ORAL COMMUNICATIONS ON AGENDA ITEMS

This portion of the meeting is set aside for public comments regarding any matter within the jurisdiction of the City Council. Comments on non-agenda items will be heard at this time. Comments related to a specific agenda item will be heard following the staff report for that item and prior to the City Council action, unless the speaker prefers to make the comment during the general public comment period. The City Council cannot discuss or take action on matters not on the agenda for this meeting, but Council members may provide brief responses. Please complete a Speaker's Card to address the City Council in-person. Please follow the instructions at the end of the agenda and wait for the Mayor or City Clerk to call on you to address the City Council virtually. Speakers providing in-person comments will be called first. Time allotted for public comment (subject to change by the presiding officer).

General Public Comment (not on agenda): 3 minutes
Consent Calendar (any or all items): 3 minutes
Agenda Items (not on consent calendar): 3 minutes per item

CONSENT CALENDAR (ITEMS 1-9)

All matters listed on the Consent Calendar are to be approved with one motion unless a Council Member requests separate action on a specific item. Council Members voting no or abstaining on a Consent Calendar item may do so without removing the item from the Consent Calendar.

1. Approve Minutes of the May 12, May 26, June 9 and June 23 Regular City Council Meetings and the Minutes of the June 10 and June 23 Special Meetings

Prepared by: Lisa Berglund, City Clerk

Recommendation: Approve as submitted.

2. Second Reading of Ordinance No. 1234 Amending Section 17-52 of the Municipal Code related to the Illegal Discharge of Fireworks by Adding Section 17-52.01 (Social Host Liability), Section 17-52.02 (Penalties for Violation), Section 17-52.03 (Enforcement & Citation Issuance), Section 17-52.04 (Right to Appeal), and Section 17-52.05 (Cost Recovery)

Prepared by: William Wynder, City Attorney

Recommendation: Approve the second reading and adopt Ordinance No. 1234 by title only and waive further reading, amending Section 17-52 of the Municipal Code related to the Illegal discharge of fireworks by adding Section 17-52.01 (Social Host Liability), Section 17-52.02 (Penalties for Violation), Section 17-52.03 (Enforcement & Citation Issuance), Section 17-52.04 (Right to Appeal), and Section 17-52.05 (Cost Recovery).

3. Approve Purchase of Police Department Drones and Accept Donation from the Cypress Police Foundation.

Prepared by: Mark Lauderback, Chief of Police

Recommendation:
1. Approve a three-year agreement for $138,388 with Axon Enterprises, Inc. for Police Department drones, software, and services.

2. Accept a $70,000 donation from the Cypress Police Foundation.

4. Receive and File the Police Department Annual Military Equipment Report

Prepared by: Jason Machado, Assistant to the City Manager

Recommendation:
1. Receive and file the Police Department Annual Military Equipment Report; and

2. Renew the Military Equipment Policy previously approved by City Council via Ordinance No. 1194.

5. Approve Amendment Seven to the Cooperation Agreement with the County of Orange for Continued Participation in the Urban County Community Development Block Grant (CDBG) and HOME Investment Partnerships (HOME) Programs for Fiscal Years 2027-2028 through 2029-2030

Prepared by: Christopher Wong, Community Development Manager

Recommendation:
1. Adopt a Resolution approving Amendment Seven to the Cooperation Agreement between the County of Orange and the City of Cypress confirming Cypress' continued participation in the Urban County CDBG and HOME Programs for Fiscal Years 2027-2028 through 2029-2030; and

2. Authorize the Director of Community Development to execute Amendment Seven to the Cooperation Agreement.

6. Award Contract for Public Engagement and Professional Design Services for Park Playground Equipment Replacement, Project 465

Prepared by: Nick Mangkalakiri, Director of Public Works

Recommendation:
1. Award a contract to David Volz Design Landscape Architecture, Inc. for Public Engagement and Professional Design Services for Park Playground Equipment Replacement, Project 465, for $106,550, and authorize a contingency of $16,000; and

2. Authorize the City Manager to execute the contract agreement.

7. Accept the Traffic Signal Improvements at Valley View Street and Plaza Drive, Project 353

Prepared by: Nick Mangkalakiri, Director of Public Works

Recommendation:
1. Accept the Traffic Signal Improvements at Valley View Street and Plaza Drive, Project 353, in the amount of $91,875 and approve the final payment of $4,593.75 to Yunex, LLC.; and

2. Authorize the City Clerk to file a Notice of Completion with the County Recorder.

8. Acceptance of Sidewalk Easement at 10652 Walker Street.

Prepared by: Nick Mangkalakiri, Director of Public Works

Recommendation:
1. Accept a Grant of Permanent Easement for public sidewalk from North Bayport Industrial Park II, LTD., located at 10652 Walker Street; and

2. Authorize the City Manager to execute the Certificate of Acceptance and direct the City Clerk to record the easement document with the County Recorder.

9. Accept a Donation of 75 Veteran Challenge Coins from GFWC Woman's Club of Cypress

Prepared by: Jeff Draper, Director of Recreation and Community Services

Recommendation: Accept a donation of 75 Veteran Challenge Coins valued at $750 from the GFWC Woman's Club of Cypress.

ITEMS REMOVED FROM CONSENT CALENDAR

PUBLIC HEARINGS (ITEMS 10 - 11)

The public may address the City Council on public hearing items prior to any action being taken. Please complete a speaker's card to participate. In-person speakers will be called first, followed by those joining virtually. The Mayor or City Clerk will call on you to address the City Council. All speakers have three minutes to make their comments. Council Members should disclose communications with anyone relevant to a Public Hearing item.

10. Public Hearing to Renew the Cypress Corporate Center Landscape Maintenance District No. 1 for FY 2026-27

Prepared by: Nick Mangkalakiri, Director of Public Works

Recommendation: Adopt a Resolution renewing Cypress Corporate Center Landscape Maintenance District No. 1 for FY 2026-27, pursuant to the Landscaping and Lighting Act of 1972.

11. Public Hearing to Consider Los Alamitos Race Course Specific Plan 3.0 Buildout

Prepared by: Alicia Velasco, Community Development Director

Recommendation:
1. Adopt the attached Resolution certifying the Environmental Impact Report, and approving Findings, a Statement of Overriding Considerations, and Mitigation Monitoring and Reporting Program; and

2. Adopt the attached Resolution approving Vesting Tentative Tract Map No. 19247; and

3. Introduce for first reading of an Ordinance approving a Development Agreement by title only and waive further reading.

NEW BUSINESS (Items 12 - 13)

12. First Reading of an Ordinance Correcting and Amending Section 17-53 and 17-54 of the Municipal Code Related to Penalties for Violation and Civil Remedies for the Illegal Discharge of Fireworks

Prepared by: William Wynder, City Attorney

Recommendation:
Introduce for first reading an ordinance correcting and amending Section 17-53 and 17-54 of the Cypress Municipal Code related to penalties for violation and civil remedies for the illegal discharge of fireworks.

13. Solid Waste Franchise Agreement Performance Review and Amendment

Prepared by: Nick Mangkalakiri, Director of Public Works

Recommendation:

1. Receive and file the Solid Waste Franchise Agreement Performance Review; and

2. Approve the Fifth Amendment to the Solid Waste Franchise Agreement between the City of Cypress and Valley Vista Services, Inc.

COUNCIL MEMBER REPORTS FROM CITY-AFFILIATED BOARDS AND COMMITTEES AND REMARKS

COUNCIL MEMBER ITEMS FOR FUTURE CONSIDERATION

CITY MANAGER REMARKS

ADJOURNMENT

The next meeting will be an adjourned Regular Meeting, to be held on Tuesday, August 25, 2026, beginning at 5:30 p.m. in the City Council Chambers.

Council Members and the public should promptly exit the meeting room following adjournment.

I, Lisa Berglund, City Clerk, certify under penalty of perjury under the laws of the State of California, that the foregoing Agenda was posted on the City Hall bulletin board and City website not less than 72 hours prior to the meeting. Dated July 8, 2026.

PUBLIC PARTICIPATION

Members of the public can participate in the City Council meeting in the following ways:

1. Attend In-Person. First-come, first-served seating is available. All attendees must be free of any symptoms associated with contagious illnesses.

2. Attend Virtually via Webinar. Follow this link: https://attendee.gotowebinar.com/register/6996636858011628848. Advanced registration is recommended. Kindly mute television or streaming devices you may have on in the background so you can hear when you are queued to speak in real time. This helps avoid delays caused by the meeting's 10-second broadcast delay.

The public may address the City Council virtually during Oral Communications on Agenda Items and Public Hearings. Virtual participants must click the 'hand raise' button prior to the end of the first in-person speaker to indicate they wish to address the City Council. Upon clicking the 'hand raise' button, please unmute your microphone and wait for the Mayor/City Clerk to call on you.

 = Hand Raise  = Unmute

3. Submit Public Comments Prior to the Meeting. The public may submit comments via email to cityclerk@cypressca.org. Comments submitted by 3:00 p.m. on the day of the meeting will be added to the meeting record.

4. Watch the Meeting. The City Council meeting can be viewed on Spectrum Cable Channel 36 or on the City's website at **www.cypressca.org/watchlive**.

5. Listen to the Meeting. Listen-only teleconferencing is available by calling +1 (562) 247-8422 and entering Access Code 501-088-955. No registration or audio pin is necessary.

INVOCATION POLICY

The City Council does not endorse the content of the invocation and does not endorse the invocational speaker's particular faith, belief and/or religious denomination. The City Council has an established neutral policy for selecting and scheduling invocational speakers. The City Council's policy on invocations is available from the City Clerk.

AMERICANS WITH DISABILITIES ACT

In compliance with the Americans With Disabilities Act, if you need special assistance to participate in this meeting, you should contact the City Clerk at (714) 229-6685 at least 72 hours prior to the meeting to enable the City to make reasonable arrangements to assure accessibility to this meeting.

CITY OF CYPRESS

The City Manager introduced Director of Public Works Mangkalakiri, who provided a report on the item.

Mayor Medrano thanked staff for the report opened the floor to questions and comments from the City Council.

Council Member Peat asked questions of Director Mangkalakiri.

Director Mangkalakiri provided clarification on the question asked by Council Member Peat.

Mayor Medrano closed discussion.

A motion was made by Mayor Pro Tem Chang and seconded by Council Member Burke to approve the leasing and upfitting of five replacement vehicles.

The motion was unanimously carried by the following electronic vote:

AYES: 5 COUNCIL MEMBERS: Chang, Peat, Burke, Medrano, Strong Carnahan
NOES: 0 COUNCIL MEMBERS: None

ITEMS REMOVED FROM CONSENT CALENDAR
None.

COUNCIL MEMBER REPORTS FROM CITY-AFFILIATED BOARDS AND COMMITTEES AND REMARKS

Council Member Strong Carnahan:
Recognized City Clerk Appreciation Week and thanked the City Clerk for her dedication, kindness, and continued support to the City Council and community. She also reported meeting with an Oxford Academy student regarding a potential internship and showed interest in women's issues and learning more about the City's efforts related to banning child marriage and the legislative process involved in advancing the issue to the State level. She attended the Commissioners Appreciation Reception and thanked all Commissioners for their service and involvement in local government. She also wished everyone a Happy Mother's Day and thanked those who have served and sacrificed as Memorial Day approached.

Council Member Peat:
Reported attending the Racecourse Briefing and thanked Planning Director Velasco for coordinating the meeting and providing updates. She also attended the Commissioners Appreciation Reception and shared appreciation for the Commissioners and their service to the community. She met with Cypress Land to discuss how operations are going within the City, challenges they may be facing, and their relationship with the City. She noted they were complimentary of City staff and shared that the business currently has 100% occupancy.
She attended an Orange County Sanitation District Operations Meeting and the Chamber Awards event and congratulated Cypress resident Colleen Janssen, as Woman of the Year. She congratulated Public Works staff and the City Manager regarding the City's designation as a California Clean Community. She recognized local historian Mr. John Olson, who spoke during oral communications, for his contributions to documenting and preserving the history of Cypress.

Council Member Burke:
Thanked the City Commissioners for their service and shared that he enjoyed attending the Commissioners Appreciation Reception and looks forward to participating in upcoming Commissioner interviews. He also participated in Capstone interviews for Cypress High School students. He attended the Southern California Association of Governments Conference on behalf of the City, where discussions included artificial intelligence, housing issues, and affordable housing efforts. He noted that Cypress is ahead of many cities regarding its certified Housing Element and shared appreciation for the City's strong financial position and staff support.

Mayor Pro Tem Chang:
Reported attending the Cypress High School and Lexington Junior High School Capstone events and thanked Principals Jennifer Brown and Daniel Klatzker for hosting and organizing the programs. He also attended the Commissioners Appreciation Reception, the Orange County Mosquito and Vector Control Budget Presentation, and participated in an interview with Civic Youth Lens, a student group from Whitney High School interested in local government.

Mayor Medrano:
Reported attending Cypress Bistro on May 7th, hosted by Cypress College. He also attended the Chamber of Commerce Awards Ceremony and congratulated all award recipients. On May 8th, he attended the Frank Vessels Elementary Pancake Breakfast and assisted with serving pancakes and sausage as part of the Kiwanis Club. He also participated in a behind the scenes visit to Target and shared appreciation for the company's community involvement, charitable contributions, and volunteer efforts throughout Orange County. He further acknowledged the importance of both large and small businesses within the community and expressed appreciation for the Cypress Chamber of Commerce supporting local businesses. He attended the ribbon cutting ceremony held by Cypress Chamber of Commerce for Advantage Financial Services as they opened their first Orange County location in Cypress. Following the event, he attended the Youth Action Council Recognition Celebration.

COUNCIL MEMBER ITEMS FOR FUTURE CONSIDERATION
Council Member Strong Carnahan requested to agendize a discussion on adding a brief land acknowledgment at the beginning of City Council meetings before office business commences. Mayor Pro Tem Chang expressed support on the item.

Council Member Burke requested to agendize discussion regarding two proposed changes to the order of the City Council agenda, including moving "Items for Future Consideration" to take place prior to "Council Member Reports from City-Affiliated Boards and Committees and Remarks" and moving "Items Removed from the Consent Calendar" to immediately following the Consent Calendar portion of the agenda. Mayor Pro Tem Chang expressed support on the item.

CITY MANAGER REMARKS
None.

ADJOURNMENT

Mayor Medrano adjourned the Regular Meeting at 6:51 p.m. to an adjourned Regular Meeting, to be held on Tuesday, May 26, 2026, beginning at 5:30 p.m. in the Executive Board Room.

REPORT OF CLOSED SESSION
The City Attorney reported that the City Council received an update on the closed session item. Mayor Medrano and Council Member Peat recused themselves from participation in the item and exited the Executive Board Room. No further reportable action was taken.

ORAL COMMUNICATIONS

Brooke Nafarrette, Cypress, thanked emergency responders, City staff, Mayor Medrano, and Council Member Peat for their efforts during the recent Garden Grove chemical leak. She suggested that the City conduct an after-action review and include a citizen ad hoc committee in future emergency preparedness planning efforts.

Anne Mallari, Cypress, thanked City staff and emergency responders for their response to the recent Garden Grove chemical leak and shared information regarding assistance available through her organization, We Care Orange County.

Randy Harper, Cypress, shared his experience as an evacuee during the recent Garden Grove chemical leak, encouraged emergency preparedness, provided information regarding SBA disaster assistance resources, and thanked City staff and emergency personnel for their response efforts.

Marilyn Reames, Cypress, spoke in support of Agenda Item No. 10 and thanked City staff, the Cypress Police Department, and emergency responders for their efforts during the recent Garden Grove chemical leak. She expressed pride in the community's response and interest in assisting with future preparedness and recovery efforts.

Brooke Nafarrette, Cypress, spoke in support of Agenda Item No. 10, thanked City staff and City Manager DeLong for their efforts during the recent Garden Grove chemical leak, and suggested publicizing the emergency proclamation for residents who may need it for insurance purposes. She also spoke in opposition to Agenda Item No. 11.

Glen Button, Cypress, spoke in opposition to Agenda Item No. 11.

CONSENT CALENDAR
All matters listed on the Consent Calendar are to be approved with one motion unless a Council Member requests separate action on a specific item.

Mayor Medrano asked if any Council Member wished to pull an item from the Consent

Calendar. Hearing none, he proceeded with consideration of the Consent Calendar.

Council Member Burke asked questions to City Staff regarding Agenda Item No. 9.

Director of Public Works Mangkalakiri and Director of Recreation and Community Services Draper provided clarification regarding Agenda Item No. 9.

The City Attorney provided procedural guidance.

Council Member Peat asked questions of Director of Finance and Administrative Services Sikkema regarding Agenda Item No. 5.

Director Sikkema provided clarification regarding Agenda Item No. 5.

RESOLUTION NO. 7047
A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF CYPRESS CALIFORNIA RATIFYING THE CITY MANAGER'S PROCLAMATION OF A LOCAL EMERGENCY

ITEMS FROM CITY COUNCIL MEMBERS

Item No. 11: Discussion of an Indigenous People Land Acknowledgment by the Cypress City Council Proposed by Council Member Strong Carnahan

Council Member Strong Carnahan provided a verbal report on the item.

Council Member Strong Carnahan acknowledged receipt of an email from Cypress resident,

Robin Isler, who expressed opposition on the item and requested that it be made part of the record.

Mayor Pro Tem Chang expressed support on the item.

Council Member Strong Carnahan provided additional comments on the item.

Council Member Peat spoke in opposition to the item and stated she would vote no.

Council Member Burke emphasized the importance of inclusivity and stated that he would abstain from voting on the item.

Mayor Medrano stated that he believed the matter was outside the City's jurisdiction and would abstain from voting on the item.

City Council discussion ensued.

A motion was made by Council Member Strong Carnahan to direct staff to include a land acknowledgment at the beginning of City Council meetings, along with the invocation and Pledge of Allegiance. No second was heard.

The motion failed due to lack of a second.

Item No. 12: Discussion of Changes to the City Council Meeting Agenda Structure Proposed by Council Member Burke

Council Member Burke provided a verbal report on the item.

Mayor Pro Tem Chang spoke in support of the item.

Council Member Peat spoke in support of the item and provided background on the current agenda structure.

Mayor Medrano closed the discussion.

A motion was made by Council Member Burke, and seconded by Mayor Pro Tem Chang, to direct staff to prepare the necessary changes to the City Council meeting agenda structure as discussed.

The motion was carried by the following electronic vote:

AYES: 4 COUNCIL MEMBERS: Chang, Peat, Burke, Medrano
NOES: 1 COUNCIL MEMBERS: Strong Carnahan

COUNCIL MEMBER REPORTS FROM CITY-AFFILIATED BOARDS AND COMMITTEES AND REMARKS

Council Member Strong Carnahan

Attended the Cypress Police Department Open House, the Police Officers Association Luncheon, emergency response briefings related to the recent Garden Grove chemical leak, the Lexington School eighth-grade promotion celebration, and an Anaheim Union High School District town hall regarding the selection of a new Lexington School principal. She expressed gratitude to local emergency responders, City staff, City officials, and volunteers for their efforts during the recent Garden Grove chemical leak and thanked those who assisted at the emergency shelters. She also expressed appreciation for the communication and transparency provided throughout the emergency response and noted that her mother was among those impacted by the evacuation of a Stanton elder care facility.

Council Member Peat

Expressed appreciation to City staff, emergency responders, volunteers, community organizations, and local businesses for their response to the recent Garden Grove chemical leak. She highlighted the efforts of those who assisted evacuees, commended the coordination and communication throughout the emergency response, and supported conducting an after-action review. She also reported attending a League of Cities roundtable, the Police Open House, the Police Foundation awards event, a West-Comm Board meeting, an Eagle Scout Board of Review, a neighborhood meeting regarding illegal fireworks, and a meeting with Frank Sherren regarding the Los Alamitos Racetrack. She concluded by commending City Manager DeLong and City staff for their leadership during the emergency response.

Council Member Burke

Attended the Orange County Fire Authority Budget and Legislative and Public Affairs Subcommittee meetings. Served as the City's representative on the City Selection Committee. He also attended the Cypress Police Department Open House, the Police Officer Association Foundation Luncheon, and along with Mayor Pro Tem Chang attended a Cypress School District Ad Hoc Subcommittee meeting. He discussed the Cypress School District's financial outlook and efforts to strengthen collaboration between the City and the School District. He expressed appreciation to the Orange County Fire Authority, local emergency responders, City staff, volunteers, residents, and City Manager DeLong for their efforts during the recent Garden Grove chemical leak. He also commended the community's cooperation, communication, and support throughout the emergency response.

Mayor Pro Tem Chang

Attended the Cypress Police Department Open House, the Police Officers Association Luncheon, Orange County Mosquito and Vector Control District Subcommittee and main meeting, toured the Korean American Special Education Center, and attended an Asian Americans Advancing Justice Southern California (AJSOCAL) meeting on demographics and trends. He noted that Sunday, May 31, is World No Tobacco Day and announced that he would be participating in a community cleanup event at Oak Knoll Park with the Clean Air Coalition and LGBTQ Center OC. He expressed appreciation to the City Manager, City staff, the Cypress Police Department, and the Orange County Fire Authority for their response to the recent Garden Grove chemical leak. He highlighted the importance of coordinated emergency communications and commended the community's support for those affected by the evacuation.

Mayor Medrano

Reported on May 13, he attended the City Council Budget Workshop and thanked all City staff who worked on the information presented. On May 16, he attended the Cypress Police Department Open House, Hope Concert and Neighborhood Education Project, and handed out certificates at New Praise Church; on May 19, the Police Officers Association Luncheon; on May 22, the Cypress College Foundation Scholarship Awards; on May 26, a meeting with Frank Sherren regarding the Cypress Town Center and Commons Specific Plan 2.0 area; and later in the afternoon of May 26th, a town hall hosted by Representative Tran. He expressed appreciation to volunteers, community organizations, local businesses, emergency responders, City staff, City Manager, City officials, and elected representatives for their efforts during the recent Garden Grove chemical leak. He also commended professionalism, communication, coordination, and adherence to established emergency response procedures throughout the incident.

COUNCIL MEMBER ITEMS FOR FUTURE CONSIDERATION

Council Member Peat requested to agendize a discussion regarding illegal fireworks, including a potential urgency ordinance and law enforcement options. Mayor Pro Tem Chang expressed support for the item.

CITY MANAGER REMARKS

Expressed appreciation to City staff, partner agencies, local school districts, the Orange County Fire Authority for their efforts and cooperation during the recent industrial hazardous materials incident in Garden Grove, noting that Captain Richard Tantuvanich had been in attendance in case the Council or members of the public questions for OCFA. She also reiterated that evacuation orders had been lifted with the exception of three properties and that Western Avenue remained closed between Chapman Avenue and Garden Grove Boulevard.

ADJOURNMENT

Mayor Medrano adjourned the Regular Meeting at 7:44 p.m. to an adjourned Regular Meeting, to be held on Tuesday, June 9, 2026, beginning at 5:30 p.m. in the Executive Board Room.

The motion was carried by the following electronic vote:

AYES: 4 COUNCIL MEMBERS: Chang, Peat, Burke, Strong Carnahan
ABSTAIN: 1 COUNCIL MEMBERS: Medrano

COUNCIL MEMBER REPORTS FROM CITY-AFFILIATED BOARDS AND COMMITTEES AND REMARKS

Council Member Strong Carnahan:
Reported and acknowledged the original inhabitants and stewards of the land. Provided an update on efforts to secure $25,000 in relief funding from Warland Investments managing partners Hope Warschaw and Chip Robertson for residents affected by the District 5 evacuation. Praised City staff for their efforts to coordinate and distribute relief donations. Reported on a tour of Sycamore Creek Charter School and a visit to the newly opened Bandoleros Café. Expressed excitement for the summer season and thanked Parks and Recreation staff for the programs already underway, as well as upcoming Concerts in the Park and Fourth of July celebrations.

Council Member Peat:
Reported on a recent Orange County Sanitation District Board meeting, including the selection of new leadership and community outreach efforts related to the Denny and Crescent project. Reported volunteering as a reviewer for the Helen Putnam Award Program through Cal Cities, attending the annual Orange County Council of Governments Conference, and meeting with Interim Superintendent Tim McLellan regarding updates within the Cypress School District. Also highlighted local businesses, including El Zarape, where several meetings were hosted, and an upcoming sushi restaurant opening in Cypress.

Council Member Burke:
Reported on attending a recent Orange County Fire Authority Board meeting, including adoption of the agency's budget, and the OCFA Best and Bravest Awards recognizing outstanding firefighters and personnel. Also thanked the City staff, particularly the City Manager and Public Works Director, for their responsiveness in addressing resident concerns and inquiries.

Mayor Pro Tem Chang:
Reported on attending the Clean Air OC World No Tobacco Day cleanup event at Oak Knoll Park, where approximately 20 community members participated, and the Margaret Landell Elementary School Open House.

Mayor Medrano:
Reported attending the California Mayors Reception on May 30, 2026, the Construction Management Association Awards on May 27, 2026, where Arnold Cypress Park received recognition, and serving pancakes as part of Kiwanis at the Margaret Landell Elementary School pancake breakfast. He also recognized Target Cypress for its response efforts during the Memorial Day weekend evacuation, including the delivery of approximately 25,000 essential supplies to Red Cross distribution hubs and

evacuation shelters throughout Orange County.

COUNCIL MEMBER ITEMS FOR FUTURE CONSIDERATION

Council Member Strong Carnahan requested future consideration of formal City recognition for Warland Investments in appreciation of its donation supporting residents affected by the District 5 evacuation. Council Member Burke expressed support for the item.

Council Member Peat expressed support for a future presentation recognizing organizations and community partners that assisted residents during the Memorial Day weekend evacuation efforts.

Council Member Peat requested future consideration of a proclamation recognizing the City of Cypress' 70th Anniversary and the Nation's 250th Anniversary. Council Member Burke expressed support for the item.

Council Member Burke requested future consideration of a presentation regarding updates to e-bike laws, regulations, and enforcement. Mayor Pro Tem Chang expressed support for the item.

City Manager DeLong summarized the requests, noting multiple Council Members' support for each item, and confirmed that the items would be placed on a future agenda.

CITY MANAGER REMARKS

None.

The City Council recessed to Closed Session at 8:04 p.m. to continue discussion on the third closed session item regarding the City Manager's 90-day performance evaluation.

2. Adopt a Resolution adopting the Local Signal Synchronization Plan for the Measure M2 Program.

RESOLUTION NO.7062

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF CYPRESS CONCERNING THE STATUS AND UPDATE OF THE LOCAL SIGNAL SYNCHRONIZATION PLAN FOR THE MEASURE M (M2) PROGRAM

Item No. 11: Approve Annual Task Order for On-Call Traffic Engineering Services, Construction Management, and Inspection Services.

ACTION:

1. Approve a Task Order to Linscott, Law & Greenspan Engineers (LLG) to provide City Traffic Engineer services for the period of July 1, 2026 through June 30, 2027; and
2. Approve a Task Order to FCG Consultants, Inc. (FCG) to provide public works construction management and inspection services for the period of July 1, 2026 through June 30, 2027; and
3. Authorize the City Manager to approve and amend annual task orders, in an amount not to exceed the adopted annual budget for City Traffic Engineer and Public Works construction management and inspection services.

Item No. 12: Accept the Police Department Shooting Range Improvements, Project 422

ACTION:

1. Accept the Police Department Shooting Range Improvements, Project 422, in the amount of $94,250 and approve the final payment of $4,712.50 to Hunter Consulting, Inc., dba HCI Environmental & Engineering Service; and
2. Authorize the City Clerk to file a Notice of Completion with the County Recorder.

Item No. 13: Accept the Replacement of the Picnic Area Shade Structure at Maple Grove Park South, Project 399

ACTION:

1. Accept the replacement of the picnic area shade structure at Maple Grove Park South, Project 399, in the amount of $79,950 and approve the final payment of $3,997.50 to Landmark Associated Builders, Inc.; and
2. Authorize the City Clerk to file a Notice of Completion with the County Recorder.

Item No. 14: Approve the Purchase of a Sewer Jetter Trailer and Replacement Sewer Vacuum Trailer

ACTION:

1. Approve the purchase of a sewer jetter trailer for $90,153.75, plus a 5% contingency, from Haaker Municipal; and
2. Approve the purchase of a replacement sewer vacuum trailer for $106,755.13, plus a 5% contingency, from Maniar and Company.

NEW BUSINESS

Item No. 15: Appoint City Commissioners and Affirm Current Boards, Commissions and Committees Policy Manual

Acting City Manager Draper, introduced City Clerk Berglund, who provided a verbal report on the item.

Acting City Manager Draper, announced the recommended appointments for City Commissioners and Alternates.

Recreation and Community Services	Senior Citizens Commission	Traffic Commission	Commission Alternates
Jeff Dronkers	Claudia Nessary	Catherine	Abhinv Pande

			Lom Ho
			Anthony Adams

A motion was made by Council Member Peat, and seconded by Council Member Strong Carnahan, to appoint City Commissioners and affirm the current Boards, Commissions, and Committees Policy Manual.

The motion was unanimously carried by the following electronic vote:

AYES: 5 COUNCIL MEMBERS: Chang, Peat, Burke, Medrano, Strong Carnahan
NOES: 0 COUNCIL MEMBERS: None

RESOLUTION NO. 7063

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF CYPRESS, AND ACTING AS EX-OFFICIO GOVERNING BOARD OF DIRECTORS OF THE CYPRESS RECREATION AND PARK DISTRICT, REAFFIRMING THE TWELFTH EDITION OF THE BOARDS, COMMISSIONS AND COMMITTEES POLICY MANUAL

Item No. 16: First Reading of an Ordinance Amending Section 17-52 of the Municipal Code related to the Illegal Discharge of Fireworks by Adding Section 17-52.01 (Social Host Liability), Section 17-52.02 (Penalties for Violation), Section 17-52.03 (Enforcement & Citation Issuance), Section 17-52.04 (Right to Appeal), and Section 17-52.05 (Cost Recovery)

Acting City Manager Draper, introduced City Attorney Wynder, who provided a verbal report on the item.

Mayor Pro Tem Chang provided comments regarding the item.

City Attorney Wynder provided clarification regarding the ordinance.

Mayor Pro Tem Chang asked questions of Chief of Police Lauderback.

Chief Lauderback responded to Mayor Pro Tem Chang's questions.

Council Members Peat and Burke also provided comments on the item and asked questions of Chief Lauderback.

Chief Lauderback provided clarification in response to all the Council Members' questions.

City Council discussion ensued.

Mayor Medrano closed the discussion.

A motion was made by Council Member Peat, and seconded by Mayor Pro Tem Chang, to introduce the first reading of an ordinance amending Section 17-52 of the Municipal Code related to the illegal discharge of fireworks, interlineating the penalty provisions modified to establish fines of $2,000 for a first violation, $4,000 for a second violation, and $6,000 for a third violation.

The motion was unanimously carried by the following electronic vote:

AYES: 5 COUNCIL MEMBERS: Chang, Peat, Burke, Medrano, Strong Carnahan
NOES: 0 COUNCIL MEMBERS: None

City Attorney Wynder stated that the amended ordinance would be brought back to the next City Council meeting for second reading and adoption.

ITEMS REMOVED FROM CONSENT CALENDAR
None.

ITEMS FROM CITY COUNCIL MEMBERS
None.

COUNCIL MEMBER REPORTS FROM CITY-AFFILIATED BOARDS AND COMMITTEES AND REMARKS

Council Member Strong Carnahan:
Acknowledged the original inhabitants and stewards of the land. She reported attending graduation ceremonies during the weekend of June 13, noting the graduates' perspectives on the future, artificial intelligence, and entering the workforce. On June 14, she attended a meeting with the board of Peer 1 on 1, an organization that supports youth and young adults with autism. On June 15, she attended the kickoff meeting for a local apprenticeship program focused on peer leadership and mentorship, which will partner with Peer 1 on 1 to support autism education. On June 19, she attended a Juneteenth celebration and expressed her appreciation for the opportunity to learn more about the holiday and support unity within the community.

Council Member Peat:
Thanked the City Council for approving the fireworks ordinance and expressed appreciation to the residents who attended and spoke during oral communications. She reported attending the City Commissioner interviews and the North Orange County Community College breakfast, where city officials and business leaders discussed workforce needs and opportunities to strengthen partnerships between colleges, communities, and businesses. She also attended the Concert on the Green and commended the event and the national anthem performance. On June 21, she participated in a construction tour of the new Olson Homes development on Lincoln Avenue. She reported significant community interest in both the Madera Walk and Tierra Walk developments, including

strong demand for the affordable housing units.

Council Member Burke:
Thanked all applicants for the City Commissioner vacancies and congratulated those who were appointed, encouraging those not selected to apply for future openings. He reported attending an Orange County Fire Authority Budget Subcommittee meeting and a League of California Cities Division meeting, where discussions focused on lessons learned from the Regional Housing Needs Assessment (RHNA) process and preparations for the upcoming housing cycle.

Mayor Pro Tem Chang:
Reported attending an Orange County Mosquito and Vector Control District Board meeting, where updates were provided on mosquito activity and West Nile virus in Orange County. He noted that Cypress is considered a high-risk area for mosquito activity and encouraged residents to eliminate standing water and report mosquito concerns to the Orange County Mosquito and Vector Control District. He also reported attending the Concert on the Green.

Mayor Medrano:
Reported attending the Senior Resource Fair and assisting with the Kiwanis Pancake Breakfast on June 12. On June 13, he participated in the Kiwanis book distribution at King Elementary School. On June 17, he attended the North Orange County Community College Breakfast. On June 19, he kicked off the Concerts on the Green event and assisted at the Kiwanis booth preparing food. On June 20, he attended the grand opening of the Korean American Special Education Center and the grand opening of a new restaurant in Cypress called Bushfire Kitchen. He also participated in the City Commissioner interviews held on June 10 and June 23**,** and congratulated those who were appointed and thanked all applicants who participated in the process.

COUNCIL MEMBER ITEMS FOR FUTURE CONSIDERATION
None.

CITY MANAGER REMARKS
Acting City Manager Draper announced upcoming community events, including the continuation of the Concerts on the Green series on June 26 featuring the band ACME Time Machine, and the Salute to America celebration on July 3 at Cypress Community College commemorating America's 250th anniversary and the City of Cypress's 70th anniversary.

City Attorney Wynder concluded the meeting with congratulatory remarks regarding one of the newly appointed commissioners.

ADJOURNMENT
Mayor Medrano adjourned the Regular Meeting at 7:15 p.m. to an adjourned Regular Meeting, to be held on Tuesday, July 14, 2026, beginning at 5:30 p.m. in the Executive Board Room.

CITY CLERK OF THE CITY OF CYPRESS

CITY OF CYPRESS

CITY COUNCIL REPORT

City Council Regular **2.**

FROM: William Wynder, City Attorney

DATE: 07/14/2026

SUBJECT: **Second Reading of Ordinance No. 1234 Amending Section 17-52 of the Municipal Code related to the Illegal Discharge of Fireworks by Adding Section 17-52.01 (Social Host Liability), Section 17-52.02 (Penalties for Violation), Section 17-52.03 (Enforcement & Citation Issuance), Section 17-52.04 (Right to Appeal), and Section 17-52.05 (Cost Recovery)**

RECOMMENDATION

Approve the second reading and adopt Ordinance No. 1234 by title only and waive further reading, amending Section 17-52 of the Municipal Code related to the Illegal discharge of fireworks by adding Section 17-52.01 (Social Host Liability), Section 17-52.02 (Penalties for Violation), Section 17-52.03 (Enforcement & Citation Issuance), Section 17-52.04 (Right to Appeal), and Section 17-52.05 (Cost Recovery).

DISCUSSION

On June 23, 2026, the City Council approved 5-0 the first reading of Ordinance No. 1234 amending Section 17-52 of the Municipal Code related to the Illegal discharge of fireworks by adding Section 17-52.01 (Social Host Liability), Section 17-52.02 (Penalties for Violation), Section 17-52.03 (Enforcement & Citation Issuance), Section 17-52.04 (Right to Appeal), and Section 17-52.05 (Cost Recovery).

If adopted, the ordinance would 1) create a "social host" category for a person(s) that may be held liable for the discharge of fireworks on their property (under a new Section, 17-52.01) and 2) increase the penalties for discharge of fireworks (under a new Section 17-52.02), as follows:

- Fines for the discharge of fireworks would be increased from $1,000 per violation, to $2,000 for a first violation, $4,000 for a second violation, and $6,000 for a third violation and each subsequent violation within a 36-month period; and
- Fines for any "social host" that allows the discharge of fireworks on their property would be established at $2,000 for a first violation, $4,000 for a second violation, and $6,000 for a third violation and each subsequent violation within a 36-month period.

These amounts were amended by City Council during the first reading at the June 23 City Council meeting. The changes are reflected in the attached redlined version of the ordinance.The proposed ordinance would also add section 17-52.03 related to the enforcement and citation process, section 17-52.04 related to the right to appeal citations, and Section 17-52.05 related to cost recovery in instances of an administrative hearing.

If approved, the ordinance will go into effect 30 days following the second reading. Assuming the second reading is approved on July 14, 2026, the ordinance would become effective on August 13, 2026.

BUDGET IMPACT

There is no direct budget impact associated with the recommendation. Additional fine revenue may be realized with the increased fine schedule; however, this amount is difficult to estimate at this point.

LEGAL REVIEW

The attached Ordinance was drafted and approved by the City Attorney's office.

APPROVED BY: Shannon DeLong, City Manager

Ordinance No. 1234

Ordinance No. 1234 Redline

ORDINANCE NO. 1234

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF CYPRESS, CALIFORNIA, ADDING SECTIONS 17-52.01 (SOCIAL HOST LIABILITY), 17-52.02 (PENALTIES FOR VIOLATION), 17-52.03 (ENFORCEMENT & CITATION ISSUANCE), 17-52.04 (RIGHT TO APPEAL) AND 17-51.05 (COST RECOVERY) TO CHAPTER 17 (OFFENSES) AND SECTION 17-52 (FIREWORKS SALE, DISTRIBUTION, AND DISCHARGE THEREOF PROHIBITED) OF THE CYPRESS MUNICIPAL CODE

R E C I T A L S

WHEREAS, the City of Cypress ("City") is a California charter city with plenary authority over all “municipal affairs,” and the broad “police powers” vested by California's Constitution, pursuant to which it may make and enforce laws necessary to protect and preserve the health, safety, and welfare of residents; and

WHEREAS, consistent with that authority and the City's police powers set forth under the California Constitution Article XI, Section 7 and Health & Safety Code § 12541, the City has authority to prohibit the sale, distribution and discharge of fireworks within the City; and

WHEREAS, Chapter 17 (Offenses) and Section 17-52 (firework; sale, distribution, and discharge thereof prohibited) of the Cypress Municipal Code ("CMC"), prohibits the sale, distribution, and discharge of fireworks within the City.

WHEREAS, despite the City's prohibition on the sale, distribution and discharge of fireworks in Section 17-52, the City has observed increased incidents and received an increased number of citizen complaints relating to fireworks in recent years, with observations and complaints associated with excessive noise levels, damage to property, risks the health and safety of residents, creating a fire hazard, and straining the resources of law enforcement officers while simultaneously diverting the resources of emergency personnel from other priorities.

WHEREAS, the Council of the City of Cypress ("City Council") finds it necessary and appropriate to enact this Ordinance to implement administrative fines associated with violations of Section 17-52 of Chapter 17 of the CMC to protect and preserve the public peace, health, and safety of the community.

O R D I N A N C E

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF CYPRESS DOES HEREBY ORDAIN AS FOLLOWS**:**

SECTION 1. The facts set forth in the Recitals are true and correct, and incorporated into this Ordinance as substantive findings.

SECTION 2. Section 17-52.01 ("Social host liability") is hereby added to Chapter 17 to read in its entirety as follows (new text in ***bold italics***):

"§ 17-52.01 Social host prohibited liability.

A. It shall be unlawful for any social host to allow, by invitation or consent, which consent may be implied given surrounding facts and circumstances such as repeated conduct, violations of Section 17-52 to occur or otherwise take place on his or her private property;

B. As used in this section, a "social host" means a person or persons with a right of possession of the residence or other private property at which fireworks are sold, offered to be sold, possessed, stored, used, ignited or discharged, including, but not limited to: (1) any owner of the residence or other private property-meaning the record owner of the title to property as of the time of the possession, storage, sale, use, ignition or discharge, wherever that person or entity resides at that time; (2) a tenant or lessee of the residence or other private property at the time when the illegal fireworks are possessed, stored, sold, used, ignited, or discharged; (3) the person(s) in charge of the residence or other private property at the time when fireworks are possessed, stored, sold, used, ignited or discharged; and (4) the person(s) who organizes, supervises, officiates, conducts or controls the gathering or any other person(s) accepting responsibility for such gatherings where fireworks are possessed. A social host need not be present at the time illegal fireworks are possessed, stored, sold, used, ignited or discharged for the city to impose penalties. Prior knowledge of the possession, storage, sale, use, ignition or discharge is not a pre-requisite to a finding that any specific individual is a social host as defined by this section."

SECTION 3. Section 17-52.02 ("Penalties for Violation") is hereby added to Chapter 17 to read in its entirety as follows (new text in ***bold italics***):

"17-52.02 Penalties for Violation.

A. Any person found in violation of this Chapter shall be guilty of a misdemeanor and may be issued an administrative citation that is punishable by an administrative fine in the amount of $2,000 for a

first violation; $4,000 for a second violation occurring within a thirty-six-month period; and $6,000 for each additional violation occurring within a thirty-six-month period.

B. Notwithstanding subsection A., any person found to be in violation of Section 17-52.01 (social host prohibited) shall be guilty of a misdemeanor and may be issued an administrative citation that is punishable by administrative fine in the amount of 2,000 for a first violation; $4,000 for a second violation occurring within a thirty-six-month period; and $6,000 for each additional violation occurring within a thirty-six-month period.

C. In addition to administrative fines, any person found in violation of this Chapter shall be responsible for reimbursement or payment of all expenses, costs, and/or fees associated with the safe disposal of all confiscated fireworks.

D. In the event that a "juvenile" (defined as any person under the age of eighteen) is found in violation of this chapter, then the parents or guardians of that juvenile shall be jointly and severally liable for any administrative fines, expenses, costs, or fees incurred or imposed. At the discretion of the city attorney or city prosecutor, community service hours may be served in lieu of the payment of penalties for violations by a juvenile.

E. The remedies set forth in this section are in addition to all other legal and equitable remedies, administrative, criminal or civil, available to the City to address violations of this chapter or California law."

SECTION 4. Section 17-52.03 ("Enforcement & Citation Issuance") is hereby added to Chapter 17 to read in its entirety as follows (new text in ***bold italics***):

"Enforcement Officers, including the Cypress Police Department, are authorized to issue administrative citations to the responsible party or property owner. Observed violations may be cited in person or, when identifying the person discharging the fireworks is impractical, the citation may be mailed to the property owner of record as identified by County tax assessment records."

SECTION 5. Section 17-52.04 ("Right to Appeal") is hereby added to Chapter 17 to read in its entirety as follows (new text in ***bold italics***):

"A. Right to Appeal: Any person who receives an administrative citation for violation of Section 17-52 or 17-52.01 may contest such citation or the imposed fees in Section 17-52.02 by filing a written Request for Hearing with the City Clerk no later than ten (10) calendar days from the date such citation was served in person or not later than thirteen (13) calendar days if such citation was served by mail.

B. Hearing Officer: The City Manager or designee shall appoint an impartial Hearing Officer to conduct the appeal hearing. The Hearing Officer shall not be the investigating police officer, enforcing code official, or any employee of the City's Police Department.

D. Hearing Procedures: The hearing shall be conducted within ten (10) calendar days of the City Clerk's actual receipt of the Request for Hearing. The cited party and the City shall have the opportunity to present evidence and witnesses. The technical rules of evidence do not apply. The hearing officer must admit any relevant evidence, including hearsay, if it is the type of evidence that reasonable and prudent people rely on in the conduct of serious affairs.

E. Hearing Officer's Decision: The Hearing Officer shall issue a written decision within 10 calendar days of the hearing, which shall include findings of fact. If the citation is upheld, the fine and any associated fees must be paid within 30 days of the written decision

F. Judicial Review: The decision of the Hearing Officer shall be final. Any person aggrieved by the decision may seek judicial review in the Orange County Superior Court in accordance with Government Code § 53069.4(b)(1)."

SECTION 6. Section 17-52.05 ("Cost Recovery") is hereby added to Chapter 17 to read in its entirety as follows (new text in ***bold italics***):

"***A. City Cost Recovery. If the administrative hearing officer upholds the citation in whole or in part, the city shall be entitled to recover all actual costs incurred in connection with the administrative appeal proceeding.***

B. Definition of Costs. For purposes of this section, administrative appeal costs include, but are not limited to:

- ***Staff time spent preparing for and attending the hearing.***
- ***Hearing officer fees and expenses.***
- ***Legal counsel fees and costs.***
- ***Costs of producing documentary or physical evidence.***

C. Collection. The city shall itemize its costs and serve a statement of costs on the party cited or appealing a citation. The party cited or appealing a citation shall pay the city such costs within thirty (30) days of the award of same. Unpaid costs may be collected by any legal means, including as a lien against the property where the violation occurred.

D. No Reciprocal Recovery. Under no circumstances shall a party cited or appealing a citation be entitled to recover attorney's fees, costs, or expenses from the city, regardless of the outcome of the appeal proceeding."

SECTION 7. CEQA. Adoption of this Ordinance is not a project within the meaning of Section 15378 of the CEQA Guidelines in that it (a) is an ordinance of general policy and procedure and does not constitute a project within the meaning of CEQA and (b) has no potential for resulting in either a direct or a reasonably foreseeable indirect physical change in the environment.

SECTION 8. Severability. The City Council declares that, should any provision, section, paragraph, sentence or word of this Ordinance be rendered or declared invalid by any final court action in a court of competent jurisdiction, or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences and words of this Ordinance shall remain in full force and effect.

SECTION 9. This Ordinance shall take effect 30 days after its passage and adoption pursuant to Government Code § 36937.

SECTION 10. The City Clerk shall certify to the passage of the Ordinance and shall cause the same to be posted in the manner required by law.

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF CYPRESS, CALIFORNIA, ADDING SECTIONS 17-52.01 (SOCIAL HOST LIABILITY), 17-52.02 (PENALTIES FOR VIOLATION), 17-52.03 (ENFORCEMENT & CITATION ISSUANCE), 17-52.04 (RIGHT TO APPEAL) AND 17-51.05 (COST RECOVERY) TO CHAPTER 17 (OFFENSES) AND SECTION 17-52 (FIREWORKS SALE, DISTRIBUTION, AND DISCHARGE THEREOF PROHIBITED) OF THE CYPRESS MUNICIPAL CODE

R E C I T A L S

WHEREAS, the City of Cypress ("City") is a California charter city with plenary authority over all “municipal affairs,” and the broad “police powers” vested by California's Constitution, pursuant to which it may make and enforce laws necessary to protect and preserve the health, safety, and welfare of residents; and

WHEREAS, consistent with that authority and the City's police powers set forth under the California Constitution Article XI, Section 7 and Health & Safety Code § 12541, the City has authority to prohibit the sale, distribution and discharge of fireworks within the City; and

WHEREAS, Chapter 17 (Offenses) and Section 17-52 (firework; sale, distribution, and discharge thereof prohibited) of the Cypress Municipal Code ("CMC"), prohibits the sale, distribution, and discharge of fireworks within the City.

WHEREAS, despite the City's prohibition on the sale, distribution and discharge of fireworks in Section 17-52, the City has observed increased incidents and received an increased number of citizen complaints relating to fireworks in recent years, with observations and complaints associated with excessive noise levels, damage to property, risks the health and safety of residents, creating a fire hazard, and straining the resources of law enforcement officers while simultaneously diverting the resources of emergency personnel from other priorities.

WHEREAS, the Council of the City of Cypress ("City Council") finds it necessary and appropriate to enact this Ordinance to implement administrative fines associated with violations of Section 17-52 of Chapter 17 of the CMC to protect and preserve the public peace, health, and safety of the community.

O R D I N A N C E

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF CYPRESS DOES HEREBY ORDAIN AS FOLLOWS**:**

SECTION 1. The facts set forth in the Recitals are true and correct, and incorporated into this Ordinance as substantive findings.

SECTION 2. Section 17-52.01 ("Social host liability") is hereby added to Chapter 17 to read in its entirety as follows (new text in ***bold italics***):

"§ 17-52.01 Social host prohibited liability.

A. It shall be unlawful for any social host to allow, by invitation or consent, which consent may be implied given surrounding facts and circumstances such as repeated conduct, violations of Section 17-52 to occur or otherwise take place on his or her private property;

B. As used in this section, a "social host" means a person or persons with a right of possession of the residence or other private property at which fireworks are sold, offered to be sold, possessed, stored, used, ignited or discharged, including, but not limited to: (1) any owner of the residence or other private property-meaning the record owner of the title to property as of the time of the possession, storage, sale, use, ignition or discharge, wherever that person or entity resides at that time; (2) a tenant or lessee of the residence or other private property at the time when the illegal fireworks are possessed, stored, sold, used, ignited, or discharged; (3) the person(s) in charge of the residence or other private property at the time when fireworks are possessed, stored, sold, used, ignited or discharged; and (4) the person(s) who organizes, supervises, officiates, conducts or controls the gathering or any other person(s) accepting responsibility for such gatherings where fireworks are possessed. A social host need not be present at the time illegal fireworks are possessed, stored, sold, used, ignited or discharged for the city to impose penalties. Prior knowledge of the possession, storage, sale, use, ignition or discharge is not a pre-requisite to a finding that any specific individual is a social host as defined by this section."

SECTION 3. Section 17-52.02 ("Penalties for Violation") is hereby added to Chapter 17 to read in its entirety as follows (new text in ***bold italics***):

"17-52.02 Penalties for Violation.

A. Any person found in violation of this Chapter shall be guilty of a misdemeanor and may be issued an administrative citation that is punishable by an administrative fine in the amount of $21,000 for a

first violation; $42,000 for a second violation occurring within a thirty-six-month period; and $63,000 for each additional violation occurring within a thirty-six-month period.

B. Notwithstanding subsection A., any person found to be in violation of Section 17-52.01 (social host prohibited) shall be guilty of a misdemeanor and may be issued an administrative citation that is punishable by administrative fine in the amount of 21,000 for a first violation; $42,000 for a second violation occurring within a thirty-six-month period; and $63,000 for each additional violation occurring within a thirty-six-month period.

C. In addition to administrative fines, any person found in violation of this Chapter shall be responsible for reimbursement or payment of all expenses, costs, and/or fees associated with the safe disposal of all confiscated fireworks.

D. In the event that a "juvenile" (defined as any person under the age of eighteen) is found in violation of this chapter, then the parents or guardians of that juvenile shall be jointly and severally liable for any administrative fines, expenses, costs, or fees incurred or imposed. At the discretion of the city attorney or city prosecutor, community service hours may be served in lieu of the payment of penalties for violations by a juvenile.

E. The remedies set forth in this section are in addition to all other legal and equitable remedies, administrative, criminal or civil, available to the City to address violations of this chapter or California law."

SECTION 4. Section 17-52.03 ("Enforcement & Citation Issuance") is hereby added to Chapter 17 to read in its entirety as follows (new text in ***bold italics***):

"Enforcement Officers, including the Cypress Police Department, are authorized to issue administrative citations to the responsible party or property owner. Observed violations may be cited in person or, when identifying the person discharging the fireworks is impractical, the citation may be mailed to the property owner of record as identified by County tax assessment records."

SECTION 5. Section 17-52.04 ("Right to Appeal") is hereby added to Chapter 17 to read in its entirety as follows (new text in ***bold italics***):

"A. Right to Appeal: Any person who receives an administrative citation for violation of Section 17-52 or 17-52.01 may contest such citation or the imposed fees in Section 17-52.02 by filing a written Request for Hearing with the City Clerk no later than ten (10) calendar days from the date such citation was served in person or not later than thirteen (13) calendar days if such citation was served by mail.

B. Hearing Officer: The City Manager or designee shall appoint an impartial Hearing Officer to conduct the appeal hearing. The Hearing Officer shall not be the investigating police officer, enforcing code official, or any employee of the City's Police Department.

D. Hearing Procedures: The hearing shall be conducted within ten (10) calendar days of the City Clerk's actual receipt of the Request for Hearing. The cited party and the City shall have the opportunity to present evidence and witnesses. The technical rules of evidence do not apply. The hearing officer must admit any relevant evidence, including hearsay, if it is the type of evidence that reasonable and prudent people rely on in the conduct of serious affairs.

E. Hearing Officer's Decision: The Hearing Officer shall issue a written decision within 10 calendar days of the hearing, which shall include findings of fact. If the citation is upheld, the fine and any associated fees must be paid within 30 days of the written decision

F. Judicial Review: The decision of the Hearing Officer shall be final. Any person aggrieved by the decision may seek judicial review in the Orange County Superior Court in accordance with Government Code § 53069.4(b)(1)."

SECTION 6. Section 17-52.05 ("Cost Recovery") is hereby added to Chapter 17 to read in its entirety as follows (new text in ***bold italics***):

"***A. City Cost Recovery. If the administrative hearing officer upholds the citation in whole or in part, the city shall be entitled to recover all actual costs incurred in connection with the administrative appeal proceeding.***

B. Definition of Costs. For purposes of this section, administrative appeal costs include, but are not limited to:

- ***Staff time spent preparing for and attending the hearing.***

SUBJECT: **Approve Purchase of Police Department Drones and Accept Donation from the Cypress Police Foundation**.

RECOMMENDATION

1. Approve a three-year agreement for $138,388 with Axon Enterprises, Inc. for Police Department drones, software, and services.

2. Accept a $70,000 donation from the Cypress Police Foundation.

DISCUSSION

The Police Department is recommending the purchase of an Unmanned Aircraft System (UAS) consisting of Skydio X10 and R10 drones, related software, and associated services. The UAS Program will provide officers with a modern public safety tool that enhances situational awareness, improves officer and community safety, and serves as a force multiplier by allowing officers to assess incidents from the air before committing personnel into potentially hazardous situations.

The recommended drones are manufactured by Skydio, an industry leader in autonomous drone technology, and are sold and supported through Axon, which provides the integrated software, evidence management, and subscription services. The Skydio X10 represents the latest generation of public-safety drone technology and is designed primarily for outdoor law-enforcement operations. The compact Skydio R10 complements the X10 by providing officers with a rapidly deployable platform designed for indoor and confined-space operations, allowing officers to safely assess hazardous environments before personnel enter. Together, the two platforms support a wide range of public safety missions, including critical incident response, search and rescue, missing person searches, crime scene documentation, tactical operations, disaster assessment, hazardous materials incidents, and other situations where aerial intelligence enhances decision-making and operational safety.

The use of drones by law enforcement agencies has expanded significantly throughout California and the United States as the technology has matured and demonstrated substantial operational benefits. Today, public safety drones are widely recognized as an effective tool for improving emergency response, enhancing officer safety, reducing public risk, and increasing operational efficiency. The recommended UAS integrates seamlessly with the Department's existing Axon digital evidence ecosystem, allowing flight video to be securely uploaded, managed, and retained within the Department's evidence management system. Axon offers the program through a subscription model that includes software licensing, cellular connectivity, hardware replacement, technical support, and ongoing technology upgrades throughout the life of the agreement.

The proposed purchase is recommended through Sourcewell, a cooperative purchasing program that conducts competitive procurements on behalf of governmental agencies. Municipal Code § 21A-10(e) authorizes the use of cooperative purchasing programs as an efficient, cost-effective procurement method that leverages competitively solicited volume pricing. The City regularly utilizes cooperative purchasing agreements to obtain the best value for specialized public safety equipment and technology.

The Police Department also recommends accepting the Cypress Police Foundation's generous $70,000 donation, which will offset the City's costs of acquiring the drones, software, equipment, and associated services necessary to implement the Department's Unmanned Aircraft System (UAS) program.

BUDGET IMPACT

The total three-year agreement amount is $138,388. The FY 2026-27 Budget includes $100,200 for the implementation costs. For the remaining implementation costs, there's contingency availability in the fund, so a budget amendment is not required. The Cypress Police Foundation has pledged a $70,000 donation to offset the City's initial purchase and subscription costs. The UAS annual subscription and maintenance costs of approximately $17,452 will be incorporated into future Police Department operating budgets.

Contract Sourcewell #101223-AXN is incorporated by reference into the terms and conditions of this Agreement. In the event of conflict the terms of Axon's Master Services and Purchasing Agreement shall govern.

Standard Terms and Conditions

Axon Enterprise Inc. Sales Terms and Conditions

Axon Master Services and Purchasing Agreement:

This Quote is limited to and conditional upon your acceptance of the provisions set forth herein and Axon's Master Services and Purchasing Agreement (posted at https://www.axon.com/sales-terms-and-conditions), as well as the attached Statement of Work (SOW) for Axon Fleet and/or Axon Interview Room purchase, if applicable. In the event you and Axon have entered into a prior agreement to govern all future purchases, that agreement shall govern to the extent it includes the products and services being purchased and does not conflict with the Axon Customer Experience Improvement Program Appendix as described below.

ACEIP:

The Axon Customer Experience Improvement Program Appendix, which includes the sharing of de-identified segments of Agency Content with Axon to develop new products and improve your product experience (posted at www.axon.com/legal/sales-terms-and-conditions), is incorporated herein by reference. By signing below, you agree to the terms of the Axon Customer Experience Improvement Program.

Acceptance of Terms:

Any purchase order issued in response to this Quote is subject solely to the above referenced terms and conditions. By signing below, you represent that you are lawfully able to enter into contracts. If you are signing on behalf of an entity (including but not limited to the company, municipality, or government agency for whom you work), you represent to Axon that you have legal authority to bind that entity. If you do not have this authority, please do not sign this Quote.

Exceptions to Standard Terms and Conditions

Rewrite Estimates

Estimated Amounts and Contract Terminations. Any amounts stated as due under existing or terminated contracts — including contract transfer balances carried forward to new or pending contracts — are estimates based on payments received as of the calculation date. These estimates may be adjusted if new contracts are not executed on the anticipated dates or if expected payments are not made.

Refresh Shipment Timing

Technology Assurance Plan (TAP) Refresh Prior to Renewal. For Customers with expiring agreements that include TAP refresh rights, Axon may, in its discretion, ship refresh hardware under the existing contract while renewal or replacement agreements are in progress. Any such shipments will be deemed made under the terms of the existing contract until the new contract is fully executed, after which any applicable updates, fees, or adjustments will apply.

Shipment Timing

Shipment Variance. Estimated shipment dates are provided for planning purposes only and are not guarantees. Axon may ship hardware before or after the estimated shipment date, and failure to meet an estimated shipment date will not, by itself, constitute a breach, provided Axon uses commercially reasonable efforts to meet estimated shipment dates.

CITY OF CYPRESS

CITY COUNCIL REPORT

City Council Regular **4.**

FROM: Mark Lauderback, Chief of Police

DATE: 07/14/2026

SUBJECT: **Receive and File the Police Department Annual Military Equipment Report**

RECOMMENDATION

1. Receive and file the Police Department Annual Military Equipment Report; and

2. Renew the Military Equipment Policy previously approved by City Council via Ordinance No. 1194.

DISCUSSION

In 2022, the City Council adopted an Ordinance approving the Police Department Military Equipment Policy as required by Assembly Bill 481. AB 481 requires law enforcement agencies to establish a policy for the funding, acquisition, and use of items deemed to be military equipment and that an annual military equipment report be posted to the agency's website and that the agency hold a community meeting within 30 days of releasing the annual report.

Government Code § 7072 requires the following information be provided for the preceding calendar year for each type of military equipment:

- **A summary of how the military equipment was used and the purpose of its use.**

  The Police department did not have any military equipment deployments in the City. The Police department participates in the West County Special Weapons and Tactics Team (SWAT), with the cities of Fountain Valley, Los Alamitos, Seal Beach and Westminster.
- **A summary of any complaints or concerns received concerning military equipment.**

  No violations were discovered, and Police Officers operated in a manner that met or exceeded department and community expectations. The Police

department did not receive any complaints or concerns related to the use of military equipment.

- **The results of any internal audits, any information about violations of the Military Equipment Use Policy, and any actions taken in response.**

  An internal audit found no violations of the Military Equipment Use Policy.
- **The total annual cost for each type of military equipment, including acquisition, personnel, training, transportation, maintenance, storage, upgrade, and other ongoing costs, and from what source funds will be provided for the military equipment in the calendar year following submission of the annual military equipment report.**

  This cost is contained in the current inventory of military equipment, which includes initial purchase costs (attached).
- **The quantity possessed for each type of military equipment.**

  This information is contained in the current inventory of military equipment (attached).
- **If the law enforcement agency intends to acquire additional military equipment in the next year, the quantity sought for each type of military equipment.**

The Police department expects to purchase three 40 MM single shot launchers and four unmanned air systems (UAS) drones in FY 2026-27. Additional ammunition and chemical agents which need to be replenished after being used in the field or in training environments will also be purchased. All items needing to be replenished or replaced are included in the Policy.

The information provided in this agenda report, including the Annual Report and the Military Equipment Policy, was posted to the website in June. A community meeting was held on July 1 at 4:00 pm at the Police station.

BUDGET IMPACT

None.

ORDINANCE NO. 1194

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF CYPRESS, CALIFORNIA APPROVING THE CYPRESS POLICE DEPARTMENT'S MILITARY EQUIPMENT USE POLICY

WHEREAS, on September 30, 2021, Governor Gavin Newsom signed into law Assembly Bill 481 (creating Government Code Section 7070, et seq.), relating to use of military equipment by California law enforcement agencies;

WHEREAS, AB 481 seeks to provide transparency, oversight, and an opportunity for meaningful public input on decisions regarding whether and how military equipment is funded, acquired, or used;

WHEREAS, the Cypress Police Department is in possession of certain items of equipment that qualify under the broad definition of "military equipment" under AB 481;

WHEREAS, AB 481 requires that a law enforcement agency possessing and using such qualifying equipment prepare a publicly released and written military equipment use policy document covering the inventory, description, purpose, use, acquisition, maintenance, fiscal impacts, procedures, training, oversight, and complaint process, applicable to the Department's use of such equipment;

WHEREAS, the Policy and supporting information must be approved by the governing body by ordinance, and reviewed annually;

WHEREAS, the City Council of the City of Cypress, having received the information required under AB 481 regarding the Cypress Police Department's use of "military equipment" as defined in said law, deems it to be in the best interest of the City to approve the Military Equipment Use Policy as set forth herein.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF CYPRESS DOES HEREBY ORDAIN AS FOLLOWS:

SECTION 1. The City Council finds that the above recitals are true and correct and are incorporated herein by this reference.

SECTION 2. City Council hereby approves and adopts the following:

Military Equipment Policy

(a) The City Council has made the following determinations:

(1) The military equipment inventoried and presented to the City Council is necessary because there is no reasonable alternative that can achieve the same objective of officer and civilian safety;

(2) This military equipment use policy attached hereto as Exhibit "A" ("Policy") will safeguard the public's welfare, safety, civil rights, and civil liberties;

(3) The equipment described in the Policy is reasonably cost-effective compared to available alternatives that can achieve the same objective of officer and civilian safety (if any);

(4) Prior military equipment use complied with the applicable equipment use policy (which included equipment now defined as military equipment) that was in effect at the time, or if prior uses did not comply with the accompanying Policy, corrective action has been taken to remedy

nonconforming uses and ensure future compliance by way of the adoption of the Policy by this Ordinance.

(b) The Cypress Police Department has made the Policy available on the Police Department's website for at least 30 days prior to the public hearing concerning the military equipment at issue and described in the Policy.

(c) The Policy was considered by the City Council as an agenda item in an open session of a regular meeting, noticed in accordance with the Ralph M. Brown Act, at which public comment was permitted.

(d) The Policy shall be made publicly available on the Police Department's website for as long as the military equipment is available for use.

(e) The Cypress Police Department shall submit an annual military equipment report to the City Council, containing the information required in Government Code Section 7072, and the City Council shall determine whether each type of military equipment identified in that report has complied with the standards for approval set forth in (a)(1)-(4) above.

(f) The City Council shall review this Ordinance, and vote on whether to renew it, on an annual basis at a regular meeting, in accordance with Government Code Section 7071(e)(2).

(g) The City Council approves the use of the Policy and finds that it satisfies the requirements of Government Code Section 7070(d).

SECTION 3. The City Council hereby authorizes and directs the Mayor and the City Clerk to execute this Ordinance on behalf of the City of Cypress forthwith upon its adoption.

SECTION 4. The Deputy City Clerk shall certify as to the passage of this Ordinance and shall cause the same to be published and/or posted at the designated locations in the City of Cypress.

SECTION 5. This ordinance shall become effective thirty (30) days following its adoption.

PASSED, APPROVED, AND ADOPTED by the City Council of the City of Cypress at a regular meeting held on the 9th day of May, 2022.

MAYOR OF THE CITY OF CYPRESS

ATTEST:

CITY CLERK OF THE CITY OF CYPRESS

STATE OF CALIFORNIA }
COUNTY OF ORANGE } SS

I, ALISHA FARNELL, City Clerk of the City of Cypress, DO HEREBY CERTIFY that the foregoing Ordinance was duly adopted at a regular meeting of said City Council held on the 9th day of May, 2022, by the following roll call vote:

AYES:	5	COUNCIL MEMBERS: Marquez, Minikus, Peat, Hertz-Mallari and Morales
NOES:	0	COUNCIL MEMBERS: None
ABSENT:	0	COUNCIL MEMBERS: None

CITY CLERK OF THE CITY OF CYPRESS

Policy

Cypress Police Department
Cypress Police Department Policy Manual

Military Equipment

708.1 PURPOSE AND SCOPE

The purpose of this policy is to provide guidelines for the approval, acquisition, and reporting requirements of military equipment (Government Code § 7070; Government Code § 7071; Government Code § 7072).

708.1.1 DEFINITIONS

Definitions related to this policy include (Government Code § 7070):

Governing body – The elected or appointed body that oversees the Department.

Military equipment – includes, but is not limited to the following:

- Unmanned, remotely piloted, powered aerial or ground vehicles.
- Mine-resistant ambush-protected (MRAP) vehicles or armored personnel carriers.
- High mobility multipurpose wheeled vehicles (HMMWV), two-and-one-half-ton trucks, five-ton trucks, or wheeled vehicles that have a breaching or entry apparatus attached.
- Tracked armored vehicles that provide ballistic protection to their occupants.
- Command and control vehicles that are either built or modified to facilitate the operational control and direction of public safety units.
- Weaponized aircraft, vessels, or vehicles of any kind.
- Battering rams, slugs, and breaching apparatuses that are explosive in nature. This does not include a handheld, one-person ram.
- Firearms and ammunition of .50 caliber or greater, excluding standard-issue shotguns and standard-issue shotgun ammunition.
- Specialized firearms and ammunition of less than .50 caliber, including firearms and accessories identified as assault weapons in Penal Code § 30510 and Penal Code § 30515, with the exception of standard-issue handguns.
- Any firearm or firearm accessory that is designed to launch explosive projectiles.
- Noise-flash diversionary devices and explosive breaching tools.
- Munitions containing tear gas or OC, excluding standard, service-issued handheld pepper spray.
- TASER® Shockwave, microwave weapons, water cannons, and long-range acoustic devices (LRADs).
- Kinetic energy weapons and munitions.
- Any other equipment as determined by a governing body or a state agency to require additional oversight.

Published with permission by Cypress Police Department

708.2 POLICY

It is the policy of the Cypress Police Department that members of this department comply with the provisions of Government Code § 7071 with respect to military equipment.

708.3 MILITARY EQUIPMENT COORDINATOR

The Support Services Division Lieutenant will act as the military equipment coordinator. The responsibilities of the military equipment coordinator include but are not limited to:

(a) Acting as liaison to the governing body for matters related to the requirements of this policy.

(b) Identifying department equipment that qualifies as military equipment in the current possession of the Department, or the equipment the Department intends to acquire that requires approval by the governing body.

(c) Conducting an inventory of all military equipment at least annually.

(d) Collaborating with any allied agency that may use military equipment within the jurisdiction of Cypress Police Department (Government Code § 7071).

(e) Preparing for, scheduling, and coordinating the annual community engagement meeting to include:

1. Publicizing the details of the meeting.
2. Preparing for public questions regarding the department's funding, acquisition, and use of equipment.

(f) Preparing the annual military equipment report for submission to the Chief of Police and ensuring that the report is made available on the department website (Government Code § 7072).

(g) Establishing the procedure for a person to register a complaint or concern, or how that person may submit a question about the use of a type of military equipment, and how the Department will respond in a timely manner.

708.4 MILITARY EQUIPMENT INVENTORY

The following constitutes a list of qualifying equipment for the Department:

708.4.1 FIREARM - PATROL RIFLE

Description: Firearm designed and intended to be fired from the shoulder and designed to use the energy of the explosive in a fixed metallic cartridge, firing a single projectile through a rifled bore for every pull of the trigger.

Quantity: 47.

Capabilities: Fires a lethal projectile.

Expected Lifespan: 20+ years.

Copyright Lexipol, LLC 2022/05/11, All Rights Reserved.
Published with permission by Cypress Police Department

Product Description:.223 caliber Patrol rifle manufactured by Colt, Bushmaster, or Eagle Arms.

Purpose and Authorized Use: May be deployed in any circumstance where personnel can articulate a reasonable expectation that the rifle may be needed (Policy 311.3.3).

Training Required: 16-hour POST approved course with qualification and additional training on safe use and deployment and device functionality. Must demonstrate proficiency with recertification twice per year.

Initial Cost: $48,000

Annual Cost: Approximately $2,400 for maintenance.

708.4.2 KINETIC ENERGY LAUNCHER
Description: Less-lethal weapon which uses a propellant cartridge to launch a kinetic energy impact projectile.

Quantity: 17

Capabilities: Fires a less-lethal kinetic energy projectile.

Expected Lifespan: 20+ years.

Product Description: 37 MM Defense Technology Single Launcher; LMT 40 MM Single Launcher; Sage SL-6 37 MM Multi-Role Launcher; Remington 870 Less-Lethal Shotgun

Purpose and Authorized Use: Less-lethal force option (Policy 307.9.1).

Training Required: Less-lethal weapons training from POST-approved instructor.

Initial Cost: $18,000

Annual Cost: Approximately $50 for maintenance of less-lethal shotgun; $150 annual maintenance for other launchers.

708.4.3 LIGHT SOUND DIVERSIONARY DEVICE (LSDD)
Description: Device used by SWAT members that produces loud noise and bright light intended to cause disorientation and distraction.

Quantity: 12

Capabilities: Distraction device used to minimize the risks to all parties by the temporary disorientation or distraction of potentially violent or dangerous suspects.

Expected Lifespan: 5 years.

Product Description: Combined Tactical Systems Flash-Bang Model #7290

Purpose and Authorized Use: To distract/disorient potentially violent or dangerous suspects.

Training Required: Diversionary device training from POST-approved instructor.

Initial Cost: $675

Copyright Lexipol, LLC 2022/05/11, All Rights Reserved.
Published with permission by Cypress Police Department

Annual Cost: N/A

708.4.4 BREACHING SHOTGUN
Description: Pump-action 12-gauge firearm used by SWAT members to defeat locking mechanisms.

Quantity: 1

Capabilities: Traditional breaching method that provides for quick breaching of multiple locking mechanisms.

Expected Lifespan: 30 years.

Product Description: Remington 870 Tactical Shotgun

Purpose and Authorized Use: May be deployed in any circumstance where the SWAT member needs to breach a door quickly and safely.

Training Required: 40-Hour explosive breaching training with quarterly update training.

Initial Cost: $925

Annual Cost: N/A

708.4.5 FIREARM - SWAT RIFLE
Description: Firearm designed and intended to be fired from the shoulder and designed to use the energy of the explosive in a fixed metallic cartridge, firing one or more projectiles through a rifled bore for every pull of the trigger.

Quantity: 12.

Capabilities: Fires a lethal projectile.

Expected Lifespan: 20+ years.

Product Description: 5.56 MM or.308 caliber rifle manufactured by Heckler & Koch or DPMS.

Purpose and Authorized Use: May be deployed in any circumstance where personnel can articulate a reasonable expectation that the rifle may be needed.

Training Required: 16-hour POST approved course with qualification and additional training on safe use and deployment and device functionality. Must demonstrate proficiency with recertification bi-monthly.

Initial Cost: $27,650

Annual Cost: Approximately $600 for maintenance.

708.4.6 FIREARM - SWAT SUBMACHINE GUN
Description: Firearm designed and intended to be fired from the shoulder and designed to use the energy of the explosive in a fixed metallic cartridge, firing one or more projectiles through a rifled bore for every pull of the trigger.

Copyright Lexipol, LLC 2022/05/11, All Rights Reserved.
Published with permission by Cypress Police Department

Quantity: 13

Capabilities: Fires a lethal projectile.

Expected Lifespan: 20+ years.

Product Description: 9 MM or.40 caliber submachine gun manufactured by Heckler & Koch. *Note: These firearms are not in current use but are in the Department's inventory.

Purpose and Authorized Use: May be deployed in any circumstance where personnel can articulate a reasonable expectation that the gun may be needed.

Training Required: Training from a department-authorized instructor.

Initial Cost: $27,700

Annual Cost: N/A

708.4.7 FIREARM - SWAT BOLT-ACTION RIFLE
Description: Firearm designed and intended to be fired from the shoulder and designed to use the energy of the explosive in a fixed metallic cartridge, firing one projectile through a rifled bore for every pull of the trigger.

Quantity: 1.

Capabilities: Fires a lethal projectile.

Expected Lifespan: 20+ years.

Product Description: 308 caliber bolt-action rifle manufactured by Remington.

Purpose and Authorized Use: May be deployed in any circumstance where personnel can articulate a reasonable expectation that the rifle may be needed.

Training Required: 40-hour precision long-rifle training with qualification and additional training on safe use and deployment and device functionality. Must demonstrate proficiency with recertification bi-monthly.

Initial Cost: $1,100

Annual Cost: Approximately $50 for maintenance.

708.5 SHARED MILITARY EQUIPMENT
The following constitutes a list of qualifying equipment for the Department that may be deployed in collaboration with other law enforcement agencies. These items' potential for use within the City of Cypress comes from the Cypress Police Department's participation in the West County Special Weapons and Tactics (SWAT) Team, a collaboration of law enforcement personnel from the Cypress, Fountain Valley, Los Alamitos, Seal Beach, and Westminster Police Departments or through joint use-agreement with the Los Alamitos and Seal Beach Police Departments:

Copyright Lexipol, LLC 2022/05/11, All Rights Reserved.
Published with permission by Cypress Police Department

708.5.1 SWAT ARMORED RESCUE VEHICLE
Description: An armored rescue vehicle deployed during high-risk incidents, special events, and community outreach. *Note: This is a regional SWAT asset that is owned and maintained by the Westminster Police Department.

Quantity: 1.

Capabilities: Mobile armored vehicle to support high-risk deployments.

Expected Lifespan: 25 years.

Product Description: Ballistic Engineered Armored Rescue (BEARCAT) Vehicle, manufactured by Lenco.

Purpose and Authorized Use: To assist police personnel in enhancing public safety by transporting first responders and/or community members to/from high-risk situations. Provide a mobile platform to safely transport and deploy personnel.

Training Required: Formalized in-house driver operation and safety training.

Initial Cost: Refer to Westminster Police Department.

Annual Cost: N/A

708.5.2 MOBILE COMMAND VEHICLE
Description: A customized vehicle used to enhance communication and coordination during emergency incidents, special events, or community outreach. *Note: This is a shared asset that is owned by the Cypress Police Department.

Quantity: 1.

Capabilities: On-scene incident command and control functions may be performed from a mobile command vehicle.

Expected Lifespan: 20 years.

Product Description: Modified command vehicle based on a Freightliner M2 106 chassis.

Purpose and Authorized Use: A mobile command vehicle provides a strategic location for police personnel during emergency incidents, special events, or community outreach events. Use of this equipment is also appropriate for large-scale events that require advanced coordination of large numbers of police and other safety or first responder personnel.

Training Required: Class B driver's license and additional department provided vehicle-specific, driver and operational training.

Initial Cost: $450,000 *Note: This item was purchased in 2007 using federal grant funding.

Annual Cost: Approximately $1,000. *Note: The maintenance costs for this asset are distributed evenly between the cities of Cypress, Los Alamitos, and Seal Beach.

Copyright Lexipol, LLC 2022/05/11, All Rights Reserved.
Published with permission by Cypress Police Department

708.5.3 SWAT KINETIC BREACHING TOOL
Description: A hand-held breaching tool engineered to deliver high-impact energy to defeat locking mechanisms. *Note: This is a regional SWAT asset that is owned and maintained by the Seal Beach Police Department.

Quantity: 1.

Capabilities: Provides for safer and faster breaching.

Expected Lifespan: 30 years.

Product Description: Powder activated kinetic energy force entry tool.

Purpose and Authorized Use: May be deployed in any circumstance where the member needs to breach a door quickly and safely.

Training Required: Training on safe use and deployment and device functionality.

Initial Cost: Refer to the Seal Beach Police Department.

Annual Cost: N/A

708.5.4 SWAT LONG RANGE ACOUSTICAL DEVICE
Description: A public address system that delivers live or recorded messages. *Note: This is a regional SWAT asset that is owned and maintained by the Westminster Police Department.

Quantity: 1.

Capabilities: Provides public address notifications

Expected Lifespan: 10 years.

Product Description: Self-powered communication system that delivers voice messages and alert tones.

Purpose and Authorized Use: May be deployed in any outdoor circumstances where the member needs to communicate information to the public.

Training Required: Training on safe use and deployment and device functionality.

Initial Cost: Refer to the Westminster Police Department.

Annual Cost: N/A

708.5.5 SWAT UNMANNED AIRCRAFT SYSTEMS (UAS)
Description: A UAS is an unmanned aircraft and the equipment necessary for the safe and efficient operation of the aircraft. An unmanned aircraft, a component of a UAS, is defined by law as an aircraft that is operated without the possibility of direct human intervention from within or on the aircraft. *Note: This is a regional SWAT asset that is owned and maintained by the Seal Beach Police Department.

Quantity: Refer to the Seal Beach Police Department.

Copyright Lexipol, LLC 2022/05/11, All Rights Reserved.
Published with permission by Cypress Police Department

Capabilities: Sustained flight controlled by a remote pilot on the ground.

Expected Lifespan: Refer to the Seal Beach Police Department.

Product Description: Refer to the Seal Beach Police Department.

Purpose and Authorized Use: To assist SWAT personnel in enhancing public safety while protecting the rights and privacy of the general public.

Training Required: Refer to the Seal Beach Police Department. *Note: No Cypress Police Department personnel are trained to operate UAS.

Initial Cost: Refer to the Seal Beach Police Department.

Annual Cost: N/A

708.5.6 SWAT REMOTE CONTROL ROBOT
Description: A remotely controlled ground vehicle that moves on tracks, manufactured by Transcend. *Note: This is a regional SWAT asset that is owned and maintained by the Westminster Police Department.

Quantity: Refer to the Westminster Police Department.

Capabilities: Provides ability for SWAT members to view scenes, deliver items, open doors, and visually clear buildings.

Expected Lifespan: Refer to the Westminster Police Department.

Product Description: Refer to the Westminster Police Department.

Purpose and Authorized Use: May be deployed in any circumstances where the SWAT Commander determines remote viewing of a location or item delivery is appropriate and lawful.

Training Required: Refer to the Westminster Police Department. *Note: No Cypress Police Department personnel are trained to operate this robot.

Initial Cost: Refer to the Westminster Police Department.

Annual Cost: N/A

708.6 APPROVAL
The Chief of Police or the authorized designee shall obtain approval from the governing body by way of an ordinance adopting the military equipment policy. As part of the approval process, the Chief of Police or the authorized designee shall ensure the proposed military equipment policy is submitted to the governing body and is available on the department website at least 30 days prior to any public hearing concerning the military equipment at issue (Government Code § 7071). The military equipment policy must be approved by the governing body prior to engaging in any of the following (Government Code § 7071):

(a) Requesting military equipment made available pursuant to 10 USC § 2576a.

Copyright Lexipol, LLC 2022/05/11, All Rights Reserved.
Published with permission by Cypress Police Department

(b) Seeking funds for military equipment, including but not limited to applying for a grant, soliciting or accepting private, local, state, or federal funds, in-kind donations, or other donations or transfers.

(c) Acquiring military equipment either permanently or temporarily, including by borrowing or leasing.

(d) Collaborating with another law enforcement agency in the deployment or other use of military equipment within the jurisdiction of this department.

(e) Using any new or existing military equipment for a purpose, in a manner, or by a person not previously approved by the governing body.

(f) Soliciting or responding to a proposal for, or entering into an agreement with, any other person or entity to seek funds for, apply to receive, acquire, use, or collaborate in the use of military equipment.

(g) Acquiring military equipment through any means not provided above.

708.7 COORDINATION WITH OTHER JURISDICTIONS

Military equipment should not be used by any other law enforcement agency or member in this jurisdiction unless the military equipment is approved for use in accordance with this policy.

708.8 ANNUAL REPORT

Upon approval of a military equipment policy, the Chief of Police or the authorized designee should submit a military equipment report to the governing body for each type of military equipment approved within one year of approval, and annually thereafter for as long as the military equipment is available for use (Government Code § 7072).

The Chief of Police or the authorized designee should also make each annual military equipment report publicly available on the department website for as long as the military equipment is available for use. The report shall include all information required by Government Code § 7072 for the preceding calendar year for each type of military equipment in department inventory.

708.9 COMMUNITY ENGAGEMENT

Within 30 days of submitting and publicly releasing the annual report, the Department shall hold at least one well-publicized and conveniently located community engagement meeting, at which the Department should discuss the report and respond to public questions regarding the funding, acquisition, or use of military equipment.

CITY OF CYPRESS

CITY COUNCIL REPORT

City Council Regular **5.**

FROM: Christopher Wong, Business Development Manager

DATE: 07/14/2026

SUBJECT: **Approve Amendment Seven to the Cooperation Agreement with the County of Orange for Continued Participation in the Urban County Community Development Block Grant (CDBG) and HOME Investment Partnerships (HOME) Programs for Fiscal Years 2027-2028 through 2029-2030**

RECOMMENDATION

1. Adopt a Resolution approving Amendment Seven to the Cooperation Agreement between the County of Orange and the City of Cypress confirming Cypress' continued participation in the Urban County CDBG and HOME Programs for Fiscal Years 2027-2028 through 2029-2030; and

2. Authorize the Director of Community Development to execute Amendment Seven to the Cooperation Agreement.

DISCUSSION

The City of Cypress has participated in the Orange County Urban County CDBG Program for more than 45 years. Participation in the program allows the City to receive federal CDBG funding administered by the County for eligible community development and housing activities that benefit low- and moderate-income residents.

The current Cooperation Agreement expires on June 30, 2027. Amendment Seven extends the City's participation in the Urban County CDBG Program for the next three-year period, covering Fiscal Years 2027-2028 through 2029-2030, and updates the agreement to reflect current U.S. Department of Housing and Urban Development (HUD) requirements.

Approval of Amendment Seven will allow the City to remain eligible to receive future CDBG, HOME, and Emergency Solutions Grant (ESG) funding through the County of Orange.

BUDGET IMPACT

Future County CDBG-funded programs will be budgeted through the General Funds grants program.

LEGAL REVIEW

The City Attorney has reviewed the amendment.

APPROVED BY: Shannon DeLong, City Manager

Attachments

Amendment Seven to Cooperation Agreement

AMENDMENT SEVEN TO
COOPERATION AGREEMENT BETWEEN
THE COUNTY OF ORANGE
AND
CITY OF CYPRESS

This Amendment Number SEVEN (hereinafter "Amendment SEVEN") is made and entered into by the County of Orange, a political subdivision of the State of California, ("COUNTY") and CITY OF CYPRESS, a municipal corporation, ("CITY"), UEI number NSLVQKY77AG4 which are sometimes individually referred to as "Party" or collectively referred to as "Parties", and is effective as of July 1, 2027, hereinafter referred to as "EFFECTIVE DATE".

WHEREAS, COUNTY and CITY executed that certain COOPERATION AGREEMENT "Small-City" (hereinafter, as amended, "Original Agreement" or "Agreement") for commencement July 1, 2005; and

WHEREAS, the Original Agreement was amended by Amendment ONE, effective as of July 16, 2008; and

WHEREAS, the Original Agreement was amended by Amendment TWO, effective as of July 1, 2012; and

WHEREAS, the Original Agreement was amended by Amendment THREE, effective as of July 1, 2015; and

WHEREAS, the Original Agreement was amended by Amendment FOUR, effective as of July 1, 2018; and

WHEREAS, the Original Agreement was amended by Amendment FIVE, effective as of July 1, 2021; and

WHEREAS, the Original Agreement was amended by Amendment SIX, effective as of July 1, 2024; and

WHEREAS, U.S. Department of Housing and Urban Development ("HUD") Notice CPD-26-08 allows "automatic" renewals for one successive three year Urban County qualification period provided that COUNTY sends a letter to CITY notifying it that the Original Agreement will be renewed unless CITY notifies COUNTY that it wishes to terminate the agreement and a copy of such a letter is provided to HUD; and

WHEREAS, COUNTY sent CITY a letter notifying CITY of such renewal on June 26, 2026; and

WHEREAS, CITY did not advise COUNTY that it wished to terminate the Original Agreement with County; and

WHEREAS, the CITY's City Manager and the COUNTY's Director of Orange County Community Resources have been duly authorized by their City Council and Board of Supervisors, respectively, to execute this Amendment SEVEN; and

WHEREAS, the Parties agree to further amend the Original Agreement at this time in the manner set forth herein.

NOW, THEREFORE, the Parties hereby agree as follows:

I. Modifications to the Original Agreement

1. Section 2 of the Original Agreement is amended in its entirety as follows:

   "COUNTY shall have the authority to carry out activities, which will be funded from annual Community Development Block Grant ("CDBG"), Home Investment Partnership ("HOME") and Emergency Solutions Grant ("ESG") Program funds appropriated for Fiscal Years 2027-2028, 2028-2029 and 2029-2030 and from any program income generated from the expenditure of such funds."

2. Section 9 of the Original Agreement is amended and shall read as amended in its entirety as follows:

   "This Agreement shall cover the three-year program period for Fiscal Years 2027-2028, 2028-2029 and 2029-2030, respectively of CDBG, HOME and ESG programs, including any subsequent Supplemental sources (Paragraph 23 of the Agreement). In no event shall this agreement be terminated by either Party before June 30, 2030, except as allowed in legislation enacted by the U.S. Congress for termination or withdrawal from the Urban County Program and as permitted by HUD.

   This Agreement remains in effect until the CDBG (and, where applicable, HOME and ESG) funds and program income received (with respect to activities carried out during the three-year qualification period, and any successive qualification periods under agreements that provide for automatic renewal) are expended and the funded activities completed, and the COUNTY and CITY cannot terminate or withdraw from this Agreement while it remains in effect."

3. Section 10 shall be added to Agreement to read:

   "In accordance with HUD Notice CPD 26-08, this Agreement will renew automatically for participation in one successive three-year Urban County qualification period (July 1, 2030 to June 30, 2033) unless COUNTY or CITY provides written notice that it elects not to participate in a new qualification period. A copy of the termination notice must be sent to HUD Field Office by the date specified on the HUD Exchange Urban Counties website. COUNTY shall notify CITY in writing of its right not to participate any longer than the date specified in HUD's Urban County Qualification Notice for the next qualification period. A copy of the County's notification must be sent to the HUD field office by the date specified on the HUD Exchange Urban Counties website."

4. Section 11 of the Original Agreement is amended to read:

   "CITY and COUNTY agree to adopt amendment(s) to this Agreement as may be required by HUD to meet any new Urban County Qualification requirement(s) when applicable and to submit such amendments to HUD. The COUNTY will notify CITY of its right to terminate its participation in the program based on the adoption of any such amendment. If either CITY or COUNTY refuses to adopt any such amendment, and

to submit such amendment to HUD, this Agreement will be voided for such qualification period."

5. Section 14 of the Original Agreement is amended to add subsection (d) as follows:

   "d. This Agreement covers the following formula funding programs administered by HUD: CDBG, HOME, and ESG, and CITY may receive a formula allocation under the HOME and ESG Programs only through the COUNTY. This does not preclude the COUNTY or the CITY from applying for HOME or ESG funds from the State, if the State allows."

6. Section 24 of the Original Agreement is amended to read:

   "CITY may void this Agreement only if it submits to COUNTY on or before June 2027 the notification from HUD that CITY has qualified as a "Metropolitan City" or an "Entitlement City" prior to the completion of the re-qualification process for Fiscal Years 2027-2028, 2028-2029, and 2029-2030. Upon such notification by HUD, CITY also must submit to COUNTY and HUD written notification of its decision to either remain in the Urban County Program as a "Metropolitan City" or become an "Entitlement City" as a separate entity. If this Agreement is not voided, then CITY must participate in COUNTY's Urban County for the entire three-year qualification period (FYs 2027/2028 through 2029/2030)."

II. Additional Agreements

The terms of the Additional Agreements in the Original Agreement are hereby amended as follows:

1. The COUNTY and the CITY agree to cooperate to undertake, or assist in undertaking, essential community development and housing assistance activities in and for the benefit of the CITY, as approved and authorized between the Parties in the CDBG agreements, including the Consolidated Plan.

2. The CITY understands and agrees that it may not apply for grants under the State CDBG Program for the fiscal years during the period in which the CITY participates in the COUNTY's CDBG Program. The COUNTY agrees that the CDBG funds that the CITY is entitled to will be utilized to benefit the CITY.

3. The COUNTY and the CITY shall take all actions necessary to assure compliance with the COUNTY'S certification under section 104(b) of Title I of the Housing and Community Development Act of 1974, as amended, and that the grant will be conducted and administered in conformity with:

   a. Title VI of the Civil Rights Act of 1964 and the implementing regulations at 24 CFR Part 1;
   b. The Fair Housing Act, and the implementing regulations at 24 CFR Part 100, and will comply with the obligation to affirmatively further fair housing including the obligations set forth in 24 CFR 91.225(a) and 5.105(a); and
   c. Section 109 of Title I of the Housing and Community Development Act of 1974, and the implementing regulations at 24 CFR Part 6, which incorporates Section 504 of the Rehabilitation Act of 1973 and the implementing regulations

at 24 CFR Part 8, Title II of the Americans with Disabilities Act of 1974 and the implementing regulations at 28 CFR Part 35, the Age Discrimination Act of 1975 and the implementing regulations at 24 CFR Part 146, Section 3 of the Housing and Urban Development Act of 1968, Uniform Relocation and Real Property Policies Act of 1970 and the implementing regulations at 49 CFR Part 24, Section 104(d) of the Housing and Community Development Act of 1974 and the implementing regulations at 24 CFR Part 425, and all other applicable laws and regulations. The Parties agree that no urban county funding will be used for activities in, or in support of, any cooperating unit of general local government that does not affirmatively further fair housing within its own jurisdiction or that impedes the COUNTY'S actions to comply with the COUNTY'S fair housing certification. The Parties acknowledge and agree that noncompliance by a unit of general local government included in an urban county may constitute noncompliance by the grantee (i.e., the urban 14 county) that can, in turn, provide cause for funding sanctions or other remedial actions by the Department.

4. The CITY, COUNTY, and all other applicable units of general local government, may not sell, trade, or otherwise transfer all or any portion of such funds to another such metropolitan city, urban county, unit of general local government, or Indian tribe, or insular area that directly or indirectly receives CDBG funds in exchange for any other funds, credits or non-Federal considerations, but must use such funds for activities eligible under Title I of the Housing and Community Development Act of 1974, as amended.

5. All other provisions of the Original Agreement, as amended, a copy of which is attached hereto as Exhibit A and incorporated by this reference, to the extent they are not inconsistent with this Amendment SEVEN, remain unchanged and in full force and effect.

IN WITNESS WHEREOF, CITY has caused this Amendment SEVEN to be executed by its City Manager and attested by its City Clerk; COUNTY has caused this Amendment SEVEN to be executed by the Director of the Orange County Community Resources; each having been duly authorized by the CITY Council and the COUNTY Board of Supervisors, respectively.

Deputy County Counsel	Dated

CITY OF CYPRESS

CITY COUNCIL REPORT

City Council Regular **6.**

FROM: Nick Mangkalakiri, Director of Public Works

DATE: 07/14/2026

SUBJECT: **Award Contract for Public Engagement and Professional Design Services for Park Playground Equipment Replacement, Project 465**

RECOMMENDATION

1. Award a contract to David Volz Design Landscape Architecture, Inc. for Public Engagement and Professional Design Services for Park Playground Equipment Replacement, Project 465, for $106,550, and authorize a contingency of $16,000; and

2. Authorize the City Manager to execute the contract agreement.

DISCUSSION

Veterans Park, located at 4554 Avenida Granada, and Maple Grove North Park, located at 6221 Orangewood Avenue, are heavily utilized neighborhood parks containing playground infrastructure that has reached the end of its useful service life. This project will replace the playground structures and play surfacing at both parks to improve safety, accessibility, and recreational opportunities.

