVALUATE WHETHER PETROLEUM HYDROCARBONS DETECTED IN GROUNDWATER ARE HYDROCARBON OXIDATION PRODUCTS

The following sections provide a summary of the scope of work and results for the implementation of the temporary groundwater monitoring well installation and groundwater monitoring event presented in the Data Gap Investigation Work Plan.

Permitting

Prior to commencing drilling activities, Farallon obtained ACWD Drilling Permit No. 2023-023 from ACWD. The approved permit is provided in Attachment A.

Health and Safety Plan

Per Section 3203 of Title 8 of the California Code of Regulations (8 CCR 3203), a Health and Safety Plan (HASP) is required for all field activities, due to the potential for exposure to hazardous substances. Farallon prepared a HASP prior to commencement of any field activities. The HASP complied with the requirements of the Occupational Safety and Health Act of 1970 and 8 CCR 3203.

March 2, 2023 Temporary Groundwater Monitoring Well Installation and Destruction

On March 2, 2023, three temporary groundwater monitoring wells (F-26 , F-27, and F-28) were installed for the collection of groundwater samples at the property south-adjacent and down-gradient of the Site. Boring locations for installation of temporary groundwater monitoring wells are shown on Figure 2.

The borings for installation of temporary monitoring wells were advanced by Cascade Drilling, L.P., a California-licensed C-57 contractor, using a hand auger to depths ranging from 6 to 8 feet bgs. A Farallon Scientist observed subsurface conditions during drilling and recorded Unified Soil Classification System descriptions, soil moisture, occurrence of groundwater, physical indications of potential contamination (e.g., odor, staining), and field-screening results obtained using a photoionization detector on Farallon's Log of Boring, presented in Attachment B. Soil cuttings generated during the drilling for installation of temporary monitoring wells were containerized pending characterization for off-Site disposal.

Temporary groundwater monitoring wells F-26, F-27, and F-28 were constructed using prepacked 3/4-inch polyvinyl chloride with 5 feet of 0.010-inch slotted screen and 20/40 sand contained within a steel mesh. Farallon collected groundwater level measurements and groundwater samples as described below. After sampling, the temporary groundwater monitoring wells F-26 through F-28 were destroyed by removing the pre-packed well casing and sand, and backfilling the boring with neat cement in accordance with ACWD permit requirements.

March 2, 2023 Groundwater Monitoring

Groundwater samples were collected from temporary groundwater monitoring wells F-26 through F-28 and existing monitoring wells MW-3 through MW-8. Groundwater samples were collected from temporary groundwater monitoring wells F-26 through F-28 to evaluate potential impacts to shallow groundwater down-gradient of the Site. Groundwater samples were collected from existing monitoring wells MW-3, MW-4, MW-6, and MW-7 to evaluate background concentrations; MW-5 to evaluate DRO and PAHs, which were detected in historical groundwater samples at concentrations greater than their respective commercial/industrial ESLs; and MW-8 to evaluate PAHs, which were detected in historical groundwater samples at concentrations greater than commercial/industrial ESLs.

Groundwater-level measurements and groundwater samples were collected using low-flow groundwater sampling procedures on March 2, 2023. Groundwater sampling was conducted in accordance with Farallon's standard operating procedures, provided in Attachment C. Groundwater samples were submitted to McCampbell Analytical Inc. of Pittsburg, California, accredited under the California State Environmental Laboratory Accreditation Program for analysis in accordance with the Data Gap Investigation Work Plan and the Sampling and Analysis Plan provided in Table 1.

March 2, 2023 Groundwater Monitoring Results

Groundwater monitoring well construction information is summarized in Table 7; current and historical groundwater elevations are summarized in Table 8. Current and historical groundwater analytical results for TPH including HOPs, VOCs, PAHs, metals, and total dissolved solids (TDS) are summarized in Tables 9 through 13, respectively. The analytical results were compared with Tier 1 ESLs, MCLs, and other commercial/industrial values. Field forms used for the groundwater monitoring events are provided in Attachment D. The laboratory analytical reports are provided in Attachment E. The measured groundwater elevations and calculated groundwater flow direction for the March 2, 2023 groundwater monitoring event are shown on Figure 3.

The depth to water varied between 2.70 and 5.25 feet below the ground surface or top of the monitoring well casing (Table 1). The water-level elevation was calculated to be between 14.40 and 17.12 feet above mean sea level (Table 8). The groundwater flow direction was calculated to be southwest at a gradient of approximately 0.004 foot per foot, as illustrated on Figure 3.

DRO analyzed without and with silica gel cleanup was detected at concentrations of 200 and 130 micrograms per liter (µg/l), respectively, in reconnaissance groundwater sample F-26, which exceed the Tier 1 ESL of 100 µg/l but are equal to or less than the MCL of 200 µg/l. In the laboratory report, the fuel pattern for reconnaissance groundwater sample F-26 was qualified as "diesel range compounds are detected; no recognizable pattern." However, the analytical laboratory stated via email (May 12, 2023 email)[9] that reconnaissance groundwater sample F-26 showed a "…possible degraded bunker [fuel] oil pattern. It's missing the characteristic alkane peaks but does show pattern across [the] entire [bunker fuel oil] BO range" in the DRO analyses without and with silica gel cleanup. The potential exists for residual bunker fuel impacts left in-place beneath the Cargill admin building to have contributed to impact identified in the sample from F-26. DRO analyzed without silica gel cleanup was detected at a concentration of 120 µg/l in reconnaissance sample F-27, which is greater than the Tier 1 ESL of 100 µg/l but less than the MCL of 200 µg/l. The analytical laboratory stated via the May 12, 2023 email that DRO detected without silica gel cleanup in reconnaissance groundwater sample F-27 did not match diesel or bunker fuel patterns. DRO analyzed with silica gel cleanup was not detected at a concentration exceeding laboratory reporting limit in reconnaissance groundwater sample F-27. Detections of DRO in sample F-27 likely represent HOPs, as discussed below. DRO analyzed without or with silica gel cleanup was not detected at a concentration exceeding laboratory reporting limits in reconnaissance groundwater sample F-28. DRO analyzed with or without silica gel cleanup was not detected at a concentration exceeding laboratory reporting limits in the groundwater samples collected from monitoring wells MW-3 through MW-8. Concentrations of DRO analyzed with or without silica gel cleanup were less than the saltwater ECOTOX ESLs in reconnaissance groundwater samples F-26, F-27, and F-28, and groundwater samples collected from monitoring wells MW-3 through MW-8.

[9] McCampbell Analytical Inc. (McCampbell). 2023. Email Regarding REVISED Analytical Report for Project: 1071-105; 6756-6792 Central Ave [MAI WO#: 2303198]. From Angela Rydelius. To Peter Sims, Farallon. May 12.

The following formula provided in the ESL User's Guide[10] was used to calculate HOPs present in reconnaissance samples F-26, F-27, and F-28 and samples collected from monitoring wells MW-3 through MW-8 during the March 2, 2023 groundwater monitoring event.

[HOPS] = [Total Organics] – [PHCs] – [NOCs]

Where:
[] = Concentration
[Total Organics] = Plume sample analyzed for DRO C10-C28 without silica gel cleanup
[PHCs] = Petroleum hydrocarbons; the same plume sample analyzed for DRO C10-C28 with silica gel cleanup
[NOCs] = Natural organic compounds; a sample from an unimpacted (background) area with similar vegetative and hydrogeologic characteristics as plume sample analyzed for DRO C10-C28 without silica gel cleanup

For the calculation of HOPs, the NOCs value was determined to be zero based on non-detect values for DRO C10-C28 without silica gel cleanup in groundwater samples collected from up-gradient monitoring wells MW-3 and MW-4. In addition, the HOPs calculations conservatively used zero for the PHCs value when concentrations of DRO C10-C28 with silica gel cleanup were less than the laboratory detection limit of 100 µg/l. Concentrations of HOPs were calculated to be 170 and 140 µg/l in reconnaissance groundwater samples F-26 and F-27, respectively, which exceed the Tier 1 ESL of 100 µg/l but are less than the MCL of 410 µg/l. HOPs were not detected in the reconnaissance groundwater sample F-28 or the samples collected from groundwater monitoring wells MW-3 through MW-8. Calculated HOPs concentrations were less than the saltwater ECOTOX ESL of 510 µg/l in reconnaissance samples F-26, F-27, and F-28 and samples collected from monitoring wells MW-3 through MW-8. The calculation of HOPs for sample MW-5 resulted in a negative value. The analytical laboratory stated via email[11] that both the MW-5 analysis without and with silica gel cleanup were performed on the same gas chromatograph and calibration run. No carryover for samples treated with silica gel was found as the samples were analyzed after the method blank. The analytical laboratory had disposed of sample MW-5 by the time this was discovered and was not able to re-extract the sample for further investigation of the issue. The issue was found to not be significant due to the relatively low concentration of

[10] Water Board. 2019. *User's Guide: Derivation and Application of ESLs* (ESL User's Guide).
[11] McCampbell. 2023. Email Regarding Analytical Report for Project: 251-230302; W&J Enterprises [MAI WO#: 2303185]. From Christine Askari. To Peter Sims, Farallon. May 24.

DRO C10-C28 with silica gel cleanup detected in the sample collected from monitoring well MW-5.

ORO analyzed without and with silica gel cleanup was detected at concentrations of 860 and 430 µg/l, respectively, in reconnaissance groundwater sample F-26. ORO analyzed without or with silica gel cleanup was not detected at a concentration exceeding laboratory reporting limits in the reconnaissance groundwater samples F-27 and F-28 or in groundwater samples collected from monitoring wells MW-3 through MW-8. ESLs have not been established for ORO.

Several PAHs were detected at concentrations exceeding laboratory detection limits in the groundwater samples. PAHs were not detected at concentrations exceeding Tier 1 ESLs in reconnaissance groundwater samples collected from temporary monitoring wells F-26, F-27, and F-28 or groundwater samples collected from monitoring wells MW-3, MW-4, MW-6, and MW-7. Benzo(a)pyrene, benzo(b)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene were detected at concentrations exceeding Tier 1 ESLs but less than the MCLs in groundwater samples from monitoring well MW-5. Benzo(a)pyrene was detected at a concentration exceeding the Tier 1 ESL but less than the MCL in groundwater samples from monitoring well MW-8. Concentrations of benzo(a)anthracene and naphthalene, the only PAHs with established vapor intrusion human health risk level ESLs for commercial/industrial properties, were either not detected or detected at concentrations significantly less than the vapor intrusion ESLs in groundwater samples collected during the March 2023 sampling event. Concentrations of PAHs were less than the saltwater ECOTOX ESL of 510 µg/l in reconnaissance samples F-26, F-27, and F-28 and samples collected from monitoring wells MW-3 through MW-8.

TDS were detected at a maximum concentration of 11,300 mg/l in the reconnaissance groundwater sample F-27. However, the laboratory noted that the reconnaissance groundwater samples F-26, F-27, and F-28 were aqueous solutions containing greater than approximately 1 percent sediment by volume, which likely contributed to the high TDS concentrations. TDS in groundwater monitoring wells at the Site were detected at a maximum concentration of 1,960 mg/l in the groundwater sample collected from monitoring well MW-8. The Secondary MCL range for TDS is 500 mg/l (recommended) to 1,000 mg/l (upper).[12] Detected TDS concentrations in groundwater monitoring wells installed in shallow

[12] California State Water Resources Control Board. 2018. California Code of Regulations, Title 22, Division 4, Chapter 15, Article 16, *Secondary Drinking Water Standards*. October 1.

water-bearing zones at the Site are indicative of brackish water. Shallow groundwater at the Site is contained in shallow water-bearing zones of the Newark Aquiclude, which are not expected to have beneficial use, and the presence of the Newark Aquiclude prevents significant downward migration of impacted groundwater from shallow water-bearing zones to the Newark Aquifer.

Waste Disposal

Disposable sampling and health and safety supplies and equipment were disposed of in an appropriate waste dumpster. Soil cuttings, excess groundwater, and decontamination water were stored in 55-gallon drums pending receipt of laboratory analytical results. Drums were stored on the Site in coordination with the Site owner. Laboratory analytical results from a sample collected from the drum of soil cuttings and groundwater monitoring results from this data gap investigation were used to profile the waste and identify appropriate disposal options. Contents of the drums were classified as nonhazardous and the drums were removed from the Site by Belshire Environmental Services, Inc. for disposal on May 8, 2023. Waste manifests are provided in Appendix F.

3) UPDATE THE VAPOR INTRUSION TO INDOOR AIR RISK ASSESSMENT

The vapor intrusion to indoor air risk assessment has been updated to include the most recent data collected during implementation of the Data Gap Investigation Work Plan. The cumulative vapor intrusion exposure risk and hazard were calculated by entering maximum concentrations of volatile COCs detected in groundwater samples collected from monitoring wells into the Water Board ESL Tier 2 – Site-Specific Cumulative Risk and Hazard Calculator,[13] presented in Attachment G. Only COCs that contribute to vapor intrusion exposure risk and hazard were included in the risk assessment calculations. For example, DRO was detected in groundwater, but because it does not have a commercial/industrial vapor intrusion human health risk level ESL, it does not contribute to the calculation for cumulative vapor intrusion exposure risk and hazard, and was not included in the calculation of vapor intrusion exposure risk and hazard. A review of historical data collected at the Site found detections of four COCs that contribute to the calculation for cumulative vapor intrusion exposure risk and hazard: methyl ethyl ketone, methyl tertiary-butyl ether, benzo(a)anthracene, and naphthalene. The maximum detected concentration in groundwater monitoring well samples for each of the four COCs was entered into the calculation presented in Appendix F. Cumulative cancer risk and noncancer hazard due to

[13] Water Board. 2019. *Environmental Screening Levels, Table T2-2: Tier 2 – Site-Specific Cumulative Risk and Hazard Calculator.* Rev. 2.

vapor intrusion were 6.3E-09 and 1.5E-04, respectively, which are less than the cancer risk and the noncancer hazard thresholds of 1.0E-6 and 1.0, respectively. Although no soil gas samples have been collected at the Site, the plethora of soil and groundwater samples with concentrations of all COCs less than commercial/industrial vapor intrusion human health risk level ESLs, and the cumulative cancer risk and noncancer hazard less than thresholds illustrate that subsurface conditions do not expose commercial workers to unacceptable health risks under continued commercial use.

CONCLUSIONS

The groundwater flow direction at the Site was calculated to be southwest at a gradient of approximately 0.004 foot per foot during the March 2, 2023 groundwater monitoring event, which is consistent with previous results.

Analytical results indicate that concentrations of COCs in groundwater at the Site are less than MCLs. The concentrations of DRO and PAHs detected in groundwater at the Site have decreased from slightly greater than the MCLs to less than the MCLs in the most recent groundwater monitoring event. COCs were not detected at concentrations exceeding the MCLs in the reconnaissance groundwater samples F-26, F-27, and F-28, and the contaminant plume exceeding water quality goals has been delineated in the down-gradient direction. The concentrations of volatile COCs detected in groundwater samples collected from on-Site monitoring wells MW-3 through MW-8 on March 2, 2023 were less than the commercial/industrial ESL for vapor intrusion human health risk level. The concentrations of COCs detected in reconnaissance samples F-26, F-27, and F-28 and samples collected from monitoring wells MW-3 through MW-8 were less than saltwater ECOTOX ESLs.

The Site is in the Niles Cone Groundwater Basin, where groundwater is considered to have beneficial use, per the Basin Plan.[14] However, groundwater quality within the Newark Aquifer near the San Francisco Bay has been degraded by saltwater intrusion. Detected TDS concentrations in groundwater monitoring wells installed in shallow water-bearing zones at the Site are indicative of brackish water, which is expected given the proximity of the Site to the San Francisco Bay and salt ponds. Shallow groundwater at the Site is contained in shallow water-bearing zones of the Newark Aquiclude, which are not expected to have beneficial use, and the presence of the Newark Aquiclude prevents significant downward

[14] Water Board. 2019. *Water Quality Control Plan (Basin Plan) for the San Francisco Bay Basin.* Updated March 7, 2023. November 5 (Basin Plan).

migration of impacted groundwater from shallow water-bearing zones to the Newark Aquifer. The down-gradient salt ponds and the San Francisco Bay were identified approximately 100 feet southwest and 2.5 miles southwest of the Site, respectively, and it is highly unlikely that they have been impacted by historical releases at the Site because COCs were not detected at concentrations exceeding aquatic habitat ESLs in the down-gradient groundwater samples F-26, F-27, and F-28. The nearest down-gradient water-supply well is approximately 1,600 feet southwest of the Site. Based on the distance to the water-supply well from the Site and the low concentrations of COCs detected in groundwater at the Site, it is highly unlikely that historical releases at the Site have impacted water-supply wells or have the potential to impact water-supply wells in the future.

Based on the findings of this data gap investigation, the CSM is complete, with no remaining data gaps. Pollutant sources have been remediated to the extent feasible. Residual chemical impact beneath the Site does not pose an unacceptable risk to human health, ecological health, or sensitive receptors, considering current and identifiable future land and water uses. Residual chemical impact does not pose an unacceptable threat to groundwater and surface water resources, considering current and identifiable future beneficial uses. Detections of COCs in the groundwater plume have decreased from slightly exceeding the MCLs to less than the MCLs in the most recent groundwater monitoring event performed on March 2, 2023, and cleanup standards have been met. Based on a review of Site conditions compared with the Assessment Tool for Closure, as summarized in Table 15, it is Farallon's opinion that the closure criteria have been met.

RECOMMENDATIONS

It is Farallon's opinion that the Site qualifies for closure under the Assessment Tool for Closure. Farallon recommends that the Site be granted No Further Action status and regulatory case closure. Upon receipt of concurrence from ACWD, Farallon will arrange for destruction of the Site monitoring wells.

CLOSING

Please contact Peter Sims at (949) 338-8317 or Scott Allin at (916) 616-8113 if you have questions regarding the information provided in this letter report.

Sincerely,

Farallon Consulting, L.L.C.

LIMITATIONS

The conclusions contained in this report/assessment are based on professional opinions with regard to the subject matter. These opinions have been arrived at in accordance with currently accepted hydrogeologic and engineering standards and practices applicable to this location. The conclusions contained herein are subject to the following inherent limitations:

- Accuracy of Information. Farallon reviewed certain information used in this report/assessment from sources that were believed to be reliable. Farallon's conclusions, opinions, and recommendations are based in part on such information. Farallon's services did not include verification of its accuracy. Should the information upon which Farallon relied prove to be inaccurate, Farallon may revise its conclusions, opinions, and/or recommendations.
- Reconnaissance and/or Characterization. Farallon performed a reconnaissance and/or characterization of the Site that is the subject of this report/assessment to document current conditions. Farallon focused on areas deemed more likely to exhibit hazardous materials conditions. Contamination may exist in other areas of the Site that were not investigated or were inaccessible. Site activities beyond Farallon's control could change at any time after the completion of this report/assessment.

Farallon does not guarantee that the Site is free of hazardous or potentially hazardous substances or conditions, or that latent or undiscovered conditions will not become evident in the future. Farallon's observations, findings, and opinions are as of the date of the report.

This report/assessment has been prepared in accordance with the contract for services between Farallon and Prologis. No other warranties, representations, or certifications are made.

Water Board Direct Exposure: MCL Priority[4]			**760**	**200**	**200**				**410**	**NE**	**NE**
Water Board ESLs Vapor Intrusion Human Health Risk Levels: Commercial/Industrial[5]			**NE**	**NE**	**NE**				**NE**	**NE**	**NE**
Water Board ESLs Aquatic Habitat Goal: Saltwater Ecotox[6]			**3,700**	**640**	**640**				**510**	**NE**	**NE**

NOTES:

Green highlight denotes concentrations exceeding the laboratory reporting limit.

Results in **bold** and highlighted **green** denote concentrations exceeding Tier 1 ESLs.

Results in **bold** and highlighted **yellow** denote concentrations exceeding Priority MCLs.

Results in **bold** and highlighted **orange** denote concentrations exceeding Priority MCLs and Aquatic Habitat Saltwater Ecotox Goals.

Gray text denotes reconnaissance groundwater sample.

--- denotes sample not analyzed.

< denotes analyte not detected at or exceeding the reporting limit listed.

* denotes aqueous sample containing greater than approximately 1 percent sediment by volume.

[1]Analyzed by U.S. Environmental Protection Agency Method 8015B.

[2]HOPs = Total Organics - PHCs - NOCs. For PHC or NOC concentrations reported at less than the laboratory reporting limit, zero (0) was used in the HOPs formula.

[3]San Francisco Bay Regional Water Quality Control Board (Water Board) Tier 1 ESLs for groundwater, dated 2019 (Rev. 2).

[4]Water Board Groundwater Direct Exposure Human Health Risk Levels (Table GW-1), dated 2019 (Rev. 2).

[5]Water Board Groundwater Vapor Intrusion Human Health Risk Levels (Table GW-3), dated 2019 (Rev. 2).

[6]Water Board Groundwater Aquatic Habitat Goal Levels (Table GW-2), dated 2019 (Rev. 2).

DRO = total petroleum hydrocarbons (TPH) as diesel-range organics

E2 = no recognizable pattern

ESL = Environmental Screening Level

GRO = TPH as gasoline-range organics

HOPS = hydrocarbon oxidation products

J = result is an estimate

MCL = Maximum Contaminant Level

NE = not established

NOCs = natural organic compounds; background sample analyzed for DRO C10-C28 with SC

ORO = TPH as oil-range organics

PHCs = petroleum hydrocarbons; plume sample analyzed for DRO C10-C28 with SGC

SGC = silica gel cleanup

Total Organics = plume sample analyzed for DRO C10-C28 without SGC

NOTES:

Green highlight denotes concentrations exceeding the laboratory reporting limit.

Results in **bold** and highlighted **green** denote concentrations exceeding Tier 1 ESLs.

Results in **bold** and highlighted **yellow** denote concentrations exceeding Priority MCLs.

Results in **bold** and highlighted **orange** denote concentrations exceeding Aquatic Habitat Saltwater Ecotox Goals and potentially Priority MCLs.

Gray text denotes reconnaissance groundwater sample.

< denotes analyte not detected at or exceeding the reporting limit listed.

--- denotes sample not analyzed.

* denotes aqueous sample containing greater than approximately 1 percent sediment by volume.

B = analyte detected in the associated method blank

ESL = Environmental Screening Levels

MCL = Maximum Contaminant Level

J = result is an estimate

NE = not established

PAHs = polycyclic aromatic hydrocarbons

Table 14
Conceptual Site Model
6756 and 6792 Central Avenue
Newark, California
Farallon PN: 1071-040

Conceptual Model Element	Conceptual Model Sub-Element	Description
Geology and Hydrogeology	Regional	The Site is in Newark, California along the southeastern coast of the San Francisco Bay, the main water body in Newark. The Site is characterized by Quaternary alluvium and marine deposits, which are composed of sequences of interbedded silts, sands, and clays to depths greater than 200 feet below ground surface (bgs). Alluvial deposits range in age from Pliocene to Holocene. The Site is in the Niles Cone Groundwater Basin, and groundwater flow beneath the region is predominantly to the west-southwest. As described in the Urban Water Management Plan,[1] the shallowest aquifer of the Niles Cone Groundwater Basin is the Newark Aquifer, which consists of gravel and sand between depths of approximately 40 and 140 feet bgs. The Newark Aquifer is overlain in most of the basin by the Newark Aquiclude, consisting of silt and clay. Layers of sand and silt within the Newark Aquiclude can act as non-regional shallow water-bearing zones. Beneath the Newark Aquifer is a clay aquitard that separates the Newark Aquifer from the Centerville Aquifer, Fremont Aquifer, and the Deep Aquifer. The Newark Aquifer is generally confined except in the area immediately west of the Hayward fault, where the overlying aquitard is absent in the forebay area. Groundwater in the Niles Cone Groundwater Basin has beneficial use per the Basin Plan.[2] The Newark Aquifer is a source of drinking water among other beneficial uses. However, groundwater quality within the Newark Aquifer near the San Francisco Bay has been degraded by saltwater intrusion. Aquifer reclamation wells up-gradient of the Site prevent further saltwater intrusion to protect drinking water as a beneficial use. As a result of the Site's location relative to the San Francisco Bay and up-gradient aquifer reclamation wells, groundwater within the Newark Aquifer beneath the Site is expected to be brackish and is not expected to be used for drinking water. Shallow water-bearing zones within the Newark Aquiclude are also expected to be brackish and are not expected to have beneficial use. The presence of the Newark Aquiclude prevents significant downward migration of impacted groundwater from shallow water-bearing zones within the Newark Aquiclude to the Newark Aquifer.
Geology and Hydrogeology	Site	According to investigations conducted by Farallon Consulting, L.L.C. (Farallon), the lithology beneath the Site consists of sand and gravel from the surface to depths of approximately 2 to 4 feet bgs, followed by clay and silt to depths of approximately 7.5 to 11 feet bgs, and by silt and sand to depths of approximately 13 to 14 feet bgs, where first-encountered groundwater was observed. This shallow water-bearing zone consists of silty sand and sand, and extends to depths of 19 to 22 feet bgs. Beneath the shallow water-bearing zone, an aquitard of silt and clay corresponding to the Newark Aquiclude was identified, extending to the total depth explored of 25 feet bgs. According to data obtained during five groundwater monitoring events conducted in 2020, 2021, and 2023, the groundwater flow direction at the Site is southwest, with a gradient of 0.001 to 0.004 foot per foot.

Table 14
Conceptual Site Model
6756 and 6792 Central Avenue
Newark, California
Farallon PN: 1071-040

Conceptual Model Element	Conceptual Model Sub-Element	Description
Sensitive Receptors	Surface Water Bodies	The federally designated wetlands nearest the Site are salt ponds that were identified approximately 100 feet southwest of the Site on the southwest-adjacent Cargill Salt property at 7220 Central Avenue. The water body nearest the Site was identified as the San Francisco Bay, approximately 2.5 miles southwest of the Site.
Sensitive Receptors	Nearby Wells	Water-supply wells within a 1-mile radius of the Site were identified in the California State Water Resources Control Board Groundwater Ambient Monitoring and Assessment Program database. Two wells were identified approximately 3,168 and 4,800 feet northeast and up-gradient of the Site. Five wells were identified approximately 1,600 to 4,200 feet southwest and down-gradient of the Site. Based on the distance of these wells from the Site and/or the direction of groundwater flow, it is highly unlikely that historical releases at the Site have impacted these water-supply wells or have the potential to impact water-supply wells in the future.
Constituents of Concern		Historical industrial use of the Site indicated the need for investigations at the Site. Previous investigations included laboratory analysis for: total petroleum hydrocarbons (TPH) as diesel-range organics (DRO), as oil-range organics (ORO), and as gasoline-range organics (GRO); polycyclic aromatic hydrocarbons (PAHs); polychlorinated biphenyls; metals; and volatile organic compounds (VOCs). The constituents of concern (COCs) for the Site are compounds that have been detected at concentrations exceeding Tier 1 Environmental Screening Levels (ESLs), which were identified during investigations as DRO, ORO, VOCs, PAHs, and select metals. Groundwater monitoring well sampling results confirmed that historical reconnaissance groundwater sample analytical results are not representative of groundwater conditions at the Site.
Release Source		Two 1,000-gallon underground storage tanks (USTs) containing bunker fuel and gasoline, and a 20,000-gallon diesel fuel aboveground storage tank (AST) and associated fuel islands and piping were removed from the Site between 1991 and 1993. Visual inspection and soil sampling at the time of removal indicated that a release had not occurred from the two USTs. Although visual inspection of the AST, associated fuel islands, and piping did not indicate that a release had occurred, DRO was detected at a maximum concentration of 2,800 milligrams per kilogram (mg/kg) in soil samples collected. A soil and groundwater investigation was conducted in September 1999 to determine the extent of petroleum hydrocarbon contamination from the AST. Based on the results from the investigation, an excavation was conducted north of the former location of the AST in June 2000, and approximately 311 tons of soil and 2,300 gallons of groundwater were removed from the Site. Confirmation samples collected following excavation did not contain detectable concentrations of TPH. Historical industrial operations at the Site may have been a potential source of impacts to soil and groundwater. Data obtained during five groundwater monitoring events using low-flow sampling procedures at the Site in 2020, 2021, and 2023 indicated that Site groundwater has not been adversely impacted by DRO or PAHs at concentrations exceeding the maximum contaminant level (MCL), with the exception of the results from groundwater samples collected from monitoring wells MW-5 and MW-8 on January 13 and April 6, 2021, which indicated that groundwater impacts appeared to be low threat and limited in areal extent. The March 2, 2023 groundwater monitoring event found that detections of DRO and PAHs in samples collected from off-Site down-gradient

Table 14
Conceptual Site Model
6756 and 6792 Central Avenue
Newark, California
Farallon PN: 1071-040

Conceptual Model Element	Conceptual Model Sub-Element	Description
		temporary groundwater monitoring wells F-26, F-27, and F-28 and Site monitoring wells MW-3 through MW-8 were less than MCLs. Groundwater impacts at the Site have been characterized and are low threat. Data suggest the potential for releases from surrounding properties to have contributed to groundwater impacts at the Site.
Constituents of Concern in Soil		COC detections in soil samples collected by Farallon are summarized below: • DRO was not detected at a concentration exceeding Tier 1 ESLs, with the exception of a detection of DRO in the sample collected from boring MW-8, which also exceeded the commercial/industrial ESL. • ORO was not detected at a concentration exceeding Tier 1 ESLs, with the exception of a detection of ORO in the sample collected from boring MW-8, which was less than the commercial/industrial ESL. • VOCs were not detected at a concentration exceeding Tier 1 ESLs, with the exception of naphthalene, which was detected at concentrations less than the commercial/industrial ESL in samples collected from borings F-4, F-20, and MW-8. • PAHs were not detected at a concentration exceeding Tier 1 ESLs, with the exception of two compounds detected at concentrations less than the commercial/industrial ESL in a sample collected from boring F-13. • Arsenic, barium, nickel, and vanadium were the only metals detected at concentrations exceeding Tier 1 ESLs; all concentrations were less than commercial/industrial ESLs. Arsenic is known to occur naturally at concentrations exceeding the commercial/industrial ESL in California soil. The San Francisco Bay Regional Water Quality Control Board has identified 11 mg/kg of arsenic as an acceptable background concentration in soil. The arsenic concentrations detected at the Site were less than this background concentration, with the exception of a detection of 12 mg/kg in a sample collected from boring F-12.

Table 14
Conceptual Site Model
6756 and 6792 Central Avenue
Newark, California
Farallon PN: 1071-040

Conceptual Model Element	Conceptual Model Sub-Element	Description
Constituents of Concern in Groundwater		COC detections in groundwater samples collected by Farallon are summarized below: • DRO was detected in two samples collected from monitoring well MW-5, with the maximum concentration of 220 micrograms per liter (µg/l) in the sample collected on April 6, 2021 slightly exceeding the MCL of 200 µg/l. DRO was not detected at a concentration exceeding the laboratory reporting limit in the sample collected from monitoring well MW-5 and analyzed for DRO with silica gel cleanup, which is indicative of the presence of natural organic compounds or hydrocarbon oxidation products (HOPs) in groundwater. Subsequent results of groundwater monitoring at monitoring well MW-5 found DRO without or with silica gel cleanup was not detected exceeding the laboratory reporting limit. DRO without and with silica gel cleanup was detected in off-Site reconnaissance groundwater sample F-26 collected on March 2, 2023, at concentrations equal or less than the MCL, respectively. The chromatograph pattern of the DRO detected in sample F-26 matched a degraded bunker fuel pattern, rather than diesel, which is consistent with residual bunker fuel impacts remaining beneath the Cargill admin building south of the Site. The concentration of HOPs calculated for sample F-26 was less than the MCL. DRO without silica gel cleanup was detected in off-Site reconnaissance groundwater sample F-27 at a concentration less than the MCL. The concentration of HOPs calculated for sample F-27 was less than the MCL. • ORO was detected in the sample collected on January 13, 2021 from monitoring well MW-5. ORO was detected in reconnaissance groundwater sample F-26 collected on March 2, 2023. An ESL has not been established for ORO. • VOCs were not detected at a concentration exceeding Tier 1 ESLs or MCLs. • Historically, select PAHs were detected at concentrations exceeding Tier 1 ESLs and benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene and dibenzo(a,h)anthracene were detected at maximum concentrations of 0.096, 0.28, 0.36, and 0.049 µg/l, respectively, which slightly exceeded the MCLs of 0.017, 0.2, 0.25 and 0.025 µg/l, respectively. During the most recent groundwater monitoring event on March 2, 2023, PAHs were not detected at concentrations exceeding the MCLs.
Source Removal Activities		USTs formerly present at the Site consisted of two 1,000-gallon USTs containing bunker fuel and gasoline, and a 20,000-gallon diesel fuel AST. The former USTs, AST, and associated fuel islands and piping were removed from the Site between 1991 and 1993, stopping any releases that may have occurred. An excavation was conducted north of the former location of the AST in June 2000, and approximately 311 tons of soil and 2,300 gallons of groundwater were removed from the Site. Confirmation samples collected following excavation did not contain detectable concentrations of petroleum hydrocarbons.

Table 14
Conceptual Site Model
6756 and 6792 Central Avenue
Newark, California
Farallon PN: 1071-040

Risk Evaluation	Potential Receptors	The Site is used for commercial/industrial purposes, with no changes in Site use planned for the future. Potential receptors are commercial/industrial workers and construction workers. Potential exposure pathways evaluated were incidental ingestion, dermal contact, dust inhalation, and vapor inhalation. An assessment of whether an exposure pathway is potentially complete, incomplete, or insignificant follows. For direct contact with contaminated soil, the exposure pathways for incidental ingestion, dermal contact, and dust inhalation for commercial/industrial workers are considered complete. However, shallow soil throughout the Site has been sampled and analyzed, demonstrating concentrations of COCs less than commercial/industrial ESLs, which reflect the intended use of the Site. The only exceptions were a detection of arsenic that slightly exceeded the acceptable background concentration, and a detection of DRO that exceeded the commercial/industrial ESL. For direct contact with contaminated groundwater, the ingestion and dermal pathways for groundwater are considered incomplete. Shallow groundwater from permanent groundwater monitoring wells across the Site was sampled and analyzed during five sampling events conducted from March 2020 to March 2023. Free-product was not encountered during the five sampling events. Concentrations of COCs detected in groundwater samples were less than the direct exposure human health risk level ESLs, with the exceptions of a concentration of DRO detected in a groundwater sample collected from monitoring well MW-5 on April 6, 2021, and concentrations of select PAHs detected in samples collected from monitoring wells MW-5 and MW-8 on March 5, 2020 and January 13 and April 6, 2021. DRO was not detected at a concentration exceeding the laboratory reporting limit in the groundwater sample collected concurrently from monitoring well MW-5 on April 6, 2021 and analyzed by U.S. Environmental Protection Agency Method 8015 with silica gel cleanup, which is indicative of the presence of natural organic compounds or HOPs in groundwater. Subsequent groundwater monitoring performed on March 2, 2023 found concentrations of DRO without and with silica gel cleanup were not detected exceeding laboratory reporting limits in samples collected from monitoring wells MW-3 through MW-8 at the Site. Calculated HOPs concentrations were not detected in samples collected from monitoring wells MW-3 through MW-8 at the Site. The detected concentrations of DRO and PAHs historically detected in samples collected from monitoring wells MW-5 and MW-8 appear to be decreasing. Down-gradient and off-Site reconnaissance groundwater samples collected from temporary monitoring wells F-26, F-27, and F-28 have delineated the down-gradient extent of the contaminant plume. The Site is in the Niles Cone Groundwater Basin, proximate to the San Francisco Bay and the large system of salt ponds present along the San Francisco Bay's margin. Groundwater in the Niles Cone Groundwater Basin is known to experience saltwater intrusion, especially closer to the San Francisco Bay. Groundwater in the Niles Cone Groundwater Basin, including the Newark Aquifer, is considered to have beneficial use per the Basin Plan, regardless of total dissolved solids (TDS) concentrations. Concentrations of TDS detected in shallow groundwater at the Site have historically been as high as 3,160 milligrams per liter (mg/l) and generally exceed the Secondary MCL range for TDS of 500 mg/l (recommended) to 1,000 mg/l (upper). According to the Basin Plan, groundwater that contains TDS at a concentration exceeding 3,000 mg/l is not reasonably expected to supply a public water system. It is not anticipated that shallow groundwater beneath the Site would be used as a source of drinking water as part of a public water system. Shallow groundwater at the Site is contained in silt and sand zones within the Newark Aquiclude, which prevents significant migration of shallow groundwater into the Newark Aquifer below. Groundwater in the Newark aquifer is identified for beneficial uses including drinking water, but because of the presence of the Newark Aquiclude,

Table 14
Conceptual Site Model
6756 and 6792 Central Avenue
Newark, California
Farallon PN: 1071-040

Conceptual Model Element	Conceptual Model Sub-Element	Description
		impacts to shallow groundwater are unlikely to migrate to the Newark Aquifer. The down-gradient salt ponds and San Francisco Bay were identified approximately 100 feet southwest and 2.5 miles southwest of the Site, respectively, and it is unlikely that they have been impacted by historical releases at the Site because COCs were not detected at concentrations exceeding aquatic habitat ESLs in the down-gradient groundwater samples F-26, F-27, and F-28. The down-gradient water-supply well nearest the Site was identified approximately 1,600 feet southwest of the Site. Based on the distance to this well from the Site and the low concentrations of COCs detected in groundwater at the Site, it is highly unlikely that historical releases at the Site have impacted water-supply wells or have the potential to impact water-supply wells in the future. For volatilization from soil or groundwater to indoor and outdoor air, the vapor inhalation pathway is considered incomplete. The concentrations of volatile COCs detected in shallow soil and groundwater at the Site were less than the commercial/industrial vapor intrusion human health risk level ESLs. In addition, cumulative vapor intrusion exposure risk and hazard were calculated by entering maximum concentrations of volatile COCs detected in samples collected from groundwater monitoring wells into the Tier 2 – Site-Specific Cumulative Risk and Hazard Calculator.[3] Only COCs that contribute to vapor intrusion exposure risk and hazard were included in the risk assessment calculations. For example, DRO was detected in groundwater, but because it does not have a commercial/industrial vapor intrusion human health risk level ESL, it does not contribute to the calculation for cumulative vapor intrusion exposure risk and hazard, and was not included in the calculation of vapor intrusion exposure risk and hazard. A review of historical data collected at the Site found detections of four COCs that contribute to the calculation for cumulative vapor intrusion exposure risk and hazard: methyl ethyl ketone, methyl tertiary-butyl ether, benzo(a)anthracene, and naphthalene. The maximum detected concentration in groundwater monitoring well samples for each of the four COCs was entered into the calculation presented in Appendix F. Cumulative cancer risk and cumulative noncancer hazard due to vapor intrusion were 6.3E-09 and 1.5E-04, respectively, which are less than the cancer risk and noncancer hazard thresholds of 1.0E-6 and 1.0, respectively. Although no soil gas samples have been collected at the Site, the plethora of soil and groundwater samples with concentrations of volatile COCs less than commercial/industrial vapor intrusion human health risk level ESLs, and the cumulative cancer risk and noncancer hazard less than thresholds illustrate that subsurface conditions do not expose commercial workers to unacceptable health risks under continued commercial use.

Table 15
Assessment Tool for Closure Checklist
6756 and 6792 Central Avenue
Newark, California
Farallon PN: 1071-040

CRITERIA	DISCUSSION	CRITERIA SATISFIED?
1. Develop a complete conceptual site model (CSM).		**Yes**
1a) Pollutant sources are identified and evaluated.	Former underground storage tanks (USTs) at the Site consisted of two 1,000-gallon USTs containing bunker fuel and gasoline and a 20,000-gallon diesel fuel aboveground storage tank (AST). The USTs, AST, and associated fuel islands and piping were removed from the Site between 1991 and 1993, stopping any releases that may have occurred. Visual inspection and soil sampling at the time of removal indicated that a release had not occurred from the two USTs. Soil and groundwater sampling at the time of the removal of the AST and associated fuel islands and piping indicated that a release had occurred.	
1b) The Site is adequately characterized.	The constituents of concern (COCs) at the Site in soil are total petroleum hydrocarbons (TPH) as diesel-range organics (DRO), TPH as oil-range organics (ORO), naphthalene, polycyclic aromatic hydrocarbons (PAHs), and metals. Only a single detection of arsenic that slightly exceeded the acceptable background concentration, and a detection of DRO that exceeded the San Francisco Bay Regional Water Quality Control Board (Water Board) commercial/industrial Environmental Screening Level (ESL) were reported in soil samples. The COCs at the Site in groundwater are: DRO, ORO, and PAHs. During the most recent groundwater monitoring event performed on March 2, 2023, detections of COCs in groundwater were less than the maximum contaminant levels (MCLs).	
1c) Exposure pathways, receptors, and potential, risks, threats, and other environmental concerns are identified and assessed.	Potential exposure pathways evaluated were incidental ingestion, dermal contact, dust inhalation, and vapor inhalation. Potential receptors are commercial/industrial workers and construction workers. Potential impacts to surface waters, groundwater with beneficial uses, and nearby water supply wells were evaluated.	

Table 15
Assessment Tool for Closure Checklist
6756 and 6792 Central Avenue
Newark, California
Farallon PN: 1071-040

CRITERIA	DISCUSSION	CRITERIA SATISFIED?
2. Control sources and mitigate risks and threats.		**Yes**
2a) Pollutant sources are remediated to the extent feasible.	In June 2000, approximately 311 tons of soil and 2,300 gallons of groundwater were removed from an excavation conducted to remove secondary source material on the northern side of the former location of the 20,000-gallon diesel AST at the Site. Confirmation samples collected following excavation did not contain detectable concentrations of TPH. Concentrations of DRO and ORO detected in the soil sample collected from boring MW-8 exceeded the Water Board Tier 1 ESLs. Groundwater samples collected from monitoring well MW-8 have not shown detectable concentrations of DRO or ORO, indicating that the soil impacts are not acting as a secondary source of impacts to groundwater in the vicinity of monitoring well MW-8.	

Table 15
Assessment Tool for Closure Checklist
6756 and 6792 Central Avenue
Newark, California
Farallon PN: 1071-040

CRITERIA	DISCUSSION	CRITERIA SATISFIED?
2b) Unacceptable risks to human health, ecological health, and sensitive receptors, considering current and future land and water uses, are mitigated.	A risk evaluation for potential receptors was conducted, and it was demonstrated that human health and the environment is protected: • For direct contact with contaminated soil, the exposure pathways for incidental ingestion, dermal contact, and dust inhalation for commercial/industrial workers are considered complete; however, concentrations of COCs were less than commercial/industrial ESLs, with the exceptions of a single detection of arsenic that slightly exceeded the acceptable background concentration, and a single detection of DRO that exceeded the commercial/industrial ESL, which are considered low threat. • Groundwater monitoring results from the most recent event on March 2, 2023 showed that COCs in groundwater samples collected from the Site are less than the MCLs, with concentrations decreasing from historical levels. The down-gradient extent of the contaminant plume has been delineated by the off-Site down-gradient reconnaissance groundwater samples F-26, F-27, and F-28. Groundwater in the Newark Aquifer is identified for beneficial uses including drinking water, but because of the presence of the Newark Aquiclude, impacts to shallow groundwater are unlikely to migrate to the Newark Aquifer. Down-gradient surface waters are highly unlikely to have been impacted because concentrations of COCs were not detected at concentrations exceeding aquatic habitat ESLs in the down-gradient groundwater samples F-26, F-27, and F-28. Due to the distance from the Site, groundwater supply wells are unlikely to have been impacted. • For volatilization from soil or groundwater to indoor and outdoor air, the vapor inhalation pathway is considered incomplete; the concentrations of volatile COCs detected in shallow soil and groundwater at the Site were less than the commercial/industrial vapor intrusion human health risk level ESLs; and cumulative cancer risk and cumulative noncancer hazard due to vapor intrusion were 6.3E-09 and 1.5E-04, respectively, which are less than the cancer risk and noncancer hazard thresholds of 1.0E-6 and 1.0, respectively.	
2c) Unacceptable threats to groundwater and surface water resources, considering existing and potential beneficial uses, are mitigated.	Unacceptable threats to groundwater and surface water resources due to the release at the Site have been evaluated and found to be highly unlikely because detections of COCs in groundwater are less than the MCLs and aquatic habitat ESLs as of the most recent groundwater monitoring event performed on March 2, 2023.	

Table 15
Assessment Tool for Closure Checklist
6756 and 6792 Central Avenue
Newark, California
Farallon PN: 1071-040

CRITERIA	DISCUSSION	CRITERIA SATISFIED?
3. Demonstrate that residual pollution in all media will not adversely affect present and anticipated land and water uses		**Yes**
3a) Groundwater plumes are decreasing.	Detections of COCs in groundwater have decreased from slightly greater than the MCLs to less than the MCLs in the most recent groundwater monitoring event performed on March 2, 2023.	
3b) Cleanup standards can be met in a reasonable timeframe.	Detections of COCs in groundwater are less than the MCLs as of the most recent groundwater monitoring event performed on March 2, 2023.	
3c) Risk management measures are appropriate, documented, and do not require future Water Board oversight.	Risk management measures are not required for the Site.

When properly signed

THIS APPLICATION IS A VALID PERMIT

to perform only work described below at the given job address, in accordance with ACWD Ordinance No. 2010-01 and all other applicable laws and regulations. Discontinuation of work may result in revocation of permit. ***Permittee must schedule the work in advance with ACWD.*** *ACWD's approval of drawings, designs, specifications, work plans, reports or incidental work and materials shall not relieve the permittee of responsibility for the technical adequacy of the work. Except for special circumstances, all work to be inspected must be performed within ACWD work hours – 7:00 a.m. to 4:30 p.m., Monday through Friday.*

PLEASE CHECK TYPE OF PROPOSED WORK

Each well or other excavation requires a separate permit application form unless otherwise indicated. Only one specific type of work can be checked per permit application.

WELLS
☐ CONSTRUCTION ☐ REPAIR ☐ DESTRUCTION

☐ Water Well

Monitoring Well:
- ☐ Chemical Investigation
- ☐ Injection Well (for Chemical Cleanup)
- ☐ Geotechnical Investigation

☐ Geothermal Heat Exchange Well

☐ Dewatering Well *(Multiple dewatering wells may be grouped together on the same permit application form)*
Quantity: _____

EXPLORATORY HOLES
☑ CONSTRUCT./DESTRUCT.

Multiple exploratory holes of the same type may be grouped together on the same permit application form.

- ☒ Chemical Investigation
- ☐ Injection Boreholes
- ☐ Soil Vapor Sampling
- ☐ Geotechnical Investigation

Quantity: 3

OTHER EXCAVATIONS
☐ CONSTRUCTION ☐ REPAIR ☐ DESTRUCTION

- ☐ Cathodic Protection Well
- ☐ Inclinometer
- ☐ Vibrating Wire Piezometer
- ☐ Elevator Shaft

Multiple other excavations of the same type may be grouped together on the same permit application form for the following:

- ☐ Cleanup Site Excavation(s)
- ☐ Wick Drains
- ☐ Shaft, Tunnel, or Directional Borehole (s)
- ☐ Support Piers, Piles, or Caissons
- ☐ Other: _____ Quantity: _____

DESCRIPTION OF PROPOSED WORK:
Environmental Investigation; three boreholes for hydropunch groundwater samples
All bores are temporary and will be grouted after sample collection

TOTAL ESTIMATED COST $ 475

PERMIT CONDITIONS:
Exploratory Boreholes to be Backfilled from Bottom of Borehole to Surface with Neat Cement

FEES: ☐ Private ☐ City ☐ Governmental Agency

GUARANTEE OF PERFORMANCE: ☐ Cash Deposit ☐ Bond

REFUND: Amount $ _____ Reason: _____

FEES/ DEPOSIT: Date Received 12/12/22 Estimated Amount $ 475.00
Check No. 48951 Actual Amount $ 475.00
Cash _____ Difference $ 0

ACWD SITE NO. 20692

APPROVED FOR SCHEDULING BY: FOR DATE: 12/16/22

APPROVED BY: DATE: 2/14/2023

I hereby agree to comply with all conditions of this permit in accordance with ACWD Ordinance No. 2010-01 and to furnish the District a completed copy of D.W.R. Drillers Report (form 188) within sixty (60) days after completion as well as any chemical testing results within thirty (30) days after completion.

Title: Associate Geologist Signature: Peter Sims Date: 12/9/2022

STANDARD OPERATING PROCEDURES

DATA GAP INVESTIGATION AND REQUEST FOR SITE CLOSURE
6756 and 6792 Central Avenue
Newark, California

Farallon PN: 1071-105

STANDARD OPERATING PROCEDURE EQ-01
EQUIPMENT DECONTAMINATION PROCEDURES

PURPOSE AND APPLICATION

The purpose of this standard operating procedure (SOP) is to provide field personnel with the methodology for decontaminating sampling equipment during various field activities. The step-by-step guidelines provided in this SOP are to be followed by the field crew during all site visits, as applicable.

EQUIPMENT AND SUPPLIES/REAGENTS

The following equipment is necessary to properly decontaminate field equipment during various field tasks:

- Rinse water or distilled water.
- Deionized water.
- Liquinox or other phosphate-free detergent.
- Paper towels.
- Labeled squirt bottles.
- Long-handled hard-bristle brushes (for sediment and soil).
- Cotton swabs.
- Plastic sheeting, garbage bags, and aluminum foil (for sediment and soil).
- Core liner caps or plastic wrap and rubber bands (for sediment and soil).
- Extension arm for cleaning core liners (for sediment and soil).
- Plastic 5-gallon bucket.
- U.S. Department of Transportation-approved drum(s) for decontamination water unless other water-handling arrangements have been made. Separate drums are needed for liquid and solid wastes (see Farallon SOP WM-01, Field-Handling of Investigation-Derived Waste). Liquid wastes should not be added to drums containing solid wastes.

Dilute Liquinox with distilled water in a squirt bottle in accordance with the instructions on the Liquinox package, and label the bottle. Fill another squirt bottle with distilled water, and label the bottle.

FIELD EQUIPMENT TO BE DECONTAMINATED AFTER USE

Decontaminate the following field equipment at the conclusion of field work each day, in accordance with the procedures outlined in this SOP:

- Water-level meter.
- Horiba/YSI multiparameter probe.
- Bladder pump.
- Submersible pump.
- Sediment and soil collection and processing equipment.

WATER-LEVEL METER DECONTAMINATION

Decontaminate the water-level meter after measuring the water level at a monitoring well before moving to a new monitoring well, using the following procedures:

- Spray the bottom half of a paper towel with the diluted Liquinox solution, and the upper half with deionized water.
- Grip the measuring tape of the water-level meter with the paper towel in one hand with the Liquinox side down toward the monitoring well casing.
- Begin slowly reeling up the water-level meter while maintaining firm contact between the measuring tape and the paper towel.
- Ensure that no debris or contamination remains on the measuring tape of the water-level meter once it has been reeled up.
- Use a clean new paper towel for each successive decontamination of the measuring tape of the water-level meter.

HORIBA/YSI MULTIPARAMETER PROBE DECONTAMINATION

Decontaminate the Horiba/YSI multiparameter probe at the end of each workday or after sampling a monitoring well with high concentrations of contamination, using the following procedures:

- Remove the multiparameter probe from the flow-through cell, and thoroughly spray each component with deionized water.
- Use a cotton swab to gently clean around each sensor probe, ensuring that all contaminated water and material has been washed away.
- Refill the protective dissolved oxygen and pH probe caps with deionized water, and replace prior to storage.
- Once the multiparameter probe has been adequately cleaned, replace the protective shield, and return the probe to the case. If the device appears to be overly wet, allow it to air-dry with the case open.

- Do not use Liquinox to clean any probes on the Horiba multiparameter probe, as it may damage the device.

BLADDER PUMP DECONTAMINATION

Decontaminate the bladder pump after sampling a well and at the end of each workday, using the following procedures:

- After extracting the bladder pump from the well, break down the pump, remove and dispose of the used bladder, and spray each component with the diluted Liquinox solution, followed by deionized water.
- Wipe away any visible contamination or debris with a paper towel.
- Capture cleaning water in a liquid waste drum for proper disposal in accordance with Farallon SOP WM-01, Field-Handling of Investigation-Derived Waste.
- Ensure that all contamination and Liquinox solution is washed off all components before reassembling the device, installing a new bladder, and moving to sample a new well.

SUBMERSIBLE PUMP DECONTAMINATION

Decontaminate the submersible pump after purging water from any well, using the following procedures:

- After extracting the submersible pump from the well, thoroughly spray down the pump with the diluted Liquinox solution, followed by deionized water.
- Wipe away any visible contamination or debris with a paper towel.
- Purge clean water through the pump and tubing to ensure that contaminated water has been cleared from all lines.
- Capture cleaning water in a liquid waste drum for proper disposal in accordance with Farallon SOP WM-01, Field-Handling of Investigation-Derived Waste.

SEDIMENT AND SOIL SAMPLING AND PROCESSING EQUIPMENT DECONTAMINATION

Decontaminate sampling equipment used to collect and process sediment and soil samples, using the following procedures:

- Place contaminated equipment and decontamination tools on plastic sheeting.
- Thoroughly rinse all used equipment with distilled water in a 5-gallon bucket to remove excess sediment or soil.
- Pour one capful of Liquinox solution into a 5-gallon bucket filled with tap water or distilled water.
- Using a long-handled hard-bristle brush, thoroughly scrub the equipment with the Liquinox solution until no sediment or soil particles remain.

- Holding the equipment over a 5-gallon bucket, double-rinse the equipment with distilled water until no Liquinox solution remains. Do not allow clean equipment to come into contact with a contaminated surface.
- Drain the equipment and place it in a clean, dry place to prevent recontamination.
- If decontaminated equipment will not be re-used immediately, wrap stainless steel equipment (e.g., bowls, spoons) in aluminum foil with the dull side facing the equipment. Seal polycarbonate core liners with core caps or cellophane plastic. Rubber-band ends to ensure a proper seal.
- After decontamination has been completed, place disposable items into a garbage bag, and store decontamination water in a drum in accordance with Farallon SOP WM-01, Field-Handling of Investigation-Derived Waste.

STANDARD OPERATING PROCEDURE EQ-02
PHOTOIONIZATION DETECTOR CALIBRATION AND OPERATION

PURPOSE AND APPLICATION

The purpose of this standard operating procedure (SOP) is to provide field personnel with the information needed to properly use, operate, and handle MiniRAE Photoionization Detector (PID) Models 2000 and 3000. The PID is used as a field-screening instrument for measurement of total volatile organic (TVO) concentrations in air. Typical uses include air monitoring of the breathing zone for health and safety purposes, screening of groundwater and soil for TVO emissions, and monitoring of the headspace of a monitoring well. The PID is a highly sensitive instrument. MiniRAE Models 2000 and 3000 have a potential operating range of 0.1 to 15,000 parts per million (ppm) isobutylene equivalents, depending on the lamp used. The detection limit is 0.1 ppm hexane or isobutylene, with a response time of less than 3 seconds.

Operation and maintenance manuals specific to this equipment should be referenced as necessary. Two user manuals are kept in Farallon's PID case: the *MiniRAE 3000 Pocket Reference;* and the *MiniRAE 3000 User's Guide*. These manuals should always be stored in the PID case so they are available for reference.

The step-by-step guidelines provided in this SOP are to be followed by the field crew when monitoring concentrations of TVO compounds in the breathing zone, a soil sample, a water sample, or the headspace of a monitoring well.

EQUIPMENT

The following equipment is necessary to calibrate and operate the PID:

- The PID instrument;
- A calibration gas regulator and silicon tubing;
- Calibration gas containing approximately 100 ppm isobutylene; and
- A 110-volt battery charger.

PID CALIBRATION CHECK

PID calibration should be checked at the beginning of the day, and as needed if drift occurs (see "PID Drift or Other Change" section below). The instructions below are to be followed to check PID calibration (refer to pages 17 and 18 of the *MiniRAE 3000 User's Guide* for information regarding the connection between buttons and control functions):

- Turn on the PID by pressing [MODE]. Wait for the PID to proceed to the default display, and allow the instrument to warm up for 10 minutes in accordance with the manufacturer's instruction. The initial reading should be 0 or 0.1 part per million volume (ppmv).
- Connect the regulator to the gas cylinder, and connect the tubing to the regulator.

- Start the gas flow by pushing in the regulator knob and turning 90 degrees. Some gas will begin to escape.
- Connect the tubing from the regulator to the PID sensor tip. The PID reading should climb to 99 to 101 ppmv.
- When the PID reading reaches the maximum level displayed, turn off the regulator and disconnect the sensor tip. The reading should return to zero.
- If any of the readings predicted above do not occur, re-calibrate the PID or arrange for repair.

PID CALIBRATION

The instructions below are to be followed to perform a zero (fresh air) calibration and a span calibration on the PID (refer to pages 35 through 46 of the MiniRAE 3000 User's Guide for information regarding calibrations):

Zero Calibration (a zero calibration always should be performed prior to a span calibration):

- Turn the unit on by pressing [MODE] for approximately 1 second.
- Press and hold [MODE] and [N/-] simultaneously until you see the Password Screen.
- Input the password:
    - The default password is 0000.
    - Use the [Y/+] to increase the number value from 0 through 9.
    - Use the [N/-] to move the cursor to a different number slot.
    - Press [MODE] once you have input the password.
- Select "Calibration" by using [Y/+].
- Select "Zero Calib" by using [Y/+].
- Apply a fresh air source to the unit. Clean ambient air without detectable contaminants may be used as a fresh air source.
- Press [Y/+] to start the zero calibration. The zero calibration will take approximately 30 seconds to complete.
- The display screen will return to the Calibration menu when the zero calibration is complete.
- Record the values read by the PID in a calibration book or in the Log Field Book.

Once the zero calibration is complete, the unit automatically returns to the Calibration menu.

If the PID does not read 0.0 ppmv following the zero calibration, repeat the zero calibration procedure. If the PID fails both attempts to zero calibrate, move on to span calibration.

SPAN CALIBRATION

- Press [N/-] to scroll down to "Span Calib."
- Press [Y/+] to select "Span Calib."
- Select the proper calibration gas. Ensure that the calibration gas and the span value on the unit's display screen have the same TVO concentration.
- Connect the regulator to the gas cylinder, and connect the tubing to the regulator.
- Press [Y/+] to begin the span calibration.
- Immediately apply the correct calibration gas to the unit's probe by turning the regulator knob 90º in either direction. The span calibration will take approximately 30 seconds.
- The calibrated value should be +/- 2 percent of the concentration indicated on the calibration gas canister. Once the span calibration is complete, the unit will automatically return to the calibration menu.
- If the calibrated value is 2 percent greater than the concentration indicated on the calibration gas canister, repeat the span calibration procedure.
- Press [MODE] twice to navigate back to the main display.
- When calibrating the PID with isobutylene, record values read by the PID in a calibration book or in the Log Field Book.
- If the PID did not initially calibrate using the zero calibration mode, re-attempt to calibrate the PID using fresh air.

If the PID does not calibrate using the span calibration gas, call and update the Project Manager on the status.

PID DRIFT OR OTHER CHANGE

PID drift commonly is a failure of the instrument to return to zero after TVO concentrations dissipate. A failure to return to zero usually reflects inaccuracy at the upper end of the instrument's detection range. Several situations can cause drift, including soil or water in the tip of the probe, soil or water in the sensor filter, or a change such as tightening or loosening the probe tip assembly since the instrument was last calibrated. The degree of drift from the initial daily calibration can be checked by exposing the PID to the calibration gas (see the "PID Calibration" section above). Re-calibration serves little purpose until the cause of the drift is determined.

If you determine that PID drift is occurring, complete the following actions:

- Unscrew the probe from the PID unit;
- Inspect the probe and the top of the unit for soil or moisture;
- Carefully remove any soil or moisture from the probe and/or unit by air drying;

- Replace the sensor filter on the probe with a new, unused sensor filter;
- Screw the probe back on the unit; and
- Apply Span Calibration gas to test the accuracy of the PID unit.

PID OPERATION

The instructions below are to be followed for PID use to screen soil and groundwater for TVO concentrations, to monitor the breathing zone for health and safety purposes, and to monitor monitoring well headspace:

- Connect the PID sample probe with filter to the PID hand-held air monitor.
- Turn on the PID by pressing [MODE]. Wait for the PID to proceed to the default display, and allow the instrument to warm up for 10 minutes in accordance with the manufacturer's instructions.
- **CAUTION!** Do not seal the soil in a plastic bag for longer than 5 minutes when conducting soil screening to avoid false readings due to moisture build-up (in wet situations, use the filter on the end of the sensor tip). Pierce the plastic bag with a clean tool, and immediately insert the sensor tip, quickly establishing a tight seal. The meter should react rapidly. Record the maximum value displayed within 30 seconds.
- To monitor groundwater and soil for TVO emissions, place the probe inlet near the groundwater or soil surface, and read the meter display showing detected concentrations. Do not allow water or soil to be sucked into the instrument.
- To monitor the breathing zone for health and safety purposes, allow the PID to monitor air quality at the breathing zone, chest, or face level, and read the meter display showing detected concentrations.
- Monitor the headspace of a monitoring well directly after the well has been opened. Place the probe inlet directly above the polyvinyl chloride well casing or tubing that is associated with a dedicated pump in the well. Read the meter display showing detected concentrations.
- Ensure that the PID is kept dry while in use. Humidity or moisture from rain can cause large fluctuations in PID readings, and can damage the instrument.
- If the PID displays erratic readings, it is possible that either moisture or dirt is in the probe, or dirt has collected in the filter. If this occurs, clean and dry the sample probe (possibly by placing it near a running heater in a vehicle), and replace the filter if necessary.

DOCUMENTATION

Document the PID measurements for all monitoring events on field forms and in a detailed field notebook, and record observations of varying weather conditions such as temperature and humidity fluctuations.

STANDARD OPERATING PROCEDURE GN-01
FIELD NOTE PROCEDURES

PURPOSE AND APPLICATION

The purpose of this standard operating procedure (SOP) is to provide field personnel with the information needed to document site and sampling activities during field work. The step-by-step guidelines provided in this SOP are to be followed by the field personnel during field work.

GENERAL FIELD NOTE INSTRUCTIONS

- Use a blue or black pen.
- Always document time in military time.
- Record your full name and the names of other Farallon employees present. Initials of personnel can be used after the full names have been provided in the field notes.
- Don't leave line spaces between field note entries.
- Keep handwriting neat.
- Be concise.

ITEMS TO INCLUDE IN FIELD NOTES

At Start of Workday:

- Document when and where you started the field day and when you arrived at the site.
- Note any stops along the way to the site.

Upon Arrival at Site:

- Note the reason for the site visit/site work.
- Document the weather on page 1, and throughout the day if the weather changes.
- Document the time personnel arrive at the site and the name of the company/agency they are affiliated with.
- Document the time subcontractors arrive, the tasks they are conducting, and the time they leave the Site.
- Conduct the Health and Safety (H&S) meeting, ensure all participants sign the H&S form, and include the signed H&S form in the field notes.
- Calibrate equipment: document equipment model number/serial number, calibration method, and results. Be specific (e.g., "Calibrated Horiba for pH using 4.0 standard." "Calibrated PID using 100 ppm isobutylene span gas and ambient air as zero gas."). Note whether the instrument is Farallon's or a rental. If using a rental, include in the field notes the calibration sheet that should have come with the equipment. If using two sets of

equipment, note on the field forms which equipment was used for each location. For example, label "Horiba 1" and "Horiba 2" on the groundwater sampling sheets, and document the serial numbers of the instruments in the field notes. Make sure to document the calibration results for Farallon equipment in the Rite-in-the-Rain notebook kept in each field equipment case.

- Document when work starts at a specific task location (e.g., well or boring), and document what equipment Farallon or the subcontractors are using at that location.
- Measure out and record the sample locations (using a rolling wheel, or GPS if available), and mark utilities on a field map if applicable.
- If media samples will be collected, complete the appropriate documentation form, or record the information in the field notes. For example, record field sampling methods (e.g., grab, composite), the type of media (e.g., soil, groundwater, stormwater), the time the sample was collected, sample location and ID, analytical method(s), the laboratory conducting the analysis, the size of the sample container, the number of containers used, and the preservative included in the sample container. If a composite sample is collected, record how many composite points make up the sample, and document where the composite samples were collected.
- If multiple samples are collected using the same methods and the same type of sample containers, simply document that a sample was collected the same as previous samples.
- Document when work is complete at each location.
- If conducting groundwater monitoring, note the condition of monitoring well monuments (e.g., bolts missing, gasket needed).
- Throughout the workday, note any relevant information (e.g., QC-sampling discrepancies, unexpected conditions, abnormal sampling events).

At End of Workday:

- Decontaminate equipment and note the decontamination method (e.g., Alconox and towels).
- Review the field notes, and complete sketches of any relevant features and sample locations if necessary.
- Record whether wastes were generated. If so, record how much was generated, whether the waste was sampled, and where the waste is stored.
- Place an "Analysis Pending" label on drums of waste, and fill out the label completely.
- Complete a drum inventory sheet and note the drum/container sizes and how much waste was accumulated.
- Document when you left the site;

- Document when you returned to the office or when the field day ended.
- Note any additional work performed after returning to the office (e.g., finished field notes, downloaded field photos).

Make sure to include any of the following forms relevant for the type of field work conducted:

- Daily Field Notes
- Health and Safety Meeting form
- Water Level Summary form
- Low Flow Well Purging and Sampling Data form
- Boring and/or test pit logs
- Monitoring Well Construction Data form
- Soil Sample Data form
- SVE Monitoring form
- Any site-specific operation and maintenance or pilot test forms
- Elevation Survey Data form
- Utility Clearance Log
- Waste Inventory Tracking Sheet
- Copy of the laboratory Chain of Custody form for any samples collected
- Copies of subcontractor daily log sheets (e.g., utility locate, drilling)
- Copies of rental equipment calibration sheets
- Near Miss form (if applicable)
- Incident Report form (if applicable)

Assemble all field forms used each day, scan, save to the electronic project Field Notes folder, and give the hard copy of the forms to the Project Manager.

Refer to the Farallon Field Documentation Checklist and the *Doc Reqs by Field Task list.*

STANDARD OPERATING PROCEDURE GW-03
GROUNDWATER LEVEL MEASUREMENT IN MONITORING WELLS

PURPOSE AND APPLICATION

The purpose of this standard operating procedure (SOP) is to provide field personnel with the methodology for measuring and documenting the depth to groundwater in monitoring wells. The step-by-step guidelines provided in this SOP are to be followed by the field crew to ensure consistent and representative measurements of depth to groundwater in monitoring wells. When multiple wells are present at a site, all water-level measurements typically are taken as quickly as possible to aid in the creation of potentiometric surface maps that are representative of a "single" point in time.

EQUIPMENT AND SUPPLIES/REAGENTS

The following equipment is necessary to properly measure the depth to groundwater in monitoring wells:

- Monitoring well key, hand drill, socket set, Allen wrench, speed handle, padlock key, or other monitoring well-access equipment specific to the monitoring well monument cover plate.
- Electronic water-level meter (Solinst or equivalent) narrow enough to fit in the monitoring well, calibrated to 0.01 foot, with sufficient line to reach the bottom of the monitoring well.
- Oil-water interface probe, if light nonaqueous-phase liquid (LNAPL) is known or suspected to be present.
- Disposable bailer if LNAPL is known or suspected to be present, and the Project Manager requests that LNAPL be bailed from the well.
- Tape measure.
- Materials necessary to provide required documentation, including Groundwater Level Measurement Summary Forms and Field Report forms.
- Personal protective equipment as described in the site-specific Health and Safety Plan.
- Decontamination equipment as specified in Farallon SOP EQ-01, Equipment Decontamination Procedures.

DECONTAMINATION

Before arrival at the site, upon relocation at the site, and upon demobilization from the site, decontaminate equipment that will come into contact with groundwater, in accordance with Farallon SOP EQ-01, Equipment Decontamination Procedures.

PROCEDURES

Follow the instructions below for measuring water levels at each monitoring well:

- Don appropriate personal protective equipment as described in the site-specific Health and Safety Plan.
- Check the operation of the water-level meter by turning on the indicator switch and pressing the test button.
- Remove soil or vegetation from the monitoring well site.
- Open the monitoring well-head enclosure, and use a bilge pump or cup to remove standing water inside the monitoring well monument before opening the monitoring well cap. Dispose of standing water to the ground surface.
- Open the monitoring well cap.
- Monitor air quality at the monitoring well-head if volatile contaminants are suspected to be present, or if it is unknown whether volatile contaminants are present.
- Repeat above procedure until all monitoring wells are open.
- Allow the water level to equilibrate with ambient atmospheric pressure for approximately 15 minutes before measuring.
- Before taking any measurements, carefully measure the length of the sonde to the nearest 0.01 foot. The additional 2 to 3 inches from the zero point of the sonde to the tip of the sonde **must be discounted** for **all** total depth measurements.
- Measure and record the depth to water using a water-level meter that has been decontaminated in accordance with Farallon SOP EQ-01, Equipment Decontamination Procedures. With the water-level meter turned on to a medium level of sensitivity, slowly lower the meter into the monitoring well casing until it reaches the groundwater table. The probe will beep when it reaches the interface of the groundwater table (when the electronic circuit is first completed). Stop lowering the probe, hold the graduated water-level cable to the notch or mark on the northern side of the top of the monitoring well casing, and note the length measurement. Repeat this process to collect a second water-level measurement. If the two readings differ by more than 0.01 foot, repeat the measurements until the readings stabilize. Repeat the process until three consecutive stabilized readings have been measured. Record the water-level measurement **only** in relation to the probe being lowered into the monitoring well, *not* as it is raised out of the monitoring well. If you cannot see the top of the monitoring well casing when the water level beeps, grasp the tape with your thumb and index finger exactly at the measuring point corresponding with the notch or mark at the top of the monitoring well casing. Slowly pull the cable out of the monitoring well and read the measurement. Repeat until readings stabilize.
- Remove the cable from the monitoring well, and record the stabilized depth-to-water measurement on the Groundwater Level Measurement Summary Form to the nearest 0.01 foot.

- Measure the total monitoring well depth. **NOTE:** If groundwater samples are to be collected, measure the total monitoring well depth **after** all groundwater samples have been collected, to avoid resuspension of settled solids in the monitoring well, impacting the samples. If the monitoring well does not have a dedicated pump, lower the water-level indicator probe to the bottom of the monitoring well to measure the total depth of the monitoring well. Gently bounce the probe on the monitoring well bottom, and pull the slack in the cord to read the total monitoring well depth. Repeat three times to ensure that the monitoring well depth measurement is reproducible, and is representative of the true depth. Note on the Groundwater Level Measurement Summary Form whether the bottom of the monitoring well is hard or soft.
- Remove the cable from the monitoring well, and record the monitoring well depth measurement on the Groundwater Level Measurement Summary Form to the nearest 0.01 foot.
- Decontaminate the water-level meter in accordance with Farallon SOP EQ-01, Equipment Decontamination Procedures.
- If the presence of LNAPL is suspected or if site conditions are unknown, check for the presence of LNAPL by one of two methods:
    - Use of a bailer: Use a new 3-foot-long disposable bailer attached to a nylon rope. Slowly lower the bailer until the bottom of the bailer is approximately 2 feet below the water surface. Slowly retrieve the bailer, and measure the product thickness using a tape measure. Record the information on the Groundwater Level Measurement Summary Form. Dispose of the bailer and product or wastewater in accordance with Farallon SOP WM-01, Field Handling of Investigation-Derived Waste.
    - Use of an oil-water interface probe: Decontaminate the oil-water interface probe in accordance with Farallon SOP EQ-01, Equipment Decontamination Procedures. With the oil-water interface probe meter turned on to a medium level of sensitivity, slowly lower the probe into the monitoring well casing until it reaches the top of the LNAPL. The probe will have a steady beep when it reaches the interface of the LNAPL (when the electronic circuit is first completed). Stop lowering the probe, hold the graduated oil-water interface cable to the notch or mark on the northern side of the top of the monitoring well casing, and note the length measurement. Repeat this process to collect a second LNAPL measurement. If the two readings differ by more than 0.01 foot, repeat the measurements until the readings stabilize. Repeat the process until three consecutive stabilized readings have been measured. Record the depth to LNAPL measurement **only** in relation to the probe being lowered into the monitoring well, *not* as it is raised out of the monitoring well. If you cannot see the top of the monitoring well casing when the oil-water interface probe beeps, grasp the tape with your thumb and index finger exactly at the measuring point corresponding with the notch or mark at the top of the monitoring well casing. Slowly pull the cable out of the monitoring well and read the

measurement. Repeat until readings stabilize. Once the depth to LNAPL has been recorded, collect the water-level measurement as described above using the oil-water interface probe. Once the depth to LNAPL and the depth to the groundwater table have been determined, subtract the depth to LNAPL from the depth to the groundwater table to determine LNAPL thickness.

- Close the monitoring well as appropriate based on monitoring well-head construction. Record any concerns about monitoring well integrity on the Groundwater Level Measurement Summary Form and on the Field Report form.

DOCUMENTATION

Document monitoring well water-level measurements on the Groundwater Level Measurement Summary Form. Document any additional information on the Field Report form.

STANDARD OPERATING PROCEDURE GW-04
LOW-FLOW GROUNDWATER SAMPLING PROCEDURES

PURPOSE AND APPLICATION

The purpose of this standard operating procedure (SOP) is to provide field personnel with the methodology for collecting and documenting groundwater samples from monitoring wells using U.S. Environmental Protection Agency (EPA) low-flow groundwater sampling procedures (EPA 1996, 2017) for chemical analysis to ensure consistent and representative sampling. The step-by-step guidelines provided in this SOP are to be followed by the field crew conducting groundwater sampling.

EQUIPMENT AND SUPPLIES/REAGENTS

The following equipment is necessary to properly purge and sample a monitoring well:

- Monitoring well key, hand drill, socket set, padlock key, or other monitoring well-access equipment.
- Electronic water-level meter long enough to reach the bottom of the monitoring well, calibrated to 0.01 foot. Alternatively, to measure for light nonaqueous-phase liquid thickness in addition to groundwater, use an oil-water interface probe.
- Monitoring well purging and sampling equipment:
    - Submersible pump (bladder or Grundfos): the pump, control box, and power source (typically a portable generator or a 12-volt battery); or
    - Peristaltic pump: the pump with pump head, silicone tubing, tubing connectors (as needed), and power source (typically a 12-volt battery).
- Sample tubing of project- and site-specific type and length.
- Bailer, if a pump is not used, or if light nonaqueous-phase liquid requires removal.
- Sufficient number of 55-gallon drums, including lids, gaskets, and fasteners, to contain all purge water, unless other water-handling arrangements have been made.
- Flow-through water-quality meter(s) to measure temperature, pH, specific conductivity, dissolved oxygen, oxidation-reduction potential (ORP), and turbidity.
- Air-space monitoring equipment if required (photoionization detector or multi-gas meter).
- Decontamination equipment and supplies (e.g., buckets, scrub brushes, deionized or distilled water, potable water, Liquinox detergent).
- Materials necessary to provide required documentation, (e.g., sample labels, Field Report forms, Low-Flow Well Purging and Sampling Data form, Chain of Custody form, Waste Inventory Tracking Sheet).

- Sample containers with the chemical preservatives appropriate for the samples, as described in project-specific plans, or as required by the analytical laboratory at a minimum.
- Personal protective equipment as described in the site-specific Health and Safety Plan (HASP).
- Sampling-support equipment (e.g., sample coolers, ice, bubble wrap, clear tape, duct tape, resealable plastic bags, garbage bags, paper towels, distilled water, nitrile gloves, shipping supplies).
- U.S. Department of Transportation-approved drum(s) for purge water, unless other water-handling arrangements have been made. Separate drums are needed for liquid and solid wastes (Refer to Farallon SOP WM-01, Field Handling of Investigation-Derived Waste). Liquid wastes should not be added to drums containing solid wastes.

DECONTAMINATION

Before arrival at the site, upon relocation at the site, and upon demobilization from the site, decontaminate reusable equipment that will come into contact with the monitoring well(s) and/or be used to acquire samples, in accordance with Farallon SOP EQ-01, Equipment Decontamination Procedures.

PROCEDURES FOR LOW-FLOW GROUNDWATER SAMPLING

Low-flow groundwater sampling procedures have been developed for monitoring wells with a dedicated pump (dedicated monitoring wells) and for monitoring wells without a dedicated pump (non-dedicated monitoring wells). Setup, purging, sample collection, and post-sampling procedures for dedicated and non-dedicated monitoring wells are presented below.

Setup

Setup procedures differ slightly for dedicated versus non-dedicated monitoring wells. Follow the instructions below for the monitoring wells as indicated:

- Calibrate the water-quality meter for the field parameters specified in the project-specific plans. At a minimum, collect temperature, pH, and specific conductivity during purging and prior to sampling. Record on the Field Report form the equipment calibration and maintenance performed. Decontaminate the water-quality meter between monitoring wells by rinsing with distilled or deionized water. Manage the rinsate water used in collecting these measurements in the same manner as for purge water, as defined in project-specific plans, and in accordance with Farallon SOP WM-01, Field Handling of Investigation-Derived Waste.
- Don appropriate personal protective equipment as described in the site-specific HASP, including nitrile gloves for activities that might involve contact with groundwater or equipment. Change gloves between each monitoring well at a minimum, or when

contaminants could be introduced into a monitoring well or onto decontaminated equipment.

- Brush away soil and/or vegetation, and pump standing water away from the monitoring well opening. If necessary, place a plastic drop cloth around the monitoring well-head to prevent sampling equipment from contacting the ground surface.
- Inspect the condition of the monitoring well (e.g., locked monitoring well cap, tightness of monitoring well cap, well-marked measuring point on casing, disturbance of surface casing, straightness of monitoring well casing, condition of concrete pad). Indicate the monitoring well condition on the Low-Flow Well Purging and Sampling Data form.
- Open the monitoring well cap. If the site-specific HASP identifies organic compounds as potential contaminants of concern, screen the monitoring well headspace and the breathing zone headspace (if specified in the HASP) for organic vapors using the appropriate field monitoring instrument (e.g., photoionization detector, multi-gas meter).
- Measure and record the depth to water using a decontaminated water-level meter in accordance with Farallon SOP GW-03, Groundwater Level Measurements in Monitoring Wells.
- If light nonaqueous-phase liquid may be present (see site-specific plans), obtain a sample from the monitoring well using a bailer (if a dedicated pump is not in use), as specified in Farallon SOP GW-03, Groundwater Level Measurements in Monitoring Wells. Alternatively, measure free-floating product thickness using an oil-water interface probe.
- Calculate the monitoring well casing volume as follows:

  Monitoring well casing volume in gallons = $(\pi * r^2) * h$(7.48 gallons/cubic foot)

  Where:

  r = radius of the inside of the monitoring well casing in feet

  h = length of the water column in the monitoring well casing (i.e., the depth to the bottom of the monitoring well minus the depth to water, both measured from the mark at the top of the monitoring well casing), in feet

- **For monitoring wells with dedicated pumps and tubing**: Set up a flow-through cell in preparation for purging. Connect dedicated tubing from the monitoring well to the flow-through cell. Set tubing and/or pump to the correct water depth in accordance with the constituents being sampled for, as described in project-specific plans. **DO NOT IMMERSE water-quality probes or meters in purge water containing nonaqueous-phase liquids, which could damage the probes.** Turn the pump controller to its lowest setting, set the memory in the flow-through cell to record readings every 3 minutes, and turn on the pump. Begin purging slowly (i.e., less than 500 milliliters per minute [ml/min]) to prevent drawing down the water table.

- **For monitoring wells with non-dedicated pumps**: Connect dedicated silicon tubing to the peristaltic pump. Place the tubing intake at the midpoint of the screen, or at the depth pre-determined in the project-specific plans. If using a bladder pump, insert the bladder pump and attach the dedicated polyethylene tubing so the pump intake is at the approximate midpoint of the screened interval, or set the pump intake to the depth pre-determined in the project-specific plans.

Purging Procedures

The purging instructions below are to be followed for dedicated and non-dedicated monitoring wells:

- Begin purging, and initiate water-quality testing for temperature, pH, specific conductivity, dissolved oxygen, ORP, and turbidity. Purge monitoring wells using a peristaltic or bladder pump, and dedicated polyethylene and silicon tubing. Record water-quality parameters every 3 minutes.
- Record water levels every 3 minutes, as possible. It is imperative that the water level not drop by more than 0.33 foot during the low-flow purging process. If the water level drops more than 0.33 foot during purging, reduce the flow rate on the pump. Recommended purge rates generally are less than 500 ml/min. Actual purge rates will vary based on aquifer material and monitoring well construction. If the water level continues to drop by more than 0.33 foot during the low-flow purging at a rate less than 100 ml/min, notify and consult with the Project Manager on how to proceed.
- Record flow rates every 3 minutes. Ensure that the flow rate does not exceed 500 ml/min during the low-flow purging process.

Purging Requirements

Continue purging at a constant rate until the water-quality parameters have stabilized for three successive measurements according to the stability criteria provided in the table below. Before samples can be collected from each monitoring well, the groundwater must stabilize according to following criteria:

- Drawdown is no greater than 0.33 foot for low-flow sampling, and
- The water-quality parameters should stabilize according to the criteria specified below:

Water-Quality Parameter	Stability Criterion
Turbidity (if required)	10% for values greater than 5 NTU or three consecutive values < 5 NTU
Dissolved oxygen	10% for values greater than 0.5 mg/l, or three consecutive values <0.5 mg/l
Specific conductivity	3%
Oxidation-reduction potential	+/- 10 millivolts
pH	+/- 0.1 unit
Temperature	3%

Notes:
mg/l = milligrams per liter
NTU = nephelometric turbidity unit

Although under some circumstances, a monitoring well may not stabilize according to the above criteria, the monitoring well can still be sampled if the monitoring well does not meet stability criteria due to the instrument accuracy, or the water level drops below the minimum value using low-flow sampling procedures. For example, a fluctuation in ORP greater than 10 millivolts does not meet the stability criterion. However, because the accuracy range of the ORP instrument is ±20 millivolt, the stability criterion would be considered satisfied and within the range of instrument accuracy. Consult the manual for the instrument to determine the accuracy range.

Also, if the water level drops below the minimum value using low-flow sampling procedures (i.e., the pump intake, or the top of the screen if the aquifer is confined) during purging and one monitoring well volume of groundwater has been removed from the monitoring well, or the monitoring well runs dry during the purging procedure, sample the monitoring well as soon as the water level has recovered sufficiently to allow collection of the volume of groundwater necessary for all samples. Use the following equation to determine the minimum volume of groundwater to remove before sampling:

Minimum purge volume = 2*[500 milliliters + M*(length of tubing in feet)]

Where: M = volume (in milliliters) contained in a 1-foot length of tubing

The value of M is provided below for the inner diameters of tubing listed:

Inner Diameter (inches)	M (milliliters)
0.125	2.4
0.25	9.7
0.5	39

Record on the Field Report form and the Low-Flow Well Purging and Sampling Data form if any monitoring well did not meet the drawdown and stability criteria and explain the rationale for sampling the monitoring well at the time it was sampled. If stability criteria have not been achieved following completion of all entries in the Low-Flow Well Purging and Sampling Data form, notify

and consult with the Project Manager whether to continue purging until stability criteria have been achieved or begin sample collection.

Sample Collection

During low-flow sampling, do not stop pumping once the purging requirements have been met. Turn down the flow rate on the pump so the water flow is minimal, but maintain sufficient pressure in the system to prevent water from the tubing or flow-through cell from flowing back into the monitoring well. Disconnect the pump discharge hose from the flow-through cell, or cut the tubing just before the connection to the flow-through cell. It is imperative not to lower the water table or disturb the water column. Fill pre-cleaned laboratory-supplied sample containers directly from the pump discharge tube into the proper sample container, and fill to capacity. Place a bucket beneath the sampling tube to catch any unsampled water between filling the sample jars. When collecting groundwater samples for multiple analyses, collect the samples in the order listed below per the EPA (1992) groundwater sampling technical guidance:

- Volatile organic compounds (VOCs);
- Dissolved gases and total organic carbon;
- Semivolatile organic compounds;
- Metals and cyanide;
- Major water quality cations and anions;
- Radionuclides; and
- Dissolved (filtered) inorganics (if required).

When collecting samples for VOCs, adjust the flow rate as low as possible without introducing air bubbles into the system. When filling the VOC containers, hold the cap in hand to minimize contamination, and direct the flow from the pump discharge tubing down the side of the sample container to minimize aeration. Fill all VOC sample containers to the top, ensuring a positive meniscus when the cap is screwed down on the container. Tap the filled VOC container, and invert several times to ensure no air bubbles are present in the sample container. If an air bubble is present, the VOC sample must be recollected using a fresh VOC sample container. If sampling for other analytes, the flow rate may be increased.

If dissolved inorganics are required, attach a new disposable 0.45-micrometer filter cartridge to the discharge line. Collect filtered samples last. Pre-rinse the disposable filter cartridges by running a minimum of 0.25 gallon of groundwater through them (collecting the groundwater into a waste bucket) prior to collecting the samples directly into the sample container. Alternate field filtration methods may be specified in the project-specific plans. Remove the pump and/or tubing from the monitoring well.

Post-Sampling

- Record the depth to water of well to determine whether the water level changed from the original reading.
- Close and lock the monitoring well or tap and record any monitoring well integrity concerns on the Field Report form and the Low-Flow Well Purging and Sampling Data form.
- Transfer purge, wash, and rinse water into a U.S. Department of Transportation-approved drum(s) and label. Separate drums are needed for liquid and solid wastes, in accordance with SOP WM-01, Field Handling of Investigation-Derived Waste. Do not add liquid wastes to drums containing solid wastes.

PROCEDURES FOR RECONNAISSANCE GROUNDWATER SAMPLING

Collect reconnaissance groundwater samples from borings using direct-push or hollow-stem auger drilling methods and 0.75- or 2-inch-inside-diameter temporary monitoring well casing and 0.010-inch slotted screen. In some cases, alternate well casing diameters or screen slot sizes may be appropriate based on the drilling equipment or project-specific requirements. Follow the instructions below for reconnaissance groundwater sample collection:

- Withdraw the drill casing when the desired sampling depth has been reached, so the temporary monitoring well screen is exposed to water-bearing material.
- Insert disposable polyethylene tubing to the approximate midpoint of the temporary monitoring well screen. Attach the appropriate length of pre-cleaned disposable silicon tubing from the polyethylene tubing to connect with the peristaltic or bladder pump.
- Set up the peristaltic or bladder pump in preparation for purging. Turn the pump to its lowest setting and turn on the pump. Begin purging slowly to prevent drawing down the water table.
- Purge each temporary monitoring well point using a peristaltic or bladder pump until visual turbidity is as low as possible, or until the temporary monitoring well is purged dry of water.
- Purge a minimum of 1 to 2 liters before sample collection, if possible. If the temporary monitoring well is completely dewatered during purging, collect samples when sufficient recharge has occurred to allow filling of the sample containers.
- Slow the pumping rate to less than 500 ml/min to reduce the potential for volatilization of chemicals during sample collection.
- Collect the sample as described above.
- If insufficient groundwater is available to collect a sample using a peristaltic or bladder pump (i.e., the boring pumps dry or cannot maintain a sufficient flow of less than 100 ml/min) or if the depth to groundwater exceeds the maximum practicable limit for sampling using a peristaltic or bladder pump, use a disposable polyethylene bailer lowered

into the monitoring well screen to collect a groundwater sample from the screened interval, if possible.

DOCUMENTATION

Document the monitoring well purging and sampling activities on the Low-Flow Well Purging and Sampling Data form and on the Field Report form. Track samples on a Chain of Custody form. Track waste generated during groundwater sampling on a Waste Inventory Tracking Sheet.

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate $250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

"When Quality Counts"

Analytical Report

WorkOrder:	2303185	**Amended:**	05/24/2023
		Revision:	3
Report Created for:	Farallon Consulting		
	330 Franklin Street, Ste. 200 Oakland, CA 94607		
Project Contact:	Peter Sims		
Project P.O.:			
Project:	251-230302; W&J Enterprises		
Project Received:	03/02/2023		

Analytical Report reviewed & approved for release on 03/09/2023 by:

Christine Askari
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in a case narrative.

Revision History

Client: Farallon Consulting **WorkOrder:** 2303185

Project: 251-230302; W&J Enterprises

Date	Revision	Reason
03/16/2023	1	Revised to report down to the MDL for PNAs and TPH DMO.
05/17/2023	2	Revised to update the TPH Diesel Range for with and without silica gel cleanup (water) per client email.
05/23/2023	3	Revised to report both Diesel ranges (C10-C24) and (C10-28) for TPH with and without silica gel. Fuel finger print also included.

Glossary of Terms & Qualifier Definitions

Client: Farallon Consulting **WorkOrder:** 2303185

Project: 251-230302; W&J Enterprises

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit [1]
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting limit [2]
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure

[1] MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016.

[2] RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.)

Glossary of Terms & Qualifier Definitions

Client: Farallon Consulting **WorkOrder:** 2303185

Project: 251-230302; W&J Enterprises

TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

J	Result is less than the RL/ML but greater than the MDL. The reported concentration is an estimated value.
S	Surrogate recovery outside accepted recovery limits.
a3	Sample diluted due to high organic content interfering with quantitative/or qualitative analysis.
c1	Surrogate recovery outside of the control limits due to the dilution of the sample.
c2	Surrogate recovery outside of the control limits due to suspected matrix interference.
j1	See attached narrative

Case Narrative

Client: Farallon Consulting
Project: 251-230302; W&J Enterprises

Work Order: 2303185
March 09, 2023

j1:

Total Extractable Petroleum Hydrocarbons- Diesel, Motor Oil

Samples 2303185-003A, -004A, -00B, -005A, -005B, -006A were analyzed on an instrument sequence with a passing closing continuing calibration verification (CCV) that was analyzed outside of the method recommendation of a 12-hour time frame due to tower error that stopped the sequence prior to its completion. The CCV recoveries were within control limits both before and after the tower error; therefore, there is no impact to the results. The quality of the data is acceptable and reportable.

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

Analytical Report

WorkOrder:	2303198	**Amended:**	05/24/2023
		Revision:	3
Report Created for:	Farallon Consulting		
	330 Franklin Street, Ste. 200 Oakland, CA 94607		
Project Contact:	Peter Sims		
Project P.O.:			
Project:	1071-105; 6756-6792 Central Ave		
Project Received:	03/02/2023		

Analytical Report reviewed & approved for release on 03/09/2023 by:

Christine Askari

Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in a case narrative.

Revision History

Client: Farallon Consulting **WorkOrder:** 2303198

Project: 1071-105; 6756-6792 Central Ave

Date	Revision	Reason
03/16/2023	1	Revised to report down to the MDL for PNAs and TPH DMO.
05/17/2023	2	Revised to update the TPH Diesel Range for with and without silica gel cleanup (water) per client email.
05/24/2023	3	Revised to report both Diesel ranges (C10-C24) and (C10-28) for TPH with and without silica gel. Fuel finger print also included.

Glossary of Terms & Qualifier Definitions

Client: Farallon Consulting **WorkOrder:** 2303198

Project: 1071-105; 6756-6792 Central Ave

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit [1]
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting limit [2]
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure

[1] MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016.

[2] RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.)

Glossary of Terms & Qualifier Definitions

Client: Farallon Consulting **WorkOrder:** 2303198

Project: 1071-105; 6756-6792 Central Ave

TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

B	Analyte detected in the associated Method Blank at a concentration greater than 1/10 the reported sample result.
J	Result is less than the RL/ML but greater than the MDL. The reported concentration is an estimated value.
S	Surrogate recovery outside accepted recovery limits.
a3	Sample diluted due to high organic content interfering with quantitative/or qualitative analysis.
b1	Aqueous sample that contains greater than ~1 vol. % sediment
c1	Surrogate recovery outside of the control limits due to the dilution of the sample.
e2	Diesel range compounds are detected; no recognizable pattern
e7	Oil range compounds are detected.
j1	See attached narrative

Case Narrative

Client: Farallon Consulting
Project: 1071-105; 6756-6792 Central Ave

Work Order: 2303198
March 09, 2023

j1:

Total Extractable Petroleum Hydrocarbons- Diesel, Motor Oil

Samples 2303198-002A, -002B, -003A, -003B were analyzed on an instrument sequence with a passing closing continuing calibration verification (CCV) that was analyzed outside of the method recommendation of a 12-hour time frame due to tower error that stopped the sequence prior to its completion. The CCV recoveries were within control limits both before and after the tower error; therefore, there is no impact to the results. The quality of the data is acceptable and reportable.

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate $250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

Notes:

Cumulative cancer risk and noncancer hazard are not automatically calculated across pathways because exposure via multiple pathways typically is not simultaneous. This may be performed separately as part of a site-specific evaluation. See the User's Guide Section 3.3 (Addressing Cumulative Risk and Hazard).

* **Current** (VI exposure to current occupants of existing buildings) – Primarily based on indoor air data. See User's Guide Chapter 5 for further information.
In the absence of indoor air data, subslab/soil gas or groundwater data is used to predict current indoor air concentrations.
Subslab/soil gas data is given priority over groundwater data for current exposure calculations. The cumulative risk calculation follows the same hierarchy.

** **Future** (VI exposure to future occupants of existing or future buildings) – Primarily based on subslab/soil gas data. See User's Guide Chapter 5 for further information.
In the absence of subslab/soil gas data, groundwater data is used to predict future indoor air concentrations. The cumulative risk calculation follows the same hierarchy.

LIST OF ABBREVIATED TERMS

ADT	average daily traffic
dBA	A-weighted sound level
CNEL	community equivalent noise level
L_{dn}	day-night noise level
dB	decibel
L_{eq}	equivalent noise level
FHWA	Federal Highway Administration
FTA	Federal Transit Administration
HVAC	heating ventilation and air conditioning
Hz	hertz
in/sec	inches per second
L_{max}	maximum noise level
µPa	micropascals
L_{min}	minimum noise level
PPV	peak particle velocity
RMS	root mean square
sf	square feet
VdB	vibration velocity level

1 INTRODUCTION

This report documents the results of an Acoustical Assessment completed for the 6750 Central Avenue Project ("project" or "proposed project"). The purpose of this Acoustical Assessment is to evaluate the potential construction and operational noise and vibration levels associated with the project and determine the level of impact the project would have on the environment. The assessment also analyzes the vibration impacts of a nearby railway on the project.

1.1 PROJECT LOCATION

The proposed project is located at 6750 Central Avenue in Newark, California. Figure 1: Regional Vicinity and Figure 2: Site Vicinity, depict the project site in a regional and local context. The project site is located in an urban area with a mix of surrounding uses including commercial, office, residential and industrial uses. The proposed project's existing land use designation is General Industrial and existing zoning designation is Employment District. The project site is currently developed with an industrial warehouse, commercial space, and a truck trailer repair yard.

1.2 PROJECT DESCRIPTION

The project intends to redevelop the property as a modern industrial facility. The proposed project would demolish the existing on-site facilities and redevelop the property with a new approximately 315,390 square feet (sf) warehouse building. The proposed warehouse building would contain approximately 281,584 sf of warehouse space and 33,806 sf of office space (refer to Figure 3: Project Site Plan). The warehouse building would include 46 dock doors located on the southeast façade. The proposed project includes surface parking with 396 automobile (passenger vehicle) spaces.

Access to the project site would be provided by two 40-foot driveways located on the northwest corner of the site from Central Avenue. The northern driveway would provide access for trucks and trailers, in addition to passenger vehicles. The southern driveway would provide primary access for passenger vehicles. The project includes a stormwater retention area on the southern corner of the project site.

It should be noted that the City of Newark has approved and funded the installation of an overpass along the project frontage on Central Avenue. This roadway improvement would construct a four-lane grade separation structure that extends from Sycamore Street to Morton Avenue above the railway south of the project site.[1] This construction and operation of this roadway improvement would alter noise and vibration levels in the surrounding area and is the impact of its installation is analyzed in the discussion below.

2 ACOUSTIC FUNDAMENTALS

2.1 SOUND AND ENVIRONMENTAL NOISE

Acoustics is the science of sound. Sound can be described as the mechanical energy of a vibrating object transmitted by pressure waves through a medium (e.g. air) to human (or animal) ear. If the pressure variations occur frequently enough (at least 20 times per second), they can be heard and are called sound. The number of pressure variations per second is called the frequency of sound and is expressed as cycles per second, or hertz (Hz).

Noise is defined as loud, unexpected, or annoying sound. The fundamental acoustics model consists of a noise source, receptor, and the propagation path between the two. The loudness of the noise source, obstructions, or atmospheric factors affecting the propagation path, determine the perceived sound level and noise characteristics at the receptor. Acoustics deal primarily with the propagation and control of sound. A typical noise environment consists of ambient noise that is the sum of many distant and indistinguishable noise sources. The sound from individual local sources is superimposed on this background noise. These sources can vary from an occasional aircraft or train passing by to continuous noise from traffic on a major highway. Perceptions of sound and noise are highly subjective from person to person.

Measuring sound directly in terms of pressure would require a large range of numbers. To avoid this, the decibel (dB) scale was devised. The dB scale uses the hearing threshold of 20 micropascals (µPa) as a point of reference, defined as 0 dB. Other sound pressures are then compared to this reference pressure, and the logarithm is taken to keep the numbers in a practical range. The dB scale allows a million-fold increase in pressure to be expressed as 120 dB, and changes in levels correspond closely to human perception of relative loudness. Table 1: Typical Noise Levels provides typical noise levels.

Table 1: Typical Noise Levels

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	– 110 –	Rock Band
Jet fly-over at 1,000 feet		
	– 100 –	
Gas lawnmower at 3 feet		
	– 90 –	
Diesel truck at 50 feet at 50 miles per hour		Food blender at 3 feet
	– 80 –	Garbage disposal at 3 feet
Noisy urban area, daytime		
Gas lawnmower, 100 feet	– 70 –	Vacuum cleaner at 10 feet
Commercial area		Normal Speech at 3 feet
Heavy traffic at 300 feet	– 60 –	
		Large business office
Quiet urban daytime	– 50 –	Dishwasher in next room
Quiet urban nighttime	– 40 –	Theater, large conference room (background)
Quiet suburban nighttime		
	– 30 –	Library
Quiet rural nighttime		Bedroom at night, concert hall (background)
	– 20 –	
		Broadcast/recording studio
	– 10 –	
Lowest threshold of human hearing	– 0 –	Lowest threshold of human hearing

Noise Descriptors

The dB scale alone does not adequately characterize how humans perceive noise. The dominant frequencies of a sound have a substantial effect on the human response to that sound. Several rating scales have been developed to analyze the adverse effect of community noise on people. Because environmental noise fluctuates over time, these scales consider that the effect of noise on people is largely dependent on the total acoustical energy content of the noise, as well as the time of day when the noise occurs. Most commonly, environmental sounds are described in terms of equivalent noise level (L_{eq}) that has the same acoustical energy as the summation of all the time-varying events. While L_{eq} represents the continuous sound pressure level over a given period, the day-night noise level (L_{dn}) and Community Equivalent Noise Level (CNEL) are measures of energy average during a 24-hour period, with dB weighted sound levels from 7:00 p.m. to 7:00 a.m. Each is applicable to this analysis and defined Table 2: Definitions of Acoustical Terms.

Table 2: Definitions of Acoustical Terms

Term	Definitions
Decibel (dB)	A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in µPa (or 20 micronewtons per square meter), where 1 pascals is the pressure resulting from a force of 1 newton exerted over an area of 1 square meter. The sound pressure level is expressed in dB as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e.g. 20 µPa). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency (Hz)	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and ultrasonic sounds are above 20,000 Hz.
A-Weighted Sound Level (dBA)	The sound pressure level in dB as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level (L_{eq})	The average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.
Maximum Noise Level (L_{max}) Minimum Noise Level (L_{min})	The maximum and minimum dBA during the measurement period.
Day-Night Noise Level (L_{dn})	A 24-hour average Leq with a 10 dBA weighting added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity at nighttime. The logarithmic effect of these additions is that a 60 dBA 24-hour Leq would result in a measurement of 66.4 dBA L_{dn}.
Community Noise Equivalent Level (CNEL)	A 24-hour average Leq with a 5 dBA weighting during the hours of 7:00 a.m. to 10:00 a.m. and a 10 dBA weighting added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively. The logarithmic effect of these additions is that a 60 dBA 24-hour Leq would result in a measurement of 66.7 dBA CNEL.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Intrusive	That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends on its amplitude, duration, frequency, and time of occurrence and tonal or informational content as well as the prevailing ambient noise level.

Because sound levels can vary markedly over a short period of time, a method for describing either the sound's average character (L_{eq}) or the variations' statistical behavior (L_{xx}) must be utilized. The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about plus or minus 1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The predicted models' accuracy depends on various factors, such as the distance between the noise receptor and noise source, the character of the ground surface (e.g., hard or soft), and the presence or absence of structures (e.g., walls or buildings) or topography, and how well model inputs reflect these conditions.

A-Weighted Decibels

The A-weighted decibel (dBA) sound level scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. The perceived loudness of sounds is dependent on many factors, including sound pressure level and frequency content. However, within the usual range of environmental noise levels, perception of loudness is relatively predictable and can be approximated by dBA values. There is a strong correlation between dBA and the way the human ear perceives sound. For this reason, the dBA has become the standard tool of environmental noise assessment. All noise levels reported in this document are in terms of dBA, but are expressed as dB, unless otherwise noted.

Addition of Decibels

The dB scale is logarithmic, not linear, and therefore sound levels cannot be added or subtracted through ordinary arithmetic. Two sound levels 10 dB apart differ in acoustic energy by a factor of 10. When the standard logarithmic dB is A-weighted, an increase of 10 dBA is generally perceived as a doubling in loudness. For example, a 70-dBA sound is half as loud as an 80-dBA sound and twice as loud as a 60-dBA sound. When two identical sources are each producing sound of the same loudness, the resulting sound level at a given distance would be 3 dBA higher than one source under the same conditions. Under the dB scale, three sources of equal loudness together would produce an increase of approximately 5 dBA.

Sound Propagation and Attenuation

Sound spreads (propagates uniformly outward in a spherical pattern, and the sound level decreases (attenuates) at a rate of approximately 6 dB for each doubling of distance from a stationary or point source. Sound from a line source, such as a highway, propagates outward in a cylindrical pattern. Sound levels attenuate at a rate of approximately 3 dB for each doubling of distance from a line source, such as a roadway, depending on ground surface characteristics. No excess attenuation is assumed for hard surfaces like a parking lot or a body of water. Soft surfaces, such as soft dirt or grass, can absorb sound, so an excess ground-attenuation value of 1.5 dB per doubling of distance is normally assumed. For line sources, an overall attenuation rate of 3 dB per doubling of distance is assumed.

Noise levels may also be reduced by intervening structures; generally, a single row of buildings between the receptor and the noise source reduces the noise level by about 5 dBA, while a solid wall or berm reduces noise levels by 5 to 10 dBA. The way older homes in California were constructed generally provides a reduction of exterior-to-interior noise levels of about 20 to 25 dBA with closed windows. The exterior-to-interior reduction of newer residential units is generally 30 dBA or more.

Human Response to Noise

The human response to environmental noise is subjective and varies considerably from individual to individual. Noise in the community has often been cited as a health problem, not in terms of actual physiological damage, such as hearing impairment, but in terms of inhibiting general well-being and

contributing to undue stress and annoyance. The health effects of noise in the community arise from interference with human activities, including sleep, speech, recreation, and tasks that demand concentration or coordination. Hearing loss can occur at the highest noise intensity levels.

Noise environments and consequences of human activities are usually well represented by median noise levels during the day or night or over a 24-hour period. Environmental noise levels are generally considered low when the CNEL is below 60 dBA, moderate in the 60 to 70 dBA range, and high above 70 dBA. Examples of low daytime levels are isolated, natural settings with noise levels as low as 20 dBA and quiet, suburban, residential streets with noise levels around 40 dBA. Noise levels above 45 dBA at night can disrupt sleep. Examples of moderate-level noise environments are urban residential or semi-commercial areas (typically 55 to 60 dBA) and commercial locations (typically 60 dBA). People may consider louder environments adverse, but most will accept the higher levels associated with noisier urban residential or residential-commercial areas (60 to 75 dBA) or dense urban or industrial areas (65 to 80 dBA). Regarding increases in dBA, the following relationships should be noted:

- Except in carefully controlled laboratory experiments, a 1-dBA change cannot be perceived by humans.
- Outside of the laboratory, a 3-dBA change is considered a just-perceivable difference.
- A minimum 5-dBA change is required before any noticeable change in community response would be expected. A 5-dBA increase is typically considered substantial.
- A 10-dBA change is subjectively heard as an approximate doubling in loudness and would almost certainly cause an adverse change in community response.

Effects of Noise on People

Hearing Loss. While physical damage to the ear from an intense noise impulse is rare, a degradation of auditory acuity can occur even within a community noise environment. Hearing loss occurs mainly due to chronic exposure to excessive noise but may be due to a single event such as an explosion. Natural hearing loss associated with aging may also be accelerated from chronic exposure to loud noise. The Occupational Safety and Health Administration has a noise exposure standard that is set at the noise threshold where hearing loss may occur from long-term exposures. The maximum allowable level is 90 dBA averaged over 8 hours. If the noise is above 90 dBA, the allowable exposure time is correspondingly shorter.

Annoyance. Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that causes for annoyance include interference with speech, radio and television, house vibrations, and interference with sleep and rest. The L_{dn} as a measure of noise has been found to provide a valid correlation of noise level and the percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise and ground transportation noise. There continues to be disagreement about the relative annoyance of these different sources. A noise level of about 55 dBA L_{dn} is the threshold at which a substantial percentage of people begin to report annoyance[2].

2.2 GROUNDBORNE VIBRATION

Sources of groundborne vibrations include natural phenomena (earthquakes, volcanic eruptions, sea waves, landslides, etc.) or man-made causes (explosions, machinery, traffic, trains, construction equipment, etc.). Vibration sources may be continuous (e.g., factory machinery) or transient (e.g.,

[2] Federal Interagency Committee on Noise, *Federal Agency Review of Selected Airport Noise Analysis Issues*, August 1992.

explosions). Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One is the peak particle velocity (PPV); another is the root mean square (RMS) velocity. The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave and is expressed in terms of inches-per-second (in/sec). The RMS velocity is defined as the average of the squared amplitude of the signal and is expressed in terms of velocity decibels (VdB). The PPV and RMS vibration velocity amplitudes are used to evaluate human response to vibration.

Table 3: Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibrations, displays the reactions of people and the effects on buildings produced by continuous vibration levels. The annoyance levels shown in the table should be interpreted with care since vibration may be found to be annoying at much lower levels than those listed, depending on the level of activity or the individual sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage. In high noise environments, which are more prevalent where groundborne vibration approaches perceptible levels, this rattling phenomenon may also be produced by loud airborne environmental noise causing induced vibration in exterior doors and windows.

Table 3: Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibrations

Maximum PPV (in/sec)	Vibration Annoyance Potential Criteria	Vibration Damage Potential Threshold Criteria	FTA Vibration Damage Criteria
0.008	-	Extremely fragile historic buildings, ruins, ancient monuments	-
0.01	Barely Perceptible	-	-
0.04	Distinctly Perceptible	-	-
0.1	Strongly Perceptible	Fragile buildings	-
0.12	-	-	Buildings extremely susceptible to vibration damage
0.2	-	-	Non-engineered timber and masonry buildings
0.25	-	Historic and some old buildings	-
0.3	-	Older residential structures	Engineered concrete and masonry (no plaster)
0.4	Severe	-	-
0.5	-	New residential structures, Modern industrial/commercial buildings	Reinforced-concrete, steel, or timber (no plaster)
PPV = peak particle velocity; in/sec = inches per second; FTA = Federal Transit Administration			
Source: California Department of Transportation, Transportation and Construction Vibration Guidance Manual, 2020 and Federal Transit administration; Transit Noise and Vibration Assessment Manual, 2018.			

Ground vibration can be a concern in instances where buildings shake, and substantial rumblings occur. However, it is unusual for vibration from typical urban sources such as buses and heavy trucks to be perceptible. Common sources for groundborne vibration are planes, trains, and construction activities such as earth-moving, which requires the use of heavy-duty earth moving equipment. For the purposes of this analysis, a PPV descriptor with units of inches per second (in/sec) is used to evaluate construction-generated vibration for building damage and human complaints.

3 REGULATORY SETTING

To limit population exposure to physically or psychologically damaging as well as intrusive noise levels, the Federal government, the State of California, various county governments, and most municipalities in the state have established standards and ordinances to control noise.

3.1 STATE

California Government Code

California Government Code Section 65302(f) mandates that the legislative body of each county and city adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines established by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of "normally acceptable", "conditionally acceptable", "normally unacceptable", and "clearly unacceptable" noise levels for various land use types. Single-family homes are "normally acceptable" in exterior noise environments up to 60 CNEL and "conditionally acceptable" up to 70 CNEL. Multiple-family residential uses are "normally acceptable" up to 65 CNEL and "conditionally acceptable" up to 70 CNEL. Schools, libraries, and churches are "normally acceptable" up to 70 CNEL, as are office buildings and business, commercial, and professional uses.

3.2 LOCAL

City of Newark General Plan

The City of Newark General Plan identifies goals, policies, and implementations in the Noise Element. The Noise Element provides a basis for comprehensive local programs to regulate environmental noise and protect citizens from excessive exposure. Table 4: Land-Use Compatibility Guidelines for Community Noise in Newark highlights nine land-use categories and the outdoor noise compatibility guidelines.

Table 4: Land-Use Compatibility Guidelines for Community Noise in Newark

Land-Use Category	Interior CNEL or L_{dn} (dBA)	Exterior Noise Exposure (CNEL or L_{dn}), in dBA			
		Normally Acceptable[1]	Conditionally Acceptable[2]	Normally Unacceptable[3]	Clearly Unacceptable[4]
Residential-Low Density Single-Family, Duplex, Mobile Homes	45	<60	55 to 70	70 to 75	>75
Residential-Multiple Family	45	<65	60 to 70	70 to 75	>75
Transient Lodging, Motels, Hotels	45	<65	60 to 70	70 to 80	>80
Schools, Libraries, Churches, Hospitals, Nursing Homes	45	<70	60 to 70	70 to 80	>80
Auditoriums, Concert Halls, Amphitheater	-	-	-	-	>65
Sports Arena, Outdoor Spectator Sports	-	-	-	-	>70
Playgrounds, Neighborhood Parks	-	<70	68 to 75	-	>72
Golf Courses, Riding Stables, Water Recreation, Cemeteries	-	<75	70 to 80	-	>80
Office Buildings, Businesses, Commercial, Professions	50	<70	68 to 75	75 to 85	-
Industrial, Manufacturing, Utilities, Agricultural	-	<75	70 to 80	75 to 85	-

1. Normally Acceptable – Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements.

2. Conditionally Acceptable – New construction should be undertaken only after a detailed analysis of the noise reduction requirement is conducted and needed noise insulation features included in the design.
3. Normally Unacceptable – New construction or development should generally be discouraged. If new construction does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.
4. Clearly Unacceptable – New Construction or development generally should not be undertaken.
Source: City of Newark General Plan, 2013.

The Newark General Plan includes the following applicable noise goal and policy:

Goal EH-6: Maintain the peace and quiet of Newark neighborhoods and promote an environment where noise does not adversely impact sensitive land uses.

Policy EH 6.3: **Truck Noise**. Establish, maintain, and enforce designated truck routes within the city to reduce noise from truck traffic near residential uses.

Policy EH 6.7: **Construction Noise – Addressing Sources of Construction Noise**. Reduce noise associated with construction activities by requiring properly maintained mufflers on construction vehicles, requiring the placement of stationary construction equipment as far as possible from developed areas, and requiring temporary acoustical barriers/ shielding to minimize construction noise impacts at adjacent receptors. Special attention should be paid to noise-sensitive receptors (including residential, hospital, school, and religious land uses).

Goal EH-7: Ensure that new structures/uses are designed and constructed to preclude excessive, inappropriate, and undesirable noise effects.

Policy EH 7.1: **Land Use Planning and Noise Compatibility**. Use the noise compatibility guidelines in Table EH-2 and the future-conditions noise contour map in Figure EH-4 to plan for appropriate land uses near existing uses that generate noise. Noise mitigation should be included to ensure that new residential areas and other noise-sensitive uses are appropriately buffered from significant noise sources.

Policy EH 7.2: **Noise Compatibility Strategies**. Where land use noise compatibility conflicts currently exist, explore the need for mitigation measures on noise sources that may be adjacent to sensitive receptors. In planning for future developments, promote the use of buffer zones, barrier/shielding measures, and/or sound insulation building techniques to preclude noise impacts to noise-sensitive land uses.

Policy EH 7.4: **Residential Noise Standard – Exterior**. Plan for and implement strategies to maintain exterior noise levels that are consistent with the noise compatibility guidelines in Table EH-2. For residential areas, this limit is 60 dBA L_{dn} for outdoor living areas. Where this level is exceeded due to freeways, arterials, and/or railroads, the construction of berms, walls, buffer zones, and other noise-reduction measures to reduce noise to the greatest extent feasible will be required.

Policy EH 7.6: **New Noise Sources**. Require developments that have the potential to create long-term noise increases to mitigate potential impact to off-site receptor properties.

Policy EH 7.7: **Acoustical Study Requirement**. Require acoustical studies for new developments in areas where the noise levels exceed the 'normally acceptable' levels for the proposed land use; based on Table EH-2. For residential uses, the analysis should include mitigation measures to limit the noise exposure in interior living spaces to 45 dB L_{dn}, consistent with California Title 24.

Acoustical Studies should have the following minimum attributes:

- Be the responsibility of the development applicant.
- Be prepared by qualified persons experienced in the fields of environmental noise assessment and architectural acoustics.
- Include representative noise level measurements with sufficient sampling periods and locations to adequately describe existing local conditions.
- Include estimates for existing and projected (20 years hence) noise levels in terms of (a) L_{dn} or CNEL and (b) any future noise regulations to be adopted by the City. Those existing and projected noise levels shall be compared to the adopted policies of the Noise Element.
- Include recommended mitigation measures to achieve compliance with the adopted policies and standards of the Noise Element. Where the noise source in question consists of intermittent single events, the report should address the effects of maximum noise levels in sleeping rooms and potential sleep disturbance issues.
- Include estimates for interior and exterior noise exposure after the prescribed mitigation measures have been implemented.
- Describe a post-project assessment program that could be used to evaluate the effectiveness of the proposed mitigation measures.

The Newark General Plan includes the following action element for vibration:

Action EH-7.D: Vibration-Intensive Construction. Implement a standard operating procedure that requires the evaluation of potential vibration impacts for individual projects which use vibration-intensive construction activities, such as pile drivers, jack hammers, and vibratory rollers, near sensitive receptors. If construction-related vibration is determined to be perceptible (i.e., in excess of Federal Transit Administrations vibration annoyance criterion) at vibration-sensitive uses, then additional requirements, such as the use of less-vibration intensive equipment or construction techniques, shall be implemented.

Action EH-7.E: **New Development Near Railroads.** Implement a standard operating procedure that requires the evaluation of potential vibration impacts for new development that occurs within 200 feet of a railroad track, in accordance with the FTA's vibration screening distances. In such instances, the project property owner/developers shall retain an acoustical engineer to conduct an acoustic analysis and identify, where appropriate, site design features and/or required building construction improvements to ensure that vibration impacts would remain below acceptable levels for residential uses.

City of Newark Municipal Code

According to Newark Municipal Code, Section 17.24.100, construction hours are limited to the hours of 7:00 a.m. to 7:00 p.m. on Monday through Saturday and 10:00 a.m. to 6:00 p.m. on Sundays and Holidays. The Municipal Code does establish quantitative noise limits for construction activities in the City. Construction noise level shall not exceed 86 dBA at any point outside the property plane and no piece of equipment is allowed to produce a noise level of 83 dBA at a distance of 25 feet from the source.

The Municipal Code also includes noise limits based on the location and type of land use. **Error! Reference source not found.** shows the standards for maximum noise level at the property line. As stated in in Municipal Code Section 17.24.120, vibrations from temporary construction, demolition, and vehicles that enter and leave the subject parcel are exempt from the City's discernable vibration standard.

Table 5: City of Newark Zoning Ordinance Noise Standards

Land Use Types	Maximum Noise Level in Decibels at Property Line
Residential between 7:00 a.m. and 9:00 p.m.	70
Residential between 9:00 p.m. and 7:00 a.m.	60
Commercial/Industrial 24 hours a day	70
Public Property 24 hours a day	60
Source: City of Newark Municipal Code section 17.24.100.	

4 EXISTING CONDITIONS

4.1 EXISTING NOISE SOURCES

The City of Newark (including the project site) is impacted by various noise sources. Mobile sources of noise, especially cars, trucks, and rail transport, are the most common and significant sources of noise in most communities. Other sources of noise are the various land uses (i.e., residential, commercial, institutional, and recreational and parks activities) throughout the City that generate stationary-source noise.

Noise Measurements

To determine ambient noise levels in the project area, three short-term (10-minute) noise measurements and one long-term (24-hour) noise measurement were taken using a Larson Davis SoundExpert LxT Type I integrating sound level meter on January 25 through January 26, 2023; refer to Appendix A for existing noise measurement data.

As shown in Figure 4: Noise Measurement Locations, short-term measurement 1 (ST-1) was taken to represent the ambient noise level at the Church northwest of the project site on Sycamore Street, ST-2 was taken to represent existing noise levels at the industrial uses northeast of the project site, and ST-3 was taken to represent the existing noise level at the industrial uses to the southwest. Long-term measurement 1 (LT-1) was taken to represent existing ambient noise levels at the project site. The primary noise sources during the noise measurements were traffic along Central Avenue, Sycamore Street, and stationary noise at industrial operations nearby. Table 6: Noise Measurements provides the ambient noise levels measured at these locations.

Table 6: Noise Measurements

Site No.	Location	L_{eq} (dBA)	L_{min} (dBA)	L_{max} (dBA)	L_{dn} (dBA)[1]	Time	Date
ST-1	Newark Community Church	59.7	51.0	74.5	-	2:00 p.m. to 2:10 p.m.	1/25/2023
ST-2	6950 Central Avenue	59.0	55.1	64.7	-	2:19 p.m. to 2:29 p.m.	1/25/2023
ST-3	7025 Central Avenue	72.1	55.4	84.5	-	2:37 p.m. to 2:47 p.m.	1/25/2023
LT-1	Project Site	69.6	51.6	96.1	73.6	3:21 p.m. to 3:21 p.m.	1/25/2023 – 1/26/2023
1. L_{dn} for short-term measurements are approximated based on the day-night variation in the long-term measurement.

Existing Mobile Noise

Existing roadway noise levels were calculated for the roadway segments in the project vicinity. This task was accomplished using the Federal Highway Administration (FHWA) Highway Traffic Noise Prediction Model (FHWA-RD-77-108) and existing traffic volumes provided by Kimley-Horn (2023). The noise prediction model calculates the average noise level at specific locations based on traffic volumes, average speeds, roadway geometry, and site environmental conditions. The average vehicle noise rates (also referred to as energy rates) used in the FHWA model have been modified to reflect average vehicle noise rates identified for California by Caltrans. The Caltrans data indicates that California automobile noise is 0.8 to 1.0 dBA higher than national levels and that medium and heavy truck noise is 0.3 to 3.0 dBA lower than national levels. The average daily noise levels along roadway segments in proximity to the project site are included in Table 7: Existing Traffic Noise.

Table 7: Existing Traffic Noise

Roadway Segment	ADT	dBA L_{dn} [1]
Sycamore Street		
Central Avenue to Clark Avenue	4,900	57.1
Central Avenue		
Morton Avenue to Sycamore Street	13,160	62.8
Sycamore Street to West Project Driveway	16,360	63.7
West Project Driveway to East Project Driveway	16,360	63.7
East Project Driveway to Cherry Street	17,090	63.9
ADT = average daily trips; dBA = A-weighted decibels; L_{dn} = day-night noise level		
1. Traffic noise levels are at 100 feet from the roadway centerline. The actual sound level at any receptor location is dependent upon such factors as the source-to-receptor distance and the presence of intervening structures, barriers, and topography.		
Source: Based on data provided by Kimley-Horn (2023). Refer to Appendix A for traffic noise modeling assumptions and results.		

The project site is primarily surrounded by industrial and commercial uses. The existing mobile noise in the project area are generated along Central Avenue and Sycamore Street west of the project site.

Existing Stationary Noise

The primary sources of stationary noise in the project vicinity are those associated with the operations of nearby existing commercial and industrial surrounding of the project site. The noise associated with these sources may represent a single-event noise occurrence, short-term noise, or long-term/continuous noise.

4.2 NEARBY RECEPTORS

Noise exposure standards and guidelines for various types of land uses reflect the varying noise sensitivities associated with each of these uses. Residences, hospitals, schools, guest lodging, libraries, and churches are treated as the most sensitive to noise intrusion and therefore have more stringent noise exposure targets than do other uses, such as manufacturing or agricultural uses that are not subject to impacts such as sleep disturbance.

As shown in Table 8: Noise Receivers, sensitive receptors near the project site include single-family residences and a church, refer to Figure 5: Sensitive Receptor Locations. Table 8 also highlights nearby

non-sensitive receivers such as commercial and industrial uses. These distances are from the project site to the sensitive receptor property line.

Table 8: Noise Receivers

Receptor Description	Distance and Direction from the Project Site[1]
Industrial Building	40 feet to the north
Commercial Building	100 feet northwest
Single Family Residential	670 feet northeast
Newark Community Church	800 feet northwest
Single Family Residential	930 feet northeast
1. Distances are measured from the project site boundary to the property line.

5 METHODOLOGY

5.1 SOUND METHODOLOGY

Construction

Construction noise estimates are based upon noise levels on typical noise levels generated by construction equipment published by the Federal Transit Administration (FTA) and FHWA. Construction noise is assessed in dBA L_{eq}. This unit is appropriate because L_{eq} can be used to describe noise level from operation of each piece of equipment separately, and levels can be combined to represent the noise level from all equipment operating during a given period.

Reference noise levels are used to estimate noise levels at nearby sensitive receptors based on a standard noise attenuation rate of 6 dB per doubling of distance (line-of-sight method of sound attenuation for point sources of noise). Construction noise level estimates do not account for the presence of intervening structures or topography, which may reduce noise levels at receptor locations. Therefore, the noise levels presented herein represent a conservative, reasonable worst-case estimate of actual temporary construction noise.

The City of Newark has a construction equipment noise threshold of 86 dBA at any point outside the property line between the times of 7:00 a.m. to 7:00 p.m. on Monday through Saturday and 10:00 a.m. to 6:00 p.m. on Sundays and Holidays. The City also has an ordinance providing that no piece of equipment is allowed to produce a noise level of 83 dBA at a distance of 25 feet from the source.

Operations

The analysis of the existing and future noise environments is based on noise prediction modeling and empirical observations. Reference noise level data are used to estimate the project operational noise impacts from stationary sources. Noise levels are collected from field noise measurements and other published sources from similar types of activities are used to estimate noise levels expected with the project's stationary sources. The reference noise levels are used to represent a worst-case noise environment as noise level from stationary sources can vary throughout the day.

Operational noise is evaluated based on the standards within the City's General Plan. Per Table EH-2 in the City of Newark General Plan, normally acceptable exterior noise levels of up to 55 dBA L_{dn} are acceptable for single-family residential uses, levels up to 60 dBA L_{dn} are acceptable for churches, levels up to 68 dBA L_{dn} are acceptable for commercial uses, and levels up to 70 dBA L_{dn} are acceptable for industrial uses. The General Plan also establishes an interior 45 dBA L_{dn} noise standard for residences and churches and notes that an untrained human ear typically cannot detect a difference in sound levels of less than 3 dB. The traffic noise levels in the project vicinity were calculated using the FHWA Highway Noise Prediction Model (FHWA-RD-77-108).

5.2 VIBRATION METHODOLOGY

Groundborne vibration levels associated with construction-related activities for the project were evaluated utilizing typical groundborne vibration levels associated with construction equipment, obtained from FTA published data for construction equipment. Potential groundborne vibration impacts related to structural damage and human annoyance were evaluated, considering the distance from construction activities to nearby land uses and typically applied criteria for structural damage and human annoyance.

Per FTA guidance, a vibration limit of 12.7 millimeters per second (mm/sec; 0.5 inch/sec) PPV is used for buildings that are structurally sound and designed to modern engineering standards. A conservative vibration limit of five mm/sec (0.2 inches/sec) PPV has been used for buildings that are found to be structurally sound but where structural damage is a major concern.

6 POTENTIAL IMPACTS AND MITIGATION

6.1 ACOUSTICAL IMPACTS

Threshold 6.1 Would the Project generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Construction

Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g. land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. During construction, exterior noise levels could affect the residential neighborhoods and other sensitive receptors surrounding the construction site. Project construction would occur approximately 670 feet from the nearest sensitive receptor to the northeast. Construction activities would occur throughout the project site and would not be concentrated at a single point near sensitive receptors. Noise levels typically attenuate (or drop off) at a rate of 6 dB per doubling of distance from point sources, such as industrial machinery. During construction, exterior noise levels could affect the residential neighborhoods near the construction site.

Construction activities associated with development of the project would include demolition, site preparation, grading, paving, building construction, and architectural coating. Such activities may require dozers and tractors during site preparation; graders, dozers, and tractors during grading; cranes, forklifts, generators, tractors, and welders during building construction; pavers, rollers, mixers, tractors, and paving equipment during paving; and air compressors during architectural coating. Grading and excavation phases of project construction tend to be the shortest in duration and create the highest construction noise levels due to the operation of heavy equipment required to complete these activities. It should be noted that only a limited amount of equipment can operate near a given location at a particular time. Equipment typically used during the grading and excavation stage includes heavy-duty trucks, backhoes, bulldozers, excavators, front-end loaders, and scrapers. Operating cycles for these types of construction equipment may involve one or two minutes of full-power operation followed by three to four minutes at lower power settings. Other primary sources of noise would be shorter-duration incidents, such as placing large pieces of equipment or the hydraulic movement of machinery lifts, which would last less than one minute. According to the applicant, no pile-driving would be required during construction.

The City of Newark General Plan has not adopted a quantitative construction noise threshold. However, the Newark Municipal Code limits construction equipment noise levels to 86 dBA at the property line and, for individual pieces of equipment, 83 dBA at 25 feet from the source. It should be noted that there are no sensitive receptors located within 25 feet of the anticipated construction area or adjacent to the project property line. The closest sensitive receptors would be the residences northeast located approximately 670 feet away from the project site. The loudest piece of equipment (used during demolition) would produce a noise level of 65 dBA at 670 feet without accounting for any noise attenuation from nearby buildings or structures, as well as vegetation. These off-site noise attenuating elements include multi-story industrial buildings, multi-story commercial buildings, and trees located north and west of the project site. Typically, a solid wall or berm can reduce noise level by about 5 to 15

dBA.[3] Thus, due to nearby attenuating structures, noise levels would be reduced below 65 dBA and the construction noise would be below the Normally Acceptable Level for residences and churches as described in Table 4. At the closest industrial use, located 40 feet northwest from the edge of the project site, the loudest piece of equipment would produce a noise level of 90 dBA without accounting for any noise attenuation from nearby buildings or structures. As mentioned previously, actual construction-related noise activities would be lower than the conservative levels described above and would cease upon completion of construction. Due to the variability of construction activities and equipment for the project, overall construction noise levels would be intermittent and would fluctuate over time. These assumptions represent the worst-case noise scenario because construction activities would typically be spread throughout the project site, and thus some equipment would be farther away from the affected receptors.

Further, construction activities would be limited to daytime hours and would conform to the time-of-day restrictions of the City's Municipal Code. Construction activities also would be subject to a routine construction management plan, which constitutes a "noise source control" that is uniformly applicable to construction sites near receptors under Newark Municipal Code section 17.24.100(B) and policies in the City's General Plan, such as Policy EH-607. (*See, e.g.,* General Plan Noise Element, pp. EH-28 to EH-30, EH-41). Construction noise management plans are common conditions of approval in the City of Newark and are intended to generally minimize the detrimental noise impacts of construction. (*See* "Environmental Checklist for Streamlined Review, Pursuant to California Public Resources Code Section 21083.3 and CEQA Guidelines Sections 15168 and 15183" for 38600 Cedar Boulevard Residential Development Project (July 2023), p. 53; *see also Berkeley Hillside Pres. v. City of Berkeley* (2015) 241 Cal.App.4th 943, 959 [project exempt from CEQA where generally applicable construction management plan ensured compliance with city noise standards]; *Walters v. City of Redondo Beach* (2016) 1 Cal.App.5th 809, 815-823 [project exempt from CEQA where noise control measures ensured compliance with city ordinance standards].)

