TREELAND – HOUSING PRODUCT

I. INTRODUCTION

Tri Pointe Homes (f/k/a Maracay Homes) is the proposed homebuilder of approximately 27.73 gross (25.10± net) acres located at the southwest corner of Chandler Heights Road and 124th Street (the “Site”), also known as “Treeland.” Treeland is proposed as a highly amenitized, gated, single-family subdivision that offers future residents a sense of community and opportunities to interact together as families and as a neighborhood. Tri Pointe is proposing the Site be developed as a high-quality community that builds on the agricultural and farming heritage found in southeast Chandler. The Site will contain 86 lots at a density of approximately 3.43 du/net ac. Tri Pointe rezoned the Site to Planned Area Development (PAD) for Single-Family Residential and obtained approvals for the Preliminary Development Plan (PDP) for Subdivision Diversity and Preliminary Plat on June 11, 2020. Tri Pointe now seeks approval of a PDP for Architectural Diversity for Treeland. Tri Pointe’s proposed housing product for Treeland will portray superb quality, community, and architecture, commensurate with the reputation established by Tri Pointe throughout its other communities in the southeast Valley and elsewhere. Tri Pointe’s homes will be compatible with the immediate area.

II. SITE AND SURROUNDING AREA

An *Aerial Map* of the Site is attached as ***Exhibit 1***. The Site lies within unincorporated Maricopa County and is PAD Residential. The Site is bounded by Chandler Heights on the north, 124th Street on the east, existing single-family residences within unincorporated Maricopa County on the south, and 122nd on the west. Further west of the Site is a single-family subdivision known as “Orchard Heights” and residences within unincorporated Maricopa County. The approved Illustrative Site Plan, Preliminary Site Plan, and Conceptual Landscape Plan are attached as **Exhibits 2, 3, and 4**, respectively.

III. PROPOSED PAD AND PDP

Tri Pointe’s proposed homes are in keeping with the theming established in the Rezoning and PDP case. See **Exhibit 5, Elevations and Floor Plans**. Four different floor plans with different elevations styles are proposed for Treeland. The homes are all single-story and range in size between 2,422 square feet to 3,201 square feet. This product was designed using a wide variety of resources and consultants with extensive homebuilding experience. The design criteria included consideration of current homebuyer lifestyle preferences, timeless rather than trendy exterior styling, incorporation of popular elements drawn from Tri Pointe’s extensive customer experience, and a commitment to crafting inviting neighborhoods and distinctive places. The timeless nature of charming neighborhoods (simple home design with distinct building shapes and roof massing) serves as the focus in creating the exterior shaping, massing, and detail of this series of homes.

The proposed homes are an innovative alternative to traditional, garage dominated, single-family homes. The proposed homes for Treeland offer flexibility for varying lifestyles. The ease of maintenance and appealing common area amenities meet the needs of empty-nesters, young professionals, and seasonal residents. Useable yard space for each residence is efficiently designed to provide private outdoor living areas. The variation in product sizes and massing creates an enhanced level of differentiation between homes. As depicted on the Elevations and Floor Plans (**Exhibit 5**), Tri Pointe is proposing 86 homes with a mix of lot sizes to meet homebuyers needs.

The homes will offer quality architectural elements such as a variety of garage placements that create an interesting street scene, well-defined entryways, generous front courtyards, and appealing architectural details such as decorative shutters, stone, tile, and iron accents.

The architectural theme of the homes gives buyers a wide selection of options and promotes architectural diversity within the community, all at the same time maintaining a consistent aesthetic feel. While the elevations will be easily identifiable to their historic origins, the slightly contemporary approach will be a refreshing and welcoming change for homebuyers seeking to proudly distinguish themselves with a unique home. The residences incorporate four distinct architectural styles:

Spanish – Inspired by regions where sunlight showers a home, the Spanish style emerged as a response to the warm climate. The style features low-pitched red tile roofs in simple hip or gable forms, smooth stucco walls, and arches defining porch entries. The main color palette for the sun battered walls often consists of lighter earth tones, offset with dark brown accents and vibrant decorative tile and shutters.

Southwest – Southwest is a regional style of architecture that draws inspiration from the Pueblos and marries it with the style characteristics of early Spanish architecture. Current interpretations rely on stucco with traditional stone, parapet roofs, and simple forms to replicate the historic look. True to its nature, there is little ornamentation, with the occasional shutter to add a pop of color on the rich earth tone stucco.

