The County's objective is to implement water control devices for long term optimal operating of the plumbing system while enhancing the utility conservation. Proposed system will decrease usage mainly by controlling water use through a system of adjustable timers and/or controls (e.g. lockout features, limited use, limited duration).

The Jail was built in 2008 and currently has installed standard correctional grade sink/toilet combination fixtures and push button shower heads. The Jail's water usage averages 1,750,000 gallons a month. The Jail is housing an average of 450 inmates. Inmates are housed in individual cells, multiple inmate cells, and dormitories.

The County seeks a solution that is proven and has been successfully implemented in other correctional facilities of similar size to the Jail.

Water Conservation of Domestic Plumbing Fixtures

Proposed On:

September 17, 2020

Proposed By:

Intelligent
Conservation Systems, Inc.

**Intelligent Conservation Systems, Inc.****PROPOSED BASE SCOPE OF WORK*****Summary***

The objective of the water fixture proposal at Burnet County Jail is to significantly reduce the water consumption and maintenance needs for the facility personnel, while increasing the security and control for the institution's officers. The water fixture retrofit will substantially reduce the demand on the domestic hot water system. Optionally, the facility can receive centralized monitoring of the cell fixtures in the housing units by the Control area officers, and the ability to set an acceptable range of operational parameters for the controllers. This would include the ability to lock out a cell or pod for contraband searches or disciplinary actions.

I-CON System Retrofit

The I-CON system retrofit of the inmate housing fixtures at Burnet County Jail is recommended because it greatly reduces the water and fuel consumption of the facility while addressing the issues previously listed. This unmatched performance is the result of one goal, which is to make a product exclusively for the correctional market that implements new technology based on the evolving needs of correctional facilities. The fixture table below indicates the area, quantity, and type of work to be conducted.

Intelligent Conservation Systems, Inc.

I-CON Flush Valves – The inmate cell toilets will receive an I-CON electronic flush valve. The primary savings associated with the I-CON flush valve is produced by increasing the volumetric rate of the bowl's flush to more effectively clear the bowl in a shorter duration of time than a standard diaphragm flush valve. The second source of water reduction by the flush valve comes from the controller's adjustable lockout time settings. This lockout has been developed specifically to modify inmate behavior by deterring abuse of the toilet fixture and plumbing system. In a wet cell environment, the close proximity of the toilet fixture to the living area creates a greater instinctual need of the occupant to utilize the fixture. Additionally, in higher security areas, the toilet is one of the few complex mechanical objects that an inmate may interact with. This can cause an inmate to repeatedly flush a toilet for nothing more than sensory stimulation. The adjustable lockout generally yields a 50% reduction in flush count. Lockout generally applies to toilets and a LED activation button may optionally be installed to display red, when pressed, to indicate that the toilet is in lockout. The button also displays other patterns and colors, such as green to assure the user that the usage request has been accepted by the controller or that the water hammer arresting feature is activated. To reduce maintenance, either corrosion resistant metallic or non-metallic outlet connections will be utilized.

I-CON Lavatory Valves – Not in Scope of Work

I-CON Showers Valves – The I-CON electronic shower valve will be installed on the inmate showers. Each I-CON shower valve will activate a single showerhead. When there are multiple showerheads, such as an ADA shower panel, an I-CON shower valve will be used for each showerhead. Before installation, the facility may state a lockout duration if desired.

I-CON Controller – At the core of the I-CON system is the field-adjustable controller which may control one specific or all types of electronic I-CON flush, lavatory, and shower valves. The controller is housed within a water-resistant housing and is conformal coated to provide additional durability. The controller regulates properties such as valve duration, cycles to lockout, lockout duration, and many other features. The controller is activated by solid stainless steel, pressure sensitive buttons with no moving parts. The cell controller will be installed in the v chase along with the flush and lavatory valves. The shower controller will be installed in the existing enclosure in the shower area when a chase is not readily available. The electrical service for the I-CON controllers requires a minimum of 24VAC to operate and this power will be supplied by a low voltage plugin or hard wire transformer in the housing unit cell chases.

I-CON 8 I/O Controller will be installed which will allow for easier upgradability to retrofit lavatory valves at later date by facility.