Implementation of the construction management plan below would ensure that construction noise levels remain consistent with the municipal code's quantitative noise level requirements. The plan would require the project to use noise reduction technology on construction equipment, construct temporary sound barriers at the project property line, and prohibit the idling of stationary equipment. With implementation of the construction noise management plan, noise levels associated with construction would be significantly reduced and would never exceed 86 decibels outside the project site. Therefore, construction noise impacts to nearby receptors would be consistent with the Newark General Plan and Newark Municipal Code, and would be less than significant.

Construction Noise Management Plan

Prior to Grading Permit issuance, the Applicant shall demonstrate, to the satisfaction of the City of Newark Director of Public Works or City Engineer that the Project complies with the following:

i. Construct solid plywood fences around ground level construction sites adjacent to the project property line, resulting in a decibel reduction of 5-15 dBA.

[3] Federal Highway Administration, *Highway Traffic and Construction Noise - Problem and Response*, April 2006.

ii. Equip all internal combustion engine-driven equipment with intake and exhaust mufflers that are in good condition and appropriate for the equipment. This would provide at least a 10 dBA reduction to individual equipment noise.[4]

iii. Prohibit unnecessary idling of internal combustion engines.

iv. Locate stationary noise-generating equipment such as air compressors or portable power generators as far as possible from the project property line. Construct temporary noise barriers to screen stationary noise-generating equipment at the project property line.

v. Utilize "quiet" air compressors and other stationary noise sources where technology exists.

vi. Control noise from construction workers' radios to a point where they are not audible at existing residences bordering the Project site.

vii. Notify all adjacent business, residences, and other noise-sensitive land uses of the construction schedule, in writing, and provide a written schedule of "noisy" construction activities to the adjacent land uses and nearby residences.

viii. If complaints are received or excessive noise levels cannot be reduced using the measures above, erect a temporary noise control blanket barrier along surrounding building facades that face the construction sites.

ix. Designate a "disturbance coordinator" who shall be responsible for responding to any complaints about construction noise. The disturbance coordinator shall determine the cause of the noise complaint (e.g., bad muffler, etc.) and shall require that reasonable measures be implemented to correct the problem. Conspicuously post a telephone number for the disturbance coordinator at the construction site and include it in the notice sent to neighbors regarding the construction schedule.

Implementation of the foregoing construction noise management plan would collectively reduce construction noise by 20 to 30 decibels. Construction noise levels would be below 45 dBA at the closest residence and church, and below 70 dBA at the closest industrial receptor which is consistent with the Normally Acceptable Levels described in Table 4. With the reduction accounting for the mufflers and the surrounding walls from the construction noise management plan (approximately a 20 dBA reduction), no construction equipment would produce a noise level more than 83 dBA at 25 feet. The loudest piece of equipment would produce a noise level of 74 dBA at 25 feet and construction noise levels would not exceed 86 dBA at the project property line. Thus, construction noise would be consistent with the Newark General Plan and Newark Municipal Code, and would be less than significant.

Construction Traffic Noise

Construction noise may be generated by large trucks moving materials to and from the project site. Large trucks would be necessary to deliver building materials as well as remove dump materials. Because of the logarithmic nature of noise levels, a doubling of the traffic volume (assuming that the speed and vehicle mix do not also change) would result in a noise level increase of 3 dBA. In general, a traffic noise increase of less than 3 dBA is barely perceptible to people, while a 5-dBA increase is readily noticeable (Caltrans,

[4] United States Environmental Protection Agency, *Noise from Construction Equipment and Operations, Building Equipment, and Home Appliances*, 1971.

2013). Central Avenue, from Morton Avenue to Sycamore Street, has an average daily trip volume of 11,570 vehicles (Table 7). Construction is not anticipated to generate 11,570 trips along Central Avenue and would, therefore, not double the existing average daily trip volume along Central Avenue. Thus, construction related traffic noise would not be noticeable and would not generate traffic noise above the 83 dBA construction noise threshold listed in the City's Municipal Code.

Operations

Implementation of the project would create new sources of noise in the project vicinity. The major noise sources associated with the project that would potentially impact existing and future nearby residences include the following:

- Off-site traffic noise;
- Mechanical equipment (i.e., trash compactors, air conditioners, etc.);
- Delivery trucks on the project site, and approaching and leaving the loading areas;
- Activities at the loading areas (i.e., maneuvering and idling trucks, loading/unloading, and equipment noise);
- Parking areas (i.e., car door slamming, car radios, engine start-up, and car pass-by); and
- Landscape maintenance activities.

As discussed above, the closest sensitive receptors are located approximately 670 feet to the northeast of the project site. The City of Newark normally acceptable noise standards for residential uses and churches is 55 dBA L_{dn} and 60 dBA L_{dn} respectively. For commercial and industrial uses, the normally acceptable noise standard is 68 dBA L_{dn} and 70 dBA L_{dn}. The Newark Municipal Code section 17.24.100 limits noise levels from industrial uses to 70 dBA at the property line. The nearest industrial land use is approximately 40 feet from the project site. The General Plan also notes that an untrained human ear typically cannot detect a difference in sound levels of less than 3 dB.

Off-Site Traffic Noise

Implementation of the project would generate increased traffic volumes along study roadway segments. The project is expected to generate a net increase of average daily trips, which would result in noise increases on project area roadways. In general, a traffic noise increase of less than 3 dBA is barely perceptible to people, while a 5-dBA increase is readily noticeable (Caltrans, 2013). Generally, traffic volumes on project area roadways would have to approximately double for the resulting traffic noise levels to increase by 3 dBA. Therefore, permanent increases in ambient noise levels of less than 3 dBA would not be a perceivable noise increase.

As shown in Table 9: Existing and Project Traffic Noise, the existing traffic-generated noise level on project area roadways is between 57.1 dBA L_{dn} and 63.9 dBA L_{dn} at 100 feet from the centerline. As previously described, L_{dn} is 24-hour average noise level with a 10 dBA "weighting" added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively.

Traffic noise levels for roadways primarily affected by the project were calculated using the FHWA's Highway Noise Prediction Model (FHWA-RD-77-108). Traffic noise modeling was conducted for conditions with and without the project, based on traffic volumes (Kimley-Horn, 2023). As noted in Table 9, project noise levels 100 feet from the centerline would range from 57.1 dBA L_{dn} to 64.8 dBA L_{dn}. This would result

in resulting noise levels below the normally acceptable levels for both industrial uses of 70 L_{dn} and commercial uses of 68 L_{dn}. According to the traffic analysis prepared, the project would generate net new 3,339 daily PCE trips.

Table 9: Existing and Project Traffic Noise

Roadway Segment	Existing Conditions[2]		With Project		Change from No Project Conditions	Perceivable
	ADT	dBA L_{dn}[1]	ADT	dBA L_{dn}[1]		
Sycamore Street						
Central Avenue to Clark Avenue	4,900	57.1	4,900	57.1	0.0	**No**
Central Avenue						
Morton Avenue to Sycamore Street	13,160	62.8	13,570	62.9	0.1	**No**
Sycamore Street to West Project Driveway	16,360	63.7	16,910	63.9	0.2	**No**
West Project Driveway to East Project Driveway	16,360	63.7	20,130	64.6	0.9	**No**
East Project Driveway to Cherry Street	17,090	63.9	20,850	64.8	0.9	**No**

ADT = average daily trips; dBA = A-weighted decibels; L_{dn} = day-night noise levels

1. Traffic noise levels are at 100 feet from the roadway centerline. The actual sound level at any receptor location is dependent upon such factors as the source-to-receptor distance and the presence of intervening structures, barriers, and topography.
2. Existing ADT shows an elevated trip count which accounts for trips associated with the existing use on-site at the time of analysis. The difference between the elevated ADT and the baseline existing ADT is negligible and would not cause the operational traffic noise level increase to be perceivable.

Source: Based on data from the Transportation Analysis (Kimley-Horn, 2023). Refer to Appendix A for traffic noise modeling assumptions and results.

Stationary Noise Sources

Implementation of the project would create new sources of noise in the project vicinity from mechanical equipment, truck loading areas, parking lot noise, and landscape maintenance. Table 10: Stationary Source Noise Levels shows the noise levels generated by various stationary noise sources and the resulting noise level at the nearest receiver.[5] Table 10 also show the project's compliance with the exterior and interior noise standards listed in Table 4. Each stationary source is discussed below.

Mechanical Equipment

Regarding mechanical equipment, the project would generate stationary-source noise associated with heating, ventilation, and air conditioning (HVAC) units. HVAC units typically generate noise levels of approximately 55 dBA at 50 feet. The project property line would be located approximately 75 feet away and would experience a noise level of 52 dBA which is consistent with the 70 dBA municipal code standard. The closest sensitive receptors to the HVAC units would be the residential area 670 feet northeast of the project site. Note that HVAC units would be mounted on the building and set back from the property line. At the distance of 670 feet, the project's mechanical equipment noise levels would be 30 dBA. On the 24-hour L_{dn} scale and assuming the units would operate intermittently, the noise level would be 33 dBA L_{dn} and would be below the City's normally acceptable residential noise standard of 55 dBA L_{dn}. Typically, a conservative estimate for interior noise levels would be a 10 dBA reduction of the exterior noise level.[6] Therefore, interior noise levels produced by mechanical equipment on the project site at the closest

5 Distances are measured from the project site boundary to the property line of the nearest receiver.

6 Federal Highway Administration, *Technique for Reviewing Noise Analyses and Associated Noise Reports*, June 2018.

sensitive receptor would reach 23 dBA L_{dn} which is below the 45 dBA L_{dn} interior noise standard listed in the noise compatibility guidelines from the Newark General Plan. At the nearest industrial receptor 150 feet northwest, noise levels would be 46 dBA L_{dn} which is also below the 70 dBA noise standard. At the nearest commercial receptor 170 feet northeast, noise levels would be 44 dBA L_{dn} which is also below the 68 dBA L_{dn} noise standard Therefore, mechanical equipment would produce noise levels consistent with Policy EH-7.7 and Table EH-2 in the Newark General Plan.

Loading Area Noise

The project is an industrial development that potential could include deliveries. The primary noise associated with deliveries is the arrival and departure of trucks. Operations of proposed project would potentially require a mixture of deliveries from vans, light trucks, and heavy-duty trucks. Normal deliveries typically occur during daytime hours. During loading and unloading activities, noise would be generated by the trucks' diesel engines, exhaust systems, and brakes during low gear shifting' braking activities; backing up toward the docks/loading areas; dropping down the dock ramps; and maneuvering away from the docks. The project is surrounded by industrial uses to the east, west, and south.

The closest residential receptors would be approximately 1,000 feet northwest of the project's loading area. While there would be temporary noise increases during truck maneuvering and engine idling, these impacts would be of short duration and infrequent. Additionally, loading noise levels would be further attenuated by intervening structures. Table 10 shows that trucks and loading area noise would not exceed the City's General Plan normally acceptable noise levels. Typically, heavy truck operations generate a noise level of 61 dBA at a distance of 50 feet, which would be approximately 68 dBA L_{dn}. The project property line would be located 55 feet away from loading dock areas. Noise generated by loading dock activities would reach 67 dBA at the project property line which is below the 70 dBA municipal code standard. At the nearest residential receptors, the project's loading area noise levels would be 42 dBA L_{dn} which is below the City's normally acceptable residential noise standard of 55 dBA. Due to the noise reduction from building attenuation, interior noise levels produced by loading area noise would reach 32 dBA L_{dn} at the closest sensitive receptor which is below the 45 dBA L_{dn} interior noise standard listed in the noise compatibility guidelines. At the nearest industrial receptor 200 feet northeast of the project's loading area, exterior noise levels would be 56 dBA L_{dn} which is also below the normally acceptable 70 dBA noise standard. At the nearest commercial building, approximately 420 feet northwest of the loading dock area, noise levels would be 50 dBA L_{dn} which is below the 68 dBA L_{dn} noise standard. Therefore, loading areas would produce levels consistent with Policy EH-7.7 and Table EH-2 in the Newark General Plan.

Parking Areas

Traffic associated with parking areas is typically not of sufficient volume to exceed community noise standards, which are based on a time-averaged scale such as the CNEL or L_{dn} scale. However, the instantaneous maximum sound levels generated by a car door slamming, engine starting up and car pass-bys may be an annoyance to nearby noise-sensitive receptors. Parking lot noise can also be considered a "stationary" noise source. The instantaneous maximum sound levels generated by a car door slamming, engine starting up, and car pass-bys range from 53 to 61 dBA at 50 feet and may be an annoyance to noise-sensitive receptors. Conversations in parking areas may also be an annoyance to sensitive receptors. Sound levels of speech typically range from 33 dBA at 48 feet for normal speech to 50 dBA at 50 feet for very loud speech. It should be noted that parking lot noise are instantaneous noise levels compared to noise standards in the L_{dn} scale, which are averaged over time. As a result, actual noise levels over time resulting from parking lot activities would be far lower. The project parking lot is located adjacent to the project property line and would generate a noise level of 68 dBA which is below the 70 dBA municipal

code standard. The nearest residential property line would be located approximately 670 feet away from the project's parking areas. As Table 10 shows, noise generated from the parking lot would be at 40 dBA L_{dn} at closest residential receptor 670 feet northeast, which would not exceed the normally acceptable 55 dBA noise standard listed in Table EH-2 of the City's General Plan. Due to the reduction of noise from building attenuation, the project's parking areas would produce an interior noise level of 30 dBA L_{dn} at the nearest residential receptor which is below the 45 dBA L_{dn} interior noise standard listed in the noise compatibility guidelines from the Newark General Plan. At the nearest industrial receptor property line located 40 feet northeast of the parking area, noise levels would be 64 dBA which is below the City's 70 dBA industrial standard. At the nearest commercial receptor, located 100 feet to the northwest, parking lot noise would produce a noise level of 56 dBA L_{dn} which is below the 68 dBA L_{dn} noise standard. Therefore, noise produced in parking areas would produce noise levels consistent with Policy EH-7.7 and Table EH-2 in the Newark General Plan.

Landscape Maintenance Activities

Development and operation of the project includes new landscaping that would require periodic maintenance. Noise generated by a gasoline-powered lawnmower is estimated to be approximately 70 dBA at a distance of five feet. Landscape maintenance activities would be 50 dBA at 50 feet away. Maintenance activities would operate during daytime hours for brief periods of time and would not permanently increase ambient noise levels in the project vicinity and would be consistent with activities that currently occur at the surrounding uses. Landscape maintenance would occur adjacent to the project property line. However, noise levels would reach approximately 63 dBA and would not exceed the 70 dBA municipal code standard. Table 10 shows that landscape maintenance noise would be at 20 dBA L_{dn} at the closest residential receptor 670 feet away. Due to the reduction of noise from building attenuation, interior noise levels produced by landscape maintenance activities on the project site at the nearest sensitive receptor would be 10 dBA L_{dn} which is below the 45 dBA L_{dn} interior noise standard listed in the noise compatibility guidelines from the Newark General Plan. Therefore, landscape maintenance activities would be consistent with Policy EH-7.7 and Table EH-2 in the Newark General Plan.

Summary

As shown in Table 10, stationary sources would not exceed the City of Newark General Plan Land Use Compatibility Standards at the adjacent industrial use or nearest residential use. Additionally, noise levels would be further attenuated by intervening terrain and structures. Noise impacts from mechanical equipment, loading area, parking area, and landscape maintenance would below the allowable noise levels listed in Table EH-2 of the City's General Plan. Therefore, the project's operational noise would be consistent with Policy EH-7.7 in the Newark General Plan.

Table 10: Stationary Source Noise Levels

Nearest Land Use	Distance (feet)[1]	Reference Level at 50 ft (dBA L_{dn})[2]	Noise Level at Receiver (dBA L_{dn})	Exterior Noise Standard[6]	Exceed Standard
Mechanical Equipment					
Property Line	75	55 dBA[3]	52 dBA	70 dBA	No
Industrial (northeast)	150		46 dBA	70 dBA	No
Commercial (northwest)	170		44 dBA	68 dBA	No
Residence (northeast)	670		33 dBA	55 dBA	No
Church (northwest)	800		31 dBA	60 dBA	No
Loading Area					
Property Line	55	68 dBA[3]	67 dBA	70 dBA	No
Industrial (northeast)	200		56 dBA	70 dBA	No
Commercial (northwest)	420		50 dBA	68 dBA	No
Residence (northeast)	1,000		42 dBA	55 dBA	No
Church (northwest)	1,250		40 dBA	60 dBA	No
Parking Area					
Property Line	25	62 dBA[4]	68 dBA	70 dBA	No
Industrial (northeast)	40		64 dBA	70 dBA	No
Commercial (northwest)	100		56 dBA	68 dBA	No
Residence (northeast)	670		40 dBA	55 dBA	No
Church (northwest)	800		38 dBA	60 dBA	No

Industrial (northeast)	40		45 dBA	70 dBA	No
Commercial (northwest)	100		37 dBA	68 dBA	No
Residence (northeast)	670		20 dBA	55 dBA	No
Church (northwest)	800		19 dBA	60 dBA	No

1. The distance is from the location of the operational noise source to the receptor property line.
2. Reference levels are adjusted for the Ldn scale and an acoustical usage factor to represent 24-hour noise levels. Mechanical, truck, and parking is conservatively assumed to occur anytime during the 24-hour period and landscape maintenance would only occur during the daytime.
3. Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden, *Noise Navigator Sound Level Database with Over 1700 Measurement Values*, July 6, 2010.
4. Kariel, H. G., *Noise in Rural Recreational Environments*, Canadian Acoustics 19(5), 3-10, 1991.
5. U.S. EPA, *Noise from Construction Equipment and Operations, Building Equipment, and Home Appliances*, 1971.
6. Table EH-2 of the Newark General Plan establishes normally acceptable noise standards of 55 dBA for residential zones, 60 dBA for churches, and 70 dBA for industrial. The Newark Municipal Code states the noise levels cannot exceed 70 dBA at an industrial-zoned property line.

6.2 VIBRATION IMPACTS

Threshold 6.2 Would the Project generate excessive groundborne vibration or groundborne noise levels?

Construction

Increases in ground-borne vibration levels attributable to the project would be primarily associated with construction-related activities. Construction on the project site would have the potential to result in varying degrees of temporary ground-borne vibration, depending on the specific construction equipment used and the operations involved. Ground vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance. The effect on buildings located in the vicinity of the construction site often varies depending on soil type, ground strata, and construction characteristics of the receiver building(s). The results from vibration can range from no perceptible effects at the lowest vibration levels, to low rumbling sounds and perceptible vibration at moderate levels, to slight damage at the highest levels. Ground-borne vibrations from construction activities rarely reach levels that damage structures.

The FTA has published standard vibration velocities for construction equipment operations. In general, depending on the building category of the nearest buildings adjacent to the potential pile driving area, the potential construction vibration damage criteria vary. For example, for a building constructed with reinforced concrete with no plaster, the FTA guidelines show that a vibration level of up to 0.50 inch per second (in/sec) peak particle velocity (PPV) is considered safe and would not result in any construction vibration damage. In general, the FTA architectural damage criterion for continuous vibrations (i.e., 0.2 in/sec) appears to be conservative.

Table 11: Typical Construction Equipment Vibration Levels, lists vibration levels at 25 feet and 165 feet for typical construction equipment. Ground-borne vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance. As indicated in Table 11, based on FTA data, vibration velocities from typical heavy construction equipment operations that would be used during project construction range from 0.0002 to 0.0052 in/sec PPV at 165 feet from the source of activity. Project construction would occur approximately 165 feet from the nearest off-site use, the industrial building located to the northeast, and approximately 670 feet from the nearest sensitive receptor located to the southwest. Therefore, the nearest sensitive receptor would not experience perceptible vibration levels.

Table 11: Typical Construction Equipment Vibration Levels

Equipment	Peak Particle Velocity At 25 feet (in/sec)	Peak Particle Velocity At 165 feet (in/sec)
Large Bulldozer	0.089	0.0052
Loaded Trucks	0.076	0.0045
Rock Breaker	0.059	0.0035
Jackhammer	0.035	0.0021
Small Bulldozer/Tractors	0.003	0.0002
1. Calculated using the following formula: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$, where: PPV_{equip} = the peak particle velocity in in/sec of the equipment adjusted for the distance; PPV_{ref} = the reference vibration level in in/sec from Table 7-4 of the Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, 2018; D = the distance from the equipment to the receiver.		
Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, September 2018.		

As shown in Table 11, the highest vibration levels are achieved with the large bulldozer operations. This construction activity is expected to take place during grading. As discussed above, project construction would occur approximately 165 feet from the closest structure. Therefore, construction equipment vibration velocities would not exceed the FTA's vibration threshold of 0.2 in/sec ppv and, therefore, is consistent with Action EH-7.D of the General Plan. In general, other construction activities would occur throughout the project site and would not be concentrated at the point closest to the nearest structure. Therefore, vibration impacts associated with the project would not be perceivable.

Operations

The project would not generate ground-borne vibration that could be felt at surrounding uses. Project operations would not involve railroads or substantial heavy truck operations, and therefore would not result in vibration impacts at surrounding uses. As a result, impacts from vibration associated with project operation would not be perceivable.

The FTA and the City of Newark do not classify industrial structures as a sensitive land use category that is susceptible to groundborne vibration and noise. Therefore, the project would not be impacted by vibration generated through the nearby railroad track.

The City of Newark requires a vibration assessment for building located within 200 feet of a railroad, and for new residential uses, requires compliance with the vibration thresholds listed in the City's General Plan (per General Plan Action EH-7.E). The closest railroad is located 10 feet southwest from the edge of the project property and is approximately 60 feet from the proposed building. The level of impact from railway vibration is influenced by multiple factors including train type, receiver building type, and geological factors. The FTA provides guidance and a reference vibration level for different types of trains at 50 feet. The highest level of vibration identified by the FTA are upper range commuter rails that produce a vibration velocity of 85 VdB at 50 feet. Common commuter rails and rapid transit trains produce a level between 70 VdB and 75 VdB at 50 feet. The FTA notes that damage for typical buildings occurs at 100 VdB and a vibration level of 85 VdB in a residence can result in strong annoyance.[7] The FTA's vibration screening procedure applies to high sensitivity buildings, residential buildings, and institutional buildings. Industrial buildings such as the proposed project are not considered vibration sensitive.[8]

[7] Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, page 113, 2018.

[8] The FTA notes that if no vibration-sensitive land uses are identified, no further vibration analysis is needed (Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, page 136, 2018).

As mentioned previously, the project building is located 60 feet away from the operation of the railroad track. Therefore, the building would be below the 100 VdB building damage threshold defined in the FTA Transit Noise and Vibration Impact Assessment Manual. Additionally, due to the distance, future receptors inside the proposed industrial building also would not experience vibration levels exceeding the 85 VdB annoyance level. Notwithstanding that, and as noted above, industrial uses are not considered vibration-sensitive.

6.3 AIRPORT NOISE

Threshold 6.3 For a Project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the Project area to excessive noise levels?

The project site is not located within the two miles of a public airport or public airport use. The nearest airport to the project site is the Hayward Executive Airport located approximately 10 miles north of the project site. Therefore, the project would not expose people residing or working in the project area to excessive airport- or airstrip-related noise levels and impacts would be less than significant.

6.4 CUMULATIVE NOISE IMPACTS

Noise by definition is a localized phenomenon, and drastically reduces as distance from the source increases. The future noise impacts involve development of the project in combination with ambient growth and other related development projects. As noise levels decrease as distance from the source increases, only projects in the nearby area could combine with the project to potentially result in future noise impacts.

Future Newark Noise Regulations

The Newark General Plan Policy EH-7.7 requires an analysis of the project with the future adopted noise policies. The City of Newark General Plan Tune Up EIR from 2013 considered the current noise standards listed in the General Plan to evaluate the City's development through 2035. Therefore, the current noise standards listed in the City of Newark General Plan are not anticipated to be updated in the near future as the current standards were analyzed and approved in the General Plan Tune Up EIR for the City's buildout till 2035.

Cumulative Construction Noise

The project's construction activities would not result in a substantial temporary increase in ambient noise levels. The City permits construction hours within the hours of 7:00 a.m. to 7:00 p.m. on Monday through Saturday and 10:00 a.m. and 6:00 p.m. on Sundays and holidays. The project would contribute to other proximate construction noise impacts if construction activities were conducted concurrently. However, based on the noise analysis above, the project's construction-related noise impacts would be consistent with the City's regulations outlined in this study.

Construction activities at any future planned and approved projects would be required to take place during daytime hours, and the City and project applicants would be required to evaluate construction noise impacts and implement mitigation, if necessary, to minimize noise impacts. Each project would be required to comply with the applicable City of Newark General Plan and Municipal Code limitations on

allowable noise levels and hours of construction. Therefore, project construction would not contribute to future noise impacts and impacts in this regard are not considerable.

Cumulative Operational Noise

Future noise impacts describe how much noise levels are projected to increase over existing conditions with the development of the project and other foreseeable projects. Future noise impacts would occur primarily as a result of increased traffic on local roadways due to buildout of the project and other projects in the vicinity. However, noise from generators and other stationary sources could also generate additional noise levels. The Newark General Plan Policy EH-7.7 requires an estimate of future noise levels 20 years in the future. These future noise levels would be compared to the noise level standards established in Table EH-2 of the General Plan.

Stationary Noise

As discussed above, impacts from the project's operations would be below the thresholds listed in the General Plan. Due to site distance, intervening land uses, and the fact that noise dissipates as it travels away from its source, noise impacts from on-site activities and other stationary sources would be limited to the project site and vicinity. After review of the City of Newark current project list and specific plan list, there is one project, the Central Avenue Overpass, that is within 2,000 feet of the project vicinity and would impact future noise levels.[9,10] As mentioned previously, the City of Newark has planned and funded the construction of an overpass on Central Avenue that would start on the northwest face of the project site. This overpass construction would extend along the project frontage from Sycamore Street to Morton Avenue. This structure would attenuate any operational stationary noise produced on-site and would reduce the impact at nearby receptors across Central Avenue. Therefore, future stationary noise levels would be lower than the levels listed above. Stationary equipment on-site would also include improved technology 20 years in the future which would further reduce noise generated by the project. Therefore, future stationary equipment noise levels are estimated to be below the noise levels listed above and future impacts related to stationary noise would be below normally acceptable noise standards listed in Table EH-2 of the Newark General Plan. Thus, future operational noise impacts from related projects, in conjunction with project-specific noise impacts, would be consistent with the City's General Plan.

Traffic Noise

As discussed above, project related traffic noise increases would not be perceivable with implementation of the project. As mentioned previously, there is only one project nearby that would impact future noise. However, the implementation of the Central Avenue Overpass would not result in an increase of traffic noise in the surrounding area. As mentioned previously, the City of Newark has planned and funded the construction of an overpass on Central Avenue that would be built over the nearby railroad track. The existing ambient noise includes traffic noise generated from driving over railroad tracks. Therefore, construction of the overpass would no longer contribute to noise in the area. Furthermore, the overpass would not generate additional future trips on Central Avenue. The Overpass project is anticipated to provide roadway traffic congestion relief and a reduction in conflicts between rail traffic and the general public.[11] Additionally, the future sale and use of EV trucks and cars would further reduce noise levels on

the surrounding roadways in the next 20 years. Therefore, future traffic noise surrounding the project site are estimated to remain below the noise standards listed in the Newark General Plan. Thus, the future operational traffic noise impacts from related projects, in conjunction with project-specific noise impacts, would be consistent with the City's General Plan.

VdB	vibration velocity level

1 INTRODUCTION

This analysis is in response to the City of Newark's request for compliance with General Plan Policy EH-7.7 and Action EH-7.E for the 6750 Central Avenue Project ("project" or "proposed project"). The purpose of this analysis is to evaluate the project's noise compatibility with surrounding land uses and the vibration impacts from a nearby railway on the project.

1.1 PROJECT LOCATION

The proposed project is located at 6750 Central Avenue in Newark, California. Figure 1: Regional Vicinity and Figure 2: Site Vicinity, depict the project site in a regional and local context. The project site is located in an urban area with a mix of surrounding uses including commercial, office, residential and industrial uses. The proposed project's existing land use designation is General Industrial and existing zoning designation is Employment District. The project site is currently developed with an industrial warehouse, commercial space, and a truck trailer repair yard.

1.2 PROJECT DESCRIPTION

The project intends to redevelop the property as a modern industrial facility. The proposed project would demolish the existing on-site facilities and redevelop the property with a new approximately 315,390 square feet (sf) warehouse building. The proposed warehouse building would contain approximately 281,584 sf of warehouse space and 33,806 sf of office space (refer to Figure 3: Project Site Plan). The warehouse building would include 48 dock doors located on the southeast façade. The proposed project includes surface parking with 401 automobile (passenger vehicle) spaces.

Access to the project site would be provided by two 40-foot driveways located on the northwest corner of the site from Central Avenue. The northern driveway would provide access for trucks and trailers, in addition to passenger vehicles. The southern driveway would provide primary access for passenger vehicles. The project includes a stormwater retention area on the southern corner of the project site.

It should be noted that the City of Newark has approved and funded the installation of an overpass along the project frontage on Central Avenue. This roadway improvement would construct a four-lane grade separation structure that extends from Sycamore Street to Morton Avenue above the railway south of the project site.[1] This construction and operation of this roadway improvement would alter noise and vibration levels in the surrounding area and is the impact of its installation is analyzed in the discussion below.

2 ACOUSTIC FUNDAMENTALS

2.1 SOUND AND ENVIRONMENTAL NOISE

Acoustics is the science of sound. Sound can be described as the mechanical energy of a vibrating object transmitted by pressure waves through a medium (e.g. air) to human (or animal) ear. If the pressure variations occur frequently enough (at least 20 times per second), they can be heard and are called sound. The number of pressure variations per second is called the frequency of sound and is expressed as cycles per second, or hertz (Hz).

Noise is defined as loud, unexpected, or annoying sound. The fundamental acoustics model consists of a noise source, receptor, and the propagation path between the two. The loudness of the noise source, obstructions, or atmospheric factors affecting the propagation path, determine the perceived sound level and noise characteristics at the receptor. Acoustics deal primarily with the propagation and control of sound. A typical noise environment consists of ambient noise that is the sum of many distant and indistinguishable noise sources. The sound from individual local sources is superimposed on this background noise. These sources can vary from an occasional aircraft or train passing by to continuous noise from traffic on a major highway. Perceptions of sound and noise are highly subjective from person to person.

Measuring sound directly in terms of pressure would require a large range of numbers. To avoid this, the decibel (dB) scale was devised. The dB scale uses the hearing threshold of 20 micropascals (µPa) as a point of reference, defined as 0 dB. Other sound pressures are then compared to this reference pressure, and the logarithm is taken to keep the numbers in a practical range. The dB scale allows a million-fold increase in pressure to be expressed as 120 dB, and changes in levels correspond closely to human perception of relative loudness. Table 1: Typical Noise Levels provides typical noise levels.

Table 1: Typical Noise Levels

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	– 110 –	Rock Band
Jet fly-over at 1,000 feet		
	– 100 –	
Gas lawnmower at 3 feet		
	– 90 –	
Diesel truck at 50 feet at 50 miles per hour		Food blender at 3 feet
	– 80 –	Garbage disposal at 3 feet

Noise Descriptors

The dB scale alone does not adequately characterize how humans perceive noise. The dominant frequencies of a sound have a substantial effect on the human response to that sound. Several rating scales have been developed to analyze the adverse effect of community noise on people. Because environmental noise fluctuates over time, these scales consider that the effect of noise on people is largely dependent on the total acoustical energy content of the noise, as well as the time of day when the noise occurs. Most commonly, environmental sounds are described in terms of equivalent noise level (L_{eq}) that has the same acoustical energy as the summation of all the time-varying events. While L_{eq} represents the continuous sound pressure level over a given period, the day-night noise level (L_{dn}) and Community Equivalent Noise Level (CNEL) are measures of energy average during a 24-hour period, with dB weighted sound levels from 7:00 p.m. to 7:00 a.m. Each is applicable to this analysis and defined Table 2: Definitions of Acoustical Terms.

Table 2: Definitions of Acoustical Terms

Term	Definitions
Decibel (dB)	A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in µPa (or 20 micronewtons per square meter), where 1 pascals is the pressure resulting from a force of 1 newton exerted over an area of 1 square meter. The sound pressure level is expressed in dB as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e.g. 20 µPa). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency (Hz)	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and ultrasonic sounds are above 20,000 Hz.
A-Weighted Sound Level (dBA)	The sound pressure level in dB as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level (L_{eq})	The average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.
Maximum Noise Level (L_{max}) Minimum Noise Level (L_{min})	The maximum and minimum dBA during the measurement period.
Day-Night Noise Level (L_{dn})	A 24-hour average Leq with a 10 dBA weighting added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity at nighttime. The logarithmic effect of these additions is that a 60 dBA 24-hour Leq would result in a measurement of 66.4 dBA L_{dn}.
Community Noise Equivalent Level (CNEL)	A 24-hour average Leq with a 5 dBA weighting during the hours of 7:00 a.m. to 10:00 a.m. and a 10 dBA weighting added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively. The logarithmic effect of these additions is that a 60 dBA 24-hour Leq would result in a measurement of 66.7 dBA CNEL.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Intrusive	That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends on its amplitude, duration, frequency, and time of occurrence and tonal or informational content as well as the prevailing ambient noise level.

Because sound levels can vary markedly over a short period of time, a method for describing either the sound's average character (L_{eq}) or the variations' statistical behavior (L_{xx}) must be utilized. The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about plus or minus 1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The predicted models' accuracy depends on various factors, such as the distance between the noise receptor and noise source, the character of the ground surface (e.g., hard or soft), and the presence or absence of structures (e.g., walls or buildings) or topography, and how well model inputs reflect these conditions.

A-Weighted Decibels

The A-weighted decibel (dBA) sound level scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. The perceived loudness of sounds is dependent on many factors, including sound pressure level and frequency content. However, within the usual range of environmental noise levels, perception of loudness is relatively predictable and can be approximated by dBA values. There is a strong correlation between dBA and the way the human ear perceives sound. For this reason, the dBA has become the standard tool of environmental noise assessment. All noise levels reported in this document are in terms of dBA, but are expressed as dB, unless otherwise noted.

Addition of Decibels

The dB scale is logarithmic, not linear, and therefore sound levels cannot be added or subtracted through ordinary arithmetic. Two sound levels 10 dB apart differ in acoustic energy by a factor of 10. When the standard logarithmic dB is A-weighted, an increase of 10 dBA is generally perceived as a doubling in loudness. For example, a 70-dBA sound is half as loud as an 80-dBA sound and twice as loud as a 60-dBA sound. When two identical sources are each producing sound of the same loudness, the resulting sound level at a given distance would be 3 dBA higher than one source under the same conditions. Under the dB scale, three sources of equal loudness together would produce an increase of approximately 5 dBA.

Sound Propagation and Attenuation

Sound spreads (propagates uniformly outward in a spherical pattern, and the sound level decreases (attenuates) at a rate of approximately 6 dB for each doubling of distance from a stationary or point source. Sound from a line source, such as a highway, propagates outward in a cylindrical pattern. Sound levels attenuate at a rate of approximately 3 dB for each doubling of distance from a line source, such as a roadway, depending on ground surface characteristics. No excess attenuation is assumed for hard surfaces like a parking lot or a body of water. Soft surfaces, such as soft dirt or grass, can absorb sound, so an excess ground-attenuation value of 1.5 dB per doubling of distance is normally assumed. For line sources, an overall attenuation rate of 3 dB per doubling of distance is assumed.

Noise levels may also be reduced by intervening structures; generally, a single row of buildings between the receptor and the noise source reduces the noise level by about 5 dBA, while a solid wall or berm reduces noise levels by 5 to 10 dBA. The way older homes in California were constructed generally provides a reduction of exterior-to-interior noise levels of about 20 to 25 dBA with closed windows. The exterior-to-interior reduction of newer residential units is generally 30 dBA or more.

Human Response to Noise

The human response to environmental noise is subjective and varies considerably from individual to individual. Noise in the community has often been cited as a health problem, not in terms of actual physiological damage, such as hearing impairment, but in terms of inhibiting general well-being and

contributing to undue stress and annoyance. The health effects of noise in the community arise from interference with human activities, including sleep, speech, recreation, and tasks that demand concentration or coordination. Hearing loss can occur at the highest noise intensity levels.

Noise environments and consequences of human activities are usually well represented by median noise levels during the day or night or over a 24-hour period. Environmental noise levels are generally considered low when the CNEL is below 60 dBA, moderate in the 60 to 70 dBA range, and high above 70 dBA. Examples of low daytime levels are isolated, natural settings with noise levels as low as 20 dBA and quiet, suburban, residential streets with noise levels around 40 dBA. Noise levels above 45 dBA at night can disrupt sleep. Examples of moderate-level noise environments are urban residential or semi-commercial areas (typically 55 to 60 dBA) and commercial locations (typically 60 dBA). People may consider louder environments adverse, but most will accept the higher levels associated with noisier urban residential or residential-commercial areas (60 to 75 dBA) or dense urban or industrial areas (65 to 80 dBA). Regarding increases in dBA, the following relationships should be noted:

- Except in carefully controlled laboratory experiments, a 1-dBA change cannot be perceived by humans.
- Outside of the laboratory, a 3-dBA change is considered a just-perceivable difference.
- A minimum 5-dBA change is required before any noticeable change in community response would be expected. A 5-dBA increase is typically considered substantial.
- A 10-dBA change is subjectively heard as an approximate doubling in loudness and would almost certainly cause an adverse change in community response.

Effects of Noise on People

Hearing Loss. While physical damage to the ear from an intense noise impulse is rare, a degradation of auditory acuity can occur even within a community noise environment. Hearing loss occurs mainly due to chronic exposure to excessive noise but may be due to a single event such as an explosion. Natural hearing loss associated with aging may also be accelerated from chronic exposure to loud noise. The Occupational Safety and Health Administration has a noise exposure standard that is set at the noise threshold where hearing loss may occur from long-term exposures. The maximum allowable level is 90 dBA averaged over 8 hours. If the noise is above 90 dBA, the allowable exposure time is correspondingly shorter.

Annoyance. Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that causes for annoyance include interference with speech, radio and television, house vibrations, and interference with sleep and rest. The L_{dn} as a measure of noise has been found to provide a valid correlation of noise level and the percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise and ground transportation noise. There continues to be disagreement about the relative annoyance of these different sources. A noise level of about 55 dBA L_{dn} is the threshold at which a substantial percentage of people begin to report annoyance[2].

2.2 GROUNDBORNE VIBRATION

Sources of groundborne vibrations include natural phenomena (earthquakes, volcanic eruptions, sea waves, landslides, etc.) or man-made causes (explosions, machinery, traffic, trains, construction equipment, etc.). Vibration sources may be continuous (e.g., factory machinery) or transient (e.g.,

[2] Federal Interagency Committee on Noise, *Federal Agency Review of Selected Airport Noise Analysis Issues*, August 1992.

explosions). Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One is the peak particle velocity (PPV); another is the root mean square (RMS) velocity. The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave and is expressed in terms of inches-per-second (in/sec). The RMS velocity is defined as the average of the squared amplitude of the signal and is expressed in terms of velocity decibels (VdB). The PPV and RMS vibration velocity amplitudes are used to evaluate human response to vibration.

Table 3: Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibrations, displays the reactions of people and the effects on buildings produced by continuous vibration levels. The annoyance levels shown in the table should be interpreted with care since vibration may be found to be annoying at much lower levels than those listed, depending on the level of activity or the individual sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage. In high noise environments, which are more prevalent where groundborne vibration approaches perceptible levels, this rattling phenomenon may also be produced by loud airborne environmental noise causing induced vibration in exterior doors and windows.

Table 3: Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibrations

Maximum PPV (in/sec)	Vibration Annoyance Potential Criteria	Vibration Damage Potential Threshold Criteria	FTA Vibration Damage Criteria
0.008	-	Extremely fragile historic buildings, ruins, ancient monuments	-
0.01	Barely Perceptible	-	-
0.04	Distinctly Perceptible	-	-
0.1	Strongly Perceptible	Fragile buildings	-
0.12	-	-	Buildings extremely susceptible to vibration damage
0.2	-	-	Non-engineered timber and masonry buildings
0.25	-	Historic and some old buildings	-
0.3	-	Older residential structures	Engineered concrete and masonry (no plaster)
0.4	Severe	-	-
0.5	-	New residential structures, Modern industrial/commercial buildings	Reinforced-concrete, steel, or timber (no plaster)
PPV = peak particle velocity; in/sec = inches per second; FTA = Federal Transit Administration			
Source: California Department of Transportation, Transportation and Construction Vibration Guidance Manual, 2020 and Federal Transit administration; Transit Noise and Vibration Assessment Manual, 2018.			

Ground vibration can be a concern in instances where buildings shake, and substantial rumblings occur. However, it is unusual for vibration from typical urban sources such as buses and heavy trucks to be perceptible. Common sources for groundborne vibration are planes, trains, and construction activities such as earth-moving, which requires the use of heavy-duty earth moving equipment. For the purposes of this analysis, a PPV descriptor with units of inches per second (in/sec) is used to evaluate construction-generated vibration for building damage and human complaints.

3 REGULATORY SETTING

To limit population exposure to physically or psychologically damaging as well as intrusive noise levels, the Federal government, the State of California, various county governments, and most municipalities in the state have established standards and ordinances to control noise.

3.1 STATE

California Government Code

California Government Code Section 65302(f) mandates that the legislative body of each county and city adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines established by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of "normally acceptable", "conditionally acceptable", "normally unacceptable", and "clearly unacceptable" noise levels for various land use types. Single-family homes are "normally acceptable" in exterior noise environments up to 60 CNEL and "conditionally acceptable" up to 70 CNEL. Multiple-family residential uses are "normally acceptable" up to 65 CNEL and "conditionally acceptable" up to 70 CNEL. Schools, libraries, and churches are "normally acceptable" up to 70 CNEL, as are office buildings and business, commercial, and professional uses.

3.2 LOCAL

City of Newark General Plan

The City of Newark General Plan identifies goals, policies, and implementations in the Noise Element. The Noise Element provides a basis for comprehensive local programs to regulate environmental noise and protect citizens from excessive exposure. Table 4: Land-Use Compatibility Guidelines for Community Noise in Newark highlights nine land-use categories and the outdoor noise compatibility guidelines.

Table 4: Land-Use Compatibility Guidelines for Community Noise in Newark

Land-Use Category	Interior CNEL or L_{dn} (dBA)	Exterior Noise Exposure (CNEL or L_{dn}), in dBA			
		Normally Acceptable[1]	Conditionally Acceptable[2]	Normally Unacceptable[3]	Clearly Unacceptable[4]
Residential-Low Density Single-Family, Duplex, Mobile Homes	45	<60	55 to 70	70 to 75	>75
Residential-Multiple Family	45	<65	60 to 70	70 to 75	>75
Transient Lodging, Motels, Hotels	45	<65	60 to 70	70 to 80	>80
Schools, Libraries, Churches, Hospitals, Nursing Homes	45	<70	60 to 70	70 to 80	>80
Auditoriums, Concert Halls, Amphitheater	-	-	-	-	>65
Sports Arena, Outdoor Spectator Sports	-	-	-	-	>70
Playgrounds, Neighborhood Parks	-	<70	68 to 75	-	>72
Golf Courses, Riding Stables, Water Recreation, Cemeteries	-	<75	70 to 80	-	>80
Office Buildings, Businesses, Commercial, Professions	50	<70	68 to 75	75 to 85	-
Industrial, Manufacturing, Utilities, Agricultural	-	<75	70 to 80	75 to 85	-

1. Normally Acceptable – Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements.
2. Conditionally Acceptable – New construction should be undertaken only after a detailed analysis of the noise reduction requirement is conducted and needed noise insulation features included in the design.

3. Normally Unacceptable – New construction or development should generally be discouraged. If new construction does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.
4. Clearly Unacceptable – New Construction or development generally should not be undertaken.
Source: City of Newark General Plan, 2013.

The Newark General Plan includes the following applicable noise goal and policy:

Goal EH-7: Ensure that new structures/uses are designed and constructed to preclude excessive, inappropriate, and undesirable noise effects.

Policy EH 7.7: **Acoustical Study Requirement**. Require acoustical studies for new developments in areas where the noise levels exceed the 'normally acceptable' levels for the proposed land use; based on Table EH-2. For residential uses, the analysis should include mitigation measures to limit the noise exposure in interior living spaces to 45 dB L_{dn}, consistent with California Title 24.

Acoustical Studies should have the following minimum attributes:

- Be the responsibility of the development applicant.
- Be prepared by qualified persons experienced in the fields of environmental noise assessment and architectural acoustics.
- Include representative noise level measurements with sufficient sampling periods and locations to adequately describe existing local conditions.
- Include estimates for existing and projected (20 years hence) noise levels in terms of (a) Ldn or CNEL and (b) any future noise regulations to be adopted by the City. Those existing and projected noise levels shall be compared to the adopted policies of the Noise Element.
- Include recommended mitigation measures to achieve compliance with the adopted policies and standards of the Noise Element. Where the noise source in question consists of intermittent single events, the report should address the effects of maximum noise levels in sleeping rooms and potential sleep disturbance issues.
- Include estimates for interior and exterior noise exposure after the prescribed mitigation measures have been implemented.
- Describe a post-project assessment program that could be used to evaluate the effectiveness of the proposed mitigation measures.

The Newark General Plan includes the following action element for vibration:

Action EH-7.E: New Development Near Railroads. Implement a standard operating procedure that requires the evaluation of potential vibration impacts for new development that occurs within 200 feet of a railroad track, in accordance with the FTA's vibration screening distances. In such instances, the project property owner/developers shall retain an acoustical engineer to conduct an acoustic

analysis and identify, where appropriate, site design features and/or required building construction improvements to ensure that vibration impacts would remain below acceptable levels for residential uses.

4 EXISTING CONDITIONS

4.1 EXISTING NOISE SOURCES

The City of Newark (including the project site) is impacted by various noise sources. Mobile sources of noise, especially cars, trucks, and rail transport, are the most common and significant sources of noise in most communities. Other sources of noise are the various land uses (i.e., residential, commercial, institutional, and recreational and parks activities) throughout the City that generate stationary-source noise.

Noise Measurements

To determine ambient noise levels in the project area, three short-term (10-minute) noise measurements and one long-term (24-hour) noise measurement were taken using a Larson Davis SoundExpert LxT Type I integrating sound level meter on January 25 through January 26, 2023; refer to Appendix A for existing noise measurement data.

As shown in Figure 4: Noise Measurement Locations, short-term measurement 1 (ST-1) was taken to represent the ambient noise level at the Church northwest of the project site on Sycamore Street, ST-2 was taken to represent existing noise levels at the industrial uses northeast of the project site, and ST-3 was taken to represent the existing noise level at the industrial uses to the southwest. Long-term measurement 1 (LT-1) was taken to represent existing ambient noise levels at the project site. The primary noise sources during the noise measurements were traffic along Central Avenue, Sycamore Street, and stationary noise at industrial operations nearby. Table 5: Noise Measurements provides the ambient noise levels measured at these locations.

Table 5: Noise Measurements

Site No.	Location	L_{eq} (dBA)	L_{min} (dBA)	L_{max} (dBA)	L_{dn} (dBA)[1]	Time	Date
ST-1	Newark Community Church	59.7	51.0	74.5	62.4	2:00 p.m. to 2:10 p.m.	1/25/2023
ST-2	6950 Central Avenue	59.0	55.1	64.7	61.7	2:19 p.m. to 2:29 p.m.	1/25/2023
ST-3	7025 Central Avenue	72.1	55.4	84.5	74.8	2:37 p.m. to 2:47 p.m.	1/25/2023
LT-1	Project Site	69.6	51.6	96.1	73.6	3:21 p.m. to 3:21 p.m.	1/25/2023 – 1/26/2023

1. L_{dn} for short-term measurements are approximated based on the day-night variation in the long-term measurement.

Existing Mobile Noise

Existing roadway noise levels were calculated for the roadway segments in the project vicinity. This task was accomplished using the Federal Highway Administration (FHWA) Highway Traffic Noise Prediction Model (FHWA-RD-77-108) and existing traffic volumes provided by Kimley-Horn (2023). The noise prediction model calculates the average noise level at specific locations based on traffic volumes, average speeds, roadway geometry, and site environmental conditions. The average vehicle noise rates (also referred to as energy rates) used in the FHWA model have been modified to reflect average vehicle noise rates identified for California by Caltrans. The Caltrans data indicates that California automobile noise is 0.8 to 1.0 dBA higher than national levels and that medium and heavy truck noise is 0.3 to 3.0 dBA lower than national levels. The average daily noise levels along roadway segments in proximity to the project site are included in Table 7: Existing Traffic Noise.

Table 6: Existing Traffic Noise

Roadway Segment	ADT	dBA L_{dn} [1]
Sycamore Street		
Central Avenue to Clark Avenue	5,230	57.3
Central Avenue		
Morton Avenue to Sycamore Street	11,570	62.2
Sycamore Street to West Project Driveway	14,040	63.0
West Project Driveway to East Project Driveway	14,040	63.0
East Project Driveway to Cherry Street	15,060	63.4
ADT = average daily trips; dBA = A-weighted decibels; L_{dn} = day-night noise level		
1. Traffic noise levels are at 100 feet from the roadway centerline. The actual sound level at any receptor location is dependent upon such factors as the source-to-receptor distance and the presence of intervening structures, barriers, and topography.		
Source: Based on data provided by Kimley-Horn (2022). Refer to Appendix A for traffic noise modeling assumptions and results.		

The project site is primarily surrounded by industrial and commercial uses. The existing mobile noise in the project area are generated along Central Avenue and Sycamore Street west of the project site.

Existing Stationary Noise

The primary sources of stationary noise in the project vicinity are those associated with the operations of nearby existing commercial and industrial surrounding of the project site. The noise associated with these sources may represent a single-event noise occurrence, short-term noise, or long-term/continuous noise.

4.2 NEARBY RECEPTORS

Noise exposure standards and guidelines for various types of land uses reflect the varying noise sensitivities associated with each of these uses. Residences, hospitals, schools, guest lodging, libraries, and churches are treated as the most sensitive to noise intrusion and therefore have more stringent noise exposure targets than do other uses, such as manufacturing or agricultural uses that are not subject to impacts such as sleep disturbance.

As shown in Table 7: Noise Receivers, sensitive receptors near the project site include single-family residences and a church, refer to Figure 5: Sensitive Receptor Locations. Table 7 also highlights nearby

non-sensitive receivers such as commercial and industrial uses. These distances are from the project site to the sensitive receptor property line.

Table 7: Noise Receivers

Receptor Description	Distance and Direction from the Project Site[1]
Industrial Building	40 feet to the north
Commercial Building	100 feet northwest
Single Family Residential	670 feet northeast
Newark Community Church	800 feet northwest
Single Family Residential	930 feet northeast
1. Distances are measured from the project site boundary to the property line.

5 METHODOLOGY

5.1 SOUND METHODOLOGY

The analysis of the existing and future noise environments is based on noise prediction modeling and empirical observations. Reference noise level data are used to estimate the project operational noise impacts from stationary sources. Noise levels are collected from field noise measurements and other published sources from similar types of activities are used to estimate noise levels expected with the project's stationary sources. The reference noise levels are used to represent a worst-case noise environment as noise level from stationary sources can vary throughout the day.

Operational noise is evaluated based on the standards within the City's General Plan. Per Table EH-2 in the City of Newark General Plan, normally acceptable exterior noise levels of up to 60 dBA L_{dn} are acceptable for single-family residential uses, levels up to 70 dBA L_{dn} are acceptable for churches, and levels up to 75 dBA L_{dn} are acceptable for industrial uses. The General Plan also establishes an interior 45 dBA L_{dn} noise standard for residences and churches and notes that an untrained human ear typically cannot detect a difference in sound levels of less than 3 dB. The traffic noise levels in the project vicinity were calculated using the FHWA Highway Noise Prediction Model (FHWA-RD-77-108).

5.2 VIBRATION METHODOLOGY

Groundborne vibration levels associated with construction-related activities for the project were evaluated utilizing typical groundborne vibration levels associated with construction equipment, obtained from FTA published data for construction equipment. Potential groundborne vibration impacts related to structural damage and human annoyance were evaluated, considering the distance from construction activities to nearby land uses and typically applied criteria for structural damage and human annoyance.

Per FTA guidance, a vibration limit of 12.7 millimeters per second (mm/sec; 0.5 inch/sec) PPV is used for buildings that are structurally sound and designed to modern engineering standards. A conservative vibration limit of five mm/sec (0.2 inches/sec) PPV has been used for buildings that are found to be structurally sound but where structural damage is a major concern.

6 POTENTIAL IMPACTS AND MITIGATION

6.1 SOUND IMPACTS

Implementation of the project would create new sources of noise in the project vicinity. The major noise sources associated with the project that would potentially impact existing and future nearby residences include the following:

- Off-site traffic noise;
- Mechanical equipment (i.e., trash compactors, air conditioners, etc.);
- Delivery trucks on the project site, and approaching and leaving the loading areas;
- Activities at the loading areas (i.e., maneuvering and idling trucks, loading/unloading, and equipment noise);
- Parking areas (i.e., car door slamming, car radios, engine start-up, and car pass-by); and
- Landscape maintenance activities.

As discussed above, the closest sensitive receptors are located approximately 670 feet to the northeast of the project site. The City of Newark normally acceptable noise standards for residential areas and churches is 60 dBA L_{dn} and 70 dBA L_{dn} respectively. In industrial areas, the normally acceptable noise standard is 75 dBA L_{dn}. The nearest industrial land use is approximately 40 feet from the project site. The General Plan also notes that an untrained human ear typically cannot detect a difference in sound levels of less than 3 dB.

Off-Site Traffic Noise

Implementation of the project would generate increased traffic volumes along study roadway segments. The project is expected to generate a net increase of average daily trips, which would result in noise increases on project area roadways. In general, a traffic noise increase of less than 3 dBA is barely perceptible to people, while a 5-dBA increase is readily noticeable (Caltrans, 2013). Generally, traffic volumes on project area roadways would have to approximately double for the resulting traffic noise levels to increase by 3 dBA. Therefore, permanent increases in ambient noise levels of less than 3 dBA would not be a perceivable noise increase.

As shown in Table 8: Existing and Project Traffic Noise, the existing traffic-generated noise level on project area roadways is between 57.3 dBA L_{dn} and 63.4 dBA L_{dn} at 100 feet from the centerline. As previously described, L_{dn} is 24-hour average noise level with a 10 dBA "weighting" added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively.

Traffic noise levels for roadways primarily affected by the project were calculated using the FHWA's Highway Noise Prediction Model (FHWA-RD-77-108). Traffic noise modeling was conducted for conditions with and without the project, based on traffic volumes (Kimley-Horn, 2022). As noted in Table 8, project noise levels 100 feet from the centerline would range from 57.3 dBA L_{dn} to 64.4 dBA L_{dn}. This would result in resulting noise levels below the normally acceptable levels for both industrial uses of 75 L_{dn} and commercial uses of 70 L_{dn}.

Table 8: Existing and Project Traffic Noise

Roadway Segment	Existing Conditions		With Project		Change from No Project Conditions	Perceivable
	ADT	dBA L_{dn}[1]	ADT	dBA L_{dn}[1]		
Sycamore Street						
Central Avenue to Clark Avenue	5,230	57.3	5,230	57.3	0.0	**No**
Central Avenue						
Morton Avenue to Sycamore Street	11,570	62.2	11,790	62.3	0.1	**No**
Sycamore Street to West Project Driveway	14,040	63.0	14,440	63.2	0.2	**No**
West Project Driveway to East Project Driveway	14,040	63.0	17,900	64.1	1.1	**No**
East Project Driveway to Cherry Street	15,060	63.4	19,010	64.4	1.0	**No**

ADT = average daily trips; dBA = A-weighted decibels; L_{dn} = day-night noise levels

1. Traffic noise levels are at 100 feet from the roadway centerline. The actual sound level at any receptor location is dependent upon such factors as the source-to-receptor distance and the presence of intervening structures, barriers, and topography.

Source: Based on data from the Transportation Analysis (Kimley-Horn, 2022). Refer to Appendix A for traffic noise modeling assumptions and results.

Stationary Noise Sources

Implementation of the project would create new sources of noise in the project vicinity from mechanical equipment, truck loading areas, parking lot noise, and landscape maintenance. Table 9: Stationary Source Noise Levels shows the noise levels generated by various stationary noise sources and the resulting noise level at the nearest receiver.[3] Table 9 also show the project's compliance with the exterior and interior noise standards listed in Table 4. Each stationary source is discussed below.

Mechanical Equipment

Regarding mechanical equipment, the project would generate stationary-source noise associated with heating, ventilation, and air conditioning (HVAC) units. HVAC units typically generate noise levels of approximately 52 dBA at 50 feet. The closest sensitive receptors to the HVAC units would be the residential area 670 feet northeast of the project site. Note that HVAC units would be mounted on the building and set back from the property line. At this distance, the project's mechanical equipment noise levels would be 30 dBA. On the 24-hour L_{dn} scale and assuming the units would operate intermittently, the noise level would be 33 dBA L_{dn} and would be below the City's normally acceptable residential noise standard of 60 dBA L_{dn}. Typically, a conservative estimate for interior noise levels would be a 10 dBA reduction of the exterior noise level.[4] Therefore, interior noise levels produced by mechanical equipment on the project site at the closest sensitive receptor would reach 23 dBA L_{dn} which is below the 45 dBA L_{dn} interior noise standard listed in the noise compatibility guidelines from the Newark General Plan. At the nearest industrial receptor 150 feet northeast, noise levels would be 46 dBA L_{dn} which is also below the 75 dBA noise standard. Therefore, mechanical equipment would produce interior noise levels of approximately 36 dBA $L_{dn,}$ which is consistent with Policy EH-7.7 and Table EH-2 in the Newark General Plan.

3 Distances are measured from the project site boundary to the property line of the nearest receiver.

4 Federal Highway Administration, *Technique for Reviewing Noise Analyses and Associated Noise Reports*, June 2018.

Loading Area Noise

The project is an industrial development that would include deliveries. The primary noise associated with deliveries is the arrival and departure of trucks. Operations of proposed project would potentially require a mixture of deliveries from vans, light trucks, and heavy-duty trucks. Normal deliveries typically occur during daytime hours. During loading and unloading activities, noise would be generated by the trucks' diesel engines, exhaust systems, and brakes during low gear shifting' braking activities; backing up toward the docks/loading areas; dropping down the dock ramps; and maneuvering away from the docks. The project is surrounded by industrial uses to the east, west, and south.

The closest residential receptors would be approximately 1,000 feet northwest of the project's loading area. While there would be temporary noise increases during truck maneuvering and engine idling, these impacts would be of short duration and infrequent. Additionally, loading noise levels would be further attenuated by intervening structures. Table 9 shows that trucks and loading area noise would not exceed the City's General Plan normally acceptable noise levels. Typically, heavy truck operations generate a noise level of 64 dBA at a distance of 50 feet, which would be approximately 61 dBA L_{dn}. At the nearest residential receptors, the project's loading area noise levels would be 42 dBA L_{dn} which is below the City's normally acceptable residential noise standard of 60 dBA. Due to the noise reduction from building attenuation, interior noise levels produced by loading area noise would reach 32 dBA L_{dn} at the closest sensitive receptor which is below the 45 dBA L_{dn} interior noise standard listed in the noise compatibility guidelines. At the nearest industrial receptor 200 feet northeast of the project's loading area, exterior noise levels would be 56 dBA L_{dn} which is also below the normally acceptable 75 dBA noise standard. Therefore, loading areas would produce levels consistent with Policy EH-7.7 and Table EH-2 in the Newark General Plan.

Parking Areas

Traffic associated with parking areas is typically not of sufficient volume to exceed community noise standards, which are based on a time-averaged scale such as the CNEL or L_{dn} scale. However, the instantaneous maximum sound levels generated by a car door slamming, engine starting up and car pass-bys may be an annoyance to nearby noise-sensitive receptors. Parking lot noise can also be considered a "stationary" noise source. The instantaneous maximum sound levels generated by a car door slamming, engine starting up, and car pass-bys range from 53 to 61 dBA at 50 feet and may be an annoyance to noise-sensitive receptors. Conversations in parking areas may also be an annoyance to sensitive receptors. Sound levels of speech typically range from 33 dBA at 48 feet for normal speech to 50 dBA at 50 feet for very loud speech. It should be noted that parking lot noise are instantaneous noise levels compared to noise standards in the L_{dn} scale, which are averaged over time. As a result, actual noise levels over time resulting from parking lot activities would be far lower. The nearest residential property line would be located approximately 670 feet away from the project's parking areas. As Table 9 shows, noise generated from the parking lot would be at 40 dBA L_{dn} at closest residential receptor 670 feet northeast, which would not exceed the normally acceptable 60 dBA noise standard listed in Table EH-2 of the City's General Plan. Due to the reduction of noise from building attenuation, the project's parking areas would produce an interior noise level of 30 dBA L_{dn} at the nearest residential receptor which is below the 45 dBA L_{dn} interior noise standard listed in the noise compatibility guidelines from the Newark General Plan. Therefore, noise produced in parking areas would produce noise levels consistent with Policy EH-7.7 and Table EH-2 in the Newark General Plan. At the nearest industrial receptor property line located 40 feet northeast of the parking area, noise levels would be 64 dBA which is below the City's 75 dBA industrial standard.

Landscape Maintenance Activities

Development and operation of the project includes new landscaping that would require periodic maintenance. Noise generated by a gasoline-powered lawnmower is estimated to be approximately 70 dBA at a distance of five feet. Landscape Maintenance activities would be 50 dBA at 50 feet away. Maintenance activities would operate during daytime hours for brief periods of time and would not permanently increase ambient noise levels in the project vicinity and would be consistent with activities that currently occur at the surrounding uses. Table 9 shows that landscape maintenance noise would be at 20 dBA L_{dn} at the closest residential receptor 670 feet away. Due to the reduction of noise from building attenuation, interior noise levels produced by landscape maintenance activities on the project site at the nearest sensitive receptor would be 10 dBA L_{dn} which is below the 45 dBA L_{dn} interior noise standard listed in the noise compatibility guidelines from the Newark General Plan. Therefore, landscape maintenance activities would be consistent with Policy EH-7.7 and Table EH-2 in the Newark General Plan.

Summary

As shown in Table 9, stationary sources would not exceed the City of Newark General Plan Land Use Compatibility Standards at the adjacent industrial use or nearest residential use. Additionally, noise levels would be further attenuated by intervening terrain and structures. Noise impacts from mechanical equipment, loading area, parking area, and landscape maintenance would below the allowable noise levels listed in Table EH-2 of the City's General Plan. Therefore, the project's operational noise would be consistent with Policy EH-7.7 in the Newark General Plan.

Table 9: Stationary Source Noise Levels

Nearest Land Use	Distance (feet)[1]	Reference Level at 50 ft (dBA L_{dn})[2]	Noise Level at Receiver (dBA L_{dn})	Exterior Noise Standard[6]	Exceed Standard
Mechanical Equipment					
Industrial (northeast)	150	55 dBA[3]	46 dBA	75 dBA	No
Residence (northeast)	670		33 dBA	60 dBA	No
Church (northwest)	800		31 dBA	70 dBA	No
Residence (northeast)	930		30 dBA	60 dBA	No
Loading Area					
Industrial (northeast)	200	68 dBA[3]	56 dBA	75 dBA	No
Residence (northeast)	1,000		42 dBA	60 dBA	No
Church (northwest)	1,250		40 dBA	70 dBA	No
Residence (northeast)	1,200		40 dBA	60 dBA	No
Parking Area					
Industrial (northeast)	40	62 dBA[4]	64 dBA	75 dBA	No
Residence (northeast)	670		40 dBA	60 dBA	No
Church (northwest)	800		38 dBA	70 dBA	No
Residence (northeast)	930		37 dBA	60 dBA	No
Landscape Maintenance					
Industrial (northeast)	150	43 dBA[5]	33 dBA	75 dBA	No
Residence (northeast)	670		20 dBA	60 dBA	No
Church (northwest)	800		19 dBA	70 dBA	No
Residence (northeast)	930		17 dBA	60 dBA	No

1. The distance is from the location of the operational noise source to the receptor property line.
2. Reference levels are adjusted for the Ldn scale and an acoustical usage factor to represent 24-hour noise levels. Mechanical, truck, and parking is conservatively assumed to occur anytime during the 24-hour period and landscape maintenance would only occur during the daytime.
3. Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden, *Noise Navigator Sound Level Database with Over 1700 Measurement Values*, July 6, 2010.
4. Kariel, H. G., *Noise in Rural Recreational Environments*, Canadian Acoustics 19(5), 3-10, 1991.
5. U.S. EPA, *Noise from Construction Equipment and Operations, Building Equipment, and Home Appliances*, 1971.
6. Table EH-2 of the Newark General Plan establishes normally acceptable noise standards of 60 dBA for residential zones, 70 dBA for churches, and 75 dBA for industrial.

6.2 VIBRATION IMPACTS

The FTA and the City of Newark do not classify industrial structures as a sensitive land use category that is susceptible to groundborne vibration and noise. Therefore, the project would not be impacted by vibration generated through the nearby railroad track.

The City of Newark requires a vibration assessment for building located within 200 feet of a railroad, and for new residential uses, requires compliance with the vibration thresholds listed in the City's General Plan (per General Plan Action EH-7.E). The closest railroad is located 10 feet southwest from the edge of the project property and is approximately 60 feet from the proposed building. The level of impact from railway vibration is influenced by multiple factors including train type, receiver building type, and geological factors. The FTA provides guidance and a reference vibration level for different types of trains at 50 feet. The highest level of vibration identified by the FTA are upper range commuter rails that produce a vibration velocity of 85 VdB at 50 feet. Common commuter rails and rapid transit trains produce a level between 70 VdB and 75 VdB at 50 feet. The FTA notes that damage for typical buildings occurs at 100 VdB and a vibration level of 85 VdB in a residence can result in strong annoyance.[5] The FTA's vibration screening procedure applies to high sensitivity buildings, residential buildings, and institutional buildings. Industrial buildings such as the proposed project are not considered vibration sensitive.[6]

As mentioned previously, the project building is located 60 feet away from the operation of the railroad track. Therefore, the building would be below the 100 VdB building damage threshold defined in the FTA Transit Noise and Vibration Impact Assessment Manual. Additionally, due to the distance, future receptors inside the proposed industrial building also would not experience vibration levels exceeding the 85 VdB annoyance level. . Notwithstanding that, and as noted above, industrial uses are not considered vibration-sensitive.

6.3 FUTURE NOISE IMPACTS

Noise by definition is a localized phenomenon, and drastically reduces as distance from the source increases. The future noise impacts involve development of the project in combination with ambient growth and other related development projects. As noise levels decrease as distance from the source increases, only projects in the nearby area could combine with the project to potentially result in future noise impacts.

Future Newark Noise Regulations

The Newark General Plan Policy EH-7.7 requires an analysis of the project with the future adopted noise policies. The City of Newark General Plan Tune Up EIR from 2013 considered the current noise standards listed in the General Plan to evaluate the City's development through 2035. Therefore, the current noise standards listed in the City of Newark General Plan are not anticipated to be updated in the near future as the current standards were analyzed and approved in the General Plan Tune Up EIR for the City's buildout till 2035.

Future Noise

[5] Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, page 113, 2018.

[6] The FTA notes that if no vibration-sensitive land uses are identified, no further vibration analysis is needed (Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, page 136, 2018).

Future noise impacts describe how much noise levels are projected to increase over existing conditions with the development of the project and other foreseeable projects. Future noise impacts would occur primarily as a result of increased traffic on local roadways due to buildout of the project and other projects in the vicinity. However, noise from generators and other stationary sources could also generate additional noise levels. The Newark General Plan Policy EH-7.7 requires an estimate of future noise levels 20 years in the future. These future noise levels would be compared to the noise level standards established in Table EH-2 of the General Plan.

Stationary Noise

As discussed above, impacts from the project's operations would be below the thresholds listed in the General Plan. Due to site distance, intervening land uses, and the fact that noise dissipates as it travels away from its source, noise impacts from on-site activities and other stationary sources would be limited to the project site and vicinity. After review of the City of Newark current project list and specific plan list, there is one project, the Central Avenue Overpass, that is within 2,000 feet of the project vicinity and would impact future noise levels.[7,8] As mentioned previously, the City of Newark has planned and funded the construction of an overpass on Central Avenue that would start on the northwest face of the project site. This overpass construction would extend along the project frontage from Sycamore Street to Morton Avenue. This structure would attenuate any operational stationary noise produced on-site and would reduce the impact at nearby receptors across Central Avenue. Therefore, future stationary noise levels would be lower than the levels listed above. Stationary equipment on-site would also include improved technology 20 years in the future which would further reduce noise generated by the project. Therefore, future stationary equipment noise levels are estimated to be below the noise levels listed above and future impacts related to stationary noise would be below normally acceptable noise standards listed in Table EH-2 of the Newark General Plan. Thus, future operational noise impacts from related projects, in conjunction with project-specific noise impacts, would be consistent with the City's General Plan.

Traffic Noise

As discussed above, project related traffic noise increases would not be perceivable with implementation of the project. As mentioned previously, there is only one project nearby that would impact future noise. However, the implementation of the Central Avenue Overpass would not result in an increase of traffic noise in the surrounding area. As mentioned previously, the City of Newark has planned and funded the construction of an overpass on Central Avenue that would be built over the nearby railroad track. The existing ambient noise includes traffic noise generated from driving over railroad tracks. Therefore, construction of the overpass would no longer contribute to noise in the area. Furthermore, the overpass would not generate additional future trips on Central Avenue. The Overpass project is anticipated to provide roadway traffic congestion relief and a reduction in conflicts between rail traffic and the general public.[9] Additionally, the future sale and use of EV trucks and cars would further reduce noise levels on the surrounding roadways in the next 20 years. Therefore, future traffic noise surrounding the project site are estimated to remain below the noise standards listed in the Newark General Plan. Thus, the future operational traffic noise impacts from related projects, in conjunction with project-specific noise impacts, would be consistent with the City's General Plan.

1. Source for reference level: Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden, *Noise Navigator Sound Level Database with Over 1700 Measurement Values* , July 6, 2010.

2. Loading dock reference noise level measurements conducted by Kimley-Horn on December 18, 2018.

3. Source for reference level: Kariel, H. G., *Noise in Rural Recreational Environments* , Canadian Acoustics 19(5), 3-10, 1991.

4. U.S. EPA, Noise from Construction Equipment and Operations, Building Equipment, and Home Appliances, 1971.

5. Reference levels are adjusted for the Ldn scale and an acoustical usage factor to represent 24-hour noise levels. Mechanical, truck, and parking is conservatively assumed to occur anytime during the 24-hour period and landscape maintenance would only occur during the daytime.

6. Calculated using the inverse square law formula for sound attenuation: $dBA_2 = dBA_1+20Log(d_1/d_2)$, where dBA_2 = estimated noise level at receptor; dBA_1 = reference noise level; d_1 = reference distance; d_2 = receptor location distance.

7. Table EH-2 of the Newark General Plan establishes normally acceptable noise standards of 60 dBA for residential zones, 70 dBA for churches, and 75 dBA for industrial.

EXECUTIVE SUMMARY

The following transportation impact study (TIS) has been prepared to determine potential Vehicle Miles Traveled (VMT) impacts and/or Level of Service (LOS) deficiencies associated with the 6756 Central Avenue Project ("Project"), a 315,390 square-foot industrial building. The proposed project would be located in Newark, California. The Project site is located at 6756 Central Avenue, which is to the south of Central Avenue and near Sycamore Street. The project proposes two unsignalized driveways on Central Avenue to the east of Sycamore Street.

This TIS addresses the Project's VMT and LOS effects in order to assist the City of Newark ("City") with planning and the identification of conditions of approval, and to mitigate the Project's VMT impacts or improve identified LOS deficiencies, if necessary.

TRIP GENERATION

Since the project does not have a tenant yet, the developer would like the most flexibility within the uses of ITE Land Use 760 (Research and Development), ITE Land Use 140 (Manufacturing), ITE Land Use 150 (Warehousing), and ITE Land Use 155 (High Cube Fulfillment Center Warehouse-Sort). The Project's proposed trip generation was based on the highest trip generating land use; therefore, the equation for Research and Development (R&D) was used for the daily and AM peak hour and the rate for High Cube Fulfillment Center Warehouse-Sort was used for the PM peak hour, from the Institute of Transportation Engineer's (ITE) publication, *Trip Generation Manual, 11th Edition*. Since there is no available truck trip data for a R&D facility in the daily and AM peak hour and as a conservative approach for the PM peak hour, the highest truck trip generation from the land uses considered, Manufacturing, was used for all time periods. The number of passenger vehicles was determined by subtracting the number of truck trips from the total vehicle trips calculated from the R&D and High Cube Fulfillment Center Warehouse-Sort land uses. A Passenger Car Equivalent (PCE) of 2.0 was used for trips associated with trucks. Existing trip credits were taken by collecting driveway counts for the existing use. Daily counts were not collected and were calculated based on the assumption that PM peak hour trips account for 10 percent of the daily trips. The existing site generates a total of 110 daily trips, 11 AM peak hour trips (7 inbound and 4 outbound), and 11 PM peak hour trips (1 inbound and 10 outbound). The existing trips were removed from the driveways and study network under plus project conditions.

The Project is expected to generate a net new 3,339 daily PCE trips, a total of 303 AM peak hour PCE trips (248 inbound and 55 outbound), and 376 PM peak hour PCE trips (151 inbound and 225 outbound).

PROJECT IMPACTS AND DEFICIENCIES

The following summarizes the transportation impacts and project deficiencies, related to the proposed project in the study area. Transportation impacts are based on vehicle miles traveled and not intersection level of service. However, intersection level of service deficiencies without the project and under project conditions were also identified and summarized to identify operational deficiencies outside of CEQA impacts.

VEHICLE MILES TRAVELED (VMT)

Per guidance provided by the Governor's Office of Planning and Research (OPR) Technical Advisory on Evaluating Transportation Impacts in CEQA[1], the threshold for employment-based VMT uses is set at 15 percent below the regional average. The City of Newark does not have an established VMT criteria, and therefore the OPR recommended thresholds were used. Based on the VMT per Employee map for the South Planning Area provided by the Alameda County Transportation Commission (ACTC), the target VMT is 14.6 (or 15 percent below 17.2 VMT per employee for the South Planning Area). Also based on the ACTC map, the project is located in an area with a VMT equal to 14.02 VMT per employee. Therefore, the project VMT of 14.02 VMT per employee is less than the target VMT of 14.6 VMT per employee and the project would result in a less than significant impact.

PROJECT AND INTERSECTION DEFICIENCIES

Although intersection level of service and queuing are not considered for CEQA impact, each of these transportation measures of effectiveness were evaluated for transportation operational deficiencies. The development of the proposed project and resulting traffic generation would result in no LOS operations deficiencies.

However, the project would result in a queuing deficiency at the northbound left-turn lane of intersection #5 (Cherry Street and Central Avenue) in the Existing Plus Project Conditions. The project increases the 95th percentile queue by more than 25 feet under plus project conditions and the queue under no project conditions exceeds the available storage length. To address the queuing deficiency in the AM and PM peak hours, it is recommended that a twice per cycle left-turn phase be provided for the northbound left-turn lane. The signal timing splits should be adjusted accordingly and with the recommended improvement, the project would add less than 25 feet of queue to the movement in comparison to Existing Conditions. A summary of the recommended improvement and 95th percentile queuing is shown in **Table E1**.

Table E1: Vehicle Queuing Analysis – Recommended Improvement

#	Intersection	Control	Movement	Storage Length (ft)	Scenario	AM Peak		PM Peak	
						95th Percentile Queue	Variance	95th Percentile Queue	Variance
5	Cherry Street/ Central Avenue	Signal	NBL	210	Existing	**652**	-	**614**	-
					Existing Plus Project	**855**	**203**	**729**	**115**
					Existing Plus Project (with Improvement)	**573**	**-79**	**629**	**15**

Note: NBL=northbound left. Queue lengths greater than queue storage are **bolded** and queuing deficiencies are highlighted.

[1] Technical Advisory on Evaluating Transportation Impacts in CEQA, Governor's Office of Planning and Research, December 2018.

1. INTRODUCTION

The following transportation impact study (TIS) has been prepared to determine potential Vehicle Miles Traveled (VMT) impacts and/or Level of Service (LOS) deficiencies associated with the 6756 Central Avenue Project ("Project"), a 315,390 square-foot industrial building. The proposed project would be located in Newark, California. The Project site is located at 6756 Central Avenue, which is to the south of Central Avenue and near Sycamore Street. The project proposes two unsignalized driveways on Central Avenue to the east of Sycamore Street.

Figure 1 illustrates the location of the project site in relation to the adjacent roadway network. The project proposes two unsignalized access driveways on Central Avenue. The eastern driveway is intended for truck access and the western driveway is intended for passenger car access. The site plan is presented in **Figure 2.**

This TIS addresses the Project's VMT and LOS effects in order to assist the City of Newark ("City") with planning and the identification of conditions of approval, and to mitigate the Project's VMT impacts or improve identified LOS deficiencies, if necessary.

STUDY METHODOLOGY

With the passage of SB 743, Vehicle Miles Traveled (VMT) has become an important indicator for determining if a new development will result in a "significant transportation impact" under the California Environmental Quality Act (CEQA). This report summarizes the VMT analysis and resultant findings for the proposed development.

VEHICLE MILES TRAVELED (VMT)

The Alameda County Transportation Commission (ACTC) was developed to implement transportation programs and project across Alameda County. One of its responsibilities is to develop and manage the Countywide travel demand model, which is used for estimating future volumes and VMT based on future land uses and the future roadway network. ACTC has developed maps displaying estimates of VMT per employee based on traffic analysis zone (TAZ) estimates from the Alameda Countywide Travel Demand Model that were used to determine if the project would cause a significant impact.

The City does not have a specified VMT criteria, and therefore per guidance provided by the Governor's Office of Planning and Research (OPR) *Technical Advisory on Evaluating Transportation Impacts in CEQA*, the threshold for employment-based VMT uses is set at 15 percent below the regional average.

SITE PLAN

SUPPLEMENTAL TRAFFIC OPERATIONS ANALYSIS

A supplemental traffic operations analysis was conducted to evaluate the Project's effect on LOS operations within the project's vicinity.

Study Area

The Project would generate new vehicular trips that would increase traffic volumes on the nearby street network. To assess changes in traffic conditions associated with the proposed project, the intersections in **Table 1** were evaluated. **Figure 1** illustrates the location of each intersection relative to the project site. The two (2) project driveways are also included as study intersections.

Table 1: Study Intersections

#	Intersection
1	Thornton Avenue and SR-84 EB Ramps
2	Thornton Avenue and Hickory Street
3	Central Avenue and Filbert Avenue
4	Central Avenue and Morton Avenue
5	Central Avenue and Cherry Street
6	Cherry Street and Robertson Avenue
7	Cherry Street and Moores Avenue
8	Central Avenue and Sycamore Avenue
9	Central Avenue and East Project Driveway
10	Central Avenue and West Project Driveway

Analysis Scenarios

Two (2) scenarios were analyzed as part of the supplemental traffic operations analysis, listed below:

- Existing conditions – Based on existing traffic counts collected in April 2023 and May 2023. At the time counts were collected, the 7380 Morton Avenue Project was at 64 percent occupancy. Therefore, only a portion of the trips generated by the Morton Avenue Project are accounted for in the existing counts. As a conservative approach, the remaining 36 percent of Morton Avenue Project trips were added to the existing 2023 counts to develop Existing conditions volumes. The existing roadway geometry and traffic control was assumed.
- Existing plus project traffic conditions – Based on Existing conditions plus the traffic generated by the Project.

Intersection Level of Service

The LOS of an intersection is a qualitative measure used to describe operational conditions. LOS ranges from A (best), which represents minimal delay, to F (worst), which represents heavy delay and a facility that is operating at or near its functional capacity. Levels of service for this study were determined using methods defined in the *Highway Capacity Manual, 6th Edition* (HCM 6) within the *Synchro 11* traffic analysis software.

The HCM includes procedures for analyzing side-street stop-controlled (SSSC), all-way stop-controlled (AWSC), and signalized intersections. The SSSC procedure defines LOS as the highest delay of each

minor street movement or major street left turns. Conversely, the AWSC and signalized intersection procedures define LOS as a function of average control delay for the entire intersection. **Table 2** relates the operational characteristics associated with each LOS category for signalized and unsignalized intersections.

According to the City of Newark, the level of service standard for intersections is LOS D. Therefore, project deficiencies were considered if:

- The addition of project traffic causes a signalized intersection to:
  - Operate at LOS E or F overall, or
  - Adds four (4) seconds of delay to an intersection already operating at LOS E or F under the comparable No Project scenario
- The addition of project traffic causes an unsignalized intersection to:
  - Operate at LOS E or F overall, or
  - Adds four (4) seconds of delay to an intersection already operating at LOS E or F under the comparable No Project scenario and California MUTCD Signal Warrant 3A or 3B is met for the impacted peak hour

Table 2: Intersection Level of Service Definitions

Level of Service	Description	Signalized (Avg. control delay per vehicle sec/veh.)	Unsignalized (Avg. control delay per vehicle sec/veh.)
A	Free flow with no delays. Users are virtually unaffected by others in the traffic stream	≤ 10	≤ 10
B	Stable traffic. Traffic flows smoothly with few delays.	> 10 – 20	> 10 – 15
C	Stable flow but the operation of individual users becomes affected by other vehicles. Modest delays.	> 20 – 35	> 15 – 25
D	Approaching unstable flow. Operation of individual users becomes significantly affected by other vehicles. Delays may be more than one cycle during peak hours.	> 35 – 55	> 25 – 35
E	Unstable flow with operating conditions at or near the capacity level. Long delays and vehicle queuing.	> 55 – 80	> 35 – 50
F	Forced or breakdown flow that causes reduced capacity. Stop and go traffic conditions. Excessive long delays and vehicle queuing.	> 80	> 50

Sources: Transportation Research Board, Highway Capacity Manual 2016, National Research Council, 2016.

The following assumptions were included in the analysis:

- Peak-hour factor (PHF) based on the existing traffic data was used for the Existing (2023) and Existing plus Project (2023) scenarios.

- Traffic signal timing assumptions for Existing (2023) conditions were based on existing signal timing sheets provided by the City, existing signal phasing and existing traffic volumes.
- Percent of heavy vehicles (PHV) based on a default value of 2 percent.

Vehicle Queuing

Queues that exceed the turn pocket length can create potentially hazardous conditions by blocking or disrupting through traffic in adjacent travel lanes. The effect of vehicle queuing was analyzed by reporting the 95th percentile queues for turning movements where the project would add substantial number of trips. The 95th percentile queue length represents a condition where 95 percent of the time during the peak hour, traffic queues will be less than or equal to the queue length determine by the analysis. This is referred to as the "95th percentile queue", which is less than the average queuing. For signalized intersections, the 95th percentile queue length was determined based on queue length calculation within the *Synchro 11* traffic analysis software. For unsignalized intersections, the 95th percentile queue length was determined using HCM 6 methodology.

2. EXISTING (2023) CONDITIONS

This chapter describes the existing conditions of the roadway network, traffic volumes, transit service, pedestrian facilities, and bicycle facilities within the vicinity of the project site.

ROADWAY NETWORK

In the City of Newark General Plan, roadways within the study area are designated as freeway, arterial, collector, or local road. This section provides a description of the specific roadways included in this study.

FREEWAYS

State Route 84 (SR 84) is an east-west freeway that spans across the San Francisco Bay, connecting to SR 1 to the west and Interstate 580 to the east. Within the study area, SR 84 is a six-lane freeway divided with a median. The posted speed limit is 65 mph.

ARTERIALS

Thornton Avenue is a two- to four-lane arterial spanning from SR 84 to the west and turns into SR 84 to the east. The roadway provides access to the commercial and residential areas within Newark. Thornton Avenue is a designated truck route. The posted speed limit is 45 mph between SR 84 and Willow Street and 35 mph east of Willow Street.

Central Avenue is a two- to four-lane arterial between Willow Street and Fremont Boulevard. The roadway serves commercial, industrial, and residential land uses and is divided by a two way left-turn lane (TWLTL). Central Avenue is a designated truck route. In the future, the City plans to reconfigure the roadway from at-grade to elevated from west of Morton Avenue to east of Sycamore Street. This improvement has been considered in the future analysis. The posted speed limit is 40 mph within the study area.

Cherry Street is a four-lane arterial divided by a TWLTL. The roadway provides access to industrial, commercial, and residential uses. Cherry Street is a designated truck route. It spans from Mirabeau Drive to the north and Stevenson Boulevard to the south. In the study area, the posted speed limit is 45 mph.

COLLECTORS

Filbert Street is a two-lane, north-south collector from Carter Avenue to Central Avenue. The roadway provides access to industrial and residential land uses. Filbert Street is a designated truck route. The posted speed limit is 35 mph.

Sycamore Street is a two-lane, north-south collector divided by a TWLTL from Central Avenue to Mayhews Landing Road. The roadway provides access to residential land uses. Sycamore Street is a designated truck route. Within the study area, the posted speed limit along is 35 mph.

Robertson Avenue is a two-lane undivided collector from Cherry Street to Cedar Boulevard. The roadway provides access to industrial, commercial, and residential land uses. Within the study area, the posted speed limit along is 25 mph.

Moores Avenue is a two-lane undivided collector from Cherry Street to Cedar Boulevard. The roadway provides access to industrial, commercial, and residential land uses. Within the study area, the posted speed limit along is 25 mph.

LOCAL ROADS

Hickory Street is a two-lane undivided local street. Hickory Street connects to Thornton Avenue and Railroad Avenue. The roadway serves office and industrial land uses. There is no posted speed limit, but it was assumed that the speed limit is 25 mph.

Morton Avenue a two-lane undivided local street. Morton Avenue connects to Central to the north. The roadway serves industrial land uses. There is no posted speed limit, but it was assumed that the speed limit is 25 mph.

STUDY INTERSECTION LANE CONFIGURATION AND TRAFFIC CONTROL

The intersection lane configuration and traffic controls, as of June 2023, are illustrated in **Figure 3**.

PEAK-HOUR TURNING MOVEMENT VOLUMES

Intersection turning movement volumes for the study intersections were collected on Tuesday, May 16, 2023 for all intersections except for Central Avenue and Cherry Street, which was collected on Tuesday, April 18, 2023. All counts were collected before local schools started summer break. Volumes were collected between 7:00 AM – 9:00 AM to capture the AM peak periods, and between 4:00 PM – 6:00 PM for the PM peak periods. As mentioned previously, the 7380 Morton Avenue Project was at 64 percent occupancy at the time counts were collected based on information provided by the City's Economic Development Manager. Therefore, only a portion of the trips generated by the Morton Avenue Project are accounted for in the collected counts. As a conservative approach, the remaining 36 percent of the Morton Avenue Project trips were derived from the *7380 Morton Transportation Impact Assessment Report*, by Fehr and Peers, dated March 13, 2018 (Morton TIA), and added to existing 2023 counts to develop Existing conditions volumes.

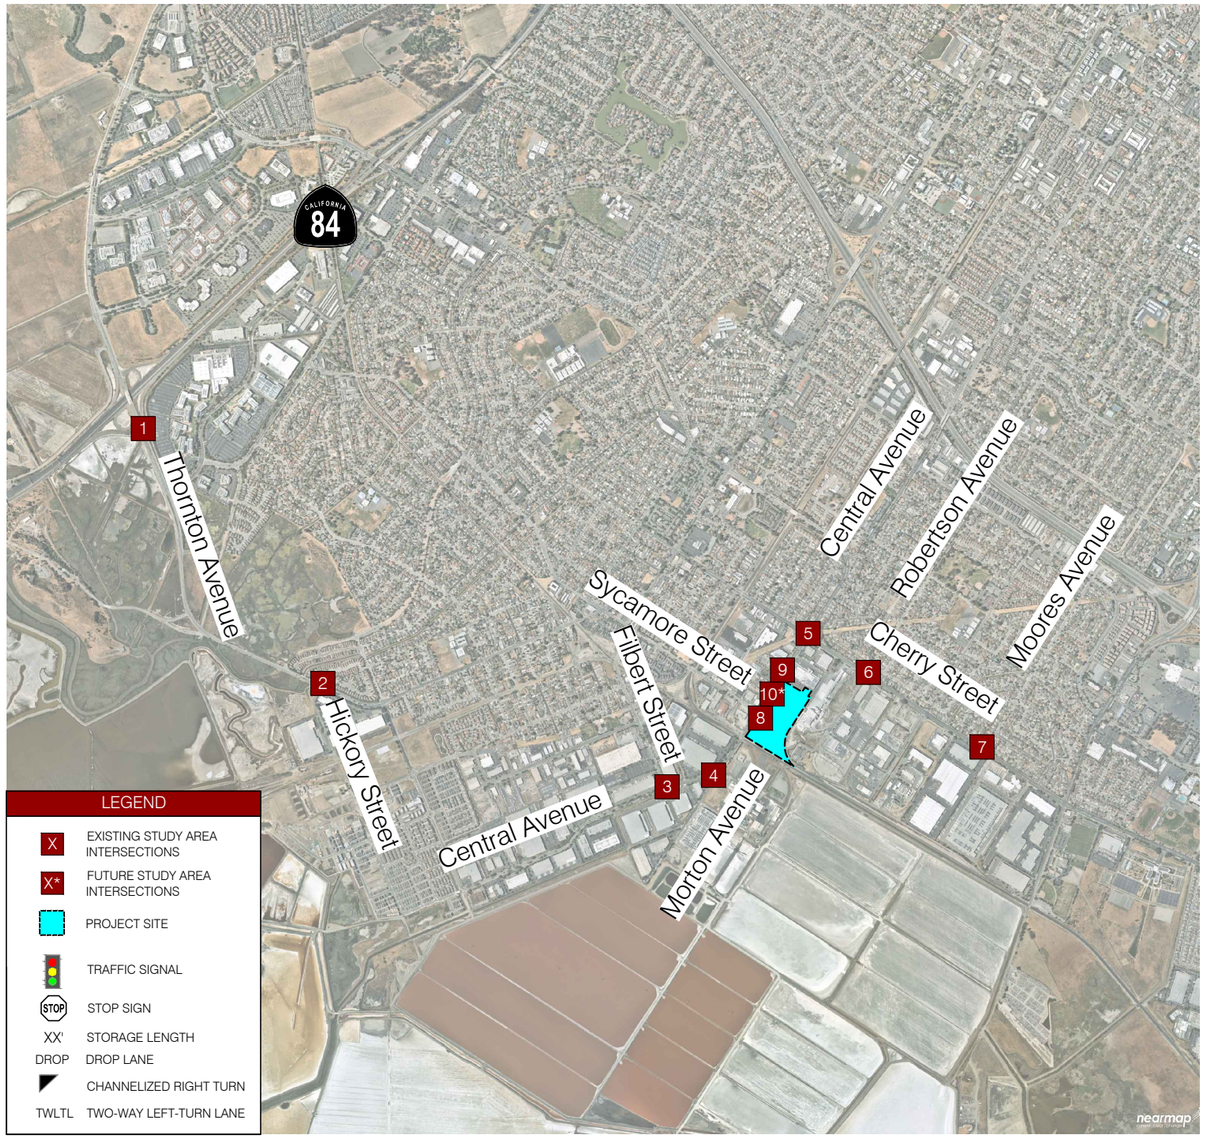
Existing peak hour turning movement volumes are shown in **Figure 4**. Existing traffic volume data sheets are provided in **Appendix A**.

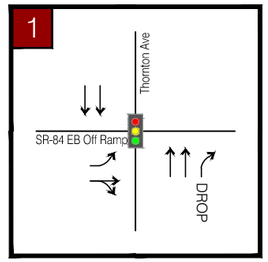
FIELD OBSERVATIONS

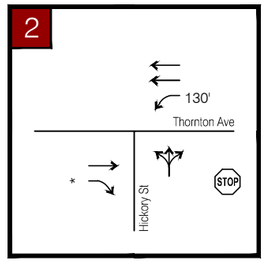
The study intersections were observed during the AM and PM peak hours. For certain intersections, there are lanes wide enough for a right-turning vehicle to bypass other vehicles in the shared through-right or shared left-through-right lane. These movements are considered de facto right turns and they have been analyzed with an exclusive right-turn lane to represent the in-field conditions more accurately. The following movements have been analyzed with a de facto right-turn lane:

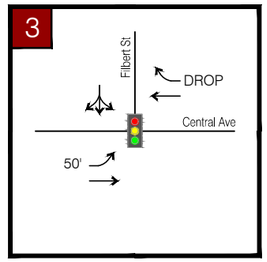
- Intersection #2—Thornton Avenue/Hickory Street (eastbound right)
- Intersection #5—Central Avenue/Cherry Street (southbound right and northbound right)
- Intersection #6—Cherry Street/Robertson Avenue (southbound right, eastbound right, and northbound right)
- Intersection #7—Cherry Street/Moores Avenue (eastbound right and northbound right)

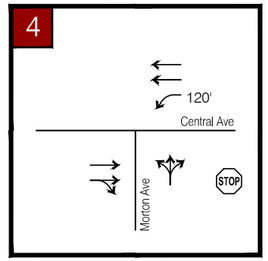
In addition, it was also confirmed that the delays at intersection #6 and #7 for the minor street approaches were consistent with the high delays output by Synchro. Delays up to 150 seconds were observed on the minor road due to the high speed and volumes along Cherry Street.

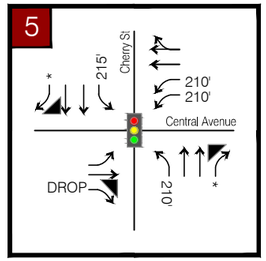


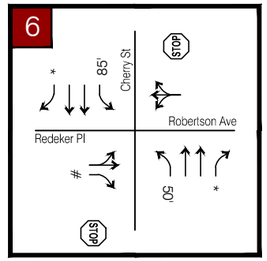


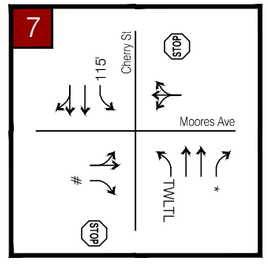


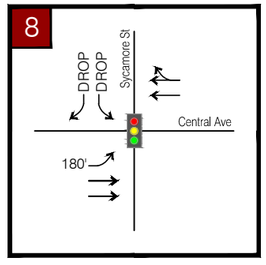


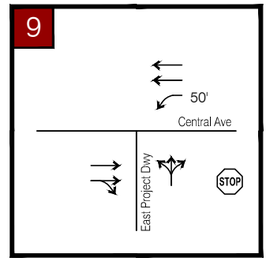


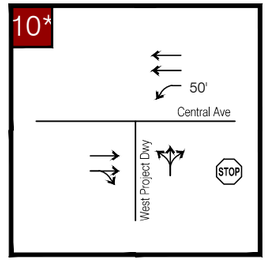












* STRIPED AS SHARED THROUGH/RIGHT TURN LANE, ANALYZED AS SEPARATE DE FACTO RIGHT TURN LANE

BICYCLE FACILITIES

Figure 5 illustrates existing and proposed facilities in the study area. Class I bicycle facilities are bike paths/trails, Class II bicycle facilities are defined as bike lanes, and Class III bicycle facilities are bike routes/boulevards.

Within the project study area, there are Class I, II, and III bicycle facilities along the following corridors:

- Class I bike paths:
  - Along railroad tracks from Newark Boulevard to Cedar Boulevard
  - Birch Street from Robertson Avenue to Smith Ave
- Class II bike lanes:
  - Thornton Avenue from SR 84 to Spruce Street
  - Jarvis Avenue from Thornton Avenue to Lake Boulevard
  - Newark Boulevard from Jarvis Avenue to Cedar Boulevard
  - Cedar Boulevard from Haley Street to Newark Boulevard
  - Cedar Boulevard from Robertson Avenue to Balentine Drive
  - Haley Street from Cedar Boulevard to Sycamore Street
  - Sycamore Street from Haley Street to Central Ave
  - Newark Boulevard from Bellhaven Avenue to Central Avenue
  - Cherry Street from Central Avenue to Balentine Drive
  - Filbert Street from railroad tracks to Enterprise Drive
  - Willow Street from Peachtree Avenue to Central Avenue
  - Enterprise Drive from Willow Street to Central Avenue
  - Central Avenue from Willow Street to Morton Avenue
- Class III bike routes:
  - Central Avenue from Cherry Street to Birch Street

In addition to existing facilities, there are future proposed bike facilities throughout the study area. See **Figure 5** for the locations of future bike facilities.

EXISTING AND PROPOSED BICYCLE FACILITIES

TRANSIT FACILITIES

Alameda-Contra Costa Transit District (AC Transit) provides transit services in the study area. **Figure 6** illustrates the existing transit services within the study area and are described in this section. **Table 3** provides a summary of the existing transit service in the study area.

Table 3: Existing Transit Service

Route	Description	Weekdays		Weekends	
		Operating Hours	Headway[1] (minutes)	Operating Hours	Headway[1] (minutes)
200	Decoto-Newark Blvd.-Mowry	6:08 AM – 12:33 AM	20	6:13 AM – 12:53 AM	20
251	Paseo Padre-Thornton-Cherry	6:35 AM – 7:34 PM	60	6:41 AM – 7:34 PM	60
620	Newark Jr. High-Cedar	7:41 AM – 8:03 AM 2:04 PM – 2:25 PM (F) 3:10 PM – 3:31 PM (M, Tu, W, Th)	-	-	-
626	Newark Memorial-Newark Blvd.	7:48 AM – 8:10 AM 3:39 PM – 3:57 PM	-	-	-
628	Newark Memorial-Cedar	7:52 AM – 8:10 AM 3:39 PM – 3:57 PM	-	-	-
629	Newark Memorial-Cherry-Haley	7:47 AM – 8:10 AM 3:39 PM – 4:02 PM	-	-	-

Notes:
[1] Headways are defined as the time between transit vehicles on the same route.

Route 200 (Decoto-Newark Blvd.-Mowry) operates between the Union City Bay Area Rapid Transit (BART) station and the Fremont BART station. Route 200 operates on weekdays between 6:08 AM and 12:33 AM of the next day on 20-minute headways and on weekends between 6:13 AM and 12:53 AM of the next day on 20-minute headways. The route runs along Thornton Avenue, Filbert Street, Central Avenue, Cedar Boulevard, and Mowry Avenue in Newark. The nearest bus stop to the project site is located at the intersection of Central Avenue and Sycamore Street.

Route 251 (Fremont Blvd-Pacific Commons) operates between Ohlone College and the Fremont BART station on the weekdays. Route 251 operates on weekdays between 6:35 AM and 7:34 PM on 60-minute headways. On weekends, route 251 runs between Silliman Recreation Center and the Fremont BART station. Weekend operation hours are between 6:41 AM and 7:34 PM on 60-minute headways. The route runs along Cherry Street, Central Avenue, and Thornton Avenue in Newark. The nearest bus stop to the project site is located at the intersection of Cherry Street and Central Avenue.

Route 620 (Newark Jr. High-Cedar) operates on weekday mornings between Cedar Boulevard and Stevenson Boulevard to Newark Jr. High School from 7:41 AM to 8:03 AM. The route operates on weekday afternoons, except for Fridays, from Newark Jr. High School to Cedar Boulevard and Stevenson Boulevard from 3:10 PM to 3:31 PM. The route operates on weekday Friday afternoons from Newark Jr. High School to Cedar Boulevard and Stevenson Boulevard from 2:04 PM to 2:25 PM. Route 620 does not run on weekends. Route 620 runs along Newark Boulevard, Cherry Street, Thornton Avenue, Sycamore Street, Central Avenue, and Cedar Boulevard. The nearest bus stop to the project site is located at the intersection of Central Avenue and Sycamore Street.

Route 626 (Newark Memorial-Newark Blvd.) operates on weekday mornings between the Lido Faire Shopping Center and Newark Memorial High School from 7:48 AM to 8:10 AM. The route operates on

weekday afternoons from Newark Memorial High School to Lido Faire Shopping Center from 3:39 PM to 3:57 PM. Route 626 does not run on weekends. Route 626 runs along Newark Boulevard, Central Avenue, and Cedar Boulevard. The nearest bus stop to the project site is located at the intersection of Central Avenue and Birch Street.

Route 628 (Newark Memorial-Cedar) operates on weekday mornings between the Lido Faire Shopping Center and Newark Memorial High School from 7:52 AM to 8:10 AM. The route operates on weekday afternoons from Newark Memorial High School to Lido Faire Shopping Center from 3:39 PM to 3:56 PM. Route 628 does not run on weekends. Route 626 runs along Cedar Boulevard. The nearest bus stop to the project site is located at the intersection of Central Avenue and Cedar Boulevard.

Route 629 (Newark Memorial-Cherry-Haley) operates on weekday mornings between the Lido Faire Shopping Center and Newark Memorial High School from 7:47 AM to 8:10 AM. The route operates on weekday afternoons from Newark Memorial High School to Lido Faire Shopping Center from 3:39 PM to 4:02 PM. Route 629 does not run on weekends. Route 629 runs along Newark Boulevard, Cherry Street, Thornton Avenue, Sycamore Street, Central Avenue, Mowry Avenue, Haley Street, Lido Boulevard, James Avenue and Cedar Boulevard. The nearest bus stop to the project site is located at the intersection of Cherry Street and Central Avenue.

It should be noted that Routes 620, 626, 628, and 629 are school routes and do not operate in the summer.

3. PROJECT DESCRIPTION

This chapter presents a description of the proposed site use, trip generation, trip distribution, and trip assignment.

PROPOSED SITE USE AND OPERATIONS

The proposed project consists of a 315,390 square-foot industrial building. The proposed project would be located in Newark, California. The Project site is located at 6756 Central Avenue, which is to the south of Central Avenue and near Sycamore Street. The project proposes two unsignalized driveways on Central Avenue to the east of Sycamore Street. The eastern driveway is intended for truck access and the western driveway is intended for passenger car access. The site plan is presented in **Figure 2.**

It should be noted that the project site is located adjacent to a future roadway improvement that will be constructed by the City. The roadway project includes elevating Central Avenue from west of Morton Avenue to east of Sycamore Street. The elevated roadway will connect to the existing grade just to the west of the west project driveway and therefore will not impact the two project driveways.

TRIP GENERATION

Since the project does not have a tenant yet, the developer would like the most flexibility within the uses of ITE Land Use 760 (Research and Development), ITE Land Use 140 (Manufacturing), ITE Land Use 150 (Warehousing), and ITE Land Use 155 (High Cube Fulfillment Center Warehouse-Sort). A comparison of the generated trips per land use can be found in **Appendix B.** The Project's proposed trip generation was based on the highest trip generating land use; therefore, the equation for Research and Development was used for the daily and AM peak hour and the rate for High Cube Fulfillment Center Warehouse-Sort was used for the PM peak hour, from the Institute of Transportation Engineer's (ITE) publication, *Trip Generation Manual, 11th Edition*. Since there is no available truck trip data for a R&D facility in the daily and AM peak hour and as a conservative approach for the PM peak hour, the highest truck trip generation from the land uses considered, Manufacturing, was used for all time periods. The number of passenger vehicles was determined by subtracting the number of truck trips from the total vehicle trips calculated from the R&D and High Cube Fulfillment Center Warehouse-Sort land uses. A Passenger Car Equivalent (PCE) of 2.0 was used for trips associated with trucks. Existing trip credits were taken by collecting driveway counts to account for trips currently generated from the existing use. Daily counts were not collected and were calculated based on the assumption that PM peak hour trips account for 10 percent of the daily trips. The existing site generates a total of 110 daily trips, 11 AM peak hour trips (7 inbound and 4 outbound), and 11 PM peak hour trips (1 inbound and 10 outbound). The existing trips were removed from the driveways and study network under plus project conditions.

The Project is expected to generate a net new 3,339 daily PCE trips, a total of 303 AM peak hour PCE trips (248 inbound and 55 outbound), and 376 PM peak hour PCE trips (151 inbound and 225 outbound).

Table 4 shows the anticipated net new daily traffic, AM, peak hour, and PM peak hour traffic generated.

Table 4: Project Trip Generation

Vehicle Type	Daily	AM			PM		
		In	Out	Total	In	Out	Total
Existing (Driveway Counts)							
Total Veh	110[1]	7	4	11	1	10	11
Proposed[2] Daily and AM Peak Hour – ITE: Research & Development LU 760 PM Hour – ITE: High Cube Fulfillment Center Warehouse – Sort LU 155 Trucks – ITE: Manufacturing LU 140							
Total Veh	3,307	250	55	305	148	230	378
PC	3,165	245	51	296	144	225	369

Source: Kimley-Horn (2023)
[1]Daily counts not provided. Daily trips were calculated based on the assumption that PM peak hour trips account for 10 percent of the daily trips.
[2]Fitted curve equation for ITE LU 760 (Research and Development) used to develop daily and AM peak hour passenger car trips. Average rate for ITE LU 155 (High Cube-Sort) used to develop PM peak hour passenger car trips. Average rate for ITE LU 140 (Manufacturing) used to develop all truck trips.
[3]PCE = Passenger Car Equivalent

PROJECT TRIP DISTRIBUTION AND ASSIGNMENT

The Project's trip distribution was based on the distribution in the Morton TIA. **Figure 7** shows the resulting general project traffic distribution assumed for the LOS analysis for the Existing plus Project scenario.

Based on the assumed trip distribution, the volumes generated by the project were assigned to the street network. Trip assignment to the project driveways was based on access type for each respective driveway. The eastern driveway is intended for truck access and the western driveway is intended for passenger car access. The trips generated from the existing use currently utilize an existing driveway that is between intersections #8 and #10. Therefore, when existing trip credits were subtracted from the proposed trips, it resulted in negative net project trips at intersection #9 in the northbound right-turn movement and intersection #11 in the westbound left-turn movement. **Figure 8** presents driveway peak hour trip assignment based on the existing driveway counts and proposed project trips. **Figure 9** presents the net project peak hour trip assignment, which was determined by subtracting the existing trip credit volumes from the proposed project volumes.

4. VEHICLE MILES TRAVELED (VMT)

This chapter summarizes the Project's Vehicle Miles Traveled (VMT) methodology, analysis, and results.

VMT METHODOLOGY

The City has not yet adopted VMT guidelines or a methodology for determining VMT impacts. Therefore, the Project's VMT evaluation relied on guidance provided by the Governor's Office of Planning and Research (OPR) Technical Advisory on Evaluating Transportation Impacts in CEQA[2] to determine potential impacts under Senate Bill (SB) 743. It should be noted that the ACTC VMT tools and maps are consistent with OPR methodology and the recommended 15 percent below countywide average threshold. The approach outlined by the OPR Technical Advisory does not specifically address industrial facilities. For the purposes of this analysis, it is assumed that the project will be evaluated based on VMT per employee since the predominant driver of VMT for the proposed Project would be commute trips and other employee-based trips. This approach is consistent with OPR guidelines which states, "where methodologies exist that can estimate the full extent of vehicle miles traveled from a project, the lead agency should apply them to do so".

VMT ANALYSIS

The ACTC has developed maps displaying estimates of VMT per employee based on traffic analysis zone (TAZ) estimates from the Alameda Countywide Travel Demand Model. Based on the VMT per Employee map for the South Planning Area shown in **Appendix C**, the project is located in an area with a VMT equal to 14.02.

Per guidance provided by the Governor's Office of Planning and Research (OPR) Technical Advisory on Evaluating Transportation Impacts in CEQA[2], the threshold for employment-based VMT uses is set at 15 percent below the regional average. Compared to the South Planning Area Average, the target VMT is 14.6 (which is 15 percent below the 17.2 VMT per employee) and therefore the project would result in a less than significant VMT impact.

[2] Technical Advisory on Evaluating Transportation Impacts in CEQA, Governor's Office of Planning and Research, December 2018.

5. SUPPLEMENTAL TRAFFIC OPERATIONAL ANALYSIS

This chapter discusses the supplemental traffic operational analysis to determine the effects of the proposed project on the transportation system, including LOS and vehicle queuing analyses.

EXISTING (2023) CONDITIONS ANALYSIS

Existing (2023) conditions analysis is based on traffic shown in **Figure 4** as well as existing roadway geometry, and traffic controls, shown in **Figure 3**, as of June 2023. **Table 5** displays the intersection LOS analysis results under Existing (2023) Conditions. All study intersections function within acceptable LOS standards under this analysis scenario, except for the following intersections:

- #6 – Cherry St/Robertson Ave (AM and PM peak hours)
- #7 – Cherry St/Moores Ave (AM and PM peak hours)

Appendix D contains the intersection LOS calculation worksheets.

EXISTING (2023) PLUS PROJECT CONDITIONS ANALYSIS

LANE GEOMETRY AND CONTROL

Existing (2023) Plus Project conditions assumed existing lane geometry as illustrated in **Figure 3**.

TRAFFIC VOLUMES

The Project is estimated to generate 3,339 daily Passenger Car Equivalent (PCE) trips, a total of 303 AM peak hour PCE trips (248 inbound and 55 outbound), and 376 PM peak hour PCE trips (151 inbound and 225 outbound). Existing (2023) Plus Project volumes were determined by adding the total net project traffic, **Figure 9** to the Existing (2023) conditions volume, **Figure 4**. Existing Plus Project peak hour volumes are shown in **Figure 10**.

INTERSECTION LEVEL OF SERVICE

Table 5 displays the intersection LOS analysis results under Existing (2023) Plus Project Conditions. Traffic operations were evaluated at the study intersections under existing conditions plus traffic generated by the project. Unsignalized intersections that operate unacceptably are not considered a project deficiency if the intersection is operating unacceptably without the project and the increase in delay is less than four (4) seconds, or the intersection does not meet the signal warrants. The following intersections operate unacceptably and add more than four (4) seconds of delay, but each are not considered a project deficiency because the intersections do not meet signal warrants:

- #6 – Cherry St/Robertson Ave (AM and PM peak hours)
- #7 – Cherry St/Moores Ave (AM and PM peak hours)

Intersection #5 Analysis

No modifications were made in Synchro between the without and with project scenarios. In the Existing (2023) Conditions, the northbound left-turn movement operates at LOS D with 47.8 seconds of delay and the overall intersection operates at LOS D with 38.1 seconds of delay in the AM peak hour. In the Existing (2023) Plus Project Conditions, the northbound left-turn movement worsens to LOS E with 67.5 seconds of

delay and the overall intersection worsens to LOS D with 49.2 seconds of delay in the AM peak hour. The addition of the project traffic to the northbound left-turn movement in the AM peak hour does worsen the northbound left-turn movement by almost 20 seconds. Although the northbound left-turn volume is high, this movement gets 45.5 seconds of split time, as compared to the opposing southbound through movement getting a maximum of 35.5 seconds of split time. These splits are based on the existing signal timing provided by the City and are achievable due to the relatively low southbound through volume and the two southbound through lanes.

Appendix D contains the intersection LOS calculation worksheets.

Table 5: Existing and Existing Plus Project Level of Service Summary

#	Intersection	LOS Criteria	Jurisdiction	Control[1]	Existing				Existing Plus Project

N

NOT TO SCALE

FIGURE 10
EXISTING PLUS PROJECT PEAK HOUR TURNING MOVEMENT VOLUMES

VEHICLE QUEUING

Vehicle queuing that exceeds a turn pocket length can create potentially hazardous conditions by blocking or disrupting through traffic in adjacent travel lanes. The effect of vehicle queuing was analyzed by reporting the 95th percentile queues for turning movements where the project would add trips to existing or proposed turn pockets. The 95th percentile is defined as the queue length that has only a 5 percent probability of being exceeded during the analysis time period. The following movements were evaluated:

- Intersection #5 – Cherry Street/Central Avenue (northbound left)

The 95th percentile queue lengths are summarized in **Table 6**. The project increases the queue by more than one vehicle length (i.e. 25 feet or more) for the following movement:

- Intersection #5 – Cherry Street/Central Avenue (northbound left)

For intersection #5, the addition of the project will cause the deficient northbound left turn queue at Cherry Street and Central Avenue to increase by 203 feet in the Existing Plus Project scenario in the AM peak hour and by 115 feet in the PM peak hour.

Queuing analysis calculation sheets are provided in **Appendix D**.

Table 6: Vehicle Queuing Analysis

#	Intersection	Control	Movement	Storage Length (ft)	Existing		Existing Plus Project			
					AM Peak	PM Peak	AM Peak		PM Peak	
					95th Percentile Queue		95th Percentile Queue	Variance	95th Percentile Queue	Variance
5	Cherry Street/ Central Avenue	Signal	NBL	210	**652**	**614**	**855**	**203**	**729**	**115**

Note: NBL=northbound left. Queue lengths greater than queue storage are **bolded** and queuing deficiencies are highlighted.

RECOMMENDED IMPROVEMENTS

Since the addition of the project traffic increases the northbound left-turn queue at Cherry Street and Central Avenue by greater than 25 feet and the queue under no project conditions exceeds the available storage length, this is considered a queuing deficiency under Existing Plus Project in the AM and PM peak hours.

To address the queuing deficiency in the AM and PM peak hours, it is recommended that a twice per cycle left-turn phase be provided for the northbound left-turn lane. The signal timing splits should be adjusted accordingly and with the recommended improvement, the project would add less than 25 feet of queue to the movement in comparison to Existing Conditions. A summary of the recommended improvement and 95th percentile queuing is shown in **Table 7**.

Table 7: Vehicle Queuing Analysis – Recommended Improvement

#	Intersection	Control	Movement	Storage Length (ft)	Existing		Existing Plus Project (with Improvement)			
					AM Peak	PM Peak	AM Peak		PM Peak	
					95th Percentile Queue		95th Percentile Queue	Variance	95th Percentile Queue	Variance
5	Cherry Street/ Central Avenue	Signal	NBL	210	**652**	**614**	**573**	**-79**	**629**	**15**

Note: NBL=northbound left. Queue lengths greater than queue storage are **bolded**.

6. SITE ACCESS

This section discusses site access, site circulation, pedestrian facilities, bicycle facilities, transit recommendations, and sight distance analysis for the project.

The project proposes two unsignalized driveways on Central Avenue to the east of Sycamore Street (East Project Driveway and West Project Driveway). It was assumed that all trucks were assigned to the East Project Driveway and all passenger cars were assigned to the West Project Driveway. The following summarizes the project access locations:

- Central Ave & West Project Driveway
  - Passenger car access only
  - Stop-controlled northbound movement for project driveway
- Central Ave & East Project Driveway
  - Truck access only
  - Stop-controlled northbound movement for project driveway

Appendix D contains the queuing worksheets for the Project's driveways. These AM/PM peak hour worksheets are the results of the Existing Plus Project Conditions and show that the proposed west project driveway throat depth is not a sufficient length to accommodate the project queues during the site's peak hours.

For the east project driveway, the throat depth was measured as approximately 25 feet, which is the distance from the adjacent roadway to the first parking space on the east side of the project site. As shown, the estimated outbound vehicle queue is less than 25 feet in the AM and PM peak hours, or less than one vehicle, which does not exceed the throat depth of 25 feet. The westbound inbound queue along Central Avenue for the east driveway is less than 25 feet, or less than one vehicle in the AM and PM peak hours. The project's trip generation estimates only five inbound trucks in the AM peak hour and four inbound trucks in the PM peak hour, which equals an average of one inbound truck every 12 minutes within the peak hour. With trucks entering the site this infrequently, it is not expected that the trucks will block the through traffic. In the unexpected scenario in which there are regular traffic surges, the landlord will coordinate with the tenant to schedule truck deliveries to mitigate regular surge events. Therefore, there are no anticipated conflicts or excessive queuing along Central Avenue.

For the west project driveway, the throat depth was measured as approximately 25 feet, which is the distance from the adjacent roadway to the first drive aisle. As shown, the estimated outbound vehicle queue is 120 feet, or 4.8 vehicles in the Existing Plus Project PM peak hour, which exceeds the throat depth of 25 feet. The inbound queue along Central Avenue for the east driveway is 32.5 feet, or 1.3 vehicles in the Existing Plus Project AM peak hour. This queue can be accommodated within the two-way left-turn lane. The distance between the east and west project driveways is 145 feet; therefore, this 32.5-foot queue should not affect the operations of the east project driveway nor the driveway along the north side of Central Avenue across from the site. Therefore, there are no anticipated conflicts or excessive queuing along Central Avenue. However, the outbound queue at the west project driveway may cause the drive aisle to be blocked. It is recommended that Do Not Block Intersection markings be placed along the west project driveway at the internal drive aisle to allow inbound vehicles to use the drive aisle and prevent the inbound queue from extending onto Central Avenue.

SITE CIRCULATION

Internal circulation paths for each vehicle type are described below. Passenger vehicles will enter and exit using the west project driveway and trucks will enter and exit using the east project driveway. It is planned for passenger vehicles to utilize the parking spaces along the west, north, and east sides of the site. Passenger vehicles can park in these parking spaces and walk to the building's front entrance along the northern, western, and eastern sides of the proposed building. For trucks, it is planned for these vehicles to use the trailer storage on the southern edge of the project site and the loading docks on the south side of the project building. Access to these parking spaces and loading docks would be through the east project driveway.

PEDESTRIAN FACILITIES

There are currently paved sidewalks along the southern side of Central Avenue, to the east of the project site. This existing sidewalk provides access for the employees and visitors of the project to access nearby residential and park uses along Central Avenue. To the north of the project site, there are sidewalks on Sycamore Avenue between Central Avenue to Thornton Avenue to access commercial, retail, and food establishments. To the west of the project site on Central Avenue, there are currently no pedestrian facilities between Sycamore Street and the railroad tracks. However, with the future roadway project, there will be sidewalks on both sides of Central Avenue to the west of the project site. There are currently no sidewalks along the north edge of the project site, but the project proposes sidewalks at this location.

Within the project site, there are sidewalks along the building and crosswalks in the parking lot from the office space that provides pedestrians access to Central Avenue. On-site sidewalks are proposed along the northern building frontage, western building frontage, and eastern building frontage for pedestrian access. There are no proposed walkways along the south side of the project building where the truck loading dock bays are proposed. Since it is not anticipated that many pedestrians would need access on this side of the site, no pedestrian improvements are needed.

With the proposed sidewalk along the Central Avenue frontage of the project site, there are sufficient pedestrian facilities adjacent to the project and to nearby complimentary uses. No additional off-site pedestrian facilities besides the sidewalk along Central Avenue are recommended to be constructed by the project.

BICYCLE FACILITIES

There are many existing bicycle facilities within the study area that provide access to the project site. A shared Class III bicycle route in which bicyclists share the roadway with motorists exists in each direction along Central Avenue adjacent to the project. A Class II bicycle lane also exists on Sycamore Street from Cedar Boulevard to Central Avenue.

Within the project site, bicyclists can share the drive aisles with motorists. There are 14 long-term bicycle lockers and 20 short-term bicycle parking stalls located west of the office space along the front of the building. Since there are sufficient bicycle facilities adjacent to the project along Central Avenue and to nearby complimentary uses, no off-site bicycle facilities are recommended to be constructed by the project. The project provides sufficient long-term bicycle lockers and short-term bicycle parking stalls to meet the minimum spaces required by the City.

TRANSIT

The Project area is currently served by AC Transit. The project site is located adjacent to the nearest transit stop along Central Avenue and Sycamore Street. This bus stop serves Route 200. The other nearest bus stop for the project is located at the intersection of Central Avenue and Cherry Street, which is approximately 600 feet to the east of the project site.

Since there are sufficient transit facilities adjacent to the project along Central Avenue and to nearby complimentary uses, no additional transit facilities are recommended to be constructed by the project.

SIGHT DISTANCE

A sight distance analysis for the east project driveway was conducted to determine if vehicles and trucks exiting the stop-controlled driveway would have adequate sight distance to observe conflicting traffic along the major roadway adjacent to the project site. Intersection sight distance for the project driveway was evaluated following methodology from the American Association of State Highway and Transportation Officials (AASHTO), *A Policy on Geometric Design of Highway and Street, 7th Edition*[3]. Sight distance for each project driveway was determined based on the proposed project site plan and the following AASHTO intersection sight distance criteria formula:

$$\text{Intersection Sight Distance} = 1.47 \times V_{major} \times t_g$$

Where V_{major} is the design speed of the major road and t_g is the time gap for the vehicle to exit the project driveway and enter the major road. No spot speed study was conducted; posted speed limits and design speeds were used to determine sight distance.

Intersection #9 – Central Avenue/East Project Driveway

The east project driveway provides truck access from the site. Using the time gap for trucks, the time gap is 8.5 seconds for a vehicle to make a right-turn movement onto Central Avenue and 10.9 seconds to make a left turn movement. With a 45 mph design speed along Central Avenue, the sight distance criteria for trucks making a right-turn is 565 feet and the sight distance criteria for trucks making a left-turn is 725 feet. As shown in the **Figure 11**, the sight triangles at the east project driveway should be clear of obstructions for a truck exiting the driveway to observe oncoming eastbound and westbound vehicles along Central Avenue.

Intersection #10 – Central Avenue/West Project Driveway

The west project driveway provides passenger car access from the site. Using the time gap for passenger cars, the time gap is 6.5 seconds for a vehicle to make a right-turn movement onto Central Avenue and 8.5 seconds to make a left turn movement. With a 45 mph design speed along Central Avenue, the sight distance criteria for passenger cars making a right-turn is 430 feet and the sight distance criteria for passenger cars making a left-turn is 565 feet. As shown in the **Figure 12**, the sight triangles at the west project driveway should be clear of obstructions for a passenger car exiting the driveway to observe oncoming eastbound and westbound vehicles along Central Avenue.

7. PARKING

This chapter summarizes the Project's parking requirements.

NEWARK PARKING REQUIREMENTS

Parking requirements for land uses within the City of Newark are provided in Chapter 17.23 of the Newark Municipal Code. This section includes parking requirements for vehicles, on-site loading, and bicycles.

VEHICLE PARKING REQUIRED

Required parking for vehicles is based on land use. For miscellaneous industrial uses and office uses, parking shall be provided at the following rates:

- Industrial: 1 per 1,000 square feet of floor area plus 1 for each 5,000 square feet of outdoor use area
- Office: 1 per 300 square feet of floor area

Assuming the project would include 33,806 square feet of office and 281,584 square feet of industrial use, a minimum of 395 vehicle parking spaces would be required.

The site plan provided by the project applicant includes a breakdown of vehicle parking provided:

- Vehicle parking spaces = 396 parking spaces (includes 291 standard spaces, 10 accessible spaces, and 95 compact spaces)

The project provides one vehicle parking space more than required by the City.

ON-SITE LOADING REQUIRED

Loading spaces shall be provided at the following rates:

- Research and Development: 5 plus 1 per each additional 75,000 square feet over 75,000 square feet

Assuming the project area is 315,390 square feet, a minimum of 9 loading spaces would be required.

The site plan provided by the project applicant includes a breakdown of loading spaces provided:

- Loading spaces = 46 dock doors, 2 drive-in doors

The project provides excess loading spaces than required by the City.

BICYCLE PARKING REQUIRED

Required parking for bicycles is based on the City of Newark Municipal Code. The proposed office portion of the project is classified as a commercial use and therefore the City's code requires short-term bicycle parking spaces to be provided at five percent of the required automobile parking space or a minimum of four short-term bicycle parking spaces. Long-term bicycle parking shall be provided at a minimum ratio of

one space per thirty vehicle spaces. This results in 20 required short-term and 14 required long-term bicycle parking spaces. Each bicycle parking space shall be no less than six (6) feet long by two (2) feet wide and shall have a parking rack capable of supporting bicycles of various sizes in a vertical position.

The project is proposing 20 short-term bicycle rack parking spaces and 14 long-term bicycle lockers on-site. Therefore, the project provides adequate bicycle parking as required by the City.

8. CONCLUSIONS AND RECOMMENDATIONS SUMMARY

This section summarizes the results and recommendations of this TIS and subsequent project frontage and access recommendations.

PROJECT RECOMMENDATIONS

OFF-SITE ROADWAY IMPROVEMENTS

The project does not propose any off-site roadway improvements associated with the project design.

PEDESTRIAN FACILITIES

Sidewalks are proposed along the project frontage on Central Avenue. Therefore, no additional off-site pedestrian facilities are proposed.

BICYCLE FACILITIES

A shared Class III bicycle route in which bicyclists share the roadway with motorists exists in each direction along Central Avenue adjacent to the project. A Class II bicycle lane also exists on Sycamore Street from Cedar Boulevard to Central Avenue.

Therefore, no off-site bicycle facilities are proposed. The project is proposing to include 14 long-term bicycle parking spaces and 20 short-term bicycle parking spaces on-site. The project provides adequate short-term and long-term bicycle parking to meet the minimum spaces required by the City.

PARKING REQUIREMENTS

The project is proposing to provide 396 vehicle parking spaces, which exceeds the parking required by the City of 395 parking spaces by one vehicle space. The project is proposing to provide 48 loading spaces, which exceeds the loading spaces required by the City of nine parking spaces.

The project provides excess parking and loading spaces than required by the City.

PROJECT DRIVEWAYS

The development of the proposed Project will require the construction of the following driveways:

- Central Ave & West Project Driveway
    - Passenger car access only
    - Stop-controlled northbound movement for project driveway
    - It is recommended that Do Not Block Intersection markings be placed along the west project driveway at the internal drive aisle to allow inbound vehicles to use the drive aisle and prevent the inbound queue from extending onto Central Avenue.
    - It is recommended that the intersection sight triangles should be clear of any obstructions greater than 3.5 feet in height to allowed vehicles exiting the driveway to observe oncoming traffic.
- Central Ave & East Project Driveway
    - Truck access only
    - Stop-controlled northbound movement for project driveway

- It is recommended that the intersection sight triangles should be clear of any obstructions greater than 3.5 feet in height to allowed vehicles exiting the driveway to observe oncoming traffic.

PROJECT IMPACTS AND MITIGATIONS

As discussed previously in the Section 4, the project VMT/employee (14.02) is expected to be lower than the threshold of significance for VMT/employee (14.6) and as a result the project is determined to have a less than significant transportation impact.

PROJECT DEFICIENCIES

LOS DEFICIENCIES

Project deficiencies were considered if:

- The addition of project traffic causes a signalized intersection to:
  - Operate at LOS E or F overall, or
  - Adds four (4) seconds of delay to an intersection already operating at LOS E or F under the comparable No Project scenario
- The addition of project traffic causes an unsignalized intersection to:
  - Operate at LOS E or F overall, or
  - Adds four (4) seconds of delay to an intersection already operating at LOS E or F under the comparable No Project scenario and California MUTCD Signal Warrant 3A or 3B is met for the impacted peak hour

Based on the results of the traffic analysis, no intersection project deficiencies were identified.

QUEUING DEFICIENCIES

In cases when the addition of project trips causes a queue to exceed the turn pocket length or increase by one or more vehicles for vehicle queues that already exceed the turn pocket length, an intersection project queuing deficiency was identified. Based on the results of the traffic analysis, the project creates a queuing deficiency at the northbound left-turn lane of intersection #5 (Cherry Street and Central Avenue) in the Existing Plus Project Conditions under the AM and PM peak hours. To address the queuing deficiency in the AM and PM peak hours, it is recommended that a twice per cycle left-turn be provided for the northbound left-turn lane. In addition, the signal timing splits should be adjusted and the cycle length should be modified to 150 seconds. With the recommended improvement, the project would add less than 25 feet of queue to the movement in comparison to Existing Conditions.

[1]Daily counts not provided. Daily trips were calculated based on the assumption that PM peak hour trips account for 10 percent of the daily trips.

[2]Fitted curve equation for ITE LU 760 (Research and Development) used to develop daily and AM peak hour passenger car trips. Average rate for ITE LU 155 (High Cube-Sort) used to develop PM peak hour passenger car trips. Average rate for ITE LU 140 (Manufacturing) used to develop all truck trips.

[3]PCE = Passenger Car Equivalent

C – VMT Per Employee South Planning Area Map

Vehicle Miles Traveled per Employee
South Planning Area

South Planning Area Average (Target -15%): 17.2 (14.6)
Alameda County Average (Target -15%): 15.9 (13.5)

Data Source: Alameda Countywide Travel Model, Plan Bay Area 2040 version, May 2019

Vehicle miles traveled (VMT) = home-based trips (home-based work, school, shopping/errands, social/recreation) at transportation analysis zone (TAZ) containing residence site

VMT also includes estimates of non-home trips generated by residents at the non-residential end of the home-based trip (e.g. lunch trips from workplace)

VMT per capita = home-based VMT at residence TAZ divided by total population in TAZ

VMT includes all travel within 9-county Bay Area plus San Joaquin County plus estimates of travel distances beyond the 10-county model area

TAZs with zero values (white) did not have population in the 2020 model

2020 Vehicle Miles Traveled per Employee by TAZ

Intersection Summary		
HCM 6th Ctrl Delay		23.9
HCM 6th LOS		C

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

User approved changes to right turn type.