Desert –The Desert elevation design captures the beauty of the surrounding mountain backdrop, with the hipped roof forms echoing the natural silhouette. The stone application, along with the deep rich stucco hues, blend appropriately into the desert environment. Towered porches highlight the entries as well as courtyards. Deep-colored brick with darker toned accent stucco makes up the color palette.

Farmhouse – This style gives a general feeling of nostalgia—a sentimental connection to the land surrounding it and the country’s rich architectural history. Core elements include steep gable roofs, white color palettes, and straightforward detailing, allowing the form and material to speak for the style. Featured areas are clad in stone with white board and batt clearly defining the Farmhouse architecture.

In addition to the diversity in architectural themes, Tri Pointe follows these additional guidelines:

- The homes provide variation in massing by dramatically changing orientation of the living areas and garage placement.
- Tri Pointe’s attention to exterior design detail and massing assures a varied streetscape that is not dominated by front wall placement or garage doors.
- Exterior color schemes must be different on adjacent homes. For example, if Lots 1 and 2 are next to each other, Lot 1 cannot have the same exterior paint selection as Lot 2.
- The same exterior elevation style and color scheme combination cannot be directly across the street from each other. For example, Lots 59 and 63 are across the street from each other and cannot have the same elevation style and exterior color selection.

- The same plan and elevation cannot be built next to each other. For example, if Plan IA Elevation A is built on Lot 2, then Lots 1 and 3 must be a different combination of plan and elevation.

Included as **Exhibit 6** is the **Colors and Materials Palette**. The building exterior finishes will be stucco, and customers will have an assortment of texture choices. Tri Pointe has created four color schemes per elevation style, offering customers a wide variety of choices. A total of 16 color scheme options are available to future home buyers to select. In addition to guidelines on housing elevations and colors/materials, front yard landscaping will be provided with each home. Three options will be available to each home buyer.

Tri Pointe creates distinctive product lines that promote a neighborhood's unique identity and enhance the surrounding area. Tri Pointe will meet or exceed the City of Chandler's general requirements and standards as well as the intent of the additional requirements. The combination of architectural creativity and quality workmanship will create an attractive and desirable neighborhood that will maintain a high standard of development for the City and surrounding area.

A. Architectural Diversity Elements

Tri Pointe's homes are designed to meet the goals of the City's Residential Architectural Diversity Guidelines. Tri Pointe's proposed PDP satisfied the City's nine required Architectural Diversity Guidelines and at least eight (seven required) of the City's Optional Architectural Diversity Guidelines. The details follow in **Appendix A**.

V. CONCLUSION

Approval of the proposed, 1-story housing product for Treeland will add to the character and quality of the surrounding environment. Residents will enjoy many amenities within Treeland and high quality of architectural finish. The proposed PDP for Architectural Diversity is appropriate for this Site, is compatible with neighboring developments, and will provide an attractive presence in the area. We request your approval.