Rather than selecting equipment from a standard manufacturer's catalog, the City is pursuing unique, site-specific playground designs for each park. To support this effort, Public Works issued a Request for Qualifications seeking firms with expertise in custom playground design, public outreach, and inclusive play environments. Four qualified proposals were received and evaluated based on experience, project approach, and overall qualifications. Following the evaluation and reference checks, Public Works identified David Volz Design Landscape Architecture, Inc. (DVDC) as the most qualified firm to provide design services for this project.

DVDC has extensive experience designing high-quality, durable playgrounds throughout Southern California, including neighborhood park projects for the cities of Buena Park, Garden Grove, South Gate, and Santa Ana. The firm specializes in public outreach and designing inclusive play environments that meet current ADA and ASTM safety standards.

The public outreach and design process is expected to take approximately seven months. The preferred playground concepts and final equipment themes will be presented to the Recreation and Community Services Commission and City Council for review prior to soliciting bids for construction.

Construction will be completed over two fiscal years. In FY 2026-27, DVDC will conduct community outreach and prepare construction documents for both Veterans Park and Maple Grove North Park. Construction is anticipated to begin at Veterans Park in Spring 2027, followed by construction at Maple Grove North Park in early FY 2027-28.

BUDGET IMPACT

The $122,550 design cost includes public outreach, design, and contingency, and is lower than the $750,000 project budget (design, construction, and in-house labor). There are sufficient amounts available in the District's Capital Projects budget in FY 2026-27. The remaining balance will be available for in-house labor and construction of the playground equipment at Veterans Park.

Project Budget (Design, Construction, In-House Labor)	**$750,000**
Design Proposal	$106,550
Design Contingency (15%)	$16,000
Total Design Estimate	**$122,550**
Available Balance	**$627,500**

LEGAL REVIEW

The City Attorney has reviewed this staff report and approved the agreement as to form.

APPROVED BY: Shannon DeLong, City Manager

Contract Agreement
Proposals

AGREEMENT FOR COMMUNITY OUTREACH AND DESIGN FOR THE PLAYGROUND EQUIPMENT REPLACEMENT AT VETERANS PARK AND MAPLE GROVE NORTH PARK – PROJECT 465
BY AND BETWEEN THE CITY OF CYPRESS AND
David Volz Design Landscape Architecture, Inc.

FOR CONTRACT SERVICES (herein "Agreement") is made and entered into this _____ day of _____, 2026 by and between the City of Cypress, a California municipal corporation ("City") and **David Volz Design Landscape Architecture, Inc.** a California Corporation ("Contractor"). City and Contractor are sometimes hereinafter individually referred to as "Party" and hereinafter collectively referred to as the "Parties."

RECITALS

A. City has sought, by issuance of a Request for Proposals or Invitation for Bids, the performance of the services defined and described particularly in Article 1 of this Agreement.

B. Contractor, following submission of a proposal or bid for the performance of the services defined and described particularly in Article 1 of this Agreement, was selected by the City to perform those services.

C. Pursuant to the City of Cypress's Charter and Municipal Code, City has authority to enter into and execute this Agreement.

D. The Parties desire to formalize the selection of Contractor for performance of those services defined and described particularly in Article 1 of this Agreement and desire that the terms of that performance be as particularly defined and described herein.

OPERATIVE PROVISIONS

NOW, THEREFORE, in consideration of the mutual promises and covenants made by the Parties and contained herein and other consideration, the value and adequacy of which are hereby acknowledged, the parties agree as follows:

ARTICLE 1. SERVICES OF CONTRACTOR

1.1 Scope of Services.

In compliance with all terms and conditions of this Agreement, the Contractor shall provide those services specified in the "Scope of Services" attached hereto as Exhibit "A" and incorporated herein by this reference, which may be referred to herein as the "services" or "work" hereunder. As a material inducement to the City entering into this Agreement, Contractor represents and warrants that it has the qualifications, experience, and facilities necessary to properly perform the services required under this Agreement in a thorough, competent, and professional manner, and is experienced in performing the work and services contemplated herein. Contractor shall at all times faithfully, competently and to the best of its ability, experience and talent, perform all services described herein. Contractor covenants that it shall follow the highest professional standards in performing the work and services required hereunder and that all materials will be both of good

quality as well as fit for the purpose intended. For purposes of this Agreement, the phrase "highest professional standards" shall mean those standards of practice recognized by one or more first-class firms performing similar work under similar circumstances.

1.2 Contractor's Proposal.

The Scope of Service shall include the Contractor's scope of work or bid which shall be incorporated herein by this reference as though fully set forth herein. In the event of any inconsistency between the terms of such proposal and this Agreement, the terms of this Agreement shall govern.

1.3 Compliance with Law.

Contractor shall keep itself informed concerning, and shall render all services hereunder in accordance with, all ordinances, resolutions, statutes, rules, and regulations of the City and any Federal, State or local governmental entity having jurisdiction in effect at the time service is rendered.

1.4 Licenses, Permits, Fees and Assessments.

Contractor shall obtain at its sole cost and expense such licenses, permits and approvals as may be required by law for the performance of the services required by this Agreement. Contractor shall have the sole obligation to pay for any fees, assessments and taxes, plus applicable penalties and interest, which may be imposed by law and arise from or are necessary for the Contractor's performance of the services required by this Agreement, and shall indemnify, defend and hold harmless City, its officers, employees or agents of City, against any such fees, assessments, taxes, penalties or interest levied, assessed or imposed against City hereunder.

1.5 Familiarity with Work.

By executing this Agreement, Contractor warrants that Contractor (i) has thoroughly investigated and considered the scope of services to be performed, (ii) has carefully considered how the services should be performed, and (iii) fully understands the facilities, difficulties and restrictions attending performance of the services under this Agreement. If the services involve work upon any site, Contractor warrants that Contractor has or will investigate the site and is or will be fully acquainted with the conditions there existing, prior to commencement of services hereunder. Should the Contractor discover any latent or unknown conditions, which will materially affect the performance of the services hereunder, Contractor shall immediately inform the City of such fact and shall not proceed except at Contractor's risk until written instructions are received from the Contract Officer.

1.6 Care of Work.

The Contractor shall adopt reasonable methods during the life of the Agreement to furnish continuous protection to the work, and the equipment, materials, papers, documents, plans, studies and/or other components thereof to prevent losses or damages, and shall be responsible for all such damages, to persons or property, until acceptance of the work by City, except such losses or damages as may be caused by City's own negligence.

1.7 Further Responsibilities of Parties.

Both parties agree to use reasonable care and diligence to perform their respective obligations under this Agreement. Both parties agree to act in good faith to execute all instruments, prepare all documents and take all actions as may be reasonably necessary to carry out the purposes of this Agreement. Unless hereafter specified, neither party shall be responsible for the service of the other.

1.8 Additional Services.

City shall have the right at any time during the performance of the services, without invalidating this Agreement, to order extra work beyond that specified in the Scope of Services or make changes by altering, adding to or deducting from said work. No such extra work may be undertaken unless a written order is first given by the Contract Officer to the Contractor, incorporating therein any adjustment in (i) the Contract Sum for the actual costs of the extra work, and/or (ii) the time to perform this Agreement, which said adjustments are subject to the written approval of the Contractor. Any increase in compensation of up to Five percent (5%) of the Contract Sum or $40,000, whichever is less; or, in the time to perform of up to one hundred eighty (180) days, may be approved by the Contract Officer. Any greater increases, taken either separately or cumulatively, must be approved by the City Council. It is expressly understood by Contractor that the provisions of this Section shall not apply to services specifically set forth in the Scope of Services. Contractor hereby acknowledges that it accepts the risk that the services to be provided pursuant to the Scope of Services may be more costly or time consuming than Contractor anticipates and that Contractor shall not be entitled to additional compensation therefor. City may in its sole and absolute discretion have similar work done by other contractors. No claims for an increase in the Contract Sum or time for performance shall be valid unless the procedures established in this Section are followed.

1.9 Special Requirements.

Additional terms and conditions of this Agreement, if any, which are made a part hereof are set forth in the "Special Requirements" attached hereto as Exhibit "B" and incorporated herein by this reference. In the event of a conflict between the provisions of Exhibit "B" and any other provisions of this Agreement, the provisions of Exhibit "B" shall govern.

ARTICLE 2. COMPENSATION AND METHOD OF PAYMENT.

2.1 Contract Sum.

Subject to any limitations set forth in this Agreement, City agrees to pay Contractor the amounts specified in the "Schedule of Compensation" attached hereto as Exhibit "C" and incorporated herein by this reference. The total compensation, including reimbursement for actual expenses, shall not exceed (see Exhibit "C") Dollars (the "Contract Sum"), unless additional compensation is approved pursuant to Section 1.8.

2.2 Method of Compensation.

The method of compensation may include: (i) a lump sum payment upon completion; (ii) payment in accordance with specified tasks or the percentage of completion of the services, less contract retention; (iii) payment for time and materials based upon the Contractor's rates as specified in the Schedule of Compensation, provided that (a) time estimates are provided for the performance of sub tasks, (b) contract retention is maintained, and (c) the Contract Sum is not exceeded; or (iv) such other methods as may be specified in the Schedule of Compensation.

2.3 Reimbursable Expenses.

Compensation may include reimbursement for actual and necessary expenditures for reproduction costs, telephone expenses, and travel expenses approved by the Contract Officer in advance, or actual subcontractor expenses of an approved subcontractor pursuant to Section 4.5, and only if specified in the Schedule of Compensation. The Contract Sum shall include the attendance of Contractor at all project meetings reasonably deemed necessary by the City. Coordination of the performance of the work with City is a critical component of the services. If Contractor is required to attend additional meetings to facilitate such coordination, Contractor shall not be entitled to any additional compensation for attending said meetings.

2.4 Invoices.

Each month Contractor shall furnish to City an original invoice for all work performed and expenses incurred during the preceding month in a form approved by City's Director of Finance. By submitting an invoice for payment under this Agreement, Contractor is certifying compliance with all provisions of the Agreement. The invoice shall detail charges for all necessary and actual expenses by the following categories: labor (by sub-category), travel, materials, equipment, supplies, and sub-contractor contracts. Sub-contractor charges shall also be detailed by such categories. Contractor shall not invoice City for any duplicate services performed by more than one person.

City shall independently review each invoice submitted by the Contractor to determine whether the work performed and expenses incurred are in compliance with the provisions of this Agreement. Except as to any charges for work performed or expenses incurred by Contractor which are disputed by City, or as provided in Section 7.3, City will use its best efforts to cause Contractor to be paid within forty-five (45) days of receipt of Contractor's correct and undisputed invoice; however, Contractor acknowledges and agrees that due to City warrant run procedures, the City cannot guarantee that payment will occur within this time period. In the event any charges or expenses are disputed by City, the original invoice shall be returned by City to Contractor for correction and resubmission. Review and payment by City for any invoice provided by the Contractor shall not constitute a waiver of any rights or remedies provided herein or any applicable law.

2.5 Waiver.

Payment to Contractor for work performed pursuant to this Agreement shall not be deemed to waive any defects in work performed by Contractor.

ARTICLE 3. PERFORMANCE SCHEDULE

3.1 Time of Essence.

Time is of the essence in the performance of this Agreement.

3.2 Schedule of Performance.

Contractor shall commence the services pursuant to this Agreement upon receipt of a written notice to proceed and shall perform all services within the time period(s) established in the "Schedule of Performance" attached hereto as Exhibit "D" and incorporated herein by this reference. When requested by the Contractor, extensions to the time period(s) specified in the Schedule of Performance may be approved in writing by the Contract Officer but not exceeding one hundred eighty (180) days cumulatively.

3.3 Force Majeure.

The time period(s) specified in the Schedule of Performance for performance of the services rendered pursuant to this Agreement shall be extended because of any delays due to unforeseeable causes beyond the control and without the fault or negligence of the Contractor, including, but not restricted to, acts of God or of the public enemy, unusually severe weather, fires, earthquakes, floods, epidemics, quarantine restrictions, riots, strikes, freight embargoes, wars, litigation, and/or acts of any governmental agency, including the City, if the Contractor shall within ten (10) days of the commencement of such delay notify the Contract Officer in writing of the causes of the delay. The Contract Officer shall ascertain the facts and the extent of delay, and extend the time for performing the services for the period of the enforced delay when and if in the judgment of the Contract Officer such delay is justified. The Contract Officer's determination shall be final and conclusive upon the parties to this Agreement. In no event shall Contractor be entitled to recover damages against the City for any delay in the performance of this Agreement, however caused, Contractor's sole remedy being extension of the Agreement pursuant to this Section.

3.4 Term.

Unless earlier terminated in accordance with Article 7 of this Agreement, this Agreement shall continue in full force and effect until completion of the services but not exceeding one (1) years from the date hereof, except as otherwise provided in the Schedule of Performance (Exhibit "D").

ARTICLE 4. COORDINATION OF WORK

4.1 Representatives and Personnel of Contractor.

The following principals of Contractor ("Principals") are hereby designated as being the principals and representatives of Contractor authorized to act in its behalf with respect to the work specified herein and make all decisions in connection therewith:

(Name)	**(Title)**
(Name)	**(Title)**
(Name)	**(Title)**

It is expressly understood that the experience, knowledge, capability and reputation of the foregoing principals were a substantial inducement for City to enter into this Agreement. Therefore, the foregoing principals shall be responsible during the term of this Agreement for directing all activities of Contractor and devoting sufficient time to personally supervise the services hereunder. All personnel of Contractor, and any authorized agents, shall at all times be under the exclusive direction and control of the Principals. For purposes of this Agreement, the foregoing Principals may not be replaced nor may their responsibilities be substantially reduced by Contractor without the express written approval of City. Additionally, Contractor shall utilize only competent personnel to perform services pursuant to this Agreement. Contractor shall make every reasonable effort to maintain the stability and continuity of Contractor's staff and subcontractors, if any, assigned to perform the services required under this Agreement. Contractor shall notify City of any changes in Contractor's staff and subcontractors, if any, assigned to perform the services required under this Agreement, prior to and during any such performance.

4.2 Status of Contractor.

Contractor shall have no authority to bind City in any manner, or to incur any obligation, debt or liability of any kind on behalf of or against City, whether by contract or otherwise, unless such authority is expressly conferred under this Agreement or is otherwise expressly conferred in writing by City. Contractor shall not at any time or in any manner represent that Contractor or any of Contractor's officers, employees, or agents are in any manner officials, officers, employees or agents of City. Neither Contractor, nor any of Contractor's officers, employees or agents, shall obtain any rights to retirement, health care or any other benefits which may otherwise accrue to City's employees. Contractor expressly waives any claim Contractor may have to any such rights.

4.3 Contract Officer.

The Contract Officer shall be Director of Public Works or such person as may be designated by the City Manager. It shall be the Contractor's responsibility to assure that the Contract Officer is kept informed of the progress of the performance of the services and the Contractor shall refer any decisions which must be made by City to the Contract Officer. Unless otherwise specified herein, any approval of City required hereunder shall mean the approval of the Contract Officer. The Contract Officer shall have authority, if specified in writing by the City Manager, to sign all documents on behalf of the City required hereunder to carry out the terms of this Agreement.

4.4 Independent Contractor.

Neither the City nor any of its employees shall have any control over the manner, mode or means by which Contractor, its agents or employees, perform the services required herein, except

as otherwise set forth herein. City shall have no voice in the selection, discharge, supervision or control of Contractor's employees, servants, representatives or agents, or in fixing their number, compensation or hours of service. Contractor shall perform all services required herein as an independent contractor of City and shall remain at all times as to City a wholly independent contractor with only such obligations as are consistent with that role. Contractor shall not at any time or in any manner represent that it or any of its agents or employees are agents or employees of City. City shall not in any way or for any purpose become or be deemed to be a partner of Contractor in its business or otherwise or a joint venturer or a member of any joint enterprise with Contractor.

4.5 Prohibition Against Subcontracting or Assignment.

The experience, knowledge, capability and reputation of Contractor, its principals and employees were a substantial inducement for the City to enter into this Agreement. Therefore, Contractor shall not contract with any other entity to perform in whole or in part the services required hereunder without the express written approval of the City. In addition, neither this Agreement nor any interest herein may be transferred, assigned, conveyed, hypothecated or encumbered voluntarily or by operation of law, whether for the benefit of creditors or otherwise, without the prior written approval of City. Transfers restricted hereunder shall include the transfer to any person or group of persons acting in concert of more than twenty five percent (25%) of the present ownership and/or control of Contractor, taking all transfers into account on a cumulative basis. In the event of any such unapproved transfer, including any bankruptcy proceeding, this Agreement shall be void. No approved transfer shall release the Contractor or any surety of Contractor of any liability hereunder without the express consent of City.

ARTICLE 5. INSURANCE AND INDEMNIFICATION

5.1 Insurance Coverages.

The Contractor shall procure and maintain, at its sole cost and expense, in a form and content satisfactory to City, during the entire term of this Agreement including any extension thereof, the following policies of insurance which shall cover all elected and appointed officers, employees and agents of City:

(a) General Liability Insurance (Occurrence Form CG0001 or equivalent). A policy of comprehensive general liability insurance written on a per occurrence basis for bodily injury, personal injury and property damage. The policy of insurance shall be in an amount not less than $1,000,000.00 per occurrence or if a general aggregate limit is used, then the general aggregate limit shall be twice the occurrence limit.

(b) Worker's Compensation Insurance. A policy of worker's compensation insurance in such amount as will fully comply with the laws of the State of California and which shall indemnify, insure and provide legal defense for the Contractor against any loss, claim or damage arising from any injuries or occupational diseases occurring to any worker employed by or any persons retained by the Contractor in the course of carrying out the work or services contemplated in this Agreement.

(c) Automotive Insurance (Form CA 0001 (Ed 1/87) including "any auto" and endorsement CA 0025 or equivalent). A policy of comprehensive automobile liability insurance written on a per occurrence for bodily injury and property damage in an amount not less than $1,000,000. Said policy shall include coverage for owned, non-owned, leased, hired cars and any automobile.

(d) Professional Liability. Professional liability insurance appropriate to the Contractor's profession. This coverage may be written on a "claims made" basis, and must include coverage for contractual liability. The professional liability insurance required by this Agreement must be endorsed to be applicable to claims based upon, arising out of or related to services performed under this Agreement. The insurance must be maintained for at least 5 consecutive years following the completion of Contractor's services or the termination of this Agreement. During this additional 5-year period, Contractor shall annually and upon request of the City submit written evidence of this continuous coverage.

(e) Subcontractors. Contractor shall include all subcontractors as insureds under its policies or shall furnish separate certificates and certified endorsements for each subcontractor. All coverages for subcontractors shall include all of the requirements stated herein.

(f) Additional Insurance. Policies of such other insurance, as may be required in the Special Requirements in Exhibit "B".

5.2 General Insurance Requirements.

All of the above policies of insurance shall be primary insurance and shall name the City, its elected and appointed officers, employees and agents as additional insureds and any insurance maintained by City or its officers, employees or agents may apply in excess of, and not contribute with Contractor's insurance. The insurer is deemed hereof to waive all rights of subrogation and contribution it may have against the City, its officers, employees and agents and their respective insurers. Moreover, the insurance policy must specify that where the primary insured does not satisfy the self-insured retention, any additional insured may satisfy the self-insured retention.

All of said policies of insurance shall provide that said insurance may not be amended or cancelled by the insurer or any party hereto without providing thirty (30) days prior written notice by certified mail return receipt requested to the City. In the event any of said policies of insurance are cancelled, the Contractor shall, prior to the cancellation date, submit new evidence of insurance in conformance with Section 5.1 to the Contract Officer.

No work or services under this Agreement shall commence until the Contractor has provided the City with Certificates of Insurance, additional insured endorsement forms or appropriate insurance binders evidencing the above insurance coverages and said Certificates of Insurance or binders are approved by the City. City reserves the right to inspect complete, certified copies of and endorsements to all required insurance policies at any time. Any failure to comply with the reporting or other provisions of the policies including breaches or warranties shall not affect coverage provided to City.

All certificates shall name the City as additional insured (providing the appropriate endorsement) and shall conform to the following "cancellation" notice:

CANCELLATION:

SHOULD ANY OF THE ABOVE DESCRIBED POLICIES BE CANCELLED BEFORE THE EXPIRATION DATED THEREOF, THE ISSUING COMPANY SHALL MAIL THIRTY (30)-DAY ADVANCE WRITTEN NOTICE TO CERTIFICATE HOLDER NAMED HEREIN.

[to be initialed] _____

Contractor Initials

City, its respective elected and appointed officers, directors, officials, employees, agents and volunteers are to be covered as additional insureds as respects: liability arising out of activities Contractor performs; products and completed operations of Contractor; premises owned, occupied or used by Contractor; or any automobiles owned, leased, hired or borrowed by Contractor. The coverage shall contain no special limitations on the scope of protection afforded to City, and their respective elected and appointed officers, officials, employees or volunteers. Contractor's insurance shall apply separately to each insured against whom claim is made or suit is brought, except with respect to the limits of the insurer's liability.

Any deductibles or self-insured retentions must be declared to and approved by City. At the option of City, either the insurer shall reduce or eliminate such deductibles or self-insured retentions as respects City or its respective elected or appointed officers, officials, employees and volunteers or the Contractor shall procure a bond guaranteeing payment of losses and related investigations, claim administration, defense expenses and claims. The Contractor agrees that the requirement to provide insurance shall not be construed as limiting in any way the extent to which the Contractor may be held responsible for the payment of damages to any persons or property resulting from the Contractor's activities or the activities of any person or persons for which the Contractor is otherwise responsible nor shall it limit the Contractor's indemnification liabilities as provided in Section 5.3.

In the event the Contractor subcontracts any portion of the work in compliance with Section 4.5 of this Agreement, the contract between the Contractor and such subcontractor shall require the subcontractor to maintain the same policies of insurance that the Contractor is required to maintain pursuant to Section 5.1, and such certificates and endorsements shall be provided to City.

5.3 Indemnification.

To the full extent permitted by law, Contractor agrees to indemnify, defend and hold harmless the City, its officers, employees and agents ("Indemnified Parties") against, and will hold and save them and each of them harmless from, any and all actions, either judicial, administrative, arbitration or regulatory claims, damages to persons or property, losses, costs, penalties, obligations, errors, omissions or liabilities whether actual or threatened (herein "claims or liabilities") that may be asserted or claimed by any person, firm or entity arising out of or in connection with the negligent performance of the work, operations or activities provided herein of Contractor, its officers, employees, agents, subcontractors, or invitees, or any individual or entity for which Contractor is legally liable ("indemnitors"), or arising from Contractor's or indemnitors'

reckless or willful misconduct, or arising from Contractor's or indemnitors' negligent performance of or failure to perform any term, provision, covenant or condition of this Agreement, and in connection therewith:

(a) Contractor will defend any action or actions filed in connection with any of said claims or liabilities and will pay all costs and expenses, including legal costs and attorney's fees incurred in connection therewith;

(b) Contractor will promptly pay any judgment rendered against the City, its officers, agents or employees for any such claims or liabilities arising out of or in connection with the negligent performance of or failure to perform such work, operations or activities of Contractor hereunder; and Contractor agrees to save and hold the City, its officers, agents, and employees harmless therefrom;

(c) In the event the City, its officers, agents or employees is made a party to any action or proceeding filed or prosecuted against Contractor for such damages or other claims arising out of or in connection with the negligent performance of or failure to perform the work, operation or activities of Contractor hereunder, Contractor agrees to pay to the City, its officers, agents or employees, any and all costs and expenses incurred by the City, its officers, agents or employees in such action or proceeding, including but not limited to, legal costs and attorney's fees.

Contractor shall incorporate similar indemnity agreements with its subcontractors and if it fails to do so Contractor shall be fully responsible to indemnify City hereunder therefore, and failure of City to monitor compliance with these provisions shall not be a waiver hereof. This indemnification includes claims or liabilities arising from any negligent or wrongful act, error or omission, or reckless or willful misconduct of Contractor in the performance of professional services hereunder. The provisions of this Section do not apply to claims or liabilities occurring as a result of City's sole negligence or willful acts or omissions, but, to the fullest extent permitted by law, shall apply to claims and liabilities resulting in part from City's negligence, except that design professionals' indemnity hereunder shall be limited to claims and liabilities arising out of the negligence, recklessness or willful misconduct of the design professional. The indemnity obligation shall be binding on successors and assigns of Contractor and shall survive termination of this Agreement.

5.4 Sufficiency of Insurer.

Insurance required by this Agreement shall be satisfactory only if issued by companies qualified to do business in California, rated "A" or better in the most recent edition of Best Rating Guide, The Key Rating Guide or in the Federal Register, and only if they are of a financial category Class VII or better, unless such requirements are waived by the Risk Manager of the City ("Risk Manager") due to unique circumstances. If this Agreement continues for more than 3 years duration, or in the event the risk manager determines that the work or services to be performed under this Agreement creates an increased or decreased risk of loss to the City, the Contractor agrees that the minimum limits of the insurance policies may be changed accordingly upon receipt of written notice from the Risk Manager.

ARTICLE 6. RECORDS, REPORTS, AND RELEASE OF INFORMATION

6.1 Records.

Contractor shall keep, and require subcontractors to keep, such ledgers, books of accounts, invoices, vouchers, canceled checks, reports, studies or other documents relating to the disbursements charged to City and services performed hereunder (the "books and records"), as shall be necessary to perform the services required by this Agreement and enable the Contract Officer to evaluate the performance of such services. Any and all such documents shall be maintained in accordance with generally accepted accounting principles and shall be complete and detailed. The Contract Officer shall have full and free access to such books and records at all times during normal business hours of City, including the right to inspect, copy, audit and make records and transcripts from such records. Such records shall be maintained for a period of three (3) years following completion of the services hereunder, and the City shall have access to such records in the event any audit is required. In the event of dissolution of Contractor's business, custody of the books and records may be given to City, and access shall be provided by Contractor's successor in interest. Notwithstanding the above, the Contractor shall fully cooperate with the City in providing access to the books and records if a public records request is made and disclosure is required by law including but not limited to the California Public Records Act.

6.2 Reports.

Contractor shall periodically prepare and submit to the Contract Officer such reports concerning the performance of the services required by this Agreement as the Contract Officer shall require. Contractor hereby acknowledges that the City is greatly concerned about the cost of work and services to be performed pursuant to this Agreement. For this reason, Contractor agrees that if Contractor becomes aware of any facts, circumstances, techniques, or events that may or will materially increase or decrease the cost of the work or services contemplated herein or, if Contractor is providing design services, the cost of the project being designed, Contractor shall promptly notify the Contract Officer of said fact, circumstance, technique or event and the estimated increased or decreased cost related thereto and, if Contractor is providing design services, the estimated increased or decreased cost estimate for the project being designed.

6.3 Ownership of Documents.

All drawings, specifications, maps, designs, photographs, studies, surveys, data, notes, computer files, reports, records, documents and other materials (the "documents and materials"), including any electronic documents and materials, prepared by Contractor, its employees, subcontractors and agents in the performance of this Agreement shall be the property of City and shall be delivered to City in a format of the City's choice upon request of the Contract Officer or upon the termination of this Agreement, and Contractor shall have no claim for further employment or additional compensation as a result of the exercise by City of its full rights of ownership use, reuse, or assignment of the documents and materials hereunder. Any use, reuse or assignment of such completed documents for other projects and/or use of uncompleted documents without specific written authorization by the Contractor will be at the City's sole risk and without liability to Contractor, and Contractor's guarantee and warranties shall not extend to such use, reuse or assignment. Contractor may retain copies of such documents for its own use. Contractor

shall have the right to use the concepts embodied therein. All subcontractors shall provide for assignment to City of any documents or materials prepared by them, and in the event Contractor fails to secure such assignment, Contractor shall indemnify City for all damages resulting therefrom. Moreover, Contractor with respect to any documents and materials that may qualify as "works made for hire" as defined in 17 U.S.C. § 101, such documents and materials are hereby deemed "works made for hire" for the City.

6.4 Confidentiality and Release of Information.

(a) All information gained or work product produced by Contractor in performance of this Agreement shall be considered confidential, unless such information is in the public domain or already known to Contractor. Contractor shall not release or disclose any such information or work product to persons or entities other than City without prior written authorization from the Contract Officer.

(b) Contractor, its officers, employees, agents or subcontractors, shall not, without prior written authorization from the Contract Officer or unless requested by the City Attorney, voluntarily provide documents, declarations, letters of support, testimony at depositions, response to interrogatories or other information concerning the work performed under this Agreement. Response to a subpoena or court order shall not be considered "voluntary" provided Contractor gives City notice of such court order or subpoena.

(c) If Contractor, or any officer, employee, agent or subcontractor of Contractor, provides any information or work product in violation of this Agreement, then City shall have the right to reimbursement and indemnity from Contractor for any damages, costs and fees, including attorney's fees, caused by or incurred as a result of Contractor's conduct.

(d) Contractor shall promptly notify City should Contractor, its officers, employees, agents or subcontractors be served with any summons, complaint, subpoena, notice of deposition, request for documents, interrogatories, request for admissions or other discovery request, court order or subpoena from any party regarding this Agreement and the work performed there under. City retains the right, but has no obligation, to represent Contractor or be present at any deposition, hearing or similar proceeding. Contractor agrees to cooperate fully with City and to provide City with the opportunity to review any response to discovery requests provided by Contractor. However, this right to review any such response does not imply or mean the right by City to control, direct, or rewrite said response.

ARTICLE 7. ENFORCEMENT OF AGREEMENT AND TERMINATION

7.1 California Law.

This Agreement shall be interpreted, construed and governed both as to validity and to performance of the parties in accordance with the laws of the State of California. Legal actions concerning any dispute, claim or matter arising out of or in relation to this Agreement shall be instituted in the Superior Court of the County of Orange, State of California, or any other appropriate court in such county, and Contractor covenants and agrees to submit to the personal jurisdiction of such court in the event of such action. In the event of litigation in a U.S. District

Court, venue shall lie exclusively in the Central District of California, in the County of Orange, State of California.

7.2 Disputes; Default.

In the event that Contractor is in default under the terms of this Agreement, the City shall not have any obligation or duty to continue compensating Contractor for any work performed after the date of default. Instead, the City may give notice to Contractor of the default and the reasons for the default. The notice shall include the timeframe in which Contractor may cure the default. This timeframe is presumptively thirty (30) days, but may be extended, though not reduced, if circumstances warrant. During the period of time that Contractor is in default, the City shall hold all invoices and shall, when the default is cured, proceed with payment on the invoices. In the alternative, the City may, in its sole discretion, elect to pay some or all of the outstanding invoices during the period of default. If Contractor does not cure the default, the City may take necessary steps to terminate this Agreement under this Article. Any failure on the part of the City to give notice of the Contractor's default shall not be deemed to result in a waiver of the City's legal rights or any rights arising out of any provision of this Agreement.

7.3 Retention of Funds.

Contractor hereby authorizes City to deduct from any amount payable to Contractor (whether or not arising out of this Agreement) (i) any amounts the payment of which may be in dispute hereunder or which are necessary to compensate City for any losses, costs, liabilities, or damages suffered by City, and (ii) all amounts for which City may be liable to third parties, by reason of Contractor's acts or omissions in performing or failing to perform Contractor's obligation under this Agreement. In the event that any claim is made by a third party, the amount or validity of which is disputed by Contractor, or any indebtedness shall exist which shall appear to be the basis for a claim of lien, City may withhold from any payment due, without liability for interest because of such withholding, an amount sufficient to cover such claim. The failure of City to exercise such right to deduct or to withhold shall not, however, affect the obligations of the Contractor to insure, indemnify, and protect City as elsewhere provided herein.

7.4 Waiver.

Waiver by any party to this Agreement of any term, condition, or covenant of this Agreement shall not constitute a waiver of any other term, condition, or covenant. Waiver by any party of any breach of the provisions of this Agreement shall not constitute a waiver of any other provision or a waiver of any subsequent breach or violation of any provision of this Agreement. Acceptance by City of any work or services by Contractor shall not constitute a waiver of any of the provisions of this Agreement. No delay or omission in the exercise of any right or remedy by a non-defaulting party on any default shall impair such right or remedy or be construed as a waiver. Any waiver by either party of any default must be in writing and shall not be a waiver of any other default concerning the same or any other provision of this Agreement.

7.5 Rights and Remedies are Cumulative.

Except with respect to rights and remedies expressly declared to be exclusive in this Agreement, the rights and remedies of the parties are cumulative and the exercise by either party

of one or more of such rights or remedies shall not preclude the exercise by it, at the same or different times, of any other rights or remedies for the same default or any other default by the other party.

7.6 Legal Action.

In addition to any other rights or remedies, either party may take legal action, in law or in equity, to cure, correct or remedy any default, to recover damages for any default, to compel specific performance of this Agreement, to obtain declaratory or injunctive relief, or to obtain any other remedy consistent with the purposes of this Agreement. Notwithstanding any contrary provision herein, Contractor shall file a statutory claim pursuant to Government Code Sections 905 et. seq. and 910 et. seq., in order to pursue a legal action under this Agreement.

7.7 Termination Prior to Expiration of Term.

This Section shall govern any termination of this Contract except as specifically provided in the following Section for termination for cause. The City reserves the right to terminate this Contract at any time, with or without cause, upon written notice to Contractor. In addition, the Contractor may terminate this Contract for cause, upon sixty (60) days' advance written notice to City. Upon receipt of any notice of termination, Contractor shall immediately cease all services hereunder except such as may be specifically approved by the Contract Officer. Except where the Contractor has initiated termination, the Contractor shall be entitled to compensation for all services rendered prior to the effective date of the notice of termination and for any services authorized by the Contract Officer thereafter in accordance with the Schedule of Compensation or such as may be approved by the Contract Officer, except as provided in Section 7.3. In the event the Contractor has initiated termination, the Contractor shall be entitled to compensation only for the reasonable value of the work product actually produced hereunder. In the event of termination without cause pursuant to this Section, the terminating party need not provide the non-terminating party with the opportunity to cure pursuant to Section 7.2.

7.8 Termination for Default of Contractor.

If termination is due to the failure of the Contractor to fulfill its obligations under this Agreement, City may, after compliance with the provisions of Section 7.2, take over the work and prosecute the same to completion by contract or otherwise, and the Contractor shall be liable to the extent that the total cost for completion of the services required hereunder exceeds the compensation herein stipulated (provided that the City shall use reasonable efforts to mitigate such damages), and City may withhold any payments to the Contractor for the purpose of set-off or partial payment of the amounts owed the City as previously stated.

7.9 Attorney's Fees.

If either party to this Agreement is required to initiate or defend or made a party to any action or proceeding in any way connected with this Agreement, the prevailing party in such action or proceeding, in addition to any other relief which may be granted, whether legal or equitable, shall be entitled to reasonable attorney's fees. Attorney's fees shall include attorney's fees on any appeal, and in addition a party entitled to attorney's fees shall be entitled to all other reasonable costs for investigating such action, taking depositions and discovery and all other necessary costs

the court allows which are incurred in such litigation. All such fees shall be deemed to have accrued on commencement of such action and shall be enforceable whether or not such action is prosecuted to judgment.

ARTICLE 8. CITY OFFICERS AND EMPLOYEES: NON-DISCRIMINATION

8.1 Non-liability of City Officers and Employees.

No officer or employee of the City shall be personally liable to the Contractor, or any successor in interest, in the event of any default or breach by the City or for any amount which may become due to the Contractor or to its successor, or for breach of any obligation of the terms of this Agreement.

8.2 Conflict of Interest.

Contractor covenants that neither it, nor any officer or principal of its firm, has or shall acquire any interest, directly or indirectly, which would conflict in any manner with the interests of City or which would in any way hinder Contractor's performance of services under this Agreement. Contractor further covenants that in the performance of this Agreement, no person having any such interest shall be employed by it as an officer, employee, agent or subcontractor without the express written consent of the Contract Officer. Contractor agrees to at all times avoid conflicts of interest or the appearance of any conflicts of interest with the interests of City in the performance of this Agreement.

8.3 Covenant Against Discrimination.

Contractor covenants that, by and for itself, its heirs, executors, assigns, and all persons claiming under or through them, that there shall be no discrimination against or segregation of, any person or group of persons on account of race, color, creed, religion, sex, gender, sexual orientation, marital status, national origin, ancestry or other protected class in the performance of this Agreement. Contractor shall take affirmative action to insure that applicants are employed and that employees are treated during employment without regard to their race, color, creed, religion, sex, gender, sexual orientation, marital status, national origin, ancestry or other protected class.

8.4 Unauthorized Aliens.

Contractor hereby promises and agrees to comply with all of the provisions of the Federal Immigration and Nationality Act, 8 U.S.C.A. §§ 1101, *et seq.*, as amended, and in connection therewith, shall not employ unauthorized aliens as defined therein. Should Contractor so employ such unauthorized aliens for the performance of work and/or services covered by this Agreement, and should any liability or sanctions be imposed against City for such use of unauthorized aliens, Contractor hereby agrees to and shall reimburse City for the cost of all such liabilities or sanctions imposed, together with any and all costs, including attorney's fees, incurred by City.

ARTICLE 9. MISCELLANEOUS PROVISIONS

9.1 Notices.

Any notice, demand, request, document, consent, approval, or communication either party desires or is required to give to the other party or any other person shall be in writing and either served personally or sent by prepaid, first-class mail, in the case of the City, to the City Manager and to the attention of the Contract Officer (with her/his name and City title), City of Cypress, 5275 Orange Avenue, Cypress, California 90630 and in the case of the Contractor, to the person(s) at the address designated on the execution page of this Agreement. Either party may change its address by notifying the other party of the change of address in writing. Notice shall be deemed communicated at the time personally delivered or in seventy-two (72) hours from the time of mailing if mailed as provided in this Section.

9.2 Interpretation.

The terms of this Agreement shall be construed in accordance with the meaning of the language used and shall not be construed for or against either party by reason of the authorship of this Agreement or any other rule of construction which might otherwise apply.

9.3 Counterparts.

This Agreement may be executed in counterparts, each of which shall be deemed to be an original, and such counterparts shall constitute one and the same instrument.

9.4 Integration; Amendment.

This Agreement including the attachments hereto is the entire, complete and exclusive expression of the understanding of the parties. It is understood that there are no oral agreements between the parties hereto affecting this Agreement and this Agreement supersedes and cancels any and all previous negotiations, arrangements, agreements and understandings, if any, between the parties, and none shall be used to interpret this Agreement. No amendment to or modification of this Agreement shall be valid unless made in writing and approved by the Contractor and by the City Council. The parties agree that this requirement for written modifications cannot be waived and that any attempted waiver shall be void.

9.5 Severability.

In the event that any one or more of the phrases, sentences, clauses, paragraphs, or sections contained in this Agreement shall be declared invalid or unenforceable by a valid judgment or decree of a court of competent jurisdiction, such invalidity or unenforceability shall not affect any of the remaining phrases, sentences, clauses, paragraphs, or sections of this Agreement which are hereby declared as severable and shall be interpreted to carry out the intent of the parties hereunder unless the invalid provision is so material that its invalidity deprives either party of the basic benefit of their bargain or renders this Agreement meaningless.

9.6 Warranty & Representation of Non-Collusion.

No official, officer, or employee of City has any financial interest, direct or indirect, in this Agreement, nor shall any official, officer, or employee of City participate in any decision relating to this Agreement which may affect his/her financial interest or the financial interest of any corporation, partnership, or association in which (s)he is directly or indirectly interested, or in violation of any corporation, partnership, or association in which (s)he is directly or indirectly interested, or in violation of any State or municipal statute or regulation. The determination of "financial interest" shall be consistent with State law and shall not include interests found to be "remote" or "noninterests" pursuant to Government Code Sections 1091 or 1091.5.

Nor shall any such officer or employee participate in any decision relating to the Agreement which affects her/his financial interest or the financial interest of any corporation, partnership or association in which (s)he is, directly or indirectly, interested, in violation of any State statute or regulation, including but not limited to the Political Reform Act (Government Code Sections 81000, *et seq*.)

Contractor warrants and represents that it has not paid or given, and will not pay or give, to any third party including, but not limited to, any City official, officer, or employee, any money, consideration, or other thing of value as a result or consequence of obtaining or being awarded any agreement. Contractor further warrants and represents that (s)he/it has not engaged in any act(s), omission(s), or other conduct or collusion that would result in the payment of any money, consideration, or other thing of value to any third party including, but not limited to, any City official, officer, or employee, as a result of consequence of obtaining or being awarded any agreement. Contractor is aware of and understands that any such act(s), omission(s) or other conduct resulting in such payment of money, consideration, or other thing of value will render this Agreement void and of no force or effect.

Contractor's Authorized Initials _____

9.7 Corporate Authority.

The persons executing this Agreement on behalf of the parties hereto warrant that (i) such party is duly organized and existing, (ii) they are duly authorized to execute and deliver this Agreement on behalf of said party, (iii) by so executing this Agreement, such party is formally bound to the provisions of this Agreement, and (iv) the entering into this Agreement does not violate any provision of any other Agreement to which said party is bound. This Agreement shall be binding upon the heirs, executors, administrators, successors and assigns of the parties.

EXHIBIT "A"
SCOPE OF SERVICES

TASK 1 – PROJECT INITIALIZATION & SITE ASSESSMENT

1. Initial Kickoff Meeting
   a. Meet with City project staff to review project criteria, site constraints, and program objectives
   b. Review operational procedures and finalize the baseline design schedule

2. Project Design Schedule
   a. Provide a baseline critical-path design schedule
   b. Update the schedule monthly to track submittals, meetings, and project milestones

3. Data Gathering and Analysis
   a. Collect and review available City-furnished record data, park maps, and site plans
   b. Conduct manual field reconnaissance to identify immediate site opportunities, perimeter setbacks, pedestrian connections, and physical constraints
   c. Perform an on-site field inventory to locate and document surface elements directly impacting the playground design

4. Project Management & Quality Control
   a. Schedule and lead twice-monthly progress and coordination meetings with City staff
   b. Execute strict Quality Assurance and Quality Control (QA/QC) measures. All notes, drawings, and design calculations will be reviewed by a senior Landscape Architect independent of the project design team prior to each formal submittal milestone (90%, and Final)
   c. Perform formal constructability and operational reviews at each submittal stage
   d. Notify the City immediately of any out-of-scope requests and obtain written approval prior to proceeding

5. Preliminary Surveys, Investigations, and Reports
   a. Topographic Survey: Coordinate with WestLAND Group (WLG) to perform a targeted site topographic survey mapping elevations and hardscape features within the playground areas

TASK 2 – COMMUNITY OUTREACH AND CONCEPT DEVELOPMENT

1. Initial Community Visioning Workshops (2 Meetings Total - 1 Per Park)
   a. Host one (1) in-person community design workshop at Veterans Park and one (1) at Maple Grove North Park
   b. Lead residents and children through a localized site walk to identify immediate park assets and spatial challenges
   c. Facilitate an interactive design charrette, inviting participants to brainstorm equipment styles, desired play amenities, and potential themes
   d. Document all community input, annotate site maps with neighborhood insights, and prepare a public preference summary

2. Project Story Mapping & Digital Engagement
    a. Build, publish, and maintain a dedicated, custom project website plaKorm to serve as the central digital hub for public information
    b. Populate the site with project descriptions, imagery, schedules, arborist summaries, and concept drawings
    c. Provide public QR codes and links for City distribution. Update the website content at each major project milestone

3. Preliminary Concept Plan Generation (3 Concepts Per Park)
    a. Develop a minimum of three (3) distinct conceptual playground layouts for each park
    b. Design layouts across at least two (2) different premier playground equipment manufacturers to ensure design variety and procurement leverage
    c. Integrate required program elements into the concepts, including age-separated play structures (2–5 and 5–12 years), integrated shade sails, standalone canopies, and matching site furnishings (benches and trash receptacles)
    d. Incorporate site-specific constraints into the concepts:
    e. Veterans Park: Footprint optimization utilizing the existing 5,000-square-foot playground layout while protecting mature tree canopies
    f. Maple Grove North Park: Optimize the existing playground to provide updated amenities based on community outreach
    g. Deliver 2D colored illustrative plan view graphics and an initial opinion of probable construction costs for each concept choice

4. Preferred Master Plan Refinement
    a. Review the schematic layouts and public workshop consensus data with City staff to secure explicit direction
    b. Refine the chosen concept into a single preferred Master Plan for each park location
    c. Update and refine the opinions of probable construction costs

5. Leadership Approvals & Commission
    a. Presentations
    b. Attend, present outreach findings, and assist the City with formal presentations to secure master concept approval from:
        - The Recreation and Community Services Commission
        - The Cypress City Council

MEETINGS & DELIVERABLES

Initial Community Visioning Workshops (2 Total - 1 Per Park)
Project Public Website & QR Access Code Community Outreach Presentation Exhibits
Preliminary Concept Plans (3 Distinct Options Per Park)
Final approved Master Plan (1 Per Park)
Preliminary Opinions of Probable Construction Cost

TASK 3 – FINAL DESIGN AND CONSTRUCTION DOCUMENTS

1. Design Development Style Guide & Resource Log
    a. Provide comprehensive descriptions for equipment color palettes, text, graphics, materials, and specialized manufacturer construction requirements
    b. Compile product catalog cuts, manufacturer literature, and a written narrative

describing components, finishes, and custom features

c. Provide a public purchasing resource log (detailing cooperative purchasing avenues). Revise and update this log at the 90%, and Final submittals

2. 3D Photorealistic Renderings & Simulations
   a. Set up precision 3D line-work models based on approved concepts
   b. Build static 3D models including playground topography, retaining low walls, shade sails, play equipment structures, surrounding tree canopies, and immediate park features
   c. Deliver high-resolution, photorealistic 3D color perspective renderings and photo-simulations

3. Preparation of Separate Construction Document Packages
   a. Prepare completely separate, independent packages of construction drawings for each park to facilitate clean, independent municipal tracking
   b. Drawings will be drafted in AutoCAD on City-provided 24x36 or 30x42 sheets (at 10 or 20-scale), delivered as seamless, high-resolution PDF packages covering:
      - Demolition Plans
      - Playground Site Construction, Layout, and Detail Plans
      - Turf repair

4. Cost Estimating & Procurement Analysis
   a. Deliver a refined Engineer's Estimate of Probable Construction Costs alongside each formal design submittal. Costs will be indexed to current market trends and escalated to the mid-point of construction
   b. Provide a formal, dedicated analysis evaluating cost-savings achievable by designating equipment as Owner Furnished-Contract Installed (OFCI)
   c. Evaluate and provide a procurement path utilizing national public cooperative purchasing agreements, including Sourcewell and BuyBoard

5. Milestones Submittals & Plan Check
   a. Submit separate packages for each park at two (2) distinct checkpoints: 90%, and Final (100% PS&E)
   b. Coordinate with the City to undergo formal internal Plan Check correction submittals through the Public Works and the Planning & Building Departments to guarantee compliance with the California Building Code (CBC)
   c. Review, address, and integrate one consolidated round of City/Plan Check comments at each submittal milestone
   d. Upon final approval, assemble the technical Bid Form, project schedule metrics, and technical specifications package to assist the City in finalizing the official public Bid Package

MEETINGS & DELIVERABLES

Design Development Style Guide & Cooperative Resource Log
Photorealistic 3D Renderings & Photo-Simulations (Static Views)
90% Construction Documents, Plan Check Submittals, & Cost Estimates (Separate Packages Per Park)
100% Final Shelf-Ready PS&E Bid Packages & OFCI Cost-Savings Analysis (Separate Packages Per Park)

TASK 4 – TECHNICAL SPECIFICATIONS

1. Technical Specifications
    a. Format all specifications to integrate with the City of Cypress Brown Book and the Standard Specifications for Public Works Construction ("Greenbook")
    b. Deliver complete Special Provisions and comprehensive payment item descriptions at the 90% and Final milestones

MEETINGS & DELIVERABLES

Technical Specifications
Special Provisions

EXHIBIT "B"
SPECIAL REQUIREMENTS
(Superseding Contract Boilerplate)

I. **DELETE** subsection 1.8 and **REPLACE** with the following:

"1.8 Additional Services. City shall have the right at any time during the performance of the services, without invalidating this Agreement, to order extra work beyond that specified in a particular Agreement, as defined in Exhibit "A," or make changes by altering, adding to or deducting from said work. No such extra work may be undertaken unless a written order is first given by the Contract Officer to the Contractor, incorporating therein any adjustment in (i) the Contract Sum for the actual costs of the extra work, and/or (ii) the time to perform this Agreement, which said adjustments are subject to the written approval of the Contractor. Any increase in compensation up to the amount authorized by the City Council or City Manager as applicable ("Contract Contingency"); or, in the time to perform of up to one hundred eighty (180) days, may be approved by the Contract Officer. Any greater increases, taken either separately or cumulatively, must be approved by the City Council. It is expressly understood by Contractor that the provisions of this Section shall not apply to services specifically set forth in the Scope of Services. Contractor hereby acknowledges that it accepts the risk that the services to be provided pursuant to the Scope of Services may be more costly or time consuming than Contractor anticipates and that Contractor shall not be entitled to additional compensation therefor. City may in its sole and absolute discretion have similar work done by other contractors. No claims for an increase in the Contract Sum or time for performance shall be valid unless the procedures established in this Section are followed.

IV. **The title of Article 5 shall read as follows:**

"INSURANCE, INDEMNIFICATION, AND BONDS"

V. **Section 5.1(d) shall be amended to read as follows:**

"Professional Liability. Professional liability insurance in the amount not less than two million dollars ($2,000,000). This coverage may be written on a "claims made" basis, and must include coverage for contractual liability. The professional liability insurance required by this Agreement must be endorsed to be applicable to claims based upon, arising out of or related to services performed under this Agreement. The insurance must be maintained for at least 5 consecutive years following the completion of Contractor's services or the termination of this Agreement. During this additional 5-year period, Contractor shall annually and upon request of the City submit written evidence of this continuous coverage."

VI. **Section 5.5 shall be added as follows:**

"Sufficiency of Insurer. Insurance required by this Agreement shall be satisfactory only if issued by companies qualified to do business in California, rated "A" or better in the most recent edition of Best's Rating Guide, The Key Rating Guide or in the Federal Register, and only if they are of a financial category Class VII or better, unless such requirements are waived by the Risk Manager of the City due to unique circumstances. In the event the Risk Manager of City ("Risk Manager") determines that the work or services to be performed under this Agreement creates an increased or decreased risk of loss to the City, the Contractor agrees that the minimum limits of the insurance policies and the performance bond required by this Section 5 may be changed accordingly upon receipt of written notice from the Risk Manager; provided that the Contractor shall have the right to appeal a determination of increased coverage by the Risk Manager to the City Council of City within 10 days of receipt of notice from the Risk Manager."

ASSUMPTIONS

1. Only services specifically noted in the scope of services are included in the fee schedule. Services such as construction survey, utility potholing, etc. are not included.
2. The following project expenses will be billed at cost plus 15% administrative fee in addition to the professional fees listed above:
   - Printing, copying, scanning, graphic, photography and reproduction services
   - Delivery, shipping and courier charges
   - Subconsultant fees and expenses
   - Agency fees, permits, plan check and inspection fees
3. The reimbursable allowance will only be billed as-needed.
4. Payments are due within 30 days from invoice date.

Additional Services

Professional fees are based on a project as outline within the scope of work. If the scope of work is increased or changed at the request of the City of Cypress, the Contractor shall receive compensation based on additional hours worked at the hourly rates stated below, or an agreed upon negotiated fee. The City of Cypress shall approve additional services and costs in writing prior to any additional work performed.

Staff	Hourly Rate
Principals	$230
Director of Design	$200
Senior Landscape Architects	$175

COMMUNITY OUTREACH AND DESIGN FOR THE PLAYGROUND EQUIPMENT REPLACEMENT AT VETERANS PARK AND MAPLE GROVE NORTH PARK

June 19, 2026

Designing landscapes that create community

~~June 19, 2026~~
Revised July 6, 2026

Tony An
Assistant City Engineer
City of Cypress
5275 Orange Avenue
Cypress, CA 90630

RE: PROPOSAL TO PROVIDE PROFESSIONAL LANDSCAPE ARCHITECTURE DESIGN SERVICES FOR COMMUNITY OUTREACH AND DESIGN FOR THE PLAYGROUND EQUIPMENT REPLACEMENT AT VETERANS PARK AND MAPLE GROVE NORTH PARK

Dear Mr. An,

Play is the spark that brings a community to life! The playgrounds at Veterans Park and Maple Grove North Park are ready to be completely reimagined as vibrant, fun, and unique all-inclusive spaces built for the next generation of play.

DVDCreative (DVDC) is an award-winning design studio with twenty-nine years of experience specializing in delivering many of Southern California's best playgrounds. We thrive on transforming community visions into reality, and we are incredibly eager to partner with you to deliver this outstanding reimagining of your city's play infrastructure. Since our founding, we have focused exclusively on public works projects. Our portfolio speaks for itself with more than 300 completed park-related projects. Along the way, we've collected over 50 prestigious design awards from industry associations, including APWA, ASLA, and CPRS. We craft durable, maintainable, and practical solutions that don't just meet expectations – they shatter them.

For Veterans and Maple Grove North Parks, we have assembled an experienced team of premier public works design professionals focused on seamless execution:

- WestLAND Group (WLG): Our trusted civil engineering partner for over thirty years will handle topographic surveying, playground site grading, and surface drainage needs.

We understand the deep importance of these playground renovations and the immense joy they will bring to Cypress families. Our team has thoroughly reviewed the RFQ, and we are primed to deliver solutions that align perfectly with your desired program outcomes, budget tracking, and municipal standards. As you review our credentials, we invite you to consider the unique, proven, and spirited benefits of the DVDC team.

EXPERIENCE ON SIMILAR PROJECTS

DVDC has been commissioned to design and bring to life hundreds of park projects, spanning all sizes and scopes. Our recent municipal triumphs include:

- Rick Gomez Park and Whitaker School Park (Buena Park): APWA and CPRS award winners, and the first new parks in that city in over thirty years! The park programs were refined through intense

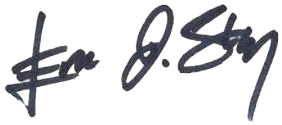
151 Kalmus Drive, Suite M8
Costa Mesa, CA 92626

714.641.1300
dvdcreative.com

community engagement and feature highly utilized shaded play areas, picnic plazas, and community fitness equipment.

- Wolfson Park Expansion (Rancho Mirage): This APWA award recipient features a regional trailhead, a specialized braille trail developed in partnership with the Braille Institute, a native cactus garden, walking paths, and a new parking facility.
- Fremont Park (Glendale): After a decade of careful planning and community engagement, we reopened this completely modernized community hub, boasting new tennis/pickleball courts, basketball courts, fitness equipment, a massive flagship playground, an interactive splash pad, synthetic soccer fields, and a new community center.

QUALIFICATIONS OF THE DESIGN TEAM



The DVDC team, anchored by our core of creative Landscape Architects, has successfully delivered Southern California's finest park facilities. Our design process is deeply rooted in robust community engagement, creative spatial layouts, and a mastery of interdisciplinary coordination. Our subconsultants aren't just names on a page; they are an extension of our passionate team, fully committed to excellent public service.

PROJECT DELIVERY

We utilize cutting-edge industry software like AutoCAD, LandFX, and Bluebeam to keep design production humming efficiently. Our key to scheduling success? Regular virtual "page-turns" that streamline information sharing across disciplines, drastically reducing turnaround times, engaging every team member, and assigning action items with crystal clarity. Furthermore, our strict Quality Control and Quality Assurance (QA/QC) program includes independent reviews by a senior Landscape Architect who is completely separate from the daily design team, backed by internal checklists built from our decades of experience.
Response to the Project Challenges

Park planning is more than our job, it's our absolute passion. The creative design expertise required for this innovative playground program is perfectly matched by the dynamic team and experience outlined in this proposal. We promise outstanding, enthusiastic, and reliable service on this important commission. My team and I genuinely look forward to working hand-in-hand with Cypress city staff to deliver these exciting new playgrounds to your community!

With thanks and appreciation,

Eric Sterling, PLA # 5463
President, DVDCreative

FIRM PROFILE

DVDCreative (DVDC) is committed to the creative design of outstanding public spaces. We specialize in the development of landscapes, parks, sports fields, and streetscapes tailored to meet the unique needs of their communities. Whether we're creating natural spaces for quiet respite or active environments for recreation and athletics, we strive to draw inspiration from each site's inherent potential.

For every commission, our focus is on enhancing the usability and character of the space, always within environmentally sound parameters. Our designs aim to maximize both functionality and beauty, resulting in lasting community value.

We serve public agency clients with a full spectrum of services including site planning, budgeting, and preparation of construction documents. Our work is evident across Southern California, with award-winning public spaces delivered throughout the state.

We remain attentive to changes in the construction industry, especially around pricing. By actively tracking and analyzing market trends during the estimating and bidding phases, we help ensure projects remain on budget.

We take our role in environmental stewardship seriously. DVDC designs with sustainability and long-term maintainability in mind, helping communities maximize public investment and enjoy spaces that endure.

Above all, our team is easy to work with creative, responsive, and deeply experienced. We live by our mission to "create community" through our designs, and we're proud to be a trusted, proactive partner to city staff and stakeholders.

FREMONT PARK

CITY OF GLENDALE

The revitalization of Fremont Park will be a great improvement for the citizens of Glendale. It has a special character and being the oldest park in the city, an important historical context; it provides a wonderful greenspace and needed recreational opportunities for the residents who live just north of downtown Glendale. This community, through several outreach meetings, provided DVDC park planners with insights related to the park's use and the current needs for recreation. The slate of improvements we planned will be enjoyed by all: new synthetic turf soccer fields, community center, play spaces, picnic grounds and ball courts. New lighting, easy access, and a full perimeter drive path will ensure better security. New parking, new maintenance facilities and a refurbished home for the model railroad club will improve this community focal point.

This busy facility includes an active tennis community with regularly scheduled lessons, tournaments, and play days. There is also a great contingent of drop-in regulars that frequent these courts. An update of the facility was needed, access, lighting and new fencing, and net stations were installed based upon DVDC renovation plans. The courts were sawcut, patched and resurfaced to accommodate this facility-wide makeover.

Other DVDC Projects in the City of Glendale:

- Pacific Park
- Maryland Park
- Cerritos Park

Client: City of Glendale
Reference: Joseph Gonzalez
Park Planner

Acreage: 8
Start Date: March 2015
Date of completion: Under Construction
Cost of Design: $1.1 million

WHITAKER ELEMENTARY PARK

CITY OF BUENA PARK

There are no parks nor any available parklands in this section of Buena Park. An initial opportunity to provide some dedicated park facilities at Whitaker School has blossomed into a full of fledged "new" park across three acres of school yard. Through a series of community outreach workshops a plan has emerged with several exciting and unique elements. In addition to normal park amenities, shaded picnic spaces, play lots restrooms, a jog path and nice open spaces, there will be a STEM themed hardscape plaza, unique geometric ground patterns and other creative play spaces. The basketball court surface will be painted for fraction ball, a math-based ball game. The running/walking track will have distance markers. The universal accessible play lot is envisioned to have fun, exciting, and challenging elements for all ages. This fully lighted park will host sports activities, family gatherings, and a myriad of recreation opportunities in this under served part of the city. As the property is to be shared with Whitaker Elementary School, a unique agreement between the City and the School District will allow for this great joint use community facility.

Other DVDC Projects in the City of Buena Park:

- Rick Gomez Park
- Thelma Community Gardens

Start Date: June 2019
Date of completion: August 2024
Cost of Design: $331,911

PARQUE DEL ARROYO VERDE

CITY OF PLACENTIA

This design reimagines the park as an immersive, dynamic outdoor environment centered around play, exploration, and community connection, anchored by an entirely re-envisioned playground experience.

At the heart of the project is a new adventure-driven play environment featuring zip lines that introduce movement, speed, and excitement, alongside sculptural boulder elements that invite climbing, discovery, and physical challenge. These features are carefully integrated to support active play, build confidence, and encourage social interaction for children of all ages, while also creating engaging destinations for families and caregivers. The broader landscape design enhances circulation, visibility, and comfort, weaving together shaded gathering areas, intuitive pathways, and flexible open spaces that support both everyday use and community events.

Through thoughtful design and layered programming, the renewed Parque Del Arroyo Verde is envisioned as a vibrant community hub that celebrates outdoor recreation, sparks imagination, and strengthens neighborhood identity—creating a destination that is equally inspiring, inclusive, and enduring.

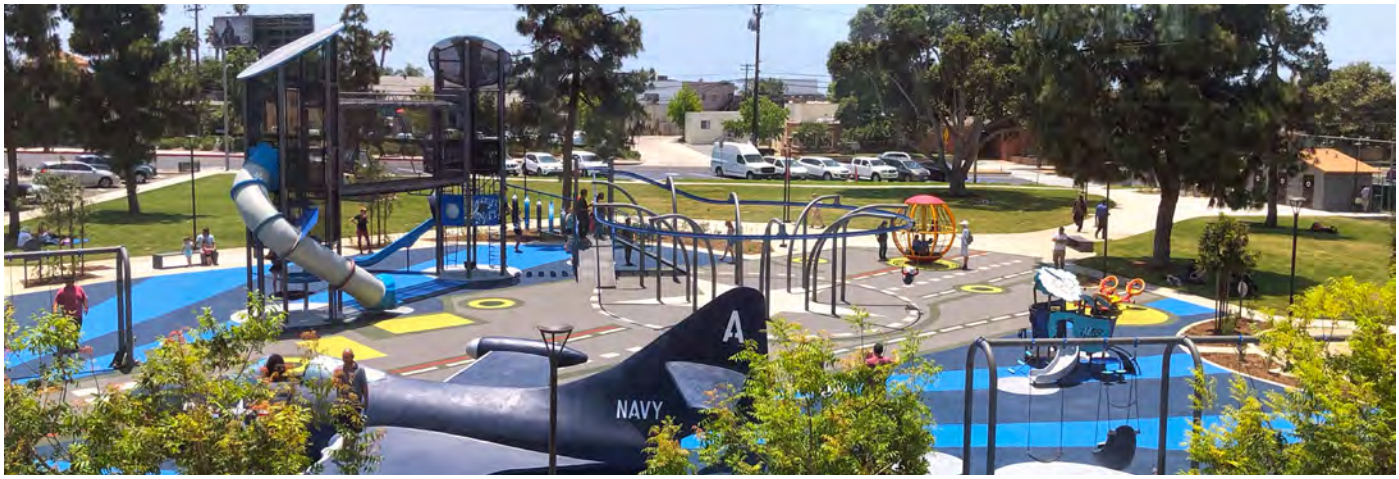
Start Date: June 2019
Date of completion: March 2024
Cost of Design: $138,700



PRIMROSE PARK

CITY OF TEMPLE CITY

Primrose Park is envisioned as a new recreational community park for this central section of the city. This park will be the first park installed within the city in over 50 years and was granted funded by Proposition 68. The vision of this new park is a vibrant activity space that would include: a playground, community space for fitness and wellness activities, a walking exercise loop, and new parking lot. The park is enclosed by a boundary fence utilizing decorative metal fence types of pickets within the site and along the alley with screening panels along Primrose Avenue. Just over the fence within the park will be a landscape buffer of planting with an art piece on a pedestal with lighting as a focal point at the corner between the park and parking lot to lead the eye into the site. A walking exercise loop with rubber surfacing and wayfinding lighting will encircle the whole park with two entries, a main gateway at the center of the site and a secondary gateway along Primrose Avenue, both to be locked at dusk. The play equipment layout has dedicated areas suited for 2-to-5-year old's and 5-to-12-year old's which also incorporates a custom flower shaped shade structure within the main piece of equipment. The playground with the theme and layout inspired by flowers taking elements of the park's namesake Primroses and Camelias as depicted within the City Seal and logo, also taking elements of the color palette to be used throughout the park.

LIONS PARK

CITY OF COSTA MESA

The City of Costa Mesa wanted to renovate their existing park and playground south of their new Donald Dungan Library. The directive for Lions Park was to remove and replace the restroom building and preserve the mature trees as well as install a new playground and retain a vintage fighter jet play structure in place. The program for users would be for ages 2 to 5 years and 5- to 12-year-old children including universal access. The programming of the play elements and surfacing of the playground design was inspired and driven by the jet fighter and an overall aviation theme. The site was zoned with the 2- to 5-year-olds to the west with swings with accessible seating for all, springers and small playhouse within rubber surfacing and a planter separation to a sand lot with sandcastle, table, and digger within as added play elements for toddlers. The 5- to 12-year-old area utilizes the renovated jet plane and a 2 towered play structure with several climb and interactive elements. The aircraft carrier rubberized surfacing pattern in between the structure and jet lent the deck of the aircraft carrier to be utilized as a runway for a zipline feature that allows the users to imagine flying over the deck. Additional program elements are swings and accessible seesaw and round-a-bout for all completing the playground. The mature tree canopies allowed families to have instant shade provided while their children engaged the site.

ORGANIZATIONAL CHART

Our creative designers have the background and expertise to deliver outstanding landscape architecture services for your city's project. The DVDC key team members are experienced and talented professionals and they will be supported by a team of licensed landscape architects, several very capable designers, sub consultants, and support staff.

Our design approach, from design development through construction document development, includes strong quality control techniques as well as several quality control measures. For example, our team will have a senior staff landscape architect assigned to specifically provide quality control oversight. This experience landscape architect will be involved in regular in-house design review of project drawings, specifications and budget estimate. He will provide input, and advice to the project administrator. This effort, together with our other quality control measures, will focus on providing the city with a design which is accurate and constructable.

Delivering projects within our client's expectations, budgets and time frame is our top priority. We will establish milestones for deliverables and set precise schedules for meetings and reviews. Our senior management will review all submittals prior to issuance. We will provide recommendations based upon experience and expertise for the betterment of any project assigned to DVDC. These same senior DVDC professionals will remain the primary contact for the City throughout the project.

DVDCreative looks forward to a long relationship with your city. We are committed to delivering high quality services, designs, reports, documents, and support to the city.

ERIC STERLING, PLA
PRINCIPAL-IN-CHARGE

As Principal-in-Charge at DVDC, Eric Sterling brings more than 27 years of experience as a landscape architect, with a portfolio that includes public parks, streetscapes, school campuses, and citywide design guidelines. His work includes numerous award-winning projects for Disney parks and reflects a keen attention to detail, particularly in playground design where he emphasizes ADA accessibility, durable materials, and modern construction practices. Eric leads the design development process from concept through construction documentation, ensuring quality control, budget and schedule adherence, and strong coordination across all disciplines. He is a skilled communicator who works closely with clients, architects, engineers, and design teams to deliver thoughtful, timely, and cohesive results. His involvement spans technical guidance, mentorship, construction oversight, plan check review, and contractor coordination—ensuring the final built environment reflects the original design intent. Eric's leadership and hands-on approach continue to be integral to the success of our work and the standards we uphold at DVDC.

GARY VASQUEZ, PLA
DIRECTOR OF DESIGN

With over 30 years of experience, Mr. Vasquez is an award-winning senior design leader known for delivering innovative, multi-faceted projects across California. As a key member of the DVDC team, he brings creative design solutions to every challenge, consistently contributing to some of our most successful and highly acclaimed park projects. Mr. Vasquez's ability to translate public input into thoughtful design is a cornerstone of his work—he plays a central role in DVDC's community outreach efforts, ensuring that local voices are meaningfully reflected in every master plan. His deep expertise spans concept development, project planning, construction detailing, planting, and irrigation design, all of which come together in projects that are both visually compelling and technically sound. His talent, leadership, and commitment to community-focused design continue to make him an essential part of DVDC's success.

CLAYTON FRANKLIN, PLA
SENIOR LANDSCAPE ARCHITECT

With over 17 years of professional experience, Clayton is a seasoned landscape architect known for blending artistic vision with practical execution. His career spans all phases of the design process—from Concept Design and Schematic Design to Design Development and Construction Documentation—demonstrating a commitment to holistic, detail-oriented project delivery. Clayton most recently spent nearly five years on contract with Walt Disney Imagineering, where he played a key role in major projects at globally renowned destinations including the Disney Anaheim Resort, Walt Disney World, Disneyland Paris, and Tokyo Disneyland. These experiences deepened his expertise in immersive thematic design and placemaking, as well as his ability to create outdoor spaces that captivate, inspire, and endure. Clayton's skillset encompasses hand drawing, advanced detail drafting, constructability methodologies, planting and irrigation design, complemented by his strong creative problem-solving skills. He is also valued for his thoughtful communication and collaborative spirit, consistently ensures the seamless realization of design concepts into functional, imaginative landscapes.

SHAUN JOHNSON, PLA
SENIOR LANDSCAPE ARCHITECT

Shaun is a seasoned design professional with over 17 years of experience transforming imaginative concepts into immersive built environments. His career has spanned a wide range of projects, from intricately themed entertainment destinations and world-class resort properties and large-scale immersive parks, each shaped by a commitment to innovation, collaboration, and environmental stewardship.
With a deep-rooted passion for themed design, Shaun brings a unique blend of creativity and technical acumen to every project. He thrives in cross-disciplinary teams where storytelling, architecture, landscape, and guest experience converge. His background enables him to navigate the complexities of planning and delivering highly detailed projects that captivate guests while remaining operationally and environmentally sustainable. Shaun leverages advanced technologies to drive both creative exploration and technical precision throughout all phases of design and construction. His fluency in these tools has establish new workflows and standards, enhancing design clarity and interdisciplinary coordination.

LUIS PEDRAZA, PLA
LANDSCAPE ARCHITECT

Luis Pedraza Cardozo is a creative and detail-oriented landscape architect with a strong foundation in both design and visual communication. With over a decade of experience, Luis brings a refined graphic sensibility to every project, seamlessly blending conceptual vision with technical precision. His work spans a variety of public projects, where he has contributed to park planning, urban open spaces, and community-driven landscapes. Luis is particularly skilled at developing compelling visual narratives through illustrative renderings and diagrams that communicate design intent with clarity and impact. He is passionate about creating equitable, inclusive spaces—often focusing on under-resourced communities—and brings a thoughtful, collaborative approach to every phase of the design process.

BRYANT AVALOS
STUDIO DIRECTOR

Bryant Avalos serves as Studio Director at DVDCreative, overseeing nearly all projects within the studio and leading a talented team of landscape designers. With extensive experience in design development, construction documentation, and irrigation design, Bryant brings a sharp eye for detail and a strong passion for creating beautiful, functional outdoor spaces. He plays a critical role in guiding projects from concept through completion, working closely with clients to translate their visions into compelling, practical designs. Proficient in the latest design software and visualization techniques, Bryant ensures that plans are precise and clearly communicate design intent. His technical expertise shines in preparing thorough construction documents and irrigation plans that promote environmental responsibility and water efficiency. By seamlessly blending artistic creativity with technical rigor, Bryant's leadership is essential to maintaining the firm's commitment to quality, sustainability, and functionality across every project.

AVERY STECKBAUER
PROJECT DESIGNER

Avery Steckbauer is a multidisciplinary landscape designer with a strong foundation in landscape architecture, urban design, and spatial storytelling. With experience spanning conceptual design, master planning, and construction documentation, Avery brings a thoughtful balance of creative vision and technical precision to her work. She is highly skilled in developing clear and compelling visual narratives through diagrams, renderings, and 2D/3D representations that communicate design intent across all project phases. Her background includes working on complex, large-scale environments as well as detailed, human-centered spaces, giving her a versatile and adaptive design approach. Avery is particularly interested in how landscape systems can shape meaningful, functional experiences, and she is driven to create spaces that are both visually engaging and socially impactful. Collaborative by nature, she values interdisciplinary teamwork and approaches each project with curiosity, clarity, and a strong sense of purpose.

PE, CA, #47886

RELEVANT EXPERIENCE

Golden Lantern and Blue Lantern | Dana Point, CA: Project Manager. The scope of work included final plan design for replacement of non-ADA compliant sidewalk paths. Final design included replacement of sidewalk paths, residential driveways, and curb and gutter.

Lilac Avenue and Rialto Avenue Improvements | Rialto, CA: Project Manager. Mr. Stuetzel served as Project Manager. WLG prepared off-site street improvements adjacent to Bud Bender Sports Park. Work included curb and gutter replacement, new sidewalks, localized pavement replacement, and grind-and-overlay of existing pavement to improve public access.

Euclid Avenue, Merrill Ave to Eucalyptus Ave | Ontario, CA: Project Manager. WLG prepared street plans for the Euclid Avenue neighborhood edge Paseo parkway improvements. The project design included meandering walkways, landscape mounding, and stormwater capture and treatment through rock creek drainage swales, sub-drain and dry well infiltration piping. The final plan designs were approved by the City of Ontario and Caltrans District 8 for construction permit approvals.

Merrill Commerce Off-Site | Ontario, CA: QA/QC Manager. WLG completed off-site engineering for the 100-acre Merrill Commerce Center, including new public streets, traffic signals, and street lighting. The project also involved regional storm drains, sewer lines, and steel water transmission lines. Hydrology and hydraulic reports were prepared for storm drain inlets. Final plans were approved by the City of Ontario and Chino.

LGC Geotechnical, Inc.

LGC Geotechnical, Inc. is a Southern California based geotechnical consulting firm with its office located in San Clemente, California. LGC Geotechnical focuses on providing professional geotechnical services throughout Orange County. We provide quality, full service geotechnical services to clients, which include public agencies, local Cities, residential and commercial developers, architects, insurance companies, utility companies, and homebuilders. The staff at LGC Geotechnical consists of highly educated and licensed professionals including registered geotechnical engineers (GE) and certified engineering geologists (CEG). Together they combine their technical knowledge and wide-ranging field experience to provide effective geotechnical engineering solutions to complex geologic problems.

UNDERSTANDING & APPROACH

The City of Cypress is proactively seeking to replace and modernize aging playground infrastructure at two vital neighborhood hubs: Veterans Park (4554 Avenida Granada) and Maple Grove North Park (6221 Orangewood Avenue). The existing playground equipment has served the community well, but after 15 years, it has reached the end of its useful service life.

The core objective for DVDCreative (DVDC) is to design two exciting, inclusive, and accessible playground environments that seamlessly integrate shade into the playgrounds. With hundreds of playgrounds under our belt, our team is intimately familiar with every major playground manufacturer and regularly visits their factories and design centers. We are well qualified to assist the city in vetting new manufacturers or working directly with a preferred vendor.

1. SITE CONSTRAINTS, MAPPING, & SAFETY COMPLIANCE

DVDC and WestLAND Group (WLG) will focus heavily on footprint optimization to maximize play value and density within the existing playground footprints.

- Veterans Park Layout: Tucked within a mature residential neighborhood, the design must respect the existing setback dynamics, mature tree canopies, and pedestrian approach paths. The existing 5,000-square-foot playground features 2-5 and 5-12 age group structures as well as swings. Our Landscape Architects are experts in accessibility and will ensure we craft a play experience that is unique and inclusive.
- Maple Grove North Park Layout: The existing playground is centrally situated adjacent to a shade structure and features a single 5-12 structure and swings in a smaller 2,900-square-foot rubberized playground. Mathematically, the current footprint is restricted under ASTM safety guidelines to house separate age groups alongside traditional swings. To safely provide distinct structures for both the 2-5 and 5-12 age groups, the playground footprint will need to expand to approximately 4,500 square feet. To maximize user safety and separate the play zones, our team will introduce a concrete walkway to divide the two age-specific areas. This expansion and layout modification will be evaluated strategically to ensure it fits perfectly within the current proposed budget.

2. INCLUSIVE PLAY & SHADE

The final playground program will be directly refined through community engagement, but our foundational design language will prioritize universal design principles:

- Age-Separated Play: Clear, distinct zones separating toddler (2-5 years) play from older children (5-12 years) to ensure safety and age-appropriate physical challenge.
- Accessibility: Going beyond basic regulatory compliance by providing significantly greater access than parallel play. We ensure our designs are on the cutting edge—maximizing play value, offering multi-generational play, and actively engaging parents and guardians.
- Shade: Incorporating integrated shade sails to maximize overhead sun protection. Our team will study robust options for integrated shade and standalone cantilever or integrated shade structures over high-traffic seating to dramatically extend year-round usability.

3. SITE FURNISHINGS & ACCESSIBILITY ASSESSMENT

A playground does not exist in a vacuum; its success relies heavily on the

surrounding amenities. Our team will examine adjacent park amenities and make targeted recommendations to comply with State mandates while ensuring top-level functionality, durability, and aesthetics are met.

- Site Furnishings, if needed: We will specify a durable, vandal-resistant palette of matching site furnishings, including heavy-duty benches, accessible picnic tables, and compliant trash and recycling receptacles.
- Accessibility Limits: DVDC will study and document site accessibility, parking, and paths of travel. Dedicated topographic survey and civil design/ engineering to bring these surrounding parking and pathway areas up to code are strictly excluded from our proposed scope of services.

Project Management Protocols (Integrated Progress Workflows)

To ensure the City of Cypress remains fully informed, engaged, and aligned throughout the lifetime of the contract, DVDC will execute the following routine coordination protocols:

- Monthly Schedule Updates: Deliver updated, critical-path project milestone schedule tracking to City staff at the conclusion of every month.
- Twice-Monthly Progress Meetings: Facilitate twice-monthly progress check-in meetings with City staff to review design evolution, track action items, and maintain project momentum.

SCOPE OF SERVICES

TASK 1 – PROJECT INITIATION AND SITE ASSESSMENT

The design team led by DVDC will prepare initial site assessments including topographic survey. At the project initiation meeting we will confirm project goals, establish the project schedule, communication protocols, and strategize how to effectively engage the community. As we dig deeper, we'll collect as-built plans and coordinate with your maintenance crew to understand the any affected irrigation at Maple Grove North. To ensure we have all the answers for the public, we prefer to have our reports in hand before the first outreach meeting.

- Kick-off Meeting: Syncing goals, establishing the schedule, and formatting communication protocols to ensure a smooth, transparent partnership.
- Data-Driven Design: Gathering targeted topographic surveys, as-builts, and available record plans for a "no surprises" design approach.

TASK 2 – COMMUNITY ENGAGEMENT AND CONCEPTUAL DESIGN

Our team are experts in community engagement, having provided facilitation for over a dozen municipal outreach meetings already in 2026. In the past five months alone, we have successfully led four public outreach meetings for the City of Norwalk! We have also recently anchored highly successful public engagement efforts in the Cities of Baldwin Park, Lawndale, Laguna Hills, and Lake Forest.

To maximize community participation and capture the distinct neighborhood dynamics of both Veterans Park and Maple Grove North Park, our team recommends a dedicated, separate outreach track for each location rather than a combined approach. For each park, we will host one outreach meetings (two community workshops total).

- One-Meeting Initial Strategy (Per Park): Ensures comprehensive community coverage, convenience, and maximum geographic feedback.
- In-Person Design Charrettes: Workshops at Veterans Park and Maple Grove North Park will feature a localized site walk to identify immediate assets and challenges. We'll host a custom design charrette, inviting residents to be "landscape architects for a day" to brainstorm equipment preferences, amenities, and potential themes.

To fully support these interactive public sessions, our team will provide:

- Visual Exhibits: Large-scale, high-impact graphics and project boards for

tactile, in-person review.

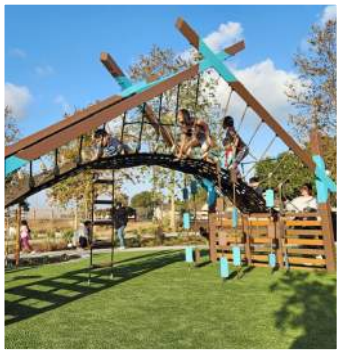
- Conceptual Plans: 2D colored illustrative plans depicting three (3) distinct options generated across at least two (2) different premier playground equipment manufacturers to ensure layout diversity and procurement leverage. Character imagery will represent proposed multi-generational amenities and shade structures.
- Project Story Map: A dedicated, custom ArcGIS StoryMaps website (accessible via public-facing QR codes) featuring project milestones, active schedules, available reports, project summary, and conceptual plans.
  - Proven Track Record: We currently maintain live project StoryMaps websites for multiple active regional commissions, including Holifield Park in Norwalk and Cavanaugh Park in Lake Forest.
- Grant Support Graphics: Conceptual plan exhibits will naturally include a strategic phasing plan and, if needed, grant-specific diagrams and quantity take-offs to seamlessly assist the City in pursuing future State and local funding grants.
- Opinion of Probable Construction Cost: A preliminary financial model will be included with the concepts, and we will work hand-in-hand with you and your team to strategize a clear, budget-conscious path forward.
- Leadership Approvals: The ultimate concept plans will be formally presented to City staff, the Recreation and Community Services Commission, and to the City Council for official master approval.

TASK 3 – FINAL DESIGN AND CONSTRUCTION DOCUMENTS

WestLAND Group (WLG) will expertly manage topographic surveying and lead Civil Engineering tasks including grading for Maple Grove North and surface erosion control for both parks. The approved community-selected concept plan will serve as the exact basis of design for the Construction Documents. Plans will be drafted in AutoCAD using City-provided title blocks on 24x36 or 30x42 sheets, generally prepared at 10 or 20-scale. All plans will be submitted in a seamless, high-resolution PDF package format. Reimbursables will cover essential printing, mounting, and delivery costs.

Construction Documents will be submitted as completely separate, independent packages for each park to allow for distinct municipal tracking. To guarantee rigorous quality control, plans will be submitted at two clear check milestones: 90%, and Final.

- Specifications Integration: Specifications will be tightly formatted to the City of Cypress Brown Book specifications and the Standard Specifications for Public Works Construction ("Greenbook"). The 90% and Final specification packages will include full special provisions and complete payment item descriptions.
- Opinion of Probable Construction Cost: All submittals (90% and Final) will include updated opinions of probable construction costs based on current market trends, active vendor pricing, and our data from ongoing Southern California park projects. We will provide a dedicated cost-savings analysis for Owner Furnished-Contract Installed (OFCI) components and evaluate whether these high-ticket items can be procured directly via public cooperative agreements such as Sourcewell.
- Renderings: The DVDC staff will provide high-fidelity 3D color renderings, and photo-simulations of the final proposed playground layouts.
- Agency Submittals & Plan Check: Final Construction Documents will undergo two to three rounds of formal plan check correction submittals to the Building Department to guarantee compliance with the California Building Code (CBC). Agency submittal fees will be paid directly by the City. Upon approval,



we will assemble the complete Bid Package. The City will prepare standard front-end specifications (contract and bidder requirements), while DVDC prepares the official technical Bid Form and provides expert input on the construction schedule parameters.

- Stand alone shade structure will require deferred submittals for engineered footings unless purchased directly by the city.

PROJECT ASSUMPTIONS & EXCLUSIONS

To ensure a targeted and highly competitive professional fee structure, DVDC has established the following scope boundaries:

- Bidding Support & Construction Phase Services: In strict alignment with the RFQ guidelines, bidding support and construction period services are excluded from our proposed scope of services. These services can be provided later under a separate contract or mutually agreed amendment.
- Environmental & Water Quality Engineering: Subsurface Water Quality management plans (WQMP/SWPPP) and formal environmental documentation for a mitigated negative declaration are excluded from the proposed base scope (these are specialized services our team can readily provide for an additional fee if needed).
- Electrical Engineering: The project scope assumes the use of existing park utilities and ambient lighting. No new electrical engineering, sports lighting, or dedicated power circuitry design is included.
- Boundary Surveying: Topographic surveying is strictly restricted to the physical surface features and elevations impacting the playground areas. Property boundary adjustments, legal tract descriptions, easements, or legal right-of-way boundary surveying are excluded.

CREATIVE, ALL-INCLUSIVE &
MULTI-GENERATIONAL PLAYGROUNDS

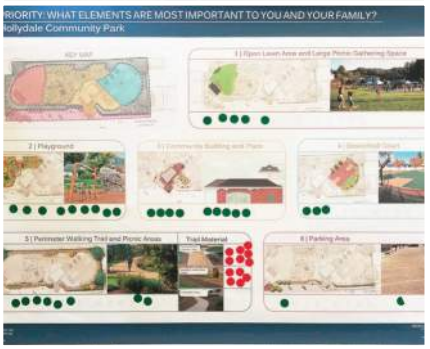
DVDCreative creates fantastic, wonder-filled, memorable play lots. Our firm has been widely recognized for delivering outstanding public park play environments that have garnered praise and accolades from local communities.

- Our whale fossil interpretive play space in Laguna Hills has been featured online blogs, local and regional newspapers and national magazines.
- The wagon train and pioneer play environment in Pioneer Park, Tustin, won several regional and state-wide awards, and was selected for a recognition by the National Recreation and Park Association.
- Our Stanton Train Park, Central Park, is featured in the CPRS District Ten Hall of Fame.
- Admiral Kidd Park, an award-winning play space, features kid size replicas of the four boats named for the Admiral. This Long Beach park was a featured stop on the state park operations annual tour of premiere park facilities.

Our play space design philosophy is built on the perspective of a kids-eye-view. Adventure, surprise, familiar and challenging settings, and themes, memorable spaces. Kids may not know the proper name of the park, but they know that there is a special play lot at airplane park, rocketship park, baseball coach park, train park, and tree house park. The goal is to create an immersive environment that will engage guests and create lasting memories.

We recognized the importance of providing for multi-generational intermingling, on the play lot, as caregivers overseeing the play space and for adults a calm, shaded comfortable surveillance spot to enjoy the space at the park. Our play area design reputation has lead to collaborations with all-access advocates and organizations. We have designed several park play environments as the lead landscape architect for Shane's Inspiration.

This work and design workshops with emotionally and physically challenged stakeholder advocates has informed our design perspective on inclusive, accessible, and caregiver insights that influences our play lot design. One of DVDC's most recent Shane's Inspiration play lots is located in El Cariso Park, an LA County Park. At this park the interactive multi-story "equipment" is the center piece of an elaborate all access play environment. Access for all is provided within the terraced natural slope of the existing park terrain. There is plenty of seating for caregivers, play pieces that encourage multi-generational, multi-fun seeker collaborative play opportunities. This is a special park, well worth a trip to this Sylmar Community Park.



COMMUNITY OUTREACH

At DVDCreative (DVDC), every community-inspired design program begins with a strong and inclusive public engagement process. We believe the best parks come from the people who use them, which is why our approach starts with a participatory community brainstorming session. This initial meeting is designed to be a creative and collaborative experience where community members can share their visions and values for the future of their park. Prior to this session, our team will conduct thorough site visits and review all relevant documents and plans. We'll also coordinate closely with city staff to gather preliminary "seed" ideas and insights. DVDC will assist in preparing outreach materials—both written and visual—to help get the word out and invite the community to be a part of the park's design.

The first workshop will open with a site tour, allowing participants to connect with the space firsthand. We'll then introduce concepts and themes—those "seed" ideas—to prompt discussion and ignite inspiration. Our goal is to guide a thoughtful and open-ended conversation, encouraging participants to explore possibilities around recreation, family-friendly features, and meaningful enhancements that make the park more vibrant and inclusive.

From there, the DVDC team will take what we've heard and develop a series of initial concept plans that synthesize the community's input. These concepts will be reviewed with city staff in a focused idea refinement meeting. Using that feedback, we'll fine-tune the strongest ideas into conceptual plans for the community to review during a second, more structured workshop. At this stage, participants will have the opportunity to provide input on the draft concepts, helping shape a vision that truly reflects their priorities. Community consensus will guide us in finalizing the program elements for the draft master plan.

DVDC will then prepare a complete draft master plan and accompanying design report, which will be shared with the broader public and reviewed by the Commission or City Council. With leadership direction, we will finalize the master plan, capturing a clear and visually compelling strategy for the site's future development. The final report will also document the entire outreach process, highlight the community-driven program elements, and include a preliminary construction budget to guide implementation.

At DVDCreative, we know that authentic community workshops are the most effective way to understand and respond to the public's aspirations. When residents are invited to shape their public spaces, it creates a true sense of ownership, leading to parks that are not only well-used but also well-loved and cared for over time.

GRAPHIC & RENDERINGS

WHAT IF A VISUALIZATION OF AN IDEA COULD BRING CLARITY TO THE DESIGN INTENT? COULD ALLOW FOR ENLIGHTENED CONSIDERATION AND UNDERSTANDING?

The DVDCreative studio has a robust graphic design component, and skilled professionals adept at delivering graphics and images, including immersive 3-dimensional fly throughs that communicate our design ideas before moving ahead with the project's engineering.

Communication is the key to understanding. The photo-realistic renderings, computer-generated 3D models, and images of the project style, detailing, form, and function provide a clear understanding of the project concepts. Our creative and innovative designs are beautifully rendered for review and consideration of civic leaders, our collaborative partners, and the general public. Our visualizations have resulted in great feedback and design considerations, great "Now I Get It" moments, and enthusiastic approvals of concepts, ideas, and projects.

The DVDC team has proven capabilities for the graphic presentation of the ideas and the layout for review of the park's conceptual layout. We will prepare artist renderings, 3D fly through videos and photo realistic pictures to describe the many elements we plan to include in this development. We will ready all our renderings for social media posting and for use in city communications.

