Zone Change Questions

Agricultural Tract 11-A-2 of Amended Tract 11-A of the Remainder of Tract 11 of Certificate of Survey No. 836 Having a total area of approximately 84.04 acres

1. Explain how the proposed project is consistent with the adopted Growth Policy, Neighborhood Plans, and other applicable city development policies.

Essential Investments - The proposed project is north of Ben Hogan Lane and Quimet Circle within the Yellowstone Country Club development area. City infrastructure already exists within the rights-of-way for Ben Hogan Lane and Quimet Circle, making the proposed development consistent with the Essential Investments growth guideline by developing property near existing City infrastructure. This helps the city more efficiently expand their tax base without significantly growing their infrastructure, making it more cost-effective to maintain.

Strong Neighborhoods - The proposed zoning will create the potential for infill development within the existing Yellowstone Country Club subdivisions. This will be an ideal location for the expanding residential population in northwest Billings for those that are looking to build a home in the rapidly-growing West End.

Growth Scenarios - The City of Billings Growth Policy identifies three growth scenarios for the Billings West End, public preferred, high density and low density. In the high density scenario, the land in question was not included. In the low density scenario, the land was shown as a medium-density development, and in the public preferred scenario, the land was shown as remaining as open space. Moving to N3 zoning on approximately 6 acres of the over-arching 84 acres would be a blend of the low density and public preferred scenarios.

2. Explain how the proposed project meets the 10 zone change criteria.
 - a. Is the new zoning designed in accordance with the growth policy?
As mentioned previously, the proposed zoning follows the growth policy to a tee. Creating a low-density residential infill in an area already served by City infrastructure makes sense for the City as well as the taxpayers.

- b. Is the new zoning designed to secure from fire and other dangers?**
The existing fire system will adequately serve the proposed zone change area, as the lots that would potentially be created will be infill lots, and will not expand the existing service area. Historically, stormwater drainage has been a concern in the area. Design completed during the subdivision process will address those concerns.
- c. Will the new zoning promote public health, public safety, and general welfare?**
The subject property will be subdivided as part of this project. At most, the proposed subdivision will consist of seven (7) new residential lots, which will virtually enact no change to the fabric of the existing neighborhood and will have no impact on public health, safety, or general welfare.
- d. Will the new zoning facilitate the adequate provision of transportation, water, sewage, schools, parks and other public requirements?**
The areas within the proposed zone change are located along existing street frontage with City water and sewer mains lying directly adjacent to the areas of interest. No extensions or construction will be required to bring any proposed lots into the City. Parkland will be dedicated during the subsequent subdivision process with the intent of connecting and continuing to allow use of the trail system that exists on the land.
- e. Will the new zoning provide adequate light and air?**
The proposed zone change will have some impact on light and air as the property will move from vacant use to residential. Any improvements to the land must adhere to the requirements for lighting laid out by the City's Zoning Code which directly addresses open areas and light.
- f. Will the new zoning affect motorized and nonmotorized transportation?**
As this project proposes the conversion of approximately 4 acres of vacant land to residential, minimal trips will be generated by the development, which will in turn have virtually no impact on motorized and nonmotorized transportation.
- g. Will the new zoning promote compatible urban growth?**
The proposed zoning will promote compatible urban growth as is desired by the city. It proposes an infill residential development in an area that is adjacent to existing City limits and is served by city infrastructure. The proposed zoning matches the neighboring properties and does not require the extension or installation of new public infrastructure, which is in direct alignment with the City of Billings Growth Policy.

- h. Does the new zoning consider the character of the district and the peculiar suitability of the property for particular uses?**
The area of the proposed development is surrounded by undeveloped land and residential subdivisions. There is a trail system that exists on the undeveloped land, and the intent is to maintain access to those trails while still creating the opportunity for residential development.
 - i. Will the new zoning conserve the value of buildings?**
The proposed zoning will conserve the value of buildings in the area by maintaining the continuity of the existing neighborhood.
 - j. Will the new zoning encourage the most appropriate use of land throughout the City of Billings?**
The proposed zoning will encourage the most appropriate use of land by infilling existing subdivisions while maintaining and promoting the integrity of parks and open space.
- 3. Does the new zoning fit with the existing or planned developments within the area?**
The new zoning matches the existing zoning of the surrounding subdivisions.