Unsignalized Delay for [SBR] is excluded from calculations of the approach delay and intersection delay.

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

User approved changes to right turn type.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary	
HCM 6th Ctrl Delay	27.1
HCM 6th LOS	C

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

User approved changes to right turn type.

Unsignalized Delay for [SBR] is excluded from calculations of the approach delay and intersection delay.

RESOLUTION NO. 2022

RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF NEWARK APPROVING DR2022-010, U2024-001, AND MUP2024-001, A DESIGN REVIEW, CONDITIONAL USE PERMIT, AND MINOR USE PERMIT FOR A NEW INDUSTRIAL BUILDING AND ASSOCIATED ON-SITE IMPROVEMENTS AT 6756 – 6792 CENTRAL AVENUE (APN: 92A-2165-14, -15, -16, AND -17)

WHEREAS, Ryan Marshall, (the "Applicant") and Prologis LP (the "Property Owner"), filed with the City of Newark an application for a Design Review, Conditional Use Permit, and Minor Use Permit for a new industrial building and associated on-site improvements at 6756 – 6792 Central Avenue (APN 92A-2165-14, -15, -16, and -17) (the "Project"); and

WHEREAS, the property at 6756 – 6792 Central Avenue (the "Project site") has a combined lot size of approximately 756,061 square feet (17.4 acres) and has a General Plan Land-Use designation of General Industrial and is currently zoned GI: General Industrial; and

WHEREAS, the Applicant and Property Owner seek a Design Review, which pursuant to Newark Municipal Code (NMC) §17.34.020 is required for all projects that require a permit for new construction, reconstruction, rehabilitation, alteration, or other improvements to the exterior of a structure, site, or a parking area. Approval of the Design Review requires the Project to meet the Design Review criteria pursuant to NMC §17.34.060 to the extent that they apply; and

WHEREAS, the Applicant and Property Owner seek a Conditional Use Permit, which pursuant to NMC §17.09.020, an "indoor warehousing and storage" use and a "wholesaling and distribution" use requires approval of a Conditional Use Permit. Approval of the Conditional Use Permit requires the Project to meet all the following Use Permit findings pursuant to NMC §17.35.060; and

WHEREAS, the Applicant and Property Owner seek a Minor Use Permit, which pursuant to NMC §17.17.040(A)(2), an additional height increase to the new prefinished vertical tube steel fencing to be 6 feet tall within the minimum required 10-foot front setback area requires approval of a Minor Use Permit. Approval of the Minor Permit requires the Project to meet all the following Minor Use Permit findings pursuant to NMC §17.35.060 and NMC §17.17.040(A)(1)(a)(ii); and

WHEREAS, a California Environmental Quality Act (the "CEQA") analysis was prepared as set forth in **Exhibit E** to evaluate the environmental impacts of the Project in accordance with the CEQA Guidelines. With implementation of the applicable mitigation measures identified in the Final Environmental Impact Report (FEIR) for the 2013 General Plan and conditions of approval as set forth in **Exhibit B**, the CEQA analysis determined and demonstrated that the Project is exempt from further environmental review pursuant to CEQA Guidelines Sections 15168 and 15183 and California Public Resources Code Section 21083.3 because the level of

development proposed is within the development assumptions analyzed in the FEIR and the Project is consistent with the General Plan; and

WHEREAS, pursuant to NMC §17.31.060, §17.34.070, and §17.35.050, a public hearing notice was published in The Tri City Voice on June 10, 2025 and mailed as required for a public hearing, and the Planning Commission held a meeting on said application at 7:00 p.m. on June 24, 2025; and

WHEREAS, the Planning Commission held a public hearing on June 24, 2025, and fully considered the Project, entitlements, staff report, findings of fact, conditions of approval, public comments, and all other testimony and evidence presented at the public hearing; and

WHEREAS, the Planning Commission finds that the staff report, exemptions from CEQA, and standards for approval reflect the City's independent judgement and analysis of the Project; and

WHEREAS, the Planning Commission finds that the Project conforms with the City's General Plan and Zoning Code for which are incorporated herein by reference and are available for review at City Hall during normal business hours and on the City's website; and

WHEREAS, the Planning Commission finds that the Project satisfies the requisite findings of fact necessary for approval of the Design Review, Conditional Use Permit, and Minor Use Permit as further explained in the staff report and the findings of fact associated with this Resolution, as identified in "Exhibit A" attached to this Resolution.

NOW, THEREFORE, BE IT RESOLVED by the Planning Commission of the City of Newark as follows:

Section 1. That the forgoing recitals are true and correct and made part of this Resolution.

Section 2. That the Planning Commission hereby makes the necessary findings and determinations required by the NMC to approve the requested Design Review, Conditional Use Permit, and Minor Use Permit for the Project, as further explained in the staff report and findings of fact for approval as set forth in "Exhibit A" attached hereto and incorporated herein by this reference.

Section 3. Based on the findings and determinations, the Planning Commission hereby approves DR2022-010, U2024-001, and MUP2024-001, a Design Review, Conditional Use Permit, and Minor Use Permit for a new industrial building and associated on-site improvements at 6756 – 6792 Central Avenue (APN 92A-2165-14, -15, -16, and -17), subject to the Conditions of Approval, as further set forth in "Exhibit B" attached hereto and incorporated herein by this reference.

This Resolution was introduced at the City of Newark Planning Commission's June 24, 2025 regular meeting by Commissioner Aguilar, seconded by Commissioner Becker, and passed as follows:

FINDINGS OF FACT

DR2022-010, U2024-001, and MUP2024-001
6756 – 6792 Central Avenue
Alameda County Assessor's Parcel Number(s) 92A-2165-14, -15, -16, and -17

Design Review Criteria (Newark Municipal Code [NMC] §17.34.060)

A. The overall design of the project including its scale, massing, site plan, exterior design, and landscaping will enhance the appearance and features of the project site and surrounding natural and built environment.

The Project consists of a new industrial building and associated on-site improvements at the site located at 6756 – 6792 Central Avenue. The new industrial building will consist of a contemporary style design that will provide a variety architectural features, design elements, colors, and materials. The height of the new building will be 49'-6", measured from grade to the top of the parapet.

The new on-site improvements, which include new landscape areas, walkways, driveways, drive aisles, parking areas, bicycle parking areas, bioretention areas, employee open space area, site lighting, fencing, vehicular gates, truck courtyard area, and trailer storage area, will complement the architecture of the new industrial building. The Project will enhance the site and will be compatible with the characteristics of the surrounding environment. Additionally, the Project will respect the surrounding development pattern. Overall, the Project's design will be complementary to the area.

This finding can be made in the affirmative.

B. The project design is appropriate to the function of the project and will provide an attractive and comfortable environment for occupants, visitors, and the general community.

As proposed, the new industrial building is considered a speculative building with no tenants. The Project Narrative stated, "Prologis, the Project Sponsor and Owner of the property, is proposing to demolish approximately 113,500 square feet of obsolete industrial buildings on site to construct a new industrial warehouse facility that can accommodate numerous uses that meet both the City and Prologis' interests". This includes advanced manufacturing uses and research and development uses, which are permitted uses in the GI Zoning District.

The Project was carefully designed to ensure compatibility with and complement the site and surrounding areas while providing a comfortable environment for occupants, visitors, and the general community. The Project will be attractive and appropriate for the neighborhood. Therefore, the proposed improvements are suitable in a manner that respects the general character of the neighborhood.

This finding can be made in the affirmative.

C. Project details, materials, signage and landscaping, are internally consistent, fully integrated with one another, and used in a manner that is visually consistent with the proposed architectural design.

The Project is suitable for the site and compatible with the existing site conditions. The application of high-quality and complementary materials and the color palette help distinguish the different areas of the building. The new industrial building and on-site improvements will fully integrate with each other and contribute positively to the site and neighborhood. Overall, the Project incorporates design elements that relate to each other and lend integrity and balance to the site.

This finding can be made in the affirmative.

D. The design of streetscapes, including street trees, lighting, and pedestrian furniture, is consistent with the intended character of the area.

The Project consists of improvements to the site and the streetscape, which includes the driveway curb cuts and landscape areas at the front of the property along Central Avenue. Currently, there are no sidewalks at the front of the property along Central Avenue. However, sidewalks will be proposed along the project frontage on Central Avenue. As part of the Planning Division's and Engineering Division's conditions of approval, the applicant will revise the Project plans to show the design of the sidewalk along the property frontage on Central Avenue as part of the building permit submittal.

Overall, the improvements complements the new industrial building and responds to the intended character of the area.

This finding can be made in the affirmative.

E. Parking areas are designed and developed to buffer surrounding land uses; compliment pedestrian-oriented development; enhance the environmental quality of the site, including minimizing stormwater run-off and the heat-island effect; and achieve a safe, efficient, and harmonious development.

The new on-site improvements, which include new landscape areas, walkways, driveways, drive aisles, parking areas, bicycle parking areas, bioretention areas, employee open space area, site lighting, fencing, vehicular gates, truck courtyard area, and trailer storage area will be designed to be harmonious with the site. The Project will provide a total of 396 on-site parking spaces, which meets the minimum required number of on-site parking spaces per the Zoning Code.

The Project will enhance the environmental quality of the site by including new bioretention areas for storm-water purposes. Also, the addition of the new landscape areas will address the heat island effect while enhancing the overall appearance of the site. Overall, the Project will be designed to achieve a safe, efficient, and harmonious development.

This finding can be made in the affirmative.

F. Lighting and lighting fixtures are designed to complement buildings, be of appropriate scale, provide adequate light over walkways and parking areas to create a sense of pedestrian safety, and avoid creating glare.

The Project proposes new exterior light fixtures around the building and site. The proposed exterior light fixtures will comply with NMC §17.17.060. Any other lighting not covered under this design review entitlement is subject to regulations specified in NMC §17.17.060 - Lighting and Illumination.

This finding can be made in the affirmative.

G. Landscaping is designed to be compatible with and enhance the architectural character and features of the buildings on site and help relate the building to the surrounding landscape.

The Project proposes new landscaping on site. The new landscaping will be designed to be compatible with and enhance the architectural character and features of the site. The Project has been conditioned to require all landscaping to be maintained in healthy growing condition and that plantings be replaced with other plant materials to ensure continued compliance with the applicable landscaping regulations in NMC Chapter 17.21.

This finding can be made in the affirmative.

Conditional Use Permit Findings (NMC §17.35.060)

A. The proposed use is allowed within the applicable zoning district and complies with all other applicable provisions of this title [NMC Title 17] and all other titles of the Municipal Code.

The Project requires approval of a Conditional Use Permit to allow for an "indoor warehousing and storage" use and a "wholesaling and distribution" use in the GI Zoning District. The Project has been evaluated and will be substantially in compliance with the applicable provisions of the Zoning Code. Additionally, the Project has been found to be consistent with the type of uses found in the GI Zoning District and will be compatible with the surrounding industrial uses in the nearby area.

This finding can be made in the affirmative.

B. The proposed use is consistent with the general plan and any applicable specific plan.

The Project site has a General Plan Land Use designation of General Industrial. The Project will be consistent with many of Newark's General Plan policies including, but not limited to:

- ***Policy LU-1.5 -** Technology Focus. Promote the city as a good location for technology businesses and clean industry, capitalizing on Newark's location within Silicon Valley.*

- ***Policy LU-1.17** - Sustainable Development Emphasis. Ensure that new development incorporates green building and sustainable design principles and encourage renovation of existing development to use water and energy more efficiently.*

- ***Policy ED-3.1*** *- Industrial Land Supply. Maintain a sufficient supply of land for office and industrial uses to generate high quality, high paying jobs and to meet the city's economic development goals. Focus office and industrial development on technology uses and other activities that will generate high wage employment.*

- ***Policy ED-3.7 -*** *Industrial Redevelopment. Encourage property owners to redevelop industrial sites and buildings when the proposed redevelopment will generate high-quality and high-paying jobs. Likewise, support the refurbishing of such spaces for continued use as general industrial properties.*

- ***Policy ED-4.4*** *- Affordable Industrial Space. Continue to support and foster the growth of general industrial uses, such as warehouse and distribution centers and manufacturing, in the Cherry Street and Central Avenue corridors and other areas designated for "General Industrial" uses on the Land Use Diagram.*

This finding can be made in the affirmative.

C. The proposed use will not be adverse to the public health, safety, or general welfare of the community, nor detrimental to surrounding properties or improvements.

As proposed, the new industrial building is considered a speculative building with no tenants. The Project will not be adverse to the public health, safety, or general welfare of the community or surrounding properties in that the Project site is mainly surrounded by industrial uses.

This finding can be made in the affirmative.

D. Tax revenue generated by the development will exceed the City's cost of the service demand as a result of the development or a compelling community benefit will be provided.

The Project would replace an existing warehouse building and uncovered storage yards, which is anticipated to be assessed with a higher property tax base for the property. As proposed, the new industrial building is considered a speculative building with no tenants. The Applicant has presented to Staff a Fiscal Analysis of the Project. Based on that Analysis and depending on the use that occupies the building, it is anticipated that the Project will exceed the cost of City services.

This finding can be made in the affirmative.

E. The proposed use complies with any design or development standards applicable to the zoning district or the use in question unless waived or modified pursuant to the provisions of this title [NMC Title 17].

The proposed "indoor warehousing and storage" use and "wholesaling and distribution" use is allowed with the approval of a Conditional Use Permit under the GI Zoning District. The

Project adheres to the development standards within the GI Zoning District, such as setbacks, height, and parking requirements. The new building's contemporary style design is compatible with the adjacent buildings and does not appear to have a negative effect on the adjacent properties or the surrounding area. Overall, the Project will comply with the development standards applicable to the Zoning District.

This finding can be made in the affirmative.

F. The design, location, size, and operating characteristics of the proposed activity are compatible with the existing and reasonably foreseeable future land uses in the vicinity.

The Project's contemporary style design will be compatible with the surrounding area. As conditioned, the Project will not interfere with operations/businesses in this zone. Also, the Project will not deviate from the intent of district's development standards. Therefore, the design, location, size, and operating characteristics of the Project will be compatible with the existing and foreseeable future land uses in the vicinity.

This finding can be made in the affirmative.

G. The site is physically suitable for the type, density, and intensity of use being proposed, including access, utilities, and the absence of physical constraints.

The Project site will be suitable to accommodate the Project as it will provide upgrades to the existing site conditions. The Project will enhance the overall appearance of the site, while respecting the surrounding development pattern. The Project will continue to provide access and utilities on the site.

This finding can be made in the affirmative.

Minor Use Permit Findings (NMC §17.35.060)

A. The proposed use is allowed within the applicable zoning district and complies with all other applicable provisions of this title [NMC Title 17] and all other titles of the Municipal Code.

The maximum height for fencing within the required front setback area is 3 feet. Pursuant to NMC §17.17.040(A)(2), an additional height increase for fencing in non-residential districts requires approval of a Minor Use Permit. The Applicant requests approval of a Minor Use Permit to allow for an additional height increase to the new prefinished vertical tube steel fencing to be 6 feet within the minimum required 10-foot front setback area.

The Project will be in compliance with the applicable provisions of Title 17 – Zoning, which includes meeting the material requirements outlined in NMC §17.17.040(A)(1)(a)(i)(3). Overall, the Project has been evaluated and will be substantially in compliance with the applicable provisions of the Zoning Code.

This finding can be made in the affirmative.

B. The proposed use is consistent with the general plan and any applicable specific plan.

The Project site has a General Plan Land Use designation of General Industrial. The Project is consistent with the general plan. The additional height to the fence will allow for the new industrial building's occupants to operate safely. Additionally, the Project will not alter the respective land-use designation.

This finding can be made in the affirmative.

C. The proposed use will not be adverse to the public health, safety, or general welfare of the community, nor detrimental to surrounding properties or improvements.

The Project includes an additional height increase to the new prefinished vertical tube steel fencing to be 6 feet in the minimum 10-foot front setback area. The location of the new fencing will be adjacent to the Union Pacific Railroad. The Project will not detract from the overall appearance of the neighborhood. Overall, the Project will not be adverse to the public health, safety, or general welfare of the community nor detrimental to surrounding properties or improvements.

This finding can be made in the affirmative.

D. Tax revenue generated by the development will exceed the City's cost of the service demand as a result of the development or a compelling community benefit will be provided.

The additional height increase to the new prefinished vertical tube steel fencing will not materially impact the City's tax revenue, nor will it additionally strain City services. The Project, in total, would replace an existing warehouse building and uncovered storage yards, which is anticipated to be assessed with a higher property tax base for the property.

This finding can be made in the affirmative.

E. The proposed use complies with any design or development standards applicable to the zoning district or the use in question unless waived or modified pursuant to the provisions of this title [NMC Title 17].

The additional height increase to the new fencing is allowed subject to meeting the applicable provisions of Title 17 – Zoning, which includes meeting the material requirements outlined in NMC §17.17.040(A)(1)(a)(i)(3). The new fencing is 6 feet in height and consist of a prefinished vertical tube steel material. Overall, the Project will comply with the development standards applicable to the Zoning District. The Project's design will be complementary to the area and does not appear to have a negative effect on the adjacent properties nor the surrounding area.

This finding can be made in the affirmative.

F. The design, location, size, and operating characteristics of the proposed activity are compatible with the existing and reasonably foreseeable future land uses in the vicinity.

The additional height increase to the new fencing will not interfere with the other industrial uses in this zone. Additionally, the Project will not deviate from the intent of district's development standards. Therefore, the design of the Project will be compatible with the existing and foreseeable future land uses in the vicinity.

This finding can be made in the affirmative.

G. The site is physically suitable for the type, density, and intensity of use being proposed, including access, utilities, and the absence of physical constraints.

The Project site and the additional height increase to the new fencing will be suitable to accommodate the Project as it will upgrade the existing site conditions. The Project will enhance the overall appearance of the site, while respecting the surrounding development pattern. The Project will continue to provide access and utilities on the site.

This finding can be made in the affirmative.

Minor Use Permit Findings for Additional Fence Height (NMC §17.17.040(A)(1)(a)(ii))

A. The additional fence height will not impair the provision of adequate light, air, circulation, and visual openness around adjacent residential structures.

The Project includes an additional height increase to the new fencing to be 6 feet in the minimum 10-foot front setback area. The additional height increase will consist of a prefinished vertical tube steel material that meets the material requirements outlined in NMC §17.17.040(A)(1)(a)(i)(3). The Project site is not abutting residential structures. The location of the new fencing will be adjacent to the Union Pacific Railroad. Therefore, the additional height will not impair the provision of adequate light, air, circulation, and visual openness around adjacent residential structures.

This finding can be made in the affirmative.

B. The additional fence height will not detract from the overall appearance of the neighborhood.

The additional height to the new fencing will be a prefinished vertical tube steel fencing material. The location of the new fencing will be adjacent to the Union Pacific Railroad. The design of the new fencing will allow for the Project to be seamlessly integrated into the neighborhood. Therefore, the additional height will not detract from the overall appearance of the neighborhood.

This finding can be made in the affirmative.

C. The additional fence height is not detrimental to the health, safety, and welfare of people living in the neighborhood.

The additional height of the new fencing will be consistent with the height of the other new fencing that is located adjacent to the Union Pacific Railroad. The new fencing will be of an aesthetically pleasing design that blends in with the property and surrounding area. Additionally, there is no evidence to suggest that the additional height will cause any harm to the community. Therefore, the additional height will not be detrimental to the health, safety, and welfare of people living in the neighborhood.

This finding can be made in the affirmative.

California Environmental Quality Act (CEQA) Categorical Exemption Findings

The Project is eligible for the following CEQA exemptions:

- ***Consistency with Program EIR.*** *The City of Newark 2013 FEIR provides for streamlining and/or tiering provisions under CEQA Guidelines Section 15168. This CEQA Analysis demonstrates that the Project would not result in substantial changes or involve new information that would warrant preparation of a subsequent EIR because the level of development proposed is within the development assumptions analyzed in the program level EIR (2013 FEIR). No further environmental review is required.*

- ***Community Plan Exemption.*** *Streamlined environmental review per Section 15183 of the CEQA Guidelines and California Public Resources Code Section 21083.3. The Project is consistent with the General Plan and will not result in significant environmental impacts that were not previously identified as significant project-level, cumulative or offsite effects in the 2013 FEIR. The Project is exempt from further CEQA review since it is consistent with the General Plan.*

The Project is within the scope of development projected under the General Plan for which an EIR was certified in 2013. The Project will implement applicable mitigation measures identified in the 2013 FEIR. In addition, the Project will be required to comply with applicable conditions of approval (**Attachment 1, Exhibit B**) and is subject to uniformly applied development standards. With implementation of required mitigation measures and conditions of approval, the Project will not result in a substantial increase in the severity or significant impacts that were previously identified in the program level EIR, nor will the Project introduce any new significant impacts that were not previously identified. Therefore, there will be no additional environmental impacts beyond those analyzed in the 2013 FEIR.

Exhibit B

CONDITIONS OF APPROVAL

DR2022-010, U2024-001, and MUP2024-001
6756 – 6792 Central Avenue
Alameda County Assessor's Parcel Number(s) 92A-2165-14, -15, -16, and -17

Planning Division

a. A building permit shall be required prior to the construction of the Project. The building permit plans shall be substantially consistent with the approved plans (see **Attachment 1, Exhibit D**), or as otherwise required by these conditions of approval.

b. These conditions of approval shall be printed on the building-permit drawings associated with this Project.

c. A Planning Final shall be required prior to the Final Building Inspection.

d. The applicant/property owner/business operator/developer shall comply with any and all applicable federal, state, or local laws and regulations.

e. The building permit plans shall demonstrate compliance with the enclosure pad, bumpers, clear zone, and drainage requirements for the trash enclosure as outlined in NMC §17.17.120(B)(2).

f. Any revisions to the proposed garbage, refuse and recycling service pick up plan shall require review and approval by Republic Services and the Community Development Director, prior to the issuance of a building permit. No refuse, garbage or recycling shall be stored outdoors except within the approved trash enclosure.

g. The building permit plans shall show the removal of the new chain link fencing along the front (southwestern) property line as part of the building permit submittal.

h. The building permit plans shall show the design of the sidewalk along the property frontage on Central Avenue as part of the building permit submittal.

i. The Landscape Plans (Sheet LC1.1) shall show the correct design of the driveway curb cuts.

j. The building permit plans shall show the 32 dock doors with two grade-level doors and 14 door knockouts.

k. Any proposed changes to the design of the new industrial building that include the conversion of the additional door knockouts to dock doors for an "indoor warehousing and storage" use and/or a "wholesaling and distribution" use shall require Planning Commission review and approval.

l. All other proposed changes from approved exhibits shall be submitted to the Community

Development Director who shall decide if they warrant Planning Commission review and, if so decided, said changes shall be submitted for the Commission's review and decision. The applicant and/or property owner shall pay the prevailing fee for each additional separate submittal of project exhibits requiring Planning Commission and/or City Council review and approval.

m. Prior to the issuance of a Certificate of Occupancy, the parking areas, aisles and access drives shall be installed and striped as shown on the approved site plan.

n. If any of the conditions of approval are not incompliance and/or have been substantially expanded beyond the Project's approval regarding parking, on-site circulation and/or traffic , the Community Development Director shall review and decide how to mitigate those issues. A parking, on-site circulation and/or traffic analysis shall be prepared at the discretion of the Community Development Director and the cost of the applicant and/or property owners. The applicant and/or property owners shall mitigate any issues identified by the parking, on-site circulation and/or traffic study. If the applicant does not mitigate these issues, the entitlements may be referred to the Planning Commission for determination if the entitlements are to be revoked.

o. Parking lot cleaning with sweeping or vacuum equipment shall not be permitted between 7:00 p.m. and 7:00 a.m.

p. All landscaping shall be maintained in healthy growing condition. Wherever necessary, plantings shall be replaced with other plant materials to ensure continued compliance with the applicable landscaping regulations in NMC Chapter 17.21.

q. All exterior utility pipes and meters shall be painted to match and/or complement the color of the adjoining building surface, as approved by the Community Development Director.

r. All exterior lighting shall comply with all applicable regulations in NMC §17.17.060 - Lighting and Illumination. All exterior lighting shall be directed on-site so as not to create glare off-site.

s. All mechanical and electrical equipment (e.g., transformer, generator, roof equipment, etc.) shall meet the screening requirements in NMC §17.17.100 - Screening. Mechanical and electrical equipment such as air conditioners (AC) units shall not be placed in the front or street side yard. If equipment is placed in any other location that makes it visible to public view, the equipment shall be properly screened with solid material pursuant to the regulations in NMC §17.17.100 - Screening.

t. The Project shall comply with all applicable noise standards in the NMC and General Plan, including, but not limited to NMC §17.24.100 - Noise. This includes all mechanical and electrical equipment.

u. All construction noise activity shall abide by NMC §17.24.100 - Noise.

v. Construction equipment, including compressors, generators and mobile equipment shall be

fitted with heavy-duty mufflers designed to reduce noise impacts.

w. The Project shall comply with the conditions outlined in the Acoustical Assessment prepared by Kimly Horn dated December 2023, or as amended.

x. The Project shall implement the Project Design Features from the Air Quality, Greenhouse Gas Emissions and Energy Technical Analysis prepared by FirstCarbon Solutions dated July 19, 2024, or as amended, which includes:

PDF AIR-1 Prohibition of Cold Storage Use and Transport Refrigeration Units
The project operation would address any potential Transport Refrigeration Unit usage by requiring the following:

- Contractual language in all tenant lease agreements that will prohibit tenants from operating Transport Refrigeration Units (TRUs) within the project site.
- Requiring a restrictive covenant over the parcel that prohibits the applicant's use of TRUs on the property unless the applicant seeks and receives an amendment to its conditional use permit allowing such use.
- The application of any future requests for cold storage and associated TRU usage to include an analysis which requires the modeling and a Health Risk Assessment of air toxic contaminants emitted from operation of these TRUs. The results of such analysis must demonstrate that the operation of TRUs would not result in a significant health impact as defined by BAAQMD thresholds.

PDF AIR-2 All-Electric Design

- Prior to issuance of building permits, the project applicant shall provide documentation (e.g., site plan) to the City to demonstrate that the proposed industrial development does not include natural gas appliances or natural gas plumbing.

PDF AIR-3 Use of Tier 4 Construction Equipment

- Prior to the issuance of any demolition, grading, or building permits (whichever occurs earliest), the project applicant and/or construction contractor shall prepare a construction operations plan that, during construction activities, requires all off-road equipment with engines greater than 50 horsepower to meet particulate matter emissions standards for Tier 4 Interim engines at the minimum. The construction contractor shall maintain records documenting its efforts to comply with this requirement, including equipment lists. Off-road equipment descriptions and information shall include, but are not limited to, equipment type, equipment manufacturer, equipment identification number, engine model year, engine certification (Tier rating), horsepower, and engine serial number. The project applicant and/or construction contractor shall submit the construction operations plan and records of compliance to the City

y. Prior to the installation of any signage, the applicant and/or property owners shall submit a

Sign Permit Application to the Planning Division for review and approval. Signage, including freestanding signs and wall signs, shall comply with Chapter 17.25 – Signage Standards.

z. Prior to the issuance of grading and site work permit(s), mailbox locations and designs shall be approved by the Community Development Director and Newark Postmaster, in that order.

aa. Prior to issuance of a grading permit, the applicant shall hire a qualified biologist to: (1) determine if occupied Burrowing Owl habitat(s) exist on the site, and (2) implement a plan to protect the owls and to excavate the site around any active burrows using hand tools to assure that the owls are not buried during grading in the event Burrowing Owl habitat(s) is found on the site. The occupied Burrowing Owl habitat(s), if found, shall not be disturbed during the nesting season. The Burrowing Owl study shall be conducted not more than 30 days prior to the time site grading activities will commence.

bb. The site and its improvements shall be maintained in a neat and presentable condition, to the satisfaction of the Community Development Director. This shall include, but not limited to, repainting surfaces damaged by graffiti, site clean-up, and maintenance of the landscaping areas. Graffiti removal/repainting, site clean-up, and maintenance of the landscaping areas shall occur on a continuing, as needed basis.

cc. Construction site trailers and buildings located on-site shall be used for office and storage purposes only and shall not be used for living or sleeping quarters. Any vehicle or portable building brought on the site during construction shall remain graffiti free.

dd. Prior to the issuance of a building permit, the applicant, property owners, and/or developer shall pay the City's impact fees in effect as well as the Community Development Maintenance Fee. The impact fees shall be based on the new building square footage for the Project.

ee. The applicant shall work with the City on the public art installation for the Project as part of the building permit submittal. The Project shall be waived from paying the Art in Public Places and Private Development fee if public art is installed.

ff. The Project sponsor shall require construction contractors to implement the following applicable BAAQMD Basic Construction Mitigation Measures to reduce emissions of fugitive dust and equipment exhaust.

gg. Measures to respond to and track complaints pertaining to construction noise shall include: (1) a procedure and phone numbers for notifying the City of Newark Building Inspection Division and Newark Police Department (during regular construction hours and off-hours); and (2) a sign posted on-site pertaining to the permitted construction days and hours and complaint procedures and who to notify in the event of a problem. The sign shall also include a listing of both the City and construction contractor's telephone numbers (during regular construction hours and off-hours).

hh. During project construction, if historic, archeological or Native American materials or artifacts are identified, work within a 50-foot radius of such find shall cease and the City shall retain

the services of a qualified archeologist and/or paleontologist to assess the significance of the find. If such find is determined to be significant by the archeologist and/or paleontologist, a resource protection plan conforming to CEQA §15064.5 shall be prepared by the archeologist and/or paleontologist and approved by the Community Development Director. The plan may include, but would not be limited to, removal of resources or similar actions. Project work may be resumed in compliance with such plan. If human remains are encountered, the County Coroner shall be contacted immediately, and the provisions of State law carried out.

ii. The City of Newark and its agents, officers, and employees shall be defended, indemnified, and held harmless from any claim, action or proceedings against the City, or its agents, officers, and employees to attach, set aside, void, or annul the approval of this application or the environmental determination which accompanies it, or which otherwise arises out of or in connection with the City's action on this application, including but not limited to, damages, costs, expenses, attorney's fees, or expert witness fees.

jj. The Community Development Director shall interpret applicable requirements in the event of any redundancy or conflict in conditions of approval.

kk. The Community Development Director shall have the right to modify or terminate this Design Review, Conditional Use Permit, and Minor Use Permit at any time if any of the terms of such permit or the conditions of approval for said permit are violated, or for other good cause deemed necessary to maintain or improve the public right-of-way or to preserve and protect the health, safety, and welfare of the public.

ll. If any condition of the entitlements be declared invalid or unenforceable by a court of competent jurisdiction, the entitlements shall terminate and be of no force and effect, at the election of the Planning Commission and/or City Council on motion.

mm. The applicant hereby agrees to defend, indemnify, and save harmless the City of Newark, its Council, boards, commissions, officers, employees and agents, from and against any and all claims, suits, actions, liability, loss, damage, expense, cost (including, without limitation, attorneys' fees, costs and fees of litigation) of every nature, kind or description, which may be brought by a third party against, or suffered or sustained by, the City of Newark, its Council, boards, commissions, officers, employees or agents to challenge or void the permit granted herein or any California Environmental Quality Act determinations related thereto.

nn. In the event that any person should bring an action to attack, set aside, void or annul the City's approval of this project, the applicant shall defend, indemnify and hold harmless the City and/or its agents, officers and employees from any claim, action, or proceeding against the City and/or its agents, officers and employees with counsel selected by the applicant (which shall be the same counsel used by applicant) and reasonably approved by the City. Applicant's obligation to defend, indemnify and hold harmless the City and/or its agents, officers and employees shall be subject to the City's compliance with Government Code Section 66474.9.

oo. The Conditions of Project Approval set forth herein may include certain fees, dedication requirements, reservation requirements and other exactions. Pursuant to Government Code

Section 66020(d)(1), these Conditions constitute written notice of a statement of the amount of such fees, and a description of the dedications, reservations and other exactions. The applicant is hereby further notified that the 90-day approval period in which the applicant may protest these fees, dedications, reservations and other exactions, pursuant to Government Code Section 66020(a), has begun. If the applicant fails to file a protest within this 90-day period complying with all of the requirements of Section 66020, the applicant will be legally barred from later challenging such exactions.

pp. Per NMC §17.31.130, the approval or conditional approval of the Design Review, Conditional Use Permit, and Minor Use Permit shall expire three years from the date the Design Review, Conditional Use Permit, and Minor Use Permit was approved or conditionally approved if it is not exercised or extended within three years of its approval. Additionally, any other permit granted under NMC Title 17 - Zoning, shall automatically expire if it is not exercised or extended within two years of its approval, unless a different time period is specified.

Engineering Division

qq. SUBDIVISION MAPS: The subdivision of land is governed by Newark Municipal Code Title 16, as well as the California Government Code §§66410-66499.85 (Subdivision Map Act). All maps are subject to review and approval by the City Engineer. Recordation of the subdivision map shall be coordinated by the applicant's title company, with one full-sized mylar copy of the recorded map returned to the City.

1. Prior to building permit issuance, the parcel map to merge the four individual parcels into one shall be recorded at the Alameda County Recorders' Office.
2. Coinciding with the Planning Commission's approval of the entitlements, the applicant shall execute the encumbrance documents as listed below, and submit them to the City for review and final execution within ten (10) working days following the expiration of the appeal period. If the project is appealed and requires City Council action on the entitlements, the documents shall be executed and submitted to the City for review and approval within ten (10) working days following City Council approval.

   Upon execution by the City, the documents shall be recorded with the Alameda County Recorder's Office. Exhibit EX-2 shows the conceptual layout of the easements, and the actual dimensions and easements shall be to the satisfaction of the City Engineer.

   i. 14-foot-wide Landscape Easement
   ii. 10-foot-wide Public Service Easement along the project frontage up to the limits of the future Central Avenue overpass improvements where a grade difference between Central Avenue and project site.
   iii. 30-foot-wide Alameda County Water District (ACWD) Waterline Easement as shown on the Exhibit EX-2.
   iv. 30-foot-wide Access Easement to the satisfaction of ACWD.
   v. Three ACWD water lateral easements connecting Central Avenue and the 30-foot-wide Waterline Easement to the satisfaction of ACWD.

vi. ACWD water lateral easement extending southeast direction from the 30-foot-wide ACWD Waterline Easement to the satisfaction of ACWD.
vii. 10-foot-wide Sidewalk and Maintenance Easement to the satisfaction of the City Engineer.
viii. Emergency Vehicle Access Easement as required to the satisfaction of Alameda County Fire Department.
ix. Temporary Construction Easement (TCE) A and TCE B to the satisfaction of the City Engineer.
x. Complete relinquishment of abutter's rights over the frontage of APNs 92A-2165-17 and 92A-2165-16, and a partial relinquishment of abutter's rights over the frontage of APNs 92A-2165-15 and 92A-2165-14 to the satisfaction of the City Engineer.
xi. Reciprocal access, Private Utility Easement, Private Stormdrain Easement, Emergency Vehicle Access Easement (EVAE), Public Utility Easement (PUE), Public Storm Drain Easement, parking easements shall be established in favor of APNs 92A-2165-17 and 92A-2165-16 over APNs 92A-2165-15 and 92A-2165-14, as determined by the final design and to the satisfaction of the City Engineer. This requirement is necessary because the lots will not be merged until the Parcel Map is recorded. Additionally, the complete relinquishment of abutter's rights over the frontage of APNs 92A-2165-17 and 92A-2165-16, and a partial relinquishment of abutter's rights over the frontage of APNs 92A-2165-15 and 92A-2165-14, shall coincide with the Planning Commission's approval of the Entitlements.

3. Concurrent with approval of the Parcel Map, the applicant shall effectuate the removal of any existing easements encumbering the property that conflict with areas proposed for improvement. Elimination or modification of existing easements on the site requires approval from the respective utility district or company and the City of Newark. Easement modifications and removals shall be performed with the Parcel Map.
4. Along with the Parcel Map application, a complete improvement plan set shall be submitted to the Engineering Division for review and approval to ensure conformance with relevant codes, policies, and other requirements of the Newark Municipal Code and City of Newark Street improvement standards. These plans shall be prepared by a qualified person licensed by the State of California to do such work. The plans shall be drawn to an appropriate scale as required by the City Engineer.

rr. SUBDIVISION IMPROVEMENT AGREEMENT: Prior to approval of the parcel map, the applicant shall enter into a Subdivision Improvement Agreement with the City and guarantee all necessary public and private street improvements and other common area improvements within the subdivision and beyond the map boundary in accordance with the improvement plans to be approved by the City Engineer. The agreement requires the applicant to post financial security in the form of either a cash deposit, letter of credit, or surety bonds in amounts equivalent to the value of the public improvements. If surety bonds are utilized, the amounts of the bonds shall be 100% of the total estimated value of the public improvements consistent with the City of Newark Municipal Code. In addition, the City requires a warranty bond (often referred to as a maintenance bond) for 20% of the estimated value. The warranty period shall be active for no less than one-Calander year following formal acceptance of the improvements. The warranty bond may be released by the City Engineer upon completion of

the warranty period and correction of all warranty items to the satisfaction of the City Engineer. All submitted securities are subject to review and approval by the City Attorney.

ss. SIDEWALK IMPROVEMENTS: The project is responsible for constructing a six-foot-wide meandering sidewalk along the property frontage on Central Avenue, connecting to the adjacent northeast property, consistent with the City of Newark Standard Details. The precise alignment and limits of the sidewalk shall be shown on the improvement plans and are subject to approval by the City Engineer prior to recordation of the Parcel Map.

The City Engineer reserves the right to waive this sidewalk construction requirement. Any waiver of this requirement will be communicated in writing to the applicant.

tt. GEOTECHNICAL RECOMMENDATIONS:

1. Submit a Geotechnical Report that shall address in-situ and import soils in accordance with the City of Newark Grading and Excavation Ordinance, Chapter 15.50. This report shall include recommendations regarding pavement sections. Grading operations shall be in accordance with recommendations contained in the soils report and shall be completed under the supervision of an engineer registered in the State of California to do such work.
2. Additional Geotech Investigation Report peer review by the City's consultant to verify the targeted static and seismic induced settlement reductions shall be required to be performed prior to the issuance of the building permit. Ground improvement methods, if proposed, may require coordination and approval from Alameda County Water District. The applicant shall pay for costs associated with the Geotechnical peer review and/or inspections per the City's Master Fee Schedule.
3. Prior to Grading Permit and Building Permit issuance, recommendations from the project's geotechnical investigation, as prepared by a California-licensed Geotechnical Engineer or Certified Engineering Geologist, shall be incorporated into the design of the improvements and/or explicitly noted on the plans. The author(s) of the geotechnical investigation shall certify on the plans that the designs comply with their recommendations. During construction, the applicant shall follow all recommendations.
4. The applicant's geotechnical consultant shall inspect, test (as needed), and approve all geotechnical aspects of the project construction. The inspections shall include, but not necessarily be limited to: site preparation and grading, site surface and subsurface drainage improvements, and excavations for foundations prior to the placement of steel and concrete. The results of these inspections and the as-built conditions of the project shall be described by the geotechnical consultant in a letter and submitted to the City Engineer for review and approval prior to project final acceptance.

uu. CONSTRUCTION GENERAL PERMIT: This application is subject to a Construction General Permit according to the National Pollutant Discharge Elimination System (NPDES) General Permit No. CAS000002. Prior to the issuance of a grading permit or a building permit, the Waste Dischargers Identification (WDID) number shall be printed on the plans to provide evidence that the proposed site development work is covered by said General Permit for any Construction Activity. The applicant will be required to register the project with the State Water Board's Stormwater Multi-Application and Report Tracking System (SMARTS) website. A Qualified SWPPP Developer (QSD) and a Qualified SWPPP Practitioner (QSP)

shall be responsible for permit compliance. In addition, the grading plans need to state: "All grading work shall be done in accordance with the approved Storm Water Pollution Prevention Plan prepared by the developer pursuant to the Notice of Intent on file with the State Water Resources Control Board."

vv. CLEAN WATER PROGRAM (LARGE PROJECTS):

1. Because the project creates and/or replaces more than 5,000 square feet of impervious surface, it is considered a Regulated Project according to Provision C.3.b of the Municipal Regional Stormwater NPDES Permit that regulates stormwater runoff in Alameda County. The Alameda Countywide Clean Water Program developed a C.3 Guidance Manual to assist applicants in addressing these regulations. The Guidance Manual is available for download at:

   https://cleanwaterprogram.org/businesses/development/

   Regulated projects shall include stormwater treatment measures in the site design to remove pollutants from stormwater upstream of any connection to the City's or Alameda County's stormwater conveyance networks. In addition, regulated projects shall be subject to a Stormwater Treatment Measure Maintenance Agreement between the City and property owner to assure long-term maintenance of the installed measures. The City will provide a template agreement. Once executed, the agreement shall be recorded against the property.

   The provided Preliminary Stormwater Treatment Plan is approved in concept only. The final Stormwater Treatment Design shall be prepared by a licensed civil engineer. Final approval is subject to the applicant providing the necessary plans, details, and calculations that demonstrate the plan comply with the latest Municipal Regional Stormwater NPDES Permit (MRP).
2. Prior to Parcel Map approval, Stormwater Requirements Checklist shall be submitted along with the improvement plans for review and approval.
3. All stormwater treatment measures are subject to review and approval by the Alameda County Mosquito Abatement District. The developer shall modify the grading and drainage and stormwater treatment design as necessary to satisfy any imposed requirements from the District.

ww. FULL TRASH CAPTURE: The entire site shall be equipped with full trash capture devices approved by the Regional Water Quality Control Board – San Francisco Bay Region and the Mosquito Abatement District, for 100% trash capture at all on-site and adjoining off-site storm drain inlets. All on-site trash capture devices shall be permanently maintained by the property owner. Acceptable off-site trash capture devices can be found on the City's website at https://www.newark.org/departments/public-works/engineering-division/stormwater-program.

xx. GRADING AND DRAINAGE PLANS: Prior to Parcel Map approval, the developer shall submit detailed grading and drainage plans for review and approval by the City Engineer. Plans shall be based on a City benchmark, on NGVD 29 datum, shall include pad and finish

floor elevations of each proposed structure, proposed on-site property grades, proposed elevations at property line, and sufficient elevations on all adjacent properties to show existing drainage patterns. All on-site pavement shall drain at a minimum of one percent. The developer shall ensure that all upstream drainage is not blocked and that no ponding is created by this development. Any construction necessary to ensure this shall be the developer's sole responsibility.

yy. HYDROLOGY AND HYDRAULIC REPORT: Hydrology and hydraulic calculations, including a drainage area map for on and offsite watersheds, a narrative explaining assumptions, criteria, methodology, and how the starting HGL was established, shall be submitted for review and approval by the City Engineer and the Alameda County Flood Control & Water Conservation District (ACFC&WCD) prior to approval of the improvement plans and Parcel Map. The calculations shall show that the City and County freeboard requirements are satisfied and that any increase in flow is mitigated with on-site detention or storage, such that the downstream facility will not be surcharged by the post-development discharge from the project.

zz. EMERGENCY OVERLAND STORMWATER FLOW/SUMP PROPERTIES: The Grading Plans shall show that the entire property is designed with an emergency overland flow path to direct storm runoff to the nearest public street or open flood control facility in the event on-site pipes become plugged. The flow path shall be lower than the finish floor elevation of all habitable structures. The flow path cannot rely on neighboring properties unless a storm drain easement across the neighbor is obtained. Sump properties shall be designed to discharge the 50-year recurrence interval storm event through the pipe network before habitable structures become inundated.

aaa. Where a grade differential is created along the boundary lot lines between the proposed development and adjacent property, the applicant shall install a permanent retaining wall (concrete or masonry or similar approved material) unless a slope easement is approved by the City Engineer. Said retaining wall shall be subject to review and approval of the City Engineer. A grading permit is required by the Building Inspection Division prior to starting site grading work.

bbb. SITE DESIGN:

1. During the building permit review, the plans shall show the visibility control triangle to demonstrate compliance with the Visibility Ordinance. The plans shall show that there is no obstructions adjacent to the driveways, and determine where signs or any above-grade utility boxes can be located. The Engineering Department can provide a copy of Visibility Ordinance information sheet when requested.

2. The Preliminary Landscape Plan shows trees within the landscape strip along south property line that conflict with an existing sewer line to remain. If these trees are accounted towards meeting any landscape zoning code, a revised Preliminary Landscape Plan will need to show removal of these trees and their new locations.

ccc. Prior to issuance of Building Permit, existing buildings within the project boundary shall be demolished. The applicant shall apply and receive a building permit and obtain a permit final for the demolition.

ddd. The applicant shall install private streets improvements including, but not be limited to driveways, drive aisles, parking facilities, utilities, storm water treatment facilities, screen walls, fencing, and all landscape areas. All private streets in the development shall be designed and constructed to City standards, are subject to review and approval by the City Engineer and shall be included with the improvement plans.

eee. The applicant shall obtain grading and site work permit(s) from Building Inspection Division for the site grading (rough grading and/or fine grading) and private structures including, but not limited to perimeter retaining walls.

fff. PAVEMENT MAINTENANCE PROGRAM: Prior to the issuance of a building permit, the developer's engineer shall submit a pavement maintenance program for the drive aisles and parking areas for the review and approval of the City Engineer. The developer shall incorporate the program into the required Storm Water Pollution Prevention Plan and Storm Water Treatment Measures Maintenance Agreement.

ggg. Prior to issuance of a Certificate of Occupancy or release of utilities for the building, vehicle access ways and parking facilities shown on the plans shall be paved in accordance with the recommendation of a licensed engineer based on a Traffic Index of 5.0 and striped as shown on the approved site plan. Minimum asphalt concrete thickness for the vehicle access ways shall be 4 inches.

hhh. All dry utilities including, but not limited to, electric, telephone, alarm systems, and cable television services shall be provided underground from the point-of-connection at the utility purveyor’s network to the service point. Electrical transformers shall be installed in underground vaults with an appropriate public utility easement.

iii. Multiple street trench cuts and openings (i.e. greater than two street cuts or openings) as a result of utility connections and other necessary street openings on Central Avenue shall be resurfaced from curb to curb to the satisfaction of the City Engineer. All pavement restoration and resurfacing shall be completed concurrent with the site development. The extent of street resurfacing shall be shown on the improvement plans prior to approval of Parcel Map. The extent of resurfacing to the satisfaction of the City Engineer.

jjj. All public improvements shall be designed in conformance with the City of Newark Municipal Code and the City’s adopted Standard Details in effect at the time of issuance of the permit(s).

kkk. ENCROACHMENT PERMIT: Any work performed within the City’s right-of-way, City easements, or City-owned property shall be subject to an Encroachment Permit as defined in Newark Municipal Code. All encroachment permit work is subject to adopted City of Newark Standard Details, and shall be performed by properly-licensed contractors as determined by

the City Engineer. Said contractors must provide evidence of proper licensure, insurance and City-issued Business License upon application for a permit.

lll. OTHER AGENCY APPROVALS:

1. Prior to Parcel Map recordation, the proposed water, sewer, and dry utility connections are subject to review and approval by the Alameda County Water District (ACWD), Union Sanitary District (USD), and Pacific, Gas & Electric Company (PG&E), respectively. The Title Sheet of improvement plans shall be signed by the ACWD, USD prior to recordation of Parcel Map. Any necessary site and utility design changes to satisfy requirements from the individual utilities or districts shall be the applicant's responsibility.
2. The applicant is encouraged to apply to PG&E as soon as possible to discuss the project's electrical and gas needs. Joint trench composite plans shall be part of the improvement plan submitted along with the Parcel Map application.
3. The project improvement plans along with the Hydrology & Hydraulic Report shall be submitted to Alameda County Flood Control & Water Conservation District (ACFC&WCD) for their review and approval. The Title Sheet of improvement plans shall be signed by the ACFCD prior to recordation of Parcel Map.

mmm. The developer shall repair and/or replace any public improvements along Central Avenue if damaged during construction, to the satisfaction of the City Engineer.

nnn. For the duration of all construction activities, the developer shall ensure that a water vehicle for dust control operations and a pick-up or vacuum type street sweeper to remove tracked dirt and debris from adjacent streets is kept readily available at all times during construction at the City Engineer's direction.

ooo. The developer shall implement the following measures for the duration of all construction activity to minimize air quality impacts:

1. Watering should be used to control dust generation during demolition of structures and break-up of pavement.
2. All trucks hauling demolition debris from the site shall be covered.
3. Dust-proof chutes shall be used to load debris into trucks whenever feasible. Watering should be used to control dust generation during transport and handling of recycled materials.
4. All active construction areas shall be watered at least twice daily and more often during windy periods; active areas adjacent to the existing land uses shall be kept damp at all times or shall be treated with non-toxic stabilizers or dust palliatives.
5. All trucks hauling soil, sand, and other loose materials shall be covered or require all trucks to maintain at least 2 feet of freeboard.
6. All unpaved access roads, parking areas, and staging areas at construction sites shall be paved, watered three times daily, or treated with (non-toxic) soil stabilizers.
7. All paved access roads, parking areas, and staging areas at construction sites shall be swept daily with water sweepers; water sweepers shall vacuum up excess water to avoid runoff-related impacts to water quality.
8. Limit traffic speeds on unpaved roads to 15 mph.
9. Install sandbags or other erosion control measures to prevent silt runoff to public roadways.

10. Replant vegetation in disturbed areas as quickly as possible.
11. Minimize idling time (5 minutes maximum).
12. Maintain properly tuned equipment.

These measures shall be incorporated into the grading specifications as well as the best management practices of the storm water pollution prevention plan and shall be implemented to the satisfaction of the City Engineer.

ppp. POLLUTANT REDUCTION IN STORMWATER: At no time during construction of the project shall pollutants be allowed to enter, clog, or contaminate stormdrain pipe networks or open stormwater channels in violation of Newark Municipal Code. The applicant shall contain all trash and debris for proper disposal to authorized landfills or recyclers. Erosion control features shall be deployed during the rainy season that extends from October 1st to April 15th each year, or any time rain is forecast outside of this period. Best Management Practices (BMPs) shall be strictly followed. Street sweepers must be employed if soil or debris is tracked onto the public roads from vehicles exiting the site. Standard BMPs are available from the California Stormwater Quality Association (CASQA), the United States Environmental Protection Agency (EPA), Caltrans, and others. Notes and/or illustrations shall be added to the plans that describe the BMPs to be utilized during construction. The use of manufactured erosion control woven blankets and straw wattles that utilize plastic monofilament netting is specifically prohibited.

qqq. SWPPP REPORTING: Copies of any monitoring and/or sampling reports required by the stormwater pollution prevention plan (SWPPP) and submitted by the Legally Responsible Person (LRP) to the State of California's SMARTS database shall also be submitted to the City of Newark inspector assigned to the project. The LRP shall also submit to the City a copy of the required Annual Report no later than September 1st of each year that construction is active or when erosion control features have been deployed. The report must include a summary of all sampling and analysis performed (Risk Levels 2 and 3 only), a log of all inspections performed including Rain Event Action Plans (REAP), a summary of any required corrective actions taken, and a summary of any violations.

rrr. TRAFFIC IMPACT STUDY: Transportation Impact Study prepared by Kimley-Horn, dated May 2025, identified a queuing deficiency at the northbound left-lane of intersection #5 at Cherry Street and Central Avenue. To correct the deficiency, the applicant shall be responsible for modifying signal phasing as per recommended by the approved Transportation Impact Study. The applicant shall be solely responsible for all costs associated with the traffic signal improvements. These traffic signal modifications shall be completed prior to the issuance of a Certificate of Occupancy or Temporary Certificate of Occupancy, whichever occurs first, for the project. The applicant shall submit improvement plans for the necessary modifications to the City for review and approval prior to the issuance of any Building Permit.

sss. The applicant shall provide all required paper and digital submittals of the project parcel map, improvement plans, and as-built plans as required by the City Engineer, including but not necessarily limited to the following: (1) One full-sized mylar copy and an electronic copy of the recorded parcel map; (2) Two full-sized copies, four half-sized copies, and electronic

copies of the approved improvement plans in a format approved by the City Engineer; (3) Electronic copies and one mylar set of the as-built improvement plans. All digital copies of the parcel map and improvement plans shall be prepared in accordance with Union Sanitary District digital submittal standards.

ttt. LANDSCAPE IMPROVEMENTS:

1. All landscape maintenance within the Landscape Easement shall be the sole responsibility of the property owner. The applicant shall enter into a Landscape Maintenance Agreement prior to the issuance of the building permit. The Landscape Maintenance Agreement shall run with the land and be binding on the property owner.
2. The landscape plans shall be included in the improvement plan set and shall be approved by the City Engineer prior to Parcel Map approval. landscape plans in accordance with the State of California Model Water Efficient Landscape Ordinance (MWELO) and per the Newark Municipal Code. Additionally, prior to project permit approvals, the applicant will be required to submit a completed City Landscape Document Package Review Checklist, which will be provided by the Engineering Department on request. Prior to Certificate of Occupancy, the applicant shall be required to submit a completed City Certificate of Completion Form. Prior to Building Permit issuance, submit the project Landscape Plans that demonstrate compliance to City of Newark requirements and MWELO requirements.
3. Prior to Building Permit issuance, the proposed tree species adjacent to the Central Avenue shall be shown on the plans in detail for review and approval, and coordinated with the City. The location of the trees on the project frontage along Central Avenue shall be approved by the City such that, at maturity, the tree canopies and root system do not impact the future City infrastructure.
4. Any above ground utility structures, including backflow prevention devices, and appurtenances, shall be installed within the applicant's property line and a minimum of 10 feet behind street face of curbs. The backflow prevention devices shall have a green painted security cage to protect it from vandalism. These locations shall be screened with landscaping to the satisfaction of the City Engineer. The landscape screen shall not interfere with the utility companies' or City Fire Department's access.
5. A Deferred Improvement Agreement (DIA) for the landscape and irrigation improvements may be required based on construction schedules and the potential future City project on Central Avenue. A Reimbursement Agreement to cover City Attorney fees associated with the DIA is required.

Building Inspection Division

uuu. The project is currently subject to the 2022 California Building Standards, should the project not apply for permits before December 18th, 2025 the project will be subject to the code edition that is adopted at the time when it is applied for this includes all chapters of the building standards.

vvv. Per the CEQA guidelines, the number EV spaces shall meet the requirements of CalGreen Tier 2.

Alameda County Fire Department

www. Project must comply with all building and fire code requirements in effect at time of building permit submittal.

xxx. The flow test must be conducted no more than 12 months prior to the fire sprinkler plan submittal. The flow test data should be included with the fire sprinkler plan submission.

yyy. A fire alarm system will be required in addition to the fire sprinkler system.

zzz. Fire access and water supply must be in service prior to the commencement of vertical combustible construction.

aaaa. The building must be equipped with a fire pump. Please indicate the location and size of the fire pump room, in accordance with the California Fire Code and NFPA 20.

bbbb. The project shall comply with all building and fire code requirements in effect at time of building permit.

cccc. The rolling tube steel gate shall not obstruct the fire apparatus access road. A Fire Department key box shall be provided at the gate entrance if the gate is manually operated, and a switch box shall be provided if the gate is electrically powered.

dddd. The project shall comply with all building and fire code requirements in effect at time of building permit.

eeee. High pile storage shall be submitted as a deferred submittal to the Fire Department for review and approval.

Police Department

ffff. The development shall comply with Chapter 15.06, Security Code, of the Newark Municipal Code and Section 510, Emergency Responder Radio Coverage in New Buildings, of the California Fire Code.

gggg. We would highly recommend installation of community safety cameras in common areas where the facility would be most susceptible to criminal activity. This would include parking areas, exterior pathways and exterior doors. The community safety cameras could be operated and controlled by the owner or the Building Management.

hhhh. We would highly recommend installation of a professionally monitored alarm system covering areas of the facility that would be most susceptible to criminal activity such as burglaries and cargo thefts. This would include parking areas, exterior pathways, gates, perimeter fencing as well as building windows and exterior doors.

iiii. The proposed development should comply with the City of Newark numbering system and tie in with the existing area street numbering. Additionally, the proposed buildings should display their individual street address in a manner clearly visible from the adjacent roadway and parking areas in order to facilitate public safety personnel's ability to quickly identify each location during emergency responses.

Environmental Conditions of Approval

jjjj. The following conditions of approval have been identified through this analysis and ensure implementation of applicable mitigation measures and policies set forth in the General Plan and its EIR.

AES-1: All exterior lighting shall comply with all applicable regulations in NMC §17.17.060 (Lighting and Illumination) and NMC Chapter 17.23 (Parking and Loading). All exterior lighting shall be directed on-site so as not to create glare off-site, as required by the Community Development Director.

AQ-1: The following dust control measures, as recommended by the Bay Area Air Quality Management District (BAAQMD), shall be included in the design of the proposed project and implemented during construction:

1. All exposed non-paved surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and access roads) shall be watered at least two times per day and/or non-toxic soil stabilizers shall be applied to exposed non-paved surfaces.
2. All haul trucks transporting soil, sand, or other loose material off-site shall be covered and/or shall maintain at least 2 feet of freeboard.
3. All visible mud or dirt tracked out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
4. All vehicle speeds on unpaved roads shall be limited to 15 miles per hour.
5. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
6. Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes, as required by the California Airborne Toxics Control Measure (ATCM) Title 13, Section 2485 of California Code of Regulations. Clear signage regarding idling restrictions shall be provided for construction workers at all access points.
7. All construction equipment shall be maintained and properly tuned in accordance with the manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.
8. The prime construction contractor shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. The construction contractor shall take corrective action within 48 hours. The BAAQMD's and the City's phone numbers shall also be visible to ensure compliance with applicable regulations.

BIO-1: To avoid and minimize potential impacts to nesting birds including passerines and raptors, the following measures shall be implemented:

1. Grading or removal of potentially occupied habitat shall be conducted outside the nesting season, which occurs between approximately February 1 to August 31.
2. If grading between August 31 and February 1 is infeasible and groundbreaking must occur within the nesting season, a pre-construction nesting bird survey (migratory species, passerines, and raptors) of the potentially occupied habitat (trees, shrubs, grassland) shall be performed by a qualified biologist within 7 days of groundbreaking. If no nesting birds are observed no further action is required and grading shall occur within one week of the survey to prevent "take" of individual birds that could begin nesting after the survey.
3. If active bird nests (either passerine and/or raptor) are observed during the pre-construction survey, a disturbance-free buffer zone shall be established around the occupied habitat until the young have fledged, as determined by a qualified biologist. The radius of the required buffer zone can vary depending on the species, (i.e., 75-100 feet for passerines and 200-500 feet for raptors). The dimensions of any required buffer zones shall be determined by a qualified biologist.
4. To delineate the buffer zone around the occupied habitat, construction fencing shall be placed at the specified radius from the nest within which no machinery or workers shall intrude.
5. Biological monitoring of active nests shall be conducted by a qualified biologist to ensure that nests are not disturbed and that buffers are appropriate, adjusted by a qualified biologist as needed to avoid disturbance.
6. No construction or earth-moving activity shall occur within any established nest protection buffer prior to September 1 unless it is determined by a qualified ornithologist/biologist that the young have fledged (that is, left the nest) and have attained sufficient flight skills to avoid project construction zones, or that the nesting cycle is otherwise completed.

BIO-2: Prior to any tree removal or alteration, the applicant shall obtain a tree removal permit from the City of Newark Public Works Department and implement tree planting requirements in accordance with development review.

CUL-1: During project construction, if historic, archaeological or Native American materials or artifacts are identified, work within 50-foot radius of such find shall cease and the City shall retain the services of a qualified archeologist and/or paleontologist to assess the significance of the find. adopted with the certification of the 2013 FEIR because not all impacts in the Southwest Newark Residential and Recreational Focus Area may be reduced to less than significant levels.

If such find is determined to be significant by the archeologist and/or paleontologist, a resource protection plan conforming to CEQA §15064.5 shall be prepared by the archeologist and/or paleontologist and approved by the Community Development Director. The plan may include, but would not be limited to, removal of resources and similar actions. Project work may be resumed in compliance with such plan. If human remains are encountered, all ground disturbing activities near or in any area potentially overlying adjacent human remains shall cease, the County

Coroner shall be contacted immediately, and the provisions of State law carried out.

GEO-1 Prior to issuance of a building permit, the applicant shall prepare and submit a design-level geotechnical report to the City for review and implement the recommendations herein, as approved by the City.

GHG-1: COA GHG-1 The Project shall comply with the most recent CalGreen Tier 2 EV requirements for non-residential projects and show the required number of EV spaces on the plans.

HAZ-1: Prior to issuance of any demolition permit, the applicant/project developer shall provide the City of Newark with evidence of approval by the ACWD of the Media Management Plan, titled "Data Gap Investigation and request for site closure", dated September 13, 2023, prepared by Farallon Consulting and case closure.

HYD-1: Preliminary Stormwater Treatment Plan is approved in concept only. Final approval is subject to the applicant providing, prior to the issuance of the grading permit, the necessary plans, details, and calculations that demonstrate the plan complies with the Municipal Regional Stormwater NPDES Permit (MRP), Order R2-2022-0018, revised July 1, 2022, issued to the City of Newark by the Regional Water Quality Control Board, San Francisco Bay Region.

HYD-2: Prior to issuance of a building permit, the applicant shall prepare an Operations and Maintenance (O&M) Plan for post-construction water quality. The O&M Plan shall be reviewed and accepted by the City Engineer prior to Project Construction on the site.

NOI-1: The Applicant/Project Contractor shall implement the following noise reduction measures to minimize the impact of construction noise onto offsite receivers and demonstrate compliance to the satisfaction of the City of Newark Director of Public Works or City Engineer:

1. Construct solid plywood fences around ground level construction sites adjacent to the project property line, resulting in a decibel reduction of 5-15 dBA.
2. ii. Equip all internal combustion engine-driven equipment with intake and exhaust mufflers that are in good condition and appropriate for the equipment. This would provide at least a 10 dBA reduction to individual equipment noise.
3. Prohibit unnecessary idling of internal combustion engines.
4. Locate stationary noise-generating equipment such as air compressors or portable power generators as far as possible from the project property line. Construct temporary noise barriers to screen stationary noise-generating equipment at the project property line.
5. Utilize "quiet" air compressors and other stationary noise sources where technology exists.
6. Control noise from construction workers' radios to a point where they are not audible at existing residences bordering the Project site.

7. Notify all adjacent businesses, residences, and other noise-sensitive land uses of the construction schedule, in writing, and provide a written schedule of "noisy" construction activities to the adjacent land uses and nearby residences.
8. If complaints are received or excessive noise levels cannot be reduced using the measures above, erect a temporary noise control blanket barrier along surrounding building facades that face the construction sites.
9. Designate a "disturbance coordinator" who shall be responsible for responding to any complaints about construction noise. The disturbance coordinator shall determine the cause of the noise complaint (e.g., bad muffler, etc.) and shall require that reasonable measures be implemented to correct the problem. Conspicuously post a telephone number for the disturbance coordinator at the construction site and include it in the notice sent to neighbors regarding the construction schedule.

NOI-2: Prior to issuance of a demolition permit or improvements plans, the Applicant shall prepare and submit the Construction Management plan to the City's Building Department for review and shall make any modifications to the Plan for Building to find it acceptable. The Applicant/Project's Contractor shall implement the Project's Construction Management Plan included in the "Acoustical Assessment", prepared for the Project by Kimley-Horn and Associates, Inc., December 2023.

TRAN-1: Project improvements shall include a twice per cycle left-turn phase at the northbound left-turn lane of Cherry Street and Central Avenue.

UTIL-1: Prior to the issuance of a building permit, the applicant shall pay the applicable impact fees, in the amount in effect at the time.

RESOLUTION NO. _____

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF NEWARK AFFIRMING THE PLANNING COMMISSION'S DECISION OF APPROVING DR2022-010, U2024-001, AND MUP2024-001, A DESIGN REVIEW, CONDITIONAL USE PERMIT, AND MINOR USE PERMIT FOR A NEW INDUSTRIAL BUILDING AND ASSOCIATED ON-SITE IMPROVEMENTS AT 6756 – 6792 CENTRAL AVENUE (APN: 92A-2165-14, -15, -16, AND -17)

WHEREAS, Ryan Marshall, (the "Applicant") and Prologis LP (the "Property Owner"), filed with the City of Newark an application for a Design Review, Conditional Use Permit, and Minor Use Permit for a new industrial building and associated on-site improvements at 6756 – 6792 Central Avenue (APN 92A-2165-14, -15, -16, and -17) (the "Project"); and

WHEREAS, the property at 6756 – 6792 Central Avenue (the "Project site") has a combined lot size of approximately 756,061 square feet (17.4 acres) and has a General Plan Land-Use designation of General Industrial and is currently zoned GI: General Industrial; and

WHEREAS, the Applicant and Property Owner seek a Design Review, which pursuant to Newark Municipal Code (NMC) §17.34.020 is required for all projects that require a permit for new construction, reconstruction, rehabilitation, alteration, or other improvements to the exterior of a structure, site, or a parking area. Approval of the Design Review requires the Project to meet the Design Review criteria pursuant to NMC §17.34.060 to the extent that they apply; and

WHEREAS, the Applicant and Property Owner seek a Conditional Use Permit, which pursuant to NMC §17.09.020, an "indoor warehousing and storage" use and a "wholesaling and distribution" use requires approval of a Conditional Use Permit. Approval of the Conditional Use Permit requires the Project to meet all the following Use Permit findings pursuant to NMC §17.35.060; and

WHEREAS, the Applicant and Property Owner seek a Minor Use Permit, which pursuant to NMC §17.17.040(A)(2), an additional height increase to the new prefinished vertical tube steel fencing to be 6 feet tall within the minimum required 10-foot front setback area requires approval of a Minor Use Permit. Approval of the Minor Permit requires the Project to meet all the following Minor Use Permit findings pursuant to NMC §17.35.060 and NMC §17.17.040(A)(1)(a)(ii); and

WHEREAS, a California Environmental Quality Act (the "CEQA") analysis was prepared as set forth in **Exhibit E** to evaluate the environmental impacts of the Project in accordance with the CEQA Guidelines. With implementation of the applicable mitigation measures identified in the Final Environmental Impact Report (FEIR) for the 2013 General Plan and conditions of approval as set forth in **Exhibit B**, the CEQA analysis determined and demonstrated that the Project is exempt from further environmental review pursuant to CEQA Guidelines Sections

15168 and 15183 and California Public Resources Code Section 21083.3 because the level of development proposed is within the development assumptions analyzed in the FEIR and the Project is consistent with the General Plan; and

WHEREAS, the Planning Commission held a public hearing on June 24, 2025, and after fully considering the Project, entitlements, staff report, findings of fact, conditions of approval, public comments, and all other testimony and evidence presented at the public hearing, voted 5-0 to approve the Project; and

WHEREAS, a Notice of Action describing the decision taken from the Planning Commission was sent to the members of the City Council and Planning Commission, applicant, all property owners within a minimum 1,000-foot radius of the Project site, all neighborhood and community organizations that have filed a written request for notice of projects in the area where the site is located, and all persons and groups who have filed a written request for notice regarding the specific application; and

WHEREAS, pursuant to NMC §17.31.100, a member of the City Council may call for review of a decision of the Director, Zoning Administrator, or Planning Commission; and

WHEREAS, Council Member Grindall called for a review of the Planning Commission's decision on the Project; and

WHEREAS, pursuant to NMC §17.31.060, a public hearing notice was published in The Tri City Voice on July 8, 2025 and mailed as required for a public hearing, and the City Council held a meeting on said application at 7:00 p.m. on July 24, 2025; and

WHEREAS, the City Council held a public hearing on July 24, 2025, and fully considered the Project, entitlements, staff report, findings of fact, conditions of approval, public comments, and all other testimony and evidence presented at the public hearing; and

WHEREAS, the City Council finds that the staff report, exemptions from CEQA, and standards for approval reflect the City's independent judgement and analysis of the Project; and

WHEREAS, the City Council finds that the Project conforms with the City's General Plan and Zoning Code for which are incorporated herein by reference and are available for review at City Hall during normal business hours and on the City's website; and

WHEREAS, the City Council finds that the Project satisfies the requisite findings of fact necessary for approval of the Design Review, Conditional Use Permit, and Minor Use Permit as further explained in the staff report and the findings of fact associated with this Resolution, as identified in "Exhibit A" attached to this Resolution.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Newark as follows:

Section 1. That the forgoing recitals are true and correct and made part of this Resolution.

Section 2. That the City Council hereby makes the necessary findings and determinations required by the NMC to approve the requested Design Review, Conditional Use Permit, and Minor Use Permit for the Project, as further explained in the staff report and findings of fact for approval as set forth in "Exhibit A" attached hereto and incorporated herein by this reference.

Section 3. Based on the findings and determinations, the City Council hereby approves DR2022-010, U2024-001, and MUP2024-001, a Design Review, Conditional Use Permit, and Minor Use Permit for a new industrial building and associated on-site improvements at 6756 – 6792 Central Avenue (APN 92A-2165-14, -15, -16, and -17), subject to the Conditions of Approval, as further set forth in "Exhibit B" attached hereto and incorporated herein by this reference.

This Resolution was introduced at the City of Newark City Council's July 24, 2025 regular meeting by Council Member _____, seconded by Council Member _____, and passed as follows:

Attachments
Exhibit A – Findings of Fact
Exhibit B – Conditions of Approval
Exhibit C – Project Narrative
Exhibit D – Project Plans
Exhibit E – CEQA Analysis

Exhibit A

FINDINGS OF FACT

DR2022-010, U2024-001, and MUP2024-001
6756 – 6792 Central Avenue
Alameda County Assessor's Parcel Number(s) 92A-2165-14, -15, -16, and -17

Design Review Criteria (Newark Municipal Code [NMC] §17.34.060)

A. The overall design of the project including its scale, massing, site plan, exterior design, and landscaping will enhance the appearance and features of the project site and surrounding natural and built environment.

The Project consists of a new industrial building and associated on-site improvements at the site located at 6756 – 6792 Central Avenue. The new industrial building will consist of a contemporary style design that will provide a variety architectural features, design elements, colors, and materials. The height of the new building will be 49'-6", measured from grade to the top of the parapet.

The new on-site improvements, which include new landscape areas, walkways, driveways, drive aisles, parking areas, bicycle parking areas, bioretention areas, employee open space area, site lighting, fencing, vehicular gates, truck courtyard area, and trailer storage area, will complement the architecture of the new industrial building. The Project will enhance the site and will be compatible with the characteristics of the surrounding environment. Additionally, the Project will respect the surrounding development pattern. Overall, the Project's design will be complementary to the area.

This finding can be made in the affirmative.

B. The project design is appropriate to the function of the project and will provide an attractive and comfortable environment for occupants, visitors, and the general community.

As proposed, the new industrial building is considered a speculative building with no tenants. The Project Narrative stated, "Prologis, the Project Sponsor and Owner of the property, is proposing to demolish approximately 113,500 square feet of obsolete industrial buildings on site to construct a new industrial warehouse facility that can accommodate numerous uses that meet both the City and Prologis' interests". This includes advanced manufacturing uses and research and development uses, which are permitted uses in the GI Zoning District.

The Project was carefully designed to ensure compatibility with and complement the site and surrounding areas while providing a comfortable environment for occupants, visitors, and the general community. The Project will be attractive and appropriate for the neighborhood. Therefore, the proposed improvements are suitable in a manner that respects the general character of the neighborhood.

This finding can be made in the affirmative.

C. Project details, materials, signage and landscaping, are internally consistent, fully integrated with one another, and used in a manner that is visually consistent with the proposed architectural design.

The Project is suitable for the site and compatible with the existing site conditions. The application of high-quality and complementary materials and the color palette help distinguish the different areas of the building. The new industrial building and on-site improvements will fully integrate with each other and contribute positively to the site and neighborhood. Overall, the Project incorporates design elements that relate to each other and lend integrity and balance to the site.

This finding can be made in the affirmative.

D. The design of streetscapes, including street trees, lighting, and pedestrian furniture, is consistent with the intended character of the area.

The Project consists of improvements to the site and the streetscape, which includes the driveway curb cuts and landscape areas at the front of the property along Central Avenue. Currently, there are no sidewalks at the front of the property along Central Avenue. However, sidewalks will be proposed along the project frontage on Central Avenue. As part of the Planning Division's and Engineering Division's conditions of approval, the applicant will revise the Project plans to show the design of the sidewalk along the property frontage on Central Avenue as part of the building permit submittal.

Overall, the improvements complements the new industrial building and responds to the intended character of the area.

This finding can be made in the affirmative.

E. Parking areas are designed and developed to buffer surrounding land uses; compliment pedestrian-oriented development; enhance the environmental quality of the site, including minimizing stormwater run-off and the heat-island effect; and achieve a safe, efficient, and harmonious development.

The new on-site improvements, which include new landscape areas, walkways, driveways, drive aisles, parking areas, bicycle parking areas, bioretention areas, employee open space area, site lighting, fencing, vehicular gates, truck courtyard area, and trailer storage area will be designed to be harmonious with the site. The Project will provide a total of 396 on-site parking spaces, which meets the minimum required number of on-site parking spaces per the Zoning Code.

The Project will enhance the environmental quality of the site by including new bioretention areas for storm-water purposes. Also, the addition of the new landscape areas will address the heat island effect while enhancing the overall appearance of the site. Overall, the Project will be designed to achieve a safe, efficient, and harmonious development.

This finding can be made in the affirmative.

F. Lighting and lighting fixtures are designed to complement buildings, be of appropriate scale, provide adequate light over walkways and parking areas to create a sense of pedestrian safety, and avoid creating glare.

The Project proposes new exterior light fixtures around the building and site. The proposed exterior light fixtures will comply with NMC §17.17.060. Any other lighting not covered under this design review entitlement is subject to regulations specified in NMC §17.17.060 - Lighting and Illumination.

This finding can be made in the affirmative.

G. Landscaping is designed to be compatible with and enhance the architectural character and features of the buildings on site and help relate the building to the surrounding landscape.

The Project proposes new landscaping on site. The new landscaping will be designed to be compatible with and enhance the architectural character and features of the site. The Project has been conditioned to require all landscaping to be maintained in healthy growing condition and that plantings be replaced with other plant materials to ensure continued compliance with the applicable landscaping regulations in NMC Chapter 17.21.

This finding can be made in the affirmative.

Conditional Use Permit Findings (NMC §17.35.060)

A. The proposed use is allowed within the applicable zoning district and complies with all other applicable provisions of this title [NMC Title 17] and all other titles of the Municipal Code.

The Project requires approval of a Conditional Use Permit to allow for an "indoor warehousing and storage" use and a "wholesaling and distribution" use in the GI Zoning District. The Project has been evaluated and will be substantially in compliance with the applicable provisions of the Zoning Code. Additionally, the Project has been found to be consistent with the type of uses found in the GI Zoning District and will be compatible with the surrounding industrial uses in the nearby area.

This finding can be made in the affirmative.

B. The proposed use is consistent with the general plan and any applicable specific plan.

The Project site has a General Plan Land Use designation of General Industrial. The Project will be consistent with many of Newark's General Plan policies including, but not limited to:

- ***Policy LU-1.5 -** Technology Focus. Promote the city as a good location for technology businesses and clean industry, capitalizing on Newark's location within Silicon Valley.*

- ***Policy LU-1.17** - Sustainable Development Emphasis. Ensure that new development incorporates green building and sustainable design principles and encourage renovation of existing development to use water and energy more efficiently.*

- ***Policy ED-3.1*** *- Industrial Land Supply. Maintain a sufficient supply of land for office and industrial uses to generate high quality, high paying jobs and to meet the city's economic development goals. Focus office and industrial development on technology uses and other activities that will generate high wage employment.*

- ***Policy ED-3.7 -*** *Industrial Redevelopment. Encourage property owners to redevelop industrial sites and buildings when the proposed redevelopment will generate high-quality and high-paying jobs. Likewise, support the refurbishing of such spaces for continued use as general industrial properties.*

- ***Policy ED-4.4*** *- Affordable Industrial Space. Continue to support and foster the growth of general industrial uses, such as warehouse and distribution centers and manufacturing, in the Cherry Street and Central Avenue corridors and other areas designated for "General Industrial" uses on the Land Use Diagram.*

This finding can be made in the affirmative.

C. The proposed use will not be adverse to the public health, safety, or general welfare of the community, nor detrimental to surrounding properties or improvements.

As proposed, the new industrial building is considered a speculative building with no tenants. The Project will not be adverse to the public health, safety, or general welfare of the community or surrounding properties in that the Project site is mainly surrounded by industrial uses.

This finding can be made in the affirmative.

D. Tax revenue generated by the development will exceed the City's cost of the service demand as a result of the development or a compelling community benefit will be provided.

The Project would replace an existing warehouse building and uncovered storage yards, which is anticipated to be assessed with a higher property tax base for the property. As proposed, the new industrial building is considered a speculative building with no tenants. The Applicant has presented to Staff a Fiscal Analysis of the Project. Based on that Analysis and depending on the use that occupies the building, it is anticipated that the Project will exceed the cost of City services.

This finding can be made in the affirmative.

E. The proposed use complies with any design or development standards applicable to the zoning district or the use in question unless waived or modified pursuant to the provisions of this title [NMC Title 17].

The proposed "indoor warehousing and storage" use and "wholesaling and distribution" use is allowed with the approval of a Conditional Use Permit under the GI Zoning District. The

Project adheres to the development standards within the GI Zoning District, such as setbacks, height, and parking requirements. The new building's contemporary style design is compatible with the adjacent buildings and does not appear to have a negative effect on the adjacent properties or the surrounding area. Overall, the Project will comply with the development standards applicable to the Zoning District.

This finding can be made in the affirmative.

F. The design, location, size, and operating characteristics of the proposed activity are compatible with the existing and reasonably foreseeable future land uses in the vicinity.

The Project's contemporary style design will be compatible with the surrounding area. As conditioned, the Project will not interfere with operations/businesses in this zone. Also, the Project will not deviate from the intent of district's development standards. Therefore, the design, location, size, and operating characteristics of the Project will be compatible with the existing and foreseeable future land uses in the vicinity.

This finding can be made in the affirmative.

G. The site is physically suitable for the type, density, and intensity of use being proposed, including access, utilities, and the absence of physical constraints.

The Project site will be suitable to accommodate the Project as it will provide upgrades to the existing site conditions. The Project will enhance the overall appearance of the site, while respecting the surrounding development pattern. The Project will continue to provide access and utilities on the site.

This finding can be made in the affirmative.

Minor Use Permit Findings (NMC §17.35.060)

A. The proposed use is allowed within the applicable zoning district and complies with all other applicable provisions of this title [NMC Title 17] and all other titles of the Municipal Code.

The maximum height for fencing within the required front setback area is 3 feet. Pursuant to NMC §17.17.040(A)(2), an additional height increase for fencing in non-residential districts requires approval of a Minor Use Permit. The Applicant requests approval of a Minor Use Permit to allow for an additional height increase to the new prefinished vertical tube steel fencing to be 6 feet within the minimum required 10-foot front setback area.

The Project will be in compliance with the applicable provisions of Title 17 – Zoning, which includes meeting the material requirements outlined in NMC §17.17.040(A)(1)(a)(i)(3). Overall, the Project has been evaluated and will be substantially in compliance with the applicable provisions of the Zoning Code.

This finding can be made in the affirmative.

B. The proposed use is consistent with the general plan and any applicable specific plan.

The Project site has a General Plan Land Use designation of General Industrial. The Project is consistent with the general plan. The additional height to the fence will allow for the new industrial building's occupants to operate safely. Additionally, the Project will not alter the respective land-use designation.

This finding can be made in the affirmative.

C. The proposed use will not be adverse to the public health, safety, or general welfare of the community, nor detrimental to surrounding properties or improvements.

The Project includes an additional height increase to the new prefinished vertical tube steel fencing to be 6 feet in the minimum 10-foot front setback area. The location of the new fencing will be adjacent to the Union Pacific Railroad. The Project will not detract from the overall appearance of the neighborhood. Overall, the Project will not be adverse to the public health, safety, or general welfare of the community nor detrimental to surrounding properties or improvements.

This finding can be made in the affirmative.

D. Tax revenue generated by the development will exceed the City's cost of the service demand as a result of the development or a compelling community benefit will be provided.

The additional height increase to the new prefinished vertical tube steel fencing will not materially impact the City's tax revenue, nor will it additionally strain City services. The Project, in total, would replace an existing warehouse building and uncovered storage yards, which is anticipated to be assessed with a higher property tax base for the property.

This finding can be made in the affirmative.

E. The proposed use complies with any design or development standards applicable to the zoning district or the use in question unless waived or modified pursuant to the provisions of this title [NMC Title 17].

The additional height increase to the new fencing is allowed subject to meeting the applicable provisions of Title 17 – Zoning, which includes meeting the material requirements outlined in NMC §17.17.040(A)(1)(a)(i)(3). The new fencing is 6 feet in height and consist of a prefinished vertical tube steel material. Overall, the Project will comply with the development standards applicable to the Zoning District. The Project's design will be complementary to the area and does not appear to have a negative effect on the adjacent properties nor the surrounding area.

This finding can be made in the affirmative.

F. The design, location, size, and operating characteristics of the proposed activity are compatible with the existing and reasonably foreseeable future land uses in the vicinity.

The additional height increase to the new fencing will not interfere with the other industrial uses in this zone. Additionally, the Project will not deviate from the intent of district's development standards. Therefore, the design of the Project will be compatible with the existing and foreseeable future land uses in the vicinity.

This finding can be made in the affirmative.

G. The site is physically suitable for the type, density, and intensity of use being proposed, including access, utilities, and the absence of physical constraints.

The Project site and the additional height increase to the new fencing will be suitable to accommodate the Project as it will upgrade the existing site conditions. The Project will enhance the overall appearance of the site, while respecting the surrounding development pattern. The Project will continue to provide access and utilities on the site.

This finding can be made in the affirmative.

Minor Use Permit Findings for Additional Fence Height (NMC §17.17.040(A)(1)(a)(ii))

A. The additional fence height will not impair the provision of adequate light, air, circulation, and visual openness around adjacent residential structures.

The Project includes an additional height increase to the new fencing to be 6 feet in the minimum 10-foot front setback area. The additional height increase will consist of a prefinished vertical tube steel material that meets the material requirements outlined in NMC §17.17.040(A)(1)(a)(i)(3). The Project site is not abutting residential structures. The location of the new fencing will be adjacent to the Union Pacific Railroad. Therefore, the additional height will not impair the provision of adequate light, air, circulation, and visual openness around adjacent residential structures.

This finding can be made in the affirmative.

B. The additional fence height will not detract from the overall appearance of the neighborhood.

The additional height to the new fencing will be a prefinished vertical tube steel fencing material. The location of the new fencing will be adjacent to the Union Pacific Railroad. The design of the new fencing will allow for the Project to be seamlessly integrated into the neighborhood. Therefore, the additional height will not detract from the overall appearance of the neighborhood.

This finding can be made in the affirmative.

C. The additional fence height is not detrimental to the health, safety, and welfare of people living in the neighborhood.

The additional height of the new fencing will be consistent with the height of the other new fencing that is located adjacent to the Union Pacific Railroad. The new fencing will be of an aesthetically pleasing design that blends in with the property and surrounding area. Additionally, there is no evidence to suggest that the additional height will cause any harm to the community. Therefore, the additional height will not be detrimental to the health, safety, and welfare of people living in the neighborhood.

This finding can be made in the affirmative.

California Environmental Quality Act (CEQA) Categorical Exemption Findings

The Project is eligible for the following CEQA exemptions:

- ***Consistency with Program EIR.*** *The City of Newark 2013 FEIR provides for streamlining and/or tiering provisions under CEQA Guidelines Section 15168. This CEQA Analysis demonstrates that the Project would not result in substantial changes or involve new information that would warrant preparation of a subsequent EIR because the level of development proposed is within the development assumptions analyzed in the program level EIR (2013 FEIR). No further environmental review is required.*

- ***Community Plan Exemption.*** *Streamlined environmental review per Section 15183 of the CEQA Guidelines and California Public Resources Code Section 21083.3. The Project is consistent with the General Plan and will not result in significant environmental impacts that were not previously identified as significant project-level, cumulative or offsite effects in the 2013 FEIR. The Project is exempt from further CEQA review since it is consistent with the General Plan.*

The Project is within the scope of development projected under the General Plan for which an EIR was certified in 2013. The Project will implement applicable mitigation measures identified in the 2013 FEIR. In addition, the Project will be required to comply with applicable conditions of approval (**Exhibit B**) and is subject to uniformly applied development standards. With implementation of required mitigation measures and conditions of approval, the Project will not result in a substantial increase in the severity or significant impacts that were previously identified in the program level EIR, nor will the Project introduce any new significant impacts that were not previously identified. Therefore, there will be no additional environmental impacts beyond those analyzed in the 2013 FEIR.

Exhibit B

CONDITIONS OF APPROVAL

DR2022-010, U2024-001, and MUP2024-001
6756 – 6792 Central Avenue
Alameda County Assessor's Parcel Number(s) 92A-2165-14, -15, -16, and -17

Planning Division

a. A building permit shall be required prior to the construction of the Project. The building permit plans shall be substantially consistent with the approved plans (see **Attachment 1, Exhibit D**), or as otherwise required by these conditions of approval.

b. These conditions of approval shall be printed on the building-permit drawings associated with this Project.

c. A Planning Final shall be required prior to the Final Building Inspection.

d. The applicant/property owner/business operator/developer shall comply with any and all applicable federal, state, or local laws and regulations.

e. The building permit plans shall demonstrate compliance with the enclosure pad, bumpers, clear zone, and drainage requirements for the trash enclosure as outlined in NMC §17.17.120(B)(2).

f. Any revisions to the proposed garbage, refuse and recycling service pick up plan shall require review and approval by Republic Services and the Community Development Director, prior to the issuance of a building permit. No refuse, garbage or recycling shall be stored outdoors except within the approved trash enclosure.

g. The building permit plans shall show the removal of the new chain link fencing along the front (southwestern) property line as part of the building permit submittal.

h. The building permit plans shall show the design of the sidewalk along the property frontage on Central Avenue as part of the building permit submittal.

i. The Landscape Plans (Sheet LC1.1) shall show the correct design of the driveway curb cuts.

j. The building permit plans shall show the 32 dock doors with two grade-level doors and 14 door knockouts.

k. Any proposed changes to the design of the new industrial building that include the conversion of the additional door knockouts to dock doors for an "indoor warehousing and storage" use and/or a "wholesaling and distribution" use shall require Planning Commission review and approval.

l. All other proposed changes from approved exhibits shall be submitted to the Community

Development Director who shall decide if they warrant Planning Commission review and, if so decided, said changes shall be submitted for the Commission's review and decision. The applicant and/or property owner shall pay the prevailing fee for each additional separate submittal of project exhibits requiring Planning Commission and/or City Council review and approval.

m. Prior to the issuance of a Certificate of Occupancy, the parking areas, aisles and access drives shall be installed and striped as shown on the approved site plan.

n. If any of the conditions of approval are not incompliance and/or have been substantially expanded beyond the Project's approval regarding parking, on-site circulation and/or traffic , the Community Development Director shall review and decide how to mitigate those issues. A parking, on-site circulation and/or traffic analysis shall be prepared at the discretion of the Community Development Director and the cost of the applicant and/or property owners. The applicant and/or property owners shall mitigate any issues identified by the parking, on-site circulation and/or traffic study. If the applicant does not mitigate these issues, the entitlements may be referred to the Planning Commission for determination if the entitlements are to be revoked.

o. Parking lot cleaning with sweeping or vacuum equipment shall not be permitted between 7:00 p.m. and 7:00 a.m.

p. All landscaping shall be maintained in healthy growing condition. Wherever necessary, plantings shall be replaced with other plant materials to ensure continued compliance with the applicable landscaping regulations in NMC Chapter 17.21.

q. All exterior utility pipes and meters shall be painted to match and/or complement the color of the adjoining building surface, as approved by the Community Development Director.

r. All exterior lighting shall comply with all applicable regulations in NMC §17.17.060 - Lighting and Illumination. All exterior lighting shall be directed on-site so as not to create glare off-site.

s. All mechanical and electrical equipment (e.g., transformer, generator, roof equipment, etc.) shall meet the screening requirements in NMC §17.17.100 - Screening. Mechanical and electrical equipment such as air conditioners (AC) units shall not be placed in the front or street side yard. If equipment is placed in any other location that makes it visible to public view, the equipment shall be properly screened with solid material pursuant to the regulations in NMC §17.17.100 - Screening.

t. The Project shall comply with all applicable noise standards in the NMC and General Plan, including, but not limited to NMC §17.24.100 - Noise. This includes all mechanical and electrical equipment.

u. All construction noise activity shall abide by NMC §17.24.100 - Noise.

v. Construction equipment, including compressors, generators and mobile equipment shall be

fitted with heavy-duty mufflers designed to reduce noise impacts.

w. The Project shall comply with the conditions outlined in the Acoustical Assessment prepared by Kimly Horn dated December 2023, or as amended.

x. The Project shall implement the Project Design Features from the Air Quality, Greenhouse Gas Emissions and Energy Technical Analysis prepared by FirstCarbon Solutions dated July 19, 2024, or as amended, which includes:

PDF AIR-1 Prohibition of Cold Storage Use and Transport Refrigeration Units
The project operation would address any potential Transport Refrigeration Unit usage by requiring the following:

- Contractual language in all tenant lease agreements that will prohibit tenants from operating Transport Refrigeration Units (TRUs) within the project site.
- Requiring a restrictive covenant over the parcel that prohibits the applicant's use of TRUs on the property unless the applicant seeks and receives an amendment to its conditional use permit allowing such use.
- The application of any future requests for cold storage and associated TRU usage to include an analysis which requires the modeling and a Health Risk Assessment of air toxic contaminants emitted from operation of these TRUs. The results of such analysis must demonstrate that the operation of TRUs would not result in a significant health impact as defined by BAAQMD thresholds.

PDF AIR-2 All-Electric Design

- Prior to issuance of building permits, the project applicant shall provide documentation (e.g., site plan) to the City to demonstrate that the proposed industrial development does not include natural gas appliances or natural gas plumbing.

PDF AIR-3 Use of Tier 4 Construction Equipment

- Prior to the issuance of any demolition, grading, or building permits (whichever occurs earliest), the project applicant and/or construction contractor shall prepare a construction operations plan that, during construction activities, requires all off-road equipment with engines greater than 50 horsepower to meet particulate matter emissions standards for Tier 4 Interim engines at the minimum. The construction contractor shall maintain records documenting its efforts to comply with this requirement, including equipment lists. Off-road equipment descriptions and information shall include, but are not limited to, equipment type, equipment manufacturer, equipment identification number, engine model year, engine certification (Tier rating), horsepower, and engine serial number. The project applicant and/or construction contractor shall submit the construction operations plan and records of compliance to the City

y. Prior to the installation of any signage, the applicant and/or property owners shall submit a

Sign Permit Application to the Planning Division for review and approval. Signage, including freestanding signs and wall signs, shall comply with Chapter 17.25 – Signage Standards.

z. Prior to the issuance of grading and site work permit(s), mailbox locations and designs shall be approved by the Community Development Director and Newark Postmaster, in that order.

aa. Prior to issuance of a grading permit, the applicant shall hire a qualified biologist to: (1) determine if occupied Burrowing Owl habitat(s) exist on the site, and (2) implement a plan to protect the owls and to excavate the site around any active burrows using hand tools to assure that the owls are not buried during grading in the event Burrowing Owl habitat(s) is found on the site. The occupied Burrowing Owl habitat(s), if found, shall not be disturbed during the nesting season. The Burrowing Owl study shall be conducted not more than 30 days prior to the time site grading activities will commence.

bb. The site and its improvements shall be maintained in a neat and presentable condition, to the satisfaction of the Community Development Director. This shall include, but not limited to, repainting surfaces damaged by graffiti, site clean-up, and maintenance of the landscaping areas. Graffiti removal/repainting, site clean-up, and maintenance of the landscaping areas shall occur on a continuing, as needed basis.

cc. Construction site trailers and buildings located on-site shall be used for office and storage purposes only and shall not be used for living or sleeping quarters. Any vehicle or portable building brought on the site during construction shall remain graffiti free.

dd. Prior to the issuance of a building permit, the applicant, property owners, and/or developer shall pay the City's impact fees in effect as well as the Community Development Maintenance Fee. The impact fees shall be based on the new building square footage for the Project.

ee. The applicant shall work with the City on the public art installation for the Project as part of the building permit submittal. The Project shall be waived from paying the Art in Public Places and Private Development fee if public art is installed.

ff. The Project sponsor shall require construction contractors to implement the following applicable BAAQMD Basic Construction Mitigation Measures to reduce emissions of fugitive dust and equipment exhaust.

gg. Measures to respond to and track complaints pertaining to construction noise shall include: (1) a procedure and phone numbers for notifying the City of Newark Building Inspection Division and Newark Police Department (during regular construction hours and off-hours); and (2) a sign posted on-site pertaining to the permitted construction days and hours and complaint procedures and who to notify in the event of a problem. The sign shall also include a listing of both the City and construction contractor's telephone numbers (during regular construction hours and off-hours).

hh. During project construction, if historic, archeological or Native American materials or artifacts are identified, work within a 50-foot radius of such find shall cease and the City shall retain the

services of a qualified archeologist and/or paleontologist to assess the significance of the find. If such find is determined to be significant by the archeologist and/or paleontologist, a resource protection plan conforming to CEQA §15064.5 shall be prepared by the archeologist and/or paleontologist and approved by the Community Development Director. The plan may include, but would not be limited to, removal of resources or similar actions. Project work may be resumed in compliance with such plan. If human remains are encountered, the County Coroner shall be contacted immediately, and the provisions of State law carried out.

ii. The City of Newark and its agents, officers, and employees shall be defended, indemnified, and held harmless from any claim, action or proceedings against the City, or its agents, officers, and employees to attach, set aside, void, or annul the approval of this application or the environmental determination which accompanies it, or which otherwise arises out of or in connection with the City's action on this application, including but not limited to, damages, costs, expenses, attorney's fees, or expert witness fees.

jj. The Community Development Director shall interpret applicable requirements in the event of any redundancy or conflict in conditions of approval.

kk. The Community Development Director shall have the right to modify or terminate this Design Review, Conditional Use Permit, and Minor Use Permit at any time if any of the terms of such permit or the conditions of approval for said permit are violated, or for other good cause deemed necessary to maintain or improve the public right-of-way or to preserve and protect the health, safety, and welfare of the public.

ll. If any condition of the entitlements be declared invalid or unenforceable by a court of competent jurisdiction, the entitlements shall terminate and be of no force and effect, at the election of the Planning Commission and/or City Council on motion.

mm. The applicant hereby agrees to defend, indemnify, and save harmless the City of Newark, its Council, boards, commissions, officers, employees and agents, from and against any and all claims, suits, actions, liability, loss, damage, expense, cost (including, without limitation, attorneys' fees, costs and fees of litigation) of every nature, kind or description, which may be brought by a third party against, or suffered or sustained by, the City of Newark, its Council, boards, commissions, officers, employees or agents to challenge or void the permit granted herein or any California Environmental Quality Act determinations related thereto.

nn. In the event that any person should bring an action to attack, set aside, void or annul the City's approval of this project, the applicant shall defend, indemnify and hold harmless the City and/or its agents, officers and employees from any claim, action, or proceeding against the City and/or its agents, officers and employees with counsel selected by the applicant (which shall be the same counsel used by applicant) and reasonably approved by the City. Applicant's obligation to defend, indemnify and hold harmless the City and/or its agents, officers and employees shall be subject to the City's compliance with Government Code Section 66474.9.

oo. The Conditions of Project Approval set forth herein may include certain fees, dedication requirements, reservation requirements and other exactions. Pursuant to Government Code

Section 66020(d)(1), these Conditions constitute written notice of a statement of the amount of such fees, and a description of the dedications, reservations and other exactions. The applicant is hereby further notified that the 90-day approval period in which the applicant may protest these fees, dedications, reservations and other exactions, pursuant to Government Code Section 66020(a), has begun. If the applicant fails to file a protest within this 90-day period complying with all of the requirements of Section 66020, the applicant will be legally barred from later challenging such exactions.

pp. Per NMC §17.31.130, the approval or conditional approval of the Design Review, Conditional Use Permit, and Minor Use Permit shall expire three years from the date the Design Review, Conditional Use Permit, and Minor Use Permit was approved or conditionally approved if it is not exercised or extended within three years of its approval. Additionally, any other permit granted under NMC Title 17 - Zoning, shall automatically expire if it is not exercised or extended within two years of its approval, unless a different time period is specified.

Engineering Division

qq. SUBDIVISION MAPS: The subdivision of land is governed by Newark Municipal Code Title 16, as well as the California Government Code §§66410-66499.85 (Subdivision Map Act). All maps are subject to review and approval by the City Engineer. Recordation of the subdivision map shall be coordinated by the applicant's title company, with one full-sized mylar copy of the recorded map returned to the City.

1. Prior to building permit issuance, the parcel map to merge the four individual parcels into one shall be recorded at the Alameda County Recorders' Office.
2. Coinciding with the Planning Commission's approval of the entitlements, the applicant shall execute the encumbrance documents as listed below, and submit them to the City for review and final execution within ten (10) working days following the expiration of the appeal period. If the project is appealed and requires City Council action on the entitlements, the documents shall be executed and submitted to the City for review and approval within ten (10) working days following City Council approval.

   Upon execution by the City, the documents shall be recorded with the Alameda County Recorder's Office. Exhibit EX-2 shows the conceptual layout of the easements, and the actual dimensions and easements shall be to the satisfaction of the City Engineer.

   i. 14-foot-wide Landscape Easement
   ii. 10-foot-wide Public Service Easement along the project frontage up to the limits of the future Central Avenue overpass improvements where a grade difference between Central Avenue and project site.
   iii. 30-foot-wide Alameda County Water District (ACWD) Waterline Easement as shown on the Exhibit EX-2.
   iv. 30-foot-wide Access Easement to the satisfaction of ACWD.
   v. Three ACWD water lateral easements connecting Central Avenue and the 30-foot-wide Waterline Easement to the satisfaction of ACWD.

vi. ACWD water lateral easement extending southeast direction from the 30-foot-wide ACWD Waterline Easement to the satisfaction of ACWD.
vii. 10-foot-wide Sidewalk and Maintenance Easement to the satisfaction of the City Engineer.
viii. Emergency Vehicle Access Easement as required to the satisfaction of Alameda County Fire Department.
ix. Temporary Construction Easement (TCE) A and TCE B to the satisfaction of the City Engineer.
x. Complete relinquishment of abutter's rights over the frontage of APNs 92A-2165-17 and 92A-2165-16, and a partial relinquishment of abutter's rights over the frontage of APNs 92A-2165-15 and 92A-2165-14 to the satisfaction of the City Engineer.
xi. Reciprocal access, Private Utility Easement, Private Stormdrain Easement, Emergency Vehicle Access Easement (EVAE), Public Utility Easement (PUE), Public Storm Drain Easement, parking easements shall be established in favor of APNs 92A-2165-17 and 92A-2165-16 over APNs 92A-2165-15 and 92A-2165-14, as determined by the final design and to the satisfaction of the City Engineer. This requirement is necessary because the lots will not be merged until the Parcel Map is recorded. Additionally, the complete relinquishment of abutter's rights over the frontage of APNs 92A-2165-17 and 92A-2165-16, and a partial relinquishment of abutter's rights over the frontage of APNs 92A-2165-15 and 92A-2165-14, shall coincide with the Planning Commission's approval of the Entitlements.

3. Concurrent with approval of the Parcel Map, the applicant shall effectuate the removal of any existing easements encumbering the property that conflict with areas proposed for improvement. Elimination or modification of existing easements on the site requires approval from the respective utility district or company and the City of Newark. Easement modifications and removals shall be performed with the Parcel Map.
4. Along with the Parcel Map application, a complete improvement plan set shall be submitted to the Engineering Division for review and approval to ensure conformance with relevant codes, policies, and other requirements of the Newark Municipal Code and City of Newark Street improvement standards. These plans shall be prepared by a qualified person licensed by the State of California to do such work. The plans shall be drawn to an appropriate scale as required by the City Engineer.

rr. SUBDIVISION IMPROVEMENT AGREEMENT: Prior to approval of the parcel map, the applicant shall enter into a Subdivision Improvement Agreement with the City and guarantee all necessary public and private street improvements and other common area improvements within the subdivision and beyond the map boundary in accordance with the improvement plans to be approved by the City Engineer. The agreement requires the applicant to post financial security in the form of either a cash deposit, letter of credit, or surety bonds in amounts equivalent to the value of the public improvements. If surety bonds are utilized, the amounts of the bonds shall be 100% of the total estimated value of the public improvements consistent with the City of Newark Municipal Code. In addition, the City requires a warranty bond (often referred to as a maintenance bond) for 20% of the estimated value. The warranty period shall be active for no less than one-Calander year following formal acceptance of the improvements. The warranty bond may be released by the City Engineer upon completion of

the warranty period and correction of all warranty items to the satisfaction of the City Engineer. All submitted securities are subject to review and approval by the City Attorney.

ss. SIDEWALK IMPROVEMENTS: The project is responsible for constructing a six-foot-wide meandering sidewalk along the property frontage on Central Avenue, connecting to the adjacent northeast property, consistent with the City of Newark Standard Details. The precise alignment and limits of the sidewalk shall be shown on the improvement plans and are subject to approval by the City Engineer prior to recordation of the Parcel Map.

The City Engineer reserves the right to waive this sidewalk construction requirement. Any waiver of this requirement will be communicated in writing to the applicant.

tt. GEOTECHNICAL RECOMMENDATIONS:

1. Submit a Geotechnical Report that shall address in-situ and import soils in accordance with the City of Newark Grading and Excavation Ordinance, Chapter 15.50. This report shall include recommendations regarding pavement sections. Grading operations shall be in accordance with recommendations contained in the soils report and shall be completed under the supervision of an engineer registered in the State of California to do such work.
2. Additional Geotech Investigation Report peer review by the City's consultant to verify the targeted static and seismic induced settlement reductions shall be required to be performed prior to the issuance of the building permit. Ground improvement methods, if proposed, may require coordination and approval from Alameda County Water District. The applicant shall pay for costs associated with the Geotechnical peer review and/or inspections per the City's Master Fee Schedule.
3. Prior to Grading Permit and Building Permit issuance, recommendations from the project's geotechnical investigation, as prepared by a California-licensed Geotechnical Engineer or Certified Engineering Geologist, shall be incorporated into the design of the improvements and/or explicitly noted on the plans. The author(s) of the geotechnical investigation shall certify on the plans that the designs comply with their recommendations. During construction, the applicant shall follow all recommendations.
4. The applicant's geotechnical consultant shall inspect, test (as needed), and approve all geotechnical aspects of the project construction. The inspections shall include, but not necessarily be limited to: site preparation and grading, site surface and subsurface drainage improvements, and excavations for foundations prior to the placement of steel and concrete. The results of these inspections and the as-built conditions of the project shall be described by the geotechnical consultant in a letter and submitted to the City Engineer for review and approval prior to project final acceptance.

uu. CONSTRUCTION GENERAL PERMIT: This application is subject to a Construction General Permit according to the National Pollutant Discharge Elimination System (NPDES) General Permit No. CAS000002. Prior to the issuance of a grading permit or a building permit, the Waste Dischargers Identification (WDID) number shall be printed on the plans to provide evidence that the proposed site development work is covered by said General Permit for any Construction Activity. The applicant will be required to register the project with the State Water Board's Stormwater Multi-Application and Report Tracking System (SMARTS) website. A Qualified SWPPP Developer (QSD) and a Qualified SWPPP Practitioner (QSP)

shall be responsible for permit compliance. In addition, the grading plans need to state: "All grading work shall be done in accordance with the approved Storm Water Pollution Prevention Plan prepared by the developer pursuant to the Notice of Intent on file with the State Water Resources Control Board."

vv. CLEAN WATER PROGRAM (LARGE PROJECTS):

1. Because the project creates and/or replaces more than 5,000 square feet of impervious surface, it is considered a Regulated Project according to Provision C.3.b of the Municipal Regional Stormwater NPDES Permit that regulates stormwater runoff in Alameda County. The Alameda Countywide Clean Water Program developed a C.3 Guidance Manual to assist applicants in addressing these regulations. The Guidance Manual is available for download at:

   https://cleanwaterprogram.org/businesses/development/

   Regulated projects shall include stormwater treatment measures in the site design to remove pollutants from stormwater upstream of any connection to the City's or Alameda County's stormwater conveyance networks. In addition, regulated projects shall be subject to a Stormwater Treatment Measure Maintenance Agreement between the City and property owner to assure long-term maintenance of the installed measures. The City will provide a template agreement. Once executed, the agreement shall be recorded against the property.

   The provided Preliminary Stormwater Treatment Plan is approved in concept only. The final Stormwater Treatment Design shall be prepared by a licensed civil engineer. Final approval is subject to the applicant providing the necessary plans, details, and calculations that demonstrate the plan comply with the latest Municipal Regional Stormwater NPDES Permit (MRP).
2. Prior to Parcel Map approval, Stormwater Requirements Checklist shall be submitted along with the improvement plans for review and approval.
3. All stormwater treatment measures are subject to review and approval by the Alameda County Mosquito Abatement District. The developer shall modify the grading and drainage and stormwater treatment design as necessary to satisfy any imposed requirements from the District.

ww. FULL TRASH CAPTURE: The entire site shall be equipped with full trash capture devices approved by the Regional Water Quality Control Board – San Francisco Bay Region and the Mosquito Abatement District, for 100% trash capture at all on-site and adjoining off-site storm drain inlets. All on-site trash capture devices shall be permanently maintained by the property owner. Acceptable off-site trash capture devices can be found on the City's website at https://www.newark.org/departments/public-works/engineering-division/stormwater-program.

xx. GRADING AND DRAINAGE PLANS: Prior to Parcel Map approval, the developer shall submit detailed grading and drainage plans for review and approval by the City Engineer. Plans shall be based on a City benchmark, on NGVD 29 datum, shall include pad and finish

floor elevations of each proposed structure, proposed on-site property grades, proposed elevations at property line, and sufficient elevations on all adjacent properties to show existing drainage patterns. All on-site pavement shall drain at a minimum of one percent. The developer shall ensure that all upstream drainage is not blocked and that no ponding is created by this development. Any construction necessary to ensure this shall be the developer's sole responsibility.

yy. HYDROLOGY AND HYDRAULIC REPORT: Hydrology and hydraulic calculations, including a drainage area map for on and offsite watersheds, a narrative explaining assumptions, criteria, methodology, and how the starting HGL was established, shall be submitted for review and approval by the City Engineer and the Alameda County Flood Control & Water Conservation District (ACFC&WCD) prior to approval of the improvement plans and Parcel Map. The calculations shall show that the City and County freeboard requirements are satisfied and that any increase in flow is mitigated with on-site detention or storage, such that the downstream facility will not be surcharged by the post-development discharge from the project.

zz. EMERGENCY OVERLAND STORMWATER FLOW/SUMP PROPERTIES: The Grading Plans shall show that the entire property is designed with an emergency overland flow path to direct storm runoff to the nearest public street or open flood control facility in the event on-site pipes become plugged. The flow path shall be lower than the finish floor elevation of all habitable structures. The flow path cannot rely on neighboring properties unless a storm drain easement across the neighbor is obtained. Sump properties shall be designed to discharge the 50-year recurrence interval storm event through the pipe network before habitable structures become inundated.

aaa. Where a grade differential is created along the boundary lot lines between the proposed development and adjacent property, the applicant shall install a permanent retaining wall (concrete or masonry or similar approved material) unless a slope easement is approved by the City Engineer. Said retaining wall shall be subject to review and approval of the City Engineer. A grading permit is required by the Building Inspection Division prior to starting site grading work.

bbb. SITE DESIGN:

1. During the building permit review, the plans shall show the visibility control triangle to demonstrate compliance with the Visibility Ordinance. The plans shall show that there is no obstructions adjacent to the driveways, and determine where signs or any above-grade utility boxes can be located. The Engineering Department can provide a copy of Visibility Ordinance information sheet when requested.

2. The Preliminary Landscape Plan shows trees within the landscape strip along south property line that conflict with an existing sewer line to remain. If these trees are accounted towards meeting any landscape zoning code, a revised Preliminary Landscape Plan will need to show removal of these trees and their new locations.

ccc. Prior to issuance of Building Permit, existing buildings within the project boundary shall be demolished. The applicant shall apply and receive a building permit and obtain a permit final for the demolition.

ddd. The applicant shall install private streets improvements including, but not be limited to driveways, drive aisles, parking facilities, utilities, storm water treatment facilities, screen walls, fencing, and all landscape areas. All private streets in the development shall be designed and constructed to City standards, are subject to review and approval by the City Engineer and shall be included with the improvement plans.

eee. The applicant shall obtain grading and site work permit(s) from Building Inspection Division for the site grading (rough grading and/or fine grading) and private structures including, but not limited to perimeter retaining walls.

fff. PAVEMENT MAINTENANCE PROGRAM: Prior to the issuance of a building permit, the developer's engineer shall submit a pavement maintenance program for the drive aisles and parking areas for the review and approval of the City Engineer. The developer shall incorporate the program into the required Storm Water Pollution Prevention Plan and Storm Water Treatment Measures Maintenance Agreement.

ggg. Prior to issuance of a Certificate of Occupancy or release of utilities for the building, vehicle access ways and parking facilities shown on the plans shall be paved in accordance with the recommendation of a licensed engineer based on a Traffic Index of 5.0 and striped as shown on the approved site plan. Minimum asphalt concrete thickness for the vehicle access ways shall be 4 inches.

hhh. All dry utilities including, but not limited to, electric, telephone, alarm systems, and cable television services shall be provided underground from the point-of-connection at the utility purveyor’s network to the service point. Electrical transformers shall be installed in underground vaults with an appropriate public utility easement.

iii. Multiple street trench cuts and openings (i.e. greater than two street cuts or openings) as a result of utility connections and other necessary street openings on Central Avenue shall be resurfaced from curb to curb to the satisfaction of the City Engineer. All pavement restoration and resurfacing shall be completed concurrent with the site development. The extent of street resurfacing shall be shown on the improvement plans prior to approval of Parcel Map. The extent of resurfacing to the satisfaction of the City Engineer.

jjj. All public improvements shall be designed in conformance with the City of Newark Municipal Code and the City’s adopted Standard Details in effect at the time of issuance of the permit(s).

kkk. ENCROACHMENT PERMIT: Any work performed within the City’s right-of-way, City easements, or City-owned property shall be subject to an Encroachment Permit as defined in Newark Municipal Code. All encroachment permit work is subject to adopted City of Newark Standard Details, and shall be performed by properly-licensed contractors as determined by the

City Engineer. Said contractors must provide evidence of proper licensure, insurance and City-issued Business License upon application for a permit.

lll. OTHER AGENCY APPROVALS:

1. Prior to Parcel Map recordation, the proposed water, sewer, and dry utility connections are subject to review and approval by the Alameda County Water District (ACWD), Union Sanitary District (USD), and Pacific, Gas & Electric Company (PG&E), respectively. The Title Sheet of improvement plans shall be signed by the ACWD, USD prior to recordation of Parcel Map. Any necessary site and utility design changes to satisfy requirements from the individual utilities or districts shall be the applicant's responsibility.
2. The applicant is encouraged to apply to PG&E as soon as possible to discuss the project's electrical and gas needs. Joint trench composite plans shall be part of the improvement plan submitted along with the Parcel Map application.
3. The project improvement plans along with the Hydrology & Hydraulic Report shall be submitted to Alameda County Flood Control & Water Conservation District (ACFC&WCD) for their review and approval. The Title Sheet of improvement plans shall be signed by the ACFCD prior to recordation of Parcel Map.

mmm. The developer shall repair and/or replace any public improvements along Central Avenue if damaged during construction, to the satisfaction of the City Engineer.

nnn. For the duration of all construction activities, the developer shall ensure that a water vehicle for dust control operations and a pick-up or vacuum type street sweeper to remove tracked dirt and debris from adjacent streets is kept readily available at all times during construction at the City Engineer's direction.

ooo. The developer shall implement the following measures for the duration of all construction activity to minimize air quality impacts:

1. Watering should be used to control dust generation during demolition of structures and break-up of pavement.
2. All trucks hauling demolition debris from the site shall be covered.
3. Dust-proof chutes shall be used to load debris into trucks whenever feasible. Watering should be used to control dust generation during transport and handling of recycled materials.
4. All active construction areas shall be watered at least twice daily and more often during windy periods; active areas adjacent to the existing land uses shall be kept damp at all times or shall be treated with non-toxic stabilizers or dust palliatives.
5. All trucks hauling soil, sand, and other loose materials shall be covered or require all trucks to maintain at least 2 feet of freeboard.
6. All unpaved access roads, parking areas, and staging areas at construction sites shall be paved, watered three times daily, or treated with (non-toxic) soil stabilizers.
7. All paved access roads, parking areas, and staging areas at construction sites shall be swept daily with water sweepers; water sweepers shall vacuum up excess water to avoid runoff-related impacts to water quality.
8. Limit traffic speeds on unpaved roads to 15 mph.
9. Install sandbags or other erosion control measures to prevent silt runoff to public roadways.

10. Replant vegetation in disturbed areas as quickly as possible.
11. Minimize idling time (5 minutes maximum).
12. Maintain properly tuned equipment.

These measures shall be incorporated into the grading specifications as well as the best management practices of the storm water pollution prevention plan and shall be implemented to the satisfaction of the City Engineer.

ppp. POLLUTANT REDUCTION IN STORMWATER: At no time during construction of the project shall pollutants be allowed to enter, clog, or contaminate stormdrain pipe networks or open stormwater channels in violation of Newark Municipal Code. The applicant shall contain all trash and debris for proper disposal to authorized landfills or recyclers. Erosion control features shall be deployed during the rainy season that extends from October 1st to April 15th each year, or any time rain is forecast outside of this period. Best Management Practices (BMPs) shall be strictly followed. Street sweepers must be employed if soil or debris is tracked onto the public roads from vehicles exiting the site. Standard BMPs are available from the California Stormwater Quality Association (CASQA), the United States Environmental Protection Agency (EPA), Caltrans, and others. Notes and/or illustrations shall be added to the plans that describe the BMPs to be utilized during construction. The use of manufactured erosion control woven blankets and straw wattles that utilize plastic monofilament netting is specifically prohibited.

qqq. SWPPP REPORTING: Copies of any monitoring and/or sampling reports required by the stormwater pollution prevention plan (SWPPP) and submitted by the Legally Responsible Person (LRP) to the State of California's SMARTS database shall also be submitted to the City of Newark inspector assigned to the project. The LRP shall also submit to the City a copy of the required Annual Report no later than September 1st of each year that construction is active or when erosion control features have been deployed. The report must include a summary of all sampling and analysis performed (Risk Levels 2 and 3 only), a log of all inspections performed including Rain Event Action Plans (REAP), a summary of any required corrective actions taken, and a summary of any violations.

rrr. TRAFFIC IMPACT STUDY: Transportation Impact Study prepared by Kimley-Horn, dated May 2025, identified a queuing deficiency at the northbound left-lane of intersection #5 at Cherry Street and Central Avenue. To correct the deficiency, the applicant shall be responsible for modifying signal phasing as per recommended by the approved Transportation Impact Study. The applicant shall be solely responsible for all costs associated with the traffic signal improvements. These traffic signal modifications shall be completed prior to the issuance of a Certificate of Occupancy or Temporary Certificate of Occupancy, whichever occurs first, for the project. The applicant shall submit improvement plans for the necessary modifications to the City for review and approval prior to the issuance of any Building Permit.

sss. The applicant shall provide all required paper and digital submittals of the project parcel map, improvement plans, and as-built plans as required by the City Engineer, including but not necessarily limited to the following: (1) One full-sized mylar copy and an electronic copy of the recorded parcel map; (2) Two full-sized copies, four half-sized copies, and electronic

copies of the approved improvement plans in a format approved by the City Engineer; (3) Electronic copies and one mylar set of the as-built improvement plans. All digital copies of the parcel map and improvement plans shall be prepared in accordance with Union Sanitary District digital submittal standards.

ttt. LANDSCAPE IMPROVEMENTS:

1. All landscape maintenance within the Landscape Easement shall be the sole responsibility of the property owner. The applicant shall enter into a Landscape Maintenance Agreement prior to the issuance of the building permit. The Landscape Maintenance Agreement shall run with the land and be binding on the property owner.
2. The landscape plans shall be included in the improvement plan set and shall be approved by the City Engineer prior to Parcel Map approval. landscape plans in accordance with the State of California Model Water Efficient Landscape Ordinance (MWELO) and per the Newark Municipal Code. Additionally, prior to project permit approvals, the applicant will be required to submit a completed City Landscape Document Package Review Checklist, which will be provided by the Engineering Department on request. Prior to Certificate of Occupancy, the applicant shall be required to submit a completed City Certificate of Completion Form. Prior to Building Permit issuance, submit the project Landscape Plans that demonstrate compliance to City of Newark requirements and MWELO requirements.
3. Prior to Building Permit issuance, the proposed tree species adjacent to the Central Avenue shall be shown on the plans in detail for review and approval, and coordinated with the City. The location of the trees on the project frontage along Central Avenue shall be approved by the City such that, at maturity, the tree canopies and root system do not impact the future City infrastructure.
4. Any above ground utility structures, including backflow prevention devices, and appurtenances, shall be installed within the applicant's property line and a minimum of 10 feet behind street face of curbs. The backflow prevention devices shall have a green painted security cage to protect it from vandalism. These locations shall be screened with landscaping to the satisfaction of the City Engineer. The landscape screen shall not interfere with the utility companies' or City Fire Department's access.
5. A Deferred Improvement Agreement (DIA) for the landscape and irrigation improvements may be required based on construction schedules and the potential future City project on Central Avenue. A Reimbursement Agreement to cover City Attorney fees associated with the DIA is required.

Building Inspection Division

uuu. The project is currently subject to the 2022 California Building Standards, should the project not apply for permits before December 18th, 2025 the project will be subject to the code edition that is adopted at the time when it is applied for this includes all chapters of the building standards.

vvv. Per the CEQA guidelines, the number EV spaces shall meet the requirements of CalGreen Tier 2.

Alameda County Fire Department

www. Project must comply with all building and fire code requirements in effect at time of building permit submittal.

xxx. The flow test must be conducted no more than 12 months prior to the fire sprinkler plan submittal. The flow test data should be included with the fire sprinkler plan submission.

yyy. A fire alarm system will be required in addition to the fire sprinkler system.

zzz. Fire access and water supply must be in service prior to the commencement of vertical combustible construction.

aaaa. The building must be equipped with a fire pump. Please indicate the location and size of the fire pump room, in accordance with the California Fire Code and NFPA 20.

bbbb. The project shall comply with all building and fire code requirements in effect at time of building permit.

cccc. The rolling tube steel gate shall not obstruct the fire apparatus access road. A Fire Department key box shall be provided at the gate entrance if the gate is manually operated, and a switch box shall be provided if the gate is electrically powered.

dddd. The project shall comply with all building and fire code requirements in effect at time of building permit.

eeee. High pile storage shall be submitted as a deferred submittal to the Fire Department for review and approval.

Police Department

ffff. The development shall comply with Chapter 15.06, Security Code, of the Newark Municipal Code and Section 510, Emergency Responder Radio Coverage in New Buildings, of the California Fire Code.

gggg. We would highly recommend installation of community safety cameras in common areas where the facility would be most susceptible to criminal activity. This would include parking areas, exterior pathways and exterior doors. The community safety cameras could be operated and controlled by the owner or the Building Management.

hhhh. We would highly recommend installation of a professionally monitored alarm system covering areas of the facility that would be most susceptible to criminal activity such as burglaries and cargo thefts. This would include parking areas, exterior pathways, gates, perimeter fencing as well as building windows and exterior doors.

iiii. The proposed development should comply with the City of Newark numbering system and tie in with the existing area street numbering. Additionally, the proposed buildings should display their individual street address in a manner clearly visible from the adjacent roadway and parking areas in order to facilitate public safety personnel's ability to quickly identify each location during emergency responses.

Environmental Conditions of Approval

jjjj. The following conditions of approval have been identified through this analysis and ensure implementation of applicable mitigation measures and policies set forth in the General Plan and its EIR.

AES-1: All exterior lighting shall comply with all applicable regulations in NMC §17.17.060 (Lighting and Illumination) and NMC Chapter 17.23 (Parking and Loading). All exterior lighting shall be directed on-site so as not to create glare off-site, as required by the Community Development Director.

AQ-1: The following dust control measures, as recommended by the Bay Area Air Quality Management District (BAAQMD), shall be included in the design of the proposed project and implemented during construction:

1. All exposed non-paved surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and access roads) shall be watered at least two times per day and/or non-toxic soil stabilizers shall be applied to exposed non-paved surfaces.
2. All haul trucks transporting soil, sand, or other loose material off-site shall be covered and/or shall maintain at least 2 feet of freeboard.
3. All visible mud or dirt tracked out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
4. All vehicle speeds on unpaved roads shall be limited to 15 miles per hour.
5. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
6. Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes, as required by the California Airborne Toxics Control Measure (ATCM) Title 13, Section 2485 of California Code of Regulations. Clear signage regarding idling restrictions shall be provided for construction workers at all access points.
7. All construction equipment shall be maintained and properly tuned in accordance with the manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.
8. The prime construction contractor shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. The construction contractor shall take corrective action within 48 hours. The BAAQMD's and the City's phone numbers shall also be visible to ensure compliance with applicable regulations.

BIO-1: To avoid and minimize potential impacts to nesting birds including passerines and raptors, the following measures shall be implemented:

1. Grading or removal of potentially occupied habitat shall be conducted outside the nesting season, which occurs between approximately February 1 to August 31.
2. If grading between August 31 and February 1 is infeasible and groundbreaking must occur within the nesting season, a pre-construction nesting bird survey (migratory species, passerines, and raptors) of the potentially occupied habitat (trees, shrubs, grassland) shall be performed by a qualified biologist within 7 days of groundbreaking. If no nesting birds are observed no further action is required and grading shall occur within one week of the survey to prevent "take" of individual birds that could begin nesting after the survey.
3. If active bird nests (either passerine and/or raptor) are observed during the pre-construction survey, a disturbance-free buffer zone shall be established around the occupied habitat until the young have fledged, as determined by a qualified biologist. The radius of the required buffer zone can vary depending on the species, (i.e., 75-100 feet for passerines and 200-500 feet for raptors). The dimensions of any required buffer zones shall be determined by a qualified biologist.
4. To delineate the buffer zone around the occupied habitat, construction fencing shall be placed at the specified radius from the nest within which no machinery or workers shall intrude.
5. Biological monitoring of active nests shall be conducted by a qualified biologist to ensure that nests are not disturbed and that buffers are appropriate, adjusted by a qualified biologist as needed to avoid disturbance.
6. No construction or earth-moving activity shall occur within any established nest protection buffer prior to September 1 unless it is determined by a qualified ornithologist/biologist that the young have fledged (that is, left the nest) and have attained sufficient flight skills to avoid project construction zones, or that the nesting cycle is otherwise completed.

BIO-2: Prior to any tree removal or alteration, the applicant shall obtain a tree removal permit from the City of Newark Public Works Department and implement tree planting requirements in accordance with development review.

CUL-1: During project construction, if historic, archaeological or Native American materials or artifacts are identified, work within 50-foot radius of such find shall cease and the City shall retain the services of a qualified archeologist and/or paleontologist to assess the significance of the find. adopted with the certification of the 2013 FEIR because not all impacts in the Southwest Newark Residential and Recreational Focus Area may be reduced to less than significant levels.

If such find is determined to be significant by the archeologist and/or paleontologist, a resource protection plan conforming to CEQA §15064.5 shall be prepared by the archeologist and/or paleontologist and approved by the Community Development Director. The plan may include, but would not be limited to, removal of resources and similar actions. Project work may be resumed in compliance with such plan. If human remains are encountered, all ground disturbing activities near or in any area potentially overlying adjacent human remains shall cease, the County

Coroner shall be contacted immediately, and the provisions of State law carried out.

GEO-1 Prior to issuance of a building permit, the applicant shall prepare and submit a design-level geotechnical report to the City for review and implement the recommendations herein, as approved by the City.

GHG-1: COA GHG-1 The Project shall comply with the most recent CalGreen Tier 2 EV requirements for non-residential projects and show the required number of EV spaces on the plans.

HAZ-1: Prior to issuance of any demolition permit, the applicant/project developer shall provide the City of Newark with evidence of approval by the ACWD of the Media Management Plan, titled "Data Gap Investigation and request for site closure", dated September 13, 2023, prepared by Farallon Consulting and case closure.

HYD-1: Preliminary Stormwater Treatment Plan is approved in concept only. Final approval is subject to the applicant providing, prior to the issuance of the grading permit, the necessary plans, details, and calculations that demonstrate the plan complies with the Municipal Regional Stormwater NPDES Permit (MRP), Order R2-2022-0018, revised July 1, 2022, issued to the City of Newark by the Regional Water Quality Control Board, San Francisco Bay Region.

HYD-2: Prior to issuance of a building permit, the applicant shall prepare an Operations and Maintenance (O&M) Plan for post-construction water quality. The O&M Plan shall be reviewed and accepted by the City Engineer prior to Project Construction on the site.

NOI-1: The Applicant/Project Contractor shall implement the following noise reduction measures to minimize the impact of construction noise onto offsite receivers and demonstrate compliance to the satisfaction of the City of Newark Director of Public Works or City Engineer:

1. Construct solid plywood fences around ground level construction sites adjacent to the project property line, resulting in a decibel reduction of 5-15 dBA.
2. ii. Equip all internal combustion engine-driven equipment with intake and exhaust mufflers that are in good condition and appropriate for the equipment. This would provide at least a 10 dBA reduction to individual equipment noise.
3. Prohibit unnecessary idling of internal combustion engines.
4. Locate stationary noise-generating equipment such as air compressors or portable power generators as far as possible from the project property line. Construct temporary noise barriers to screen stationary noise-generating equipment at the project property line.
5. Utilize "quiet" air compressors and other stationary noise sources where technology exists.
6. Control noise from construction workers' radios to a point where they are not audible at existing residences bordering the Project site.

7. Notify all adjacent businesses, residences, and other noise-sensitive land uses of the construction schedule, in writing, and provide a written schedule of "noisy" construction activities to the adjacent land uses and nearby residences.
8. If complaints are received or excessive noise levels cannot be reduced using the measures above, erect a temporary noise control blanket barrier along surrounding building facades that face the construction sites.
9. Designate a "disturbance coordinator" who shall be responsible for responding to any complaints about construction noise. The disturbance coordinator shall determine the cause of the noise complaint (e.g., bad muffler, etc.) and shall require that reasonable measures be implemented to correct the problem. Conspicuously post a telephone number for the disturbance coordinator at the construction site and include it in the notice sent to neighbors regarding the construction schedule.

NOI-2: Prior to issuance of a demolition permit or improvements plans, the Applicant shall prepare and submit the Construction Management plan to the City's Building Department for review and shall make any modifications to the Plan for Building to find it acceptable. The Applicant/Project's Contractor shall implement the Project's Construction Management Plan included in the "Acoustical Assessment", prepared for the Project by Kimley-Horn and Associates, Inc., December 2023.

TRAN-1: Project improvements shall include a twice per cycle left-turn phase at the northbound left-turn lane of Cherry Street and Central Avenue.

UTIL-1: Prior to the issuance of a building permit, the applicant shall pay the applicable impact fees, in the amount in effect at the time.

CITY OF NEWARK
Planning Commission
City Hall, City Council Chambers

37101 Newark Boulevard, Newark, CA 94560 | (510) 578-4330 | E-mail: planning@newark.org

MINUTES

Tuesday, June 24, 2025
7:00 P.M.

A. ROLL CALL

Chair Bogisich called the meeting to order at 7:00 pm. All members of the Planning Commission were present: Chair Bogisich, Vice Chair Becker, and Commissioners Aguilar, Fitts, and Dhillon.

B. MINUTES

B1. Approval of Minutes of the regular Planning Commission meeting of June 10, 2025.

MOTION APPROVED

Chair Bogisich requested a motion. Commissioner Fitts moved, and Vice Chair Becker seconded, to approve the Minutes of the regular Planning Commission meeting on June 10, 2025. **The motion passed unanimously – 5 AYES.**

C. WRITTEN COMMUNICATIONS

None.

D. ORAL COMMUNICATIONS

Members of the public are invited to address the Planning Commission on any item not listed on the agenda. Public Comments are generally limited to 5 minutes per speaker. Please note that State law prohibits the Commission from acting on non-agenda items.

None.

E. PUBLIC HEARINGS

E.1. Public Hearing to consider DR2022-010, U2024-001, and MUP2024-001, a Resolution approving a Design Review, Conditional Use Permit, and Minor Use Permit to allow for a new industrial building and associated on-site improvements at 6756 – 6792 Central Avenue (APN: 92A-2165-14, -15, -16, and -17). The subject site is zoned GI: General Industrial and has a General Plan designation of General Industrial.