SCOPE OF SERVICES

TASK 1 – PROJECT INITIALIZATION & SITE ASSESSMENT

1.01 Initial Kickoff Meeting
- a. Meet with City project staff to review project criteria, site constraints, and program objectives
- b. Review operational procedures and finalize the baseline design schedule

1.02 Project Design Schedule
- a. Provide a baseline critical-path design schedule
- b. Update the schedule monthly to track submittals, meetings, and project milestones

1.03 Data Gathering and Analysis
- a. Collect and review available City-furnished record data, park maps, and site plans
- b. Conduct manual field reconnaissance to identify immediate site opportunities, perimeter setbacks, pedestrian connections, and physical constraints
- c. Perform an on-site field inventory to locate and document surface elements directly impacting the playground design

1.04 Project Management & Quality Control
- a. Schedule and lead twice-monthly progress and coordination meetings with City staff
- b. Execute strict Quality Assurance and Quality Control (QA/QC) measures. All notes, drawings, and design calculations will be reviewed by a senior Landscape Architect independent of the project design team prior to each formal submittal milestone (90%, and Final)
- c. Perform formal constructability and operational reviews at each submittal stage
- d. Notify the City immediately of any out-of-scope requests and obtain written approval prior to proceeding

1.05 Preliminary Surveys, Investigations, and Reports
- a. Topographic Survey: Coordinate with WestLAND Group (WLG) to perform a targeted site topographic survey mapping elevations and hardscape features within the playground areas

MEETINGS & DELIVERABLES

Kickoff Meeting, Virtual (1)
Twice-monthly Progress Meetings, Virtual (As Required)
Baseline Project Schedule & Monthly Updates
Topographic Site Survey

TASK 2 – COMMUNITY OUTREACH AND CONCEPT DEVELOPMENT

2.01 Initial Community Visioning Workshops (2 Meetings Total – 1 Per Park)
- a. Host one (1) in-person community design workshop at Veterans Park and one (1) at Maple Grove North Park
- b. Lead residents and children through a localized site walk to identify immediate park assets and spatial challenges
- c. Facilitate an interactive design charrette, inviting participants to brainstorm equipment styles, desired play amenities, and potential themes
- d. Document all community input, annotate site maps with neighborhood insights, and prepare a public preference summary

2.02 Project Story Mapping & Digital Engagement
- a. Build, publish, and maintain a dedicated, custom project website platform to serve as the central digital hub for public information
- b. Populate the site with project descriptions, imagery, schedules, arborist summaries, and concept drawings
- c. Provide public QR codes and links for City distribution. Update the website content at each major project milestone

2.03 Preliminary Concept Plan Generation (3 Concepts Per Park)
- a. Develop a minimum of three (3) distinct conceptual playground layouts for each park
- b. Design layouts across at least two

(2) different premier playground equipment manufacturers to ensure design variety and procurement leverage

c. Integrate required program elements into the concepts, including age-separated play structures (2–5 and 5–12 years), integrated shade sails, standalone canopies, and matching site furnishings (benches and trash receptacles)
d. Incorporate site-specific constraints into the concepts:
   - Veterans Park: Footprint optimization utilizing the existing 5,000-square-foot playground layout while protecting mature tree canopies
   - Maple Grove North Park: Optimize the existing playground to provide updated amenities based on community outreach
e. Deliver 2D colored illustrative plan view graphics and an initial opinion of probable construction costs for each concept choice

2.04 Preferred Master Plan Refinement
a. Review the schematic layouts and public workshop consensus data with City staff to secure explicit direction
b. Refine the chosen concept into a single preferred Master Plan for each park location
c. Update and refine the opinions of probable construction costs

2.05 Leadership Approvals & Commission Presentations
a. Attend, present outreach findings, and assist the City with formal presentations to secure master concept approval from:
   - The Recreation and Community Services Commission
   - The Cypress City Council

MEETINGS & DELIVERABLES

Initial Community Visioning Workshops (2 Total – 1 Per Park)
Project Public Website & QR Access Code
Community Outreach Presentation Exhibits
Preliminary Concept Plans (3 Distinct Options Per Park)
Final approved Master Plan (1 Per Park)
Preliminary Opinions of Probable Construction Cost

TASK 3 – FINAL DESIGN AND CONSTRUCTION DOCUMENTS

3.01 Design Development Style Guide & Resource Log
a. Provide comprehensive descriptions for equipment color palettes, text, graphics, materials, and specialized manufacturer construction requirements
b. Compile product catalog cuts, manufacturer literature, and a written narrative describing components, finishes, and custom features
c. Provide a public purchasing resource log (detailing cooperative purchasing avenues). Revise and update this log at the 90% and Final submittals

3.02 3D Photorealistic Renderings & Simulations
a. Set up precision 3D line-work models based on approved concepts
b. Build static 3D models including playground topography, retaining low walls, shade sails, play equipment structures, surrounding tree canopies, and immediate park features
c. Deliver high-resolution, photorealistic 3D color perspective renderings and photo-simulations

3.03 Preparation of Separate Construction Document Packages
a. Prepare completely separate, independent packages of construction drawings for each park to facilitate clean, independent municipal tracking
b. Drawings will be drafted in AutoCAD on City-provided 24x36 or 30x42 sheets (at 10 or 20-scale), delivered as seamless, high-resolution PDF packages covering:
   - Demolition Plans
   - Playground Site Construction, Layout, and Detail Plans
   - Turf repair

3.04 Cost Estimating & Procurement Analysis
a. Deliver a refined Engineer's Estimate of Probable Construction Costs alongside each formal design submittal. Costs will be indexed to current market trends and escalated to the mid-point of construction
b. Provide a formal, dedicated analysis

evaluating cost-savings achievable by designating equipment as Owner Furnished-Contract Installed (OFCI)

c. Evaluate and provide a procurement path utilizing national public cooperative purchasing agreements, including Sourcewell and BuyBoard

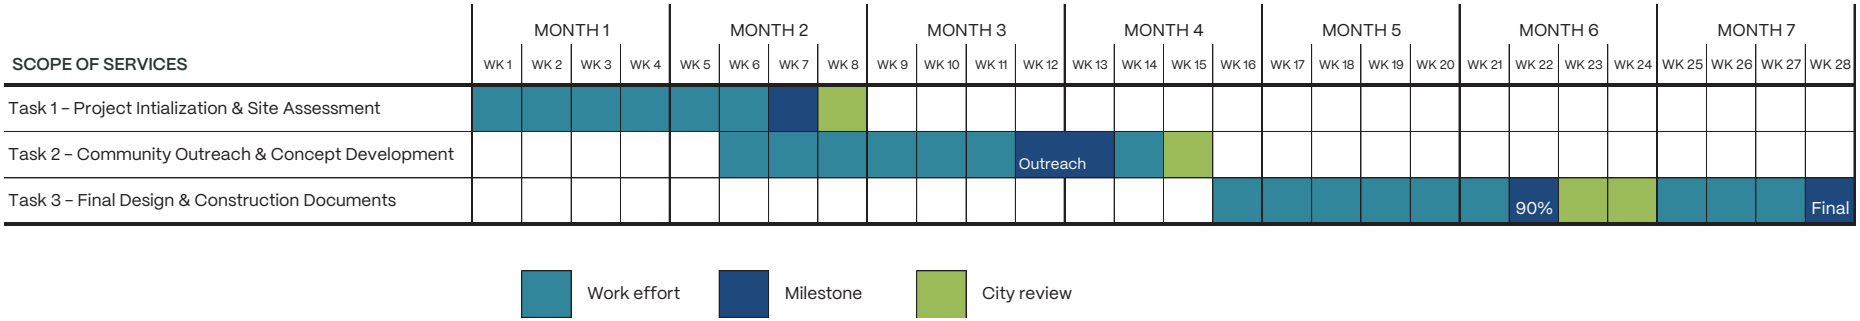
3.05 Milestones Submittals & Plan Check

a. Submit separate packages for each park at two (2) distinct checkpoints: 90%, and Final (100% PS&E)
b. Coordinate with the City to undergo formal internal Plan Check correction submittals through the Public Works and the Planning & Building Departments to guarantee compliance with the California Building Code (CBC)
c. Review, address, and integrate one consolidated round of City/Plan Check comments at each submittal milestone
d. Upon final approval, assemble the technical Bid Form, project schedule metrics, and technical specifications package to assist the City in finalizing the official public Bid Package

MEETINGS & DELIVERABLES

Design Development Style Guide & Cooperative Resource Log
Photorealistic 3D Renderings & Photo-Simulations (Static Views)
90% Construction Documents, Plan Check Submittals, & Cost Estimates (Separate Packages Per Park)
100% Final Shelf-Ready PS&E Bid Packages & OFCI Cost-Savings Analysis (Separate Packages Per Park)

TASK 4 – TECHNICAL SPECIFICATIONS

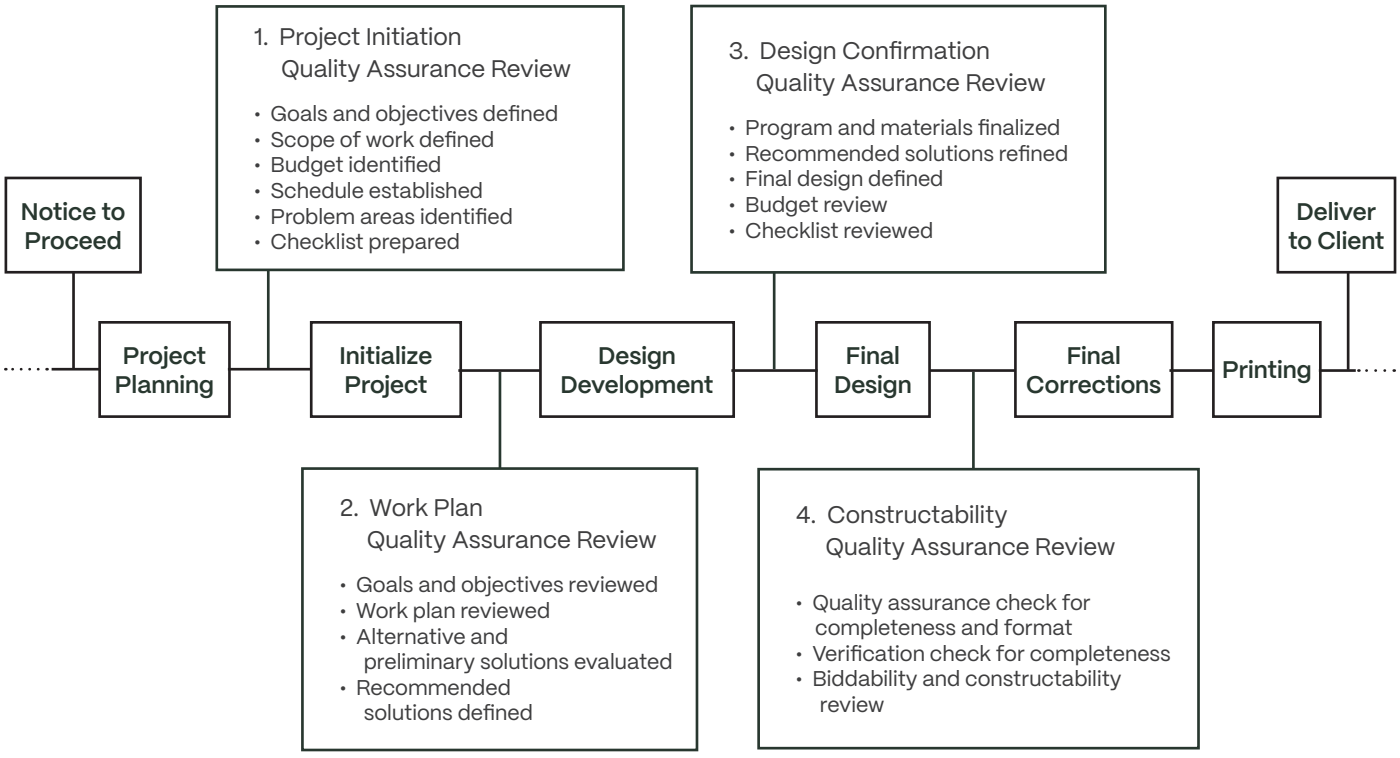


4.01 Technical Specifications

a. Format all specifications to integrate with the City of Cypress Brown Book and the Standard Specifications for Public Works Construction ("Greenbook")
b. Deliver complete Special Provisions and comprehensive payment item descriptions at the 90% and Final milestones

MEETINGS & DELIVERABLES

Technical Specifications
Special Provisions



PROJECT SCHEDULE

QUALITY CONTROL

DVDC has an established quality control and assurance program that we undertake for all our design services, and for this project. The Principal-in-Charge will be responsible for implementation of these Quality Control measures. The primary elements include:

- Verification that required deliverables and documents noted in the Scope of Work are provided.
- A Peer Review will be conducted by our senior professional staff to solicit critical comments and verify correctness.
- Retention of documents with highlighted markings and red-line comments, and verification that required revisions are incorporated into the updated documents.
- Continual assessment and tracking of project schedule and budget against baseline data.
- A complete construction review for constructability and biddability of the complete PS&E package will be assigned to experienced professionals on staff prior to final submittal to our client.

City of BUENA PARK

COMMUNITY SERVICES DEPARTMENT
JIM BOX, DIRECTOR

February 6, 2023

RE: Recommendation in Support of David Volz Design Landscape Architects, Inc.

To Whom It May Concern:

David Volz Design has provided high-quality design and consulting services to the City of Buena Park for many years. They have provided park planning, leadership at public outreach meetings, creative park design, developed construction documents, and construction period services on several park projects.

Two notable projects the City of Buena Park is exceptionally proud of is the Rick Gomez Park and most recently, the Whitaker School Park. The projects include a high level of design and a team of sub-consultants under David Volz Designs' contract. David Volz Design team welcomed community input at outreach gatherings to design creative, interactive play areas and inviting, green spaces.

David Volz Design has always provided the City of Buena Park with high-quality professional service for these projects and many others. I highly recommend David Volz Design to your agency.

Sincerely,

Jim Box
Director of Community Services
City of Buena Park

RE: Recommendation in Support of David Volz Design Landscape Architects, Inc.

To Whom It May Concern:

David Volz Design has provided high quality design and consulting services to the City of Garden Grove for many years. They have provided park planning, provided leadership at public outreach meetings, provided creative park design, developed construction documents and provided construction period services on several park projects.

One notable project is the Woodbury Park Revitalization Project, which includes a high level of design and a team of sub-consultants under David Volz Designs' contract. This project is a Prop 68 grant award that will allow a complete renovation, of an under used park, to be brought back to life for an underserved community. DVD has done an outstanding job of meshing the needs of the community with the design request of the Parks and Rec Commission and staff.

DVD has always provided the City of Garden Grove with high quality professional service for these projects and many others. I highly recommend David Volz Design to your agency.

Sincerely,

John Montanchez

RE: Recommendation in Support of David Volz Design Landscape Architects, Inc.

To Whom It May Concern:

David Volz and his team at David Volz Design have provided superior service to the City of South Gate on a variety of projects to improve our parks over the last twelve years. From Master Planning and Community Outreach to whole park renovations, providing creative, sustainable and usable designs that enhance our community and excite our park goers, David Volz Design has consistently met all expectations.

Please feel free to contact me if you have any specific questions or would like additional information. We have had nothing but the best experiences with DVD and would enthusiastically recommend them to anyone looking for a top-quality landscape design firm for you public project.

Sincerely,

Steve Costley,
Director of Parks & Recreation

RE: Recommendation of David Volz Design Landscape Architects, Inc.

To Whom It May Concern:

David Volz Design has provided high quality design and consulting services to the City of Santa Ana for many years. They have provided park planning, provided leadership at public outreach meetings, provided creative park design, developed construction documents and provided construction period services on several park projects.

Most notably is the recent Santiago Park Gas House Area Development project, of which David and his team have been a part of from the very beginning. They provided concept design, led community outreach efforts, developed contract documents and are now providing construction support. The project will be completed this spring and is an award winner. We are very excited and are appreciative of the great working relationship we had together, and the expertise they brought to the table.

DVD has always provided the City of Santa Ana with high quality professional service for these projects and many others. I highly recommend David Volz Design to your agency.

Mr. Tony An, P.E.
Assistant City Engineer
City of Cypress
Public Works Department
5275 Orange Avenue
Cypress, CA 90630

RE: Proposal for Community Outreach and Design for the Playground Equipment Replacement at Veterans Park and Maple Grove North Park

Dear Mr. An:

MIG, Inc. (MIG), is pleased to submit this proposal for community outreach, playground planning, and landscape architectural design services for the replacement of playground equipment at Veterans Park and Maple Grove North Park in the City of Cypress.

We understand that the City is undertaking this important initiative to replace and modernize aging playground equipment that has reached the end of its useful life while creating engaging, inclusive, and accessible play environments that will serve Cypress families for years to come. The project presents an opportunity to not only replace play structures and surfacing, but also to enhance the overall user experience through integrated shade, improved seating and gathering spaces, upgraded accessibility, and thoughtfully designed site amenities that support year-round enjoyment of both parks.

Equally important, we recognize that community engagement is central to the project's success. The City's vision for this effort extends beyond equipment replacement and seeks to create play environments that reflect community priorities and respond to the unique character and needs of each neighborhood. Our team is particularly excited about this aspect of the project and will employ a collaborative outreach process that meaningfully engages residents, stakeholders, the Recreation and Community Services Commission, and City Council throughout the planning and design process.

MIG has extensive experience leading community-driven park and playground improvement projects throughout California and brings a multidisciplinary team of landscape architects, engagement specialists, cost estimators, and play environment designers uniquely suited for this assignment. Our in-house Play Studio specializes in the creation of innovative, inclusive, and memorable play environments that move beyond standard, catalog-driven playgrounds and instead create distinctive destinations that foster exploration, imagination, physical activity, and social interaction for children of varying ages and abilities.

Our proposed scope includes project initiation and site assessment, community outreach and engagement, development of multiple conceptual alternatives for each park, preparation of high-quality renderings and cost estimates, and completion of separate construction document packages for Veterans Park and Maple Grove North Park. While the projects will be managed under a single coordinated effort for efficiency and consistency, each park will receive its own community-driven design process, preferred concept plan, cost estimate, and final construction documentation.

We also understand the City's desire to move quickly and efficiently, with design commencing in 2026 and Veterans Park advancing into construction on an accelerated schedule while simultaneously positioning Maple Grove North Park for future implementation. Our team has successfully delivered numerous park improvement projects under similar schedules and is well prepared to provide responsive project management, proactive communication, and practical solutions that maintain schedule and budget objectives while delivering high-quality design outcomes.

Thank you for your consideration of our qualifications and proposal. We appreciate the opportunity to partner with the City of Cypress on these important community investments and look forward to creating two exceptional play environments that will enrich the recreational experience of Cypress residents for generations to come.

Sincerely,

Oscar Johnson, PLA, CPRS
Principal-in-Charge
oscarj@migcom.com

Firm Organization, Credentials, Background

About MIG, Inc.

Moore Iacofano Goltsman, Inc. (MIG), improves, adapts, and creates organizations, environments, and tools for human development. We are a community of designers, planners, engineers, scientists, and storytellers who engage people in creative problem-solving and collective action. We believe that the physical and social environment around us has a profound impact on our lives, and this belief shapes the principles that guide our work:

- Communities should plan their own futures.
- Great projects work for everyone.
- Elegant design inspires new thinking.
- All work must be context driven.

MIG is at the forefront of innovation. We are leading local, regional, and national planning and design initiatives to improve accessibility and equity; engage, educate, and empower people through participatory processes; facilitate strategy development for social change; create playful and inclusive communities; reimagine streets and repurpose infrastructure; revitalize cities and restore ecosystems; and promote environmental stewardship by recognizing that the health of the natural and built world is mutually dependent.

For over four decades, MIG has worked with public, private, and nonprofit agencies and their constituents throughout the United States to effectively address any issue on the planning and design spectrum related to parks and recreation—concept to construction; strategic plan to master plan; historic preservation to open space conservation; sustainability to feasibility; and everything in between. Our dedicated staff has the background and experience to scope and implement projects that enable people to actively participate in making decisions that impact their access to and use of parks, open space, and recreation resources.

The depth of our expertise encompasses the full range of assessment, analysis, outreach, design, and planning methods/skills required to help communities create and responsibly manage available resources—providing the right balance in the amount, size, types, and locations of parkland, recreation amenities, and services for each community now and in the future. The breadth of our experience is unparalleled—from regional open space and trails to community and neighborhood parks to recreation centers and youth programs. Our approach is based on a thorough understanding of all factors associated with parks and recreation, from maintenance and operations to site safety and funding; efficiency and accuracy in data gathering and analysis; and creativity and innovation in facility design, problem-solving, and strategic implementation.

Subconsultant Profiles

CONVERSE

The Converse Professional Group, dba Converse Consultants (Converse), is an employee-owned Small, Local, and Minority Business Enterprise founded in 1946 by Caltech Professor Fred Converse. The firm provides geotechnical and environmental consulting services to public agencies and has extensive experience with Southern California parks.

For this project, Converse will perform necessary geotechnical/soils investigations, agronomic soil analyses, and analyses of potential hazardous materials (asbestos survey, etc.), and provide remediation recommendations, if necessary.

ISE

Founded in 2007, ISE Engineers is a full-service structural engineering firm built on the belief that effective design should solve problems while remaining practical and affordable. The company provides structural engineering solutions for a wide range of project types, including commercial, healthcare, education, government, industrial, housing, energy, and modular/off-site construction. With engineering licenses in more than 28 states and offices across the Western United States, ISE supports projects nationwide through innovative, value-driven designs that reduce construction costs while maintaining structural integrity and life safety.

ISE differentiates itself through a collaborative, client-focused approach that emphasizes communication, constructability, efficiency, and quality control. The firm combines experienced principal engineers, project managers, and design engineers with advanced engineering software and established internal standards to deliver consistent, reliable results. By prioritizing responsiveness, coordination, and cost-effective solutions, ISE strives to be a trusted partner throughout the design and construction process, helping clients successfully navigate today's complex building and development challenges.

VCL

Since their establishment in 2004, Visual Concepts Lighting, Inc. (VCL), stands as a leading full-service electrical engineering firm, dedicated to the intricate art of sustainable lighting design. While their capabilities span the entire spectrum of electrical engineering, they have honed their focus and expertise on outdoor lighting, epitomizing a 'fusion of light" that transforms spaces—from high-end residential landscapes to picturesque streetscapes and dynamic municipal ball fields.

VCL's design philosophy is rooted in a seamless journey, guiding clients from lighting concept to construction-ready plans. With a robust foundation of over 30 years of hands-on electrical field experience and a cumulative 45 years of design prowess, they are committed to delivering designs that align with the true intent of their clients. Their approach aims to eliminate costly change orders and deliver successful, efficient, and effective electrical systems.

ISE: Laselle Sports Park site structures and light poles

VCL: Montage Park Lighting

The MIG Team

MIG is proud to present an experienced and highly qualified team to provide professional landscape architecture, environmental, and engineering services for the Veterans Park and Maple Grove North Park projects. Our team members identified in the organizational chart and staffing table have been selected for their strong expertise in their fields of work as well as for their passion for this project. Please refer to our Design Budget, under separate submission, for a detailed breakdown of staff hours by task. Detailed resumes for all proposed key personnel are included starting on page 12.

Project Management

With his meticulous attention to detail and his dedication to longevity, Principal-in-Charge/Senior Landscape Architect **Oscar Johnson, PLA, CPRS**, will allocate adequate resources to this project and assure that contractual requirements are met. Oscar will provide overall project direction, oversight, and quality control.

Project Manager **Holly De La Torre, LEED AP, CPSI**, will oversee the day-to-day work of the MIG Team, making certain the project's design is being developed while pacing the team to remain on schedule and under budget. Holly is a landscape designer with over 18 years of experience, with a special interest in parks that increase recreational value within the communities they serve. She has participated in projects from conceptual design through construction and knows the importance of complete and definitive construction documents and the value of collaboration throughout the design and construction process.

Arnold Cypress Park

MIG prepared the master plan and construction documents for complete redesign of this existing 14.55-acre community park. The park includes a centrally located hub of three lighted softball fields. This park serves as the home field for the local, long-time championship girls' softball league and provides bullpen and batting cage amenities for tournament-level play. A central plaza with a restroom/concession building, large children's play area, and shaded group and family picnic facilities offer convenient support facilities. A practice ballfield is in the southwest corner of the park. Eight pickleball courts, a full basketball court, volleyball court, and exercise equipment area are in the northeast active corner of the park. For flexible use, an open grass area is adjacent to the group picnic structure. Ample parking is provided for 294 cars. A perimeter walk around the park encourages easy access and ADA compliance.

Wishing Tree Park

MIG and the Los Angeles Neighborhood Land Trust (LANLT), in cooperation with the County of Los Angeles, the Los Angeles Conservation Corps, and the community, moved forward in the final design process to realize the development of a new 8.45-acre neighborhood park.

The park's design program incorporates the community's vision for creating a unique recreational, social, safe, and accessible public space that includes play, healthy physical activity, neighborhood connections, energy efficient and sustainable technologies, and educational components. The park also promotes health and well being, and educates the community in regenerative landscape systems and water and energy conservation.

The amenities of the park include: a play area with 2–5- and 5–12-year-old age-appropriate play equipment; concrete plaza; baseball field with bleachers; two futsal courts; a basketball court; open passive turf areas; restroom building with a meeting room; maintenance yard and building; solar security lighting; individual picnic areas; fencing; bollards; benches; picnic tables; barbeques; drinking fountains; shade shelters; arbors; decomposed granite walking/jogging trail; California-friendly planting; and on-site parking.

Hidden Creek Park

Over nearly two decades, MIG partnered with the City of Hillsboro to help transform one of the largest remaining open spaces within the city into what is now Hidden Creek Park. Beginning with a comprehensive master plan for the east and west sides of the site, MIG worked with residents, stakeholders, and City staff to establish a shared vision for a future community park that would support recreation, gathering, nature, and year-round community life.

The planning process included extensive public engagement, including a robust online outreach program during the COVID-19 pandemic that expanded participation through multilingual materials, captioned content, a project website, QR-code access, virtual workshops, and multiple opportunities for community members to stay informed and provide feedback. This input helped shape a vision that balanced sports and recreation, play, community gathering, trails, woodlands, open spaces, and future recreation facilities.

MIG continued its partnership with the City through the design and implementation of Hidden Creek Park East and Hidden Creek Park West, helping bring the community's vision to life through multiple phases of investment and development. Today, the Hidden Creek campus includes a community center, recreation facilities, park amenities, and gathering spaces, with a new aquatic center planned as the next phase of the campus evolution. The Park's popularity and continued growth reflect the strength of a community-driven vision that established a clear framework for future investment, growth, and decision-making.

Martin Luther King Jr. (MLK) Community Park

MIG prepared the Master Plan for the major renovation of Martin Luther King Jr. (MLK) Community Park in East Bakersfield, California. The approximately 15-acre park and community center has been re-imagined with a new community center building hosting many programmed facilities including a large gymnasium with full basketball court, spectator seating and cross courts, locker rooms, restrooms, weight room, multi-use banquet room, health/family resource center, multi-use rooms, technology room, bike repair shop, and events plaza. The park offers an amphitheater, basketball courts, multi-use sports courts, shaded picnic areas, gathering pavilion, community garden, children's play areas, sprayground, water slide and pool complex, a memorial plaza to greet visitors, and ample parking. A second floor will conveniently house the City's recreation department and park rangers' office. The master plan process engaged stakeholders, the community, and neighborhood residents and garnered great input reflected in the final plan.

MIG is currently developing "bridge documents" to direct the master plan intent into 50% construction documents to guide contractor design/build implementation of the proposed park improvements.

Emma Prusch Park

Emma Prusch Farm Park was gifted to the City of San José with the vision of creating and maintaining a rural country atmosphere in the city that promotes and demonstrates historic, contemporary, and culturally relevant agricultural practices. This neighborhood park is unique in the region with a working farm that is co-managed with nonprofits and docents. The park includes community gardens, rare fruit orchards, livestock, a barn, historic buildings, picnic facilities, and a play area (park visitors also get to enjoy the free-ranging peacocks and chickens that make visits extra memorable!). MIG's design for an all-inclusive playground builds on the agricultural history of the site, while providing play experiences for all ages and abilities.

The concept builds on the park's unique character as a working farm and plays with scale in a fun way—for example, there is a giant chicken climbing structure. The hillside has a looping accessible path with a variety of sliding options and shared, shaded seating areas help bridge the existing play area with the new area. The park opened in 2024.

Oscar Johnson, PLA, CPRS

MIG

PRINCIPAL-IN-CHARGE

Oscar Johnson always had a passion for drawing and creating, and he's been fulfilling it as a landscape architect and project manager for almost three decades. Oscar started as a landscape designer at MIG. His steady rise to firm principal is the result of his meticulous attention to detail and dedication to unwavering quality and customer service. From multimillion dollar sports facilities to intimate neighborhood parks, Oscar has designed and managed construction for various public and private projects throughout California. He develops cost-effective construction details and design specifications that can be built to last. He is adept in establishing a camaraderie with clients, colleagues, and contractors to shepherd projects from design to ribbon-cutting. Oscar is proactive in reducing risks and applying new technologies and materials to his designs. He describes himself as "a build-a-better-mousetrap type of person," who takes the Big Picture and fills in the fine lines. While his work has benefited people in many communities, Oscar particularly appreciates providing physical, mental, and emotional stimulation to children with disabilities through his work—facilitating their interaction with nature and with others.

Holly De La Torre, LEED AP, CPSI

PROJECT MANAGER / LANDSCAPE DESIGNER

Holly De La Torre's wide interests in landscape architecture, coupled with the breadth of projects she has worked on for over 18 years with MIG, has led her to be a strong member of the design team. She has participated in projects from conceptual design through construction and knows the importance of complete and definitive construction documents and the value of collaboration through the design and construction process.

Holly's interest in improving the larger environment and quality of life has been demonstrated in her successful design of streetscapes, parkways, campuses, multigenerational parks, sports fields, play environments, and most recently dog parks, where the owner's interaction and comfort are as important as the canine activity design. She has also successfully participated in public outreach, recreation facility assessments, and park and recreation master plans.

Christina Frank, ASLA, CPSI

PLAY SPECIALIST

Christina Frank is an award-winning landscape architectural designer who brings play to life in every space she creates. From parks and streets to schools and museums, her designs spark curiosity, connection, and joy for children and adults alike. Christina was always drawn to children's education and the outdoors, but her career choice was cemented at a Harvard University summer studio program where she first explored all the elements that she incorporates in her work today—people, place, color, aesthetics, and most significantly, how the environment can support or deter behavior.

A visionary designer, Christina curates ideas, images, and stories that inspire innovative play spaces. In addition, her strong communication skills, collaborative leadership, and attention to detail make her a highly effective project manager. As the leader of MIG's Play Studio and a national conference speaker, she is a creative force—championing the power of play, inclusion, and connection in public spaces.

Eric Freeman, PLA

IRRIGATION SPECIALIST

EDUCATION

» BS, Landscape Architecture, California State Polytechnic University, Pomona

REGISTRATIONS

» Licensed Landscape Architect: CA #6245, NV #1054

From the walnut groves and hills of his hometown to the landscapes he's created for over two decades, Eric Freeman has used his imagination to turn ideas into places for people to explore and enjoy. His strong family ties and military service have instilled dedication and discipline, evident in his thoughtful approach to project management and meticulous attention to detail and design quality. His career course was set after reading a description of the landscape architecture profession—combining creativity, connection to the outdoors, and people's experience of place and space. Even with the experience and expertise he has cultivated, Eric is enthusiastic about learning and mastering new skills and approaches. His greatest satisfaction comes from seeing his work come to life as people repeatedly use and engage with his finished product. Regardless of size, site, or situation, he strives to exceed expectations and leave a positive impression.

Nathaniel Riedy, PE

CIVIL ENGINEER

EDUCATION

» BS, Civil Engineering, University of Washington

REGISTRATIONS

» Professional Engineer: TX #126555, CO #0050429, WA #50177, CA #80161, AL #35421

Nathaniel Riedy is a highly skilled and adaptable civil engineer whose experience and expertise have contributed to infrastructure projects across the country. Nathaniel's early aspiration to improve quality of life in the built environment is continuously achieved with each new project—from site engineering and stormwater management to utility design and street improvements. As a project manager, he is committed to project stewardship from initial planning to post-construction sustainability. As a water resources and environmental engineering specialist, Nathaniel focuses on using green infrastructure and Low Impact Development principles to meet performance targets, mitigate costs, facilitate future maintenance, and protect or enhance the environment. His cross-training and collaboration with urban designers and landscape architects enables him to develop projects that are both functional and experiential. Nathaniel's technical communication and writing skills yield plans and documents that are succinct, well-organized, and easily readable by clients and laypersons alike. Registered in five states, he strives to develop project solutions that are context sensitive to meet not just engineering standards, but also the multifunctional needs and expectations of each community.

Esmeralda García

ENGAGEMENT SPECIALIST

Esmeralda García is a community planning and public outreach expert whose projects often tackle complex social and economic issues associated with public services and infrastructure, transportation, housing, and urban planning and design. Through her early volunteer work, she was exposed to community organizing and governance, which sparked her passion for collaborative engagement and inclusive decision-making. Esmeralda is widely recognized for her ability to reach and connect with communities of diverse backgrounds and cultures—many of whom are under-served and often go unheard. She combines her extensive experience in facilitation and strategic planning with her broad knowledge of planning and communications to bring people together to identify and resolve problems. With her fluency in Spanish and English, Esmeralda is uniquely positioned to articulate challenges, opportunities, and goals for both clients and constituents. Whether it's a freeway corridor impacting tens of thousands of residents and businesses or a neighborhood park serving a hundred families, she is dedicated to forging understanding and cooperation to find implementable solutions that improve the lives of everyone.

Shawn Lothrop, PE, SE

PRINCIPAL STRUCTURAL ENGINEER | ISE

As CEO, Co-Owner, Principal, and Structural Engineer of Record on many ISE projects, Shawn plays a central leading role in maintaining the firm's reputation as a trusted industry partner. He brings over 20 years of structural design experience across a wide range of material types, including sustainable and LEED-rated systems. Shawn is particularly skilled in practical value engineering and proactively identifying potential construction conflicts during design, helping provide clients with clarify and confidence throughout a project's lifecycle. His broad experience includes educational and civic buildings, hospitality projects, parking structures, multifamily developments, and foundation and building retrofits. His leadership and depth of experience allow him to guide projects strategically while providing technical excellence and responsiveness at every stage.

Shane Lothrop

SUSTAINABLE DESIGN LEAD | ISE

As COO, Co-Owner, and Project Manager at ISE, Shane has been instrumental in establishing and advancing the firms internal design and engineering standards. He has extensive experience designing with a wide range of material types, including sustainable and LEED-rated systems, and is widely regarded for his expertise in the thoughtful integration of sustainable building materials and construction methods. Shane has collaborated with many leading architects and builders, prioritizing coordination, constructability, and client satisfaction. Known for his straightforward, no-nonsense style, he has a talent for translating complex structural concepts into clear, actionable guidance for clients and project partners. With more than 19 years of modular design experience, Shane has helped expand ISE's modular portfolio to include educational, multifamily, and hospitality projects. He also engineered the highest LEED Platinum rated residential structure in California.

Greg DeLeon, PE,

PROJECT MANAGER | ISE

Greg has been with ISE Structural Engineers since 2016 and brings nearly a decade of experience delivering thoughtful, technically sound solutions across a wide range of project types. Over the course of his tenure, he has played a key role in the analysis and design of numerous successful projects, including modular and site-built residential developments, park renovation projects, tenant improvements, healthcare facilities, and educational buildings. Recently promoted to project manager, Greg leads projects with a disciplined and methodical approach. Drawing on his military background, he brings strong organization, accountability, and strategic thinking to his work. His structured communication style and attention to detail allow him to proactively identify issues, maintain clear coordination among stakeholders, and deliver consistent service from project inception through completion.

» BS, Civil Engineering, California State University, Fullerton

REGISTRATIONS

» Licensed Professional Civil Engineer: CA #C97403

SELECTED PROJECT EXPERIENCE

» Hodgson Hosterman Residence, Crested Butte, CO
» Harrison Ave Residence, Redwood City, CA
» Martis Camp Residence, Truckee, CA
» Olive Park Apartments, Oceanside, CA
» Alante Residential, Rancho Bernardo, CA
» Palmdale Assisted Living, Palmdale, CA

Ken Perez, Sr.

SENIOR ENGINEER | VCL

VCL's President Ken Perez Sr. has been in the electrical field for more than 40 years with experience in both construction and electrical engineering design. For the last 20 years, he has been working on the engineering side of the industry with an emphasis in lighting design. His actual field experience has given him a tremendous edge over his competition in that he knows firsthand how an electrical system is installed, which he is then able to more clearly translate to the design documents. This approach has enabled him to keep costly change orders down to a minimum for his client's benefit. He has continued his knowledge in lighting fundamentals and electrical engineering by staying active with ongoing classes in his field of expertise. These classes include Lighting Fundamentals through the IESNA and State-sponsored classes for Energy Conservation Measures. Ken serves as Vice President of the IES in San Diego.

TRAINING/CERTIFICATIONS

- Lighting applications certification (AGI-32), Lighting Analyst
- Lighting Fundamentals certification, Illumination Engineering Society of North America
- UCSD-1998, HVAC, DDC Controls Certification
- Mesa College-1978, National Electrical Code
- Ongoing classes in lighting fundamental, applications, Title-24 and UBC, NEC, and CEC

PROFESSIONAL AFFILIATIONS

- IES-Illumination Engineering Society – Past Vice President for over 5 years

SELECTED PROJECT EXPERIENCE

- Hollandia Park, San Macros, CA
- Sunset Park, San Marcos, CA
- SDSU Mission Valley River Park, San Diego, CA
- Montage Park – Chula Vista, CA
- Clay Neighborhood Park, San Diego, CA
- Sunset Park, San Marcos, CA
- Skyline Hills Community Park, San Diego, CA

Kenny Perez, Jr.

SENIOR PROJECT MANAGER | VCL

Kenny Perez Jr. boasts 18 years of expertise in designing and managing diverse projects. His commitment to staying current with sustainable lighting technology is evident in authored ordinances for Rancho Sante Fe Association and Roripaugh Ranch in Temecula, CA. As VCL's Title-24 expert, he remains at the forefront of outdoor lighting measures, actively engaging with industry trends through the Illumination Engineering Society of North America.

TRAINING/CERTIFICATIONS

- Lighting applications certification (AGI-32), Lighting Analyst
- Lighting Fundamentals certification, Illumination Engineering Society of North America
- AutoCad Certification. Virtual Design & Construction Institute
- Project Management, UC San Diego
- Ongoing classes in lighting fundamental, applications, Title-24 and UBC, NEC, and CEC
- CALCTP Certified Employer

PROFESSIONAL AFFILIATIONS

- IESNA-Illuminating Engineering Society of North America
- BIA – San Diego/Southern California

SELECTED PROJECT EXPERIENCE

- Sommers Bend Sports Park, Temecula, CA
- 41st Park, San Diego, CA
- Citrus Trails Community Park, Loma Linda, CA
- Fosia Park, Carson, CA
- Harvest Park, Valley Center, CA
- 36601 Summer Dain Lane Park, Wildomar, CA
- Alley Grove Promenade Park, Tustin, CA

Project Understanding and Approach

PROJECT UNDERSTANDING

The City of Cypress is undertaking the replacement and modernization of aging playground facilities at Veterans Park and Maple Grove North Park as part of its Fiscal Year 2026–27 Capital Improvement Program. The project presents an opportunity to create two engaging, inclusive, and contemporary play environments that provide safe and accessible recreational experiences for children of varying ages and abilities while enhancing overall park usability and community enjoyment.

The City has indicated that the new playground environments should incorporate modern, ADA-accessible play equipment, replacement of existing rubberized surfacing, integrated shade sails or standalone shade structures, and supporting amenities such as benches, trash receptacles, and improved seating and gathering opportunities. The design process will also evaluate opportunities for incidental site enhancements, including pathway connections, landscape restoration, and other site improvements that complement the new playground environments.

MIG understands that community engagement is central to the success of this project. The City requires one in-person community workshop for each park, stakeholder presentations to the Recreation and Community Services Commission and City Council, and online engagement opportunities that allow residents and park users to meaningfully influence the final design direction. The community process will ultimately guide the development of a preferred playground concept for each park that balances community priorities, operational considerations, budget parameters, and long-term maintainability.

MIG also understands several important project considerations identified through the City's addenda and responses to questions. No topographic survey or geotechnical report currently exists for either park and will need to be developed as part of the project. ADA verification will be conducted during the concept phase to identify accessibility opportunities and constraints within the playground areas; however, park-wide ADA improvements are not included within the anticipated scope. Additionally, minor ponding has been identified on the south side of the Veterans Park playground area and should be evaluated during site analysis and incorporated into the design approach as appropriate. Site-specific structural calculations will also be required for the final selected playground configurations in compliance with

current California Building Code requirements and ASTM playground safety standards.

Recognizing the City's desire to implement the project on an expedited schedule, MIG understands that conceptual design and community engagement efforts should proceed efficiently, allowing Veterans Park to advance into construction in early 2027 while simultaneously preparing a complete and implementation-ready construction package for Maple Grove North Park for future funding and construction.

PROJECT APPROACH

The project includes community outreach, conceptual design, final construction documents, cost estimating, and bidding support services for the replacement of existing playground equipment and surfacing at Veterans Park and Maple Grove North Park. The improvements will include demolition and removal of existing playground equipment and surfacing; new inclusive and ADA-accessible play equipment; replacement of rubberized surfacing; integrated shade structures or shade sails; benches, trash receptacles, and other site furnishings; accessible routes and connections within the playground areas; and selective landscape restoration and incidental site improvements that support the overall playground experience. Each park will receive its own independent construction document package, technical specifications, and engineer's estimate of probable construction cost.

MIG will utilize its in-house Play Studio to develop innovative and memorable playground environments that move beyond standard, catalog-driven layouts. Through a collaborative and community-based design process, the team will develop three conceptual playground alternatives for each park that respond to site opportunities, community preferences, age-specific play needs, inclusive play opportunities, and long-term operational considerations. Concepts will be refined into a preferred plan for each park and presented to City staff, the Recreation and Community Services Commission, and City Council for review and direction.

The City has indicated that no topographic survey currently exists for either park. MIG will conduct field verification and site reconnaissance to document existing conditions and evaluate accessibility, drainage, and site constraints. Should additional survey information be determined necessary to support final design and construction documentation, MIG can coordinate supplemental surveying services in consultation with the City.

The City has also indicated that no geotechnical report currently exists for either park. MIG will evaluate existing site conditions during field investigations and identify any geotechnical considerations that may affect the design. Should geotechnical investigations or subsurface testing be deemed beneficial to support final design recommendations and construction documentation, these services can be provided as an optional additional service.

Site-specific structural calculations for the final selected playground configurations and shade shelters will also be coordinated and incorporated into the final design package in accordance with California Building Code requirements and ASTM standards.

MIG will prepare separate construction-ready plan packages for Veterans Park and Maple Grove North Park, including demolition plans, layout plans, grading and drainage plans as necessary, playground details, specifications, and cost estimates that reflect current market conditions, anticipated escalation, and procurement opportunities. The team will also prepare high-quality color renderings of the final playground layouts for each park to support stakeholder presentations and community communication efforts.

Throughout the project, MIG will maintain close coordination with the City's Public Works and Recreation and Community Services staff and employ a proactive quality control process focused on schedule management, budget alignment, constructability, and implementation readiness. Our approach is specifically tailored to help the City of Cypress efficiently deliver two distinctive, inclusive, and highly functional playground environments that serve the community for many years to come.

PROJECT TEAM

MIG's project team will be led by **Oscar Johnson, PLA,** serving as **Principal-in-Charge**, providing overall project leadership, quality control, and executive oversight. **Holly De La Torre** will serve as **Project Manager**, responsible for day-to-day coordination, client communication, schedule and budget management, and delivery of project milestones as well as technical production, consultant coordination, and internal quality control.

MIG's **in-house Play Studio** will support the project team by leading concept development and detailed design of the play environments, and MIG's **civil engineers** will support grading, drainage coordination, and water quality documentation.

Subconsultants, include **ISE Structural Engineers**, who will support structural design and calcs for play equipment footings; **VCL Electrical Engineers** to support a shade structure lighting option; and **Converse Consultants** to support a geotechnical investigation option.

SCOPE OF WORK

PHASE 1: PROJECT INITIATION, COMMUNITY OUTREACH, AND CONCEPTUAL DESIGN

The goal of this phase is to gather information necessary to initiate design, engage the community and stakeholders, and develop approved conceptual playground improvements for Veterans Park and Maple Grove North Park. Upon receipt of written Notice to Proceed (NTP), MIG shall perform the following tasks:

1.1 Project Kick-off Meeting

MIG will conduct a project kick-off meeting with City staff to confirm project goals, schedule, communication protocols, project priorities, anticipated implementation sequencing, and review available background information and as-built documentation. Two (2) MIG staff members will attend.

MIG will prepare meeting agendas in advance and provide meeting summary notes within five (5) business days.

1.2 Site Visits and Existing Conditions Assessment

MIG will conduct site visits and field reconnaissance at Veterans Park and Maple Grove North Park to document existing conditions, opportunities, and constraints, including:

- Existing playground conditions and surfacing
- Access and circulation patterns
- Existing park amenities and furnishings
- Shade opportunities and existing trees
- General grading and drainage conditions
- Existing utilities and infrastructure
- Relationships to surrounding park uses
- Constructability and phasing considerations
- Accessibility opportunities and constraints within the playground areas

1.3 Community Outreach Program

MIG will develop and implement a comprehensive community engagement program that includes:

- One (1) in-person community workshop for Veterans Park
- One (1) in-person community workshop for Maple Grove North Park
- Online community survey and engagement tools

- Meeting materials and presentation graphics
- Compilation and analysis of community input

MIG will coordinate closely with City staff regarding meeting logistics, outreach materials, and public engagement strategies.

1.4 Preliminary Concept Design Alternatives

MIG and its Play Studio will develop three (3) conceptual playground alternatives for each park based on community input, City direction, and site conditions.

The conceptual alternatives will illustrate:

- Age-appropriate play zones
- Inclusive and ADA-accessible play opportunities
- Manufactured and custom play elements
- Replacement rubberized surfacing
- Integrated shade sails and/or standalone shade structures
- Benches, trash receptacles, and site furnishings
- Accessible routes and pathway connections within the playground areas
- Landscape restoration opportunities
- Incidental site enhancements

Plans will be labeled and formatted for presentation and review.

1.5 Concept Presentations and Preferred Plan Selection

MIG will present conceptual alternatives to:

- City staff
- Recreation and Community Services Commission
- City Council

Based on feedback received, MIG will refine the preferred concept for each park into one (1) final conceptual plan.

1.6 Color Renderings

MIG will prepare two (2) color renderings for each playground to illustrate the final proposed design from multiple perspectives and support stakeholder presentations and public communication.

1.7 Preliminary Estimate of Probable Construction Costs

MIG will prepare preliminary estimates of probable construction cost for the preferred concepts, reflecting:

- Current market conditions
- Construction escalation
- Procurement considerations
- Opportunities for owner-furnished/contractor-installed (OFCI) equipment and cooperative purchasing programs, if applicable

1.8 Design Schedule Management

MIG will develop and maintain a project schedule throughout conceptual design, coordinating milestones with City staff and accommodating the City's desired expedited implementation schedule.

1.9 Research and Code Review

MIG will review applicable:

- California Building Code requirements
- ASTM playground standards
- ADA accessibility requirements
- Playground safety criteria
- City standards and requirements

MIG will also identify any supplemental investigations or studies that may benefit the project.

1.10 Project Management

MIG will provide overall project management and coordination throughout the Project Initiation, Community Outreach, and Conceptual Design phase. Services will include project administration, schedule management, coordination with City staff, internal team coordination, monitoring of project budget and deliverables, and ongoing communication regarding project progress and decisions. MIG will maintain an updated project schedule and facilitate timely completion of community engagement activities and conceptual design milestones.

Deliverables – Phase 1

- Existing conditions assessment memorandum
- Two (2) in-person community workshops
- Online survey and summary findings
- Three (3) conceptual playground alternatives for each park
- One (1) preferred concept plan for each park
- Two (2) color renderings per park
- Preliminary cost estimates
- Updated project schedule
- Community outreach summary

Meetings – Phase 1

- One (1) project kick-off meeting
- Two (2) community workshops
- One (1) Recreation and Community Services Commission presentation
- One (1) City Council presentation
- Up to four (4) project coordination meetings

PHASE 2: FINAL DESIGN AND CONSTRUCTION DOCUMENTS

The goal of this phase is to prepare separate, coordinated construction documents for Veterans Park and Maple Grove North Park suitable for bidding and construction.

Consistent with the City's preferred process, MIG anticipates preparing:

- 90% Construction Documents
- 100% PS&E Documents

2.1 Construction Documents

MIG will prepare separate construction document packages for each park.

2.2 Drawing Package (sheet size will be 24" x 36" unless otherwise requested)

The anticipated drawing packages may include:

a. Title Sheet

b. Existing Conditions and Demolition Plan

c. Site Layout and Dimension Plan

d. Playground Equipment Layout Plan

e. Accessible Route and Circulation Plan

f. Grading and Drainage Plan (as necessary)

g. Site Furnishings and Shade Structure Plan

h. Landscape Restoration Plan (as necessary)

i. Construction Details and Notes

The extent of grading and drainage documentation will be limited to improvements necessary to support the playground replacements and address localized drainage concerns. Should additional grading and drainage be deemed beneficial to support final construction documentation, these services can be provided as an optional additional service.

2.3 Technical Specifications

MIG will prepare technical specifications coordinated with:

- City of Cypress Standards
- Standard Specifications for Public Works Construction ("Greenbook")
- California Building Code
- Applicable playground safety standards

2.4 Structural Coordination

MIG will coordinate site-specific structural calculations required for the final playground configurations in accordance with City requirements and California Building Code standards.

2.5 Engineer's Estimate of Probable Construction Costs

MIG will prepare cost estimates at each formal submittal stage.

2.6 Quality Control

MIG will conduct internal quality reviews prior to each submittal and provide documentation of QA/QC procedures.

2.7 Progress Submittals and Review Meetings

MIG will prepare submittals and conduct review meetings with City staff.

MIG will incorporate review comments and finalize construction documents in accordance with agreed-upon schedules.

2.8 Final Construction Documents

MIG will provide final digital files and PDF construction documents for each park.

2.9 Project Management

MIG will provide project management services throughout the Final Design and Construction Documents phase, including management of the multidisciplinary design team, coordination with City staff, schedule maintenance, quality assurance oversight, and monitoring of project budget and deliverables. MIG will oversee preparation of separate construction document packages for Veterans Park and Maple Grove North Park and facilitate efficient review and resolution of City comments.

Deliverables – Phase 2

For each park:

- 90% PS&E package
- 90% cost estimate
- 100% bid-ready PS&E package
- Final engineer's estimate
- Technical specifications
- QA/QC documentation
- Final PDF and CAD files

Meetings – Phase 2

- One (1) 90% review meeting
- One (1) 100% review meeting
- Up to four (4) project coordination meetings

OPTIONAL SERVICES

1. Bidding Assistance
   - Pre-bid meeting
   - Responses to bidder questions and RFIs
   - Addenda preparation support
2. Construction Support Services
   - Construction kick-off meeting
   - Submittal and shop drawing reviews
   - Construction RFIs
   - Periodic site observations and progress meetings
   - Record drawing preparation
3. Geotechnical Survey
4. Electrical Design for Playground or Shade Structure Lighting
5. Topographic Survey
6. Full Civil Scope of Services for each Park beyond footprint of Playground

PROJECT ASSUMPTIONS AND EXCLUSIONS

1. Separate construction document packages will be prepared for Veterans Park and Maple Grove North Park.

2. No electronic topographic survey or geotechnical report is currently available and neither service is assumed within the base scope.

3. ADA verification of the playground areas is included; however, the redesign of park-wide ADA improvements outside the playground areas is excluded.

4. Existing utility information will be provided by the City and/or utility providers. Utility potholing and subsurface utility investigations are excluded.

5. Site-specific structural calculations required for final playground configurations are assumed to be provided by the playground manufacturer. Independent structural engineering services, if required, are an optional service.

6. Permit, plan check, agency review, and application fees are excluded.

7. Bidding and Construction Support services are excluded and may be provided as an optional service.

8. Any improvements beyond the playground replacement areas, including broader park improvements, parking lot modifications, or off-site improvements, are excluded unless specifically authorized by the City.

9. Additional investigations identified during design, including geotechnical studies, supplemental drainage analyses, or survey services, may be authorized by the City as optional additional services.

10. Estimates will reflect current market costs and consider market trends, cost projections, and materials escalation costs to mid-point of construction. An analysis will be provided to assess whether the City can realize cost savings by procuring items to be owner furnished-contract installed (OFCI) and whether these items can be procured through cooperative agreements (Sourcewell, BuyBoard, etc.).

11. Reproduction for submittal and bid sets will be provided by City.

12. Construction documents will be prepared for lump sum bid contract. Technical specifications prepared in CSI format. Specifications will be coordinated with

City of Cypress Brown Book specifications, Standard Specifications for Public Works Construction “Greenbook,” CA Building Code, and other applicable standards.

13. Division 00 and 01 specifications will be prepared by City. Project Manual prepared by City.

14. Street/Right-of-way improvement plans are not anticipated and therefore are not included in this proposal.

15. Value Engineering services are not included, but can be provided as an additional service.

16. Construction planning and schedule is not included, but can be provided as an additional service.

17. Anticipated area of project disturbance is assumed to be less than 1 acre, therefore development of Stormwater Pollution Prevention Plan (SWPPP) is not included.

18. Utility design services (water, sewer, lighting, etc.) are not included in this proposal, but can be provided as an additional service.

19. Base scope assumes stormwater management to be achieved by maintaining existing flow patterns without formal stormwater/drainage improvements. For stormwater/drainage improvement scope see optional tasks.

20. Grading and pathway accessibility improvements are assumed to be feasibly achieved without the need for retaining walls, stairs or handrails. Design of these elements can be provided as an additional service.

21. Pavement marking and signage plans are not included but can be provided as an additional service.

Modifications to the Standard City Contract Services Agreement

MIG has reviewed the Standard City Contract Services Agreement and requests as the modification that the Civil Code 2782.8 be added. Outside of this request, we have no other changes at this time.

RE: Statement of Qualifications for Community Outreach and Design for the Playground Equipment Replacement at Veterans Park and Maple Grove North Park

Dear Mr. An and Members of the Consultant Selection Evaluation Panel:

RHA Community Works (RHA+CW) is pleased to submit our qualifications to provide comprehensive community outreach and professional design services for the Playground Equipment Replacement at Veterans Park and Maple Grove North Park. As the City of Cypress prepares to deliver vibrant, modern play experiences for local families, we offer a partnership grounded in trusted municipal experience, a disciplined and efficient design process, and an unmatched familiarity with your local standards.

As a full-service firm specializing in the design, plan review, and accessibility auditing of public parks across Southern California, we bring rare local technical readiness to this contract. We are positioned to hit the ground running because we already serve as a trusted consultant within your park system, our team delivered the Lexington Park project, designed the Oak Knoll Park restroom and concession facilities, and is now applying the final bid touches to the Veterans Park Sports Court Improvements. This active footprint gives our landscape architects a real-time, on-the-ground understanding of your field conditions and operational expectations that no other firm can match.

Our approach to both playground sites centers on the following core strengths:

- ***Embedded CASp & Safety Expertise:***
  Playground design demands a meticulous command of universal accessibility and play safety. Our leadership team includes in-house Certified Access Specialists (CASp) and a Certified Playground Safety Inspector (CPSI), led by Managing Partner Scott Rice, one of only four licensed landscape architects in California to hold a CASp credential. We design for inclusion from day one, minimizing regulatory revisions and keeping your 90% plan check on track.

- ***Proven Cypress & Regional Technical Precision:***
  We design to your standards. Our technical specifications are coordinated seamlessly with the City of Cypress "Brown Book," the Standard Specifications for Public Works Construction ("Greenbook"), and California Building Code (Title 24) requirements. We have proactively included additional structural engineering service allowance for playground structural calculations and third-party footing verifications, as well.

- ***High-Yield Public Engagement:***
  Using our interactive multi-lingual outreach model, we facilitate tailored in-person community workshops and a 30-day online survey that capture clear, actionable data. Our senior outreach leadership has run successful, custom-tailored, campaigns for cities across the region, turning community input into constructible, inclusive, and widely loved park spaces.

We also recognize the City's intent to stretch its fiscal resources through creative procurement. Our team will deliver a robust Owner Furnished–Contractor Installed (OFCI) cost-savings analysis, evaluating cooperative purchasing vehicles such as Sourcewell and BuyBoard to maximize the value of every budget dollar. Our team features several previous public-sector employees, who truly understand the importance of stewardship, transparency, and accountability to the communities we serve.

We look forward to expanding our collaborative working relationship with the City of Cypress to deliver independent, bid-ready PS&E packages for Veterans Park and Maple Grove North Park. We confirm we are in receipt of the Q&A's issued on 6/10/2026 and 6/16/2026 as well as Addenda for Extension of Time on 6/16/2026.

Thank you for your continued consideration. Please direct questions to Scott Rice, Managing Partner, at scott@rhacw.com or (951) 369-0700.

Respectfully submitted,

RHA Community Works is a landscape architecture and planning firm based in Riverside, California, with deep, multi-generational roots in the Southern California region. The firm was formed through the shared vision and meticulous craftsmanship of its founders and Managing Partners: Doug Grove, President of RHA Landscape Architects + Planners, and Scott Rice, President of Community Works Design Group. Each founder brings decades of proven leadership and industry experience. Prior to uniting their firms, both Doug and Scott served as successors to the founders of their respective, highly regarded practices.

Our team includes 20 dedicated professionals, including 12 licensed landscape architects, who work collaboratively under a team-based approach directed by the firm's principals and associates. Our multidisciplinary team bridges the gap between creative vision, technical feasibility, and environmental stewardship. RHA Community Works provides a comprehensive suite of services designed to enhance public spaces while ensuring long-term sustainability:

- **Public Works Planning & Design:** Expert development of neighborhood and community parks, sports complexes, skate parks, dog parks, and vibrant streetscapes that strengthen community branding.
- **Specialized Technical Consulting:** Targeted expertise in CASp/ADA accessibility auditing, comprehensive tree inventory and management, and advanced water conservation strategies.
- **Master Planning & Visualization:** Site-specific conceptual development supported by 3D photo-realistic rendering and inclusive community outreach programs to build local consensus.
- **Construction Support:** Delivery of meticulous construction documentation, precise cost estimating, and dedicated construction administration to ensure design intent is realized. Our team includes two **licensed C-27 landscape contractors.**
- **Plan Check & Inspection Services:** A seamless, dual-layer approach ensuring every project, from initial technical review to final field installation, meets 100% regulatory compliance and the highest construction standards.
- **Regulatory Compliance & Sustainability:** Proven success assisting Southern California municipalities in navigating complex mandates, including **SB 1383 (Organic Waste and Mulching)** and **AB 1572 (Non-Functional Turf)** requirements.

FIRM ORGANIZATION, CREDENTIALS, BACKGROUND

We offer comprehensive planning and design services tailored to the unique needs of each client and project. Our scope of services includes:

Planning and Design

- Master Planning
- Preliminary Design Development
- Program Development
- Recreation Land-Use Planning
- Site Evaluation and Selection
- Site Planning
- Consensus Building
- General Consulting
- Community Outreach Campaigns
- Landscape Plan Check and Inspection Services
- Accessibility Consulting (CASp)

Construction Documentation and Support

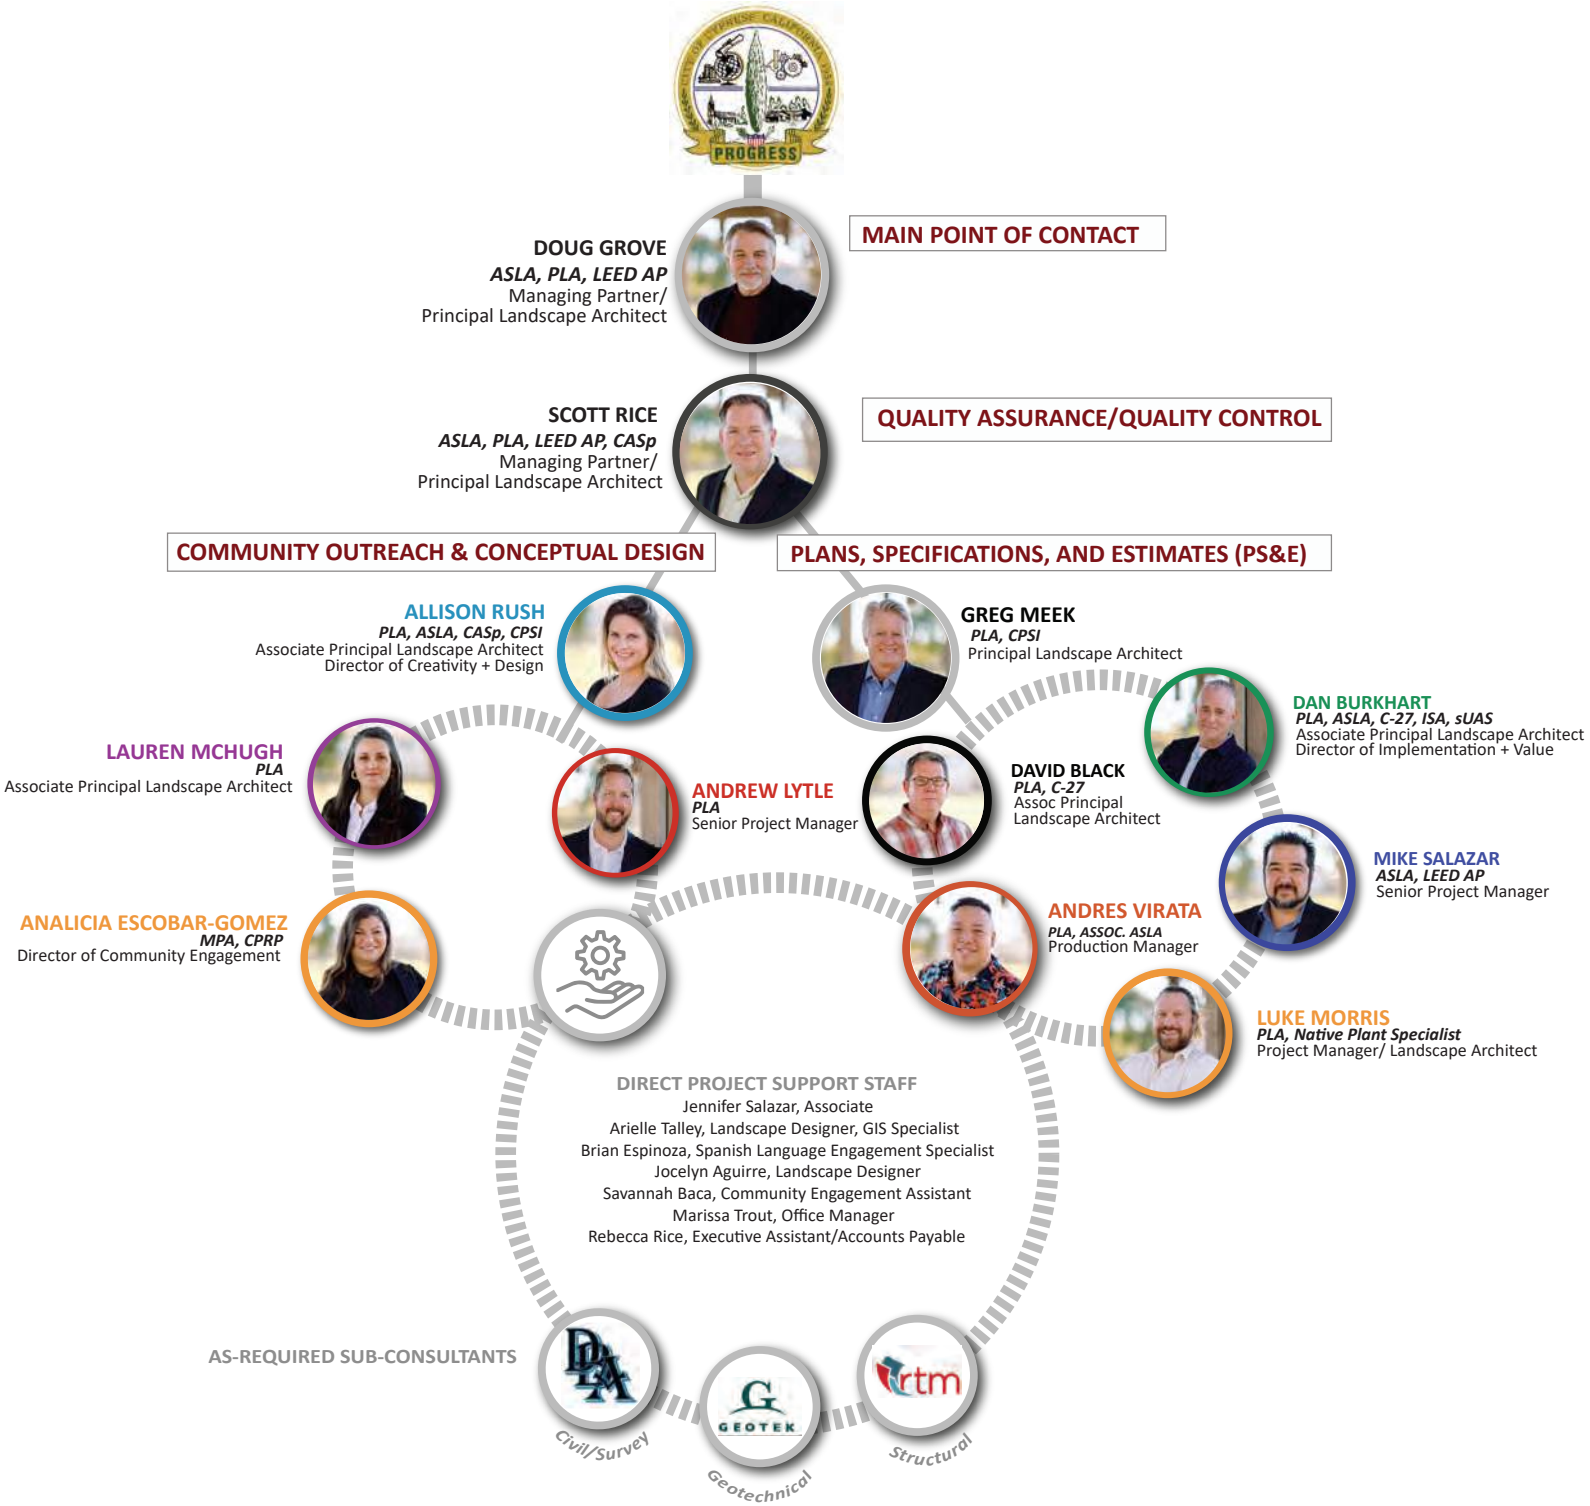
- Working Drawings & Specifications
- Assistance During Bidding
- Construction Observation & Consulting
- Maintenance Guidelines and Observation

Integrity & Reliability

The unified firm of RHA+CW maintains an impeccable professional record. Neither RHA Landscape Architects + Planners (RHA) nor Community Works Design Group (CWDG) has:

- Any failures or refusals to complete a contract.
- Financial interests in other lines of business.
- Active or past claims for money or damages.
- History of Litigation, Adverse Judgments, or “For Cause” terminations.

Minimum Qualifications



RHA+CW affirms that we meet each of the minimum qualifications established for this solicitation. We are fully able to provide the community outreach and design services described in the Scope of Work, and we have operated in the Southern California region delivering community outreach and public park design services for well over five years through our predecessor firms, RHA Landscape Architects + Planners and Community Works Design Group.

Within the last five years alone, we have completed more than thirty-five parks and recreation projects across Southern California, including Marine Park (Santa Monica), Lexington Park (Cypress), Foss Field Park (Perris), Lucinda Garcia Park (Monrovia), and Acacia Park (El Segundo), each comparable in scope and quality to the work requested here.

Neither the firm nor any of its owners or officers is in the process of, associated with, or has been convicted of any crime involving the award of a government project or the bidding or performance of a governmental contract within the last ten years. Finally, RHA+CW has not been refused renewal of any form of insurance policy within the last five years and maintains coverage that meets or exceeds the City’s requirements, including the $2,000,000 professional liability limit specified in the agreement.

FIRM ORGANIZATION, CREDENTIALS, BACKGROUND

RHA+CW confirms that key personnel identified in the Organizational Chart identified below will remain during the term of the agreement. In the event there are proposed changes during the term of the agreement we will develop a transition plan for the City's approval. We are also happy to work with other selected consultants awarded in other categories as deemed appropriate for each project.

FIRM ORGANIZATION, CREDENTIALS, BACKGROUND

YOUR COMMITTED SENIOR LEADERSHIP TEAM

Doug Grove, LLA #2799 ASLA, LEED AP
Managing Partner - Principal Landscape Architect

Doug is uniquely qualified to lead this contract as he brings a deep institutional understanding of regional park planning and community-driven design, ensuring all projects align with the City of Cypress's specific goals, community needs, and existing infrastructure. With over four decades of experience and as a former President of the California Park and Recreation Society (CPRS), Doug offers a "concept-to-completion" leadership style that ensures every on-call task, from park renovations to landscape plan checks, aligns seamlessly with the City's long-term strategic vision and municipal goals. His extensive experience navigating the regulatory landscape and coordinating with local stakeholders allows RHA Community Works to deliver highly efficient, technically sound designs that are ready for immediate implementation. Under Doug's leadership, our team is prepared to provide Cypress with the same level of rigorous oversight and design excellence that has become the hallmark of his 40-year career in Southern California municipal services.

10% of Time Available During Active Deliverables

Scott Rice, LLA #5111 ASLA, LEED AP, CASp
Managing Partner - Principal Landscape Architect

With over 25 years of experience managing public works projects, Mr. Rice provides executive oversight and high-level quality assurance for all RHA Community Works municipal projects. His certification as a **Certified Access Specialist (CASp)** is a critical asset for the City of Cypress, as the RFQ specifically requires all documents to be reviewed for ADA compliance. Mr. Rice will ensure that every design submittal meets the most stringent federal and state accessibility standards, providing the City with the technical certainty that all public spaces are inclusive and fully compliant. In addition, he serves as the City of Los Angeles' go-to CASp expert for everything from emergency site assessments to expert witness services.

10% of Time Available During Active Deliverables

Greg Meek, LLA #2484 CPSI - Principal Landscape Architect

Greg brings over 45 years of professional experience, including over a decade as a park development coordinator and senior landscape architect for major California municipalities, providing him with a sophisticated understanding of capital improvement budgeting, professional service agreements, and the internal operations of public agencies. This background is particularly valuable for the City of Cypress, where Greg will apply his expertise to provide meticulous internal landscape plan checking services. His deep familiarity with municipal codes and development standards ensures that all submittals are reviewed with technical precision, facilitating a streamlined approval process that maintains the City's high standards for public and private landscape improvements.

FIRM ORGANIZATION, CREDENTIALS, BACKGROUND

YOUR COMMITTED LANDSCAPE ARCHITECTURE SERVICES TEAM

Allison Rush, LLA #6378 CASp, CPSI - Associate Principal Landscape Architect
As a Licensed Landscape Architect and **Director Of Design + Creativity** with over 13 years of experience, Allison provides a dual layer of technical oversight as both a **Certified Access Specialist (CASp) and a Certified Playground Safety Inspector (CPSI)**. She oversees all graphics and overall cohesion for plans and graphics for the firm.
20% of Time Available for Conceptual Designs & Vendor Coordination

Dan Burkhart, LLA #6092 ASLA, ISA, sUAS - Associate Principal Landscape Architect
As the Director of Implementation and Value, Dan provides an "insider" perspective rooted in his previous service as a Senior Landscape Inspector. His diverse technical toolkit as a Licensed Landscape Architect, **ISA Certified Arborist, and FAA Licensed Drone Pilot** allows him to oversee project implementation with a unique focus on budget-conscious asset management.
15% of Time Available for Constructibility Review and Cost Estimating.

Andrew Lytle, LLA #7165 Senior Project Manager/Landscape Architect
With over a decade of experience, Andrew brings a **high level of technical proficiency in 3D visualization** and the design of complex public infrastructure, including parks, schools, and trail systems. His expertise spans the full project lifecycle, from initial conceptual rendering and budget management to the rigorous navigation of permitting and construction-phase oversight.
25% of Time Available for 3D Renderings.

Analicia Escobar-Gomez MPA, CPRP - Director of Community Engagement
Analicia provides a multifaceted perspective to the team, drawing on her diverse background as a designer and public sector planner to develop highly implementable solutions for municipal clients. **With over a decade of park planning experience**, she specializes in equity-driven, community-based design and has successfully led recent outreach campaigns for numerous California cities.
30% of Time Available for Community Outreach Campaign.

Andres Virata, LLA #7124 PLA, Assoc. ASLA - Production Manager/Landscape Architect
Andres brings over a decade of specialized experience in landscape architecture, serving as a cornerstone of the firm's technical execution and as a dedicated mentor to the design staff. **As Production Manager**, he oversees a diverse portfolio of public sector work ranging from memorials and monuments to high-use municipal assets like streetscapes and dog parks.
25% of Time Available for Construction Documents and Production Oversight.

Brian Espinoza Landscape Designer/Spanish Language Engagement Specialist
Brian is a Landscape Designer and bilingual community engagement specialist with RHA Community Works who will serve as the firm's dedicated outreach specialist for Spanish-speaking residents under this contract. By facilitating workshops, surveys, and design discussions in both English and Spanish, he ensures Cypress's diverse families can fully participate in shaping the new play areas at Veterans Park and Maple Grove North Park.
15% of Time Available for Community Outreach Campaign.

FIRM ORGANIZATION, CREDENTIALS, BACKGROUND

TEAM SUPPORT

David Black, LLA #5509 C-27 #789824 - Associate Principal Landscape Architect
David offers over 25 years of experience, **serves as the firm's Irrigation Specialist**, ensuring all projects meet high standards for water efficiency and technical reliability. His extensive background in irrigation design and construction observation ensures that all projects are both environmentally sustainable and seamlessly transitioned from design to final installation.
15% of Time Available for Irrigation Reconfigurations, if required.

Lauren McHugh, LLA #5578 - Associate Principal Landscape Architect
As a Project Manager and Associate Principal with RHA Community Works, Ms. McHugh brings over 19 years of dedicated experience to the firm, managing projects from preliminary design through construction documentation. **She has specialized in diverse assignments including streetscapes, regional park planning, master planning and more.**

Jennifer Salazar Project Manager/Associate
Serving as Project Manager and Associate for RHA Community Works, Mrs. Salazar brings over **25 years of diverse experience of neighborhood, community, regional, and specialized dog parks.** She is recognized for her ability to efficiently lead projects through every phase of development, managing everything from preliminary site-specific design and multi-agency coordination to complete construction documentation and final installation observation.

Mike Salazar, LLA #5166 - Senior Project Manager/Landscape Architect
With over 20 years of experience, Mike specializes in bridging the gap between innovative design and the technical requirements of large-scale capital improvement programs. As a **LEED Accredited Professional**, he brings a rigorous focus on sustainability and operational efficiency to the firm.

Luke Morris, LLA #7205 PLA - Project Manager/Landscape Architect
Luke is an experienced Project Manager and **certified Native Plant Specialist** who leverages his deep expertise in California flora to design sustainable, water-efficient landscapes. He specializes in navigating complex agency requirements and fuel modification standards and also serves as the firm's SB 1383 specialist.

Arielle Talley Landscape Designer/GIS Technician
Ms. Talley is a Landscape Designer with RHA Landscape Architects-Planners, Inc. Her experience spans a variety of project types, including streetscapes, pedestrian and bike trails, neighborhood parks, and large-scale regional park developments. She brings specialized expertise in **Geographic Information Systems (GIS),** needs assessments, and parks master planning, which enhance her ability to develop comprehensive and data-driven planning solutions.

FIRM ORGANIZATION: SUBCONSULTANTS

While the RHA Community Works team will perform the majority of the project scopes for the City of Cypress our team also includes the following subconsultants as required and will be happy to work with any other sub-consultants on the City of Cypress's On-Call Lists:

David Beckwith & Associates, Inc. (DBA)

David Beckwith brings a rare and highly advantageous combination of credentials as a dual-registered Professional Engineer (PE) and Professional Land Surveyor (PLS) with over 23 years of regional experience in the engineering and construction fields. As the founder and CEO of David Beckwith and Associates, Inc., David will oversee all surveying and civil engineering input required for the contract, providing the City of Cypress with seamless, data-driven site analysis and technical accuracy. His extensive Southern California portfolio spans complex public and private sector projects, where he has built a reputation for delivering precision survey data, resolving intricate stormwater management challenges, and executing technically sound civil design under tight timelines and strict environmental constraints. Fully versed in municipal development standards, David's dual-discipline expertise ensures that all boundary verification, topographic mapping, and civil engineering coordination integrate flawlessly with RHA Community Works' landscape architecture and plan-checking services, maintaining the City's high standards for public infrastructure.

Years of Collaboration: 2015 - Current (10+ Years)

RTM Engineering Consultants, Inc. brings specialized structural engineering expertise to the team, providing the precise structural calculations and construction details necessary to ensure all park amenities and infrastructure are safe, durable, and fully compliant with current California Building Codes. Their services have been included on an as-needed basis depending on the structural output capabilities of the selected play equipment manufacturer.

Years of Collaboration: 2020 - Current (5+ Years)

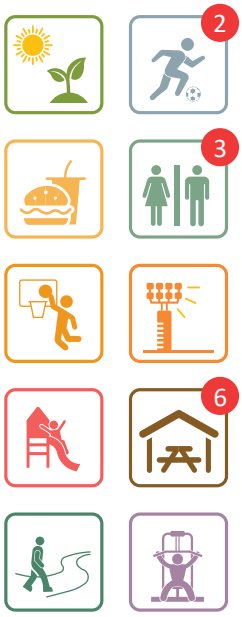
Our team has worked with **GeoTek** on many successful projects. They are equipped to provide as required geotechnical and soils reports as well as infiltration reports. They will prepare soils and drainage reports as required for each site for use for structural calculations for playground equipment footings and shade structures if required by manufacturer.

Years of Collaboration: 1990 - Current (35+ Years)

MARINE PARK

ALL-ACCESS PLAYGROUND
CITY OF SANTA MONICA

RHA+CW INVOLVEMENT:
Community Outreach, Conceptual Design, Photo Simulations, Construction Drawings, Construction Administration



CONTACT:
Linda Cogswell
Architectural Associate
(310) 461-9053
architecture@smgov.net

RHA Landscape Architects, now doing business as RHA+CW, transformed an aging neighborhood playground into a fully inclusive, universally accessible play destination. The 20-year-old playground was removed and replaced with a barrier-free environment where children of all abilities can play side by side, with the site's existing concrete ramp repurposed for at-grade access, building accessibility into the landscape itself. Custom play equipment brings a "Marine + Santa Monica Coast" theme to life: a "lifeguard tower" structure, an "aquarium" spinner, signage referencing the Pier and Route 66, and a custom Ferris wheel climber echoing the one on the Santa Monica Pier. Separate structures serve ages 2–5 and 5–12, with rubber safety surfacing, a sand play area, shade structures, and inclusive sensory panels ensuring every child can join the fun. The $1.2 million project, opened in summer 2022, a one-of-a-kind playground experience unmistakably rooted in Santa Monica.

LEXINGTON PARK

NEW DEVELOPMENT CITY OF CYPRESS

CWDG INVOLVEMENT:
Community Outreach,
Conceptual Design,
3D Modeling,
Construction Drawings,
Construction Administration

CONTACT:

Director of Public Works
nmangkal@cypressca.org

Completion:	Project Size:	Project Cost:
2022 MARCH	9 acres	$13.2 MILLION

CWDG, now doing business as RHA+CW, served as prime consultant for the design of Lexington Park which included soccer fields, a shaded plaza, pickleball courts and more. Our team was led by Scott Rice, who was directly assisted by Allison Rush, and Dan Burkhart. The CWDG team also assisted the City of Cypress with their Oak Knoll Park renovation project which included a new restroom and concession stand building, as well as addressing path of travel accessibility to the new amenities.

CWDG, now doing business as RHA+CW, led the landscape architecture and community-driven design for the reimagining of Foss Field Park, one of Perris's oldest parks, established in 1960. Through seven virtual engagements and in-person events that earned 100% community support for the final concept, the firm helped shape a new master plan featuring a nearly 5,000 square foot recreation building, skate park, futsal and pickleball courts, an all-inclusive playground, dog park, walking trail, and butterfly garden. ***Our team salvaged portions of the existing park play equipment and added new features and equipment including accessibility ramps to make the full play area seamless and inclusive.***

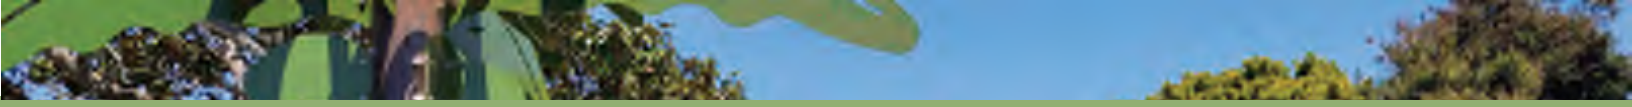
LUCINDA GARCIA PARK

RENOVATION
CITY OF MONROVIA



RHA+CW INVOLVEMENT:

Conceptual Design,
3D Modeling,
Construction Drawings,
Construction Administration
Plan Check & Inspections

CONTACT:

Tina Cherry, Director
(626) 256-8226
tcherry@ci.monrovia.ca.us

RHA Landscape Architects, now doing business as RHA+CW, led a comprehensive renovation of Lucinda Garcia Park. Honoring the site's origins as a former stop along the historic Red Car Line, the design for the 2–5 age area takes the form of a Red Car, complete with a ticket booth and rail tracks integrated directly into the pour-in-place safety surfacing, turning a piece of local transit heritage into an interactive play experience. Responding directly to input from residents living across from the park, the larger play structure was developed around a nature theme that complements the neighborhood setting. To deepen the park's educational and cultural value, the team designed a series of interpretive signs celebrating Lucinda Garcia, the Red Car Line, and the on-site Native Plant Garden, while a locally commissioned mural brings the story of Lucinda Garcia and her family to life. The result is a thoughtfully renovated park that blends inclusive recreation with place-based storytelling and a strong sense of community identity.

EXPERIENCE

ACACIA PARK

EXPANSION
CITY OF EL SEGUNDO

RHA+CW INVOLVEMENT:
Community Outreach, Conceptual Design, Photo Simulations, Construction Drawings, Construction Administration

CONTACT:
Cheryl Ebert, P.E.
City Engineer
(310) 524-2321
cebert@elsegundo.org

RHA, now doing business as RHA+CW, worked with the City of El Segundo to design renovations to Acacia Park. Extensive community outreach was conducted to determine what the residents would like to see in their park. New playgrounds for 2–5 year-olds and 5–12 year-olds were designed along with a perimeter walk, picnic tables and a drinking fountain. A decomposed granite path was designed around an existing Redwood tree that was significant to the site and the community. Playground synthetic turf was used in the play areas to match the natural turf in the center of the park.

Mr. Grove serves as the Managing Partner and Principal Landscape Architect of RHA Community Works, where he leverages over four decades of technical expertise, visionary design, and executive leadership. A 1985 graduate of California State Polytechnic University, Pomona, with a Bachelor of Science in Landscape Architecture, Mr. Grove has dedicated his career to the stewardship of public and private land. He has built a reputation for mastering the critical intersection where community functionality, environmental sustainability, and aesthetic excellence meet.

Throughout his tenure, Mr. Grove has become a definitive voice in the public works sector. His portfolio includes the successful design and project management of hundreds of park projects, alongside a diverse array of streetscapes, institutional facilities, and commercial environments. Beyond public infrastructure, he is highly regarded within the home-building industry for his strategic oversight of residential developments. This dual expertise allows him to navigate the unique requirements of both public and private stakeholders with a rare level of fluency.

Mr. Scott Rice is Managing Partner and Principal Landscape Architect of RHA Community Works. He has managed over $150 million of park projects during his tenure at CWDG. Scott oversees the development of construction documents, plan checking, cost estimating, conceptual rendering, and construction observation and management.

Scott graduated with honors from Cal Poly Pomona, earning a Bachelor of Science Degree in Landscape Architecture. He is a full member of the American Society of Landscape Architects (ASLA). Additionally, Scott is a LEED Accredited Professional (LEED AP), as designated by the United States Green Building Council (USGBC), and a Certified Access Specialist (CASp) as issued by the State of California, Division of the State Architect. Scott is one of only four Landscape Architects in California that currently hold CASp Certification.

Scott also serves as the City Landscape Architect for the City of Highland, California, and has acted in that capacity since 2005. Scott also has served as a Contract Park Planner for Jurupa Community Services District (JCSD) since 2003 and Consultant Park Planner/ Plan Checker for Jurupa Area Recreation and Park District (JARPD) since 2015.

Mr. Rice draws on previous work experience in graphic design and golf course maintenance to integrate high aesthetic quality in balance with functional, cost-effective design. His focus is in Public Works projects for various municipalities throughout the State, including Park Planning of various scales, including Community, Neighborhood, Sports, and Pocket Parks, as well as median and parkway landscape, and LMD/ CFD planning. Specialized areas of involvement include Skate Parks, Dog Parks, and Accessible Play. In addition to Park Planning, Scott is seasoned in the landscape architectural development of Multi-family Housing, Planned Residential Communities, Highway Aesthetic Design, Custom Residential Planning, and various private/commercial ventures.

Mrs. Allison Rush is an Associate Principal Landscape Architect at RHA Community Works, specializing in the optimization of public spaces and the technical delivery of water-resilient infrastructure. With a Master of Landscape Architecture and a background in Architectural History, Allison excels at configuring environments that promote community health while meeting modern sustainability mandates. Her expertise is central to the firm's ability to transform underutilized areas into high-functioning, AB 1572-compliant landscapes that balance user experience with resource conservation.

With over a decade of experience in the California landscape industry, Allison has developed a sophisticated mastery of digital media and CAD-based production. She leverages advanced AutoCAD workflows, 3D modeling, and photo simulations to translate complex design guidelines into precise, constructible documents. These tools are critical in the public works sector, providing Districts with realistic visualizations of turf reduction and irrigation retrofits while ensuring that site grading and drainage plans align perfectly with local municipal standards and state water ordinances.

As a Certified Access Specialist (CASp) and Playground Safety Inspector, Allison ensures that every project exceeds universal design standards and safety requirements. Her technical fluency allows her to lead multidisciplinary teams through the intricacies of playground design and irrigation modernization, bridging the gap between creative intent and strict regulatory adherence. By maintaining a rigorous standard for construction documentation, she ensures that the firm's designs are not only visionary but technically sound and ready for seamless field implementation.

Representative projects include (partial list):

Ms. McHugh serves as an Associate Principal Landscape Architect with RHA Community Works, bringing over 19 years of dedicated expertise in landscape architecture, urban design, and advanced computer-aided graphic design to the firm. A graduate of California State Polytechnic University, Pomona, with a Bachelor of Science in Landscape Architecture, she combines technical precision with creative vision to deliver high-impact spatial solutions. Throughout her distinguished tenure with the firm, Ms. McHugh has established a proven track record of steering complex, multi-phase projects seamlessly from initial conceptualization and master planning through to the meticulous production of final construction documents.

Her diverse and extensive portfolio spans a wide range of public and private sector developments, with specialized expertise in designing transformative civic infrastructure. Ms. McHugh's project history features the successful execution of streetscapes and roadway improvement initiatives, multi-modal pedestrian and bicycle trail networks, local neighborhood parks, and large-scale regional park destinations. Additionally, her multi-disciplinary capabilities extend to healthcare environments, including major hospital grounds, as well as comprehensive community landscape planning assignments that prioritize sustainable land use, accessibility, and community resilience.

Mr. Dan Burkhart is an Associate Landscape Architect at RHA Community Works, where he directs the firm's construction development and documentation processes with a focus on large-scale public works projects. With over 24 years of cross-disciplinary experience, Dan oversees technical plan checking, internal quality control, and comprehensive construction oversight. His professional journey, from early roles in municipal parks departments to serving as a General Superintendent for habitat restoration and mitigation, provides him with a unique "boots-on-the-ground" perspective that ensures designs are not only visionary but technically executable and maintainable.

As a specialist in sustainable infrastructure and public-sector contracts, Dan previously served as the Senior Landscape Inspector for the City of Yorba Linda. In this capacity, he managed extensive landscape maintenance assessment districts (LMAD), overseeing 500 acres of municipal landscape and a 22,000-tree urban forest. This experience on the agency side of the table is invaluable for turf reduction initiatives, as it allows him to anticipate the long-term operational needs of public districts while ensuring strict adherence to project specifications and water-efficiency mandates.

Dan holds a Bachelor of Science in Landscape Architecture from Cal Poly Pomona and maintains an elite technical toolkit, including certifications as a Licensed Contractor, Certified Arborist, FAA UAS Drone Pilot, and Qualified Applicator (QAL). Known as the "Coach" within the office, he is dedicated to mentoring staff and optimizing production efficiency to meet demanding project schedules. His diverse background in both design-build and municipal inspection makes him a key asset in delivering high-performance, AB 1572-compliant landscapes that stand up to the rigors of public use and maintenance.

Analicia Escobar-Gomez serves as the Director of Community Engagement and Senior Project Manager at RHA Community Works. Drawing on over a decade of experience in the public sector, most recently as Senior Park Planner for Riverside County. Analicia provides clients with a unique perspective on municipal processes and community-driven design. A Cal Poly Pomona alumna with a Master's in Public Administration, she has successfully managed over $15 million in capital improvement projects and secured millions in grant funding, ensuring that each project's vision is realized through thoughtful branding and identity building. Her leadership is instrumental in navigating the firm's recent strategic growth, ensuring that the merged entity continues to deliver high-quality, innovative landscape architecture and urban design solutions.

In addition to her public sector background, Analicia has managed a residential landscape design-build company for 15 years, giving her an expert eye for costs, trends, and material availability. This diverse foundation in education and hands-on experience allows her to approach urban design with an artistic yet pragmatic lens. Dedicated to equity and inclusion, she brings a deep sense of empathy and humanity to her work, focusing on developing public spaces that enhance the sense of place and serve the unique needs of California's diverse communities. Furthermore, her ongoing pursuit of a Doctorate in Public Administration underscores her dedication to staying at the forefront of policy trends and legislative advocacy for public park systems.

- Dolores Huerta Park, City of Fresno
- 37th Street Park, Jurupa Area Recreation & Park District (JARPD)
- Weston Park Redesign, City of Hemet
- Shalimar Park Expansion, City of Costa Mesa
- Villegas Park Splash Pad, City of Riverside
- Playground Master Plan, City of Laguna Beach
- Carson Streetscape Master Plan, City of Carson

We will provide complete professional landscape architecture, civil engineering, and specialized irrigation design services for the complete planning, public outreach, and design of new playground equipment and associated amenities at Veterans Park and Maple Grove North Park for the City of Cypress.

Our work will culminate in the delivery of two (2) separate, independent, and bid-ready final sets of Plans, Specifications, and Estimates (PS&E) packages. We will ensure all designs comply with the City of Cypress "Brown Book" specifications, the Standard Specifications for Public Works Construction ("Greenbook"), the California Building Code (Title 24), and all applicable ADA / ASTM / CPSC safety guidelines.

TASK 1: PROJECT INITIATION AND SITE ASSESSMENT

Upon receipt of the Notice to Proceed and after our Project Kick-Off, RHA will immediately launch our site investigation. Because we just completed the field and path-of-travel design for the adjacent Veterans Park Sports Court Improvements, RHA+CW already holds active, accurate baseline data for Veterans Park. This eliminates the typical 2-to-3 week startup lag, allowing us to hit the City's 90% submittal target seamlessly.

1.1 Project Kick-off & Alignment

We will attend one (1) virtual kick-off meeting with City staff to review project goals, establish lines of communication, establish data exchange protocols, and confirm the baseline project schedule.

1.2 Site Investigation & Reconnaissance

We will conduct field visits to both park sites to document existing conditions, physical opportunities, and spatial constraints. During our field analysis, we will:

- Inventory existing playground equipment footprints, mature trees (using our in-house ISA Arborist), walkways, and perimeter clear zones.
- Review existing utility locations, surface drainage patterns, and path-of-travel accessibility compliance with our in-house Certified Access Specialists (CASp) .

1.3 Regulatory Coordination

We will interface with City departments and relevant public agencies to verify regulatory limitations, zoning setbacks, utility clearances, maintenance preferences, and permitting requirements.

Task 1 Deliverables

- D1.1: We will provide Kick-off Meeting Minutes and a Finalized Project Schedule.
- D1.2: We will deliver Digital Site Photo-Documentation and a Basemap Verification memo identifying key constraints and design opportunities for both sites.

TASK 1: PROJECT INITIATION AND SITE ASSESSMENT EXAMPLES

While we understand Accessibility Improvements are not necessarily included in the scope of work and construction budget for the current projects, our team of in-house Certified Access Specialists (CASp) will conduct site assessments for both park sites. Our team has already assisted the City of Cypress with Veterans Park Sports Court Improvements which includes accessibility improvements to the accessible parking stalls that will also serve the playground. We will review the path of travel as well as any drainage issues around the existing play areas. Our team recently assisted the City of Laguna Beach with their Playground Master Plan which featured the site assessment and field reporting of nine (9) of their playgrounds from the lens of accessibility and playground safety. In addition to the site assessments, our team also conducted extensive stakeholder and community outreach regarding what they wanted to see at each site.

TASK 2: COMMUNITY OUTREACH AND CONCEPT DEVELOPMENT

2.1 Public Engagement Campaign

We will develop, facilitate, and execute a comprehensive, multi-lingual, community engagement program consisting of:

- ***Two (2) In-Person Workshops:***
  We will host one (1) standalone workshop localized for the Veterans Park community and one (1) standalone workshop for the Maple Grove North Park community. We will utilize interactive engagement methods such as preference dot-voting boards and scaled site-map planning exercises.

- ***One (1) Online Survey:***
  We will design and launch a digital, multi-lingual, survey hosted via the City's platform for a minimum duration of 30 days to collect broader resident input on desired play features, age demographics, and amenity preferences.

2.2 Conceptual Design Alternatives

Based directly on stakeholder feedback and site analysis, we will develop a minimum of three (3) distinct conceptual designs for each park (6 concepts total). We will clearly illustrate:

- Playground equipment layout separated by targeted age groups (2–5 and 5–12 years old).
- Integrated shade structures, safety surfacing types, and clear zones.
- General park amenities including specific placement for benches and trash receptacles.

2.3 Leadership Presentations & Refinement

- We will present the conceptual alternatives to City staff, the Recreation and Community Services Commission, and the City Council to receive formal direction.
- Following feedback, we will refine the selected alternative for each park into a single, comprehensive Preferred Concept Plan.
- We will develop Preliminary Order of Magnitude Cost Estimates for both Preferred Concept Plans.

Task 2 Deliverables

- D2.1: We will deliver a Community Engagement Summary Report synthesizing in-person workshop data and online survey analytics.
- D2.2: We will provide three (3) Color Conceptual Design Alternatives per park in PDF format.
- D2.3: We will deliver two (2) Final Preferred Concept Plans accompanied by Preliminary Cost Estimates.
- D2.4: We will prepare presentation materials (PowerPoint/Boards) for Commission and City Council meetings.

