Zone Change Questions

Lots 2 & 3 of Clearwater Estates Subdivision, Yellowstone County, Montana. Having a total area of approximately 9.676 acres

- 1. Explain how the proposed project is consistent with the adopted Growth Policy, Neighborhood Plans, and other applicable city development policies.**

Essential Investments - The proposed project is located along Central Avenue which is a critical corridor for growth of the City. The development and extension of municipal services, particularly public utilities, will open further development of a large swath of land between Monad and Broadwater from 48th Street to the east. The proposed development will assure that key parts of the Billings West End will be developed with appropriate density, connected to City services, and added to the City tax base. The proposed zoning brings another option of single-family housing to the overall development, providing several options in the for residents looking to relocate to the area.

Infill Development Policy – The goal of the Billings Infill Policy is to promote housing and retail choices to encourage economic development, by rezoning this area it will stimulate development of the area and provide a more enjoyable neighborhood environment for the residents. The mixture of residential housing with the small commercial designation along Central Avenue will improve neighborhood walkability and reduce commuter traffic into the City for basic services.

Diversified & Affordable Housing – This zone change will provide a mix of housing options. By offering a mix of housing alternatives, residents will be afforded the opportunity to upgrade within in the same neighborhood, creating a more resilient community. The development will also be an affordable option for the City due to the low cost of service created by the proposed mix of density in this proposal. The proposed zoning will bring residential density to an area that currently has little diversity in housing, filling in the “missing middle” housing gap that currently exists in this West End area.

- 2. Explain how the proposed project meets the 10 zone change criteria.**

- a. Is the new zoning designed in accordance with the growth policy?**

The new zoning adheres to the City of Billings growth policy through its expansion of mixed community uses with residential diversity incorporated into the development. The project incorporates multi-modal components with access to trails and parks included to give residents options.

b. Is the new zoning designed to secure from fire and other dangers?

There will be fire hydrants located an adequate distance throughout the interior of the development with a maximum spacing of 500-ft, meeting all City of Billings Fire Codes. Additionally, the project will bring fire services with hydrants to an area of the West End that only operated on dry hydrants within the BUFSA or had not close fire suppression availability at all. Construction of the site will comply with building regulations and zoning code to allow for appropriate separation of buildings and proper lighting for public safety and security. The site is also located outside of any floodplain.

c. Will the new zoning promote public health, public safety, and general welfare?

The proposed zone change will diversify the surrounding neighborhood and create opportunities for housing in what is now considered the “missing middle” within the Billings West End. Buildout of this vacant land will bring more public eyes to the area to help keep watch on public safety. This zone change also requires landscaped or natural open areas to be incorporated within the development which will improve the general well-being of the neighborhood and encourage residents to use services within walking distance to their residence in the neighborhood.

d. Will the new zoning facilitate the adequate provision of transportation, water, sewage, schools, parks and other public requirements?

The change in zone will tie into existing services already constructed within the subdivision. The development is not necessarily close to MET transportation however the proximity to future commercial with the intent of providing neighborhood services is an attempt to minimize the need for residence to travel outside their neighborhood, straining our transportation network. Over time the development will connect to pedestrian systems, such as the multi-use path along Monad, that will tie back to Shiloh and the multi-use trail running along that corridor.

e. Will the new zoning provide adequate light and air?

The proposed zone change will have some impact on light and air as the property will move from agricultural use to residential, however, the open space, and subsequently park dedication, requirements will allow for adequate lighting and air for the property and surrounding area. Any improvements to the land must adhere to the zoning requirements for lighting laid out by the City's Zoning Code which directly addresses open areas and light.

f. Will the new zoning affect motorized and nonmotorized transportation?

As this property is in the process of converting from agricultural lands to residential development, additional residents will move to the area creating an impact on the motorized transportation in the area. However, this proposal is a down zoning from the previous PND approval and will reduce traffic loads on the overall surrounding area. The proposed zoning has been studied as part of the Traffic Impact Study (TIS) associated with the subdivision (Clearwater Estates Sub, 2nd Filing). The developer, as part of the overall development, will contribute to intersection impacts in the areas identified by City Public Works to mitigate any negative impact coming from the overall development.

g. Will the new zoning promote compatible urban growth?

The proposed zoning will promote compatible urban growth as it is nestled between low density residential on the west and north sides and medium to higher density residential coming (planned, presented and approved by Council) to the east and south of the project area. This zoning will allow for new residents to move into a thriving and safe neighborhood that can easily meet most of their needs in the immediate area. The proposed zone change provides the desired step-back in density placing commercial along the arterial corridor (Central Ave.) and stepping back to mix density residential to the south. The proposed mix in commercial and residential, with varying residential densities, is what both City Council and urban growth policies ask for in new neighborhood development. The proposed plan will introduce new housing variety and density to this area of the Billings West End while creating neighborhoods in a walkable manner with commercial designations to service the surrounding areas.

h. Does the new zoning consider the character of the district and the peculiar suitability of the property for particular uses?

The area of the proposed development is currently surrounded by active agricultural production land with county subdivisions to the northeast and northwest across Central Avenue. Southeast of the proposed development, the City has already approved annexation and zoning for a similar mixed-use development north of Monad. The compatibility will be seamless between the development of the Vista property and what is proposed in this application. As presented, the proposal achieves the directives from City of Billings planning documents in that low to medium density residential is layered through the property. The proposed zoning steps back density with the highest commercial uses along the arterial corridor (Central Ave.) and mixed density residential as the development moves south towards Monad. Because of the surrounding adjacent agricultural uses, the proposed development is buffered in large part from any surrounding developments and will be setting the stage for future development of the City in this area. The proposed residential zoning (N3) allows for a variety of housing options, aligning with the character of the existing County community.

i. Will the new zoning conserve the value of buildings?

It should be noted that the proposed development is only directly adjacent to active agricultural land with County subdivisions to the northwest and northeast across Central Avenue. The proposed zoning will conserve the value of buildings in the area by creating new amenities for nearby neighborhoods while not intruding upon them.

j. Will the new zoning encourage the most appropriate use of land throughout the City of Billings?

By providing a small single-family options (<8,000 SF lots) in the development the project adheres to the City of Billings initiative to lower cost of service to the City, making the development the most appropriate use of the land. The proposed development adequately steps back density from the arterial corridor (Central Ave.) while providing a diversity in housing options and mixed residential neighborhoods within the Billings West End. Services in the area can support expanded growth without straining City infrastructure or EMS services.

Zone Change 1071 Attachments

3. Does the new zoning fit with the existing or planned developments within the area?

The new zoning will fit seamlessly into the area as the surrounding land is still agricultural in nature. This proposal provides the “missing middle” medium density housing between the larger single-family County properties and the high-density apartments of the existing Farmstead apartments and the recently approved Vista development. The proposed development will provide neighborhood diversity in both housing options and services. The site will help provide housing density and diversity to start serving the “missing middle” of our City with medium density residential development supported by many amenities and necessities for the current and future residents in the area. Lastly, the development stepped back density from Central Ave. with appropriate distances to minimize impacts and the feel of higher density being within the core of subdivision.