(RESOLUTION)

Associate Planner (AP) Balatbat delivered a detailed presentation on the proposed Prologis project. AP Balatbat began by providing context for the project site that included a description of the General Plan land use and Zone Map designations, prior uses and existing conditions, and a description of nearby uses. He stated that the project involves constructing a new 315,390 square-foot industrial building. The building includes 46 dock doors, and two grade-level doors located at the back of the building. He identified the requested entitlements that include Design Review for the new industrial building and associated on-site improvements, a Conditional Use Permit for an "indoor warehousing and storage" use and a "wholesaling and distribution" use, and a Minor Use Permit to allow for an additional height increase to the new prefinished vertical tube steel fencing to be 6 feet tall within the minimum required 10-foot front setback area. Regarding site improvements, AP Balatbat mentioned that the project will include new landscaping and bioretention areas featuring a variety of trees, shrubs, perennials, grasses, and groundcover. Two new driveways along Central Avenue will provide access to the site and parking areas. The site improvements include 396 automobile parking spaces, with pedestrian walkways, bicycle parking, a trash enclosure, and pathways connecting to the new building.

He also noted that sidewalks are proposed along the project frontage, and as a condition of approval, the applicant will need to revise the building permit plans to include the final sidewalk design.

AP Balatbat mentioned that the developer would add new site lighting along the property's perimeter, a truck courtyard, and trailer storage area behind the building. For

employees, an open space will be provided at the front of the building, including an outdoor cooking area and a seating area.

Regarding fencing, the site will feature several types:

- Pre-finished vertical tube steel fencing, 3-foot and 6-foot tall
- 6-foot-tall chain-link fencing, which will not be visible from Central Avenue
- 6-foot-tall combination retaining wall with chain-link above, which will not be visible from Central Avenue
- Two 6-foot-tall vertical tube steel vehicle gates

He pointed out that although the plans show chain-link fencing along part of the front property line, that fence type will need to be removed as part of the building permit revisions per the conditions of approval.

Additionally, AP Balatbat stated that the applicant requests a Minor Use Permit to install the 6-foot-tall vertical tube steel fencing within the 10-foot front setback along the property line adjacent to the Union Pacific Railroad. He mentioned that the proposed fencing meets all relevant standards, including height and material.

The project involves installation of underground utilities, stormwater, sewer, and infrastructure along Central Avenue. AP Balatbat mentioned that the City of Newark is considering a capital improvement project that includes an automobile overpass on Central Avenue across the Union pacific railroad tracks, which would be constructed adjacent to the project site . As part of the approval conditions, the applicant must coordinate with the City Engineer to obtain the necessary easements for the overpass and submit the required documentation for review and approval.

Since the building is speculative and currently has no specific tenant, the applicant intends for the facility to support various potential uses. Uses such as advanced manufacturing and research and development are considered permitted uses and would be allowed by right within the proposed building. Other uses, including "indoor warehousing and storage" and "wholesaling and distribution," require a Conditional Use Permit. Because the building is speculative, without an identified tenant, city staff included a condition of approval that requires a reduction in the number of dock doors from 46 to 32 doors with 14 door "knockouts." The condition includes a requirement that any future conversion of

the additional door knockouts into dock doors for "indoor warehousing and storage" and "wholesaling and distribution uses" would require review and approval by the Planning Commission.

AP Balatbat emphasized that the proposed project aligns with the goals of the City, the applicant, and the General Industrial (GI) zoning district.

He also shared that a Transportation Impact Study was completed to evaluate traffic impacts, including vehicle miles traveled (VMT). The study found that the project would have a less-than-significant VMT impact. It identified a potential deficiency at the Cherry Street and Central Avenue intersection, and the study recommended adjusting signal phasing in the northbound left-turn lane. That recommendation is included in the project's conditions of approval.

AP Balatbat noted that the applicant held two community meetings. The first was in December 2023 at the Silliman Community Activity Center with no public attendees, and the second took place in January 2025 at the Newark Library. Before the second meeting, the City received written public comments on sidewalk improvements, the CEQA review process, and construction timing.

Regarding environmental review, AP Balatbat mentioned that the Metropolitan Planning Group (M-Group) prepared a CEQA analysis and determined that the project is exempt from further review under CEQA Guidelines Sections 15168 and 15183, as well as Public Resources Code Section 21083.3, because it aligns with the assumptions in the City's FEIR and General Plan.

In conclusion, AP Balatbat stated that the project complies with all relevant zoning and code requirements, promotes an interactive and compatible design for the area, and enhances the overall character of the surrounding built environment. Based on the presented findings, staff recommends that the Planning Commission adopt the draft resolution approving the Design Review, Conditional Use Permit, and Minor Use Permit.

AP Balatbat offered to answer any questions and introduced the applicant team, who were also present and ready to share their presentation.

Staff Recommendation: Staff requests the Planning Commission to consider the following action:

- **Adopt the Draft Resolution, approving the Design Review (DR2022-010), Conditional Use Permit (U2024-001), and Minor Use Permit (MUP2024-001) for the project based on the findings provided in Attachment 1, Draft Resolution.**

After AP Balatbat finished his presentation, Chair Bogisich thanked him and opened the floor for questions from the commissioners.

Commissioner Fitts began by thanking him for the presentation and inquired if there is a schedule for the Central Avenue overpass, specifically when construction will start and what will happen underneath it once it is built. He noted that underpasses can sometimes attract homelessness or become hidden areas that create challenges for the city.

AP Balatbat said the construction timeline had not yet been determined. Details about the infrastructure and design under the overpass, he referred to City Engineer Scott Alman, who was attending the meeting via Zoom.

City Engineer Alman explained that the Central Avenue overpass project is currently in the design phase, with the City expecting to submit a 90% design soon. He clarified that, although the design is not finalized, there will be no vehicular access underneath the overpass, and the City requires the applicant to relinquish their abutters' rights at the property line, despite the elevated road. Beyond that, he said there are no additional details available at this time, but he emphasized that the applicant has cooperated in preparing and granting the necessary easements for the future overpass construction.

Commissioner Fitts thanked him for the information.

Commissioner Aguilar followed up with a question for the City Engineer, recognizing the progress toward the 90% design milestone. He asked if there is an estimated timeline for when the construction of the overpass will begin, and once it starts, how long completion might take.

City Engineer Alman said that no timeline is available yet. While the design is approaching 90% completion, many steps remain, so estimating the construction schedule or duration is premature.

Commissioner Aguilar thanked him for the clarification.

Next, Commissioner Dhillon inquired about traffic flow to and from the proposed site. He wanted to know where all the traffic going to the building would be coming from, expressing concerns about morning traffic congestion. Commissioner Dhillon expressed that there is a lot of traffic in the housing development area. He also expressed big trucks making turns, and whether there would be a traffic signal light.

AP Balatbat clarified that the property has multiple access points, including Sycamore Street, Central Avenue (from Cherry Street), and the Bayside Newark neighborhood. He also mentioned that the traffic impact study identified a queuing concern. One suggested solution is signal timing at the intersection of Central Avenue and Cherry Street, which will help manage traffic flow more effectively.

Commissioner Dhillon acknowledged the response and thanked staff.

Following the Planning Commission's discussion, Chair Bogisich invited the applicant, Mr. Nick Fafoutis of Prologis, to the podium to present. She asked if he had read the resolution and agreed to all the conditions of approval.

Mr. Nick Fafoutis, representing Prologis, confirmed he had read and agreed to the conditions of approval. He introduced himself as the for new acquisitions and developments in Northern California and mentioned that Prologis has worked closely with City staff over the past 18 months to advance the proposed project at 6756 Central Avenue.

He stated that Prologis, founded in 1983 and headquartered in the Bay Area, is a global industrial real estate company operating in 20 countries across four continents. Despite its size, Prologis emphasizes local impact, long-term ownership, and community partnerships, with 12 existing properties in Newark totaling 1.7 million square feet.

Mr. Fafoutis stated that the proposed project is a speculative industrial building for future manufacturing, warehousing, or distribution tenants. He explained that the site was acquired in 2019 and was previously filled with dilapidated structures and uses that did not comply with regulations. Prologis collaborated with the City to vacate tenants, demolish unsafe buildings, and prepare the site, which is now mostly vacant.

He mentioned that the proposed development aligns with the upcoming Central Avenue Overpass. He added that the original access points were revised in coordination with the City to accommodate the overpass design, and that the underground infrastructure improvements have been completed at no cost to support the overpass construction.

He noted that sustainability is key to the project, which will be:

- LEED Silver certified
- Solar-ready
- Equipped with EV charging infrastructure
- Heavily landscaped for visual and environmental quality

The building will feature a modern office space, a second-floor mezzanine, and an outdoor amenity area for employees, all designed to attract quality tenants and a strong workforce. Additionally, he mentioned that Prologis plans to install a public art piece and hopes to collaborate with a local Newark artist.

Mr. Fafoutis stated that the project involves a $100 million investment, generating approximately $2.9 million in impact fees, and is expected to create construction and permanent jobs and ongoing tax revenue.

He further stated that Prologis has continued to commit to the community by donating to the Newark Education Foundation, participating in the City's tree lighting, and sponsoring Newark Days.

Mr. Fafoutis concluded by thanking City staff and the Commission, and respectfully requested approval of the Conditional Use Permit, reaffirming Prologis's commitment to being a long-term partner in Newark.

Following Mr. Fafoutis' presentation, Chair Bogisich expressed her thanks and invited the Commission to ask questions.

Commissioner Aguilar praised the presentation and asked two important questions. First, he asked about the expected construction timeline. Mr. Fafoutis replied that if construction started in early 2026, the entire process, including site work and vertical construction, would take about 12 months.

Second, Commissioner Aguilar inquired about the current market demand for industrial users. Mr. Fafoutis explained that demand varies by region, with distribution users more common near the Port of Oakland and advanced manufacturing more prevalent in Silicon Valley. He highlighted the importance of flexibility, especially given the unpredictable global economic conditions, which is why the Conditional Use Permit (CUP) is vital.

Vice Chair Becker also praised the project, calling it a significant improvement over what he described as a long-standing "eyesore." He asked about the possibility of attracting a point-of-sale tenant, which could generate local tax revenue. Mr. Fafoutis confirmed this was a potential option, noting their financial analysis modeled various tenant types, including fulfillment and warehouse users, with potential annual tax contributions ranging from $150,000 to $900,000, depending on the tenant's profile.

Vice Chair Becker also expressed concerns about truck traffic but acknowledged that the Traffic impact study adequately addressed those issues. He then asked whether constructing the Central Avenue Overpass might interfere with the project, either during construction or once it is operational. Mr. Fafoutis explained that Prologis has been working closely with City staff to phase construction properly and avoid conflicts. He added that temporary construction easements have been well-documented, and future tenants would be fully aware of potential overpass work during lease negotiations.

Vice Chair Becker revisited the long history of the Central Avenue Overpass planning, noting that discussions had been ongoing for many years. He asked again about the construction timeline. Public Works Director Howard Young responded that, due to multiple moving parts, no definitive construction schedule exists at this time, but the City will notify stakeholders when one is established.

Chair Bogisich then opened the floor to public comments; however, no members of the public spoke up.

Following this, Mr. Stephen Cassidy, President of the Newark Chamber of Commerce, spoke to the Commission and made remarks supporting the Prologis project.

He expressed the Chamber of Commerce's strong support, highlighting the project's $100 million investment, its potential to revitalize the industrial area, create local jobs, and offer long-term economic benefits to the City. Mr. Cassidy pointed out the $2.9 million

development fees as a possible funding source for future infrastructure projects like the Central Avenue Overpass. Drawing from his experience as the former Mayor of San Leandro, he emphasized the importance of flexible land use, referencing a similar project that became a key source of tax revenue. He urged the Commission to approve the project and endorse its lasting benefits for the Newark community.

Chair Bogisich closed the public hearing and invited the Commission to share any final questions, comments, or to make a motion.

Commissioner Fitts began by sharing his long-standing concerns about the Central Avenue Overpass project, especially its uncertainty. However, after hearing the applicant's detailed explanation and understanding that the proposed development could move forward without the overpass, he felt reassured. He voiced his support for the project, calling it well-designed and beneficial to the community.

Commissioner Aguilar echoed Mr. Cassidy's earlier comments, stating that a speculative development like this demonstrates a strong vote of confidence in Newark's future and its ability to attract quality tenants. He highlighted that the project improves the underutilized site and noted that the visual renderings illustrate the positive transformation. Comparing the proposal to a past project, Mission Linen, approved several years ago, he said this new project represents a clear net benefit to the community. With that, he offered to make a motion in favor of approval.

Motion: Chair Bogisich called for a motion. Commissioner Aguilar moved to approve, and Vice Chair Becker seconded the motion. **The motion passed unanimously—5 AYES.**

F. STAFF REPORTS

None.

G. COMMISSION MATTERS

G.1 Report on City Council actions.

None.

H. PLANNING COMMISSIONER COMMENTS

Commissioner Fitts wished everyone a happy Fourth of July and encouraging the community to purchase fireworks in Newark.

Chair Bogisich thanked everyone for attending and appreciated the thoughtful presentations and reports.

I. ADJOURNMENT

Chair Bogisich adjourned the meeting at 7:45 p.m.

Respectfully submitted,

Steven Turner,
Secretary

RESOLUTION NO. _____

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF NEWARK OVERTURNING THE PLANNING COMMISSION'S DECISION OF APPROVAL THEREBY DENYING DR2022-010, U2024-001, AND MUP2024-001, A DESIGN REVIEW, CONDITIONAL USE PERMIT, AND MINOR USE PERMIT FOR A NEW INDUSTRIAL BUILDING AND ASSOCIATED ON-SITE IMPROVEMENTS AT 6756 – 6792 CENTRAL AVENUE (APN: 92A-2165-14, -15, -16, AND -17)

WHEREAS, Ryan Marshall, (the "Applicant") and Prologis LP (the "Property Owner"), filed with the City of Newark an application for a Design Review, Conditional Use Permit, and Minor Use Permit for a new industrial building and associated on-site improvements at 6756 – 6792 Central Avenue (APN 92A-2165-14, -15, -16, and -17) (the "Project"); and

WHEREAS, the property at 6756 – 6792 Central Avenue (the "Project site") has a combined lot size of approximately 756,061 square feet (17.4 acres) and has a General Plan Land-Use designation of General Industrial and is currently zoned GI: General Industrial; and

WHEREAS, the Applicant and Property Owner seek a Design Review, which pursuant to Newark Municipal Code (NMC) §17.34.020 is required for all projects that require a permit for new construction, reconstruction, rehabilitation, alteration, or other improvements to the exterior of a structure, site, or a parking area. Approval of the Design Review requires the Project to meet the Design Review criteria pursuant to NMC §17.34.060 to the extent that they apply; and

WHEREAS, the Applicant and Property Owner seek a Conditional Use Permit, which pursuant to NMC §17.09.020, an "indoor warehousing and storage" use and a "wholesaling and distribution" use requires approval of a Conditional Use Permit. Approval of the Conditional Use Permit requires the Project to meet all the following Use Permit findings pursuant to NMC §17.35.060; and

WHEREAS, the Applicant and Property Owner seek a Minor Use Permit, which pursuant to NMC §17.17.040(A)(2), an additional height increase to the new prefinished vertical tube steel fencing to be 6 feet tall within the minimum required 10-foot front setback area requires approval of a Minor Use Permit. Approval of the Minor Permit requires the Project to meet all the following Minor Use Permit findings pursuant to NMC §17.35.060 and NMC §17.17.040(A)(1)(a)(ii); and

WHEREAS, a California Environmental Quality Act (the "CEQA") analysis was prepared as set forth in **Exhibit D** to evaluate the environmental impacts of the Project in accordance with the CEQA Guidelines. With implementation of the applicable mitigation measures identified in the Final Environmental Impact Report (FEIR) for the 2013 General Plan and conditions of approval as set forth in the analysis, the CEQA analysis determined and demonstrated that the Project is exempt from further environmental review pursuant to CEQA Guidelines Sections

15168 and 15183 and California Public Resources Code Section 21083.3 because the level of development proposed is within the development assumptions analyzed in the FEIR and the Project is consistent with the General Plan; and

WHEREAS, the Planning Commission held a public hearing on June 24, 2025, and after fully considering the Project, entitlements, staff report, findings of fact, conditions of approval, public comments, and all other testimony and evidence presented at the public hearing, voted 5-0 to approve the Project; and

WHEREAS, a Notice of Action describing the decision taken from the Planning Commission was sent to the members of the City Council and Planning Commission, applicant, all property owners within a minimum 1,000-foot radius of the Project site, all neighborhood and community organizations that have filed a written request for notice of projects in the area where the site is located, and all persons and groups who have filed a written request for notice regarding the specific application; and

WHEREAS, pursuant to NMC §17.31.100, a member of the City Council may call for review of a decision of the Director, Zoning Administrator, or Planning Commission; and

WHEREAS, Council Member Grindall called for a review of the Planning Commission's decision on the Project; and

WHEREAS, pursuant to NMC §17.31.060, a public hearing notice was published in The Tri City Voice on July 8, 2025 and mailed as required for a public hearing, and the City Council held a meeting on said application at 7:00 p.m. on July 24, 2025; and

WHEREAS, the City Council held a public hearing on July 24, 2025, and fully considered the Project, entitlements, staff report, findings of fact, conditions of approval, public comments, and all other testimony and evidence presented at the public hearing; and

WHEREAS, the City Council has determined that it cannot make the required findings pursuant to the Design Review criteria specified in NMC §17.34.060, Conditional Use Permit findings specified in NMC §17.35.060, and Minor Use Permit findings specified in NMC §17.35.060 and NMC §17.17.040(A)(1)(a)(ii) as further explained in the findings of fact associated with this Resolution, as identified in "Exhibit A" attached to this Resolution.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Newark as follows:

Section 1. That the forgoing recitals are true and correct and made part of this Resolution.

Section 2. That the City Council cannot make the necessary findings and determinations required by the NMC to approve the requested Design Review, Conditional Use Permit, and Minor Use Permit for the Project, as further set forth in "Exhibit A" attached hereto and incorporated herein by this reference.

Section 3. Based on the findings and determinations, the City Council hereby overturns the

Planning Commission's approval of the Project and denies DR2022-010, U2024-001, and MUP2024-001, a Design Review, Conditional Use Permit, and Minor Use Permit for a new industrial building and associated on-site improvements at 6756 – 6792 Central Avenue (APN 92A-2165-14, -15, -16, and -17).

This Resolution was introduced at the City of Newark City Council's July 24, 2025 regular meeting by Council Member _____, seconded by Council Member _____, and passed as follows:

Exhibit A – Findings of Fact
Exhibit B – Project Narrative
Exhibit C – Project Plans
Exhibit D – CEQA Analysis

Exhibit A

FINDINGS OF FACT

DR2022-010, U2024-001, and MUP2024-001
6756 – 6792 Central Avenue
Alameda County Assessor's Parcel Number(s) 92A-2165-14, -15, -16, and -17

Design Review Criteria (Newark Municipal Code [NMC] §17.34.060)

A. The overall design of the project including its scale, massing, site plan, exterior design, and landscaping will enhance the appearance and features of the project site and surrounding natural and built environment.

B. The project design is appropriate to the function of the project and will provide an attractive and comfortable environment for occupants, visitors, and the general community.

C. Project details, materials, signage and landscaping, are internally consistent, fully integrated with one another, and used in a manner that is visually consistent with the proposed architectural design.

D. The design of streetscapes, including street trees, lighting, and pedestrian furniture, is consistent with the intended character of the area.

E. Parking areas are designed and developed to buffer surrounding land uses; compliment pedestrian-oriented development; enhance the environmental quality of the site, including minimizing stormwater run-off and the heat-island effect; and achieve a safe, efficient, and harmonious development.

F. Lighting and lighting fixtures are designed to complement buildings, be of appropriate scale, provide adequate light over walkways and parking areas to create a sense of pedestrian safety, and avoid creating glare.

G. Landscaping is designed to be compatible with and enhance the architectural character and features of the buildings on site and help relate the building to the surrounding landscape.

Conditional Use Permit Findings (NMC §17.35.060)

A. The proposed use is allowed within the applicable zoning district and complies with all other applicable provisions of this title [NMC Title 17] and all other titles of the Municipal Code.

B. The proposed use is consistent with the general plan and any applicable specific plan.

C. The proposed use will not be adverse to the public health, safety, or general welfare of the community, nor detrimental to surrounding properties or improvements.

D. Tax revenue generated by the development will exceed the City's cost of the service demand as a result of the development or a compelling community benefit will be provided.

E. The proposed use complies with any design or development standards applicable to the zoning district or the use in question unless waived or modified pursuant to the provisions of this title [NMC Title 17].

F. The design, location, size, and operating characteristics of the proposed activity are compatible with the existing and reasonably foreseeable future land uses in the vicinity.

G. The site is physically suitable for the type, density, and intensity of use being proposed, including access, utilities, and the absence of physical constraints.

Minor Use Permit Findings (NMC §17.35.060)

A. The proposed use is allowed within the applicable zoning district and complies with all other applicable provisions of this title [NMC Title 17] and all other titles of the Municipal Code.

B. The proposed use is consistent with the general plan and any applicable specific plan.

C. The proposed use will not be adverse to the public health, safety, or general welfare of the community, nor detrimental to surrounding properties or improvements.

D. Tax revenue generated by the development will exceed the City's cost of the service demand as a result of the development or a compelling community benefit will be provided.

E. The proposed use complies with any design or development standards applicable to the zoning district or the use in question unless waived or modified pursuant to the provisions of this title [NMC Title 17].

F. The design, location, size, and operating characteristics of the proposed activity are compatible with the existing and reasonably foreseeable future land uses in the vicinity.

G. The site is physically suitable for the type, density, and intensity of use being proposed, including access, utilities, and the absence of physical constraints.

Minor Use Permit Findings for Additional Fence Height (NMC §17.17.040(A)(1)(a)(ii))

A. The additional fence height will not impair the provision of adequate light, air, circulation, and visual openness around adjacent residential structures.

B. The additional fence height will not detract from the overall appearance of the neighborhood.

C. The additional fence height is not detrimental to the health, safety, and welfare of people living in the neighborhood.

California Environmental Quality Act (CEQA) Categorical Exemption Findings

Prologis Industrial Building Project

(DR2022-010, U2024-001, & MUP2024-001)

Agenda

1. Summary of Events
2. Call for Review
3. Project Background and Overview
4. California Environmental Quality Act (CEQA) Exemption
5. Findings of Fact
6. Staff Recommendation
7. Questions

Summary of Events

- On June 24, 2025, the Planning Commission considered the Project and adopted Resolution No. 2022 with a vote of 5-0 to approve the Project, based upon the findings contained in the Resolution and subject to the conditions of approval.

- Notice of Action describing the Planning Commission's decision was sent out, which includes the members of the City Council. The Notice of Action included procedures for a Call for Review of the decision.

- Council Member Grindall requested a Call for Review of the Planning Commission's decision to adopt the Resolution.

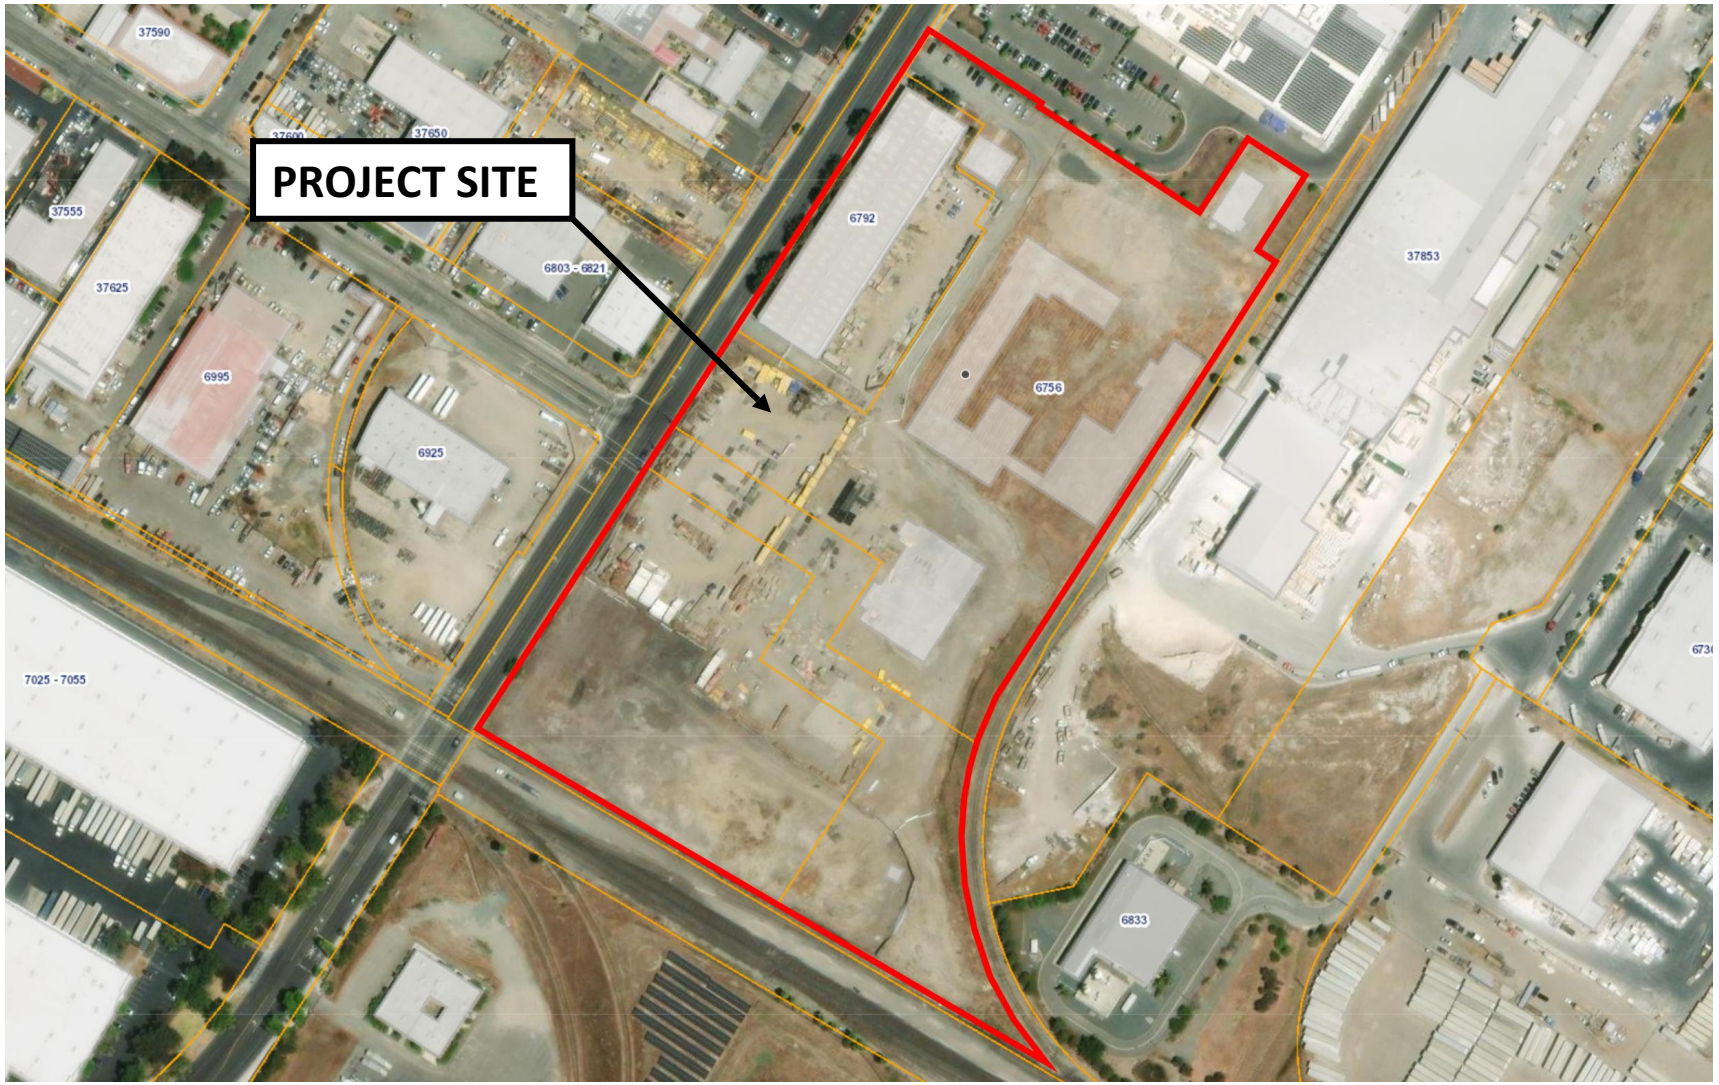
Call for Review

- Pursuant to NMC §17.31.100, a member of the City Council may submit a "Call for Review" of a decision of the Community Development Director, Zoning Administrator, or Planning Commission.

- Such call for review shall not require any statement of reasons and shall not represent opposition to or support of a decision, application, or appeal.

- Procedure:
  1. Design Review and Other Ministerial Actions. The call for review shall be scheduled as a staff report item at the next available meeting of the body which called for review.
  2. Use Permits and Other Discretionary Actions. The call for review shall be processed in the same manner as an appeal by any other person.

Project Overview



Requested Entitlements

- **Design Review (DR2022-010)** for the construction of a new industrial building and associated on-site improvements.

- **Conditional Use Permit (U2024-001)** to allow for an “indoor warehousing and storage” use and a “wholesaling and distribution” use.

- **Minor Use Permit (MUP2024-001)** to allow for an additional height increase to the new prefinished vertical tube steel fencing to be 6 feet tall within the minimum required 10-foot front setback area.

Community Meetings

- **1st Community Meeting**
  - ❑ Date: December 18, 2023
  - ❑ Location: Silliman Community Activity Center

- **2nd Community Meeting**
  - ❑ Date: January 21, 2025
  - ❑ Location: Community Meeting Room in the Newark Library.

CEQA Exemption

- The Project is eligible for the following CEQA exemptions:
  - ***Consistency with Program EIR.*** *The City of Newark 2013 FEIR provides for streamlining and/or tiering provisions under CEQA Guidelines Section 15168. This CEQA Analysis demonstrates that the proposed Project would not result in substantial changes or involve new information that would warrant the preparation of a subsequent EIR.*

  - ***Community Plan Exemption.*** *Streamlined environmental review per Section 15183 of the CEQA Guidelines and California Public Resources Code Section 21083.3. The Project is consistent with the General Plan and will not result in significant environmental impacts that were not previously identified as significant project-level, cumulative or offsite effects in the 2013 FEIR.*

Fiscal Impact

- Based on the new building square footage (≈ 315,390 SF).
- **Community Development Maintenance Fee:** 0.5% of construction valuation

Impact Fees			
Public Safety:	$0.61/SF	=	**$192,387.90**
Community Service/Facilities:	$0.45/SF	=	**$141,925.50**
Transportation:	$5.93/SF	=	**$1,870,262.70**
Housing Impact:	$0.83/SF	=	**$261,773.70**
Art in Public Places and Private Development:	$0.21/SF	=	**$66,231.90**
Total			**$2,532,581.70**

Findings of Fact

- The Project must meet all the:
  - Design Review Criteria (NMC §17.34.060)
  - Conditional Use Permit Findings (NMC §17.35.060)
  - Minor Use Permit Findings (NMC §17.35.060 and NMC §17.17.040(A)(1)(a)(ii))

- The inability to make one or more of the criteria and findings is grounds for denial.

- On June 24th, the Planning Commission determined that the Project meets the criteria and findings for the entitlements, as outlined in Resolution 2022.

Staff Recommendation

- Staff recommends that the City Council consider one of the following actions:

1. Affirm the Planning Commission's decision to adopt the Resolution without any modifications to project approvals;
2. Affirm the Planning Commission's decision to adopt the Resolution with changes to the Project, the required findings of fact, and/or the conditions of approval; or
3. Reject the Planning Commission's decision; thereby, denying the Project based on an inability to make the necessary findings for approval.

Staff Recommendation

If the City Council determines that the entitlement findings cannot be made and decides to overturn the decision of the Planning Commission:

- A statement shall be made specifically identifying the denial findings as outlined in Attachment 5.

Questions

STAFF REPORT

Item F. 1.

DATE	07/24/2025
TO	Honorable Mayor and City Council Members
FROM	Ed Miranda, Information Technology Director/CIO
SUBJECT	Adopt a resolution to award a Broadband Public-Private Partnership contract to Smart Fiber Networks

SUMMARY AND RECOMMENDATION

This staff report summarizes the City of Newark's strategic broadband efforts and outlines the rationale for selecting a Public-Private Partner (P3) to implement the Broadband Master Plan. The report recommends award of the P3 contract to Smart Fiber Networks based on proposal responsiveness, qualifications, pricing, and alignment with long-term City goals.

Staff recommends that the City Council consider adoption of a resolution awarding a Public-Private Partnership contract to Smart Fiber Networks for design and implementation of broadband infrastructure, including connection of City facilities and public access infrastructure.

BACKGROUND

Seed funding

In March 2021, the federal government passed the American Rescue Plan Act (ARPA), allocating $11.8 million to the City of Newark through the State and Local Fiscal Recovery Fund (SLFRF). The City designated $1.2 million for broadband development:

- $200,000: Citywide Broadband Master Plan
- $1,000,000: Broadband infrastructure implementation

Resolution No. 11275 adopted by City Council on October 28, 2021, approved these priorities.

Additionally, on July 27, 2023, City Council adopted Resolution No. 11554, accepting $1,800,000 State grant funding for broadband improvements. This funding was secured through the lobbying efforts of City staff and Assemblymember Alex Lee with appropriations from Assembly Bill 179.

Broadband Master Plan

After broad community and focused business outreach efforts, a 10-year strategic Broadband Master Plan (Plan) was developed and adopted by City Council via Resolution No. 11680 on July 25, 2024. The Plan outlines a strategic framework to

improve and expand internet access for all community sectors. Its purpose is to guide investments, partnerships, and policies that support digital equity, economic development, and Smart City initiatives. Smart City initiatives use technology and data-driven solutions like sensors and high-speed internet to improve quality of life. Impacts include reducing traffic, saving energy, improving safety, and making it easier for people to access city services. The following goals, key findings, and key actions are included in the Plan.

Primary Goals:

- Inclusivity – equitable broadband access citywide
- Reliability – resilient, modern infrastructure
- Affordability – low-cost service for all
- Smart City Enablement – broadband backbone to support innovation

Key Findings:

- A city-owned network would reduce the City's telecom costs
- Strong foundation to attract Public-Private Partnership investment
- Current service reliability is inconsistent
- Indoor cellular gaps in City facilities
- Need for broadband-friendly policies (e.g., dig-once, joint trench, micro trench)
- Infrastructure must support future technologies

Key Actions:

1. Assign program lead and oversight team
2. Adopt broadband policies (e.g., dig-once, joint trench, micro trench)
3. Pursue a Public-Private Partnership to develop and deliver broadband internet service
4. Develop long-term funding strategies
5. Incrementally build city-owned infrastructure

Priority Projects:
The 10-year Plan includes many projects, some with multiple phases, in order to achieve the ultimate goal of equitable access to community-wide broadband. In consideration of the current available funding and in addition to policy development tasks, two priority projects were identified:

Expansion of Wi-Fi
Wi-Fi is a technology that lets devices like phones, laptops, and tablets connect to the internet wirelessly using radio waves instead of cables. While a long-term goal is to ensure community-wide access to reliable high-speed wi-fi, that is a multi-year process requiring an undetermined amount of funding in the millions of dollars. Staff recently applied for a federal grant that could outfit most of the City with fiber infrastructure to improve internet access, reliability, and affordability. Staff anticipate receiving results of the grant application in the fall.

Part of the goal of community-wide broadband includes offering free wi-fi to the public at City sites. Currently, free wi-fi is available while visiting David W. Smith City Hall, Newark Police Department, Clark W. Redeker Newark Senior Center, and the

George M. Silliman Community Activity Center. With the available funding, expanding free public wi-fi to four major parks is planned for prioritization. This includes Newark Community Center Park, Birch Grove Park, Jerry Raber Ash Street Park, and Mel Nunes Sports Field Park.

Fully-connected City Infrastructure
To improve security and efficiency of the City's network, another identified priority project is to connect all City facilities using underground and aerial fiber routes. Benefits of this inter-connection include improved City operations, reduced City telecom expenses, a broadband fiber optic backbone to support innovation, and enhanced business attraction.

DISCUSSION/ANALYSIS

To complete the identified priority projects, a public-private partnership (P3) was identified as the most cost-effective and efficient means of achieving the City's goals. A broadband P3 is a contractual agreement between a government entity and a private company to develop and deliver broadband internet service. It combines the resources and expertise of both sectors to improve internet access, particularly in underserved areas. By sharing risks, P3s can make large-scale broadband projects more feasible and attractive to private investors. P3s can streamline the process of building and deploying broadband networks compared to traditional government-led projects.

The Request for Proposals for a Broadband Public-Private Partnership was released April 28, 2025, and closed June 5, 2025. Six proposals were received:

- Bonfire
- California Broadband Alliance (unresponsive)
- Circet USA (unresponsive)
- Pivot-Tech Development (unresponsive)
- Smart Fiber Networks
- SmartWAVE Technologies LLC

Proposals were reviewed by a committee including City department representatives and the Information Technology Steering Committee. Top respondents were further interviewed.

Smart Fiber Networks scored highest overall and was identified as the most responsive, scalable, and investment-ready partner. Their model includes a physical fiber optic infrastructure available to other businesses and households (open-access infrastructure) with a 60/40 profit-sharing fee structure (Vendor/City), designed to lower prices through internet service provider competition and provide meaningful City revenue. In addition, Smart Fiber Networks was the lowest responsible bidder.

FISCAL IMPACT

The total cost of the proposed Broadband Public-Private Partnership contract with Smart Fiber Networks is $3,281,559, which includes:

- Phase 1: $1,868,039
- Phase 2: $526,560
- Phase 3: $600,859
- Fiber Maintenance (5 years): $234,000
- Wireless Maintenance (5 years): $22,800
- Pole Attachment Fees: $29,300

The following funding sources have been secured, received, and earmarked for the Broadband Initiative:

- $1,000,000 – American Rescue Plan Act (ARPA) allocation, previously designated for broadband implementation and now available for re-appropriation from the Revenue Restoration Fund
- $1,800,000 – Federal appropriation secured through Assemblymember Alex Lee (AB179 allocation)
- $700,000 – Public, Educational, and Governmental (PEG) access funds available for capital broadband-related expenditures

Although all funding sources are fully received and available, City Council action is required to appropriate Broadband Master Plan funds, ARPA Revenue Restoration funds, State Grant AB179 funds, and Public, Educational, and Government (PEG) funds into Capital Improvement Project No. 1418 – Broadband Initiatives project as part of the Fiscal Year 2025-26 budget cycle.

The total available funding fully supports the project cost, and no General Fund appropriation is required.

Broadband Master Plan

RESOLUTION NO.

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF NEWARK AUTHORIZING THE AWARD OF A BROADBAND PUBLIC-PRIVATE PARTNERSHIP CONTRACT TO SMART FIBER NETWORKS AND APPROPRIATING FUNDS TO CAPITAL IMPROVEMENT PROJECT NO. 1404

WHEREAS, on March 11, 2021, the American Rescue Plan Act (ARPA) was signed into law, allocating $11.8 million in federal relief funds to the City of Newark through the Coronavirus State and Local Fiscal Recovery Fund; and

WHEREAS, by Resolution No. 11275 adopted on October 28, 2021, the City Council approved the allocation of $200,000 for the development of a Citywide Broadband Master Plan and $1,000,000 for partial implementation of broadband infrastructure; and

WHEREAS, the remaining $1,000,000 previously allocated for broadband infrastructure under Resolution No. 11275 was subsequently transferred to the City's Revenue Restoration Fund and is now available for re-appropriation to Capital Improvement Project No. 1404 – Broadband Initiatives; and

WHEREAS, an additional $1,800,000 was secured through the lobbying efforts of City Staff and Assemblymember Lee with appropriations from Assembly Bill 179 and accepted by City Council on July 27, 2023 via Resolution No. 11554; and

WHEREAS, the City Council adopted the Citywide Broadband Master Plan via Resolution No. 11680 on July 25, 2024, which outlines a ten-year strategy for achieving citywide high-speed broadband connectivity, supporting Smart City goals, and enabling equitable access to broadband for all Newark residents and businesses; and

WHEREAS, the City issued a Request for Proposals (RFP) on April 28, 2025, to identify a qualified Public-Private Partner to implement key elements of the Broadband Master Plan, including construction of a fiber-optic backbone and the provision of open-access broadband services; and

WHEREAS, after thorough evaluation of six submitted proposals, including interviews conducted by the City's broadband consultant GTG, Smart Fiber Networks was determined to be the most responsive and qualified proposer, offering a comprehensive and scalable broadband infrastructure solution aligned with the City's vision; and

WHEREAS, Smart Fiber Networks' proposal includes a total cost of $3,281,559 across three project phases and five years of operations and maintenance, with a 60/40 (Vendor/City) profit-sharing model that supports open-access and competitive ISP engagement; and

WHEREAS, funding for the project has been fully secured, received, and earmarked from the following sources:

- $1,000,000 from the American Rescue Plan Act (ARPA), available via the City's Revenue Restoration Fund
- $1,800,000 from Assembly Bill 179 appropriations secured by Assemblymember Alex Lee
- $700,000 from previously collected Public, Educational, and Governmental (PEG) access funds designated for eligible capital broadband infrastructure; and

WHEREAS, appropriation of these funds into the Fiscal Year 2025–26 Biennial Budget is necessary to proceed with contract execution and construction activities under Capital Improvement Project No. 1404 – Broadband Initiatives.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Newark as follows:

1. The City Council hereby awards a Broadband Public-Private Partnership contract to Smart Fiber Networks in an amount not to exceed $3,281,559 and authorizes the City Manager to execute the contract and any associated documents necessary to implement the project.

2. The City Council hereby authorizes an amendment to the Fiscal Year 2025–26 Biennial Budget and Capital Improvement Plan to appropriate a total of $3,500,000 to Capital Improvement Project No. 1404 – Broadband Initiatives, including $1,800,000 from the AB179 Federal Appropriation (Fund 492), $1,000,000 from the ARPA Revenue Restoration Fund (Fund 110), and $700,000 from the PEG funds (Fund 611), as follows:

TO:	610.90.094.940.6221.CIP1404	Broadband Initiatives	$170,000
FR:	610.90.094.940.6221.CIP1418	Broadband Master Plan	$170,000
TO:	610.90.094.940.6221.CIP1404	Broadband Initiatives	$1,630,000
FR:	492.00.000.000.9999	State Grants AB179 - Broadband	$1,630,000
TO:	610.90.094.940.6221.CIP1404	Broadband Initiatives	$1,000,000
FR:	110.00.000.000.9999	ARPA Revenue Restoration Funds	$1,000,000
TO:	610.90.094.940.6221.CIP1404	Broadband Initiatives	$700,000
FR:	611.00.000.000.9999	Public, Educational, and Governmental (PEG) Funds	$700,000

Broadband Public-Private Partnership

July 24, 2025

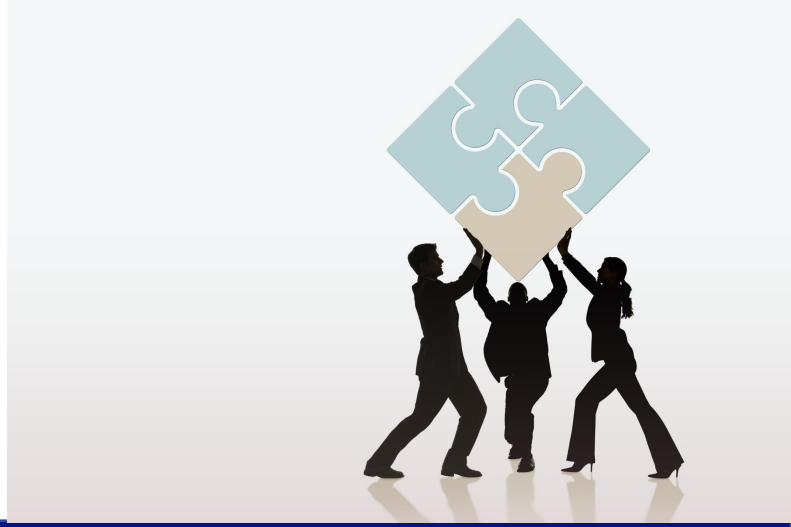
City Council Meeting

Ed Miranda, Information Technology Director

Broadband Public-Private Partnership

Background: Broadband Master Plan Development

- Funding secured through American Rescue Plan Act (ARPA)
- Community outreach: March - August 2023
- Plan adopted: July 2024
- Strategic framework to improve and expand internet access for all community sectors



Broadband Public-Private Partnership

Background: Goals

- Inclusivity
- Reliability
- Affordability
- Smart City enablement

Broadband Public-Private Partnership

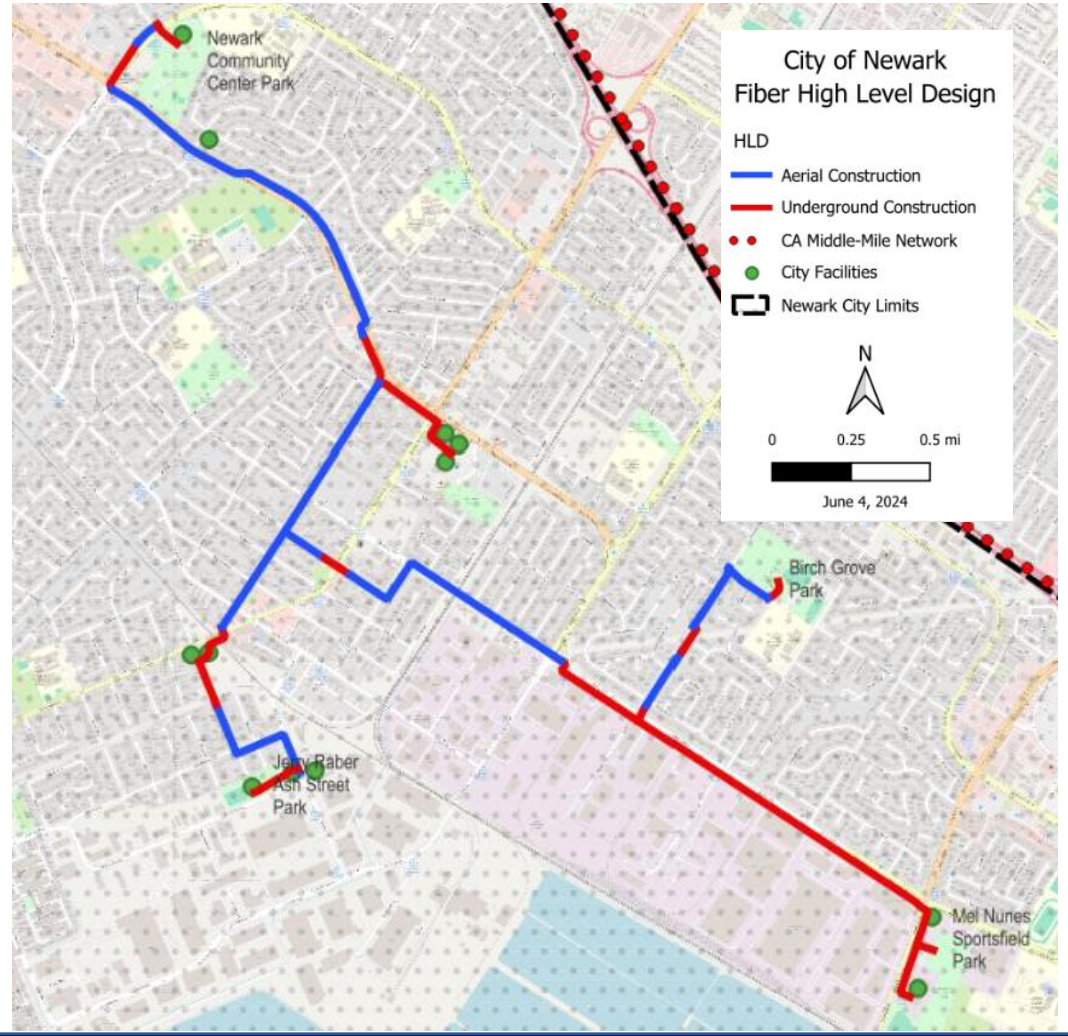
Background: Key Findings

- City-owned fiber network = telecom cost savings
- Broadband policy needs: dig-once, joint trench, and micro trench policies
- Spotty cellular coverage in City facilities
- Inconsistent service reliability
- Infrastructure for future technologies

Broadband Public-Private Partnership

Background: Priority Projects

- Fiber to City facilities via aerial and underground routes
- Free Public Wi-Fi:
  - Newark Community Center Park
  - Birch Grove Park
  - Jerry Raber Ash Street Park
  - Mel Nunes Park
- Foundation for fiber backbone and broadband investment



Broadband Public-Private Partnership

RFP Process

Issued: April 28, 2025 | **Closed:** June 5, 2025

6 proposals received | 3 responsive:

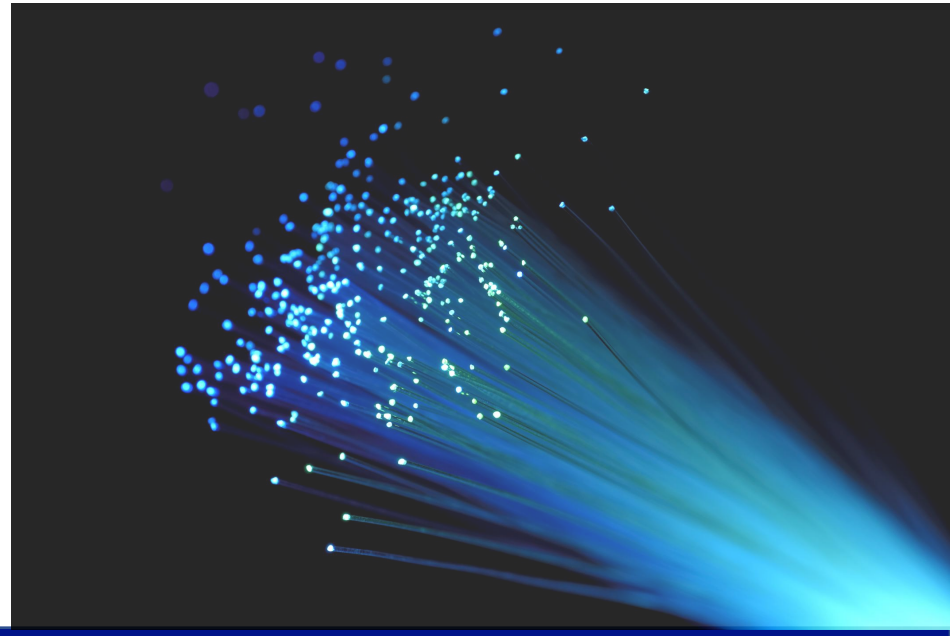
- Smart Fiber Networks
- SmartWAVE Technologies
- Bonfire

Evaluated by review committee and Information Technology Steering Committee

Broadband Public-Private Partnership

Recommended Partner: Smart Fiber Networks

- Lowest Responsible Bidder
- Top-ranked proposer with scalable model
- Open-access platform with 60/40 revenue share (Vendor/City)
- Local Experience
- Prequalified for Broadband, Equity, Access & Deployment (BEAD) funding



Broadband Public-Private Partnership

Project Cost & Fiscal Plan

Total Proposal Cost: $3,281,559

Available Funds:

$1M American Rescue Plan Act (ARPA)

$1.8M Assembly Bill 179

$700K Public, Educational, and Governmental Access (PEG)

Broadband Public-Private Partnership

Staff Recommendation

- Adopt a resolution to authorize the award of a Broadband Public-Private Partnership contract to Smart Fiber Networks and appropriate additional funds to Capital Improvement Project no. 1418

Broadband Public-Private Partnership

Executive Summary

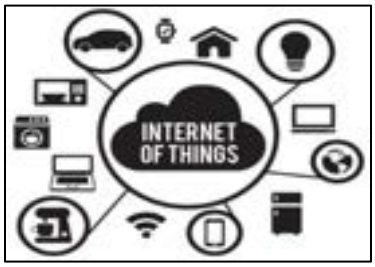
Broadband is a 21st century challenge, ranked as one of the most important technology investments to make worldwide. It is key for economic development purposes, competitiveness, job creation and a new foundation for more prosperous communities. In Newark's case, there is a desire to improve reliability and speeds in the community, including wireless and 5G technologies. Broadband increases the opportunities to achieve these goals.

Access to the internet is a critical part of everyday life for most of the world. The internet, known as a network of networks, allows individuals to connect to each other, no matter where you live or do business in the world. Broadband is the way we connect to the internet, using diverse types of technology such as copper wireline, fiber optics, cellular, wireless, coax or even satellite.

Although there are different technologies, the terms broadband and internet can be interchangeable terms that refer to ability to access the "Net" or internet. "High-speed" broadband is the term for devices to connect to the internet via wireless, fiber optics, hybrid fiber coax or DSL technologies. The Federal Communications Commission has defined broadband as internet speeds of at least 25 megabits per second (Mbps) download and 3 Mbps upload. California has set a higher standard of 100Mbps down and 20 Mbps up.

The internet of things (IoT) refers to a collective network of devices that can communicate with each other, the cloud and other networks. IoT integrates everyday "things" such as refrigerators, TVs, cars, phones and a myriad of devices and implants to continuously monitor and report their status with minimal or no human interaction needed. The IoT relies on broadband, in all its many forms, to connect to the internet.

Figure 1 - Internet of Things



Technology advancements are creating an online reality that cannot be ignored, and any city that does not embrace this new reality will be left behind. Distance learning, telehealth and remote work are requirements for residents to be able to function in this new online environment. Until recently, broadband was viewed as a luxury provided by the private sector, with cities held captive by the whims of these companies.

The City of Newark is no different. Partnering with Government Technology Group LLC (GTG), a Broadband Master Plan and Smart City Study was performed to assess broadband and Smart City opportunities in the city.

The City recognized their community's desire for high-speed, affordable broadband services. Government Technology Group (GTG) performed the assessment of the broadband and Smart City needs of the city, exploring opportunities for improving and expanding high speed broadband communications for all community members in their jurisdiction, while taking advantage of broadband communications to support innovative Smart City solutions.

The assessment included a survey of the community, workshops with residents, stakeholders and businesses and discussions with City staff to obtain a holistic view of their needs.

The outreach performed by GTG shows that the city is well served by broadband internet, but there is a need to expand fiber to other areas of the city to support municipal services and build infrastructure that could be used to improve competition between broadband providers in the city, if determined as a need in the future. Broadband expansion could also be beneficial in improving wireless connectivity in the city for public safety, public works and for the public with expanded 5G services.

For Newark to be successful in moving forward with the recommendations of the Broadband Master Plan the following top six recommendations should occur:

1) Defining roles and responsibilities, assigning a point person to lead broadband efforts, and continual oversight on program initiatives and progress.
2) Establish a staff committee for oversight and accountability for program initiatives and progress.
3) Newark should consider a public private partnership for a partner that can engineer and construct the High-Level Design as well as attract an ISP to provide Internet services to the community. The provider should also have the ability to add public/private WiFi to areas identified by the City.
4) Create policies and procedures relative to broadband development including a dig once policy and development agreement standards.
5) Finally, developing funding mechanisms or financing strategies that help pay for broadband programs (i.e. Technology Fund, PEG fees, Enterprise Funding, Utility User Tax) will be critical for the initial and ongoing success of broadband development.

6) Incrementally build city-owned broadband infrastructure with a P3 if this model is selected.

This report provides recommendations for the organization as a strategic roadmap that focuses on using time and resources efficiently.

Introduction

Methodology

The methodology GTG used for this plan consists of proven steps, encompassing the vital information needed to establish a Broadband/Smart City plan and the steps to accomplish said plan.

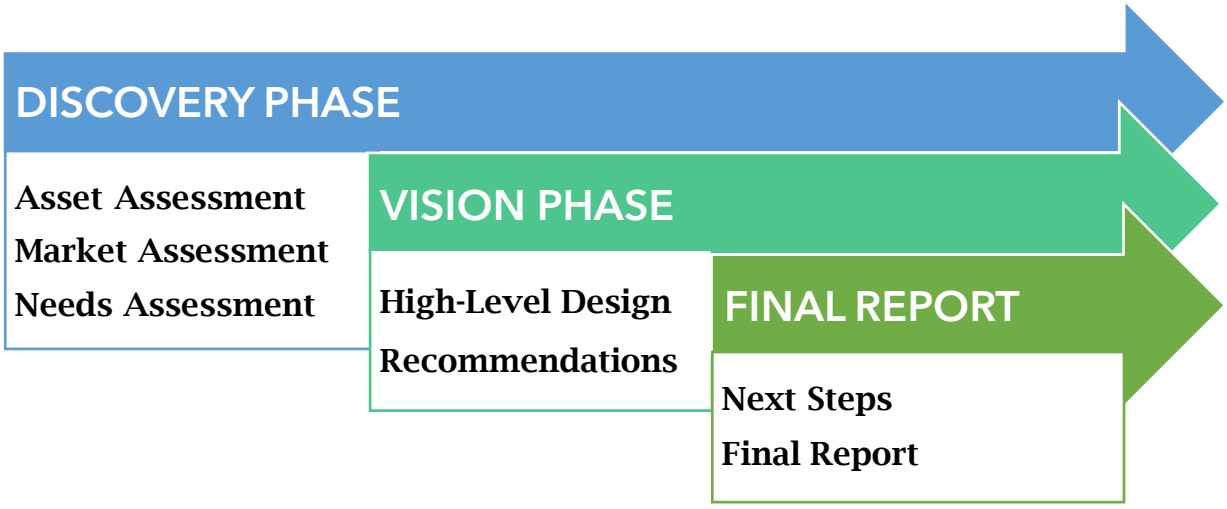


Figure 2- Methodology

Asset Assessment is investigating and analyzing what assets—street and traffic lights, towers, existing conduit or fiber, for example —exist in the city that can be leveraged for the expansion of broadband. GTG looks at city-owned assets as well as privately owned assets.

Market Assessment includes researching the area and discovering what services are available, in what areas they are available and at what price.

Needs Assessment is required to understand what the city needs to support economic development, as well as community needs related to broadband and Smart City innovation.

High-Level Design provides a road map for the expansion of broadband through construction. Although it is not always recommended that municipalities build a network to serve the community, a high-level design is necessary to understand what it would take to build a network, providing the city an opportunity to incrementally build and take advantage of Dig Once policies, developer agreements and capital projects.

Recommendations comprise the totality of the report, with an outline of the direction the city should follow to support the needs of the community.

Next Steps apply actions to the recommendations to accomplish the tasks required for implementation of the broadband and Smart City plan.

Final Report and Presentation including all the elements outlined above in a final document and presentation to staff, city council and the public, if desired.

Key Findings

- Expanding broadband to city facilities will reduce telecommunication costs for the city, while providing a foundation for improved services, such as attracting a private sector partner to expand low-cost, high-speed internet within the city.
- Most community members have access to high-speed broadband, but the existing infrastructure is not future proof i.e. fiber. Some providers are using a hybrid fiber coax solution while others continue to use dated copper lines.
- Internet Service Provider broadband infrastructure is dated impacting reliability.
- Cellular coverage within city facilities is lacking or spotty. This could be due to saturation of coverage or something blocking the signal i.e., trees and buildings.
- There is a desire for Wi-Fi for business, inclusivity, old town area, restaurant row, the Senior Center, community center and parks.
- Newark is interested in developing broadband in a way that offers a competitive advantage for its community.
- The City lacks a Dig Once policy and Developer Agreement standards for expanding broadband infrastructure at a reduced cost to the city.
- Broadband access and affordability are issues for lower-income residents. All businesses—particularly large, technology-focused businesses—need reliable, modern broadband infrastructure.

- Newark works closely with property owners and developers to streamline the development and building permit review and inspection processes. The City should continue enhancing these processes as needed.
- The City issued an RFP to reduce telephone and Internet costs to select facilities. The City's broadband plan should be considered during the evaluation process to assist in reducing costs while improving speeds and reliability.
- The City has a security framework in place, a foundational piece to support Smart City/Connected Community programs.
- The City has multiple opportunities to implement Smart City solutions, taking advantage of broadband infrastructure planned for implementation.
- The City is in the process of updating its streetlights. The new streetlights are Smart City/Connected Community ready i.e., they can be used to expand Wi-Fi when funding becomes available.
- The City has Smart City/Connected Community projects and services in place, i.e., eNotifications, TextMyGov.
- There is a desire to improve cellular coverage at the Mall and Costco. The City can help provide Wi-Fi outside the buildings, but private businesses need to work with cellular providers to improve service inside the buildings.

Asset Assessment

Assets are everything owned by a city that has inherent value. This includes physical items, as well as the non-physical, such as space and intellectual property. Asset inventory is one of the first steps in the planning process and is required to find a starting point for infrastructure expansion. For this study, GTG focused on assets that are or can be utilized for broadband. Some assets evaluated include:

- Network equipment
- Fiber optic cables
- In ground conduits
- Wireless towers and antennas
- Agreements with assets attached
- Office space, rack space

Planned Assets

Planned assets and capital improvement projects are necessary to track and are included in the network designing process because they can add a great deal of infrastructure at a reduced cost. These projects can also speed up deployment by taking advantage of opportunities that can be used later when needed. Some of the opportunities can be agreements with other agencies, counites, rail lines, internet service providers (ISPs) and more.

Newark has a few planned projects that fall into these categories:

- **Bayside Transit Oriented Development** – Future major Bay Area regional rail and bus transit center, which includes a large transit oriented residential development, located in the southwest portion of the city near the intersection of Enterprise Dr. and Willow Street.
- **Traffic Signal Interconnect** – Three separate projects running along Cherry St, Thronton Ave, and Newark Blvd provide transportation flow and control improvements.
- **Old Town Project Development Area Streetscape Improvements** – Major project to enhance the downtown core of Newark.

Each of these projects offer Newark improved opportunities to add fiber, conduit, and access points as they are developed. Additionally, these projects could help Newark expand its reach of fiber throughout the community, providing opportunities for residents, businesses, schools, and other government facilities to gain access to high-speed broadband infrastructure.

City-Owned Broadband Infrastructure

The City owns limited broadband infrastructure. To provide improved services for the community and the potential for enhanced internet services for community, the city should take advantage of Dig Once policies and regional efforts to build out the high-level design provided in this report.

Technology Trends

Overall, activities, processes and resources are being digitized. On one level, this is simply a function of the increasing capacity and speed of digital technologies. On another level, these trends are driven by a larger mega-trend

towards demand-driven, pull-based systems, including agile development and lean production.

Pull-based systems produce just-in-time results, like getting a coffee at a cafe; it is not made until you order it. Tying this to agile and lean production, you ensure information is visible and accessible as needed, improving decision making and collaboration, resulting in improved, cost-effective services. Much of the rationale for digitization has centered on cost avoidance or reduction, whereas the larger trend is primarily focused on increasing customer value and revenue in an efficient manner. These trends are interacting with larger socioeconomic factors, particularly the aging population, a shrinking workforce, and climate change. While beyond the scope of this study, this report provides a solid foundation for effectively addressing the trends noted below.

A specific trend directly impacting local governments is the emergence of a *Connected Community (Smart City),* which can be defined as "a place where traditional networks and services are made more efficient with the use of digital solutions for the benefit of its inhabitants and business."[1] While Connected Community activities have often been very technology-centric rather than citizen-centric, the general purpose is to improve and integrate public processes. Generally, Connected Communities focus on energy, environment, and public-facing activities, but major internal changes, typically referred to as digital transformation, are necessary for external improvements.

"*Digital transformation* is the integration of digital technology into all areas of a business, fundamentally changing how businesses, including local governments, operate and deliver value to customers."[2] This has important implications for municipalities, not the least of which relate to residents and other external stakeholders. For Newark, digital transformation means residents are likely working remotely or running businesses from their homes. Of course, this also implies major changes for the city itself. Specifically, citizen/customer-facing systems might be deployed and/or upgraded so the City's operations can be done completely online. This also means the City should be providing some form of connectivity, such as electronic kiosks and

[1] https://commission.europa.eu/eu-regional-and-urban-development/topics/cities-and-urban-development/city-initiatives/smart-cities_en

[2] https://enterprisersproject.com/what-is-digital-transformation

public Wi-Fi, for convenience and for those who do not have access to affordable or reliable internet at home or at their business.

Three related trends are the rise of cloud services, integration of information technologies (IT) with operational technologies (OT), and, most significant for current purposes, emergence of broadband as a utility.

Cloud services include a wide range of applications, data collection, processing and storage and network functions provided via numerous, distributed computing resources. The two major implications for municipalities are (a) reduced need to operate servers but (b) increased costs for and reliance on online services along with (c) new applications—mostly web-based—that were impractical or unavailable in the past.

A general class of cloud-based applications and related technologies focuses on adding intelligence to assets and machines of various sorts, allowing them to be integrated with information technologies (or vice-versa).

Operational technologies (OT) are "programmable systems or devices that interact with the physical environment [to] detect or cause a direct change through the monitoring and/or control of devices, processes and events."[3] For municipalities, OT includes everything from garbage trucks to traffic signals. Increasingly, OT is being added to "dumb" assets such as manholes, SCADA systems, traffic, parking meters and streetlights. Integration with IT enables cost reduction and performance improvement.

Broadband is technically any channelized communications media, but it has come to mean always-on, high-speed internet access. Broadband is important for people, as it allows them to access media content, connect with friends and pursue their interests. As businesses and government undergo digital transformation, broadband is increasingly important in everyday life. Access to education, jobs and healthcare effectively require broadband. On the other side of this trend, businesses and municipalities that do not have and use broadband are at a huge competitive disadvantage. While it may seem a bit pedantic to include broadband as a trend in a report for a broadband study, it is important to understand that broadband isn't an end, but rather a means to improved outcomes that enables other trends.

[3] https://csrc.nist.gov/glossary/term/operational_technology

Beneath all these trends runs a more fundamental observation: The critical and growing need for robust *cybersecurity*. Internet access can provide a way for malicious hackers to steal data from or take over municipal systems. As the amount of OT increases, so do the digital vulnerabilities that allow hackers to control them, operate software bots and attack other systems. Cybersecurity is as much about practices and procedures as well as technologies. For example, "deep fake" technology and spoofing—imitating or taking over accounts—are being used to get critical information or direct payments. People need to be educated about how to recognize possible scams and "social hacks" and avoid them.

Fiber optics has become the gold standard for broadband deployment. There is no broadband deployment medium that can compare to the speeds, symmetrical bandwidth or low latency that fiber optics provide. Wireless, cellular or hybrid fiber-coaxial (HFC) cannot compare to the speeds or reliability of fiber optics. Japan's National Institute of Information and Communications Technology (NICT) set a new speed record over a single strand of fiber at 1.02 petabits per second.[4]

File Downloaded	Apx. File Size	Apx. Download Times							
		Broadband Speed				Fiber Speed			
		1 Mbps	5 Mbps	10 Mbps	20 Mbps	100 Mbps	200 Mbps	300 Mbps	1 Gbps
One song (4 min)	4 MB	30 sec	5 sec	3 sec	1.5 min	0.3 sec	0.15 sec	0.1 sec	Instant
Video clip (5 min)	30 MB	3 min	40 sec	26 sec	13 sec	2.5 sec	1.25 sec	0.8 sec	0.2 sec

Figure 4 - Library of Congress Download Comparison

Fiber optic networks are essential for backhaul of all networks to connect to the internet, including cellular networks. Fiber optic cables are flexible strands of glass that trap the light inside a core only 8-10 microns wide inside of a strand that is 125 microns wide. Trapping and controlling the light allows fiber to avoid the many issues that arise from wireless and copper networks, such as obstacles in a wireless environment and the slow speeds of analogue or digital signals over copper.

Wireless technologies are advancing in ways never imagined. There are two basic trains of thought on broadband: fixed wireline and wireless. The two rarely come together, and proponents of each technology overplay their own importance, thinking that either wireless or wireline is the only way to go. In more urban areas, the reality is wireless last-mile deployment is the future.

Last mile refers to the connection from the street to the resident. This is commonly referred to as fiber-to-the-neighborhood. Fiber optics networks are essential for back-haul, connecting each neighborhood to the internet. However, the cost savings realized by a wireless last mile cannot be overlooked, especially with the current wireless technologies available. Terragraph is a wireless company that uses different technologies and deployment strategies to overcome the inherent issues with the typical wireless deployments. Tarana Wireless is one such company that is reshaping the future of wireless deployments, making it faster, easier, and more cost-effective to deploy high-speed broadband. Companies such as Mimosa, Ubiquity, and others are all creating better, stronger, more resilient equipment with higher bandwidth. Wireless technology is a way that municipalities and private companies quickly deploy more cost-effective networks.

Satellite is another budding technology that is currently experiencing growing pains. Satellite uses light to relay information from the end user to a satellite orbiting the earth at either low level, 250-350 miles above the earth, or as far out as 26,000 miles. Although the signal is travelling at the speed of light, going that far into space, being bounced off a satellite and returning to earth creates exceedingly high latency, the time it takes for data to reach the other end.

Satellite signals are shared, which requires a lot of satellites to be in orbit with many base stations on earth, connected to fiber optic networks providing the end users a connection to the internet.

Starlink wants approval for 30,000 low orbit satellites to be deployed for the satellite network to improve functionality. The Federal Communications Commission (FCC) in December 2022 granted approval for 7,500 satellites to be deployed. However, Starlink was recently denied Rural Digital Opportunity Fund (RDOF) subsidies of nearly $885 million because the satellite provider failed to provide the speeds promised at a high cost per dish required at residents' homes. Satellite technology holds possibilities as a broadband provider to the more rural areas of the USA that have no other options.

"Starlink's technology has real promise," Federal Communications Commission (FCC) chair Jessica Rosenworcel explains. "But the question before us was whether to publicly subsidize it's still developing technology for consumer broadband — which requires that users purchase a $600 dish — with nearly $900 million in universal service funds until 2032."

Artificial Intelligence is a trend that is talked about across every aspect of business and industry. However, Newark should be extremely cautious, as this is an emerging technology that has significant risk associated with putting it in practice.

Newark should consider the following cautionary points as it relates to artificial intelligence, depending on where and how it is planned to be used:

- **Bias.** AI systems are trained on data, and if that data is biased, the AI system will be biased as well. This can lead to discrimination against certain groups of people. Newark should take steps to ensure that the AI systems used are trained on unbiased data.
- **Privacy and security.** AI systems collect and store a lot of data, and this data could be misused or hacked. Newark, as well as all cities, should take steps to protect the privacy and security of the data that is collected and stored by AI systems.
- **Transparency and accountability.** It can be difficult to understand how AI systems make decisions. This can make it difficult to hold AI systems accountable for their decisions.

To help mitigate some of these risks Newark should consider the following:

- **Develop ethics guidelines for the use of AI.** These guidelines should address issues such as bias, privacy, security, transparency, and accountability.

- **Invest in AI research and development.** This research should focus on using AI systems that are more fair, transparent, and accountable.
- **Partner with the private sector and academia to develop and implement AI solutions**. This will help to ensure that Newark is able to access the latest AI technologies and best practices.

While AI could be a powerful tool, it's important to be aware of the maturity and risk associated with it.

Market Analysis

The Market Assessment section of the study serves the purpose of evaluating broadband availability to determine whether it aligns with the requirements of the local market. To gain a more comprehensive understanding of the local broadband landscape in Newark, we conducted an analysis of current services and associated pricing within the city. For effective broadband planning, it is imperative to understand the offerings and costs of technology providers.

Various factors contribute to disparities in broadband access and adoption in different areas. The primary cause of such discrepancies is geographical access to broadband, where certain locations lack providers offering broadband services in proximity. Additionally, the affordability of services plays a pivotal role, as the cost may be prohibitive for some potential subscribers.

Broadband access and adoption are shaped by many factors, encompassing availability, pricing, service quality and the extent to which it caters to a community's needs. In the realm of broadband and telecommunications, service quality primarily revolves around the speed and reliability of the services provided. Broadband is increasingly viewed by many municipalities as a modern utility, given its integral role in our daily lives. Consequently, the focus is predominantly on high-speed, dependable broadband, with customer service becoming a significant consideration only in competitive market environments.

GTG focused on the following questions when conducting the market assessment:

1. What is the current coverage of the local providers?
2. What technologies are offered: fiber-to-the-home, HFC (hybrid fiber-coaxial), DSL, 5G or Satellite?

3. What are the pricing tiers for each provider?

4. What is the competitive nature of broadband in Newark?

GTG conducted a comprehensive analysis of the broadband landscape within the City of Newark, with the aim of assessing the available broadband options for residents, businesses, the city itself and other entities. This analysis delves into several key aspects, including the internet speeds offered, the associated pricing, the providers of these services, the level of competition within the local market and an evaluation of the existing and planned broadband infrastructure.

Key Findings

- The City of Newark is served by local providers. According to network maps shared by the local providers, the community has access to high-speed broadband.
- The largest provider in the area is Comcast/Xfinity and is the only provider that covers around 98% of the city. Providers are outlined next in this section.
- According to the FCC Broadband map, approximately 32% of the residents have access to a FTTH provider, offering up to 1000 Mbps symmetrical download and upload speeds.

FCC Broadband Maps

The FCC Broadband Maps, officially known as the Federal Communications Commission Broadband Data Collection, are a crucial initiative in the United States, designed to improve the accuracy and transparency of broadband coverage data. These maps are instrumental in ensuring that every American has access to reliable, high-speed internet services, playing a pivotal role in shaping broadband policy, investment, and infrastructure development across the country.

Data Collection: The FCC Broadband Maps involves the collection of data from internet service providers (ISPs) to create an up-to-date and detailed representation of broadband coverage nationwide. ISPs are required to report information on the availability of their services, including maximum advertised speeds, technology used (e.g., DSL, cable, fiber) and geographic coverage.

Mapping Accuracy: One of the primary objectives of these maps is to provide an accurate depiction of where broadband services are available and where they

are not. This information is vital for identifying underserved and unserved areas that may lack adequate internet access.

Transparency: The FCC Broadband Maps aim to enhance transparency and accountability in the broadband industry. By making coverage data publicly available, consumers can make more informed choices about their internet service providers and advocate for better connectivity.

Policy Development: The FCC Broadband Maps play a crucial role in informing broadband policy development at federal, state, and local levels. Policymakers use this data to allocate resources, design subsidy programs and prioritize areas in need of improved broadband infrastructure.

Challenges and Controversies: The accuracy of these maps has been a subject of debate. Critics argue that they may overstate the availability of broadband in certain areas, leading to inadequate funding allocation. There are also concerns about the reliability of ISP-reported data and the need for more independent verification.

Ongoing Improvements: The FCC has been actively working to enhance the quality and reliability of its broadband maps. These improvements include better data collection techniques and increased granularity in mapping, enabling a more precise understanding of coverage in smaller geographic areas.

Impact on Rural and Underserved Communities: Accurate broadband mapping is particularly crucial for rural and underserved communities. It helps direct resources to areas that are most in need, bridging the digital divide and ensuring that all Americans have access to essential online services and opportunities.

In summary, the FCC Broadband Maps are a fundamental tool for shaping the future of internet connectivity in the United States. They enable better-informed decision-making, transparency, and the equitable distribution of broadband resources to ensure that everyone can participate in the digital age. Continued efforts to refine and enhance these maps are essential to address the evolving needs of our increasingly connected society.

FCC Maps can be found at: https://broadbandmap.fcc.gov/location-summary.

Providers in Newark

According to the FCC broadband map[5], there are six available providers in Newark: Comcast Corporation, AT&T, Hughes Network Systems LLC, Space Exploration Holdings LLC, T-Mobile USA Inc and ViaSat Ince.

Comcast Corporation is a global media and technology company with two primary businesses: Comcast Cable and NBCUniversal. Comcast Cable is one of the United States' largest video, high-speed Internet and phone providers to residential customers under the XFINITY brand and provides these services to businesses. Comcast is the predominant provider in Newark, serving 63.7% of the city's residents, according to this survey. Current offerings in Newark can be found in the chart below[6].

Provider	Technology	Speed/ Mbps	$/Month	Data limit
Comcast/Xfinity	HFC	75	$51.00	No
Comcast/Xfinity	HFC	200	$35.00	No
Comcast/Xfinity	HFC	400	$50.00	No
Comcast/Xfinity	HFC	800	$60.00	No
Comcast/Xfinity	HFC	1000	$60.00	No
Comcast/Xfinity	HFC	1200	$80.00	No

AT&T, recognized as the world's largest telecommunications company, holds the second-largest position in the mobile phone services industry. Notably, in recent years, this multinational conglomerate ventured significantly into the media and entertainment sectors, particularly through its acquisition of Warner Media in 2018. However, a shift in strategy emerged in February 2021, when AT&T announced its intention to spin off DirecTV, six years after acquiring this satellite TV business. Subsequently, in May of the same year, plans were unveiled to spin off Warner Media and merge it with Discovery.

[5] https://broadbandmap.fcc.gov/location-summary/

[6] https://www.xfinity.com/digital/offers/plan-builder

Under the leadership of CEO John Stankey, AT&T seeks to refocus its efforts on expanding its 5G wireless connectivity capabilities. In pursuit of this objective, the company is currently engaged in a highly competitive, multibillion-dollar battle against rivals such as T-Mobile and Verizon. This battle revolves around achieving the fastest speeds and the most extensive 5G network coverage.

Provider	Technology	Speed/ Mbps	$/Month	Data limit
ATT	Fiber	300	$55.00	No
ATT	Fiber	1000	$65.00	No
ATT	Fiber	1000	$80.00	No

T-Mobile offers 5G home internet for just $50 a month with AutoPay, up to 50% savings against the industry benchmark, or $30 per month for families with Magenta MAX, T-Mobile's most popular phone plan. It's a flat rate, with no added taxes or fees, equipment costs, annual contracts, or price hikes. Availability for this service requires upgrading or constructing 5G antennas. This does not happen on a city-wide basis, but rather an incremental build over time. Coverage in Newark is limited and there is minimal subscribership.

Provider	Technology	Speed/ Mbps	$/Month	Data limit
T-Mobile - Home Internet	5G	max 235	$ 55.00	No

Satellite providers available in the city include ViaSat, HughesNet and Starlink. Satellite companies utilize wireless signals transmitted from a base station/ground unit, bouncing these signals off an array of satellites orbiting the Earth at an average distance of 26,000 miles. Even at the speed of light, a 52,000-mile round trip introduces a significant amount of latency. Latency refers to the time it takes for data to travel from one point on a network to another.

Starlink has begun deploying satellites in a low earth orbit, approximately 350 miles above Earth's surface. Users of these lower orbit satellites experience significantly lower latency, better speeds and overall performance. However, Starlink's proposal to add an additional 9,000 low orbit satellites has been denied for several reasons. Foremost among these is a lack of understanding

about how objects in low Earth orbit behave over time and what might happen when they eventually re-enter the Earth's atmosphere.

Another reason for the denial is the concern about space pollution. Allowing too many objects into orbit could limit our ability to observe space from the Earth's surface and pose potential risks to existing satellites and space missions.

Provider	Technology	Speed/ Mbps	$/Month	Data limit
ViaSat	Satellite	12	$ 69.99	40 GB
	Satellite	25	$ 99.99	60 GB
	Satellite	30	$ 149.99	100 GB
	Satellite	30	$ 199.99	150 GB
	Satellite	30	$ 299.99	300 GB
Hughes Net	Satellite	25	$ 74.99	50 GB
Starlink	Satellite	25	$ 110.00	1 TB

4G Coverage and 5G Coverage

According to the FCC Broadband Map[7] shown below, 3G has been upgraded and is no longer being used or deployed by any courier, with 100% of Newark having access to 4G, 5G and 5G NR. Newark area providers include Verizon, T-Mobile (Metro PCS and Sprint), US Cellular and AT&T. In every city, there are small pockets that are not covered by cellular signals, which are not reported or shown on maps. It is nearly impossible to ascertain this information without metering these signals through mobile mapping efforts. Mobile mapping uses software and antennas, which test and record the signal strength throughout the city and is used to identify pockets that need to be bolstered with more cellular towers. Newark residents report suffering from many pockets of bad

[7] https://broadbandmap.fcc.gov/area-summary/mobile?version=jun2023&geoid=0650916&type=place&zoom=11.95&vlon=-122.109695&vlat=37.521020&tech=tech4g&env=0

cellular coverage that have not been identified by mobile mapping, something that should be accomplished by the cellular providers.

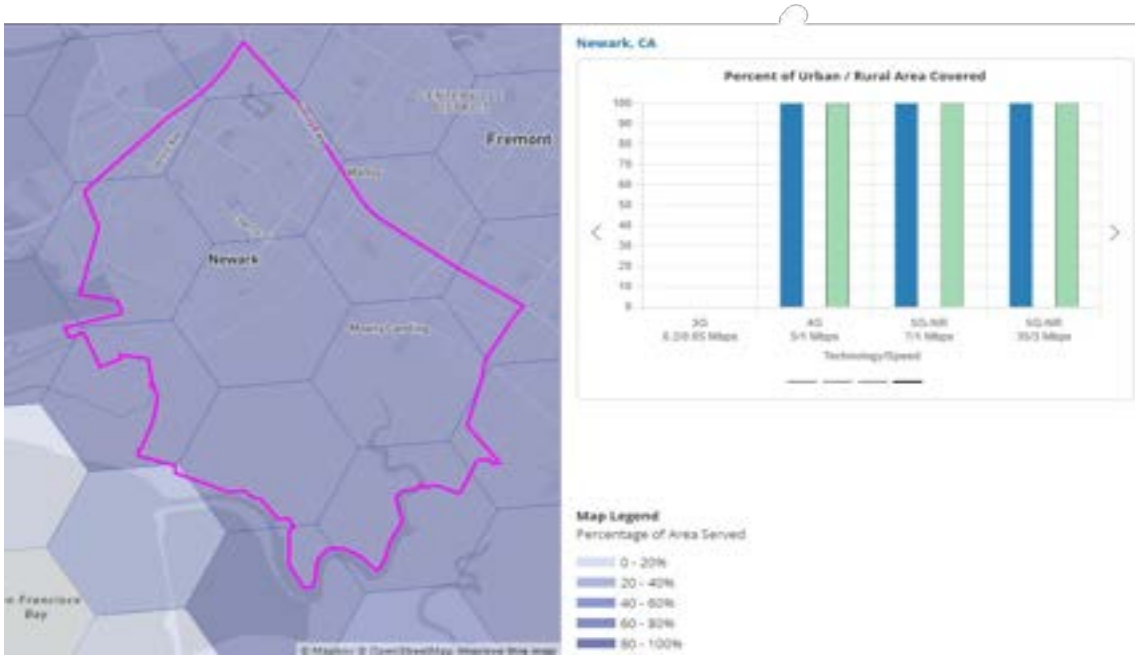

Figure 5 - FCC Broadband 3G, 4G, 5G, and 5G NR (New Radio)

Figure 8 - Verizon coverage map showing availability of 5G Home Internet and 4G LTE

Figure 9 - ATT Coverage Map showing availability of 5G+, 5G and 4G LTE according to AT&T's website

Privately Owned Fiber Optic Cables

In Newark, there are several providers with both metro and long-haul fiber assets, as illustrated in the maps below. The first image (Figure 10), which displays the local metro networks, prominently features assets owned by Crown Castle and CenturyLink (formerly Level 3 fiber). These networks are instrumental in providing high-speed, reliable connectivity within the city.

The second image (Figure 11) showcases the long-haul fiber routes that traverse Newark, and it includes infrastructure owned by Level 3, CenturyLink and Electric Lightwave. These routes follow many of the city's major corridors, serving as the backbone for data transmission over longer distances.

These extensive fiber networks, both metro and long-haul, are essential for supporting the growing demand for data and communication services in Newark. They not only enable businesses, residents and other entities to access high-speed internet, but also play a pivotal role in connecting the city to the broader region and the global digital infrastructure. As Newark continues to develop and expand its technological capabilities, these fiber assets will be crucial in facilitating economic growth, innovation, and improved connectivity for all.

Figure 10 – Assets owned by Crown Castle and CenturyLink

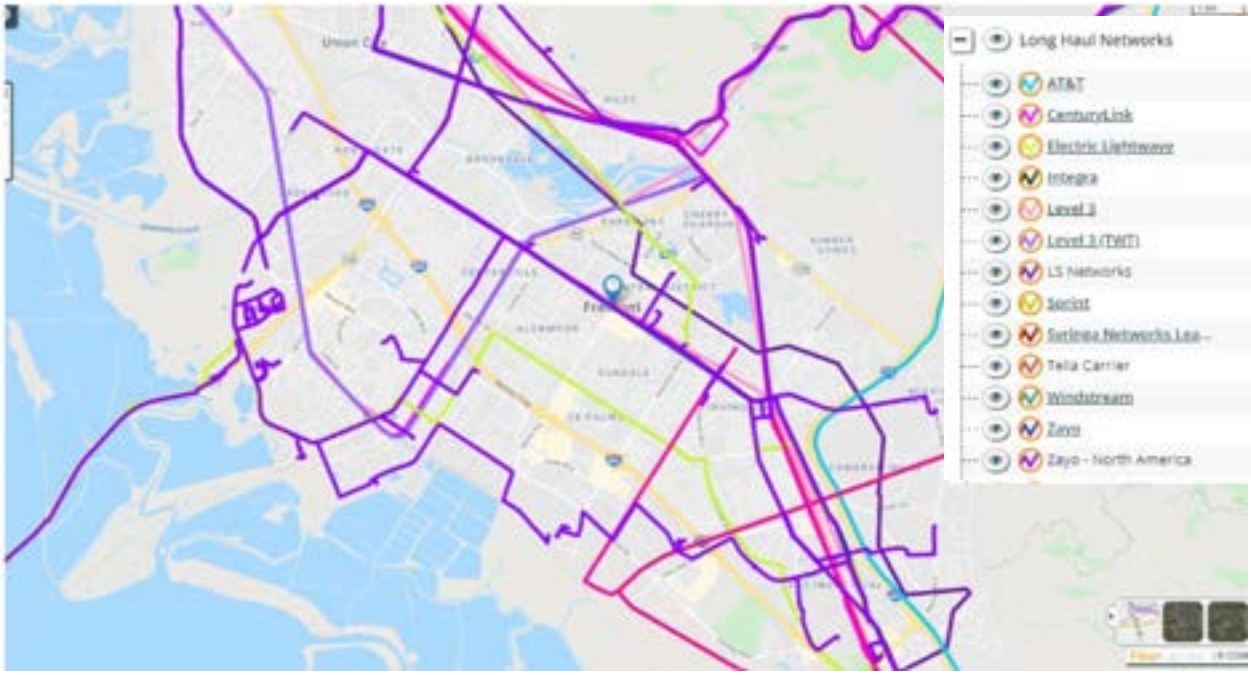

Figure 11 - Newark long-haul fiber routes and infrastructure owned by Level 3, CenturyLink and Electric Lightwave.

Data Centers

Connectivity in any urban area, community or region is predominantly defined by its access to the internet, with the critical factors being internet speeds and available bandwidth. One often underestimated component of a fiber optic network is its links to data centers. These data centers serve as hubs where numerous internet service providers, private enterprise networks (such as Facebook and Amazon), point-to-point connections and various avenues to connect with the global network converge. In the City of Newark, there is one data center situated within its boundaries that was purchased by T5 Data Centers in October 2020:

T5 Data Centers (formerly Apple Newark Data Center)

39800 Eureka Drive

Newark, CA 94560

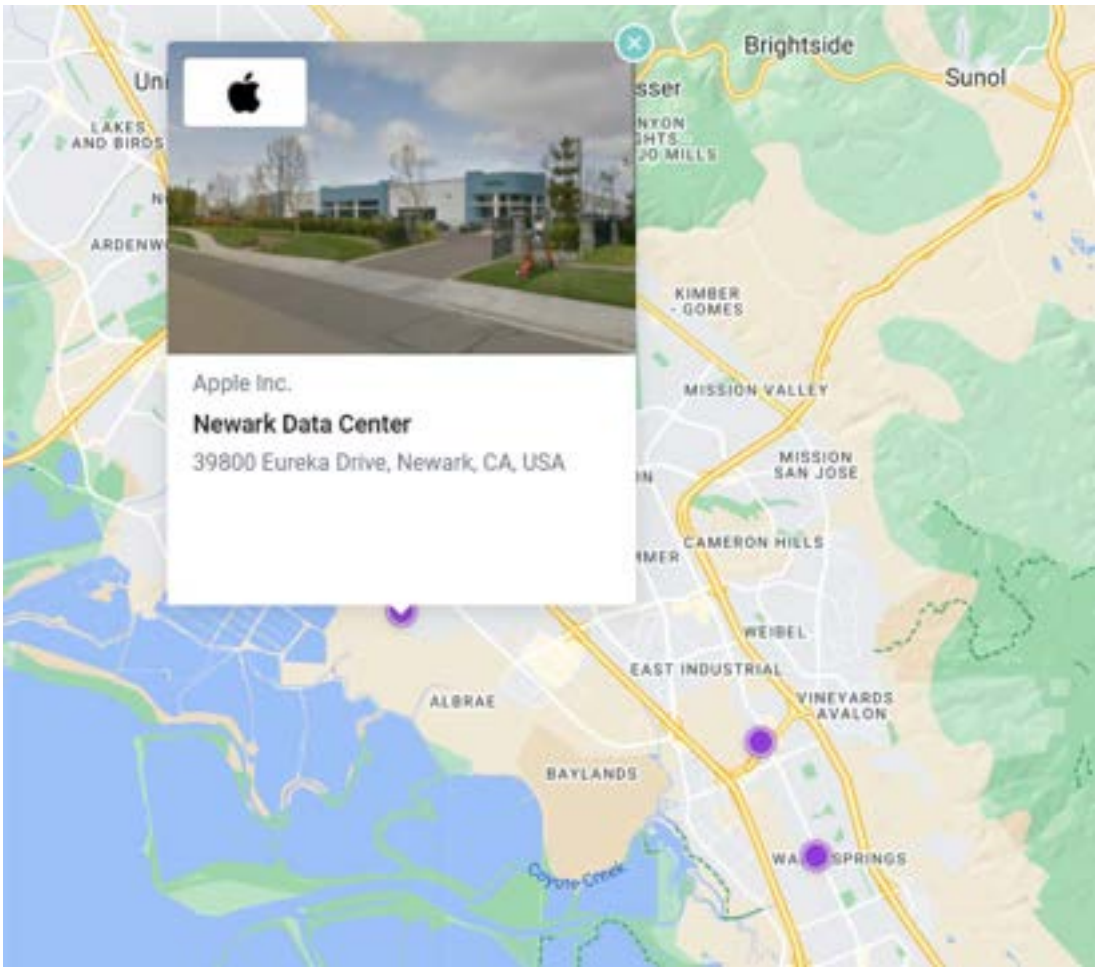

Figure 12 – Data Center in Newark Map

There are 88 data centers within a 25-mile radius of Newark, with the majority in San Jose and San Francisco. With this high concentration of data centers, Newark has options when it comes to connectivity and access to the internet, anchor institutions, other municipalities.

Significant benefits of connecting to a regional hub include business continuity and disaster recovery benefits. These locations allow for offsite storage and redundancy in critical systems that the city could take advantage of.

In addition to private data centers, the California Department of Technology (CDT) is working on the California Middle-Mile project, which refers to the development and implementation of a middle-mile network in the state of California. It is part of the broader effort to expand broadband infrastructure and improve internet connectivity across the state. The project aims to establish a network of fiber optic cables that connect various communities and regions within California, providing a reliable and high-speed backbone for

broadband services. The middle-mile network is planned to run along 680 and I-880. The CDT will also be building Data Hubs approximately every 50 miles on the middle-mile network and splice boxes/vault every 2400 feet. GTG recommends the City coordinate with CDT to determine a location for the connection to the middle-mile network that will provide access to other local governments for sharing communications and having access to high-speed low-cost Internet services in addition to providing areas for disaster recovery equipment.

Other opportunities include working with BART or the City of Fremont to connect the City's fiber network to the regional Oakland hub or the Hurricane hub in Fremont for access to high-speed low cost Internet services.

Conclusion

Newark is served by the local incumbent provider with sufficient broadband to handle the needs of the community in the area outside of complaints related to customer service, reliability, costs and accessibility. It would benefit the area to have a more competitive landscape, however, the area is not being neglected and the City should continue to work with and support the local providers. Studying the 4G and 5G provider coverage maps you can see the entire area has access to 5G cellular coverage and 5G home coverage.

Although Newark is well covered by the local providers and access to broadband seems to be an option for most of the community, in addition to complaints regarding customer service, reliability, costs and accessibility, the issue of adoption comes into view. The lack of adoption can be caused by a few reasons including affordability, access to devices, and digital illiteracy, among others. Newark should become an active participant in helping alleviate the digital divide by adopting programs and raising awareness of the Affordable Connectivity Program, ACP.

Two major complaints from city departments and residents were reliability and speed of 5G coverage with areas that impact public safety, public works, and the community. The City should evaluate the need for additional towers within the city to increase speeds due to saturation and reliability for public safety purposes or determine if this is limited to pockets where buildings, trees, etc. may be causing coverage issues and an additional tower would be unnecessary.

Service Availability

Once the providers are identified, it is important to understand the areas the providers operate within.

Address Assessment

For a better understanding of the availability of providers and the broadband options they offer to specific locations, GTG pulled 40 random addresses and researched the options available at each address. Those results can be found in the chart below. We are not including the actual address researched for privacy concerns.

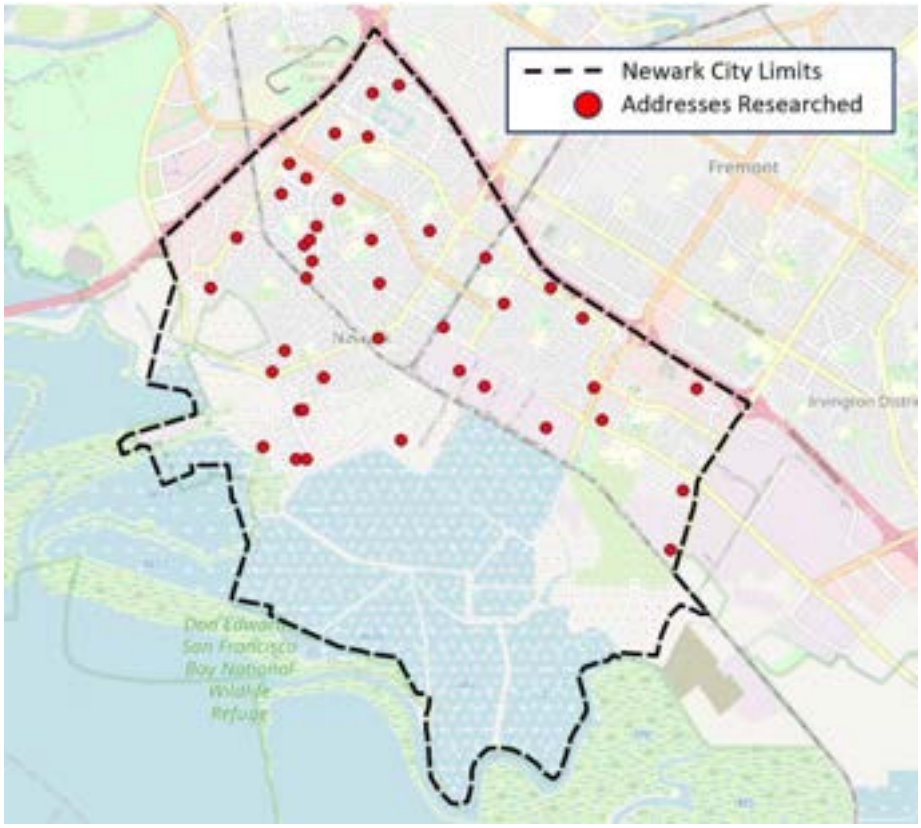

Figure 13 – Address Assessment in City of Newark

The table below shows, of the 40 total addresses researched, the providers that were available and the percentage of the coverage offered.

	Comcast HFC	ATT Fiber	ATT DSL	Satellite	Fixed wireless	T-Mobile
Total	**35**	**11**	**18**	**35**	**33**	**34**
Percentage of Households	**88%**	**28%**	**45%**	**88%**	**83%**	**85%**

State of California Maps

The State of California maintains a broadband availability map that, like the FCC, shows addresses that are identified as in need of broadband access. These maps are crucial to understand the areas of the city that need bolstering. These maps represent information that is supplied by the internet service providers and can be used to identify the areas and neighborhoods that each provider supports with broadband service. It is worthwhile to compare the maps identifying locations where the information overlaps and greatly increases the validity of the provided information. To help see the disparities in broadband

speed, the State has the below online "Broadband Interactive Map"[8] that shows, according to state complied and federal data, addresses that have a need for better broadband.

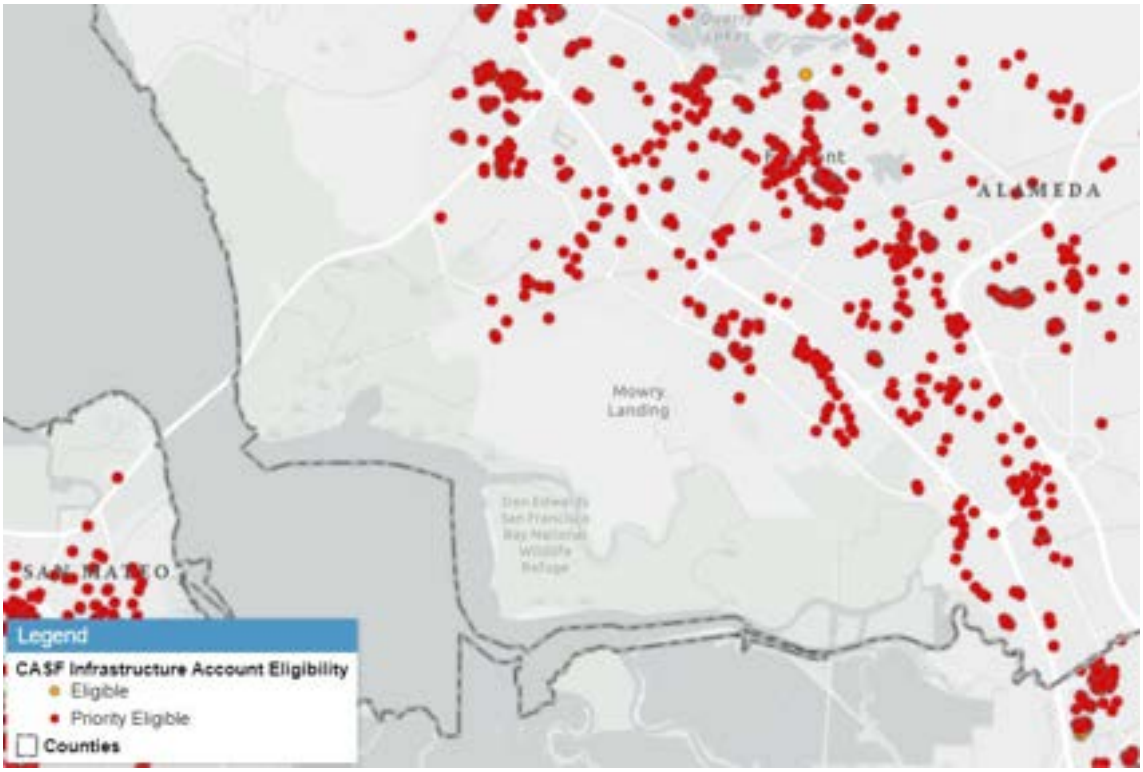

Figure 14 - California Interactive Broadband Map

FCC Broadband Maps

The FCC has a substantial amount of information that is collected through FCC Form 477, a report that providers fill out and self-report the technology they offer and where they offer it. The form has received criticism, claiming that the information is not accurate due to providers wanting to show they offer better services in a wider area than they actually do.

The self-reporting portal, according to the Institute for Local Self-reliance, has inherent flaws such as:[9]

1. ISPs may fill out forms improperly.

[8] https://www.broadbandmap.ca.gov/

[9] https://ilsr.org/when-you-cant-trust-the-data-flaws-in-the-federal-communications-commissions-broadband-forms/

2. The data is out of date.
3. The data only includes maximum advertised download and upload speeds.
4. The submitted data itself overstates availability.

Understanding the results could be flawed, information given by providers clearly shows that Newark is well-served by the local incumbents, stating 100% coverage with 250 Mbps download and 25 Mbps upload. One positive change in the Broadband Data Collection (BDC) is the establishment of mechanisms to dispute the claims of providers, hopefully to further refine the data and provide a realistically accurate portrayal of the current state of broadband.

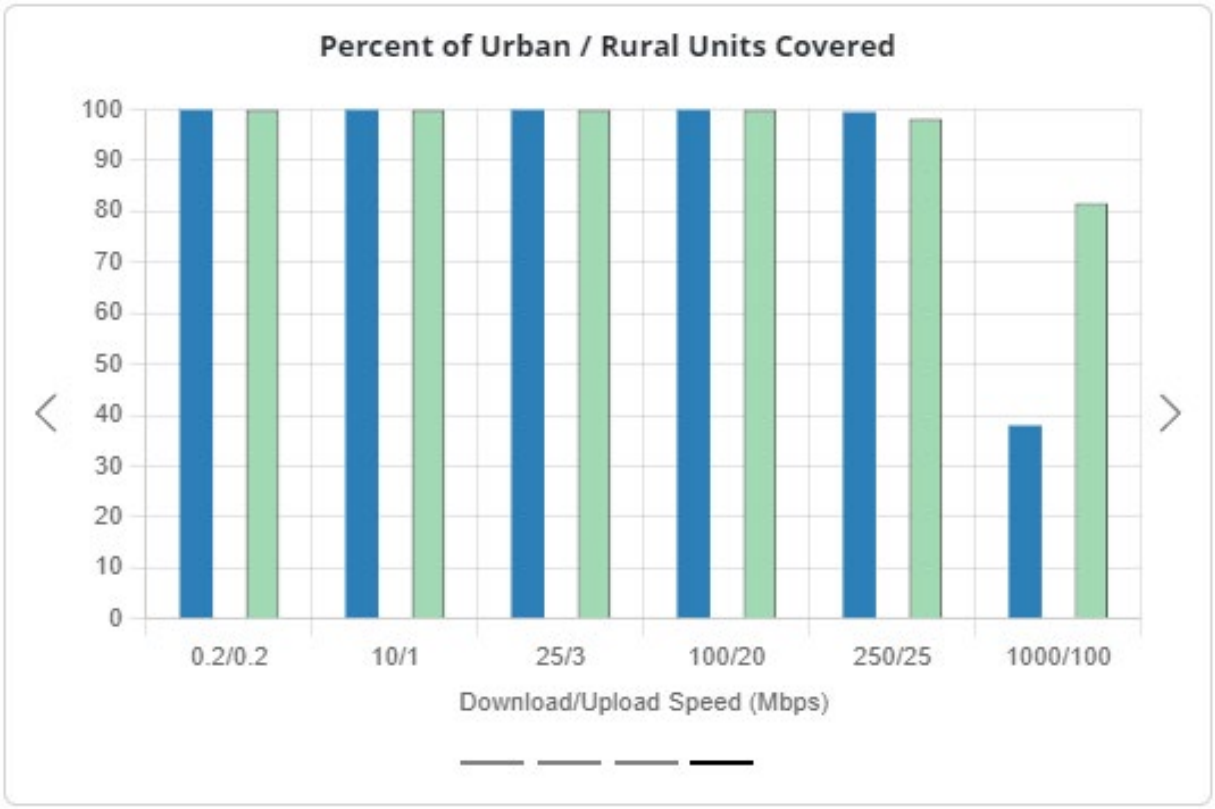

Figure 15 – FCC Form 477 for City of Newark

Goals and Needs

Broadband Survey

To gain insight into the needs of the community, it is important to initiate community engagement to gather input from as many community members as possible. One step that GTG takes to gain as much insight as possible is to conduct an online broadband survey where the respondents can answer questions and provide information from their point of view. The survey was linked from the city's website, and the city promoted it to the public through many different communication channels including social media, mass email marketing, print and digital marketing, word of mouth and in community outreach meetings. At the end of the survey, GTG collected 276 responses.

Survey responses

The completion rate of the survey was 81.5%, with a total of 276 responses. Most respondents, 81%, identified themselves as residents, while 19% identified themselves as local businesses. Although not all responses were complete, the partial surveys include all surveys with at least 75% of the questions filled out. Partial surveys provide valuable information, which is why some of the numbers in the graphs do not always equal 276.

Figure 16 - Response count

The current broadband standard set by the FCC for download speed is 25 Mbps (megabits per second) and 3 Mbps for upload speed. However, it was proposed in July of 2022 to increase the broadband standard to 100 Mbps download and 20 Mbps upload. It has not been adopted on the federal level; however,

California and many other states have set 100 Mbps as the minimum download speed for broadband.

It's important to note the asymmetrical nature of HFC broadband speeds, where the need for downloading data is greater than the need for uploading. This results in standards that are not symmetrical, meaning the download and upload speeds are not the same. All fiber networks can have symmetrical services, and much faster than those of hybrid networks. This survey shows comparison values of both networks.

The data on the adequacy of the internet connection at respondents' locations presents a significant insight into the overall satisfaction with internet services. Despite 55% of respondents affirming the adequacy of their internet connection, the fact that 45% expressed dissatisfaction suggests that there might be underlying issues affecting user experience and expectations.

This discrepancy highlights the importance of not only delivering high-speed broadband, but also ensuring consistent reliability and performance. It indicates that factors such as intermittent service disruptions, latency issues or insufficient customer support might be contributing to the dissatisfaction among a considerable portion of users.

To improve overall satisfaction, it would be beneficial for internet service providers to focus not only on delivering high-speed connections, but also on addressing issues related to service reliability, consistency, and customer support. By paying attention to these factors, providers can ensure that users not only have access to high-speed internet but also enjoy a seamless and reliable online experience, ultimately leading to higher customer satisfaction and loyalty.

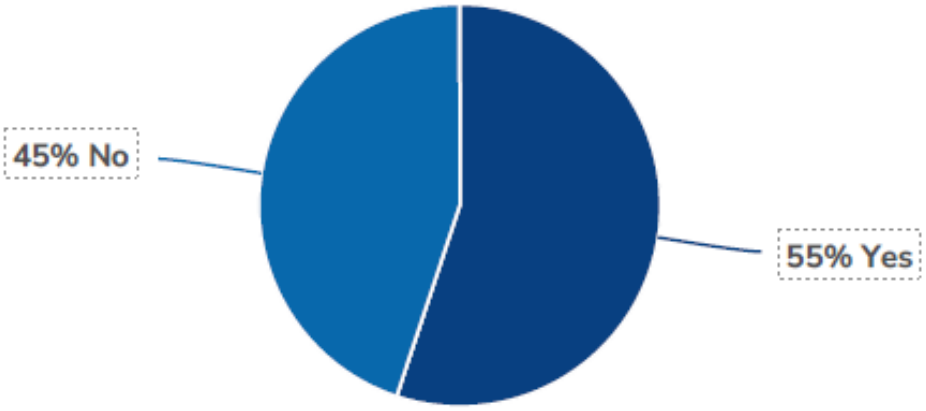

Figure 17 - Internet adequacy survey in City of Newark

The data for internet satisfaction highlights a significant divide in customer sentiment. With 47.3% expressing satisfaction and 52.7% reporting dissatisfaction with their current internet provider, it's evident that there is room for improvement in the service quality and customer experience provided by these companies.

Furthermore, the presence of healthy competition within the market can be advantageous for consumers. When multiple internet providers operate in the same area, it fosters an environment where each company is compelled to enhance its services to attract and retain customers. This competitive pressure often leads to improved offerings, better pricing, and a focus on customer satisfaction.

However, despite the positive influence of competition, it's crucial for providers to address the underlying issues contributing to customer dissatisfaction, such as service reliability and customer support. By prioritizing these aspects, internet providers can work towards enhancing the overall customer experience and fostering greater satisfaction among their customer base.

Value	Percent
Yes	47.3%
No	52.7%

Reliability in broadband refers to the consistent and uninterrupted availability of internet connectivity. It encompasses factors such as network stability, minimal downtime, and consistent speeds. Reliable broadband is crucial for various activities, including remote work, online education, telemedicine, and general internet usage.

To ensure reliable broadband, it is essential for service providers to invest in robust infrastructure, regular maintenance, and efficient customer support. Additionally, the document emphasizes the need for redundancy and backup systems to minimize service disruptions.

While the survey analysis document may not provide specific reliability data for Newark, such as actual down time and outages, it does acknowledge the significance of reliable broadband service for the community. 71% of respondents share that they feel their internet is reliable enough or very reliable. This is positive news for the community, showing that the ISPs are providing good broadband on reliable networks.

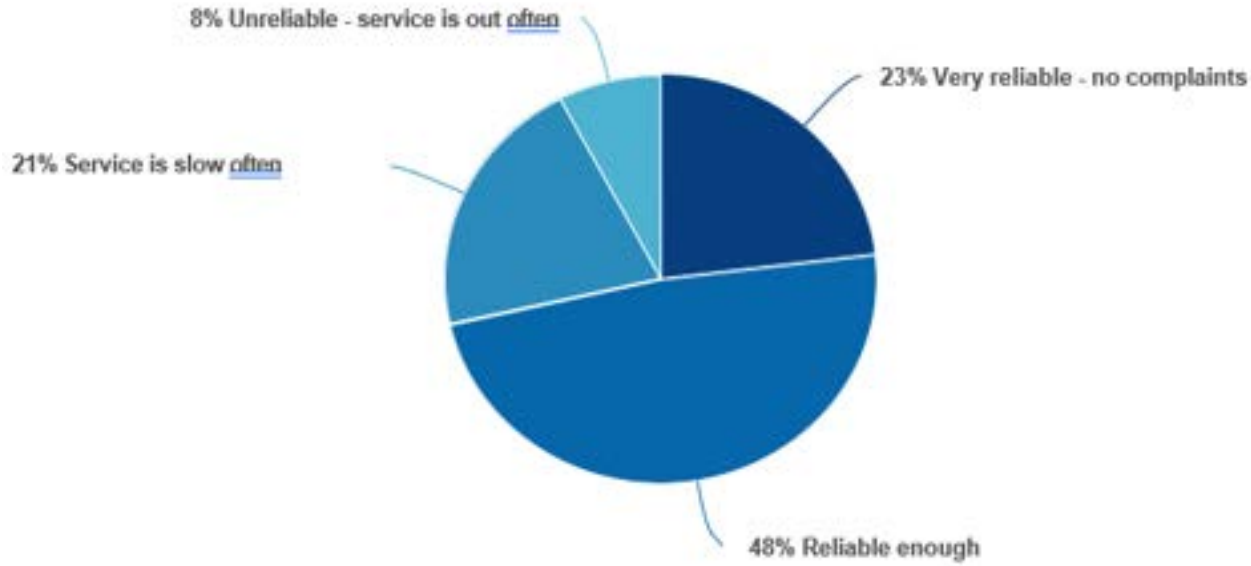

Figure 18 – Reliability survey in City of Newark

Based on the data, the breakdown of internet service providers among the respondents is as follows:

Value	Percent
AT&T	32.4%
Comcast/Xfinity	60.5%
T-Mobile	3.8%
Verizon	0.5%
Other - Write In	2.7%

These percentages represent the distribution of the different internet service providers among the responses. Comcast/Xfinity appears to have the largest share, followed by AT&T, T-Mobile, and Verizon, while a small percentage of respondents are using smaller ISPs.

Speed Test Results

The map depicted in Figure 19 illustrates the respondent locations, categorized by speed test results, ranging from up to 25 Mbps (Federal Minimum), up to 100 Mbps (California minimum), up to 500 Mbps and up to 1000 Mbps (1 Gigabit). The data reveals that areas with high-speed connectivity are spread across the city, whereas locations with slower connections are concentrated primarily in the region south of 880, positioned between Central Blvd and Mowery Ave. The underlying reasons for this area's notably high concentration of DSL subscribers remain ambiguous.

Upon examining why respondents chose their respective service providers, it was commonly reported that these providers were either the sole option available or were perceived as the best available choice. This implies the possibility that some users might be paying for high-speed services that aren't being fully delivered. In the case of respondents utilizing Comcast/Xfinity's HFC network, it may be necessary to consider network upgrades. Meanwhile, for those relying on AT&T's DSL services, the expectation of higher speeds is unrealistic, as DSL is an outdated technology with very limited speeds, commonly meeting the Federal standards but fail to meet the broadband standards set by the State of California.

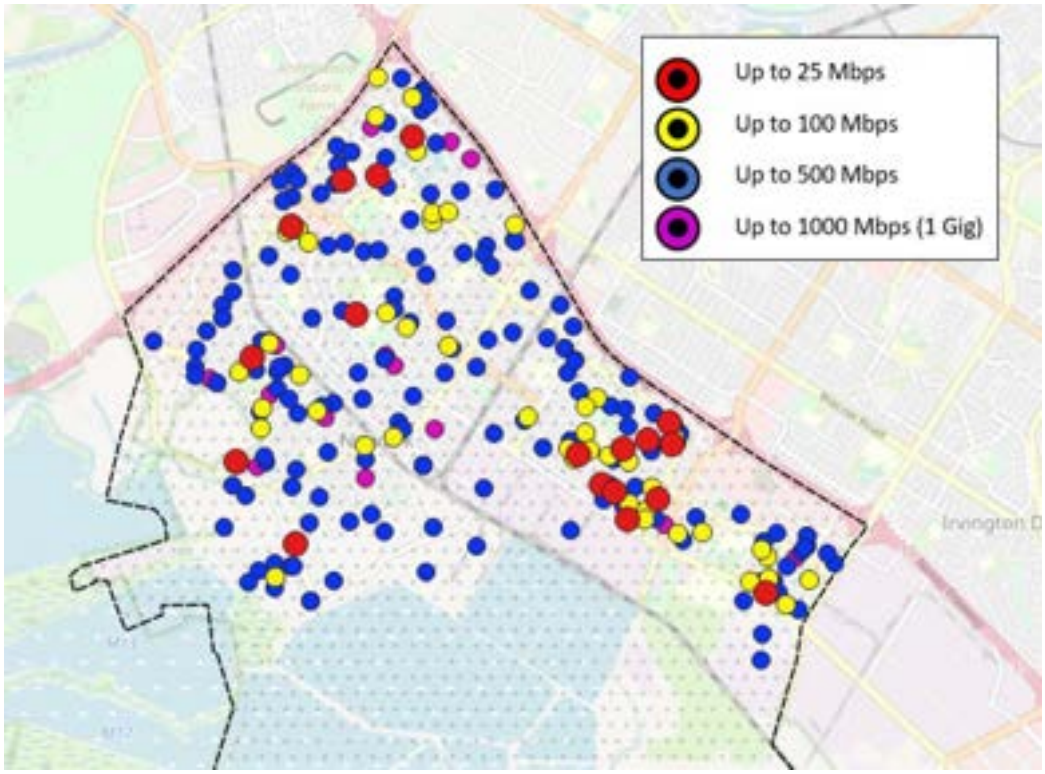

Figure 19 – Respondent locations with corresponding speed test results

Comments from Business Respondents

In the survey conducted by GTG, respondents were invited to share their comments regarding their Internet service. Specifically, businesses were asked "Please explain how better Internet access would impact your organization. Will it help with economic development, services, or sales? Do you have other thoughts on the impact of better Internet access?" It is essential to clarify that GTG did not alter the wording or grammar of any comment, whether they were from businesses, residents or other key stakeholders. The only adjustments made were for the sake of brevity.

Response ID	Comments
262	*At this time we are told we can not improve our service because the area is not wired to accommodate high speed (even though we are paying for it) the service we have now goes out frequently in the early evenings and weekends for minutes at a time. If one or more companies would rewire our area of Newark, we can have choices of carriers, and choose a internet package that would suit our needs*
236	*Better Internet access would significantly enhance the operations and reach of our company. Here's how: Economic Development: A faster and more reliable Internet connection would enable us to tap into global markets, collaborate in real-time with partners and stakeholders regardless of their geographical location, and efficiently utilize cloud-based resources. This would drive productivity and foster innovation, placing us in a competitive position in the marketplace...*
256	*it would help with downloading large format files to create the decal panels for application to our customers vehicles. it would help with downloading parts information and manuals and diagrams along with the need to open files received from customers with their art work and or their damaged units. So yes, it would help with services, sales and the development of our business, to make it better.*
235	*Our building only offers access to T1 lines or higher, which we cannot afford (and maybe now fiber optics) or microwave access using a dish on the roof of the building. There is no other access option. It is very limiting for a small business like ours. There's no cable access or other ways to reasonably purchase internet access. I'm hoping this survey results in better options for the business community.*
223	*We notice frequent glitches and unscheduled outages with Comcast. And, it's very expensive!*

240	*We relied extensively on Zoom sessions, especially during the pandemic. The upload speed available to us was terrible, and the download speed was frequently inadequate. Churches are increasingly reaching out to members at a distance. The available DSL services were inadequate for live streaming -- which is what most churches use now. The limitations have contributed to the ending of our services. Infrastructure along Cedar Blvd is inadequate for ALL utilities.*

Comments from Residents

In the survey conducted by GTG, respondents were invited to share their comments regarding their Internet service. Specifically, residents were asked "What would better broadband mean to you and your family or the area?".

Response ID	Comments
189	*1. I'd love to have 500mbps / 1gbps broadband access for less than $50 per month and not have to haggle with AT&T at the end of every annual contract that I will be switching to Comcast and then they magically bring the price down for another 12 months. 2. There seems to be a relatively local player, SAIL internet which uses AT&T backbone, is there a chance to get them to become a approved provider by the city?*
238	*ATT said for years that fiber options were coming, but after 10 years of waiting, nada. So cable was the best option. Connectivity means everything to compete in the world today and stay informed. The speed of that connection will determine the rate of information and response in certain situations. Extremely important to stay relevant.*
187	*Better choice of providers who all provide the same level of service and speed. Right now, comcast/xfinity are the only ones who provide a decent service with speed needed.*

181	*Better upload speed and removal a caps would allow me to work from home*
25	*Better work and education experience. I am full time remote worker.*
195	*Broadband access is becoming as necessary as water. electricity, etc. It is important for business as many times the decision to locate at a specific city is based on availability of broadband access.*
173	*Broadband should be free*
102	*Cell service is really bad on my cell phone-get a lot of dropped calls (phone uses my Wi-Fi) Internet disconnects fairly often. I need a stable one because I work from home*
48	*Cheaper, more competition.*
65	*Comcast is very expensive & constantly raising its rates. I am a retired senior, but I haven't qualified for ACP for some reason.*
213	*Comment: When we move to the Birch Grove neighborhood in 2020 we were originally with AT&T, we switch ISPs because the DSL in the neighborhood were so bad that cause one of our DSL lines to go offline repeatedly. My hope is with this broadband masterplan it will prioritize the Birch Grove neighborhood to get fiber optic.*
141	*connectivity speeds of 1gbps which power all the connected devices for todays needs and future needs at an affordable cost.*
119	*Consistent download speeds. Even though we have high speed internet, sometimes the response is slow.*
174	*Consistent speed, no drop services and affordable .*
148	*Cost. Broadband is not available at my address.*
50	Download speed ã€‹ 500 mbps , upload ã€‹200 mbps . No sudden drops

129	*Easier to stay connected throughout the city especially in newer housing developments where service can be minimal.*
175	*Everyone having Internet accessibility is very important to our family. I think it's important for everybody to have equity and opportunity in resources.*
36	*We have service through AT&T and Xfinity. This is in case one goes down, as I work from home. It would be nice if the services didn't 'hiccup' as much as they do.*
205	*We need choices with our broadband provider and better cellular service,*
108	*We take meetings from home. Our children like the stream shows. The internet has always been horrible in this area. They told us that the wires run underground are disconnected (per ATT) we would love to be able to do the things we need to do without such slow speeds and the constant loss of connection.*
44	*We use Comcast Business to get better broadband than residential already, so we are satisfied, except it is expensive.*
155	*We would fiber optic internet*
92	*We would prefer to have fiber internet over cable.*
117	*When we moved here in 2020, we had AT&T as our ISP but we ran into problems by the fact of the lines kept on going down and slowing down our speed after a year of working with AT&T it was determined that the lines in the house was fine but the outside line were the issue. My comment is that I am sure that I am not the only person in the birch grove area that is having this issue. Since we are on T-mobile home internet we have zero issues with our interent.*
176	*Would like to automate as much of the home as possible*

Affordable Connectivity Program (ACP)

The FCC introduced the Affordable Connectivity Program (ACP) to improve broadband accessibility and affordability for low-income households. Qualified households can receive a $30 monthly subsidy from participating broadband providers, lowering the cost of securing a 100 Mbps download speed broadband connection. By making internet access more affordable, the ACP aims to reduce the digital divide. Cities can effectively promote the advantages of the ACP to residents and program managers serving disadvantaged communities.

According to data from educationsuperhighway.com, a key ACP adoption tracker and information provider, the table below displays a 26% adoption rate among eligible families within city limits. The data also highlights that 738 eligible households currently lack regular internet access and often rely on cellular hotspots for connectivity. Notably, cellular providers, being private entities, operate on profit-oriented business models, limiting the public sector's control and influence over the coverage they provide.

City	Adoption Rate	Eligible Households	Enrolled Households	Eligible Unconnected Households
Newark	26%	4488	1146	738

Among the survey respondents, the table below indicates the levels of awareness and adoption. It is concerning that only 26% of the eligible households in Newark are utilizing the program, especially considering the national average adoption rate of 80%. Given this significant gap, the City of Newark should prioritize promoting and increasing awareness of the program in underserved areas, aiming to bridge the digital divide.

KNOW ABOUT THE ACP		
Yes	39.9%	67
No	60.1%	101

TAKING ADVANTAGE OF ACP		
Yes	1.2%	2
No	98.8%	166

It should be noted that 34 respondents would like to receive additional information regarding the ACP.

Community Outreach Meetings

To gather information regarding the needs of the community in Newark, GTG, working with City staff, held a stakeholder outreach/listening session allowing the public to voice their opinions in a structured manner. Although the meeting had relatively low attendance, the participants provided some quality information. The low attendance was more than likely due to the broadband availability in Newark. The meetings were publicized by City staff with emails, publications and signs being used to inform the public of the meetings. The public tends to only attend these types of meetings if there is a serious problem they are experiencing, or the state of broadband is overall unsatisfactory. Newark is well served by the local incumbents presumably leading to the low meeting attendance.

Policies

The City of Newark does not have policies in place regarding broadband and related assets. Basic broadband policies include a Dig Once policy or joint build, master license agreement, construction standards, developer agreements or similar mechanisms.

A Dig Once policy would include procedures to facilitate broadband development and minimize restoration issues. Developer agreements are another way to have developers of larger parcels or land development provide broadband infrastructure. These could be put in place to reduce costs for expanding broadband in Newark and to support City services.

Permitting and restoration requirements follow city standard processes and timelines. The city should evaluate an expedited process to support broadband expansion.

On a positive note, the city's general plan does reference technology in multiple areas. This is a best practice that Newark has in place including:

1. LU-1.5 Technology Focus. Promote the city as a good location for technology businesses and clean industry, capitalizing on Newark's location within Silicon Valley.
2. Action T-2.D. Utilize Technology to Improve Safety. Evaluate and implement alternative safety measures for bicyclists and pedestrians using the latest technologies available.
3. Policy E D-1.2 Newark's Competitive Edge. Maintain and enhance Newark's competitive edge relative to other cities in the East Bay, Silicon Valley, and Peninsula Areas, particularly in the **technology** sector. This will require competitive fees and fast processing times.
4. Policy E D-1.7 Flexibility. Ensure that city policies, zoning, and economic development programs are flexible enough to respond to rapid changes in **technology**, real estate market dynamics, and the workplace. Economic development efforts should be modified and adapted as necessary as local, regional, national, and global economic conditions evolve.
5. Emergency Preparedness references to updating response to new requirements, technology, and communication protocol.
6. Action EH-1.B Code Updates. Periodically revise construction codes and regulations to incorporate the latest **information** and **technology** related to natural hazards such as earthquakes and flooding.

This plan supports expanding broadband and Smart City initiatives to enhance public safety, economic development, transportation, and mobility, as well as other improvements that increase efficiency and expand services to Newark's community.

Gaps

The gaps in fiber optic infrastructure appear to be in a lack of consistent coverage by the incumbents. Deciding where and how to build in any city or urban area is a highly secretive process and usually does not make clear sense to anyone reviewing coverage maps. Newark is not different, as shown in the

map below, with select neighborhoods built with FTTP (fiber-to-the-premise) as reported by a national incumbent, while the neighboring areas are not built. This creates gaps for the City of Newark to try to solve and encourage providers to build satisfactory networks.

As you can also see in Figure 20 below, there is virtually no fiber network or access in the business areas around the city, with the incumbent providers not offering fiber services to commercial market. The incumbent providers will on occasion support businesses with fiber connectivity, however at very high upfront construction costs. Consequently, reliability and speed seem to be major issues for businesses. It is important that the city supports economic development, especially in the retail sector, as the city relies on sales tax as a major revenue source.

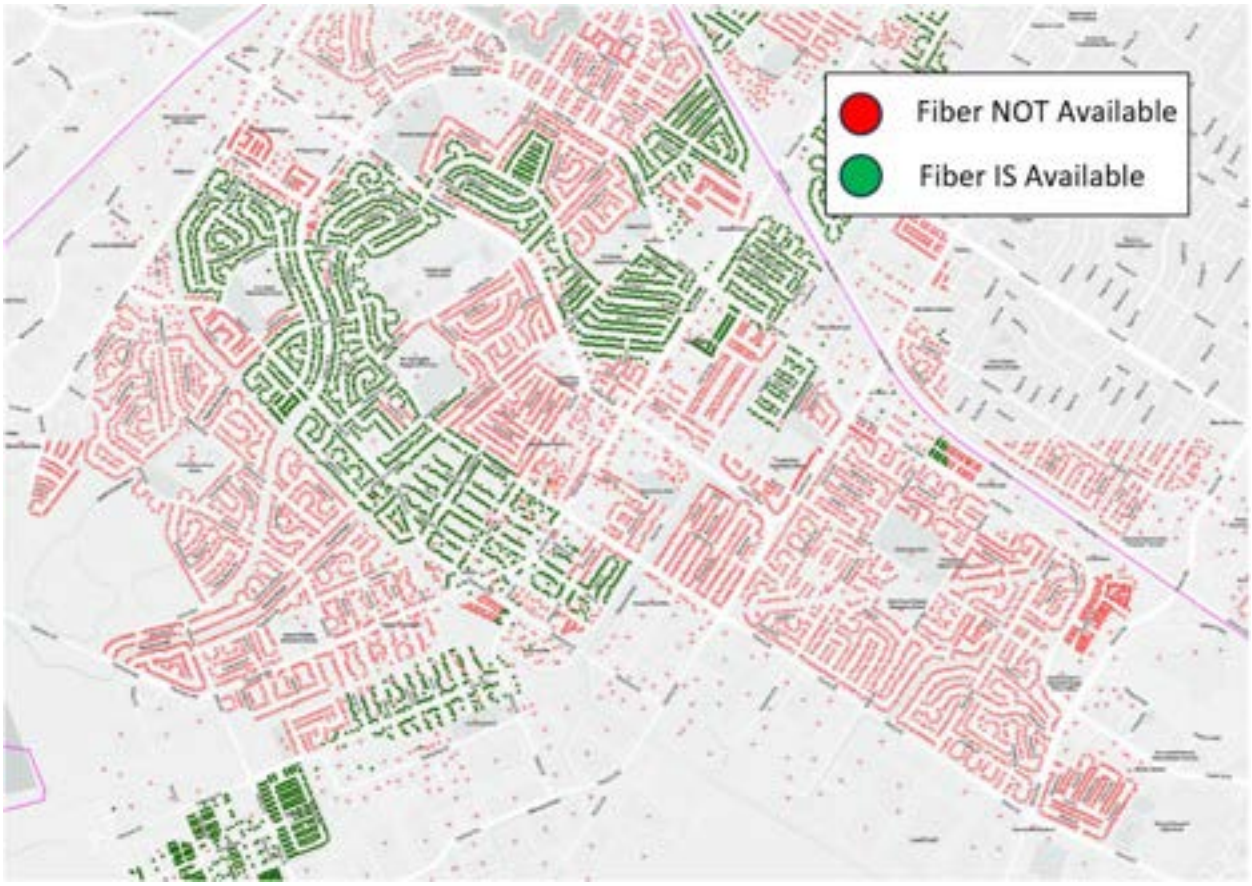

Figure 20 – Fiber service availability

Newark has major gaps in its policies related to fiber and other network infrastructure. These gaps include:

- Dig Once policies and joint-build policies and programs.
- Developer Agreements that include fiber and conduit expansion.