TASK 2: COMMUNITY OUTREACH AND CONCEPT DEVELOPMENT EXAMPLES

City of Hemet - Weston Park Redesign - Reference Contact: Noah Rau, Interim City Manager, nrau@hemetca.gov
CWDG, now doing business as, RHA+CW, partnered with the City of Hemet to execute a robust, multi-channel community engagement campaign for the reimagining of the 4-acre Weston Park. The process began in September 2025 with a city-wide, multilingual online survey alongside a SWOT analysis with key municipal stakeholders to establish baseline community priorities. CWDG then conducted direct, interactive public outreach at four local events, the Hemet Concert Series, Rodeo Del Sol, Chalktober Art Festival, and the annual Christmas Parade, while concurrently engaging the Hemet Youth Council and launching a social media campaign that garnered nearly 50,000 views. This comprehensive approach captured feedback from over 450 initial survey respondents, revealing that 87% viewed safety as their primary barrier to park use, while a majority prioritized amenities like a splash pad, shade, and updated sports courts. Ultimately, this public input directly shaped three draft conceptual plans, which were brought back to the public for a vote where "Option 3" emerged as the definitive community choice with 76% of the ballot, allowing CWDG to deliver a final conceptual landscape plan rooted entirely in stakeholder consensus and approved by City Council.

TASK 2: COMMUNITY OUTREACH AND CONCEPT DEVELOPMENT EXAMPLES

City of Riverside - Villegas Park Splash Pad - Reference Contact: Pamela Galera, Director, PGalera@riversideca.gov

CWDG, now doing business as, RHA+CW, collaborated with the City of Riverside to lead a targeted bilingual community outreach campaign to design an accessible splash pad for the Casa Blanca community. The engagement process initiated in January 2024 with an on-site stakeholder site walk and review, which determined that moving the splash pad away from the existing pool and within 400 feet of the playground restrooms would optimize operations and accessibility. CWDG then deployed a bilingual public campaign spanning from February 26 to March 23, 2024, utilizing localized postal mailers sent to residents within a 1,000-foot radius and distributing neighborhood surveys directly through the Villegas Park Community Center. To ensure widespread local representation, CWDG's engagement team presented layout options and gathered feedback at the Villegas Park Advisory Committee and the Villegas Park/Casa Blanca Community Action Group, culminating in a highly attended booth at the park's Spring Egg Hunt event where nearly 100 families cast votes. The community overwhelmingly favored "Option A" (near the playground) with 69% approval, and survey results specifically prioritized a nature theme, bright blue and light poppy red colors, and complementary amenities like shade umbrellas and refillable water stations. Our team then coordinated with vendors to present three (3) design options for the splash pad based off of the community's input.

TASK 3: FINAL DESIGN AND CONSTRUCTION DOCUMENTS (PS&E)

3.1 90% Submittal Package

Upon approval of the Preferred Concept Plans, we will advance directly to a comprehensive 90% complete design package. We will prepare two (2) separate, standalone sets of Construction Documents, which we will develop to include:

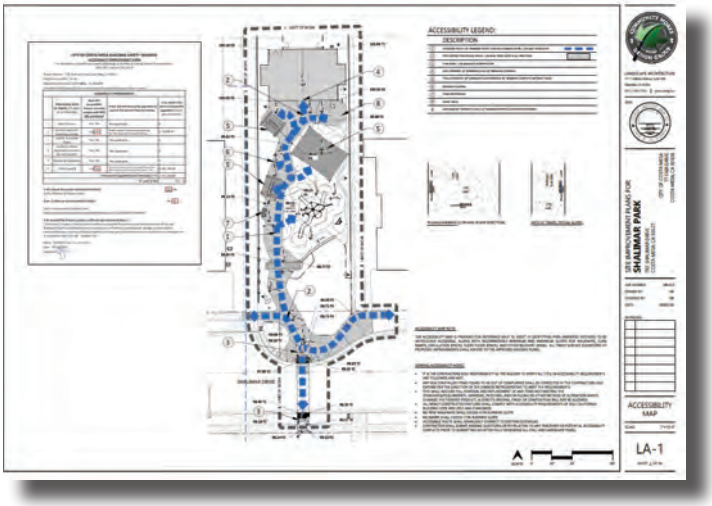
- Cover Sheets, Existing Site/Demolition Plans, Tree Protection Plans.
- Staking, Layout, and Material Plans.
- Grading, Surface Drainage, and Accessibility (ADA) Details.
- Detailed Irrigation Reconfiguration Plans - (If Required):
  We will design specific mechanical details for cutting, capping, and re-routing mainlines, lateral lines, and remote control valves to adapt to the new playground footprint without disrupting adjacent park zones.
- Construction Details and Playground Equipment Footing Profiles.
- 3D Color Renderings:
  We will create and deliver high-fidelity, illustrative 3D perspective renderings of the final approved playground layouts, including equipment, structures, and amenities, for City public relations use.
- Technical Specifications:
  We will prepare these in strict conformance with the City's "Brown Book" and regional "Greenbook" formats.
- 90% Engineer's Estimate & Market Analysis:
  We will compile detailed itemized cost estimates reflecting current market trends and material escalations to the mid-point of construction. Additionally, we will provide a formal OFCI / Cooperative Procurement Analysis evaluating cost-savings for direct purchasing via Sourcewell, BuyBoard, etc.

3.2 100% Final Bid-Ready Package

Upon receipt of plan check comments from the City's 90% review, we will address all edits, resolve discrepancies, and deliver the final, stamped 100% PS&E package ready for public bidding.

Task 3 Deliverables

- D3.1: We will deliver the 90% PS&E Submittal, including separate PDF Plan Sets, Specifications, 90% Cost Estimates, and the Procurement Analysis Report.
- D3.2: We will provide High-Resolution 3D Color Illustrative Renderings with a minimum of 2 views per park.
- D3.3: We will deliver the 100% Final Bid-Ready Submittal, consisting of two separate sets of wet-stamped, sign-off ready Plans, Final Specifications, and the Final Engineer's Estimate.



Left: Rendering of the City of Fresno's Dolores Huerta Park Playground, featuring agricultural theming, shade and fencing. 3D renderings allow stakeholders and communities to clearly communicate upcoming improvements and effectively show what each dollar is being spent on. Our team coordinated with stakeholders and the community to develop the design of the park.

Left: Rendering of the City of Hemet's Weston Park Redesign Play Area, including perimeter fencing which was an important aspect brought up by the community throughout the outreach process.

Below: Rendering of Shalimar Park in the City of Costa Mesa. Additionally, 100% Plan Accessibility Sheet developed and reviewed by our in-house CASp Team as part of all of our plan sets.

Reverse-Engineering from the Available Budget

Recognizing that the City of Cypress has established a strict, phased funding structure, with $750,000 allocated for Fiscal Year 2026-27 (covering design for both parks and construction for Veterans Park) and $550,000 for Fiscal Year 2027-28 (covering construction for Maple Grove North Park), RHA+CW utilizes a rigorous "Target Value Design" methodology. Instead of designing a concepts-first playground and attempting to cut costs later, we reverse-engineer our design choices directly from your baseline construction numbers.

1. Cost-Driven Design Development (Target Value Matrix)

At the project kickoff, our team will establish a granular cost model for each park, breaking down the available construction funds into specific allocation categories: playground equipment, safety surfacing, site amenities, path-of-travel accessibility compliance, and infrastructure adjustments. By designing to these specific monetary caps from day one, we eliminate the traditional redesign loops that delay schedules and inflate public agency expenditures.

Above: Roughly repaired concrete & other path of travel deficiencies at Maple Grove North Park will be examined to make within budget improvements. We will look to make similar integrations at Veterans Park.

2. Smart Material Specification & Global Supply Realities

We select materials, play structures, and resilient surfacing types based on current market lead times and localized labor rates. Our team tracks regional bidding trends to ensure our estimates reflect real-time contractor pricing in Orange County. We design using modular, durable components that offer competitive bidding options, preventing proprietary single-source specifications from driving up construction bids.

3. Seamless Phased Procurement (Standalone PS&E Packages)

To align perfectly with the City's multi-year fiscal constraints, RHA+CW will structure the contract documents to give the City maximum procurement flexibility:

- ***Distinct Bid Schedules:***
  We will deliver separate, standalone PS&E packages for Veterans Park and Maple Grove North Park.

- ***Additive Alternates:***
  Construction documents will be structurally organized with core playground goals as the base bid, utilizing "add-alternates" for non-essential amenities.

This strategic organization ensures that if market conditions fluctuate, the City retains absolute control over the bid award. You can confidently move forward with the Year 1 construction phase at Veterans Park while keeping the Year 2 Maple Grove North Park package perfectly aligned with its respective funding cycle.

Quality Control and Assurance Program

Quality is not a final step at RHA+CW; it is a structured, milestone-driven discipline embedded from kickoff through bid award. Because we routinely serve as the landscape plan checker for other public agencies (Highland, Banning, Perris, Rialto, Jurupa Valley, Corona, and Desert Recreation District), we review our own submittals through the same critical lens a reviewing agency will apply, so the City of Cypress receives plans that are already pre-checked against the issues that typically generate redlines.

Single Point Of QA/QC Accountability

Managing Partner Scott Rice (PLA #5111, CASp-709) serves as the dedicated Quality Assurance/Quality Control lead for this contract. No submittal leaves our office for Veterans Park or Maple Grove North Park without his sign-off, ensuring consistency across both independent PS&E packages.

Independent Senior Review At Every Milestone (30% / 90% / 100%)

At each major deliverable, a licensed principal who is not the production lead performs an independent redline review before the package is released to the City. This "second set of eyes" verifies design intent, technical accuracy, drawing-to-drawing coordination, and conformance with the City's "Brown Book," the "Greenbook," and the California Building Code (Title 24).

Dual-Layer Accessibility (CASp) Review

Every submittal is reviewed in-house by our Certified Access Specialists, Scott Rice (CASp-709) and Allison Rush (CASp-1080), for path-of-travel, accessible parking and route connectivity, and CBC Chapter 11B / ADA compliance. Catching accessibility conflicts during design, rather than during construction, is the single most effective way to protect the City's schedule and budget.

Playground Safety (CPSI) Review

Our Certified Playground Safety Inspectors, Greg Meek and Allison Rush, review each concept and construction set against CPSC Public Playground Safety Handbook guidance and ASTM standards (including F1487 for equipment, use zones, and fall heights, and F1292 for impact-attenuating surfacing). This ensures the play environments are not only inclusive and engaging but demonstrably compliant and safe.

Cross-Discipline Coordination Reviews

Before each milestone, our team back-checks landscape architecture against survey/civil (David Beckwith & Associates, Inc.), as-required structural (RTM Engineering Consultants), if-required geotechnical (GeoTek), and any irrigation reconfiguration (led by Irrigation Specialist David Black, PLA, C-27). This eliminates the layout, grading, and utility conflicts that commonly surface late in design.

Constructibility Review By Licensed Contractors

Our staff includes licensed C-27 landscape contractors (David Black and Dan Burkhart) and a former senior municipal landscape inspector. They review every set from a "boots-on-the-ground" constructibility standpoint, adding item-specific notes that reduce contractor "artistic license," limit RFIs, and produce a cleaner, more biddable package.

Estimate Quality Control

Our cost estimates are validated against real, current market data; we routinely request unit pricing from the two apparent low bidders on our active public-works projects and fold those figures into our in-house estimates, keeping the City's numbers aligned with real-time Orange County contractor pricing.

Document Control

All RFI, submittal, and change-order logs are version-controlled and shared with the City online via Basecamp, providing a single, transparent source of truth throughout design and construction support.

Developing, Maintaining, and Updating the Project Schedule

Developing

At the Task 1 kickoff we will issue a baseline project schedule (Deliverable D1.1) built around the City's phased funding structure, design for both parks plus Veterans Park construction in FY 2026-27, and Maple Grove North Park construction in FY 2027-28, and around the City's 90%-then-100% submittal track. Because we already hold active, accurate baseline data for Veterans Park from the adjacent Sports Court Improvements, we can compress typical startup time and protect early milestones.

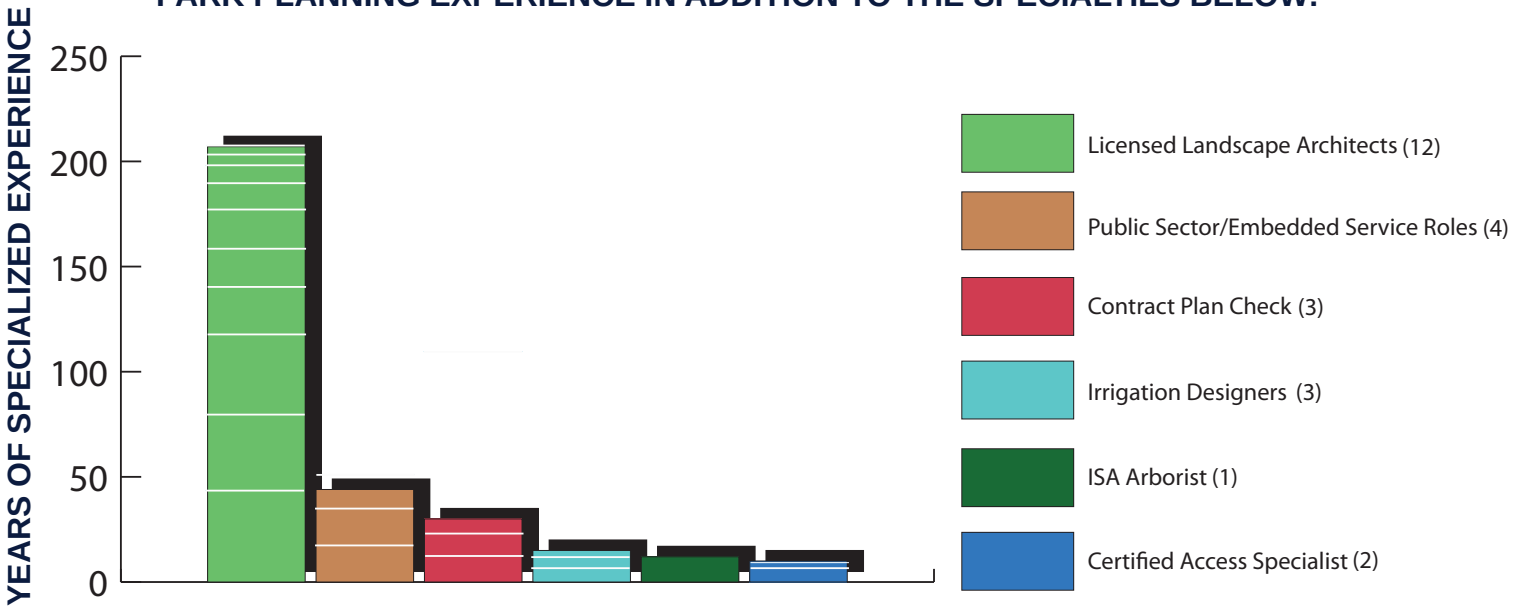
Maintaining

We will keep the schedule current through milestone tracking and short look-ahead updates, with progress, upcoming deliverables, and any open items visible to the City's Public Works team in Basecamp. Standing coordination meetings at each major plan milestone keep the City informed and decisions moving.

Updating

The schedule is revisited at every milestone and coordination meeting, with critical-path risks flagged early, particularly long-lead items such as playground-equipment manufacturing windows and any manufacturer-driven structural calculations. When a risk emerges, we bring the City a recommended mitigation rather than a surprise, preserving both the review track and the multi-year funding alignment.

ORGANIZATION QUALIFICATIONS



Our team offers twelve (12) Licensed Landscape Architects. Additionally, our staff holds a variety of Certifications that boost our abilities in the Landscape Architectural realm, including the following:

- Certified Access Specialist (CASp)
- Expert Irrigation Designers
- Certified Playground Safety Inspector (CPSI)
- SITES Accredited Professional (SITES AP)*
- LEED Accredited Professional (LEED AP)
- ISA Certified Arborist (ISA)

* via contract employee

Brian Espinoza	Landscape Designer/Spanish Community Engagement Assistant
Jocelyn Aguirre	Landscape Designer
Savannah Baca	Landscape Designer/ Community Engagement Assistant
Marissa Trout	Office Manager
Rebecca Rice	Executive Assistant

RHA+CW'S CURRENT TEAM OFFERS OVER 200 YEARS OF COMBINED PARK PLANNING EXPERIENCE IN ADDITION TO THE SPECIALTIES BELOW:

ORGANIZATION QUALIFICATIONS

Site Specific Master Planning & Concept Development:
Our team excels at developing master plans and multi-phased developments. In addition to vibrant master plan documents our team also develops photo realistic 3-D renderings as part of our design process to ensure a fully cohesive and integrated site. This process allows us to make proactive design decisions for vertical plane elements. We find the 3-D visuals also help garner excitement around important projects and are an integral tool for funding support. As a standard practice, we provide scaled 3-D modeling to help the community understand how the proposed park improvements will actually appear, to help identify any conflicts well ahead of construction.

Above: Top renderings: Dolores Huerta Park playground and thematic wind screen for Futsal Multi-Use Courts in Fresno, CA.

Community Outreach:
RHA+CW recognizes the need for all voices in a community to be heard and incorporated into thoughtful designs. Our team aims to ensure all members of the community have the opportunity to participate in community outreach and planning processes.

Our team is currently working on final touches for the design of Dolores Huerta Park for the City of Fresno. As part of the preliminary design process, CWDG, now doing business as RHA+CW worked with the City to create a community outreach campaign in 4 different languages (Spanish, Punjabi, Hmong and English), to best serve their community.

We employ what we call the "FUNnel" approach to take the multitude of "wants" and narrow them down to a final concept that reflects the best interests of the City and its constituents- and we do so in a FUN way! We typically start by gathering general information by means of online and mail-out surveys ahead of the public design meetings, with ongoing input from the City, so that we can begin to prepare informed design decisions to facilitate a conceptual design that reflects the community's interest and not OUR interests. We focus on developing a strong sense of pride for each project by focusing on a placemaking that incorporates the community's identity.

Meetings and Presentations:
Our team has experience presenting to a variety of City Staff, Boards and Commissions. Doug Grove, Scott Rice, and Analicia Escobar-Gomez all have extensive experience presenting to special commissions, City Councils and other committees. We also find commissions and committees are a great place for garnering project feedback and support. It is often a good place to start soliciting feedback by going where people are already meeting.

Accessibility Consulting
We provide comprehensive Certified Access Specialist (CASp) services to help ensure your property complies with applicable accessibility standards and regulations. Our evaluations identify potential barriers to access and offer clear, practical recommendations for achieving compliance with the Americans with Disabilities Act (ADA) and California accessibility codes. Whether for new construction, renovations, or existing facilities, we deliver detailed reports, guidance on corrective measures, and support throughout the compliance process, helping reduce legal risk while promoting inclusive and accessible environments for all users.

Feasibility Studies:
RHA+CW's most recent Feasibility Study was completed for the City of Ontario as part of our on-call services. For this our team worked with the City to identify and prioritize park amenity renovations with accessibility and available funding in mind.

Utility Search and Coordination:
Our team has extensive experience with utility coordination. In addition, our subconsultants will assist these coordination efforts.

Contract Documents:
Our team focuses on constructibility by creating Construction Drawings that will include site plans and details for all aspects of demolition, construction, civil, grading, planting, irrigation and specialty plans. Our construction details are crafted from a constructibility standpoint, supplemented with item-specific notes that reduce contractor "artistic license" and reduce likelihood of RFI's. Plans will identify recommended suppliers and products, with emphasis given to local sources, sustainable concepts, recycled/ recyclable materials, and durability of products. Each member of the RHA+CW team integrates their strengths, expertise and experience to ensure the best designs and most complete, constructible, contract documents are completed on-time and within budget for each project we take on.

Cost Estimating:
We regularly prepare detailed construction plans, details, specifications and estimates for park projects, and strive to make our construction drawing packages the most biddable and buildable across the industry. Since we perform Landscape Plan Check for various agencies, our finger remains on the pulse of the industry, and are able to glean tips and tricks to making plans more readable, maintaining a good balance of notes and clarifications without overwhelming the drawings with redundant information. We are regularly receiving bids for various public work projects. Upon receiving the bid we also request from the two apparent low bidders their unit prices. We incorporate these updated unit prices into our own in-house cost estimates. This allows our firm to provide up-to-date cost estimates for our clients.

Permits:
Our team has first hand plan check experience which comes in handy when it comes time to assist the City in obtaining approvals and/or permits from applicable agencies as needed. Our team has experience with the permitting processes with USACE, MSHCP, CDFW, and SCAQMD.

Storm Water Best Management Practices:
We work with Civil Engineers who have extensive experience with designing using the principles of storm water best management practices (BMP). RHA+CW has also worked on many park and trail projects that feature unique and design integrated storm water BMP's. Our work with our teams also include WQMPs and SWPPPs where applicable and required.

Environmental:
In addition to Analicia Escobar-Gomez's background with CEQA/NEPA Compliance for park planning and public landscape projects, she also has background in facilitating AB52 Tribal Consultations.

Design Expertise: RHA+CW has successfully completed over 35 parks and recreation projects in the past five (5) years. Our team stays up to date on water-wise landscaping and irrigation with our Certified Irrigation Designer taking the lead in staying up to date with new techniques and technologies.

Leadership In Energy And Environmental Design
LEED certified and a leader in the design of energy efficient, water-wise parks and public spaces RHA Community Works actively encourages the employment of environmentally friendly sustainable design principles. We encourage clients to use green technologies and design principles to achieve innovative, resource conserving, maintenance friendly public facilities which provide long term budget savings.

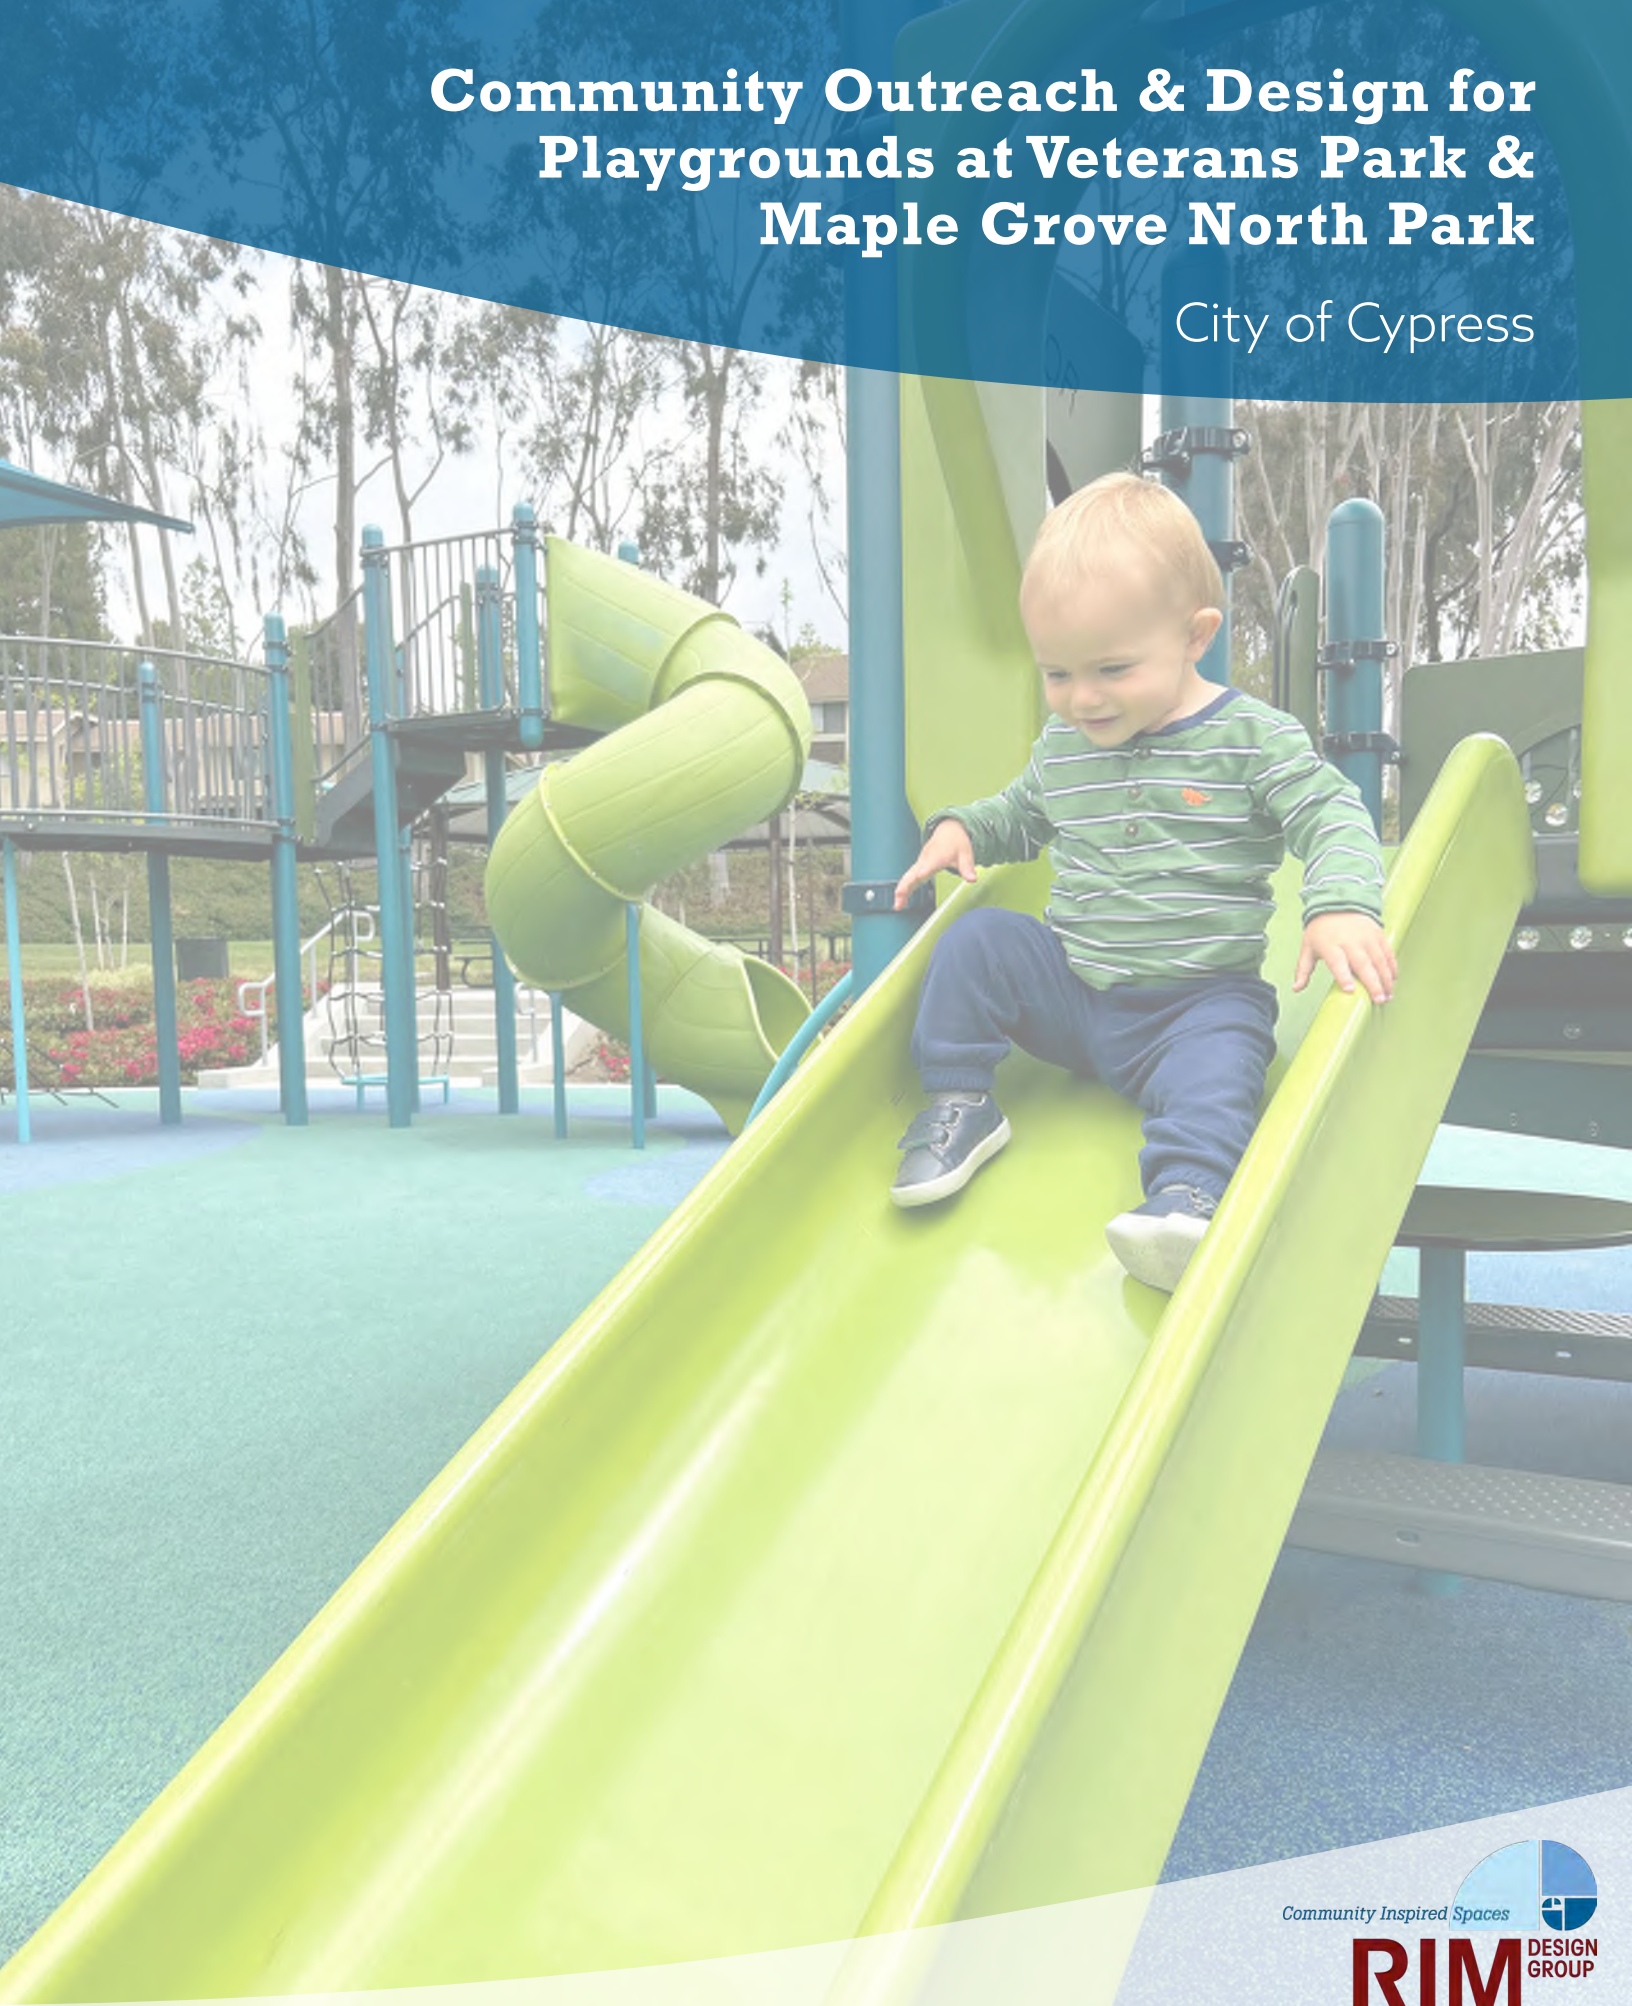
Plan Checking Services
We have provided plan-checking services to various agencies for over three decades and have experienced licensed individuals on staff to provide this function. We have provided these services for the Cities of Highland, Banning, Perris, Rialto, Jurupa Valley, Corona, as well as Desert Recreation District.

Construction Support:
What sets RHA+CW apart during the Construction Support/Administration phase is our first hand experience as a licensed contractor, allowing us to closely monitor and track scheduling, budgets, and upcoming inspections. We work hard to drive the construction schedule and keep contractors accountable. We will participate in construction meetings when requested, and at a frequency determined by the City. Based on our observations at the site and on the contractor's application for payment, we will assist in determining the amount owed to the contractor. We will review job drawings, as-builts, RFI's, samples and other submissions of the contractor for conformance with the design of the project and for compliance with the information given in the conformance contract documents, for the project. We will review change orders and submittals for approval and issuance by the City. We will respond to requests for information from the contractor, and issue field bulletins. We will maintain updated RFI, Change Order and Submittal logs, which will be shared online via Basecamp app.

ORGANIZATION QUALIFICATIONS

Award-Winning Design

RHA Community Works has received numerous accolades from respected organizations, including:



- American Society of Landscape Architects (ASLA)
- American Planning Association (APA)
- California Park and Recreation Society (CPRS)
- American Public Works Association (APWA)
- National Association of County Parks and Recreation Officials (NACPRO)

Notable award-winning projects include:

- Frisbie Park Expansion, Rialto
- Pikes Peak Park, Norco
- Lucinda Garcia Park, Monrovia
- Dolphin Park All-Abilities Playground, Carson
- Mercado Park, Perris
- California Citrus State Historic Park, Riverside
- Horseshoe Lake Park, Jurupa Valley
- Ayala Park, Bloomington
- Pico Park, Pico Rivera
- White Park, Riverside
- Aliso Viejo Ranch, Aliso Viejo
- Enchanted Hills Park, Perris
- Bob Belt's Beach Park, Needles
- Rancho Jurupa Park Expansion, Jurupa Valley
- Joe Sampson Park, Rialto
- Piru Skate Park, Piru, Ventura County
- Sycamore Highlands Park, Riverside

RE: RFQ – Community Outreach and Design for the Playground Equipment Replacement at Veterans Park and Maple Grove North Park

Dear Selection Committee:

RJM Design Group, Inc. is pleased to submit our qualifications to provide community outreach and design services for the playground equipment replacement projects at Veterans Park and Maple Grove North Park. RJM brings extensive experience designing and renovating playgrounds throughout Southern California, creating engaging, inclusive, and durable play environments that serve communities for years to come.

We understand the City's goal of replacing aging playground equipment with modern, ADA-accessible play environments that enhance recreational opportunities, improve accessibility, and provide safe, welcoming destinations for residents of all ages. Our team has extensive experience in creating exciting play areas while blending cost-conscious design solutions, integrating shade structures and site amenities, to provide complete construction documents for community park projects.

Community engagement is a key component of successful park design. RJM looks forward to working closely with City staff, residents, the Recreation and Community Services Commission, and City Council to develop conceptual alternatives that reflect community priorities while remaining responsive to project budgets and implementation goals. Our collaborative approach, combined with realistic cost estimating and strong project management, helps deliver projects that are both meaningful and achievable.

We appreciate the opportunity to submit our qualifications and look forward to partnering with the City of Cypress to create vibrant, accessible, and lasting playground environments at Veterans Park and Maple Grove North Park.

Sincerely,
RJM Design Group, Inc.

Zachary Mueting, LLA | Principal
zach@rjmdesigngroup.com | (949) 493-2600

Firm Organization, Credentials, & Background

Established in 1987, RJM Design Group has become a prominent, multi-disciplinary firm specializing in landscape architecture, planning, and design. We are committed to serving cities, public agencies, and organizations across California, by providing creative, sustainable solutions that address the unique needs of each community. Our team consists of skilled professionals with diverse backgrounds, including licensed landscape architects, designers, and planners. Known for our innovative designs, we have a strong ability to create community-inspired spaces that enhance the environment and bring people together. Each team member brings a wealth of knowledge and a passion for their craft, ensuring personalized, high-quality service at every stage of every project.

Principal-in-Charge
RJM Design Group, Inc.

Zachary Mueting is a visionary landscape architect and urban designer with over a decade of experience creating sustainable and engaging outdoor spaces. His portfolio includes diverse projects, from public parks and recreational facilities to urban landscapes, all designed to foster community connection and environmental stewardship. With a passion for blending innovation and aesthetics, Zachary's work emphasizes collaboration and a deep understanding of community needs, resulting in spaces that inspire and endure.
Zachary's exceptional technical design skills and ability to lead project teams have been integral to his success in delivering complex, high-impact projects. He combines advanced proficiency in design software and sustainable practices with strategic project management, ensuring that each initiative is executed efficiently and to the highest standards.

Andrew Steen, LLA
Associate Landscape Architect
RJM Design Group, Inc.

Andy Steen has been a dedicated member of RJM Design Group since 2014, bringing over 20 years of experience as a licensed Landscape Architect and certified arborist. With a strong background in landscape materials, construction, and detailing, Andy has developed a unique approach to blending traditional techniques with innovative, modern design ideas. His expertise spans across a wide range of projects, with a particular focus on imaginative and exciting playground design, where his design solutions emphasize both functionality and aesthetic appeal. Known for his exceptional project management skills, Andy ensures projects are completed on time and within budget while maintaining the highest quality standards. His extensive knowledge of plant species and horticulture further enriches his designs, allowing him to create sustainable, thriving landscapes. Andy's depth of experience and commitment to excellence make him an invaluable asset to any project.

Chris Curry
Glasir Design
Irrigation Design

GLASIR DESIGN

Chris Curry is an irrigation sub-consultant who understands the Model Water Efficiency Landscape Ordinance to determine the water use for a project and in-turn design the irrigation system to meet the requirements of the Ordinance. He is familiar with new water savings technology to meet the allowable water use requirements. Glasir Design will ensure the project shows the planting hydro zones to be compatible with the irrigation design. For the past 10 years Chris has prepared irrigation plans for RJM park projects. Chris has over 19 years' experience in irrigation design, landscape architecture, and landscape construction. His focus is on the efficient use of water in the landscape. He has been rewarded for his efforts by being chosen by the United States Environmental Protection Agency as the WaterSense Irrigation Partner of the year for 2011.

Boulder Pond Park

Rancho Mission Viejo, CA

Project Completed:	2025
Project Size:	10.6 acres
Design Cost:	$826,000
Construction Cost:	$7.1M

Client Reference

Jennifer Taylor
Senior Director Amenity and Landscape Design
City of Rancho Mission Viejo
(949) 240-3363 | jtaylor@ranchomv.com

Project Summary

Boulder Pond Park, located within a newly developed residential community in Rancho Mission Viejo, serves as a key recreational hub for residents of all ages, including an age-qualified 55+ neighborhood and multi-generational homes. Positioned along a main corridor, the park was designed to enhance community connections while integrating seamlessly with the adjacent pool facility. The project incorporates hillside-stabilizing plants for erosion control, while walking paths foster connectivity between neighborhoods and amenities.

The park offers a mix of passive and active recreation, highlighted by a striking split-level pond with a cascading waterfall, two docks for relaxation and interaction with the water, and a fish habitat for ecological balance. A nature-themed playground features water-inspired rubber surfacing and custom play elements, while seating areas, shaded gathering spaces, and site furnishings enhance comfort and usability. Several heritage oak trees were transplanted from within the development, providing instant shade and maturity to the landscape. Sustainability and environmental responsibility were central to the design, with a planting palette emphasizing native and low-water-use species to meet fuel modification requirements and ensure long-term resilience. By blending natural beauty with functional, multi-generational recreation, Boulder Pond Park transforms a challenging site into a dynamic and welcoming community destination.

Douglas A. Erdman, P.E.
Assistant City Engineer/
Engineering Services Manager
City of Lake Forest
(949) 282-5233 | derdman@lakeforestca.gov

Project Summary

As part of a massive overhaul of their existing park system, the City of Lake Forest elected RJM Design Group to redesign and renovate ten parks throughout the municipality. RJM kicked off the project by holding a series of community workshops to solicit ideas from residents for the desired amenities in their neighborhood parks.

RJM developed conceptual designs for the ten parks with the input from the community, which were reviewed, refined, and approved by the City prior to the start of construction document development. Bid documents were put together in an expeditious manner, allowing the City to prioritize the renovation of each park in a balanced schedule.

Cherry Park acted as the crown jewel of the renovations, designed to be an all inclusive facility for residents of all abilities to enjoy. The playful design boasts a variety of activities, and a splash of color, thrilling visitors of all ages, and drawing them into the fun.

Great Park Bosque Playground

Irvine, CA

Project Completed:	Anticipated 2026
Project Size:	0.94 acres
Design Cost:	$157,000
Construction Cost:	$2.6M

Client Reference
Chris Slama
Director of Community & Library Services
City of Irvine
(949) 724-6692 | cslama@cityofirvine.org

Project Summary

In an effort to provide more recreational amenities to the neighborhoods surrounding the northern portion of the Great Park known as the Bosque, the City of Irvine envisioned an adventure-styled playground oasis nestled within this naturalized landscape setting. Designed to inspire exploration, discovery, and active play, this spectacular playground includes a double zipline, hillside slides and climbers, a balance course for tots, challenging nest climbers for school-age children, multi-user spinners, and a wide variety of swings for all ages. The play area is uniquely situated across two terraces, creating opportunities for families to spread out, explore, and "whoosh" down the 10-foot-high embankment slides that connect the upper and lower levels.

Beyond its adventurous features, the playground is thoughtfully integrated into the surrounding Bosque. Lush shade tree plantings and conversational seating areas provide comfortable spots for rest, socializing, and family gatherings, while open sightlines ensure safety and visibility throughout the space. The design celebrates the natural topography and character of the park, transforming it into a vibrant recreational destination where kids and adults alike can play, relax, and connect with nature.

Crucero Park

Mission Viejo, CA

Project Completed:	2026
Project Size:	1.87 acres
Design Cost:	$92,000
Construction Cost:	$1.6M

Client Reference

Jerry Hill
Assistant City Manager
City of Mission Viejo
(949) 470-3085 | JHill@cityofmissionviejo.org

Project Summary

Crucero Park was redesigned to modernize the existing playground and address long-standing functional issues while enhancing overall park amenities. The project included updated play equipment, shade sails, rubberized surfacing, new seating locations, and refreshed planting, irrigation, and a bioinfiltration area. A major priority was resolving significant drainage problems in the original playground; this was accomplished through regrading and replacing the sand surfacing with a rubberized system to improve accessibility, safety, and long-term performance. The redesigned playground now serves a range of age groups, with dedicated equipment for toddlers, ages 2–5, and ages 5–12, along with a small sand play area to support tactile play.

A second phase expanded improvements beyond the playground, extending a concrete sidewalk around the north end of the park and creating seating nodes along the expansive turf lawn. This phase also introduced new lighting and updated planting to improve comfort, safety, and usability throughout the park. Together, the two phases transformed Crucero Park into a more functional, inclusive, and welcoming community space for families and visitors of all ages.

Associate Engineer, Public Works Engineering
City of Stanton
(714) 890-4204 | hyoo@stantonca.gov

Project Summary

Premier Park, located at 8340 Briarwood Street in the City of Stanton, is a 0.90-acre recreational park that was in need of renovations. The City of Stanton elected RJM Design Group to redesign and renovate Premier Park based on feedback from the community.

The park renovation that includes new tree house themed play equipment and surfacing with integrated shade and seating areas, dynamic exercise equipment, half-court basketball court, concrete walking pathways, split-rail fences, new irrigation system, sodded turf areas, security lighting, and California Friendly landscape plant material.

The park had its Grand Opening in October of 2024 and continues to be a well-visited park for Stanton residents and the local community.

RJM DESIGN GROUP

Project Understanding & Management Approach

APPROACH & UNDERSTANDING

RJM Design Group understands the City's goal of replacing and modernizing the playground facilities at Veterans Park and Maple Grove North Park with safe, inclusive, and engaging recreational environments. We recognize that the project extends beyond playground replacement and includes the opportunity to enhance accessibility, user comfort, shade, site amenities, and overall park experience while maintaining alignment with the City's budget. Our team understands the importance of delivering separate construction-ready documents for each park while providing accurate cost estimates and practical solutions that maximize long-term value for the City.

To achieve these objectives, RJM will lead a collaborative planning and design process beginning with a comprehensive assessment of existing site conditions, identifying opportunities and constraints at each site. We will engage residents, City staff, the Recreation and Community Services Commission, and City Council through a combination of community workshops, online outreach, and stakeholder presentations to ensure the final designs reflect the needs and desires of the community. Using this feedback, RJM will develop multiple conceptual alternatives for each park, refine the preferred design through ongoing coordination with City staff, and prepare complete construction documents that meet current accessibility, safety, and City standards. Our goal is to provide a seamless process from community visioning through bid-ready construction documents.

TASK 1 — PROJECT INITIATION & SITE ASSESSMENT

To initiate the design process, RJM will conduct a project kickoff meeting with City staff to review the goals, schedule and order of communication between the design team and the City, in addition to discussing design limitations and City regulatory requirements. At this time, we can also perform thorough field reviews of the existing conditions with site visits at each of the two parks. To dive deeper into the process, we will conduct a visual field investigation to photo document existing conditions including public entry points and circulation patterns, ADA site access, sun exposure, and any potential conflicts. During our field investigation, we will also analyze how the space is currently being used, accessed, and experienced by the community. An aerial topographic and boundary survey with 1 foot contours will be conducted to be used as the base map for the design of the project. A field survey to complement the aerial survey will be performed before the start of Construction Documents to ensure that all join conditions are addressed for ease of constructability and accessibility.

MEETINGS:	*One (1) Project Kickoff Meeting*
DELIVERABLES:	*Aerial Survey*
	Site Analysis Exhibits

Project Understanding & Management Approach (continued)

TASK 2 — COMMUNITY OUTREACH & CONCEPT DEVELOPMENT

With sound base information, RJM can generate a site plan and conceptual amenity option boards that can be presented to the community for their feedback. RJM will facilitate two community workshop meetings, one for each park, that will allow residents the opportunity to provide input on the play features and park elements to truly give the community the opportunity to help design "their" park. In addition, RJM will produce a project website for each park that will host an online survey soliciting feedback from residents who are unable to attend the in-person workshops. The project websites will include project updates and can be shared by the City through their own social media channels to ensure clear communication with the whole community. RJM will then prepare a summary of the feedback received in order to develop our preliminary design layouts.

RJM will develop three (3) preliminary design concept/site plans for each park that are reflective of the community feedback received in concert with the site opportunities/constraints. We will incorporate universal design principles to accommodate all user groups and prepare a complete conceptual design package identifying the play surfacing, play equipment elements, accessible path of travel and identify any other site improvements that should be included within the project scope, (i.e. replacement of site furnishings, seating, picnic amenities, landscape improvements, etc.). This conceptual design package will be shared with City staff for review and comment and RJM will revise the conceptual design to the comments received. These revised conceptual designs complete with 3D layouts of the play equipment, can then be presented to the Recreation and Community Services Commission as well as City Council for review, discussion and ultimately selection. With City Council approval of the conceptual design layout we can proceed into the next phase of construction document preparation.

MEETINGS:	*Two (2) Community Workshop Meetings*
	One (1) City Staff Review Meeting
	One (1) Recreation and Community Services Commission
	One (1) City Council Presentation
DELIVERABLES:	*Community Workshop Presentation with Option Boards*

	Community Outreach Summary
	Three (3) Conceptual Design Layouts for Each Park
	Refined Conceptual Design Package
	Refined 3D Rendered Images of Play Equipment
	Preliminary Cost Estimate

Project Understanding & Management Approach (continued)

TASK 3 — FINAL DESIGN & CONSTRUCTION DOCUMENTS

Upon approval of the conceptual design package, RJM Design Group will proceed with the preparation of comprehensive Construction Documents, advancing directly to the 90% progress milestone. Every progress submittal will include the project plans, technical specifications in Microsoft Word format, and project cost estimate in Microsoft Excel (Plans, Specifications, and Estimate – PS&E). Construction documents will be developed in AutoCAD with plans comprising of a demolition plan, grading and drainage plans, site construction plan, and all necessary construction details.

Technical Specifications will be formatted in the City of Cypress Brown Book Specifications as well as the Standard Specifications for Public Works Construction "Greenbook" organization. All plans, specifications, and details will comply with ASTM F1487, ASTM 1951, ADA Standards for Accessible Design, and all applicable federal, state, and local codes. All designs will optimize constructability and cost efficiency while ensuring compliance with City standards and all regulatory requirements. Cost saving options such as City direct purchase or other cooperative buying agreements will be presented with cost estimates that recognize current market trends and potential escalations.

The 90% progress PS&E will be submitted to City staff for their review and comment followed by a review meeting to examine the comments provided. The final 100% complete submittal package will incorporate City review comments, and quality assurance/quality control reviews will be performed internally prior to each submittal to verify compliance with accessibility, safety, and City standards prior to each submittal. An additional review meeting after the 100% complete submittal can be coordinated to incorporate any final revisions to ensure the construction documents are ready for bidding.

MEETINGS:	*90% Progress PS&E Virtual Review Meeting*
	100% Complete PS&E Virtual Review Meeting
DELIVERABLES:	*90% Progress PS&E Construction Document Submittal*
	100% Complete PS&E Construction Document Submittal

PROJECT MANAGEMENT

RJM will develop a detailed project schedule at project initiation that identifies all major milestones, community outreach activities, City review periods, stakeholder presentations, and construction document submittals. During the kickoff meeting, we will work closely with City Staff to confirm project priorities, establish communication protocols, identify critical path items, and define key decision points. Throughout the design process, RJM's project manager will serve as the primary point of contact, facilitating regular coordination with City staff to review progress, discuss design considerations, address comments, and proactively resolve issues before they impact the schedule. We will continuously monitor project progress against established milestones, provide schedule updates at each project meeting, and adjust timelines as necessary to accommodate stakeholder input, City review comments, or unforeseen site conditions. Through proactive project management, clear communication, and close collaboration with City Staff, RJM will maintain project momentum and ensure the successful delivery of community-supported, bid-ready construction documents.

Project Understanding & Management Approach (continued)

QUALITY ASSURANCE / QUALITY CONTROL

RJM maintains a rigorous QC/QA program that is integrated throughout the design process to ensure the delivery of accurate, coordinated, and constructible documents. Quality control begins at project initiation with the establishment of project-specific design criteria, code requirements, accessibility standards, and City design standards. Throughout each phase of the project, the project manager coordinates regular internal reviews to verify consistency between the design intent, community feedback, cost estimates, and project budget. Prior to each major submittal, including the conceptual design package, 90% PS&E, and 100% PS&E, senior staff not directly responsible for daily production conduct independent QA reviews to evaluate plan completeness, technical accuracy, constructability, ADA compliance, and conformance with applicable ASTM standards, City requirements, and industry best practices.

Our QC/QA process also includes interdisciplinary coordination reviews, document cross-checking, and cost estimate reconciliation to identify and resolve potential conflicts before submittal. By combining experienced technical oversight, multiple levels of review, and proactive coordination with City Staff, RJM consistently delivers high-quality construction documents that minimize change orders, reduce construction risk, and support a smooth bidding and implementation process.

QUALITY ASSURANCE / QUALITY CONTROL

A key differentiator of RJM's team is the specialized playground expertise provided by Andy Steen, who will serve as Project Manager for this effort. Andy is a Certified Playground Safety Inspector (CPSI), providing the project with an in-depth understanding of playground safety requirements, risk management, accessibility standards, and industry best practices. His expertise allows RJM to evaluate existing playground conditions, guide the selection and layout of play equipment, and ensure that all proposed improvements comply with ASTM standards, ADA requirements, and current playground safety guidelines. By combining technical playground knowledge with extensive experience in park planning and community engagement, RJM is uniquely qualified to deliver safe, inclusive, and community-supported playground environments that provide long-term value to the City of Cypress.

Contract Exceptions

RJM DESIGN GROUP, INC. has established a reputation of integrity and professionalism within the landscape architecture industry. Our due diligence in performing client services begins with proposal preparation, contract review and negotiation, and carries through to project completion.

We have reviewed the Standard City Contract Services Agreement for the Veterans Park and Maple Grove North Park project with the City of Cypress. As part of this review, we identify items which may not conform to the terms of our insurance coverage and/or to California Civil Code section 2782.8 which regulates contracts between public agencies and design professionals. Upon selection for this project, we would like to request the following modifications pertaining to the Agreement in order to arrive at mutually agreeable terms. All suggested additions and/or deletions to the contract language are in blue.

CITY OF CYPRESS

CITY COUNCIL REPORT

City Council Regular **7.**

FROM: Nick Mangkalakiri, Director of Public Works

DATE: 07/14/2026

SUBJECT: **Accept the Traffic Signal Improvements at Valley View Street and Plaza Drive, Project 353**

RECOMMENDATION

1. Accept the Traffic Signal Improvements at Valley View Street and Plaza Drive, Project 353, in the amount of $91,875 and approve the final payment of $4,593.75 to Yunex, LLC.; and

2. Authorize the City Clerk to file a Notice of Completion with the County Recorder.

DISCUSSION

In January 2025, the City Council awarded a construction contract to Yunex, LLC to install a new traffic signal pole and upgrade existing equipment with new signal heads, accessible pedestrian push buttons, traffic monitoring cameras, vehicle detection loops, safety light fixtures, and other items to improve the efficiency of the intersection at Valley View Street and Plaza Drive. Due to the long lead time for the traffic signal pole, the project started in April 2026 and was completed in May 2026, within the approved budget. The improvements were funded by Goodman North America as part of the conditions of approval for their project at 5757 Plaza Drive.

Public Works will release the Labor and Materials Bond and the Faithful Performance Bond upon expiration of the required lien period.

BUDGET IMPACT

The estimated cost of construction and inspection was $113,710, and final project costs total $99,336.72, as summarized in the attached table. Sufficient amounts are budgeted in the City's Lighting District Fund, which was funded by Goodman North America for signal improvements associated with the 5757 Plaza Drive development.

LEGAL REVIEW

The City Attorney has reviewed this staff report.

APPROVED BY: Shannon DeLong, City Manager

Attachments

CITY OF CYPRESS

CITY COUNCIL REPORT

City Council Regular **8.**

FROM: Nick Mangkalakiri, Director of Public Works

DATE: 07/14/2026

SUBJECT: **Acceptance of Sidewalk Easement at 10652 Walker Street.**

RECOMMENDATION

1. Accept a Grant of Permanent Easement for public sidewalk from North Bayport Industrial Park II, LTD., located at 10652 Walker Street; and

2. Authorize the City Manager to execute the Certificate of Acceptance and direct the City Clerk to record the easement document with the County Recorder.

DISCUSSION

The Tuffli Company (Tuffli), a private real estate investment, asset management, and land development firm, is relocating its corporate headquarters from Torrance to 10652 Walker Street in Cypress. The property is owned by North Bayport Industrial Park II, LTD.

As part of Tuffli's tenant improvement project, Public Works identified the need for sidewalk and curb ramp improvements along Walker Street at Executive Drive to provide ADA-compliant pedestrian access. Construction of these improvements requires a permanent public sidewalk easement from the property owner, who has agreed to grant the easement to the City.

Acceptance of the Grant of Permanent Easement will allow the City to maintain public access to the new ADA-compliant sidewalk and curb ramp improvements.

BUDGET IMPACT

There is not any impact to the City's budget. The property owner is responsible for the construction cost of the sidewalk improvements. After installation of the Improvements, the City will be responsible for any maintenance, repair, or replacement activity.

LEGAL REVIEW

The City Attorney has approved the easement as to form.

APPROVED BY: Shannon DeLong, City Manager

GRANT OF PERMANENT EASEMENT
(Sidewalk Improvements)

This Grant of Permanent Easement ("**Agreement**") is made this _____ day of ____, 2026 by North Bayport Industrial Park II, Ltd., a Texas limited partnership ("**Grantor**") in favor of the City of Cypress, a California charter city ("**Grantee**"). Grantor and Grantee may separately and collectively be referred to herein as "**Party**" and/or "**Parties**".

RECITALS

A. Grantor owns that certain real property located at 10652 Walker Street in the City of Cypress, County of Orange, State of California (APN 241-112-08) (the "**Property**").

B. The Property is the servient tenement for the Easement (defined below) granted in this Agreement.

C. Grantor has applied for site plan approval for the development of the Property and, in connection therewith, Grantee has required Grantor to expand the existing sidewalk on the southwest side of the Property ("**Sidewalk Expansion**") to provide required ADA clearance around an existing light pole and fire hydrant and to bring that portion of the sidewalk into compliance with the Americans with Disabilities Act of 1990 (the "**Act**").

D. Grantor agrees to grant to Grantee an easement for the Sidewalk Expansion and related improvements in, on and about the southwest Property as legally described on Exhibit A and further visually depicted on Exhibit B, attached hereto and incorporated herein ("**Sidewalk Easement Area**").

NOW, THEREFORE, for a valuable consideration the receipt of which is hereby acknowledged, Grantor and Grantee agree as follows:

1. Recitals. The above Recitals are true and correct and are incorporated herein.

2. **Effective Date; Duration.** This Agreement shall be effective ("**Effective Date**") upon recordation in the Official Records of Orange County ("**Official Records**"). This Agreement shall remain in full force and effect in perpetuity.

3. **Grant of Easement.** Grantor hereby grants and conveys to Grantee a non-exclusive, perpetual public use easement over the Sidewalk Easement Area for the purpose of public pedestrian access and use (the "**Easement**"). Grantor, its successors, assigns, tenants, licensees, and invitees shall retain the right to use the Sidewalk Easement Area consistent with its public pedestrian purpose. Grantee's acceptance of the Easement constitutes Grantee's acceptance of jurisdiction over the Sidewalk Easement Area for public sidewalk purposes.

4. **Construction of Improvements.** Grantor, at Grantor's sole cost and expense, shall construct the sidewalk improvements and related appurtenances (collectively, "**Improvements**") in accordance with the plans and specifications reasonably approved by Grantee and in a good and workmanlike manner in compliance with all applicable permits and the Act. Upon completion of the Improvements and Grantee's acceptance thereof, all the Improvements shall be owned by Grantee free and clear of any and all liens.

5. **Maintenance of the Easement Area.** After installation of the Improvements and Grantee's acceptance of same, Grantee shall be responsible for (a) maintaining the Sidewalk Easement Area and all Improvements in good order, condition and repair, and in compliance with the Act; (b) promptly repairing any and all damage to the Property and Improvements thereon arising from Grantee's exercise of its rights hereunder or the ordinary public use of the Sidewalk Easement Area, ordinary wear and tear excluded; (c) restoring the Property, including any landscaping or surface improvements disturbed thereby, to substantially the same condition existing prior to any maintenance, repair, or replacement activity undertaken by Grantee within the Sidewalk Easement Area, ordinary wear and tear excluded.

6. **Non-Interference.** Grantor agrees not to construct or permit the construction of any building, structures, permanent or temporary barriers, fences, or obstructions of any kind or nature that interfere with or obstruct the function or use of the Sidewalk Easement Area for the purposes described in this Agreement.

7. **Grantor Representations and Warranties.** Grantor represents and warrants to Grantee that, as of the Effective Date, Grantor has authority to execute this Agreement.

8. **Modification or Amendment.** This Agreement may only be amended or modified in writing executed by Grantor and Grantee and recorded in the Official Records of Orange County.

9. **Notice.** Any notice, demand, request, consent, approval, or communication that either Party desires or is required to give to the other shall be in writing and be served personally, sent overnight by a national overnight delivery service or sent by first class mail, postage prepaid, addressed as follows:

To Grantor:	North Bayport Industrial Park II, Ltd. 2245 W. 190th Street Torrance, California 90504 Attn: Brandon Morrell
To Grantee:	City of Cypress 5275 Orange Avenue Cypress, California 90630 Attn: Director of Public Works
With a Copy to:	Aleshire & Wynder, LLP 5275 Orange Avenue Cypress, California 90630 Attn: City Attorney

or to such other address as either Party shall designate by written notice to the other. Notice shall be deemed effective (i) upon delivery in the case of personal delivery; (ii) upon the day following deposit with the overnight delivery service; or, (iii) three (3) business days after deposit in the United States mail.

10. Entire Agreement. This Agreement together with the exhibits hereto, each of which are incorporated herein by this reference, constitutes the entire agreement of the Parties with respect to the subject matter hereof and supersedes all prior oral or written agreements with respect to same.

11. Governing Law; Venue. This Agreement shall be construed in accordance with the laws of the State of California in effect at the time it is recorded, and the jurisdiction for any action shall be in Orange County.

12. Attorney's Fees. In the event of any litigation or other legal proceeding including, but not limited to, arbitration or mediation between the Parties arising from this Agreement, the prevailing Party will be entitled to recover, in addition to any other relief awarded or granted, its reasonable costs and expenses (including attorney's fees) incurred in the proceeding.

13. Construction. This Agreement shall be construed according to its fair meaning as if prepared by all Parties to this Agreement. Headings used in this Agreement are provided for convenience only and shall not be used to construe meaning or intent.

14. No Waiver. The failure of either Party to enforce any term, covenant, or condition of this Agreement on the date it is to be performed shall not be construed as a waiver of that Party's right to enforce this, or any other, term, covenant, or condition of this Agreement at any later date or as a waiver of any term, covenant, or condition of this Agreement.

15. Binding Effect. Each and all of the covenants and conditions shall be binding

on and shall inure to the benefit of the Parties, and their successors, heirs, personal representatives, or assigns. This Easement shall run with the land and be binding upon Grantor and its successors and assigns; provided, however, that this Section shall not restrict the transfer of the Property or the Easement in connection with a conveyance of the Property.

16. Counterparts. This Agreement may be executed in one or more identical counterparts and all such counterparts together shall constitute a single instrument for the purpose of the effectiveness of this Agreement.

17. Authority. Each person warrants that the individuals who have signed this Agreement have the legal power, right, and authority to make this Agreement and bind each respective entity.

18. Exhibits. Exhibits A and B, attached hereto are incorporated herein by reference.

CITY OF CYPRESS

CITY COUNCIL REPORT

City Council Regular **9.**

FROM: Jeff Draper, Director of Recreation and Community Services

DATE: 07/14/2026

SUBJECT: **Accept a Donation of 75 Veteran Challenge Coins from GFWC Woman's Club of Cypress**

RECOMMENDATION

Accept a donation of 75 Veteran Challenge Coins valued at $750 from the GFWC Woman's Club of Cypress.

DISCUSSION

The City of Cypress Veterans Recognition Ad Hoc Committee led by Council Members Peat and Strong Carnahan identifies and recommends community veterans to be honored by the City Council on a quarterly basis or as identified. The honoring of veterans at City Council meetings has been ongoing since it launched in 2013.

In honor of America 250 and the City of Cypress's 70th birthday, the Veteran Recognition committee recommended a challenge coin be designed to acknowledge active military personnel and veterans at the July 3, 2026, Salute to America event.

Council Member Peat requested a donation from the General Federation of Women's Clubs (GFWC) Women's Club of Cypress as part of their Veteran Appreciation project. The GFWC Woman's Club of Cypress, a 501(c)(3) nonprofit organization consisting of over 120 members, agreed to donate 75 Veterans challenge coins.

The challenge coins will be provided to veterans honored at future Cypress City Council meetings.

BUDGET IMPACT

There is no cost associated with the donation of the veteran challenge coins.

LEGAL REVIEW

None required.

CITY OF CYPRESS

CITY COUNCIL REPORT

City Council Regular **10.**

FROM: Nick Mangkalakiri, Director of Public Works

DATE: 07/14/2026

SUBJECT: **Public Hearing to Renew the Cypress Corporate Center Landscape Maintenance District No. 1 for FY 2026-27**

RECOMMENDATION

Adopt a Resolution renewing Cypress Corporate Center Landscape Maintenance District No. 1 for FY 2026-27, pursuant to the Landscaping and Lighting Act of 1972.

DISCUSSION

The City of Cypress formed a Maintenance District in 1985 covering all properties bounded by Katella Avenue, Knott Street, Valley View Street, and the Stanton Storm Channel (Channel). The Maintenance District provides maintenance of the landscape berm adjacent to the Channel. The City maintains the berm primarily through a contract, which includes trimming plants four times a year and irrigation repairs.

Nineteen parcels owned by four property owners are assessed annually on a per-acre basis. The FY 2026-27 assessment is $109,463 and the attached Resolution authorizes the assessment of Cypress Business Park properties adjacent to the Channel for berm maintenance. A copy of the May 12, 2026, Agenda Report approving the City Engineer's Report and the FY 2026-27 renewal of the Cypress Corporate Center Landscape Maintenance District No. 1 is attached. Affidavits of posting and publication of the public hearing notices are on file in the City Clerk's office.

BUDGET IMPACT

The maximum assessment for FY 2026-27 is $109,463 and covers the majority of the $143,068 budget, including indirect and direct costs from the City and the County Auditor-Controller. Accumulated fund balance amounts from prior year assessments are available in the Corporate Center Maintenance District No. 1 Fund to pay the $33,605 of projected costs expected to exceed the FY 2026-27 assessment.

Resolution

May 12 Agenda Report

RESOLUTION NO.

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF CYPRESS, CALIFORNIA, ORDERING THE RENEWAL OF THE CYPRESS CORPORATE CENTER LANDSCAPE MAINTENANCE DISTRICT NO. 1 FOR FISCAL YEAR 2026-27, PURSUANT TO THE LANDSCAPING AND LIGHTING ACT OF 1972, AND CONFIRMING THE DIAGRAM AND ASSESSMENT THEREOF

WHEREAS, the City Council has, by Resolution No. 7046, declared its intention to order the construction and maintenance of a certain landscaped berm in connection with the development of the Cypress Business Park, and to modify Cypress Corporate Center Landscape Maintenance District No. 1 under the provisions of the Landscaping and Lighting Act of 1972, i.e., Part 2 of Division 15 of the California Streets and Highways Code (herein "the Act"); and

WHEREAS, in Resolution No. 7046, the City Council fixed July 14, 2026, at the hour of 6:00 p.m. in the City Council Chamber located at City Hall, 5275 Orange Avenue, in the City of Cypress, California, as the time and place for hearing protests and objections to the improvements proposed to be renewed for Fiscal Year 2026-27, and/or to the proposed assessment; and

WHEREAS, the City Council has approved a report prepared by the City Engineer under and pursuant to the Act and, in particular, Section 22565 et seq. of the Act; the City Engineer's Report (herein "the Report"), and said Report has been filed with the City Clerk of the City of Cypress and has been available for review by the property owners within Cypress Corporate Center Landscape Maintenance District No. 1; and

WHEREAS, the City Clerk has given the notices of the passage of the Resolution of Intention, Resolution No. 7046, the filling of the Report, and of the time and place and purpose of said hearing, substantially as required by Sections 22626 et seq. of the California Streets and Highways Code; and

WHEREAS, the City Clerk has filed with the City Council an affidavit setting forth the time and manner of the compliance with the requirements of the Act for publishing and mailing of said notices; and

WHEREAS, at the time and place stated in said notices, a hearing was duly held by the City Council; during the course of said hearing, the Report was duly presented and considered; all written protests and objections received, if any, were duly presented, read, heard, and considered; all persons appearing at said hearing and desiring to be heard in the matter of said Report were heard; a full, fair, and complete hearing has been had; and the City Council is fully informed in the premises; and

WHEREAS, the City Council has examined and considered the assessment proposed in said Report and the proceedings prior thereto, and the evidence presented at said hearing.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF CYPRESS DOES HEREBY FIND, DETERMINE, RESOLVE AND ORDER AS FOLLOWS:

SECTION 1. The hearing referred to in the recitals hereof has been duly, held, and each and every step in the proceedings prior to and including the hearing has been duly and regularly taken. The City Council is satisfied with the correctness of the Report, including the assessment and diagram, the proceedings and all matters relating thereto; and any and all protests, objections, or appeals are hereby overruled and denied. The City Council orders the renewal of Cypress Corporate Center Landscape Maintenance District No. 1 for Fiscal Year 2026-27, as described in Resolution No. 7046, and confirms the proceedings and said assessment.

SECTION 2. The City Council orders the proposed improvements to be made in accordance with said Report and these proceedings.

SECTION 3. The City Council determines that the amount of the assessment shown in said Report, i.e. $109,463 should be confirmed; and said assessment is confirmed and fixed in the amount of $109,463.

SECTION 4. The City Council determines that the amounts to be assessed against the individual parcels shown on the assessment diagram contained in said Report are hereby approved and confirmed; and said City Clerk is directed to endorse the fact and date of such approval on said Report.

SECTION 5 The City Clerk is directed to file said diagram and assessment with the County Auditor as required by Section 22641 of the California Streets and Highways Code.

PASSED AND ADOPTED by the City Council of the City of Cypress at a regular meeting held on the 14th day of July, 2026.

_____

_____

CITY CLERK OF THE CITY OF CYPRESS

CITY OF CYPRESS

CITY COUNCIL REPORT

City Council Regular Item # 4.

FROM: Nick Mangkalakiri, Director of Public Works

DATE: 05/12/2026

SUBJECT: **Approve the City Engineer's Report and Adopt a Resolution Declaring the City Council's Intent to Renew Cypress Corporate Center Landscape Maintenance District No. 1 following a July 14, 2026 Public Hearing**

RECOMMENDATION

1. Approve the City Engineer's Report for the Cypress Corporate Center Landscape Maintenance District No. 1 for Fiscal Year 2026-27; and

2. Adopt the attached Resolution declaring the City Council's intention to order the renewal of Cypress Corporate Center Landscape Maintenance District No. 1 for maintenance of the landscape and irrigation system and setting the public hearing for July 14, 2026.

DISCUSSION

The City formed a Maintenance District in 1985 covering all properties bounded by Katella Avenue, Knott Street, Valley View Street, and the Stanton Storm Channel. The Maintenance District provides for maintenance of the landscape berm adjacent to the Channel. The City maintains the berm primarily through a contract, which includes trimming plants four times a year and irrigation repairs.

Nineteen parcels owned by four property owners are assessed annually on a per-acre basis (Attachment E and F of the City Engineer's Report). The assessment funds the maintenance and irrigation of the landscape berm. The annual assessment is a routine process established 40 years ago.

Pursuant to the Landscaping and Lighting Act, the City Engineer prepares an annual report to file with the City Clerk outlining the Maintenance District renewal. The recommended Resolution approves the City Engineer's Report and declares the City Council's intention to renew Cypress Corporate Center Landscape Maintenance District No. 1 for FY 2026-27 and sets the public hearing for July 14, 2026.

BUDGET IMPACT

Renewal includes a maximum assessment of $109,463 for the parcels adjacent to the berm. The assessment is distributed based on each parcel's square footage. The assessment reflects a 3.4% CPI increase from FY 2025-26. Estimated FY 2026-27 maintenance costs and indirect support from

the City are $143,068, which exceeds the assessment by $33,605. The Maintenance District No. 1 Fund has sufficient accumulated balances available from prior year assessments to pay for costs above the recommended FY 2026-27 assessment.

LEGAL REVIEW

The City Attorney has reviewed this staff report.

City Engineer's Report

Resolution

CITY OF CYPRESS

CITY COUNCIL REPORT

City Council Regular **11.**

FROM: Alicia Velasco, Planning Director

DATE: 07/14/2026

SUBJECT: **Public Hearing to Consider Los Alamitos Race Course Specific Plan 3.0 Buildout**

RECOMMENDATION

1. Adopt the attached Resolution certifying the Environmental Impact Report, and approving Findings, a Statement of Overriding Considerations, and Mitigation Monitoring and Reporting Program; and

2. Adopt the attached Resolution approving Vesting Tentative Tract Map No. 19247; and

3. Introduce for first reading of an Ordinance approving a Development Agreement by title only and waive further reading.

SUMMARY

Los Alamitos Race Course (LARC) has applied for approval of Vesting Tentative Tract Map No. 19247 and a Development Agreement to facilitate the future phased buildout of the Cypress Town Center and Commons Specific Plan 3.0 area. The map area includes approximately 151.60 acres, including LARC property and property associated with Grace Church, and would divide the site into 14 numbered lots and related lettered lots consistent with the Specific Plan.

No residential or commercial construction is proposed at this time. The Environmental Impact Report evaluates a future buildout scenario of up to 1,791 residential units, up to 440,000 square feet of commercial space, approximately 11 acres of additional public park space, the extension of Moody Street, and a new Vessels Circle/Moody Street intersection.

Staff recommends approval of the project because it is consistent with the voter-approved Cypress Town Center and Commons Specific Plan 3.0, the Cypress

Municipal Code, and the Subdivision Map Act. The requested approvals establish the framework for future phased development, including the timing and responsibility for public improvements, park improvements, drainage improvements, bicycle and pedestrian connections, maintenance obligations, and related infrastructure.

DISCUSSION

The project site is located within the Cypress Town Center and Commons Specific Plan 3.0 area, which includes the Los Alamitos Race Course (LARC). The racetrack was developed in the 1950s and has operated for decades as a major quarter horse racing facility. The property has been subject to several voter-approved land use measures because Measure D, approved by Cypress voters in 1987, requires voter approval for certain land use changes beyond the zoning in place at that time.

Over the years, voters have considered several measures affecting the use of the property. Measure L was approved in 2012 and allowed commercial and senior housing along Katella Avenue. Measure GG, which would have allowed residential development within the racecourse property, was rejected in 2016. Measure A was approved in 2018 and created the Cypress Town Center and Commons (CCTC) Specific Plan 2.0. In 2024, voters approved Measure S, creating Specific Plan 3.0 and increasing residential capacity within the plan area to help address the City's state-mandated housing obligations. Since the adoption of the CTCC, LARC has donated nine acres for Lexington Park, and one 135-unit townhome project has been developed within the Specific Plan area.

Project Description

The proposed project includes certification of an Environmental Impact Report (EIR), approval of Vesting Tentative Tract Map No. 19247, and approval of a Development Agreement to facilitate future buildout of the CTCC Specific Plan 3.0 area. The project area totals approximately 151 acres, of which approximately 130 are buildable. The vesting tentative tract map will subdivide the site into 14 numbered lots in anticipation of a phased development.

Consistent with the Specific Plan, the project area accommodates up to 1,791 new residential units (in addition to the 135 existing units) and approximately 11 acres of additional public park space. Although the Specific Plan allows up to approximately 880,000 square feet of commercial development, the applicant has requested that the City evaluate a lower-intensity scenario of up to 440,000 square feet as part of the EIR. This reflects a more realistic buildout assumption: commercial uses are permitted but not required within the Specific Plan area, and it is uncertain whether regional market demand would support the full amount allowed. If 440,000 square feet is ultimately constructed and additional commercial development is later proposed, the City would require further analysis of environmental, traffic, utility, and infrastructure impacts before approving any additional square footage.

No physical construction is proposed as part of the current approvals. LARC does not anticipate serving as the future developer of the property. Instead, LARC intends to subdivide the property and sell individual lots to future developers, who would be required to submit project-specific applications for City review and approval. Those future projects would be required to comply with the Specific Plan, the Development Agreement, the conditions of approval, the Mitigation Monitoring and Reporting

Program, and any applicable future discretionary approvals, permits, and environmental review.

Project Area and Surrounding Land Uses

The project site is generally bounded by Cerritos Avenue to the north, Katella Avenue to the south, Lexington Drive to the west, and Winners Circle/Walker Street to the east. Surrounding land uses are:

Direction	Land Use	Zoning
North	Single-family residential	Residential Single Family (RS-6000)
South	Planned community; Commercial/retail; church	Planned Business Park/Specific Plan
East	Commercial/retail	Planned Business Park/Specific Plan
West	Industrial	City of Los Alamitos — Commercial/Industrial

Environmental Impact Report

The project is subject to an Environmental Impact Report (EIR), which evaluates the project's potential environmental impacts and identifies mitigation measures to avoid or reduce those impacts where feasible.

The EIR evaluates 19 environmental issue areas consistent with the California Environmental Quality Act (CEQA). For most issue areas, the EIR finds that impacts would either be less than significant or would be reduced to a less than significant level through regulatory compliance and mitigation measures. However, impacts related to air quality, transportation, and cultural resources would remain significant and unavoidable even with implementation of mitigation measures.

Air Quality

The EIR found that long-term operational emissions from CTCC buildout would exceed the South Coast Air Quality Management District's (SCAQMD) significance thresholds, resulting in a significant and unavoidable impact. Opportunities for reducing emissions are limited because vehicle emission regulations fall outside the City's jurisdiction, and developers cannot compel residents, employees, and customers to use alternative transportation.

It is important to note that any significant development at this site would likely result in similar air quality impacts. The EIR nonetheless includes mitigation measures to reduce operational emissions:

- Mitigation Measure AIR-1 requires design features such as site layouts that encourage walking, biking, and public transit; energy-efficient building design; and maximized tree coverage and shade throughout the site.
- Mitigation Measure TRA-1 requires robust bike facilities and connectivity, along with off-site sidewalks to improve pedestrian connections to the surrounding area.

Even with these measures, air quality impacts remain significant and unavoidable.

Cultural Resources
Frank Vessels, Sr. played a significant role in shaping the quarter horse racing industry. The LARC grandstand and racetrack, directly tied to that history, are considered historical resources for purposes of CEQA. Future buildout of the project would require demolition of these character-defining features, resulting in a significant and unavoidable impact to historical resources. The EIR requires the following mitigation measures to address this impact:

- Mitigation Measure CUL-1 requires historical photographs, memorabilia, brochures, and similar materials to be made available to a local library or historical society for use in exhibits or as part of a permanent research archive.
- Mitigation Measure CUL-2 requires future development to incorporate a historical marker providing information about Frank Vessels, Sr. and LARC, and/or to incorporate the Vessels name, track logo, racing terminology, and names of noteworthy quarter horses throughout the project.

Transportation
The EIR's vehicle miles traveled (VMT) analysis found that the project would exceed the applicable significance threshold. VMT measures the amount of vehicle travel generated by a project, expressed on a per capita basis for residential uses. It does not measure traffic congestion or travel delay on local streets. Although the project would result in residents driving 14 vehicle miles traveled (VMT) per day, which is lower than the Countywide average of 15 VMT per day, the project would still exceed the CEQA threshold of 13 VMT per day. As a result, the impact is considered significant under CEQA.

This impact is largely due to the project's suburban location and the continued reliance on vehicle travel in Cypress and the surrounding area. Mitigation Measure TRA-1 is included to reduce VMT impacts; however, even with implementation of the mitigation measure, the impact would remain significant and unavoidable.

Statement of Overriding Considerations
Because air quality, cultural resources, and transportation impacts remain significant and unavoidable even with mitigation, a Statement of Overriding Considerations and a Mitigation Monitoring and Reporting Program must be adopted in order to certify the Final EIR (FEIR). The Statement of Overriding Considerations details how the project's benefits outweigh its environmental impacts. For example:

- The proposed project would provide a significant number of new residential units in the Buildout Area to help meet the unmet demand for housing in the City and the project vicinity, consistent with the City's Housing Element and the Cypress Town Center and Commons Specific Plan 3.0 approved by the voters of the City of Cypress.
- The proposed project would revitalize a large area in the City that is currently significantly underutilized.
- The proposed project would diversify the City's existing housing stock by providing various housing product types and densities to meet a range of housing needs of Cypress and area residents.

The EIR also evaluated project alternatives; however, the alternatives would not avoid all significant and unavoidable impacts or would not meet the project objectives to the same extent as the proposed project. Certification of the FEIR and approval of the Statement of Overriding Considerations and Mitigation Monitoring and Reporting Program are therefore recommended.

Development Agreement

The proposed Development Agreement is a contract between the City and LARC that establishes the framework for long-term implementation of the CTCC Specific Plan 3.0 Buildout Project. It implements the Specific Plan and Vesting Tentative Tract Map No. 19247 by identifying the timing and responsibility for required infrastructure, public benefits, maintenance obligations, park improvements, and future development review. The agreement has a 15-year term, reflecting the project's anticipated long-term buildout and the lack of a defined timeline for LARC's closure. The Specific Plan area is expected to develop over many years, likely through multiple future developers.

The Development Agreement ensures that future development proceeds in an orderly manner under a consistent regulatory framework, while also ensuring that required infrastructure, public improvements, and public benefits are provided. The Development Agreement requires the property owner and/or future transferees to complete roadway and intersection improvements, extensions and improvements to Moody Street and Vessels Circle; widening of Lexington Drive; storm drain and drainage improvements; construction of the Lots 5/6 park and stormwater detention basin; creation of the two-acre floating park space; publicly accessible bicycle and pedestrian improvements; and ongoing maintenance obligations. These requirements are discussed in more detail below.

The City’s commitments include processing future development applications consistent with the Specific Plan, vesting tentative tract map, and Development Agreement. However, the City retains its authority to apply applicable laws, require future discretionary approvals, conduct additional CEQA review where required, impose applicable fees, and ensure that required infrastructure and public benefits are provided.

Vesting Tentative Tract Map

LARC has applied for approval of Vesting Tentative Tract Map (VTTM) No. 19247 to subdivide the Specific Plan area into 14 numbered lots and related lettered lots that generally align with the Specific Plan's land use districts. The subdivision will allow LARC to sell individual parcels to future developers, who will construct the residential, commercial, park, and infrastructure improvements contemplated by the Specific Plan. The map also facilitates the land exchange with Grace Church involving Lots 8 and 9, and the creation of an approximately eight-acre park and stormwater detention area at the southeast corner of Cerritos Avenue and Moody Street on Lots 5 and 6. A vesting tentative map gives the property owner vested rights to develop the property under the regulations in effect at the time of approval, subject to the conditions of approval, the Development Agreement, and applicable law.

Cypress Municipal Code Chapter 25, Article IX establishes submittal requirements for vesting tentative maps, including information and supporting materials related to

proposed development, infrastructure, grading, utilities, drainage, and other improvements. Because LARC does not intend to be the property's ultimate vertical developer, some detailed project-level information normally submitted with a vesting tentative map is not yet available. The Municipal Code authorizes the Director of Public Works/City Engineer to waive certain submittal requirements determined to be unnecessary, duplicative, or inapplicable to the proposed subdivision, provided the required findings can be made. The commitments secured through the Development Agreement and conditions of approval give the City a framework to ensure required improvements are constructed in a timely manner and consistent with the Specific Plan. The required waiver findings are included in the VTTM resolution.

Traffic and Public Improvements

A traffic study was prepared to evaluate the project's potential transportation impacts. The study analyzed a development scenario of up to 1,791 residential units and 440,000 square feet of commercial space. This is a conservative analysis: commercial development typically generates more vehicle trips than residential development, and the ultimate amount and configuration of commercial development within the Specific Plan area has not yet been determined. At full buildout, the residential component is estimated to generate approximately 11,458 daily trips and the commercial component approximately 16,284 daily trips. After accounting for internal capture and existing trips, the project is projected to generate approximately 21,041 daily trips.

The traffic study analyzed 31 intersections in Cypress and Los Alamitos using a future buildout year of 2038. During the AM peak hour, no intersections were identified as having a significant project-related impact. During the PM peak hour, five intersections were identified as having a significant project-related impact; however, none would fall below the City's applicable General Plan level-of-service threshold. Although the intersections remain within the City's required level of service, the project will add traffic to the surrounding street system and therefore requires public roadway and traffic improvements.

After the racetrack closes, LARC will be required to complete several major public improvements, including upgrades to five intersections, the extension of Moody Street to Siboney Street, and the extension of Vessels Circle to Moody Street. The Moody Street extension will include landscaped medians and parkways, while the Vessels Circle extension will include landscaped parkways. New streets will include sidewalks, parkways, and street lights, and Moody Street will include a bicycle lane.

These improvements will enhance pedestrian, bicycle, and vehicle connectivity between future residential neighborhoods, commercial uses along Katella Avenue, the Town Center area, existing shopping centers at Katella Avenue and Siboney Street, and public park spaces along Cerritos Avenue. The Development Agreement also requires pedestrian and bicycle connectivity to Moody Street, including a walking trail from Lot 2 on the west side of the Specific Plan area across Lots 3 and/or 4.

A full description of the required public improvements is included in Exhibit D to the Development Agreement. Future development within the Specific Plan area will also be required to pay applicable traffic impact fees, which the City may use toward future traffic improvements citywide.

Parks, Bike Paths, and Trails

The Specific Plan requires 20 acres of public park space at full buildout. Nine acres have already been developed at Lexington Park. The project will provide approximately eight additional acres at the southeast corner of Cerritos Avenue and Moody Street on Lots 5 and 6 (Lots 5/6 park). This park will also serve as a stormwater detention area, with approximately four acres designed for drainage. Because of this dual use, the park is expected to have a more passive, nature-oriented character than an active sports park like Lexington Park.

The Specific Plan also requires two acres of floating park space within the development area and anticipates dedication of the remaining approximately one-acre parcel adjacent to Lexington Park after the racecourse closes. Together, these park areas are intended to satisfy the Specific Plan's public park requirements and provide park space throughout the project area.

The Development Agreement establishes the process and requirements for the Lot 5/6 park and the floating park space. The Lots 5/6 park must be constructed in connection with development of Lots 3, 4, and 7. It may be privately owned and maintained but must remain publicly accessible through recorded public access easements. The two-acre floating park space must be identified before development of certain key parcels and may be City-owned or privately owned, provided it is publicly accessible through easements or another mechanism acceptable to the City.

The Development Agreement also requires a public design process for the Lot 5/6 park and the floating park space. This process includes coordination with City staff, preparation of park concepts, public outreach, review by applicable City bodies, preparation of a park master plan for City Council consideration, and construction of the approved park improvements. The process ensures that the parks are thoughtfully designed, publicly accessible, and consistent with the City's expectations for park quality and long-term maintenance.

The Development Agreement also addresses repayment of approximately $1 million in previously deferred park fees from the Melia Belmont residential project. The deferred amount has been prorated across future residential development parcels within the Specific Plan area, and the repayment schedule is included as an exhibit to the Development Agreement. LARC has requested that the City consider accepting the remaining approximately one-acre parcel adjacent to Lexington Park in lieu of the deferred fee obligation. This option is included in the Development Agreement, but the City is not obligated to accept the exchange, and any residential development occurring before track closure must pay the applicable deferred fee amount.

Signage

LARC has proposed to identify the future Specific Plan buildout area as "The Commons." As part of the project, LARC will construct two freestanding monument signs: one at the Katella Avenue/Moody Street entrance and one at the Cerritos Avenue/Moody Street entrance. Staff worked with LARC's landscape architecture and urban design team on the signs' design. The Katella Avenue monument sign is intended to fit within the existing landscaped median and preserve the iconic palm trees at the entrance to the racecourse property. The Cerritos Avenue/Moody Street

monument sign will be located near the corner of the Lot 5/6 park. Any additional future signage will require separate City review and approval.

Public Hearing

Public hearing notices were posted and mailed to the owners of all properties located within 500 feet of the project and to the New Dutch Haven and Carrier Row housing tracts in Los Alamitos (a condition of the Cottonwood Church Settlement Agreement). The public hearing notice was posted to the City's website and posted at the project site. All written communication related to the public hearing received prior to publication of the July 14 City Council agenda is attached. Written communication received by 5:00 p.m. on July 14 will be provided to the City Council and made part of the public hearing administrative record.

Alternative Action

In the event the City Council determines there are issues that should be addressed before taking action, the City Council may consider the following alternatives:

1. Add conditions of approval to address specific concerns;
2. Continue the item and direct staff to work with the applicant to resolve identified issues; or
3. Continue the item and direct staff to return with a resolution for denial, including appropriate findings.

BUDGET IMPACT

There is no direct General Fund impact associated with the recommended actions. Future development within the Specific Plan area will be responsible for required public improvements, applicable development impact fees, and other obligations identified in the Municipal Code, Development Agreement and conditions of approval.

LEGAL REVIEW

The City Attorney's Office has reviewed and approved the resolutions and Development Agreement ordinance as to form.

VESTING TENTATIVE TRACT NO. 19247

IN THE CITY OF CYPRESS
COUNTY OF ORANGE, STATE OF CALIFORNIA
TAIT & ASSOCIATES, INC., MARCH 2026
EXISTING SUBDIVISION

A. LOS ALAMITOS RACE COURSE (LARC)/CYPRESS GC TITLE REPORT:

TITLE COMPANY: FIRST AMERICAN TITLE INSURANCE COMPANY
TITLE ORDER NO: NHSC-6812721 (hp)
COMMITMENT DATE: NOVEMBER 26, 2025 (AMENDED DECEMBER 11, 2025)
TITLE OFFICER: HEATHER PANKEY
E-MAIL: hpankey@firstam.com

LEGAL DESCRIPTION:

REAL PROPERTY IN THE CITY OF CYPRESS, COUNTY OF ORANGE, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:

PARCEL A: (APN'S: 241-081-02, 241-081-23, 241-091-21, 241-221-22, 241-221-25, 241-221-26, 241-221-27, 241-221-28, 241-221-30, 241-232-20, 241-232-21, 241-232-22 AND 241-091-50 AND 241-091-51)

BEING ALL OF PARCEL 1 OF LOT LINE ADJUSTMENT NO. 2019-01, RECORDED JANUARY 23, 2020 AS INSTRUMENT NO. 2020000030639 OF OFFICIAL RECORDS IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

TOGETHER WITH ALL OF THAT CERTAIN 60.00 FOOT STRIP OF LAND DESCRIBED IN QUITCLAIM DEED RECORDED DECEMBER 31, 2014 AS INSTRUMENT NO. 2014000566806 OF OFFICIAL RECORDS IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

EXCEPTING THEREFROM, ALL MINERALS AND ALL MINERAL RIGHTS OF EVERY KIND AND CHARACTER NOW KNOWN TO EXIST OR HEREAFTER DISCOVERED UNDERLYING THE PROPERTY, INCLUDING, WITHOUT LIMITING THE GENERALITY OF THE FOREGOING, OIL AND GAS AND RIGHTS THERETO, TOGETHER WITH THE SOLE, EXCLUSIVE AND PERPETUAL RIGHT TO EXPLORE FOR, REMOVE AND DISPOSE OF SAID MINERALS BY ANY MEANS OR METHODS SUITABLE TO GRANTOR, ITS SUCCESSORS AND ASSIGNS, BUT WITHOUT ENTERING UPON OR USING THE SURFACE OF THE PROPERTY, AND IN SUCH MANNER AS NOT TO DAMAGE THE SURFACE OF THE PROPERTY, OR TO INTERFERE WITH THE USE THEREOF BY GRANTEE, ITS SUCCESSORS OR ASSIGNS, BY QUITCLAIM DEED RECORDED AUGUST 6, 2001 AS INSTRUMENT NO. 20010534711 OF OFFICIAL RECORDS.

NOTE: THE ABOVE LEGAL DESCRIPTION IS FOR THE SOLE PURPOSE OF THIS REPORT AND MAY NOT BE CONSIDERED FOR USE IN ANY POLICY OF TITLE INSURANCE TO BE ISSUED BY THIS COMPANY, AND IS SUBJECT TO CHANGE AT ANY TIME.

PARCEL B: (APN'S: 241-221-19, 241-221-24, 241-221-29, 241-221-32, 241-221-33, 241-091-37 AND 241-232-37)

BEING ALL OF PARCEL 1 OF PARCEL MAP NO. 90-241, FILED IN BOOK 259, PAGES 1 THROUGH 12, INCLUSIVE, OF PARCEL MAPS IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

TOGETHER WITH ALL OF PARCEL 2 OF LOT LINE ADJUSTMENT NO. 2017-01, RECORDED MAY 9, 2018 AS INSTRUMENT NO. 2018000168853 OF OFFICIAL RECORDS IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

EXCEPTING THEREFROM ALL OF THAT CERTAIN GRANT DEED RECORDED MAY 31, 2018 AS INSTRUMENT NO. 2018000198492 OF OFFICIAL RECORDS IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

ALSO EXCEPTING FROM A PORTION THEREOF, ALL MINERALS AND ALL MINERAL RIGHTS OF EVERY KIND AND CHARACTER NOW KNOWN TO EXIST OR HEREAFTER DISCOVERED UNDERLYING THE PROPERTY, INCLUDING, WITHOUT LIMITING THE GENERALITY OF THE FOREGOING, OIL GAS AND RIGHTS THERETO, TOGETHER WITH THE SOLE, EXCLUSIVE AND PERPETUAL RIGHT TO EXPLORE FOR, REMOVE AND DISPOSE OF SAID MINERALS BY ANY MEANS OR METHODS SUITABLE TO GRANTOR, ITS SUCCESSORS AND ASSIGNS, BUT WITHOUT ENTERING UPON OR USING THE SURFACE OF THE PROPERTY, AND SUCH MANNER AS NOT TO DAMAGE THE SURFACE OF THE PROPERTY, OR INTERFERE WITH THE USE THEREOF BY GRANTEE, ITS SUCCESSORS AND ASSIGNS, PROVIDED HOWEVER, THAT GRANTOR, ITS SUCCESSORS AND ASSIGNS, WITHOUT THE PRIOR WRITTEN PERMISSION OF THE GRANTEE, ITS SUCCESSORS OR ASSIGNS, SHALL NOT CONDUCT ANY MINING ACTIVITIES OF WHATSOEVER NATURE ABOVE A PLANE 500 FEET BELOW THE SURFACE OF THE PROPERTY, AS RESERVED BY UNION PACIFIC RAILROAD COMPANY, A DELAWARE CORPORATION RECORDED DECEMBER 31, 2003 AS INSTRUMENT NO. 2003001534651 OF OFFICIAL RECORDS.