Tri Pointe Homes

APPENDIX A – ARCHITECTURAL DIVERSITY STANDARDS

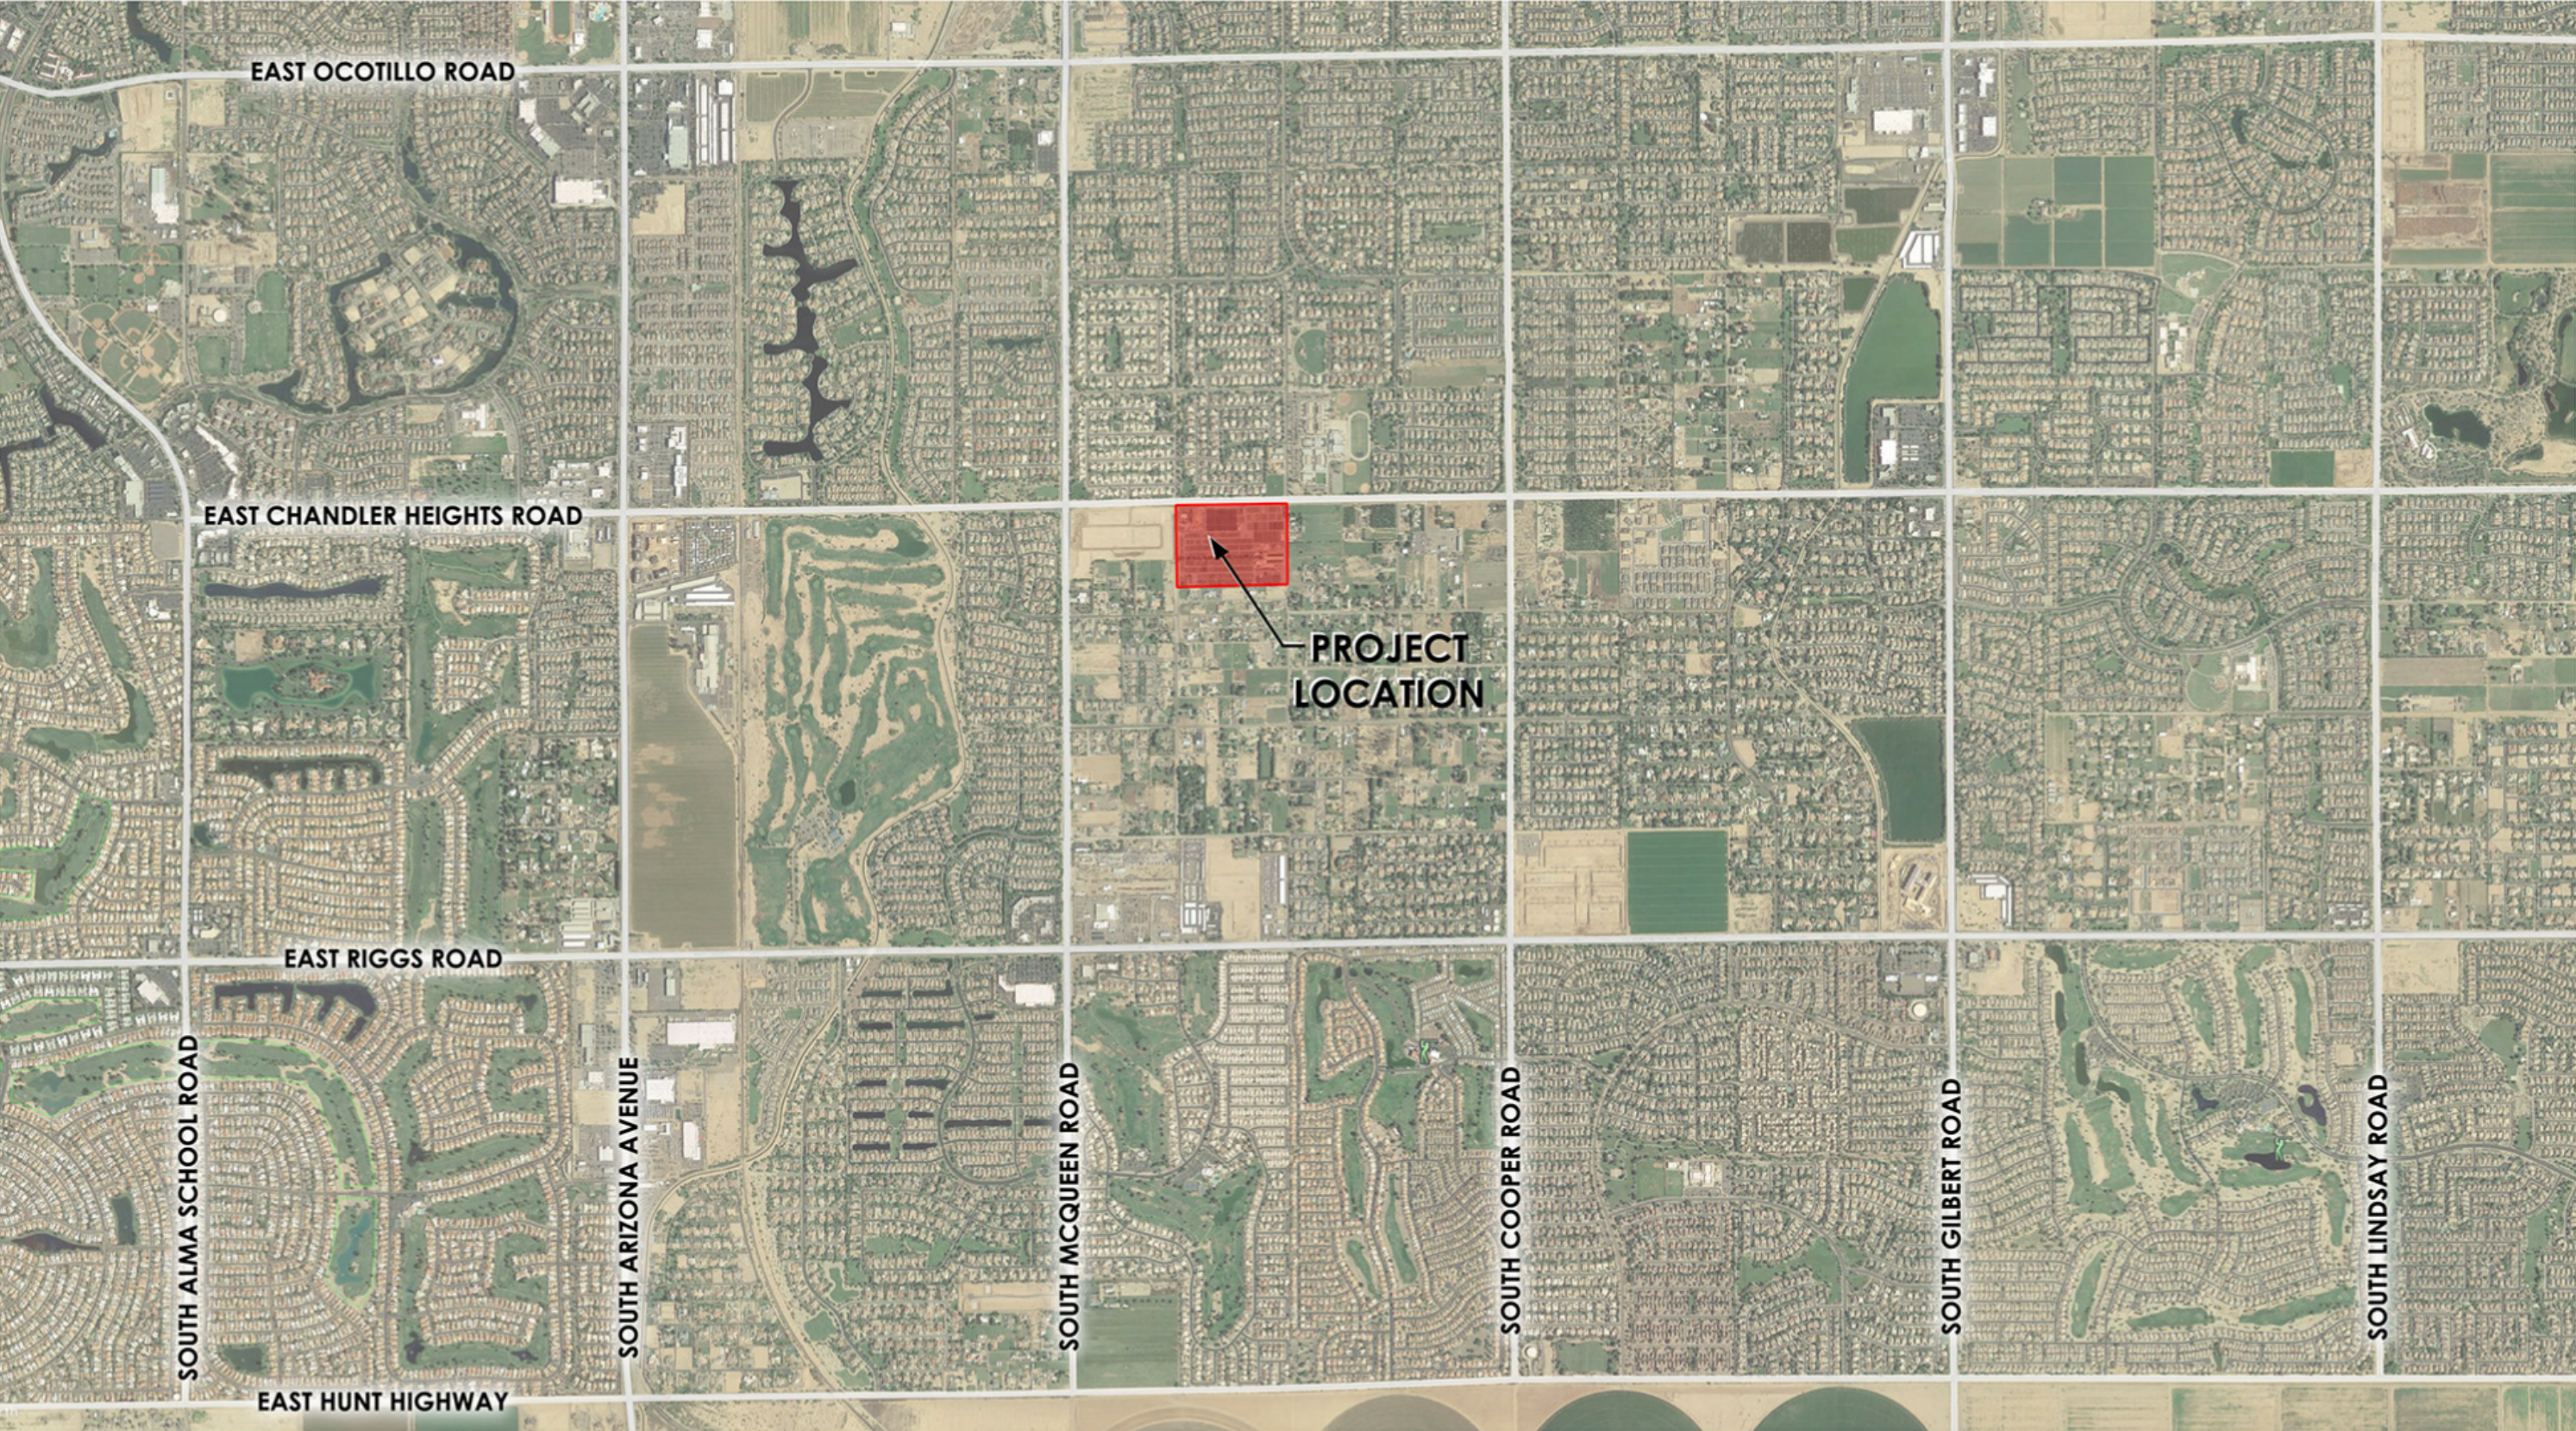

Required Elements:

1. Provide four-sided architecture	The use of varied roof massing, window accent detailing, and rear elevation roof line breaks provide four-sided architectural design.
2. De-emphasize garage fronts	The homes provide a mix garage locations and styles to deemphasize garage fronts. The forward-facing garages will encompass no more than one-third (1/3) of the street front elevation, in addition to being setback from the porch and living spaces in all plans and elevation styles.
3. Front door or courtyard entry visible from street	Front doors or courtyard entries on all plans are visible from the street.
4. Single story or combination one- and two-story homes on all corner lots	Corner lots will be restricted to single-story or combination one- and two-story homes.
5. Enhanced rear elevations along arterials/collectors	Enhanced rear elevations will be provided using varied roof massing, window accent detailing, and rear elevation roof line breaks.
6. Variety of roof colors, textures, shapes	The proposed elevation styles incorporate a variety of roof shapes and building massing.