- Siting cell sites and antennas on public assets/property, including a master license agreement
- Assets to leverage an expansion of the fiber network
- Fiber services to a significant portion of the commercial and industrial sectors of the city, as outlined in phase areas 1 – 3, which is detailed further in the report.

Conceptual Design

High-Level Designs (HLDs) represent a conceptual framework featuring routes, potential construction methods and overall project estimated footage, offering a budgetary overview and potential timeframes for project completion.

The City of Newark presents a distinctive scenario, necessitating a tailored approach to HLD development that caters to the diverse needs of its community. With varying levels of internet accessibility among residents, ranging from robust connectivity to the absence of broadband, the HLD must address the connectivity of city facilities, support residents lacking broadband access and contribute to the economic development of Newark.

The HLD is strategically put together, prioritizing the use of the most cost-effective construction methods. Initial considerations involve leveraging existing infrastructure, such as fiber optic cables, conduits, and other pre-existing assets, before implementing new construction. Underground construction, such as boring and plowing, are generally recognized as the most expensive and time-consuming approaches to network development. While the expenses associated with new construction methods can vary significantly, they generally surpass the costs of utilizing existing infrastructure. The chart below illustrates the available construction methods along with estimated costs for each.

Construction Methods	Estimated Cost/Foot	Brief Description
Existing Infrastructure		
Existing city owned fiber optic cable	$4 – $10	Re-splicing, adding splice cases, testing, and documenting existing fiber
Existing city owned empty conduit	$10 – $15	Placing new cable in existing conduit, splicing, splice cases, testing and documenting fiber

Remove and replace city owned Fiber	$25 – $35	Removing working circuits, splicing, adding splice cases, testing, and documenting existing fiber
Upgrade traffic interconnect conduit	$30 – $40	Removing interconnect cables, upgrade handholes and sweeps, pull new cable, splice, test, and document
Aerial Construction		
Over lash aerial cable	$7 – $15	Pole Loading, place new cable on existing strand (over lash), splice, test, and document
New attachment aerial cable	$15 – $25	Pole load, build new attachments, place strand, lash cable, splice, test, and document
New aerial with new poles	$90 – $120	Same as above but must permit and place new telephone poles first.
Underground Construction		
Plowing	$30 – $40	Using a vibratory plow with 4' stinger to place conduit prior to new cable placement
Micro trenching	$20 – $30	Micro trenching uses a thin 1" – 2" by 12" deep to cut a trench into the ground, pavement, or other and place conduit in the trench and seal it with special material to prevent cable from coming out of the trench.
Rock Wheel	$110 – $125	Uses a 6" – 8" blade to cut a trench up to 36" deep through any material including rock, gravel, asphalt, dirt etc.
Boring/Directional Drilling	$95 – $120	Uses rods and a machine to drill a hole under the surface of the earth at any depth needed with minimal disturbance
Open trench	$80 - $100	Using machines like mini excavators, backhoes, shovels to open a trench to place conduit and back fill over conduit

Assumptions used for the City of Newark HLD include:

- The HLD consists of connecting city facilities. By prioritizing the facilities according to usage and cost to construct, the HLD is broken into 3 phases.

- The HLD was updated per Council feedback to add fiber and WiFi connections to four City Parks, improving access to underserved areas within the City.
- All new underground construction will be directional drilling/boring.
- Construction costs are for infrastructure, including cable, splicing, and prevailing wage.
- Construction methods are chosen in order of cost effectiveness, providing a fiscally responsible build.
- Due to all construction and engineering costs increasing by over 30% after COVID-19, the HLD cost assumptions include a 20% contingency.
- City assets will be used to house all major equipment and power needed to build, run, and maintain the network.
- All cabinets, hubs, distribution multiport service terminals (MSTs) and other assets built must be placed in the public right-of-way.
- Routes are based on road access. There may be easements to lessen the footage and will be discovered during the low-level engineering.

Tradeoffs

Construction methods cost very differently, and the inclination would be to use the least expensive methods to save on the up-front capital investment needed. However, all construction methods have positive and negative elements, and the tradeoffs are something that needs to be considered in advance of construction of a network. Below are some examples of tradeoffs when considering different construction methods.

Example 1: New underground construction can be done in a variety of ways, with boring being one of the most expensive. Microtrenching is one of the least expensive methods but has drawbacks that need to be evaluated and mitigated prior to use. Microtrenching is a shallow underground technique that is a viable in neighborhoods where there is little traffic and little exposure to major emergencies, such as water main breaks, that require major excavation in a hurried manner, possibly exposing the shallower fiber to damage and outages. However, in major intersections, heavily travelled roads, water mains, storm drains, side sidewalks and gutters microtrenching present a much higher risk to damage than using directional drilling/boring, which is much deeper at 36” - 48” deep on average.

Example 2: Aerial construction is one of the fastest construction methods to deploy. The positive reasons for building aerial infrastructure include speed to deploy, relatively inexpensive labor costs versus other methods and easily inspectable infrastructure. With the cost of aerial about 1/5th to 1/4th that of new underground (boring), it makes aerial the obvious choice. However, there are negatives involved with aerial construction that must be understood and accepted prior to being used. This includes a vulnerable infrastructure more easily damaged and susceptible to vandalism, as well as yearly pole lease fees, making aerial not as attractive over time. The yearly pole leasing fees add up and can negate any cost savings over a matter of 20 years. It is important to understand the tradeoffs when it comes to construction methods and how those factors can affect the network overtime. Especially the upfront capex costs versus the operational costs.

Example 3: Underground construction has very high initial costs and a myriad of additional operational costs. Anyone doing underground digging must call 811 to avoid hitting utilities that have been buried. All owners of underground infrastructure must respond to these calls and mark where the underground infrastructure is located. These services have costs associated with them, which are usually outsourced to companies specializing in locating underground utilities. In the event of damage to underground infrastructure, this maintenance can be very expensive, with costs estimated to be 5% - 10% of the total network cost annually.

One can see that when viewed as a process and not simply a construction method, but rather using operating costs, vulnerabilities and other concerns, choosing a infrastructure can be a far more complicated process than initial cost alone.

Phasing

Most city-wide networks are broken into smaller phased areas that are meant to speed up deployment, bring in revenue prior to the entire network being built and to provide milestones to gauge budget, timing, and overall success of the project.

An additional benefit to the city in replacing current broadband services is reducing the reliance on very high-cost internet services and connections.

Phase	Construction Type	Est Footage	Miles	Percentage
Phase 1	Aerial	8,239	1.56	46%
	New Underground	9,599	1.82	54%
Phase 1 Total		**17,839**	**3.38**	
Phase 2	Aerial	3,203	0.61	64%
	New Underground	1,788	0..34	36%
Phase 2 Total		**4,991**	**0.95**	
Phase 3	Aerial	4,986	0.94	74%
	New Underground	1,717	0.33	26%
Phase 3 Total		**6,703**	**1.270**	
Grand Total		**29,532**	**5.59**	
20% Contingency		**35,438**	**6.71**	

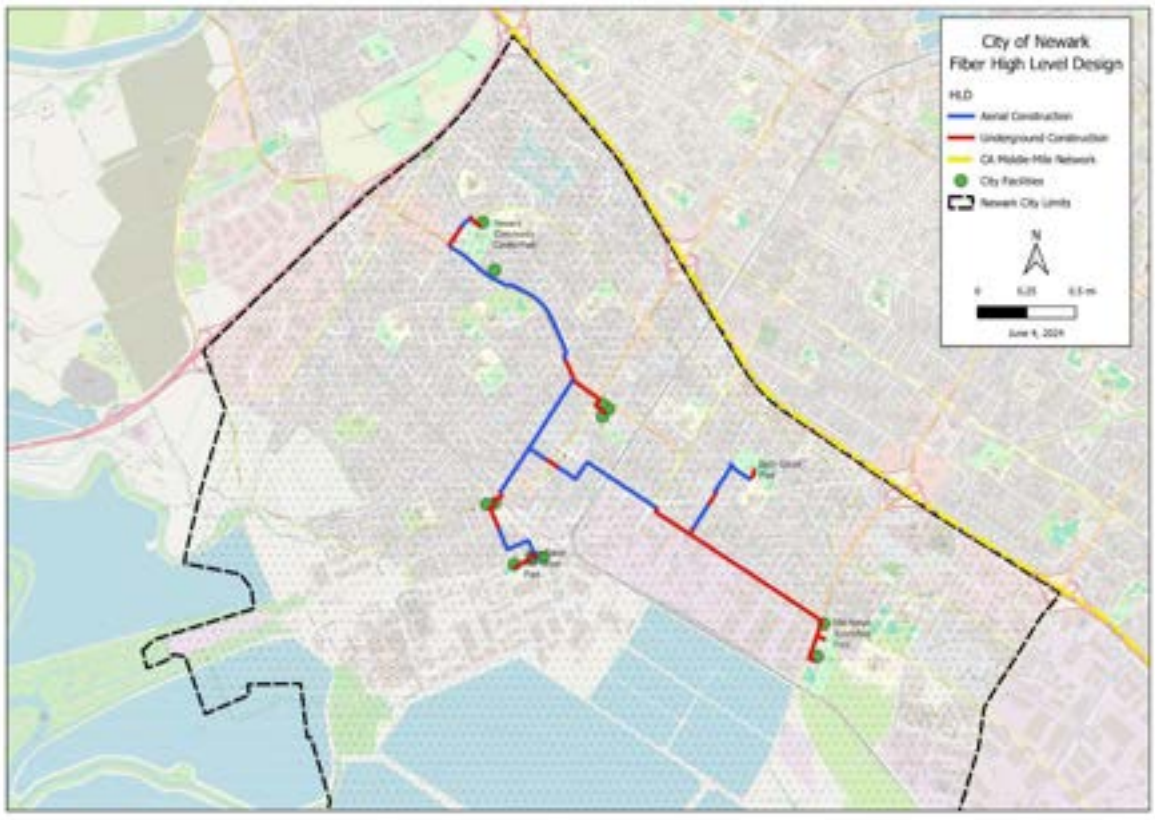

Figure 21 – HLD by Construction Type

Phase 1

During the needs assessment, it was made clear that the Sillman Center is a major recreational hub for the residents, students and visitors and the facility offers many amenities that benefit those in the area. This phase contains much of the new underground construction, due to the lack of poles and other aerial infrastructure along Cherry Street. This phase connects the Silliman Center and Fire Station 27. As shown in the table below, the construction cost for phase 1 is estimated at $1.406 million, making it the most expensive phase. It is the recommendation to connect Mel Nunes Sportsfield and Birch Grove parks during this phase.

Phase 2

Phase 2 builds off phase 1, requiring at least some of that phase to be complete before it can be initiated. The footage in this phase is far less, but is just as important, as it connects areas of great importance for the City of Newark. In this phase, the following will be connected: Fire Station 28, Center for the Elderly and Public Works Corps Yard. This phase has an approximate value of $303,545 according to the sample table below. It is recommended to connect Jerry Raber Ash Street Park during this phase.

Phase 3

Phase 3 connects the remaining two city facilities, Fire Station 29 and Community/Childcare Center by adding infrastructure to phases 1 and 2. The cost of this phase is estimated at $339,233. It is recommended to connect Newark Community Center Park during this phase.

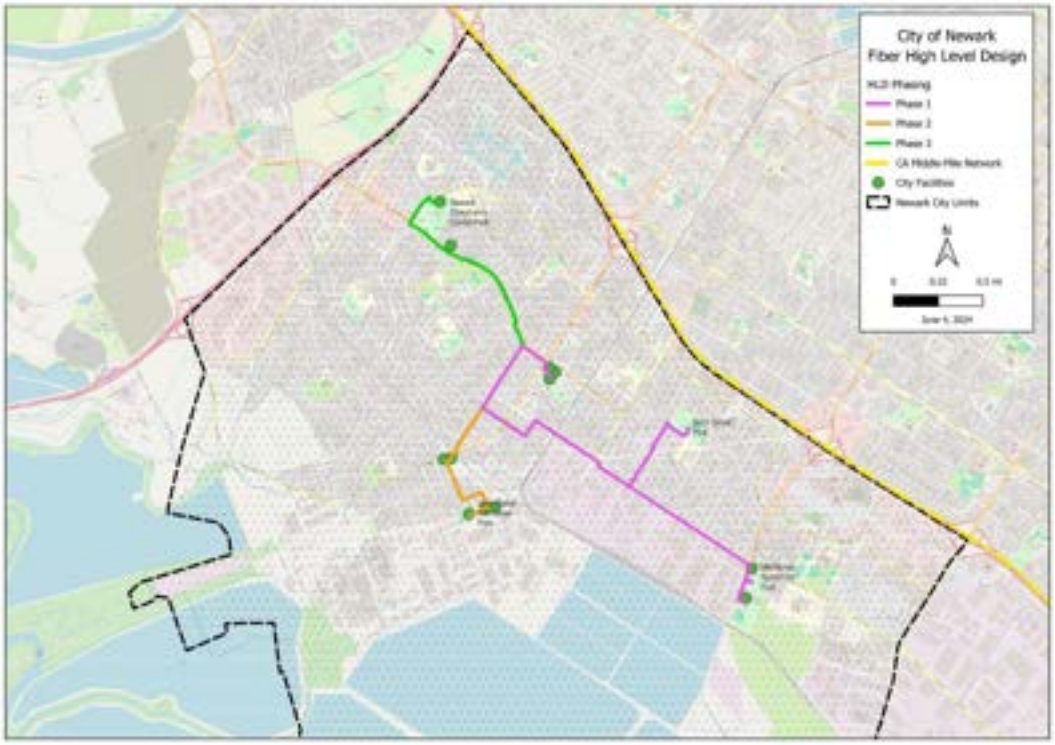

Figure 22: HLD Map by Phase

HLD Footages, WiFi and Budget

During the April 25th 2024 council meeting, where the Broadband/Smart City draft was presented, Council expressed a desire to provide wireless connectivity for its community. Based on analysis of surveys including identifying areas that are highly populated community gathering areas, this report was updated to include fiber and WiFi to Mel Nunes, Birch Grove, Jerry Raber and Newark Community parks.

The following table outlines the projected construction types, along with their estimated footage and costs. The cost per foot includes prevailing wage, engineering, cable, and splicing. It does not include any new equipment. As previously noted in the report, the costs significantly surged in the last year, attributed to post-COVID inflationary trends. These pricing figures were gathered through discussions with utility contractors in the local area, who acknowledge the ongoing upward trajectory of construction-related inflation. However, they anticipate this phenomenon to stabilize soon. It is crucial to

emphasize that given the volatile nature of construction costs, the estimates provided below will remain valid for a limited duration.

Phase	Construction Type	Est $/FT	Segment Total
Phase 1	Aerial	$25.00	$205,977.50
	New Underground	$125.00	$1,199,925.00
	WiFi		$57,929.38
Phase 1 Total			**$1,463,831.88**
Phase 2	Aerial	$25.00	$80,070.00
	New Underground	$125.00	$223,475.00
	WiFi		$36,558.53
Phase 2 Total			**$340,103.53**
Phase 3	Aerial	$25.00	$124,657.50
	New Underground	$125.00	$214,575.00
	WiFi		$36,558.53
Phase 3 Total			**$375,791.03**
Grand Total			**$2,179,726.44**
13.6% Contigency			**$2,476,169.24**

Cost of Services by Phase

The table above shows the cost of construction for the 3 phases, while the table below shows the current cost of service the city pays for, listed by location. As the phases are built the operational cost for each location that will be served by the new network should be noted as savings and treated as a return on investment of the new construction and overtime, will further justify completing the network.

Build Phase	Facility	Service Address	Monthly Totals	Grand Total with Taxes and Surcharges	Annual
Phase 1	SILLIMAN CENTER	6800 MOWRY AVE	$1,102.66	$1,364.46	$16,373.52
Phase 1	FIRE STATION #27	39039 CHERRY	$494.39	$623.46	$7,481.52
Phase 1	LIBRARY	37055 NEWARK BLVD	$114.12	$142.01	$1,704.12
Phase 1	POLICE GROUND FLOOR	37077 NEWARK BLVD	$2,341.00	$2,926.00	$35,112.00
Phase 1	COUNCIL CHAM	37101 NEWARK BLVD	$59.52	$74.40	$892.80
			Total Cost	**$5,130.33**	**$61,563.96**
Phase 2	SENIOR CENTER	7401 ENTERPRISE DR	$171.79	$217.50	$2,610.00
Phase 2	SERVICE CENTER/CORP YARD	37440 FILBERT	$752.24	$923.11	$11,077.32
Phase 2	ALT EOCFIRE STATION 28	7550 THORNTON AV	$853.24	$1,025.07	$12,300.84

Phase 2	OLD FIRE STATION 1	7700 THORNTON AVE	$38.04	$45.90	$550.80
Phase 2	WATKINS HALL	37103 ASH	$38.04	$45.90	$550.80
			Total Cost	**$2,257.48**	**$27,089.76**
Phase 3	COMMUNITY CTR/CHILD CARE	35501 CEDAR BL	$769.03	$1,003.03	$12,036.36
Phase 3	FIRE STATION 29	35775 RUSCHIN DR	$624.32	$744.39	$8,932.68
Phase 3	37365 ASH	37365 ASH	$38.04	$45.90	$550.80
			Total Cost	**$1,793.32**	**$21,519.84**

Business Model and Funding

There are a range of business models for local governments to impact broadband development, from passive, policy-only models to fully active, full-service models. To follow best practices, it makes sense to develop policies to encourage local, non-profit broadband service providers. This would involve establishing expedited, non-discriminatory access to local Public Right of Way (PROW) and standards for constructing and developing network assets that use the PROW. Beyond that, the city could establish procurement preferences for services from such providers and a special class for them within a wireless facilities master license agreement.

To determine the proper business model for a municipal network, local governments need to understand the various factors and how they interplay with each other.

The different business models shown in the table below compare the various levels of investment and amount of municipal control. The City of Newark has different options from doing nothing, letting the incumbent providers handle broadband all the way to becoming a municipal ISP and provide services to the community. Rarely is extremely a viable option with the key factors leading to a business model somewhere in the middle.

Business Models

Internal expansion

Any business model beyond leasing a limited amount of dark fiber will require dedicated staff. Dark Fiber is unused fiber that can be leased and is maintained by the lessee, reducing impact to staff and city resources. The program or division would need a broadband manager with a strong understanding of facilities leasing and maintenance. The broadband manager would be responsible for the overall organizational performance, focused on finances and governance.

If the city is actively promoting use of the network, it will also need a sales and marketing specialist to identify and manage leases. The sales and marketing manager may also work with wholesale customers to promote internet services to the community. An infrastructure specialist will also be needed to follow through with the policies put in place, dig once, also to track placement, ownership, and maintenance of the infrastructure. Finally, the program or division will need a fiber management system (FMS) and should have a maintenance fund to cover repair costs. Major maintenance or repair tasks—anything requiring excavation—would need to be contracted out. Additional positions may also be needed, depending on the scope and scale of the project.

If the city were to move forward with any of the above, it would require substantial overhead and operating costs, as well as a much larger capital investment in infrastructure and equipment. Payroll can account for 90% or more of ongoing costs. Equipment licenses, maintenance, refresh, and upgrades create high periodic costs and ongoing reoccurring costs. Limiting operations to a backbone network will greatly reduce both up-front and on-going costs and set the stage for private investment.

Public Private Partnership (P3)

P3 agreements are a common business model in the modern municipal network for the construction, operation, and maintenance of city-owned infrastructure. These agreements are so popular because they can entail any of the following business models by working with private ISPs and creating an agreement that the city can support. All cities have varying amounts of assets, capital, and staff to support municipal networks. Some cities have a sufficient staff to run and monitor a network, some cities contract the majority of the operations to private companies or individuals and have little staff that can help with the

running of a network, while other cities have substantial infrastructure that can be leveraged in a P3 to ultimately generate revenue through these agreements. It is important to understand the level of commitment from both parties when considering the following:

- Who will pay for the network construction?
- What funds will both parties be required to put into the agreement?
- What are the roles and responsibilities of either party?
- Who will determine the ownership and control of any future network expansion?
- What is the revenue model that will allow both parties to benefit from an agreement?

Public policy only

Public policies are a vital part of the modern city broadband network, whether it be city or privately owned. Policies that may have a substantial impact on the broadband networks include Dig Once policies and developer agreements. Dig once policies put in place a mechanism for the city to add infrastructure while other companies and agencies are doing work in the right-of-way allowing the city to add infrastructure as part of these other projects. Developer agreements are important because they allow the city to require infrastructure to be added to the development of large plots. Other policies that should be created and implemented are those streamlining the permitting process to encourage local ISP investment in broadband throughout the city. A major deterrent for private company broadband construction in municipalities is if the permitting process and restoration requirements impact the return on investment (ROI) that drives all private company investments. This is not a real “business” model but does have an impact on the local broadband market and regardless of the business model used, policies must be evaluated and updated or implemented.

Infrastructure provider

In this business model, the municipality builds infrastructure and leases that infrastructure out to other agencies with the goal of generating enough revenue to, at a minimum, pay for the cost and maintenance of the infrastructure. Private companies work off profits and ROI models that require lower cost construction and enough subscribers to offset these costs. There are areas in every city that have a low ROI and private companies simply will not build in these areas and skip to higher profit areas. Cities can build infrastructure that the private sector can use, lowering the costs of construction and increasing the ROI. The infrastructure can be conduit only, fiber or wireless towers.

Public services provider

Cities connecting publicly owned assets, public organizations, county, nonprofit organizations, schools, libraries and/or other non-private locations are considered public services providers. These organizations are usually limited to anchor institutions, critical organizations, public safety organizations, utilities, and healthcare. A government owned network can provide a better quality of service at lower costs.

Open access provider

Open access networks are those networks that do not offer exclusive access to any one entity. This philosophy is geared towards increasing competition and potentially increasing revenue by not limiting access to only one lessee.

Lit services are when the provider supplies the equipment, fiber and anything needed to support a certain level of service. Simply put, if the customer wants 100 Mbps service, that is what the city would need to provide. The customer pays for the level of service they want and the cost increases with the increase in speed.

Conversely, if the customer wants to provide their own equipment, the city will only provide the fiber from end to end and the customer is responsible for the equipment and speeds they are wanting. The city only maintains the fiber and does not have any involvement with the equipment. These circuits are known as "dark" circuits and the bandwidth used is not controlled by the city. Although the equipment is not provided by the city, the circuits are remarkably close in cost.

Municipal services provider (ISP)

Municipalities that provide end user services to residential and business customers are considered retail service providers. Most commonly, local governments offer triple-play services consisting of phone, television, and Internet services, essentially becoming an equal competitor to incumbent cable and broadband providers. As a retail provider, the organization is responsible for a significant number of operational functions, including management of retail services, network operations, billing, provisioning, network construction, and general management.

For a municipal services approach, the following would need to be taken into consideration:

Capital Expenses

- Develop the cost model for the network, including one-time and ongoing capital expenditures to build the network. This will include an assessment of current facility locations, city-owned land and the city right-of-way for construction and the need to purchase any land or equipment.
- Provide a phased deployment approach, including prioritization and costs for each phase.

Operating Expenses

- Develop the cost model for operations, including operations and maintenance, network operations, field services, staffing, billing, and customer service.

Revenue Potential

- From the market analysis and outreach, determine the customer segmentation and growth on the network, across each type of customer (business, school, hospital, etc.).
- Determine customer growth rates for the network, based on benchmarking analysis from other utility and municipal providers.
- Determine a proposed competitive rate schedule for potential services, using pricing information from the market analysis and benchmarking information.

Financial Viability

- Develop financial statements including:
  - Operating income and cash flow
  - Net present value analysis
  - Projected revenues and benefits
  - Uses and sources of funds
  - Operational expenses
  - Depreciation schedule
  - Debt service analysis
  - Key assumptions
- Conduct comprehensive financial analysis on the project to determine overall financial sustainability using key metrics such as free cash flow, debt service coverage, operating margin, and net income.

Grants and Other Funding Sources

The City of Newark is an affluent community and therefore is not competitive for most federal and state grants that support expanding broadband to unserved and underserved communities. The city should monitor and apply for

transportation and Smart City related grants which can be coupled with expanding fiber optic installation to expand broadband in the community.

The city has been prudent in the development of a CIP for conduit infrastructure tied to street projects. This supports expansion of broadband in the community and supports regional efforts related to broadband. In addition to the CIP, the city should evaluate the addition of technology fees, which can facilitate building out broadband quicker, supporting the community and economic development.

The City has existing American Rescue Plan Act (ARPA) and Public, Education and Government (PEG) funds that can be used to begin the installation of broadband infrastructure within the constraints of the funding sources and if not already allocated to other city projects. Due to the city's lack of competitiveness for current broadband grants, the city is left with limited options outside the above sources. Other options include bonds, debt, or direct revenue (fees & taxes).

Recommendations

The city needs to create a platform to attract investment and innovation. The following recommendations support the city in this effort.

Form or designate a broadband advisory committee.

Without accountability and designated resources, master plans can fall by the wayside. It is important that there is a level of accountability. The city should evaluate a committee of city staff that have the level of authority and interest to ensure broadband progresses in the community. A point person with interest in the project should be appointed as the lead to this team.

Investigate a Public Private Partnership (P3).

Private companies have the experience and expertise to engineer, build out and maintain a city network. Through partnerships, allowing the partner to use the infrastructure constructed for the city network, costs can be greatly reduced and help alleviate the operational expenses of owning a network. The city staff should maintain the equipment, routers and services, and the partner should maintain the physical layer of cables and splicing. A partnership should be leveraged to add competition and reduce the need for the city to build a fiber-to-the-premises, FTTP, network. A P3 partnership would meet one of the city's goals to offer internet to the public at reduced costs with improved reliability.

Create policies and workflows.

Create workflows and city policies that aid in the further development of broadband infrastructure through Dig Once policies, updated construction standards, developer agreements and requirements, including infrastructure with capital improvement projects and other policies. These policies should be applied to both the public and private sectors doing work in the public right-of-way (ROW).

Permitting and restoration requirements prove to be difficult for developers and private ISPs looking to build in the ROW. Permits can take too long to approve, but through policies and updated requirements, the city can alleviate some of this by ensuring the permitting process is streamlined.

SB 378 passed into law in 2022 and requires municipalities to allow microtrenching for the purpose of placing fiber optic cables, in certain circumstances. The city should consider creating a standard to address when microtrenching is going to be used, including policies in place for dealing with microtrenching during emergency digging in the ROW.

The city should also consider creating a digital inclusion policy that will further digital inclusion and help bring digital equity to Newark in support of digital inclusion efforts recommended below.

Create a Technology Enterprise Fund.

Dedicating all revenues generated from telecommunication carriers or ISPs through leases of city poles, ROW access, cell towers and/or land for placement of towers and other public assets to a Technology Enterprise Fund will ensure the city has a financing source for the purchase, installation and/or construction of new broadband assets and Smart City applications, particularly to take advantage of opportunities outside of the annual budget process, such as coordinated joint trenching. These funds would also be used for digital inclusion efforts.

Newark should consider investments that provide modern, reliable broadband infrastructure and programs that would offer free or low-cost services to qualified residents, the school district, and the library.

The city should also use the fund to support innovative Smart City/Connected Community programs that improve efficiencies while enhancing services for the community. This includes infrastructure investments that deliver real-time environmental, public safety and transportation information to stakeholders,

such as streetlight sensors for noise, air quality, on-street parking availability, traffic congestion and evacuation routes. “Push” notifications can be employed to relay important messages; retail location intelligence can improve economic development by offering analytic information on foot traffic in the surrounding business areas.

Incrementally build city-owned broadband infrastructure.

The city should adopt the HLD and implement policies that include broadband in all projects. If there is an opportunity to add this infrastructure as part of other projects, the city can incrementally build infrastructure as needed over time to reduce costs. Keeping the future in mind, the broadband committee should be included in the planning process with broadband being considered a utility like power, water and sewer.

Evaluate the use of Public, Education and Government (PEG) funds where applicable to enhance services with broadband.

The City has a need in the Emergency Operations Center (EOC) for multiple video and audio feeds for its Joint Information Center (JIC) to broadcast and monitor live reports of events.

The City also has the need for remote location broadcasting of events i.e. festivals and city events, which broadband would support.

The use of PEG funds is a potential source of funding to assist with these needs.

Support digital inclusion.

Digital divide is the problem and digital inclusion are the steps and activities to help fix the problem, with digital equity as the goal.

Digital divide is the gap between those who have adequate broadband and ability to use it and those who do not. It is easy to define the problem, however, less so to define the underlying causes such as affordability, physical access, owning devices that can access the internet, and even knowing how to use the internet effectively.

No two cities have the same issues that need to be solved, but there are some causes of the digital divide that exist, to some extent, in every town, city, county and state. One of those causes is the affordability of internet access. In addition to the local ISP affordability information provided on their websites, the city should promote the Federal Affordable Connectivity Program (ACP),

which is an FCC-funded subsidy that helps ensure households can afford the broadband they need for work, school, healthcare and more. Details can be found at https://www.fcc.gov/acp. The survey resulted in showing the city has a low take rate for the ACP program. Education regarding this important tool to assist those in need is prudent.

The library in Newark has many resources to be leveraged in digital inclusion efforts including computers, iPads, and other devices the community can benefit from. The city should promote the library and its resources to the community. The library has study rooms that can be used to hold educational classes on how to use the internet. The aged population tends to learn technology more slowly and can use help with how to access telehealth, doctor appointments, online bill pay, and many other activities required to exist in the increasingly online lifestyle of the world.

Another aspect of digital inclusion is to ensure the affordability of the devices that allow users to connect to the internet. Cities have surplus equipment, desks, computers, and laptops, among other things, which could be donated to senior centers, schools, economic development centers or any other group that helps lessen the digital divide. Senior centers are in particular need, with most residents being on fixed incomes with no way to purchase devices.

Next Steps

Outlined below is a summary of the next steps the city should take to improve and expand broadband.

1. Create a staff committee to advise, keep abreast of and hold accountability for broadband.
    a. Define roles and responsibilities.
    b. Keep the committee small and nimble, including representatives from key departments such as Public Works, Information Technology, Police Department, Community Development and a representative from the City Manager's Office.
2. In addition to the committee, assign or hire a person or consultant to be the City's point person leading the broadband efforts lined out in the study.

3. Pursue a public private partnership, create an RFP to find partnerships with a local ISP.
    a. Find a partner that can engineer and construct HLD phases 1 – 3 as appropriate and as budget allows including the addition of WiFi in the four city parks identified (Newark Community, Jerry Raber, Birch Grove and Mel Nunes).
    b. Create a partnership that will accomplish the goals of the broadband plan in providing underserved businesses with reliable service.
4. Review city policies to update as needed.
    a. Dig Once policy.
    b. Developer agreements.
    c. Create workflows and policy to ensure broadband is a consideration on all city capital improvement projects, permitted work in the ROW, and planning efforts.
    d. Review needs for wireless telecommunication facilities ordinance.
5. Create a broadband enterprise fund to support broadband efforts, construction, and partnerships.
    a. Assign a portion of PEG fees to a broadband fund where applicable.
    b. Assign a portion franchise fees to a broadband fund.
    c. Create a financing strategy that separately tracks revenues and expenditures for this fund.
    d. Create a funding policy that established a reserve as well as strives to ensure that revenues match expenditures without being a burden to the city's General Fund.
6. Incrementally build city-owned broadband infrastructure with a P3 if this model is selected.
7. Evaluate the community's needs for Wi-Fi for locations such as the Silliman Center, the Senior Cener, low-income neighborhoods, Restaurant Row, the Old Town area and City parks.
8. Monitor grants such as BEAD and CASF including funding for education and accessibility. Traffic grants are also a great source of funding for expanding a fiber network
9. Think regionally – the City should consider working with other local governments in the region to reduce costs and take advantage of economies of scale while improving services. This includes the county, schools, Ohlone College and other neighboring cities like Fremont and Union City that are pursuing expanding broadband as well.
10. Create a digital inclusion policy and program including the following:

   a. Promote the Affordable Connectivity Program or other programs that provide similar services.
   b. Use library resources to educate individuals.
   c. Standards for donating surplus equipment.

11. Promote digital inclusion efforts for the residents of the city.
   a. Promote the Affordable Connectivity Program. Newark has residents that have a challenging time affording internet access.

12. Instead of auctioning off extra and surplus equipment, donate to local groups and individuals that would benefit.
   a. Senior Centers
   b. Youth Centers
   c. Economic Development Groups
   d. Small Business Associations
   e. Under privileged households
   f. Schools
   g. Etc.

Connected Communities

Connected Communities AKA “Smart City” have different meanings city to city, and the definition has evolved over time. Initially, the focus was on infrastructure projects and centrally controlled systems with reporting and analytics. These investments provided very little value for the communities they served. Now, Connected Community initiatives focus on the use of technology and data to increase collaboration, drive decisions, and improve the community’s livability, workability and sustainability.

A Connected Community Program improves internal alignment to become an efficient, collaborative, and transparent city that is continuously improving cross-departmental coordination and data-sharing, refining operational approaches and priorities through a participatory governance process and active resident engagement.

Connected Communities help keep community members feeling inclusive, safe, and informed through continuous innovation with modern technologies improving response time and situational awareness.

Newark’s Connected Community/Smart City leveraged broadband as a foundation to build equity through creative ways of providing the necessary connectivity to support unserved and underserved neighborhoods.

Newark’s Connected Community/ Smart City plan should be coupled with the City’s broadband master plan to establish a collaborative ecosystem to bring together residents, businesses, industry, government, non-profits and other stakeholders to ideate and implement solutions that maximize “Livability” for residents, “Workability” in the City and “Sustainability” for all as overarching value propositions.

With the implementation of a Connected Community strategy and plan, operational efficiency will be improved and likewise become the backbone for delivering “Newark Community Connect," enabling the city to rethink and innovate how the city functions and delivers its services.

Government Technology Group (GTG) would use the following as a framework for helping Newark achieve its goals of digital transformation. This process aids transparency, programs, and budget alignment, coordinating across organizations to realize functional requirements

Vision

The vision establishes the foundation, by which the actual transformation is executed against. This vision should directly align with city initiatives and the

foundational principles of operational efficiency and improved service delivery.

Transformation

Transformation is the execution of the vision by way of specific projects aimed at delivering the desired outcomes. This is not so much technology centric, rather people and process oriented, leaning on technology to realize the objectives.

Outcomes

The outcomes reflect the improvements to the overall process of city operations and service delivery. They represent a new way for the city to measure performance, engage residents and build on a foundation of continuous improvement.

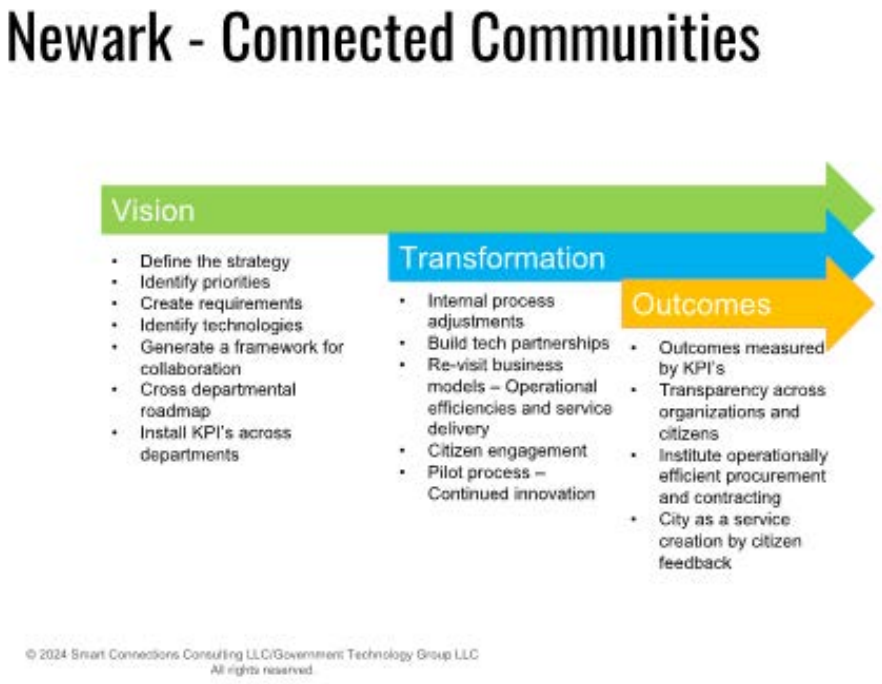

Figure 23 – Connected Communities in Newark

Case Study Examples

The cases below demonstrate Connected Community/Smart City use cases that we have participated in with the respective cities.

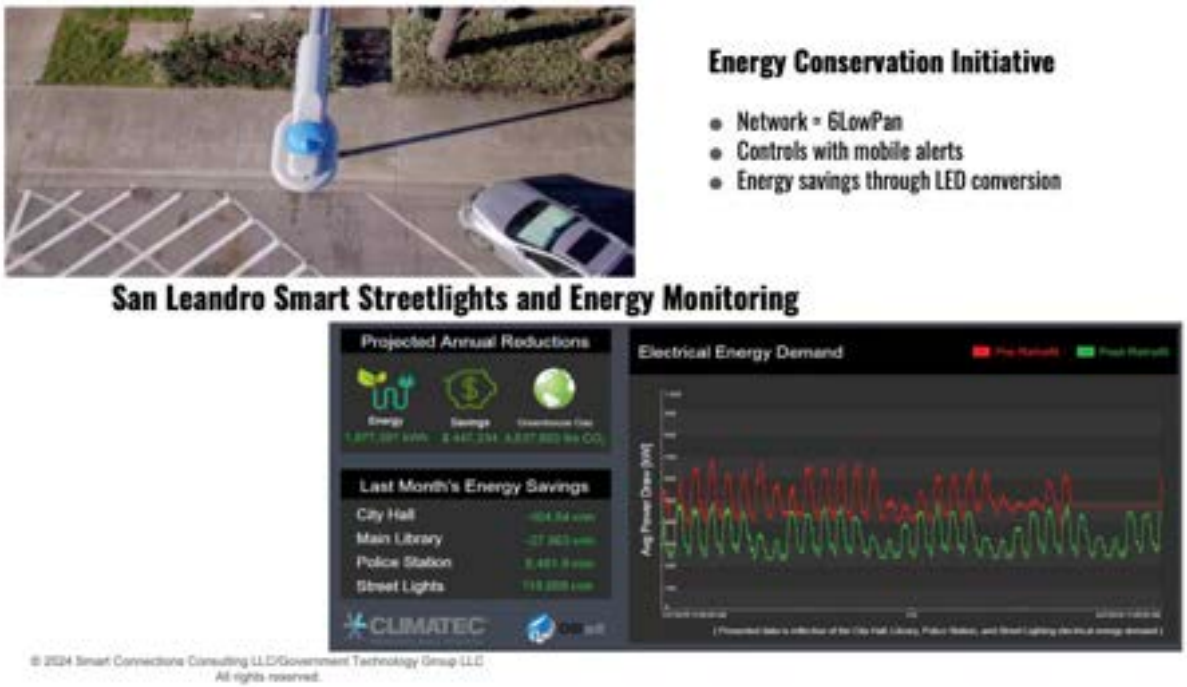
East Palo Alto – Digital Equity

During the pandemic the County of San Mateo took action to make sure that its infrastructure assets were utilized to deliver connectivity services to its underserved communities, East Palo Alto was the ideal community.

We leveraged the county's fiber as the backbone and solved the middle mile with CBRS (Citizens Broadband Radio Service) and deployed several WAPs (Wireless AP's) for the public Wi-Fi in various parks and city buildings. The Wi-Fi was used to connect the homes so that there was support for distance learning and remote work. The program was an absolute success and improved the county's DDI (Digital Divide Index) number.

San Leandro – Connected Lighting

The City of San Leandro initiated an LED relamping program and decided to connect the streetlights via a Low Power Wide Area Network (LPWAN) for the purpose of energy conservation.



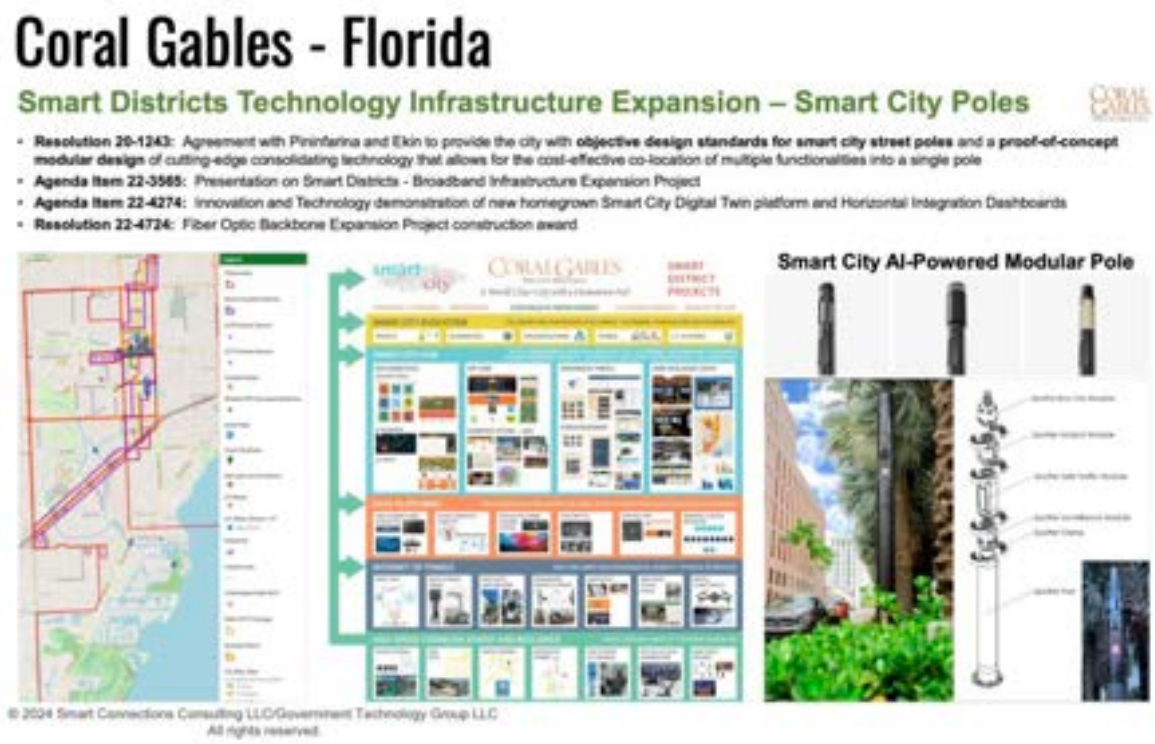
Lessons learned:

While the energy savings was successful, there were plans to leverage the lighting network for additional applications e.g. environmental monitoring, people counting, etc. The challenge was that the protocol for the wireless network was not broadly adopted, making it very difficult to integrate additional sensors for new applications. As a lesson learned, it is important to:

1. Ensure that the technical choice supports the strategic plan.
2. Understand the standards and protocols that are supported.
3. Leverage your infrastructure for more than a single use whenever possible.

Coral Gables – Connected Communities/Smart City Platform

The City of Coral Gables Florida set out over 10+ years ago to create a Connected Community that embraced services and transparency while improving city operations. This was under the leadership of Raimundo Rodulfo – CIO.



Coral Gables demonstrates the focus and effort it takes to deliver on the vision of "Connected Community/Smart City" by:

1. Establishing and revisiting their strategic plan.
2. Establishing the foundation of systems interoperability for improved service delivery.
3. Focus on innovation and open standards.
4. Clear KPI's that are communicated to the community.

Palo Alto – Digital Twin for Traffic Monitoring Case Study

Working directly with the Palo Alto CIO and the chief traffic engineer, the program was executed over the course of 18 months and has garnered significant visibility from an innovation perspective. The objective was to set the foundation for traffic modernization using existing data to build a real time digital twin as insight to aid in improving traffic flow and give priority to cyclists and pedestrians at crosswalks.

Leveraging the Trafficware Management System data provided in partnership by the city, we were able to deliver a baseline of the current traffic conditions to inform decisions on where to introduce “Adaptive Traffic Signaling,” as well as preparing for vision zero initiatives. The user interface allows for real time insight into traffic flow, congestion, and pedestrians at crosswalks.

The second part of the project was to deliver the ability to visualize the traffic data for the purpose of preemptive signaling, which was successfully demonstrated.

The outcome was successful and there were several additional use cases documented to leverage the traffic data combined with other city data - e.g. environmental monitors coupled with traffic flow data show the CO2 emissions based on traffic flow.

Newark Strategic Horizon Chart

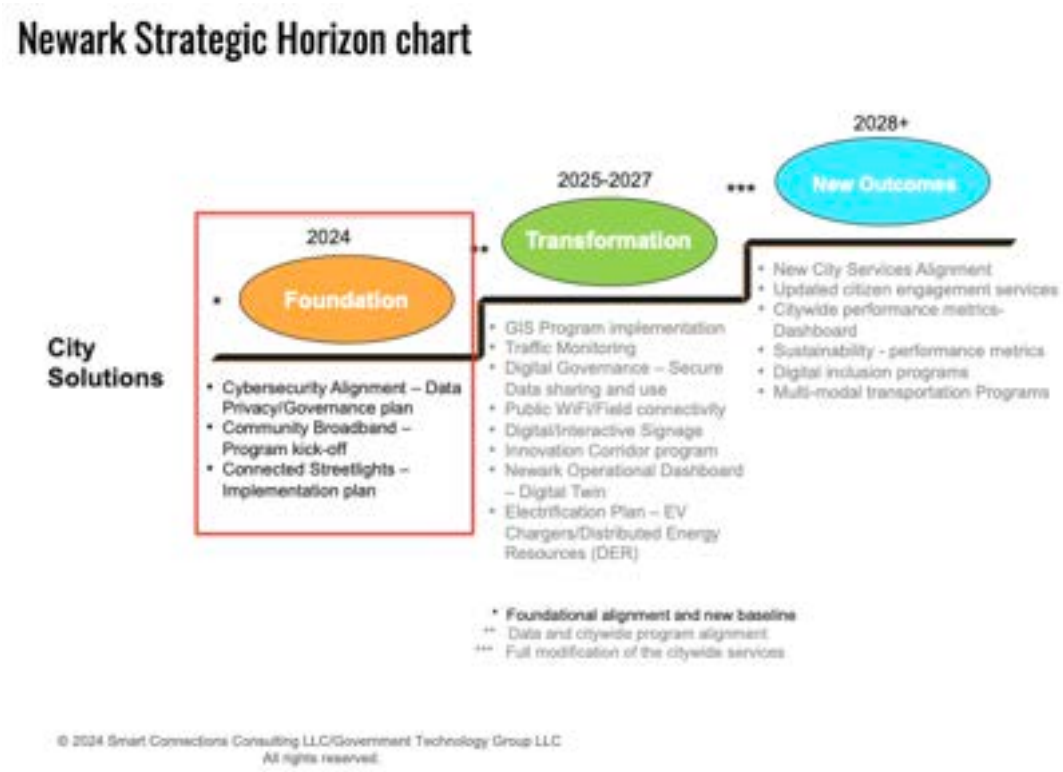


Figure 24 – Newark Strategic Horizon chart

The strategic horizon chart is a living reference tool that aligns programs and projects to the city vision for Connected Communities/Smart City. It is meant to be updated as priorities and initiatives change over time.

Top Areas of Opportunity

The following list highlights areas of opportunity for Newark to establish project initiatives that deliver value to the city and residents alike.

1. Connected street lighting
    a. Improves energy efficiency.
    b. Improves community safety.
    c. Reduces carbon footprint.

   d. Extends additional Connected Community applications e.g. Public Wi-Fi, Air quality sensors etc.
2. Community broadband
   a. Promotes Digital Equity and ensures reliable and affordable internet access for all community members irrespective of income or location.
   b. Enhances education and lifelong learning.
   c. Boosts economic development and innovation.
   d. Improves public service and citizen engagement.
3. Traffic monitoring
   a. Reduces traffic congestion and improves commutes.
   b. Enhances public safety and emergency response.
   c. Benefits environment and sustainability.
   d. Prepares for autonomous vehicles.
4. Cybersecurity, privacy, and data governance
   a. Improves the city's security posture.
   b. Improves transparency for the community.
   c. Prepares the city for use of the extended datasets generated by the solutions.

With a robust broadband strategy, the above listed solutions deliver a solid foundation for continued innovation for Newark's Connected Community.

Other Smart City/Connected Communities Recommendations

Newark has several areas that align to the strategy initiatives of Livability, Workability, and Sustainability. These domains are very common amongst the majority of cities.

Livability

- **Environmental Monitoring** – The benefits here are aligned to the city delivering information to the residents about the conditions in the surrounding areas. Is it advised to hike, ride bikes? Is the temperature combined with CO2 emissions safe? What is the particulate count?
- **Digital Signage/Kiosk** – The benefits here serve the residents and visitors as they will be able to walk and engage the signage for information. Likewise, it can be used to engage residents and allow them to initiate permits and other city forms without going inside city hall.

- **Security Monitoring** – The benefits here are aligned with residents feeling safe. It is likewise aligned with workability when the police department is looking for forensic information related to criminal activity.
- **Multi-Modal Transportation** – This benefits the city residents in a variety of ways.
  - Getting to public transportation hubs will improve the experience for all.
  - Establishing e-mobility programs for the elderly.
  - Could get residents out of their car and into public transportation which would have an impact on sustainability.

Workability

- **Wireless connectivity** – The benefits of the city considering ancillary wireless connectivity in conjunction with its fiber deployment covers workability as well as livability.
  - First responders will have reliable connections within a variety of areas in the city. This leans toward considering PLTE (Private LTE) for some areas of the city.
  - Benefits the residents when looking at large numbers of digital signs or additionally tap to pay EV Chargers, etc.
  - Field workers will have the ability to relay GIS information whenever there are changes needed.
  - Recreation centers will experience a much higher level of reliability as well as improved services.
- **GIS program** – This will benefit the city across the board. Operational efficiency when field visits are made in terms of understanding and clearly knowing where the assets, wireless AP's, etc. are located.
- **Digital Twin** – Digital Twins are very useful when the data is available. The benefits tie themselves to providing insight into a variety of areas and visualizing them in a single dashboard that is updating in real time.
  - Improvement in traffic monitoring – Leads to adaptive traffic monitoring.
  - Improvement in emergency response – Leads to managing routes to specific locations. Also, unifies the various data streams into a single view shared amongst the teams.
  - Can become the "Single Pane of Glass" used by most city workers.
- **Security foundation** – When extending Connected Community services to operational technology, the city should evaluate its security strategy and

processes to reduce risk to the city from potential cyber security incidents.

- **Automated redundant internet** – As innovation occurs and the city relies more heavily on the Internet to support its Connected Community program, it should evaluate automated redundant internet access if the new enhancements are deemed critical to the business needs of the city.

Sustainability

- **Buildings** – With Newark's sustainability targets, buildings (both old and new) should be under consideration. Note that Newark is already in a good place with the city hall and police departments already equipped with building automation to support HVAC and building services.
  - Energy efficient windows for all construction.
  - Solar and other distributed energy resources to reduce emissions.
  - Connectivity within building that monitors and manages lighting, HVAC, and energy.
- **EV charging** - This provides even greater value when attached to other sustainable initiatives, renewables, and other energy efficient programs.

GTG is well prepared to help Newark execute a plan for solution delivery.

With a robust broadband strategy, the above listed solutions deliver a solid foundation for continued innovation for Newark's Connected Community.

Acknowledgements

We would like to acknowledge with much appreciation the crucial role of city staff and regional stakeholders from Newark. City staff provided valuable feedback on a regular basis during the project in addition to assisting with getting the word out to the community regarding this important project.

STAFF REPORT

Item F. 2.

DATE	07/24/2025
TO	Honorable Mayor and City Council Members
FROM	James Scanlin, Environmental Services Manager
SUBJECT	Presentation on the status of the Sea Level Rise Vulnerability Assessment and Adaptation Strategy

SUMMARY AND RECOMMENDATION

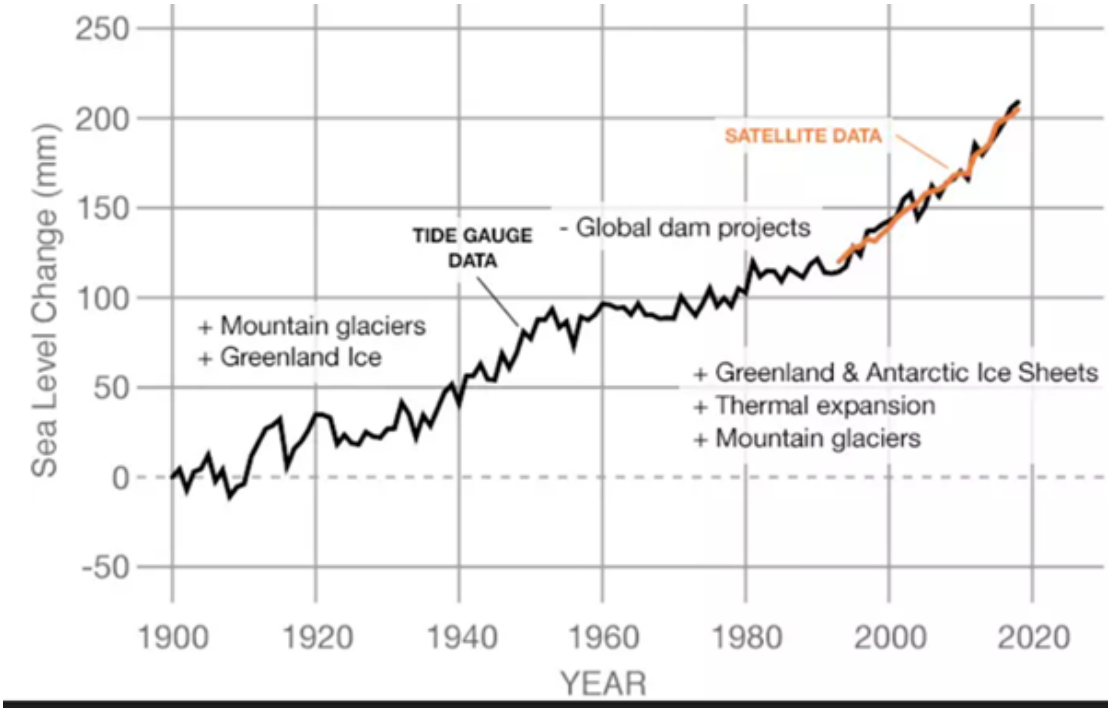
The City of Newark has initiated a comprehensive Sea Level Rise Vulnerability Assessment and Adaptation Strategy to address the challenges posed by rising sea levels and associated flooding risks. This project aims to develop a robust understanding of the City's flood risks and to formulate effective adaptation strategies. In July 2024, the City Council approved a contractual services agreement with Arup US, Inc. (Arup) to assist with the development of a flood modeling report, a vulnerability assessment, and an adaptation strategy. The flood modeling report and vulnerability assessment have been completed and are attached to this staff report. The next step is to develop adaptation pathways to respond to changing flood risks over time.

Staff recommends that the City Council receive a presentation from Arup US, Inc. on the results of the flood modeling and vulnerability assessment reports, and the process for developing adaptation pathways.

BACKGROUND

The sea level has been rising. The average sea level increased approximately 200 mm (0.65 feet) since 1900 and has increased more rapidly over the past 20 years. The graph below from the NASA website (climate.nasa.gov) shows the rise in sea level since 1900 based on tide gauges and, more recently, based on satellite data. This increase is due to the melting of glaciers and ice sheets and the thermal expansion of the oceans.

Figure 1: Rise in Sea Level Since 1900



Sea level is expected to continue to rise, possibly even more rapidly than in the past. *The Ocean Protection Council: California Sea Level Rise Guidance: 2024 Science and Policy Update* states that an additional 1.6 feet from the 2000 level provides a reasonable estimate of the lower bound for the most likely sea level rise by 2100, and that 3.1 feet provides a reasonable upper bound for the most likely range of sea level rise by 2100.

Table 1: Ocean Protection Council Sea Level Scenarios (in feet)

YEAR	LOW	INT-LOW	INTERMEDIATE	INT-HIGH	HIGH
2020	0.2	0.2	0.2	0.2	0.3
2030	0.3	0.4	0.4	0.4	0.4
2040	0.4	0.5	0.6	0.7	0.8
2050	0.5	0.6	0.8	1.0	1.2
2060	0.6	0.8	1.1	1.5	2.0
2070	0.7	1.0	1.4	2.2	3.0
2080	0.8	1.2	1.8	3.0	4.1
2090	0.9	1.4	2.4	3.9	5.4
2100	1.0	1.6	3.1	4.9	6.6
2110	1.1	1.8	3.8	5.7	8.0
2120	1.1	2.0	4.5	6.4	9.1
2130	1.2	2.2	5.0	7.1	10.0
2140	1.3	2.4	5.6	7.7	11.0
2150	1.3	2.6	6.1	8.3	11.9

California Senate Bill (SB) 272 (Laird 2023): Sea Level Rise Planning and Adaptation was signed into law October 7, 2023, and requires all local cities and counties in the state's coastal zone or jurisdiction of BCDC to develop a sea level rise plan that is subject to approval by the San Francisco Bay Conservation and Development

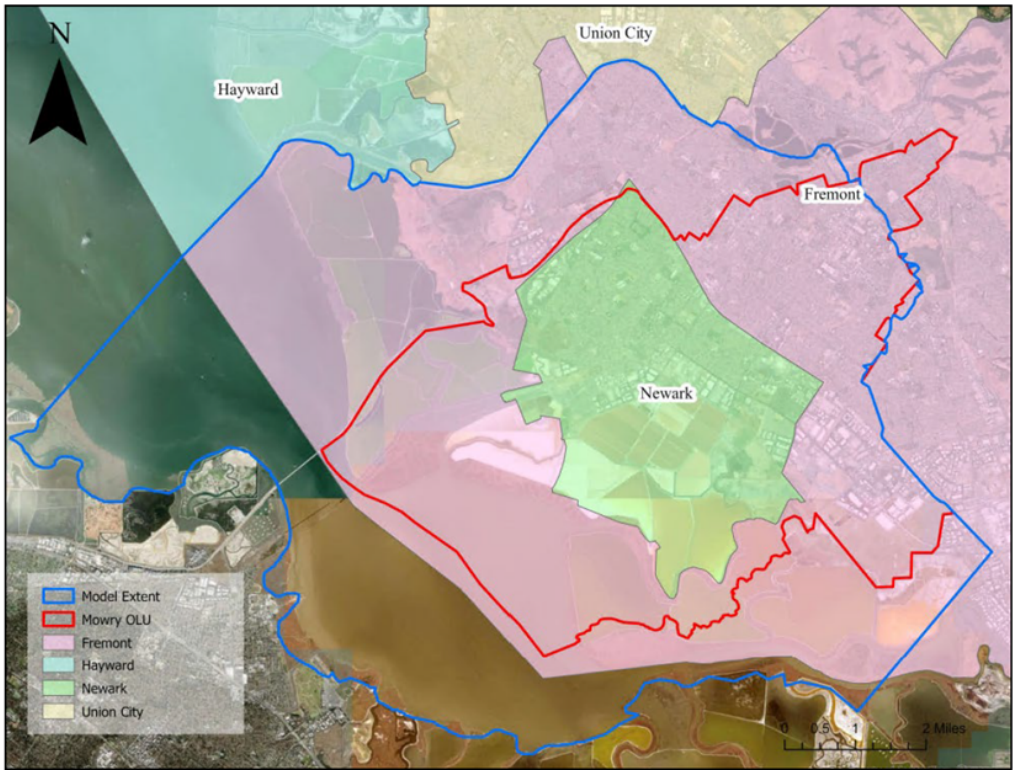
Commission (BCDC), on or before January 1, 2034. Newark is within the jurisdiction of BCDC. SB 272 requires that cities and counties receiving approval for a sea level rise plan be prioritized for funding to implement sea level rise adaptation strategies and recommended projects outlined in the local government's approved sea level rise plan. In December 2024, BCDC adopted the Regional Shoreline Adaptation Plan, which specifies what must be included in the sea level rise plan.

The Flood Modeling and the Vulnerability and Risk Assessment are the first steps in the City's effort to address the impacts of sea level rise. These have been completed and are attached to the staff report. The assessments are in line with BCDC's requirement that local jurisdictions evaluate 0.8, 3.1, 4.9, and 6.6 feet of sea level rise, along with various coastal storm scenarios. These efforts provide a solid foundation for future planning efforts.

DISCUSSION/ANALYSIS

In 2019, the San Francisco Estuary Partnership and SPUR released the *San Francisco Bay Shoreline Adaptation Atlas: Working with Nature to Plan for Sea Level Rise Using Operational Landscape Units*(Atlas). The San Francisco Bay Regional Quality Control Board funded the report. The Atlas recommends using what are referred to as Operational Landscape Units (OLUs) as the framework for developing sea level rise adaptation plans. OLUs are "connected geographic areas that share common physical characteristics and that would benefit from being managed as individual units." Newark is entirely within the Mowry OLU. Part of Fremont is also within the Mowry OLU (see Figure 2 below). This is the area that was assessed for this project.

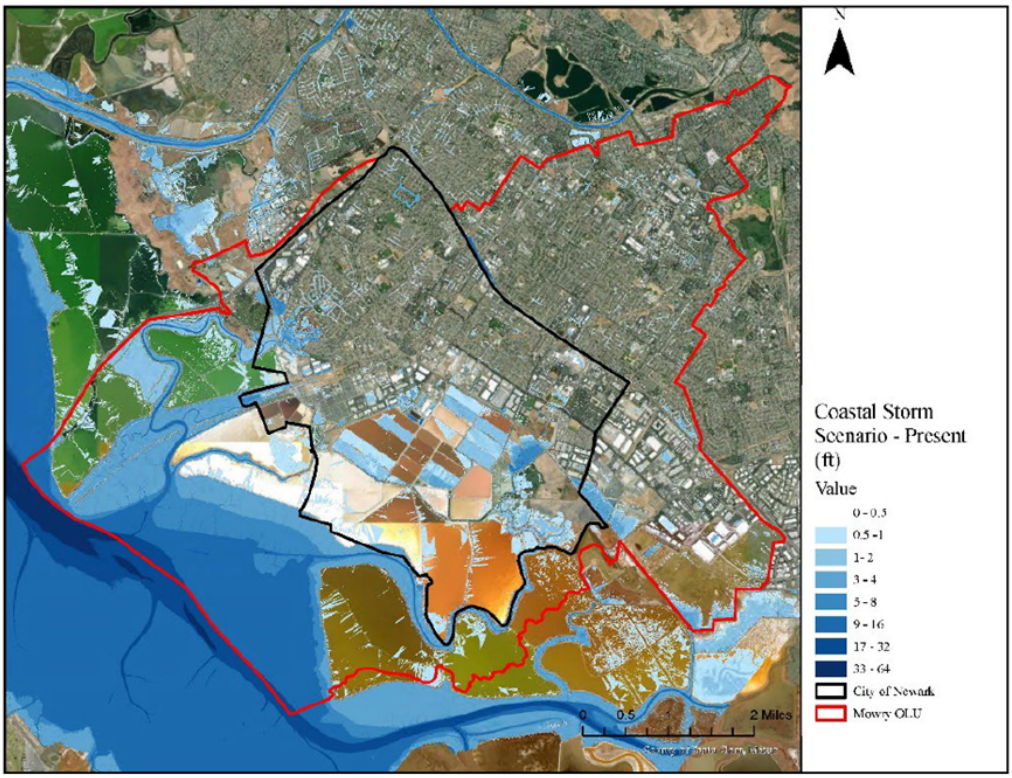
Figure 2: Mowry Operational Landscape Unit



Flood Modeling

As part of this project, Arup modeled a 100-Year Coastal Storm under the current sea level. As can be seen in Figure 3, some areas of Newark are currently prone to flooding during large storm events.

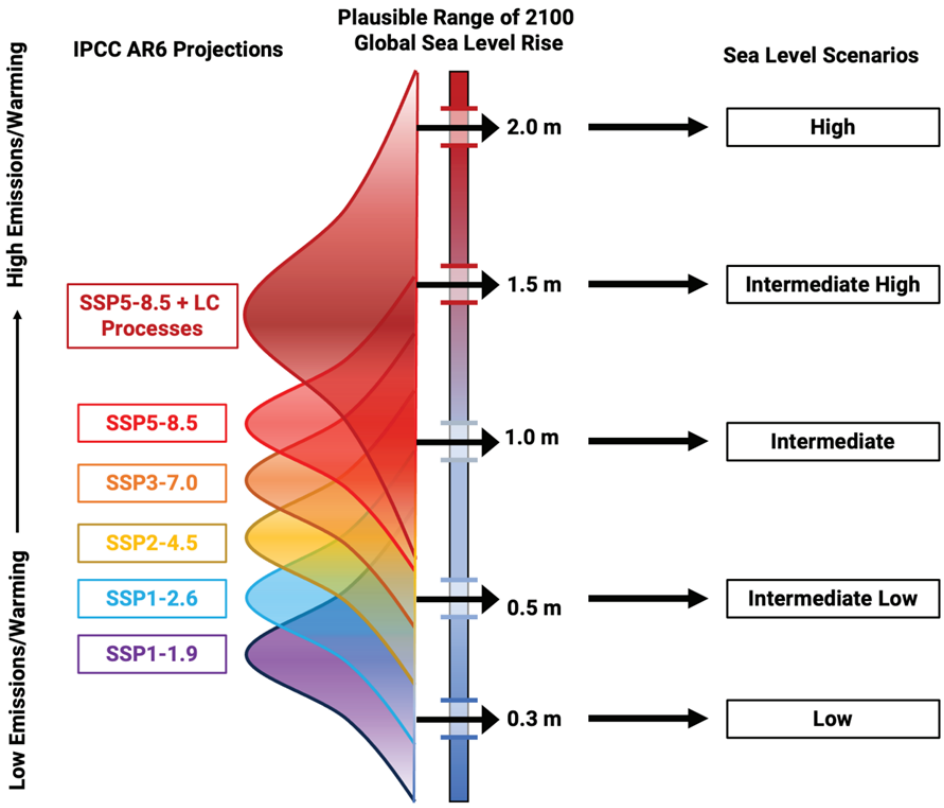
Figure 3: Modeled 100-Year Storm Under Current Conditions



Future Scenarios

There is a great deal of uncertainty regarding the speed and extent of sea level rise. Figure 4 from the Ocean Protection Council illustrates the plausible range of sea level rise by 2100 (*California Sea Level Rise Guidance: 2024 Science and Policy Update).* Arup developed a flood model of the Mowry OLU for various sea level rise scenarios (0.8 ft., 3.1 ft., 4.9 ft., and 6.6 ft.), with and without concurrent storms, as required by BCDC's Regional Shoreline Adaptation Plan (RSAP).

Figure 4: Plausible Range of Sea Level Rise (*Ocean Protection Council, 2024*)



Vulnerability and Risk Assessment

The results of the Flood Modeling were used to assess potential impacts on the community. Table 2 lists the estimated present-day cost of the impact on infrastructure from quasi-permanent inundation. Quasi-permanent inundation is defined as areas that would be flooded under daily high tides. The results of this risk analysis describe the cost of no action and help lay the groundwork for future adaptation planning.

Table 2: Estimated Losses from Quasi-Permanent Inundation (in millions)

Asset Type	Mid-century (2050)	End-of-century (2100)		
	0.8ft SLR	3.1ft SLR	4.9ft SLR	6.6ft SLR
Buildings	$45	$200	$1,500	$3,100
Roads	$0	$70	$360	$490
Rail	$4.5	$7.5	$14	$17
Sewer	$1.7	$5.7	$22	$32
Power	$20	$115	$160	$180
Total Loss	**$71**	**$398**	**$2,056**	**$3,819**

Next Steps

The completion of the Flood Modeling and the Vulnerability and Risk Assessment Reports for the Mowry OLU are critical initial steps for developing a subregional shoreline adaptation plan that is required to be submitted to BCDC by 2034. The RSAP requires local jurisdictions to develop adaptation strategy alternatives for the 0.8 ft (2050) and 3.1 ft (2100) sea level rise scenarios. BCDC recommends using the "Adaptation Pathways" approach to develop this adaptation strategy. The Adaptation

Pathway approach is to "implement actions in the near term in discrete, manageable steps that provide flexibility for changes in the future." In other words, to implement "no regrets" actions that provide near-term benefits and that do not preclude additional or alternative implementation measures in the future. Arup will develop a proposed framework for implementing adaptation pathways. Further development and implementation of the adaptation pathways would be done in coordination with other stakeholders, such as the City of Fremont, the Alameda County Flood Control District, the Union Sanitary District, the Alameda County Water District, Newark residents, Cargill and other Newark businesses.

FISCAL IMPACT

While there is no immediate budgetary impact associated with this item, the long-term cost of adapting to sea level rise in Newark is expected to be substantial. Future investments would likely be needed for property protection, infrastructure improvements, and groundwater mitigation. Funding these efforts would require a combination of financing mechanisms, such as bonds or special assessments, along with state and federal support. A detailed, asset-specific cost analysis will be developed in subsequent project phases and presented to the City Council for consideration and budget approval.

Executive Summary

The City of Newark initiated a comprehensive *Sea Level Rise Vulnerability Assessment and Adaptation Strategy* to address the challenges posed by rising sea levels and associated flooding risks. This project aims to develop a robust understanding of the City's flood risks and to formulate effective adaptation strategies. The study area encompasses the Mowry Operational Landscape Unit (OLU) which includes the entire City of Newark and portions of Fremont. This report documents the approach and initial findings from the flood modeling analysis.

Approach

The flood modeling approach used the Super-Fast Inundation of CoastS (SFINCS) model to simulate compound flooding scenarios, incorporating factors such as rising sea levels, groundwater levels, subsidence, storm flows, and coastal storm surges. The model was validated against historical tide gauge data and Federal Emergency Management Agency (FEMA) flood maps. Scenarios were modeled for present-day, mid-century (2050), and end-of-century (2100) conditions, considering storm intensities and sea level rise (SLR) projections aligned with guidance from the State Ocean Protection Council (OPC) and the San Francisco Bay Conservation and Development Commission (BCDC). This project and the modeling outputs do not replace FEMA maps for official purposes, such as insurance and zoning. Rather, the flood hazard results from this project are meant to be used for planning purposes, as they incorporate projected SLR and assess multiple flood scenarios.

Key Findings

The results highlight the present-day threat of extreme rainfall events (e.g., atmospheric river events) on residential and commercial areas in Newark, and future coastal flooding exacerbated by SLR. Key findings indicate that the city is vulnerable to both coastal and inland flooding, with the plausible extent and depth of flooding expected to increase substantially by 2100. The non-storm scenarios show that, even under moderate SLR, it is plausible that public infrastructure and residential areas could be quasi-permanently inundated, meaning that they experience flooding during typical day-to-day conditions, without adaptation action by the end of the 21st century.

The implications of these findings underscore the need for adaptive strategies to mitigate flood risks. The next steps of this study will use the flood hazard results presented in this report to assess the impact on communities and infrastructure, develop adaptation solutions, and engage with the community to share information and gather input for steering the implementation of future measures.

1. Introduction

The City of Newark initiated this integrative study to simultaneously understand critical challenges resulting from SLR and develop adaptation strategies for addressing these risks. Prior to this effort, the City conducted a Local Hazard Mitigation Plan (LHMP) effort with Union City and the City of Fremont which highlighted the need for this project. This project represents the first critical step in the adaptation planning process for the City by establishing a baseline understanding of pertinent flooding risks using industry best practices and methods. This understanding is essential for the second step, which involves developing risk-informed adaptation strategies and identifying potential partners for implementation.

This report summarizes the flood hazard model data collection, methodology, model development, results, and conclusions. The model outputs include present and future flood extent and depth scenarios considering rising sea levels, rising groundwater, subsidence, storm flows, and storm surge.

1.1 Study Area

The study area covers the Mowry OLU, which includes the entire City of Newark as well as portions of Fremont (Figure 1). The model extents include some additional surrounding areas as necessary for completeness in modeling. The total surface area on land within the model extents is 64 square miles and consists primarily of medium-to-high density development. The study area also includes approximately 15 miles of shoreline along the San Francisco Bay.

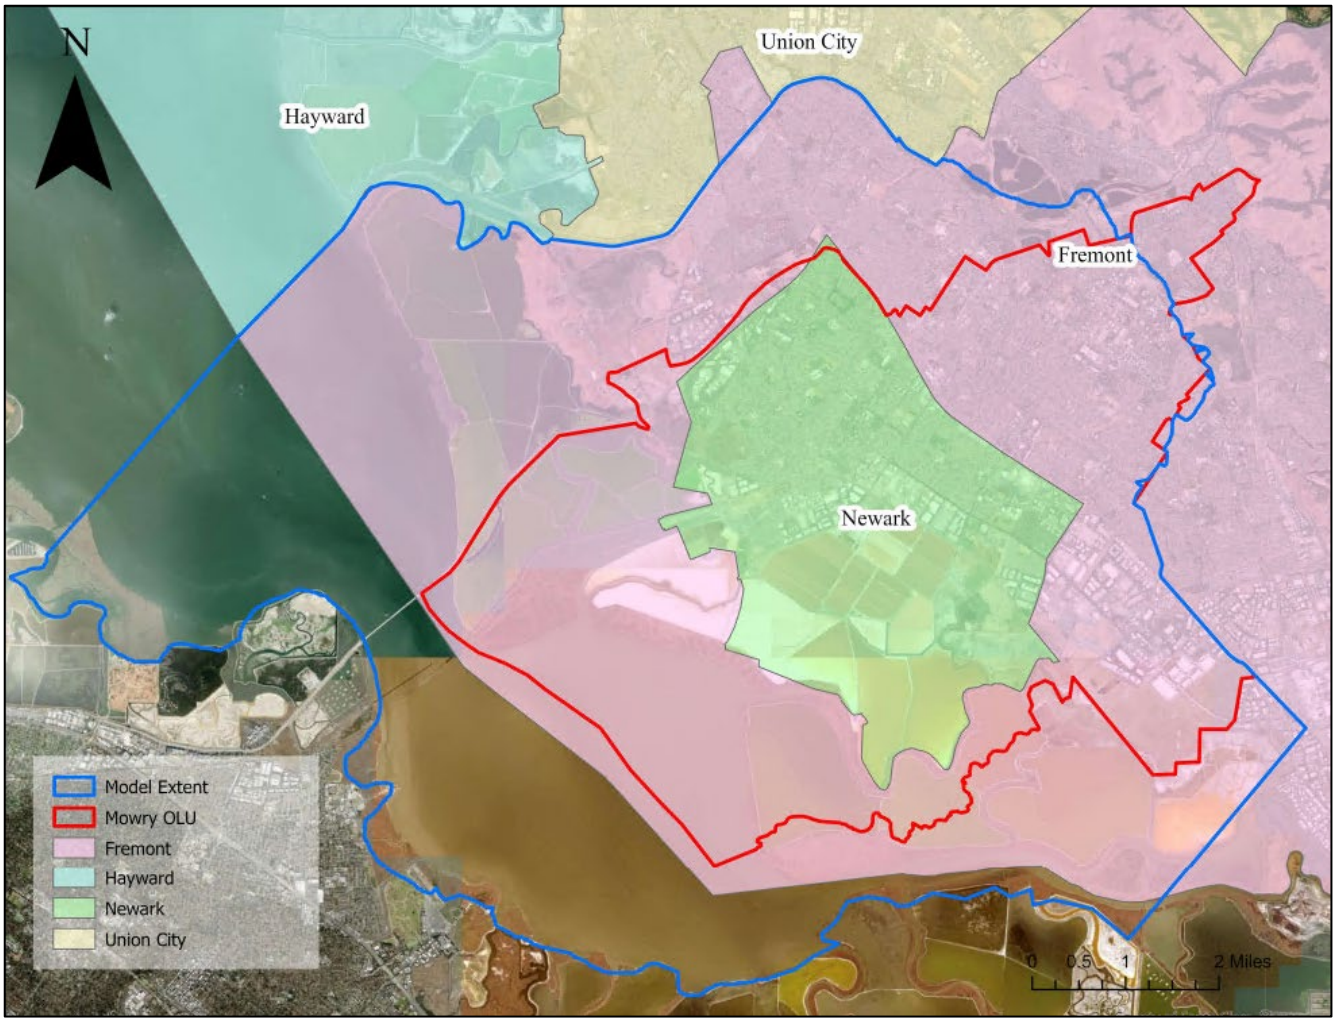

Figure 1 Study area, model extents, and jurisdictions

1.2 Historical Flooding

According to the 2024 Tri-City LHMP, there have been 19 State and 19 Federal disaster declarations from flooding, heavy rain, and storms in Alameda County, listed by year in Table 1. Historical events like these, particularly the 1982–1983 El Niño event, have underscored the need for stronger flood management systems, including levee improvements and enhanced stormwater infrastructure.

Table 1 Alameda County Flood Disaster Declarations from 1950 to 2023 (City of Newark, 2024)

Disaster Type	State Declarations		Federal Declarations	
	Count	Years	Count	Years
Flood (including heavy rains and storms)	19	1950, 1955, 1957, 1958 (twice), 1962, 1963, 1970, 1982, 1983 (twice), 1986, 1995 (twice), 1997, 1998, 2008, 2017 (twice)	19	1955, 1958, 1962 (twice), 1970, 1982, 1983, 1986, 1995 (twice), 1997, 1998, 2005, 2006, 2017 (thrice), 2023 (twice)

The 1982–1983 El Niño event remains a benchmark event for understanding the impacts of combined stormwater and coastal flooding in the Bay Area. In Newark and the surrounding areas, infrastructure such as roads and wastewater treatment facilities were heavily impacted (National Weather Service, 1982). Flooding along bayfront areas disrupted local transportation and businesses.

Prior to the 1950s, the city experienced recurring flooding during heavy rains, which prompted development of a flood control district to improve the City's drainage system. Most recently, in 2023, two major storm events in January and March resulted in storm drain backup which caused flooding of local streets, which was exacerbated by debris build up at storm drains and fallen trees affecting drainage.

No disaster declarations to-date have attributed impacts to SLR.

1.3 FEMA Flood Maps

The FEMA flood hazard maps (effective August 3, 2009) depict the 100-year and 500-year flood zones in the study area, shown in Figure 2 (refer to Appendix A for a map with the FEMA Base Flood Elevations, BFE). There are several developed areas near the City's shoreline that are within the FEMA 100-year floodplain (in blue) and several other areas further inland that are within the FEMA 500-year floodplain (in orange). The hazard is primarily driven by coastal flooding, as there are no major creeks or rivers within the city.

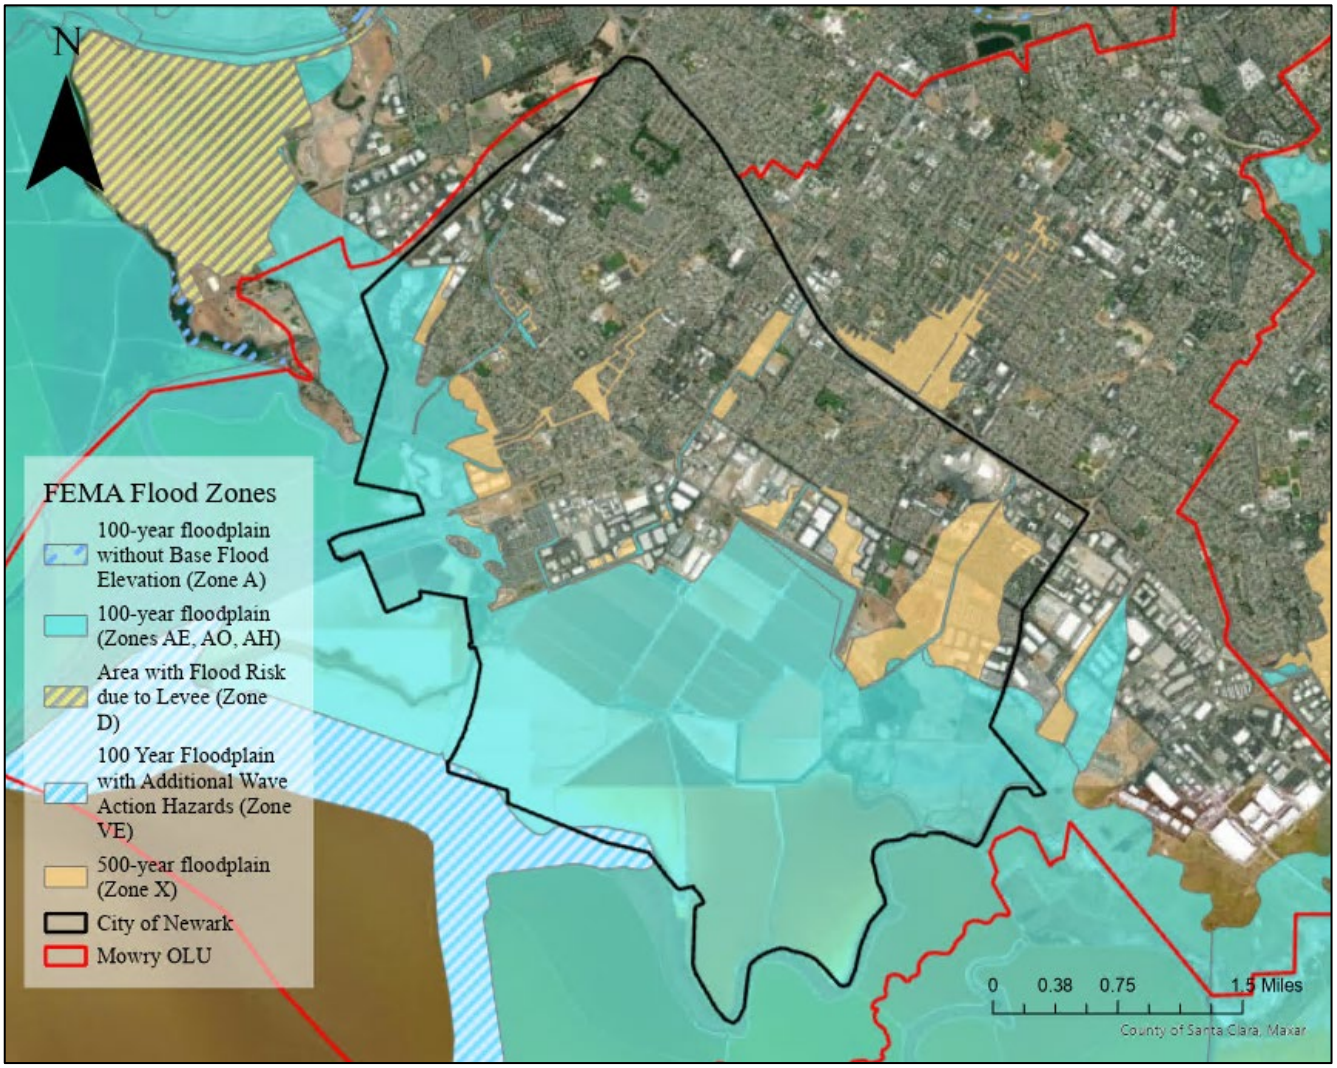

Figure 2 FEMA flood map by study area (FEMA, 2024)

This project and the modeling outputs do not replace FEMA maps for official purposes, such as insurance and zoning. The flood hazard results from this project are used for planning purposes, as they incorporate projected SLR and assess multiple flood scenarios. Unlike FEMA maps, which typically focus on the BFE under the 100-year event (i.e., 1% annual chance event), this study's approach provides an understanding of flood risks under various storm scenarios and future sea level change.

2. Model Development

A comprehensive flood hazard model was developed to evaluate present-day and future flooding, in both storm and non-storm conditions, under several SLR scenarios aligned with BCDC Regional Shoreline Adaptation Plan (RSAP) guidelines.

The model integrates hydrologic and hydraulic components to comprehensively simulate inland and coastal processes. The hydrologic component simulates the rainfall-runoff process, evaluating how much rainfall infiltrates into the ground versus generates runoff. The hydraulic component simulates the flow of water through rivers, channels, and streams to evaluate conveyance and flooding in floodplains. The hydraulics of the coastal system include simulating how storm surge and tides interact with the river, coastal topography, and infrastructure. An integrated flood modeling approach was used to capture the hydrologic and hydraulic model components and estimate the extent and depth of flooding, as visualized in Figure 3.

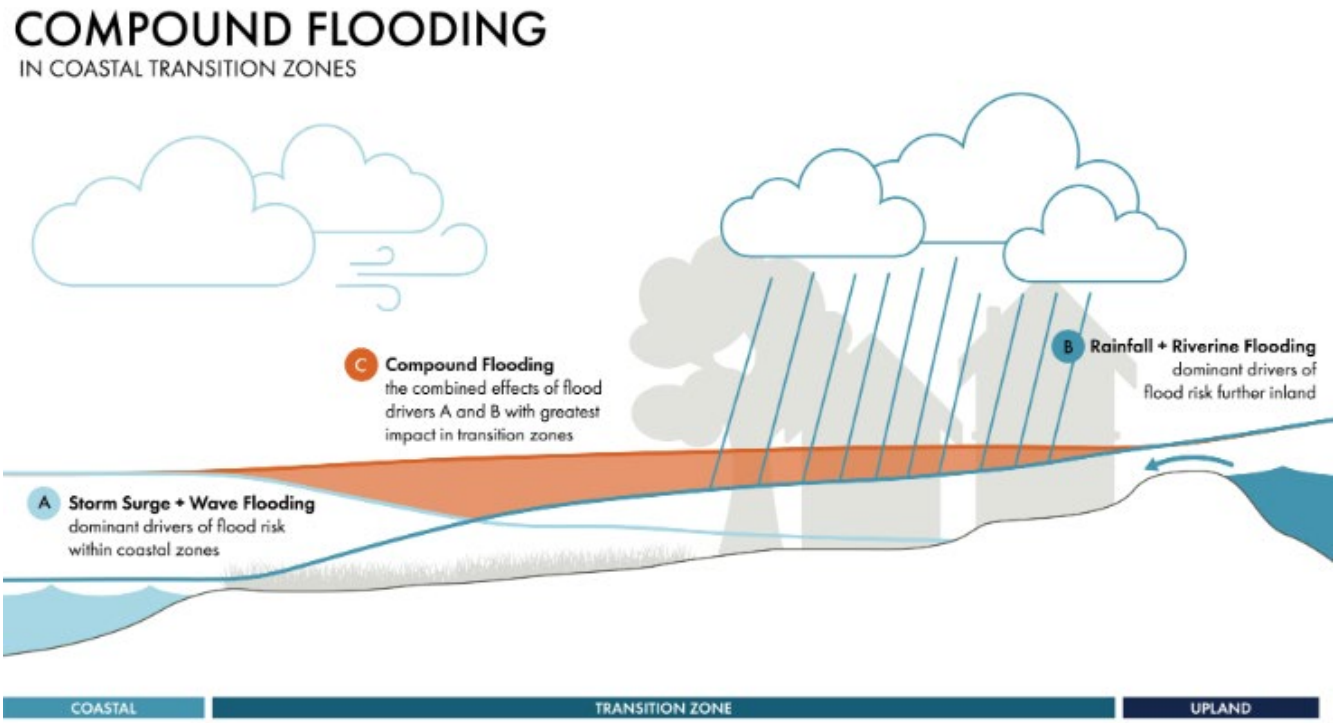

Figure 3 Schematic drawing of compound flood modeling (the Water Institute, 2024)

This section describes:

- **Software and tools** used to conduct the flood hazard modeling
- **Sea level rise and storm scenarios** modeled
- **Key model inputs** collected from best available public datasets and incorporated into the modeling
- **Sensitivity analysis** conducted to test assumptions and develop an appropriately conservative model
- **Assumptions and limitations** made to develop these models

2.1 Software and Tools

SFINCS, an open-source software developed by Deltares, was used to perform the flood hazard modeling. Open-source means that the original source code it is freely available and may be redistributed and modified, and therefore there are no software licensing fees or costs for users to use the model. The SFINCS model feeds into the FloodAdapt platform, a user-friendly, publicly available, and open-source software that allows users to view flood hazard maps and risk to exposed assets and to evaluate adaptation strategies (Figure 4). A populated FloodAdapt model was provided to the City with the flood scenarios modeled for this phase of the project, and updated versions of the FloodAdapt model will be configured with vulnerability and risk results (which will conducted in Delft-FIAT) as part of future project deliverables.

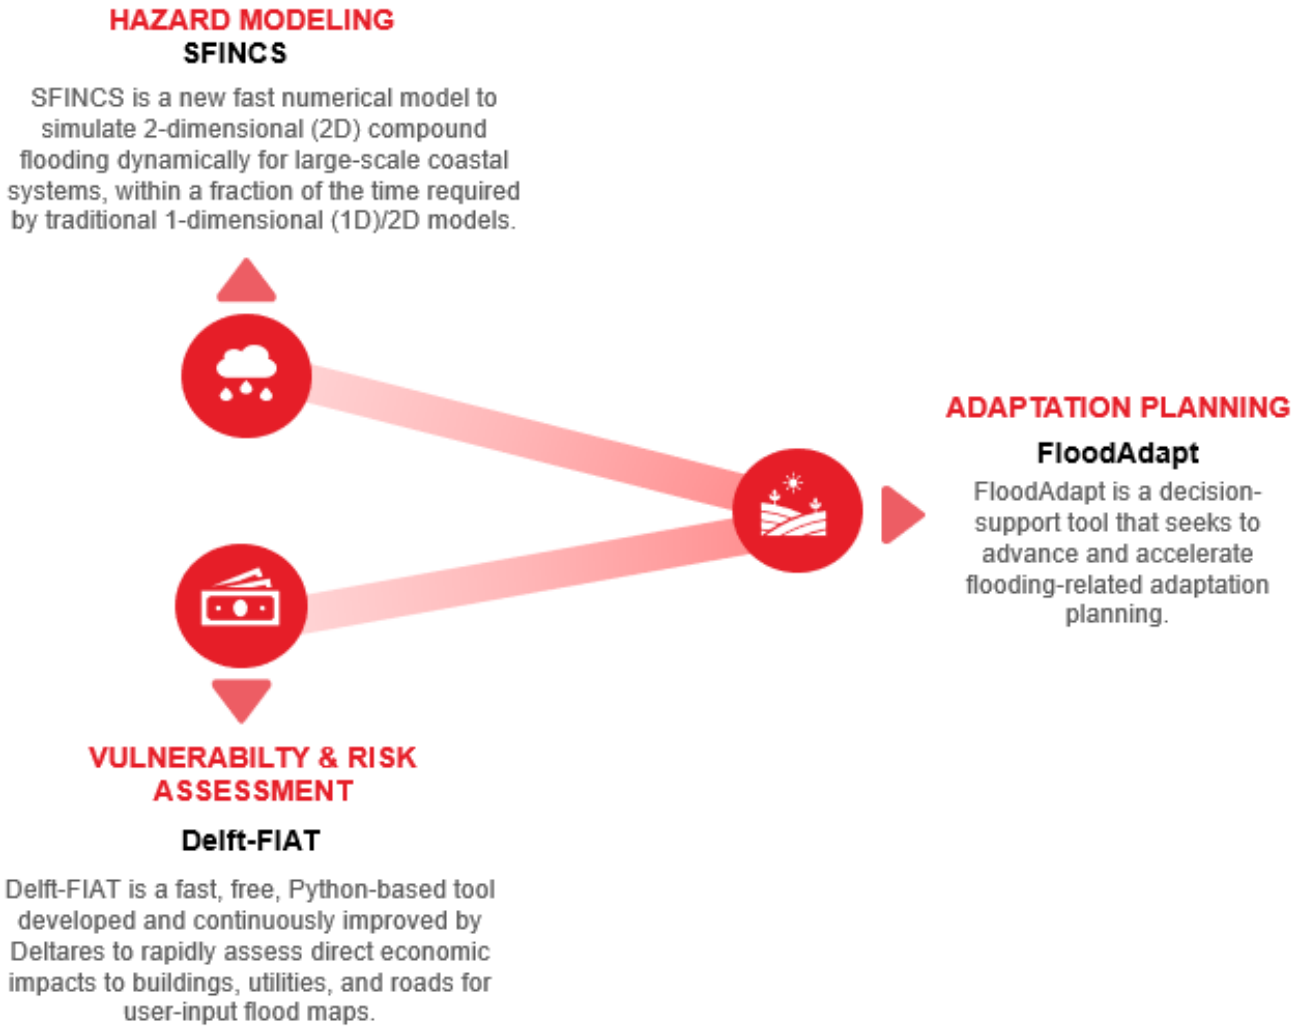

Figure 4 Interaction between models and tools

The SFINCS model allows for considering rising sea levels, rising groundwater, subsidence, storm flows, and storm surge in one, compound flood model. The modeling output includes inundation extents and depths for present-day, mid-century (2050), and end-of-century (2100) scenarios. SFINCS is a numerical model which simulates 2-dimensional (2D) compound flooding dynamically for large-scale coastal systems. SFINCS is a physics-based tool which has been peer-reviewed and used by numerous federal and academic agencies for hazard assessments (Leijnse et al., 2021). This report is focused on the inputs and outputs of the SFINCS model.

2.2 Sea Level Rise and Storm Scenarios

Ten flood scenarios were modeled, encompassing the study area and evaluating timeframes for present-day, mid-century, and end-of-century conditions. The models cover four sea level rise scenarios and two storm scenarios, summarized in Table 2 and described in the following sections.

Table 2 Modeled scenarios

Time Horizon	SLR Scenarios	Climate Scenarios for Precipitation	Inundation Maps
Present	Not applicable	Not applicable	Two maps: • Coastal Storm Scenario: 100-year coastal + 10-year inland • Inland Storm Scenario: 100-year inland + 10-year coastal
Mid-century 2050	One SLR Scenario	SSP5-8.5 / Representative Concentration Pathway (RCP) 8.5	Two maps: • Quasi-permanent Inundation Map (Mean Higher High Water, MHHW) for 0.8ft SLR Scenario • Future Storm Scenario with 0.8ft SLR Scenario
End-of-century 2100	Three SLR Scenarios	SSP5-8.5 / RCP8.5	Six maps: • Quasi-permanent Inundation Map (MHHW) for 3.1ft SLR Scenario (Intermediate) • Quasi-permanent Inundation Map (MHHW) for 4.9ft SLR Scenario (Intermediate-High) • Quasi-permanent Inundation Map (MHHW) for 6.6ft SLR Scenario (High) • Future Storm Scenario with 3.1ft SLR Scenario (Intermediate) • Future Storm Scenario with 4.9ft SLR Scenario (Intermediate-High) • Future Storm Scenario with 6.6ft SLR Scenario (High)

2.2.1 Sea Level Rise Scenarios

The SLR scenarios were selected to align with the San Francisco BCDC September 2024 Draft RSAP guidelines. These BCDC guidelines were developed to describe the requirement for cities, including Newark, to develop a shoreline adaptation plan compliant with the newly passed regulation described in Senate Bill 272.

The BCDC guidelines build on the updated State of California Sea Level Rise Guidance published in 2024 by the OPC. These state guidelines defined five sea level rise scenarios based on global emissions projections from the Intergovernmental Panel on Climate Change Sixth Assessment Report (IPCC AR6). The relationship between the SLR scenarios and climate change scenarios, called Shared Socio-economic Pathways (SSPs), are depicted in Figure 5. Table 2 summarizes the four SLR scenarios used in this project. The MHHW level was used to evaluate areas with quasi-permanent flooding due to their location within the tidal zone.

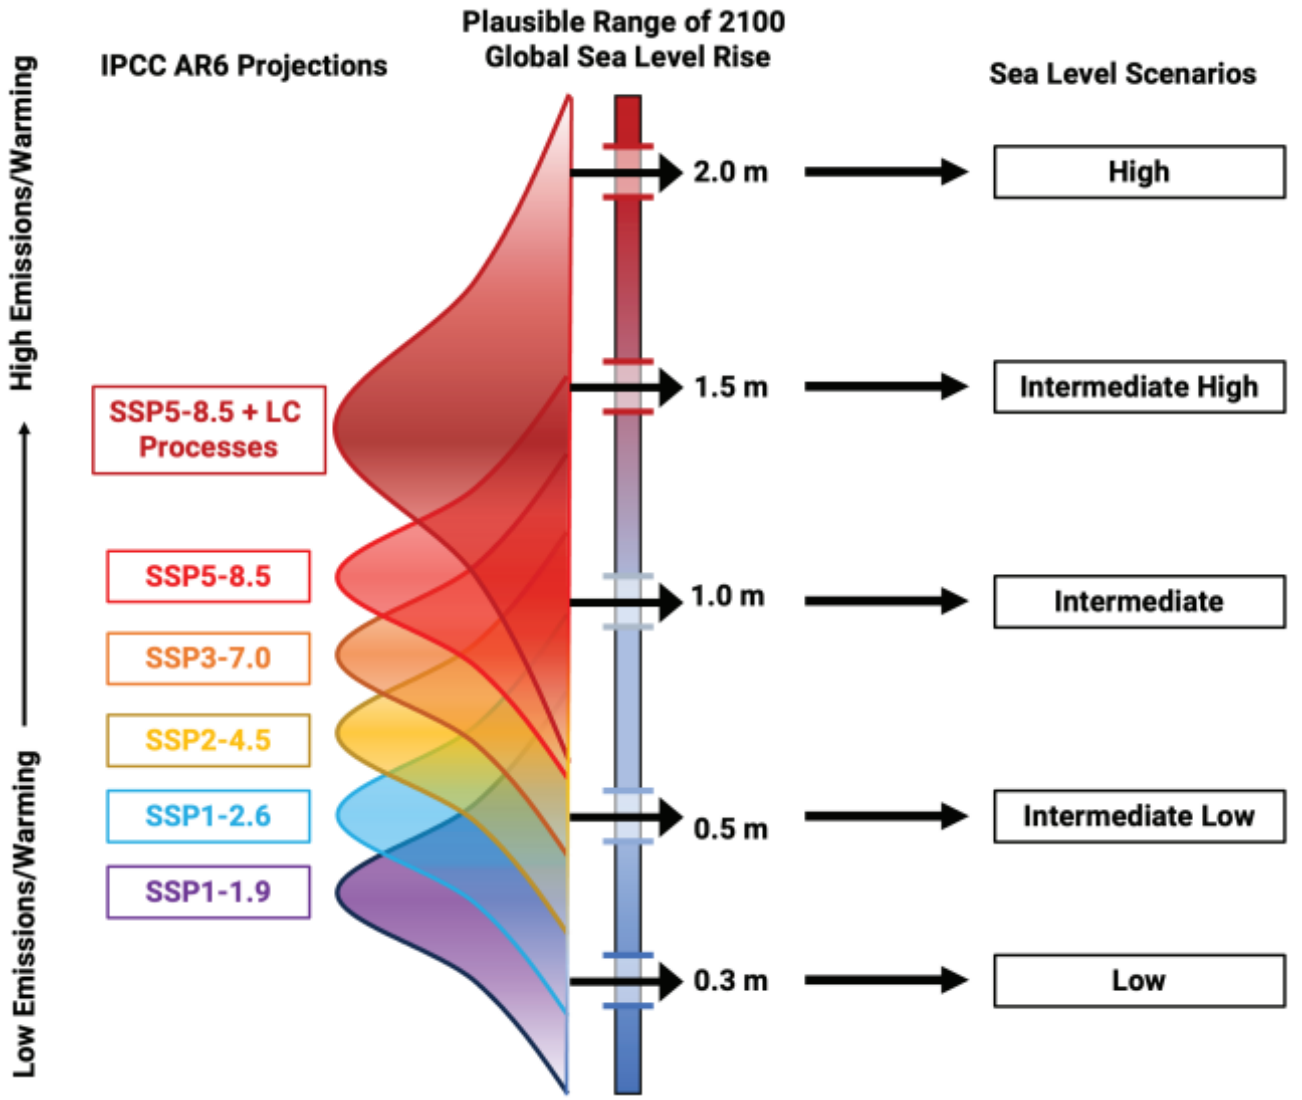

Figure 5 Depiction of the relationship between the OPC SLR scenarios and IPCC AR6 emissions scenarios from State of California Sea Level Rise Guidance (OPC, 2024)

2.2.2 Storm Scenarios

Four main types of flood scenarios were modeled for this project:

- **Present Coastal Storm Scenario:** This scenario is defined in this study as the 100-year coastal event which considers tides and storm surges occurring simultaneously with a 10-year inland event which considers rainfall.
- **Present Inland Storm Scenario:** This scenario is defined in this study as the 100-year inland event which considers rainfall occurring simultaneously with a 10-year coastal event which considers tides and storm surges.
- **Tidal Inundation:** These scenarios are defined by MHHW, which represents a typical high tide that serves as a proxy for everyday flooding. When modeling future MHHW with different SLR scenarios, the resultant maps provide useful tools for planning.
- **Future Storm Scenario:** The future Storm Scenarios evaluate the maximum of the coastal storm scenario and the inland storm scenario to represent extreme but plausible combined storm scenarios. Rainfall for the future events comes from future climate projections of precipitation.

The precipitation scenarios selected were based on data available through Cal-Adapt, which is a publicly accessible online tool that provides interactive climate data and projections for California to support climate resilience planning and decision-making (California Energy Commission, 2024). The extreme rainfall scenario used (SSP5-8.5 / RCP8.5) represents a plausible upper bound that aligns with the IPCC AR6 using SSP. This data is also used for California's Fifth Climate Change Assessment.

2.3 Data Collection and Sources

Existing data and models were collected and developed to provide a tailored analysis for the City. Data was provided by the City as well as from local agencies, such as the Alameda County Flood Control District (ACFCD). Publicly available data was also collected and reviewed. Table 3 summarizes the data requests, data sources and the availability of the data.

Table 3 Data and data sources

Topic	Data	Data Source	Status
Hydrology parameters	Rainfall	National Oceanic and Atmospheric Administration (NOAA)	Publicly available
	Topography	LiDAR available from the ACFCD	Requested through ACFCD with City approval
	Bathymetry	United States Geological Survey (USGS)	Publicly available
	Groundwater	San Francisco Estuary Institute (SFEI) Shallow Groundwater Response to Sea-Level Rise: Alameda, Marin, San Francisco, and San Mateo Counties	Publicly available
Hydraulic model development	SLR projections	San Francisco BCDC September 2024 Draft RSAP	Publicly available
	Subsidence	No historical data available from the City. Reference USGS.	USGS - publicly available
	Culverts	ACFCD	Requested through ACFCD with City approval
	Levees	ACFCD	Requested through ACFCD with City approval
Validation	Hydrodynamic model of the San Francisco Bay and Delta	Delft3D San Francisco Bay Community Model (Nederhoff et al., 2021)	Publicly available
	Stream gauges	No City of ACFCD stream gauges within the study area.	Not available
	Riverine model	There are no riverine models available in the study area.	Not available

2.4 Key Model Inputs

The SFINCS software was used for flood hazard modeling, which can incorporate rising sea levels, rising groundwater, subsidence, storm flows, and storm surge into the analysis. The model and all inputs are in the North American Vertical Datum of 1988 (NAVD88). NAVD88 is a geodetic datum which is a standard reference framework for elevation data over a large geographic extent.

2.4.1 Hydrology Parameters

The hydrologic component of the model simulates the rainfall-runoff process, evaluating how much rainfall infiltrates into the ground versus generates runoff. The hydrology model applies the Curve Number (CN)

method, a widely used empirical procedure developed by the U.S. Department of Agriculture (USDA) Soil Conservation Service, to estimate direct runoff volume and peak discharge from rainfall events. This method calculates the amount of rainfall that infiltrates versus becoming surface runoff based on watershed characteristics such as land cover, soil type, and hydrologic conditions, which are expressed as a single CN and can be used in various settings including urban areas with medium to high densities. However, it does not account for complex hydrological features such as urban drainage systems, including storm sewers and detention basins. For this project, land cover and Hydraulic Soil Group (HSG) data as depicted in Section 2.2 were converted to CNs to support the model's calculations. For more background information on the methodology, refer to Nederhoff et al. (2024).

Topography and Bathymetry

Topography data used comes from the most recent, highest resolution datasets available, using Light Detection and Ranging (LiDAR) data with 1ft resolution from 2019 provided by the ACFCD. The 1ft resolution sufficiently captures features in the topography which affect the hydrologic and hydraulic process, while relying on readily available publicly accessible data.

A Digital Elevation Model (DEM) was derived from this data in NAVD88. Bathymetry data is from the USGS. The topography and bathymetry data were combined for the model and are shown in Figure 6.

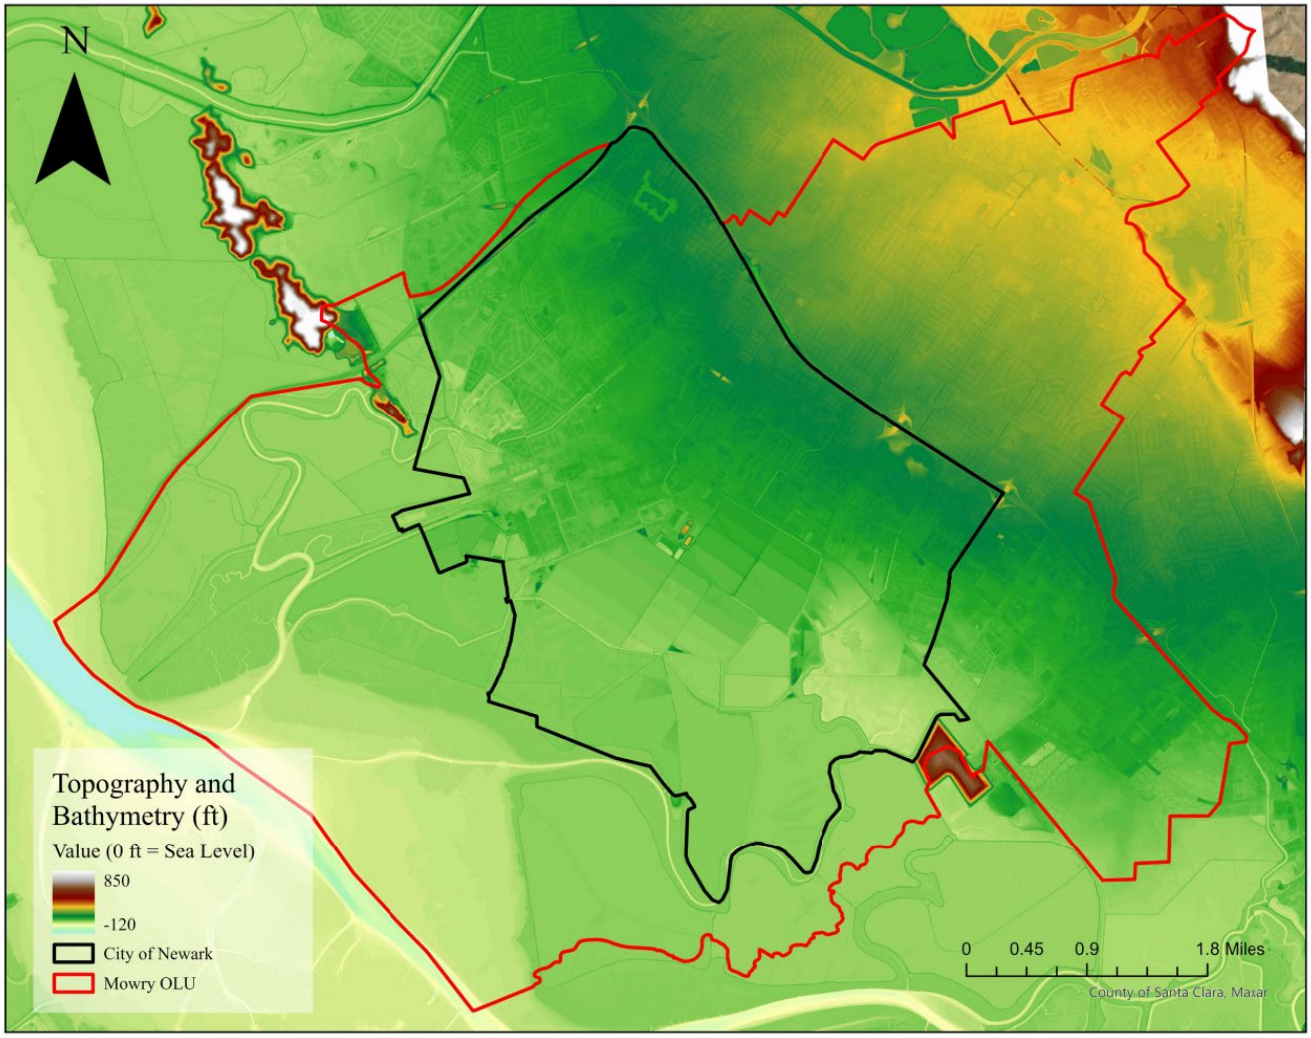

Figure 6 Topography and bathymetry in NAVD88 (ACFCD, 2018)

Rainfall

Rainfall is a critical input in flood modeling and hydrology calculations, as it directly influences runoff, river flow, and the potential for flooding by determining the amount of water entering a watershed. Rainfall was modeled as a 24-hour design storm based on data collected from the ACFCD hydrology manual. The ACFCD manual also includes a unit hydrograph for runoff determination; a hydrograph is a graphical representation of discharge over time, used in hydrology and flood modeling to analyze the response of a watershed to rainfall and predict flood events.

The rainfall data was scaled with NOAA Atlas 14 data to develop 24-hour storms with 10-year and 100-year return periods. The 10-year and 100-year return periods represent extreme rainfall events with a 10% and 1% annual chance of occurrence respectively based on historical measurements. An anomaly at hour 4 of the ACFCD hydrograph was removed for this project. The ACFCD Hydrology Manual states that the 24-hour storm should be used for drainage watersheds larger than 25mi^2 and the study area includes 64mi^2 of inland area. The DEM is uploaded into the SFINCS model; therefore, the model simulates rainfall falling over the entire watershed and routes runoff within the entire study area. This also eliminates the requirement to delineate sub-watersheds. Rainfall was applied without spatial variation across the study area.

The future rainfall scenarios used for modeling utilize precipitation change information from Global Climate Models (GCMs) based on the SSP5-8.5 scenario for mid-century (2050) and end-of-century (2100); this future pathway is consistent with RCP8.5 from the IPCC Fifth Assessment Report. The methodology incorporates climate change impacts on future precipitation to develop adjusted hazard curves for 2050 and 2100. Translating data from global-scale GCMs to the Bay Area context involves downscaling which has already been completed by the LOCA-2 (Localized Constructed Analogs version 2) effort. LOCA-2 is a high-resolution climate dataset providing downscaled projections of temperature, precipitation, and other variables for assessing regional climate change impacts in California with its output data hosted by the Cal-Adapt platform (California Energy Commission, 2025). The downscaled models developed for California and used on this project have a resolution of 3km (2mi), which provide detailed coverage across the State and show local differences.

The LOCA-2-Hybrid dataset (3km, or 1.86mi, resolution) for the California domain (Pierce et al., 2023) was used to conduct an extreme value analysis (EVA), using data available from the Cal-Adapt Analytics Engine. The EVA was used to compare the future mid-century and end-of-century precipitation values to the modeled historical data for 15 different climate models. The 15 climate models used for precipitation in LOCA-2 are selected based on their performance in simulating observed precipitation patterns and variability, ensuring they represent a range of plausible future climate scenarios. These models are drawn from the Coupled Model Intercomparison Project Phase 6 (CMIP6) ensemble and are chosen to balance model skill, independence, and diversity in projecting precipitation changes under future warming.

The percent change from historical to mid-century and end-of-century periods was calculated for each model, averaged, and then used to upscale present hydrographs representing the 10-year and 100-year return periods. This “change factor” approach corrects the bias between the modeled and observed data by calculating the change between the modeled hindcast and forecast and then applying that change to the observed data. Figure 7 depicts the rainfall 10-year and 100-year rainfall events under current conditions and with the 2050 and 2100 projections.

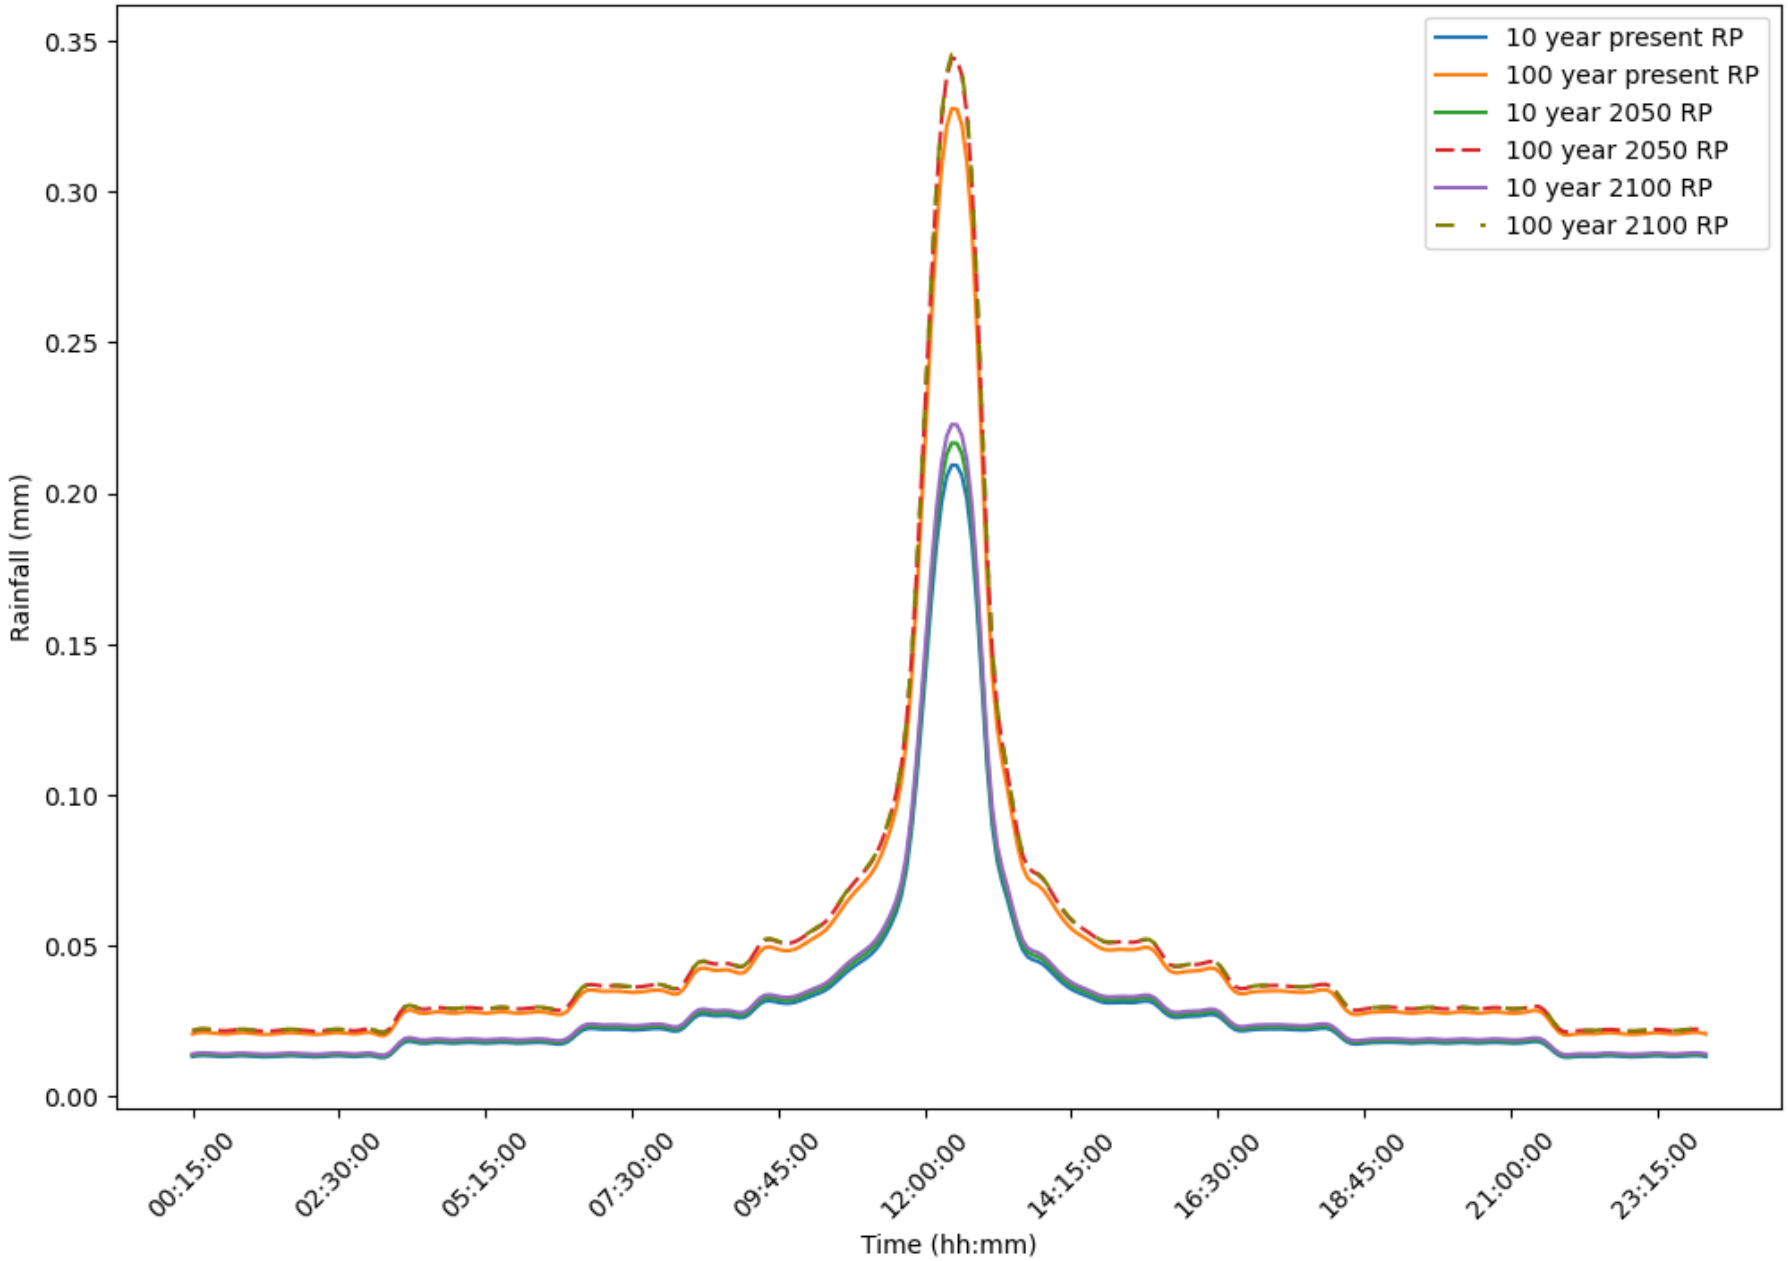

Figure 7 Incremental rainfall data at present and upscaled 10-year and 100-year return periods (RP)

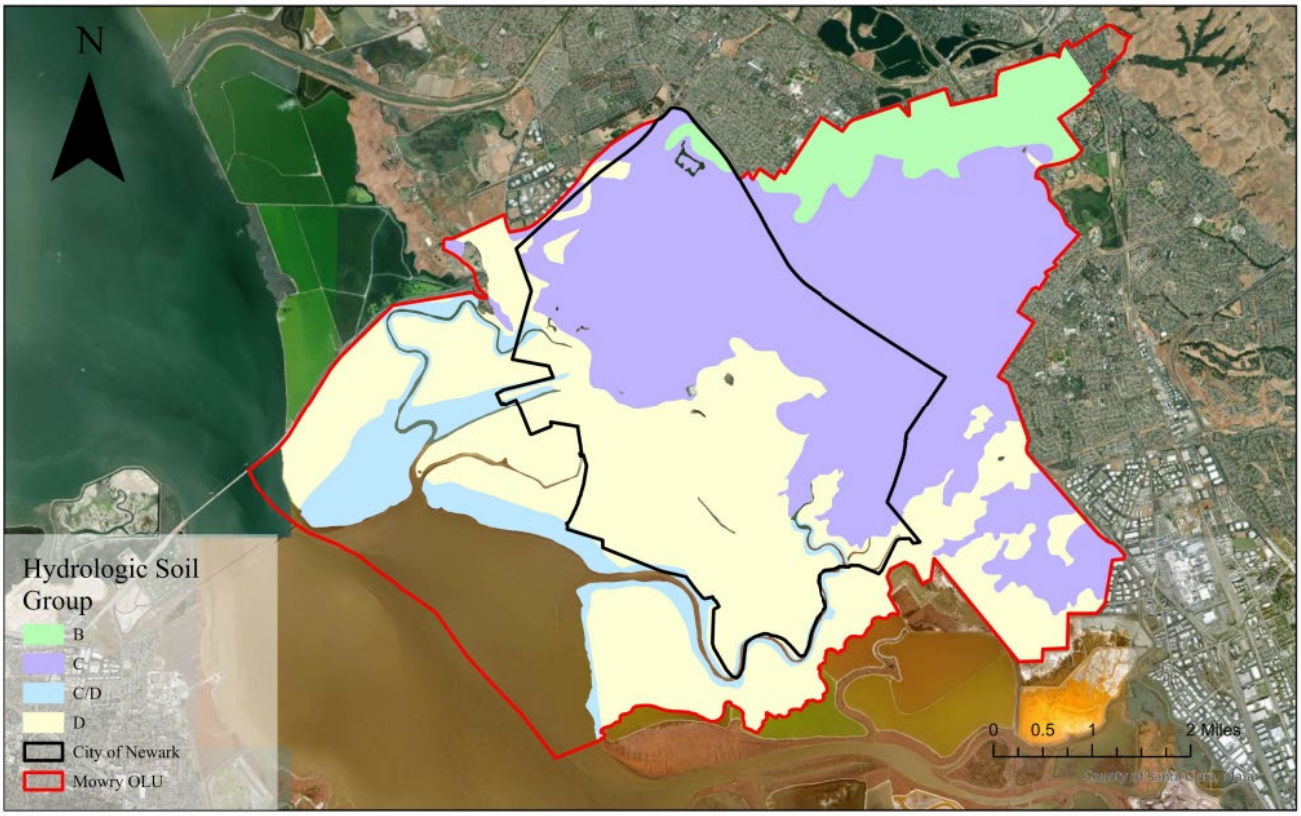
Land Use and Soils

Land use and soils data are essential components in flood modeling and hydrology calculations, as they influence water infiltration, surface runoff, and the overall hydrological response of a watershed to precipitation events.

Data from the United States General Soil Map (STATSGO2) (USDA, 2020) provided the input for the CN infiltration method used in the overland flooding models. STATSGO2 is an inventory developed by the USDA and includes soil characteristics information across the Continental U.S. The HSG information and hydraulic conductivity (Ks) from the surface layer were used for this study, shown in Figure 8. In particular, HSG information was combined with a land- cover map from the National Land Cover Database (NLCD) from the USGS classification and is shown in Figure 9, to estimate the CNs according to USDA (USDA, 1986).



Group B
Soils with moderately low runoff potential and unimpeded water transmission. Typically 10-20% clay, 50-90% sand, with loamy sand or sandy loam textures.

Group C
Soils with moderately high runoff potential and somewhat restricted water transmission. Typically 20-40% clay, less than 50% sand, with loam, silt loam, sandy clay loam, clay loam, and silty clay loam textures.

Group C/D
Soils with slow infiltration rates, combining characteristics of Group C and D soils, impeding water movement.

Group D
Soils with high runoff potential and restricted or very restricted water movement. Typically more than 40% clay, less than 50% sand, with clayey textures.

Figure 8 Hydrological soil groups (USGS, 2019b)

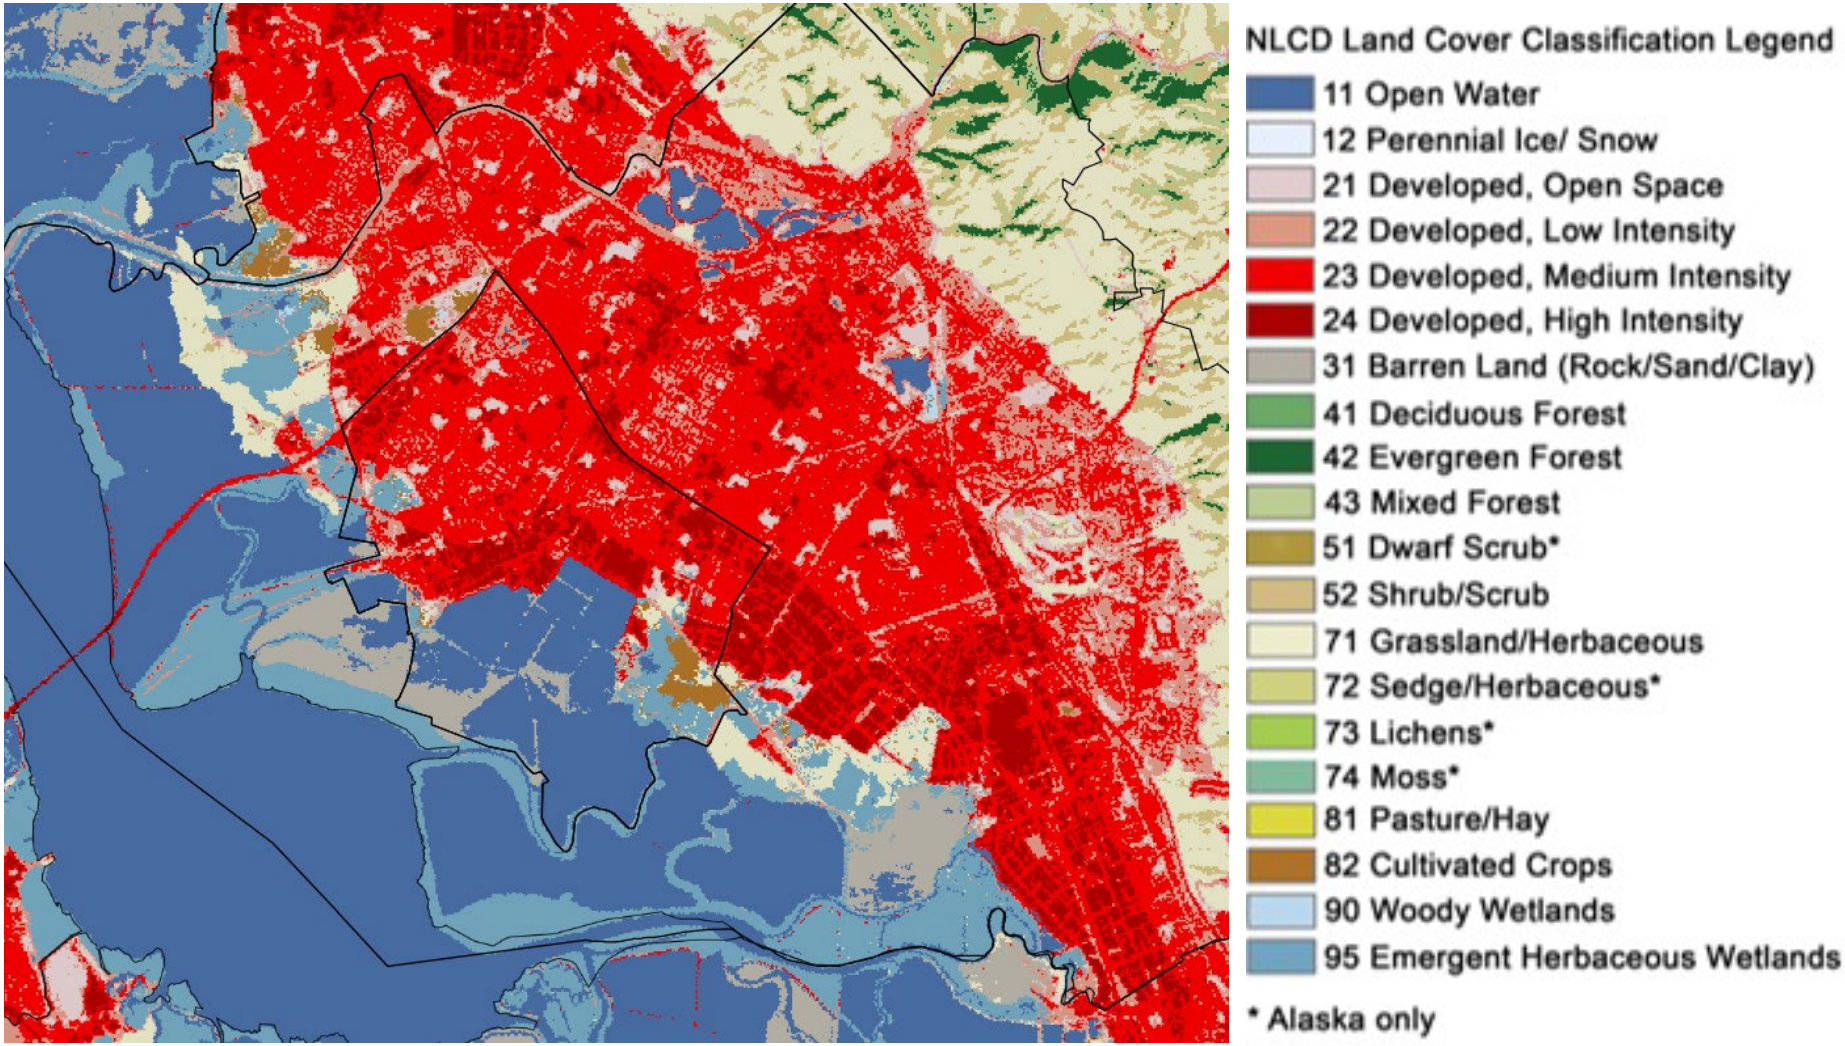


Figure 9 Land cover classifications (USGS, 2019a)

Groundwater

Pathways Climate Institute and SFEI developed depth-to-groundwater maps depicting shallow groundwater conditions including for the Newark area. Figure 10 depicts the shallow groundwater conditions in Newark with one foot (12in) of SLR and wet winter conditions, which is representative of groundwater conditions in the 2050 modeling scenario (SFEI, 2022). The SFEI also has groundwater data available for the 3ft, 5ft, and 7ft SLR scenarios, which were applied for the 2100 modeling scenarios. Refer to Appendix B for the detailed SFEI groundwater maps. To account for the rising groundwater levels, the infiltration rate in the models were adjusted relative to the SFEI groundwater data.