PARCEL C:

A NON-EXCLUSIVE EASEMENT FOR VEHICULAR, EQUESTRIAN AND PEDESTRIAN INGRESS AND EGRESS AS DESCRIBED IN EASEMENT AGREEMENT RECORDED MAY 31, 2018 AS INSTRUMENT NO. 2018000198493 OF OFFICIAL RECORDS AND MORE PARTICULARLY DESCRIBED AS FOLLOWS:

THAT PORTION OF PARCEL 1 OF PARCEL MAP NO. 90-241, IN THE CITY OF CYPRESS, COUNTY OF ORANGE, STATE OF CALIFORNIA, PER MAP FILED IN BOOK 259, PAGES 1 THROUGH 12, INCLUSIVE, OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS:

COMMENCING AT THE SOUTHWEST CORNER OF SAID PARCEL 1; THENCE ALONG THE WESTERLY LINE OF SAID PARCEL 1 NORTH 00°03'32" WEST, 347.00 FEET; THENCE LEAVING SAID WESTERLY LINE SOUTH 41°07'10" EAST, 459.77 FEET, TO A POINT ON THE SOUTHERLY LINE OF SAID PARCEL 1, DISTANT THEREON NORTH 89°52'46" EAST, 302.00 FEET, FROM THE SOUTHWEST CORNER THEREOF, SAID POINT BEING THE TRUE POINT OF BEGINNING; THENCE ALONG SAID SOUTHERLY LINE OF PARCEL 1 NORTH 89°52'46" WEST, 485.30 FEET; THENCE PARALLEL WITH SAID WESTERLY LINE OF PARCEL 1 NORTH 00°03'32" WEST, 24.00 FEET, TO A LINE PARALLEL WITH AND 24.00 FEET NORTHERLY OF SAID SOUTHERLY LINE OF PARCEL 1; THENCE ALONG SAID LAST PARALLEL LINE SOUTH 89°52'46" WEST, 506.19 FEET, TO THE HEREINABOVE DESCRIBED COURSE BEARING "SOUTH 41°07'10" EAST"; THENCE ALONG SAID LAST COURSE SOUTH 41°07'10" EAST, 31.80 FEET, TO THE TRUE POINT OF BEGINNING.

PARCEL D: (APN: 241-221-29)

THAT PORTION OF LEXINGTON DRIVE AS SHOWN AND DEDICATED ON PARCEL MAP NO. 90-241, IN THE CITY OF CYPRESS, COUNTY OF ORANGE, STATE OF CALIFORNIA, AS PER MAP FILED IN BOOK 259, PAGES 1 THROUGH 12 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, BOUNDED NORTHERLY BY THE WESTERLY PROLONGATION OF THE NORTHERLY LINE OF PARCEL 1 AS SHOWN ON SAID PARCEL MAP NO. 90-241 AND BOUNDED SOUTHERLY BY THE WESTERLY PROLONGATION OF THE SOUTHERLY LINE OF PARCEL 1 AS SHOWN ON SAID PARCEL MAP NO. 90-241.

THE OFFER WAS NOT ACCEPTED AS OF DECEMBER 4, 1990 RECORDING OF SAID MAP.

B. GRACE CHURCH TITLE REPORT:

TITLE COMPANY: FIRST AMERICAN TITLE INSURANCE COMPANY
TITLE ORDER NO: NHSC-7211074 (hp)
COMMITMENT DATE: DECEMBER 30, 2024 – AMENDED FEBRUARY 14, 2025
TITLE OFFICER: HEATHER PANKEY
E-MAIL: hpankey@firstam.com

LEGAL DESCRIPTION:

REAL PROPERTY IN THE CITY OF CYPRESS, COUNTY OF ORANGE, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:

PARCEL A: (APN: 241-081-08; 241-081-12; 241-081-22)

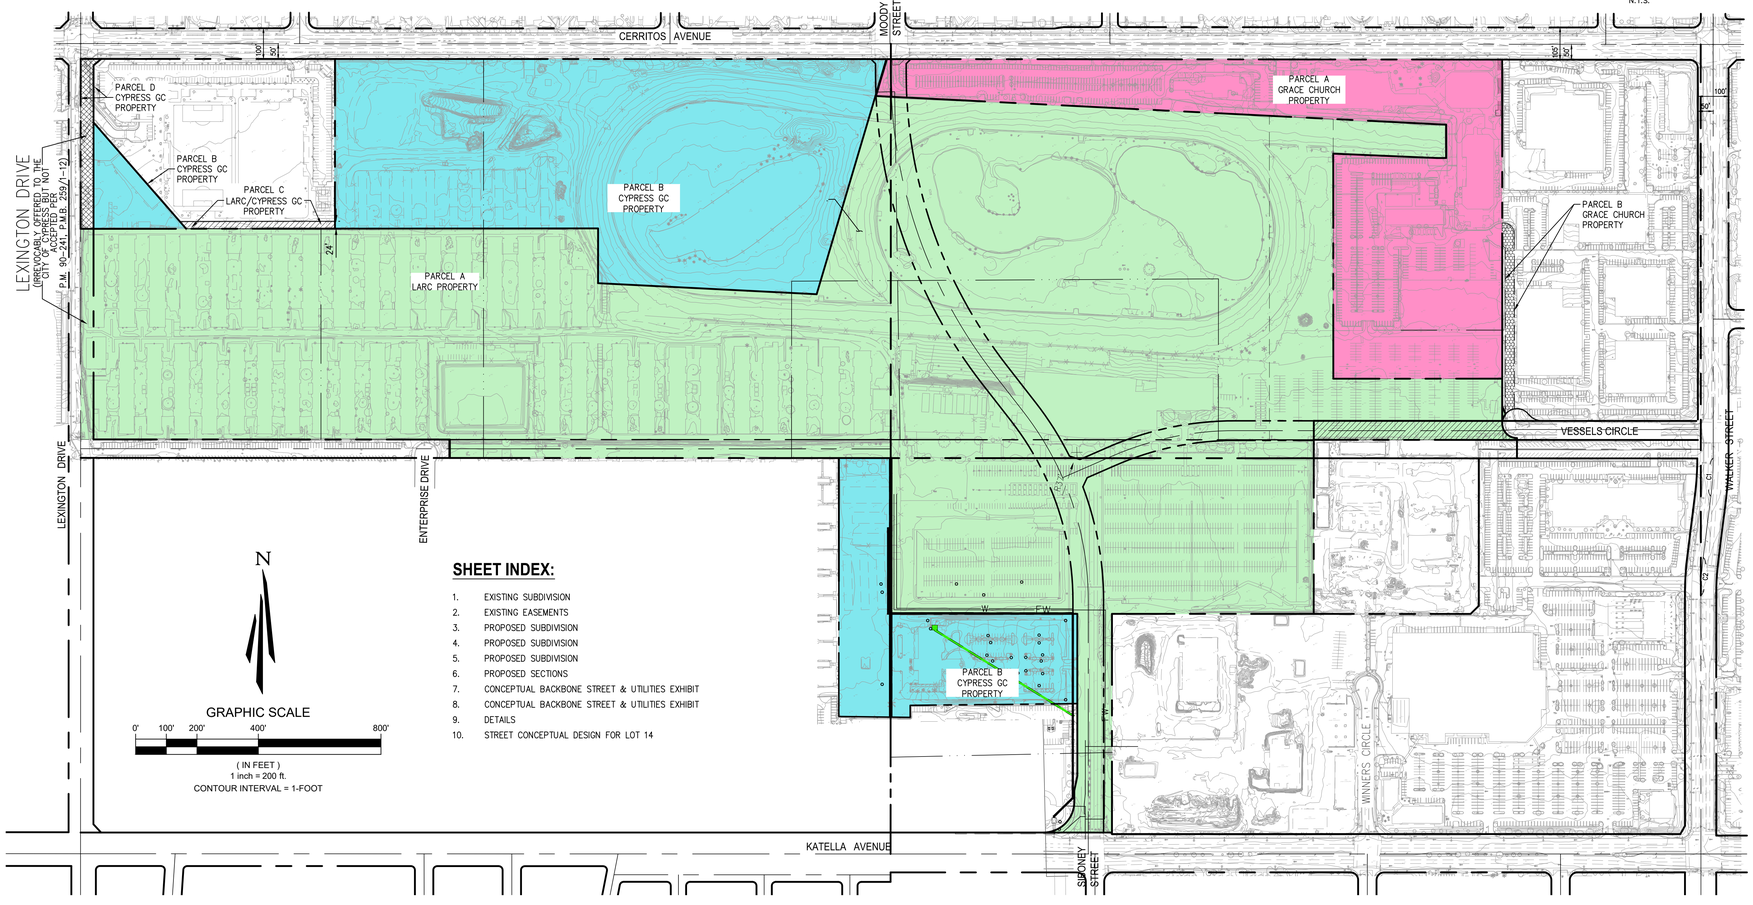
PARCEL 1, AS SHOWN ON LOT LINE ADJUSTMENT NO. LL 2009-02, AS EVIDENCE BY DOCUMENT RECORDED JANUARY 21, 2010 AS INSTRUMENT NO. 2010000031686 OF OFFICIAL RECORDS, BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

PARCEL 1 OF LOT LINE ADJUSTMENT 95-3, IN THE CITY OF CYPRESS, COUNTY OF ORANGE, STATE OF CALIFORNIA, RECORDED JUNE 30, 1997 AS INSTRUMENT NO. 19970303502, OF OFFICIAL RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

TOGETHER WITH THAT PORTION OF PARCEL 1 OF LOT LINE ADJUSTMENT 98-3, IN THE CITY OF CYPRESS, COUNTY OF ORANGE, STATE OF CALIFORNIA, RECORDED JANUARY 12, 1999 AS INSTRUMENT NO. 19990020764, OF OFFICIAL RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT THE SOUTHEAST CORNER OF PARCEL 1 OF LOT LINE ADJUSTMENT 95-3; THENCE ALONG THE EAST LINE OF PARCEL 1 OF SAID LOT LINE ADJUSTMENT 98-3, SOUTH 00°04'47" EAST TO A LINE THAT IS PARALLEL WITH AND DISTANT 158.15 FEET FROM THE SOUTH LINE OF PARCEL 1 OF SAID LOT LINE ADJUSTMENT 95-3; THENCE ALONG SAID PARALLEL LINE SOUTH 89°55'13" WEST 550.87 FEET TO THE SOUTHERLY PROLONGATION OF THAT CERTAIN COURSE IN THE WEST LINE OF SAID PARCEL 1, HAVING A BEARING AND DISTANCE OF "N 00°04'47" W 575.52 FEET", AS SHOWN ON SAID LOT LINE ADJUSTMENT 95-3; THENCE ALONG SAID PROLONGATION NORTH 00°04'47" WEST 158.15 FEET TO THE SOUTHWEST CORNER OF SAID PARCEL 1; THENCE ALONG SAID SOUTH LINE NORTH 89°55'13" EAST 550.87 FEET TO THE POINT OF BEGINNING.

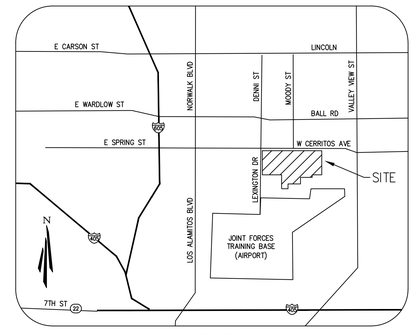
PARCEL B:



A NON-EXCLUSIVE PERPETUAL EASEMENT, AS SAID EASEMENT IS SET FORTH IN THAT CERTAIN ACCESS AND UTILITY EASEMENT AGREEMENT RECORDED JULY 19, 1991 AS INSTRUMENT NO. 91-377517 AND AMENDED BY THAT CERTAIN FIRST AMENDMENT TO EASEMENT AGREEMENT RECORDED FEBRUARY 13, 2003 AS INSTRUMENT NO. 2003000165238, BOTH OF OFFICIAL RECORDS OF ORANGE COUNTY, CALIFORNIA, FOR THE PURPOSE OF PEDESTRIAN AND VEHICULAR ACCESS OVER THOSE PORTIONS OF PARCELS 1 AND 4 OF PARCEL MAP NO. 2000-193, AS SHOWN ON A MAP FILED IN BOOK 321, PAGES 13 AND 14 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID ORANGE COUNTY, CALIFORNIA, INCLUDED WITHIN THAT CERTAIN STRIP OF LAND DELINEATED THEREON AS "B -INDICATES AN EASEMENT FOR ACCESS PURPOSES, INGRESS AND EGRESS, RESERVED HEREON FOR FUTURE CONVEYANCE".

EXISTING NUMBER OF LEGAL LOTS: 8

PROPOSED NUMBER OF LOTS: 18



TITLE NOTES:

1. THESE PROPERTIES ARE SUBJECT TO ALL EASEMENTS AND AGREEMENTS DESCRIBED IN THE SUBJECT TITLE REPORTS.

5. UPGRADE TRAFFIC SIGNAL AT MOODY AND CERRITOS PER CITY OF CYPRESS STANDARDS
6. FINAL PAVEMENT SECTION OF MOODY AND VESSELS PER FINAL GEOTECHNICAL REPORT AND CITY STANDARDS
7. TRAILS AND GREENWAYS AND BIKE PATHS PER FINAL SITE PLANS AS NOTED IN SPECIFIC PLAN 3.0
8. 2.0 ACRE PARK SPACE OVERLAY TO BE DETERMINED IN FINAL SITE PLANS
9. HOA TO BE SET UP FOR MAINTENANCE OF LANDSCAPE AND WATER QUALITY DEVICE (BMP) IN PUBLIC RIGHTS OF WAY (MOODY, VESSEL, CIRCLE)
10. THE LOCATIONS, DESIGN AND SIZING OF THE SIX DETENTION BASINS SHOWN HEREON ARE CONCEPTUAL IN NATURE AND ILLUSTRATE POTENTIAL LOCATIONS, DESIGN AND SIZING FOR THE DETENTION BASINS THAT WILL OR MAY BE REQUIRED FOR BUILDOUT UNDER SPECIFIC PLAN 3.0. THE FINAL NUMBER, LOCATIONS, DESIGN AND SIZING OF SUCH DETENTION BASINS WILL BE DETERMINED AS DEVELOPMENT PLANS ARE APPROVED FOR PROJECTS IN THE VARIOUS LAND USE DISTRICTS. THE AMENDMENT OF THIS VESTING TENTATIVE TRACT MAP SHALL NOT BE REQUIRED TO REFLECT THE FINAL NUMBER, LOCATIONS, DESIGN AND SIZING OF THE REQUIRED DETENTION BASINS.

PROPOSED EASEMENTS:

1. A PROPOSED 20-FOOT WIDE SEWER EASEMENT ON LOT 2.
2. A PROPOSED 20-FOOT WIDE STORM DRAIN EASEMENT ON LOT 3.
3. A PROPOSED 20-FOOT WIDE PRIVATE STORM DRAIN EASEMENT ON LOTS 7,10 AND 11 FOR SERVICE TO LOT 8.
4. A PROPOSED 20-FOOT WIDE SEWER EASEMENT ON LOT 11 FOR SERVICE TO LOT 10.
5. A PROPOSED 30-FOOT WIDE EASEMENT FOR INGRESS/EGRESS ON LOT 11.
6. A PROPOSED 50-FOOT WIDE EASEMENT FOR INGRESS/EGRESS ON LOT 9 FOR ACCESS TO LOT 8.
7. PROPOSED 20-FOOT WIDE PRIVATE SEWER EASEMENT ON LOT 7 FOR SERVICE TO LOT 8.

STORM WATER PUMP STATION

Los Alamitos Race Track - 3.56 CFS

NOTES:

1. STORM WATER MANAGEMENT SYSTEM IN ITS ENTIRETY, AS SHOWN ON THESE SHEETS, SHALL BE DESIGNED BY A CALIFORNIA LICENSED PROFESSIONAL ENGINEER. ALL COMPONENTS OF THE STORM WATER MANAGEMENT SYSTEM SHALL BE DESIGNED AND SUPPLIED BY SANTA FE WATER SYSTEMS (SFWS), EXCEPT WHERE NOTED. ANY DEVIATION, OMISSION OR SUBSTITUTION SHALL VOID SFWS EXTENDED TWO-YEAR WARRANTY. SFWS EXTENDED TWO-YEAR WARRANTY SHALL COVER THE COMPLETE SYSTEM ACCORDING TO THE PERFORMANCE PARAMETERS INDICATED ON THE DRAWING SET AS ENGINEERED BY SFWS, WHEN INSTALLED IN ACCORDANCE WITH THE SFWS DESIGN. THE WARRANTY INCLUDES ALL PARTS AND LABOR OF SHOP ASSEMBLED ITEMS AND EXCLUDES INSTALLATION OF COMPONENTS BY CONTRACTOR UNLESS OTHERWISE NOTED ON PLANS. WARRANTY COVERAGE REQUIRES REGULAR DOCUMENTED MAINTENANCE OF THE FULL SYSTEM PERFORMED BY THE OWNER OR AUTHORIZED MAINTENANCE CONTRACTOR.
2. ALL DIMENSIONS AND ELEVATIONS SHOWN ARE NOMINAL DIMENSIONS. IT IS THE RESPONSIBILITY OF THE ON-SITE CONTRACTOR OR CUSTOMER TO VERIFY THE ACCURACY OF ANY CRITICAL DIMENSIONS OR ELEVATIONS PRIOR TO SETTING OR INSTALLING ANY EQUIPMENT.
3. ITEMS WILL BE DELIVERED TO THE SITE AFTER THE HOLE HAS BEEN EXCAVATED AND SHORED. THE CONTRACTOR SHALL SUPPLY A CRANE OR RIGGING OF SUFFICIENT SIZE TO LOWER ALL PIECES INTO THE HOLE SAFELY.
4. UPON ESTABLISHMENT OF PRIOR AGREEMENT, SANTA FE WATER SYSTEMS WILL PROVIDE A REPRESENTATIVE FOR TECHNICAL ASSISTANCE ON THE DAY OF INSTALLATION TO ANSWER ANY QUESTIONS THAT MAY ARISE.
5. THE CONTRACTOR IS RESPONSIBLE FOR ALL INSTALLATION, INCLUDING, BUT NOT LIMITED TO PLUMBING AND ELECTRICAL CONNECTIONS.
6. OVER FLOW PUMPS SHALL BE DEMING 8D 7365N-861-1H-30N, 7.5HP, 208V, 3 PHASE, 24.9A MAX, VARIABLE SPEED, 8" DISCHARGE, 1000 GPM @ 15.67' TDH MIN. (TOTAL PUMP STATION FLOW RATE = ~ 2000 GPM)
7. PUMP CONTROLLER TO BE SEEWATER DUPLEX CONTROL PANEL W/ PLC & VFD, 208VAC, 3PH, NEMA 4X. PLC SHALL OPERATE ONE OF THE PUMPS AT HALF SPEED DURING INITIAL START UP (OPERATING AT HALF THE TOTAL FLOW), AND AS THE INFLOW OF WATER INCREASES, THE PLC WILL PROGRESSIVLEY INCREASE THE OPERATING SPEED OF THE PUMP UNTIL IT REACHES FULL SPEED (OPERATING AT FULL FLOW). IF NECESSARY, IF THE INCOMING FLOW IS TOO EXCESSIVE FOR 1 PUMP TO HANDLE, THE OTHER WILL EVENTUALLY BOOT UP AT HALF SPEED AS WELL AND INCREASE IN SPEED IN ACCORDANCE WITH THE FLOW UNTIL ALL STORMWATER HAS BEEN DISCHARGED.
8. MOUNT PUMP CONTROLLER IN LOCATION SPECIFIED BY OWNER. CONSULT WITH SFWS TO DETERMINE NEED FOR ADDITIONAL CABLE AND/OR EQUIPMENT. MAXIMUM PUMP POWER CABLE LENGTH IS 100' FOR SPECIFIED PUMPS. PUMP POWER CORD TO BE CONNECTED TO ADDITIONAL POWER CORD (SJOOW, OR EQUAL) WITH LENGTH REQUIRED TO MAKE CONNECTION TO CONTROL PANEL. ADDITIONAL POWER CORD TO BE CONNECTED VIA WATERPROOF SPLICES LOCATED IN ELECTRICAL JUNCTION BOX IF PERMITTED BY LOCAL JURISDICTION.
9. ALL COMPONENTS PROVIDED BY SANTA FE WATER SYSTEMS SHALL BE SUITABLE FOR USE WITH OPERATIONAL AND ENVIRONMENTAL CONDITIONS.
10. EQUIPMENT DOCUMENTATION SHALL BE PROVIDED FOR REVIEW UPON ACCEPTANCE OF PURCHASE ORDER.
11. COORDINATE PIPE SIZES AND INVERT ELEVATIONS WITH CIVIL SHEETS.
12. ALL STRUCTURES TO BE H-20 INCIDENTAL TRAFFIC RATED FOR PARKING LOT SPEEDS.
13. CONCRETE MANHOLE COLLAR SHALL BE INSTALLED SUCH THAT SURFACE LOADING DOES NOT BEAR ON FIBERGLASS VAULT.
14. **NO SUBSTITUTION ALLOWED UNLESS APPROVED BY SFWS.**

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF CYPRESS, CALIFORNIA, APPROVING VESTING TENTATIVE TRACT MAP NO. 19247 FOR THE SUBDIVISION OF APPROXIMATELY 151 GROSS ACRES INTO 14 PARCELS WITHIN THE CYPRESS TOWN CENTER AND COMMONS SPECIFIC PLAN 3.0 AREA LOCATED AT 4961 KATELLA AVENUE.

WHEREAS, the City Council of the City of Cypress has considered an application submitted by Los Alamitos Race Course ("Property Owner") for Vesting Tentative Tract Map No. 19247 ("VTTM No. 19247") to subdivide approximately 151 gross acres into 14 parcels within and adjacent to the Cypress Town Center and Commons Specific Plan 3.0 area located at 4961 Katella Avenue (the "Project"); and

WHEREAS, the Project is intended to facilitate the future phased development of residential, commercial, open space, circulation, and public facility uses consistent with the Cypress Town Center and Commons Specific Plan 3.0; and

WHEREAS, the Project requires approval of Vesting Tentative Tract Map No. 19247 and a Development Agreement by the City Council; and

WHEREAS, in compliance with the requirements of the California Environmental Quality Act ("CEQA"), the City prepared Final Environmental Impact Report SCH No. 2025040377 ("Final EIR") for the Project; and

WHEREAS, on July 14, 2026, the City Council certified the Final EIR, adopted Findings of Fact, a Mitigation Monitoring and Reporting Program, and a Statement of Overriding Considerations for the Project, all in accordance with CEQA; and

WHEREAS, the City Council has reviewed and considered the Final EIR prior to considering approval of Vesting Tentative Tract Map No. 19247; and

WHEREAS, on July 14, 2026, the City Council held a duly noticed public hearing and accepted testimony regarding the proposed Project and Vesting Tentative Tract Map No. 19247; and

WHEREAS, said tentative tract map has been reviewed by the City Engineer, Orange County Fire Authority, and applicable City departments, all of whom recommended approval subject to conditions; and

WHEREAS, the proposed subdivision, together with the provisions for its design and improvement, is consistent with the City's General Plan, the Cypress Municipal Code, and the Cypress Town Center and Commons Specific Plan 3.0; and

WHEREAS, the City Council finds that the applicant agrees with the necessity of and accepts all elements, requirements, and conditions of this Resolution as being a reasonable manner of preserving, protecting, providing for, and fostering the health, safety, and welfare of the public.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF CYPRESS, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

SECTION 1. The proposed Vesting Tentative Tract Map does not warrant denial pursuant to the Subdivision Map Act, the Cypress Municipal Code, the City's General Plan, or the Cypress Town Center and Commons Specific Plan 3.0, because the City Council finds as follows:

A. The proposed subdivision is hereby found and determined to be consistent with the Cypress Town Center and Commons Specific Plan 3.0 land use designations and development framework.
B. The proposed subdivision is hereby found and determined to be consistent with the City of Cypress General Plan.
C. The site is hereby found and determined to be physically suitable for the type of development contemplated by the subdivision. The Project site is currently developed as a racetrack facility and is capable of accommodating future development consistent with the Specific Plan.
D. The site is hereby found and determined to be physically suitable for the proposed density and intensity of development. Future development within the subdivision will be governed by the Cypress Town Center and Commons Specific Plan 3.0 development standards and maximum development thresholds.
E. The design of the subdivision and proposed improvements are not likely to result in substantial adverse environmental impacts or substantial and avoidable adverse impacts to fish, wildlife, or to their habitat. Environmental impacts associated with the Project were fully analyzed in that certain Final Environmental Impact Report SCH No. 2025040377 and mitigation measures were adopted to reduce impacts to the extent feasible.
F. The design of the subdivision and type of improvements will not result in serious adverse public health impacts. Future development will be subject to all applicable local, regional, and state regulations related to public health, utilities, drainage, circulation, and emergency access.

G. The design of the subdivision and type of improvements will not conflict with easements acquired by the public at large for access through or use of property within the proposed subdivision. Existing and proposed public easements and rights-of-way will be maintained or provided in accordance with applicable City standards and the approved tract map.

SECTION 2. The City Council hereby approves Vesting Tentative Tract Map No. 19247, subject to the conditions of approval attached hereto as Exhibit "A" and incorporated herein by this reference.

SECTION 3. Cypress Municipal Code Chapter 25, Article IX establishes submittal requirements for vesting tentative maps, including information and supporting materials related to proposed development, infrastructure, grading, utilities, drainage, and related improvements. The Municipal Code also authorizes the Director of Public Works/City Engineer to waive certain submittal requirements when those requirements are determined to be unnecessary, duplicative, or inapplicable to the proposed subdivision, provided the required findings can be made.

SECTION 4. The Property Owner has requested approval of VTTM 19247 without submitting all materials otherwise required by Chapter 25, Article IX of the Municipal Code. In connection with that request, the Property Owner has provided project information, supporting materials, and commitments through the Development Agreement intended to address the purpose of the outstanding submittal requirements. Based on the record before the City, including the conditions of approval and obligations in the Development Agreement, the City finds that the waived submittal requirements are not necessary for approval of VTTM 19247, and that the waiver will not jeopardize public health, safety, or welfare or impair prudent public policy and decision-making.

SECTION 5. The City Council finds that the conditions of approval are necessary to protect the public health, safety, and welfare and to ensure consistency with the General Plan, the Cypress Town Center and Commons Specific Plan 3.0, and applicable provisions of the Cypress Municipal Code and Subdivision Map Act.

SECTION 6. This Resolution shall become effective immediately upon adoption by the City Council.

PASSED, APPROVED and ADOPTED by the City Council of the City of Cypress at a regular meeting held on the 14th day of July, 2026.

I, LISA BERGLUND, City Clerk of the City of Cypress, DO HEREBY CERTIFY that the foregoing Resolution was duly adopted at a regular meeting of the City Council held on the ___ day of _____, 2026, by the following roll call vote:

AYES: COUNCIL MEMBERS:
NOES: COUNCIL MEMBERS:
ABSENT: COUNCIL MEMBERS:

_____
CITY CLERK OF THE CITY OF CYPRESS

EXHIBIT "A"

PROJECT TITLE: Vesting Tentative Tract Map Number 19247

ADDRESS: 4961 Katella Ave/CTCC SP 3.0

CONDITIONS OF APPROVAL

1. General Conditions

1.1. This approval is granted for Vesting Tentative Tract Map No. 19247 dated March 19, 2026, ("VTTM 19247") on file with the Planning Division. The project shall conform to VTTM 19247, except as otherwise specified in these conditions. *(Planning)*

1.2. Unless and until the project applicant signs and returns a City-provided affidavit accepting these conditions of approval, the entitlement approved hereinabove will be of no force or effect.

1.3. The applicant shall defend, indemnify, and hold harmless, the City, its boards, commissions, or committees, its elected or appointed officials, agents, officers or employees, from and against any claims, demands, actions, causes of action, or proceedings against the City arising out of or related to the adoption, validity, or enforcement of, VTTM 19247, which action is brought within the time period provided in Government Code §66499.37 and Public Resources Code, Division 13, CH. 4 (§ 21000 et seq. - including but not by way of limitation § 21152 and 21167). The City shall promptly notify the applicant of the service upon the City of any claim, action, or proceeding brought within this time periods identified herein. *(City Attorney)*

1.4. The applicant's contractor(s) shall provide the City with a Certificate of Insurance on a City approved certificate of insurance evidencing a comprehensive liability insurance policy with a combined single limit of not less than $500,000 each occurrence in connection with the work to be performed by the applicant's contractor(s). Such certificate of insurance shall name the City, its City Council, City officers, members of City boards or commissions, City agents and employees, as additional Named Insureds with respect to any claim, action, damage, liability and expense, including attorneys' fees, arising out of or related to the work to be performed under the development executed by the applicant's contractor(s) and the City, including any act or omission of employees, agents, subcontractors, or their employees. Such certificate shall have a 30-day cancellation notice to the City. *(City Attorney)*

1.5. Within 48 hours of the approval of this project, the applicant shall deliver to the Community Development Department the required Fish and Wildlife impact fee in the form of a check payable to the County Clerk-Recorder, to enable the City to file the Notice of Determination pursuant to Fish and Wildlife Code §711.4 and California Code of Regulations, Title 14, section 753.5. *(Planning)*

1.6. These conditions of approval are in addition to, and do not supersede, amend, or limit, any obligations, requirements, or timing provisions set forth in the Development Agreement for the project. The applicant/property owner shall comply with both these conditions of approval and the Development Agreement approved with respect to the

project. In the event of any inconsistency these conditions of approval and the provisions of the Development Agreement shall control. (*Planning, City Attorney*)

1.7. These conditions of approval shall be binding upon the applicant, property owner, and their successors, transferees, and assigns. The obligations set forth herein shall run with the land and shall apply to all future owners and developers of the property subject to VTTM 19247, unless modified by the City in accordance with applicable law. *(Planning, City Attorney)*

1.8. If the Development Agreement allows dedication or conveyance of land to the City in lieu of payment of deferred park fees, the City shall not be obligated to accept such land unless and until the City determines, in its sole discretion, that the parcel is suitable for the intended public purpose. Prior to City acceptance, the applicant/property owner shall provide all title documents, environmental information, grading information, and improvement plans requested by the City, and shall satisfy any conditions required by the City regarding demolition, clearing, grading, access, drainage, environmental condition, maintenance, and public safety. (*Planning, Engineering, City Attorney)*

1.9. It is intended that a final map will be recorded with respect to VTTM 19247 and that "B" final maps will be recorded with respect to specific development projects on portions of the property subject to VTTM 19247. Therefore, as determined by the City, some of the conditions of approval below that reference the "final map" shall be deemed to mean and refer to the final map with respect to VTTM 19247 ("19247 Final Map"), and other references to the "final map" mean the applicable "B" final map with respect to a specific development project. The subdivider may satisfy applicable conditions of approval relating to the "final map" with respect to "B" final maps for specific development projects, as determined by the City, except where a condition of approval clearly relates to the 19247 Final Map, which means, without limitation, that (a) where applicable, the obligations with respect to a condition of approval shall be apportioned on a pro-rata basis among specific development projects, (b) the subdivider shall not be required to pay any fees or charges, submit any plans, construct any offsite or other public improvements, bond for the same, or plant any landscaping that is not directly related to the applicable development project, and (c) all required dedications of easements and construction of on-site private streets and off-site public improvements shall occur on a development project-by-development project basis.

2. Planning

2.1. All mitigation measures within the Final Environmental Impact Report (EIR) are conditions of approval for this project. Prior to issuance of any grading or building permit associated with implementation of the project, the applicant shall demonstrate compliance with the applicable requirements in the adopted Mitigation Monitoring and Reporting Program (MMRP), to the satisfaction of the Community Development Department. *(Planning)*

2.2. All CC&R’s and any Reciprocal Easement Agreements shall be submitted to the City (prior to recordation) for review, recommendation, and approval to assure the continuous maintenance applicability, responsibility, and enforceability. *(Planning)*

3. Signage

3.1. This approval includes two freestanding entrance monument signs: one located at Katella Avenue and Siboney Street within the existing landscape median, and one located at the southeast corner of Cerritos Avenue and Moody Street. Each sign shall be approximately 12 feet long by 20 feet high and shall display "The Commons." *(Planning)*

3.2. Changeable copy or lettering on the freestanding sign face is prohibited. *(Planning)*

3.3. The property owner or developer shall not erect or display on the subject property any signs which have not been approved in writing by the Community Development Department. The installation and method of sign illumination shall be reviewed and approved by the Planning Division and the Building and Safety Division. *(Planning)*

4. Landscaping

4.1. A detailed landscape and automatic irrigation plan shall be submitted to the Cypress Planning Division for review and approval at least 30 days prior to installation. In addition, a bond shall be posted with Public Works to guarantee against defects in plant materials and workmanship for work within the public right-of-way, for a period of one year from acceptance of the landscape installation. All required landscaping shall be permanently maintained in a neat and orderly condition. *(Planning)*

4.2. All landscape areas shall comply with the City's water efficiency ordinance as well as the water efficient requirements of the Cypress Zoning Code. *(Planning)*

4.3. Unless otherwise specified, all required trees shall be a minimum 15-gallon in size and of a variety approved by the Director of Community Development. *(Planning)*

5. Property Maintenance

5.1. All walls, fences, and trash enclosures shall be maintained free of significant surface cracks, dry rot, warping, missing panels or blocks, graffiti, or other conditions that detract from the appearance of the property. *(Planning)*

5.2. Parking lot surfaces and pedestrian walkways shall be maintained in a safe condition such that any concrete, asphalt, or other driving or walking surfaces are free of potholes, buckled or cracked surfaces, or raised areas. *(Planning)*

5.3. Each vacant lot shall be enclosed with fencing and screening along its property lines in a manner that secures the lot from unauthorized access and maintains the property in a clean, neat, and orderly condition. All fencing and screening shall be maintained in good condition. Any images, logos, branding, or other custom fence screening shall require review and approval by the Community Development Department. *(Planning)*

5.4. The property shall be maintained free of the accumulation of trash and debris. Trash

and debris associated with the permitted uses are to be stored solely in designated trash enclosures. *(Planning)*

6. Orange County Fire Authority

6.1. Design Review: Portions of the project that are deferred shall be subject to the codes, standards, and other applicable requirements in force on the date that the deferred plan is submitted to OCFA. The development review does not imply or express approvals on any subsequent plan submittal. *(OCFA)*

6.2. Plan Submittal Sequence: The applicant or responsible party shall submit the plan(s) listed below to the Orange County Fire Authority for review. Approval shall be obtained on each plan prior to the specified event. *(OCFA)*

Prior to issuance of precise grading permit, or, at the discretion of the planning department, prior to approval at public hearing if this precedes map approval or grading permit issuance:

- Environmental Impact Report (service code PR100)
- Map Review (service code PR110)

Prior to OCFA clearance of a final map or issuance of a precise grading permit or a building permit, if a grading permit is not required:

- Fire Master Plan (service code PR145)
- Demonstrating a fire flow of 4,000 g.p.m. at 20 p.s.i. for 4 hours

Prior to issuance of a building permit:

- Architectural Plans (service codes PR200-PR272)
- Underground piping for private hydrants and fire sprinkler systems (service code PR470-PR475)
- Fire sprinkler system (service codes PR400-PR465)

Prior to concealing interior construction:

- Fire alarm system (service code PR500-PR520)
- Hood and duct extinguishing system (service code PR335)

6.3. Emergency Access Easements: Irrevocable reciprocal access easements for emergency access purposes to the benefit of the City of Cypress shall be recorded concurrently with the final map and the final map will be submitted to the OCFA for clearance. *(OCFA)*

6.4. Secured Fire Protection Agreement: Prior to clearance of a final map for recordation, or issuance of a building permit, whichever comes first, the applicant or responsible party shall enter into a secured fire protection agreement with OCFA Strategic Services (714-573-6199) to mitigate additional fire service impacts resulting from the project. *(OCFA)*

6.5. Traffic Pre-emption Devices: Prior to issuance of a final map, grading permit, or building permit, whichever comes first, the applicant or responsible party shall arrange with the appropriate city, county, or state public works department or agency for installation of traffic pre-emption devices on each traffic signal installed, relocated, or similarly modified as part of this project. *(OCFA)*

6.6. Pre-submittal Meeting: Prior to issuance of grading permit or submittal of any fire master plans or architectural plans to the OCFA, the applicant or responsible party shall attend a pre-submittal meeting with an OCFA plan reviewer. Call OCFA Planning & Development Services at 714-573-6108 at least two weeks in advance to arrange for scheduling and payment for the pre-submittal meeting. *(OCFA)*

6.7. Preconstruction Meeting: Before commencement of construction, the applicant or responsible party shall attend a pre-construction meeting with an OCFA inspector. Call OCFA Inspection Scheduling at 714-573-6150 at least five days in advance to schedule and pay for the pre-construction meeting. *(OCFA)*

6.8. Lumber-drop Inspection: After installation of required fire access roadways and hydrants, the applicant shall receive clearance from the OCFA prior to bringing combustible building materials on-site. Call OCFA Inspection Scheduling at 714-573-6150 with the Service Request number of the approved fire master plan at least five days in advance to schedule the lumber drop inspection. *(OCFA)*

6.9. Emergency Responder Digital Radio System: The applicant shall provide evidence of compliance with emergency responder digital radio system performance criteria prior to occupancy. Buildings shall be equipped with an emergency responder digital radio system per the requirements of the Orange County Sheriff's Department-Communications & Technology Division. *(OCFA)*

7. Engineering

7.1. That all engineering requirements of the City of Cypress, including preparation of improvement plans and installation of all improvements such as curbs and gutters, sidewalks, street grading and pavement, sewer and drainage facilities, or other appurtenant work shall be complied with as required by the City Engineer and in accordance with specifications on file in the Office of the City Engineer, as may be modified by the City Engineer; and, that security in the form of a bond, certificate of deposit, letter of credit, completion guarantee, or cash, in an amount and form satisfactory to the City of Cypress, shall be posted with the City to guarantee the satisfactory completion of said improvements. Said security shall be posted with the City prior to the issuance of a building permit or final map approval, whichever occurs first, to guarantee the installation of the related improvements prior to final building and zoning inspections in accordance with an approved construction phasing plan. In the event the developer's contractor and/or subcontractor fails to diligently prosecute the work within the public right-of-way, the City reserves the right, in its reasonable discretion, to issue a stop work notice and to provide a substitute contractor and/or subcontractor to complete said work at the sole cost and expense of developer. *(Engineering)*

7.2. The applicant shall not grant any easements over any property subject to a requirement of dedication or irrevocable offer to the City of Cypress, unless such easements are expressly made subordinate to the easements to be offered for dedication to the City. Prior to granting any of said easements, the subdivider shall furnish a copy of the proposed easement to the City Engineer for review and approval. *(Engineering)* (Easement Subordination)

7.3. Prior to any street construction or relocation, when there are monuments in the project area which control the location of subdivisions, streets or highways, or provide survey control, the developer shall locate and reference the monuments and shall reset them after construction as required by Section 8771 of the Business and Professions Code, in a manner meeting the approval of the City Engineer. *(Engineering)*

7.4. The applicant shall notify the City Engineer in writing if any changes to parcel/tract map are proposed during the plan check process. Permits shall not be issued until the City Engineer has reviewed and approved the proposed changes for conformance with the intent of the City Council's action and the conditions herein. If the proposed changes are of a substantial nature, an amendment to the original entitlement may be required. *(Engineering, Planning) (Changes to the Tract Map/Parcel Map)*

7.5. The applicant shall make all submittals, including engineering, building, grading, water quality, and inquiries through the department's online plan check and permit application at https://cypressca.viewpointcloud.com or as determined by the City Engineer. *(Engineering)*

7.6. The applicant will be subject to, but not limited to, the following fees on the latest Cypress Master Fee Schedule (at the time of permit application):

- Building/mechanical/electrical/plumbing permit and plan check fees
- Citywide and regional traffic impact fees
- Grading and Public Works permit and plan check fees
- Park Development Fee
- Orange County Sanitation District – Sewer Connection Fees

(Engineering)

8. Landscaping within the Public Right-of-Way

8.1. The applicant or successor in interest shall maintain all landscaping, irrigation, and trees planted in the public right-of-way located along the frontages of their properties, and the roadway parkways and medians in a working, healthy and safe condition. *(Engineering, Maintenance)*

8.2. Within 90 days after recordation of the final map and prior to City's acceptance of the Moody Street dedication, the applicant shall establish a new maintenance agreement, amend the existing maintenance agreement, or otherwise provide documentation acceptable to the City confirming that the existing maintenance obligations will remain in effect for the maintenance of the Moody Street frontage along 5155 and 5233

Katella Avenue and ensuring the continuing maintenance obligation with Shea Properties after the City's acceptance of the public roadway dedication.

9. Sewer and Wastewater

9.1. The developer shall construct new private sewer laterals with manholes or cleanouts at a location approved by the City Engineer. *(Engineering)*

9.2. Prior to the recordation of the subdivision map, the applicant shall submit a sewer plan signed and stamped by a registered civil engineer, detailing all the proposed public and/or private sewer lines meeting the requirements of the City Design Standards for Sewer Facilities to be approved by the City Engineer. (*Engineering*)

9.3. Prior to the recordation of the subdivision map, the applicant shall construct the proposed public sewer lines meeting the requirements of the City Design Standards for Sewer Facilities and must be approved by the City Engineer. (*Engineering*)

9.4. All sewer lines (including mains and laterals) within private lots/properties shall be private sewer lines and shall be owned, maintained and cleaned by the developer, or successor in interest. The City of Cypress shall have no responsibility for maintenance of the private sewer lines. *(Engineering)*

9.5. Prior to the acceptance of any future public sewer lines for City operation and maintenance, the applicant shall grant applicable easements to the City as needed. *(Engineering)*

10. Street Trees

10.1. Trees shall be planted within the public right of way in accordance with the approved street landscape plan subject to the approval of the City Engineer. *(Engineering)*

10.2. The applicant or successor in interest shall trim all trees in the public right-of-way by following the City's tree trimming policy annually or as prescribed by the City Engineer and maintain the trees in a healthy and safe condition. *(Maintenance)*

10.3. The applicant or successor in interest shall maintain and irrigate all trees in the public right-of-way to maintain the trees in a healthy and safe condition. *(Maintenance)*

11. Street Lighting

11.1. The applicant shall install new street lighting on Moody Street, Vessels Circle, and Lexington Drive (east side) with energy efficient LED fixtures. Street light poles, standards, fixtures, spacing, illumination and details shall be approved by the City Engineer and meet the City of Cypress and Southern California Edison design standards and requirements. The applicant shall administer, coordinate, and perform all actions necessary to design, construct, and deliver approved street lighting on all proposed public roadways.

12. Streets

12.1. The applicant shall construct extensions of Moody Street and Vessels Circle within the project limits as shown on VTTM 19247 and described in the Development Agreement. All improvements shall be constructed in accordance with Cypress Public Works standards and specifications and the Traffic Study for the project dated January 2026, prepared by Kimley-Horn and Associates, Inc., and approved by the City ("Traffic Study"), to satisfaction of the City Engineer.

12.2. Prior to the issuance of any certificate of occupancy for project improvements on Lot 2 in VTTM 19247, the applicant shall widen Lexington Drive to the ultimate right-of-way from Cerritos Avenue to the south property line of Lot 2 in VTTM 19247. All improvements shall be constructed in accordance with Cypress Public Works standards and specifications to satisfaction of the City Engineer.

12.3. For all roadway construction, structural sections shall be based on the recommendations of a soils report which has been reviewed and approved by the City Engineer. All design shall be in conformance with the County of Orange Highway Design Manual and City of Cypress standards. Attention is directed that street structural sections shall be determined by using an applicable Traffic Index, but shall be not less than four inches asphalt concrete over six inches of asphalt base. The minimum flow line grade in streets shall be two-tenths percent, and the minimum A.C. cross fall shall be two percent. (Engineering) (Street Structural Sections)

12.4. Prior to the recordation of the applicable "B" final maps for specific development projects, the applicant shall install new driveway approaches that are compliant with the American Disabilities Act. The developer shall comply with the following requirements regarding the improvements:

- Construct all improvements in accordance with Cypress Public Works standards and specifications to satisfaction of the City Engineer.
- Prior to construction, obtain and pay for a permit and inspection services. As part of the permit, maintain a schedule on file with the City Engineer for the work.
- Adjust utility vaults and boxes to grade in accordance with the corresponding utility’s requirements and standards.
- Relocate any utilities as necessary securing the appropriate approvals from the respective utilities.
- If necessary, grant easements to the City for pedestrian purposes for any sidewalk or driveways for compliance with ADA requirements prior to issuance of a permit for construction.

(Engineering)

12.5. Remove and replace any damaged street, pavement, sidewalk, curb and gutter, or any other public improvements as a result of work associated with a specific development project and appropriately clean the area to the satisfaction of the City Engineer.

12.6. The applicant shall submit a street design plans for approval by the City Engineer for all proposed City streets or any work within existing public right of way. Street name signs and traffic signs shall be installed per City Standards. *(Engineering)*

12.7. Prior to issuance of a certificate of occupancy, the applicant shall remove and replace any existing public improvements at the applicable development site which have existing damage, are damaged due to construction, or otherwise below current standards, to the satisfaction of the City Engineer. *(Engineering)*

13. Subdivisions

13.1. This approval is granted subject to the City's approval of a final map and recordation of the final map. The City shall issue building permits only after such recordation, unless otherwise approved by both the Planning Director and Public Works Director and/or pursuant to the Subdivision Map Act. Before occupying any structures or initiating any use approved by this permit, the applicant shall comply with all conditions of the tentative and final maps. (*Engineering, Planning*)

13.2. Prior to the recordation of the final map, the developer shall place on the map an offer of irrevocable dedication, in a form and language acceptable to both the City Engineer and City's Development Attorney, for the extensions of Moody Street and Vessels Circle, and widening of Lexington Drive. The roadways shall be owned and maintained as private streets until acceptance of the offer and the streets are constructed to the City's public street standards as determined by the City Engineer. *(Engineering)*

13.3. All proposed street names for newly created streets, whether public or privately owned, shall be subject to the approval of the City. The developer shall submit to the Planning Director a list of three proposed names and the new street names shall be taken from this list or as recommended by City staff. New streets that align with existing streets shall use the existing street name. Building addresses shall be assigned by the City Building Division. *(Planning, Engineering, Building & Safety) (Street Names)*

13.4. The applicant shall quitclaim or terminate the access easement for the Los Alamitos Race Course (Parcel C of VTTM 19247) located on the Lexington Park property at 4600 W. Cerritos Avenue.

13.5. Subject to any required City approval, prior to the issuance of any permits for the construction of project improvements on Lots 5 and 6 in VTTM 19247, the applicant or a developer shall record documentation sufficient to cause the merger of Lots 5 and 6 in VTTM 19247.

13.6. Subject to any required City approval, within one hundred eighty (180) days after the recordation of the 19247 Final Map (or the portion thereof that is applicable to Lots 8 and 9 in VTTM 19247, the applicant or a developer shall cause Grace Community Church of Cypress ("Grace") to record documentation sufficient to either: (i) cause the merger of Lots 8 and 9 in VTTM 19247; or (ii) create a lot tie for Lots 8 and 9 in VTTM 19247.

14. Traffic

14.1. The quantity, location, width, and type of public driveways shall be subject to the approval of the City Traffic Engineer. Prior to construction of any driveway approach upon public street right-of-way, the applicant shall obtain a public works permit. *(Engineering)* (Driveways)

14.2. The applicant shall construct, modify or install the following improvements in accordance with Cypress Public Works standards/specifications and the Traffic Study. The timing of the improvements shall be prescribed in Exhibit D to the Development Agreement.

1. Ball Road at Moody Street:
   - Add one additional mast arm indication for the northbound and southbound approaches.
2. Ball Road at Walker Street:
   - Restripe the EB/WB approaches to provide one left-turn lane, two through lanes, and one dedicated right-turn lane.
   - Shift the westbound exit lanes north.
3. Cerritos Avenue at Moody Street:
   - Widen and restripe EB approach to provide an exclusive right-turn lane.
   - Restripe SB approach to provide 2 lefts, 1 through, and 1 shared through/right lane.
   - NB approach to provide 2 lefts, 1 through, and 1 shared/through right lane.
   - Modify traffic signal to provide protected left-turn phasing for the northbound/southbound approaches.
   - Provide a crosswalk on the east leg of the intersection.
   - Provide bike lanes on Moody Street.
4. Cerritos Avenue at Valley View Street
   - Modify traffic signal to provide NB right-turn and SB right-turn overlap phasing.
   - Modify striping to extend EB left-turn pocket storage.
5. Vessels Circle at Walker Street
   - Modify traffic signal to add EB right-turn overlap phasing.
   - Modify striping to extend NB and EB pocket storage.
   - Widen Vessels Circle by 10 feet on the south side for 650 feet west of Walker Street.
   - Widen the westbound receiving lane by 3 feet on the north side for 600 feet west of Walker Street.
   - Modify the traffic signal as necessary to accommodate the widening of Vessels Circle.
6. Vessels Circle at Moody Street
   - Install traffic signal with safety lighting, CCTV monitoring, and fiber optic communications connecting to the City's traffic signal network.
   - NB approach to provide 1 left, 2 throughs, 1 right.
   - SB approach to provide 1 left, 1 through, 1 through/right.
   - WB approach to provide 1 left, 1 through, 1 right.
   - EB approach to provide 1 left, 1 through/right.

- Provide bike facilities on both Moody Street and Vessels Circle.

14.3. Prior to the issuance of any grading permits, the applicant shall provide adequate sight distance per Engineering Standard Plan 204 and 205 at all street intersections, driveways, and parkways, in a manner meeting the approval of the City Traffic Engineer. The applicant shall make all necessary revisions to the plan to meet the sight distance requirement such as removing trees, signs, utilities, landscape, hardscape, slopes or any other encroachments from the limited use area in a manner meeting the approval of the City Engineer. *(Engineering)* (Sight Distance)

15. Utilities

15.1. Prior to issuance of a certificate of occupancy, the applicant shall install all new utility services underground. *(Engineering)*

15.2. The applicant shall install all new underground utility services prior to the installation of the final 2-inch cap of the asphalt pavement. All new asphalt pavement shall have a moratorium of 3 years. *(Engineering)*

15.3. All new utility meters shall be installed on private property and shall not be located on any existing or future public right of way. *(Engineering)*

15.4. Arterials shall be crossed by boring only. In public streets, lateral open cuts spaced within 20 feet of each other shall be covered with a two-inch continuous asphalt concrete cap. *(Engineering)*

15.5. All proposed utility, storm drain, or sewer connections shall be reviewed and approved by the agency or utility who owns and operates the service. *(Engineering)*

16. Drainage

16.1. Prior to issuance of any grading/drainage permits for specific development projects within the property subject to VTTM 19247, at the direction of the City Engineer, the applicant shall submit a grading plan for approval signed and stamped by a registered California civil engineer and using actual grades from an Orange County Surveyor's Benchmark. *(Engineering)*

The applicant shall ensure the following requirements are met:

- Drainage is solved to the satisfaction of the City Engineer and Building Official.
- The Grading Plan is consistent with the Water Quality Management Plan, Site Plan and any Improvement Plan for proposed public storm drains.
- Submittal of a Preliminary Grading Plan if deemed necessary by the City Engineer.
- The topography of the area surrounding this development shall be made to establish existing drainage flow patterns.
- The minimum slope standards are met for 1% for landscape areas, AC parking areas 1.5%, Concrete 2%.
- All surface runoff and subsurface drainage directed to the nearest acceptable drainage facility, as determined by the City Engineer.

- Drainage facilities discharging onto adjacent property shall be designed to imitate the manner in which runoff is currently produced from the site or alternatively, the applicant may obtain a drainage acceptance and maintenance agreement, suitable for recordation, from the owner of said adjacent property.
- All drainage facilities must be consistent with the County of Orange Grading Ordinance as supplemented by the Engineering Division and Local Drainage Manual.

16.2. Prior to the issuance of any demolition permits for storm drainage features and improvements on the Property that currently accommodate drainage from Lot 9 in VTTM 19247, the applicant shall construct a stormwater detention basin and pump station, consistent with the Master Plan of Drainage for Specific Plan 3.0 Buildout Project dated March 11, 2026, prepared by Tait & Associates, Inc., and approved by the City ("Master Plan of Drainage"), on Lot 8 in VTTM 19247 or at another location approved by the City. The applicant and Grace Church shall execute and record an amendment to that certain Declaration of Drainage Easement recorded in 2010 to clarify that (a) the stormwater drainage for Lots 8 and 9 in VTTM 19247 will no longer flow to the property, (b) the applicant or a developer will construct a new detention basin/pump station for that purpose on Lot 8 or another location approved by the City and (3) Grace Church shall be responsible for the operation and maintenance of such drainage improvements.

16.3. The applicant shall construct a stormwater detention basin and pump station on Lots 5/6 in VTTM 19247 in accordance with the Master Plan of Drainage, City standards and the Development Agreement and as approved by the City Engineer. The stormwater detention basin will be privately owned and maintained by an association. The pump station shall be City owned, maintained, and operated. The City may shall form an assessment district to fund the maintenance, operation, repair, and replacement of the pump station as described in the Development Agreement. The applicant shall grant any easement(s) necessary for the City to maintain and operate the pump station. The applicant shall additionally grant easements to the City to allow for the discharge of stormwater from portions of the Moody Street extension to the Lots 5/6 detention basin as preliminarily proposed in the Master Plan of Drainage.

16.4. The applicant shall construct all necessary storm drain improvements or relocations to facilitate roadway improvements for Vessels Circle, Moody Street, and Lexington Drive consistent with the Master Plan of Drainage. All storm drain improvements shall be reviewed and approved by the City Engineer and shall meet City standards. The applicant or developers shall obtain approval from the City of Los Alamitos for the proposed storm drain connection at Lexington Drive prior to issuance any permits for Lot 2 or recordation of “B” final map for Lot 2.

16.5. Prior to the issuance of any construction permits for any project improvements on Lot 3 or 4, the applicant and Cottonwood Christian Center or its successor in interest shall execute and record an amendment to the existing an existing Easement Agreement recorded in 2007 to include the right to discharge stormwater from Lots 3 and 4 of VTTM 19247 into the existing 48" private storm drain on Cottonwood's property, in a form acceptable to the City.

16.6. Any proposed stormwater drainage or storm drains which cross property line(s) shall require drainage easements to be executed and recorded prior to the issuance of applicable grading permits, unless existing drainage easements or agreements are in effect.

17. Storm Water Quality – National Pollutant Discharge Elimination System

17.1. Development must be undertaken in accordance with conditions and requirements of the Santa Ana Region National Pollutant Discharge Elimination System (NPDES) Permit Order No. R8-2009-0030 as amended by Order No. R8-2010-0062.

17.2. Prior to the issuance of any grading or building permits, the applicant shall submit for review and approval by the City Engineer, a Final Water Quality Management Plan (WQMP). The WQMP must include best management practices for source control, pollution prevention, site design, and low impact development as well as structural treatment controls among many factors. Site design for controlling urban runoff must first evaluate infiltration, then harvest and water re-use, then evapotranspiration and only bio-treatment if the other three are not feasible. The WQMP must identify the routine structural and non-structural measures specified in the current Drainage Area Management Plan (DAMP) and utilize the Orange County Technical Guidance Document (OC TGD) as well as the Model WQMP.

Applicable WQMP projects must also:

- Utilize the City's current WQMP template;
- Utilize the City's online WQMP application system for submittal;
- Address site Design BMPs (as applicable) such as minimizing impervious areas, maximizing permeability, minimizing connected impervious areas, creating reduced or zero discharge areas, and conserving natural areas;
- Incorporate Routine Source Control BMPs as defined in the DAMP;
- Include post-construction Treatment Control BMP(s) as defined in the DAMP;
- Include and Operations and Maintenance (O&M) Plan that (1) describes the long- term operation and maintenance requirements for pos-construction Treatment Control BMP(s); (2) identifies the entity that will be responsible for long-term operation and maintenance of the referenced Treatment Control BMP(s); (3) describes the mechanism for funding the long-term operation and maintenance of the references Treatment Control BMP(s); (4) includes the Water Quality Implementation Covenant and Agreement.

17.3. Prior to issuance of and grading or building permits, the applicant must submit a certified copy of the approved Final Water Quality Management Plan (WQMP) along with the final approved Grading Plan and all other supporting documentation on a USB flash drive in a single digital file (pdf) format acceptable to the City Engineer. The Final WQMP Submittal and subsequent approval of the Preliminary Water Quality Management Plan does not guarantee approval of the Final Water Quality Management Plan. Should the final calculations and submittals not meet the required thresholds necessary to meet the obligations of the City under the NPDES Permit for development and its incorporated documents such as the DAMP and OC

TGD. alterations to the site and the site plan may be required as prescribed by the City Engineer to the WQMP. Any significant alteration to the site plan due to the Final WQMP may require approval of the Council for the revision. Additionally, the WQMP must identify a responsible party and implement funding sources for maintaining post construction BMPs as required as part of the development and must ensure that appropriate easements and ownerships are properly recorded in public records and access is made available for inspection of said devices.

17.4. The owner is responsible for providing a Water Quality Implementation Covenant and Agreement and an Operations and Maintenance plan that outlines the funding and maintenance of water quality BMPs, consent to inspect, and indemnification on the forms provided by the City for all post-construction stormwater mitigation and treatment devices, as required by the Santa Ana Regional National Pollutant Discharge Elimination System (NPDES) Permit Order No. R8-2009-0030 as amended by Order No. R8-2010- 0062. The agreement will be subject to the review and approval of the City Engineer and City Attorney. Before final acceptance of project improvements, the owner or his/her designated representative must certify that the treatment device was constructed and installed in accordance with the approved plans. Prior to the issuance of a certificate of occupancy, the applicant must demonstrate compliance with the City's NPDES Implementation Program in a manner meeting the satisfaction of the City Engineer and Water Quality Manager, including:

- Demonstrate that all structural Best Management Practices (BMPs) described in the BMP Exhibit from the project's approved WQMP and Maintenance Covenant and Agreement have been implemented, constructed and installed in conformance with approved plans and specifications
- Demonstrate that the applicant has complied with all non-structural BMPs described in the project's WQMP
- Demonstrate that copies of the project's approved WQMP and Covenant and Agreement (with attached O&M Plan) are available for each of the initial occupants
- Agree to provide pay a compliance deposit to pay for any required inspections and any additional non-compliance inspections as the City deems necessary
- Submit certified record drawings as well as the project engineer’s post-construction certification as well as the owner’s post construction certification on a template provided by the City
- Agree to pay for an inspection (special investigation) from the City for a date 12 months after the issuance of a certificate of occupancy for the project to verify compliance with the approved WQMP, Maintenance Covenant and Agreement and O&M Plan.
- Demonstrate that the applicant has RECORDED one of the following:

  1. The CC&R's (that must include the approved WQMP, Maintenance Covenant and Agreement and O&M Plan) for the project's Homeowner’s Association;
  2. A Water Quality Implementation Covenant and Agreement that has the approved WQMP and O&M Plan attached; or
  3. The final approved Water Quality Management Plan (WQMP) and

Operations and Maintenance (O&M) Plan. *(Engineering, Water Quality)* (NPDES/WQMP Compliance Measures).

17.5. All onsite storm drain inlets, whether newly constructed or existing, must be labeled "No Dumping Drains to Ocean" before occupancy in accordance with city requirements.

17.6. All exterior metal building surfaces, including roofs, must be coated with rust-inhibitive paint to prevent corrosion and release of metal contaminants into the storm drain system prior to occupancy.

17.7. Trash enclosures and/or recycling area(s) must include a structure to cover the enclosure with a solid roof design below to direct stormwater away from entering the enclosure. All litter/waste material must be kept in leak-proof containers. Area(s) must be paved with impermeable material. No other area may drain onto these areas. The trash enclosure and/or recycling area(s) may not drain to the storm drain system and all cleanups must be performed using dry cleanup methods. Additionally, there must be a posted sign on the trash enclosure informing users that hazardous materials are not to be disposed therein. Additionally, trash enclosures may be required to be modified to meet the current solid waste requirements.

17.8. Pet waste collection systems or dispensers, which hold bags for pet owners to use to pick up waste, must be installed in close proximity to trash receptacles in all common use areas. Regular refuse collection and resupply of pickup bags must be conducted by property owner or homeowner's or business owner's association.

17.9. Decorative fountains and ponds must be designed with no connection to the storm drain system. The discharge of non-stormwater from fountains and ponds must not be allowed to drain to the storm drain system.

17.10. Prior to the issuance of any grading or building permit, the applicant must submit an Erosion and Sediment Control Plan (ESCP) in a manner meeting approval of the City Engineer and the Building Official and in accordance with requirements of the Santa Ana Regional National Pollutant Discharge Elimination System (NPDES) Permit Order No. R8-2009-0030 as amended by Order No. R8-2010-0062. The ESCP must be developed and implemented to demonstrate compliance with the City's NPDES Implementation Program and State water quality regulations for grading and construction activities. The ESCP must identify how all construction materials, wastes, grading or demolition debris, and stockpiles of soil, aggregates, soil amendments, etc. must be properly covered, stored, and secured to prevent transport into local drainage ways or coastal waters by wind, rain, tracking, tidal erosion or dispersion. The ESCP must also describe how the applicant will ensure that all BMPs will be maintained during construction of any future public right-of-ways. The ESCP must be updated as needed to address the changing circumstances of the project site. A copy of the current ESCP must be kept at the project site and be available for City review on request.

17.11. Prior to issuance of certificate of occupancy, the applicant must clean all on site storm drain systems, catch basins, filters, storm drain lines, inlet boxes, etc.

Additionally, upon direction of the City Engineer, the applicant must clean any public storm drain systems, catch basins, filters, lines, inlet boxes that the City Engineer has determined have been impacted by the applicant's construction. If clean-up is not performed, the City may make arrangements to clean the system at developer’s expense.

17.12. The owner is responsible for maintaining and operating all on-site private improvements.

17.13. The owner or association shall maintain all post-construction stormwater quality improvements per the approved Water Quality Management Plan (WQMP).

17.14. All property areas must be maintained free of litter/debris.

17.15. All onsite storm drains including post-construction best management practices (BMPs) must be cleaned at least twice a year; once immediately before October 1st (the beginning of the rainy season), and once in May (the end of the rainy season). Additional cleaning may be required by the City Engineer.

17.16. There must be no pressure washing of parking areas, and waste storage areas, or building site, unless the City approves a collection system to keep water from entering the storm drain.

17.17. Landscaping must be properly maintained with efficient irrigation to reduce runoff, promote surface filtration, and minimize the use of fertilizers and pesticides that can contribute to urban runoff pollution.

17.18. Any site plan review applicant or its successor shall be responsible for the cost of any water quality inspections by the City that are mandated by the State of California or by the U.S. Environmental Protections Agency (USEPA) presently or in the future.

17.19. The Improvement Bond must incorporate all post-construction stormwater devices from the approved WQMP. These costs will be provided in the WQMP for review and inclusion in the Improvement Bond and shall cover device defects as well as malfunctions and possible replacement in the event the device is damaged or not operating per the manufacturer’s specification or intended design.

17.20. The applicant will be subject to all requirements of Section 13-29 of the Cypress Municipal Code regarding stormwater pollution prevention including, but not limited to, an Operations and Maintenance Verification Certification – WQMP Post Construction through the City’s online application and permitting system, prior to issuance of a final certificate of occupancy.

17.21. No person or person(s) shall make any modifications to drainage approved in the grading plan or WQMP without prior written approval from the City Engineer.

17.22. Certified full trash capture devices must be installed to address the Statewide Trash Amendments adopted April 7, 2015. Existing storm drain inlets located within this project must be retrofitted to address the above trash policies. Additionally, proposed post-construction BMPs must be devices that are State certified for full-

trash capture. Relocated catch basin along property frontage shall also include automatic retractable screens (ARS) devices in addition to full trash capture devices to address the Statewide Trash Amendments.

18. Building and Safety

18.1. Applicant/developer shall provide a single point of contact for all phases of the permitting process and the construction process. The point of contact may be different for permitting and construction. The applicant/developer will provide a 24-hour contact number. This person will be responsible for all communications with Building and safety including but not limited to application, plan submittal, permit issuance, inspection requests and any other requests or inquiries. (*Building and Safety*)

18.2. The applicant will schedule a pre-construction meeting with both the Building Official and City Engineer (or designee) prior to any work starting on the project site. The meeting shall take place one to two weeks prior to the start of construction. All contractors including their superintendents, designers/engineers will be required to attend unless otherwise directed by the Director of Public Works. (*Building and Safety, Engineering*)

18.3. Construction bins for non-recyclable and recyclable materials generated from any construction site (residential and non-residential) must be placed "on site" out of the public right-of-way unless permit is obtained from the City Engineer. *(Building & Safety)*

18.4. A pre-grading SWPPP's inspection is required prior to grading permit issuance. All required grading stormwater BMPs shall be installed and inspected by the Building Division prior to release of the grading permit. *(Building & Safety)*

18.5. Delivery, loading and unloading of construction materials shall occur on site and not within the Public Right of Way unless a permit is obtained from the City Engineer. *(Building and Safety)*

19. Solid Waste

19.1. The applicant shall subscribe to solid waste services from the City's solid waste hauler with no less than one time per week service for trash, recycling, and organics recycling. These shall be properly maintained and not allowed to overflow. Source separated organic recycling is required unless alternatives are approved in writing from the Public Works Director. (*Public Works, Water Quality*)

19.2. The applicant shall ensure there is adequate room and clearance for solid waste trucks and for placement of construction bins on site during construction. Access ways shall not be blocked without written approval of the Building Official. (*Public Works*)

19.3. The applicant shall not install a trash compactor at the site without first having received written approval from the City's solid waste hauler. *(Public Works)*

RESOLUTION NO.

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF CYPRESS, CALIFORNIA, CERTIFYING FINAL ENVIRONMENTAL IMPACT REPORT SCH NO. 2025040377; ADOPTING CEQA FINDINGS OF FACT, A MITIGATION MONITORING AND REPORTING PROGRAM, AND A STATEMENT OF OVERRIDING CONSIDERATIONS; AND APPROVING ENVIRONMENTAL CLEARANCE FOR THE REASONABLE BUILDOUT OF THE CYPRESS TOWN CENTER AND COMMONS SPECIFIC PLAN 3.0 PROPERTY LOCATED AT 4961 KATELLA AVENUE.

WHEREAS, the City Council of the City of Cypress has considered an application submitted by Los Alamitos Race Course ("LARC") ("Developer") for the reasonable buildout of the Cypress Town Center and Commons 3.0 Specific Pan including the subdivision of 151 gross acres into 14 parcels and a Development Agreement ("DA"); and

WHEREAS, the foregoing project requires approval of a Vesting Tentative Tract Map ("VTTM No. 19247") and a Development Agreement that required the preparation of an Environmental Impact Report ; and

WHEREAS, a Notice of Preparation (NOP) was circulated for comment to the public, responsible, and trustee agencies for a 30-day public review period between April 4, 2025 and May 5, 2025, during which time the City held a public scoping meeting on April 16, 2025; and

WHEREAS, the Notice of Availability ("NOA") for the Draft Environmental Impact Report ("Draft EIR") was issued on March 16, 2026, and the Draft EIR was circulated for public review from March 16, 2026 through April 30, 2026; and

WHEREAS, following the close of the public review period, the Final Environmental Impact Report ("Final EIR") was prepared, which includes written responses to the comments received during the public review period; and

WHEREAS, the responses to comments on the Draft EIR are full and complete in compliance with California Environmental Quality Act ("CEQA"). The responses to comments do not detrimentally affect the analysis in the Draft EIR, and do not require the recirculation of information; and

WHEREAS, the City Council now desires to adopt a resolution (1) adopting the findings required by CEQA Guidelines, Section 15091; (2) certifying the Final EIR for the Proposed Project; (3) adopting the proposed mitigation monitoring and reporting program, and (4) adopting a statement of overriding considerations, pursuant to CEQA; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF CYPRESS, CALIFORNIA, HEREBY FINDS, RESOLVES AND ORDERS AS FOLLOWS:

Section 1. Recitals. The City Council hereby specifically finds that all of the facts set forth in the recitals above of this Resolution are true and correct and the same are specifically incorporated herein.

Section 2. Administrative Record. All evidence introduced before the City Council at the public hearing on the Final EIR held on July 14, 2026, are hereby incorporated into the record of this proceeding, including all documents specified under applicable State law, and shall comprise the entire record of proceedings for any claims under CEQA.

Section 3. Final EIR Contents. The Final EIR consists of the following:

a) The Final EIR including all Technical Appendices attached;
b) The Draft EIR including all Technical Appendices attached;
c) The Notice of Preparation and comments received in response to the Notice of Preparation;
d) The Mitigation Monitoring and Reporting Program;
e) Additions and corrections to the remaining portions of the Draft EIR that have been made pursuant to public comments;
f) Comments received on the Draft EIR with Responses to each of the Comments made;
g) The Notice of Completion and Availability of the Draft EIR for public review; and
h) Any other information added by the Lead Agency.

(All hereafter collectively referred to collectively as the “EIR”)

Section 4. Accompanying Documents To EIR. Documents that shall accompany and be part of the EIR are:

a. Mitigation Monitoring and Reporting Program;
b. Findings of Fact; and
c. Statement of Overriding Considerations.

Section 5. Certification Of Compliance With CEQA. The City Council does hereby finds and determines the EIR (Exhibit “1” to this Resolution, a copy which is on file with the Planning/Community Development Department), the Findings of Fact and the Statement of Overriding Considerations (Exhibit “2” to this Resolution), and the Mitigation

Monitoring and Reporting Program (Exhibit "3" to this Resolution) have been prepared in accordance with requirements of CEQA, and the CEQA Guidelines.

Section 6. CEQA Findings of Fact, Mitigation Monitoring and Reporting Program and Statement of Overriding Considerations.

a) *Adoption of Findings of Fact*. The City Council does hereby approve, accepts as its own, incorporate as if set forth in full herein, and make each and every one of the findings contained in the Findings of Fact, Exhibit "2" of this Resolution, a copy of which is on file in the Planning/Community Development Department.

b) *Certification of Environmental Impact Report*. The City Council hereby certifies (1) the EIR has been completed in compliance with CEQA; (2) that it has reviewed and considered the information contained in the EIR prior to approving the project; and (3) that the EIR reflects the City Council's independent judgment and analysis.

c) *Adoption of Statement of Overriding Considerations*. The City Council finds and determines that, even with the incorporation of all feasible mitigation measures, certain significant and unavoidable environmental impacts associated with the Proposed Project will remain. These impacts include air quality emissions, impacts to cultural resources, and transportation impacts associated with future development that may occur under the Proposed Project. Accordingly, the City Council hereby adopts the Statement of Overriding Considerations set forth in Exhibit "2" to this Resolution and finds that the economic, legal, social, and other benefits of the Proposed Project outweigh and render acceptable the Project's unavoidable adverse environmental impacts. The City Council further finds and determines these overriding considerations apply to the Proposed Project as approved, or as may be modified or amended by the City Council.

d) *Adoption of Mitigation Monitoring and Reporting Program*. As required by applicable State law, the City Council hereby adopts the Mitigation Monitoring and Reporting Program set forth in Exhibit "3" of this Resolution. The City Council finds that the Program is designed to ensure that, during project implementation, the City and any other responsible parties implement the project components and comply with the mitigation measures identified in the Findings of Fact and the Mitigation Monitoring and Reporting Program.

Section 7. Effective Date of Resolution. This Resolution shall become effective immediately. The Community Development Department is directed to file a Notice of Determination.

PASSED, APPROVED and ADOPTED by the City Council of the City of Cypress at a regular meeting held on the 14th day of July, 2026.

_____
MAYOR OF THE CITY OF CYPRESS

ATTEST:

_____
CITY CLERK OF THE CITY OF CYPRESS

STATE OF CALIFORNIA)
COUNTY OF ORANGE)SS

I, LISA BERGLUND, City Clerk of the City of Cypress, DO HEREBY CERTIFY that the foregoing Resolution was duly adopted at a regular meeting of the said City Council held on the 14th day of July, 2026, by the following roll call vote:

AYES: COUNCIL MEMBERS:
NOES: COUNCIL MEMBERS:
ABSENT: COUNCIL MEMBERS:

AND
STATEMENT OF OVERRIDING CONSIDERATIONS

FINDINGS OF FACT AND STATEMENT OF OVERRIDING CONSIDERATIONS FOR THE FINAL ENVIRONMENTAL IMPACT REPORT

FOR THE SPECIFIC PLAN 3.0 BUILDOUT PROJECT (CERTIFICATION OF AN ENVIRONMENTAL IMPACT REPORT AND VESTING TENTATIVE TRACT MAP NO. 19247)

STATE CLEARINGHOUSE NO. 2025040377

The Final Environmental Impact Report (Final EIR) prepared by the City of Cypress (City) for the Specific Plan 3.0 Buildout Project (proposed project) consists of the March 2026 Draft Environmental Impact Report (Draft EIR) and June 2026 Response to Comments on the Draft EIR.

The Final EIR identifies significant environmental impacts that will result from implementation of the proposed project. The City finds that the adoption of mitigation measures identified in the Final EIR as part of the proposed project approval will reduce all but the following significant environmental effects (impacts) to levels that are less than significant: air quality, cultural resources, and transportation. For those impacts, no feasible mitigation measures have been identified to reduce the impacts to a less than significant level. Mitigation measures have been identified and included but would not reduce impacts to a level of less than significance; therefore, these impacts will remain significant and unavoidable. These Findings contain a Statement of Overriding Considerations that demonstrates why the benefits of the proposed project outweigh the unavoidable adverse environmental effects and are therefore acceptable.

As required by the California Environmental Quality Act, Public Resources Code (PRC) Section 21000 *et seq*. (CEQA) and the *State CEQA Guidelines*, California Code of Regulations, Title 14, Section 15000 *et seq*. (*State CEQA Guidelines*), the City, in addition to adopting these CEQA Findings and Statement of Overriding Considerations, also adopts a Mitigation Monitoring and Reporting Program (MMRP) for the proposed project. In adopting the MMRP, the City finds that it meets the requirements of PRC Section 21081.6 by providing for the implementation and monitoring of measures intended to mitigate potentially significant environmental effects of the proposed project.

In accordance with CEQA and the *State CEQA Guidelines*, the City adopts these findings as part of the project approval. Pursuant to PRC Section 21082.1(c)(3), the City also finds that the Final EIR reflects the City's independent judgment as the lead agency for the proposed project.

This page intentionally left blank

1.0 INTRODUCTION

1.1 FINDINGS OF FACT

CEQA requires that the environmental impacts of a project be examined and disclosed prior to approval of a project. Pursuant to Section 15091(a) of the *State CEQA Guidelines*, no public agency shall approve or carry out a project for which an EIR has been certified which identifies one or more significant environmental effects of the project unless the public agency makes one or more written findings for each of those significant effects, accompanied by a brief explanation of the rationale for each finding. The possible findings are:

1. Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

2. Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency.

3. Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the Final EIR.

Having received, reviewed and considered the Final EIR prepared for the Specific Plan 3.0 Buildout Project (proposed project), State Clearinghouse (SCH) No. 2025040377; as well as all other information in the record of proceedings on this matter, the following Findings Regarding the CEQA Documents for the proposed project are hereby adopted by the City.

1.2 DOCUMENT FORMAT

These Findings have been categorized into the following sections:

1. Section 1.0 provides an introduction to these Findings.

2. Section 2.0 provides a summary of the proposed project, overview of other discretionary actions required for the proposed project, and a statement of project objectives.

3. Section 3.0 provides a summary of those activities that have preceded the consideration of the Findings for the proposed project as part of the environmental review process, and a summary of public participation in the environmental review for the proposed project.

4. Section 4.0 sets forth findings regarding those potentially significant environmental impacts identified in the CEQA Documents which the City has determined to be less than significant with the implementation of project design features.

5. Section 5.0 sets forth findings regarding those significant or potentially significant environmental impacts identified in the CEQA Documents which the City has determined can

feasibly be mitigated to a less than significant level through the imposition of mitigation measures included in the MMRP for the project.

6. Section 6.0 sets forth findings for significant and unavoidable project impacts.

7. Section 7.0 sets forth findings regarding growth-inducing impacts.

8. Section 8.0 sets forth findings regarding alternatives to the proposed project.

9. Section 9.0 contains findings regarding the Mitigation, Monitoring and Reporting Program (MMRP) for the proposed project.

10. Section 10.0 contains other relevant findings adopted by the City with respect to the proposed project.

11. Section 11.0 contains the Statement of Overriding Considerations for the proposed project.

The Findings set forth in each section herein are supported by findings and facts identified in the administrative record of the proposed project.

1.3 CUSTODIAN AND LOCATION OF RECORDS

The documents and other materials that constitute the administrative record for the City's actions regarding the proposed project are located at the City of Cypress Community Development Department, located at 5275 Orange Avenue, Cypress, California 90630. The City is the custodian of the administrative record for the proposed project.

2.0 PROJECT SUMMARY

2.1 PROJECT DESCRIPTION AND LOCATION

The proposed project analyzed in the Draft EIR consists of the reasonably foreseeable buildout of a portion of the area governed by the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) that includes approximately 134 acres of land (Buildout Area) in the City of Cypress. The City of Cypress voters approved the Specific Plan on November 5, 2024, pursuant to "Measure S" as part of the Housing Element Implementation Project. The proposed project includes the approval of Vesting Tentative Tract Map No. 19247 (VTTM 19247). VTTM 19247 includes lots with a total land area of approximately 151.6 acres. The land subject to VTTM 19247 is greater than the Buildout Area as VTTM 19247 includes Lots 8 and 9 (17.55 acres), which are, or will be, part of the Grace Church property, which is located outside the area governed by the Specific Plan. The environmental analyses in the Draft EIR do not consider future development on Lots 8 and 9 of VTTM 19247.

In addition, the proposed project does not consider the development of two discrete portions of the land subject to the Specific Plan, which include (1) seven acres of land within the area governed by the Specific Plan (Melia Property) that Melia Homes has previously developed as the Belmont residential project (State Clearinghouse [SCH] 2020099025) and (2) nine acres of land on which the City has previously developed Lexington Park.

The proposed project evaluated in this EIR includes 1,791 residential units and 440,000 square feet of non-residential uses that could occur within the Buildout Area, as detailed below.

- **Residential Development:** The Specific Plan allows for a maximum of 1,926 residential units, including the units allowed on the seven-acre Melia Property. Melia Homes previously developed the Belmont residential project with 135 units on the Melia Property. Therefore, an additional 1,791 residential units (1,926 minus 135) may be developed within the Buildout Area.

- **Non-Residential Development:** The Specific Plan permits an aggregate maximum of 879,170 square feet of non-residential floor area within the Buildout Area. However, it is anticipated that, based on current and reasonably foreseeable future market conditions, the buildout of the Buildout Area will include substantially less than 879,170 square feet of non-residential development. Therefore, the environmental analyses in the Draft EIR are based in part on the assumption that only 440,000 square feet of non-residential development will occur within the Buildout Area. This represents approximately 50 percent of the maximum amount of permitted non-residential development. If non-residential development that cumulatively exceeds 440,000 square feet is later proposed within the Buildout Area, additional environmental review in accordance with the provisions of CEQA and the *State CEQA Guidelines* may be required if and to the extent such non-residential development requires any discretionary action by the City.

- **Development of Lot 14:** Melia Homes has proposed a project (Lot 14 Project) on the entirety of Lot 14 in proposed VTTM 19247, which includes approximately 7.33 acres of land. The Lot 14 Project includes the further subdivision of proposed Lot 14 into 8 lots (Lots 1–6, A and B) for condominium purposes for the construction and sale of 112 attached townhomes, with

common areas for landscaping, recreation center, parking, drive aisles and easements. Lot 14 is located in the Mixed-Use (Town Center/MDR) District established in the Specific Plan.

The analyses in the Draft EIR are based on the assumed development of Lot 14 with 128 residential units and a portion of the 440,000 square feet of non-residential development that is anticipated to occur in the Buildout Area. Given that the Lot 14 Project includes only 112 residential units (fewer than the 120 residential units assumed for analytical purposes in this EIR) and no non-residential uses, the environmental analyses in this EIR fully account for the proposed Lot 14 Project and are conservative in that they overstate the environmental impacts associated with the development of Lot 14.

VTTM 19247 would divide the Buildout Area and other land currently owned by Grace Church into 14 numbered lots. The numbered lots would accommodate the development of residential, non-residential and park and recreational uses. VTTM 19247 also includes existing Siboney Street, land that would be used to expand a portion of Lexington Drive adjacent to Lot 1 and Lexington Park, the further extension of Vessels Circle between Lots 7 and 12 and the extension of Moody Street to connect to Siboney Street, with Siboney Street becoming part of Moody Street.

In accordance with the approved Specific Plan, the proposed project evaluated in the Draft EIR includes residential development on Lots 2 through 4, 7, and 10 through 14, non-residential development on Lots 10 through 14, and the development of park and recreational improvements on Lots 1, 5, and 6 (as well as two additional acres within the Specific Plan that will be specified in the future).

Development on Lots 1, 5, and 6 is limited to park and recreational uses. The Public Park District includes 18.2 of specifically identified land, which includes the nine acres of land that the City previously developed as Lexington Park following its approval as the Cypress Sports Park Project (SCH No. 2019089093).

The proposed project evaluated in the Draft EIR does not assume any development on Lots 8 and 9. Grace Church owns Lot 9 where its existing church facilities are located. It is anticipated that Grace Church would acquire Lot 8 from Los Alamitos Race Course (LARC) in exchange for transferring ownership of Lots 5 and 10 to LARC. Following this anticipated land swap, Grace Church would own Lots 8 and 9, which collectively include approximately 17.55 acres of land and are not located within the Buildout Area. Lots 8 and 9 have been included in VTTM 19247 solely in connection with the contemplated land swap and no development is presently contemplated on those lots by Grace Church.

The maximum residential buildout and reasonably foreseeable non-residential buildout of the Buildout Area pursuant to the Specific Plan reflects the land swap described above and therefore includes Lots 5 and 10, and excludes Lots 8 and 9.

The Buildout Area has multiple owners. LARC owns approximately 97 acres (LARC Property), Cypress Golf Course (GC), LLC owns approximately 33 acres (Cypress GC Property) and Grace Community Church of Cypress dba Seacoast Grace Church (Grace Church) owns approximately 4 acres. LARC currently operates Los Alamitos Race Course on the LARC Property. The Cypress GC Property is a

portion of the former Cypress Golf Club. Grace Church currently operates a portion of its church on its 4 acres of land in the Buildout Area.

The Buildout Area is situated in the southern portion of the City of Cypress, within Orange County. The City of Cypress is bordered on the north by La Palma and Buena Park, on the east by Anaheim and Stanton, on the south and west by the City of Los Alamitos, and on the west by Long Beach, Hawaiian Gardens, and Lakewood. The Buildout Area includes all of the land governed by the Specific Plan, except for the Melia Property and Lexington Park, which have previously been developed, and the portion of Lots 8 and 9 in VTTM 19247 that is not part of the land governed by the Specific Plan.

The Buildout Area is generally bounded by Cerritos Avenue to the north, on the east by several existing commercial and institutional uses along and near Walker Street including Grace Church and office and retail uses, on the west by Lexington Drive, and on the south by Katella Avenue and several existing commercial, retail, and residential uses.

Regional vehicular access to the Buildout Area is provided by Interstates 605 and 405 (I-605 and I-405), which are approximately 1.5 miles to the west and 2.1 miles to the south, respectively; Beach Boulevard (State Route 39 [SR-39]), approximately 2.7 miles to the east; and State Route 22 (SR-22), approximately 2 miles to the south.

2.2 DISCRETIONARY ACTIONS

The City is the Lead Agency under CEQA and is responsible for reviewing and certifying the adequacy of the EIR for the proposed project. It is expected that the City, at a minimum, would consider the data and analyses contained in the EIR when making their permit determinations. Prior to implementation of the proposed project, discretionary permits and approvals must be obtained from local, state and federal agencies, as listed below.

- **Vesting Tentative Tract Map No. 19247**: The project applicant is requesting approval of Vesting Tentative Tract Map No. 19247 (VTTM 19247).

- **Development Agreement:** The project applicant is requesting approval of a Development Agreement with the City of Cypress, pursuant to Section 65864 *et seq.* of the California Government Code and Section 4.21.020 of the City's Zoning Ordinance.

2.3 STATEMENT OF OBJECTIVES

Section 15124(b) of the *State CEQA Guidelines* states that the project description shall contain "a statement of the objectives sought by the proposed project." Section 15124(b) of the *State CEQA Guidelines* further states that "the statement of objectives should include the underlying purpose of the project."

The underlying purpose of the proposed project is to redevelop the Buildout Area in accordance with the voted-approved Specific Plan. This will be accomplished consistent with the following objectives:

1. Provide a significant number of new residential units in the Buildout Area to help meet the unmet demand for housing in the City and the project vicinity, consistent with the City's Housing Element and the Cypress Town Center and Commons Specific Plan approved by the voters of the City of Cypress.

2. Establish a mixed-use town center that is intended to be the City's "main street" and a gathering place for the community with a vibrant mix of entertainment, retail, restaurant, commercial and residential uses.

3. Revitalize a large urban area in the City that is currently significantly underutilized.

4. Diversify the City's existing housing stock by providing various housing product types and densities to meet a range of housing needs of Cypress and area residents.

5. Provide a mix of residential, commercial, retail and park and recreational uses that encourages project residents to walk or bike to and from the commercial areas and attractions and parks within the Buildout Area and provides an enhanced consumer and employee base for the new commercial uses.

6. Develop a project that will invigorate the local economy by providing new employment and business opportunities.

7. Provide residential and commercial/retail improvements that generate new sources of revenue for the City through increased property values and retail sales.

8. Extend existing City streets through all or a portion of the Buildout Area to improve overall traffic circulation in the project vicinity and provide necessary vehicular and pedestrian access for project residents, tenants, visitors and patrons.

9. Develop new residential and senior housing communities with sufficient housing units to support the size, scale and operation of planned public parks and other amenities and common areas included in the proposed project.

3.0 ENVIRONMENTAL REVIEW AND PUBLIC PARTICIPATION

A Notice of Preparation (NOP) was distributed for the proposed project by the City to the State Clearinghouse on April 4, 2025. The State Clearinghouse (SCH) issued a project number for the proposed project, SCH No. 2025040377. In accordance with *State CEQA Guidelines* Section 15082, the NOP was circulated to interested agencies, groups, and individuals for a period of 30 days, from April 4, 2025, to May 5, 2025, during which comments were solicited and received, pertaining to environmental issues/topics that the Draft EIR should evaluate. These NOP responses were considered in the preparation of the Draft EIR, which upon release, was made available to all Responsible/Trustee Agencies and interested groups and individuals, as required under *State CEQA Guidelines* Sections 15105 and 15087. A virtual public scoping meeting was held on April 16, 2025, at 6:30 p.m.

The State-mandated public review of the Draft EIR began on March 16, 2026, and concluded on April 30, 2026. The Final EIR includes a Response to Comments package, which presents all written comments received during the public review period of the Draft EIR and includes responses to these comments and associated changes made to the Draft EIR in the form of an Errata.

The Final EIR includes any exhibits or appendices thereto, the list of persons, organizations and public agencies which commented on the Draft EIR, the comments which were received by the City regarding the Draft EIR, and the City's written responses to comments raised in the public review and comment process, all of which are incorporated herein and made a part hereof by reference. Pursuant to *State CEQA Guidelines* Section 15084, the Final EIR has been reviewed and analyzed by the City of Cypress as the lead agency with respect to the proposed project and the Draft EIR. The following findings for the proposed project and each fact in support of a finding are thus based upon substantial evidence in the record.

This page intentionally left blank

4.0 FINDINGS REGARDING ENVIRONMENTAL IMPACTS DETERMINED TO HAVE NO IMPACTS OR BE LESS THAN SIGNIFICANT

The City finds, based upon the analysis presented in Chapter 4.0 of the Draft EIR, that the following environmental effects of the proposed project either have no impact or are less than significant, and, therefore, no mitigation measures are required. The City hereby finds that existing regulatory requirements, policies, and/or project conditions have been identified and incorporated into the proposed project which avoids or substantially lessens the potentially significant effect on the environment to a less than significant level.

4.1 AESTHETICS

Threshold 4.1.1: Substantial Adverse Effect on a Scenic Vista: No Impact

The City is almost entirely developed, and no public vantage points provide substantial views of water bodies, mountains, hills, or other significant visual resources. Given that no scenic vista is currently viewable from any public vantage point in proximity to the Buildout Area, the development of the proposed project would not alter an existing scenic vista or block views of any scenic vistas. Therefore, the proposed project would not have a substantial adverse effect on a scenic vista, and no impact would occur.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not significantly affect scenic vistas. No impact would occur. Consequently, no mitigation measures are required for this no impact determination.

Mitigation Measures: No mitigation is required.

Supporting Evidence: Please refer to pages 4.1-7 and 4.1-8 of the Draft EIR prepared for the proposed project

Threshold 4.1.2: Substantial Damage to Scenic Resources: No Impact

There are no designated State Scenic Highways within the City's limits. The only designated Scenic Highway in the County is a 4-mile segment of State Route 91 (SR-91) from State Route 55 (SR-55) to the east of the Anaheim city limits, located approximately 12 miles northeast of the Buildout Area, and the nearest eligible Scenic Highway is a segment of Pacific Coast Highway (State Route 1 [SR-1]), located approximately 5.5 miles southwest of the Buildout Area. Due to distance and intervening land uses, no portion of the Buildout Area is visible from either roadway. Therefore, the proposed project would not damage scenic resources within a State Scenic Highway, and no impact would occur.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not significantly affect scenic resources within a scenic highway or corridor. No impact would occur. Consequently, no mitigation measures are required for this no impact determination.

Mitigation Measures: No mitigation is required.

Supporting Evidence: Please refer to page 4.1-8 of the Draft EIR prepared for the proposed project.

Threshold 4.1.3: Conflict with Applicable Zoning Governing Scenic Quality: Less Than Significant Impact

Because the City and the Buildout Area are located within the Los Angeles—Long Beach—Anaheim, CA Urbanized Area, as defined by the U.S. Census Bureau and *State CEQA Guidelines* Section 15387, the applicable threshold is whether the proposed project would conflict with applicable zoning and regulations governing scenic quality.

The proposed project would allow higher density development within the Buildout Area than currently exists. However, the Specific Plan provides specific development standards for residential and mixed-use development, including maximum structure height and setback requirements, which would be applicable to the future development under the proposed project. Therefore, although the proposed project would change the aesthetic character of the Buildout Area, all development pursuant to the Specific Plan would be required to comply with all relevant sustainable design strategies stated or referenced in the Specific Plan. In addition, all development within the Buildout Area would be required to comply with the design regulations in the Zoning Ordinance that relate to scenic quality, including the objective design standards in Section 3.17.110 of the Zoning Ordinance with respect to multi-family development that are not inconsistent with the Specific Plan and Section 3.15 of the Zoning Ordinance related to signage design standards. Therefore, the proposed project would not conflict with applicable zoning and other regulations governing scenic quality, and impacts would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not significantly degrade the existing visual character or quality of public views of the site and its surroundings. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supporting Evidence: Please refer to pages 4.1-8 and 4.1-9 of the Draft EIR prepared for the proposed project.

Threshold 4.1.4: Create a New Source of Substantial Light or Glare: Less Than Significant Impact

Construction activities associated with the proposed project would occur primarily during daylight hours, and any temporary nighttime lighting would be limited to safety and security purposes. In addition, construction activities are not anticipated to result in flat, shiny surfaces that would reflect sunlight or cause other natural glare. Minor glare from sunlight on construction equipment and vehicle windshields is not anticipated to impact visibility in the area as the construction sites would be fenced and shielded from pedestrian and vehicular views. In addition, construction vehicles would not operate at night and thus would not create nighttime sources of glare. Therefore, construction would not create a substantial new source of light or glare, and impacts would be less than significant.

As development occurs within the Buildout Area, new housing and non-residential development would result in new sources of light and glare, including from new street and pedestrian lighting, individual lighting from new buildings, reflective building materials, such as glass, stainless steel, aluminum, and photovoltaic panels. In addition, the proposed project would increase vehicle trips to and from the Buildout Area that would incrementally increase ambient nighttime illumination in the area. However, all project lighting would be required to comply with applicable lighting standards in the City's Zoning Ordinance. As required by Section 3.11.060.A (Exterior Features) of the Zoning Ordinance, lighting fixtures shall be architecturally compatible with the character of the surrounding structure(s) and shall be energy efficient. Fixtures shall be appropriate in height, intensity, and scale to the use they are serving. In accordance with Section 3.11.060.B (Intensity), the level of parking lot light projected onto any ground or wall surface shall not be more than 5 footcandles at the base of the light fixture and building-mounted decorative lights shall not exceed 5 footcandles measured 5 feet from the light source. In accordance with Section 3.11.060.C (Security Lighting), security lighting shall provide a maximum of 3 footcandles at the ground level of the project entrances. Pursuant to Section 3.11.060.D (Shielding of Light Source), where a project light source is visible from outside the project boundary (other than public street lighting), the light source shall be shielded to reduce glare so that neither the light source nor its image from a reflective surface shall be directly visible from any point beyond the property line. As required by Section 3.14.050.C.4 (Required Improvements for Off-Street Parking Areas), the level of parking lot light shall not exceed 1 footcandle at the boundaries of the Buildout Area.