RECOMMENDATIONS

Domestic plumbing systems receiving 80psi or more are susceptible to premature failure of its components due to the force exerted on its surfaces, and also caused by mechanical erosion weakening the parts. The facility pressure is recommended to be set by the facility personnel between 55-65 psi at the median first floor level of the housing units. This recommendation will need further review from the facility to ensure compliance with the additional needs of the domestic plumbing.

**Intelligent Conservation Systems, Inc.**

ATTIC STOCK***Description***

Attic stock will be provided to the facility at the time of substantial completion. The purpose of attic stock is to provide facility personnel instant onsite material to expedite their future repair of defective/end of life parts. This will assist to prevent a shutdown of an area due to delays caused by the procurement of replacement material. The facility is advised to replenish this stock as it is consumed. After substantial completion, the O & M documentation will provide quantities with specific part numbers per the as-built I-CON system.

**Intelligent Conservation Systems, Inc.****CLARIFICATIONS AND DISCLAIMERS:**

1. Savings calculations do not include material or labor savings associated with reduced fixture maintenance that the facility's aging plumbing components would have cost if not retrofitted. Savings calculations do not include utility escalation factors such as future utility cost increases or population fluctuation.
2. Items not specially identified to be retrofitted or replaced are figured to remain in place.
3. Upstream and downstream infrastructure components are expected to be in functional condition prior to start of construction. These items include, but are not limited to, shutoff valves, water filtration, water treatment, pumps, heaters, pressure regulating valves, mixing valves, angle stops, piping, supports, insulation, fixture jets, drainage. Repair or replacement by ICS would be at additional cost.
4. We exclude costs associated with concealed conditions, which are any unobvious conditions not disclosed visually during the walkthrough or in written bid documents.
5. This proposal is based on facility provided information as to suitable electrical availability, stability, and emergency capacity to operate electrical equipment according to NEC. This proposal does not include any high voltage labor or materials. The county has already begun installing emergency power outlets in the pipe chases. The work under this contract will commence after an onsite inspection to confirm all areas contain the required electrical circuits.
6. This proposal is based on reasonable access to a quantity of fixtures sufficient to maintain the anticipated schedule. We estimate this as contiguous accessibility to a minimum of 18 fixtures, chases, and associated plumbing per day. One to two fulltime dedicated escorts with necessary keys will be required for our scope, allowing two independent crews to perform the work. No costs for escorts have been included in this proposal. This proposal is also based on secured tool and material storage inside the facility.
7. Angle stop valves shall be reused. We include up to 10% replacement of defective stop valves. Replacement of additional stop valves shall be at additional cost. No plumbing fixtures will be replaced.
8. This proposal does not include painting or tile work. Based on experience, the facility is better suited to perform and manage this work, but none of this work is anticipated to be required.
9. ICS assumes ownership and responsibility for the removal and disposal of all construction related materials and removed facility equipment, other than hazardous materials such as lead or asbestos. The facility is responsible for any hazardous material abatement prior to the installation of this ECM. No hazardous abatement is expected because of the facility's age.
10. Warranties are one year from owner acceptance, but no longer than 90 days from substantial completion. Warranty labor is included for all workmanship or specification related claims. Claims for material defect are per each manufacturer and generally do not include labor.

All pricing in this proposal is valid for 120 days from the date of this proposal. Not all options may be

11. combined or can stand alone. Pricing breakdowns are for informational purposes only and may not be severable. Contact ICS for pricing configurations.
12. Per the RFP and Q&A, project costs do not include sales tax or bonds.
13. Permit Fees are not anticipated for this project based on the "retrofit" nature of the scope and permissible in the category of maintenance, and no major modifications to infrastructure are being performed. Municipalities and jurisdictions may, however, impose permit fees after the fact. We have not included permit fees but would seek reimbursement at cost if required.
14. We reserve the ability to utilize all Code approved materials and methods. Should the facility have a preference or prohibition which has a significant cost affect, that premium will result in a change order.
15. Acceptance and use of an ICS Proposal and qualifications constitutes an agreement to be included in any contract or purchase order as an attachment to the scope of work.