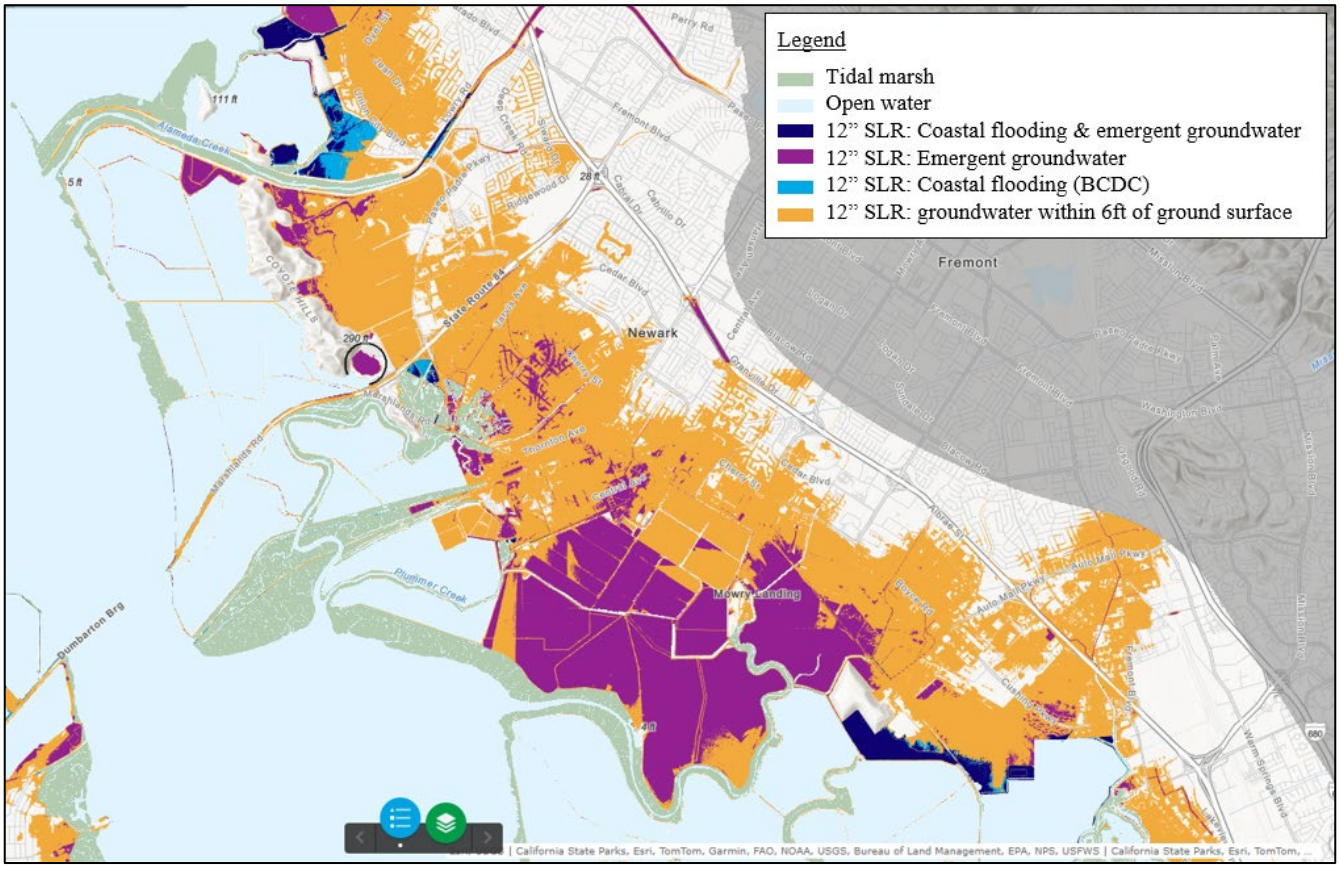

Figure 10 Groundwater levels with a 1ft SLR scenario (likely to happen by 2050) and wet winter conditions (SFEI, 2022)

In the near term (within the next 25 years), SLR (as shown in Figure 10) translates to the potential for groundwater level rise across the City of Newark. Across the city, the majority of areas in the next 25 years at risk to future groundwater flooding are limited to uninhabited areas along the coastline. However, there are smaller areas within the city where groundwater flooding may occur (for example in the area along Central Avenue north of the brine ponds). The basis for these 'at-risk' areas within the city is because they are in lower-lying areas at an elevation lower than the projected increased sea level (as illustrated in Figure 11). SFEI also indicates areas where groundwater level rise is limited to within 6ft of ground surface (due to a 'near-term' 1ft SLR). Over a longer period (for example the next 100 years), the risk to these areas should be expected to increase.

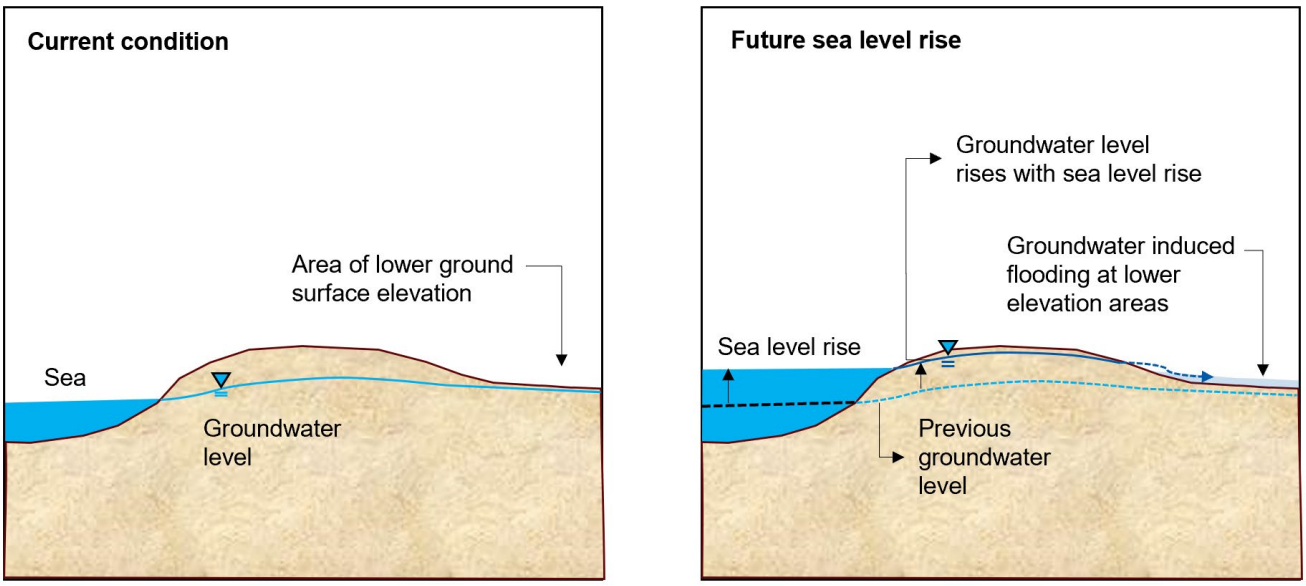

Figure 11 Illustration of groundwater induced flooding at lower elevation areas due to SLR

The 2024 Tri-City Local Hazard Mitigation Plan states that there are 16 groundwater wells, of which six are within the City of Newark, which are pumped for use as a water source for distribution mains serving residents and businesses. The 16 wells can produce up to 47.5 million gallons of water per day. The groundwater basin consists of gravel, sand, silt, and clay, and the top of the aquifer is relatively shallow, between 40ft and 140ft below ground surface in most inland locations. The depth to groundwater is much shallower nearer to the Bay.

The 2023 and 2024 Alameda County Water District Groundwater Conditions Reports state that the aquifer was not overdrawn and there is no indication that saltwater entered the basin between Fall 2021 and Fall 2023. The reports also state that the groundwater level in the Newark Aquifer has remained above sea level (if the water levels were below sea level, then saline water would flow from the bay into Newark Aquifer).

Runoff

Rainfall-runoff processes are explicitly accounted for by including precipitation and infiltration in the flood model, including the effect of rising groundwater. Runoff is the result of the difference between total precipitation and infiltration. The moisture storage capacity of the soil controls the amount of infiltration and is depleted during wet periods. To model this behavior using the CN method, an effective storage capacity is tracked continuously throughout the simulation. During rainfall, the storage capacity is gradually filled. At the start of a new simulation, effective storage capacity is assumed at 50% of the maximum storage capacity. This initial saturation assumption, which results in an average effective capacity of 2.2in for the present-day scenario, is discussed further in the discussion section.

2.4.2 Coastal Boundary Conditions

The SLR scenarios are in alignment with BCDC's Draft RSAP (September 2024) and are summarized in Section 2.2. The SLR values were added to the coastal boundary condition water level time series).

The compound flooding hazard model for Newark and the adjacent areas of the Mowry OLU utilizes a scenario-based approach to assess both present and future flood risks. This model is driven by water level boundary conditions in the San Francisco Bay, which incorporate tides and storm surges. These conditions are derived from high-resolution, regionally accurate modeling efforts conducted by the USGS, Deltares, and ACFCD (Figure 12). These regional models form part of the Delft3D San Francisco Bay Community Model (Nederhoff et al., 2021), which provides 70 years of continuous data (1950–2019).

For this study, several five-day periods representing MHHW as well as 10-year and 100-year coastal events were selected (Table 4 and Figure 13). By using the recorded data from these periods, it is ensured that the model simulates realistic conditions that have occurred in the past (Table 4). This approach enhances the reliability of the predictions by grounding them in observed events. ACFCD also utilizes this approach.

Table 4 Five-day coastal periods for model simulations

Event	Peak Value (ft) in NAVD88	Historical Date of Peak Value
100-year	10.2	January 27, 1983
10-year	9.5	February 06, 1998
MHHW	7.0	March 07 2004

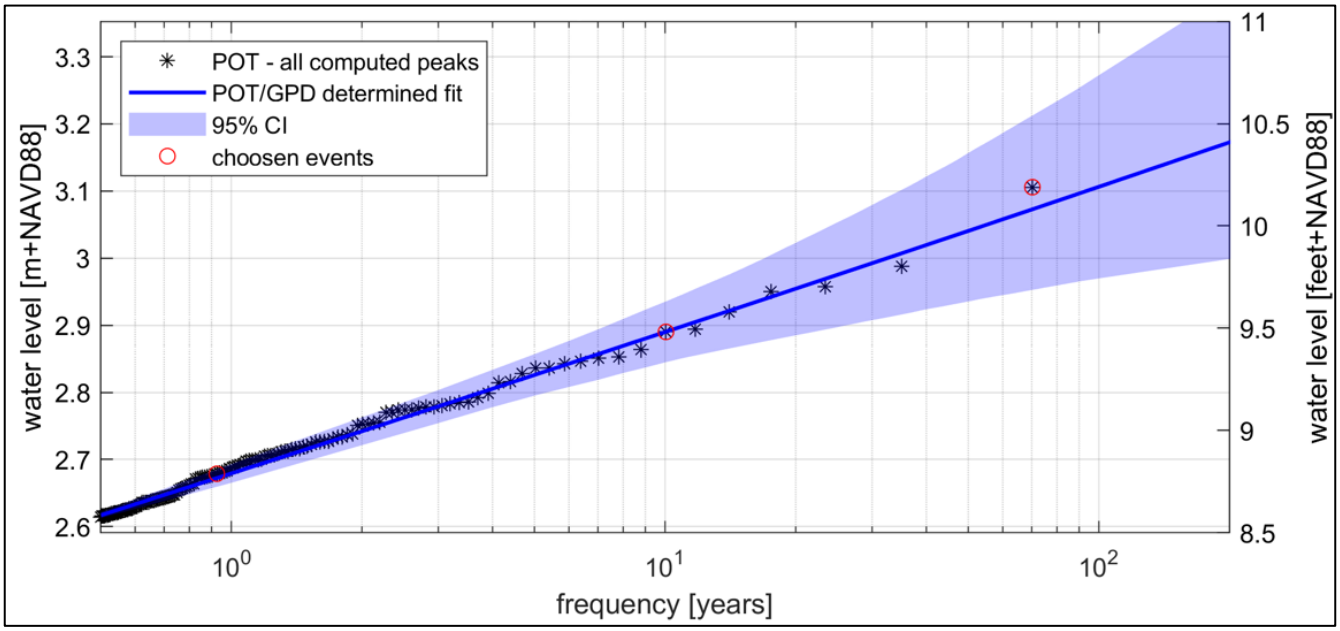

Figure 12 Values computed by Delft3D near SFINCS boundary

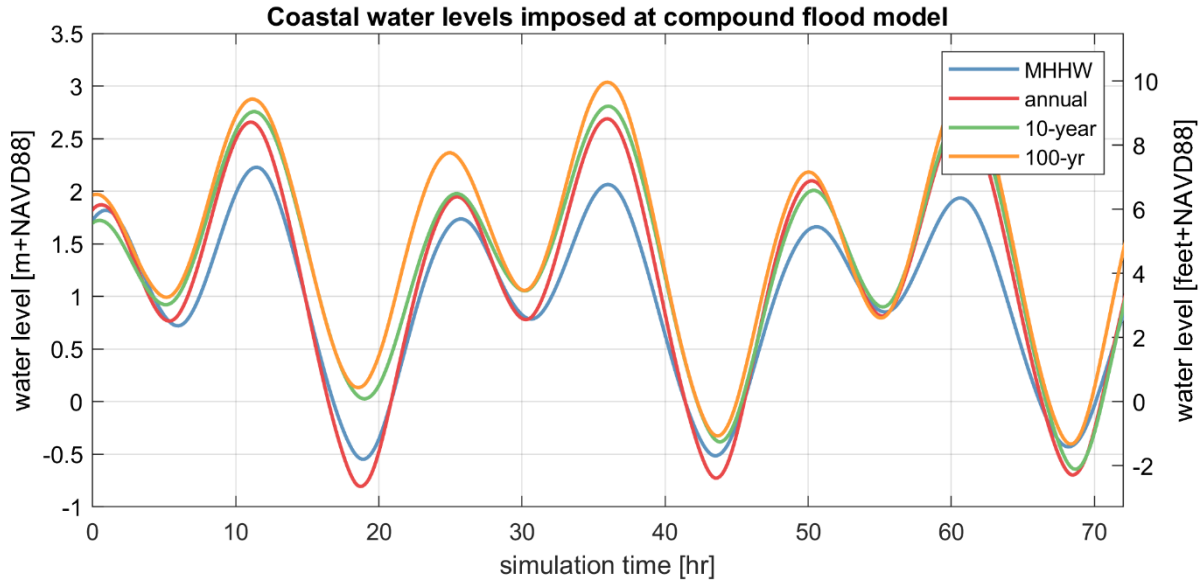

Figure 13 Coastal water levels imposed at compound flood model

2.4.3 Subsidence

There has been a history of groundwater pumping related subsidence in the Bay Area. For example, subsidence due to over pumping of groundwater is well documented in the Santa Clara Valley (located south of Newark and Alameda County) due to widespread agricultural land use. Measures to manage the groundwater resource in the Valley began in the 1930s. However agricultural expansion continued to result in land subsidence. By the late 1990's, subsidence in the Valley had been resolved (USGS, 2018). Figure 14 shows ground level reductions and subsidence rates for one location in the Central Valley for context.

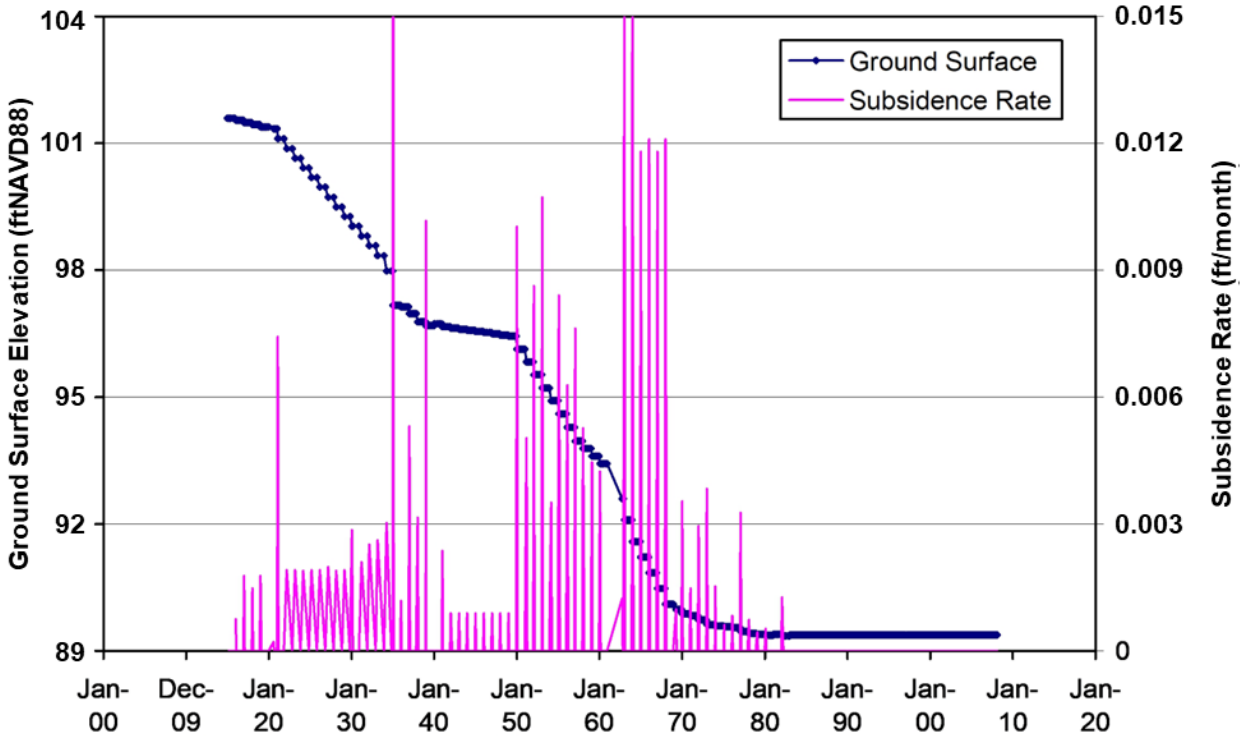

Figure 14 Ground subsidence at USGS Index Well 7R99 (located in Santa Clara Valley) between 1900 and 2010

Future groundwater levels will be influenced by both SLR and varying rainfall behavior. During periods of higher rainfall, groundwater levels are expected to rise along with SLR. Drought typically reduces groundwater levels. However, with the contribution of SLR, drought periods will have less of an impact on groundwater levels. For these reasons, and in light of the impact of SLR, land subsidence should be expected to be less than any historical subsidence (assuming that future groundwater pumping remains at sustainable rates).

When considering the 2050 SLR scenario of 0.8ft, and 2100 SLR scenarios of 3.1ft to 6.6ft, the groundwater levels are expected likely to rise with the rising sea levels (refer to Section 2.4.2). Therefore, long-term land-surface-elevation changes from groundwater pumping-induced subsidence is not anticipated to occur within the study area. If later research indicates subsidence has a larger impact, subsidence rates could be accounted for in the model by adjusting topography heights with the expected values.

2.4.4 Drainage Infrastructure

The culvert physical parameters, such as location and size, were provided by ACFCD, are included in the model, and are depicted in Figure 15. The model does not include other urban drainage systems (i.e., storm drain network) because the most conservative scenario assumes that the drainage infrastructure is at capacity and not accepting additional runoff. Nonetheless, the potential reduction in flooding from green infrastructure can still be assessed. There are no pump stations within the study area.

Figure 15 Culverts and levees included in the model

2.4.5 Flood Management Structures

There are levees around the existing salt ponds on the Newark shoreline (Figure 15). The levees were modeled as weirs, to simulate the effects of constrained flow. No information is available on levee condition. It is assumed that the levees are stable and do not fail. This allows the analysis to represent the expected conditions and focuses on the behavior of water flow as opposed to structural integrity.

The model also includes levees/berms along the Alameda Creek Flood Control Channel to model the effect of this infrastructure. The median levee elevation is approximately 12.3ft in the model extents.

2.5 Sensitivity Analysis

A sensitivity analysis of peak rainfall timing was conducted to confirm the worst-case flooding scenario relative to tidal and rainfall peak alignment. Three simulations were tested to evaluate scenarios where peak rainfall occurred at the same time, 30 minutes prior, and 1 hour prior to the peak tidal water level during a 24hour storm (Figure 16). The maximum inundation extents were observed when the peak rainfall and peak tidal water level were aligned; therefore, this alignment was applied for all other model scenarios to represent the conservative, worst-case flood conditions.

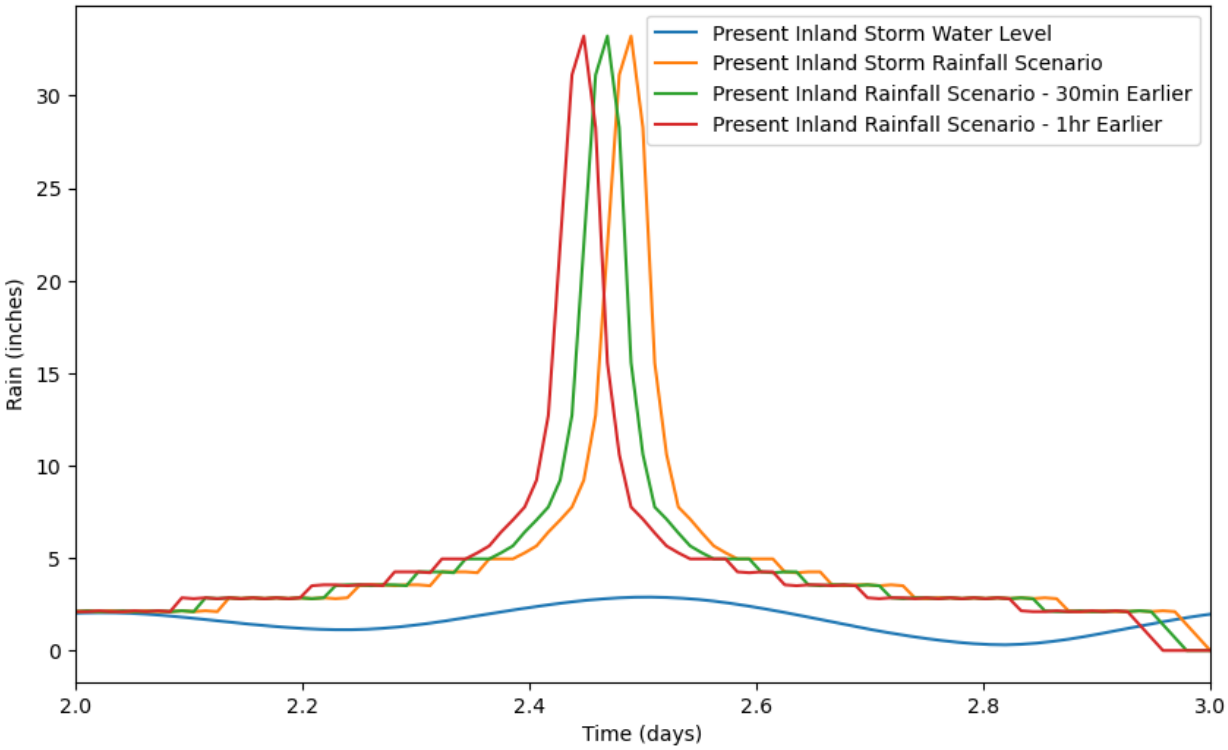

Figure 16 Sensitivity analysis of peak rainfall and tidal water level

2.6 Assumptions and Limitations

This analysis assumes that:

- Publicly available data and data provided by the City and ACFCD is correct.
- The FEMA hazard maps effective in 2009 are correct for the present-day 100-year rainfall event.
- The existing levees are stable and do not fail.
- Drainage infrastructure is at full capacity during storm conditions.

Limitations include:

- The model accuracy is dependent on the quality and resolution of the input data, such as topography, bathymetry and rainfall.
- There is inherent uncertainty in model predictions. The model assumptions and inputs may not fully capture real-world complexities and variability in natural systems, which can affect the accuracy of the results. For instance, water levels in San Francisco Bay were reproduced with an error of several inches (see to Section 3.2) and therefore do not perfectly align with historical observations.
- There are no stream gauges within the study area, therefore no stream gauge data was available to calibrate the riverine flow rates.

3. Model Results

The scenarios from Section 2.2 were modeled to represent the flood extents and depths for the selected present day, 2050, and 2100 conditions.

3.1 Outputs and Analysis

The ten scenarios from Section 2.2 for present day, mid-century, and end-of-century were modeled, and flood depths at several locations are compared in Figure 17 and Table 5. Results are included in this section with additional higher resolution maps included in Appendix C.

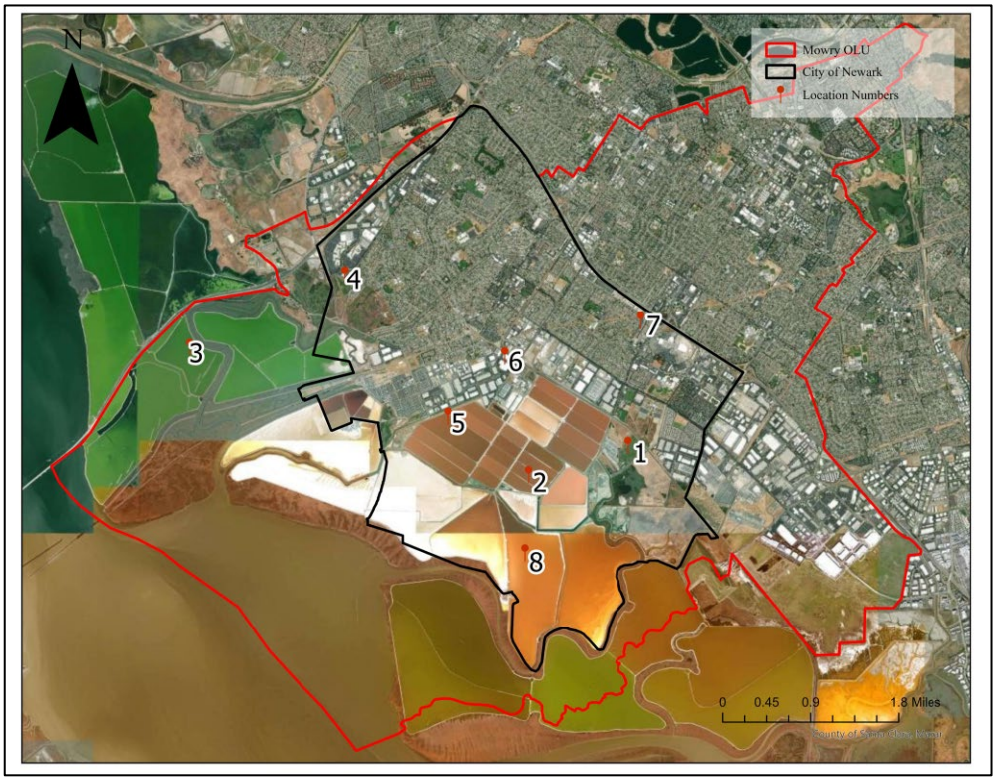

Figure 17 Model result locations associated with flood depths in Table 5

Table 5 Model result flood depths at locations depicted in Figure 17

Time	Storm/ Quasi-permanent Inundation	SLR (ft)	Location ID							
			1	2	3	4	5	6	7	8
			Water Depth (ft)							
Present	Coastal Storm	0	6.3	1.9	1.9	6.8	0.0	0.7	0.0	0.5
	Inland Storm	0	6.5	3.2	1.4	7.5	0.6	0.9	0.0	0.7
2050	Future Storm (Coastal)	0.8	6.3	2.2	2.7	6.9	0.1	0.7	0.0	0.6
	Quasi-permanent Inundation	0.8	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0
2100	Future Storm (Coastal)	3.1	6.4	4.9	6.5	8.5	1.8	0.7	0.0	4.4
		4.9	6.4	8.2	9.0	10.8	4.9	0.7	0.0	7.3
		6.6	7.1	10.0	10.8	12.6	6.7	0.9	0.0	9.1
	Quasi-permanent Inundation	3.1	0.0	0.0	2.5	0.0	0.0	0.0	0.0	0.0
		4.9	0.0	0.0	4.3	6.6	0.0	0.0	0.0	2.9
		6.6	0.0	6.3	7.4	9.2	3.1	0.0	0.0	5.4

The model is dynamic and simulates a period of five days; an example of the results at different time steps is depicted in Figure 18.

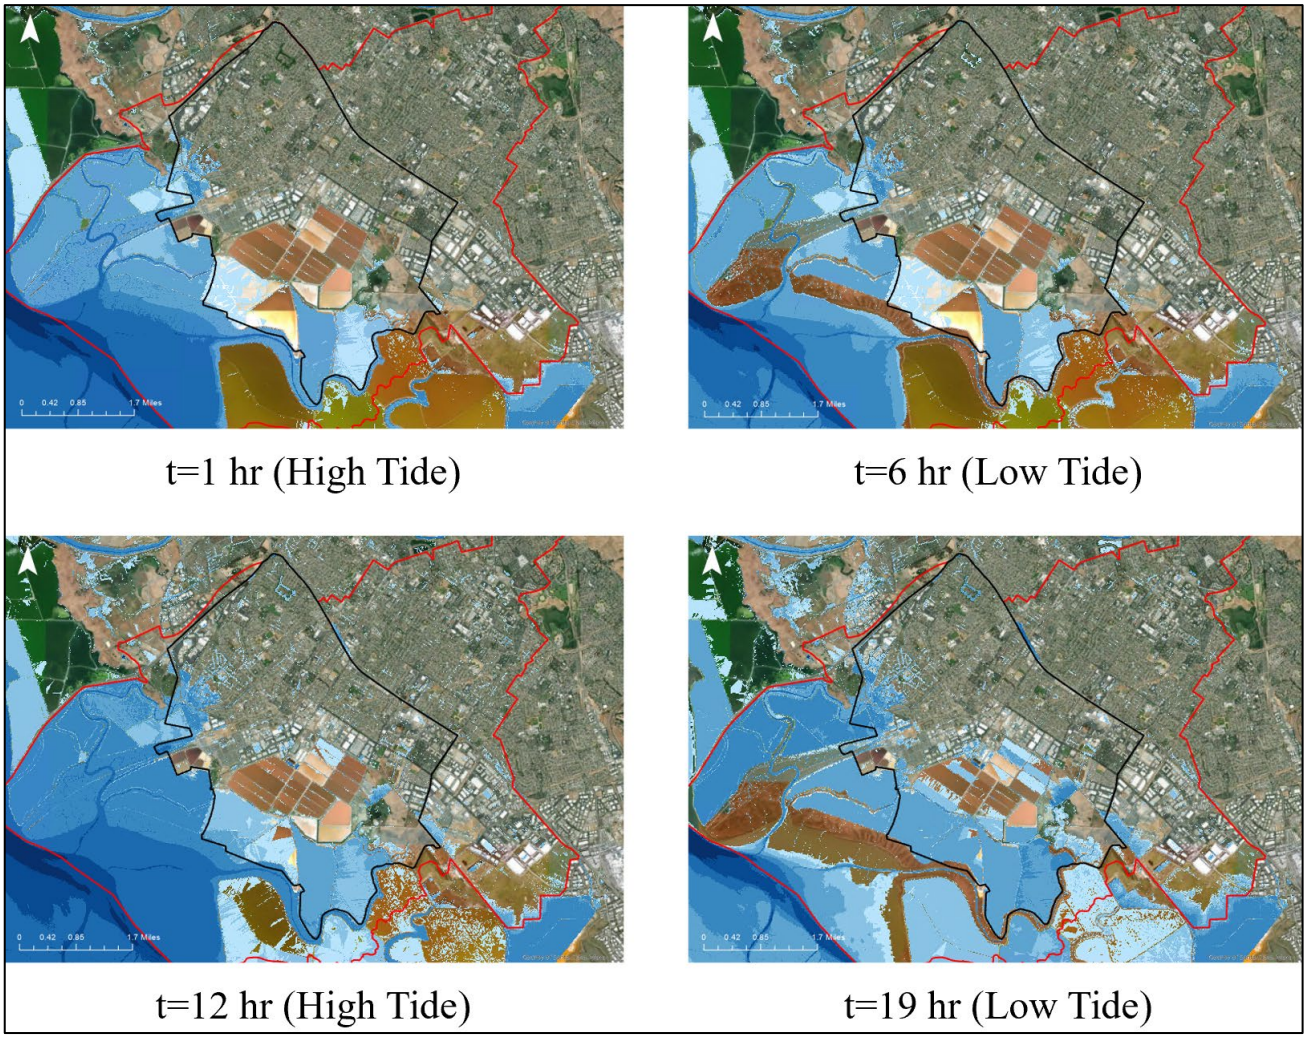

Figure 18 End-of-century Storm Scenario (coastal) flood hazard results with 3.1ft of SLR (where t is the time)

3.1.1 Present Day

The Coastal Storm Scenario (100-year coastal + 10-year inland) and Inland Storm Scenario (100-year inland + 10-year coastal) maximum flood depth results are depicted in Figure 19 and Figure 20.

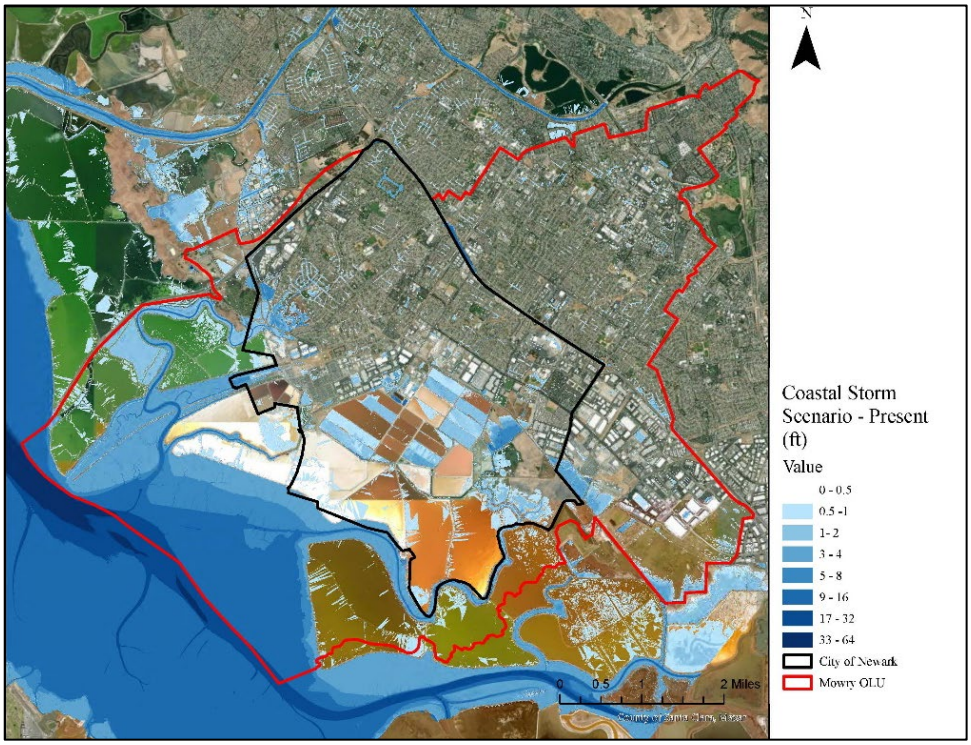

Figure 19 Present day Coastal Storm Scenario flood hazard results

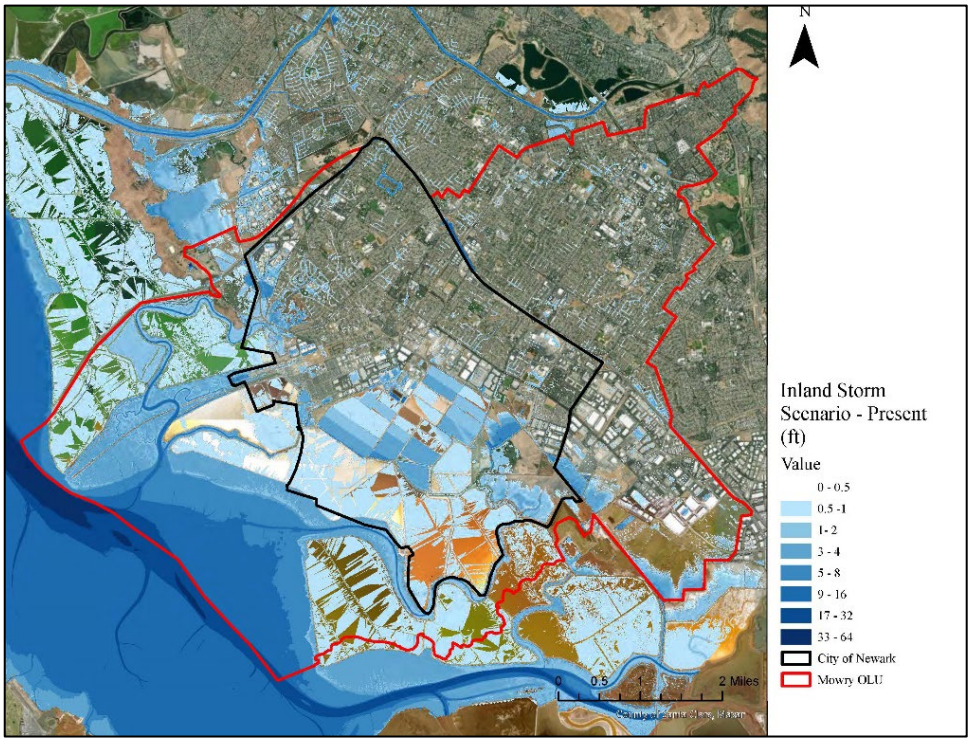

Figure 20 Present day Inland Storm Scenario flood hazard results

The Inland Storm Scenario has wider flood inundation extents, as depicted in Figure 21 which compares the Coastal and Inland Storm Scenario maximum flood depths. The green areas indicate a higher inland flood depth and blue areas indicates higher coastal flood depth. Under present day conditions, the flooding from the Inland Storm has a greater impact in residential and commercial areas, particularly within the City of Newark boundary. The berms around the salt farms provide a level of protection against coastal flooding and the berms are not overtopped in either of the present-day scenarios.

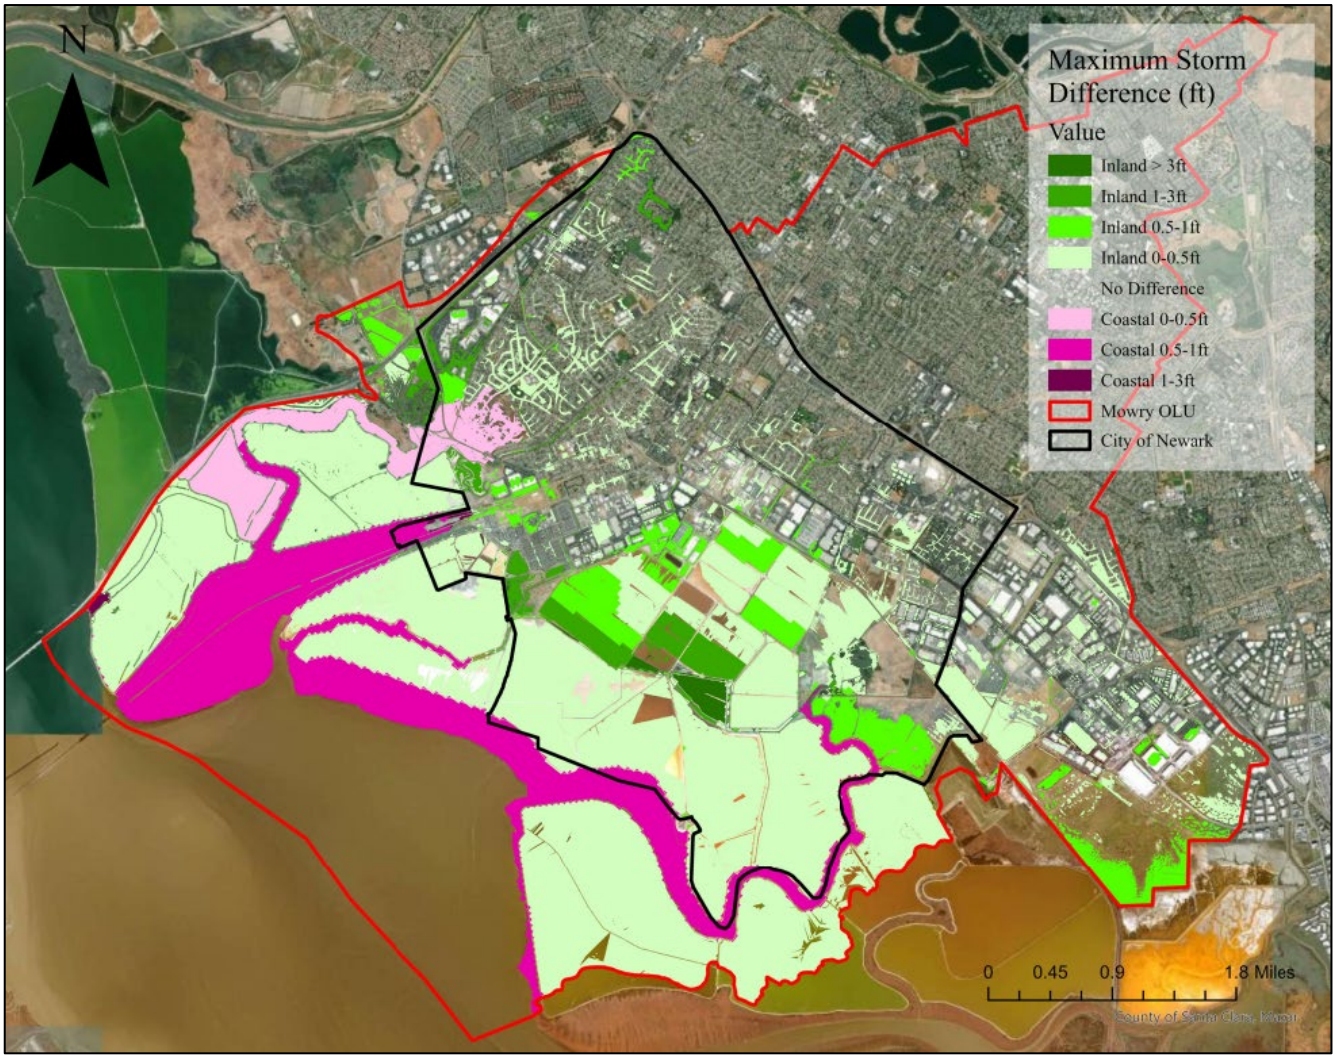

Figure 21 Comparison of the maximum flood depths between the Coastal and Inland Storm Scenarios

3.1.2 Mid-Century (2050)

The mid-century scenarios include 0.8ft of SLR with the quasi-permanent inundation and Storm Scenario. The respective maximum flood depth results are depicted in Figure 22 and Figure 23. The quasi-permanent inundation map depicts typical day-to-day conditions.

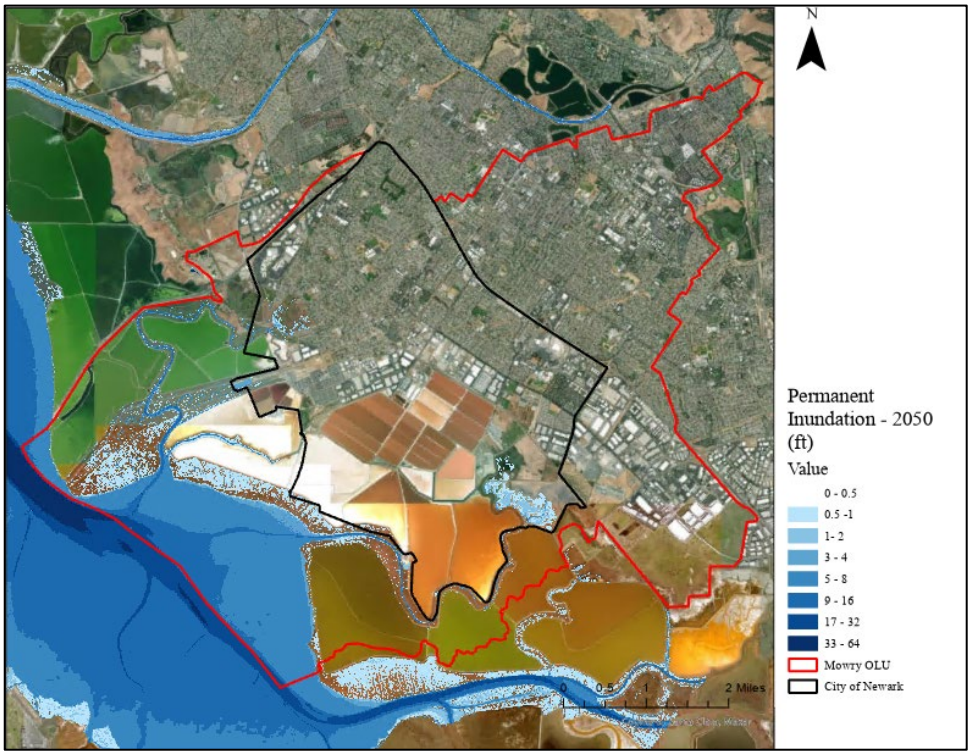

Figure 22 Mid-century quasi-permanent inundation scenario flood hazard results

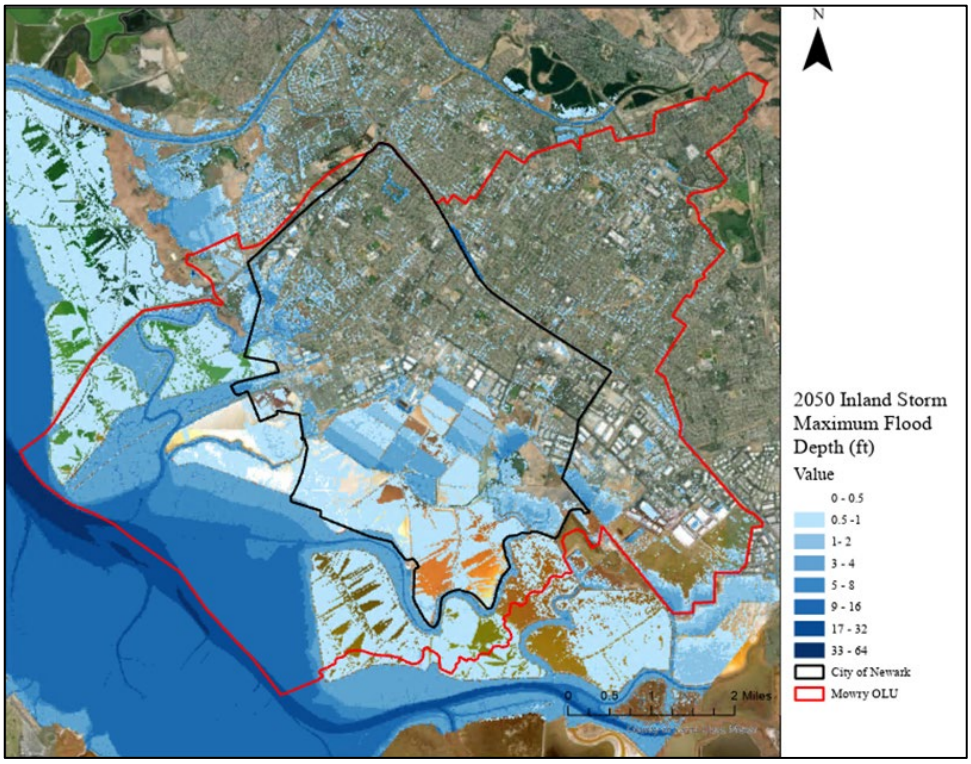

Figure 23 Mid-century Storm Scenario flood hazard results

The quasi-permanent inundation results depict limited areas of impact, with localized parts flooding in the northwest and southeast of the City. Initial mitigation efforts could be focused on these locations. When considering the Storm Scenario in addition to the Quasi-permanent conditions, the flooding becomes more widespread, particularly in the salt farms.

3.1.3 End-of-Century (2100)

The end-of-century scenarios include 3.1ft, 4.9ft, and 6.6ft of SLR with the quasi-permanent inundation and Storm Scenarios. The quasi-permanent inundation results under the three SLR scenarios, respectively, are depicted in Figure 24 through Figure 28. The quasi-permanent inundation map depicts typical day-to-day conditions. The Storm Scenario maximum flood depth results under the three SLR scenarios, respectively, are depicted in Figure 25 through Figure 29.

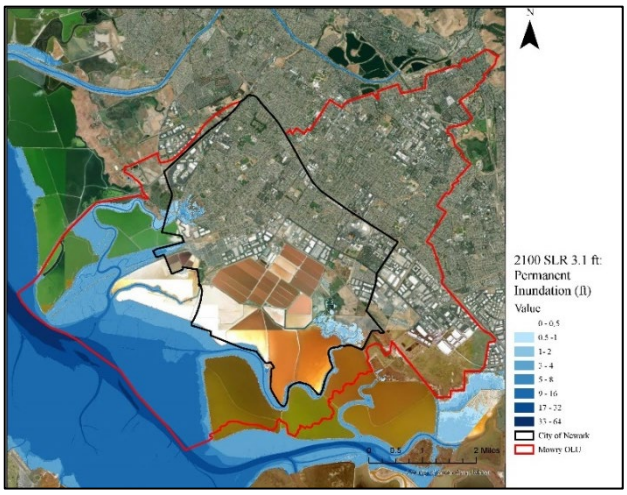

Figure 24 End-of-century Quasi-permanent Inundation Scenario under 3.1ft of SLR flood hazard results

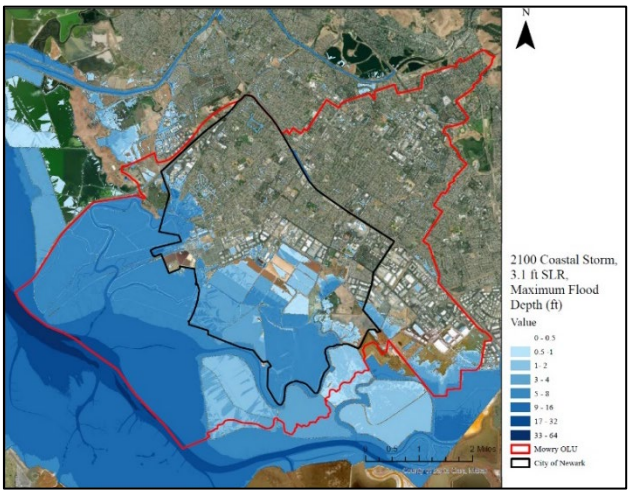

Figure 25 End-of-century Storm Scenario under 3.1ft of SLR flood hazard results

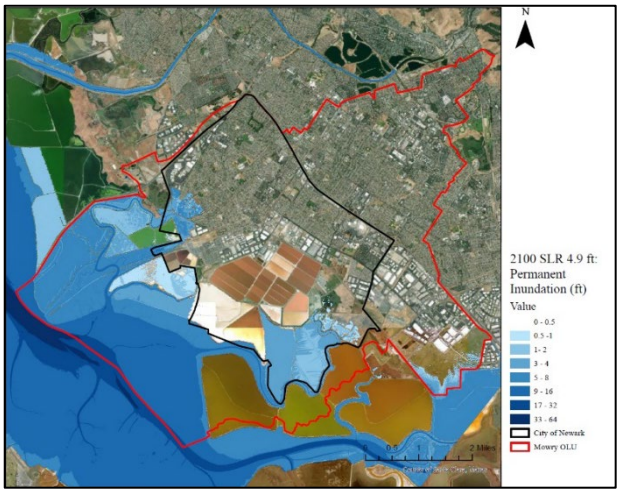

Figure 26 End-of-century Quasi-permanent Inundation Scenario under 4.9ft of SLR flood hazard results

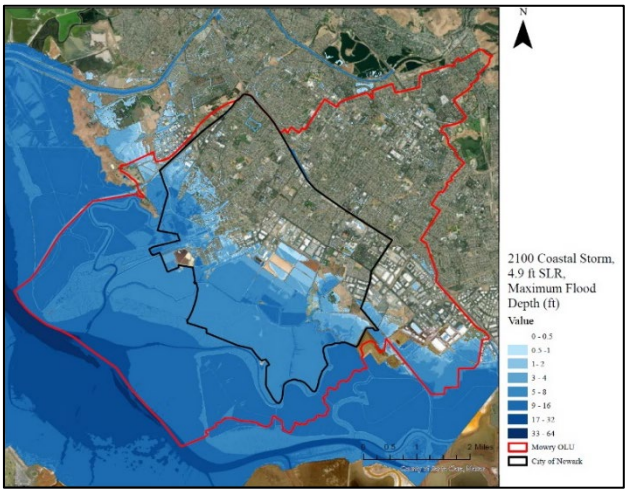

Figure 27 End-of-century Storm Scenario under 4.9ft of SLR flood hazard results

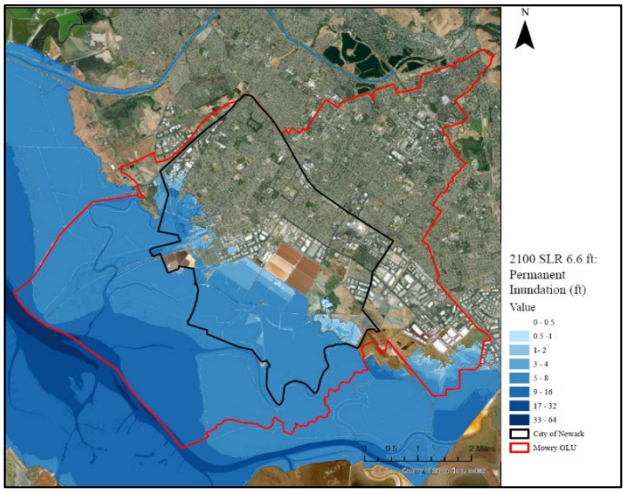

Figure 28 End-of-century Quasi-permanent Inundation Scenario under 6.6ft of SLR flood hazard results

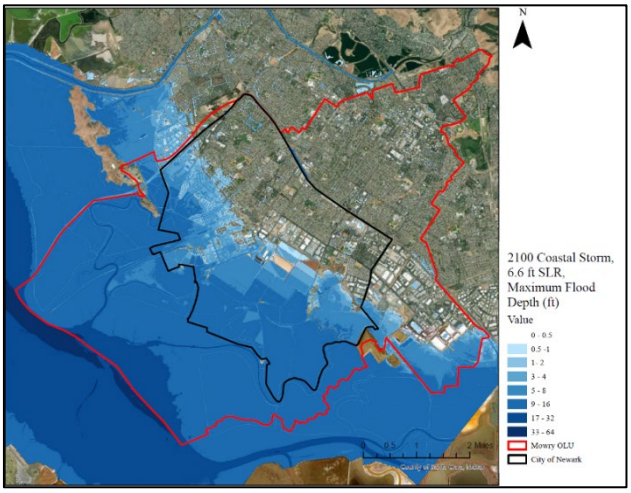

Figure 29 End-of-century Storm Scenario under 6.6ft of SLR flood hazard results

The quasi-permanent inundation results considering 3.1ft of SLR depict limited areas of impact similar to the mid-century results, with localized areas in the northwest and southeast of the city becoming inundated. Quasi-permanent inundation from 4.9ft of SLR impacts the southern section of the salt farms and a greater extent of the area in the northwest of the city. The tipping point where day-to-day impacts from quasi-permanent inundation become significant occur when SLR increases from 4.9ft to 6.6ft of SLR, visualized in Figure 30, which depicts the MHHW level relative to the median weir elevation.

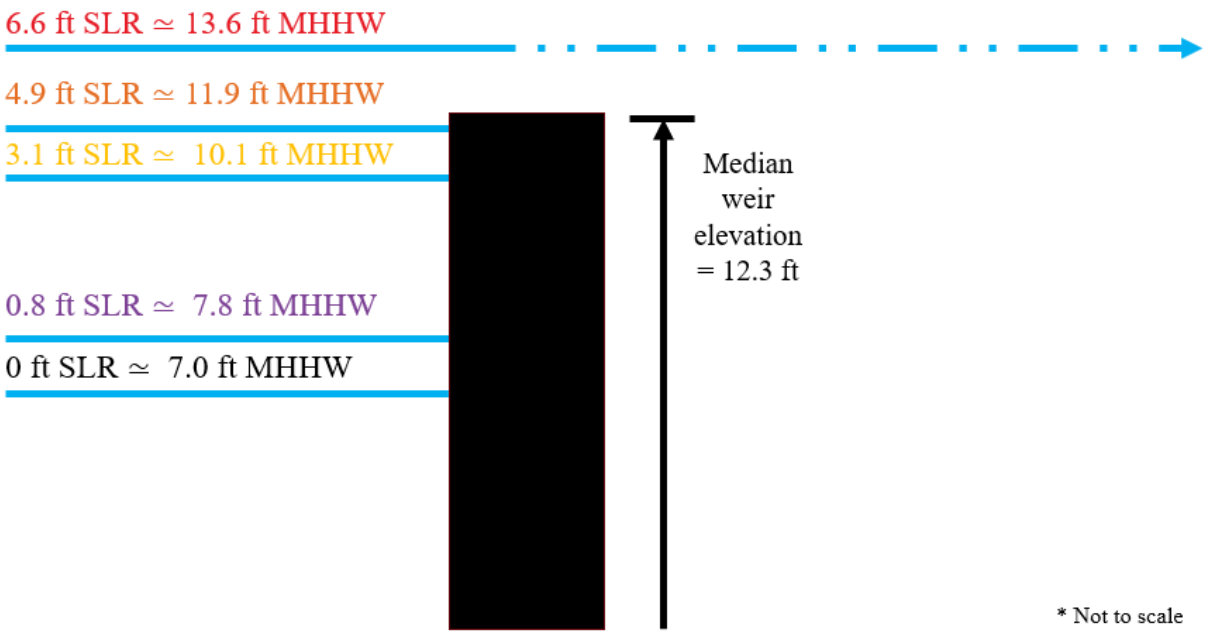

Figure 30 Visualization of MHHW elevation and weir elevation under SLR scenarios with tipping point depicted

The areas impacted by quasi-permanent inundation with 4.9ft of SLR are similar to those impacted by 3.1ft of SLR, but the maximum flood depths are greater. In the 6.6ft of SLR scenario, a significantly larger portion of developed areas are impacted, and widespread mitigation would be required. Figure 31 depicts the change in inundation from 4.9ft to 6.6ft SLR, where the darker the color indicates how much more flooding there is in 6.6ft SLR than 4.9ft SLR scenarios (MHHW).

When considering the Storm Scenario in addition to the quasi-permanent conditions, the tipping point for widespread flooding occurs with 3.1ft of SLR, which could occur in a nearer timeframe than the quasi-permanent inundation tipping point. In particular, the salt farms and in the developed areas in the northwest of the city experience the most flooding. Inland flooding also occurs in pockets throughout the residential neighborhoods in this scenario.

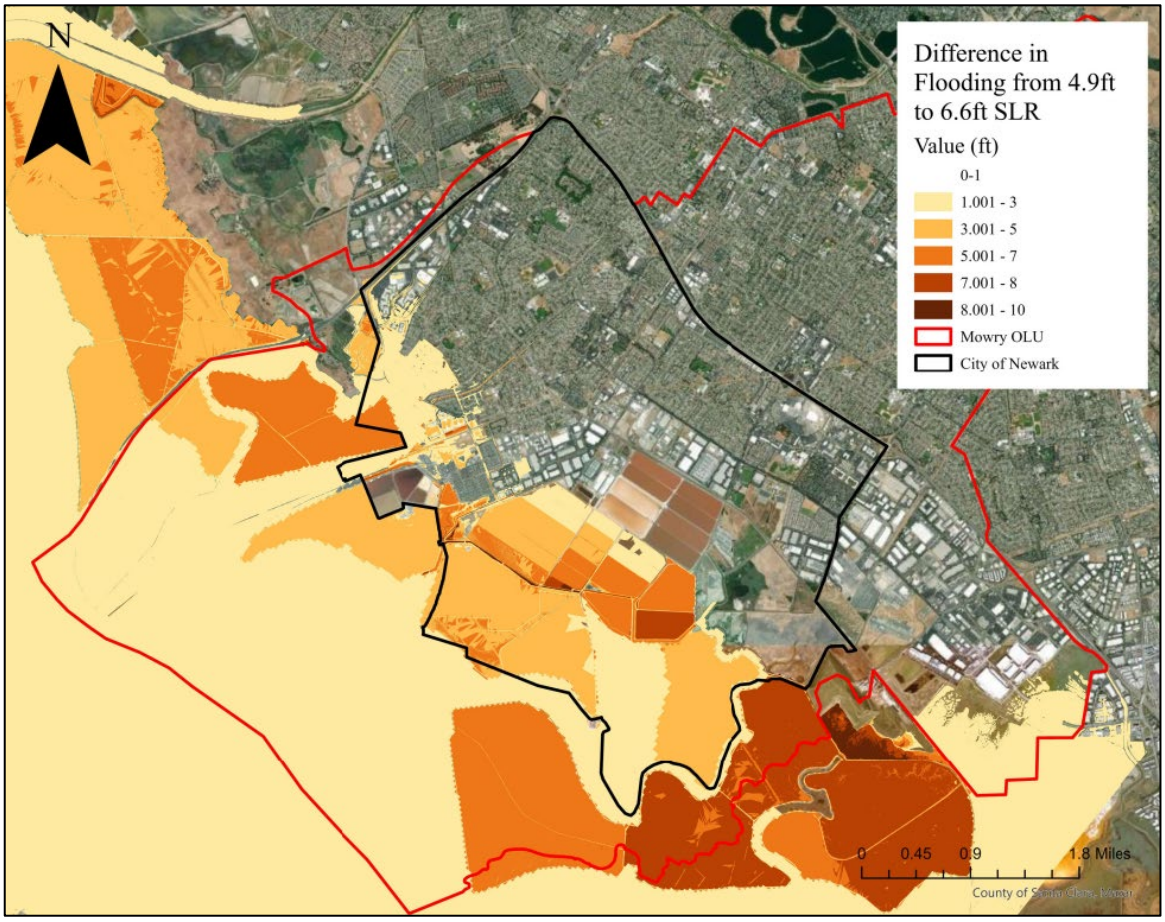

Figure 31 Difference in flood depths from quasi-permanent inundation due to 4.9ft versus 6.6ft of SLR

3.2 Validation

The Delft3D San Francisco Bay Community Model (Nederhoff et al. (2021)), from which the coastal boundary conditions were derived, is calibrated against tide gauge data. For this regional Newark model, the model results water levels were validated against the Coyote Creek tide gauge water levels in Figure 32. The modeled water levels ("SFINCS model") align with the observed values ("observed (hourly)"), as seen visually for the time series below during winter 1983.

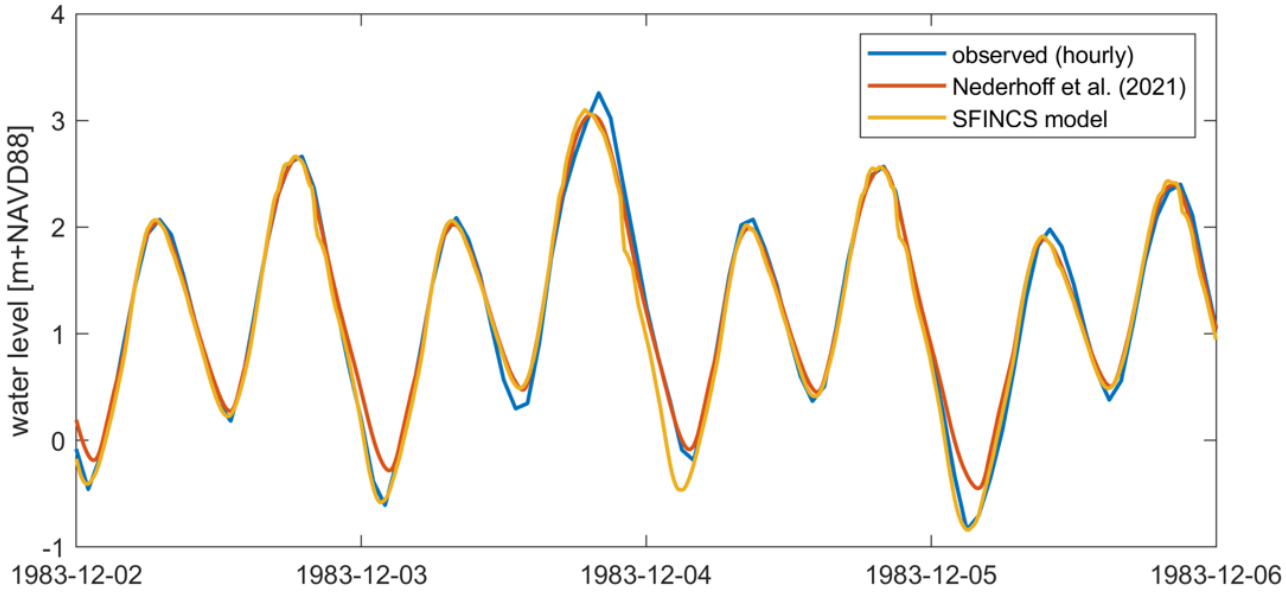

Figure 32 Validation Coyote Creek – RMSE 15cm, MAE 11cm

The model results verification compared to FEMA indicates there is some overestimation of flooding mainly on land driven by rainfall. This is likely because of two reasons: 1) urban drainage systems are not included in the SFINCS model because they are assumed to be at full capacity which results in ponding water in the streets, and 2) The FEMA model does not include local storm drain systems and is not a 2D model, therefore flooding will not show in the streets unless it is specifically around creeks or channels which are overtopped. Therefore, it is expected that there will be some misalignment between the results from inland flooding. There is also some underestimation in the salt ponds, which may be driven by overestimation of the weir height, or potential inaccuracies or assumptions in the FEMA results.

Despite these limitations, the results include an 88% hit rate, which means that the SFINCS model flooding aligned with 88% of the FEMA flood area, which gives confidence that the model is capturing the main flood patterns as depicted in the FEMA benchmark.

It is estimated that biases are likely consistent across different return periods, meaning it does not vary significantly with event magnitude. However, the relative patterns of increasing flooding driven by climate change factors, such as sea level rise and heightened precipitation, are still well captured. While the absolute flood extents may carry systematic biases, the relative trends remain reliable for assessing future risks. For projections at specific time horizons, the overestimation may slightly inflate the total flooded area but is unlikely to significantly alter the trends in increased flood hazards under climate change scenarios. These trends are critical for planning purposes, as they provide insight into the relative changes in risk and the areas requiring priority action.

4. Conclusions and Next Steps

The findings from this compound flood hazard modeling highlight the significant hazards posed by rising sea levels, increased storm intensity, and groundwater emergence to the City of Newark. The flood hazard model developed for this study provides a comprehensive understanding of current and future flood hazards, demonstrating that both coastal and inland storm scenarios could increasingly impact residential, commercial, and green spaces. Limitations include the quality and resolution of input data (i.e., topography, bathymetry, rainfall), inherent uncertainty in model predictions, and absence of available stream gauge data for calibration.

The model results underscore the urgency of implementing adaptive measures to mitigate associated risks, particularly in vulnerable areas such as in the northwest of the city which is exposed in the present-day coastal storm scenario. The alignment of peak rainfall and tidal events further emphasizes the need for robust flood management strategies to protect the community and infrastructure.

The next phase of work includes evaluation of the impact of the flooding on communities and infrastructure using Delft FIAT. The flood hazard results from this modeling effort will be utilized as the baseline for this assessment. The vulnerability assessment will identify assets that are exposed to flooding in the various future scenarios, considering the flood depth and potential damage. Risk modeling will then be performed in Flood Adapt and will support the implementation of a multi-criteria approach to identify key flood risk areas, considering severity of flood risk, potential impact on vulnerable communities, and criticality of impacted assets. Financial losses will also be estimated.

Concept-level adaptation solutions will be developed to address key areas in the city which are exposed to significant flood risk. The proposed adaptation solutions will be evaluated through a simple benefit-cost analysis and potential funding sources will be identified. Arup led a community engagement meeting at the project onset, to inform the public and solicit input, and a second meeting will review the results and present proposed conceptual adaptation measures.

Water Board	San Francisco Bay Regional Water Quality Control Board

Executive Summary

Flooding, sea level rise (SLR), and strong storms are growing threats for the City of Newark (the City). This study analyzes how these risks could affect the City's infrastructure, communities, and natural areas. This analysis focuses on identifying what is at risk, like homes, roads, and wetlands, and estimating the potential damage.

Detailed flood maps show which areas might be permanently or regularly inundated in the future if no action is taken. These maps, described in the *Flood Modeling Report*, provided the foundation for the vulnerability and risk assessment presented here.

To better understand flood impacts, this study applied a planning tool called FloodAdapt, which brings together flood maps, infrastructure and building data, and information on potential damage and consequences. For analyzing SLR scenarios, any asset located below the future projected daily high tide line was assumed to be regularly flooded and treated as a total loss. To consider storm scenarios, damages based on modeled flood depths were estimated using industry-standard "depth-damage curves," which relate water depth to the expected cost of damage.

This process helped estimate not only potential financial losses, but also identify which neighborhoods, facilities, and ecosystems are most at risk. The results of this risk analysis describe the cost of no action and help lay the groundwork for future adaptation planning.

Key Findings

This analysis provides a clear picture of what is at stake for the City—today, mid-century, and by the end-of-century. The findings below highlight the scale of potential impacts, which grow significantly over time and underscore the urgency of proactive planning.

Four SLR scenarios were applied: one representing mid-century conditions (0.8ft) and three representing end-of-century conditions (3.1ft, 4.9ft, 6.6ft). This approach captures the range of reasonable uncertainty by 2100 and aligns with state and regional standards for this type of analysis, including guidance from BCDC.

Table 1 summarizes the assets exposed to SLR for each of the four scenarios. The listed assets would be flooded under daily high tides, which the report also calls quasi-permanent inundation, as assets in the tidal zone would be inundated only part of the time. The results significantly increase from the 2050 scenario to the end-of-century scenarios, described more following the tables.

Table 1 Summary of quasi-permanent flood impacts from future SLR scenarios

Asset Type (units)	Mid-century (2050)	End-of-century (2100)		
	0.8ft SLR	3.1ft SLR	4.9ft SLR	6.6ft SLR
Buildings (count)	10	50	490	2,200
Roads and trails (mi)	10	20	50	60
Rail lines (mi)	2	3	5	6
Sewer lines (mi)	1	4	11	17
Sewer system (count)	0 manholes 0 pump/lift station	130 manholes 1 pump/lift station	650 manholes 2 pump/lift stations	980 manholes 2 pump/lift stations
Electrical substations (count)	0	1	1	1
Transmission lines (mi)	4	20	30	40
Population in impacted census blocks (count)	23,000	23,000	23,000	29,000
Contamination sites (count)	1	1	1	20
Wetland area (ac)	8,000	8,500	8,600	8,900
Total zoning area (ac)	4,100	4,700	7,900	12,000

The estimated losses from quasi-permanent inundation are tabulated in Table 2. These values assume that the exposed assets, which would experience flooding under daily high tides, are a total loss, which is a conservative assumption as some amount of partial loss is plausible.

The sum shows $71M of impacted assets by 2050. The value increases by a factor of six by end-of-century under 3.1ft SLR and may be as much as $3.8B with 6.6ft SLR. These values assume all assets exposed, including those exposed to daily high tides under future SLR, are a total loss, which may conservatively overestimate impacts. This analysis forms a foundation upon which to evaluate cost-related benefits of adaptation strategies.

Table 2 Total estimated cost of SLR, in millions of dollars, given exposed assets are considered a total loss

Asset Type	Mid-century (2050)	End-of-century (2100)		
	0.8ft SLR	3.1ft SLR	4.9ft SLR	6.6ft SLR
Buildings	$45	$200	$1,500	$3,100
Roads	$0	$70	$360	$490
Rail	$4.5	$7.5	$14	$17
Sewer	$1.7	$5.7	$22	$32
Power	$20	$115	$160	$180
Total Loss	**$71**	**$398**	**$2,056**	**$3,819**

Between now and 2050, the City faces limited but important early-stage risks from SLR, mostly affecting utilities and industrial infrastructure. The risks include:

- **Buildings**: Approximately 10 buildings are at risk of daily flooding, primarily industrial and public buildings.
- **Roads and Trails**: No permanent loss identified, but storm scenarios indicate significant flooding.
- **Rail Lines**: About 1.5mi of rail lines are expected to be quasi-permanently inundated.
- **Sewer System**: 1mi of active sewer lines and 5 sewer manholes would be flooded under high tides.
- **Power System**: 4mi of transmission lines are within flooded areas.

Between 2050 and 2100, the scale of risk increases dramatically across all sectors. The risks include:

- **Buildings**: By 2100, estimates range from about 50 to over 2,000 buildings impacted by daily flooding, depending on SLR ranging from 3.1ft to 6.6ft. There is a significant increase in residential and commercial buildings exposed.
- **Roads and Trails**: Approximately 5mi of roads and 15mi of trails could experience quasi-permanent inundation by 3.3ft SLR, increasing to 37mi and 23mi, respectively, by 6.6ft SLR.
- **Rail Lines**: Permanent inundation could affect 3mi to 6mi of rail lines.
- **Sewer System**: 4-17mi of active sewer lines and up to 1,000 sewer manholes could be exposed to permanent inundation from SLR or daily flooding in the tidal zone.
- **Power System**: 20mi to 40mi of transmission lines and one electrical substation could be quasi-permanently inundated.

Next Steps

The upcoming phase will focus on developing adaptation measures for key areas at risk, engaging the public, and incorporating feedback to prioritize actions and develop an adaptation strategy for the City.

1. Introduction

The City of Newark has initiated a comprehensive *Sea Level Rise Vulnerability Assessment and Adaptation Strategy* to address the challenges posed by rising sea levels and associated flooding risks. This project aims to develop a robust understanding of the City's flood risks and to formulate effective adaptation strategies. The study area encompasses the Mowry Operational Landscape Unit (OLU) which includes the entire City of Newark and portions of Fremont. Refer to the *Flood Modeling Report* for additional details on the flood hazard modeling approach and results. This report documents the approach and initial findings from the vulnerability and risk assessment. The upcoming phase will focus on adaptation strategies for key areas at risk.

Prior to this effort, the City conducted a Local Hazard Mitigation Plan effort with Union City and the City of Fremont which highlighted the need for this project. This project represents the first critical step in the adaptation planning process for the City by establishing a baseline understanding of pertinent flooding risks using industry best practices and methods. This understanding is essential for the second step, which involves developing risk-informed adaptation strategies and identifying potential partners for implementation.

This report summarizes the vulnerability and risk assessment model development, results, and conclusions. The assessment includes impacts on infrastructure, residents, business and the environment from flood hazards, including quantification of the number of assets at risk and estimated costs.

1.1 Study Area

The study area covers the Mowry OLU, which includes the entire City of Newark as well as portions of Fremont (Figure 1). The study area includes approximately 15mi of shoreline along the San Francisco Bay. The model extent is slightly larger than the Mowry OLU to ensure full coverage of Newark's infrastructure and flood pathways, including areas just beyond the OLU boundary that influence local flood dynamics.

Figure 1 Study area, model extents, and jurisdictions

1.2 Vulnerability and Risk Assessment Approach

A flood hazard model of the Mowry OLU, which includes the City of Newark, was developed for both present and future SLR and storm scenarios. Four main types of flood scenarios were modeled for this project:

- **Present Coastal Storm Scenario:** This scenario is defined in this study as the 100-year coastal event which considers tides and storm surges occurring simultaneously with a 10-year inland event which considers rainfall.
- **Present Inland Storm Scenario:** This scenario is defined in this study as the 100-year inland event which considers rainfall occurring simultaneously with a 10-year coastal event which considers tides and storm surges.
- **Tidal (Quasi-Permanent) Inundation:** These scenarios are defined by MHHW, which represents a typical high tide that serves as a proxy for everyday flooding. When modeling future MHHW with different SLR scenarios, the resultant maps provide useful tools for planning.
- **Future Coastal Storm Scenario:** The future Storm Scenarios evaluate the maximum of the coastal storm scenario and the inland storm scenario to represent extreme but plausible combined storm scenarios. Rainfall for the future events comes from future climate projections of precipitation.

These scenarios are summarized in Table 3. The scenario development and hazard outputs are detailed in the *Flood Modeling Report*.

Table 3 Summary of flood hazard scenarios run through the model

Time Horizon	Scenarios
Present	• Coastal Storm Scenario: 100-year coastal + 10-year inland • Inland Storm Scenario: 100-year inland + 10-year coastal
Mid-century (2050)	• 0.8ft SLR – Quasi-permanent Inundation – Future Coastal Storm
End-of-century (2100)	• 3.1ft SLR (Intermediate Scenario) – Quasi-permanent Inundation – Future Coastal Storm • 4.9ft SLR (Intermediate-High Scenario) – Quasi-permanent Inundation – Future Coastal Storm • 6.6ft SLR (High Scenario) – Quasi-permanent Inundation – Future Coastal Storm

The exposure of infrastructure, communities, and the environment to flooding was evaluated by intersecting their locations with the flood inundation extents using GIS. The vulnerability and risk assessment identified assets that are exposed to flooding in the storm and SLR scenarios, considering flood depth and potential damage. For building assets, damage was estimated using a depth-damage curve assigned to each asset, like apartment buildings or commercial businesses. As pictured in the center of Figure 2 and defined further in Section 2.4.2, depth-damage curves map the percentage of damage to the inundation depth for these assets. Percent damage was directly related to financial loss for each asset for the storm scenarios, also shown in Figure 2. For SLR scenarios without storm, 100% damage was assumed.

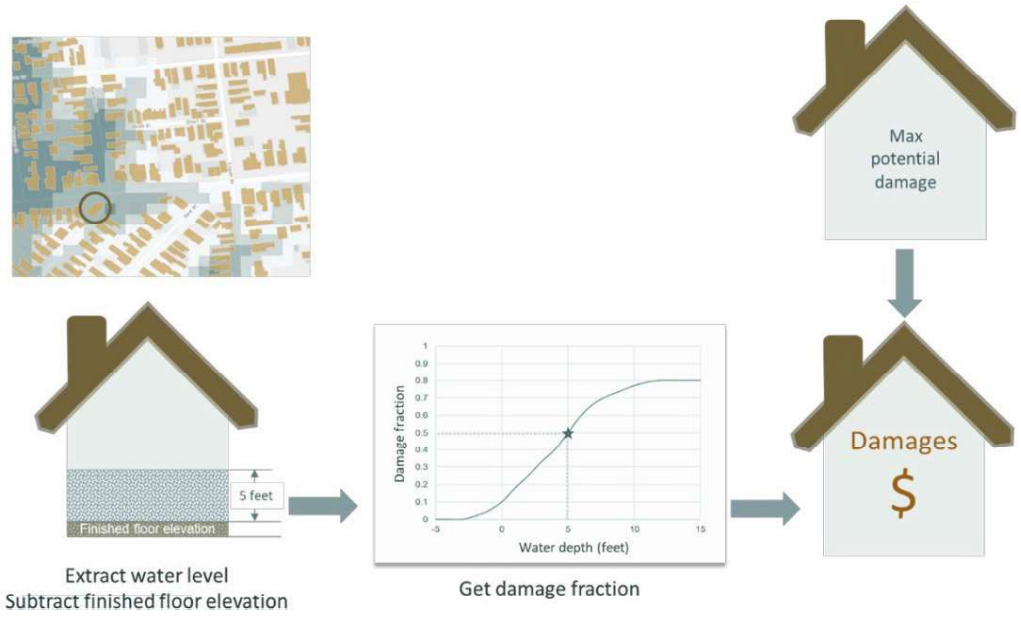

Figure 2 Overview of the calculation framework in Delft-FIAT, depicting the input of damage curves and asset data

Risk was assessed using a scenario-based approach to evaluate the impact of flooding under each SLR and storm scenario. The financial losses of damage to physical infrastructure and buildings were estimated within FloodAdapt for the SLR scenarios, building on the assessment of exposure, damage, and vulnerability.

2. Vulnerability and Risk Model Development

This section describes the development of the vulnerability and risk model using FloodAdapt. The sections capture:

- **Software and tools** used to conduct the assessment
- **Scenarios** modeled
- **Key model inputs** collected from best available public datasets and incorporated into the modeling
- **Assumptions and limitations** made to develop these models

2.1 Software and Tools

Delft-FIAT is a Python-based tool developed to rapidly assess direct economic impacts to buildings, utilities, and roads for user-input flood maps. Delft-FIAT utilizes a unit-loss method similar to the Hazus tool by the Federal Emergency Management Agency. This report is focused on the inputs and outputs of the Delft-FIAT model that supported the vulnerability and risk assessment.

FloodAdapt is a decision-support tool that seeks to advance and accelerate flooding-related adaptation planning. A FloodAdapt model was configured with flood hazard, vulnerability, and risk results (Figure 3). It will be used to model adaptation strategies.

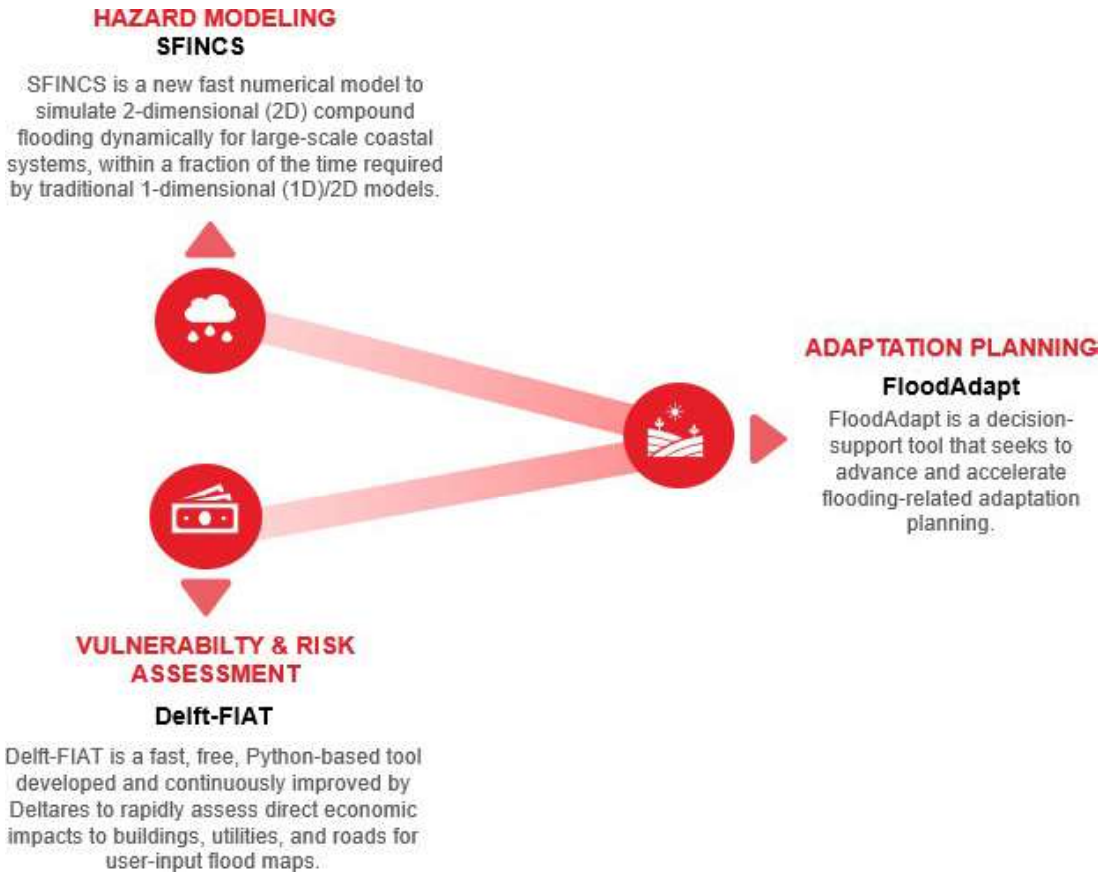

Figure 3 Interaction between models and tools

2.2 Scenarios Modeled

Ten flood scenarios were modeled as summarized in the *Flood Hazard Report*, encompassing the study area and evaluating timeframes for present-day, mid-century, and end-of-century conditions. The models cover four SLR scenarios and two storm scenarios, summarized in Table 3. Quasi-permanent inundation maps refer to areas inundated under Mean Higher High Water (MHHW) for that SLR scenario. For more detail on the flood hazard scenarios please review the *Flood Hazard Report*.

2.3 Data Collection and Sources

Existing data and models were collected and developed to provide a tailored analysis for the City. Data was provided by the City as well as from local agencies, such as the Alameda County Flood Control District, San Francisco Bay Regional Water Quality Control Board (Water Board), Metropolitan Transportation Commission (MTC), and San Francisco Estuary Institute (SFEI). Datasets from state and national sources were also used, such as U.S. Army Corps of Engineers (USACE) National Structure Inventory (NSI), California Energy Commission (CEC), U.S. Environmental Protection Agency (EPA), and the California Office of Environmental Health Hazard Assessment (OEHHA). The sources are detailed in Table 5. Publicly available data was also collected and reviewed. Table 4 summarizes the data requests, data sources, and the availability of the data. Unavailable data is defined as data not received from the City of Newark and not readily available online.

Table 4 Data and data sources

Available Data	Unavailable Data
• Building Data • Population Data • Land Use Data • Zoning Data • Roadway Data • Rail Line Data • Power System Data • Sanitary System Data • Emergency Facility Data • Landfill Data / Contaminated Sites • Trail Data • Community and Public Health Data • Community Facilities • Wetland Data • Vulnerable Communities Data	• Transit System: Bus lines, yards, transit hubs • Water System: Water distribution system and pumps and treatment plants • Economic Impact Data: Economic activities, property values, and potential economic loss information • Infrastructure Improvements: Planned infrastructure improvement projects • O&M: Ongoing maintenance/replacement schedules, e.g. road repaving projects or culvert/bridge replacement. • Existing Cost-Benefit Analysis: Economic evaluation of proposed/existing adaptation measures. • Feasibility Assessment: Technical and logistical feasibility of proposed/existing adaptation measures. • Proposed Adaptation Measures: Potential strategies for mitigating risks and adapting to SLR. • Planning Documents: Current comprehensive plans, hazard mitigation plans, and climate adaptation plans

2.4 Vulnerability and Risk Assessment Key Model Inputs

The FloodAdapt software was used for the vulnerability and risk assessment using inputs collected primarily from publicly available sources. The inputs and their sources are discussed in this section.

2.4.1 Flood Hazard Data

The results presented in the Flood Hazard Report were used to feed into the vulnerability and risk assessment. Delft-FIAT overlays spatial data on flooding and exposed assets to calculate flood damages, as depicted in Table 5. The results from the *Flood Modeling Report* are summarized below. Details from these results and high-resolution flood maps can be referenced there.

Present Day

- The berms around the salt farms provide a level of protection against coastal flooding and the berms are not overtopped in either of the present-day scenarios.

- The Inland Storm Scenario has wider flood inundation extents and has a greater impact in residential and commercial areas, particularly within the City of Newark boundary, compared to the Coastal Storm Scenario which is concentrated in areas closer to the bay.

Mid-century (2050)

- Quasi-permanent Inundation:
  - The quasi-permanent inundation results depict limited areas of impact, with localized parts flooding in the northwest and southeast of the City.
- Storm Scenario:
  - When considering the Storm Scenario in addition to the quasi-permanent conditions, the flooding becomes more widespread, particularly in the salt farms.

End-of-century (2100)

- Quasi-permanent Inundation:
  - 3.1ft SLR to 4.9ft SLR: Similar flood extents with limited areas of impact similar to mid-century, localized flooding in the northwest and southeast of the City. Maximum flood depth increases at 4.9ft SLR.
  - Tipping point (4.9ft to 6.6ft SLR): The flood hazard report identified a "tipping point" in the results where the increase in sea level result in disproportionately large and often irreversible impacts. At this stage, significant day-to-day impacts from quasi-permanent inundation begin, with berms overtopped.
  - 6.6ft SLR: Significantly larger portion of developed areas impacted, requiring widespread mitigation.
- Storm Scenario:
  - When considering the Storm Scenario in addition to the quasi-permanent conditions, the tipping point for widespread flooding occurs with 3.1ft SLR, which could occur in a nearer timeframe than the quasi-permanent inundation tipping point.
  - In particular, the salt farms and in the developed areas in the northwest of the City experience the most flooding. Inland flooding also occurs in pockets throughout the residential neighborhoods in this scenario.

2.4.2 Asset Data

The vulnerability model assesses the exposure of different asset types to flood inundation, and it considers how those assets may be damaged. Assets in this assessment include buildings (residential, commercial, industrial, and public), roads, utility infrastructure (power and sewer), landfills, and wetlands. Data was collected where available about their location and characteristics (e.g., building use type) to inform the vulnerability and risk assessment. This information is summarized in Table 5.

Table 5 Summary of key model inputs for the assets

Asset Type	Asset Name (Subtype)	Data Source	Data Type	Vulnerability Curve	Cost Data
Building Data	Building centroids (points)	NSI (USACE)	Point	Arup	NSI (USACE)
Population Data	Equity Priority Communities (areas)	MTC	Polygon	N/A	N/A
Zoning Data	Zoning (areas)	City of Newark and City of Fremont	Polygon	N/A	N/A
Roadway Data	Roadways (lines)	City of Newark and OSM	Polyline	Arup	N/A
Rail Line Data	Rail lines (lines)	City of Newark	Polyline	Arup	Arup
Sanitary System Data	Manholes (points) Power/Lift Stations (points) Easements (points) Mains (lines)	Union Sanitary District	Points and Polylines	Arup, HAZUS	Arup
Power System Data	Electrical substations (points)	CEC	Points	Arup, HAZUS	PG&E
	Transmission Lines (lines)	CEC	Lines	Arup, HAZUS	PG&E
Emergency Facility Data	Police stations (points) Fire stations (points)	City of Newark and City of Fremont	Point	Arup	Arup, NSI (USACE)
Landfill Data / Contaminated Sites	Facility Registry Service Sites (points) Water Board sites (points)	EPA and Water Board	Point	N/A	N/A
Trail Data	Bike trails (lines) Pedestrian trails (lines)	MTC	Line	Arup	N/A
Public Health Facilities	Hospitals (points) Care centers (points)	City of Newark and City of Fremont	Point	Arup	Arup, NSI (USACE)
Community Facilities	Libraries (points) Schools (points) Community/civic centers (points) Other public use buildings (points)	City of Newark and City of Fremont	Point	Arup	Arup, NSI (USACE)
Wetland Data	Wetlands (areas)	SFEI	Polygon	N/A	N/A
Vulnerable Communities Data	Vulnerable communities (areas)	CA OEHHA	Polygon	N/A	N/A

Point and linear assets were assessed quantitatively via FloodAdapt. Point assets are combined as an input "Buildings" dataset, while linear assets were combined as an input "Roads" dataset to be used in FloodAdapt. These datasets went through a pre-processing stage to combine all point assets together and all linear assets together. Preprocessing included the following:

- There was overlap in the NSI dataset and other provided buildings above, a pre-processing step was done to filter buildings that overlapped one another within a 30ft radius.
- Linear assets were segmented into 500ft increments to provide more granularity to results as the centroid digital elevation model (DEM) value is assigned to each feature.

The unavailable assets listed in Table 3 were excluded from this analysis. Should datasets become available in the future, they can be uploaded to the model via the FloodAdapt interface after preprocessing the data into exposure and vulnerability datasets.

Area features were assessed qualitatively through a geospatial analysis. To do this assessment, the flood maps were turned into polygons and overlaid with areas to determine percent flooding and exposure to land and people.

Asset Vulnerability Data

Depth-damage curves are used to estimate the damage to assets based on the depth of flooding, as shown in Figure 4. These curves relate the depth of water to the percentage of damage, also used to estimate percentage of financial loss, for different asset types. The curves are derived from empirical studies (such as HAZUS) and detailed component-based models (such as Arup). Data sources for the vulnerability curves for each asset are listed by type in Table 5.

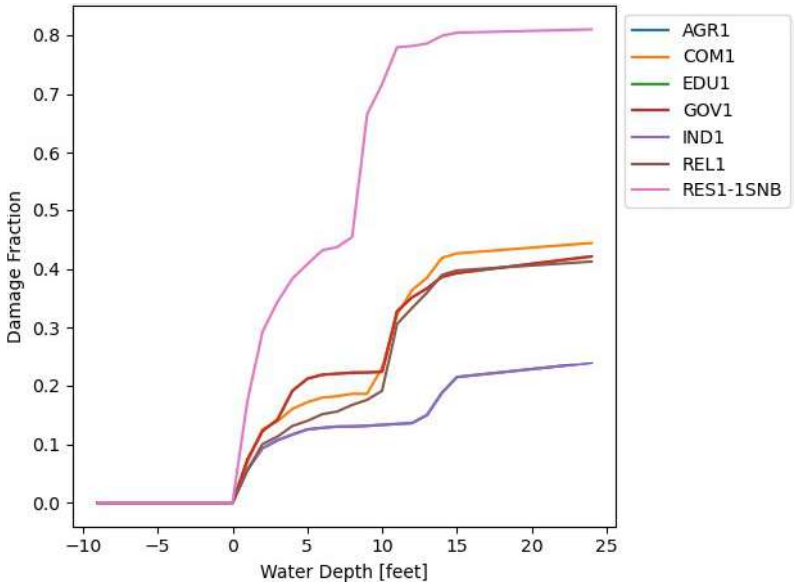

Figure 4 Example vulnerability curves used in FloodAdapt showing a set of depth-damage curves (Arup)

The implementation of vulnerability curves required several assumptions. These details are summarized in Table 6.

Table 6 Asset types and vulnerability curve implementation

Asset Type	Vulnerability Curve Implementation
Points	The finished floor elevation (FFE) for buildings was used from the USACE NSI database. Where FFE was not available, it was assumed to be 0.5ft above the ground. All other point assets were assumed at-grade (0ft above the ground).
Lines	All linear assets were assumed to be at-grade (0ft above the ground).
Areas	All area assets were assumed to be at-grade (0ft above the ground).

Asset Cost Estimate Data

As shown in Table 5, values of each asset used cost data from several sources, including the NSI database (USACE, 2022) for most buildings, PG&E data for power system infrastructure, and Arup-developed cost data for the remainder of assets whose costs were assessed. These cost estimates should be considered as rough order of magnitude values to present a high-level estimate of potential financial losses under each scenario. The costs do not consider broader economic impacts.

2.5 Assumptions and Limitations

This analysis assumes that publicly available data and data provided by the City and sources listed below accurately represent existing conditions and infrastructure. Limitations include:

- The hazard model accuracy is dependent on the quality and resolution of the input data, such as topography, bathymetry, and rainfall.
- Damage values for buildings are based on depth-damage curves assigned based on the use type in the NSI dataset or overridden by a City-provided dataset if provided.
- Maximum damage values of assets are based on average values from previous studies or published reports for non-building assets.
- Flooding depth of linear assets are based on a DEM at a 500-meter resolution.
- The data may not account for recent changes or developments in the area, such as new construction or infrastructure changes.
- Results presented are based on the inputs discussed herein. There may be gaps in the data that could lead to incomplete analysis or conclusions.
- Results were rounded to two significant figures before summation.

3. Vulnerability and Risk Model Results

Vulnerability is defined as the combination of exposure and potential damage. **Exposure** refers to the extent to which various types of assets, such as physical structures, human populations, environmental resources, and economic entities, are subject to potential harm. **Potential damage** describes the possible extent of harm or loss that could occur if these exposed assets are affected, including physical destruction, human health impacts, environmental degradation, and economic losses. **Risk** focuses on these consequences for potential events, for this assessment in terms of cost information. Risk assessment involves evaluating the likelihood of an event occurring and the severity of its impact, here quantified in financial terms. Together, these concepts help in understanding and mitigating the potential adverse effects on assets and resources (Figure 5).

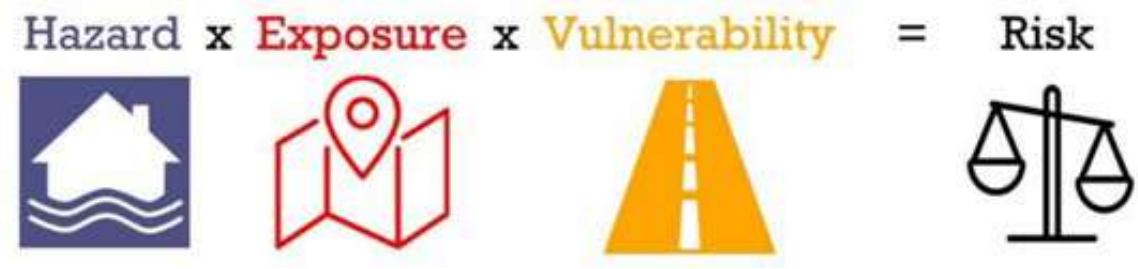

Figure 5 Vulnerability and risk relationship (Arup)

The results from the vulnerability and risk model results are presented in this section, first with a summary of results, followed by details of the qualitative and quantitative assessment performed.

3.1 Vulnerability Summary

Table 7 summarizes exposed assets for each SLR scenario, where the listed assets would be flooded under daily high tides (i.e., MHHW) at a minimum. The results significantly increase from the mid-century scenario to the end-of-century scenarios.

Table 7 Summary of vulnerable assets exposed under quasi-permanent inundation in each SLR scenario

Asset Type (units)	Mid-century (2050)	End-of-century (2100)		
	0.8ft SLR	3.1ft SLR	4.9ft SLR	6.6ft SLR
Buildings (count)	10	50	490	2,200
Roads and trails (mi)	10	20	50	60
Rail lines (mi)	2	3	5	6
Sewer system (mi)	1	4	11	17
Sewer system (count)	0 manholes 0 pump/lift station	130 manholes 1 pump/lift station	650 manholes 2 pump/lift station	980 manholes 2 pump/lift station
Electrical substations (count)	0	1	1	1
Transmission lines (mi)	4	20	30	40
Socially vulnerable households	0	0	0	10
Contamination sites** (count)	1	1	1	20
Wetland area (ac)	8,000	8,500	8,600	8,900
Total zoning area (ac)***	4,100	4,700	7,900	12,000

**Contamination sites include those queried from the EPA Facility Registry Service Sites that fall under the Hazardous Waste Program, Superfund/Superfund National Priorities List, and Toxic Release Inventory Reporter within Fremont and Newark, along with sites provided by the Water Board.

***Total zoning area is defined as the land that is zoned per the cities of Newark and Fremont within the OLU

Under the coastal storm scenario, the number of exposed assets is much higher than considering SLR alone. Table 8 includes a high-level summary by SLR scenario with coastal storm for present and future time horizons resulting from the quantitative assessment.

Table 8 Summary of vulnerable assets exposed in present and future storm scenarios

Asset Type	Present-day (2025)	Mid-century (2050)	End-of-century* (2100)
Buildings (count)	180	200	1,900 to 4,600
Roads and trails (mi)	50	50	70-80
Rail lines (mi)	3	4	5 to 8
Sewer system (mi)	30	120	120 to 130
Sewer system (count)	600 manholes** 0 pump/lift station	500 manholes** 1 pump/lift station	1,120 to 1,370 manholes 2 to 3 pump/lift station
Electrical substations (count)	0	0	1
Transmission lines (mi)	20	30	35 to 40

*Range from multiple SLR scenarios modelled for end-of-century (3.1ft, 4.9ft, and 6.6ft).

**Reduction in flooding from present to 2050 is due to ponding in the model, where depths are below 4in. This applies to approximately 200 manholes in 2025 and 100 manholes in 2050.

3.2 Qualitative Results

The qualitative results in this section focus on people, contamination sites, habitats, and land exposed to daily high tides, a state referred to as quasi-permanent inundation, for each of the four SLR scenarios evaluated.

3.2.1 Population

The population density of census blocks in the Mowry OLU affected by each of the future SLR inundation scenarios is shown in Figure 6. This bivariate mapping conveys the population density of each census block and the percent area of each census block that is inundated. In a bivariate map, two variables are shown simultaneously using a combined color scale—here, population density and flood extent. Yellow areas are relatively more populated, blue areas have higher relative flooding, and the increasingly red values have both relatively more flooding and denser population. The census block data is from 2020.

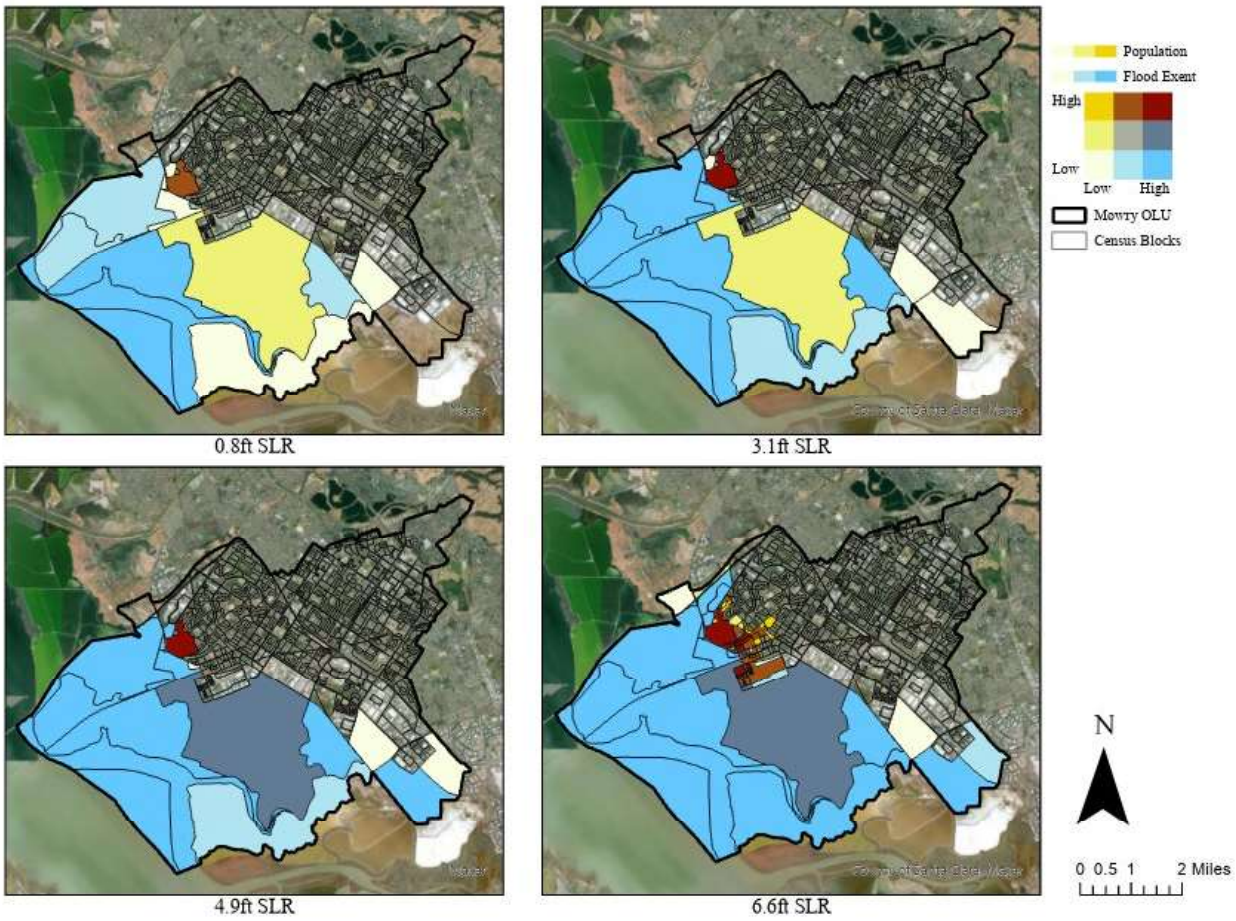

Figure 6 Census blocks affected by quasi-permanent flood levels with rising SLR

The most vulnerable census block is in the northwest portion of the study area in all future SLR scenarios. The tipping point from 4.9ft to 6.6ft inundation reveals that the most populous blocks within the City on the western side, consisting of approximately 5,800 people, are flooded daily by 6.6ft SLR and can be expected to be vulnerable during coastal storms earlier than 2100.

In addition to census population, flood extents were overlayed with regions of unique CalEnviroScreen 4.0 Indicator (CI) scores. This is a science-based mapping tool developed by the California EPA and the Office of Environmental Health Hazard Assessment. The map of the surrounding area and their CI scores is depicted in Figure 7. The CI scores incorporates various socioeconomic indicators, such as income, education, and housing conditions, to evaluate how these factors contribute to a community's susceptibility to pollution. Communities with higher social vulnerability often face greater health risks from environmental hazards due to limited resources and resilience.

Within FloodAdapt, a high social vulnerability is listed as social vulnerability index (SVI) > 0.6, and displacement is expected where inundation of homes exceeds 6ft. By 2050, approximately 40 homes with a high SVI score are expected to experience moderate flooding during the storm scenario, and displacement is not expected. For the 2100 storm, between 50 to 400 homes with a high SVI score are expected to experience moderate flooding, and displacement is expected for 50 homes. Less than 10 socially vulnerable homes are expected to be impacted by quasi-permanent inundation at 6.6ft SLR.

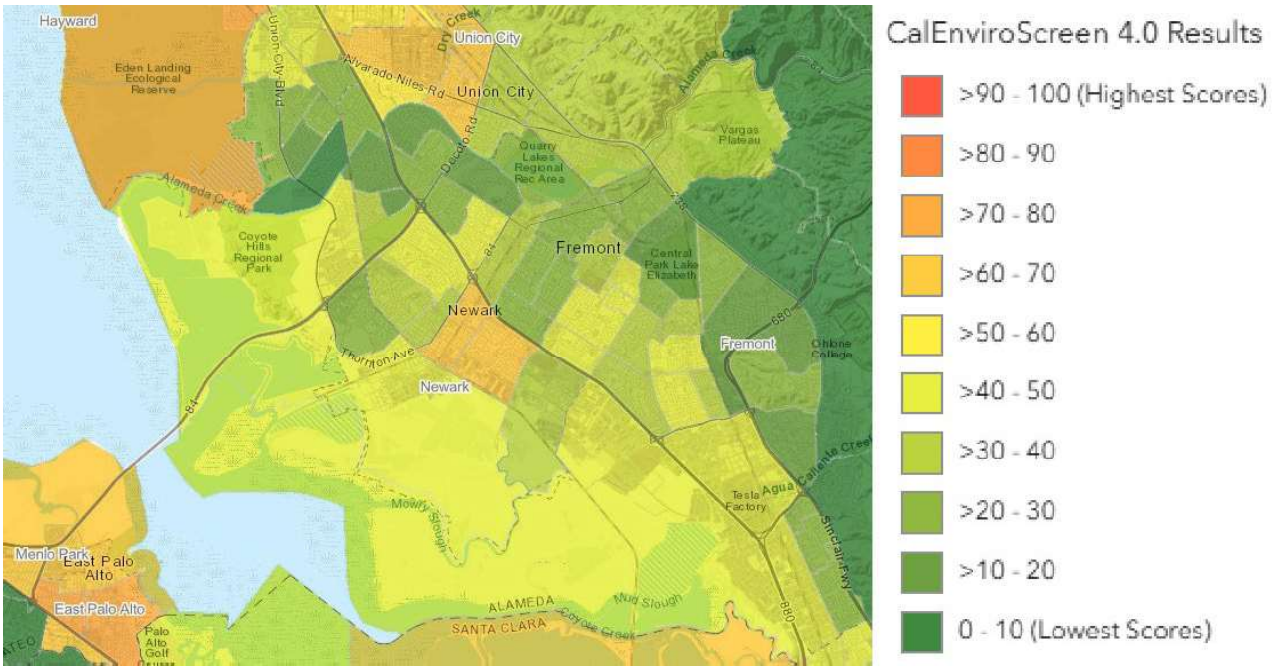

Figure 7 CI scores for the City and the surrounding area

The social and economic vulnerability to environmental factors as determined by the CI scores is presented in the Figure 8 with description of flood extents from the quasi-permanent inundation.

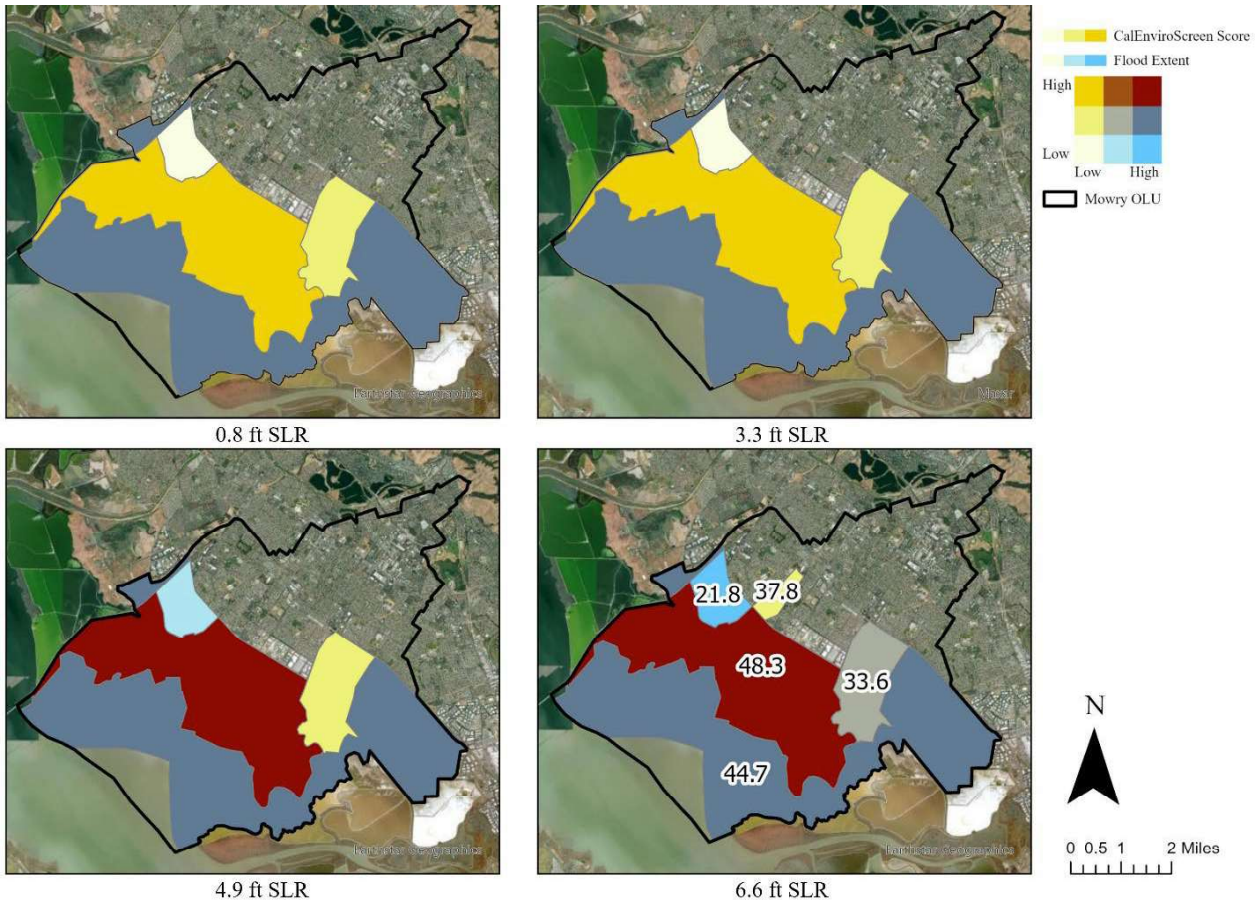

Figure 8 Bivariate map with flood extent and CI score (the CI score is the same for each image)

Figure 8 depicts census tracts with some inundation and presents their CI scores, which range from 21.8 to 48.3 out of 100 which is moderate compared to the surrounding region. The flood extents vary based on the SLR scenario and the CI score is consistent across all scenarios. The extent of vulnerable groups impacted across scenarios is similar until 6.6ft SLR when an additional population block is impacted in the northern zone of the City (population 5,500). The highest CI scored zone is 48.3 which is characterized by 35% of the population living below two times the federal poverty level, 55% linguistic isolation, 12% unemployment, and 40% of residents with a housing burden.

3.2.2 Contamination Sites

Figure 9 depicts the locations of EPA Facility Registry Service (FRS) Sites in Newark and Fremont that fall under the EPA Hazardous Waste Program, Superfund/Superfund National Priorities List, and Toxic Release Inventory Reporter within Fremont and Newark, and contamination sites provided by the Water Board within the OLU. There are 251 total sites identified in Mowry OLU between these two datasets. Refer to Appendix B for a full list of Facility Registry Sites and Water Board sites in Newark and Fremont.

In Figure 9, the lefthand side depicts the quasi-permanent flood extents in reference to potentially contaminated sites, and the righthand side depicts the site locations in reference to groundwater.

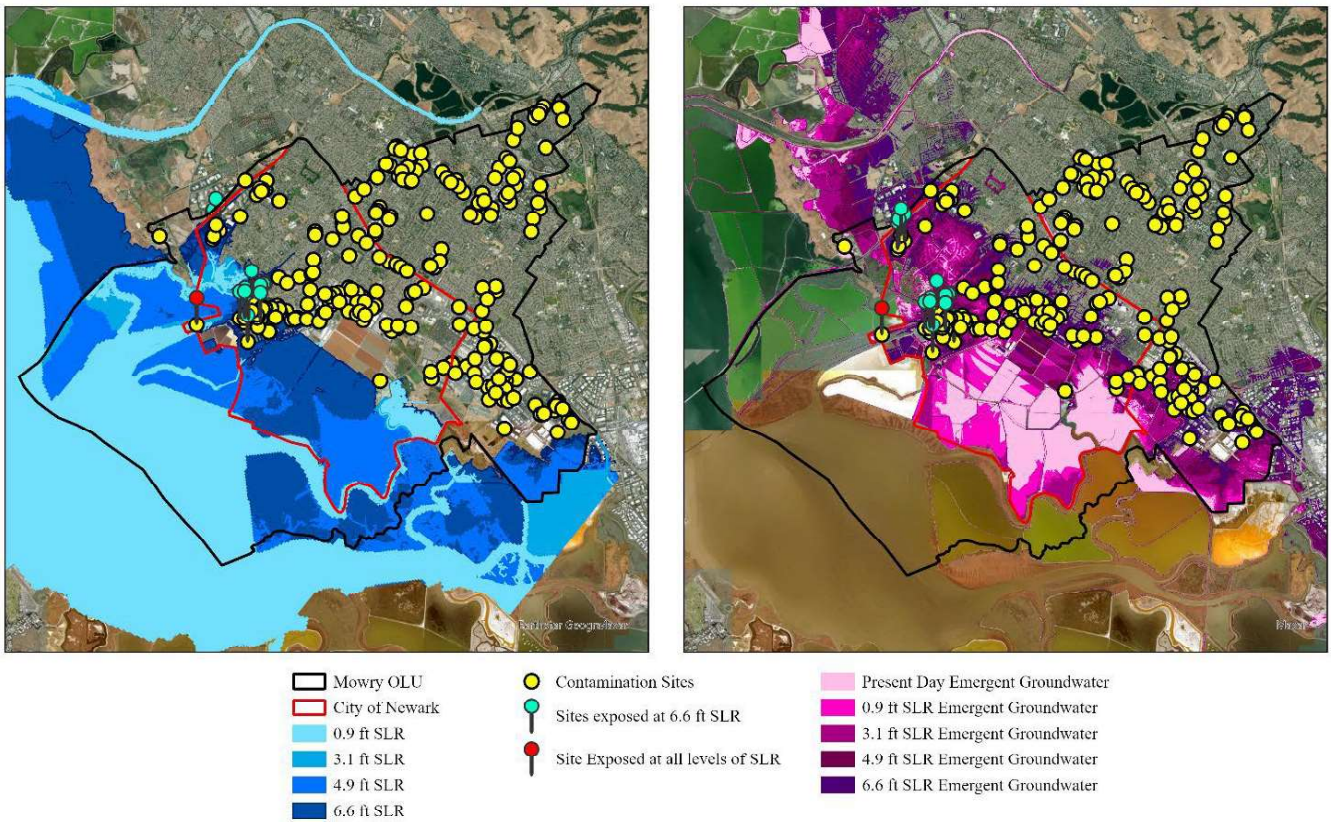

Figure 9 Contaminated sites and flooding (left) and contaminated sites and emergent groundwater from SFEI (right)

When considering flooding of the FRS sites, 11 are impacted under 6.6ftSLR and there are no impacted sites under the lower SLR scenarios evaluated. Only one Water Board site is impacted at all quasi-permanent inundation states. Eight (8) Water Board sites are impacted under 6.6ft. The type and count of sites impacted under the SLR scenarios are listed in Table 9.

Table 9 Count of contamination sites exposed to quasi-permanent inundation

Contaminated Sites	Source	Mid-century (2050)	End-of-century (2100)		
		0.8ft SLR	3.1ft SLR	4.9ft SLR	6.6ft SLR
Land Disposal Site	Water Board	0	0	0	2
Water Board - Cleanup Program Site	Water Board	0	0	0	3
Non-case Information	Water Board	0	0	0	1
LUST Cleanup Site	Water Board	1	1	1	2
FRS Sites	EPA	0	0	0	11
Total		**1**	**1**	**1**	**19**

The potential for environmental contamination via groundwater presents a potential hazard shown on the right in Figure 9 due to the rising groundwater levels (SFEI, n.d) with overlay to approximately 50% of the total contaminated sites by 6.6ft SLR presents concern for environmental contamination. Rising groundwater levels can damage infrastructure designed to contain hazardous materials. This includes underground storage tanks and waste containment systems, which may fail and release contaminants. The increased pressure from groundwater can also compromise the integrity of these structures. Contaminated groundwater can lead to significant environmental and health hazards. Toxic substances such as heavy metals, pesticides, and industrial chemicals can be released into the environment, posing risks to human health and ecosystems.

3.2.3 Wetlands

Wetlands are natural transition zones between the sea and land and consist of valuable ecosystem elements such as coastal vegetation and unvegetated mudflats. They are a vulnerable land type as they can be lost due to SLR if their rate of landward migration is lower than seaward erosion (Chen et al., 2024).

The total wetland area in the Mowry OLU is 9,000ac. The two main habitat types are Freshwater Emergent and Estuarine/Marine according to U.S. Fish and Wildlife designations. The wetland area by type with overlaid outlines of quasi-permanent inundation is shown in Figure 10. The area designated as Lake was excluded from the quantification, as it is representative of the industrial salt flats in the OLU and discussed in Section 3.2.4. A full-page version of this map is available in Appendix D.

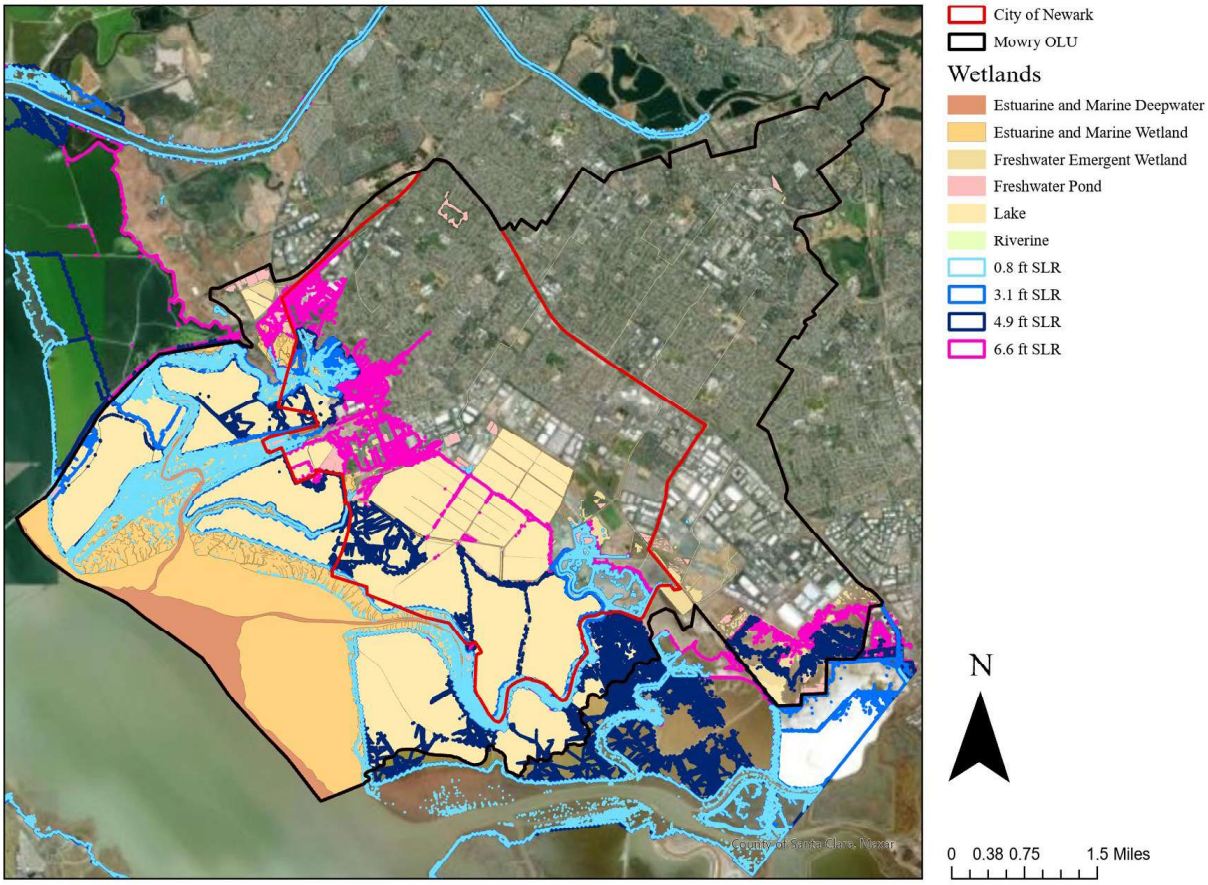

Figure 10 Wetlands areas from the U.S. Fish and Wildlife Service

Of this dataset, the two types of wetland areas (Estuarine & Marine Wetland and Freshwater Emergent Wetland) total area impacted for each SLR scenario is shown in Table 10.

Table 10 Wetland area impacted in each SLR scenario

Wetland Areas	Mid-century (2050)	End-of-century (2100)		
	0.8ft SLR	3.1ft SLR	4.9ft SLR	6.6ft SLR
Estuarine and Marine Wetland	8,000	8,500	8,500	8,700
Freshwater Emergent Wetland	20	20	100	180
Total Area (ac)	8,020	8,520	8,600	8,880

Present-day (2025)

Healthy wetland habitats exist in the present-day tidal zone. These areas support diverse vegetation and wildlife, contributing to the overall ecological health of the region. The salt farms provide habitat for over 70 bird species.

Mid-century (2050)

By mid-century, some wetland areas that were previously inundated only during high tides will experience permanent inundation. This change will impact the health of existing vegetation and inhabitants, potentially leading to shifts in species composition and ecosystem functions. Most of the marine wetland is inundated by 0.8ft SLR (90%) and a small portion of the freshwater emergent wetland is inundated daily.

End-of-century (2100)

A notable shift in **freshwater emergent wetland** occurs between 3.1ft to 4.9ft SLR, where percent inundation increases five times (from 20 to 100 ac). By 6.6ft SLR, most of the salt ponds are expected to be quasi-permanently inundated. This represents a substantial increase in inundation, affecting the stability and health of these wetland ecosystems.

3.2.4 Land Use

The types of zoned areas in the City include five main uses: Industrial, Parks and Open Space, Residential, Commercial, and Public. The zoning in the Mowry OLU is shown in Figure 11 and the impacted areas are summarized in Table 11. Refer to Appendix A for the full list of zones. A full-page version of this map is available in Appendix D.

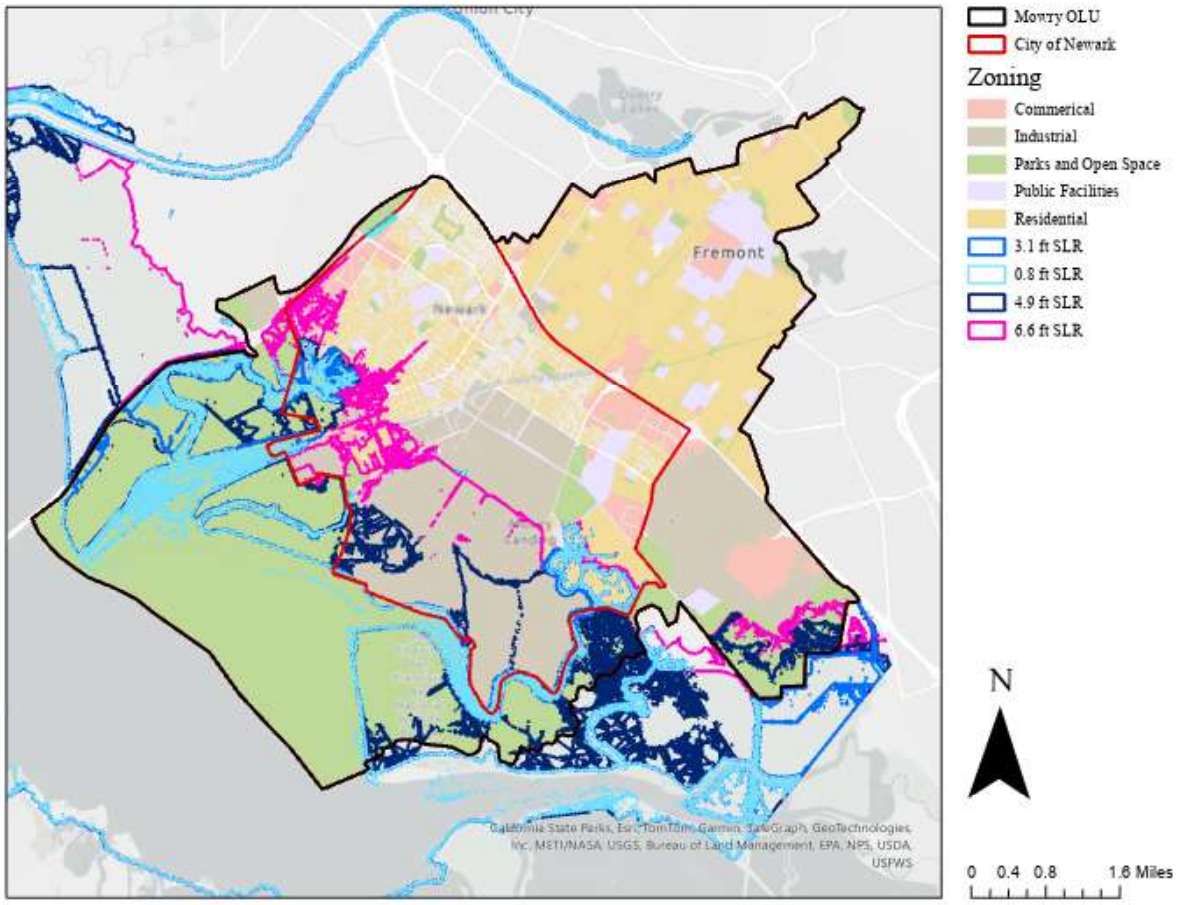

Figure 11 Zoning in Mowry OLU

Table 11 Impacted areas (ac) by zone type

Zone	Total Zone Area (ac)	Mid-century (2050)	End-of-century (2100)		
		0.8ft SLR	3.1ft SLR	4.9ft SLR	6.6ft SLR
Industrial	7,400	50	90	1,070	2,600
Parks and Open Space	36,300	3,800	4,400	6,600	8,500
Residential	13,500	200	200	200	300
Commercial	700	2	10	30	150
Public	1,800	10	20	20	50
Total Impacted Zoned Area	–	**4,062**	**4,720**	**6,850**	**9,000**

Present-day (2025)
Currently, the areas designated for industrial, residential, commercial, public, and parks and open spaces are largely unaffected by SLR. These zones support various activities and infrastructure, contributing to the economic and social fabric of the region. The wetlands and salt farms in Newark and Fremont, continue to provide critical habitats for wildlife and support biodiversity.