Section 4.6: Lighting, of the Specific Plan includes policies to minimize light impacts on surrounding uses: (1) encourage the use of low-contrast lighting, low-voltage fixtures and energy-efficient bulbs, such as compact fluorescent and light emitting diodes; (2) promote the use of lights with automated occupancy sensors in nonresidential buildings that automatically shut off when rooms are unoccupied; and (3) utilize solar-powered lights in landscaped areas for energy savings where possible.

In addition, all illuminated and neon signs associated with future development within the Buildout Area would be required to adhere to the development standards detailed in Section 3.15.110

(Standards for Specific Types of Signs) of the Zoning Ordinance. Section 3.15.110(A) states that the use of neon signs shall enhance the viewer's appreciation of the City's nighttime atmosphere and shall be primarily aesthetic and decorative with a utilitarian function only when used as signage. In addition, neon signage and linear tubing shall be UL listed with a maximum 20 amps per circuit and shall be designed to accommodate a dimmer in order to reduce the brightness of the neon. Neon linear tubing shall also not exceed one-half in width, shall reinforce the architecture of a structure, and shall be concealed from view when possible through the use of architectural features (e.g., parapets, cornices, etc.), and neon signs adjacent to residential uses shall be a maximum of one-half footcandle from the property line.

Therefore, although the proposed project would increase the overall intensity of on-site land uses and associated lighting within the Buildout Area, the increase in lighting would not result in substantial increases in light intensity at off-site locations through compliance with the applicable lighting standards in the Specific Plan and the Zoning Ordinance.

The proposed buildings would incorporate a variety of building materials, which would primarily be non-reflective materials (i.e., neutral colors and a variety of materials, such as tile, cement, plaster, and wood). Therefore, the proposed project would not have the potential to produce a substantial degree of glare.

Nighttime lighting and glare sources from the proposed project could also include lighting from interior and exterior building lighting, security lighting, parking lot lighting, and vehicle headlights. The nighttime glare produced by these sources would be similar to the existing nighttime glare produced by the surrounding commercial/retail, residential and hotel uses and would not result in enough glare to be considered substantial or affect nighttime view because lighting would be required to meet all applicable lighting standards in the Specific Plan and the Zoning Ordinance as discussed above.

For these reasons, the proposed project would not create a new source of substantial light or glare that would adversely affect day or nighttime views in the surrounding urban area, and impacts would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not add substantial new sources of light and glare. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supporting Evidence: Please refer to pages 4.1-9 through 4.1-11 of the Draft EIR prepared for the proposed project.

4.2 AGRICULTURE AND FORESTRY RESOURCES

All Thresholds: No Impact

The proposed project would not result in any impacts related to agriculture and forestry resources as the Buildout Area does not contain Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, there are no lands within the City that are currently under a Williamson Act contract, and there is no forest or timberland present within the Buildout Area that could be lost from project implementation. Therefore, no impact on agriculture and forestry resources would occur.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not generate any impacts related to the conversion of Prime Farmland, Unique Farmland, and Farmland of Statewide Importance, nor would it conflict with existing zoning for agricultural or forest/timberland use or a Williamson Act contract. Lastly, the proposed project would not result in the conversion of any Farmland to non-agricultural use or forest land to non-forest use. No impact would occur. Consequently, no mitigation measures are required for this no impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.2-7 through 4.2-9 of the Draft EIR prepared for the proposed project

4.3 AIR QUALITY

Threshold 4.3.4: Other Emissions, Such as Odors: Less Than Significant Impact

During construction of future development facilitated under the proposed project, some odors may be present due to diesel exhaust. However, these odors would be temporary and limited to the construction period. The proposed project would not include any activities or operations that would generate objectionable odors and once operational, development envisioned under the proposed project would not be a source of odors. Therefore, the proposed project would not result in other emissions (such as those leading to odors) affecting a substantial number of people. This impact would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not result in other emissions, including odors, that would adversely affect a substantial number of people. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to page 4.3-37 of the Draft EIR prepared for the proposed project.

4.4 BIOLOGICAL RESOURCES

Threshold 4.4.1: Substantial Adverse Effects on Special Status Species: Less Than Significant Impact

The Buildout Area is located within a highly urbanized and developed setting and does not contain or connect to contiguous native habitats, riparian corridors, or other sensitive natural communities. While the Buildout Area provides limited ecological value, structures and vegetation within the Buildout Area (e.g., ornamental trees, palms, and buildings) may provide suitable nesting habitat for common native and migratory bird species, as well as potential roosting habitat for bats. In addition, although no special-status wildlife species were observed during the field survey, and suitable habitat for such species is absent from the Buildout Area due to the high level of development, six special-status wildlife species (monarch butterfly; wintering sites (*Danaus plexippus plexippus*), Ferruginous hawk; wintering (*Buteo regalis*), Swainson's hawk; nesting (*Buteo swainsoni*), western mastiff bat (*Eumops perotis californicus*), western yellow bat (*Lasiurus xanthinus*), and pocketed free-tailed bat (*Nyctinomops femorosaccus*) have the potential to occur on or near the Buildout Area.

The Buildout Area provides low potentially suitable roosting habitat (Eucalyptus trees) for monarch butterfly, the wintering habitat is limited, and there are no known wintering roost locations in the Buildout Area. Therefore, implementation of the proposed project is not expected to result in significant impact on the monarch butterfly. In addition, the proposed project would be required to adhere to Regulatory Compliance Measures BIO-1 and BIO-2, which require preconstruction bat surveys prior to demolition of onsite structures or tree removal if these activities would occur during the bat maternity season (April 1 through August 31) and preconstruction nesting bird surveys and active nest avoidance buffers if potential bird nesting habitat is to be removed during the avian nesting season (January 1 through August 31). Adherence to these measures would ensure that the proposed project would not result in significant impacts on Ferruginous hawk, Swainson's hawk, western mastiff bat, western yellow bat, and pocketed free-tailed bat.

With implementation of Regulatory Compliance Measures BIO-1 and BIO-2, impacts on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or the U.S. Fish and Wildlife Service (USFWS) would be less than significant. .

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not have a substantial adverse effect on any special-status species identified in applicable plans, policies, or regulations. Potential impacts would

be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Regulatory Compliance Measures: Regulatory Compliance Measures BIO-1 and BIO-2 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.4-32 through 4.4-37 of the Draft EIR prepared for the proposed project.

Threshold 4.4.2: Substantial Adverse Effects on Riparian Habitat or Other Sensitive Natural Community: No Impact

The nearest sensitive natural community to the Buildout Area is Southern Coastal Salt Marsh, which occurs near Alamitos Bay and in Anaheim Bay, within 5 miles of the Buildout Area. However, both of these occurrences are historical and are presumed extant. In addition, no salt marsh habitat exists within the Buildout Area. Therefore, there would be no impact on the Southern Coastal Salt Marsh, or any other sensitive natural community, with implementation of the proposed project.

The Buildout Area currently contains one existing drainage feature, one existing detention basin, and three existing artificial ponds. The single drainage feature is located on Lot 3 and originates from a culvert beneath the internal road just northwest of a parking lot. This drainage is an ephemeral, earthen bottom drainage created to carry stormwater. The detention basin is located on Lots 2 and 3 and is best described as a manmade basin created to capture flows. It appears to divert accumulated water into the adjacent drainage that terminates into an underground drain system. The three artificial ponds are on Lots 3, 4, 6, and 7 and are manmade and thus, hydrologically isolated. The ponds contain hydrophytic vegetation along portions of their shoreline, including species that could be considered wetland indicators. All of these aquatic features were constructed in previously graded or developed areas and do not represent natural stream channels, wetlands, or riparian systems. Their primary functions are aesthetic or related to stormwater conveyance and retention. Therefore, no riparian habitat is present within the Buildout Area. Therefore, no impacts to riparian habitat would result from project implementation.

Based on the information provided above, development of the proposed project would not impact any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the CDFW or USFWS.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not have a substantial adverse effect on any riparian habitat or other sensitive natural community identified by the CDFW or USFWS. No impact would occur. Consequently, no mitigation measures are required for this no impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.4-37 and 4.4-38 of the Draft EIR prepared for the proposed project.

Threshold 4.4.4: Substantial Interference with Wildlife Movement: Less Than Significant Impact

The Buildout Area is located within an urban, built-out portion of the City and is currently disturbed and developed with existing uses. Although the Buildout Area contains one drainage feature, one detention basin, and three artificial ponds with limited hydrophytic vegetation, these features are manmade and do not provide suitable habitat for native resident or migratory fish species. Additionally, native wildlife habitat is largely absent within the Buildout Area and surrounding vicinity and the development surrounding the Buildout Area and lack of ground cover and suitable foraging habitat make the site undesirable for many native wildlife species.

A total of 19 wildlife species were observed during the September 2024 field survey; however, these species are typical of urbanized areas in Orange County, and no special-status wildlife species were observed or are expected to occur due to the lack of suitable habitat. Furthermore, the Buildout Area does not function as a wildlife movement corridor, as it is surrounded by existing urban development and lacks connectivity to natural habitat areas.

Although no nesting birds or roosting bats were observed during the field survey, suitable nesting and roosting habitat may be present within existing structures and ornamental trees on-site and construction activities could result in temporary disturbance to nesting birds or roosting bats. However, compliance with Regulatory Compliance Measures BIO-1 and BIO-2, which require preconstruction nesting bird surveys, establishment of avoidance buffers for active nests, and preconstruction bat surveys where suitable habitat is present, would ensure that potential impacts to wildlife nursery sites are avoided or minimized. Therefore, the proposed project would not substantially interfere with wildlife movement, native resident or migratory species, or wildlife nursery sites, and impacts would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not interfere substantially with wildlife movement. Potential impacts are considered less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Regulatory Compliance Measures: Regulatory Compliance Measures BIO-1 and BIO-2 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.4-39 and 4.4-40 of the Draft EIR prepared for the proposed project.

Threshold 4.4.5: Conflict with Local Biological Protection Policies or Ordinances: Less Than Significant Impact

Construction of the proposed project would involve the removal of existing trees. However, all tree removal activities would be consistent with Section 3.9 of the Specific Plan, which supersedes the City's Landmark Tree Ordinance, as codified in Sections 17-17 through 17-27 of the City's Municipal Code, and details the tree replacement standards for development within the Buildout Area. Consistent with Specific Plan requirements, all proposed tree removal required for a future development project would be described in the site plan review application and all removed trees would be replaced with an equivalent number of specimen trees, subject to adjustment in accordance with Section 5.6.2 of the Specific Plan.

Therefore, adherence to the tree replacement standards set forth in the Specific Plan would ensure that the proposed project would comply with all applicable local policies and ordinances related to tree protection and would not result in conflicts with regulations protecting biological resources. Impacts would be less than significant, and no mitigation is required.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not conflict with any local policies or ordinances protecting biological resources. Potential impacts are considered less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to page 4.4-40 of the Draft EIR prepared for the proposed project.

Threshold 4.4.6: Conflict with Adopted Conservation Plan: No Impact

There is no adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other habitat conservation plan applicable to the City. The Orange County Transportation Authority's (OCTA) Natural Community Conservation Plan/Habitat Conservation Plan (NCCP/HCP) includes a Plan Area that covers the entirety of Orange County, including the City. However, the City is not a party to the OCTA NCCP/HCP, and development within the City is not subject to its provisions. Therefore, the proposed project would not conflict with any local, regional, or State Habitat Conservation Plan. Therefore, the proposed project would result in no impacts related to conflicts with an HCP or NCCP, and no mitigation is required.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not conflict with the provisions of an adopted HCP, NCCP, or other conservation plan. No impact would occur. Consequently, no mitigation measures are required for this no impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.4-40 and 4.4-41 of the Draft EIR prepared for the proposed project.

4.5 CULTURAL RESOURCES

Threshold 4.5.2: Substantial Adverse Change in the Significance of an Archaeological Resource: Less Than Significant Impact

The Buildout Area is currently developed and/or previously disturbed, and no known archaeological resources have been identified within the Buildout Area, as determined by the record search completed for the Cypress City Center Project, which included the Buildout Area. However, the buildout area is underlain by fill material over native alluvial soils, which may contain previously unknown archaeological resources. Future construction facilitated by the proposed project would include ground disturbing activities, including grading and excavation activities. Ground-disturbing activity into the native alluvial soils associated with project implementation has the potential to encounter previously unknown archaeological deposits or resources, resulting in a potential substantial adverse change in the significance of a unique archaeological resource, as defined in *State CEQA Guidelines* Section 15064.5. However, future development facilitated under the proposed project would be required to adhere to Regulatory Compliance Measure CUL-1, which details provisions in the event that unknown cultural resources are discovered during ground-disturbing construction activities, consistent with the California Code of Regulations (CCR) Section 15064.5(e) and State Health and Safety Code Section 7050.5. In the event that archaeological resources are encountered during construction activities, work shall cease within 5- feet of the find until a qualified archaeologist from the Orange County List of Qualified Archaeologists has evaluated the find in accordance with federal, State, and local guidelines to determine whether the find constitutes a “unique archaeological resource,” as defined in Section 21083.2(g) of the California Public Resources Code (PRC). With adherence to Regulatory Compliance Measure CUL-1, implementation of the proposed project would result in less than significant impacts related to archaeological resources.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not cause a substantial adverse change in the significance of an archaeological resource. Potential impacts would be less than significant.

Consequently, no mitigation measures are required for this less than significant impact determination.

Regulatory Compliance Measures: Regulatory Compliance Measure CUL-1 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.5-17 and 4.5-18 of the Draft EIR prepared for the proposed project.

Threshold 4.5.3: Disturbance of Human Remains: Less Than Significant Impact

The Buildout Area is currently developed and/or previously disturbed, and there are no known human remains located within the Buildout Area. However, future development would include ground disturbing activities, during which there is the potential to encounter previously unknown human remains. However, in the event that human remains are encountered during construction, these remains would be treated in accordance with Section 7050.5 of the California Health and Safety Code and PRC Section 5097.98, as detailed in Regulatory Compliance Measure CUL-2. Section 7050.5 of the California Health and Safety Code states that, in the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, there shall be no further excavation or disturbance within 50 feet of the find or any nearby area reasonably suspected to overlie adjacent remains until the coroner of the county in which the remains are discovered has determined whether or not the remains are subject to the Coroner's authority. If the human remains are of Native American origin, the coroner must notify the Native American Heritage Commission (NAHC) within 24 hours of this identification. The NAHC will identify an Most Likely Descendant (MLD) to inspect the site and provide recommendations for the proper treatment of the remains and associated grave goods.

In addition, the proposed project would be required to implement Mitigation Measures TCR-1 and TCR-4, which detail provisions for the treatment of Native American human remains and associated funerary objects, if encountered during project construction. However, it should be noted that while implementation of Mitigation Measures TCR-1 and TCR-4 would further reduce impacts related to the disturbance of human remains, implementation of these mitigation measures is not required to reduce potential impacts to less than significant, as impacts to human remains would be less than significant with adherence to the requirements of Section 7050.5 of the California Health and Safety Code and PRC Section 5097.98, as specified in Regulatory Compliance Measure CUL-2.

Future development facilitated by the proposed project would be required to comply with the appropriate procedures required under State law, as detailed in Regulatory Compliance Measure CUL-2, and the provisions detailed in Mitigation Measures TCR-3 and TCR-4 for the treatment of human remains in order to ensure that descendant communities have significant input in the treatment and final disposition of human remains, if encountered at the project site during future development activities. Therefore, implementation of the proposed project would result in less than significant impacts related to human remains.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not disturb any human remains, including those interred outside of dedicated cemeteries. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Regulatory Compliance Measures: Regulatory Compliance Measure CUL-2 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.5-19 and 4.5-20 of the Draft EIR prepared for the proposed project.

4.6 ENERGY

Threshold 4.6.1: Wasteful, Inefficient, or Unnecessary Consumption of Energy: Less Than Significant Impact

Project construction and operation would have a negligible effect on local and regional energy supplies. Therefore, electrical and natural gas demand associated with project construction and operations would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region. Furthermore, impacts related to energy use during construction would be temporary and relatively small in comparison to Orange County's overall use of the State's available energy resources. The proposed project would also be constructed using energy efficient modern building materials and construction practices, and would use new modern appliances and equipment, in accordance with the Appliance Efficiency Regulations (Title 20, CCR Sections 1601 through 1608). Future development would also be designed to meet sustainability goals, including the California Green Building Standards Code (CALGreen Code) and Title 24 energy efficiency requirements. Therefore, the proposed project's impacts related to wasteful, inefficient, or unnecessary consumption of energy resources would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not result in a significant impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.6-11 through 4.6-16 of the Draft EIR prepared for the proposed project.

Threshold 4.6.2: Conflict with or Obstruct State or Local Energy Plans: Less Than Significant Impact

California's energy conservation planning actions are conducted at a regional level, and the proposed project's total impact on regional energy supplies would be minor. Therefore, the proposed project would not conflict with or obstruct California's energy conservation plans as described in the California Energy Commission's (CEC) Integrated Energy Policy Report. In addition, buildout of the proposed project introduces new housing consistent with planned regional housing growth included in the Southern California Association of Governments' (SCAG) Regional Housing Needs Assessment (RHNA) Allocation. Due to the fact that the proposed project would accommodate planned regional housing growth included in the SCAG RHNA, the proposed project would not conflict with SCAG's regional strategies outlined in Connect SoCal 2024.

Additionally, the proposed project would be constructed using energy efficient modern building materials and construction practices, and would use new modern appliances and equipment, in accordance with the Appliance Efficiency Regulations (Title 20, CCR Sections 1601 through 1608). Future development would also be designed to meet sustainability goals, including the CALGreen Code and Title 24 energy efficiency requirements. Further, as discussed above, the proposed project would not result in the inefficient, wasteful, and unnecessary consumption of energy. Therefore, impacts related to conflict with or obstruction of a State or local plan for renewable energy or energy efficiency would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not conflict or obstruct a state or local plan for renewable energy or energy efficiency. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.6-17 through 4.6-18 the Draft EIR prepared for the proposed project.

4.7 GEOLOGY AND SOILS

Threshold 4.7.1(i): Substantial Adverse Effects Related to Earthquake Fault Rupture: No Impact

According to the California Geological Survey and the United States Geological Survey (USGS) Quaternary Faults Map, there are no active faults or Alquist-Priolo Fault Zones within the Buildout

Area or the city. The nearest fault, the Newport-Inglewood Fault System, is located approximately 4.8 miles southwest of the Buildout Area, and the Whittier-Elsinore Fault System is located approximately 11.6 miles east of the Buildout Area. Because the Buildout Area is not located within an Alquist-Priolo Fault Hazard Zone and there are no known active or potentially active faults within the city, future development of the land uses allowed under the Specific Plan would not expose people or structures to substantial adverse effects involving the rupture of a known earthquake fault as delineated in the most recent Alquist-Priolo Fault Zone Map. Accordingly, the proposed project would have no impact related to this threshold.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not directly or indirectly cause substantial adverse effects, including the risk of loss, injury, or death involving the rupture of a known Alquist-Priolo Earthquake Fault. No impact would occur. Consequently, no mitigation measures are required for this no impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.7-10 through 4.7-11 of the Draft EIR prepared for the proposed project.

Threshold 4.7.1(ii): Substantial Adverse Effects Related to Strong Seismic Ground Shaking: Less Than Significant Impact

The Buildout Area is located in the highly seismically active Southern California region within the influence of several fault systems. The degree of seismic ground shaking would depend on factors such as fault location, distance from the Buildout Area, the soil conditions, the depth to groundwater, and earthquake magnitude. However, future development within the Buildout Area facilitated by the proposed project would be required to adhere to Regulatory Compliance Measure GEO-1, which requires that new development within the Buildout Area comply with the seismic design criteria of the 2022 California Building Standards Code requirements that aim to prevent building collapse and reduce the impacts of seismic ground shaking. Adherence to these requirements would reduce injury and loss of life and building damage after an earthquake. Therefore, with the implementation of Regulatory Compliance Measure GEO-1, impacts related to seismic ground shaking would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not directly or indirectly cause substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Regulatory Compliance Measure: Regulatory Compliance Measure GEO-1 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to page 4.7-11 of the Draft EIR prepared for the proposed project.

Threshold 4.7.1(iv): Substantial Adverse Effects Related to Landslides: No Impact

According to the City's General Plan Safety Element, landslides have not been recorded within the City boundaries and are not anticipated based on the lack of any significant topographic features. Further, according to the California Geological Survey's (CGS) Landslide Inventory, there are no recorded landslides within the vicinity of the Buildout Area. Both the Buildout Area and surrounding properties are flat with no unusual geographic features. Therefore, neither the Buildout Area nor the surrounding area have the potential for impacts related to landslides.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not directly or indirectly cause substantial adverse effects, including the risk of loss, injury, or death involving landslides. No impact would occur. Consequently, no mitigation measures are required for this no impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to page 4.7-12 of the Draft EIR prepared for the proposed project.

Threshold 4.7.2: Substantial Soil Erosion or Loss of Topsoil: Less Than Significant Impact

Any future development at the Buildout Area associated with the proposed project that disturbs more than one acre of soil would be required to comply with Regulatory Compliance Measure HYD-1, which requires preparation of a Stormwater Pollution Prevention Plan (SWPPP). The SWPPP would include Erosion Control and Sediment Control Best Management Practices (BMPs) to be implemented during construction activities such as site clearing, excavation, grading, and filling, which have the potential to increase soil erosion and siltation. If construction of a future project would disturb less than one acre of soil, those projects would be required to comply with Section 4.106 of the CALGreen Code, which requires implementation of BMPs to prevent flooding, minimize erosion, and retain sediment on site. With incorporation of construction BMPs as required by Regulatory Compliance Measure HYD-1 or the CALGreen Code, short-term impacts related to soil erosion and siltation during construction would be less than significant.

Implementation of the proposed project would increase impervious surfaces within the Buildout Area by approximately 10 percent compared to existing conditions. This increase could result in higher volumes and velocities of stormwater runoff, which may contribute to on-site, off-site, or downstream erosion or loss of topsoil. However, future development facilitated by the proposed

project would be required to comply with Regulatory Compliance Measure HYD-3, which mandates that stormwater runoff be captured in detention basins and/or proprietary flow-based biofiltration systems prior to discharge into the storm drain system. These features would detain, filter, and treat runoff prior to discharge into the surrounding storm drain system, thereby substantially reducing the potential for erosion and protecting downstream water quality.

In addition, only one drainage management area in the Buildout Area drains through the Walker Street Storm Drain to a portion of the Bolsa Chica Channel that is not concrete lined and more susceptible to erosion. However, compliance with Regulatory Compliance Measure HYD-3 would ensure that drainage design incorporates measures to reduce changes in natural flow conditions and minimize the potential for erosion in downstream receiving waters. Therefore, with implementation of Regulatory Compliance Measures HYD-1 and HYD-3, impacts related to soil erosion, loss of topsoil, and siltation during both construction and operation would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not result in substantial soil erosion or the loss of topsoil. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Regulatory Compliance Measures: Regulatory Compliance Measures HYD-1 and HYD-3 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.7-12 and 4.7-13 of the Draft EIR prepared for the proposed project.

Threshold 4.7.4: Located on Expansive Soils Creating Substantial Risks to Life and Property: No Impact

According to the City's General Plan Program EIR, Geologic and Seismic Hazards chapter, all soil types within the City are suitable for urban development. Of the known soil types within the City, none are expansive. Therefore, there is low potential for risks to life or property as a result of the future development within the Buildout Area being located on expansive soil, and the proposed project would have no impact related to expansive soils.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not be located on expansive soil and would create a direct or indirect risk to life or property. No impact would occur. Consequently, no mitigation measures are required for this no impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.7-14 and 4.7-15 of the Draft EIR prepared for the proposed project.

Threshold 4.7.5: Septic Tanks and Alternative Wastewater Disposal Systems: No Impact

Future development within the Buildout Area would be served by the City and the Orange County Sanitation District. The proposed project includes the installation of wastewater infrastructure identified in the Specific Plan to serve the future development allowed under the Specific Plan, including two new sewer connections to existing main sewer lines. Future development within the Buildout Area would not include the development of or use of any septic tanks or alternative wastewater disposal systems, as all wastewater generation would be served by the City's existing sewer system. Therefore, the proposed project would not have any impacts related to soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not require the use of septic tanks or alternative wastewater disposal systems. No impact would occur. Consequently, no mitigation measures are required for this no impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to page 4.7-15 of the EIR prepared for the proposed project.

4.8 GREENHOUSE GAS EMISSIONS

Impacts related to greenhouse gas (GHG) emissions were identified as potentially significant. Refer to Section 5.0 of this document for a discussion of potential impacts related to GHG with implementation of the proposed project.

4.9 HAZARDS AND HAZARDOUS MATERIALS

Threshold 4.9.1: Significant Hazards Through the Routine Transport, Use, or Disposal of Hazardous Materials: Less Than Significant Impact

During demolition, excavation, on-site grading, and building construction, hazardous materials such as fuels and oils associated with construction equipment, as well as paints, solvents, cement products containing strong basic or acidic chemicals could be routinely used in the Buildout Area throughout construction. These materials are commonly used at construction sites, and the quantities present would be limited to what is required to operate construction equipment. Construction activities would also be required to comply with applicable State and federal

regulations for the proper transport, use, storage, and disposal of hazardous materials and hazardous waste.

The temporary transport, use, storage, or disposal of fuels, lubricants, paints, and other hazardous materials related to construction would not pose a significant hazard to the public or the environment unless the materials were accidentally spilled or released into the environment. The potential for the release of hazardous materials during project construction is low, and even if a release were to occur, it would not result in a significant hazard to the public, surrounding land uses, or the environment due to the small quantities of these materials associated with construction vehicles. In addition, the proposed project would be required to comply with existing hazardous materials regulations, including California Code of Regulations (CCR) Title 8, General Industrial Safety Orders. Workers at hazardous waste sites (or workers who may be exposed to hazardous wastes that might be encountered during excavation of contaminated soils) would also receive specialized training and medical supervision according to the Hazardous Waste Operations and Emergency Response regulations.

The transport, use, storage, or disposal of hazardous materials during construction would also be regulated by the Orange County Fire Authority (OCFA) and the California Occupational Safety and Health Administration (Cal/OSHA). Additionally, the United States Department of Transportation (USDOT) Office of Hazardous Materials Safety prescribes strict regulations for the safe transportation of hazardous materials by truck and rail on State highways and rail lines, as described in CFR Title 49 and implemented by CCR Title 13. Worker health and safety is also regulated at the federal level by the United States Department of Labor OSHA. Further, the routine transport, use, and disposal of hazardous materials within the Buildout Area during construction activities would be required to comply with a project Health and Safety Plan (HASP) prepared in accordance with CCR Title 8, which would reduce potential health hazards for construction workers from the routine transport, use, or disposal of hazardous materials. Overall, construction activities would comply with applicable regulations, as outlined above, including requiring hazardous materials carriers to register with the DTSC as required by the USDOT, which regulates the transport of hazardous materials and waste in connection with construction activities. In addition, Regulatory Compliance Measures HYD-1 through HYD-3 would ensure compliance with waste discharge permit requirements to avoid potential impacts to water quality due to spills or runoff from hazardous materials used during construction. Therefore, impacts related to the routine transport, use, or disposal of hazardous materials during construction would be less than significant.

The proposed project would allow for residential and supporting non-residential development within the Buildout Area. Operation of residential uses typically do not present a hazard associated with the accidental release of hazardous substances because they do not involve the use, storage, or transport of large volumes of hazardous materials. Hazardous substances associated with residential are typically limited in both amount and use, such that they can be contained without impacting the environment. In addition, the proposed non-residential uses would include commercial space pursuant to the Specific Plan that is intended to provide retail and other service-oriented uses. These types of non-residential uses would use minimal amounts of hazardous materials during operations that would be similar to those used by residential uses (i.e., cleaning products, pesticides/herbicides/fertilizers associated with landscaping), and therefore are also unlikely to

present a hazard associated with the accidental release of hazardous substances into the environment.

Long-term operations activities typical of the residential and non-residential uses envisioned under the proposed project involve the use and storage of small quantities of potentially hazardous materials in the form of cleaning solvents, fertilizers, and pesticides. For example, maintenance activities related to landscaping include the use of fertilizers and light equipment (e.g., lawn mowers and edgers) that may require fuel. As stated previously, these types of activities do not involve the use of a large or substantial amount of hazardous materials. Further, such materials would be contained, stored, and used in accordance with manufacturers' instructions and handled in compliance with applicable federal, State, and local regulations. In addition, operation of future residential and non-residential development associated with the proposed project would not store, transport, generate, or dispose of large quantities of hazardous substances. Therefore, potential impacts from the routine transport, use, or disposal of hazardous materials resulting from operation of the proposed project would be less than significant, and no mitigation would be required.

Future development applications within the Buildout Area would be required to comply with all applicable regulations and standards related to the proper transport, use, storage, and disposal of hazardous materials and hazardous waste. Additionally, future developments would be reviewed by the OCFA for hazardous materials and would be required to comply with waste discharge permit requirements to avoid potential impacts to water quality due to spills or runoff from hazardous materials used during construction. Moreover, any future development projects requiring discretionary actions would be subject to environmental review, in accordance with the provisions of CEQA and the *State CEQA Guidelines.*

Therefore, implementation of the proposed project would result in less than significant impacts related to the routine transport, use, or disposal of hazardous materials.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not create a significant hazard to the public or environment through the routine transport, use, or disposal of hazardous materials. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Regulatory Compliance Measures: Regulatory Compliance Measures HYD-1 through HYD-3 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.9-10 through 4.9-13 of the Draft EIR prepared for the proposed project.

Threshold 4.9.3: Significant Hazardous Emissions or Handling Hazardous or Acutely Hazardous Materials, Substances, or Waste Within One-Quarter Mile of an Existing or Proposed School: Less Than Significant Impact

The proposed project would not create a significant hazard to the public or the environment due to hazardous materials with compliance with federal, State, and local regulations for the management of hazardous materials. In addition, the proposed residential and non-residential uses within the Buildout Area would not present a hazard associated with the accidental release of hazardous substances into the environment as these uses are not anticipated to use, store, dispose or transport large volumes of hazardous materials. Hazardous substances associated with these uses are typically limited in both amount and use such that they can be contained without impacting the environment. Therefore, implementation of the proposed project would not result in hazardous emissions or the handling of hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school. The proposed project's impacts would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.9-14 through 4.9-15 of the Draft EIR prepared for the proposed project.

Threshold 4.9.5: Airport-Related Safety Hazards for People Residing or Working in the Project Area: Less Than Significant Impact

The Buildout Area is located approximately 0.3 mile north of Joint Forces Training Base (JFTB) Los Alamitos. According to the Orange County Airport Land Use Commission's (ALUC) 2017 Airport Environs Land Use Plan (AELUP) for JFTB Los Alamitos, the Buildout Area is located in the Federal Aviation Administration's (FAA) Part 77 Notification Area (Exhibit D1) and the AELUP height restriction zone for JFTB Los Alamitos (Exhibit D2).Height limitations are imposed on projects within a height restriction zone so that structures or trees (1) do not obstruct the airspace required for takeoff, flight, or landing of aircraft at an airport, or (2) are not otherwise hazardous to the landing or taking off of aircraft. On July 18, 2024, the ALUC found the Specific Plan consistent with the AELUP for JFTB Los Alamitos.

Implementation of the proposed project would not result in a safety hazard or excessive noise for people residing or working in the Buildout Area because any future development within the Buildout Area would be required to comply with all appropriate FAA standards and requirements, including

Regulatory Compliance Measure HAZ-1, which requires that the FAA be notified of any proposed structure(s) that would penetrate the 100 to 1 imaginary surface that surrounds the runway at JFTB Los Alamitos. The FAA would then be responsible for reviewing the height of the proposed structures and determining whether they pose a potential aviation hazard. With adherence to the regulatory standards provided in Regulatory Compliance Measure HAZ-1, the proposed project would result in less than significant impacts related to the Buildout Area's proximity to a public airport or public use airport.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that while located within an airport land use plan, the proposed project would not result in a safety hazard for people residing or working in the vicinity of the Buildout Area. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Regulatory Compliance Measure: Regulatory Compliance Measure HAZ-1 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.9-16 and 4.9-17 of the Draft EIR prepared for the proposed project.

Threshold 4.9.6: Impairment or Interference with an Emergency Response Plan or Emergency Evacuation Plan: No Impact

According to the City's General Plan Safety Element, evacuation routes within the City include Ball Road, a west-to-east arterial, and Valley View Street, a north-to-south arterial. Although the proposed project would include future development within the Buildout Area, the Buildout Area is not located along either of the emergency evacuation routes identified above.

Future development projects within the Buildout Area would be required to conform with the adopted emergency response or evacuation plan established by the City, including the evacuation orders issued by the City Police Chief during emergency evacuations. Therefore, the proposed project would not impair implementation of or physically interfere with emergency operations and evacuations, and there would be no impact on emergency response.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. No impact would occur. Consequently, no mitigation measures are required for this no impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to page 4.9-17 of the Draft EIR prepared for the proposed project.

Threshold 4.9.7: Significant Risk of Loss, Injury or Death Involving Wildland Fires: No Impact

According to the California Department of Forestry and Fire Protection's (CAL FIRE) Very High Fire Hazard Severity Zone Maps for the Orange County region, there are no portions of the City in a very high fire hazard severity zone (VHFHSZ). In addition, future developments under the proposed project would be required to conform with applicable City standards and criteria, including consistency with the City's General Plan goals and policies and the City's Building Code, including general fire safety provisions consistent with the California Fire Code such as automatic, on-site fire protection systems, and maintenance of certain vegetation that poses a fire hazard risk. Therefore, there would be no risk of loss, injury, or death involving wildland fires. No impact would occur.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not expose people or structures to significant risk of loss, injury, or death involving wildland fires. No impact would occur. Consequently, no mitigation measures are required for this no impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.9-17 and 4.9-18 of the Draft EIR prepared for the proposed project.

4.10 HYDROLOGY AND WATER QUALITY

Thresholds 4.10.1, 4.10.6, 4.10.11, 4.10.12, 4.10.18: Violation of Water Quality Standards or Waste Discharge Requirements, Substantial Water Quality Degradation, Pollutant Discharge Increases, and Significant Alteration of Receiving Water Quality: Less Than Significant Impact

Future development facilitated by the proposed project would generally be required to comply with applicable construction permits and regulations associated with water quality, as detailed in Regulatory Compliance Measures HYD-1 through HYD-3. Construction activities associated with development within the Buildout Area could temporarily increase erosion and sedimentation due to soil disturbance, as well as introduce pollutants such as sediments, trash, petroleum products, concrete waste, and chemicals into stormwater runoff. Any future development at the Buildout Area associated with the proposed project that disturbs more than one acre of soil would be required to comply with Regulatory Compliance Measure HYD-1, which requires preparation of a Stormwater Pollution Prevention Plan (SWPPP). The SWPPP would include construction BMPs to be implemented during construction activities. If construction of a future project would disturb less than one acre of soil, those projects would be required to comply with Section 4.106 of the CALGreen Code, which requires implementation of BMPs to prevent flooding, minimize erosion, and

retain sediment on site. Compliance with the requirements of the Construction General Permit or Section 4.106 of the CALGreen Code, including incorporation of construction BMPs, would ensure that construction impacts related to waste discharge requirements, water quality standards, degradation of water quality, increased pollutant discharge, and alteration of receiving water quality would be less than significant.

Groundwater within the Buildout Area is relatively shallow, ranging from approximately 5 to 12.5 feet below ground surface, and construction activities, including excavation for removal of the three artificial lakes would require dewatering. Groundwater and water from the three artificial lakes may contain high levels of total dissolved solids, nitrate, salinity, or other constituents, or high or low pH levels that could be introduced to surface waters when dewatered water is discharged to receiving waters. However, Regulatory Compliance Measure HYD-2 would require that dewatering activities would be conducted in accordance with the Construction Dewatering Permit, including testing and treatment of groundwater prior to discharge to ensure that water quality standards are not violated. As a result, dewatering activities would not introduce pollutants to receiving waters at levels that would violate water quality standards or waste discharge requirements, degrade water quality, increase pollutant discharge, or alter the quality of the receiving water.

Operation of future development would increase impervious surface areas within the Buildout Area and introduce new sources of urban runoff pollutants, including suspended solids, nutrients, heavy metals, pathogens, pesticides, oil and grease, and trash. However, as specified in Regulatory Compliance Measure HYD-3, future development projects would be required to comply with the Orange County MS4 Permit, Orange County Drainage Area Management Plan (DAMP), and the City's Local Implementation Plan (LIP), including preparation of a project-specific Water Quality Management Plan (WQMP). The WQMP would identify and require implementation of Source Control, Low Impact Development (LID), and treatment control BMPs designed to capture, treat, and reduce pollutants in stormwater runoff prior to discharge to receiving waters. These measures would include both structural and non-structural BMPs, such as site design features, biotreatment systems, and operational practices to minimize pollutant discharge.

The Preliminary WQMP (PWQMP) prepared for the proposed project specifies the Source Control and LID BMPs proposed for the project (no Treatment Control BMPs are proposed). The BMPs specified in the PWQMP would be implemented and maintained, as specified in Regulatory Compliance Measure HYD-3. As provided in the PWQMP, the proposed LID BMPs include biotreatment BMPs, including either detention basins and/or proprietary flow-based biofiltration systems (depending on the design considerations of the final buildout condition), to capture and treat stormwater runoff before discharging stormwater to the surrounding storm drain system. The proposed BMPs would target and reduce pollutants of concern from runoff from the Buildout Area in compliance with the Orange County MS4 Permit requirements, Orange County DAMP, and City of Cypress LIP. Compliance with these requirements, including incorporation of operational BMPs to target pollutants of concern (as specified in Regulatory Compliance Measure HYD-3), would ensure that water quality impacts, degradation of water quality, increased pollutant discharge, and alteration of receiving water quality during project operation would be less than significant.

Furthermore, future development projects facilitated by the proposed project would be evaluated for site-specific impacts relating to hydrology and water quality and would include appropriate

mitigation (as necessary) to address impacts related to violation of water quality standards or waste discharge requirements or degradation of water quality. Therefore, implementation of the proposed project would result in a less than significant impact related to the violation of water quality standards or waste discharge requirements, degradation of water quality, increase pollutant discharges, or alter receiving water quality

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not violate water quality standards or waste discharge requirements, degrade water quality, increase pollutant discharges, or alter receiving water quality. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Regulatory Compliance Measure: Regulatory Compliance Measures HYD-1 through HYD-3 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.10-23 through 4.10-27 of the Draft EIR prepared for the proposed project.

Threshold 4.10.2: Substantial Depletion of Groundwater Supplies, Adverse Impacts on Groundwater Quality, and Interference with Groundwater Recharge: Less Than Significant Impact

During construction, temporary dewatering could be required during excavation activities due to the shallow groundwater present within the Buildout Area. However, groundwater dewatering would be localized, short-term, and minimal, and the volume of groundwater removed would not be substantial when compared to the total amount of groundwater stored in the Coastal Plain of the Orange County Groundwater Basin, which has a surface area of 350 square miles and a storage capacity of 38,000,000 acre-feet. Groundwater and water from the three artificial lakes may contain high levels of total dissolved solids, nitrate, salinity, or other constituents, or high or low pH levels that could be introduced to surface waters when dewatered water is discharged to receiving waters. However, Regulatory Compliance Measure HYD-2 would require that dewatering activities would be conducted in accordance with the Construction Dewatering Permit, including testing and treatment of groundwater prior to discharge to ensure that water quality standards are not violated. As a result, dewatering activities would not result in significant impacts on groundwater quality.

In addition, according to the Geotechnical Investigation, the predominate soil type within the Buildout Area is classified as Hydrologic Soil Group C. Group C soils have slow infiltration rates when thoroughly wetted and have a slow rate of water transmission. Therefore, construction activities would not substantially deplete groundwater supplies or interfere with groundwater recharge in a manner that may impede sustainable groundwater management. Impacts would be less than significant.

Implementation of the proposed project would increase impervious surface coverage within the Buildout Area compared to existing conditions, which would decrease on-site infiltration. However, because underlying soils already exhibit low infiltration capacity, the proposed project is not expected to substantially alter groundwater recharge compared to existing conditions. The proposed project would also not involve direct groundwater extraction. The Golden State Water Company (GSWC) West Orange would supply water to the proposed project. According to the Water Supply Assessment (WSA) prepared for the proposed project, GSWC West Orange's water supply sources include groundwater pumped from the Orange County Groundwater Basin, treated imported water, a small amount of purchased water from the City of Seal Beach through an intertie, and recycled water from the City of Cerritos. As discussed in the WSA prepared for the proposed project, GSWC West Orange's primary sources of supply would provide sufficient water supply for GSWC West Orange's projected water demand, including the proposed project, under all conditions, over the next 20 years. Increased water use during operation of the proposed project would also not substantially affect groundwater supplies because the groundwater basin has been sustainably managed by the Orange County Water District (OCWD) over the last 10 years and will continue to be sustainably managed. In addition, OCWD and GSWC West Orange coordinate in order to ensure that groundwater extracted for municipal water supplies would not substantially deplete groundwater supplies. Therefore, operation of the proposed project would not substantially deplete groundwater supplies or interfere with groundwater recharge in a manner that may impede sustainable groundwater management. Impacts would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not deplete groundwater supplies, create an adverse impact on groundwater quality, or interference with groundwater recharge. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.10-27 through 4.10-28 of the Draft EIR prepared for the proposed project.

Thresholds 4.10.3, 4.10.13: Substantial Alteration of Existing Drainage Patterns; Downstream Erosion or Siltation; On- or Off-Site Flooding; Exceed the Capacity of Stormwater Drainage Systems; Additional Sources of Polluted Runoff, and Increase Surface Runoff Flow Rate or Volume: Less Than Significant Impact

During project construction activities, soil would be exposed and disturbed, drainage patterns would be temporarily altered during grading and other construction activities, and there would be an increased potential for soil erosion and siltation compared to existing conditions. Additionally, during a storm event, soil erosion and siltation could occur at an accelerated rate. As discussed above, as construction of future development associated with the proposed project is anticipated to disturb greater than 1 acre of soil, future development projects would be subject to the

requirements of the Construction General Permit, which requires preparation of a SWPPP (Regulatory Compliance Measure HYD-1). The SWPPP which would detail Erosion Control and Sediment Control BMPs to be implemented during project construction to minimize erosion and retain sediment on site. However, as the specific design and sequencing of future development projects cannot be determined at this time, future projects may disturb less than 1 acre of soils and the Construction General Permit would not be applicable. If construction of future development associated with the proposed project would disturb less than 1 acre of soil and are not a part of a larger common plan, those projects would be required to comply with Section 4.106 of the CALGreen Code (Regulatory Compliance Measure HYD-1). Section 4.106 of the CALGreen Code requires implementation of BMPs to prevent flooding and erosion and to retain sediment on site. Therefore, compliance with the requirements of the Construction General Permit or Section 4.106 of the CALGreen Code, including incorporation of construction BMPs, would ensure that construction impacts related to on-site, off-site, or downstream erosion or siltation would be less than significant.

Project construction would not alter the course of a stream or river because there are no rivers and streams in the Buildout Area. Therefore, impacts related to substantial erosion or siltation due to alterations to existing course of stream or rivers would be less than significant, and no mitigation is required.

According to the WQMP prepared for the proposed project, all 18 Drainage Management Areas (DMAs) discharge to channels that are not susceptible to hydromodification. Therefore, no hydrologic conditions of concern (HCOC) are present for these DMAs, and construction of the proposed project would not result in hydromodification impacts to downstream receiving waters, including increased erosion downstream. Impacts would be less than significant, and no mitigation is required.

Implementation of the proposed project would increase the amount of impervious surface area by 11 percent within the Buildout Area from approximately 78.02 acres 92.39 acres (70 percent). The approximately 92.39 acres of the Buildout Area that would be impervious would not be susceptible to on-site erosion or siltation because no soil would be included in these areas. The remaining 40.29 acres would consist of pervious surface area, which would contain landscaping that would minimize on-site erosion and siltation by stabilizing the soil. Therefore, on-site erosion and siltation impacts would be minimal.

The Drainage Report also included off-site hydrology analysis for the drainage facilities that the Buildout Area would discharge to. Under existing conditions, the 25-year storm event peak flow rate for the Cerritos Avenue Storm Drain is approximately 202 cubic feet per second (cfs), at the intersection of Bloomfield Avenue and Cerritos Avenue. Analysis of the hydrology results indicated that the proposed project would not have any impacts on the Cerritos Avenue Storm Drain, as the proposed project's discharge would be less than the existing condition, and it would only occur once the 100-year high confidence peak flows have passed at the discharge location. This reduction is due to the proposed detention basin that would collect, detain, and treat stormwater before discharging stormwater to the Cerritos Avenue Storm Drain. This detention basin is currently proposed to discharge at a rate of 17 cfs, but only upon the subsidence of flows in the Cerritos Avenue Storm Drain. The proposed project is allowed to discharge directly to the Katella Avenue Storm Drain at a rate of approximately 32.84 cfs, which would significantly improve the existing storm drain system

hydraulics and reduce current deficiencies within the system. Therefore, the proposed project would not have any adverse effects on the downstream receiving waters.

Lastly, under existing conditions, the 25-year high confidence storm event peak flow rate for the Lexington Drive Storm Drain is approximately 76.84 cfs. The Drainage Report indicated that the allowed discharge to the Lexington Drive Storm Drain is 11.33 cfs and that, due to the extensive on-site mitigation from proposed detention basins, the proposed project would not cause adverse effects to the hydraulic conditions of this facility or downstream facilities.

Overall, stormwater runoff would be collected, detained, and treated in the proposed detention basins and/or proprietary flow-based biofiltration systems, which would capture and treat stormwater runoff before discharging stormwater to the surrounding storm drain system (Regulatory Compliance Measure HYD-3). The proposed detention basins and proprietary flow-based biofiltration systems would not be susceptible to erosion or siltation and implementation of the proposed detention basins would ensure that the proposed project would not result in increased off-site erosion or siltation. Additionally, according to the PWQMP and as discussed above, all 18 DMAs discharge to channels that are not susceptible to hydromodification. Therefore, no HCOCs are present for these DMAs and the proposed project would not result in hydromodification impacts to downstream receiving waters, including increased downstream erosion or siltation impacts.

In addition, operation of the proposed project would not alter the course of a stream or river because there are no rivers and streams in the Buildout Area. Therefore, impacts related to substantial erosion or siltation due to alterations to existing course of stream or rivers would be less than significant, and no mitigation is required. For these reasons, operational impacts related to substantial on-site, off-site, or downstream erosion or siltation would be less than significant, and no mitigation is required.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not increase runoff, downstream erosion, or siltation; exceed the capacity of stormwater drainage systems; or result in hydromodification impacts. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact.

Regulatory Compliance Measure: Regulatory Compliance Measure HYD-3 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.10-28 through 4.10-31 of the Draft EIR prepared for the proposed project.

Threshold 4.10.7: Development of Housing or Structures within a 100-Year Flood Hazard Area: No Impact

The Buildout Area is not located within a 100-year floodplain. According to Federal Emergency Management Agency (FEMA) Federal Insurance Rate Map (FIRM) No. 06059C0116J (December 3, 2009), the Buildout Area is located within Zone X, which comprises areas of 0.2 percent annual chance flood (500-year flood). As the Buildout Area is not located within a 100-year floodplain, the proposed project would not place housing or structures within a 100-year flood hazard area. No impact, during either construction or operation of the proposed project, would occur.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not place structures or housing within a 100-year flood hazard area. No impact would occur. Consequently, no mitigation measures are required for this no impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to page 4.10-43 of the Draft EIR prepared for the proposed project.

Threshold 4.10.9: Significant Risk of Loss, Injury or Death Involving Flooding, Including Flooding as a Result of the Failure of a Levee or Dam: Less Than Significant Impact

The Buildout Area is not located within the inundation zone of a levee; however, it is within the inundation zone of Prado Dam. The functionality of Prado Dam, which was originally designed in the 1930s, was enhanced by Seven Oaks Dam, which was completed in 1999 and is approximately 40 miles upstream on the Santa Ana River. During a flood, Seven Oaks Dam stores water destined for Prado Dam for as long as the reservoir pool at Prado Dam is rising. When the flood threat at Prado Dam has passed, Seven Oaks Dam begins to release its stored flood water at a rate that does not exceed the downstream channel capacity. Working in tandem, the Prado and Seven Oaks Dams provide increased flood protection to Orange County.

Prado Dam is maintained and inspected to ensure its integrity and to ensure that risks are minimized. The USACE Dam Safety Program re-rated the dam to be a high urgency (Dam Safety Action Classification [DSAC] Rating II) and was scheduled to undergo modification to the existing spillway in 2021 to address safety concerns. In addition, construction of the Santa Ana River Mainstem Project was initiated in 1989, and is scheduled for completion in 2025. The Santa Ana River Mainstem Project will increase levels of flood protection to more than 3.35 million people in Orange, San Bernardino, and Riverside Counties. Improvements to 23 miles of the Lower Santa Ana River channel, from Prado Dam to the Pacific Ocean, are 95 percent complete, with the remaining bank protection improvements in Yorba Linda currently under construction. Improvements to the Santa Ana River channel include construction of new levees and dikes. In addition, the Santa Ana River Mainstem Project includes improvements to Prado Dam that are currently underway and are

estimated to be completed in 2025. The Prado Dam embankment has been raised, and the outlet works have been reconstructed to convey additional discharges. Remaining improvements to Prado Dam include acquisition of additional land for the expansion of the Prado Reservoir, construction of protective dikes, and raising of the spillway.

Although the proposed project would facilitate the construction of new structures in a dam inundation zone, the proposed project would not increase the chance of inundation from failure of Prado Dam. Additionally, the potential for dam failure is remote and the City's emergency evacuation plans would be implemented if the dam were susceptible to rupture during heavy rain or other events. Therefore, proposed project impacts related to the exposure of people and structures to significant risk associated with flooding as a result of dam failure would be less than significant, and no mitigation is required.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.10-43 through 4.10-44 of the Draft EIR prepared for the proposed project.

Threshold 4.10.10: Inundation by Seiche, Tsunami, or Mudflow: No Impact

The Buildout Area is relatively flat and not at risk of mudflow. The Buildout Area is also not located in an area mapped by the California Emergency Management Agency as being potentially inundated by a tsunami. Seiches are waves that are created in an enclosed body of water such as a bay, lake, or harbor and go up and down or oscillate and do not progress forward like standard ocean waves. There are no enclosed bodies of water within 3 miles of the Buildout Area. Due to the distance from the nearest enclosed body of water to the Buildout Area, the Buildout Area is not in a seiche hazard zone. Therefore, no impact from inundation by seiche, tsunami, or mudflow would occur.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not subject people or structures to inundation by seiche, tsunami, or mudflow. No impact would occur. Consequently, no mitigation measures are required for this no impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to page 4.10-44 of the Draft EIR prepared for the proposed project.

Threshold 4.10.14: Increase Impervious Surface Area: Less Than Significant Impact

According to the PWQMP prepared for the proposed project, implementation of the proposed project would increase the amount of impervious surface area within the Buildout Area by 11 percent, from approximately 78.02 acres (59 percent) to approximately 92.39 acres (70 percent), which would increase stormwater runoff within the Buildout Area. However, the proposed project would include an on-site stormwater system and detention facilities in order to control the increase in runoff within the Buildout Area such that no flooding, on- or off-site, would occur and the capacity of the downstream stormwater facilities would not be exceeded. Therefore, impacts would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not result in increased impervious surfaces and associated increased runoff. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.10-44 through 4.10-45 of the Draft EIR prepared for the proposed project.

Threshold 4.10.16: Increase in Pollutants for which the Receiving Waterbody is Already Impaired as Listed on the Clean Water Act (CWA) Section 303(d) List: Less Than Significant Impact

According to the PWQMP, receiving waters for the Buildout Area include the Cerritos Avenue Storm Channel, the Katella Avenue Storm Channel, the Los Alamitos Channel, the Bolsa Chica Channel, the San Gabriel River (Reach 1), the San Gabriel River Estuary, San Pedro Bay (near/off-shore zones), Huntington Harbor, Anaheim Bay, and Alamitos Bay. According to the most recent USEPA approved 302(d) list (2024), the Bolsa Chica Channel is impaired for ammonia, indicator bacteria, and pH, Huntington Harbor is impaired for chlordane, copper, indicator bacteria, lead, PCBs, and toxicity, and Anaheim Bay is impaired for nickel, PCBs, and toxicity. The most recent USEPA approved 203(d) list (2024) does not list any impairments for San Gabriel River (Reach 1), Alamitos Bay, and San Pedro Bay (near/offshore zones).

Construction of the proposed project has the potential to introduce pollutants to the storm drain system from erosion, siltation, and accidental spills. During construction activities, excavated soil would be exposed and there would be an increased potential for soil erosion and sediment to reach downstream receiving waters, which could result in decreases in dissolved oxygen levels. Chemicals, liquid products, petroleum products (e.g., paints, solvents, and fuels), and concrete-related waste

may be spilled or leaked during construction. Therefore, construction has the potential to contribute to the temperature and pH impairments. Leaks from grading and earthmoving equipment are sources of chemicals, liquid products, and petroleum products if the equipment leaks and could contribute to the metals (nickel and copper) and pH impairments in downstream receiving waters. If concrete-related wastes are spilled or leaked, they could affect the pH of downstream receiving waters. Temporary or portable sanitary facilities provided for construction workers could be a source of sanitary waste and contribute to downstream indicator bacteria impairments. However, sanitary waste generated from temporary or portable sanitary facilities would be disposed of in compliance with all applicable regulations. Project construction would not involve use of dioxin, which was banned in the United States in 1979. Therefore, construction of the proposed project would not contribute to the dioxin impairment.

As required by Regulatory Compliance Measure HYD-1, the proposed project would be required to comply with the requirements of the Construction General Permit as construction of future development facilitated by the proposed project is anticipated to disturb greater than 1 acre of soil. However, as the specific design and sequencing of future development projects cannot be determined at this time, future projects may disturb less than 1 acre of soil and the Construction General Permit would not be applicable. If construction of future development associated with the proposed project would disturb less than 1 acre of soil and is not a part of a larger common plan, those projects would be required to comply with Section 4.106 of the CALGreen Code during construction. As specified in Regulatory Compliance Measure HYD-1, compliance with the Construction General Permit requires preparation of a SWPPP to identify construction BMPs to be implemented during project construction to reduce impacts to water quality and compliance with Section 4.106 of the CALGreen Code requires implementation of BMPs to prevent flooding and erosion and to retain sediment on site. Construction BMPs would include, but not be limited to, Erosion and Sediment Control BMPs designed to minimize erosion and retain sediment on-site, as well as Good Housekeeping BMPs to prevent spills, leaks, and discharge of construction debris and waste into receiving waters. In addition, during construction period groundwater dewatering, Regulatory Compliance Measure HYD-2 would ensure that pollutants are not introduced to receiving waters and that water quality standards and waste discharge requirements are met. Therefore, compliance with all applicable federal, state, and local regulations including Regulatory Compliance Measures HYD-1 and HYD-2, potential construction impacts related to an increase in pollutants for which the receiving waterbody is already impaired as listed on the CWA Section 303(d) list would be less than significant, and no mitigation is required.

During operation, expected pollutants of concern include suspended solids, nutrients, heavy metals, pathogens, pesticides, oil and grease, toxic organic compounds, and trash and debris. Pets utilizing the landscaped areas would be a potential source of pathogens (e.g., fecal matter) which could contribute to the indicator bacteria and dissolved oxygen impairment. Vehicles operating within the Buildout Area could be a source of heavy metals (nickel and copper) if not properly maintained. Proper maintenance would minimize the potential for leaks or spills of oils, fuels, and other contaminants. Therefore, while there is the potential for operational pollutants to contribute to the indicator bacteria, nickel, copper, pH, and temperature impairments in receiving waters, project operation would not involve the use of dioxin. All activities would be conducted in accordance with

applicable federal, state, and local regulations and the operations would not contribute to the pollutant impairment.

As specified in Regulatory Compliance Measure HYD-3, operational water quality BMPs would be implemented and maintained during operation to target and reduce pollutants in stormwater runoff from the Buildout Area prior to discharge to receiving waters. The Source Control and LID BMPs specified in the PWQMP would target and reduce pollutants in stormwater runoff from the Buildout Area, including those contributing to downstream water quality impairments. Therefore, compliance with Regulatory Compliance Measure HYD-3, potential operational impacts related to an increase in pollutants for which the receiving waterbody is already impaired as listed on the CWA Section 303(d) list would be less than significant, and no mitigation is required.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not result in increased pollutants within an impaired water body as listed on the Clean Water Act Section 303(d) list. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact.

Regulatory Compliance Measures: Regulatory Compliance Measures HYD-1 through HYD-3 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.10-45 through 4.10-46 of the Draft EIR prepared for the proposed project.

Threshold 4.10.18: Potentially Significant Environmental Impacts on Surface Water Quality to Either Marine, Fresh, or Wetland Waters: Less Than Significant Impact

According to the Orange County MS4 Permit, Environmentally Sensitive Areas are areas such as those designated as Areas of Special Biological Significance (ASBS) or waterbodies listed on the CWA Section 303(d) list of impaired waters. The Buildout Area is not tributary to an ASBS. The proposed project's compliance with Regulatory Compliance Measures HYD-1, HYD-2, and HYD-3 would ensure that it would not result in an increase in pollutants for which the receiving waterbody is already impaired as listed on the CWA Section 303(d) list. Therefore, the proposed project would not exacerbate already existing sensitive conditions in receiving waters listed on the CWA Section 303(d) list of impaired waters. Impacts would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not exacerbate sensitive conditions within environmentally sensitive areas or have a potentially significant environmental impact on surface water quality to either marine, fresh, or wetland waters. No impacts would occur. Consequently, no mitigation measures are required for this no impact determination.

Regulatory Compliance Measures: Regulatory Compliance Measures -1 through HYD-3 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to page 4.10-47 of the Draft EIR prepared for the proposed project.

Threshold 4.10.22: Significant Environmental Effects Related to the Operation of New or Retrofitted Stormwater Treatment Control Best Management Practices: Less Than Significant Impact

The proposed project would include implementation of operational BMPs to reduce impacts related to hydrology and water quality. Stormwater treatment in the Buildout Area would be provided using proprietary flow-based biofiltration systems. Alternatively, proposed detention basins may treat stormwater before discharging into the City's surrounding storm drain infrastructure, depending on the final site plan design. These BMPs would not result in additional impacts not already evaluated throughout the Draft EIR. These BMPs would be designed and routinely inspected and maintained to reduce impacts related to vectors and odors. Therefore, impacts related to BMPs would be less than significant.

Furthermore, future development facilitated by the proposed project would be required to demonstrate that new or retrofitted stormwater treatment BMPs would not cause significant environmental impacts occur. Future development projects would also be subject to separate environmental review on a project-specific basis, in accordance with the provisions of CEQA. Additionally, a project-specific WQMP would be required that details operational BMP maintenance and inspection plans which would minimize potential odors and vectors. Therefore, impacts related to BMPs would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not include new or retrofitted stormwater treatment control BMPs, the operation of which could result in significant environmental effects. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.10-48 through 4.10-49 of the Draft EIR prepared for the proposed project.

4.11 LAND USE AND PLANNING

Threshold 4.11.1: Physical Division of an Established Community: Less Than Significant Impact

The Buildout Area is within an urbanized area and is currently surrounded by a variety of land uses, including commercial, office, business park, retail, park, residential, religious facilities, and mixed-use land uses. Future development under the proposed project within the Buildout Area would not physically divide an established community and would improve existing connectivity in the area with the extension of Moody Street and Vessels Circle. Further, the neighboring residential communities would not be separated by the proposed road extensions or proposed buildout of the proposed project. Project implementation would implement the vision of the Specific Plan. The proposed project would not introduce an inconsistency with the existing uses in the surrounding area and would be consistent with all General Plan and zoning designations. Therefore, impacts related to the physical division of an established community would be less than significant. In addition, future development applications contemplated within the Buildout Area would also be required to comply with all applicable regulations and standards related to land use and planning. Any future development or redevelopment projects requiring discretionary actions would also be subject to environmental review, in accordance with the provisions of CEQA and the *State CEQA Guidelines.*

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not physically divide an established community. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.11-8 through 4.11-11 of the Draft EIR prepared for the proposed project.

Threshold 4.11.2: Significant Environmental Impact Due to Conflicts with Land Use Plans, Policies, or Regulations Adopted for the Purpose of Avoiding or Mitigating an Environmental Effect: Less Than Significant Impact

A project's inconsistency with a plan or policy is considered significant only if the conflict would result in a substantial physical environmental impact (per *State CEQA Guidelines* Section 15382).

The proposed project would be consistent with applicable Connect SoCal goals, including Connect SoCal's goals to develop, connect and sustain communities that are livable and thriving and to create a healthy region for the people of today and tomorrow, by providing additional housing opportunities within locations near amenities and already used by the public for commercial,

recreational, and/or professional uses. In addition, the proposed project would support the development, connection, and sustainability of communities that are living and thriving by providing necessary housing. The proposed project would deliver a range of residential uses, from single-family to high-density housing. This diversity of housing types would offer options to accommodate varying household needs within the community. Buildout of the proposed project would include commercial uses, would improve circulation from the adjacent roadways and surrounding areas to the north and south, and would provide access to parks.

The Buildout Area is designated as Specific Plan on the General Plan Land Use Map. The City has determined, through Measure S, that the Specific Plan is consistent with all elements of the General Plan, including Land Use, Circulation, Conservation/Open Space/Recreation, Noise, Housing, Safety, Growth Management, and Air Quality. Therefore, the proposed project's updates to the General Plan would ensure consistency between the project and all applicable General Plan goals and policies.

In addition, the Specific Plan is the regulatory plan that provides the land use designations and zoning for the Buildout Area. The project as proposed is the reasonably foreseeable buildout of the Specific Plan and no amendments to the Specific Plan are required for implementation. Therefore, the proposed project is consistent with the Specific Plan and City's Zoning Ordinance. In addition, as provided above, the City (through Measure S) determined that the Specific Plan is consistent with all eight elements of the General Plan, as required by Government Code Section 65450.

Therefore, because the proposed project does not include any proposed amendments or modifications to the adopted Specific Plan and because proposed project is the reasonably foreseeable buildout of the Specific Plan in the Buildout Area, the proposed project would not introduce inconsistencies in the applicable City land use and planning policies. Therefore, the proposed project would result in less than significant impacts related to potential conflicts with applicable land use plans, policies, and regulations.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.11-11 through 4.11-25 of the Draft EIR prepared for the proposed project.

4.12 MINERAL RESOURCES

Thresholds 4.12.1, 4.12.2: Loss of Availability of Known Mineral Resources or a Locally Important Mineral Resource Recovery Site: No Impact

There are no known mineral resources within or in the vicinity of the Buildout Area, and there are no other known mineral deposits or resources within the city that are of significant value to the region or the State. Therefore, implementation of the proposed project would not result in the loss of availability of a known mineral resource that would be of value to the region and residents of the State. Therefore, no impacts on mineral resources would occur.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not result in the loss of availability of a known mineral resources that would a value to the region or the residents of the state or result in the loss of availability of a local important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. No impact would occur. Consequently, no mitigation measures are required for this no impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.12-4 through 4.12-5 of the Draft EIR prepared for the proposed project.

4.13 NOISE

Threshold 4.13.1: Substantial Temporary or Permanent Increase in Ambient Noise Levels: Less Than Significant Impact

Implementation of the proposed project would introduce temporary and permanent sources of noise within the Buildout Area, including demolition, grading, construction activities, increased traffic, and ongoing operational uses.

Two types of short-term noise impacts could occur during construction within the Buildout Area: (1) construction traffic, and (2) construction equipment. Because construction-related vehicle trips would not approach existing daily traffic volumes on nearby roads, any increase in traffic noise would be less than 3 A-weighted decibels (dBA) and therefore would not be perceptible. It should also be noted that removal of the existing improvements associated with the Los Alamitos Race Course would result in cessation of race track operations during demolition and subsequent construction activities. With the track no longer operating, the existing traffic generated by patrons, employees, vendors, and event-related activities would be substantially reduced or eliminated. As such, construction-related vehicle trips would, in part, replace rather than add to existing operational traffic volumes, thereby offsetting potential roadway noise increases. Accordingly, short-term construction-related noise impacts associated with worker commutes and equipment transport to the Buildout Area would be less than significant.

Construction would occur incrementally and in phases as individual development components are implemented and occupied. Accordingly, construction equipment-related noise would be intermittent and localized to active work areas, rather than occurring simultaneously across the entire site. In addition, construction activities would comply with the City of Cypress Noise Ordinance, as specified in Regulatory Compliance Measure NOI-1, which expressly permits construction during specified daytime hours. Construction would occur outside of the nighttime hours and only occur during the permitted construction hours from 7:00 a.m. to 8:00 p.m. on weekdays and 9:00 a.m. to 8:00 p.m. on Saturdays. Construction would not be permitted outside of these hours or on Sundays or federal holidays. The City's construction-hour restrictions were established to minimize disruption to nearby sensitive receptors by prohibiting construction activities during nighttime and other low-ambient-noise periods when residents are more likely to be sleeping or otherwise sensitive to noise. Compliance with these established time limitations would ensure that construction noise occurs only during periods deemed acceptable by the City to avoid substantial disturbance to surrounding residential and other noise-sensitive land uses. There is potential that during certain construction activities, like mat foundation pours or utility installation, work may need to occur on a 24-hour rotation. In those situations, a temporary use permit may be obtained from the City's Community Development Director. The application would have to detail why compliance with standard construction hours cannot be achieved and the duration of the scheduled event. The City requires at least 10 days to process a request for a temporary use permit.

Construction activities within the Buildout Area would generate temporary increases in noise levels at nearby sensitive receptors, including residential uses and other noise-sensitive land uses. Short-term exposure to elevated construction noise may result in temporary annoyance, speech interference, or sleep disturbance if occurring during early morning or nighttime hours. However, health guidance indicates that long-term adverse health effects—such as cardiovascular outcomes, chronic stress responses, or hearing impairment—are generally associated with prolonged, chronic exposure at elevated noise levels, rather than intermittent and temporary construction noise. The World Health Organization has concluded that adverse health effects are primarily linked to sustained environmental noise exposure over extended periods, particularly nighttime exposure affecting sleep. Similarly, the USEPA identifies much higher continuous exposure levels (e.g., long-term average levels approaching or exceeding 85 dBA) as associated with measurable health risks. Because construction activities would be temporary, phased, and restricted to daytime hours in accordance with City standards, and because receptors would not be exposed to sustained high noise levels over long durations, the potential for long-term adverse health impacts would be minimal.

Although construction noise levels would temporarily exceed existing ambient noise levels in the vicinity of the Buildout Area, such increases would be short term and limited to the duration of active construction. Project construction would be conducted in accordance with the City of Cypress Noise Ordinance, including compliance with permitted construction hours and operational requirements designed to protect nearby sensitive receptors. Because construction activities would comply with the City's established regulatory framework, construction-related noise impacts would be temporary and would not result in a substantial adverse effect.

Long-term noise impacts would be associated with increases in traffic and on-site operational activities. While implementation of the proposed project would increase traffic volumes on surrounding roadways, associated increases in noise levels would not be substantial and would remain below thresholds of perceptibility. Specifically, the results of the noise analysis indicate that the increase in noise associated with project-related traffic, comparing existing without project traffic volumes to existing plus project traffic volumes, would be up to 0.3 dBA Community Noise Equivalent Level (CNEL) along the analyzed road segments. A noise level increase of less than 3 dBA would not be perceptible to the human ear in an outdoor environment. Because project-related traffic would not result in a perceptible increase (i.e., 3 dBA or greater) in ambient roadway noise levels, off-site traffic noise impacts would be less than significant.

Operational noise sources would include on-site stationary equipment such as heating, ventilation, and air conditioning (HVAC) systems, as well as commercial activities including loading, unloading, and parking lot use. Emergency generators would operate only during routine testing or power outages and would not constitute continuous noise sources. In addition, once final architectural plans and mechanical equipment specifications are available for each future project, preparation of a project-specific acoustical analysis would be required to confirm compliance with the City's exterior and interior noise standards related to land use compatibility, as established in City of Cypress Municipal Code Article VII (Noise Control), Sections 13-68, which set forth allowable noise limits by noise zone and authorize the City to require noise measurements or acoustical studies to verify compliance with applicable standards prior to or following project occupancy. Further, Regulatory Compliance Measure NOI-2 would require mechanical equipment, including air conditioning units in residential and non-residential zoning districts, be enclosed within a structure or completely screened from view from surrounding properties by the use of a fence or wall consistent with Section 3.11.100(b) of the City of Cypress Municipal Code. As the proposed project would meet the City's noise standards, impacts would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Regulatory Compliance Measures: Regulatory Compliance Measures NOI-1 and NOI-2 would be applicable and implemented for the proposed project

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.13-16 through 4.13-22 of the Draft EIR prepared for the proposed project.

Threshold 4.13.2: Excessive Ground-borne Vibration or Ground-borne Noise Levels: Less Than Significant Impact

Construction of the proposed project could result in the generation of ground-borne vibration. The greatest levels of vibration are anticipated to occur during the foundation preparation phase. All other phases are expected to result in lower vibration levels. During the foundation preparation phase, the equipment with the highest vibration generation potential is the large bulldozer, which would generate 0.089 peak particle velocity (PPV) inches per second (in/sec) at 25 feet. The closest surrounding buildings to the Buildout Area construction boundary include existing residential buildings located approximately 10 feet west of the edge of Lot 13 and south of Lot 3. Assuming heavy construction equipment would not operate within 5 feet of existing property line walls, at a distance of approximately 15 feet from typical construction activities, vibration levels would approach 0.191 in/sec PPV and would be below the Federal Transit Administration (FTA) criteria of 0.2 in/sec PPV, that applies to non-engineered timber and masonry buildings and therefore impacts would be less than significant, including at the closest surrounding buildings which would be at least 15 feet from construction activities.

In addition to potential building damage considerations, construction-generated ground-borne vibration may result in human annoyance at nearby vibration-sensitive receptors. During the foundation preparation phase for future development within the Buildout Area, the large bulldozer represents the equipment with the highest vibration generation potential. At a distance of 165 feet from the center of construction activities to the nearest sensitive receptor, vibration levels are expected to approach 62 vibration velocity decibels (VdB) and would not exceed the annoyance thresholds. Because the FTA criteria are based on the root mean square vibration level (Lv), expressed in VdB, vibration levels would need to exceed the applicable residential thresholds to result in a potentially significant impact related to human annoyance. As discussed above, the maximum predicted vibration level of 62 VdB is well below the applicable daytime and nighttime thresholds (78 VdB during daytime hours and 72 VdB during nighttime hours); therefore, no significant vibration impact related to human annoyance would occur.

Given the anticipated uses in the Buildout Area, project-related traffic would be the only source of potential vibration impacts to surrounding uses during operation. With respect to potential ground-borne vibration from existing roadway conditions, the roadways surrounding the Buildout Area, including Katella Avenue, Cerritos Avenue, and the existing site driveways, are paved and maintained in generally smooth condition and are therefore unlikely to generate substantial vibration. Typical on-road vehicles, including passenger cars, trucks, and buses, operate on rubber tires and utilize suspension systems that dampen roadway irregularities, making it uncommon for standard vehicular traffic on paved roadways to result in perceptible ground-borne vibration or vibration-related noise at off-site receptors. Therefore, vibration generated by project-related traffic on the adjacent roadways would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not generate excessive ground-borne vibration or ground-borne noise levels. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.13-22 through 4.13-25 of the Draft EIR prepared for the proposed project.

Threshold 4.13.3: Excessive Noise Levels Due to Proximity to an Airport: Less Than Significant Impact

The closest airport to the Buildout Area is JFTB Los Alamitos, located approximately 0.6 mile south of the Buildout Area. The Buildout Area is within the 60 A-weighted decibel community noise equivalent level (dBA CNEL), but outside of the 65 dBA CNEL noise contour for JFTB Los Alamitos. Therefore, although the Buildout Area is located within Noise Impact Zone 2 (moderate noise impact), it is outside of Noise Impact Zone 1 (high noise impact) defined by the Airport Environs Land Use Plan. Given that the proposed project does not contain outdoor sensitive receptors and the City defined levels between 60 and 65 dBA CNEL as conditionally acceptable with the incorporation of an HVAC system allowing a windows-closed condition and standard building construction, the noise impacts related to airport noise would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not expose people residing or working in the project area to excessive noise levels due to proximity to an airport. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to page 4.13-26 of the Draft EIR prepared for the proposed project.

4.14 POPULATION AND HOUSING

Threshold 4.14.1: Substantial Unplanned Population Growth: Less Than Significant Impact

Implementation of the proposed project would result in a net population increase of approximately 5,516 persons at full buildout associated with the development of up to 1,791 residential units. The City's housing need allocation for the planning period between 2021 and 2029 is 3,936 units, as identified in the Southern California Association of Governments (SCAG) 6th Cycle Regional Housing Needs Assessment (RHNA). The Housing Element and Specific Plan allow for a total of 1,926

residential units, including the 135 units already developed by Melia Homes as part of the Belmont residential project on the 7-acre Melia Property. The remaining capacity under the Specific Plan allows for the development of up to 1,791 additional residential units within the Buildout Area. Accordingly, the proposed project would not result in unplanned growth and the projected population increase associated with the proposed project falls within this anticipated regional and local growth.

The proposed project includes the construction of roads, water and wastewater infrastructure, power lines and other utilities, as envisioned in the Specific Plan. The Buildout Area is in an urbanized setting with a full range of public services and would utilize existing public utilities infrastructure. The proposed project would include the extension of Moody Street from Cerritos Avenue to Katella Avenue, as well as the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension, consistent with the Specific Plan. The proposed project also includes, consistent with the Specific Plan, the widening of Lexington Drive within Lot B in Vesting Tentative Tract Map (VTTM) 19247 and seven access driveways, including one at Lexington Drive and two each at Cerritos Avenue, Moody Street, and Vessels Circle. These proposed extensions would provide access to the proposed development within the Buildout Area and surroundings.

Although the proposed project would facilitate the development of new housing in the City, the new housing would not induce substantial unplanned population growth, as the City has already planned for the reasonably foreseeable development of housing within the Buildout Area as a way of meeting the Housing Element and City's RHNA obligations. In addition, the proposed project is consistent with planned regional housing growth and planned population growth of the City as evaluated in the SCAG RHNA and Housing Element. Therefore, the proposed project would not cause indirect substantial unplanned population growth through the extension of roads and other infrastructure. Impacts associated with unplanned population growth, directly or indirectly, would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not induce substantial unplanned population growth in the area, either directly or indirectly. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.14-8 and 4.14-9 of the Draft EIR prepared for the proposed project.

Threshold 4.14.2: Displacement of People or Housing Resulting in Need for Replacement Housing: No Impact

There are no residential uses currently located in the Buildout Area that would be subject to demolition or require the removal or relocation of existing residents. In addition, as discussed above, the proposed project would be consistent with the housing allocation needs specified by the SCAG RHNA and Housing Element. Therefore, the proposed project would result in no impact related to the displacement of people or housing necessitating the construction of replacement housing elsewhere.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere. No impact would occur. Consequently, no mitigation measures are required for this no impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to page 4.14-9 of the Draft EIR prepared for the proposed project.

4.15 PUBLIC SERVICES

Threshold 4.15.1(i): Fire Protection Services: Less Than Significant Impact

Buildout of the proposed project would result in an increase of approximately 5,516 residents, which would result in a corresponding increase in demand for fire protection services.

Construction activities associated with the proposed project, including roadway improvements such as the extension of Moody Street and Vessels Circle, have the potential to temporarily affect fire protection services, including emergency vehicle response times, by temporarily requiring partial lane closures, reducing roadway capacity, or increasing congestion. However, the construction contractor of future development projects would be required to implement a Transportation Construction Plan (TCP) that complies with applicable engineering standards outlined in the *California Manual of Uniform Traffic Control Devices*, ensuring that construction activities which may temporarily restrict vehicular traffic would be required to implement adequate and appropriate measures to facilitate the passage of persons and vehicles through/around any required road closures. As such, construction-related impacts to fire protection services and emergency response times would not be substantially affected.

With implementation of the proposed project and the associated increase in population at the Buildout Area, the firefighter-to-resident ratio could decrease from approximately 5.86–5.94 firefighters per 10,000 residents to approximately 5.29 per 10,000 residents, which may necessitate the addition of approximately four firefighters to maintain existing service levels. However, OCFA has a history of adjusting staffing levels to meet demand, and the Buildout Area is located in close

proximity (approximately 75 feet) to Fire Station No. 17, which supports the ability to meet OCFA's response time goals of 8 minutes for fire response and 5 minutes for paramedic response at least 90 percent of the time.

Further, OCFA has not identified the need for new fire stations or expanded facilities to serve the Buildout Area. If OCFA determines that such facilities are required in the future, they: (1) would occur where allowed under the designated land use; (2) would be located on parcels that are infill opportunities on lots that are likely between 0.5 and one acre in size; and (3) would very likely qualify for a Categorical Exemption under *State CEQA Guidelines* Section 15301 or 15332 and, if not, a Negative Declaration or a Mitigated Negative Declaration, and, therefore would not be expected to result in significant impacts.

In addition, any future development implemented pursuant to the proposed project would be required to comply with all applicable OCFA requirements, including the provision of adequate fire flow, hydrant spacing, and emergency access. In addition, future projects would be subject to City review and approval, including verification during the development review process that adequate fire protection services can be provided, and would also be required to coordinate with OCFA to determine and pay any applicable development impact fees necessary to offset potential impacts to staffing and service capacity, as specified in Regulatory Compliance Measure PS-1. Therefore, impacts related to fire protection services, including the need for new or expanded facilities, would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not generate substantial impacts relating to fire protection services. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Regulatory Compliance Measure: Regulatory Compliance Measure PS-1 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.15-13 through 4.15-14 of the Draft EIR prepared for the proposed project.

Threshold 4.15.1(ii): Police Protection Services: Less Than Significant Impact

Implementation of the proposed project would result in a net increase of approximately 5,516 residents, which could generate additional calls for law enforcement services. However, such demand would be consistent with the types of service calls typically handled by the Cypress Police Department (CPD) for similar residential and mixed-use developments. Additionally, the Buildout Area is located within an urbanized setting already served by CPD.

As discussed above, the construction contractor would be required to implement a TCP in accordance with the *California Manual of Uniform Traffic Control Devices* to ensure that construction activities which may temporarily restrict vehicular traffic would be required to implement adequate and appropriate measures to facilitate the passage of persons and vehicles through/around any required road closures. Therefore, potential impacts related to emergency access during construction of the proposed project would not be impeded and response times would not be substantially affected.

With the addition of approximately 5,516 residents associated with the proposed project, the CPD's officer-to-resident ratio would decrease to approximately 1.00 officer per 1,000 residents if staffing levels remain unchanged. While the increase in population may warrant the addition of approximately five to six officers to maintain current service ratios and response time goals, CPD has indicated that it anticipates being able to serve the proposed project using existing resources in the short term while continuing to monitor staffing needs as development occurs. CPD has also not identified the need for new or expanded police facilities to serve the Buildout Area. If additional facilities are required in the future, such facilities: (1) would occur where allowed under the designated land use; (2) would be located on parcels that are infill opportunities on lots that are likely between 0.5 and one acre in size; and (3) would very likely qualify for a Categorical Exemption under *State CEQA Guidelines* Section 15301 or 15332 and, if not, a Negative Declaration or a Mitigated Negative Declaration, and, therefore would not be expected to result in significant impacts.

The proposed project would also incorporate Crime Prevention Through Environmental Design (CPTED) principles, including adequate lighting, access control, natural surveillance, and security features, and would coordinate with CPD during the site design phase. Future development projects would be required to comply with all applicable City standards, including the General Plan and Zoning Code, and any future development or redevelopment projects requiring discretionary actions would be subject to environmental review pursuant to CEQA. In addition, development impact fees would be collected, as appropriate, to support public services, including police protection. Therefore, impacts to police protection services, including the need for new or expanded facilities, would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not generate substantial impacts relating to police protection services. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.15-14 through 4.15-16 of the Draft EIR prepared for the proposed project.

Threshold 4.15.1(iii) Schools: Less Than Significant Impact

Implementation of the proposed project is estimated to result in approximately 237 elementary school students within the Cypress School District (CSD), 235 middle and high school students within the Anaheim Union High School District (AUHSD), and approximately 288 students within the Los Alamitos Unified School District (LAUSD) (including 206 elementary and 82 middle/high school students). This increase in student population would incrementally increase demand for school facilities within the affected districts; however, such growth is consistent with regional population projections and housing development anticipated under the SCAG RHNA and the City's Housing Element.

The CSD currently operates below its facility capacity. The addition of 237 elementary students associated with the proposed project would represent an increase of approximately 7.0 percent in enrollment but would remain within the district's available capacity of approximately 1,081 available seats.

The addition of approximately 235 middle and high school students within the AUHSD would represent an increase of approximately 0.84 percent. According to the AUHSD Facilities Master Plan Update, the district is experiencing a projected decline in enrollment of approximately 3,200 students through the 2025–2026 school year. As such, the district is expected to have sufficient capacity to accommodate students generated by the proposed project.

The addition of approximately 288 students within in the LAUSD would represent an estimated 3.2 percent increase in enrollment; however, given the district's declining enrollment trends, sufficient capacity is expected to be available to serve these students.

In addition, future development associated the proposed project would be required to pay applicable school facility development fees in accordance with California Education Code Section 17620(a)(1) and Government Code Section 65995, as specified in Regulatory Compliance Measure PS-2. These fees are intended to offset impacts to school facilities associated with new development and, pursuant to the provisions of Government Code Section 65996, a project's impact on school facilities is fully mitigated through payment of the requisite school facility development fees current at the time a building permit is issued. Therefore, with payment of the required fees, as outlined in Regulatory Compliance Measure PS-2, potential impacts to school services and facilities associated with implementation of the proposed project would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not generate substantial impacts relating to school facilities. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Regulatory Compliance Measure: Regulatory Compliance Measure PS-2 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.15-16 through 4.15-20 of the Draft EIR prepared for the proposed project.

Threshold 4.15.1(iv): Parks: Less Than Significant Impact

The estimated increase in population associated with the proposed project would be expected to increase the use of existing parks and recreational facilities within the City. Currently, the City provides approximately 93.9 acres of parkland, which equates to approximately 1.92 acres per 1,000 residents—below the City's General Plan goal of 4.5 acres per 1,000 residents. With project implementation, this ratio would decrease to approximately 1.73 acres per 1,000 residents without additional parkland improvements.

However, the proposed project includes the provision of park and recreational space consistent with the Specific Plan. As established in the Specific Plan, 18.2 acres of land shall be set aside exclusively for two public parks within the Public Park District. This area was considered to be large enough to provide passive and active recreational uses. An additional 2 acres of public park will be, or have been, provided in one or more of the other Land Use Districts, for a total of approximately 20 acres of public parks. Lexington Park, which is approximately 9 acres and is located outside the Buildout Area has already been developed adjacent to Lots 1 and 2 of Vesting Tentative Tract Map (VTTM) 19247, and counts toward the 20-acre park requirement included in the Specific Plan. The proposed project would include approximately 11 acres of land on which park and recreational uses would be developed. The specific amenities and improvements that would be developed in the Specific Plan's Public Park District and the additional 2 acres of public park space would be determined in connection with future development projects as they are proposed within the Buildout Area. The proposed project would also include additional open space areas as an amenity for future residents. The amount of open space, improvements, and amenities in the final buildout is not known or defined at this programmatic stage of the proposed project but would be consistent with requirements in the Specific Plan.

With the dedication of approximately 11 acres of parkland within the Buildout Area, the City's parkland-to-resident ratio would improve to approximately 1.93 acres per 1,000 residents. While this would not meet the City's goal of 4.5 acres per 1,000 residents, it would represent a slight improvement over existing conditions. Furthermore, consistent with Article VI and in Regulatory Compliance Measure PS-3, future applicants within the Buildout Area would be required to dedicate land, pay applicable park fees, obtain private open space credits, or a combination thereof. Therefore, although the proposed project would increase demand for park and recreational facilities, development on onsite parks and recreation space and compliance with Regulatory Compliance Measure PS-3, would ensure that impacts to parks and recreation facilities would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not generate substantial impacts on parks. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Regulatory Compliance Measure: Regulatory Compliance Measure PS-3 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.15-20 through 4.15-21 of the Draft EIR prepared for the proposed project.

Threshold 4.15.1(v): Other Public Facilities: Less Than Significant Impact

The estimated population increase associated with buildout of the proposed project could increase demand for library services at the Cypress Branch Library, located within the Cypress Civic Center at 5331 Orange Avenue, approximately 1 mile north of the Buildout Area. Based on County service standards of 0.2 square feet of library space per capita and 1.5 books per capita, the Cypress Branch Library has sufficient capacity to accommodate a population of 75,000 and enough books to serve 58,667 residents. Therefore, the library has adequate space and resources to serve the additional population growth associated with the proposed project. For these reasons, the proposed project would not require the construction of new or physically altered library facilities, and impacts on library services would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not generate substantial impacts to other public facilities. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to page 4.15-22 of Draft EIR prepared for the proposed project.

4.16 RECREATION

Threshold 4.16.1: Increase Use and Cause Physical Deterioration of Parks and Other Recreation Facilities: Less Than Significant Impact

Implementation of the proposed project would result in approximately 5,516 new residents within the Buildout Area. Currently, the City has approximately 93.9 acres of parkland for its 48,782 residents, providing about 1.92 acres per 1,000 residents, which falls short of the City's parkland objective. With the addition of 5,516 residents, the parkland ratio would be 1.73 acres per 1,000 residents prior to construction of any recreational resources proposed by the project.

However, the proposed project includes the provision of park and recreational space consistent with the Specific Plan. As established in the Specific Plan, 18.2 acres of land shall be set aside exclusively for two public parks within the Public Park District. This area was considered to be large enough to provide passive and active recreational uses. An additional 2 acres of public park will be, or have been, provided in one or more of the other Land Use Districts, for a total of approximately 20 acres of public parks. Lexington Park, which is approximately 9 acres and is located outside the Buildout Area has already been developed adjacent to Lots 1 and 2 of Vesting Tentative Tract Map (VTTM) 19247, and counts toward the 20-acre park requirement included in the Specific Plan. The proposed project would include approximately 11 acres of land on which park and recreational uses would be developed. The specific amenities and improvements that would be developed in the Specific Plan's Public Park District and the additional 2 acres of public park space would be determined in connection with future development projects as they are proposed within the Buildout Area. The proposed project would also include additional open space areas as an amenity for future residents. The amount of open space, improvements, and amenities in the final buildout is not known or defined at this programmatic stage of the proposed project but would be consistent with requirements in the Specific Plan. With the dedication of approximately 11 acres of parkland, the City's parkland-to-resident ratio would be approximately 1.93 acres per 1,000 residents. While this would not meet the City's goal of 4.5 acres per 1,000 residents, it would represent a slight improvement over existing conditions. Furthermore, consistent with Article VI and in Regulatory Compliance Measure PS-3, future applicants within the Buildout Area would be required to dedicate land, pay applicable park fees, obtain private open space credits, or a combination thereof.

Therefore, impacts to parks and recreational facilities would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not increase the use of existing neighborhood and regional parks or other recreation facilities such that substantial physical deterioration of the facility would occur or be accelerated. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Regulatory Compliance Measure: Regulatory Compliance Measure PS-3 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.16-6 and 4.16-7 of the Draft EIR prepared for the proposed project.

Threshold 4.15.2: Construction or Expansion of Recreational Facilities Resulting in an Adverse Physical Effect: Less Than Significant Impact

The proposed project would include approximately 11 acres of land on which park and recreational uses would be developed. The specific amenities and improvements that would be developed in the 9 acres of Public Park District and the additional 2 acres of public park space would be determined in connection with future development projects as they are proposed within the Buildout Area. Future individual development projects implemented within the Buildout Area pursuant to the previously approved Specific Plan would be subject to further project-specific evaluation to determine whether they are consistent with the assumptions in the Draft EIR. If a future project exceeds the scope of this analysis or results in site-specific impacts not previously addressed, additional environmental review under CEQA may be required to evaluate impacts to recreation and ensure compliance with applicable policies, standards, and mitigation measures.

In addition, given the availability and distribution of these facilities, as well as the City's existing park planning framework and service standards, the increase in population associated with the proposed project would not result in the physical deterioration of existing recreational resources or necessitate the construction of new parks or recreational infrastructure. As such, potential impacts related to the construction or expansion of recreational facilities that could result in adverse physical effects would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that although the proposed project would include recreational facilities the construction of these facilities would not have an adverse physical effect on the environment. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.16-2 and 4.16-3 of the Draft EIR prepared for the proposed project.

4.17 TRANSPORTATION

Threshold 4.17.1: Conflict with a Program, Plan, Ordinance or Policy Related to the Circulation System: Less Than Significant Impact

In the City, the circulation system is primarily regulated by the City's General Plan Circulation Element. In addition, the City's General Plan Growth Management Element contains a goal to reduce traffic congestion. A consistency analysis of the goals and policies from the City's General Plan pertaining to the circulation system that are relevant to the proposed project was conducted and it was determined that the proposed project would not conflict with any of the goals and policies contained in the City's General Plan related to the circulation system. In addition, the

proposed project would be consistent with applicable Connect SoCal 2024 goals, which regulates the regional circulation system. Furthermore, the proposed project reinforces the stated goals of Connect SoCal 2024, including Connect SoCal 2024's goals to develop, connect and sustain communities that are livable and thriving and to create a healthy region for the people of today and tomorrow, by providing additional housing opportunities within locations near amenities and already used by the public for commercial, recreational, and/or professional uses. In addition, the proposed project would support the development, connection, and sustainability of communities that are livable and thriving by providing necessary housing for all income levels in a bustling economic corridor.

Transit service in the vicinity of the Buildout Area is provided by OCTA along Katella Avenue and Valley View Street. The proposed project is expected to generate approximately 210 daily transit trips, which equates to 420 OC Bus boardings. However, this increase would not interfere with existing or planned transit services as the City is continually assessing ridership demand and coordinates with OCTA in order to address any deficiencies in service. OCTA has also recently completed the 2024 Orange County Transit Vision Master Plan, which aims to integrate, enhance, and expand multimodal transportation services throughout the County, and is currently developing the Directions 2050 plan to update OCTA's Long-Range Transportation Plan (LRTP). Directions 2050 will look ahead to 2050 and outline strategies to ensure that the County's transportation system remains efficient, safe, balanced, and sustainable, and addresses the provision of transit services. OCTA's Fiscal Year (FY) 2025-2026 budget also highlights increased transit service, including adding more bus service to meet rising demand, and investments in transit infrastructure. Implementation of the proposed project would not interfere with implementation of these transit planning documents, including the specific actions to address the growing need for expanded transit service.

Bicycle and pedestrian facilities would also be enhanced through the addition of approximately 1 mile of new bicycle facilities, sidewalks along project frontages, and connections to existing networks. In addition, the proposed project would be required to implement Transportation Demand Management (TDM) strategies, which would further support safe and efficient multimodal circulation by constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network and improving the pedestrian network, including the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area.

During construction, temporary delays in traffic may occur due to oversized vehicles traveling at lower speeds on the surrounding roadways turning into the Buildout Area. In addition, construction activities may require temporary road or lane closures in the vicinity of the Buildout Area. Temporary road or lane closures during construction would have a potential significant impact to roadways and safety. However, the traffic generated by construction activity would be limited in duration and would not materially impact the level of service (LOS) at any study intersections or freeway mainline segments. In addition, a TCP would be implemented to minimize potential disruptions.

In addition, because a Traffic Impact Analysis (TIA) has been prepared for the proposed project to analyze LOS impacts for local policy and regional consistency purposes, the Orange County Congestion Management Plan (CMP) requirements have been addressed.