7. Variety of durable exterior materials/finishes	Roofing materials will be concrete tile and wall finishes will be stucco. Accent materials will include stone veneer and ceramic tile.
8. Box-on-box to include single story element, second story plane change, or multiple roofs with different ridge orientations	No two-story plans are being offered.
9. Covered Patios	Covered rear patios are standard on all floor plans.

<i>Optional Elements:</i>	
1. Provide at least 3 significant architectural style differences with at least 4 distinctive features	The proposed homes offer four architectural styles as shown on Exhibit 5, Elevations and Floor Plans . Additionally, elements including corbels, stone and /or brick veneer, horizontal siding, batt & board, and decorative tile and shutters promote the individuality of each elevation.
2. Prohibit the same front elevation on adjoining homes or across the street	The same elevation styles will not be built side-by-side or directly across from each other.
3. Standard feature stone, brick, or accent façade material on at least one elevation for each floor plan	Stone veneer, horizontal siding, or batt and board is standard on at least one elevation for each plan.
4. Provide distinctive architectural details on all elevations such as covered front entries, covered front porches, door and window details, roof features, parapet walls with cap features, eave details, front door styles, dormers, etc.	Within each of the distinct architectural elevations there are varying details, each meant to articulate the individual style. Diversity elements between elevation styles include roof massing, window and opening shapes, window accent designs/materials, and general adherence to historical aesthetic design themes.
5. Provide screening or other accommodations for refuse containers	All trash containers, recycling bins, and other household equipment will be screened behind the side-yard gate.
6. Incorporate standard front porches, defined courtyards, or other defined front yard outdoor living spaces on at least one elevation for each floor plan.	All four plans contain covered porches or courtyards with covered portico.
8. Break-up the main ridgelines on roof slopes.	The main ridgelines of the roof slopes are broken-up using multiple roof elevations and plane changes.
9. Limit the roof slopes visible from arterial streets to no more than 2 adjacent lots with identical rear elevation roof lines.	The roof slopes visible from Lindsay Road (arterial street) will be limited to no more than 2 adjacent lots with identical rear elevation roof lines.