Mid-century (2050)
By mid-century, the impact SLR begins to manifest noticeably. The impacts include:

- **Parks and Open Space:** 3,800ac are affected, potentially disrupting recreational areas and natural habitats.
- **Residential Areas:** 200ac are impacted, posing risks to homes and communities.
- **Industrial Areas**: 50ac are impacted, indicating initial encroachment of rising waters into industrial zones; most of this area is zoned within the salt flats.
- **Public Areas:** 10ac are impacted, indicating some early effects on public infrastructure and services.
- **Commercial Areas**: <5ac are affected, suggesting minimal early impact on commercial zones.

End-of-century (2100)
By the end-of-century, the impact of SLR varies significantly across the different scenarios, from Intermediate SLR (3.1ft) to High SLR (6.6ft). The impacts include:

- **Parks and Open Space:** The affected area ranges from 4,400ac (Intermediate) to 8,500ac (High), threatening recreational spaces and natural habitats.
- **Industrial Areas:** The impacted area ranges from 90ac (Intermediate) to 2,600ac (High), indicating substantial risk to industrial infrastructure and operations.
- **Residential Areas**: The impacted area ranges from 200ac (Intermediate) to 300ac (High), posing significant risks to housing and communities.
- **Commercial Areas:** The affected area ranges from 10c (Intermediate) to 150ac (High), indicating increasing a large range of risk to commercial properties.
- **Public Areas:** The impacted area ranges from 20ac (Intermediate) to 50ac (High), suggesting growing threats to public infrastructure and services.

3.3 Quantitative Results

This section details the quantitative risk results, which show the counts of assets and estimated dollar loss from impacted assets within the Mowry OLU. Results are presented for buildings, roads, trails, rail lines, sewer system, and power system. For each SLR scenario, there is a summary of results for both the assets exposed to quasi-permanent flooding (e.g., inundated by high tides and/or SLR in a given scenario) and to coastal storms (i.e., the 100-year storm surge).

The severity of flooding is also presented, where flood depths range from slight to severe flooding depending on the asset type. This provides more detailed description and insight to the consequences at different levels of flooding.

Figure 12 depicts the flood maps for the quasi-permanent SLR scenarios, showing concentration of exposed assets in red. Notably, the northwest corner of Newark has a high concentration of exposed assets. Higher resolution maps can be found in Appendix C.

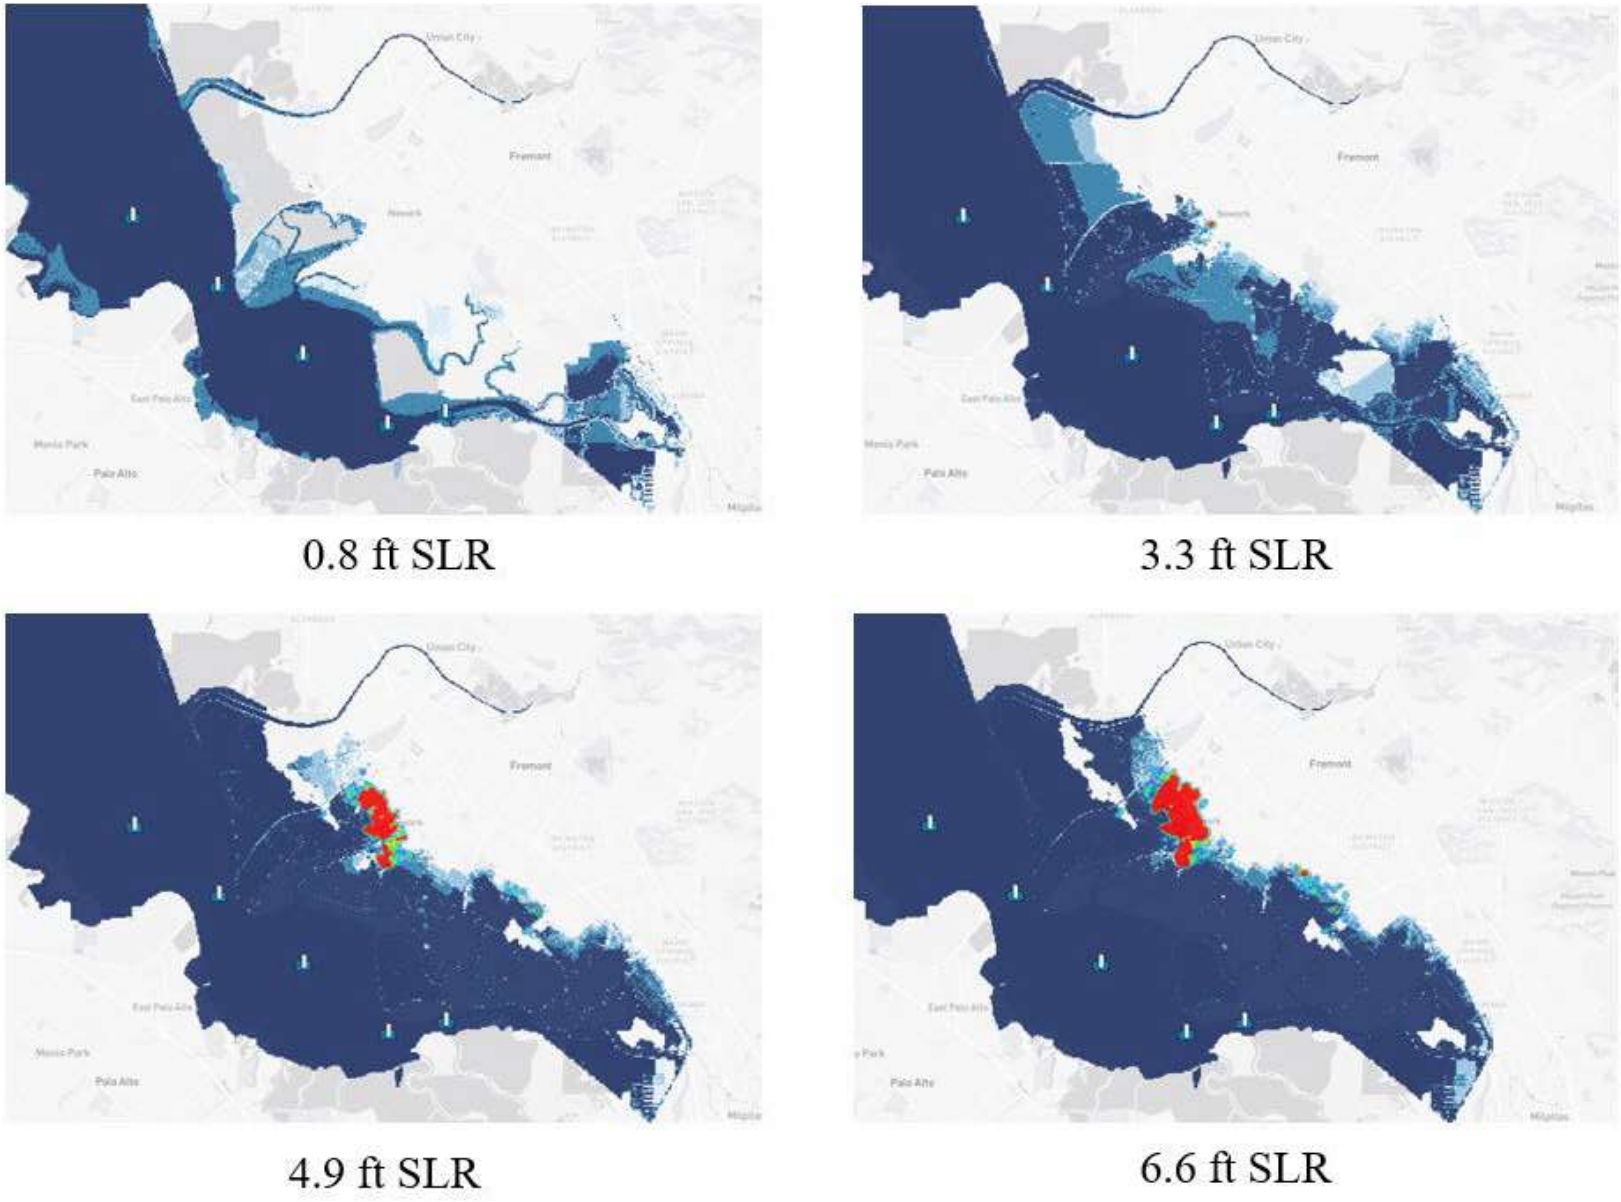

Figure 12 FloodAdapt results for quasi-permanent inundation, showing concentration of exposed assets in red

The estimated losses (in dollars) are tabulated in Table 12, showing $71M of impacted assets by 2050. The value increases nearly six-fold to $398M by end-of-century under 3.1ft SLR and may be as much as $3.8B with 6.6ft SLR. These values assume all assets exposed, including those exposed to daily high tides under future SLR, are a total loss, which may conservatively overestimate impacts.

Table 12 Total estimated cost of SLR, given exposed assets are considered a total loss

Asset Type	Mid-century (2050)	End-of-century (2100)		
	0.8ft SLR	3.1ft SLR	4.9ft SLR	6.6ft SLR
Buildings	$45	$200	$1,500	$3,100
Roads	$0	$70	$360	$490
Rail	$4.5	$7.5	$14	$17
Sewer	$1.7	$5.7	$22	$32
Power	$20	$115	$160	$180
Total Loss	**$71**	**$398**	**$2,056**	**$3,819**

3.3.1 Buildings

The count of buildings exposed to SLR is tallied in Table 13 and presented by building type. Buildings located in the tidal zone are exposed to quasi-permanent flooding, and these buildings are considered a total loss. By mid-century, twelve buildings were identified as exposed, including 10 public buildings and 2 industrial buildings, whose loss values were estimated at a total of $45M.

Table 13 Count of flooded buildings by type under quasi-permanent inundation

Building Type	Mid-century (2050)	End-of-century (2100)		
	0.8ft SLR	3.1ft SLR	4.9ft SLR	6.6ft SLR
Public Buildings	10	30	70	100
Industrial Buildings	2	15	70	110
Commercial Buildings	0	2	70	100
Residential Buildings	0	5	280	1,800
Emergency Facility	0	0	0	3
Hospitals and Care Centers	0	0	2	4
Schools	0	0	0	3
Total Count	**12**	**52**	**492**	**2,120**
Total Loss ($millions USD)	**$45**	**$200**	**$1,500**	**$3,100**

The values of building counts affected by quasi-permanent inundation are visualized in Figure 13. The shaded area shows the range based on SLR scenario, from Intermediate (3.1ft) to High (6.6ft).

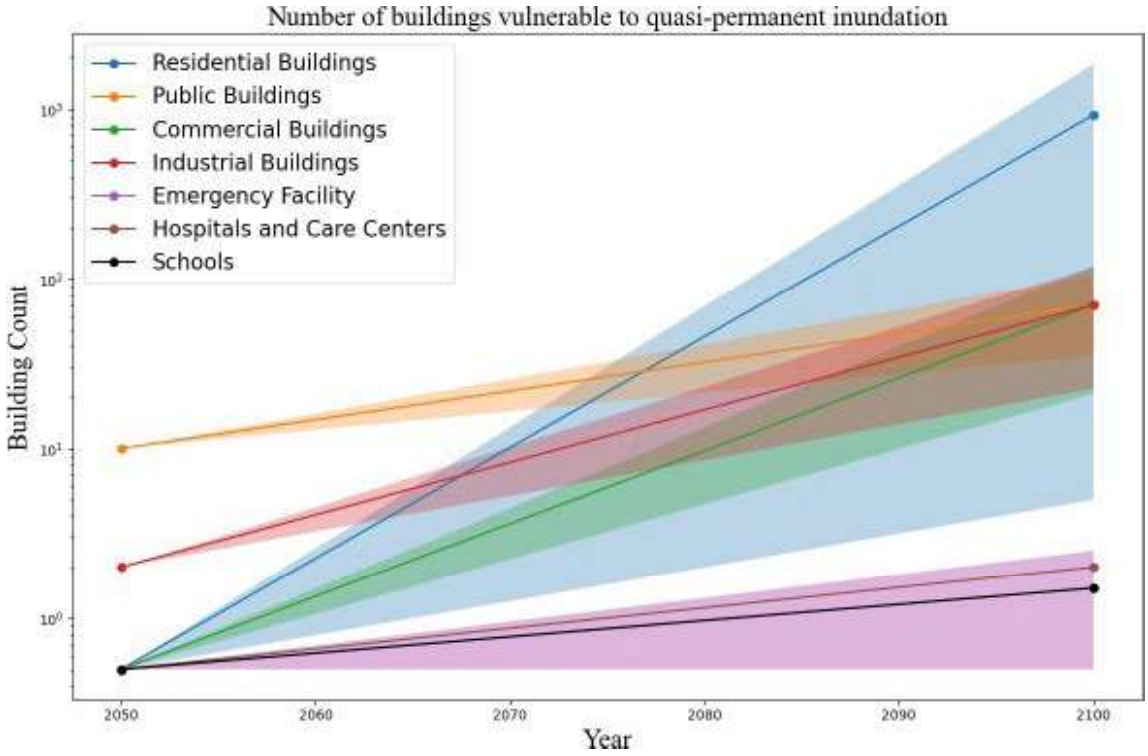

Figure 13 Number of impacted buildings by type in each time horizon on a log-normal scale

The results from storm scenarios are depicted in Table 14 and Table 15 based on estimated building repair costs and the level of flooding at each building in each storm scenario.

Table 14 Building types and damage value under storm scenarios

Building Type	Estimated Cost (million $ USD)		
	Present-day (2025)	Mid-century (2050)	End-of-century* (2100)
Public Buildings	$40	$40	$100–200
Industrial Buildings	$15	$35	$200–450
Commercial Buildings	$50	$55	$220–680
Residential Buildings	$10	$10	$100–470
Emergency Facility	$ –	$ –	$<1–3
Hospitals and Care Centers	$1	$1	$2–12
Schools	$ –	$ –	$2–10
Total Cost	**$116**	**$141**	**$625–1,825**
*Range for 2100 represents 3.1ft to 6.6ft SLR.			

Table 15 Severity of building flooding under storm scenarios

Time Horizon	Minor Flooding	Major Flooding	Destroyed Buildings	Count of Buildings
Present	54%	40%	6%	180
2050	48%	44%	8%	200
2100*	57% (3.1ft SLR) 15% (6.6ft SLR)	40% (3.1ft SLR) 80% (6.6ft SLR)	3% (3.1ft SLR) 5% (6.6ft SLR)	1,900 (3.1ft SLR) 4,600 (6.6ft SLR)
*Minor flooding for buildings is defined as inundation depths < 1ft **Major flooding for buildings is defined as inundation depths 1ft to 6ft ***Destroyed buildings are defined as those with > 6ft inundation				

Present-day (2025)
Under a 100-year storm surge event, the following impacts were identified through 2050:

- Total damage is approximately $116M for buildings.
- Approximately 180 buildings are affected, where most of the sustained damage is minor (54%).

Mid-century (2050)
Assets at stake under SLR include:

- Very minimal exposure of buildings (approximately 10) to daily flooding, composed of industrial and public buildings.

Temporary loss over storm scenarios includes:

- Approximately 200 buildings are impacted with a rise in major flooding and destroyed buildings, adding an additional $25M in cost from today's 100-year storm surge event.

End-of-century (2100)
Assets at stake under SLR include:

- By 2100 with 3.1ft SLR, the number of buildings impacted by quasi-permanent inundation increases by a factor of 5 (50 buildings). Commercial buildings begin to be impacted.
- By 4.9ft SLR, the count of impacted buildings increases by a factor of 10 to 490 buildings.
- By 6.6ft SLR, up to 2,160 buildings are impacted on a daily basis. Hospitals and care centers are impacted. The majority of buildings impacted by the end-of-century are residential.

Temporary loss of assets over storm scenarios include:

- In an end-of-century storm scenario, there are up to 4,600 flooded buildings, most of which are impacted by severe flooding. The cost of a storm event will be between $600M to $900M, around 1.5 to 5 times greater cost than a 2050 storm event.

3.3.2 Roads and Trails

Table 16 and Table 17 summarize impacts to roads and trails under future SLR scenarios (considered a total loss) and in the storm scenarios. Table 16 summarizes the quasi-permanent inundation scenarios, summing assets located in the tidal zone (below high tide).

Figure 14 displays the results of the storm scenarios, in which inundation is considered temporary. These results were summarized as a dollar value, where costs to repair assets were used.

Overall, most roads in Mowry OLU are residential and major roads, and both experience up to 50% extent inundation by the end-of-century. There is a very small extent of arterial roads within the OLU, and freeways experience up to 30% inundation extent by end-of-century.

Table 16 Miles of flooded roads under quasi-permanent inundation

Type of Road	Total Length (mi)	Mid-century (2050)	End-of-century (2100)		
		0.8ft SLR	3.1ft SLR	4.9ft SLR	6.6ft SLR
Arterial	1	0	0	0.4	0.4
Residential	90	0	3.2	18	26
Major Road	40	0	2.4	11	13
Freeway	15	0	0	1.3	2.2
Trails	75	10	15	20	23
Total Roads (mi)	**221**	**10**	**20.6**	**50.7**	**64.6**
Total Cost* (Millions USD)		**$0**	**$70**	**$360**	**$490**

*Total cost does not include the cost of trail replacement.

Table 17 Average severity of roadway flooding in each storm scenario

Time Horizon	Total Flooding (mi)	Slight Flooding (%)	Minor Flooding (%)	Major Flooding (%)	Fully Flooded (%)
Present (2025)	50	28%	18%	48%	6%
Mid-century (2050)	50	28%	15%	48%	9%
End-of-century (2100)	70-80	17% (3.1ft SLR) 12% (6.6ft SLR)	7% (3.1ft SLR) 5% (6.6ft SLR)	31% (3.1ft SLR) 19% (6.6ft SLR)	45% (3.1ft SLR) 64% (6.6ft SLR)

Note: Values above are not inclusive of trail flooding during storm

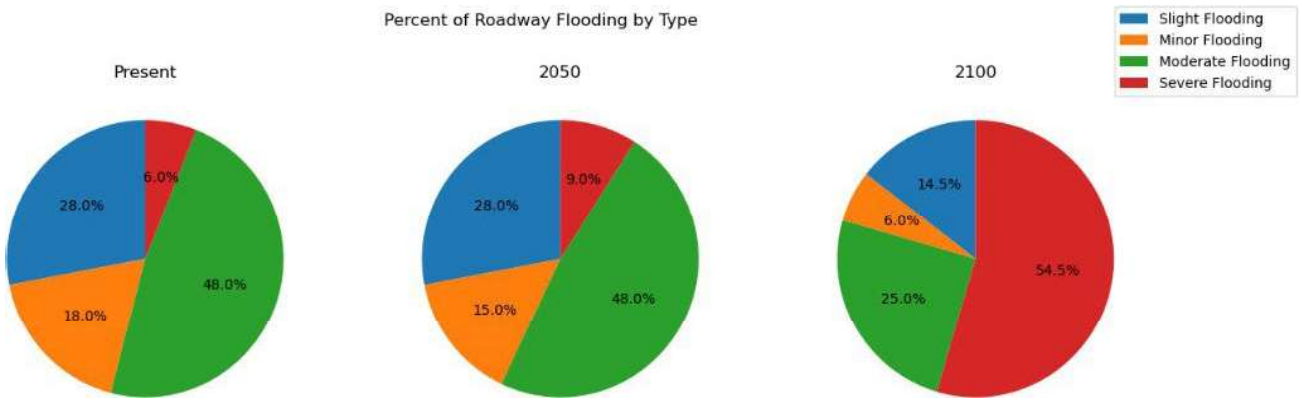

Figure 14 Percent of road system by degree of flooding (2100 is reported as an average value of 3.1, 4.9 and 6.6ft SLR)

Present-day (2025)

Under a 100-year storm surge event, 50mi of roadways (non-inclusive of trails) are expected to be impacted, to varying degrees listed in Table 17.

- **Slight flooding:** 14mi of road are expected to experience at least slight flooding (<0.3ft). This flooding is expected to affect pedestrians through ponding but no vehicles.
- **Minor flooding:** 9mi of roadway experience >0.5ft flooding and may experience damage, or at the very least be closed for several hours to several days and disrupt cars.

- **Major Flooding:** 27mi of roadway experience >1ft flooding. This level of inundation can significantly disrupt traffic flow, cause extensive damage to road surfaces, and potentially undermine the structural integrity of the roads, leading to prolonged closures and costly repairs.
- **Fully Flooded Roads**: 3mi of roads experience > 2ft flooding. Major flooding can render roads completely impassable, isolate communities, hinder emergency response efforts, and result in substantial long-term damage to the infrastructure, necessitating major reconstruction efforts.

Mid-century (2050)

No permanent loss was identified at 0.8ft SLR of roadways was identified. Ten (10) miles of trails were found to experience daily flooding and could impact use.

Temporary loss of assets over storm scenarios include:

- Flooding extents are expected to be the same in this storm scenario as present day, with marginal differences in the overall road system.

End-of-century (2100)

Assets at stake under SLR include:

- No permanent loss of roads was identified at 3.1ft SLR, but 15 miles of trails are identified as impacted. At 4.9ft SLR, roughly 6mi of roads and 20mi trails experience quasi-permanent inundation, which increases to 23mi of trails and 41mi of roads at 6.6ft SLR. The impacts from 4.9 and 6.6ft SLR includes 0.4mi of arterial roads, 18mi to 26mi of residential roads, 11mi to 13mi of major roads, 1.3mi to 2.2mi of freeways, and 20-23mi of trails.

Temporary loss of assets over storm scenarios include:

- By the end of the century, storms are expected to impact 70-80mi of roadways, with most of this (76-83%) consisting of major flooding (>1ft inundation).

3.3.3 Rail lines

There are 13mi of railroad within the site boundary and their impacts within the different storm scenarios are listed in Table 18. The severity of rail system flooding under storm scenarios is included in Table 19 and displayed in Figure 15.

Table 18 Extent of flooded rail lines under quasi-permanent inundation

Type	Mid-century (2050)	End-of-century (2100)		
	0.8ft SLR	3.1ft SLR	4.9ft SLR	6.6ft SLR
Railroad (mi)	1.5	2.5	4.5	5.5
Total Loss (millions $)	**$4.5**	**$7.5**	**$14**	**$17**

Table 19 Severity of rail system flooding under storm scenarios

Time Horizon	Total Flooding* (mi)	Slight Flooding (%)	Minor Flooding (%)	Major Flooding (%)	Severe Flooding (%)
Present	3 (2)	10	10	16	64
Mid-century	4 (3)	6	6	10	78
End-of-century* (2100)	5-8 (5-8)	8% (3.1ft SLR) 6% (6.6ft SLR)	0% (3.1ft SLR) 3% (6.6ft SLR)	18% (3.1ft SLR) 7% (6.6ft SLR)	74% (3.1ft SLR) 84% (6.6ft SLR)
*The length of railway that is anticipated to impact a train (inundation > 0.5ft) is reported in parentheses					

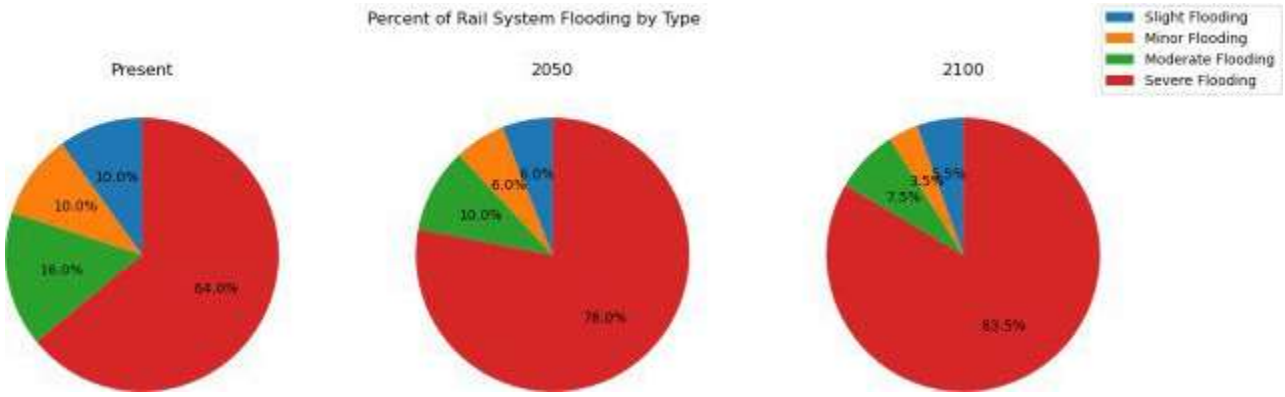

Figure 15 Percent of rail system flooding by flood level (2100 is reported as an average value)

Present-day (2025)

Under a 100-year storm surge event, the following impacts were identified through 2050:

- Flooding Extent: Coastal storms are expected to flood approximately 3mi of railway, 2 of which are expected to impact railway travel.
- Flooding Severity: 15% of this flooding is severe (1ft to 2ft inundation).
- Implications: The current flooding poses operational challenges and potential disruptions to rail services, requiring immediate mitigation measures to ensure safety and continuity.

Mid-century (2050)

Assets at stake under SLR include:

- Permanent Inundation: By 2050, approximately 1.5mi of railroad lines are expected to be quasi-permanently inundated.
- Implications: Permanent inundation will require long-term planning and investment in adaptive measures, such as elevating tracks or relocating vulnerable sections, to maintain rail connectivity and protect critical transportation assets.

For a storm in 2050, temporary impacts to assets include:

- Flooding Extent: The extent of flooding on railroad lines is projected to increase by 50% (up to 4mi).
- Flooding Severity: Moderate to severe flooding is expected to double up to 25% being at least a foot inundated, while slight and minor flooding will be reduced by half.
- Implications: The increased flooding severity will necessitate significant infrastructure upgrades and enhanced flood management strategies to prevent prolonged service interruptions and ensure resilience against future storms.

End-of-century (2100)

Assets at stake under SLR include:

- Permanent Inundation: By 2100, the railroad lines are expected to experience significant permanent inundation, with estimates ranging from 6mi to 9mi of railroad being affected.

- Implications: The permanent loss of railroad infrastructure will necessitate extensive long-term planning and investment in adaptive measures. This may include elevating tracks, constructing protective barriers, or relocating vulnerable sections to ensure rail connectivity and protect critical transportation assets.

Temporary loss of assets over storm scenarios include:

- Flooding Extent: Coastal storms in 2100 are projected to flood approximately 6mi to 9mi of railroad.
- Flooding Severity: The severity of flooding is expected to increase, with moderate to severe flooding becoming more prevalent. This will require substantial infrastructure upgrades and enhanced flood management strategies to prevent prolonged service interruptions and ensure resilience against future storms.
- Implications: The increased flooding extent and severity will pose significant operational challenges, necessitating robust mitigation measures and emergency response plans to ensure the safety and continuity of rail services.

3.3.4 Sewer System

The number of sewer system assets exposed to SLR is tallied in Table 20. Sewer system assets located in the tidal zone are exposed to quasi-permanent flooding, and these assets are considered a total loss. The total estimated loss ranges from $11M by 2050 to approximately $200M by the end of the century.

Table 20 Extent of sewer system flooding by type under quasi-permanent inundation

Type	Mid-century (2050)	End-of-century (2100)		
	0.8ft SLR	3.1ft SLR	4.9ft SLR	6.6ft SLR
Sewer line (active) (mi)	1.0	3.6	11	17
Sewer line (abandoned) (mi)	0	0.07	0.16	0.16
Sewer Manhole	5	130	650	980
Abandoned Sewer Manhole	0	7	10	10
Sewer Pump/Lift Station	0	1	2	2
Total Loss ($ million USD)	**$1.7**	**$5.7**	**$22**	**$32**

During a coastal storm the count of impacted assets is much higher, as seen in Table 21.

Table 21 Sewer system flooding under storm scenarios

Time Horizon	Miles of Flooded – Mains*	Count of Flooded Manholes**	Count of Sewer Pump/ Lift Station
Present	30	600	0
2050	120	500#	1
2100+	120–130	1,100–1,400	2–3

*Flooding for hydraulic structures is defined as inundation depths >= 1ft.

**Flooding for manholes is defined as inundation depths < 0.1ft

#Reduction in flooding from present to 2050 is likely due to ponding in the model, in isolated areas with depths less than four inches (<0.3ft).

+Range for 2100 represents the lower and upper bounds of anticipated SLR (3.1ft to 6.6ft).

Present-day (2025)
Under a 100-year storm surge event, the following impacts were identified through 2050:

- 30mi of sewer mains: These are critical for wastewater transport and are at risk of flooding, which could lead to service disruptions and potential contamination.
- 600 sewer manholes: Vulnerable to inundation, which can cause blockages and overflow. These include 20 abandoned sewer manholes.

Mid-century (2050)
Assets at stake under SLR include:

- 1mi of active sewer lines
- 2.2mi of abandoned sewer lines
- 130 sewer manholes
- 7 abandoned sewer manholes
- 1 sewer pump/lift station

Temporary loss of assets over storm scenarios include:

- 120mi of flooded mains
- 500 flooded manholes
- 1 sewer pump/lift station

End-of-century (2100)
Assets at stake under SLR include:

- 11-17mi of active sewer lines: Significant increase in risk of flooding and service disruptions.
- 650 to 1,000 sewer manholes, and 10 abandoned sewer manholes: Consistent potential overflow points.
- 2 sewer pump/lift stations

Temporary loss of assets over storm scenarios include:

- 120mi to 130mi of flooded mains
- 1,100 to 1,400 flooded manholes
- 2 to 3 sewer pump/lift stations

These updates reflect the severity and extent of sewer system flooding under different scenarios, highlighting the increasing risks and potential impacts over time.

3.3.5 Power System

There are three electrical substations and 45mi of transmission lines included in the study area for this assessment. The number of power system assets exposed to SLR is tallied in Table 22. Power system assets located in the tidal zone are exposed to quasi-permanent flooding, and these assets are considered a total loss.

Table 22 Extent of flooded power system by type under quasi-permanent inundation

Type	Mid-century (2050)	End-of-century (2100)		
	0.8ft SLR	3.1ft SLR	4.9ft SLR	6.6ft SLR
Electrical substations (count)	0	1	1	1
Transmission lines (mi)	4	20	30	35
Total Loss ($ million USD)	**$20**	**$120**	**$160**	**$180**

Power transmission lines may be elevated out of inundated areas, but their accessibility may be limited. Notably, some transmission lines are currently located in the San Francisco Bay. The results for the coastal storm scenario are presented in Table 23.

Table 23 Severity of power system flooding under storm scenarios

Time Horizon	Miles of Flooded Transmission Line	Slight Flooding (%)	Minor Flooding (%)	Major Flooding (%)	Fully Flooded (%)
Present	25	24%	28%	14%	34%
Mid-century	30	9%	5%	7%	79%
End-of-century* (2100)	35-40	4% (3.1ft SLR) 2% (6.6ft SLR)	5% (3.1ft SLR) 4% (6.6ft SLR)	10% (3.1ft SLR) 4% (6.6ft SLR)	81% (3.1ft SLR) 90% (6.6ft SLR)
*Range for 2100 represents the lower and upper bounds of anticipated SLR (3.1ft to 6.6ft).					

Present-day (2025)

Under a 100-year storm surge event, the following impacts were identified through 2050:

- 25mi of transmission lines. 10mi of these assets would experience over 1ft inundation

Mid-century (2050)

Assets at stake under SLR include:

- 4mi of transmission lines are expected to be inundated and were considered permanently lost

Temporary loss of assets over storm scenarios include:

- 30mi of transmission line flooding, with 25mi over 1ft inundated

End-of-century (2100)

Assets at stake under SLR include:

- 20mi to 35mi of transmission lines: Significant increase in risk of permanent inundation.
- 1 electrical substation: Identified as vulnerable to permanent flooding.

Temporary loss of assets over storm scenarios include:

- Transmission lines: Increase from 20mi to a range of 30mi to 35mi, indicating further expansion of the flood-prone area.
- Electrical substations: Consistent vulnerability with 1 substation at risk.

These updates reflect the severity and extent of power system flooding under different scenarios, highlighting the increasing risks and potential impacts over time.

4. Conclusions and Next Steps

The findings from the Sea Level Rise Vulnerability Assessment and Adaptation Strategy highlight the increasing vulnerability of assets within the study extent to SLR scenarios. The vulnerability and risk assessment developed for this study provides a comprehensive understanding of current and future flood risks, demonstrating that both coastal and inland storm scenarios could increasingly impact residential, commercial, and green spaces. Limitations include the quality and resolution of input data and inherent uncertainty in model predictions.

The model results underscore the urgency of implementing adaptive measures to mitigate associated risks, particularly in vulnerable areas such as the northwest of the City, which is exposed in the present-day coastal storm scenario. **Qualitative results** indicate that the most vulnerable census block is in the northwest portion of Mowry OLU, with significant impacts on residential areas, especially under higher SLR scenarios. Additionally, contamination sites, wetlands, and land use areas such as parks and open spaces are highly susceptible to flooding, with potential environmental and health hazards due to rising groundwater levels and inundation.

Between now and 2050, the City faces limited but important early-stage risks from SLR, mostly affecting utilities and industrial infrastructure. The risks include:

- **Buildings**: Approximately 10 buildings are at risk of daily flooding, primarily industrial and public buildings.
- **Roads and Trails**: No permanent loss identified, but storm scenarios indicate significant flooding.
- **Rail Lines**: About 1.5mi of rail lines are expected to be quasi-permanently inundated.
- **Sewer System**: 1mi of active sewer lines and 5 sewer manholes would be flooded under high tides.
- **Power System**: 4mi of transmission lines are within flooded areas.

Between 2050 and 2100, the scale of risk increases dramatically across all sectors. The risks include:

- **Buildings**: By 2100, estimates range from about 50 to over 2,000 buildings impacted by daily flooding, depending on SLR ranging from 3.1ft to 6.6ft. There is a significant increase in residential and commercial buildings exposed.
- **Roads and Trails**: Approximately 5mi of roads and 15mi of trails could experience quasi-permanent inundation by 3.3ft SLR, increasing to 37mi and 23mi, respectively, by 6.6ft SLR.
- **Rail Lines**: Permanent inundation could affect 3mi to 6mi of rail lines.
- **Sewer System**: 4-17mi of active sewer lines and up to 1,000 sewer manholes could be exposed to permanent inundation from SLR or daily flooding in the tidal zone.
- **Power System**: 20mi to 40mi of transmission lines and one electrical substation could be quasi-permanently inundated.

The next phase of work includes the development of adaptation measures. The vulnerability and risk assessment has identified assets exposed to flooding in various future scenarios, considering flood depth and potential damage. A multi-criteria approach will be used to identify key flood risk areas, considering the severity of flood risk, potential impact on vulnerable communities, and criticality of impacted assets.

Concept-level adaptation solutions will be developed to address key areas in the City exposed to significant flood risk. The proposed adaptation solutions will be evaluated through a simple benefit-cost analysis, and potential funding sources will be identified. Community engagement will be crucial to inform the public and solicit input, followed by a review of results and presentation of proposed conceptual adaptation measures.

City Council Presentation on Sea Level Rise

July 24, 2025

It is our Mission to Serve and Partner with our Community to Continually Enhance the Quality of Life of Everyone in Newark.

NEWARK
california

Introduction & Goals

Meeting Goals

1. Share updates on project schedule and anticipated outcomes

2. Review modelling results on flood hazard, vulnerability, and risk assessment

3. Discuss community engagement and next steps on adaptation

Newark: Changing Shoreline

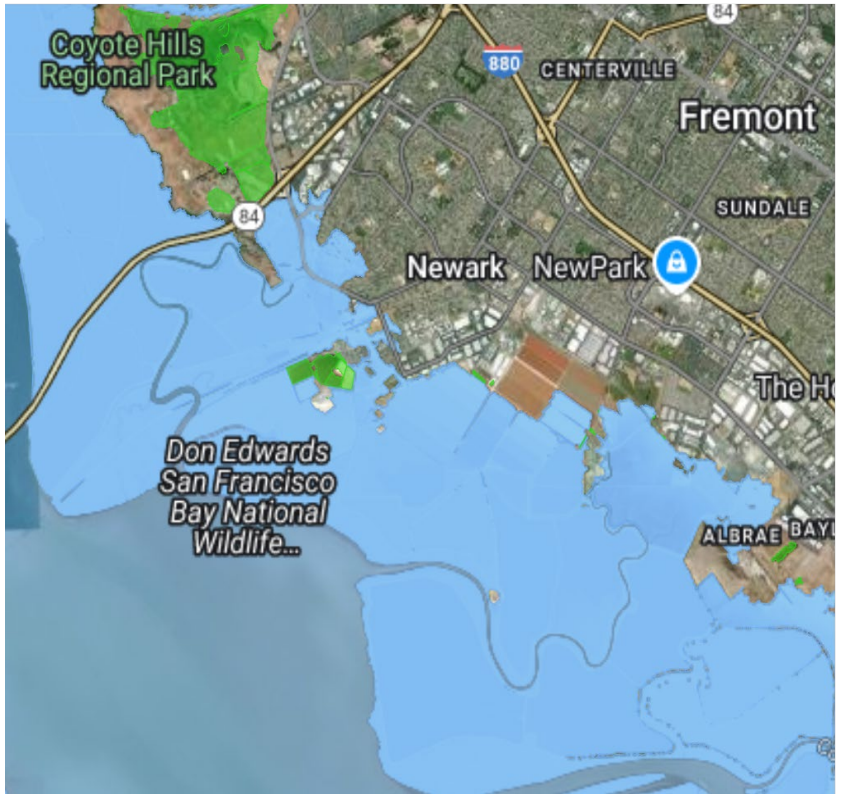
Historical Shoreline - 1950

Newark aerial- salt pond and two bridges. Nov 22, 1950

Present Shoreline - 2024

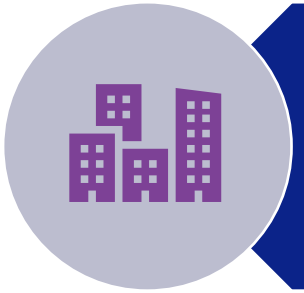
Google Earth satellite imagery

Future Shoreline - 2100?

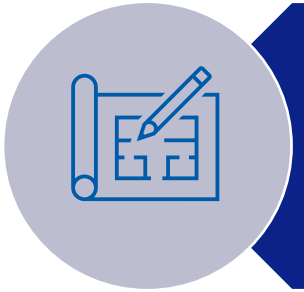


Flood Hazard Map – 4.9ft SLR

Project Objectives



Resilience to sea level rise



Robust analysis to develop case for real-world projects

Lay the foundation for adaptation projects

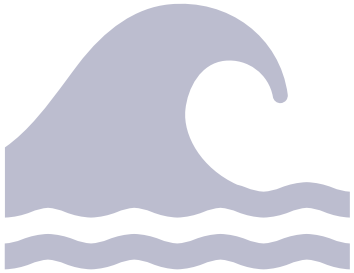
What is involved in this effort?



Flood & SLR Modelling

- Where does it flood today?
- Where might it flood in the future?

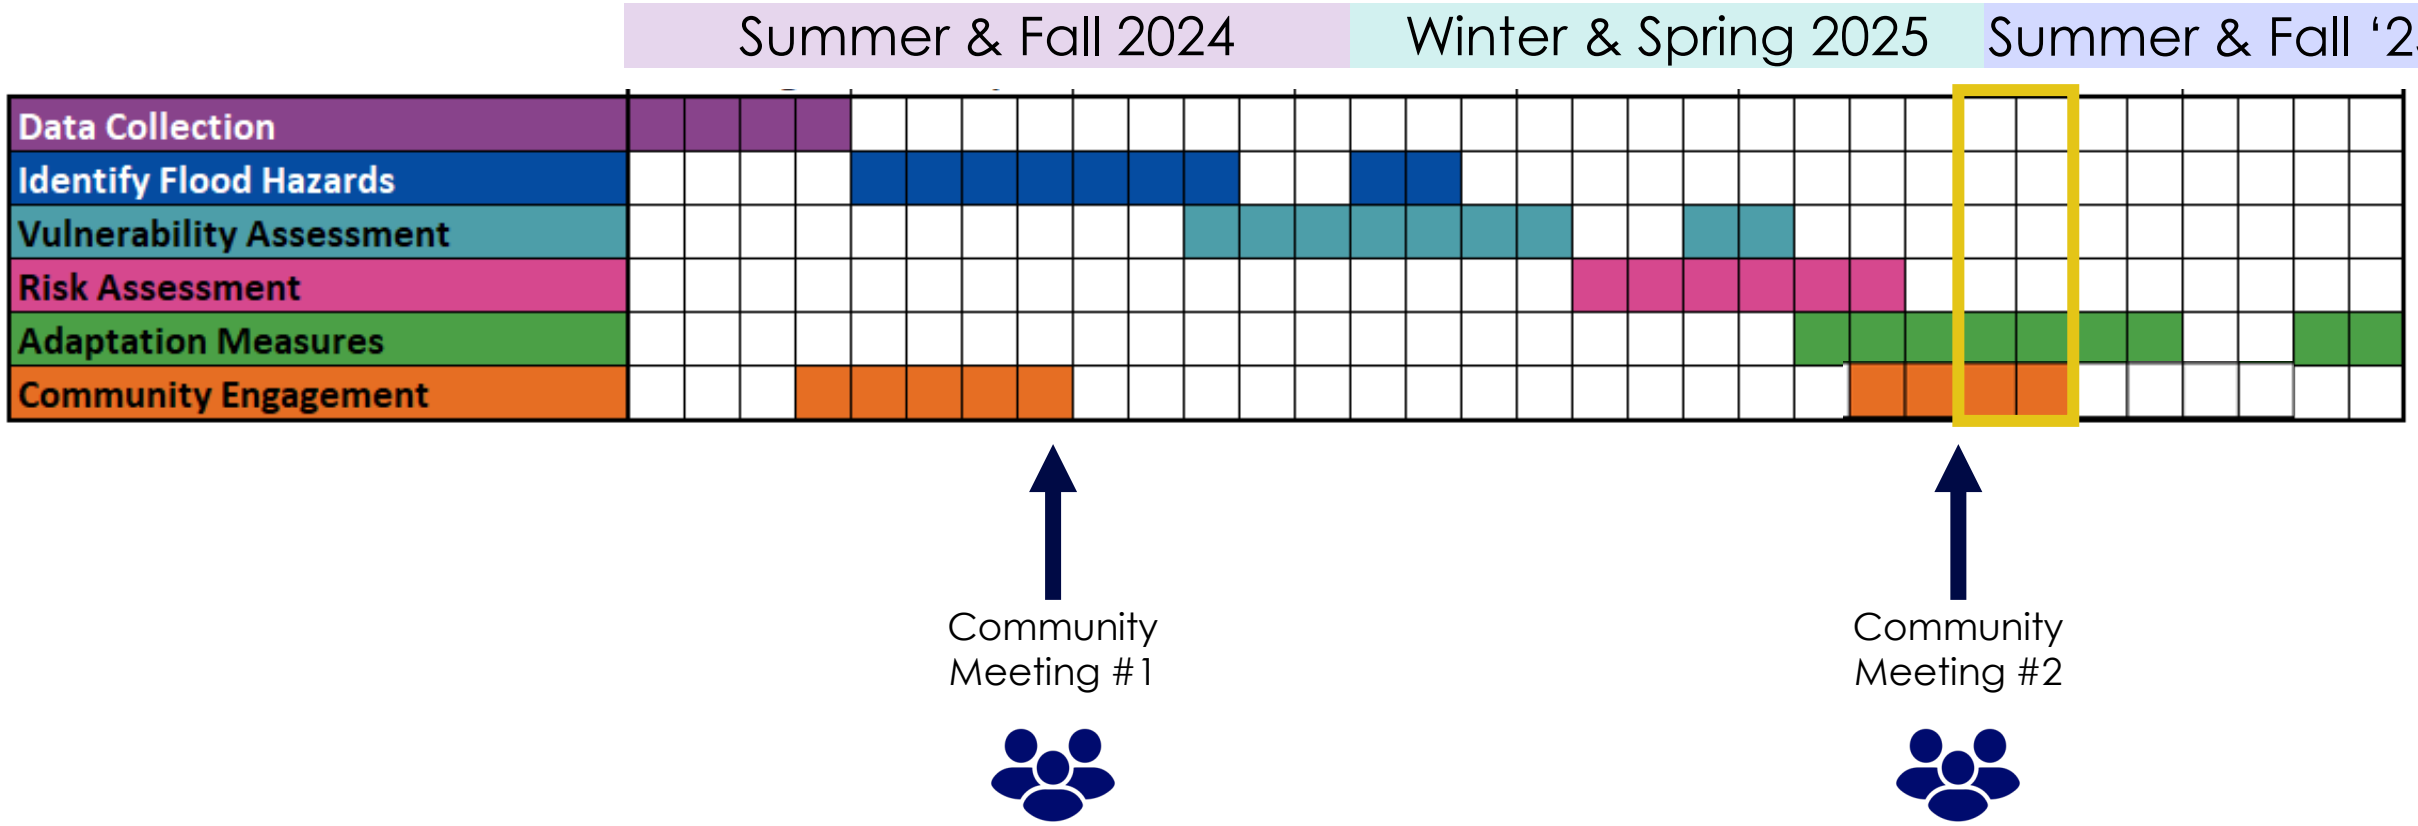
Vulnerability & Risk Assessment

- How will our community be impacted by flooding?

Adaptation Strategy

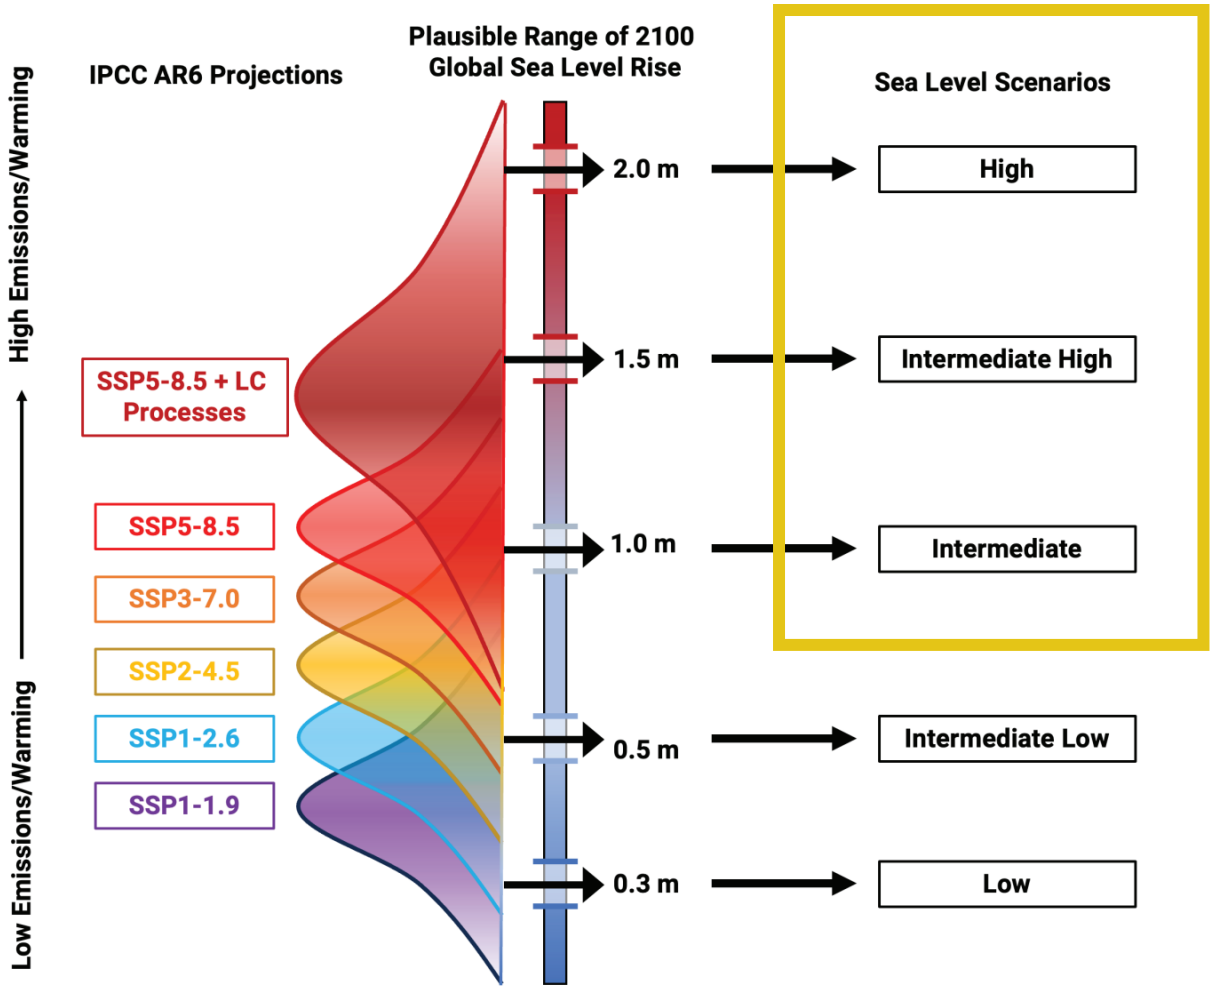
- What can we do to address present and future flood risk?

Project Schedule



Modeling Results

Climate Change & Sea Level Rise



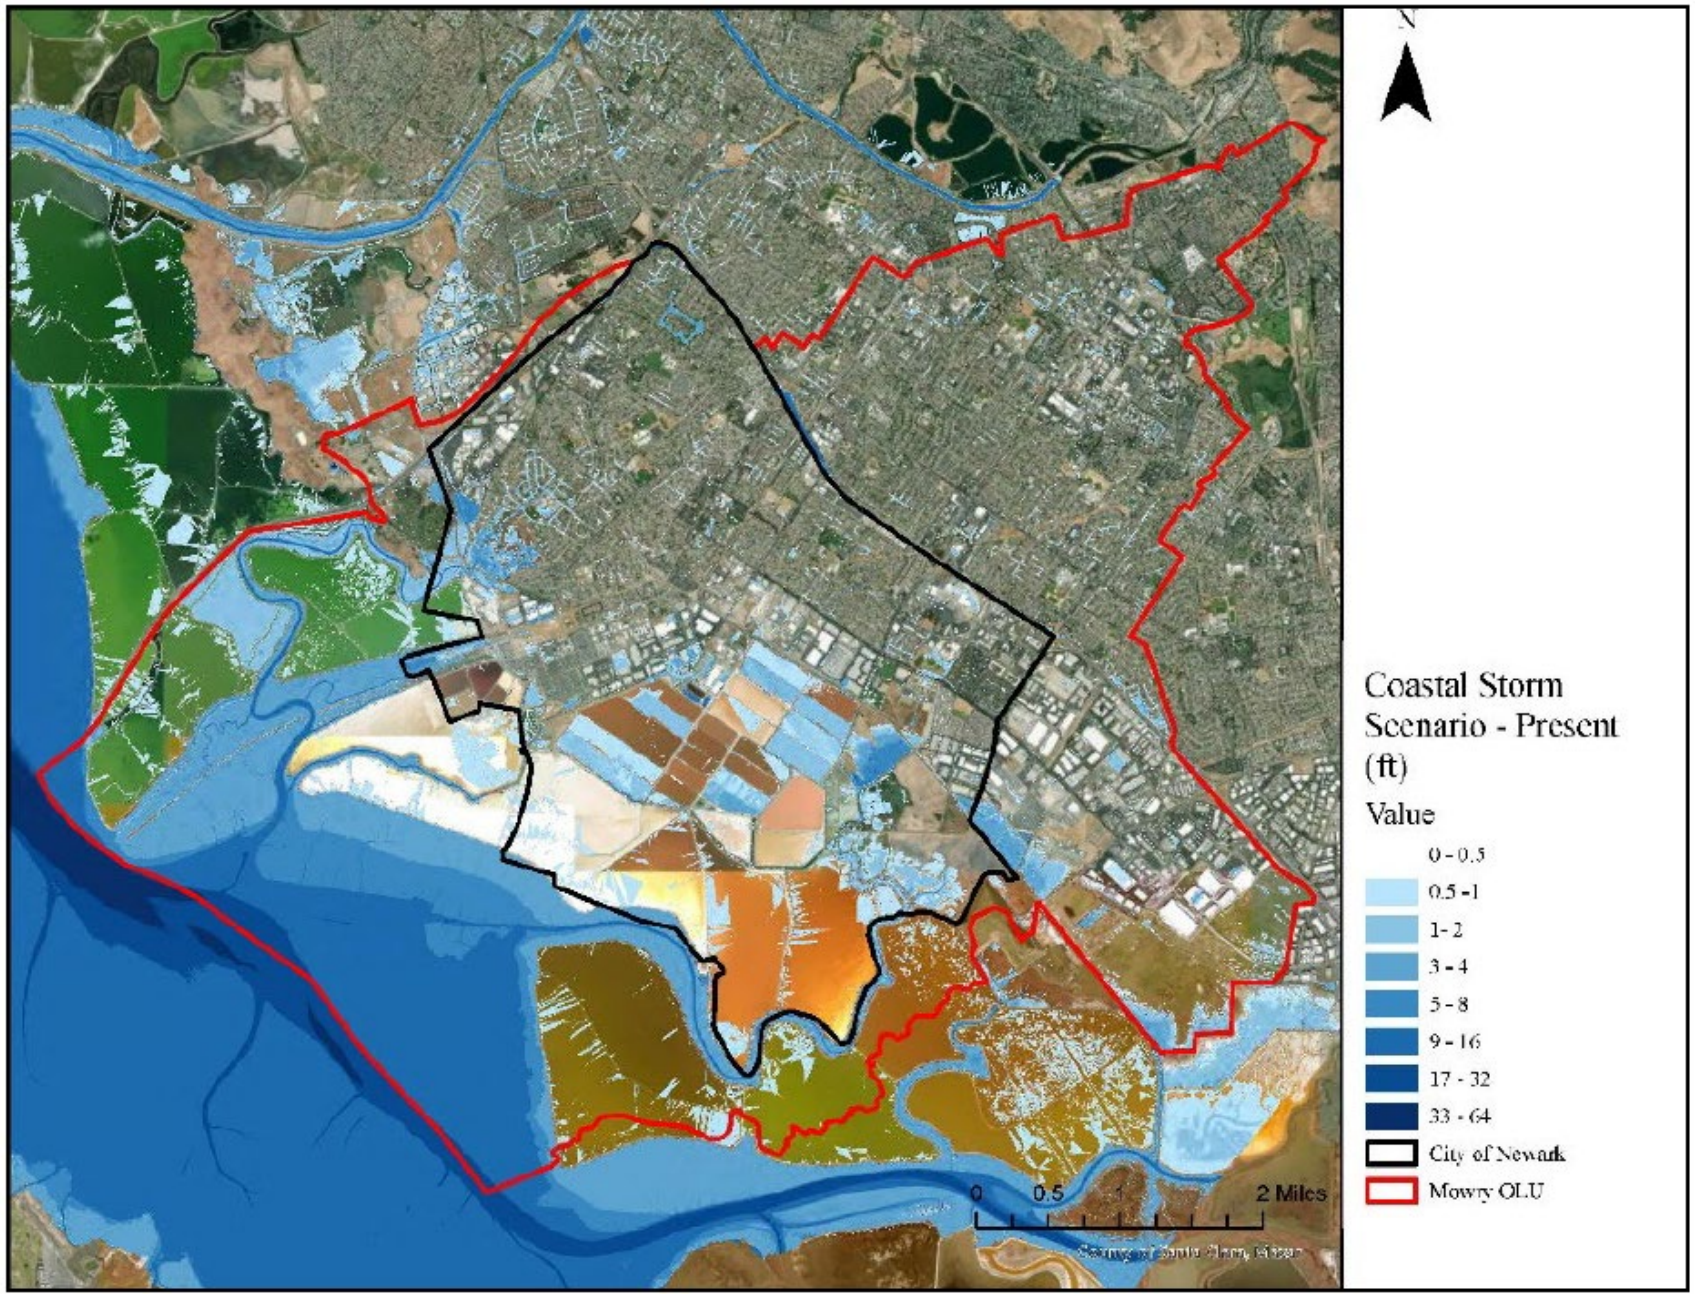
Regional guidance from BCDC to use these scenarios.

Value	Scenario
0.8 ft	2050
3.1 ft	2100 Intermediate
4.9 ft	2100 Intermediate-High
6.6 ft	2100 High

Storm Scenarios

Focus on Mowry OLU outlined in **red**

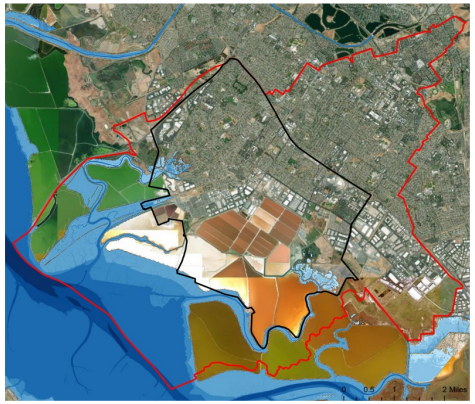
Includes:
- Storm surge
- Precipitation



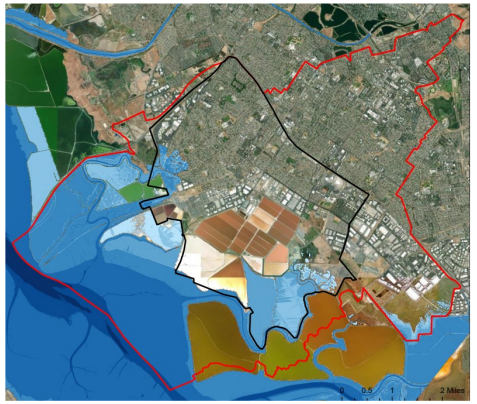
Future with SLR

0.8ft SLR

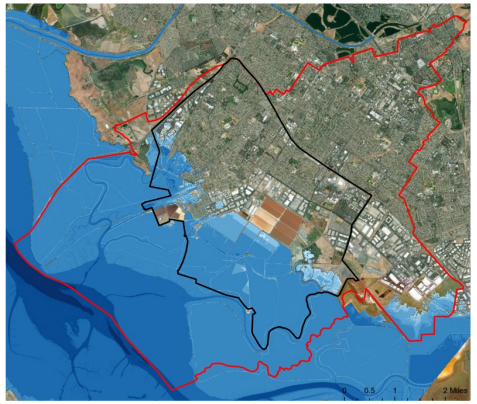
3.1ft SLR



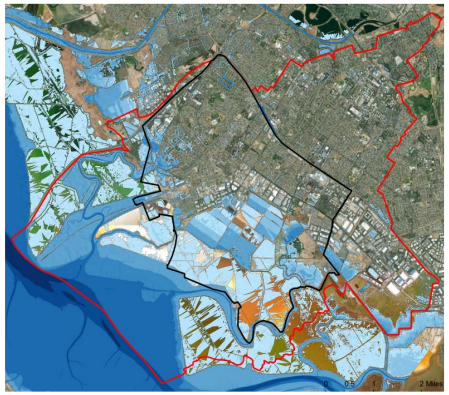
4.9ft SLR



6.6ft SLR

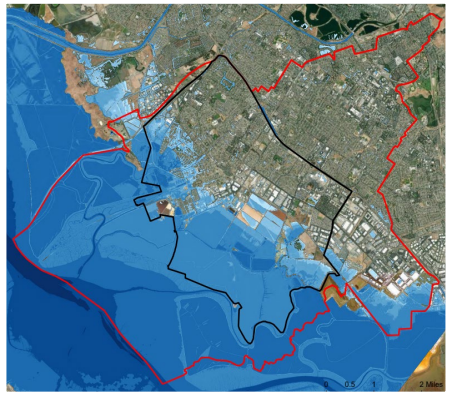


+ Storm

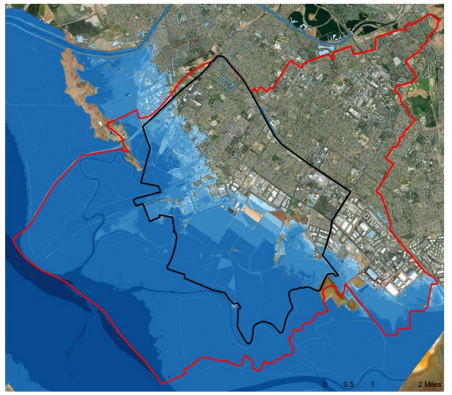


3.1 ft SLR + Storm

4.9 ft SLR + Storm



6.6 ft SLR + Storm



Flood Hazard Takeaways

Present Day

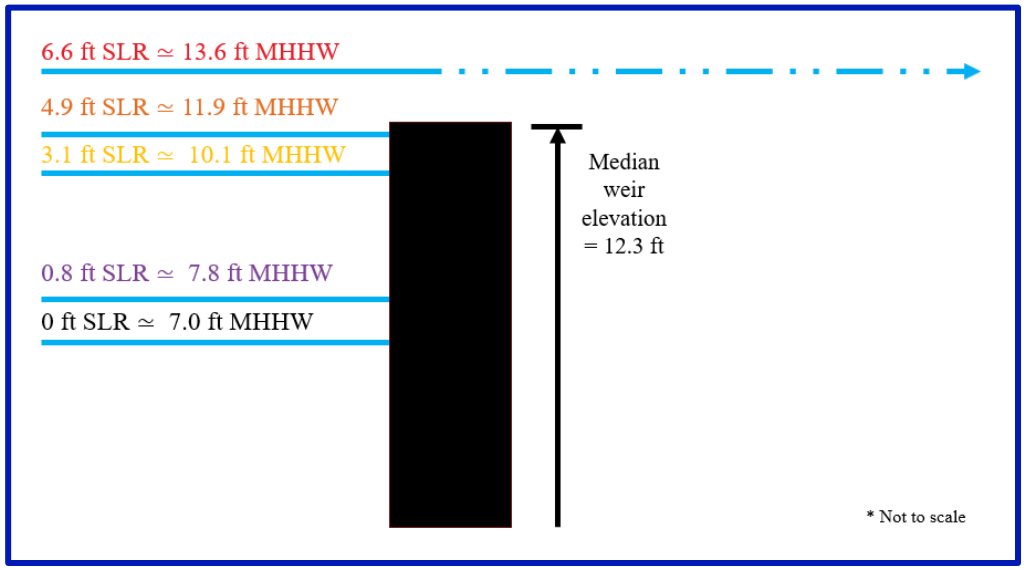
- Inland storm flooding in populated areas
- Berms & weirs in bay / salt farms provide protection

By 2050

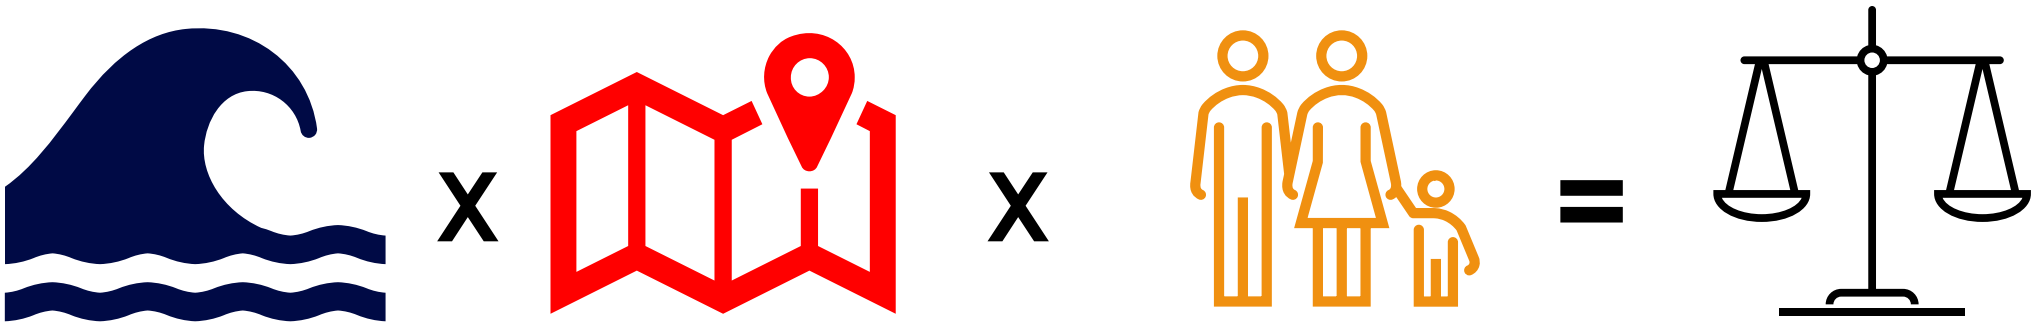
- Due to SLR, some areas may flood on sunny days
- Storms increase depth & extent of flooding

By 2100

- NW & SE areas see most extensive flooding
- By 6.6ft (2100 High Scenario), many homes, businesses, and green spaces may flood regularly

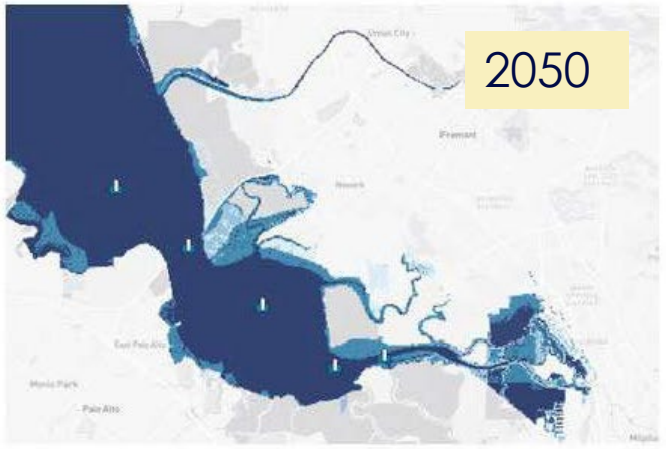


What is risk?

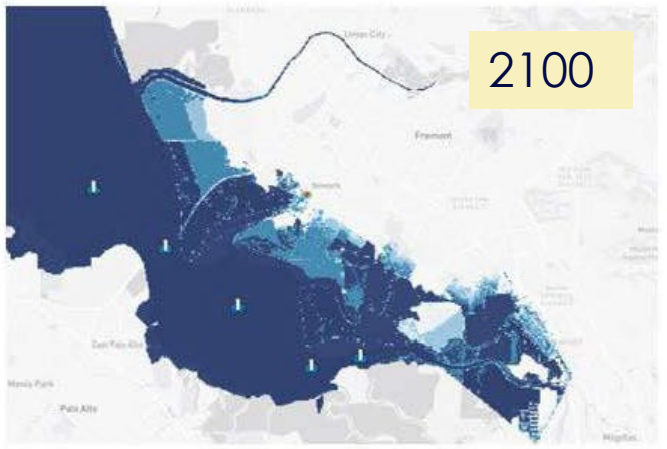


Hazard Exposure Vulnerability Risk

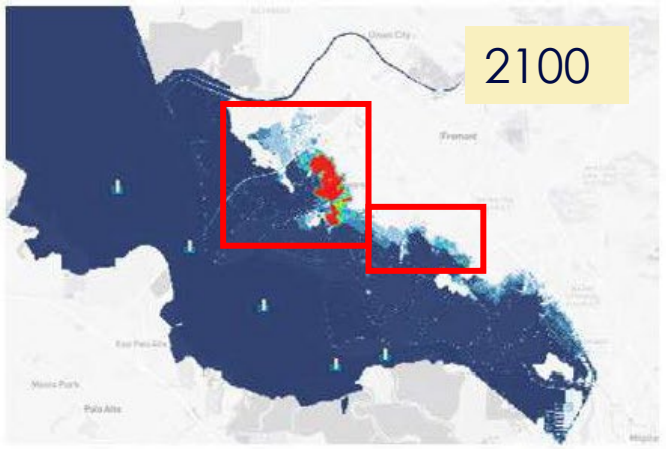
Risk results



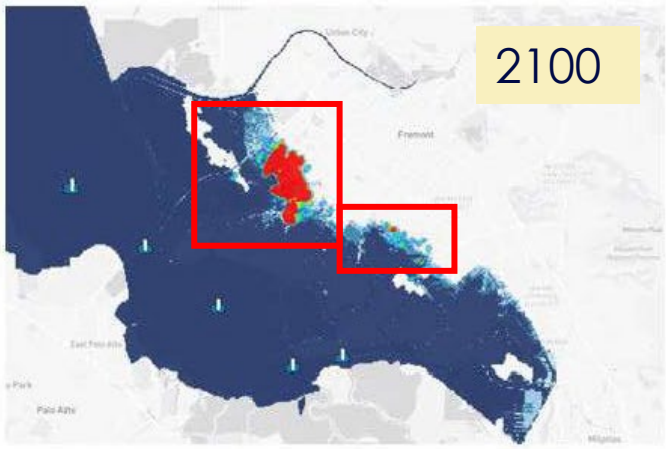
0.8 ft SLR



3.3 ft SLR



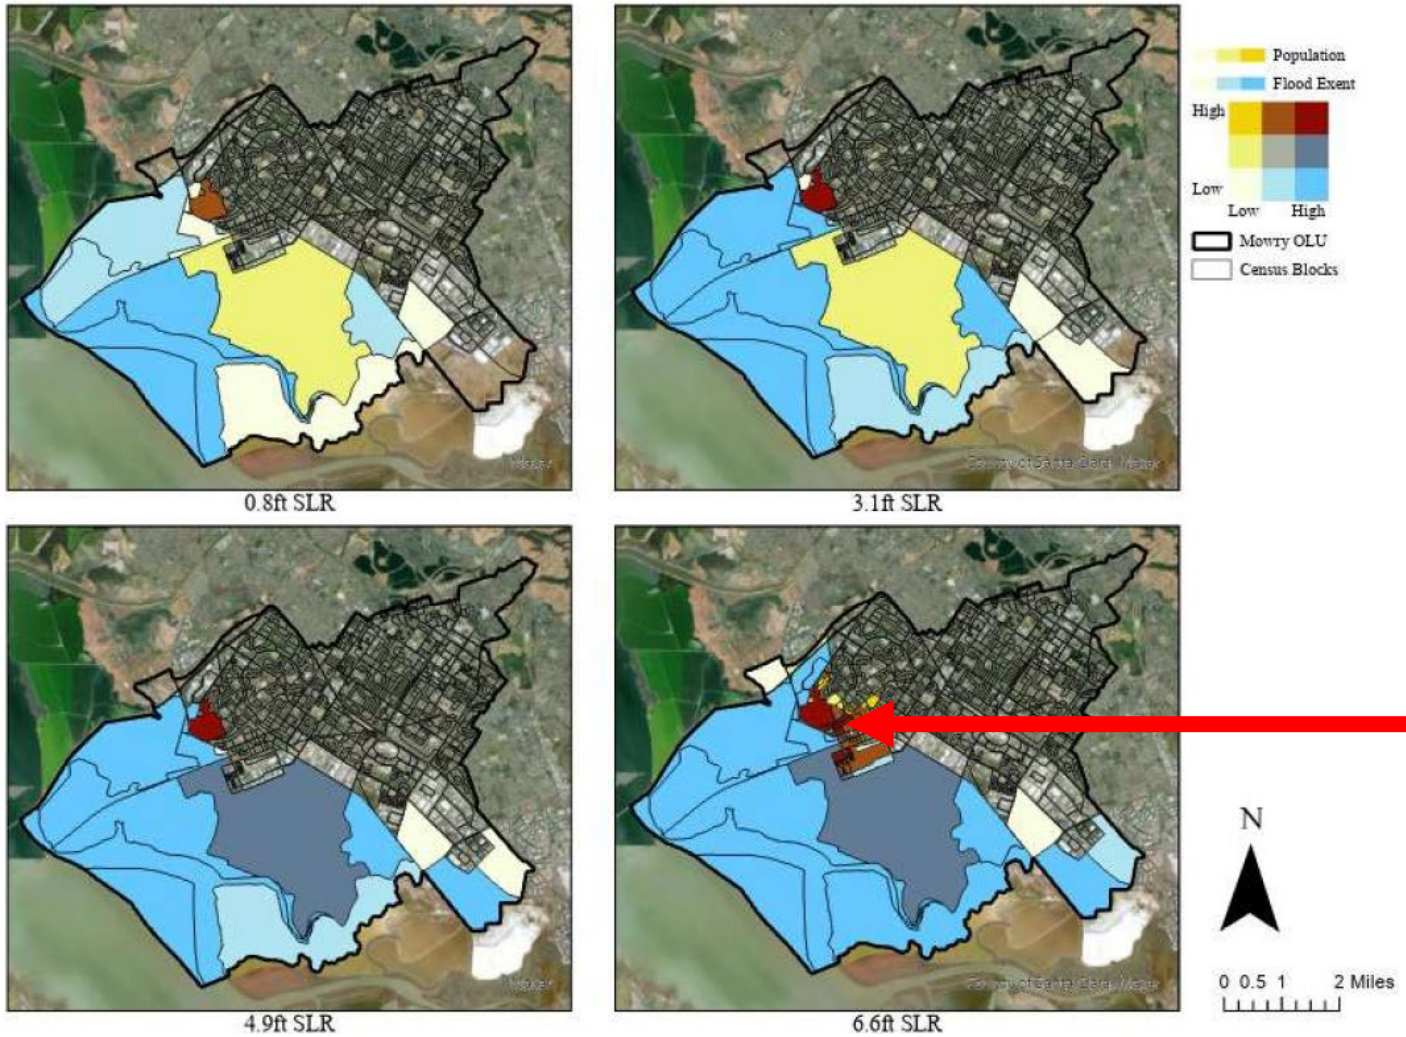
4.9 ft SLR



6.6 ft SLR

- Damage to infrastructure exposed starting 4.9ft SLR (2100)
- Location most concentrated in the northwest region of the City

Population



Northwest part of Newark is most exposed, affected in all future flood scenarios.

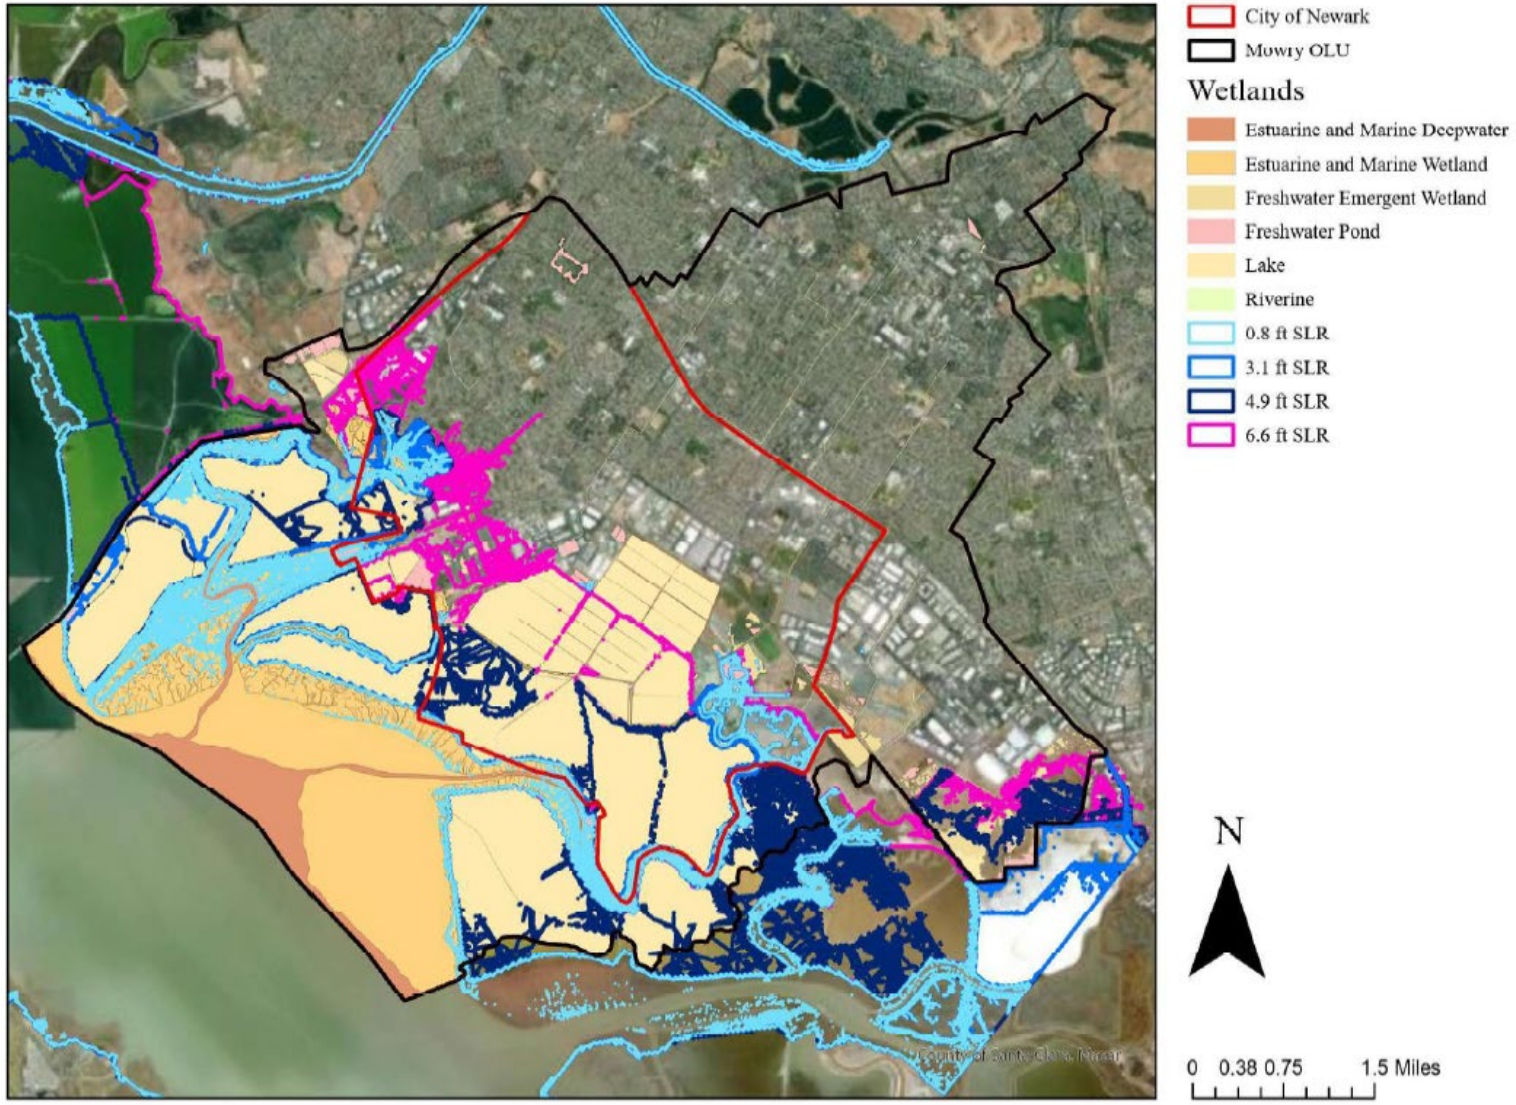
Significant increase in 2100 scenarios:

4.9ft & 6.6ft SLR

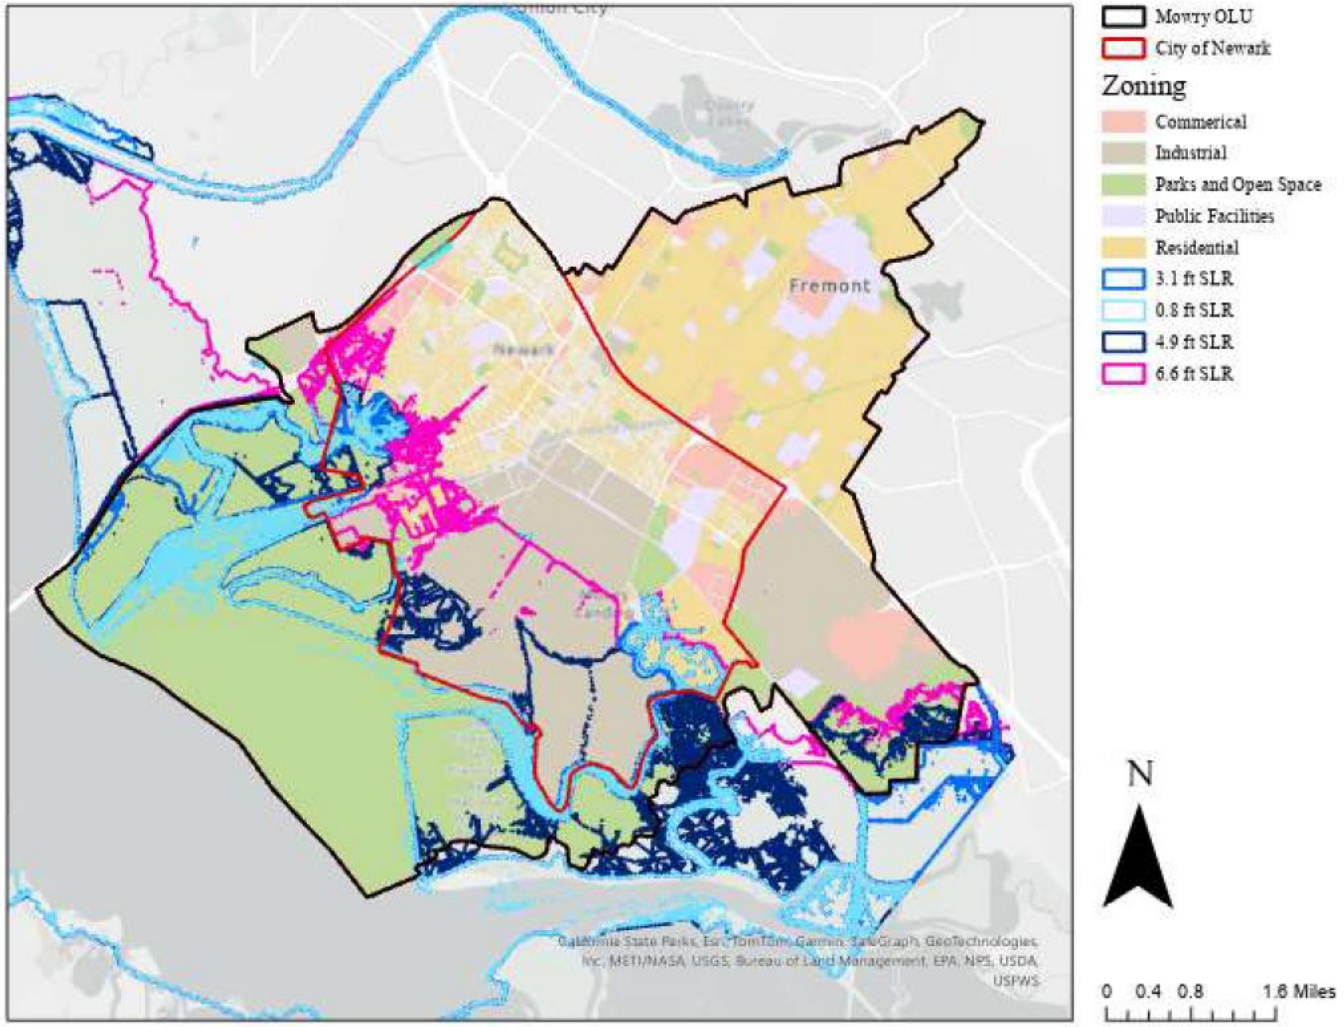
Wetlands habitats

- **Freshwater ponds & emergent wetlands**
  - 20 acres inundated in 2050
  - 20-180 acres inundated 2100
- **Estuarine & marine wetlands**
  - 90% below MHHW by 2050

These changes could disrupt ecosystems, reduce biodiversity, and weaken natural flood protection.



Land Use



More exposed

- **Commercial:** 1% - 20% of area exposed by 2100
- **Industrial**: 1% - 35% of area exposed by 2100, primarily salt farms

Less exposed

- **Residential** : 1% - 2% of area exposed by 2100
- **Public**: 1% - 3% of area exposed by 2100

Buildings

By 2050

SLR will start to affect a small number of **industrial and public** buildings.

By 2100

SLR will begin to affect all types of buildings, and **residential buildings** are most impacted by 4.9-6.6ft

Building Type	Mid-century (2050)	End-of-century (2100)		
	0.8ft SLR	3.1ft SLR	4.9ft SLR	6.6ft SLR
Public Buildings	10	30	70	100
Industrial Buildings	2	15	70	110
Commercial Buildings	0	2	70	100
Residential Buildings	0	5	280	1,800
Emergency Facility	0	0	0	3
Hospitals and Care Centers	0	0	2	4
Schools	0	0	0	3
Total Count	**12**	**52**	**492**	**2,120**

Roads & Trails

By 2050

No permanent loss of roads, but trails begin to be affected.

By 2100

By the end of the century, **up to 65mi of roads and trails** are under water.

Type of Road	Total Length (mi)	Mid-century (2050)	End-of-century (2100)		
		0.8ft SLR	3.1ft SLR	4.9ft SLR	6.6ft SLR
Arterial	1	0	0	0.4	0.4
Residential	9	0	3.2	18	26
Major Road	40	0	2.4	11	13
Freeway	15	0	0	1.3	2.2
Trails	75	10	15	20	23
Total Roads & Trails (mi)	**221**	**10**	**20.6**	**50.7**	**64.6**

Infrastructure & Utilities

2050

- **Rail**: ~1.5mi of rail lines inundated
- **Sewer**: 1mi of active sewer lines and 5 sewer manholes inundated
- **Power**: 4mi of transmission lines within flooded areas

2100

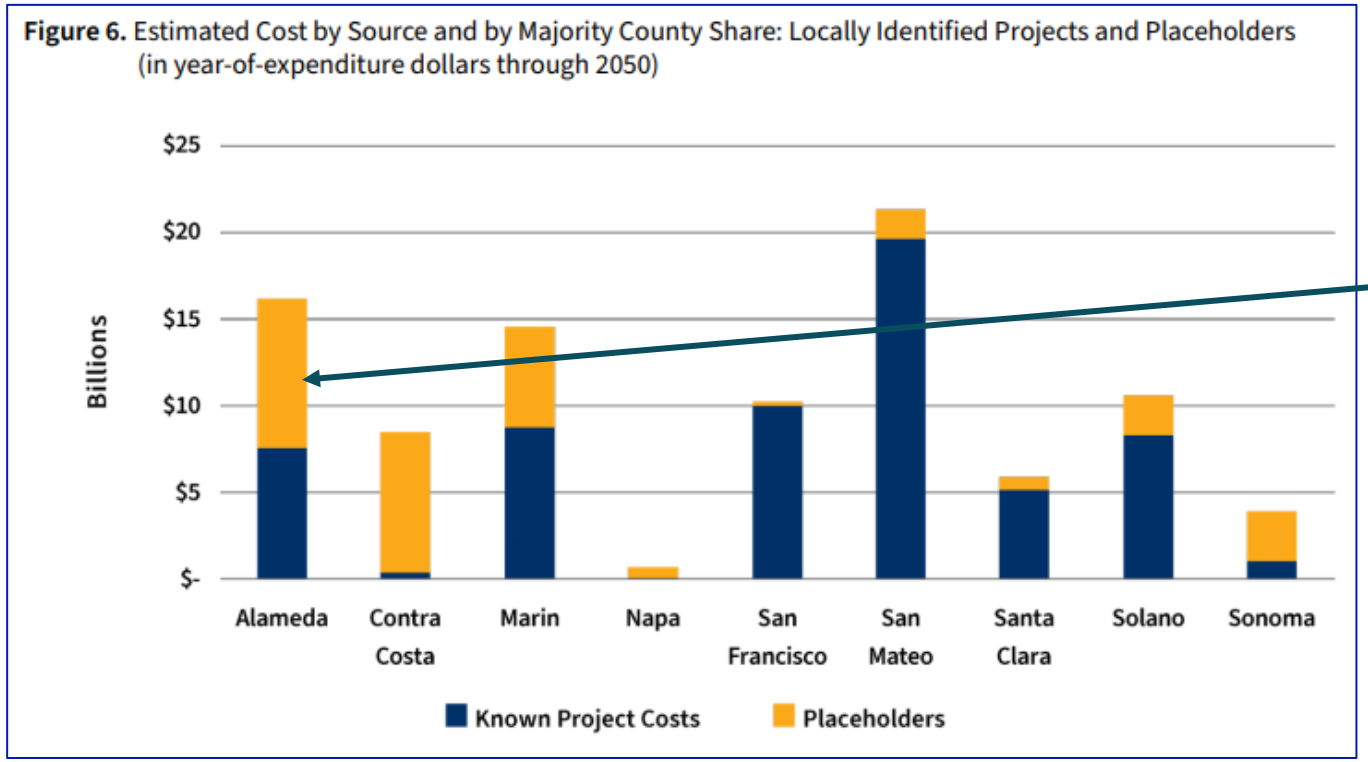
- **Rail**: 3mi to 6mi of rail lines inundated
- **Sewer**: 4-17mi of active sewer lines and up to 1,000 sewer manholes inundated
- **Power**: 20mi to 40mi of transmission lines and one electrical substation exposed

Total Estimated Losses for Mowry OLU in Millions

Asset Type	Mid-century (2050)	End-of-century (2100)		
	0.8ft SLR	3.1ft SLR	4.9ft SLR	6.6ft SLR
Buildings	$45	$200	$1,500	$3,100
Roads	$0	$70	$360	$490
Rail	$4.5	$7.5	$14	$17
Sewer	$1.7	$5.7	$22	$32
Power	$20	$115	$160	$180
Total Loss (in millions)	**$71**	**$398**	**$2,056**	**$3,819**

Total Estimated Losses for Mowry OLU in Context

Asset Type	Mid-century (2050)	End-of-century (2100)		
	0.8ft SLR	3.1ft SLR	4.9ft SLR	6.6ft SLR
Total Loss (in millions)	$71	$398	$2,056	$3,819



Estimated adaptation needs by 2050 for each Bay Area county (MTC/ABAG, 2023).

For Alameda County: ~$16B

Vulnerability & Risk Results Takeaways

When are the impacts of SLR felt?

- 4.9ft or more SLR by 2100
- There is time to act!

What assets & infrastructure are exposed **by 2050**?

- ~10 public & industrial buildings
- ~10mi of trails
- Some utility infrastructure

What assets & infrastructure are exposed **by 2100**?

- ~50 to 2,000 primarily residential buildings
- ~20mi to 60mi of roads & trails
- More utility infrastructure

How much are the losses?

- ~$70M by 2050
- ~$400M to ~$4B by 2100

Community Engagement & Next Steps

Community Engagement

Two well-attended community meetings were held at the Library.

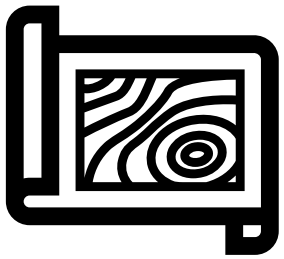
Both included breakout activities with smaller groups, such as providing feedback on the SLR maps.

What is climate adaptation?

- Adjustments in **ecological, social, or economic systems** in response to actual or expected climatic impacts.

- Changes in processes, practices, and structures to **moderate potential damages** or to **benefit from opportunities** associated with climate change.

Next Steps

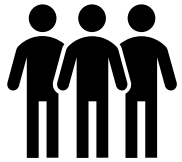


Select key areas with flood risk for adaptation work

Align on principles & guardrails

Review toolkit of adaptation solutions

Adaptation Principles

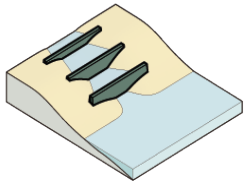


1. **Centered on People**: Which people or neighborhoods in Newark do you think are most at risk from sea level rise?

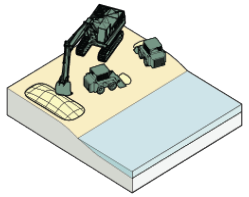
2. **Partnership with the Environment**: What other benefits—like cleaner air, more shade, or better wildlife habitat—would you like to see come from these nature-based projects?

3. **Economic Vitality**: Which local industries or types of jobs are most at risk from flooding?

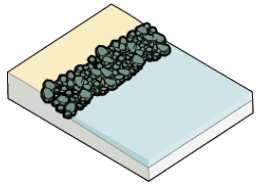
Toolkit of SLR Strategies



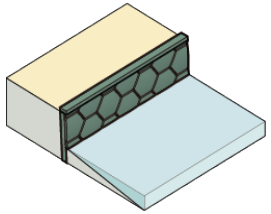
Check Dams



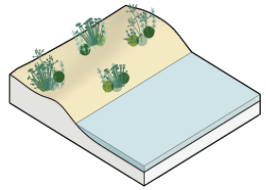
Beach Nourishment



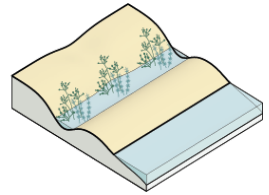
Cobble Berm



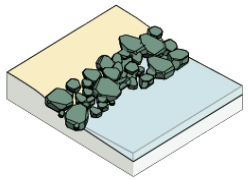
Ecological Enhancement of Coastal Structures



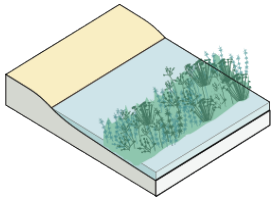
Vegetated Dunes



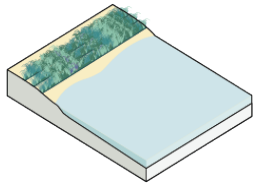
Vegetated Swales



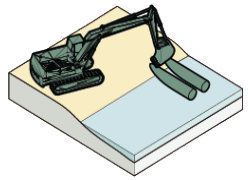
Riprap



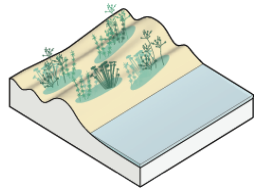
Enhance Intertidal Habitat



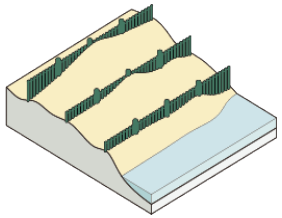
Live Brush layer



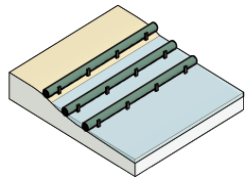
Preserve Natural Drainage



Vegetated Berms



Dune Stabilization



Coir Fence / Logs

RSAP & Regional Coordination

STAFF REPORT

Item F. 3.

DATE	07/24/2025
TO	Honorable Mayor and City Council Members
FROM	Nicholas Cuevas, Recreation and Community Services Director
SUBJECT	Presentation of information from Alameda County's 2024 Point-in-Time Count and the City's activities related to homelessness

Staff will present key findings from Alameda County's 2024 Point-in-Time (PIT) Count and provide information on the City's referral efforts and service coordination to address homelessness. Status on the development of Newark's first Five-Year Homelessness Action Plan will also be discussed.

City of Newark 211 Handout

Newark's Homelessness Update

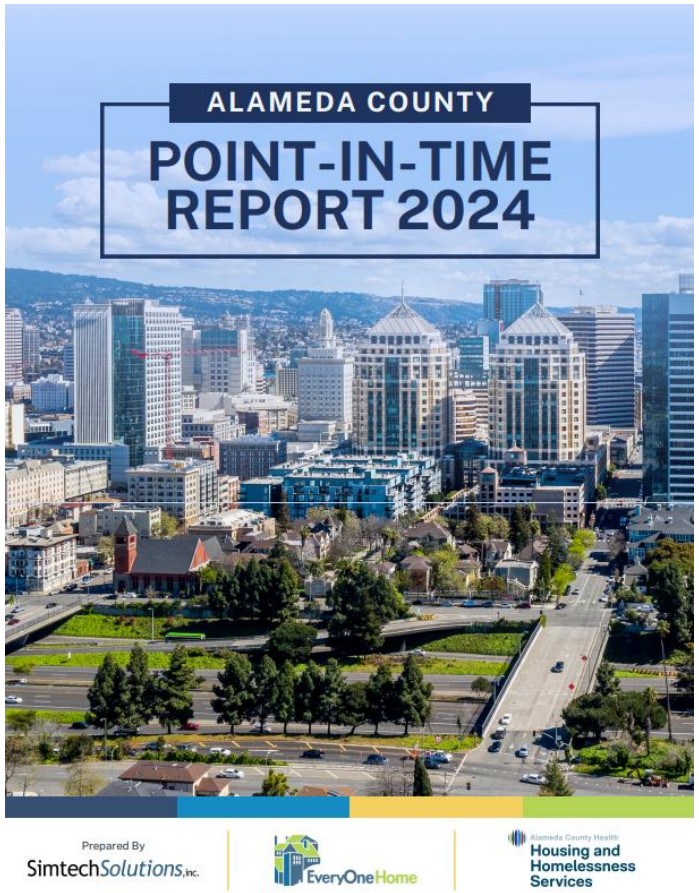
July 24, 2025
City Council Meeting

Nick Cuevas
Recreation & Community Services Director

Agenda

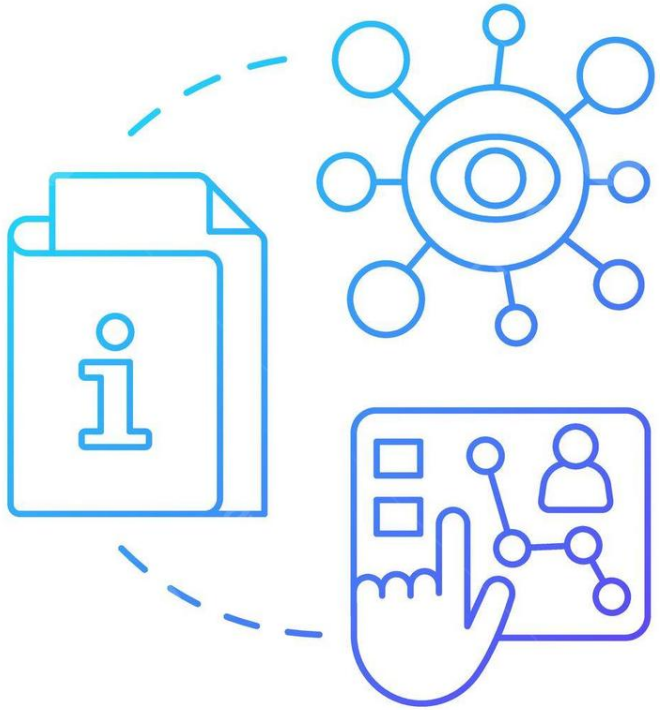
- Alameda County's Point in Time (PIT) Count 2024
  - Newark's PIT Count
- Newark's Response & Resources
- Human Services Information
- Homelessness Action Plan Update
- Q&A

Alameda County Point-in-Time (PIT) Count



- Biennial census of people experiencing homelessness
- Conducted on January 25, 2024
- Required to receive funding from the U.S. Department of Housing and Urban Development
- Data used to inform programs, policies, funding strategies, and system design to end homelessness

County Point-in-Time (PIT) Count Methodology



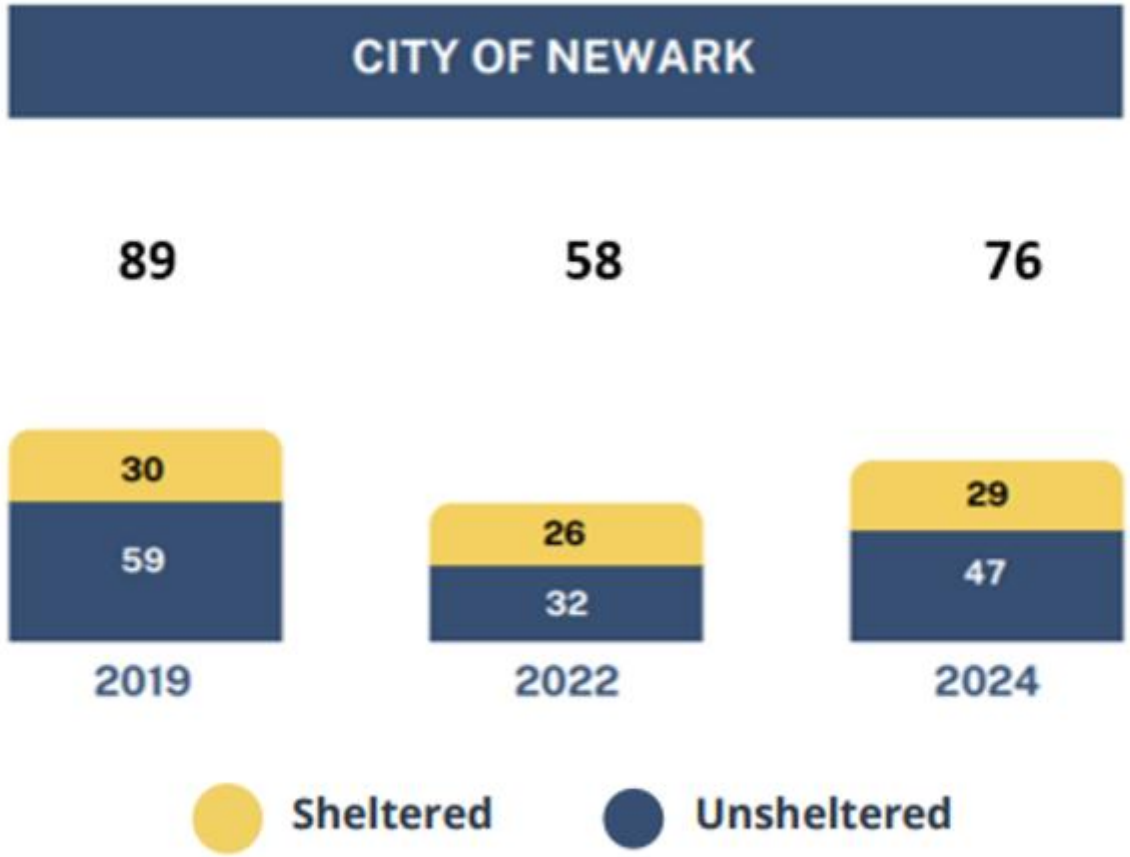
- What the PIT Count Measures
- New Data-Driven Approach used in 2024
- Limitations of the PIT Count

Primary Events Contributing to Homelessness

Alameda County-Wide Prevalent Answers:

- 35.4% Housing Loss
- 22.0% Income Issues
- 18.1% Health Issues
- 18.0% Household Breakup

City of Newark Homeless PIT Count 2024



The City of Newark has a capacity of 34 shelter beds via Second Chance, Inc.

City of Newark Homeless PIT Count 2024

Key Findings from Newark's PIT Count based on surveys taken:

- 73.7% Male (vs. 51.8% in Newark's general population)
- 57.9% of individuals are ages 35–54
- 19.7% of individuals are ages 55 and older; 5% under age 18
- 13.2% Asian/Asian American (vs. 41.8% in Newark's population)
- 21.1% Black/African American (vs. 3.3% in Newark's population)

Newark's Response & Resources

- City Staff Homelessness Committee
- Coordinated response from multiple departments
- Local Homelessness Action Plan
- Webpage with housing and other Human Services resources
  - www.newarkca.gov/homelessness
  - www.newarkca.gov/help

Human Services Information

- Dedicated webpage www.Newarkca.gov/help
- Alameda County Referral Services - 211
- Quick Help Handouts
- Ongoing Food Distributions
- Case Management
- Paratransit Services
- Tri-Cities Navigation Center (Fremont)
- Future Newark Resource Center

Homelessness Action Plan Timeline

Release of RFP
Monday, June 2

Completed

Proposals Due
Friday, July 11

Completed

Anticipated Agreement to Council
Friday, September 11

In-Progress

Estimated Project Completion Timeline: 6 - 12 months

ACKNOWLEDGMENTS

The Point in-Time Count is an extremely time and labor-intensive undertaking that requires months of planning and culminates with hundreds of volunteers deploying all across the county on the day of the Count, including people with lived experience of homelessness. The 2024 Count was the most ambitious count ever undertaken in Alameda County and included the leadership and dedication of dozens of community leaders. Alameda County wishes to thank the following leaders and participants who gave generously of their time and expertise.

Simtech Solutions Inc. created the software, developed the enumeration and sampling protocols, did the analysis, prepared the HUD tables, and prepared the draft reports for this effort.

Alameda County wishes to acknowledge staff at the AC Health Housing and Homelessness Services who assisted in completing this report and associated materials including Jonathan Russell, Kerry Abbott, Suzanne Warner, and Riley Wilkerson. Katharine Gale Consulting assisted in preparing the final report and accompanying materials. Ryan Gamba of AC Health Integrated Planning Team assisted with in-depth data analysis that was included in the report. Alex Baker, Suzanne Campillo, and others on the AC Health HMIS team completed the Shelter Count Methodology.

EXECUTIVE SUMMARY

Every two years, during the last 10 days of January, communities across the United States conduct a count of people experiencing homelessness. The 2024 Alameda County Point-in-Time (PIT) Count was a communitywide effort conducted on January 25, 2024. This effort included an administrative count of all people sheltered that night, a geographic sampling and enumeration approach to count unsheltered people, and a survey conducted with 1,506 people experiencing homelessness to provide details about the population and their experiences. More than 1,200 volunteers supported this critical effort.

For the first time since 2013, overall homelessness declined slightly (down 3% from 2022) and unsheltered homelessness declined significantly (down 11% since 2022). The infographics below highlight key findings from the 2024 Count. Population data from the enumeration of sheltered and unsheltered individuals is shown in numbers, while responses to the survey are shown below in percentages.

INTRODUCTION

The Point-in-Time (PIT) Count is an annual census of people experiencing homelessness on a single night. It is a required activity for all communities receiving funding from the US Department of Housing and Urban Development (HUD) for homelessness. The PIT Count also presents an opportunity to raise awareness of the myriad challenges homeless residents face, hear firsthand from those experiencing homelessness, identify disparities, and highlight key elements of the community's homelessness response.

The PIT Count has two components: sheltered and unsheltered. The sheltered count, conducted annually, enumerates the number of people experiencing homelessness staying in emergency shelters, transitional housing, or safe havens. The unsheltered portion of the PIT Count is required to be conducted biennially.[1] Unsheltered situations include anyone without a permanent residence who is staying outdoors or in places not designed for habitation such as vehicles, streets, parks, or abandoned buildings.

The PIT Count is the result of extraordinary community collaboration and includes a countywide effort to engage and assess the unsheltered population. This year's Count was conducted during the early morning of January 25, 2024, with the support of 1,278 registered volunteers, who used the Counting Us mobile application developed by Simtech Solutions Inc., to gather the survey information. The PIT Count also requires participation by all emergency shelters, transitional housing, and safe haven projects in the region, including those that do not routinely enter information into the region's Homeless Management Information System (HMIS). After completing the PIT count, the data was carefully analyzed and validated to meet HUD's high data quality standards.

The Count results found in this report were submitted to HUD in time for the May 10, 2024, deadline and have since been reviewed by and approved by HUD Technical Assistance providers. This report is a further exploration of the results. It includes additional information about the experiences of people who are homeless in our community, including geographic breakdowns by city.

LIMITATIONS

While the primary purpose of the biennial Point-in-Time Count is to quantify the extent of homelessness both locally and nationally, it is important to understand its limitations. The PIT Count represents a snapshot in time; this information does not reflect the total number of people experiencing homelessness throughout the year. Additionally, since the Count is conducted on a single night in January, factors such as weather and the number of volunteers available, may factor into the count's accuracy. The Point-In-Time Count is only one piece of data used to understand who is experiencing homelessness in our community. Alameda County's annual Home Together 2026 Community Plan updates use data from the Homeless Management Information System (HMIS) to estimate and report on annual numbers of people who access homeless services. Readers are encouraged to reference that information for a more complete picture of homeless services and the people who experience homelessness over time.

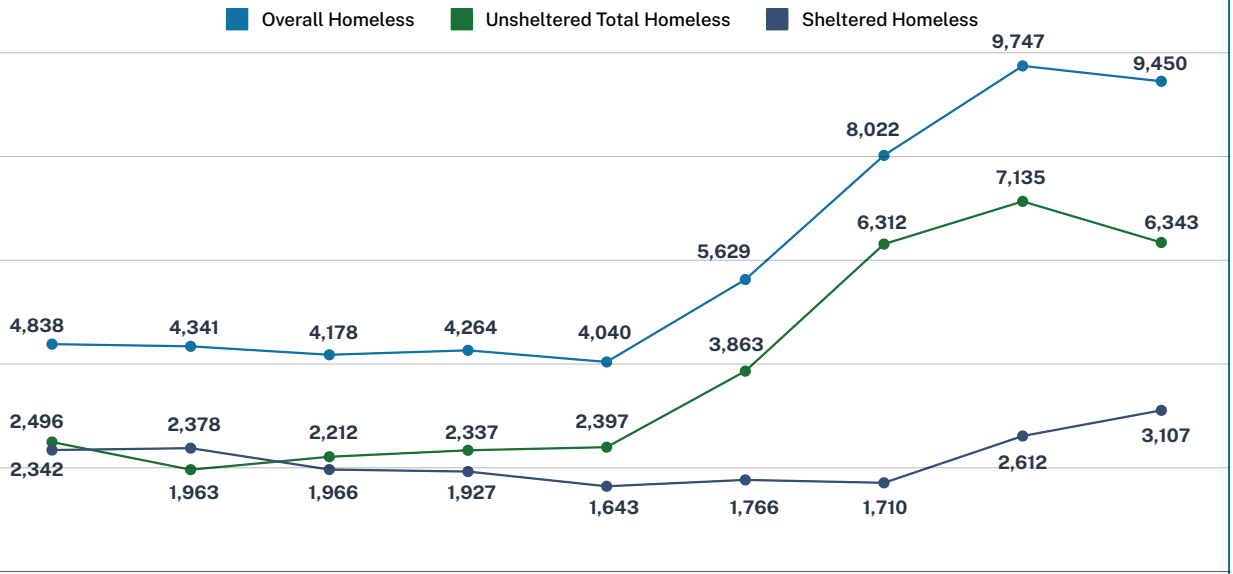
[1] Due to the COVID-19 pandemic, the unsheltered PIT scheduled for January 2021 was delayed until January 2022. As a result, the last unsheltered count for regional information to compare against the sheltered count was from 2022.

KEY FINDINGS

The 2024 Point-in-Time (PIT) Count estimated 9,450 people were experiencing homelessness in Alameda County on the morning of January 25th. This represents a decrease of 297 people (3%) from the 2022 PIT Count, the last time the unsheltered count was conducted. This is the first time since 2013 that the overall PIT Count has gone down.

More strikingly, the number of people living unsheltered in Alameda County decreased by 11.1%, dropping from 7,135 to 6,343, while the sheltered count increased by 19%. An estimated 3,107 people were sheltered in 2024 compared to 2,612 people in 2022. This is the first time since 2009 that the sheltered rate has increased while the unsheltered rate has decreased.

Figure 1: Point-In-Time Summary, 2007 - 2024



Although the count was slightly lower this year, Alameda County had seen the total number of people experiencing homelessness counted during the PIT increase by 121.2% over the prior ten years. In the State of California, there was a 53% increase 2013 to 2023.[2]

[2] 2007-2023-PIT-Counts-by-State.xlsb (live.com)

HOUSEHOLD COMPOSITION

People who are experiencing homelessness may do so alone or in a household with other people.[3] The PIT Count distinguishes between households of only adults (one or more adults experiencing homelessness together), households with minor children (often referred to as families), and households of only children, meaning persons 17 or under who are experiencing homelessness without an adult.

Table 1: Population by Household Composition

	People in Adult Only Households	People in Households with Adults and Children	People in Households with only children	Total
Number of people	8,725	699	26	9,450
Percent of people experiencing homelessness	92.3%	7.4%	0.3%	100%

Households with Both Adults and Children

The PIT count identified 240 households (701 individuals) with both children and adults. This is a 17% decrease in both persons and households since the 2022 Count and continues a trend of decrease in family households experiencing homelessness.

Eighty-nine percent (89%) of these households, 208, were sheltered while 29 households (with 106 household members) were unsheltered.

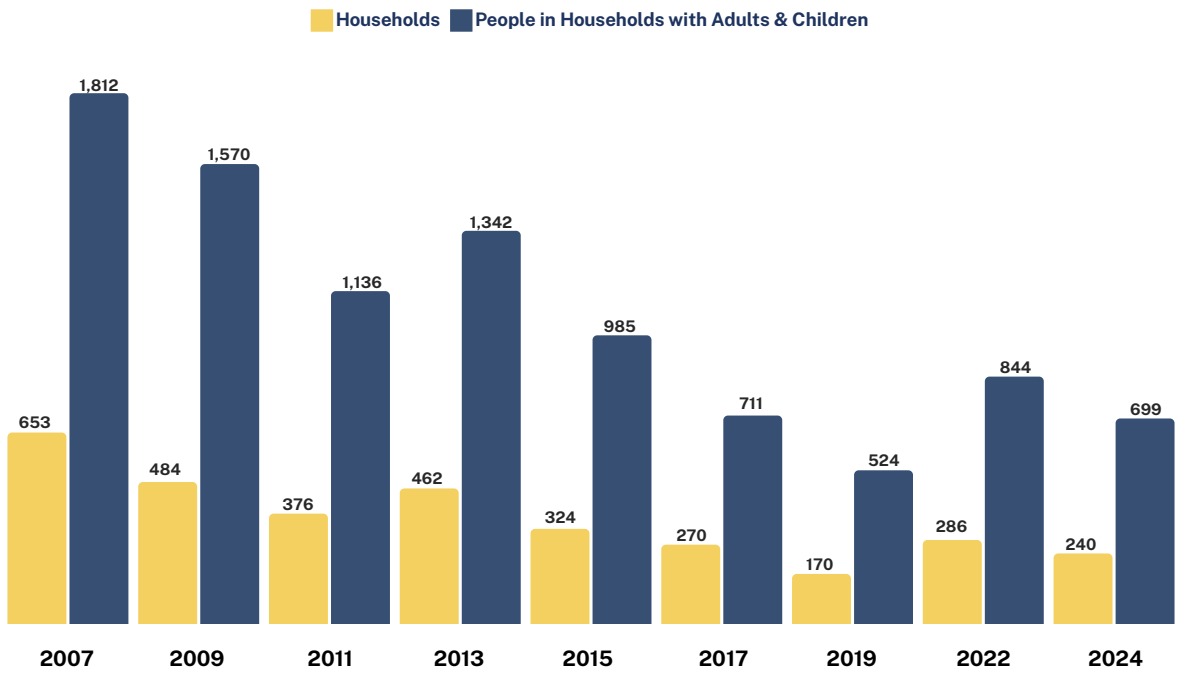
Table 2: Households with Adults and Children, Location and Composition

	Households with Adults and Children	Adults 25 and older	Youth 18-24	Children under 18
Sheltered (In emergency shelter and transitional housing)	208	35.9%	6.1%	58.0%
Unsheltered	29	48.1%	--	51.9%
Total	237			

The majority of people in such households (both sheltered and unsheltered) are children under 18. The average household size for people experiencing homelessness with at least one adult and at least one child was 2.95 people, slightly larger than the Alameda County census average of 2.78 people.

[3] Members of the household do not need to be related by blood, marriage, or in any other legal capacity

Figure 2: Households with Children, 2007 -2024



Since the 2007 Point-in-Time Count, the number of households with both adults and children decreased by 63%, from 653 to 237, and the number of people within these households decreased 61% from 1,812 people to 699.

Adults in Households without Children

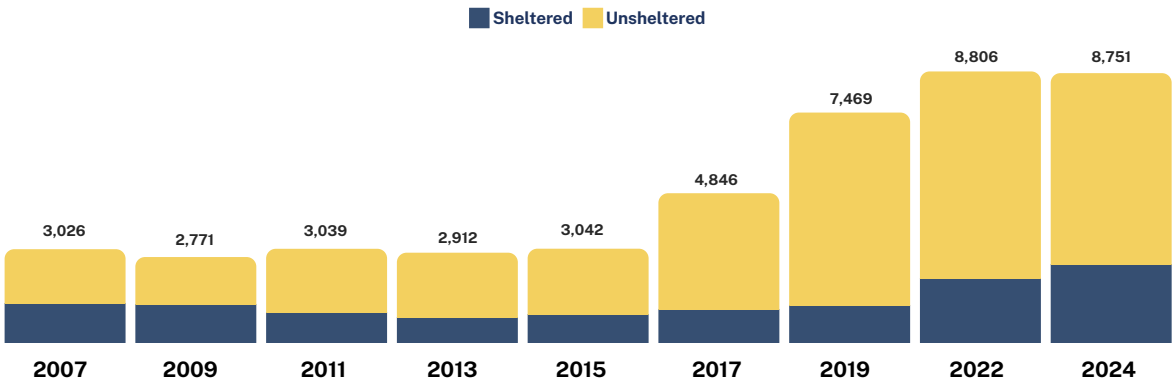
Adults in households without children make up the vast majority of the population experiencing homelessness. 71.4% were unsheltered, while 28.6% were sheltered in emergency shelter or transitional housing. Most adults experiencing homelessness are over 25.

Table 3: Adult Only Households, Location and Age Group

	People in households without children	Adults 25 and older	Youth 18-24
Sheltered (In emergency shelter and transitional housing)	2,514	92.8%	7.2%
Unsheltered	6,237	96.6%	3.4%
Total	8,751		

The number of adult only households decreased slightly (down 1%) from the 2022 count, after having increased dramatically between 2015 and 2022.

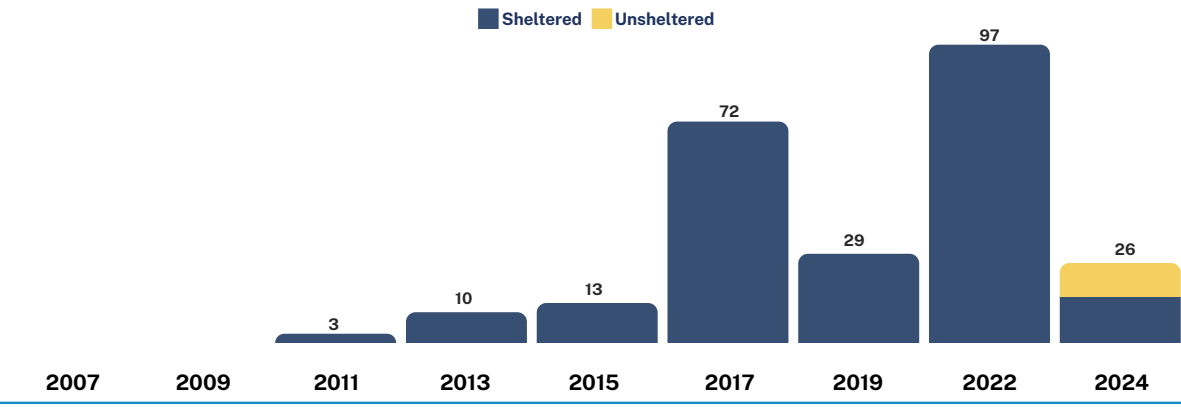
Figure 3: Households with Adults Only, 2007-2024



Households with Only Children

Households with only children refers to individuals or households composed only of persons age 17 or under and who are not emancipated.

Figure 4: People in households with Only Children, 2007 - 2024



GEOGRAPHIC DISTRIBUTION

Most people experiencing homelessness in Alameda County are from Alameda County. Seventy-eight percent (78%) of those surveyed reported their previous permanent address was within the county, while 22% became homeless most recently outside of Alameda County. (We do not know how many of those people may have previously lived in Alameda County.)

Within Alameda County, the majority of people (58%) are experiencing homelessness in Oakland, whereas Oakland's general population makes up approximately 25% of the overall County population. While Oakland saw an 8.5% increase in the PIT, it represents a slow-down in growth over previous counts.

In the other large urban areas in the county, numbers varied widely. Increases in homelessness were recorded in City of Alameda, Hayward, and Livermore, while Berkeley, Fremont, San Leandro and the Unincorporated Area saw significant decreases. The majority of these cities also added shelter inventory in the last two years.

Figure 5: Population Distribution by City and by Sheltered Status

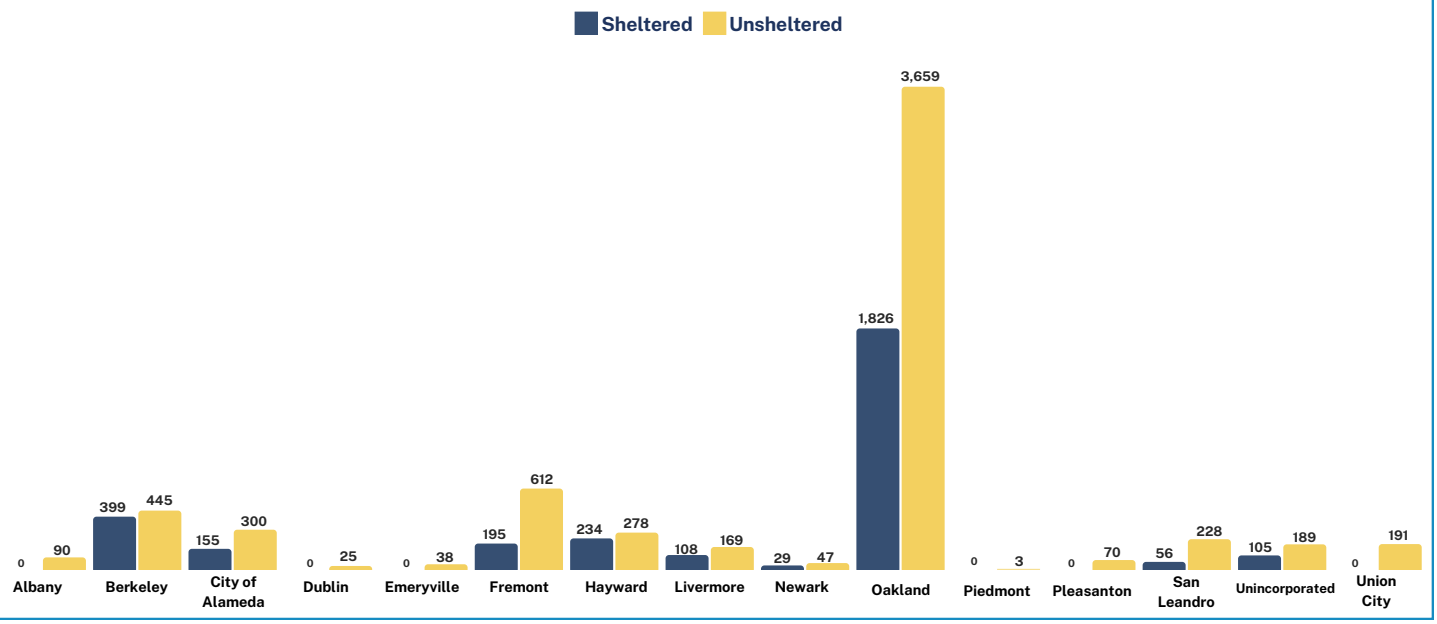


Table 4: Population Distribution by City and by Sheltered Status

Jurisdiction	Total People Unsheltered Count 2022	Total People Unsheltered Count 2024	Unsheltered Change %	Total Sheltered 2022	Total Sheltered 2024	Sheltered Change %	Total Sheltered and Unsheltered 2022	Total Sheltered and Unsheltered 2024

Unincorporated	418	189	-55%	91	105	15%	509	294

SHELTERED COUNT AND BED UTILIZATION

The sheltered portion of the count is derived from the reported occupancy on the night of January 25, 2024. The bed utilization (or occupancy rate) is calculated by comparing the number of people staying in emergency shelters or transitional housing with the total number of available beds. A total of 3,107 persons were reported as sheltered in emergency shelter or transitional housing on the night of the Count. At the same time there were 3,458 beds reported in the Housing Inventory Count (HIC), for an overall occupancy rate of 90%.

People who participated in the Unsheltered Survey were asked about reasons they do not access shelter. The most frequent answers were that shelters were too crowded and imposed curfews. Full details of the Unsheltered Survey are available in that section of this report.

Table 5: Sheltered Count: Beds and Occupancy

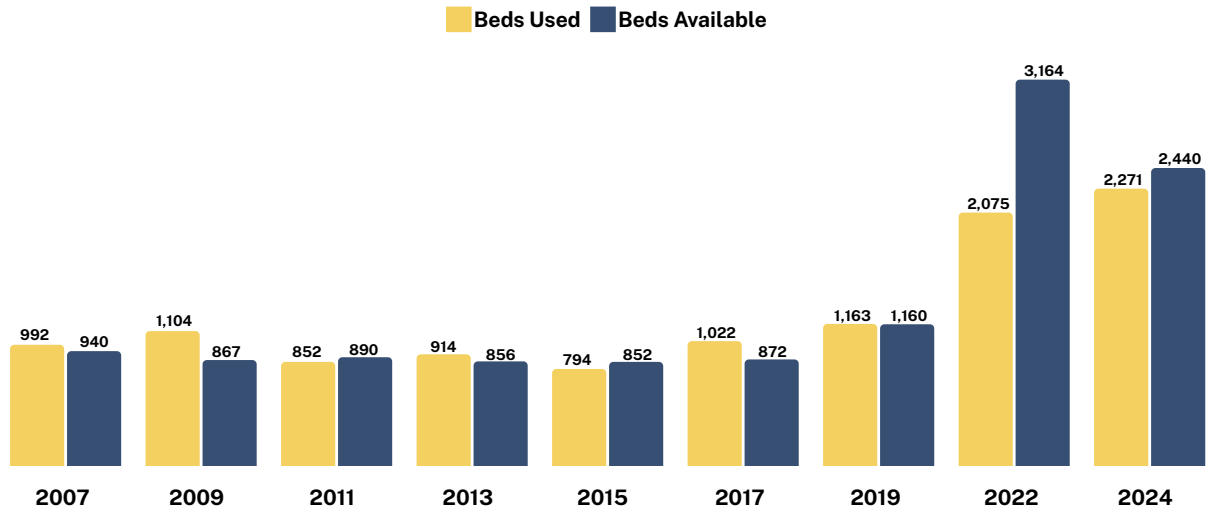
	Emergency Shelter	Transitional Housing	Total Sheltered
Persons in Beds, January 25, 2024	2,271	825	3.096
Total Beds	2,440	1,018	3,458
Utilization Rate	(93.1%)	(81%)	(90%)

Shelter Occupancy

Emergency shelters include congregate and non-congregate settings where people experiencing homelessness can stay temporarily while they seek permanent housing. On the night of the count, 2,271 of the 2,440 Emergency shelter beds (93.1%) were occupied. After nearly a decade of very limited change in shelter beds, Alameda County's shelter inventory grew significantly in the past five years, more than doubling since 2019. Many of the new shelter resources were added during the COVID-19 shelter-in-place orders and were typically non-congregate hotel rooms to allow for social distancing and for isolation and quarantine. Some of the leased hotel sites have remained open as shelter, several transitioned back to private operations, and many were purchased and are being converted to permanent housing. Several cities also added single and double occupancy "tiny homes" or "community cabins."[4]

[4] There was a large surge in non-congregate shelter beds between 2020 and 2022 due to the COVID crisis, though occupancy was not full due to distancing requirements and the need to keep rooms available for Isolation. Since that time some of those beds and programs have been converted to permanent housing.