Consistent with the Circulation Plan shown on Figure 2-3 in the Specific Plan, the proposed project would include the extension of Moody Street from Cerritos Avenue to Katella Avenue, as well as the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension. The Moody Street extension would traverse the Buildout Area, passing adjacent to Lots 3, 4, 5, 6, 7, 12, 13, and 14 in proposed VTTM 19247, and create a central north-south corridor, while the extension of Vessels Circle within Lot C would, among other things, provide access to Lots 10 and 11 in proposed VTTM 19247. The proposed project also includes, consistent with the Specific Plan, the widening of Lexington Drive within Lot B in proposed VTTM 19247. In addition, the proposed project would include seven access driveways, including one at Lexington Drive and two each at Cerritos Avenue, Moody Street, and Vessels Circle. Future development within the Buildout Area may require the construction of private driveways, accessways and/or streets that connect to the Moody Street and Vessels Circle extensions and existing public streets adjacent to the Buildout Area, but their specific locations and sizes would be determined during the design process for specific development projects. As the proposed project would include the extension of Moody Street south of Cerritos Avenue to Siboney Street, the extension of Vessels Circle to the west to intersect with the Moody Street extension, and the required future widening of Lexington Drive, consistent with the Circulation Plan contained in the Specific Plan, implementation of the proposed project would not conflict with the Specific Plan with respect to transportation.

Based on the above analysis, and because the proposed project would be required to adhere to the Specific Plan and the General Plan, the proposed project would generally be consistent with all programs, plans, ordinances, and policies addressing the circulation system, including those regulating transit, roadway, bicycle, and pedestrian facilities and impacts would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.17-13 through 4.17-17 of the Draft EIR prepared for the proposed project.

Threshold 4.17.3: Increase in Hazards Due to a Geometric Design Feature or Incompatible Uses: Less Than Significant Impact

Except as otherwise provided in the Specific Plan, all roadway improvements in and around the Buildout Area shall be designed and constructed in accordance with Chapter 25, Article 5, Public Improvements, of the CMC and applicable Public Works Design Standards, which establish minimum requirements for street widths, curb return radii, intersection design, and driveway access. Except as

otherwise provided in the Specific Plan, driveway design and access control shall also comply with CMC Appendix I (Zoning), Chapter 3.14 – Off-Street Parking and Loading, which regulates driveway width, location, and spacing to prevent hazardous conflicts between vehicular and pedestrian movements (CMC § 3.14.050). In addition, except as otherwise provided in the Specific Plan, all final site and roadway improvement plans shall conform to the City's Public Works Design Criteria Manual, which incorporates California Manual on Uniform Traffic Control Devices (CA MUTCD) standards for intersection control, sight distance, and geometric design.

Finally, all final improvement and site access plans shall be subject to review and approval by the City's Public Works and Fire Departments prior to issuance of building permits. Compliance with these requirements and design standards would ensure that new roadway and driveway improvements avoid sharp curves, unsafe intersection geometry, and visual obstructions, thereby maintaining safe and efficient circulation within and adjacent to the Buildout Area. For these reasons, the proposed project's impact related to a substantial increase in hazards due to a design feature or incompatible use would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not substantially increase hazards due to a geometric design feature or incompatible uses. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.17-21 and 4.17-22 of the Draft EIR prepared for the proposed project.

Threshold 4.17.4: Inadequate Emergency Access: Less Than Significant Impact

All roadway and internal circulation improvements associated with the proposed project would be designed and constructed to meet all City requirements for street widths, corner radii, and intersection control. The proposed project and internal circulation system would be designed to provide adequate emergency vehicle access and safe evacuation for all future structures.

During construction, the construction contractor would be required to implement a TCP that complies with applicable engineering standards outlined in the *California Manual on Uniform Traffic Control Devices*. The proposed seven access driveways, including one at Lexington Drive and two each at Cerritos Avenue, Moody Street, and Vessels Circle, would also act as fire access roads, and would be designed to adequately accommodate fire apparatus and other emergency response vehicles. In addition, all final site and roadway improvement plans would be subject to review and approval by the Orange County Fire Authority (OCFA) and the City's Police Department prior to issuance of building permits. Compliance with these requirements would ensure that emergency

access is maintained throughout construction and operation, and impacts related to inadequate emergency access would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not result in inadequate emergency access. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.17-22 and 4.17-23 of the Draft EIR prepared for the proposed project.

4.18 TRIBAL CULTURAL RESOURCES

Impacts to tribal cultural resources were identified as potentially significant. Refer to Section 5.0 of this document for a discussion of potential impacts on tribal cultural resources with implementation of the proposed project.

4.19 UTILITIES AND SERVICE SYSTEMS

Threshold 4.19.1: Relocation or Construction of New or Expanded Water, Wastewater Treatment, Stormwater Drainage, Electric Power, Natural Gas, or Telecommunication Facilities That Would Cause a Significant Environmental Effect: Less Than Significant Impact

Construction would require minimal water for dust control using existing potable water lines, with no new conveyance facilities required. In addition, no significant increase in wastewater flows is anticipated as a result of construction activities within the Buildout Area as sanitary services during construction would be provided by portable toilet facilities, which transport waste off-site for treatment and disposal. Construction of the proposed project would comply with Regulatory Compliance Measures HYD-1 and HYD-2, which include implementation of a Storm Water Pollution Prevention Plan (SWPPP), construction BMPs, and testing/treatment of any dewatered groundwater prior to discharge. These measures would prevent substantial additional sources of polluted runoff being discharged to the storm drain system through implementation of construction BMPs that target pollutants of concern in runoff from the Buildout Area as well as testing and treatment (if required) of groundwater prior to its discharge to surface waters. With implementation of BMPs, construction of the proposed project would not result in a substantial increase in the rate or amount of surface runoff, flow, and volume that would exceed the capacity of the adjacent stormwater drainage systems. Therefore, construction of the proposed project would not require or result in the relocation or construction of new or expanded stormwater drainage facilities, the construction or relocation of which could cause significant environmental effects.

Construction electricity demand would minimal and temporary, with no new transmission facilities required, and would not require natural gas. In addition, the proposed project would be required to

prepare and implement a TCP during construction activities, which would ensure that if the installation of utility connections and improvements would require temporary road or lane closures, there would be no significant transportation impact during construction. Therefore, construction of the proposed project would not require the construction of new or expanded water, wastewater, stormwater drainage, electrical, or natural gas facilities.

Operational water service would be provided by GSWC through connections to existing water lines and new lines within the Moody Street extension. According to the WSA prepared for the proposed project, the historical water use at the Buildout Area over the past several years (for two meters providing service to the LARC) has averaged approximately 73 afy and future development facilitated by the proposed project would result in an additional approximately 620 acre-feet per year, which accounts for approximately 3.8 percent of the estimated water demand and 2.6 percent of the total available water supplies in the service area for 2045. Further, the WSA prepared for the proposed project indicated that sufficient water supplies exist to meet the existing and future water demands within the GSWC Los Alamitos West Orange Service Area, including the proposed project.

As the new water infrastructure improvements are proposed as part of the project, the environmental impacts associated with construction of the improvements have been discussed and analyzed throughout this EIR. In addition, the GSWC has indicated in a Will Serve letter that existing water infrastructure in the surrounding area has the capacity to serve the proposed project and sufficient water supplies exist to serve the proposed project. Therefore, operation of the proposed project would not require or result in the relocation or construction of new or expanded water facilities or infrastructure, beyond those proposed as part of the project, the construction or relocation of which could cause significant environmental effects.

The proposed project would also connect to existing OC San sewer lines via two proposed sewer connections and lines within the Moody Street extension. Hydraulic analyses conducted as part of the Sewer Capacity Study confirmed that the proposed sewer lines would have adequate capacity to serve the proposed project. In addition, the Sewer Capacity Study found that the existing 18-inch pipe at proposed Sewer Connection B and the existing 21-inch pipe at the existing connection to the 30-inch OC San sewer trunk line would be adequate to serve the proposed project and no replacement facilities with increased capacity would be necessary. In addition, the proposed project's estimated wastewater generation of 276 acre-feet per year would represent approximately 0.1 percent of OC San's daily treatment capacity. In addition, as provided in the Sewer Capacity Study, OC San has provided a Will Serve letter stating that OC San facilities can accommodate the full development of the Buildout Area under the proposed project.

As the proposed new wastewater infrastructure improvements are proposed as part of the project, the environmental impacts associated with construction of the improvements have been discussed and analyzed throughout this EIR. In addition, OC San has indicated in a Will Serve letter that existing wastewater infrastructure in the surrounding area has the capacity to serve the proposed project and sufficient capacity at Reclamation Plant No. 1 and No. 2 exists to serve the proposed project. Therefore, operation of the proposed project would not require the relocation or construction of new or expanded wastewater facilities or infrastructure, beyond those proposed as part of the project, the construction or relocation of which could cause significant environmental effects.

Implementation of the proposed project would require modifications to the existing Drainage Areas and the Buildout Area and would include on- and off-site upgrades to stormwater infrastructure, including the installation of a proposed storm drain line in the proposed Moody Street and Vessels Circle extensions (Storm Drain Line A), a proposed storm drain line in Drainage Area B that connects to the existing 48-inch storm drain line that begins at Enterprise Drive and ultimately connects to the existing 48-inch Lexington Drive Storm Drain (Storm Drain Line B), and a proposed storm drain line that would convey stormwater runoff from Drainage Area A to the proposed Basin C in the park area (Storm Drain Line C). Ultimately, all stormwater from the Buildout Area would discharge to the Los Alamitos Channel, similar to the existing conditions. The proposed on-site storm drain system would be adequately sized to accommodate stormwater runoff so that on-site flooding would not occur.

With implementation of the proposed storm drain systems and detention system, as specified in Regulatory Compliance Measure HYD-3, operation of the proposed project would not result in a substantial increase in the rate or amount of surface runoff, flow, and volume that would exceed the capacity of the adjacent stormwater drainage systems. As the proposed stormwater infrastructure improvements are proposed as part of the project, the environmental impacts associated with construction of the improvements have been discussed and analyzed throughout this EIR. In addition, the proposed stormwater infrastructure would be appropriately sized in order to ensure that stormwater runoff from the Buildout Area would be adequately accommodated by the existing stormwater infrastructure in the area. Therefore, operation of the proposed project would not require or result in the relocation or construction of new or expanded stormwater drainage facilities, beyond those proposed as part of the project, the construction or relocation of which could cause significant environmental effects.

Based on the CalEEMod results for the proposed project, the estimated electricity demand associated with the operation of the proposed project is approximately 11,888,842 kWh/year, representing approximately 0.01 percent of the electricity consumption in the Southern California Edison (SCE) service area and 0.06 percent of the electricity consumption in Orange County. Consequently, anticipated electricity consumption by the proposed project is negligible (less than 0.1 percent) compared to the total consumption of the SCE service area and Orange County. In addition, SCE provided a will serve letter on June 19, 2025, indicating that they have the ability to serve the proposed project. As such, the proposed project would not require the relocation or construction of new or expanded electrical facilities or infrastructure, and impacts would be less than significant.

Based on the CalEEMod results for the proposed project, the estimated potential increase in natural gas demand in the Buildout Area is anticipated to be approximately 382,524 therms/year. Therefore, operation of the proposed project would increase annual natural gas consumption in the SoCalGas service area and Orange County by approximately 0.008 and 0.07 percent, respectively. Consequently, the anticipated natural gas consumption by the proposed project would be negligible (less than 0.1 percent) compared to the total consumption of the SoCalGas service area and Orange County. The proposed project would connect to existing natural gas infrastructure and would not require the construction of any physical improvements related to the provision of natural gas service that would result in significant environmental impact. In addition, SoCalGas provided a will serve

letter on June 30, 2025, indicating that they have the ability to serve the proposed project. As such, the proposed project would not require the relocation or construction of new or expanded natural gas facilities or infrastructure, and impacts would be less than significant.

Construction and operation would include onsite extensions of telecommunication facilities (telephone, cable, internet), installed concurrently with other utilities. Offsite impacts are not expected, and service adequacy is confirmed by providers.

Additionally, any future projects implemented in accordance with the proposed project would be required to adhere to the Specific Plan, provide required development impact fees, and comply with applicable development regulations pertaining to utilities. As a part of the development review process, all future projects would be required to demonstrate that existing public utilities would be sufficient to serve the future projects' needs. Overall, the proposed project would not require relocation or construction of new or expanded utility facilities beyond those included in the project, and all impacts would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not require or result in the relocation or construction of new or expanded water, wastewater treatment, stormwater drainage, electric power, natural gas, or telecommunication facilities that would cause a significant environmental effect. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Regulatory Compliance Measures: Regulatory Compliance Measures HYD-1 through HYD-3 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.19-11 through 4.19-21 of the Draft EIR prepared for the proposed project.

Threshold 4.19.2: Sufficient Water Supplies: Less Than Significant Impact

According to the WSA prepared for the proposed project, the historical water use at the Buildout Area for the past several years (for the two existing meters serving the LARC) has averaged approximately 73 afy and future development facilitated by the proposed project would result in an additional approximately 620 afy of total water use. This accounts for approximately 3.8 percent of the estimated water demand and 2.6 percent of the total available water supplies in the service area for 2045. Further, the WSA prepared for the proposed project indicated that sufficient water supplies exist to meet the existing and future water demands within the GSWC Los Alamitos West Orange Service Area, including the proposed project.

Therefore, the proposed project would not result in insufficient water supplies during normal, dry, or multiple dry years, and adequate water supply would be available to accommodate the future development in the Buildout Area facilitated by the proposed project. Impacts related to water supplies would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would have sufficient water supplies available to serve the project and reasonably foreseeable future developments during normal, dry, and multiple dry years. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.19-21 and 4.19-22 of the Draft EIR prepared for the proposed project.

Threshold 4.19.3: Adequate Capacity to Serve Projected Wastewater Treatment Demand in Addition to the Provider's Existing Commitments: Less Than Significant Impact

During construction, wastewater would be generated by construction workers, and sanitary services would be provided by portable toilet facilities, which would transport waste off-site for treatment and disposal at either Reclamation Plant No. 1 in Fountain Valley or Treatment Plant No. 2 in Huntington Beach. As construction activities would be temporary, the wastewater treatment provider is anticipated to have adequate capacity to serve the projected wastewater demand in addition to the provider's existing commitments. Impacts would be less than significant, and no mitigation is required.

The future residential and non-residential development facilitated by the proposed project is anticipated to generate approximately 276 acre-feet of wastewater annually, or approximately 246,398 gallons of wastewater per day. This accounts for approximately 0.1 percent of OC San's daily capacity, the current capacity of Reclamation Plant No. 1, and the current capacity of Reclamation Plant No. 2. In addition, as provided in the Sewer Capacity Study, OC San has provided a Will Serve letter stating that OC San facilities can accommodate the full development of the Buildout Area under the proposed project. Additionally, through its Capital Improvement Program, the OC San strives to continue maintaining its facilities at optimal levels by planning, designing, and preparing for future demand by developing Facilities and Biosolids Master Plans that address 20-year planning horizons. Through these long-range planning activities, the OC San would be able to accommodate the growth in demand for wastewater treatment generated by the proposed project and other projects in its service area. Therefore, the proposed project would not result in a significant contribution to demands on the treatment capacity of Reclamation Plant No. 1 or Treatment Plant No. 2. Additionally, fees required by the OC San would sufficiently offset potential impacts generated by the proposed project. Furthermore, some of the 1,791 housing units that

would be facilitated under the proposed project would replace existing urban uses that currently generate wastewater.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would be adequately served by the wastewater treatment provider's existing capacity in addition to the provider's existing commitments. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact.

Mitigation Measures: No mitigation is required

Supportive Evidence: Please refer to pages 4.19-22 and 4.19-23 of the Draft EIR prepared for the proposed project.

Threshold 4.19.4: Solid Waste Generation in Excess of State or Local Standards or Capacity of Local Infrastructure: Less Than Significant Impact

The demolition of existing structures within the Buildout Area and future construction of the proposed project would generate typical construction debris, including wood, paper, glass, metals, cardboard, and green waste. Construction of the proposed project would be required to comply with **Regulatory Compliance Measure UTIL-1**, the City's Construction and Demolition Ordinance, City Ordinance No. 1166, and the California Green Building Standards Code. These requirements mandate submittal of a Materials Questionnaire (where applicable) and require that a minimum of 65 percent of construction and demolition debris be diverted from landfills. In addition, Valley Vista Services certifies a diversion rate of approximately 75 percent for construction and demolition materials, which would further reduce landfill disposal demand. Therefore, adherence to Regulatory Compliance Measure UTIL-1, City Ordinance No. 1166, and the California Green Building Standards Code would ensure that construction-related solid waste impacts would remain less than significant.

Solid waste from future development allowed under the proposed project would be required to comply with State and local solid waste reduction, diversion, and recycling policies and regulations. According to CalEEMod calculations, the future development facilitated by the proposed project would generate approximately 1,811 tons of solid waste per year (approximately 5 tpd). The additional solid waste generation of approximately 5 tpd represents 0.04 percent, 0.06 percent, and 0.1 percent of the daily permitted tonnage of the Frank R. Bowerman Landfill, Olinda Alpha Landfill, and Prima Deshecha Landfill, respectively. Consequently, anticipated solid waste generation by the proposed project is negligible compared to available landfill capacity. The proposed project would not require the construction of new solid waste disposal facilities or expansion of existing facilities, and the OCWR solid waste disposal system would have adequate capacity to serve the proposed project. Furthermore, some of the future development facilitated by the proposed project would replace existing urban uses, most of which currently generate solid waste.

Therefore, with adherence to Regulatory Compliance Measure UTIL-1, City Ordinance No. 1166, and the California Green Building Standards Code, along with compliance with State and local solid waste regulations, would ensure that the proposed project would not result in a significant contribution to landfill capacity demand. Impacts related to solid waste generation would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Regulatory Compliance Measure: Regulatory Compliance Measure UTIL-1 would be applicable and implemented for the proposed project.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.19-23 and 4.19-24 of the Draft EIR prepared for the proposed project.

Threshold 4.19.5: Comply with Federal, State, and Local Solid Waste Management and Reduction Statutes and Regulations: Less Than Significant Impact

Solid waste from future development under the proposed project would be required to comply with State and local solid waste reduction, diversion, and recycling regulations. Based on CalEEMod calculations, future development facilitated by the proposed project would generate approximately 1,811 tons of solid waste per year, which represents 0.04 percent, 0.06 percent, and 0.1 percent of the daily permitted tonnage of the Frank R. Bowerman Landfill, Olinda Alpha Landfill, and Prima Deshecha Landfill, respectively. Consequently, anticipated solid waste generation by the proposed project is negligible (substantially less than 0.1 percent) compared to the total amount of solid waste received by the three landfills. The proposed project would not require the construction of any physical improvements related to the provision of solid waste disposal that would result in significant environmental impacts and the OCWR solid waste disposal system would have adequate capacity to serve the proposed project. In addition, some of the future development would replace existing urban uses that currently generate solid waste, thereby partially offsetting net increases in disposal demand.

Overall, the proposed project would comply with applicable federal, State, and local statutes and regulations governing solid waste management, including AB 939 and other diversion and recycling requirements. Accordingly, construction and operation of the proposed project would not result in a significant impact related to solid waste generation or landfill capacity, and impacts would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would comply with federal, state, and local management and reduction statutes and regulations associated with solid waste. Potential impacts would be less than significant. Consequently, no mitigation measures are required for this less than significant impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.19-24 and 4.19-25 of the Draft EIR prepared for the proposed project.

4.20 WILDFIRE

All Thresholds: No Impact

According to the California Department of Forestry and Fire Protection Services (CAL FIRE), the Buildout Area is located within an Local Responsibility Area (LRA) and is not within or near a Very High Fire Hazard Severity Zone (VHFHSZ) or State Responsibility Area (SRA). The nearest VHFHSZ is approximately 6.8 miles northeast in Coyote Hills (Fullerton), and the nearest SRA is approximately 12 miles northeast in Puente Hills. The Buildout Area is fully urbanized and does not contain wildland fuels or interface conditions that would support wildfire spread.

Construction of the proposed project may require temporary lane closures; however, construction contractors would implement a TCP in accordance with the California Manual on Uniform Traffic Control Devices to maintain emergency access. Additionally, all proposed structures and internal circulation paths within the Buildout Area would be developed in accordance with the City and OCFA emergency access standards. The proposed project would also be required to comply with all applicable codes and ordinances for emergency vehicle access, which would ensure that emergency vehicles have adequate access to, from, and within the Buildout Area. Therefore, implementation of the proposed project would not impair emergency response or evacuation routes.

Future development within the Buildout Area would also adhere to applicable building and fire codes, which would further reduce the risk of wildfire. As the Buildout Area is not located within the vicinity of a VHFHSZ or in an SRA, the uncontrolled spread of wildfire in the vicinity of the Buildout Area is unlikely due to existing development, and impacts from downwind pollutant concentrations from a wildfire to occupants as a result of the proposed project would be negligible. Further, although the proposed project would include new roadways and utility infrastructure improvements, the proposed project would not include any changes to public or private roadways that would exacerbate fire risk or that would result in impacts to the environment and all utility lines, pipes, utility junction boxes, and transformers would be located underground. Further, the design and implementation of utility improvements would be reviewed and approved by the City's Public Works Department to ensure that it would be sized to accommodate future development

allowed under the approved Specific Plan and comply with all applicable fire codes, design standards, and regulations.

Lastly, because the Buildout Area is not located in a VHFHSZ or in an SRA, the proposed project would not expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes. Overall, all impacts associated with wildfire would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR.

The City hereby finds that the proposed project would not result in any impacts related to wildfire. No impacts would occur, Consequently, no mitigation measures are required for this no impact determination.

Mitigation Measures: No mitigation is required.

Supportive Evidence: Please refer to pages 4.20-8 through 4.20-13 of the Draft EIR prepared for the proposed project.

This page intentionally left blank

5.0 FINDINGS REGARDING POTENTIALLY SIGNIFICANT ENVIRONMENTAL IMPACTS WHICH CAN BE MITIGATED TO A LEVEL OF LESS THAN SIGNIFICANT

The City finds, based upon the analysis presented in Chapter 4.0 of the Draft EIR, that the following environmental effects of the proposed project can be avoided or reduced to less than significant with incorporation of feasible mitigation measures identified in the Draft EIR. No substantial evidence has been submitted to or identified by the City that indicates that the following impacts would, in fact, occur at levels that would necessitate a determination of significance.

Section 15126(b) of the *State CEQA Guidelines*, requires a description of any significant environmental effects that cannot be avoided if the proposed project is implemented.

5.1 AESTHETICS

No impacts were identified as potentially significant.

5.2 AGRICULTURE AND FORESTRY RESOURCES

No impacts were identified as potentially significant.

5.3 AIR QUALITY

Threshold 4.3.3: Expose Sensitive Receptors to Substantial Pollutant Concentrations: Less Than Significant Impact with Mitigation Incorporated

The closest existing sensitive receptors to the Buildout Area include the following: residential uses located north of the Buildout Area across Cerritos Avenue; residential/mixed-use buildings located adjacent to the eastern boundary of the Buildout Area along Katella Avenue; senior housing located adjacent to the southern and western boundaries of the Buildout Area along Katella Avenue; and residential uses located south of the Buildout Area across Katella Avenue.

Construction activities associated with future development could generate emissions of particulate matter and diesel exhaust from heavy-duty equipment. Diesel particulate matter (DPM) is identified by the California Air Resources Board (CARB) as a toxic air contaminant, and exposure to elevated concentrations may result in potential cancer and noncancer health risks. The potential magnitude of exposure would vary depending on construction intensity, duration, equipment mix, and receptor proximity. Accordingly, construction-related health risk impacts would be potentially significant in the absence of mitigation. With the implementation of Mitigation Measure AIR-2, which requires the use of United States Environmental Protection Agency (USEPA) Tier 4 Final or cleaner construction equipment, impacts related to construction diesel particulate matter exposure to sensitive receptors would be less than significant.

Operational emissions associated with future buildout envisioned under the proposed project would exceed the South Coast Air Quality Management District's (SCAQMD) volatile organic compounds (VOC) thresholds, even with implementation of Mitigation Measure AIR-1 and Mitigation Measure TRA-1. Although the emissions from operations resulting from buildout of the proposed project are

expected to exceed the SCAQMD's project level thresholds, it should be noted that exceeding or not exceeding the SCAQMD's numeric regional mass daily thresholds does not, by itself, directly correlate to a determination regarding health risk impacts on nearby sensitive receptors. The project level thresholds are intended to provide a means of consistency in significance determination within the environmental review process, and do not provide a finding on health risk impacts on nearby sensitive receptors. The reason for this is that the project level criteria pollutant thresholds are in pounds per day emitted into the air, whereas health effects are determined based on the concentration of emissions in the air at a particular receptor (e.g., parts per million [ppm] by volume of air, or micrograms per cubic meter [$\mu g/m^3$] of air). State and federal ambient air quality standards were developed to protect the most susceptible population groups from adverse health effects and were established in terms of parts per million or micrograms per cubic meter for the applicable emissions.

CARB has developed a guidance document, the *Air Quality and Land Use Handbook: A Community Health Perspective,* to assess compatibility and associated health risks when placing sensitive receptors near existing pollution sources. None of the uses allowed under the proposed project are considered a substantial source of toxic air contaminants (TACs) that would require specific siting distances based on the CARB recommendations. In addition, the industrial uses near the Buildout Area on the western and eastern boundaries are further than 500 feet, so any new sensitive receptors, such as proposed residential uses, will be consistent with CARB's siting recommendations.

Finding: Pursuant to PRC Section 21081(a) and *State CEQA Guidelines* Section 15091(a), the City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project that avoid or substantially lessen the significant effect on the environment to below a level of significance with Mitigation Measure AIR-2.

Mitigation Measures: Based upon the analysis presented in Section 4.3, Air Quality, of the Draft EIR, which is incorporated herein by reference, Mitigation Measure AIR-2 below is feasible and is made binding through the MMRP. Imposition of this mitigation measure will reduce potentially significant impacts to less than significant.

Mitigation Measure AIR-2 All construction activities in the Buildout Area shall utilize U.S. EPA Tier 4 Final diesel construction equipment for equipment rated at greater than 50 brake horsepower (bhp) if and to the extent commercially available, or the cleanest available equipment and technology that is commercially available and feasible at the time of construction (e.g., zero-emission or equivalent low-emission equipment), to minimize diesel particulate matter (DPM) emissions.

If Tier 4 Final equipment is not commercially available for a majority of the construction equipment and an individual development project would be larger than 20 acres, the City shall require preparation of a construction Health Risk Assessment (HRA) for such development project.

Supportive Evidence: Please refer to pages 4.3-32 through 4.4-37 of the Draft EIR prepared for the proposed project.

5.4 BIOLOGICAL RESOURCES

Threshold 4.4.3: Substantial Adverse Effect on Protected Wetlands: Less Than Significant Impact with Mitigation Incorporated

The Buildout Area contains one drainage feature, one detention basin, and three artificial ponds. The three ponds identified within the Buildout Area contain hydrophytic vegetation along portions of their shoreline, including species that could be considered wetland indicators. However, the ponds are manmade features and hydrologically isolated from other waters. As such, the three ponds are not expected to be regulated by the United States Army Corps of Engineers (USACE), Regional Water Quality Control Board (RWQCB), or California Department of Fish and Wildlife (CDFW). The detention basin is entirely lined with polyethylene, is best described as a manmade basin created to capture flows, and appears to divert accumulated water into the adjacent drainage that terminates into an underground drain system. Similar to the artificial ponds, because the detention basin is and appears to be hydrologically isolated from other waters, the detention basin is also not expected to be regulated by USACE, RWQCB, or CDFW. However, the drainage feature located on Lot 3 contains ruderal vegetation and may connect to Coyote Creek, which is tributary to the San Gabriel River and ultimately flows to the Pacific Ocean. Therefore, the removal of this drainage feature may be subject to regulation by the RWQCB and CDFW, and impacts to this drainage feature would be considered potentially significant.

However, the proposed project would be required to implement Mitigation Measure BIO-1, which requires a jurisdictional delineation be conducted prior to commencing construction activities that would impact any of the identified aquatic resources in Lots 2, 3, 4, 6, and 7 of VTTM 19247. With implementation of Mitigation Measure BIO-1, potential impacts to jurisdictional waters would be reduced to less than significant as jurisdictional waters would be identified and the appropriate permits and approvals would be obtained, as necessary.

In addition, although construction and operational activities have the potential to result in temporary indirect effects to water quality including a potential increase in erosion and sediment transport into downstream aquatic areas and the contamination of waters from construction equipment, these potential indirect effects to hydrology and water quality would be avoided or substantially minimized through the implementation of BMPs during both construction and operation and a Water Quality Management Plan, as detailed in Regulatory Compliance Measures HYD-1 through HYD-3. Implementation of BMPs would ensure protection of downstream water quality and aquatic resources.

Overall, with implementation of Mitigation Measure BIO-1 and adherence to Regulatory Compliance Measures HYD-1 through HYD-3, impacts to wetlands and other waters would be less than significant with mitigation incorporated.

Finding: Pursuant to PRC Section 21081(a) and *State CEQA Guidelines* Section 15091(a), the City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project that avoid or substantially lessen the significant effect on the environment to below a level of significance with Mitigation Measure BIO-1.

Regulatory Compliance Measures: Regulatory Compliance Measures HYD-1 through HYD-3 would be applicable and implemented for the proposed project.

Mitigation Measures: Based upon the analysis presented in Section 4.4, Biological Resources, of the Draft EIR, which is incorporated herein by reference, Mitigation Measure BIO-1 below is feasible and is made binding through the MMRP. Imposition of this mitigation measure will reduce potentially significant impacts to less than significant.

Mitigation Measure BIO-1 **Jurisdictional Delineation.** Prior to commencing construction activities that would impact any of the identified aquatic resources in Lots 2, 3, 4, 6, and 7 of Vesting Tentative Tract Map (VTTM) 19247, a jurisdictional delineation shall be conducted, as follows:

- Regional Water Quality Control Board (RWQCB) Jurisdiction (Waters of the State): Delineation shall follow the State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State (State Water Resources Control Board [SWRCB] 2019).

- California Department of Fish and Wildlife (CDFW) Jurisdiction (Streambed Alteration Program): The extent of CDFW jurisdiction shall be identified consistent with California Fish and Game Code §§ 1600–1616, including the outer limits of the bed, bank, and channel and the extent of any associated riparian vegetation.

- United States Army Corps of Engineers (USACE) Jurisdiction (Waters of the United States [WOTUS]): The determination that no federal WOTUS occur on site shall be documented consistent with 33 CFR § 328.3, the USACE 1987 Wetland Delineation Manual, and the appropriate Regional Supplement (USACE 2008).

If impacts to RWQCB and/or CDFW jurisdictional waters are expected to occur, appropriate permits or authorization (e.g., Water Quality Certification/Waste Discharge Requirements, CDFW Lake and Streambed Alteration Agreement) shall be obtained prior to construction.

Supportive Evidence: Please refer to pages 4.4-38 through 4.4-39 of the Draft EIR prepared for the proposed project.

5.5 CULTURAL RESOURCES

Impacts related to causing a substantial adverse change in the significance of a historical resource were identified as significant and unavoidable. Refer to Section 6.0 of this document.

Impacts related to causing a substantial adverse change in the significance of an archaeological resource and disturbance of any human remains were identified as less than significant. Refer to Section 4.0 of this document.

5.6 ENERGY

No impacts were identified as potentially significant.

5.7 GEOLOGY AND SOILS

Threshold 4.7.1(iii): Adverse Effects Related to Seismic Related Ground Failure: Less Than Significant Impact with Mitigation Incorporated

The entirety of the City is located within a CGS Liquefaction Zone, indicating that local geologic and groundwater conditions present potential for liquefaction during seismic events. In addition, according to the Geotechnical Investigation prepared for the proposed project, onsite soils are considered to be susceptible to liquefaction settlement during an earthquake and liquefaction-related settlement at the ground surface could range from approximately 1.24 to 3.67 inches under seismic conditions, which could result in potentially significant impacts without appropriate ground stabilization.

Therefore, future development within the Buildout Area would be required to implement Mitigation Measure GEO-1, which requires compliance with the recommendations of the Geotechnical Investigation. Mitigation Measure GEO-1 would require the stabilization of upper soils beneath structures intended for human occupancy through ground improvement techniques such as Rammed Aggregate Piers, Vibrated Aggregate Piers, or similar methods, designed in coordination with geotechnical and structural engineers. In addition, future development would be required to be supported on a mat, or mat-type foundations. Implementation of the ground improvements detailed in Mitigation Measure GEO-1 would reduce the potential for liquefaction-induced ground failure and associated risks to people and structures.

Finding: Pursuant to PRC Section 21081(a) and *State CEQA Guidelines* Section 15091(a), the City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project that avoid or substantially lessen the significant effect on the environment to below a level of significance with Mitigation Measure GEO-1.

Mitigation Measures: Based upon the analysis presented in Section 4.7, Geology and Soils, of the Draft EIR, which is incorporated herein by reference, Mitigation Measure GEO-1 below is feasible and is made binding through the MMRP. Imposition of this mitigation measure will reduce potentially significant impacts to less than significant.

Mitigation Measure GEO-1 **Implementation of Geotechnical Investigation Recommendations.** Future development projects within the Buildout Area shall implement the recommendations of the Geotechnical Investigation prepared for the proposed project, to the satisfaction of the City of Cypress' (City) Building Official, including, but not limited to:

Ground Improvement Techniques. Ground improvement techniques shall be implemented in the Buildout Area beneath any structure intended for human occupancy. Ground improvements may consist of rammed aggregate piers, vibrated aggregate piers, or similar techniques. The ground improvements must be designed by a qualified ground improvement contractor through coordination with a geotechnical engineer and/or structural engineer to ensure liquefaction in the upper soils.

Building Foundation Techniques. Subsequent to the installation of any proposed ground improvements, proposed structures, mat or mat-type foundation systems will be used. Conventional foundations may be utilized for support of the lighter at-grade structure if the ground improvements reduce the total and differential settlement to a threshold confirmed by the geotechnical engineer, the structural engineer, and the construction contractor.

Additional site testing and final design evaluation(s) shall be conducted by a geotechnical consultant to refine and/or enhance these requirements during buildout of the project on an as-needed basis. A future project applicant(s) shall require the geotechnical consultant to assess whether the recommendations in the Geotechnical Investigation need to be modified or refined to address any changes in the project features prior to start of grading. If the geotechnical consultant identifies modifications or refinements to the recommendations, the future project applicant(s) shall make modifications to the final project design and specifications. Examples of additional measures could include: a moisture or vapor retarding system below foundations, additional ground stabilization techniques like cement treatment or aggregate, or removal and replacement of existing soil to eliminate any unsuitable materials or undocumented fill. Design, grading, and construction shall be performed in accordance with applicable requirements in the Municipal Code, the California Building Code, local grading regulations, and any additional measures recommended by the geotechnical consultant in the subsequent geotechnical evaluation(s).

Supporting Evidence: Please refer to pages 4.7-11 through 4.7-12 of the Draft EIR prepared for the proposed project.

Threshold 4.7.3: Landslides, Lateral Spreading, Subsidence, Liquefaction, or Collapsible Soils: Less Than Significant Impact with Mitigation Incorporated

According to the Geotechnical Investigation, groundwater within the Buildout Area has a historic depth of less than 10 feet below ground surface, ranging from approximately 5 to 12.5 feet below ground surface. As shallow groundwater is present, it is likely that groundwater dewatering would be required during excavation activities. However, any groundwater dewatering would need to implement Regulatory Compliance Measure HYD-2, which outlines requirements of the Groundwater Dewatering Permit, as specified in Section 4.10 of the Draft EIR. During operation of the proposed project, no groundwater dewatering would occur. Therefore, subsidence associated with dewatering is not anticipated to occur during construction or operation of the proposed project.

As discussed in Response 4.7.1(iii), structures built on or above potentially liquefiable soils may experience bearing capacity failures due to the temporary loss of foundation support or vertical settlements (both total and differential) and/or undergo lateral spreading. Loss of bearing and ground settlement are of concern within the Buildout Area. This would be a potentially significant impact. However, as part of the proposed project, the construction contractor would comply with all recommendations in the Geotechnical Investigation and include ground improvement techniques, stable foundations would be required for all future projects (Mitigation Measure GEO-1), and all development would be required to comply with the California Building Code (CBC) (Regulatory Compliance Measure GEO-1). Therefore, impacts would be less than significant with mitigation incorporated.

Finding: Pursuant to PRC Section 21081(a) and *State CEQA Guidelines* Section 15091(a), the City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project that avoid or substantially lessen the significant effect on the environment to below a level of significance with Mitigation Measure GEO-1.

Regulatory Compliance Measures: Regulatory Compliance Measures GEO-1 and HYD-2 would be applicable and implemented for the proposed project.

Mitigation Measures: Based upon the analysis presented in Section 4.7, Geology and Soils, of the Draft EIR, which is incorporated herein by reference, Mitigation Measure GEO-1 below is feasible and is made binding through the MMRP. Imposition of this mitigation measure will reduce potentially significant impacts to less than significant.

Mitigation Measure GEO-1 *See above.*

Supporting Evidence: Please refer to pages 4.7-13 through 4.7-14 of the Draft EIR prepared for the proposed project.

Threshold 4.7.6: Destruction of Paleontological Resources or Unique Geologic Features: Less Than Significant Impact with Mitigation Incorporated

According to the City of Cypress General Plan EIR, there are no known paleontological resources in the City. A search of the paleontology collection records for the locality and specimen data at the Natural History Museum of Los Angeles County (NHMLA) was requested for the proposed project and did not identify any existing fossil localities within the Buildout Area. However, the search did return fossil localities present in the same type of sedimentary deposits that underlay the Buildout Area, located within a 10-mile radius of the Buildout Area.

As detailed in the Geotechnical Investigation, fill soils are present in the upper 3 to 5 feet of the Buildout Area, and are mainly composed of silty sand and sandy silt, yellowish. Underlying the fill are native soils at a depth of approximately 10 feet, consisting of interlayered sandy to silty clay, sandy to clayey silt, silty to clayey sand, and sand.

Construction activities associated with the proposed project that have the potential to disturb native alluvium at a depth below 10 feet would have the potential to have a potentially significant impact on paleontological resources. Based on the geologic setting, the native alluvium soils at and below 10 feet are Quaternary alluvial deposits within the Los Angeles Basin. Such deposits are often paleontologically sensitive, as they can contain vertebrate fossils (e.g., mammoths, ground sloths, camelids) at depth. Typically, the upper 5 feet of shallow fill and disturbed soils are low sensitivity, but deeper undisturbed alluvium is considered to have high sensitivity. Therefore, the proposed project would be required to implement Mitigation Measures GEO-2 and GEO-3, which include provisions for the discovery of previously unknown paleontological resources, including stop work procedures, and worker training procedures. With implementation of Mitigation Measures GEO-2 and GEO-3,implementation of the proposed project would have a less than significant impact on paleontology resources.

Finding: Pursuant to PRC Section 21081(a) and *State CEQA Guidelines* Section 15091(a), the City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project that avoid or substantially lessen the significant effect on the environment to below a level of significance with Mitigation Measures GEO-2 and GEO-3.

Mitigation Measures: Based upon the analysis presented in Section 4.7, Geology and Soils, of the Draft EIR, which is incorporated herein by reference, Mitigation Measures GEO-21 and GEO-3 below are feasible and are made binding through the MMRP. Imposition of these mitigation measures will reduce potentially significant impacts to less than significant.

Mitigation Measure GEO-2 **Procedures for Unexpected Paleontological Resources Discoveries.** If paleontological resources are discovered during ground-disturbing activities associated with the proposed project, construction personnel shall immediately halt work within 50 feet of the discovery, and a future project applicant/developer or construction supervisor shall contact a qualified paleontologist to assess the discovery for scientific importance. A qualified paleontologist is defined as a person with an M.S. or Ph.D. in geology or paleontology

and who meets the standards set forth by the Society of Vertebrate Paleontology. The paleontologist shall make recommendations regarding the collection, treatment, and disposition of the discovery. Scientifically important resources shall be prepared to the point of identification, identified to the lowest taxonomic level possible, cataloged, and curated into the permanent collections of a museum repository. If paleontological resources are discovered, regardless of their scientific importance, paleontological monitoring shall be required for subsequent ground-disturbing activities at a frequency, depth, and/or interval determined by the paleontologist. Paleontological monitoring shall be conducted by a qualified paleontological monitor as set forth in the Society of Vertebrate Paleontology standards. At the conclusion of monitoring, a final monitoring report shall be prepared by the paleontologist to document the results of monitoring and project compliance with all regulations and project requirements. If scientifically important paleontological resources are recovered, this report shall also document those paleontological resources with a catalog, descriptions, and photographs as determined appropriate by the paleontologist. The final monitoring report shall be submitted to the City of Cypress Director of Community Development Department or designee for review and approval. A copy of this final report shall also accompany the fossil material to the museum repository.

Mitigation Measure GEO-3 **Worker Sensitivity Training**: Prior to issuance of grading permits, applicants for projects that would include ground-disturbing activities below 10 feet in undisturbed native sediments ranked as having a moderate or high paleontological sensitivity shall be required to retain a qualified paleontologist meeting the requirements set forth by the Society of Vertebrate Paleontology. Prior to and during initial ground-disturbing activities, the qualified paleontologist (or their designee) shall provide worker environmental awareness training to construction personnel. Training shall include recognition of potential fossil materials, appropriate worker response protocols, and contact information for the paleontologist.

Supportive Evidence: Please refer to pages 4.7-15 and 4.7-16 the Draft EIR prepared for the proposed project.

5.8 GREENHOUSE GAS EMISSIONS

All Thresholds: Less Than Significant Impact with Mitigation Incorporated

The proposed project would be implemented within a regulatory framework that includes statewide programs designed to reduce GHG emissions over time, such as the California Building Standards

Code (Title 24), the California Green Building Standards Code (CALGreen), Senate Bill 100, the Low Carbon Fuel Standard, and Advanced Clean Cars II. In addition, the proposed project would be consistent with regional planning strategies, including the Southern California Association of Governments' Connect SoCal 2024, which incorporates anticipated housing growth and demonstrates achievement of regional GHG reduction targets. The proposed project would also support infill development patterns and efficient land use consistent with the California Air Resources Board's 2022 Scoping Plan.

Furthermore, the proposed project would be required to implement Mitigation Measure GHG-1, Mitigation Measure AIR-1, and Mitigation Measure TRA-1. With implementation of Mitigation Measure AIR-1, future development facilitated by the proposed project would provide enhanced electric vehicle charging infrastructure consistent with Scoping Plan guidance. The proposed project would also avoid conversion of natural or working lands and, with implementation of Mitigation Measure TRA-1, would incorporate transportation demand management strategies supportive of reduced vehicle travel. Building energy performance and electrification measures required under Mitigation Measure GHG-1 further support long-term building decarbonization objectives.

In addition, the proposed project would be consistent with the land use and growth assumptions underlying Connect SoCal 2024 and would implement planned housing growth identified in the City's adopted and California Department of Housing and Community Development (HCD)-certified Housing Element.

Overall, with implementation of Mitigation Measure GHG-1, Mitigation Measure AIR-1, and Mitigation Measure TRA-1, the proposed project's incremental contribution to cumulative GHG emissions would not be cumulatively considerable. Therefore, impacts related to the generation of greenhouse gas emissions, either directly or indirectly, and potential conflict with applicable plans, policies, or regulations adopted to reduce greenhouse gas emissions would be less than significant with mitigation incorporated.

Finding: Pursuant to PRC Section 21081(a) and *State CEQA Guidelines* Section 15091(a), the City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project that avoid or substantially lessen the significant effect on the environment to below a level of significance with Mitigation Measure GHG-1, Mitigation Measure AIR-1, and Mitigation Measure TRA-1.

Mitigation Measures: Based upon the analysis presented in Section 4.8, Greenhouse Gas Emissions, of the Draft EIR, which is incorporated herein by reference, Mitigation Measure GHG-1, Mitigation Measure AIR-1, and Mitigation Measure TRA-1 below are feasible and are made binding through the MMRP. Imposition of these mitigation measures will reduce potentially significant impacts to less than significant.

Mitigation Measure GHG-1 Prior to issuance of building permits, project applicants for future development within the Buildout Area shall demonstrate to the satisfaction of the City of Cypress (City) Planning Division that the proposed buildings incorporate feasible greenhouse gas (GHG) reduction strategies consistent with current State and local

decarbonization goals. Compliance shall be demonstrated through building plans, energy modeling, California Green Building Standards Code (CALGreen Code) checklists, or similar documentation submitted during the plan check process, as deemed necessary by the City.

Future project applicants shall comply with either the All-Electric Design Path or the Efficient Mixed-Fuel Design Path, as described below:

Preferred Compliance Path: All Electric Design - Future development shall be designed and constructed without natural gas infrastructure or natural gas appliances. All space heating, water heating, cooking, and clothes drying systems shall be fully electric. Electrical service panels shall be sized to accommodate expected loads and future electrification needs.

Alternative Compliance Path: Efficient Mixed-Fuel Design - If a project proposes to install natural gas infrastructure or natural gas appliances, the project applicant shall implement a combination of GHG reduction measures sufficient to minimize GHG emissions from natural gas usage to the maximum extent feasible. Measures may include, but are not limited to, the following:

- Exceed Title 24, Part 6 (Building Energy Efficiency Standards) performance requirements by 10–20 percent, where feasible, as demonstrated through energy modeling or prescriptive compliance documentation.
- Install on-site solar photovoltaic (PV) systems to the maximum feasible extent, including on rooftops and parking canopy structures, where structurally and technically feasible.
- Provide electric-ready infrastructure, including service panel capacity, conduit, wiring, and dedicated circuits, to allow future conversion to all-electric appliances and systems.
- Design buildings to achieve, at minimum, Leadership in Energy and Environmental Design (LEED) Silver certification or an equivalent third-party green building rating.
- Install programmable thermostats, advanced metering infrastructure, and smart home energy management systems.
- Provide heating, ventilation, and air conditioning (HVAC) commissioning consistent with CALGreen Code Sections

5.410.2–5.410.4, including a commissioning plan, functional performance testing, and a commissioning report.

- Install cool roof materials meeting an aged solar reflectance of ≥ 0.30, or the most current CALGreen Code requirement, whichever is more stringent.
- Provide infrastructure to accommodate up to 50 percent recycled water use for landscape irrigation, where recycled water supply is available.
- Use water-efficient irrigation systems, minimize turf, and incorporate native, low-water, or drought-tolerant plant species.
- Install rainwater harvesting systems, where feasible.
- Prohibit or restrict the use of potable water for cleaning non-vegetated outdoor surfaces and prohibit systems that apply water to hardscape surfaces.
- Implement and maintain robust solid waste diversion programs, including recycling and organic waste collection consistent with Senate Bill (SB) 1383 requirements.

All selected GHG reduction measures shall be clearly identified on improvement plans and construction drawings. Compliance with this measure shall be verified by City staff during plan check and confirmed through building inspection prior to final occupancy.

Mitigation Measure AIR-1 *Refer to Section 6.3 of this document.*

Mitigation Measure TRA-1 *Refer to Section 6.17 of this document.*

Supportive Evidence: Please refer to pages 4.8-14 through 4.8-30 of the Draft EIR prepared for the proposed project.

5.9 HAZARDS AND HAZARDOUS MATERIALS

Threshold 4.9.2: Significant Hazards Through Reasonably Foreseeable Upset and Accident Conditions Involving the Release of Hazardous Materials into the Environment: Less Than Significant Impact with Mitigation Incorporated

The Buildout Area was historically used for agricultural purposes until approximately 1947; however, subsequent site development beginning in the 1950s reworked near-surface soils, and hazardous materials associated with past agricultural use are not anticipated to remain. The Phase I ESA prepared for the proposed project concluded that there is no evidence of Recognized Environmental

Conditions (RECs) within the Buildout Area. However, one Controlled Recognized Environmental Condition (CREC) was identified related to the historical removal of underground storage tanks (USTs) and associated remediation activities, which received regulatory closure from the Orange County Health Care Agency (OCHCA) in 1996 with a requirement for notification upon land use change. The Phase I ESA also identified a Historical Recognized Environmental Condition (HREC) associated with a removed UST and a Business Environmental Risk (BER) related to the potential presence of asbestos-containing materials (ACMs) and lead-based paint (LBP) in existing structures.

Future development would include demolition and site preparation activities, during which there is potential for exposure to these materials. The identified presence of a CREC, an HREC, and a BER in association with the Buildout Area represents a potentially significant impact associated with creating a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. To address this potentially significant impact, the Phase I ESA recommended preparation and implementation of an Operations and Maintenance (O&M) Plan to safely manage the suspect ACMs and LBP associated with the existing buildings within the Buildout Area and the notification of the OCHCA as required in the case closure summary from 1996 for the CREC. No additional subsurface investigations were recommended. Future development facilitated by the proposed project would be required to implement these recommendations, as detailed in Mitigation Measure HAZ-1.

In addition, compliance with applicable federal, State, and local regulations, including South Coast Air Quality Management District Rule 1403, would ensure proper handling, abatement, and disposal of hazardous materials. In accordance with SCAQMD Rule 1403, a comprehensive asbestos survey would be required prior to demolition. All identified ACMs and suspect materials would be removed by a certified asbestos abatement contractor in accordance with applicable regulations. Therefore, with implementation of Mitigation Measure HAZ-1, impacts related to hazardous materials would be less than significant with mitigation incorporated.

Finding: Pursuant to PRC Section 21081(a) and *State CEQA Guidelines* Section 15091(a), the City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project that avoid or substantially lessen the significant effect on the environment to below a level of significance with Mitigation Measure HAZ-1.

Mitigation Measures: Based upon the analysis presented in Section 4.9, Hazards and Hazardous Materials, of the Draft EIR, which is incorporated herein by reference, Mitigation Measure HAZ-1 below is feasible and is made binding through the MMRP. Imposition of this mitigation measure will reduce potentially significant impacts to less than significant.

Mitigation Measure HAZ-1 Prior to the issuance of a building permit, a future project applicant/ developer shall demonstrate the recommendations provided in the Phase I Environmental Site Assessment (Phase I ESA) prepared for the Buildout Area have been, or will be, implemented. Recommendations provided in the Phase I ESA include the following:

- Preparation and implementation of an Operations and Maintenance (O&M) Program in order to safely manage the suspect asbestos-containing materials (ACMs) and/or lead-based paint (LBP) associated with the existing structures located within the Buildout Area; and

- Providing a copy of this Draft Environmental Impact Report (EIR) and the Notice of Completion (NOC) to the Orange County Health Care Agency (OCHCA) in order to notify them of the proposed change in land use facilitated under the proposed project.

Supportive Evidence: Please refer to pages 4.9-13 and 4.9-14 of the Draft EIR prepared for the proposed project.

Threshold 4.9.4: Location on a Site Included on a List of Hazardous Materials Sites Compiled Pursuant to Government Code Section 65962.5, Creating a Significant Hazard to the Public or the Environment: Less Than Significant Impact with Mitigation Incorporated

Database searches, including a search of the GeoTracker and Superfund databases, determined that the Buildout Area is not listed on the Cortese List compiled pursuant to Government Code Section 65962.5, and is not a recorded Superfund site. In addition, as part of the Phase I ESA for the Buildout Area, a comprehensive regulatory database search was conducted to identify potential environmental concerns within a defined radius of the site. The search identified multiple listings in databases such as the Aboveground Storage Tank (AST) database, California Environmental Reporting System (CERS) Tank, Cleanup Sites, Department of Toxic Substances Control Hazardous Waste Tracking System (HAZNET), Leaking Underground Storage Tank (LUST), and Resource Conservation and Recovery Act Small Quantity Generator (RCRA-SQG). None of these listings, however, were determined to be RECs or HRECs.

However, impacts associated with the release of hazardous materials into the environment through reasonably foreseeable upset and accident conditions would be reduced to less than significant with adherence to existing regulatory requirements, including notification to OCHCA for the CREC, compliance with SCAQMD Rule 1403 for ACMs, and implementation of Mitigation Measure HAZ-1, requiring implementation of the recommendations provided in the Phase I ESA.— Additionally, because the Buildout Area is not included on a hazardous materials site list compiled pursuant to Government Code Section 65962.5, the proposed project would not create a significant hazard to the public or environment. Therefore, with incorporation of Mitigation Measure HAZ-1, impacts would be less than significant.

Finding: The City hereby finds that changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the final EIR.

Pursuant to PRC Section 21081(a) and *State CEQA Guidelines* Section 15091(a), the City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project that

avoid or substantially lessen the significant effect on the environment to below a level of significance with Mitigation Measure HAZ-1.

Mitigation Measures: Based upon the analysis presented in Section 4.9, Hazard and Hazardous Materials, of the Draft EIR, which is incorporated herein by reference, Mitigation Measure HAZ-1 above is feasible and is made binding through the MMRP. Imposition of this mitigation measure will reduce potentially significant impacts to less than significant.

Mitigation Measure HAZ-1 *See above.*

Supportive Evidence: Please refer to pages 4.9-15 and 4.9-16 of the Draft EIR prepared for the proposed project.

5.10 HYDROLOGY AND WATER QUALITY

Threshold 4.10.21: Impacts to Aquatic, Wetland, or Riparian Habitat: Less Than Significant Impact

No riparian habitat currently exists within the Buildout Area. However, five potential jurisdictional water resources currently exist within the Buildout Area, including three artificial ponds, one drainage feature, and one detention basin. The three artificial ponds are located within the LARC racetrack area and are manmade. As such, the ponds are hydrologically isolated and not subject to regulation by the USACE. However, these ponds still have the potential to be regulated by the Santa Ana RWQCB under the State Porter-Cologne Water Quality Control Act and by the California Department of Fish and Wildlife (CDFW) under Section 1600 of the Fish and Game Code. In addition, the field survey performed as part of the Biological Resources Assessment (BRA) (**Appendix C** of the Draft EIR) indicated that the ponds contained hydrophytic vegetation along portions of their shoreline, including species that would be considered wetland indicators. Therefore, these portions of the ponds may be classified as wetlands under the Santa Ana RWQCB's jurisdiction.

The existing detention basin is located along the southern Buildout Area boundary, at the northwest corner of the existing residential development located south of the Buildout Area, and the existing drainage feature extends east from this detention basin. The drainage feature originates from a culvert beneath the road just northwest of the existing parking lot. This drainage is an ephemeral, earthen bottom drainage created to carry stormwater. Sparse ruderal vegetation was observed within this drainage area. Therefore, the drainage is expected to be regulated by the Santa Ana RWQCB and CDFW; however, the BRA did not determine if it would be regulated by the USACE. The detention basin is a manmade basin entirely lined with polyethylene created to capture flows and appears to divert accumulated water into the adjacent drainage that terminates into an underground drain system. Similar to the drainage feature, the detention basin is expected to be regulated by the Santa Ana RWQCB and CDFW; however, the BRA did not determine if it would be regulated by the USACE.

According to the BRA, if impacts to these features are expected, regulatory permits may be required, including those under Section 404 of the CWA as administered by the USACE, the Water Quality Certification under Section 401 of the CWA or Waste Discharge Requirements under the Porter-Cologne Water Quality Control Act as administered by the Santa Ana RWQCB, or the

Streambed Alteration Agreement under Section 1602 of the California Fish and Game Code as administered by CDFW, as detailed in Mitigation Measure BIO-1. Therefore, with implementation of Mitigation Measure BIO-1, potential impacts on aquatic, wetland, or riparian habitat with implementation of the proposed project would be less than significant.

Finding: Pursuant to PRC Section 21081(a) and *State CEQA Guidelines* Section 15091(a), the City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project that avoid or substantially lessen the significant effect on the environment to below a level of significance with Mitigation Measure BIO-1.

Mitigation Measures: Based upon the analysis presented in Section 4.10, Hydrology and Water Quality, of the Draft EIR, which is incorporated herein by reference, Mitigation Measure BIO-1 below are feasible and are made binding through the MMRP. Imposition of these mitigation measures will reduce potentially significant impacts to less than significant.

Mitigation Measure BIO-1 *Refer to Section 5.4 of this document*

Supportive Evidence: Please refer to pages 4.10-47 and 4.10-48 of the Draft EIR prepared for the proposed project.

5.11 LAND USE AND PLANNING

No impacts were identified as potentially significant.

5.12 MINERAL RESOURCES

No impacts were identified as potentially significant.

5.13 NOISE

No impacts were identified as potentially significant.

5.14 POPULATION AND HOUSING

No impacts were identified as potentially significant.

5.15 PUBLIC SERVICES

No impacts were identified as potentially significant.

5.16 RECREATION

No impacts were identified as potentially significant.

5.17 TRANSPORTATION

No impacts were identified as potentially significant.

5.18 TRIBAL CULTURAL RESOURCES

Threshold 4.18.1: Substantial Adverse Change in the Significance of a Tribal Cultural Resource That is Listed or Eligible for Listing in the California Register or in a Local Register of Historical Resources as Defined in PRC Section 5020.1(k): Less Than Significant Impact with Mitigation Incorporated

The City consulted with tribal representatives traditionally or culturally affiliated with the Buildout Area pursuant to the requirements outlined in Assembly Bill (AB) 52. Most tribes deferred comment or declined consultation; however, the Gabrieleño Band of Mission Indians – Kizh Nation responded and requested consultation with the City regarding the proposed project. On May 27, 2025, the City provided suggested mitigation measures relating to the protection of tribal cultural resources to the Gabrieleño Band of Mission Indians - Kizh Nation, as detailed in Mitigation Measures TCR-1 through TCR-4. On July 14, 2025, the Gabrieleño Band of Mission Indians - Kizh Nation requested on-site tribal monitoring during all ground-disturbing activities, including areas containing previously disturbed soils or fill. Although no tribal cultural resources have been identified within the Buildout Area, ground-disturbing activities associated with future development could potentially uncover previously unknown resources, including Native American human remains, resulting in a potentially significant impact to tribal cultural resources.

However, future development facilitated under the proposed project would be required to adhere to Regulatory Compliance Measures CUL-1 and CUL-2, which detail provisions in the event that previously unknown cultural resources, including human remains, are discovered during ground-disturbing construction activities, consistent with CCR Section 15064.5(e) and State Health and Safety Code Section 7050.5. In addition, the proposed project would be required to implement Mitigation Measures TCR-1 through TCR-4. These mitigation measures include required tribal cultural resources training and ALERT sheet posting, on-site tribal monitoring during ground disturbance of native sediment, and provisions in the event that previously unknown tribal cultural resources (including human remains and funerary objects) are discovered during ground-disturbing construction activities. Adherence to these mitigation measures, along with Regulatory Compliance Measures CUL-1 and CUL-2 for the treatment of unknown archaeological resources and human remains, would reduce potential impacts on previously unknown tribal cultural resources to less than significant. Therefore, the proposed project would have less than significant impacts on tribal cultural resources with mitigation incorporated.

Finding: Pursuant to PRC Section 21081(a) and *State CEQA Guidelines* Section 15091(a), the City hereby finds that changes or alterations have been required in, or incorporated into, the proposed project that avoid or substantially lessen the significant effect on the environment to below a level of significance with Mitigation Measures TCR-1 through TCR-4.

Regulatory Compliance Measures: Regulatory Compliance Measures CUL-1 and CUL-2 would be applicable and implemented for the proposed project.

Mitigation Measures: Based upon the analysis presented in Section 4.18, Tribal Cultural Resources, of the Draft EIR, which is incorporated herein by reference, Mitigation Measures TCR-1 through TCR-

4 below are feasible and are made binding through the MMRP. Imposition of these mitigation measures will reduce potentially significant impacts to less than significant.

Mitigation Measure TCR-1

Tribal Cultural Resources Training and ALERT Sheet Posting. Prior to the start of any ground-disturbing activities, a qualified archaeologist meeting the Secretary of the Interior standards, in consultation with a representative from a traditionally and culturally affiliated Native American Tribe, under the direction of the City of Cypress Planning Division, shall prepare a Cultural Resources Sensitivity Summary. This summary shall include a brief description of the types of archaeological and tribal cultural resources that may be encountered, visual examples (if available), reporting procedures in the event of a discovery, and appropriate contact information.

The summary shall be printed and posted in a visible location at the construction site for the duration of all ground-disturbing activities.

An initial worker environmental training shall be provided by a qualified archaeologist in collaboration with a tribal representative prior to the start of construction, under the direction of the City of Cypress Planning Division. The training shall include a review of applicable laws, procedures to follow if resources are discovered, and cultural sensitivity guidance. A sign-in sheet shall be maintained to document attendance. As construction progresses, the construction manager shall be responsible for ensuring that all new personnel receive the same information through on-site orientation and review of the posted materials. Documentation of ongoing training shall be maintained and made available to the City upon request.

Mitigation Measure TCR-2

Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities. Prior to the issuance of any grading permits for projects within the Buildout Area that would require "ground-disturbing activity," where such disturbance activity would occur in undisturbed native sediment, a future project applicant/City shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching on both on-site and any off-site locations that are included in the Project Description/ definition and/or required in connection with the projects, such as public improvement work.

A copy of the executed monitoring agreement shall be submitted to the Director of the City of Cypress Community Development

Department, or their designee, prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity. The tribal monitor shall also provide appropriate insurance certificates.

The monitor shall complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs shall identify and describe any discovered tribal cultural resources (TCRs), including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, "TCRs"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs shall be provided to the future project applicant/City upon written request to the Tribe.

On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Tribe from a designated point of contact for the future project applicant/City that all ground-disturbing activities and phases that may involve ground-disturbing activities in native (previously undisturbed) soil has occurred (i.e., no tribal monitoring shall be required for landscaping activities occurring after completion of project grading and trenching, as this soil will have been previously monitored) or in connection with the project are complete; or (2) a determination and written notification by the Tribe to the future project applicant/City that no future, planned construction activity and/or development/ construction phase associated with the project possesses the potential to impact TCRs.

Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Tribe's monitor and/or archaeologist. The Tribe will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural, and/or historic purposes.

Mitigation Measure TCR-3

Unanticipated Discovery of Human Remains and Associated Funerary Objects. Native American human remains are defined in Public Resources Code (PRC) Section 5097.98 (d)(1) as an

inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in PRC Section 5097.98, are also to be treated according to this statute.

If Native American human remains and/or grave goods are discovered or recognized during ground-disturbing activities associated with projects within the Buildout Area, then all construction activities shall immediately cease within 50 feet of the find. Health and Safety Code Section 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and all ground-disturbing activities shall immediately halt and shall remain halted until the Coroner has determined the nature of the remains. If the Coroner recognizes the human remains to be those of a Native American or has reason to believe they are Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission (NAHC), and PRC Section 5097.98 shall be followed.

Human remains and grave/burial goods shall be treated alike per PRC Section 5097.98(d)(1) and (2).

If Native American human remains are discovered or recognized on any construction sites within the Buildout Area during ground-disturbing activities and the NAHC subsequently identifies the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe) to be the Most Likely Descendant (MLD), construction activities may resume in other parts of the construction site at a minimum of 200 feet away from discovered human remains and/or burial goods, if the Tribe determines in its sole discretion that resuming construction activities at that distance is acceptable and provides the project manager express consent of that determination (along with any other mitigation measures the Tribe's monitor and/or archaeologist deems necessary). (*State CEQA Guidelines* Section 15064.5(f).)

Preservation in place (i.e., avoidance) is the Tribe's preferred manner of treatment for discovered human remains and/or burial goods.

Any discovery of human remains/burial goods shall be kept confidential to the extent feasible to prevent further disturbance.

Mitigation Measure TCR-4 **Procedures for Burials and Funerary Remains.** If Native American human remains are discovered or recognized on any construction sites within the Buildout Area during ground-disturbing activities and the Native American Heritage Commission subsequently

identifies the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe) to be the Most Likely Descendant ("MLD"), the Koo-nas-gna Burial Policy, as described below, shall be implemented. To the Tribe, the term "human remains" encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the preparation of the soil for burial, the burial of funerary objects with the deceased, and the ceremonial burning of human remains.

If the discovery of human remains includes four or more burials, the discovery location shall be treated as a cemetery and a separate treatment plan shall be created.

The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered as associated funerary objects. Cremations will either be removed in bulk or by means as necessary to ensure complete recovery of all sacred materials.

In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that burials will be removed.

In the event preservation in place is not possible despite good faith efforts by the future project applicant/City and/or landowner, before ground-disturbing activities may resume on the project site, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects.

Each occurrence of human remains and associated funerary objects will be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within 6 months of recovery. The site of reburial/repatriation shall be on the project site but at a

location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.

The Tribe will work closely with the project's qualified archaeologist to ensure that the excavation is treated carefully, ethically and respectfully. If data recovery is approved by the Tribe, documentation shall be prepared and shall include (at a minimum) detailed descriptive notes and sketches. All data recovery data recovery-related forms of documentation shall be approved in advance by the Tribe. If any data recovery is performed, once complete, a final report shall be submitted to the Tribe and the NAHC. The Tribe does not authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.

Supportive Evidence: Please refer to pages 4.18-6 through 4.18-12 of the Draft EIR prepared for the proposed project.

5.19 UTILITIES AND SERVICE SYSTEMS

No impacts were identified as potentially significant.

5.20 WILDFIRE

No impacts were identified as potentially significant.

6.0 FINDINGS REGARDING SIGNIFICANT AND UNAVOIDABLE ENVIRONMENTAL IMPACTS WHICH CANNOT BE MITIGATED TO A LEVEL OF LESS THAN SIGNIFICANT

The City finds, based upon the analysis presented in Chapter 4.0 of the Draft EIR, that the following environmental effects of the proposed project cannot be avoided or reduced to less than significant with incorporation of feasible mitigation measures identified in the Draft EIR. Some of these impacts can be reduced, although not to a less than significant level, through implementation of mitigation measures identified in the Draft EIR (PRC Section 21081(a)(1)). However, impacts would remain significant and unavoidable.

Section 15126(b) of the *State CEQA Guidelines*, requires a description of any significant environmental effects that cannot be avoided if the proposed project is implemented.

6.1 AESTHETICS

No impacts were identified as significant and unavoidable.

6.2 AGRICULTURE AND FORESTRY RESOURCES

No impacts were identified as significant and unavoidable.

6.3 AIR QUALITY

Threshold 4.3.1: Conflict with or Obstruct Implementation of the Applicable Air Quality Plan: Significant and Unavoidable Impact

The proposed project would be consistent with Indicator 2 as the proposed project would not exceed the growth assumptions in Connect SoCal 2024 or the 2022 Air Quality Management Plan (AQMP). However, the proposed project would have the potential to conflict or obstruct implementation of applicable air quality plans under Indicator 1 of the South Coast Air Quality Management District's (SCAQMD) 2022 AQMP because buildout of the proposed project would result in significant and unavoidable long-term operational pollutant emissions. Specifically, long-term operational emissions associated with the proposed project would exceed the SCAQMD's established significance thresholds including for area, energy, and mobile source emissions, even with implementation Mitigation Measure AIR-1 and Mitigation Measure TRA-1.

Although there is no feasible mitigation to reduce operational pollutant emissions to a less than significant level, Mitigation Measure AIR-1 and Mitigation Measure TRA-1 would incorporate design features that would contribute to reducing criteria air pollutant emissions generated during operational activities associated with the proposed project. Therefore, since the proposed project would conflict with Indicator 1, impacts would be significant and unavoidable.

Mitigation Measures: Based upon the analysis presented in Section 4.3, Air Quality, of the Draft EIR, which is incorporated herein by reference, Mitigation Measure AIR-1 and Mitigation Measure TRA-1 are feasible and are made binding through the MMRP. Implementation of these mitigation

measures will reduce impacts associated with conflicts with or obstruction of implementation of the applicable air quality plan but will not reduce potentially significant impacts to less than significant. As such, the impact remains significant and unavoidable.

Mitigation Measure AIR-1

Prior to issuance of grading permits for development projects in the Buildout Area, a future project applicant in collaboration with the City of Cypress Planning Division shall identify project design details and specifications, where feasible, to document implementation and compliance with emission reduction measures. The City of Cypress Planning Division shall verify compliance through: (1) review and approval of construction drawings and building permit submittals demonstrating incorporation of the emission-reduction measures; (2) documentation or reporting from the contractor or a future project applicant, as deemed necessary by the City of Cypress Planning Division, demonstrating adherence to approved measures.

The measures below shall be implemented and updated as necessary as they are considered feasible and effective in reducing criteria pollutant emissions generated by the project. These measures shall be reviewed and updated in accordance with the most recent emission-reduction and emission-minimization guidance available, including, at a minimum, the California Air Pollution Control Officers Association (CAPCOA) 2024 guidance. A future project applicant shall incorporate all feasible and updated measures into the final construction drawings, building plans, and contractor specifications for City review, including, but not limited to, the following:

- Provide building access and paths which are physically separated from street parking lot traffic and that eliminate physical barriers such as walls, berms, landscaping and slopes that impede the use of pedestrians, bicycle facilities, or public transportation vehicles.

- Provide continuous sidewalks separated from the roadway by landscaping and on street parking.

- Provide a parking lot design that includes clearly marked and shaded pedestrian pathways between transit facilities and building entrances.

- Provide preferential parking spaces near the entrance of buildings for those who carpool/vanpool/rideshare and provide signage.

- Install electric vehicle charging capabilities that meet the requirements of the latest version of the California Green Building Standards Code (CALGreen Code) Tier 2 Voluntary Standards.
- Install ENERGY STAR certified heating, cooling, and lighting devices, and appliances or equivalent.
- Install only electric fireplaces.
- Install low-flow water fixtures.
- Utilize energy-efficient design features, including appropriate site orientation, use of lighter color roofing and building materials, and use of deciduous shade trees and windbreak trees to reduce fuel consumption for heating and cooling.
- Use light-colored paving and roofing materials.
- Use low-volatile organic compound (VOC) paints with 10 grams per liter or less.
- Require the use of all-electric landscaping equipment.
- Maximize the planting of trees in landscaping and parking lots.

Mitigation Measure TRA-1 *Refer to Section 6.17 of this document.*

Supportive Evidence: Please refer to pages 4.3-21 through 4.3-24 of the Draft EIR prepared for the proposed project.

Cumulatively Considerable Net Increase of a Criteria Pollutant for Which the Region is Non-Attainment Under an Applicable Federal or State Ambient Air Quality Standard: Significant and Unavoidable Impact

During construction, short-term degradation of air quality may occur due to the release of particulate emissions generated by demolition, grading, paving, building, and other activities. Emissions from construction equipment are also anticipated and would include carbon monoxide (CO), NO_x, VOCs, directly emitted particulate matter ($PM_{2.5}$ and PM_{10}), and TACs such as diesel exhaust particulate matter.

Construction activities would include demolition, site preparation, grading, building construction, architectural coating, and paving activities. Construction-related effects on air quality are typically greatest during the demolition, grading, and site preparation phases due to the disturbance of soils. If not properly controlled, these activities would temporarily generate particulate emissions. Unless properly controlled, vehicles leaving construction sites would deposit dirt and mud on local streets,

which could be an additional source of airborne dust after it dries. PM_{10} emissions would vary from day to day, depending on the nature and magnitude of construction activity and local weather conditions. PM_{10} emissions would depend on soil moisture, silt content of soil, wind speed, and the amount of operating equipment.

In addition to dust-related PM_{10} emissions, heavy trucks and construction equipment powered by gasoline and diesel engines would generate CO, sulfur dioxide (SO_2), NO_X, VOCs, and some soot particulate ($PM_{2.5}$ and PM_{10}) in exhaust emissions. If construction activities were to increase traffic congestion in the area, CO and other emissions from traffic would increase slightly while those vehicles idle in traffic. These emissions would be temporary in nature and limited to the immediate area surrounding the construction site.

Construction emissions were estimated for future development envisioned under the proposed project using CalEEMod. This analysis includes two model runs to evaluate a worst-case construction scenario. The first model run evaluates construction emissions associated with full buildout of the proposed project, including the development of up to 1,791 additional residential units and 440,000 square feet of non-residential development within the Buildout Area.

The second model run includes a phased approach to grading that includes the simultaneous grading of multiple development areas to reflect a conservative worst-case construction scenario during grandstand demolition and grading only. Results of both analyses are described below.

Construction emissions were estimated for full buildout of the future development allowed under the proposed project using CalEEMod. Specific construction information for specific development projects, such as construction phasing and schedule, is not yet known; however, construction of the entire Buildout Area is assumed to commence in 2026 and conclude in 2038, which was included in CalEEMod. Construction activities would include demolition, site preparation, grading, building construction, paving, and architectural coatings (painting). TAIT, a licensed civil engineering firm, prepared grading estimates for buildout of the proposed project, concluding the proposed project would require the cut of 248,600 cubic yards of soil and fill of 333,500 cubic yards of soil, which would result in the net import of 84,900 cubic yards of soil. In addition, the proposed project would require the demolition of approximately 768,360 square feet of existing buildings. Based on information provided by the Project Applicant, demolition activities would require up to four excavators, two track loaders, a crawler crane, and several bobcats/backhoes. This analysis also assumes the use of Tier 2 construction equipment and that the proposed project would comply with SCAQMD Rule 403 measures. Assuming the use of Tier 2 construction equipment is conservative as construction contractors often typically use Tier 2 or cleaner equipment due to their wide availability.

As described above, in order to provide a conservative analysis of the construction impacts associated with the proposed project, this supplemental analysis evaluates the simultaneous grading of five projects in multiple land use districts. This supplemental analysis is for informational purposes only to evaluate a potential worst-case scenario for grading activities.

This analysis conservatively assumes that the grading for five development projects would simultaneously occur on Lots 2, 4, 7, 12 and 13, including all of Lots 4, 12 and 13, the southern 8

acres of Lot 2 and the northern 11 acres of Lot 7. Grading activities associated with the five development projects would require the cut of 202,000 cubic yards of soil and fill of 263,000 cubic yards of soil, which would result in the net import of 61,000 cubic yards of soil.

Consistent with a conservative worst-case approach, this supplemental analysis uses default construction equipment assumptions in CalEEMod, including a Tier 2 equipment fleet, and assumes compliance with SCAQMD Rule 403 dust control measures.

Long-term air pollutant emission impacts that would result from future buildout envisioned under the proposed project are those that are associated with mobile sources (e.g., vehicle trips), energy sources (e.g., natural gas), and area sources (e.g., architectural coatings and the use of landscape maintenance equipment).

Mobile source emissions include VOC and NO_X emissions, which contribute to the formation of ozone. Additionally, PM_{10} emissions result from running exhaust, tire and brake wear, and the entrainment of dust into the atmosphere from vehicles traveling on paved roadways. Energy source emissions would typically result from activities in buildings for which natural gas is used. Typically, area source emissions consist of direct sources of air emissions located at a project site, including architectural coatings, consumer products, and the use of landscape maintenance equipment. This analysis utilizes default assumptions for architectural coatings, the use of consumer products (including cleaning supplies, kitchen aerosols, cosmetics and toiletries), and landscape maintenance equipment.

Development within the Buildout Area would occur on a project-by-project basis and the specific design and sequencing of those projects cannot be determined at this time. The exact timing of implementation and phasing for the Buildout Area may vary based on a number of factors, including market and economic demands, as well as physical constraints or timing of roadway/infrastructure improvements. As such, it is possible that construction activities would still be underway while parts of the proposed project become operational. Since the proposed project is a programmatic level document and the timing of projects that would be developed under the Specific Plan are unknown at this time, the precise combination of emissions that would occur is unknown.

However, since operational emissions would exceed SCAQMD thresholds, it is assumed that construction and operational emissions combined would exceed the significance threshold established by the SCAQMD for daily project emissions. Two feasible mitigation measures were identified aimed at reducing operational emissions, Mitigation Measure AIR-1 and Mitigation Measure TRA-1.

With implementation of Mitigation Measure AIR-1 and Mitigation Measure TRA-1, NO_x emissions would be reduced to below the SCAQMD's significance criteria. However, VOC emissions would still exceed the SCAQMD's significance criteria. While Mitigation Measure AIR-1 and Mitigation Measure TRA-1 would incorporate design features that would contribute to reducing criteria air pollutant emissions generated during operational activities associated with the full buildout envisioned under proposed project; the long-term operational VOC emissions associated with the proposed project would cumulatively contribute to the nonattainment designations in the Basin and project impacts would not be lowered below SCAQMD thresholds.

The majority of the proposed project's operational-source emissions are generated by passenger cars associated with trips generated by the project. Even with potential vehicle miles traveled (VMT) reductions required in Mitigation Measure TRA-1, VOC emissions would remain above the SCAQMD thresholds. As there are no additional feasible mitigation measures that would reduce project operational-source VOC emissions to a less than significant level proposed project operation would result in a significant and unavoidable impact related to a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard.

Vehicular trips associated with the proposed project would contribute to congestion at intersections and along roadway segments in the vicinity of the Buildout Area. Localized air quality impacts would occur when emissions from vehicular traffic increase as a result of the proposed project. The primary mobile-source pollutant of local concern is CO, a direct function of vehicle idling time and, thus, of traffic flow conditions. CO transport is extremely limited; under normal meteorological conditions, CO disperses rapidly with distance from the source. However, under certain extreme meteorological conditions, CO concentrations near a congested roadway or intersection may reach unhealthful levels, affecting local sensitive receptors (e.g., residents, schoolchildren, the elderly, and hospital patients). Typically, high CO concentrations are associated with roadways or intersections operating at unacceptable levels of service or with extremely high traffic volumes. In areas with high ambient background CO concentrations, modeling is recommended to determine a project's effect on local CO levels.

The significance of localized project impacts under CEQA depends on whether ambient CO levels in the vicinity of the Buildout Area are above or below State and federal CO standards. Because ambient CO levels are below the standards throughout the Basin, a project would be considered to have a significant CO impact if project emissions result in an exceedance of one or more of the 1-hour or 8-hour standards.

Full buildout envisioned under the proposed project would generate 21,041 net new average daily trips, 1,019 a.m. peak-hour trips, and 1,418 p.m. peak-hour trips. As discussed in the proposed project's Traffic Study, under Existing Conditions, all study intersections currently operate at acceptable levels of service. As described in the Traffic Study, even with the improvements recommended in the Traffic Study, four intersections and roadway segments would continue to operate at deficient levels of service (LOS) during peak hours. However, given the extremely low level of CO concentrations in the Buildout Area, project-related vehicles are not expected to result in CO concentrations exceeding the State or federal CO standards. Impacts related to CO hot spots would be less than significant, and no mitigation is required.

Mitigation Measures: Based upon the analysis presented in Section 4.3, Air Quality, of the Draft EIR, which is incorporated herein by reference, Mitigation Measure AIR-1 and Mitigation Measure TRA-1 are feasible and are made binding through the MMRP. Implementation of these mitigation measures will reduce impacts associated with conflict with or obstruction of implementation of the applicable air quality plan but will not reduce potentially significant impacts to less than significant. No additional feasible mitigation measures have been identified that would reduce these impacts to a less than significant level. As such, the impact remains significant and unavoidable.

Supportive Evidence: Please refer to pages 4.3-24 through 4.3-32 of the Draft EIR prepared for the proposed project.

6.4 BIOLOGICAL RESOURCES

No impacts were identified as potentially significant.

6.5 CULTURAL RESOURCES

Threshold 4.5.1: Adverse Change in the Significance of a Historical Resource: Significant and Unavoidable Impact

The proposed project would have the potential to result in a substantial adverse change to a historical resource under CEQA because implementation of the proposed project would require demolition of the character-defining features of the Los Alamitos Race Course (LARC) property, including the grandstand, quarter-mile chute, and pre-1970 racetrack. Demolition is considered a material impairment of the historical resource, and no feasible mitigation measures are available to fully mitigate the demolition of a historical resource to a less than significant level. Implementation of mitigation measures could reduce significant adverse impacts but not completely mitigate or avoid the significant impact. If the historical significance of the building is thoroughly documented, well photographed, and publicly available, the demolition of the building would have a reduced impact on the historical significance of the building, though the impact would still be significant.

Although there is no feasible mitigation to avoid demolition of the historical resource, the proposed project would be required to implement Mitigation Measures CUL-1 through CUL-3, which requires which requires that photographs and memorabilia, including brochures, promotional flyers, marketing materials, special events announcements, and the like (or copies of the same) be available to a local library or an Orange County-based historical society, a historical marker or the Vessels' name, the track logo, racing terminology, and/or the names or likenesses (e.g., statuary, wall or garden art, and photographs) of noteworthy Quarter Horses, and documentation of the historic resource in accordance with the Historic American Building Survey (HABS) standards. Because implementation of the proposed project would demolish the character-defining features of the LARC Property, implementation of the proposed project would result in a substantial adverse change to a historic architectural resource under CEQA. Implementation of Mitigation Measures CUL-1 through CUL-3 would require documenting the character-defining features of LARC Property, but it would not avoid demolition of the character-defining features; therefore, impacts to built-environment historic resources as defined in *State CEQA Guidelines* Section 15064.5 would be significant and unavoidable.

Mitigation Measures: Based upon the analysis presented in Section 4.5, Cultural Resources, of the Draft EIR, which is incorporated herein by reference, Mitigation Measures CUL-1 through CUL-3 listed below are feasible and are made binding through the MMRP. Implementation of these mitigation measures will reduce impacts associated with the adverse change in the significance of a historical resource but will not reduce potentially significant impacts to less than significant. **As such, the impact remains significant and unavoidable.**

Mitigation Measure CUL-1 Prior to demolition activities of any character-defining features, the owner of Los Alamitos Race Course, or subsequent project proponents, shall make photographs and memorabilia, including brochures, promotional flyers, marketing materials, special events announcements and the like (or copies of the same) available to a local library or an Orange County-based historical society:

a. For use in an exhibit(s) about horse racing, quarter horses, Frank Vessels, Sr., the Vessels family, pari-mutuel betting and/or the history of Cypress; and/or

b. To be part of a permanent archive for research purposes.

Mitigation Measure CUL-2 Require future development on portions of the Los Alamitos Race Course property to incorporate one or more of the following:

a. A historical marker that provides information about Frank Vessels, Sr. and Los Alamitos Race Course. The marker should be clearly visible and accessible to the public.

b. The Vessels' name, the track logo, racing terminology, and/or the names or likenesses (e.g., statuary, wall or garden art, and photographs) of noteworthy Quarter Horses (such as Clobber, Go Man Go, or Moonist).

Mitigation Measure CUL-3 Prior to, or in conjunction with, approval of any demolition or development permits that involves the destruction of any portion of the Los Alamitos Race Course property, the Project Applicant should be required to commission documentation of the property in the form of Historic American Building Survey (HABS)-like documentation that complies with the Secretary of the Interior's Standards for Architectural and Engineering Documentation (NPS 1990), if any of the character-defining features as identifies are still present. The documentation should generally follow the HABS Level III requirements and include digital photographic recordation of the complex, a detailed historic narrative report, and compilation of historic research. Photographic documentation should include:

- General views of the site and landscape as a whole
- Photographs of the 550-yard chute, track, and winner's circle
- Photographs of each exterior elevation of all buildings and structures in the complex
- Photographs of the interior of the Grandstand.

The documentation should be completed by a qualified architectural historian or historian who meets the Secretary of the Interior's Professional Qualification Standards for History and/or Architectural History (NPS 1983). The original archival-quality documentation shall be offered as donated material to the following entities: South Central Coastal Information Center at CSU Fullerton, Preserve Orange County, the Orange County Historical Society and other repositories to be determined such as local libraries and the American Quarter Horse Association Hall of Fame.

Supportive Evidence: Please refer to pages 4.5-14 through 4.5-17 of the Draft EIR prepared for the proposed project.

6.6 ENERGY

No impacts were identified as significant and unavoidable.

6.7 GEOLOGY AND SOILS

No impacts were identified as significant and unavoidable.

6.8 GREENHOUSE GAS EMISSION

No impacts were identified as significant and unavoidable.

6.9 HAZARDS AND HAZARDOUS MATERIALS

No impacts were identified as significant and unavoidable.

6.10 HYDROLOGY AND WATER QUALITY

No impacts were identified as significant and unavoidable.

6.11 LAND USE AND HOUSING

No impacts were identified as significant and unavoidable.

6.12 MINERAL RESOURCES

No impacts were identified as significant and unavoidable.

6.13 NOISE

No impacts were identified as significant and unavoidable.

6.14 POPULATION AND HOUSING

No impacts were identified as significant and unavoidable.

6.15 PUBLIC SERVICES

No impacts were identified as significant and unavoidable.

6.16 RECREATION

No impacts were identified as significant and unavoidable.

6.17 TRANSPORTATION

Threshold 4.17.2: Conflicts or Inconsistencies with CEQA Guidelines Section 15064.3(b): Significant and Unavoidable Impact

A VMT screening was conducted to determine whether the proposed project could be screened out from a project-specific VMT analysis. The results of the VMT screening determined that the proposed project does not meet the High Quality Transit Area (HQTA) or Low VMT Area screening criteria, but does qualify as a neighborhood-serving retail development under the Governor's Office of Land Use and Climate Innovation's (LCI) (previously the Governor's Office of Planning and Research [OPR]) 2018 *Technical Advisory on Evaluating Transportation Impacts In CEQA* (LCI Technical Advisory). A supplemental quantitative analysis conducted in accordance with the County Guidelines confirmed that the proposed project's non-residential uses result in a less than significant VMT impact, supporting the conclusion that the proposed project satisfies both the intent and technical requirements for VMT screening. While the proposed project's non-residential uses qualify as neighborhood-serving retail under the LCI Technical Advisory and are presumed to result in a less than significant VMT impact, the residential component does not meet any screening criteria and therefore requires a full quantitative VMT analysis.

Consequently, a full VMT analysis was conducted for the proposed residential uses in accordance with the County Guidelines. To calculate VMT for the proposed project, the Orange County Transportation Analysis Model (OCTAM) was run for both existing plus project (2019) and cumulative plus project (2050) scenarios, and calculations from the relevant OCTAM output files were completed to estimate the anticipated Home-Based VMT for the project's Traffic Analysis Zone (TAZ). The City's threshold of significance for a project's VMT impact with respect to residential uses, based on the County Guidelines, is 13.21 VMT per capita (15 percent below the existing regional average). The results show that the residential VMT would exceed the County threshold of 13.21 VMT per capita (15 percent below the regional average) by 11.6 percent, with 14.29 VMT per capita under existing conditions and 14.96 VMT per capita under cumulative conditions, indicating a potentially significant VMT impact.

As such, future residential development within the Buildout Area would be required to implement Mitigation Measure TRA-1, which requires the proposed project to reduce overall VMT in order to contribute to achieving the overall VMT reduction target established in this EIR of 11.6 percent. Mitigation Measure TRA-1 provides two Transportation Demand Management strategies for future residential development within the Buildout Area that would reduce VMT generated by the proposed project, including constructing or improving bike facilities and providing pedestrian network improvements. Constructing or improving bicycle facilities to connect the Buildout Area to the regional bicycle network would provide residents opportunities to bike rather than drive and is

estimated to reduce VMT by 0.1 percent. Providing pedestrian network improvements, including approximately 1.7 miles of new sidewalks along the Moody Street and Vessels Circle extensions and increasing the study area sidewalk length from 7.7 miles to 9.4 miles is estimated to reduce VMT by 1.1 percent by encouraging walking for short trips. Therefore, while the implementation of Mitigation Measure TRA-1 would reduce the residential VMT impact, the impact would remain above the established threshold for residential VMT and the residential VMT impact would be significant and unavoidable.

Mitigation Measures: Based upon the analysis presented in Section 4.17, Transportation, of the Draft EIR, which is incorporated herein by reference, Mitigation Measure TRA-1, is feasible and is made binding through the MMRP. Implementation of this mitigation measure will not reduce potentially significant impacts to less than significant. No additional feasible mitigation measures have been identified that would reduce these impacts to a less than significant level. As such, the impact remains significant and unavoidable.

Mitigation Measure TRA-1 Transportation Demand Management Strategies. The Development Agreement between the City of Cypress and the Project Applicant regarding the proposed project shall include a provision requiring that any future project applicants for subsequent residential development projects within the Buildout Area demonstrate the project's consistency with the measures set forth in Items 1 and 2 below that are applicable to such project prior to its approval to the satisfaction of the City of Cypress Planning Director.

1. **Construct or Improve Bike Facility (California Air Pollution Control Officers Association [CAPCOA] Handbook Strategy T-19-A):** This transportation demand management strategy requires the project to include a new bicycle facility or facilities or improve an existing facility that would connect the project to the existing regional bicycle network. The construction/ improvement of bicycle facilities would provide residents with the opportunity to bike to their destination rather than drive, reducing the number of vehicle trips and overall project generated vehicle miles traveled (VMT).

2. **Provide Pedestrian Network Improvement (CAPCOA Handbook Strategy T-18):** This transportation demand management strategy requires the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area.

Supportive Evidence: Please refer to pages 4.17-17 through 4.17-21 of the Draft EIR prepared for the proposed project.

6.18 TRIBAL CULTURAL RESOURCES

No impacts were identified as significant and unavoidable.

6.19 UTILITIES

No impacts were identified as significant and unavoidable.

6.20 WILDFIRE

No impacts were identified as significant and unavoidable.

7.0 FINDINGS REGARDING GROWTH INDUCING IMPACTS

Section 15126.2(d) of the *State CEQA Guidelines* requires that an EIR:

> "Discuss the ways in which the proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment."

Additionally, *State CEQA Guidelines* Section 15126.2(e) specifies that growth does not necessarily imply impacts that are beneficial, detrimental, or of little significance to the environment. A project that meets any of these criteria may be considered growth inducing. To address these issues, potential growth-inducing effects were examined through analysis of the following questions:

- Would the project remove obstacles to, or otherwise foster, population growth (e.g., through the construction or extension of major infrastructure facilities that do not presently exist in the project area, or through changes in existing regulations pertaining to land development)?
- Would the project foster economic growth?
- Would approval of the project involve some characteristic that may encourage and facilitate other activities that could significantly affect the environment?

7.1.1 Removal of Obstacles to, or Otherwise Foster, Population Growth

The proposed project includes the reasonably foreseeable buildout of the Specific Plan, including the construction of up to 1,791 residential units and 440,000 square feet of non-residential space within the Buildout Area. In addition, buildout of the proposed project would include the expansion or extension of three existing roadways to serve the Buildout Area, including expanding a portion of Lexington Drive, the extension of Vessels Circle and the extension of Moody Street to connect to Siboney Street to serve the Buildout Area, consistent with the Circulation Plan included in the approved Specific Plan. As discussed in Section 4.14, Population and Housing, future development facilitated by the proposed project would result in a net increase of approximately 5,516 persons at full buildout. However, according to the Connect SoCal 2024 population projections, this population increase is within the expected population growth of 7,418 people estimated for the City of Cypress. Therefore, the increase in housing and population associated with buildout of the proposed project would be limited to fostering expected growth in the region and project vicinity.

As such, the proposed project is consistent with planned regional housing growth and planned population growth of the City. Although the proposed project would facilitate the development of new housing in the City, the new housing would not induce substantial unplanned population growth, as the proposed project is designed to meet the City's housing need. Therefore, the proposed project would not cause indirect substantial unplanned population growth through the extension of roads and other infrastructure. Impacts associated with unplanned population growth, directly or indirectly, would be less than significant and no mitigation would be necessary.

7.1.2 Foster Economic Growth

The proposed project consists of the reasonably foreseeable buildout allowed under the current Specific Plan, which City of Cypress voters approved on November 5, 2024, pursuant to "Measure S" as part of the Housing Element Implementation Project. The Specific Plan allows for a maximum of 1,926 residential units, including the units allowed on the seven-acre Melia Property, and up to 879,170 square feet of non-residential development.

Economic growth could be expected from buildout of the proposed project because it would allow for residential occupation within walking distance of commercial retail establishments. Buildout under the Specific Plan would encourage walkability within the area and could therefore provide retail establishments with an expanded consumer base and potentially increase commercial activity in the project vicinity. However, this increased commercial activity would be consistent with the City's economic development goals for the Buildout Area established in the previously approved Specific Plan. As a result, the proposed project is not considered to foster unplanned economic growth, and therefore, the proposed project would not result in any economic growth-inducing impacts.

7.1.3 Other Characteristics

Approval of the proposed project would not involve any characteristics that may encourage and facilitate other activities that could significantly affect the environment.

8.0 FINDINGS REGARDING PROJECT ALTERNATIVES

CEQA requires that an EIR analyze a reasonable range of feasible alternatives that could substantially reduce or avoid the significant impacts of a project while also meeting the project's basic objectives. An EIR must identify ways to substantially reduce or avoid the significant effects that a project may have on the environment (PRC Section 21002.1). Accordingly, the discussion of alternatives shall focus on alternatives to a project or its location which are capable of avoiding or substantially reducing any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives or would be more costly. The alternative analysis included in the Draft EIR, therefore, identified a reasonable range of project alternatives focused on avoiding or substantially reducing the project's significant impacts.

The following alternatives were analyzed in the Draft EIR:

- No Project Alternative
- Historic Preservation Alternative
- Reduced Development Alternative (30%) Reduction

Based upon the analysis from Chapter 5, Alternatives, of the Draft EIR, the City finds, pursuant to CEQA Guidelines Section 15096(g)(2), that no feasible alternative or additional mitigation measure will substantially lessen any significant effect of the project, reduce the significant unavoidable impacts of the project to a level that is less than significant, or avoid any significant effect the project would have on the environment.