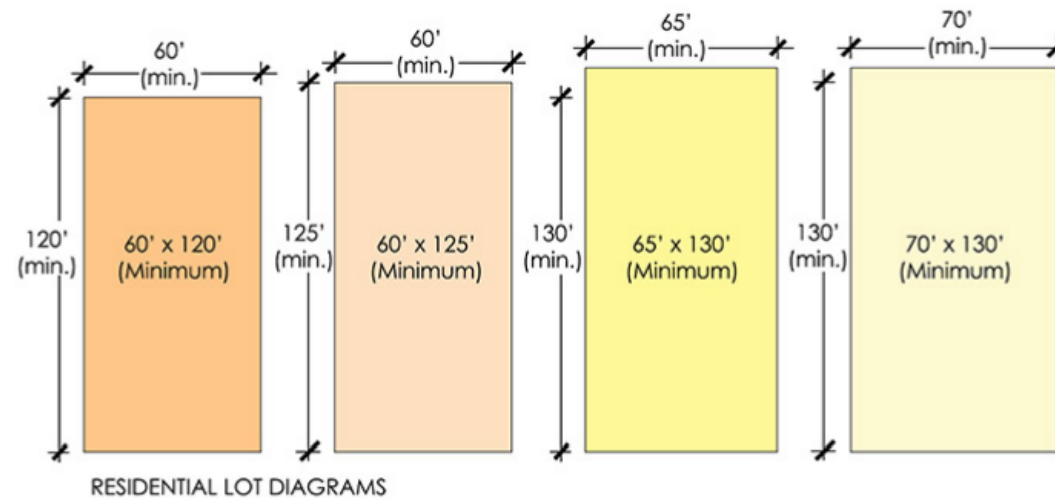

<i>Optional Elements:</i>	
1. Provide at least 3 significant architectural style differences with at least 4 distinctive features	The proposed homes offer four architectural styles as shown on Exhibit 5, Elevations and Floor Plans . Additionally, elements including corbels, stone and /or brick veneer, horizontal siding, batt & board, and decorative tile and shutters promote the individuality of each elevation.
2. Prohibit the same front elevation on adjoining homes or across the street	The same elevation styles will not be built side-by-side or directly across from each other.
3. Standard feature stone, brick, or accent façade material on at least one elevation for each floor plan	Stone veneer, horizontal siding, or batt and board is standard on at least one elevation for each plan.
4. Provide distinctive architectural details on all elevations such as covered front entries, covered front porches, door and window details, roof features, parapet walls with cap features, eave details, front door styles, dormers, etc.	Within each of the distinct architectural elevations there are varying details, each meant to articulate the individual style. Diversity elements between elevation styles include roof massing, window and opening shapes, window accent designs/materials, and general adherence to historical aesthetic design themes.
5. Provide screening or other accommodations for refuse containers	All trash containers, recycling bins, and other household equipment will be screened behind the side-yard gate.
6. Incorporate standard front porches, defined courtyards, or other defined front yard outdoor living spaces on at least one elevation for each floor plan.	All four plans contain covered porches or courtyards with covered Portico.
8. Break-up the main ridgelines on roof slopes.	The main ridgelines of the roof slopes are broken-up using multiple roof elevations and plane changes.
9. Limit the roof slopes visible from arterial streets to no more than 2 adjacent lots with identical rear elevation roof lines.	The roof slopes visible from 124 th Street and East Chandler Heights Road (arterial street) will be limited to no more than 2 adjacent lots with identical rear elevation roof lines.