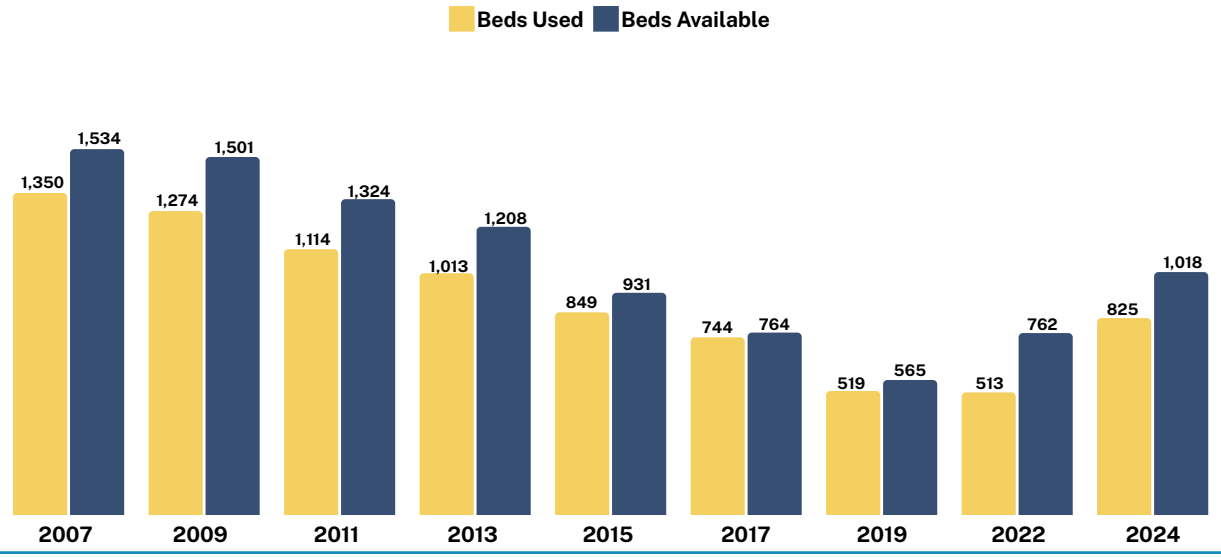
Figure 6: Emergency Shelter Beds and Utilization



Transitional Housing Capacity and Utilization

Transitional housing, like emergency shelter, also provides temporary accommodations but generally has a longer length of stay (up to 24 months) and often serves specific target populations such as youth or survivors of domestic violence. In transitional housing, 825 of the 1018 beds (81.0%) were utilized on the night of the count.

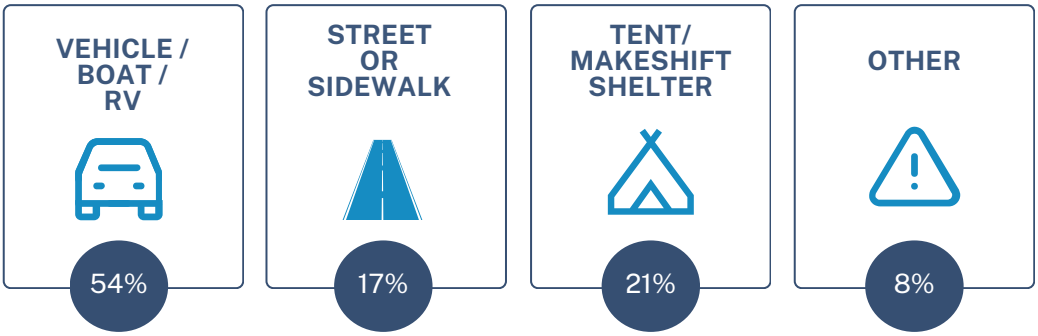
Figure 7: Transitional Housing Beds and Utilization



THE UNSHELTERED COUNT

As described in Appendix B below, the 2024 unsheltered count used a method of targeted enumeration and sampling to estimate the number of people unsheltered throughout Alameda County. The estimated unsheltered population for the night of the count was 6,343 people, two-thirds (67%) of the total homeless population of 9,450. This was a decrease from 2022 of 11%.

Figure 8: Sleeping Locations of Unsheltered People

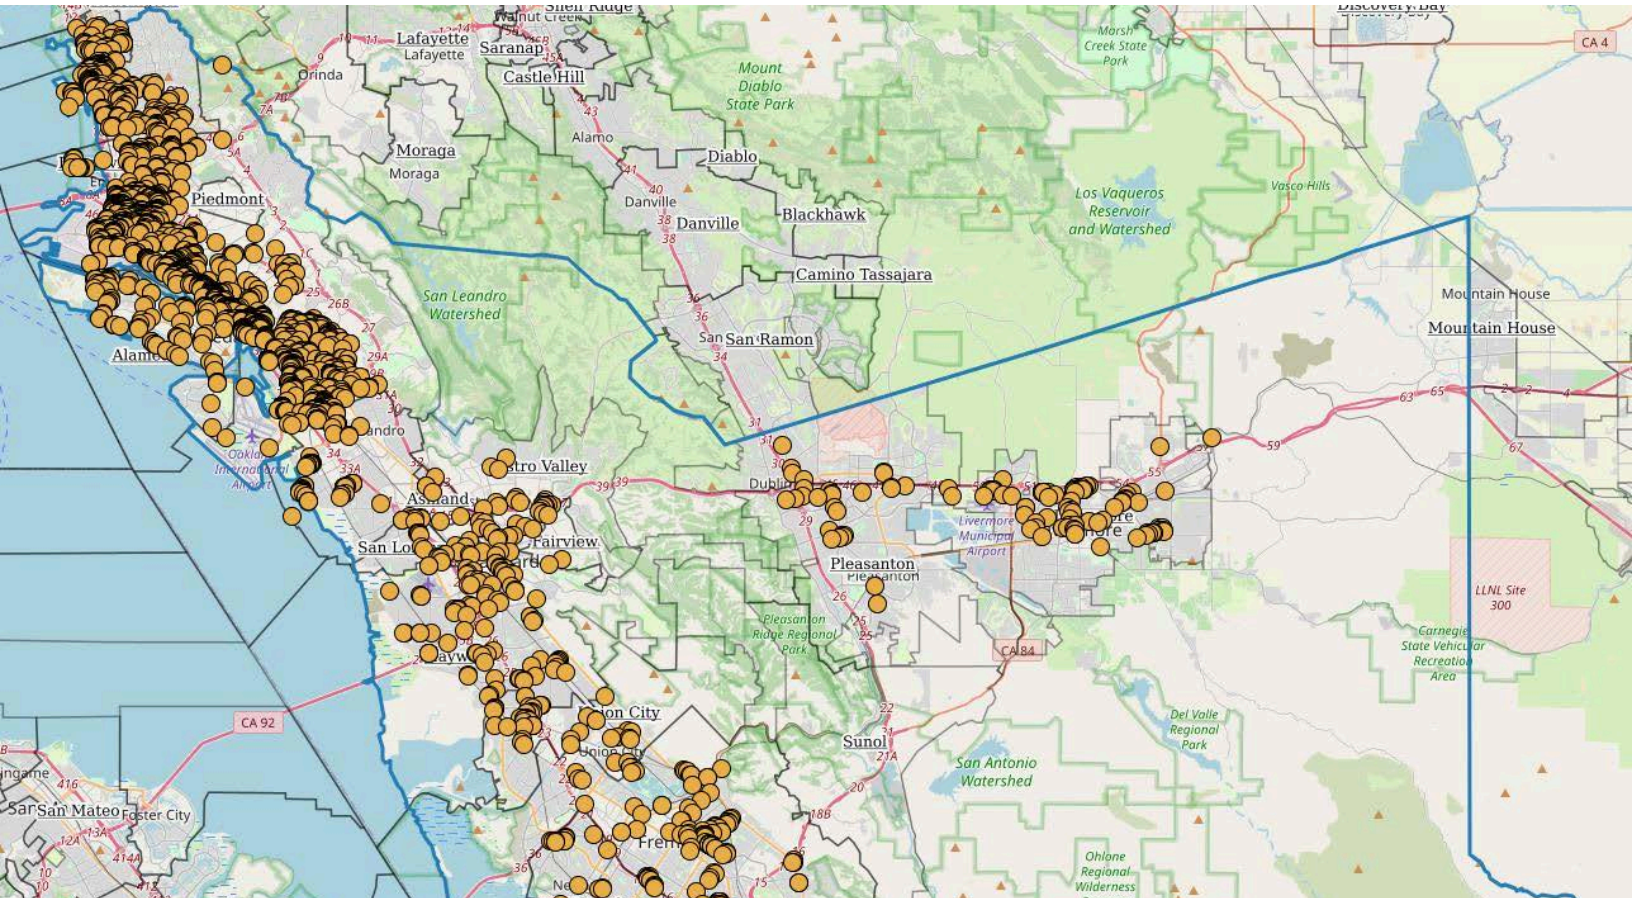


36% of the entire population experiencing homelessness (sheltered and unsheltered combined) was found to be living in vehicles. 54% of total population counted in unsheltered locations were living in vehicles in 2024, which represents a 1% decrease since the 2022 count, where 55% of the total unsheltered population were residing in vehicles.

People Experiencing Homelessness in Vehicles and Makeshift Shelters

In the California Bay Area, the issue of homelessness has taken on a distinct form with a notable population living in vehicles. This mode of living, while offering some semblance of stability and privacy, comes with significant challenges. Access to basic amenities like sanitation and healthcare remains limited, and the transient nature of their housing makes accessing health care, social services and employment opportunities more complicated. Despite these barriers, community organizations and local governments are working to provide support, offering street health services. safe parking initiatives, targeted outreach programs, and advocacy efforts to address the often complex needs of those living in vehicles.

People experiencing unsheltered homelessness living in vehicles and makeshift shelters can be found throughout the county. The map below highlights these locations.



DEMOGRAPHIC ANALYSIS

The demographics of people experiencing homelessness are collected as part of the Point-in-Time Count. These demographics include racial identities, age, and gender identities. This year, HUD provided expanded response options for gender and race. A separate category for ethnicity (whether someone identifies as Hispanic/Latina/e/o) was removed as its own demographic category and included as a choice of racial identity.

While HUD expanded the categories for both race and gender, those expansions are not reflected the same way in US Census data. For example, gender data from the Census only includes "male" and "female" options, while HUD allows for an additional six gender identities. Additionally, the Census only provides six race categories and classifies Hispanic/Latina/e/o as an ethnicity, rather than race. HUD has fifteen race categories and includes Hispanic/Latina/e/o.

Racial Demographics in the Homeless Population

The population of people experiencing homelessness in Alameda County includes people of many racial backgrounds. The largest racial group experiencing homelessness in Alameda County is Black, African-American or African, 3,904 people (41.3%).

Table 6: Homeless Population by Race

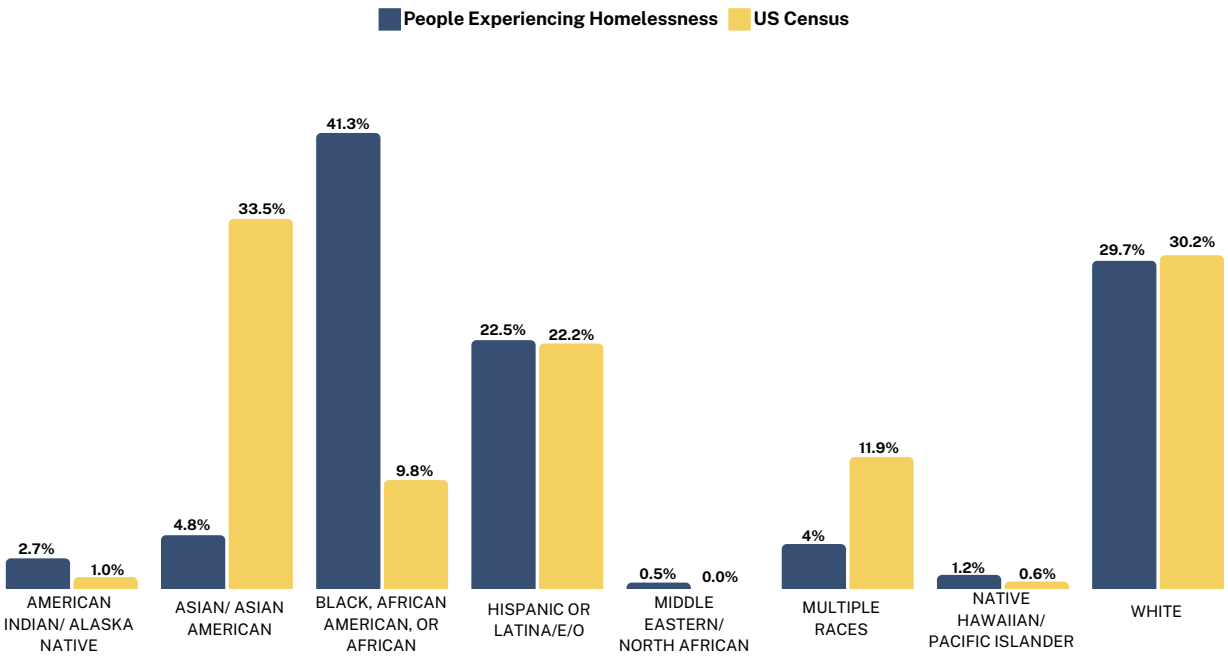
Race	Total	Percentage
American Indian, Alaska Native, or Indigenous	120	1.3%
American Indian, Alaska Native, or Indigenous & Hispanic/Latina/e/o	138	1.5%
Asian or Asian American	442	4.7%
Asian or Asian American & Hispanic/Latina/e/o	10	0.1%
Black, African American, or African	3,817	40.4%
Black, African American, or African & Hispanic/Latina/e/o	87	0.9%
Hispanic/Latina/e/o	1,456	15.4%
Middle Eastern or North African	43	0.5%
Middle Eastern or North African & Hispanic/Latina/e/o	3	0%
Native Hawaiian or Other Pacific Islander	110	1.2%
Native Hawaiian or Other Pacific Islander & Hispanic/Latina/e/o	19	0.2%
White	2,450	26%
White & Hispanic/Latina/e/o	353	3.7%
Multi-racial & Hispanic/Latina/e/o	58	0.6%
Multi-racial (not Hispanic/Latina/e/o)	323	3.4%

Racial Disparities within the Homeless Population

Large racial disparities exist between the population experiencing homelessness and the overall population. This is true of almost every Continuum of Care in the United States. The chart below highlights the racial identities of people experiencing homelessness compared with the overall county population.

Due to changes in race categories not aligning with census categories, the data reflected in the chart below represents the percentage of each category with and without Latina/e/o identity included. For example, people who identified as Asian or Asian and Latina/e/o are reflected in the Asian percentage. Similarly, people who identified as Latina/e/o alone or in combination with another race are reflected in the Latina/e/o percentage.

Figure 9: County and Homeless Populations by Race



Most Black, Indigenous, and People of Color (BIPOC), especially African Americans, experience homelessness at higher rates than people who are White.[5] Within Alameda County, people who identify as Black or African American constitute 9.8% of the overall population yet comprise 41.3% of the homeless population (down from 43% in 2022).

While the numbers are smaller, there is also a higher prevalence of people who are American Indian or Native Alaskan as well as those who are Native Hawaiian and Pacific Islanders. While the US Census data indicates American Indian / Native Alaskans comprise 1.0% of the overall population this group accounted for 2.7% of the homeless population (nominally down from 3% in 2022). Similarly, 0.6% of the population in Alameda County is Native Hawaiian or Pacific Islanders yet 1.2% were found to be experiencing homelessness during the PIT Count.

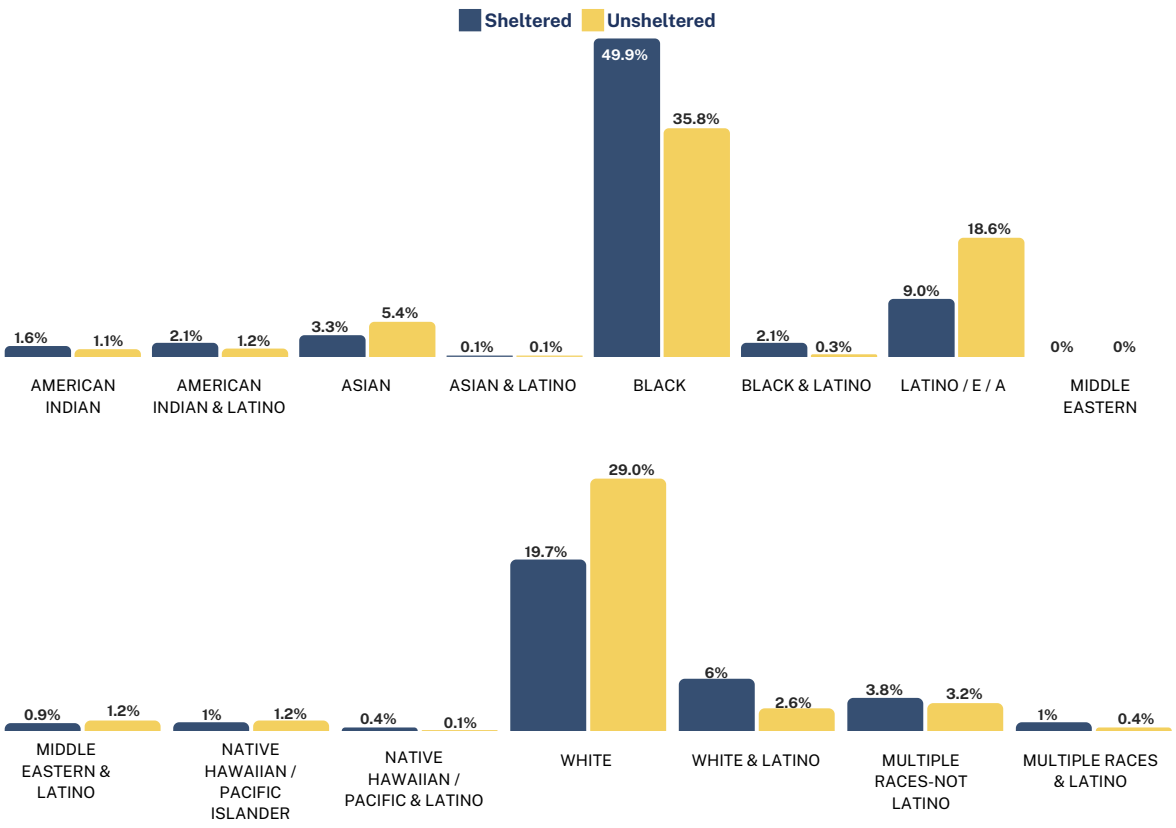
[5] The U.S. Department of Housing and Urban Development. (2024). The 2023 Annual Homeless Assessment Report (AHAR) to Congress.

This year, HUD reassigned the Ethnicity Category of Hispanic/Latina/e/o to a Race Category. In Alameda County 22.2% of the county's population identify as Hispanic/Latina/e/o, compared to 22.5% of the population experiencing homelessness.

Racial Differences between Sheltered & Unsheltered

As described in the previous section, Black, African American, or African people are overrepresented in the overall homeless population. However, representation by race is different when looking at people who are sheltered and unsheltered in Alameda County. People who identify as Asian, Hispanic/Latino/e/a, and White are more likely to be unsheltered, while people who are Black, African American, or African make up a larger share of the sheltered population

Figure 10: Sheltered and Unsheltered Populations by Race



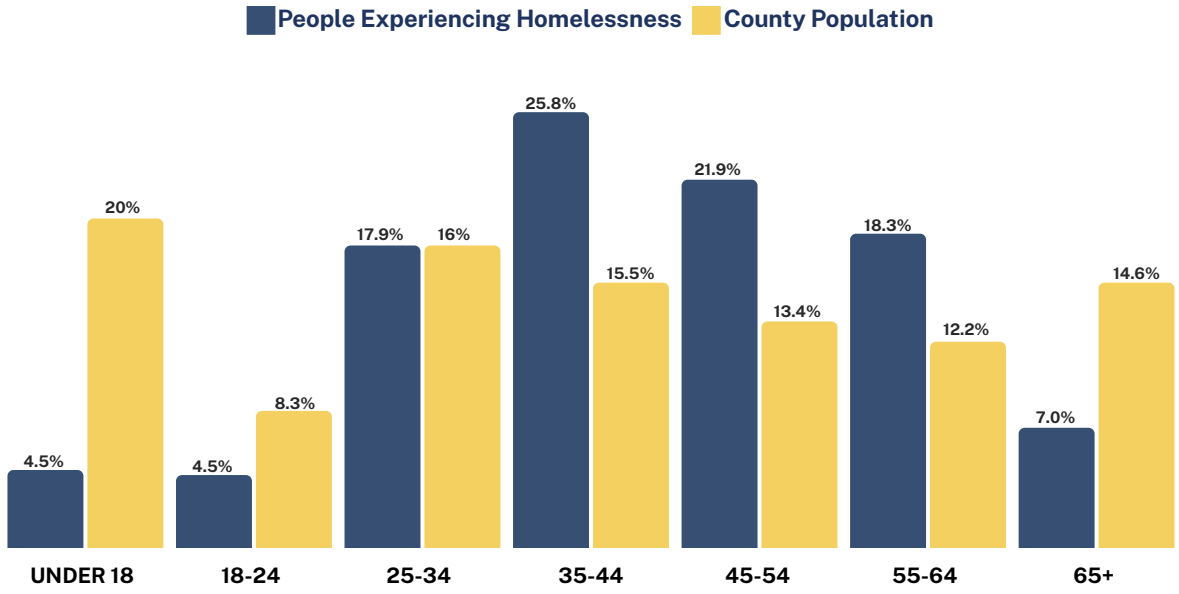
Age Demographics

Table 7: Homeless Population by Age and Household Type

Age Group	Inside Households with Adults and Children	Inside Adult Only or Child Only Households	Total	Percentage
Children (under age 18)	399	26	425	4.5%
Youth (age 18-24)	36	393	429	4.5%
Adults (25-34)	108	1588	1696	17.9%
Adults (35-44)	97	2342	2439	25.8%
Adults (45-54)	42	2027	2069	21.9%
Older Adults (55-64)	13	1720	1733	18.3%
Older Adults (65 and Over)	4	655	659	7.0%

Within the total homeless population, Alameda County saw a 3.1% increase in homelessness among adults, while the population under 18 decreased 21% from 2022 to 2024. Young adults decreased 47.1% from 804 in 2022 to 429 in 2024.

Figure 11: County and Homeless Populations by Age



Adults are disproportionately represented in the homeless population, while children, youth and older adults 65 and over are more prevalent in the County population.

Children under 18 represent 4.5% of those experiencing homelessness and 19.5% of the population. respectively. In contrast to this comparison, those experiencing homelessness between the ages of 35-44 make up 25.8% of the homeless population while they represent 15.7% of the greater populace.

Individuals over 55 accounted for 25.3% of those recorded as people experiencing homelessness while representing 27.9% of the general population

[6] *The U.S. Census Bureau. (2022). American Community Survey: Demographic and Housing Estimates.*

Age Differences between Sheltered & Unsheltered People Experiencing Homelessness

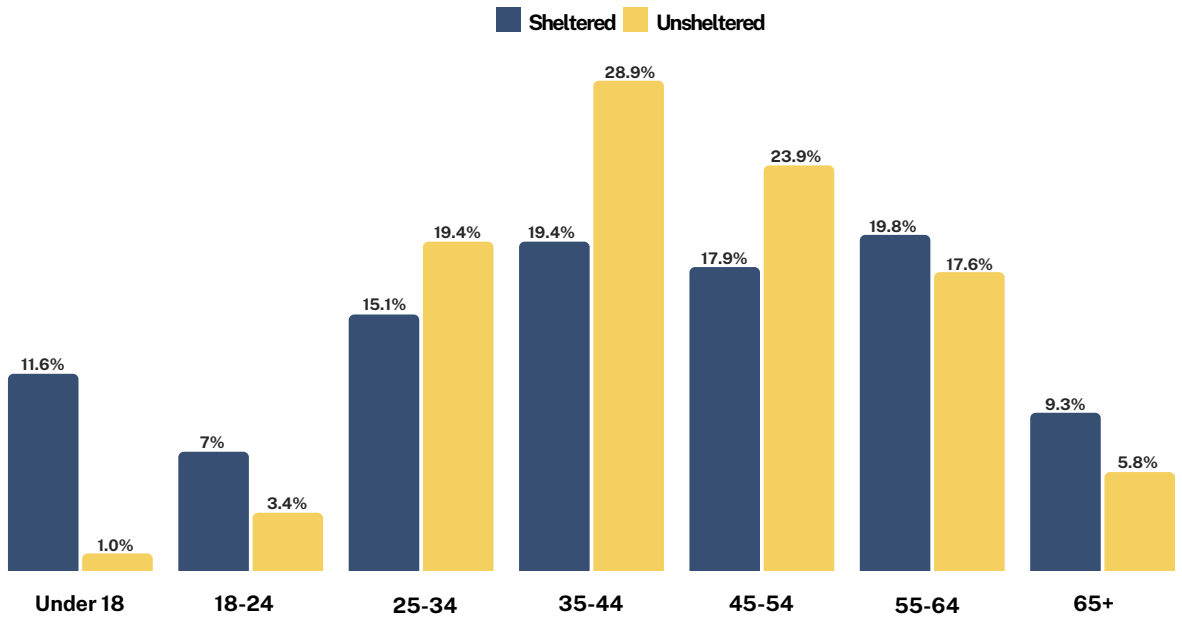
Table 8: Age Groups by Sheltered and Unsheltered Status

Age Group	Sheltered	% Sheltered	Unsheltered	% Unsheltered	Total
Children (17 and under)	359	84.5%	66	15.5%	425
Youth (age 18-24)	216	50.3%	213	49.7%	429
Adults (25-34)	468	27.6%	1228	72,4%	1696
Adults (35-44)	604	24.8%	1835	75.2%	2439
Adults (45-54)	556	26.9%	1513	73.1%	2069
Adults (55-64)	614	35.4%	1119	64.6%	1733
Adults (65 and Over)	290	44.0%	369	56.0%	659

Age demographics between the sheltered and unsheltered populations in Alameda County demonstrate that children, transition age youth, and older adults (55 and older) are more likely to be sheltered. Adults between the ages of 25 and 54 are more likely to experience unsheltered homelessness. As is the case in the majority of CoCs in the US, there are proportionally more available shelter beds for people in families than there are for individual adults. In Alameda County there are 720 beds between Emergency Shelter and Transitional Housing available for people in families, while there were 701 people estimated to be experiencing homelessness in these households. Conversely, there are 2,740 beds for adult individuals between Emergency Shelter, Transitional Housing, and Safe Haven while 8,725 individuals were estimated to be experiencing homelessness.

There were 240 households with both adults and children within these households. 58.6% were children under the age of 18, 5% were young adults 18-24, and 36.4% were adults over the age of 25. The average household size was 2.85 people. There were 8,398 households without children with 4.2% being young adults and the remaining 95.8% being adults over the age of 25. Young adults used a larger percentage of the Transitional Housing beds (60.6%) than the 39.4% used by young adults in Emergency Shelters. Unsheltered: Within the unsheltered population in Alameda County, 6064 individuals were reported as 25 or older, 213 were between the ages of 18-24, and 66 were reported as children under 18.

Figure 12: Age Disparities Between Sheltered and Unsheltered Status



This represents a 3% decrease in unsheltered adults above 25 years old, a 64% decrease in the number of people between the ages of 18-24, and a 76.0% decrease in the number of children under 18 experiencing unsheltered homelessness. Overall, within the total homeless population, including both sheltered and unsheltered, Alameda County saw a 3.2% increase in homelessness among adults, while the population under 18 decreased 27.0% from 2022 to 2024. Young adults decreased 46.6% from 804 in 2022 to 425 in 2024.

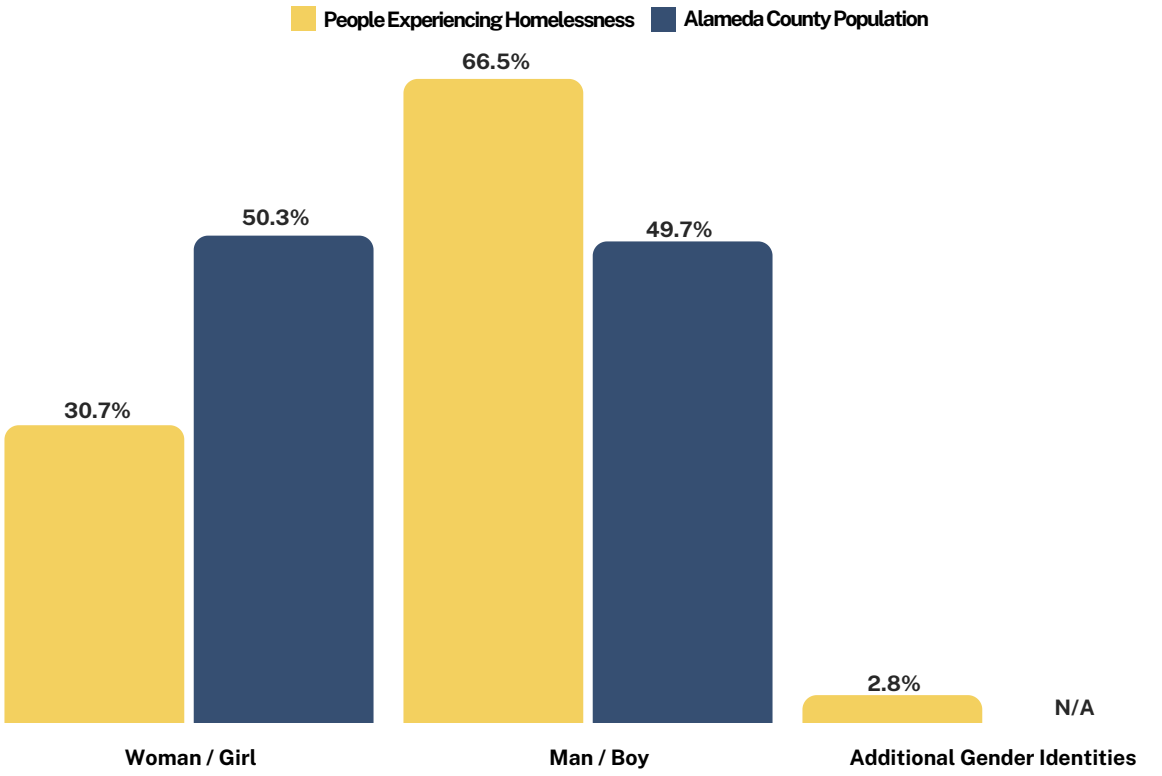
When comparing the Alameda County 2024 Point-in-Time Count of people experiencing homelessness to Census information, individuals under 18 represent 4.5% and 19.5% respectively. In contrast to this comparison, those experiencing homelessness between the ages of 35-44 make up 24.2% of the homeless population while they represent 15.7% of the greater populace.

Within Alameda County, 659 individuals 65 years and older made up 9.3% and 5.8% of sheltered and unsheltered populations, respectively. Within the overall homeless population, individuals over 55 accounted for 25.3% of those recorded as people experiencing homelessness while representing 27.9% of the general population. At a national level, over 19.6% of the homeless population is made up of individuals over 50 years old.

Gender Demographics

Men make up nearly two-thirds of the population experiencing homelessness, 6,296 (66.6%) of the total population while women accounted for 2,898 (30.7%) and other gender groups accounted for less than 2.7% with 255 people. In the County population, 49.7% of the population were recorded as men and 50.3% as women. (It is important to note that the US Census data currently does not provide gender demographic data beyond men and women.)

Figure 13: Gender Comparison with County Population

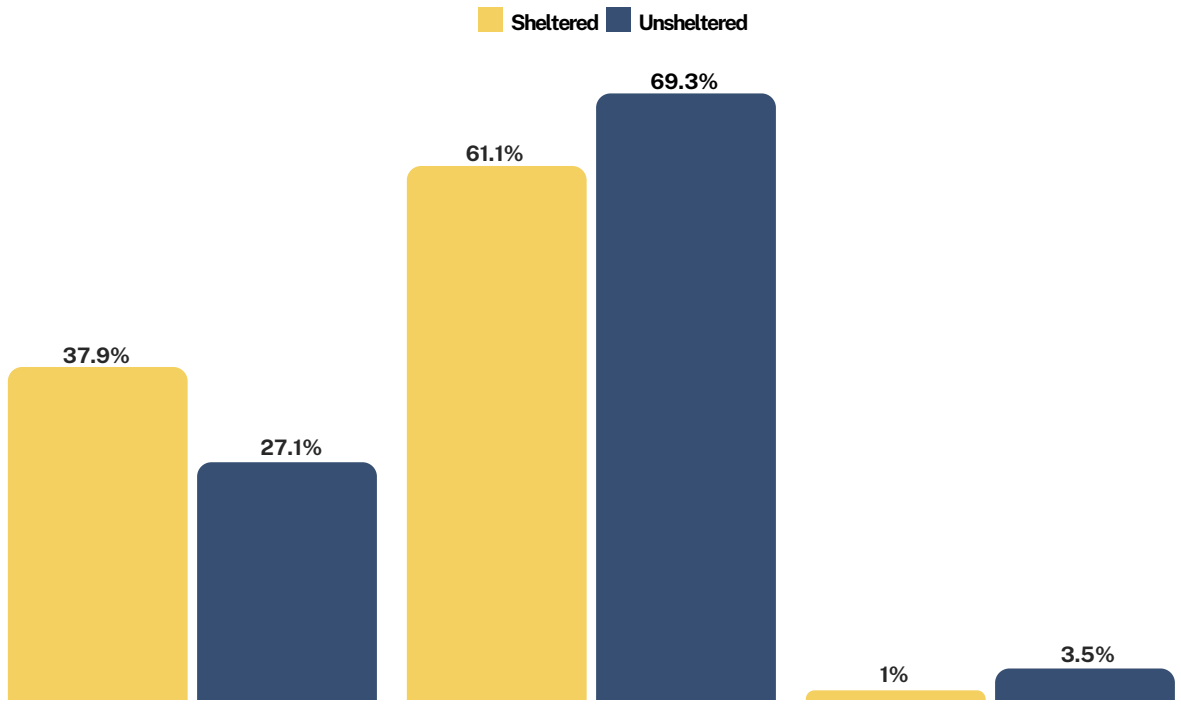


The gender distribution is different for families. Within households with adults and children, the survey findings showed that 60.5% of respondents identified as women and 35.2% identified as men.

Gender Differences between Sheltered & Unsheltered Populations

Men are overrepresented in the homeless population in general and they are more likely to be unsheltered than women. People who identify as a gender other than man or woman are also more likely to experience unsheltered homelessness.

Figure 14: Gender Differences by Sheltered Status

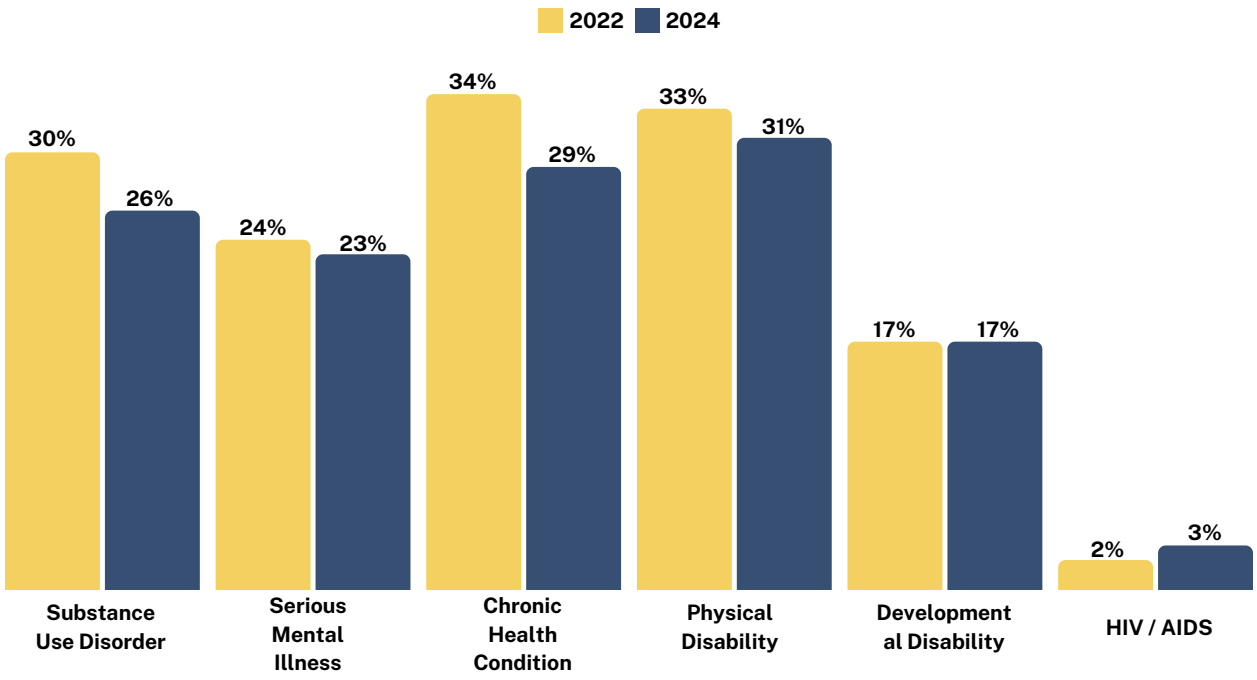


HEALTH & WELLNESS

According to the National Health Care for the Homeless Council (NHCHC), the average life expectancy for individuals experiencing homelessness is 25 years less than those in stable housing. Without regular access to safe and stable housing, many individuals also lack access to healthcare, experience preventable illness, and often endure longer hospitalizations than those who have safe and stable housing. It is estimated that those experiencing homelessness stay four days (or 36%) longer per hospital admission than non-homeless patients.[8]

The presence of a disabling condition, which can be exacerbated by homelessness,[5] can hinder a person from being able to obtain employment and maintain stable housing. In Alameda County, 60.3% of those who completed the Point-In-Time survey were found to have at least one disabling condition. The prevalence rates of disabling conditions for the people experiencing homelessness who were surveyed are shown below.

Figure 15: Self-Reported Disability Conditions Over Time



[8] National Health Care for the Homeless Council. (2020). National Homeless Mortality Overview.

KEY SUBPOPULATIONS

As homelessness is a complex issue, it is often beneficial to focus the conversations on particular "subpopulations." Three of these key subpopulations are:

1

People experiencing chronic homelessness

2

Veterans

3

Unaccompanied children and transition-age youth

Local progress toward ending homelessness can be evaluated broadly as well as by each of these subpopulations. Alameda County also places specific attention to these population groups and reports on progress in the Home Together annual updates. The following evaluation utilizes data gathered from local Point in Time counts as well as results from the national count.

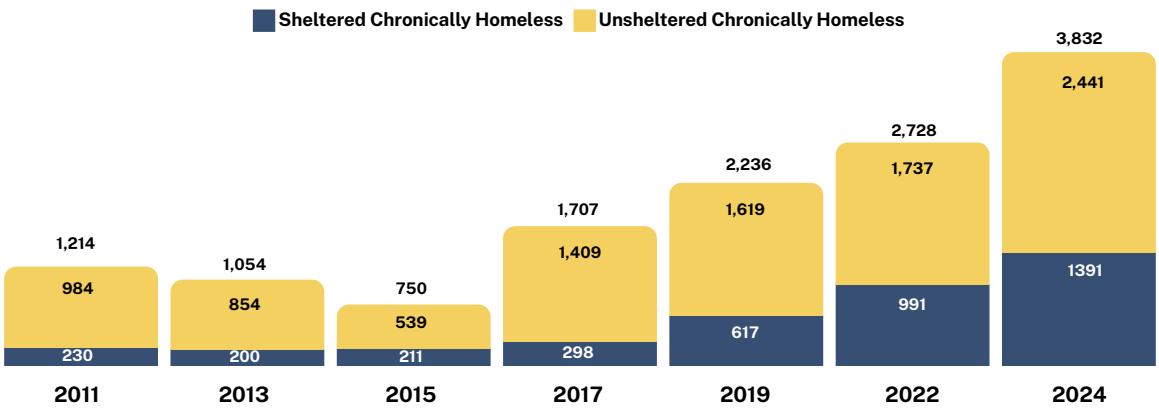
Chronic Homelessness

HUD defines a chronically homeless person as someone who has experienced homelessness for a year or longer — or who has experienced at least four episodes of homelessness totaling 12 months in the last three years — and also has a disabling condition that prevents them from maintaining work or housing. This definition applies to adult individuals and people in households with adults and children who meet the definition.

The chronically homeless population represents one of the most vulnerable populations[5] experiencing unsheltered homelessness; the mortality rate for those experiencing chronic homelessness is four to nine times higher than that of the general population. The chronic homeless population tends to have higher community costs attributed to emergency room visits, interactions with law enforcement, incarceration, and regular access to social support and homeless services. These combined costs are often significantly higher than the cost of providing individuals with permanent housing and supportive services. In Alameda County, the PIT Count found that 1,391 sheltered individuals and 2,441 unsheltered individuals were categorized as experiencing chronic homelessness.

In Alameda County, 1,391 of 2,532 adults (54.9%) in shelters were determined to be chronically homeless whereas 2,441 of the 6,277 (38.9%) from the unsheltered count were determined to be chronically homeless.

Figure 16: Chronic Homelessness Over Time



In the 2023 Annual Homelessness Assessment Report (AHAR), HUD found that 154,313 individuals were experiencing chronic homelessness, which is just under one-quarter of all homeless individuals. Within Alameda County, 3,629 of 8,725 (41.5%) individual adults were estimated to be chronically homeless. For households, the percentages are lower with 203 of the 701 (29.0%) people in households with at least one adult and one child considered to be chronically homeless in the 2024 Count.

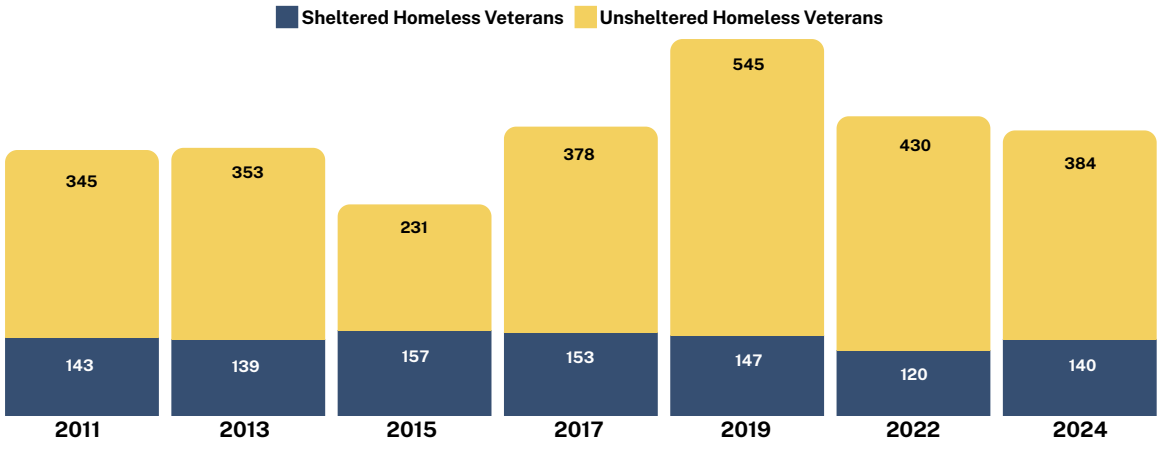
Veterans

U.S. veterans experience conditions that place them at increased risk for homelessness. Veterans experience higher rates of post-traumatic stress disorder (PTSD), traumatic brain injury (TBI), sexual assault, and substance abuse. Veterans experiencing homelessness are more likely to live on the street than in shelters and remain unsheltered for extended periods.[9]

The U.S. Department of Veterans Affairs (VA) provides a broad range of benefits and services to veterans of the U.S. Armed Forces. These benefits can involve different forms of financial assistance, including monthly cash payments to disabled veterans, health care, education, and housing benefits. In addition to these supports, the VA and HUD partner to provide additional housing and support services to veterans currently homeless or at risk of homelessness.

Within Alameda County's PIT Count, within the 523 veteran households of the 546 individuals, 524 individuals were identified as veterans. This represents 5.8% of all adults found on that night. Veterans make up approximately 3% of the population overall in the county. While the majority of those found in veterans households were adults without children, there were two households with children with a total of six people in those households. There were almost three times the number of veterans living unsheltered than those staying in shelters. Men made up 82% of the population with only 12.7% women total between sheltered and unsheltered groups and 5% identified as a gender other than men or women.

Figure 17: Veteran Homelessness Over Time



Within shelters, 30 persons in veteran households were determined to be chronically homeless, and 189 people in the unsheltered veteran households were determined to be chronically homeless.

[9] National Coalition for Homeless Veterans. Veteran Homelessness.

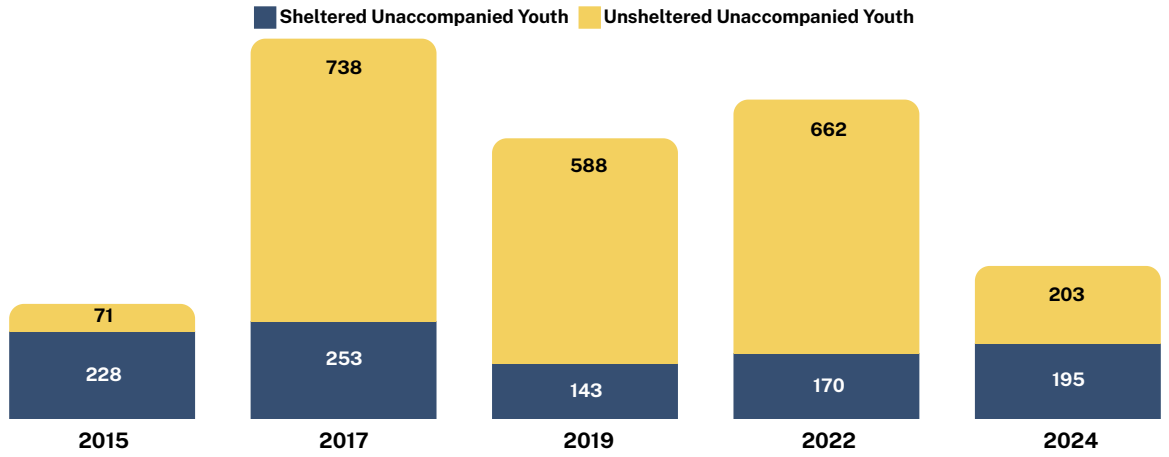
Transition Age Youth & Parenting Youth Under 25

Young people experiencing homelessness tend to have difficulty accessing shelter, medical care, and employment. Potential reasons for this include the stigma of their housing situation, lack of knowledge of available resources, and a dearth of services targeted to young people.

Although largely considered an undercount, nationwide estimates from 2023 suggest there are over 34,000 unaccompanied youth experiencing unsheltered homelessness and in public shelters, with most being between the ages of 18 and 24. According to the 2023 AHAR *"Unaccompanied youth experiencing homelessness were more likely than all individuals experiencing homelessness to be women or girls (38% vs. 30%)"*.[10] In comparison, women represented 34.7% of the Alameda County findings, and 7.5% identified as a gender other than men or women. The sheltered unaccompanied youth represented 49.0% of the population with 195 of the 398 total residing in Emergency Shelter or Transitional Housing.

The estimated number of unaccompanied youth decreased 52.6% from 832 people in 2022 to 398 in 2024. Rates of unsheltered homelessness among this group decreased from 80% in 2022 to 57% in 2024. Seven percent of unaccompanied youth were under 18 whereas 93% were between the ages of 18 and 24.

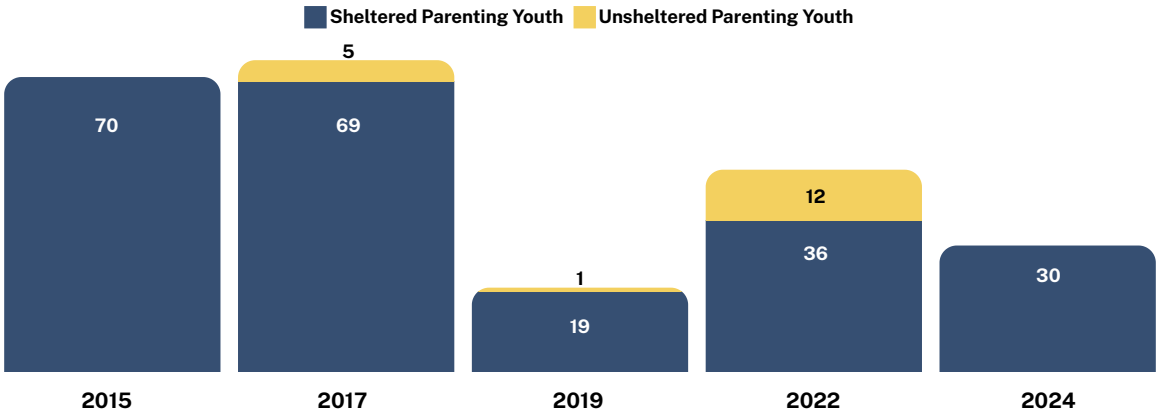
Figure 18: Unaccompanied Youth Over Time



[10] U.S. Department of Housing and Urban Development. (2023). HUD Releases 2023 Annual Homeless Assessment Report Part 19 Website address: https://everyonehome.org/main/continuum-of-care/point-in-time-count-2024/

In 2024, there were 30 parenting youth counted, and all were found in shelters. This represents a 37.5% decrease since 2022.

Figure 19: Parenting Youth 2015-2024



Survivors of Domestic Violence

7.3% of the adult population experiencing homelessness in Alameda County (666 people) were currently fleeing domestic violence in 2024, up from 6% in 2022. When disaggregated by gender identity, 16.9% of those who identified as women were currently fleeing domestic violence compared to 3.9% of those who identified as men. The number of those who had experienced domestic violence at any point in their lifetime was substantially higher at 32.8% (compared to 31% in 2022).

Being female was associated with 5.6 times greater odds of experiencing DV compared to if you were male, after adjusting for sexual orientation, age, and race. Being transgender was associated with 4.4 times greater odds of experiencing DV compared to if you were male, again adjusting for sexual orientation, age, and race. Not being straight was associated with 1.8 times greater odds of having experienced domestic violence compared to those who are straight, after adjusting for age, race, and gender.

COMMUNITY-SPECIFIC UNSHELTERED SURVEY FINDINGS

While HUD provides guidance for specific data collection requirements for the Point-in-Time Count, many communities also use the opportunity to collect additional data to learn more about the experiences and needs of people experiencing homelessness. The following charts represent the responses from people who answered survey questions with a volunteer during the count efforts. Please note that the results below are included in the comprehensive Point-in-Time Count dashboard website on the Community Specific Insights tab and are fully interactive.[11] The interactivity allows for cross-sectional analysis of survey data so end users can drill down into various subcategories of demographic information, responses, etc.[9]

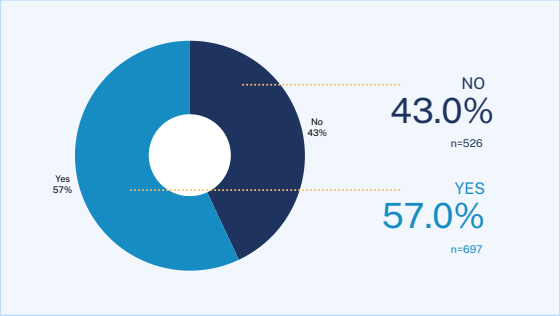
In Alameda County, 1,506 people agreed to provide answers to survey questions. Youth (anyone under the age of 25 with or without dependent children) were asked to provide answers to questions in a youth addendum. Respondents could refuse to provide answers to any questions if they did not feel comfortable providing the information. The findings below include the percentage and number of people who provided answers for each question and exclude respondents who did not answer the question.

Episodes and Duration of Homlessness

First Time Experiencing Homelessness

More than half of those experiencing unsheltered homelessness indicated that this was their first time experiencing homelessness. This is a significant change from 2022 in which 31% of people said they were experiencing homelessness for the first time.

Figure 20: First Time Experiencing Homelessnes *N=1,506*

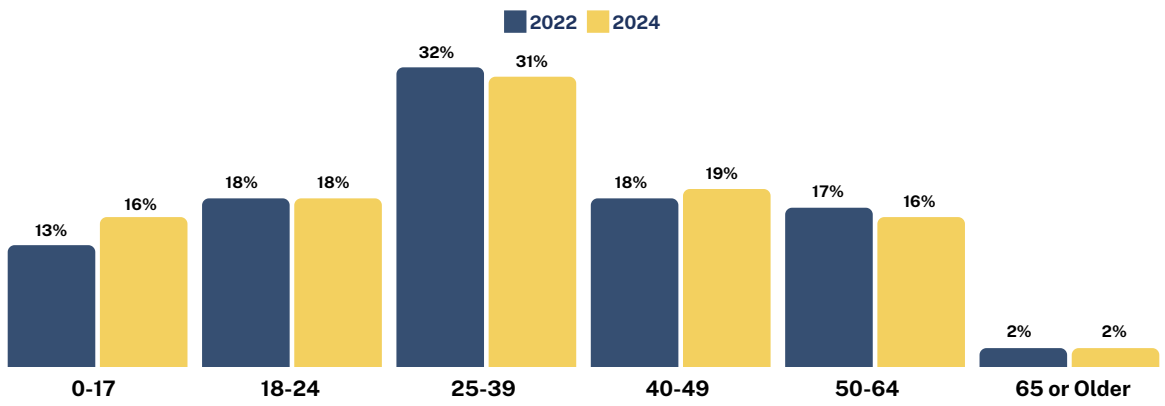


[11] Website address: https://everyonehome.org/main/continuum-of-care/point-in-time-count-2024/

Age of First Homelessness Experience

Survey findings suggest the most common age when people first become homeless in Alameda County to be between 25 and 39.

Figure 21: Age First Experienced Homelessness *N=1,506*

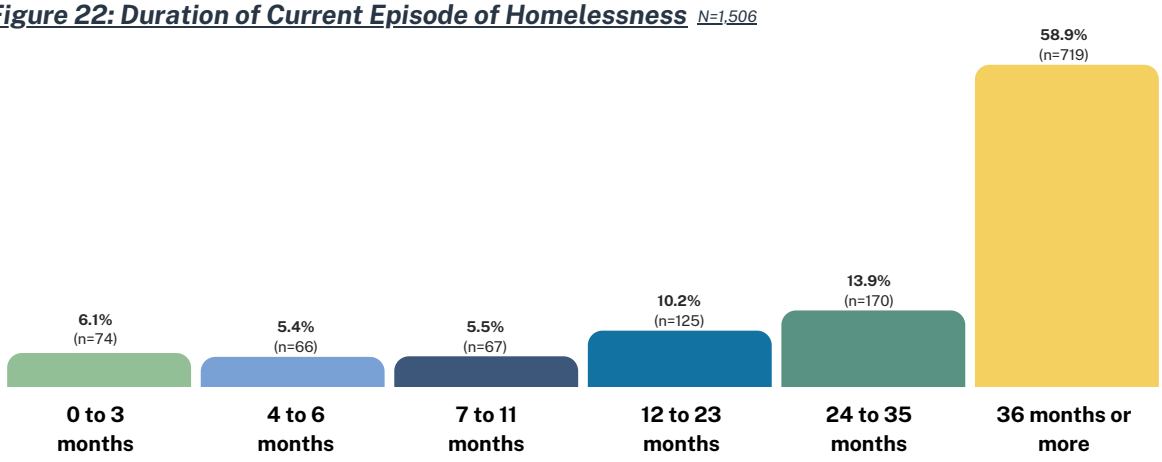


2022 n=1,397; 2024 n=1,138
Note: Percentages may not add up to 100 due to rounding.

Length of Time Homeless for Current Episode

More than half of the unsheltered population in Alameda County indicated their current episode of homelessness has been 3 years or longer.

Figure 22: Duration of Current Episode of Homelessness *N=1,506*



Number of Homeless Episodes in the Last Three Years

Due to the substantial number of respondents who have had a long duration of experiencing homelessness, more than half of the people interviewed did not need to provide the number of homeless episodes over the last three years. For those who did respond, 50.8% had fewer than four episodes, while 49.2 % had 4 or more episodes.

Figure 23: Number of Homeless Episodes in the Last 3 Years *N=1,506*

Length of Time Living in Alameda County

More than three-quarters of all respondents indicated they lived in the community for ten years or longer. Only 7.1% of people interviewed reported living in the county for one year or less.

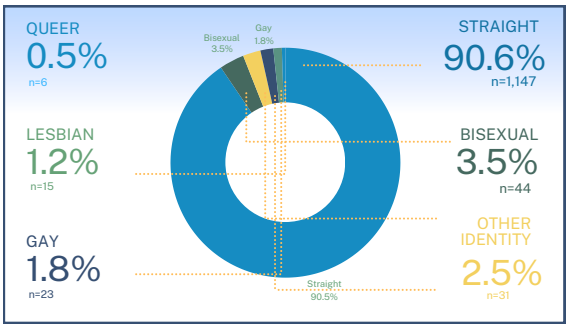
Figure 24: Length of Time Living in Alameda County *N=1,506*

Additional Demographic And Household Information

Sexual Orientation

84% of survey respondents provided information about their sexual orientation. Of those that responded, 90.6% identified as straight. While 9.4% identified as an orientation other than straight.

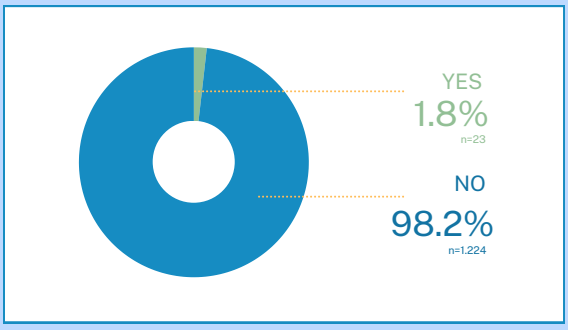
Figure 25: Sexual Orientation *N=1,506*



Pregnancy Status

The percentage of the unsheltered population surveyed who reported either being pregnant or expecting a child was 1.8%.

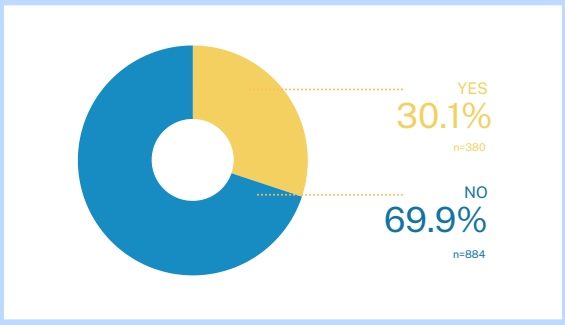
Figure 26: Pregnancy Status *N=1,506*



Pets

Just over 30% of the population experiencing unsheltered homelessness in Alameda County reported having one or more pets with them.

Figure 27: People with Pets *N=1,506*



Primary Events Contributing to Homelessness

Homelessness is a complex issue and often several factors contribute to a person's housing crisis. The unsheltered survey allowed respondents to provide as many responses as necessary to the question asking about the primary events leading to their current episode of homelessness and as a result the total of the percentages will be over 100%. The most prevalent answers include housing loss (35.4%), income issues (22.0%), health related issues (18.1%) and household breakup issues (18.0%).

Table 9: Primary Reasons for Homelessness *N=1,312*

Housing Loss Related	**35.4%**
Eviction, Foreclosure, Rent Increase	17.2%
Can No Longer Stay with Friends or Family	12.7%
Lost Subsidy	6.9%
Stopped Using Supports	1.7%
Aged Out of Foster Care	0.5%
Gender or Sexual Orientation not Accepted	0.6%
Income Related	**22.0%**
Job Loss	14.9%
Other Money Issues	8.5%
Other	**19.2%**
Health Related	**18.1%**
COVID Related	4.0%
Mental Health Issues	5.3%
Physical Health Issues	3.7%
Substance Use Issues	9.1%
Household Breakup Related	**18.0%**
Death of Someone Close	9.5%
Divorce or Breakup	9.0%
Victimization Related	**12.4%**
Domestic Violence	6.4%
Crime Victim	6.1%
Racism	0.8%
Incarceration	**5.6%**

Employment

Just over 10% of the unsheltered population surveyed indicated they had employment. Only 3.1% of respondents indicated their employment was full-time. Almost one-quarter of the population who is not employed reported being unable to work.

Figure 28: Employment Status of Unsheltered Respondents *N=1,312*

Those who were not employed were asked about factors keeping them from work. Respondents could provide more than one answer. The most common factors impacting becoming employed are health issues, particularly a physical disability, and a lack of resources needed to support working.

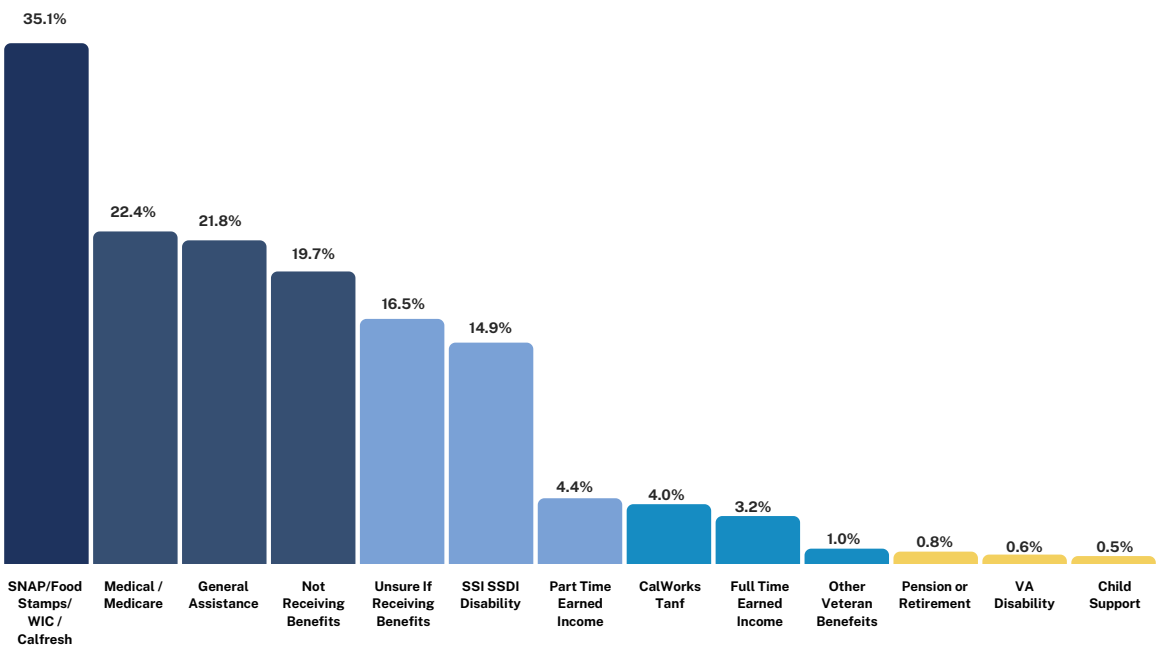
Table 10: Factors Impacting Employment *N=922* [7]

Health Issues	**40.7%**
Physical Disability	16.6%
Mental Health Needs	9.0%
Health Problems	8.6%
Alcohol/Drug Use	3.5%
Developmental Disability	2.7%
COVID-19 Issues (safety, fear, caregiving, etc.)	0.3%
Resource Needs	**22.7%**
No Permanent Address	8.0%
No Transportation	3.9%
No Phone	2.6%
No Photo ID/Social Security Card	2.3%
Lack of Confidence	1.4%
No Access to Technology	1.2%
Need Clothing/Shower Facilities	0.8%
Need Education/Training/Skill Development	0.8%
Fear of Losing Personal Belongings	0.7%
No Work Permit	0.7%
Childcare Needs	0.3%
Pet Care	0.1%
No Available Work/Jobs	**15.5%**
Other	**12.1%**
Discrimination Related	**6.0%**
Criminal Record	3.5%
Age	2.5%
Not Wanting Work	**3.0 %**
Doesn't Want to Work	2.6%
Risk of Losing Benefits if Working Too Much	0.4%

Benefits Received

Seventy-eight percent of people experiencing unsheltered homelessness who completed a survey provided a response regarding any benefits they receive or have received over the last twelve months. The most common benefit reported was SNAP/ Food Stamps / WIC / CalFresh food assistance. Almost 20% of the population reported they were not receiving any benefits, while 16.5% reported that they did not know if they were receiving them.

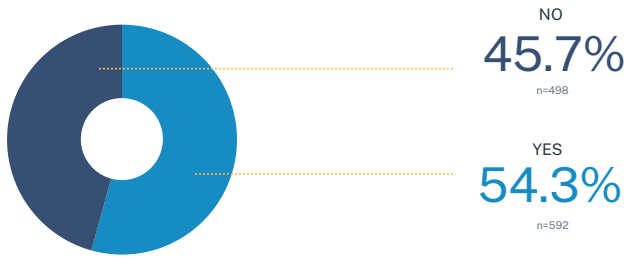
Figure 29: Benefits Received *N=1,180*



Medical Visits in the Last Year

Just over 54% of the unsheltered people surveyed reported having a medical visit during the last 12 months.

Figure 30: Having a Medical Visit in the Past 12 Months *N=1,180*



Barriers to Using Shelter Services

The barriers to using shelter services fall into three overarching categories: Shelter Experience (58.4%), Shelter Rules and Restrictions (54.2%), and Location (14.9%). The most frequent answers were that shelters were too crowded (23.9%), and imposed curfews (23.7%). Please note that people responding to this question could provide more than one response, therefore the total percentage will be greater than 100%.[7]

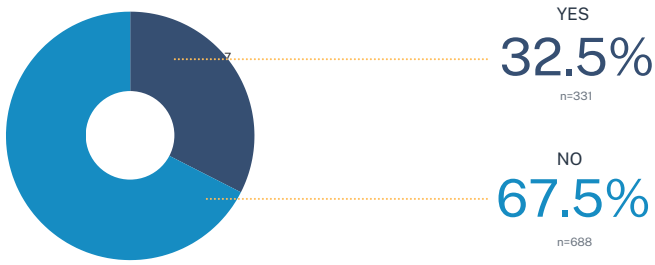
Table 11: Barriers to Accessing Shelter *N=1,057*

Shelter Experience Related	**58.4%**
Too Crowded	23.9%
Personal Safety Concerns	19.7%
Privacy Concerns	18.7%
Shelters are Full	14.3%
Germs	10.8%
No Storage for Belongings	10.0%
Bugs	6.2%
Not Enough Staff	3.2%
Racially Unwelcome	2.5%
Gender or Sexual Orientation not Accepted	0.6%
Rules and Restrictions Related	**54.2%**
Curfew	23.7%
Too Many Rules	18.4%
Can't Bring My Pet	8.9%
Can't Stay with Partner/Family	7.8%
Can't Stay with Friends	5.7%
Hours of Operation	4.9%
Alcohol and Drugs Prohibited	4.7%
Location Related	**14.9%**
Don't Know Where Shelters Are	9.7%
Shelters Too Far Away	5.8%

Interactions with the Criminal Justice System in Last Year

Nearly one third of people experiencing unsheltered homelessness surveyed (32.5%) indicated that they had an interaction with the criminal justice system during the last year.

Figure 31: Interacted with Criminal Justice in the Past Year *N=1,057*



YOUTH ADDENDUM UNSHELTERED SURVEY FINDINGS

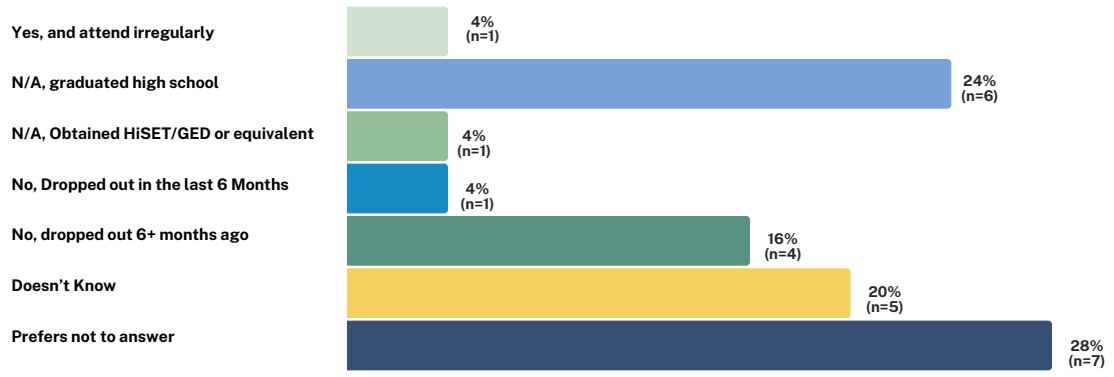
While communities conducting Point-in-Time Counts strive to find as many people experiencing unsheltered homelessness as possible, youth are typically the most challenging group of people to find during canvassing efforts. Youth experiencing homelessness may not meet the specific definitions of homelessness included in the traditional PIT Count. They also may be reticent to identify themselves as homeless and therefore less likely to engage with a Count Volunteer. Due to these factors, youth experiencing homelessness are likely to be undercounted in the PIT and many communities conduct separate youth counts at a different time to get a more complete understanding of youth homelessness.

In Alameda County, very few youths experiencing unsheltered homelessness agreed to answer questions included in the Youth Addendum (see survey instrument in Appendix C). Depending on the question asked, responses came from between 3 and 25 people. As a result, limited conclusions should be drawn from these data and some question responses will not be displayed.

Education Status Among Youth

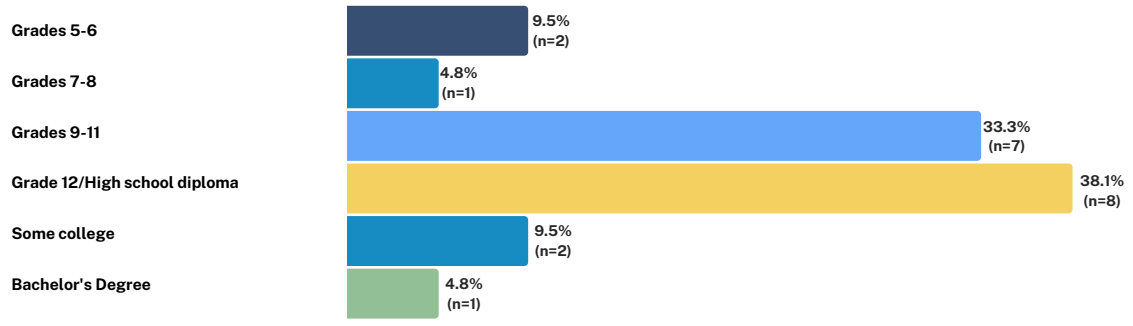
Twenty-eight percent of youth surveyed indicated they graduated high school or obtained a high school equivalency. Twenty percent indicated they dropped out of school. Many (28%) preferred not to answer.

Figure 32: Youth Enrolled in School *N=26*



Of the youth who responded to the question about the last grade completed in school, 52.4% graduated high school, attended some college, or held a bachelor's degree.

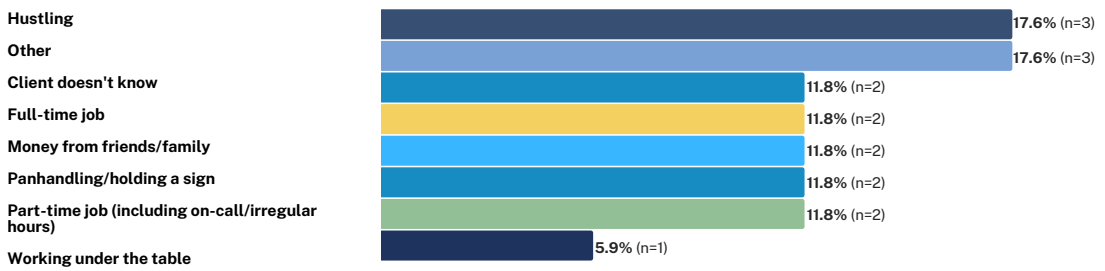
Figure 33: Last Grade Completed *N=26*



Youth Income Sources

Only 17 youth provided information about their sources of income over the last year. Those responses are as follows:

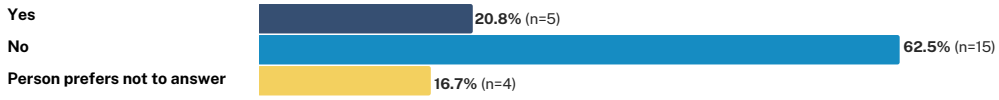
Figure 34: Youth Income Sources in the Past Year *N=26*



Foster or CPS Care

Almost 21% of youth experiencing homelessness indicated they were in Foster Care or Child Protective Services (CPS) care.

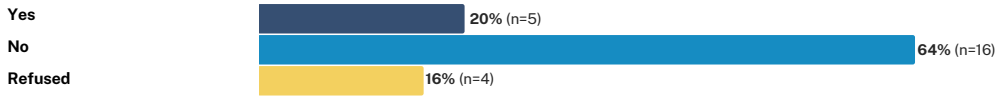
Figure 35: Youth In Foster or CPS Care *N=26*



Juvenile Justice Involvement

Twenty percent of youth who responded to the survey indicated they had a history of juvenile justice involvement. All five indicated that they were not currently on parole or probation.

Figure 36: Juvenile Justice Involvement *N=26*

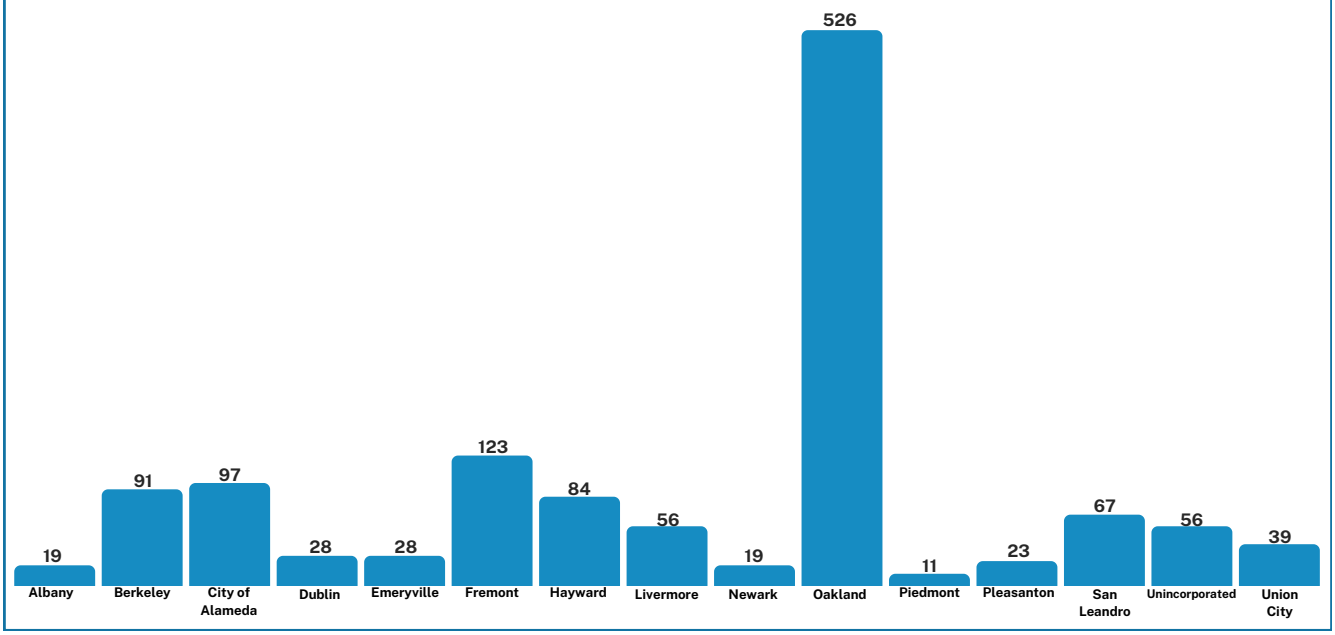


VOLUNTEERS

Alameda County is committed to ending homelessness and that includes solutions that emphasize the importance of equity in all its committees, decision making and policies. As such, the 2024 PIT Count was the first time a county collected the demographics of people volunteering to conduct surveys of people experiencing unsheltered homelessness. While these data provide a baseline analysis for 2024, these demographic comparisons can help the county strategize targeted volunteer recruitment, determine if surveyor bias may be impacting survey completion rates or data collection, and if there is a need for more volunteer training related to race equity.

Additionally, the change in survey approach necessitated more volunteers to facilitate surveys this year. The county and the individual jurisdictions conducted very successful recruitment efforts and 1,278 people registered to volunteers. Volunteers included community members, staff from county cities and service providers, and most importantly, people with lived experience of homelessness. In fact, just over 20% of the people who volunteered to conduct surveys were formerly or currently experiencing homelessness.

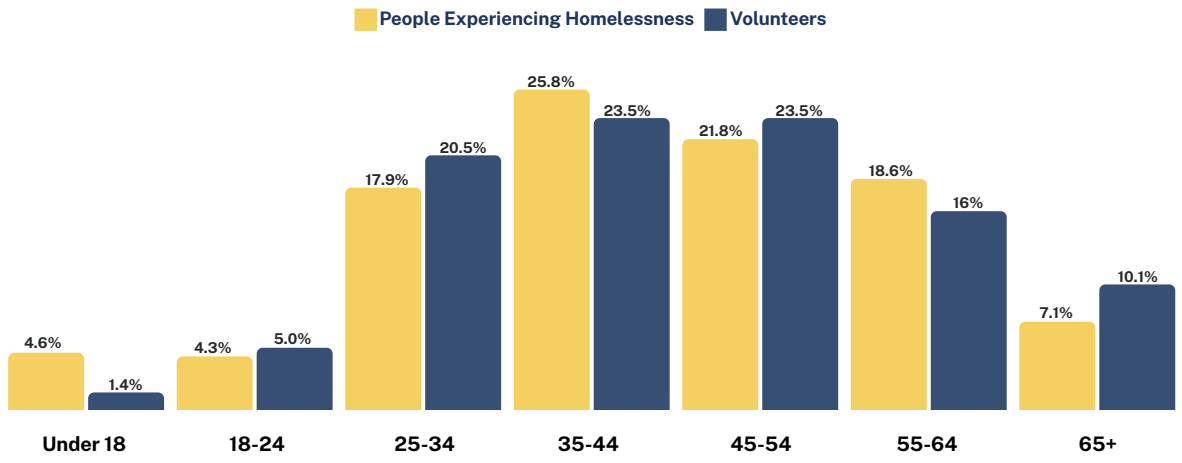
Figure 37: Volunteers By Jurisdiction



Volunteer Age

The ages of volunteers are relatively similar to the population experiencing homelessness. More disparity between groups exists in children under the age of 18 and adults over the age of 65. Many communities choose not to have surveyors in the field who are under 18 unless they are with a parent. Therefore, it is not surprising to see this much of a difference between the populations. Similarly, older adults are often more likely to be retired and have more availability for volunteering.

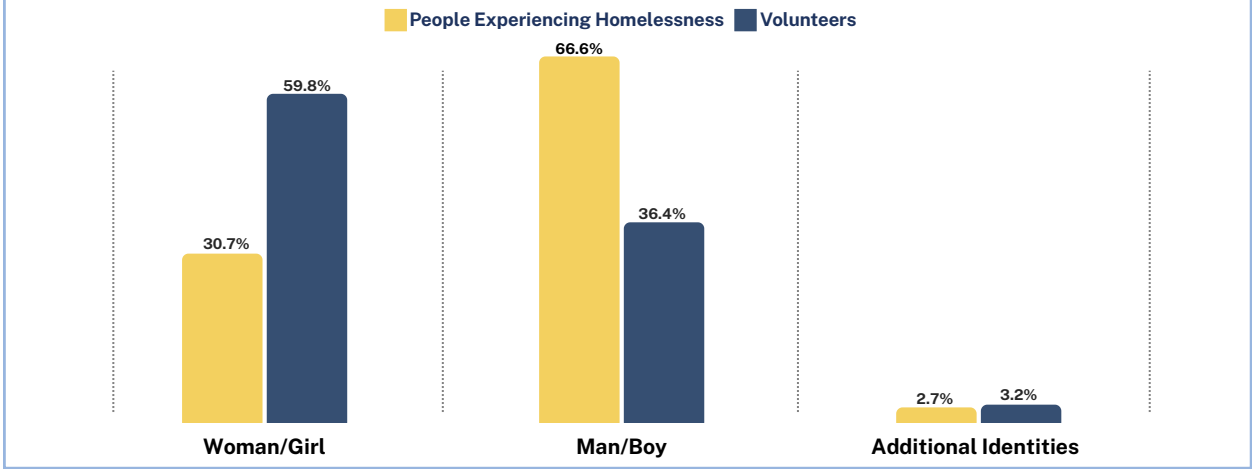
Figure 38: Age Comparisons Between Volunteers and Homeless Populations



Volunteer Gender

Most of the volunteers in Alameda County this year were women (59.8%). As seen in the gender demographics in Figure 39, men are over-represented in the population of people experiencing homelessness. They were under- represented in the pool of volunteers, making up only 36.4% of the group. People who identified as a gender other than man or woman had similar representation to the homeless population.

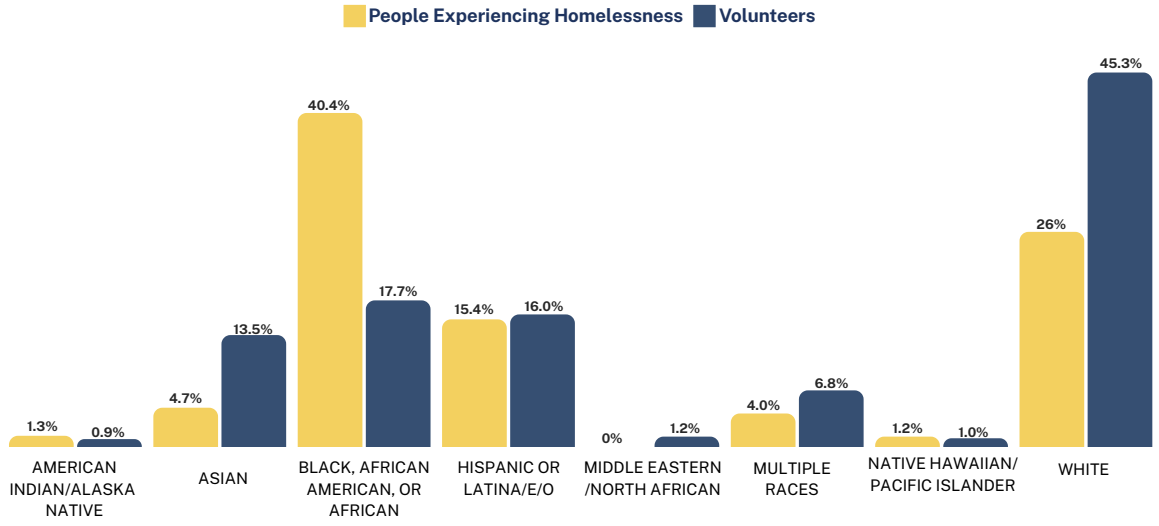
Figure 39: Gender Comparisons Between Volunteers and Homeless Populations



Volunteer Race

Black, African, and African American people disproportionately comprise the homeless population (40.4%), yet only 17.7% of volunteers identified as such. Asian, Multi-Racial, and White people had higher representation in the pool of volunteers than the representation in the population experiencing homelessness.

Figure 40: Race Comparisons Between Volunteers and Homeless Populations



LESSONS LEARNED AND FUTURE FOCUS

As described above, 2024 was the first year that Alameda County used a geographic sampling and enumeration method for the unsheltered count.[1] This method is described in detail in Appendix A.

Between 2017 and 2022, the methodology used for the unsheltered count was a census track level enumeration, attempting to cover directly all of Alameda County's' geography, followed by a targeted survey of approximately 1,500 people experiencing homelessness administered by street outreach workers during the weeks following the count. The survey used was detailed and time was spent completing it as fully as possible with those who consented to be surveyed.

In 2024, roughly the same number of surveys was collected (1,506) but these were administered on a single morning at the same time as the enumeration sampling was conducted, requiring a much larger number of volunteers on the morning of the count. A successful volunteer recruitment led to the largest volunteer effort to date, more than 1,200 people, a significant success.

In preparation for administering the survey on the morning as the count, the previous instrument was reviewed and some questions were removed from the survey instrument. However, even with a shorter survey the response rate on some questions was low. For example, the youth addendum had an extremely low response rate (between 3 and 25 respondents depending on the question), not high enough to draw any statistically significant conclusions. Likewise, the community had hoped to be use information about where people lived prior to becoming homeless to inform targeting for prevention programs and report on the relationship between historic racial injustice, such as neighborhood redlining, and current disparities in homelessness. However, the response rate for this question was too low to draw statistically significant conclusions.[2]

In the future we hope to review the questions that underperformed, refine the survey methodology and training, and the balance between the number and type of questions and the survey time needed to get a higher response rate for any questions included.

[1] We note that this is not the first time that a statistical sampling method was used. Between 2003 and 2015 Alameda County used a service site-based sampling method that also estimated the total unsheltered population from a detailed sampling strategy. This method was replaced by a full enumeration approach in 2017.

[2] Some of this information may still be useful for designing neighborhood targeting strategies for prevention, but any findings will need to be approached with some caution.

APPENDIX A: Count Methodologies

Sheltered Count

GOAL: The goal of the sheltered Count is to gain an accurate Count of persons temporarily housed in shelters, transitional housing, and safe haven programs across the county.

These data are vital to gaining an accurate, overall Count of the homeless population and understanding where homeless persons receive shelter.

DEFINITION: For the purposes of this study, the HUD definition of sheltered homelessness for PIT Counts was used. This definition includes individuals and families living in a supervised publicly or privately operated shelter designated to provide temporary living arrangements such as emergency or transitional shelters or Safe Haven facilities.

RESEARCH DESIGN: All shelter data were gathered either directly from the shelter including domestic violence programs or from the county's Homeless Management Information System, except one shelter program that was unresponsive after numerous attempts and whose data were imputed using average occupancy and demographic data. Only programs listed on the Housing Inventory Chart (HIC) that were operational on the night of the Count were included.

All shelter data were collected either directly from the shelters, including domestic violence programs, or from the county's Homeless Management Information System. The only exception is one shelter program that did not respond despite numerous attempts. For this program, the data were estimated using average occupancy and demographic information. Only programs that were listed on the Housing Inventory Chart (HIC) and operational on the night of the Count were included.

DATA COLLECTION: To collect data on individuals staying in shelters, Simtech worked with the County HMIS staff. The County collected data on all emergency shelters, transitional housing programs, and Safe Havens operating in the county. Data was collected on household status, age, gender, race and ethnicity, veteran status, chronic status, and if individuals had certain health conditions following the HUD data requirements. Data were cleaned by HMIS staff and validated by the operator of the program.

In order to gather information about people staying in shelters, Simtech collaborated with the County HMIS staff. The County collected data from all emergency shelters, transitional housing programs, and Safe Havens operating in the county. The data included information about household status, age, gender, race and ethnicity, veteran status, chronic status, and whether individuals had certain health conditions, as per HUD data requirements. The collected data was then reviewed and verified for accuracy by the HMIS staff and the program operator.

The Unsheltered Count

Fully canvassing a large Continuum of Care (CoC) such as Alameda County for the point-in-time homeless census would require a tremendous number of surveyors. Fortunately, HUD supports a "geographic sampling and enumeration" model that enables regions to derive a statistically reliable point-in-time count estimate without necessitating the entire community to be canvassed. The reporting logic used within the Regional Command Center to support this model was developed by Simtech Solutions Inc. in collaboration with statistician and University of Pennsylvania professor, Dan Treglia, PhD. HUD has since authored the How to Use Sampling within a CoC to Conduct an Accurate Unsheltered Count paper which aligns with Simtech's approach.

Key Changes in Unsheltered Count Approach from 2022 to 2024

The CoC decided to transition from an approach that entailed a blitz count (trying to cover the entire county geography) combined with survey of a random sample of people experiencing homelessness, to a geographic sampling and enumeration approach. This transition increased the overall effort however we are confident that it also increased the accuracy and the depth of information that is now available to improve our collective understanding of the homeless population. This increase in effort was supported by the creation of a new role for jurisdictional leads from each city and town within the County who were guided through a facilitated process to help recruit surveyors, identify known locations of people experiencing homelessness, train surveyors, manage the count locally, and support any data cleanup needed. Key resources for Jurisdictional Leads, including details of their roles and responsibilities, training schedules, training videos, volunteer recruitment materials and other support materials can be found here.

Outreach staff used a "known location survey" within the Counting Us app, 211 call information, and GIS data of known encampment locations in the months before the count to designate census tracts likely to contain people experiencing homelessness (PEH). This information, along with the knowledge of how long it would take to complete the expanded survey, helped inform the community of the number of surveyors that needed to be recruited. The jurisdictional leads did a stellar job with this and recruited 1278 surveyors, compared to the 480 who participated in the 2022 PIT Count. The additional 798 people represent a 285% increase in participation, which was largely a result of the efforts of jurisdictional leads and the communities they represent.

These surveyors were assigned to a jurisdiction within the County and a count team within the jurisdiction. Team sizes were informed by the known location data, the size of each census tract, and the number of tracts designated for sampling.

Surveyors were provided with live virtual training, recorded videos, and documentation to ensure they were well prepared for the count. This preparation included how to engage people in a manner that is both culturally sensitive and trauma-informed, when to use each survey, and how to use the Counting Us app. Within the Counting Us app, surveyors were

provided details of who their team leader was, who else was on their team, where to meet, and what their designated coverage areas were.

Jurisdictional, CoC leads, and Simtech Solutions' staff monitored the incoming data via the Regional Command Center and used the real-time data capture to help ensure each community was properly canvassed and the incoming data was of high quality. If a jurisdictional lead had questions or a surveyor had an issue, the lead was able to connect with Simtech Solutions staff via a virtual help desk.

In the days following the count, large encampments that required additional time to fully canvas were revisited by outreach staff. Survey results were subsequently matched against data that had already been collected in HMIS using the person's name and date of birth. Any data missing from the PIT survey for which a value existed in HMIS was updated. The data was also screened for potential duplicates using an algorithm that looks at personally identifiable information as well as the location of each survey.

Sampling Strategy

A stratified random sample was employed to estimate the number of unsheltered people experiencing homelessness across the entire CoC. This approach required designating each of the 378 censuses block groups within the geographic boundaries of the COC as either "high" or "low" based on the probability of finding a person experiencing homelessness in that census tract. All high-probability areas, and a random sample of low-probability areas, were canvassed during the PIT Count.

The high probability designations were based on results from the previous year's count and institutional knowledge from outreach staff. The "Known Locations Survey" was used in the weeks leading up to the count to identify areas known to contain people experiencing homelessness (PEH). For Alameda County, Simtech worked with Jurisdictional Leads to coordinate with street outreach teams, first responders, and people who are either currently or formerly homeless to identify areas that are likely to contain people experiencing homelessness (PEH). These stakeholders were provided with training on how to capture the location information through the usage of a "Known Location Survey" that was added to the Counting Us mobile app. In addition to this, the GIS departments from Oakland and Pleasanton provided locations of encampments from their internal system.

The County's 211 system provided information on 1312 calls regarding PEH which also included the zip code the call was made from. While this information was not able to be directly correlated to census tracts, it was helpful to validate the designations that were made using the Known Location Survey. The chart to the right lists the ten zip codes that had the highest number of calls.

Rank	Zip Code	Count	Percent
1	94601	221	16.8%
2	94621	89	6.8%
3	94605	86	6.6%
4	94603	66	5.0%
5	94541	64	4.9%
6	94544	51	3.9%
7	94612	50	3.8%
8	94577	43	3.3%
9	94501	42	3.2%
10	94607	41	3.1%

The data gathered was used to designate a total of 234 of the 378 census tracts in which at least three (3) people were counted – all of which were marked as high-probability census tracts.

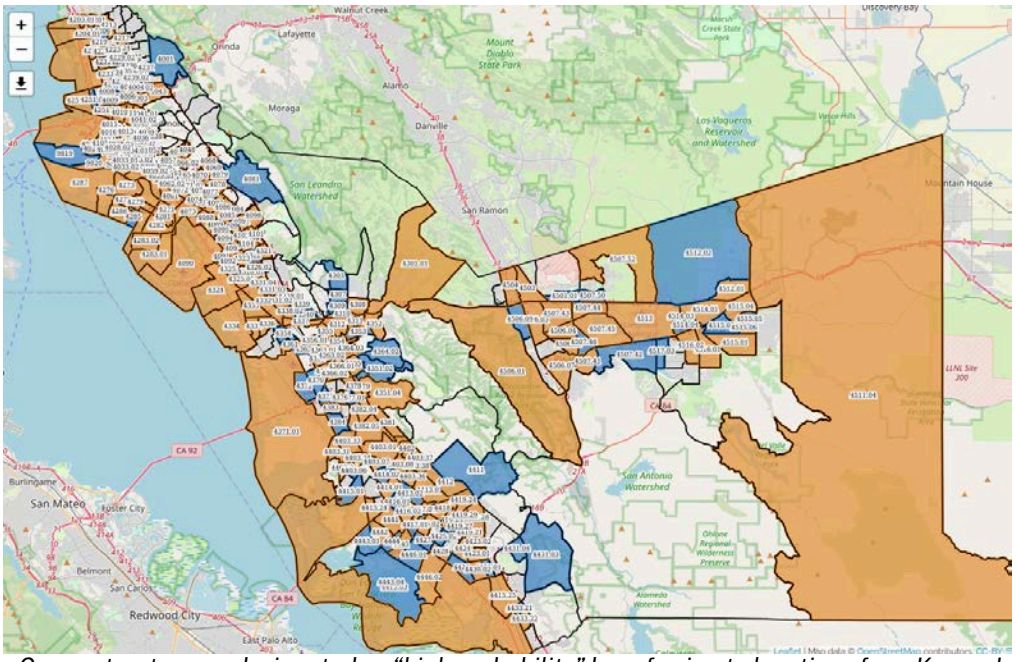


Figure 1 – Census tracts were designated as "high probability" by referring to locations from Known Location Surveys and GIS data provided by the City of Oakland. These are the areas in orange on the map.

The low-probability census area block groups to be canvassed are chosen through a random, computer-generated sample of all census area block groups that were not previously designated as High Probability areas. For Alameda County, there are 378 total census tracts, 234 of which were designated as High Probability and zero (0) indicated to be in an area not suitable for human habitation. This left a total of 144 low-probability areas to be randomly sampled.

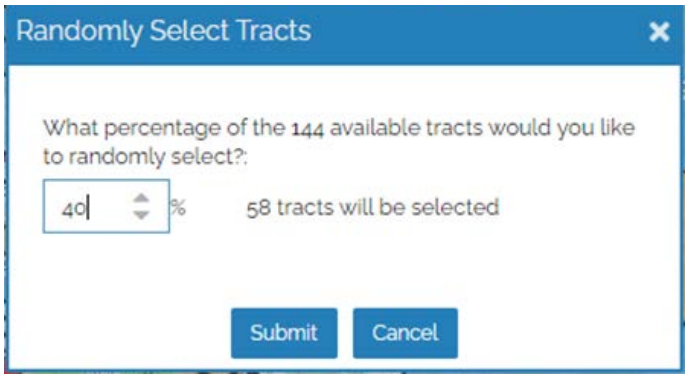
Determining the Number of Low Probability Census Area Block Groups to be Sampled

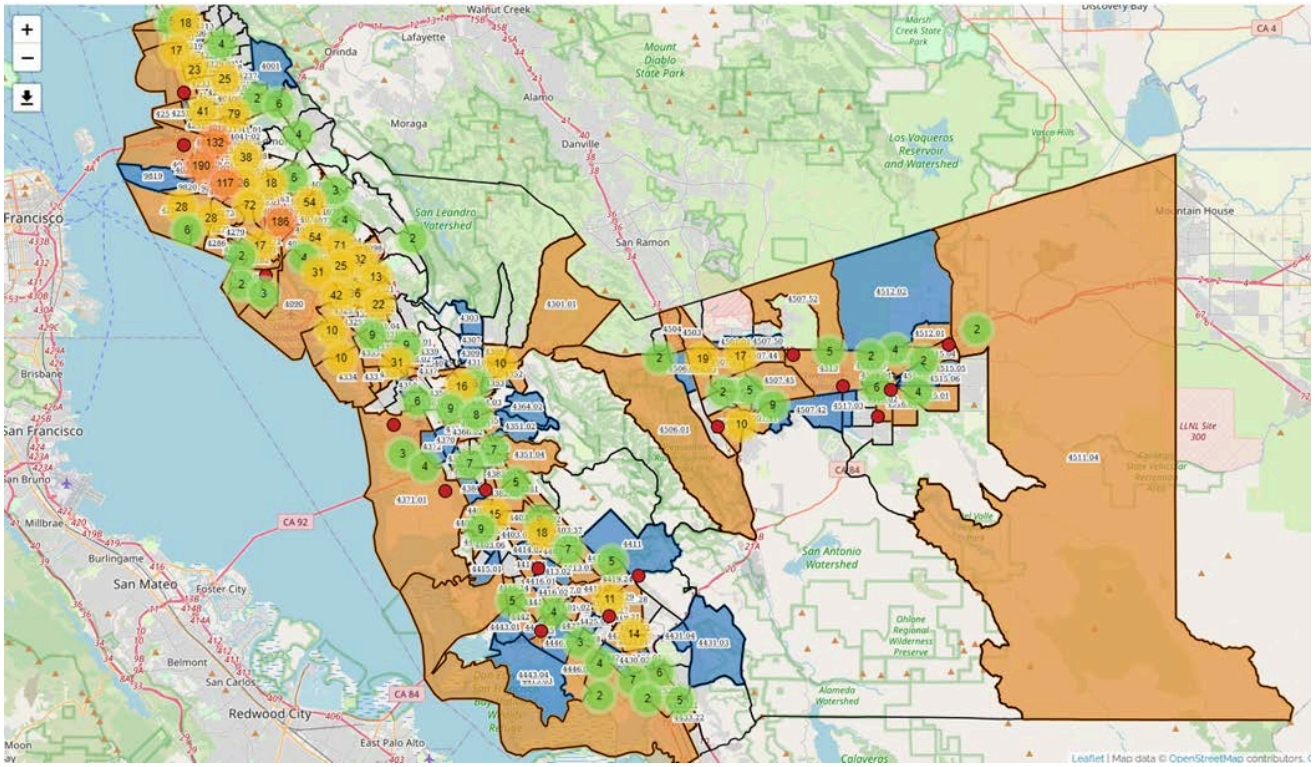
$$n_{LP} = \frac{1}{\frac{d^2}{{N_{LP}}^2 z^2 \sigma^2} + \frac{1}{N_{LP}}}$$

Simtech used the formula to the right to estimate the predicted precision of the count estimate based on the sample size of 144 areas. For Alameda County, the Confidence Level of 95% and a Margin of Error of 10% were used. This resulted in 58 of the 144 census tracts needing to be randomly sampled. This means 58 or more tracts need to be canvassed to have a confidence level of 95% that the real value is within ±10% of the measured/surveyed value.

Randomly Select Tracts in the Command Center

Based on the determination of the number of low-probability census tracts to be sampled, the “Randomly Select Tracts” function within the Command Center was then used to determine which of the tracts were to be canvassed and which were to be ignored. The resulting tract designation is shown below.



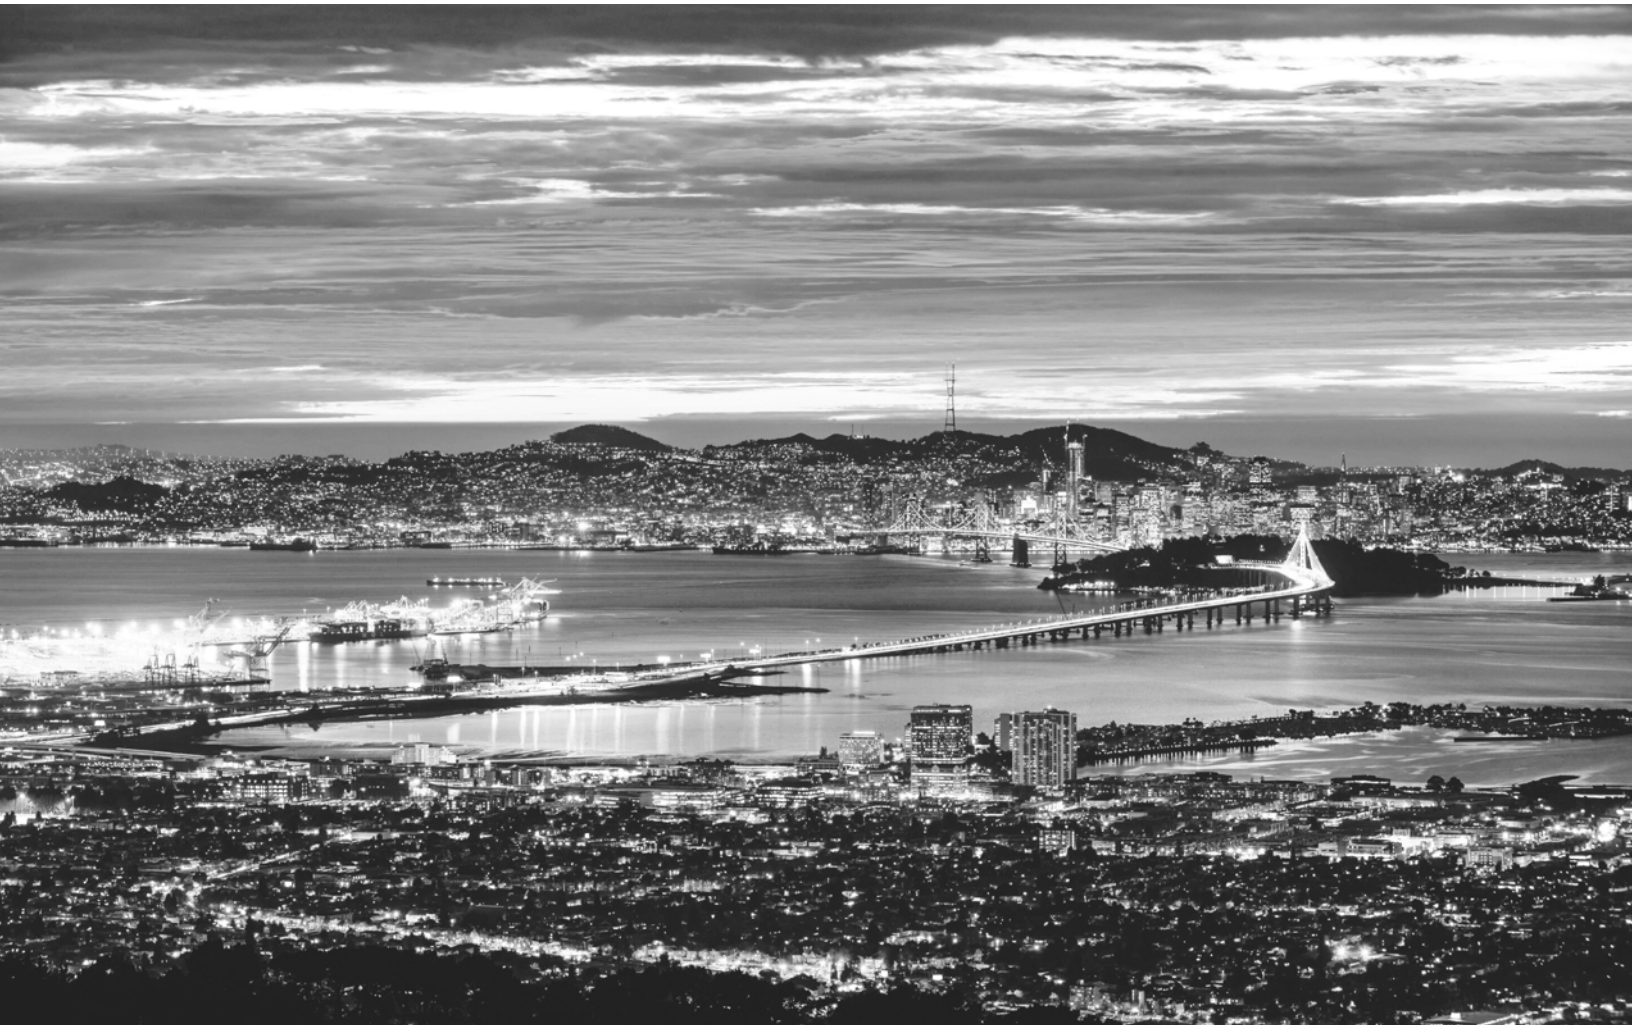


The sampling setup resulted in 236 total high-probability census tracts (shown in orange), 58 randomly selected low-probability tracts (shown in blue), and 84 tracts to be ignored (no coloring).

The Role of the Weighting Factor in Deriving Estimated Count Figures

The Low Probability Weighting Factor is a simple calculation derived by dividing the total number of low-probability census area block groups by the number of low-probability tracts to be sampled. Due to movement of the homeless population, two tracts that were originally designated as low-probability were reassigned as high-probability. For Alameda County, this resulted in a weighting factor of 142/58 or 2.448. After all low-probability areas that have been randomly selected are canvassed, the count results from these areas are multiplied by the weighting factor to derive estimated count figures for all low-probability tracts in the region.

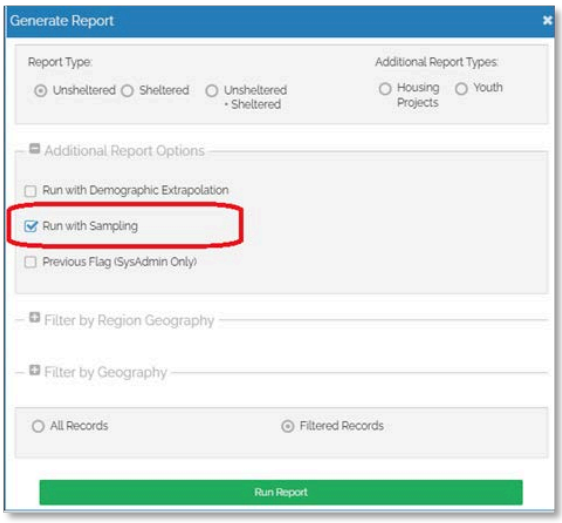
Total Census Tracts	378
High Probability Census Tracts	236
Low Probability Census Tracts	142
Low Probability Sampled	58
Low Probability Weighting Factor	2.448



Enumeration of Count Results

Sampling weights, estimates, and confidence intervals are applied differently to high and low-probability census area block groups to produce final estimates. Since all high-probability census area block groups are to be fully canvassed, there are no sample weighting factors or confidence intervals applied. The weighting factor is applied to survey figures from the low-probability census area block groups to be sampled to derive estimated figures for all low-probability census area block groups.

To ensure the methodological rigor of the PIT estimate, only surveys from areas designated as high probability, or are within low probability census area block groups to be sampled, are included in the results calculation. Surveys from outside of the boundaries of these designated tracts are not included in the results, as doing so would remove the randomness of the random sample.



As shown in the image to the right, the HUD Point in Time Report can be "Run with Sampling" simply by checking off the box shown before clicking "Run Report." An example of the interim results for Alameda County is shown below.

	Region High	Region Low	Region Low w/ Geo. Extrap.	Region Total
Total number of persons	2497	88	215.42	2712.42
Number of children (under age 18)	23	3	7.34	30.34
Number of youth (age 18 to 24)	77	6	14.69	91.69

Number of adults (age 45 to 54)	552	15	36.72	588.72
Number of adults (age 55 to 64)	398	14	34.27	432.27
Number of adults (age 65 or older)	136	2	4.9	140.9
Observed age 25 or older	208	7	17.14	225.14
Unknown Age	0	0	0	0
Chronically Homeless	576	9	22.03	598.03
Veterans	91	3	7.34	98.34

Estimated Number of Homeless, before weighting for Vehicles and Makeshift Shelters, in Alameda County

After the count was completed, 2497 people were counted in the high-probability areas, and 88 were counted in the 58 sampled low-probability areas. The number of people surveyed (88) was multiplied by the Weighting Factor of 2.448 to derive an estimated count of 215.4 people for all low-probability census area block groups. These count figures were adjusted to include the estimated count of people experiencing homelessness (PEH) believed to have been living in vehicles or makeshift shelters.

Estimating People Living in Vehicles or Makeshift Shelters

The Vehicle/Structure Tally is an optional feature used to count Vehicles and Makeshift Shelters (VMS) that appear to be serving as temporary living situations for people who cannot be engaged. The process for deriving estimates of people living in these situations is as follows:

1. An average count of people sleeping in each vehicle and makeshift shelter type is derived. To calculate this average, the additional question of "Including yourself, how many people are sleeping in this location?" is asked of anyone who responds to the "Where did you sleep during the night of the count?" question with any living situation that is either a type of vehicle or a makeshift shelter. For instances with three or less people surveyed for the living situation, national averages derived from the 68 regions that used Counting Us for the 2024 count, are applied. These averages, and the sample size for each, are shown in the table below.

Row Labels	Average of num_sleeping	Total Records
Abandoned Building	1.92	24
Boat	1.55	11
Car	1.75	1430
Makeshift Shelter	1.86	443
Other	1.92	166
RV	2.30	948
Tent	1.72	1278
Van	2.40	482
Grand Total	**1.935173568**	**4782**

2. Surveyors use the Vehicle/Makeshift Shelter Tally to count any of these living situations that are believed to contain people sleeping in them who cannot be engaged.

   In adherence to the guidance from the HUD Housing Inventory Count (HIC) and Point-in-Time (PIT) Count Notice, these structures are only included in the count estimates if the following conditions are met:

   A. The answer to the question "Please indicate whether or not the vehicle or structure appears to be actively being used or if it appears abandoned?" is not "Appears Abandoned." B. For RVs, the RV is counted if the answer to "Please provide details on the condition of the RV?" is not "RV appears to be in good working order and is suitable for habitation" and "Occupants do not have access to sewer, water, and electricity" is selected.

3. The averages derived in step 1 are multiplied by the counts from step 2 to derive an estimated count per vehicle and structure type.

4. The total estimates for each vehicle and structure type are added together to create a total estimated count of people living in VMS for the region. These totals are subsequently weighted based on whether the vehicle or structure was in a low or high-probability area that was designated to be canvassed, as shown in the report image below. This produced an estimated count of 501 people.

A VMS Weighting Factor is calculated based on the total estimated count of 6104 people experiencing homelessness divided by the 2706 count estimate from the geographic sampling and enumeration. This results in a weighting factor of 2.21 that is applied to all count estimates.

Vehicle and Makeshift Shelter Stats					
Vehicle/Structure Type	Avg. People per Vehicle/Structure	# Vehicles/Structures - High Prob. Areas	Est. # People - High	# Vehicles/Structures - Low Prob. Areas	Est. # People - Low
Car	1.5	545	818	29	44
RV	1.7	509	865	12	20
Abandoned Building	1.9	5	10	0	0
Tent	1.6	253	405	6	10
Van	1.6	443	709	14	22
Makeshift Shelter	1.6	153	245	3	5
Boat	1.6	1	2	0	0
Other	1.6	80	128	6	10
Total			3182		111

Safe Parking Sites

There were a total of 239 people experiencing homelessness counted in Safe Parking sites. These figures were a straight count gathered from conducting surveys of everyone residing in any of the five (5) safe parking sites throughout Alameda County. No enumeration was applied to these results and these figures, as well as the demographic survey details, were added to the count estimates described above to produce the final unsheltered count estimates.

Deriving Estimates in Sub-Regions

Since the number of census area block groups within a sub-region such as a city or town is an insufficient sample size for estimations, the estimates for these sub-regions are derived from the estimates calculated at the CoC level. These estimates are based on the number of people counted in high-probability census area block groups within the subregion combined with the weighted average number of people estimated in the low-probability sample.

	Full Region Details	Sub-Region Details
Total Census Tracts	378	33
High Probability Census Tracts	236	17
Low Probability Census Tracts	142	16
Low Probability Sampled	58	4
Low Probability Weighting Factor	2.448	
Sub-Region Percentage		11.27

For the Berkeley region, 149 people were counted in “high probability” census area block groups. The weighted average for the low-probability block groups is calculated by multiplying the count estimate for all low-probability block groups in the COC (88) with the percentage of low-probability block groups that exist within the sub-region. For Berkeley, the sixteen (16) low-probability block groups comprise 11.27% of the 58 sampled low-probability block groups. This sub-region percentage is multiplied by the count estimate of 215 people for the entire CoC to derive a sub-region estimate of 24.28 people. The final count estimate is derived by adding this figure to the 149 people counted in high-probability block groups to derive an estimate of 173.28.

	Region High	Region Low	Region Low w/ Geo. Extrap.	Region Total	Sub-Region High	Sub-Region Low Extrap.	Sub-Region Total
Total number of persons	2497	88	215.42	2712.42	149	24.28	173.28

APPENDIX C: Unsheltered Survey Instrument

This Survey Template is designed to mirror the base "Unsheltered Survey" within the Counting Us app. The questions are color coded as noted below.
RED FONT = HUD required questions that are needed to produce the HUD Point in Time report.
PURPLE FONT = These are commonly asked research questions that can be removed without impacting any reporting or conditional logic.
BLACK FONT = Supporting questions designed to help improve the integrity of the data.
YELLOW FONT = Community custom questions.
+ = RHY or YHDP required questions.

Introduction & Screener	
*Hello, my name is _____ and I'm a volunteer for local outreach. We are surveying to understand homelessness in our community better and improve programs. If you participate your responses will be kept confidential. You can skip any question, and your answers will not affect your eligibility for compensation or services. The information will not be shared with anyone outside of our team. I need to read each question all the way through. Can I have about 10 minutes of your time? *	
1. Have you already been interviewed today for the Point in Time Count?	❑ Yes ❑ No (If Yes --- STOP)
2. Where are you sleeping on the night of the Count? (If an option in bold is selected, continue with the survey)	❑ **Abandoned building** ❑ **Under a bridge / overpass** ❑ Jail ❑ **Bus/ Train station** ❑ **Vehicle / Boat / RV** ❑ Motel/Hotel paid for w/ own $ ❑ **Motel/Hotel paid for by agency** ❑ **Emergency shelter** ❑ Transitional housing ❑ **Outdoor encampment** ❑ House or apt – rent/own ❑ Treatment program ❑ **Park** ❑ Hospital ❑ **Street or Sidewalk** ❑ w/ friend or family (couch surfing) ❑ In a place being evicted from ❑ **Other:** _____
3. What is your name?	First Name (or Initial): _____ Last Name (or Initial): _____ ❑ Person prefers not to answer
a. If hesitant, ask "What are your initials?"	Text box

Demographic Questions	
4. What is your date of birth?	(mm/dd/yyyy) ___/ ___ /_____ ❑ Person doesn't know ❑ Person prefers not to answer
a. If person is not comfortable to answer date of birth, ask "How old are you?"	Numeric Box
b. If refused to answer age, "What age range do you fall into?"	❑ <5 ❑ 5-12 ❑ 13-17 ❑ 18-24 ❑ 25-34 ❑ 35-44 ❑ 45-54 ❑ 55-64 ❑ 65+
5. What is your gender? (select all that apply)	❑ Woman ❑ Man ❑ Culturally Specific Identity (e.g., Two-Spirit) ❑ Transgender ❑ Non-Binary ❑ Questioning ❑ Different Identity ❑ Person doesn't know ❑ Person prefers not to answer
a. If Different Identity, please specify	Text box
6. What is your race? (select all that apply)	❑ American Indian, Alaska Native, or Indigenous (Specify Tribe (optional): _____) ❑ Asian or Asian American ❑ Black, African American, or African ❑ Hispanic/Latina/e/o ❑ Middle Eastern or North African ❑ Native Hawaiian or Pacific Islander ❑ White ❑ Other: _____ ❑ Person doesn't know ❑ Person prefers not to answer

CITY OF NEWARK

HOMELESS CENSUS & SURVEY 2024 EXECUTIVE SUMMARY

Every 2 years, communities conduct counts of people experiencing both sheltered and unsheltered homelessness. The 2024 Alameda County Point-in-Time (PIT) Count was a community-wide effort conducted on January 25, 2024. The snapshot below includes people enrolled in shelter projects in Newark on the night of January 24th and those interviewed or observed as experiencing unsheltered homelessness in the early morning hours of 1/25/24.

STAFF REPORT

Item H. 1.

DATE	07/24/2025
TO	Honorable Mayor and City Council Members
FROM	Sheila Harrington, City Clerk
SUBJECT	Discussion and direction regarding June 26, 2025 meeting minutes and approval of same

---

Council Member Grindall removed the June 26, 2025 meeting minutes (Attachment A) from the Consent Calendar at the July 10, 2025 City Council meeting. Council Member Grindall indicated that he would like to continue the item to add further details in the minutes related to the City Council Matters section, where he requested that the City Council consider adding a discussion related to the Area 3 school site to a future City Council agenda.

The City Clerk has historically prepared action minutes for City Council meetings. Action minutes record the final decisions made by the City Council. Comments made by individual council members are generally limited to directions/suggestions given or announcements made under City Council Matters. Additional details as to what occurred during Council meetings are accessible as all Council meetings are recorded.

Staff recommends that the City Council provide direction as to additional details, if any, that the Council would like to see added to the June 26, 2025 meeting minutes. Staff reviewed the meeting video and prepared a transcript of the portion of the meeting where Council Member Grindall sought additional detail (Attachment B). After the City Council has provided guidance on the minutes, staff is seeking a motion for approval.

Draft

Thursday, June 26, 2025
7:00 P.M.

A. ROLL CALL

Mayor Hannon called the meeting to order at 7:00 p.m. Council Members Jorgens, Grindall, and Catancio were present. Vice Mayor Little was noted absent.

B. PRESENTATIONS

1. Introduction of employee(s)

Mayor Hannon introduced Management Analyst Henderson and Dispatcher Lopez.

C. PUBLIC COMMENT

No one from the public requested to speak.

D. CONSENT CALENDAR

Council Member Jorgens moved, Council Member Catancio seconded, to approve Consent Calendar items D.1 to D.4 and that reading of the titles suffice for adoption. Council Member Grindall abstained from voting on the June 12, 2025, minutes. The motion passed, 4 AYES, 1 ABSENT.

1. Approval of Audited Demands

2. Approval of June 5 and June 12, 2025, minutes

3. Adopt a resolution authorizing the City Manager to execute a purchase order with Dell Marketing, L.P. (Dell) in an amount not to exceed $475,785 for the renewal of licenses and software assurance and subscription services for three years
Resolution No. 11752

4. Adopt a resolution accepting work with G. Bortolotto & Company, Inc. for the Fiscal Year 2024 Asphalt Concrete Street Overlay Program, Project 1344
Resolution No. 11753

E. PUBLIC HEARINGS

1. Hold a public hearing and adopt a resolution approving the Final Engineer's Report, confirming formation of Landscaping and Lighting District No. 20 and authorizing the levy and collection of assessments for Fiscal Year 2025-26
Resolution No. 11754

Senior Civil Engineer Deshmukh gave the staff report recommending approval of the formation of the Landscaping and Lighting District No. 20, if the ballot was affirmative.

At 7:14 p.m. Mayor Hannon opened the public hearing.

No one requested to speak.

Mayor Hannon closed the public hearing at 7:15 p.m.

City Clerk Harrington opened the ballot and announced the vote in favor of the formation of Landscaping and Lighting District No. 20.

Moved by Council Member Jorgens, seconded by Council Member Grindall to adopt the resolution approving the Final Engineer's Report, confirming formation of Landscaping and Lighting District No. 20 and authorizing the levy and collection of assessments for Fiscal Year 2025-26. The motion passed 4 AYES, 1 ABSENT.

2. Public Hearing for Landscaping and Lighting District Nos. 1, 2, 4, 7, 11, 15, 16, 17, 18 and 19 and adopt a resolution confirming diagrams and assessments and the levying and collection of assessments for Landscaping and Lighting

District Nos. 1, 2, 4, 7, 11, 15, 16, 17, 18, and 19 for Fiscal Year 2025-26
Resolution No. 11755

City Manager Benoun stated that he and Council Member Catancio have received formal advice from the Fair Political Practices Commission that they no longer need to recuse due to their individual property ownership in Landscaping and Lighting District No. 11.

Public Works Director Young gave the staff report recommending approval.

At 7:21 pm Mayor Hannon opened the public hearing.

No one requested to speak.

Mayor Hannon closed the public hearing at 7:22 p.m.

Mayor Hannon requested pictures in the staff report next year.

Moved by Council Member Grindall, seconded by Council Member Catancio to adopt the resolution confirming diagrams and assessments and the levying and collection of assessments for Landscaping and Lighting Districts Nos. 1, 2, 4, 7, 11, 15, 16, 17, 18, and 19 for Fiscal Year 2025-26. The motion passed 4 AYES, 1 ABSENT.

3. Public Hearing Pursuant to Government Code Section 3502.3 Requirements for Reporting on City of Newark Vacancy Rates and Recruitment and Retention Efforts

Human Resources Director Frye gave the presentation. Presentation on file with City Clerk.

At 7:32 p.m. Mayor Hannon opened the public hearing.

No one requested to speak.

Mayor Hannon closed the public hearing at 7:33 p.m.

Mayor Hannon requested that staff add average number of days to fill positions and the number of police officer applications received in the next presentation.

This item was informational only.

F. OTHER BUSINESS

1. Presentation on the City's draft Climate Action Plan update titled "Climate Action Newark" (CAN)

Environmental Services Manager Scanlin gave the presentation. Presentation on file with City Clerk.

No one from the public requested to speak.

In response to Council Member Jorgens request for a timeline on the Urban Forest and Active Transportation Plans, staff anticipated the Urban Forest Plan would go to the City Council in the fall and would update the status of the Active Transportation Plan through the City Manager.

Council Member Jorgens stated that the plans need to be considered holistically and that bike lock facilities were needed at shopping centers.

Council Member Grindall stated that he would like more transit shelters and solar power generation at city buildings.

Hannah Kornfeld responded to the Mayor’s questions regarding greenhouse gas emission measurements.

Mayor Hannon requested greenhouse gas reduction information in staff reports where applicable and a periodic update on the Climate Action Plan.

This item was informational only.

2. Adopt a resolution designating the Measure GG Oversight Committee to review the expenditures of revenue from the Transient Occupancy Tax pursuant to Ordinance No. 553 and approving the Mayor’s appointments to the Measure GG Oversight Committee
Resolution No. 11756

Finance Director Lee gave the staff report recommending approval.

No one requested to speak.

Council Member Jorgens suggested changing the name of the committee to reflect both tax measures.

Mayor Hannon announced his appointments of Taryn Singh, Vinod Kumar, and Daniel Cardenas.

Taryn Singh and Vinod Kumar each thanked the City Council for the appointment to the committee.

Moved by Council Member Grindall, seconded by Council Member Jorgens to adopt the resolution designating the Measure GG Oversight Committee to review the expenditures of revenue from the Transient Occupancy Tax pursuant to Ordinance No. 553 and approving the Mayor's appointments to the Measure GG Oversight Committee. The motion passed 4 AYES, 1 ABSENT.

3. Adopt resolutions approving: 1) The Memorandum of Understanding with the Newark Association of Miscellaneous Employees; 2) The Memorandum of Understanding with the Newark Police Association; 3) The Compensation and Benefit Plan for the Confidential Employee Group; 4) The Compensation and Benefit Plan for the Management, Supervisory, and Professional Employee Group; and 5) An amendment to the City's salary schedule in conformance with California Code of Regulations, Title 2, Section 570.5
Resolution Nos 11757 to 11760

City Attorney Kokotaylo gave the staff report recommending approval. He noted that a memo was provided to the City Council before the meeting to correct typographical and calculation errors to four positions on the salary schedule.

No one from the public requested to speak.

Moved by Council Member Jorgens, seconded by Council Member Grindall to adopt the resolutions approving: 1) The Memorandum of Understanding with the Newark Association of Miscellaneous Employees; 2) The Memorandum of Understanding with the Newark Police Association; 3) The Compensation and

Benefit Plan for the Confidential Employee Group; 4) The Compensation and Benefit Plan for the Management, Supervisory, and Professional Employee Group and 5) An amendment to the City's salary schedule in conformance with California Code of Regulations, Title 2, Section 570.5 with the revisions in the memorandum provided to the City Council before the meeting. The motion passed 4 AYES, 1 ABSENT.

G. CITY MANAGER UPDATES

City Manager Benoun announced: the Community Development Advisory Committee application deadline of July 8, 2025, by 2 p.m.; Alameda County Fire Department Fourth of July pancake breakfast fundraiser at Fire Station 27; Summer Sports Camp will be held from July 7 to 11, 2025; Groovin's at the Grove Summer Concert will be held on June 27, 2025, at the Shirley Sisk Grove.

H. CITY COUNCIL MATTERS

Council Member Catancio congratulated the Measure GG appointees, she complimented the Juneteenth celebration, she attended the AVA Community Energy meeting, and encouraged the purchase of Safe and Sane fireworks to support local nonprofits.

Council Member Jorgens stated that he hoped the community would stay safe during the July 4th holiday. He suggested residents reflect on ways to help improve our community during the holiday.

Council Member Grindall stated his next Coffee with a Council Member would be held at the Old Town Starbucks on June 29, 2025.

Council Member Grindall stated that the City negotiated a school site as part of the Sanctuary development and he would like a discussion at the next council meeting. Mayor Hannon stated that the Newark Unified School District Board of Education has not indicated that they want to build a school at that location and was not in support of placing this on the Council agenda. Council Member Grindall made a motion to place the item on the next agenda. The motion died for a lack of a second.

Council Member Grindall stated that the Mariachi Festival was coming up.

Mayor Hannon stated that July 4th was a good reminder that Newark is a welcoming community and he thanked staff for keeping the community safe on the holiday. He commended Council Member Catancio for attending the Juneteenth celebration. He stated Big Truck Day was a success and he wished his wife a happy anniversary.

I. CLOSED SESSION

1. Closed session for conference with Labor Negotiators pursuant to California Government Code Section 54957.6.
Agency designated representatives: Assistant City Manager Hovorka and Human Resources Director Frye
Employee Organization: The Newark Police Management Association

No one from the public requested to speak.

At 8:41 p.m., the City Council recessed into a Closed Session.

At 8:49 p.m., the City Council convened in Closed Session

At 9:14 p.m. the City Council reconvened in open session.

J. ADJOURNMENT

Mayor Hannon adjourned the meeting at 9:15 p.m.

June 26, 2025 Minutes Excerpt

Council Member Grindall stated that the City negotiated a school site as part of the Sanctuary development and he would like a discussion at the next council meeting. Mayor Hannon stated that the Newark Unified School District Board of Education has not indicated that they want to build a school at that location and was not in support of placing this on the Council agenda. Council Member Grindall made a motion to place the item on the next agenda. The motion died for a lack of a second.

Transcript

Council Member Grindall stated that the City negotiated a school site as a part of the Sanctuary Development. The clock is running out on that development and it would otherwise return to the developer. Serious, dire consequences could occur to the community if that were the case. This wasn't agendized so I cannot go into great detail. I would like to see a transparent, open discussion at the next council meeting where we talk about the opportunities and constraints and concerns about that location and what the City can do. I look for support from my colleagues to have a transparent and open public discussion of what the issues are and what the City might be able to do to ameliorate the issues. I do have a couple of other comments. Let me know if it is okay at this point.

Mayor Hannon stated I don't know where the Brown Act draws the line on conversations like this item. I will look to the city attorney to give me some advice on this. At this point, I think Council Member Grindall is simply asking the Council to agendize an item. That seems to be the issue that we are limited to discussing. I will speak to that item. I am not willing to ask the Council to agendize this item. The reason I am not willing to ask the council to do that is because the development agreement City Attorney, please stop me if I am going further than I should.

City Attorney Kokotaylo stated I think if the discussion is whether to agendize it or not and you are just seeking to, brief comments as to why you do or don't want to, as well as the rest of the Council, that is fine.

Mayor Hannon stated thank you. I am going to limit my comment to that. The reason I would not support and I would ask my council not to support agendizing this item, it's really not a city of Newark item, its not a city of Newark issue that we can involve ourselves. The development agreement was specific in terms of advising the Newark Unified School District that if they wanted to have a school built at Sanctuary, there was land available for them to do that. The agreement, which is a contract, was real specific that they had seven years to begin construction of that school site. That date is going to run out in August of this year. We, the City, have been waiting patiently for seven years, encouraging the School District to come forth with a plan to build a school site at that location. They have indicated that they are not currently interested in building a school at that location. So any request by us to the developer to extend it would really fall on deaf ears. We really have no, no real interest in this item that we can put any pressure on them to do so. That would be my comment. I would ask the council not to consider Council Member Grindall's request.

Mayor Hannon stated any other comments? Or is there a motion to put this item on the July 24th agenda, if we were to agendize this?

Council Member Grindall stated I would make that motion.

Mayor Hannon stated is there a second? No second, that item dies on the motion.