8.1 PROJECT OBJECTIVES

Section 15124(b) of the CEQA Guidelines states that the project description shall contain "a statement of the objectives sought by the proposed project." Section 15124(b) of the CEQA Guidelines further states that "the statement of objectives should include the underlying purpose of the project."

As indicated in Section 3.4 of the Project Description, of the Draft EIR, the underlying purpose of the proposed project is to redevelop the Buildout Area in accordance with the voter-approved Specific Plan. As indicated on pages 3-13 to 3-14 of the Project Description, of the Draft EIR, the Project's basic and fundamental objectives are as follows:

1. 1. Provide a significant number of new residential units in the Buildout Area to help meet the unmet demand for housing in the City and the project vicinity, consistent with the City's Housing Element and the Cypress Town Center and Commons Specific Plan 3.0 approved by the voters of the City of Cypress.

2. Establish a mixed-use town center that is intended to be the City's "main street" and a gathering place for the community with a vibrant mix of entertainment, retail, restaurant, commercial and residential uses.

3. Revitalize a large urban area in the City that is currently significantly underutilized.

4. Diversify the City's existing housing stock by providing various housing product types and densities to meet a range of housing needs of Cypress and area residents.

5. Provide a mix of residential, commercial, retail and park and recreational uses that encourages project residents to walk or bike to and from the commercial areas and attractions and parks within the Buildout Area and provides an enhanced consumer and employee base for the new commercial uses.

6. Develop a project that will invigorate the local economy by providing new employment and business opportunities

7. Provide residential and commercial/retail improvement that will generate new sources of revenue for the City through increased property values and retail sales.

8.2 NO PROJECT ALTERNATIVE

Description: Under the No Project Alternative, the Buildout Area would not be developed with new residential or non-residential uses. The Buildout Area would remain as it is in its current condition, with no demolition of existing structures, grading, or new construction occurring within the Buildout Area. Specifically, the Buildout Area would remain developed with the existing structures and facilities that support horse racing, training, and community activities, including the race track, grandstand structure, three artificial lakes inside the race track, one-story clubhouse and restaurant structures, lighting structures, approximately 41 permanent one-story barns and several temporary structures and barns; and parking structures. In addition, the roadway improvements and extensions envisioned under the proposed project would not occur.

Under the No Project Alternative, it is assumed the Los Alamitos Race Course would continue to operate under its existing conditions and entitlements. No new development, redevelopment, or expansion would occur beyond what is currently allowed, and ongoing activities at the site—including horse racing events, simulcast operations, associated parking, lighting, and supporting facilities—would remain generally consistent with present-day operations. As a result, there would be no change to existing land use patterns, intensity of use, or operational characteristics at LARC, and environmental conditions would remain substantially similar to baseline conditions, aside from normal fluctuations associated with routine operations and maintenance.

Finding: The City hereby finds that specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR.

The City finds that the No Project Alternative would result in no impacts associated with all environmental impact areas and would therefore be less impactful in all environmental impact areas compared to the proposed project. However, the No Project Alternative would not meet the underlying purpose of the proposed project or any of the project objectives. Most notably, the No Project Alternative would not provide residential uses that would help meet the unmet demand for housing in the City and the project vicinity, consistent with the City's Housing Element and the Cypress Town Center and Commons Specific Plan 3.0 approved by the voters of the City of Cypress.

Therefore, for the reasons stated above, the No Project Alternative is infeasible and less desirable than the proposed project and is rejected.

Supporting Evidence: Please refer to pages 5-8 through 5-16 of the Draft EIR prepared for the proposed project.

8.3 HISTORIC PRESERVATION ALTERNATIVE

Description: The Historic Preservation Alternative would develop new residential and non-residential uses within the Buildout Area and would retain the existing character-defining features at LARC that contribute to the LARC's eligibility for listing in the National Register and California Register. The character-defining features, including the original pre-1970 track, the 1954 quarter-mile chute, the infield and ponds, and a portion of the grandstand, would be converted into a performance venue for future concerts, plays, and other entertainment performances. When not being used as a performance venue, Lots 5 through 8 and portions of Lots 3 and 4 would be open to the public as a park or recreational use. All non-historic features of the race course, including the race-track extensions, barns, temporary buildings, clubhouse building, and annex would be demolished. Existing restaurants, food service, and the three existing lakes within the original race track would be retained. The Historic Preservation Alternative also includes a six-level above-ground parking structure with 1,600 parking spaces (1 space for every 3 seats) to accommodate the performance venue and account for the loss of parking at the race course.

Implementation of the Historic Preservation Alternative would require a Specific Plan amendment, which would have to be approved by voters, to allow the performance venue use within the Medium-Density Residential District and Single-Family Attached Subdistrict. In addition, the Historic Preservation Alternative would require approval of a VTTM, similar to the proposed project. The proposed lots in the VTTM would be different than the proposed project and would include a lot for the race course improvements being retained and to accommodate the event venue use and related modifications of other lots.

Under the Historic Preservation Alternative, development on Lots 2, 10, 11, 12, and 14 would be the same as the proposed project. In addition, similar to the proposed project, Lots 5 and 6 would be limited to parks and recreational uses.

As part of the Historic Preservation Alternative, Lot 7 would be limited to parks and recreational uses, as opposed to the residential uses proposed under the project. In addition, portions of Lots 3 and 4 would also include parks and recreational uses and the development area within Lot 13 would be reduced as compared to the proposed project.

Further, the Historic Preservation Alternative would only transfer ownership of an approximately 1-acre portion of Lot 8 to Grace Church and would develop the remaining 3 acres of Lot 8 with parks and recreational uses, similar to Lots 5, 6, 7, and portions of Lots 3 and 4. Similar to the proposed project, no development is proposed on Lot 9 and the ownership of Lot 5 would be transferred from Grace Church to LARC.

Overall, the Historic Preservation Alternative would result in development of 1,400 residential units and 440,000 square feet of non-residential development, in addition to the events venue. As such, implementation of the Historic Preservation Alternative would result in an approximately 22 percent reduction in residential units, or 391 fewer residential units, as compared to the proposed project and the same amount of non-residential floor area as the proposed project.

The Historic Preservation Alternative would also include the extension of Vessels Circle like the proposed project, and the extension of Siboney Street to connect to the intersection of the Vessels Circle extension. Under the Historic Preservation Alternative, Moody Street would not be extended to Katella Avenue to create a new north-south connection between Cerritos Avenue and Katella Avenue.

A new approximately 3,500-square-foot clamshell stage would be constructed within Lot 7, facing south towards the existing grandstands and away from Cerritos Avenue. In addition, permanent infield seating for approximately 500 guests and temporary seating on the track for approximately 500 guests would also be provided facing the stage. Including the 3,694 seats associated with the existing grandstand, which would be retained, the Historic Preservation Alternative would result in a total of 4,694 seats for the performance venue. The oval track, chute, and infield would be utilized as a public park when the performance venue is not in use and the track and chute would be used for walking, cycling and running paths with the infield available for passive park activities, including picnic areas, playgrounds, and/or gardens. In addition, the two existing ponds would be retained and would contain paddle boats and/or canoes available for rent.

Food and beverage services, similar to existing facilities within the grandstand, would be available during performances and may also be available during non-performance hours for visitors to the public park amenities. The existing restaurant would be retained. The lower two floors of the grandstand would be utilized for equipment storage, offices, dressing rooms, and rehearsal space. In addition to the preserved LARC facilities, a six-level parking structure containing approximately 1,600 parking spaces would be constructed west of the grandstand to provide parking for future events hosted at the performance venue, consistent with Section 2.06.050 of the City's Municipal Code.

Finding: The City hereby finds that specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR.

The City finds that the Historic Preservation Alternative would result in either no impacts or less than significant impacts in all but three of the environmental resource areas (Aesthetics, Air Quality, and Transportation) as discussed below and could be less impactful or similar to the proposed project in most of the environmental resource areas, with the exception of Aesthetics, in which impacts would be slightly greater than those under the proposed project. As with the proposed project, this alternative would likely result in significant and unavoidable impacts to Air Quality and Transportation; however, the Historic Preservation Alternative would avoid the proposed project' significant and unavoidable impact on Cultural (Historical) Resources as the alternative would preserve the historic recourses within the Buildout Area. The Historic Preservation Alternative would not satisfy, or fully satisfy, a number of key project objectives related to the number of residential

units provided and build out of the already-approved Specific Plan, consistent with the City's Housing Element and the Cypress Town Center and Commons Specific Plan 3.0 approved by the voters of the City of Cypress to the same extent as the proposed project. Therefore, the Historic Preservation Alternative would not meet the underlying purpose of the proposed project to redevelop the Buildout Area in accordance with the voter-approved Specific Plan. Therefore, for the reasons stated above, the Historic Preservation Alternative is infeasible and less desirable than the proposed project and is rejected.

Supporting Evidence: Please refer to pages 5-17 through 5-50 of the Draft EIR prepared for the proposed project.

8.4 REDUCED DEVELOPMENT ALTERNATIVE (30%) REDUCTION

Description: Under the Reduced Development Alternative, the overall intensity of the proposed project, including residential and commercial development, would be reduced by 30 percent. As such, the Reduced Development Alternative would facilitate the future development of 1,253 residential units and approximately 308,000 square feet of non-residential uses. This represents a decrease of 538 residential units and approximately 132,000 square feet of non-residential uses as compared to the proposed project. Under this alternative, the demolition and removal of all or a substantial portion of the existing improvements associated with the LARC property, including the race track and infield area, grandstand, buildings, barns and structures and three artificial lakes, would still occur, similar to the proposed project. In addition, the extension of Moody Street from Cerritos Avenue to Katella Avenue and the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension would still occur, consistent with the Specific Plan. In addition, the approximately 11 acres of land on which park and recreational uses would be developed, including the land in Lots 1, 5, and 6, and the two additional acres of public park space that may be located in one or more of the land use districts established in the Specific Plan associated with the proposed project would be included in the Reduced Development Alternative.

Finding: The City hereby finds that specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR.

The City finds that the Reduced Development Alternative would result in either no impacts or less than significant impacts in all but four of the environmental resource areas (Air Quality, Biological Resources, Cultural Resources, and Transportation) and could be less impactful or similar to the proposed project in most of the environmental resource areas. As with the proposed project, this alternative would still result in significant and unavoidable impacts to Air Quality, Cultural Resources, and Transportation. Therefore, the Reduced Development Alternative would not reduce or eliminate significant and unavoidable impacts associated with the proposed project. The Reduced Development Alternative would meet the project objectives to a lesser extent than the proposed project. Most notably, the Reduced Development Alternative would not satisfy a number of key project objectives relating to the already-approved Specific Plan and the number of proposed residential units, consistent with the City's Housing Element and the Cypress Town Center and Commons Specific Plan 3.0 approved by the voters of the City of Cypress to the same extent as the

proposed project. Therefore, the Reduced Density Alternative would not satisfy the project objectives to the same extent as the proposed project. For the reasons stated above, the Reduced Density Alternative is infeasible and less desirable than the proposed project and is rejected.

Supporting Evidence: Please refer to pages 5-50 through 5-75 of the Draft EIR prepared for the proposed project.

8.5 FINDINGS REGARDING THE MITIGATION MONITORING AND REPORTING PROGRAM

Section 21081.6 of the PRC requires that when making findings required by Section 21081(a) of the PRC, the Lead Agency approving a project shall adopt a reporting or monitoring program for the changes to the project which it has adopted or made a condition of project approval, in order to ensure compliance with project implementation and to mitigate or avoid significant effects on the environment. The City hereby finds that:

1. A Mitigation Monitoring and Reporting Program (MMRP) has been prepared for the proposed project, and the mitigation measures are included therein. The MMRP is incorporated herein by reference and is considered part of the record of proceedings for the proposed project.

2. The MMRP designates responsibility for implementation and monitoring of proposed mitigation measures. The City's Community Development Director will serve as the overall MMRP coordinator and will be primarily responsible for ensuring that all mitigation measures are complied with.

3. The MMRP prepared for the proposed project has been adopted concurrently with these Findings. The MMRP meets the requirements of Section 21021.6 of the Public Resources Code. The City will use the MMRP to track compliance with mitigation measures. The MMRP will remain available for public review during the compliance period.

9.0 OTHER FINDINGS

The City hereby finds as follows:

1. The foregoing statements are true and correct;

2. The City is the "Lead Agency" for the project evaluated in the CEQA Documents and independently reviewed and analyzed in the Draft EIR and Final EIR for the project;

3. The Notice of Preparation of the Draft EIR was circulated for public review. It requested that responsible agencies respond as to the scope and content of the environmental information germane to that agency's specific responsibilities;

4. The public review period for the Draft EIR was for 45 days between March 16, 2026, and April 30, 2026. The Draft EIR and appendices were available for public review during that time. A Notice of Completion and copies of the Draft EIR were sent to the State Clearinghouse, and notices of availability of the Draft EIR were published by the City. The Draft EIR was available for review on the City's website. Physical copies of the environmental documents are available at the Cypress Civic Center by appointment only;

5. The CEQA Documents were completed in compliance with CEQA;

6. The CEQA Documents reflect the City's independent judgment;

7. The City evaluated comments on environmental issues received from persons and organizations who reviewed the Draft EIR. In accordance with CEQA, the City prepared written responses describing the disposition of significant environmental issues raised. The Final EIR provided adequate, good faith and reasoned responses to the comments. The City reviewed the comments received and responses thereto and has determined that neither the comments received nor the responses to such comments add significant new information to the Draft EIR regarding adverse environmental impacts. The City has based its actions on full appraisal of all viewpoints, including all comments received up to the date of adoption of these Findings, concerning the environmental impacts identified and analyzed in the Final EIR;

8. The City finds that the CEQA Documents, as amended, provide objective information to assist the decision-makers and the public at large in their consideration of the environmental consequences of the project. The public review period provided all interested jurisdictions, agencies, private organizations, and individuals the opportunity to submit all comments made during the public review period;

9. The CEQA Documents evaluated the following impacts: (1) aesthetics; (2) agriculture and forestry resources; (3) air quality; (4) biological resources; (5) cultural resources; (6) energy; (7) geology and soils; (8) greenhouse gas emissions; (9) hazards and hazardous materials; (10) hydrology and water quality; (11) land use and planning; (12) mineral resources; (13) noise; (14) population and housing; (15) public services; (16 recreation; (17) transportation; (18) tribal

cultural resources; (19) utilities and service systems; and (20) wildfire. Additionally, the CEQA Documents considered, in separate sections, significant irreversible environmental changes and growth-inducing impacts of the project, as well as a reasonable range of project alternatives. All of the significant environmental impacts of the project were identified in the CEQA Documents;

10. The MMRP includes all of the mitigation measures identified in the CEQA Documents and has been designed to ensure compliance during implementation of the project. The MMRP provides the steps necessary to ensure that the mitigation measures are fully enforceable;

11. The MMRP designates responsibility and anticipated timing for the implementation of mitigation; the City's Community Development Director will serve as the MMRP Coordinator;

12. In determining whether the project may have a significant impact on the environment, and in adopting these Findings pursuant to Section 21081 of CEQA, the City has complied with CEQA Sections 21081.5 and 21082.2;

13. The impacts of the project have been analyzed to the extent feasible at the time of certification of the CEQA Documents;

14. The City made no decisions related to approval of the project prior to the initial recommendation of certification of the CEQA Documents. The City also did not commit to a definite course of action with respect to the project prior to the initial consideration of the CEQA Documents;

15. Copies of all the documents incorporated by reference in the CEQA Documents are and have been available upon request at all times at the offices of the City of Cypress Community Development Department, the custodian of record for such documents or other materials;

16. The responses to the comments on the Draft EIR, which are contained in the Final EIR, clarify and amplify the analysis in the Draft EIR;

17. Having reviewed the information contained in the CEQA Documents and in the administrative record, the City finds that there is no new significant information regarding adverse environmental impacts of the project in the Final EIR; and

18. Having received, reviewed and considered all information in the CEQA Documents, as well as all other information in the record of proceedings on this matter, these Findings are hereby adopted by the City in its capacity as the CEQA Lead Agency.

10.0 STATEMENT OF OVERRIDING CONSIDERATIONS

Pursuant to PRC § 21081(b), and *State CEQA Guidelines* §15093(a) and (b), the decision-making agency is required to balance, as applicable, the economic, legal, social, technological, or other benefits of the project against its unavoidable environmental risks when determining whether to approve a project. If the specific economic, legal, social, technological, or other benefits of the project outweigh the unavoidable adverse environmental effects, those effects may be considered "acceptable" (14 CCR § 15093 (a)). CEQA requires the agency to support, in writing, the specific reasons for considering a project acceptable when significant impacts are not avoided or substantially lessened. Those reasons must be based on substantial evidence in the Final EIR or elsewhere in the administrative record (14 CCR § 15093(b)).

Courts have upheld overriding considerations that were based on a variety of policy considerations including, but not limited to, new jobs, stronger tax base, and implementation of an agency's economic development goals, growth management policies, redevelopment plans, the need for housing and employment, conformity to community plan, and provision of construction jobs; see *Towards Responsibility in Planning v. City Council* (1988) 200 Cal App. 3d 671; *Dusek v. Redevelopment Agency* (1985) 173 Cal App. 3d 1029; *City of Poway v City of San Diego* (1984) 155 Cal App. 3d 1037; and *Markley v. City Council* (1982) 131 Cal App.3d 656.

In accordance with the requirements of CEQA and the *State CEQA Guidelines*, the City finds that the mitigation measures identified in the Final EIR and the Mitigation Monitoring and Reporting Program (MMRP), when implemented, would avoid, or substantially lessen all of the significant effects identified in the Final EIR for the Specific Plan 3.0 Buildout Project (proposed project). However, certain significant impacts of the proposed project are unavoidable even after incorporation of all feasible mitigation measures.

These significant unavoidable impacts would be associated with air quality, cultural (historic) resources, and transportation. Specifically, implementation of the proposed project would conflict or obstruct implementation of applicable air quality plans under AQMP Indicator No. 1; result in an exceedance of criteria air pollutant emissions during project operational activities; result in a substantial adverse change in the significance of a historical resource pursuant to §15064.5 due to demolition of historical resources; and conflict or be inconsistent with *State CEQA Guidelines* Section 15064.3, subdivision (b) as the residential component of the project would result in a higher VMT per capita than the County's residential VMT significance thresholds under both existing and cumulative plus project conditions.

The proposed project would implement the development-specific mitigation measures identified in this analysis (Mitigation Measures AIR-1, CUL-1 through CUL-3, and TRA-1), acting to generally reduce the project's operational-source air pollutant emissions, residential VMT, and ensure the historical resources that would be demolished would be property document. However, implementation of the proposed project would continue to result in a significant and unavoidable impact even after implementation of mitigation.

The City finds that all feasible mitigation measures identified in the Final EIR that are within the purview of the City would be implemented with the proposed project. As identified below, the City further finds that the remaining significant unavoidable effects are outweighed and are found to be acceptable due to the following specific overriding economic, legal, social, technological, or other benefits, based upon the facts set forth above, the Final EIR, and the record.

The City finds that any one of the benefits set forth below is sufficient by itself to warrant approval of the proposed project. This determination is based on the findings herein and the evidence in the record. The following economic, legal, social, or technological benefits, independent of the other benefits, override the potential significant unavoidable adverse impacts and render acceptable each of the unavoidable adverse environmental impacts. Having balanced the unavoidable adverse environmental impacts against each of the benefits, the City hereby adopts this Statement of Overriding Considerations for the following reasons:

1. All feasible mitigation measures have been imposed to lessen project impacts to less than significant levels; alternatives to the project are infeasible because while they have similar or less environmental impacts, they do not provide the economic benefits of the project, or are otherwise socially or economically infeasible when compared to the project.

2. The proposed project would provide a significant number of new residential units in the Buildout Area to help meet the unmet demand for housing in the City and the project vicinity, consistent with the City's Housing Element and the Cypress Town Center and Commons Specific Plan 3.0 approved by the voters of the City of Cypress.

3. The proposed project would revitalize a large urban area in the City that is currently significantly underutilized.

4. The proposed project would diversify the City's existing housing stock by providing various housing product types and densities to meet a range of housing needs of Cypress and area residents.

5. The proposed project would provide a mix of residential, commercial, retail and park and recreational uses that encourages project residents to walk or bike to and from the commercial areas and attractions and parks within the Buildout Area and provides an enhanced consumer and employee base for the new commercial uses.

6. The proposed project would invigorate the local economy by providing new employment and business opportunities.

7. The proposed project would include residential and commercial/retail improvement that will generate new sources of revenue for the City through increased property values and retail sales.

8. The proposed project would extend existing City streets through all or a portion of the Buildout Area to improve overall traffic circulation in the project vicinity and provide necessary vehicular and pedestrian access for project residents, tenants, visitors and patrons.

EXHIBIT "3"
MITIGATION MONITORING AND REPORTING PROGRAM

MITIGATION MONITORING AND REPORTING PROGRAM

When making findings, CEQA requires that a lead agency must adopt a reporting or monitoring program for the changes to the project that it has adopted or made a condition of project approval to ensure compliance during project implementation. As required by CEQA, the City adopts, concurrently with the adoption of these Findings, a Mitigation Monitoring and Reporting Program ("MMRP") to meet the requirements of Public Resources Code Section 21081.6 by providing for the implementation and monitoring of measures intended to mitigate potentially significant effects of the Proposed Project. The MMRP, as presented in the EIR, is designed to serve this purpose for the mitigation measures identified in the EIR. The MMRP requires that the City or other governmental agencies monitor mitigation measures designed to reduce or eliminate significant impacts, as well as those mitigation measures designed to reduce environmental impacts that are less than significant. The MMRP includes all the mitigation measures identified in the EIR and has been designed to ensure compliance during implementation of the Proposed Project.

The MMRP describes the procedures for the implementation of all of the mitigation measures identified in the EIR for the Proposed Project. Mitigation measures set forth in the MMRP are specific and enforceable and are capable of being fully implemented by the City of Cypress, the various applicants, and/or other identified public agencies of responsibility. It is the intent of the MMRP to (1) verify satisfaction of the required mitigation measures of the EIR; (2) provide a methodology to document implementation of the required mitigation; (3) provide a record of the Monitoring Program; (4) identify monitoring responsibility; and (5) establish administrative procedures for the clearance of mitigation measures.

The MMRP lists mitigation measures according to the same numbering system contained in the Draft EIR sections.

The City finds that the impacts of the Proposed Project have been mitigated to the extent feasible by the mitigation measures identified in the EIR and in the MMRP. The City adopts the MMRP for the Proposed Project that accompanies the EIR. The MMRP designates responsibility and anticipated timing for the implementation of mitigation measures and conditions within the jurisdiction, of the City. The City approves and will implement all the mitigation measures identified in the EIR.

MITIGATION MONITORING AND REPORTING PROGRAM

MITIGATION MONITORING REQUIREMENTS

California Public Resources Code (PRC) Section 21081.6, which is part of the California Environmental Quality Act (CEQA) statute, mandates that the following requirements shall apply to all reporting or mitigation monitoring programs:

- The public agency shall adopt a reporting or monitoring program for the changes made to the project or conditions of project approval in order to mitigate or avoid significant effects on the environment. The reporting or monitoring program shall be designed to ensure compliance during project implementation. For those changes that have been required or incorporated into the project at the request of a responsible agency or a public agency having jurisdiction by law over natural resources affected by the project, that agency shall, if so requested by the lead agency or a responsible agency, prepare and submit a proposed reporting or monitoring program.

- The lead agency shall specify the location and custodian of the documents or other materials that constitute the record of proceedings upon which its decision is based.

- The lead agency shall provide measures to mitigate or avoid potentially significant effects on the environment that are fully enforceable through permit conditions, agreements, or other measures. Conditions of project approval may be set forth in referenced documents that address required mitigation measures or, in the case of the adoption of a plan, policy, regulation, or other project, by incorporating the mitigation measures into the plan, policy, regulation, or project design.

- Prior to the close of the public review period for a draft environmental impact report, a responsible agency, or a public agency having jurisdiction over natural resources affected by the project, shall either (1) submit to the lead agency complete and detailed performance objectives for mitigation measures that would address the significant effects on the environment identified by the responsible agency or agency having jurisdiction over natural resources affected by the project, or (2) refer the lead agency to appropriate, readily available guidelines or reference documents. Any mitigation measures submitted to a lead agency by a responsible agency or an agency having jurisdiction over natural resources affected by the project shall be limited to measures that mitigate impacts to resources that are subject to the statutory authority of, and definitions applicable to, that agency. Compliance or noncompliance with that requirement by a responsible agency or agency having jurisdiction over natural resources affected by a project shall not limit the authority of the responsible agency or agency having jurisdiction over natural resources affected by a project, or the authority of the lead agency, to approve, condition, or deny projects as provided by this division or any other provision of law.

MITIGATION MONITORING PROCEDURES

The mitigation monitoring and reporting program for the proposed Specific Plan 3.0 Buildout Project (proposed project) has been prepared in compliance with PRC Section 21081.6. It describes the requirements and procedures to be followed by the City of Cypress (City), as the Lead Agency, to ensure that all mitigation measures adopted as part of the proposed project will be carried out as described in the Final Environmental Impact Report (EIR).

Table A: Mitigation Monitoring and Reporting Program sets forth the proposed mitigation monitoring and reporting program. It lists each of the mitigation measures specified in Chapter 4.0 of the Draft EIR and identifies the party or parties responsible for implementation and monitoring of each measure.

REGULATORY COMPLIANCE MONITORING PROCEDURES

Table B: Regulatory Compliance Measures lists all regulatory compliance measures associated with the proposed project as specified in in Chapter 4.0 of the Draft EIR and describes the requirements and procedures to be followed by the City to ensure that all standard conditions will be carried out as described in the Draft EIR.

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
4.3: Air Quality					
Mitigation Measure AIR-1: Prior to issuance of grading permits for development projects in the Buildout Area, a future project applicant in collaboration with the City of Cypress Planning Division shall identify project design details and specifications, where feasible, to document implementation and compliance with emission reduction measures. The City of Cypress Planning Division shall verify compliance through: (1) review and approval of construction drawings and building permit submittals demonstrating incorporation of the emission-reduction measures; (2) documentation or reporting from the contractor or a future project applicant, as deemed necessary by the City of Cypress Planning Division, demonstrating adherence to approved measures. The measures below shall be implemented and updated as necessary as they are considered feasible and effective in reducing criteria pollutant emissions generated by the project. These measures shall be reviewed and updated in accordance with the most recent emission-reduction and emission-minimization guidance available, including, at a minimum, the California Air Pollution Control Officers Association (CAPCOA) 2024 guidance. A future project applicant shall incorporate all feasible and updated measures into the final construction drawings, building plans, and contractor specifications for City review, including, but not limited to, the following: ● Provide building access and paths which are physically separated from street parking lot traffic and that eliminate physical barriers such as walls, berms, landscaping and slopes that impede the use of pedestrians, bicycle facilities, or public transportation vehicles. ● Provide continuous sidewalks separated from the roadway by landscaping and on street parking. ● Provide a parking lot design that includes clearly marked and shaded pedestrian pathways between transit facilities and building entrances.	Prior to issuance of grading permits for development projects in the Buildout Area	City of Cypress / Future Project Applicant(s)			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
• Provide preferential parking spaces near the entrance of buildings for those who carpool/vanpool/rideshare and provide signage. • Install electric vehicle charging capabilities that meet the requirements of the latest version of the California Green Building Standards Code (CALGreen Code) Tier 2 Voluntary Standards. • Install ENERGY STAR certified heating, cooling, and lighting devices, and appliances or equivalent. • Install only electric fireplaces. • Install low-flow water fixtures. • Utilize energy-efficient design features, including appropriate site orientation, use of lighter color roofing and building materials, and use of deciduous shade trees and windbreak trees to reduce fuel consumption for heating and cooling. • Use light-colored paving and roofing materials. • Use low-volatile organic compound (VOC) paints with 10 grams per liter or less. • Require the use of all-electric landscaping equipment. • Maximizing the planting of trees in landscaping and parking lots.					
Mitigation Measure AIR-2: All construction activities in the Buildout Area shall utilize U.S. EPA Tier 4 Final diesel construction equipment for equipment rated at greater than 50 brake horsepower (bhp) if and to the extent commercially available, or the cleanest available equipment and technology that is commercially available and feasible at the time of construction (e.g., zero-emission or equivalent low-emission equipment), to minimize diesel particulate matter (DPM) emissions. If Tier 4 Final equipment is not commercially available for a majority of the construction equipment and an individual development project would be larger than 20 acres, the City shall require preparation of a construction Health Risk Assessment (HRA) for such development project.	Prior to and during construction activities	City of Cypress / Construction Contractor			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
If a construction HRA is required, it shall be prepared in accordance with current OEHHA methodology and applicable SCAQMD CEQA and health risk assessment guidance. Additional feasible risk-reduction measures identified through the HRA process shall be implemented as determined necessary by the City.					
4.4: Biological Resources					
Mitigation Measure BIO-1: Jurisdictional Delineation. Prior to commencing construction activities that would impact any of the identified aquatic resources in Lots 2, 3, 4, 6 and 7 of Vesting Tentative Tract Map (VTTM) 19247, a jurisdictional delineation shall be conducted, as follows: ● Regional Water Quality Control Board (RWQCB) Jurisdiction (Waters of the State): Delineation shall follow the State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State (State Water Resources Control Board [SWRCB] 2019). ● California Department of Fish and Wildlife (CDFW) Jurisdiction (Streambed Alteration Program): The extent of CDFW jurisdiction shall be identified consistent with California Fish and Game Code §§ 1600–1616, including the outer limits of the bed, bank, and channel and the extent of any associated riparian vegetation. ● US Army Corps of Engineers (USACE) Jurisdiction (Waters of the United States [WOTUS]): The determination that no federal WOTUS occur onsite shall be documented consistent with 33 CFR § 328.3, the USACE 1987 Wetland Delineation Manual, and the appropriate Regional Supplement (USACE 2008). If impacts to RWQCB and/or CDFW jurisdictional waters are expected to occur, appropriate permits or authorization (e.g., Water Quality Certification/Waste Discharge Requirements, CDFW Lake and Streambed Alteration Agreement) shall be obtained prior to construction.	Prior to commencement of construction activities that would impact any of the identified aquatic resources in Lots 2, 3, 4, 6, and 7 of VTTM 19247	Future Project Applicant(s) / Qualified Delineator			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
4.5: Cultural Resources					
Mitigation Measure CUL-1: Prior to demolition activities of any character-defining features, the owner of Los Alamitos Race Course, or subsequent project proponents, shall make photographs and memorabilia, including brochures, promotional flyers, marketing materials, special events announcements and the like (or copies of the same) available to a local library or an Orange County-based historical society: a. For use in an exhibit(s) about horse racing, quarter horses, Frank Vessels, Sr. the Vessels family, pari-mutuel betting and/or the history of Cypress; and/or b. To be part of a permanent archive for research purposes.	Prior to demolition activities of any LARC character-defining features	Owner of LARC or Future Project Applicant(s)			
Mitigation Measure CUL-2: Require future development on portions of the Los Alamitos Race Course property to incorporate one or more of the following: a. A historical marker that provides information about Frank Vessels, Sr. and Los Alamitos Race Course. The marker should be clearly visible and accessible to the public. b. The Vessels' name, the track logo, racing terminology, and/or the names or likenesses (e.g., statuary, wall or garden art, and photographs) of noteworthy Quarter Horses (such as Clabber, Go Man Go, or Moonist).	Prior to project occupancy	Future Project Applicant(s)			
Mitigation Measure CUL-3: Prior to, or in conjunction with, approval of any demolition or development permits that involves the destruction of any portion of the Los Alamitos Race Course property, the Project Applicant should be required to commission documentation of the property in the form of Historic American Building Survey (HABS)-like documentation that complies with the *Secretary of the Interior's Standards for Architectural and Engineering Documentation* (NPS 1990), if any of the character-defining features as identified are still present. The documentation should generally follow the HABS Level III requirements and include digital photographic recordation of the complex, a detailed historic narrative report, and compilation of historic research. Photographic documentation should include:	Prior to, or in conjunction with, approval of any demolition or development permits that involves the destruction of any portion of the LARC property	Future Project Applicant(s) / Qualified Architectural Historian			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
• General views of the site and landscape as a whole • Photographs of the 550-yard chute, track, and winner's circle • Photographs of each exterior elevation of all buildings and structures in the complex • Photographs of the interior of the Grandstand. The documentation should be completed by a qualified architectural historian or historian who meets the Secretary of the Interior's Professional Qualification Standards for History and/or Architectural History (NPS 1983). The original archival-quality documentation shall be offered as donated material to the following entities: South Central Coastal Information Center at CSU Fullerton, Preserve Orange County, the Orange County Historical Society and other repositories to be determined such as local libraries and the American Quarter Horse Association Hall of Fame.					
4.7: Geology and Soils					
Mitigation Measure GEO-1: Implementation of Geotechnical Investigation Recommendations. Future development projects within the Buildout Area shall implement the recommendations of the Geotechnical Investigation prepared for the proposed project, to the satisfaction of the City of Cypress' (City) Building Official, including, but not limited to: **Ground Improvement Techniques.** Ground improvement techniques shall be implemented in the Buildout Area beneath any structure intended for human occupancy. Ground improvements may consist of rammed aggregate piers, vibrated aggregate piers, or similar techniques. The ground improvements must be designed by a qualified ground improvement contractor through coordination with a geotechnical engineer and/or structural engineer to ensure liquefaction in the upper soils. **Building Foundation Techniques.** Subsequent to the installation of any proposed ground improvements, proposed structures, mat or mat-type foundation systems will be used. Conventional foundations may be utilized for support of the lighter at-grade structure if the ground improvements reduce the total and	Prior to the issuance of any grading or building permit	City of Cypress / Future Project Applicant(s)			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
differential settlement to a threshold confirmed by the geotechnical engineer, the structural engineer, and the construction contractor. **Additional site testing and final design evaluation(s)** shall be conducted by a geotechnical consultant to refine and/or enhance these requirements during buildout of the project on an as-needed basis. A future project applicant(s) shall require the geotechnical consultant to assess whether the recommendations in the Geotechnical Investigation need to be modified or refined to address any changes in the project features prior to start of grading. If the geotechnical consultant identifies modifications or refinements to the recommendations, the future project applicant(s) shall make modifications to the final project design and specifications. Examples of additional measures could include: a moisture or vapor retarding system below foundations, additional ground stabilization techniques like cement treatment or aggregate, or removal and replacement of existing soil to eliminate any unsuitable materials or undocumented fill. Design, grading, and construction shall be performed in accordance with applicable requirements in the Municipal Code, the California Building Code, local grading regulations, and any additional measures recommended by the geotechnical consultant in the subsequent geotechnical evaluation(s).					
Mitigation Measure GEO-2: Procedures for Unexpected Paleontological Resources Discoveries. If paleontological resources are discovered during ground-disturbing activities associated with the proposed project, construction personnel shall immediately halt work within 50 feet of the discovery, and a future project applicant/developer or construction supervisor shall contact a qualified paleontologist to assess the discovery for scientific importance. A qualified paleontologist is defined as a person with an M.S. or Ph.D. in geology or paleontology and who meets the standards set forth by the Society of Vertebrate Paleontology. The paleontologist shall make recommendations regarding the collection, treatment, and disposition of the discovery. Scientifically important resources shall be prepared to	During ground-disturbing activities	Construction Contractor / Qualified Paleontologist			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
the point of identification, identified to the lowest taxonomic level possible, cataloged, and curated into the permanent collections of a museum repository. If paleontological resources are discovered, regardless of their scientific importance, paleontological monitoring shall be required for subsequent ground-disturbing activities at a frequency, depth, and/or interval determined by the paleontologist. Paleontological monitoring shall be conducted by a qualified paleontological monitor as set forth in the Society of Vertebrate Paleontology standards. At the conclusion of monitoring, a final monitoring report shall be prepared by the paleontologist to document the results of monitoring and project compliance with all regulations and project requirements. If scientifically important paleontological resources are recovered, this report shall also document those paleontological resources with a catalog, descriptions, and photographs as determined appropriate by the paleontologist. The final monitoring report shall be submitted to the City of Cypress Director of Community Development Department or designee for review and approval. A copy of this final report shall also accompany the fossil material to the museum repository.					
Mitigation Measure GEO-3: Worker Sensitivity Training: Prior to issuance of grading permits, applicants for projects that would include ground-disturbing activities below 10 feet in undisturbed native sediments ranked as having a moderate or high paleontological sensitivity shall be required to retain a qualified paleontologist meeting the requirements set forth by the Society of Vertebrate Paleontology. Prior to and during initial ground-disturbing activities, the qualified paleontologist (or their designee) shall provide worker environmental awareness training to construction personnel. Training shall include recognition of potential fossil materials, appropriate worker response protocols, and contact information for the paleontologist.	Prior to issuance of grading permits	Future Project Applicant(s) / Qualified Paleontologist

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
4.8: Greenhouse Gas Emissions					
Mitigation Measure GHG-1: Prior to issuance of building permits, project applicants for future development within the Buildout Area shall demonstrate to the satisfaction of the City of Cypress (City) Planning Division that the proposed buildings incorporate feasible greenhouse gas (GHG) reduction strategies consistent with current State and local decarbonization goals. Compliance shall be demonstrated through building plans, energy modeling, California Green Building Standards Code (CALGreen Code) checklists, or similar documentation submitted during the plan check process, as deemed necessary by the City. Future project applicants shall comply with either the All-Electric Design Path or the Efficient Mixed-Fuel Design Path, as described below: **Preferred Compliance Path: All Electric Design** - Future development shall be designed and constructed without natural gas infrastructure or natural gas appliances. All space heating, water heating, cooking, and clothes drying systems shall be fully electric. Electrical service panels shall be sized to accommodate expected loads and future electrification needs. **Alternative Compliance Path: Efficient Mixed-Fuel Design** - If a project proposes to install natural gas infrastructure or natural gas appliances, future project applicants shall implement a combination of GHG reduction measures sufficient to minimize GHG emissions from natural gas usage to the maximum extent feasible. Measures may include, but are not limited to, the following: • Exceed Title 24, Part 6 (Building Energy Efficiency Standards) performance requirements by 10–20 percent, where feasible, as demonstrated through energy modeling or prescriptive compliance documentation. • Install on-site solar photovoltaic (PV) systems to the maximum feasible extent, including on rooftops and parking canopy structures, where structurally and technically feasible.	Prior to issuance of building permits	City of Cypress / Future Project Applicant(s)			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
• Provide electric-ready infrastructure, including service panel capacity, conduit, wiring, and dedicated circuits, to allow future conversion to all-electric appliances and systems. • Design buildings to achieve, at minimum, Leadership in Energy and Environmental Design (LEED) Silver certification or an equivalent third-party green building rating. • Install programmable thermostats, advanced metering infrastructure, and smart home energy management systems. • Provide heating, ventilation, and air conditioning (HVAC) commissioning consistent with CALGreen Sections 5.410.2–5.410.4, including a commissioning plan, functional performance testing, and a commissioning report. • Install cool roof materials meeting an aged solar reflectance of ≥ 0.30, or the most current CALGreen Code requirement, whichever is more stringent. • Provide infrastructure to accommodate up to 50 percent recycled water use for landscape irrigation, where recycled water supply is available. • Use water-efficient irrigation systems, minimize turf, and incorporate native, low-water, or drought-tolerant plant species. • Install rainwater harvesting systems, where feasible. • Prohibit or restrict the use of potable water for cleaning non-vegetated outdoor surfaces and prohibit systems that apply water to hardscape surfaces. • Implement and maintain robust solid waste diversion programs, including recycling and organic waste collection consistent with Senate Bill (SB) 1383 requirements. All selected GHG reduction measures shall be clearly identified on improvement plans and construction drawings. Compliance with this measure shall be verified by City staff during plan check and confirmed through building inspection prior to final occupancy.					

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
4.9: Hazards and Hazardous Materials					
Mitigation Measure HAZ-1: Prior to the issuance of a building permit, a future project applicant/developer shall demonstrate the recommendations provided in the Phase I Environmental Site Assessment (Phase I ESA) prepared for the Buildout Area have been, or will be, implemented. Recommendations provided in the Phase I ESA include the following: ● Preparation and implementation of an Operations and Maintenance (O&M) Program in order to safely manage the suspect asbestos-containing materials (ACMs) and/or lead-based paint (LBP) associated with the existing structures located within the Buildout Area; and ● Providing a copy of this Draft Environmental Impact Report (EIR) and the Notice of Completion (NOC) to the Orange County Health Care Agency (OCHCA) in order to notify them of the proposed change in land use facilitated under the proposed project.	Prior to issuance of a building permit	Future Project Applicant(s)			
4.17: Transportation					
Mitigation Measure TRA-1: Transportation Demand Management Strategies. The Development Agreement between the City and the Project Applicant regarding the proposed project shall include a provision requiring that any future project applicants for subsequent residential development projects within the Buildout Area demonstrate the project's consistency with the measures set forth in Items 1 and 2 below that are applicable to such project prior to its approval to the satisfaction of the City of Cypress Planning Director. 1. **Construct or Improve Bike Facility (California Air Pollution Control Officers Association [CAPCOA] Handbook Strategy T-19-A):** This transportation demand management strategy requires the project to include a new bicycle facility or facilities or improve an existing facility that would connect the project to the existing regional bicycle network. The construction/improvement of bicycle facilities would provide residents with the opportunity to bike to their destination	During preparation of the Development Agreement	City of Cypress / Future Project Applicant(s)			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
rather than drive, reducing the number of vehicle trips and overall project-generated vehicle miles traveled (VMT). 2. **Provide Pedestrian Network Improvement (CAPCOA Handbook Strategy T-18):** This transportation demand management strategy requires the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area.					
4.18: Tribal Cultural Resources					
Mitigation Measure TCR-1: Tribal Cultural Resources Training and ALERT Sheet Posting. Prior to the start of any ground-disturbing activities, a qualified archaeologist meeting the Secretary of the Interior standards, in consultation with a representative from a traditionally and culturally affiliated Native American Tribe, under the direction of the City of Cypress Planning Division, shall prepare a Cultural Resources Sensitivity Summary. This summary shall include a brief description of the types of archaeological and tribal cultural resources that may be encountered, visual examples (if available), reporting procedures in the event of a discovery, and appropriate contact information. The summary shall be printed and posted in a visible location at the construction site for the duration of all ground-disturbing activities. An initial worker environmental training shall be provided by a qualified archaeologist in collaboration with a tribal representative prior to the start of construction, under the direction of the City of Cypress Planning Division. The training shall include a review of applicable laws, procedures to follow if resources are discovered, and cultural sensitivity guidance. A sign-in sheet shall be maintained to document attendance. As construction progresses, the construction manager shall be responsible for ensuring that all new personnel receive the same information through on-site orientation and review of the posted materials. Documentation of ongoing training shall be maintained and made available to the City upon request.	Prior to the start of any ground-disturbing activities	Future Project Applicant(s) / Qualified Archaeologist			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
Mitigation Measure TCR-2: Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities. Prior to the issuance of any grading permits for projects within the Buildout Area that would require "ground-disturbing activity," where such disturbance activity would occur in undisturbed native sediment, a future project applicant/City shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching on both on-site and any off-site locations that are included in the Project Description/ definition and/or required in connection with the projects, such as public improvement work. A copy of the executed monitoring agreement shall be submitted to the Director of the City of Cypress Community Development Department, or their designee, prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity. The tribal monitor shall also provide appropriate insurance certificates. The monitor shall complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs shall identify and describe any discovered tribal cultural resources (TCRs), including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, "TCRs"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs shall be provided to the future project applicant/City upon written request to the Tribe. On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Tribe from a designated	Prior to the issuance of any grading permits	Future Project Applicant(s) / Native American Monitor			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
point of contact for the future project applicant/City that all ground-disturbing activities and phases that may involve ground-disturbing activities in native (previously undisturbed) soil has occurred (i.e., no tribal monitoring shall be required for landscaping activities occurring after completion of project grading and trenching, as this soil will have been previously monitored) or in connection with the project are complete; or (2) a determination and written notification by the Tribe to the future project applicant/City that no future, planned construction activity and/or development/construction phase associated with the project possesses the potential to impact TCRs. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Tribe's monitor and/or archaeologist. The Tribe will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural, and/or historic purposes.					
Mitigation Measure TCR-3: Unanticipated Discovery of Human Remains and Associated Funerary Objects. Native American human remains are defined in Public Resources Code (PRC) Section 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in PRC Section 5097.98, are also to be treated according to this statute. If Native American human remains and/or grave goods are discovered or recognized during ground-disturbing activities associated with projects within the Buildout Area, then all construction activities shall immediately cease within 50 feet of the find. Health and Safety Code Section 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and all ground-disturbing activities shall immediately halt and shall remain halted until the Coroner	During ground-disturbing activities	Construction Contractor / County Coroner / Most Likely Descendant			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
has determined the nature of the remains. If the Coroner recognizes the human remains to be those of a Native American or has reason to believe they are Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission (NAHC), and PRC Section 5097.98 shall be followed. Human remains and grave/burial goods shall be treated alike per PRC Section 5097.98(d)(1) and (2). If Native American human remains are discovered or recognized on any construction sites within the Buildout Area during ground-disturbing activities and the NAHC subsequently identifies the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe) to be the Most Likely Descendant (MLD), construction activities may resume in other parts of the construction site at a minimum of 200 feet away from discovered human remains and/or burial goods, if the Tribe determines in its sole discretion that resuming construction activities at that distance is acceptable and provides the project manager express consent of that determination (along with any other mitigation measures the Tribe's monitor and/or archaeologist deems necessary). (*State CEQA Guidelines* Section 15064.5(f).) Preservation in place (i.e., avoidance) is the Tribe's preferred manner of treatment for discovered human remains and/or burial goods. Any discovery of human remains/burial goods shall be kept confidential to the extent feasible to prevent further disturbance.					
Mitigation Measure TCR-4: Procedures for Burials and Funerary Remains. If Native American human remains are discovered or recognized on any construction sites within the Buildout Area during ground-disturbing activities and the Native American Heritage Commission subsequently identifies the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe) to be the Most Likely Descendant ("MLD"), the Koo-nas-gna Burial Policy, as described below, shall be implemented. To the Tribe, the term "human	During ground-disturbing activities	Construction Contractor / Most Likely Descendant			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
remains" encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the preparation of the soil for burial, the burial of funerary objects with the deceased, and the ceremonial burning of human remains. If the discovery of human remains includes four or more burials, the discovery location shall be treated as a cemetery and a separate treatment plan shall be created. The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered as associated funerary objects. Cremations will either be removed in bulk or by means as necessary to ensure complete recovery of all sacred materials. In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that burials will be removed. In the event preservation in place is not possible despite good faith efforts by the future project applicant/City and/or landowner, before ground-disturbing activities may resume on the project site, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects. Each occurrence of human remains and associated funerary					

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
objects will be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within 6 months of recovery. The site of reburial/repatriation shall be on the project site but at a location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered. The Tribe will work closely with the project's qualified archaeologist to ensure that the excavation is treated carefully, ethically and respectfully. If data recovery is approved by the Tribe, documentation shall be prepared and shall include (at a minimum) detailed descriptive notes and sketches. All data recovery data recovery-related forms of documentation shall be approved in advance by the Tribe. If any data recovery is performed, once complete, a final report shall be submitted to the Tribe and the NAHC. The Tribe does not authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.					

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
4.3: Air Quality					
Regulatory Compliance Measure AIR-1: During clearing, grading, earth moving, or excavation operations, excessive fugitive dust emissions shall be controlled by regular watering or other dust preventative measures by using the following procedures, in compliance with South Coast Air Quality Management District (SCAQMD) Rule 403 during construction. The applicable Rule 403 measures are as follows: ● Apply nontoxic chemical soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas inactive for 10 days or more). ● Water active sites at least twice daily (locations where grading is to occur shall be thoroughly watered prior to earthmoving). ● Cover all trucks hauling dirt, sand, soil, or other loose materials, or maintain at least 2 feet (0.6 meter) of freeboard (vertical space between the top of the load and the top of the trailer) in accordance with the requirements of California Vehicle Code Section 23114. ● Pave construction access roads at least 100 feet (30 meters) onto the site from the main road. ● Reduce traffic speeds on all unpaved roads to 15 miles per hour or less.	During clearing, grading, earth moving, or excavation operations	Construction Contractor			
Regulatory Compliance Measure AIR-2: All trucks that are to haul excavated or graded material shall comply with State Vehicle Code Section 23114, with special attention to Sections 23114(b)(F), (e)(2), and (e)(4) as amended, regarding the prevention of such material spilling onto public streets and roads.	During construction activities	Construction Contractor			
Regulatory Compliance Measure AIR-3: Prior to approval of future project plans and specifications, the City of Cypress shall confirm that the construction bid packages specify: ● Contractors shall use high-volume low-pressure paint applicators with a minimum transfer efficiency of at least 50 percent; ● Coatings and solvents that will be utilized have a volatile organic	Prior to approval of future project plans and specifications	City of Cypress / Future Project Applicant(s)			

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
compound content lower than required under SCAQMD Rule 1113; and ● To the extent feasible, construction/building materials shall be composed of pre-painted materials.					
Regulatory Compliance Measure AIR-4: Future projects shall comply with SCAQMD Rule 402. Rule 402 prohibits the discharge of air contaminants or other material from any type of operations, which can cause nuisance or annoyance to any considerable number of people or to the public or which endangers the comfort or repose of any such persons, or the public.	During operation of future projects	Future Project Operators			
4.4: Biological Resources					
Regulatory Compliance Measure BIO-1: Preconstruction Bat Surveys. If construction activities for a specific development project within the Buildout Area, including structure demolition and tree removal, will occur during the bat maternity season (April 1 to August 31), then the City, or designee, shall confirm that the applicable developer has retained a qualified biologist who shall conduct a nighttime bat survey of potential maternity roost habitat no more than 30 days prior to the removal of potential habitat. These surveys shall be initiated no later than 30 minutes before sunset and continue for no less than 1 hour after sunset. If maternity roosts are found and the project would result in impacts to roosting bats, the biologist shall coordinate with CDFW to establish appropriate avoidance buffers around all maternity roost sites, and no construction work shall occur within the buffers until the completion of the maternity season. If deemed necessary through coordination with CDFW, additional measures could include two-step removal of any trees containing maternity roosts (outside of the maternity season), preparation of a Bat Habitat Mitigation and Monitoring Plan (BHMMP), and humane bat eviction/exclusion.	30 days prior to the initiation of construction activities if construction will occur during the bat maternity season (April 1 to August 31)	Future Project Applicant(s) / Qualified Biologist			
Regulatory Compliance Measure BIO-2: Preconstruction Nesting Bird Surveys and Active Nest Avoidance Buffers. If potential bird nesting habitat is to be removed from a portion of the Buildout Area in connection with a specific development project during the avian nesting season (January 1 through August 31), including structures, trees, shrubs and suitable ground-nesting areas, a qualified biologist	Within 3 days prior to the potential removal of suitable nesting habitat, if	Future Project Applicant(s) / Qualified Biologist			

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
shall conduct a nesting bird survey in such portion of the Buildout Area within 3 days prior to the commencement of structure demolition, vegetation removal, or other construction activities that could remove suitable nesting habitat. If no nesting birds are identified, no additional survey is required. If at any time an active nest is identified, the biologist shall establish suitable buffers around the nests that consider the ecology of the species present and the location of construction activities to ensure that disruption of nesting does not occur. The buffer areas shall be avoided until the nests are no longer occupied and the juvenile birds can survive independently from the nests.	construction will occur during the avian nesting season (January 1 through August 31)				
4.5: Cultural Resources					
Regulatory Compliance Measure CUL-1: Unknown Archaeological Resources. In the event that archaeological resources are discovered during excavation, grading, or construction activities, work shall cease within 50 feet of the find until a qualified archaeologist from the Orange County List of Qualified Archaeologists has evaluated the find in accordance with federal, State, and local guidelines to determine whether the find constitutes a "unique archaeological resource," as defined in Section 21083.2(g) of the California Public Resources Code (PRC). A future project applicant and its construction contractor shall not collect or move any archaeological materials and associated materials. Construction activity may continue unimpeded on other portions of the project site. Any found deposits shall be treated in accordance with federal, State and local guidelines, including those set forth in PRC Section 21083.2. Prior to commencement of grading activities, the Director of the City of Cypress (City) Community Development Department, or designee, shall verify that all project grading and construction plans include specific requirements regarding California PRC (Section 21083.2[g]) and the treatment of archaeological resources as specified above.	During excavation, grading, or construction activities	Construction Contractor / Qualified Archaeologist from the Orange County List of Qualified Archaeologists			

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
Regulatory Compliance Measure CUL-2: Human Remains. In the event that human remains are encountered on the project site, work within 50 feet of the discovery shall be redirected and the County Coroner notified immediately consistent with the requirements of California Code of Regulations (CCR) Section 15064.5(e). State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. If the remains are determined to be Native American, the County Coroner shall notify the Native American Heritage Commission (NAHC), which shall determine and notify a Most Likely Descendant (MLD). With the permission of the property owner, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. The MLD may recommend scientific removal and non-destructive analysis of human remains and items associated with Native American burials. Consistent with CCR Section 15064.5(d), if the remains are determined to be Native American and an MLD is notified, the City of Cypress shall consult with the MLD as identified by the NAHC to develop an agreement for treatment and disposition of the remains. Prior to the issuance of grading permits, the Director of the City of Cypress Community Development Department, or designee, shall verify that all grading plans specify the requirements of CCR Section 15064.5(e), State Health and Safety Code Section 7050.5, and PRC Section 5097.98, as stated above.	During construction activities	Construction Contractor / County Coroner / Most Likely Descendant			
4.6: Energy					
The proposed project would not require any regulatory compliance measures related to energy.					
4.7: Geology and Soils					
The proposed project would not require any regulatory compliance measures related to geology and soils.					
4.8: Greenhouse Gas Emissions					
The proposed project would not require any regulatory compliance measures related to greenhouse gas emissions.					

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
4.9: Hazards and Hazardous Materials					
Regulatory Compliance Measure HAZ-1: Federal Aviation Regulation Title 14 Part 77. A future project applicant/developer shall notify the Federal Aviation Administration (FAA) of any proposed structure(s) that would penetrate the 100 to 1 imaginary surface that surrounds the runway at Joint Forces Training Base Los Alamitos at least 45 days prior to beginning construction.	At least 45 days prior to beginning construction of a structure that would penetrate the 100 to 1 imaginary surface that surrounds the runway at Joint Forces Training Base Los Alamitos	Future Project Applicant(s) / Developer			
4.10: Hydrology and Water Quality					
Regulatory Compliance Measure HYD-1: Construction General Permit. If construction of future projects associated with the proposed project would disturb greater than 1 acre of soil, prior to commencement of construction activities within the proposed Buildout Area, the Construction Contractor shall obtain coverage under the National Pollutant Discharge Elimination System (NPDES) *General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities*, Order WQ 2022-0057-DWQ, NPDES No. CAS000002 (Construction General Permit), or any other subsequent permit. This shall include submission of Permit Registration Documents, including permit application fees, a Notice of Intent (NOI), a risk assessment, a site plan, a Stormwater Pollution Prevent Plan (SWPPP), a signed certification statement, and any other compliance-related documents required by the permit, to the State Water Resources Control Board via the Stormwater Multiple Application and Report Tracking System (SMARTS). Construction activities shall not commence until a Waste Discharge Identification Number is obtained for the project from the SMARTS and provided to the Director of Public Works for the City of Cypress, or designee, to	Prior to commencement of construction activities	Construction Contractor			

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
demonstrate that coverage under the Construction General Permit has been obtained. Project construction shall comply with all applicable requirements specified in the Construction General Permit, including but not limited to, preparation of a SWPPP and implementation of construction site best management practices (BMPs) to address all construction-related activities, equipment, and materials that have the potential to impact water quality for the appropriate risk level identified for the project. The SWPPP shall identify the sources of pollutants that may affect the quality of storm water and shall include BMPs (e.g., Sediment Control, Erosion Control, and Good Housekeeping BMPs) to control the pollutants in storm water runoff. Upon completion of construction activities and stabilization of the Buildout Area, a Notice of Termination (NOT) shall be submitted via SMARTS. If construction of future projects associated with the proposed project would disturb less than 1 acre of soil, prior to commencement of construction activities within the Buildout Area, the Construction Contractor shall provide evidence that project construction would comply with Section 4.106 of the 2019 California Green Building Standards Code (CALGreen Code). Section 4.106 of the CALGreen Code requires implementation of BMPs to prevent flooding and erosion and to retain sediment on site (e.g., Sediment Control, Erosion Control, and Good Housekeeping BMPs).					
Regulatory Compliance Measure HYD-2: Construction Dewatering Permit. If groundwater dewatering is required during excavation activities, the Applicant/City shall obtain coverage under the *General Waste Discharge Requirements for Discharges to Surface Waters that Pose an Insignificant (De Minimis) Threat to Water Quality*, Order No. R8-2020-0006, NPDES No. CAG998001 (Construction Dewatering Permit). This shall include submission of a Notice of Intent (NOI) for coverage under the permit to the Santa Ana Regional Water Quality Control Board (RWQCB) at least 45 days prior to the start of dewatering. Groundwater dewatering activities shall comply with all applicable provisions in the permit, including water sampling, analysis,	During excavation activities	Construction Contractor			

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
treatment (if required), and reporting of dewatering-related discharges. Upon completion of groundwater dewatering activities, a Notice of Termination shall be submitted to the Santa Ana RWQCB.					
Regulatory Compliance Measure HYD-3: Orange County MS4 Permit/City Municipal Code. Prior to issuance of a grading permit for future projects associated with the proposed project, the future project Applicant shall prepare and submit a final project-specific water quality management plan (WQMP) to specify BMPs that would be implemented to capture, treat, and reduce pollutants of concern in stormwater runoff in compliance with the Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the Incorporated Cities of Orange County within the Santa Ana Region Areawide Urban Storm Water Runoff Orange County, Order R8-2009-0030, NPDES No. CAS618030, as amended by Order No. R8-2010-0062 (Orange County MS4 Permit), Orange County Drainage Area Management Plan (DAMP), and the City of Cypress Local Implementation Plan (LIP). The WQMP shall also incorporate the results of the Final Hydrology and Hydraulic Analyses to demonstrate that the bioretention facilities meet the hydromodification requirements of the Orange County MS4 Permit and Chapter 13-23 of the Cypress Municipal Code. The City Engineer/Public Works Director, or designee, shall ensure that the BMPs specified in the WQMP are incorporated into the final project design of future projects associated with the proposed project.	Prior to issuance of a grading permit for future projects	Future Project Applicant(s)			
4.11: Land Use and Planning					
The proposed project would not require any regulatory compliance measures related to land use and planning.					
4.12: Mineral Resources					
The proposed project would not require any regulatory compliance measures related to mineral resources.					
4.13: Noise					
Regulatory Compliance Measure NOI-1: The construction contractor shall limit all construction-related activities to between the hours 7:00 a.m. and 8:00 p.m. on weekdays and between the hours of 9:00 a.m. and 8:00 p.m. on Saturdays. No construction shall be permitted outside of these hours or on Sundays or a federal holiday with the exception of certain construction activities that are time sensitive and	During construction activities	Construction Contractor			

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
require a 24-hour rotation. In those situations, a temporary use permit can be obtained from the City of Cypress' Community Development Director.					
Regulatory Compliance Measure NOI-2: Mechanical equipment, including air conditioning units in residential and non-residential zoning districts, shall be enclosed within a structure or completely screened from view from surrounding properties by the use of a fence or wall consistent with Section 3.11.100(b) of the City of Cypress Municipal Code. Additionally, prior to the issuance of building permits, a future applicant/developer shall demonstrate, to the satisfaction of the City Director of Community Development, or designee, that on-site stationary noise sources, such as air conditioners, shall not exceed City noise standards as stated within the City's Municipal Code Sections 13-68 and 13-69.	Prior to the issuance of any building permit	City of Cypress / Future Project Applicant(s)			
4.14: Population and Housing					
The proposed project would not require any regulatory compliance measures related to population and housing.					
4.15: Public Services					
Regulatory Compliance Measure PS-1: Any future projects implemented within the Buildout Area in accordance with the City of Cypress (City) Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) would be required to coordinate with the Orange County Fire Authority (OCFA) to determine the appropriate development impact fees required to offset potential impact to OCFA staffing and service ability. Prior to the approval of such projects, the designated site developer shall enter into a Secured Fire Protection Agreement with OCFA that details the agreed-upon development impact fees required for the project.	Prior to the approval of any future project	Future Project Applicant(s)			
Regulatory Compliance Measure PS-2: Payment of School Fees. Prior to issuance of any building permits within the Buildout Area in accordance with the Specific Plan, the applicant/developer of future development projects facilitated by the proposed project shall provide proof to the Director of the City of Cypress Community Development Department, or designee, that payment of school fees to the appropriate school districts have been made in compliance with Section 65995 of the California Government Code.	Prior to issuance of any building permits	Future Project Applicant(s) / Developer			

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
Regulatory Compliance Measure PS-3: Dedication of Parkland and/or Payment of Park Fees. Prior to issuance of any building permits within the Buildout Area in accordance with the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan), a future applicant/developer shall provide proof of compliance with the applicable provisions of Chapter 25 (Subdivisions), Article VI, Park and Recreational Facilities, of the City of Cypress Municipal Code.	Prior to issuance of any building permits	Future Project Applicant(s)			
4.17: Transportation					
The proposed project would not require any regulatory compliance measures related to transportation.					
4.18: Tribal Cultural Resources					
The proposed project would not require regulatory compliance measures unique to tribal cultural resources. Please see RCMs CUL-1 and CUL-2 for relevant measures in Section 4.5 above.					
4.19: Utilities and Service Systems					
Regulatory Compliance Measure UTIL-1: Construction and Demolition Ordinance. The construction contractor shall comply with the provisions of City of Cypress Ordinance No. 1166 and the 2022 California Green Building Standards Code, which would reduce construction and demolition waste. Ordinance No. 1166 is codified in Article VIII, Materials Questionnaire for Certain Construction and Demolition Projects within the City of Cypress in the Cypress Municipal Code.	During construction activities	Construction Contractor			
4.20: Wildfire					
The proposed project would not require any regulatory compliance measures related to wildfire.

1.0 INTRODUCTION

This document comprises the Final Environmental Impact Report (EIR) for the proposed Specific Plan 3.0 Buildout Project (proposed project). It is composed of comments received during the public review period, responses to those comments, and an Errata section that clarifies, amplifies, or makes minor modifications to the Draft EIR text. The Draft EIR and technical appendices are provided separately.

In compliance with Section 15201 of the *State CEQA Guidelines*, the City of Cypress (City) has provided opportunities for public participation in the environmental process. The City distributed a Notice of Preparation (NOP) on April 4, 2025, to the State Clearinghouse, responsible agencies, and interested parties for a 30-day public review period. The City also made the NOP available on the City's website to inform agencies and the public about the proposed project and to solicit input on the scope of the Draft EIR. The NOP described the proposed project and identified potential environmental impacts associated with proposed project implementation. In addition, the City held a virtual Public Scoping Meeting on April 16, 2025, to present the proposed project and to solicit input from interested parties regarding environmental issues that the Draft EIR should address. **Appendix A** of the Draft EIR contains a copy of the NOP and comments received. Section 1.3 of the Draft EIR identifies areas of concern raised in response to the NOP or at the scoping meeting.

The California Environmental Quality Act (CEQA) requires a Draft EIR to have a review period lasting at least 45 days for projects that have been submitted to the State Clearinghouse for review (Section 150105(a) of the *State CEQA Guidelines*). As required by Section 15087 of the *State CEQA Guidelines*, the City provided a public Notice of Availability (NOA) of the Draft EIR for the proposed project at the same time it filed a Notice of Completion (NOC) with the State Clearinghouse. The Draft EIR was circulated for public review for a period of 45 days, from March 16, 2026, to April 30, 2026.

The City used several media to solicit comments on the Draft EIR. The City posted physical notices to various locations within the vicinity of the Buildout Area. Additionally, the NOA was mailed to the last known name and address of agencies, organizations, and individuals who previously requested such notice in writing. The City also submitted the Draft EIR to the State Clearinghouse for distribution to, and review by, State agencies. The City also made a copy of the Draft EIR available at the Cypress Civic Center by appointment. In addition, the City posted the Draft EIR and all technical appendices on the City's website.

Eleven comment letters from State, regional, and local agencies, as well as individuals, were received during the public review period. The comments in the comment letter are included and responded to in this Final EIR. Comments that address environmental issues are responded to thoroughly. Comments that (1) do not address the adequacy or completeness of the Draft EIR; (2) do not raise environmental issues; or (3) request the incorporation of additional information not relevant to environmental issues, do not require a response, pursuant to Section 15088(a) of the *State CEQA Guidelines*.

Section 15088 of the *State CEQA Guidelines*, Evaluation of and Response to Comments, states:

a) The lead agency shall evaluate comments on environmental issues received from persons who reviewed the draft EIR and shall prepare a written response. The lead agency shall respond to comments received during the noticed comment period and any extensions and may respond to late comments.

b) The written response shall describe the disposition of significant environmental issues raised (e.g., revisions to the proposed project to mitigate anticipated impacts or objections). In particular, major environmental issues raised when the lead agency's position is at variance with recommendations and objections raised in the comments must be addressed in detail, giving the reasons that specific comments and suggestions were not accepted. There must be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice.

c) The response to comments may take the form of a revision to the draft EIR or may be a separate section in the final EIR. Where the response to comments makes important changes in the information contained in the text of the draft EIR, the lead agency should either:

   1. Revise the text in the body of the EIR; or

   2. Include marginal notes showing that the information is revised in the responses to comments.

Information provided in this Final EIR clarifies, amplifies, or makes minor modifications to the Draft EIR. No significant changes have been made to the information contained in the Draft EIR as a result of the comments received on the Draft EIR, and no significant new information has been added that would require recirculation of the document pursuant to Section 15088.5 of the *State CEQA Guidelines*. This Final EIR also includes an Errata section that clarifies and makes minor modifications to the Draft EIR as a result of comments received during the public review period.

1.1 INDEX OF COMMENTS RECEIVED

The following is an index list of the agencies and individuals that commented on the Draft EIR. The comments received have been organized in a manner that facilitates finding a particular comment or set of comments. The comment letters received are coded with the number as shown in Table A: Comments Received During the Public Comment Period, below.

Table A: Comments Received During the Public Comment Period

Comment Code	Signatory	Date
State Agencies		
S-1	California Department of Toxic Substances Control (DTSC)	March 26, 2026
S-2	California Department of Transportation (Caltrans), District 12	April 30, 2026
Regional Agencies		
R-1	South Coast Air Quality Management District (SCAQMD)	April 30, 2026
Local Agencies		
L-1	Orange County Sanitation District (OC San)	April 14, 2026
L-2	Orange County Public Works (OCPW)	April 17, 2026
L-3	City of Los Alamitos	April 20, 2026
L-4	City of Garden Grove	April 30, 2026
Individuals		
I-1	Ernesto Muñoz	April 20, 2026
I-2	George Pardon	April 26, 2026
I-3	Unidentified Commenter (quinn2767@proton.me)	April 29, 2026
I-4	Ernest and Cheryl Hanaoka	April 30, 2026

1.2 FORMAT OF RESPONSES TO COMMENTS

The following pages provide responses to each coded comment letter. The comment code number is provided in the upper right corner of the comment letter, and individual comments within the letter are numbered along the right-hand margin of the letter. The City's responses to the comment letter immediately follow each letter and are referenced by the index numbers in the margins.

This page intentionally left blank

2.0 RESPONSES TO COMMENTS

This page intentionally left blank

2.1 MASTER RESPONSES

Several comments received during the public review period raised similar concerns over the proposed project's consistency with the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) and suggested implementation of a reduced development alternative in order to reduce or eliminate transportation impacts associated with implementation of the proposed project. In addition, several comments suggested that the proposed project construct an east-west through connection along Vessels Circle to reduce or eliminate transportation impacts, provide additional opportunities for alternative modes of transportation, and create redundancies for fire, police, and medical services. Master responses to these concerns/comments are provided below and referenced, as applicable, in the following response sections.

2.1.1 SPECIFIC PLAN CONSISTENCY

On November 5, 2024, the voters of the City of Cypress approved the current Specific Plan (i.e., Cypress Town Center and Commons Specific Plan 3.0) pursuant to "Measure S" as part of the Cypress Housing Element Implementation Project (Housing Implementation Project). The current Specific Plan superseded and replaced the 2018 Specific Plan. Prior to the voters' approval of Measure S, the City Council certified a Final Environmental Impact Report (SCH No. 2023040560) for the Housing Element Implementation Project (Housing Element Implementation Final EIR) that analyzed the environmental impacts associated with adding 676 residential units within the Specific Plan Area beyond the maximum number of residential units permitted under the 2018 Specific Plan. The 2018 Specific Plan permitted a maximum of 1,250 residential units, so the increase of 676 units now allows a maximum of 1,926 residential units within the Specific Plan Area (including the 135 residential units previously developed as part of the Melia Project). As provided in Chapter 3.0, Project Description, the proposed project consists of the reasonably foreseeable buildout of a portion of the area governed by the Specific Plan that includes approximately 134 acres of land (Buildout Area) in the city. The proposed project also includes the approval of Vesting Tentative Tract Map No. 19247 (VTTM 19247).

The Draft EIR analyzed buildout of the Specific Plan within the Buildout Area at a "programmatic" level. According to *State CEQA Guidelines* Section 15168, a Program EIR may be prepared for a series of actions that are related geographically, as logical parts in a chain of contemplated actions, or in connection with the issuance of plans that govern the conduct of a continuing program (per Section 15168(a) of the *State CEQA Guidelines*). The Draft EIR evaluates environmental impacts at a programmatic level, based on the overall buildout scenario under the proposed project. Development within the Buildout Area would occur on a project-by-project basis and the specific design and sequencing of those projects cannot be determined at this time.

The primary concern raised in comments related to the proposed project's consistency with the Specific Plan is whether the proposed project would provide pedestrian and bicycle trails as contemplated in the Specific Plan. The Draft EIR addresses access and circulation (including pedestrian and bicycle) of the Buildout Area in several places as noted below.

As shown in Figure 3-5: Vesting Tentative Tract Map No. 19247, of the Draft EIR, the proposed project evaluated in the Draft EIR assumes the extension of Moody Street from Cerritos Avenue to

Katella Avenue, as well as the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension, consistent with the voter-approved Specific Plan. The Moody Street extension would traverse the Buildout Area, passing adjacent to Lots 3, 4, 13, and 14 in VTTM 19247, and create a central north-south corridor, while the extension of Vessels Circle within Lot C would, among other things, provide access to Lots 10 and 11 in VTTM 19247. The proposed project also includes, consistent with the Specific Plan, the widening of Lexington Drive within Lot B in VTTM 19247. These roadway improvements within the Buildout Area represent the "backbone" circulation system for future development that would be constructed pursuant to Specific Plan buildout. Pedestrian circulation improvements, including sidewalks, are contemplated along these extensions.

As discussed in Section 4.17, Transportation, of the Draft EIR, implementation of the proposed project would provide sidewalks along the project frontages and throughout the Buildout Area that would provide connections to existing pedestrian and bicycle facilities in the surrounding area. Specifically, as discussed in Section 4.17 of the Draft EIR, the proposed project would include the addition of approximately 1 mile of bicycle facilities, connecting to the existing bicycle network. In addition, pedestrian access via sidewalks to the Buildout Area would be from Katella Avenue, Cerritos Avenue, Lexington Drive, and Vessels Circle, as extended. Additional pedestrian circulation improvements include sidewalks along the extension of Moody Street south of Cerritos Avenue. These pathways, together with the existing pedestrian infrastructure on the surrounding streets, would ensure seamless integration with the broader pedestrian network consistent with the Specific Plan requirements. Additionally, as detailed in **Mitigation Measure TRA-1**, the proposed project would be required to implement feasible Transportation Demand Management (TDM) strategies to mitigate the proposed project's Vehicle Miles Traveled (VMT) impact, which include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network and improving the pedestrian network, including the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area.

In addition, as discussed in Chapter 3.0, future development within the Buildout Area may require the construction of private driveways, accessways and/or additional streets that would connect to the Moody Street and Vessels Circle extensions and existing public streets adjacent to the Buildout Area. However, because the proposed project is analyzed in the Draft EIR at the programmatic level and the specific future projects associated with implementation of the proposed project, including the specific accessways and internal roadway network beyond the main "backbone" roadways shown on Figure 3-5 of the Draft EIR, the specific locations and sizes cannot be determined at this time and would be determined during the design process of future development projects proposed within the Buildout Area.

Existing development in the Specific Plan area has incorporated dedicated pedestrian and bicycle trails, as contemplated by the Specific Plan, accented with new landscaping throughout the development and provides a connection to future pedestrian and bicycle trails developed on surrounding lots.

Future development projects associated with implementation of the proposed project would also be reviewed by the City on a project-by-project basis in order to ensure that the proposed development is consistent with the Specific Plan. Specifically, through the design review process,

future development projects would be required to submit a detailed site plan that depicts the pedestrian pathways and bicycle trails that would be included in each development, consistent with the Specific Plan.

The proposed project would facilitate the implementation of the Specific Plan, and future development projects associated with implementation of the proposed project are required to submit a detailed site plan as part of the site plan review process that depicts the pedestrian pathways and bicycle trails that would be included in each development, consistent with the Specific Plan; therefore, the proposed project is considered consistent with the Specific Plan. However, it should be noted that although the Specific Plan includes the provision of pedestrian and bicycle trails within the Buildout Area, it does not require that these trails be public or dedicated to the City. The Specific Plan requirements relate to providing pedestrian and bicycle trails may also be satisfied by providing private pedestrian and bicycle trails for use by residents that would connect to the City's public pedestrian and bicycle network in the surrounding area.

2.1.2 REDUCED DEVELOPMENT ALTERNATIVE (30% REDUCTION)

Several comments received during the public review period suggested implementation of a reduced development alternative would reduce or eliminate transportation impacts associated with implementation of the proposed project, particularly VMT impacts. VMT measures the amount of driving a project is expected to generate compared to the regional average. It looks at the average number of miles people travel each day for activities like commuting, shopping, and errands. Under CEQA, VMT is used to evaluate a project's impact on air quality and greenhouse gas emissions, since more travel generally results in more pollution. In addition, transportation impacts under CEQA are now evaluated based on a project's effect on VMT as opposed to vehicle delay and Level of Service (LOS). This change came into effect on December 28, 2018, when the California Office of Administrative Law cleared the revised *State CEQA Guidelines* for use and removed vehicle delay and LOS from consideration under CEQA. In general, projects located near jobs, shops, and public transit tend to have lower VMT, while those in more auto-dependent areas tend to have higher VMT. Importantly, VMT does not measure traffic congestion or roadway conditions. It focuses on how far people travel, not how traffic flows, and is typically associated with a project's location, not its density or scale.

As discussed in Section 4.17, Transportation, of the Draft EIR, the residential component of the proposed project would exceed the County's residential VMT significance thresholds under both existing and cumulative plus project conditions by 11.6 percent. As such, the proposed project would be required to implement feasible TDM strategies to mitigate the proposed project's VMT impact, as detailed in **Mitigation Measure TRA-1**. However, implementation of **Mitigation Measure TRA-1**, which includes all feasible TDM strategies, would only reduce the proposed project's residential VMT impact by 1.2 percent. As such, even with implementation of the identified TDM strategies, the proposed project's residential VMT impact would remain significant, with a residential VMT impact of 10.4 percent over the significance threshold. Therefore, the proposed project's VMT impact would be significant and unavoidable, as identified in the Draft EIR.

Chapter 5.0, Alternatives, of the Draft EIR, included a discussion of three alternatives that could feasibly attain most of the basic objectives of the proposed project but that may avoid or

substantially lessen any of the significant impacts of the proposed project, including the Reduced Development Alternative (30% Reduction). As provided in Chapter 5.0, the Reduced Development Alternative would facilitate the future development of 1,253 residential units and approximately 308,000 square feet of non-residential uses. This represents a decrease of 538 residential units and a decrease of approximately 132,000 square feet of non-residential uses as compared to the proposed project. An analysis of the potential environmental impacts of this alternative across all environmental issue areas was included in the Draft EIR and compared to the environmental impacts associated with the proposed project. The Draft EIR included a qualitative analysis of the VMT impacts of the reduced-density alternative. The results of the alternatives analysis determined that, while implementation of the Reduced Development Alternative would generally reduce or be similar to the proposed project's impacts, impacts on air quality, cultural (historical) resources, and transportation (VMT) would continue to be significant and unavoidable.

Since preparation of the Draft EIR, a quantitative VMT assessment for the Reduced Development Alternative was conducted by Kimley-Horn and Associates, Inc. in order to further substantiate the alternative's significant and unavoidable VMT impact determination. To calculate VMT for the Reduced Development Alternative, Orange County Transportation Analysis Model (OCTAM), Version 5.1 (OCTAM) was run for the cumulative plus alternative (2050) scenario, and calculations from the relevant OCTAM output files were completed to estimate the anticipated Home-Based VMT (for residential VMT) and Total Countywide VMT (for non-residential VMT) for the alternative's Transportation Analysis Zone (TAZ). The City's threshold of significance for a project's VMT impact with respect to residential uses, based on the County Guidelines, is 13.21 VMT per capita (15 percent below the existing regional average). For non-residential uses, VMT is evaluated using a total VMT metric. Under this methodology, the project's non-residential uses would result in a significant transportation impact if it would cause a net increase in total VMT greater than 0. Table B: Residential VMT Impacts Comparison, and Table C: Non-Residential VMT Impacts Comparison, below, provide a summary of the VMT analysis prepared for the Reduced Development Alternative and compares it to the proposed project's VMT impacts.

Table B: Residential VMT Impacts Comparison

Analysis Scenario	Proposed Project Home-Based VMT/Capita	Reduced Development Alternative Home-Based VMT/Capita
Significance Threshold (15% Below Existing Regional Average)	13.21	13.21
Cumulative Plus Project (2050)	14.96	14.50
VMT in Excess of Significance Threshold	1.73	1.28
VMT % In Excess of Threshold	11.6%	8.8%
VMT % In Excess of Threshold (With Mitigation)	10.4%	7.6%

Source: Kimley-Horn and Associates, Inc. (2026).

Table C: Non-Residential VMT Impacts Comparison

Analysis Scenario	Proposed Project Total Countywide VMT	Reduced Development Alternative Total Countywide VMT
Significance Threshold (Net Increase in Total VMT)	> 0	>0
Cumulative Plus Project (2050) Without Retail	157,660,001	157,584,513
Cumulative Plus Project (2050) With Retail	157,643,286	157,553,522
Net Change in VMT With Retail (2050)	-16,715	-30,991

Source: Kimley-Horn and Associates, Inc. (2026).

As shown in Table C, the Reduced Development Alternative's non-residential VMT would be below the County's significance threshold for non-residential uses, resulting in a less than significant non-residential VMT impact, similar to the proposed project. However, because the Reduced Development Alternative would exceed the residential significance threshold even with implementation of the same mitigation as the proposed project, as shown in Table B, the Reduced Development Alternative's residential component would result in a significant and unavoidable VMT impact, similar to the proposed project. As such, transportation (VMT) impacts associated with the Reduced Development Alternative would continue to be significant and unavoidable. As such, implementation of a reduced development alternative, as suggested by several commenters, would not actually reduce or eliminate transportation impacts associated with implementation of the proposed project, particularly VMT impacts.

In addition, implementation of the Reduced Development Alternative would not meet the project objectives to the same extent as the proposed project. Specifically, while the Reduced Development Alternative would facilitate development of 1,253 residential units within the Buildout Area, which would help meet the significant unmet demand for housing in the city and the project vicinity, the Reduced Development Alternative would result in 538 fewer residential units than the proposed project. As such, the Reduced Development Alternative would not satisfy project objectives related to providing much need housing in the city to the same extent as the proposed project. Further, the Reduced Development Alternative would not develop the Buildout Area consistent with the City's Housing Element and the voter-approved Specific Plan as it would not develop the site with 1,791 residential units and up to 440,000 square feet of non-residential development.

2.1.3 VESSELS CIRCLE THROUGH CONNECTION

Several comments received during the public review period questioned why Vessels Circle is not proposed to extend through the Buildout Area to terminate at Lexington Drive, providing an east-west through connection. These comments suggested that this through connection would improve traffic flow, avoid the proposed project's significant and unavoidable VMT impact, provide opportunities for alternative modes of transportation (pedestrian and bike mobility), and improve potential public health, safety, and welfare concerns.

The proposed project consists of the reasonably foreseeable buildout of the voter-approved Specific Plan, which did not include the provision of an east-west through connection through the Buildout Area. As provided in Chapter 3.0, Project Description, of the Draft EIR, the proposed project evaluated in the Draft EIR assumes the extension of Moody Street from Cerritos Avenue to Katella Avenue, as well as the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension, consistent with the voter-approved Specific Plan. The Moody Street extension would traverse the Buildout Area, passing adjacent to Lots 3, 4, 13, and 14 in VTTM 19247, and create a central north-south corridor, while the extension of Vessels Circle within Lot C would, among other things, provide access to Lots 10 and 11 in VTTM 19247. Accordingly, the Vessels Circle extension is proposed to result in a new terminus at Moody Street and would not create an east-west through connection from Moody Street to Lexington Drive through the Buildout Area. This proposal is consistent with the "backbone" circulation network provided in the Specific Plan.

As discussed above, VMT measures the amount of driving a project is expected to generate compared to the regional average and looks at the average number of miles people travel each day for activities like commuting, shopping, and errands. In general, projects located near jobs, shops, and public transit tend to have lower VMT, while those in more auto-dependent areas tend to have higher VMT. Importantly, VMT does not measure traffic congestion or roadway conditions. It focuses on how far people travel, not how traffic flows. While construction of an east-west Vessels Circle through connection to Lexington Drive would nominally reduce VMT associated with vehicles traveling east and west of the Buildout Area as vehicles would not have to drive around the Buildout Area, based on existing peak hour traffic volumes taken for the Lexington Drive/Cerritos Avenue, Lexington Drive/Katella Avenue, Walker Street/Katella Avenue, and Walker Street/Cerritos Avenue intersections, there is little demand for vehicle trips traveling east and west through the Buildout Area and most vehicles are traveling to and from farther locations. Accordingly, the minor reduction in VMT associated with vehicles traveling east and west of the Buildout Area would not result in any meaningful VMT reduction associated with buildout of the proposed project and would not change the overall VMT conclusions presented in the VMT Memo and Draft EIR. Therefore, because a Vessels Circle east-west through connection to Lexington Drive would not substantially reduce the distance people are traveling to and from the Buildout Area, modifying the proposed project to include a Vessels Circle east-west through connection to Lexington Drive would not reduce or avoid the proposed project's significant and unavoidable VMT impact. This proposal also was not contemplated in the Specific Plan and construction of a new east-west connection would not be permitted under the existing Specific Plan. An amendment to the Specific Plan would be required, which necessitates another voter-approval, similar to the Measure S approval process.

In addition, as previously discussed, because the proposed project is analyzed in the Draft EIR at the programmatic level, the specific future projects associated with implementation of the proposed project, including the specific accessways and internal roadway network beyond the main "backbone" roadways shown on Figure 3-5 of the Draft EIR, cannot be determined at this time. Future development projects associated with implementation of the proposed project would be reviewed by the City on a project-by-project basis in order to ensure that the proposed development is consistent with the Specific Plan. Specifically, through the design review process, future development projects would be required to submit a detailed site plan that depicts the

proposed circulation network for each development, including pedestrian pathways and bicycle trails that would be included in each development. As such, project-specific design review for future development projects would provide various routes for pedestrians and cyclists, even in these are not provided as part of a Vessels Circle through connection to Lexington Drive.

Further, as discussed in Section 4.17, Transportation, of the Draft EIR, implementation of the proposed project would provide sidewalks along the project frontages and throughout the Buildout Area that would provide connections to existing pedestrian and bicycle facilities in the surrounding area. Specifically, as discussed in Section 4.17 of the Draft EIR, the proposed project is assumed to include the addition of approximately 1 mile of bicycle facilities, connecting to the existing bicycle network. In addition, pedestrian access via sidewalks to the Buildout Area would be from Katella Avenue, Cerritos Avenue, Lexington Drive, and Vessels Circle, as extended. Additional pedestrian circulation improvements include sidewalks along the extension of Moody Street south of Cerritos Avenue. These pathways, together with the existing pedestrian infrastructure on the surrounding streets, would ensure seamless integration with the broader pedestrian network, effectively linking the Buildout Area with nearby amenities and transit options.

Additionally, as detailed in **Mitigation Measure TRA-1**, the proposed project would be required to implement feasible TDM strategies to mitigate the proposed project's VMT impact, which include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network and improving the pedestrian network, including the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area. All future development facilitated by the proposed project would be required to comply with the requirements of **Mitigation Measure TRA-1** related to providing and improving bicycle and pedestrian facilities, as well as City policies regarding bicycle parking and other infrastructure. In addition, the proposed project would not include features that would disrupt existing or planned bicycle or pedestrian facilities. Therefore, the proposed project would improve pedestrian and bicycle mobility in the Buildout Area and in the surrounding area and would help further the City's goals of promoting alternative transportation.

As discussed in Section 4.15, Public Services, of the Draft EIR, based on communication with the Orange County Fire Authority (OCFA) and Cypress Police Department (CPD), implementation of the proposed project would not result in any significant impacts related to fire, police protection, or emergency services. In addition, all future projects implemented in accordance with the proposed project would be required to adhere to all OCFA and CPD requirements, including providing adequate fire flow/structure protection to the properties, hydrants spaced to meet the minimums identified in the fire code, and providing adequate access for emergency vehicles.

Further, all future development projects would be required to obtain City approval of building plans prior to issuance of building permits and would be required to demonstrate during the development review process that law enforcement providers would be able to provide adequate police protection services. In addition, through the City budgetary process a portion of development impact fees would be directed to the CPD, as deemed necessary. The development impact fees have been adopted by the City and are updated periodically following the preparation of a nexus study to confirm that the impact fees are in alignment with the costs required to complete new capital improvements to serve the new development. Future development would also be required to

comply with **Regulatory Compliance Measure PS-1**, which requires coordination with OCFA to determine if any development impact fees will be required for the project related to OCFA staffing and service. Therefore, implementation of the proposed project would not result in any potential significant impacts related to public health, safety and welfare.

Overall, implementation of the proposed project, which does not currently include an east-west Vessels Circle through connection to Lexington Drive, would be consistent with City goals related to encouraging alternative modes of transportation and improving pedestrian and bicycle connections, and does not result in any potentially significant impacts related to public health, safety and welfare. In addition, the provision of an east-west Vessels Circle through connection to Lexington Drive would not reduce the proposed project's significant and unavoidable VMT impact.

RE: DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE SPECIFIC PLAN 3.0 BUILDOUT PROJECTDATED MARCH 17, 2026, STATE CLEARINGHOUSE NUMBER 2025040377

Dear Alicia Velasco,

The Department of Toxic Substances Control (DTSC) reviewed the Draft Environmental Impact Report (DEIR) for the Specific Plan 3.0 Buildout Project (Project). The proposed Project consists of the reasonably foreseeable buildout of a portion of the area governed by the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) that includes approximately 134 acres of land in the city. The proposed Project includes the approval of Vesting Tentative Tract Map No. 19247 which includes lots with a total land area of approximately 151.6 acres. The proposed Project evaluated in this Draft EIR includes 1,791 residential units and 440,000 square feet of non-residential uses that could occur within the Buildout Area. S-1-1

According to the Phase I Environmental Site Assessment conducted by Partner Engineering and Science, Inc. (Partner), Historical Recognized Environmental Conditions, Controlled Recognized Environmental Conditions, and Business Environmental Risks were detected on the Project site and Partner recommended that S-1-2

an Operation and Maintenance (O&M) Program should be implemented. DTSC recommends and requests consideration of the following comments S-1-2 cont.

1. Since the proposed Project includes residential development, DTSC recommends that the City of Cypress enter into a voluntary agreement to address any existing contamination on the property or receive oversight from a self-certified local agency, DTSC, or the Regional Water Quality Control Board. If entering into one of DTSC's voluntary agreements, please note DTSC uses a single standard Request for Lead Agency Oversight Application for all agreement types. Please apply for DTSC oversight using this link: Request for Agency Oversight Application. Submittal of the online application includes an agreement to pay costs incurred during agreement preparation. If you have any questions about the application portal, please contact the relevant Regional Brownfield Coordinator for your Project. S-1-3
2. DTSC recommends all imported soil/fill material be tested to ensure all COCs meet screening levels as outlined in DTSC's Preliminary Endangerment Assessment Guidance Manual. Furthermore, DTSC advises referencing the DTSC Information Advisory Clean Imported Fill Material Fact Sheet if importing soil/fill is necessary. To minimize the possibility of introducing contaminated soil/fill material, there should be documentation of the origins of the soil/fill material and, if applicable, sampling be conducted to ensure that the imported soil/fill material is suitable for the intended land use. The sampling should include analysis based on the source of the soil/fill and knowledge of prior land use. S-1-4

DTSC appreciates the opportunity to comment on the DEIR for the Specific Plan 3.0 Buildout Project. Thank you for your assistance in protecting California's people and environment from the harmful effects of toxic substances. If you have any questions or would like clarification on DTSC's comments, please respond to this letter or via email for additional guidance. S-1-5

Sincerely,

2.2.1 CALIFORNIA DEPARTMENT OF TOXIC SUBSTANCES CONTROL (DTSC)

Letter Code: S-1
Date: March 26, 2026

Response to Comment S-1-1

This comment provides introductory remarks and summarizes the proposed project.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment S-1-2

This comment summarizes the conclusions and recommendations provided in the Phase I Environmental Site Assessment (ESA) prepared for the proposed project. Specifically, this comment states that the Phase I ESA identified historical recognized environmental conditions (HREC), controlled recognized environmental conditions (CREC), and business environmental risks (BER) within the Buildout Area and recommends an Operation and Maintenance (O&M) Program be implemented.

The results of the Phase I ESA prepared for the proposed project were summarized and discussed in Section 4.9, Hazards and Hazardous Materials, of the Draft EIR. In addition, as provided in Section 4.9, future development facilitated by the proposed project would be required to implement **Mitigation Measure HAZ-1**. **Mitigation Measure HAZ-1** requires implementation of the recommendations provided in the Phase I ESA, including preparation and implementation of an O&M Plan to safely manage the asbestos containing materials (ACMs) and lead based paint (LBP) associated with the existing buildings within the Buildout Area. Mitigation Measure HAZ-1 also requires providing a copy of the Draft EIR to the Orange County Health Care Agency (OCHCA) to notify them of the proposed change in land use facilitated by the proposed project. As such, the proposed project would implement the recommendations provided in the Phase I ESA.

Response to Comment S-1-3

This comment recommends that, because the proposed project includes residential uses, the City enter into a voluntary agreement to address any existing contamination within the Buildout Area or receive oversight from a self-certified local agency, DTSC, or the Regional Water Quality Control Board (RWQCB).

As discussed above and in Section 4.9, Hazards and Hazardous Materials, of the Draft EIR, the Phase I ESA identified the presence of a CREC, a HREC, and a BER in association with the Buildout Area. The identified HREC was associated with a 2,000-gallon, two-compartment underground storage tank (UST) used for gasoline and diesel fuel located in the former golf course maintenance area near Lexington Drive, which was removed in March 2004. Due to the removal of the UST, regulatory oversight and closure, limited impacts below risk thresholds, and subsequent redevelopment of the site, the former UST is considered an HREC and no longer presents a hazardous environmental condition associated with the Buildout Area. The potential BER is associated with the age of the

buildings on site, which may include ACMs or LBP. The identified CREC was related to the historical removal of four USTs—two 10,000-gallon, one 2,000-gallon, and one 1,000-gallon—that had been used to store gasoline and diesel for maintenance vehicles. These tanks were removed in 1988 under the oversight of the OCHCA. By 1996, OCHCA granted regulatory case closure, confirming that remaining contamination levels were below thresholds of concern. The closure requires notification of OCHCA if a change in land use is proposed.

The Draft EIR prescribed **Mitigation Measure HAZ-1**, requires implementation of the recommendations provided in the Phase I ESA, including preparation and implementation of an O&M Plan to safely manage the suspect ACMs and LBP associated with the existing buildings within the Buildout Area and the notification of the OCHCA as required in the case closure summary from 1996 for the CREC due to the proposed project's change in land use. In compliance with **Mitigation Measure HAZ-1**, a copy of the Draft EIR and the NOC was provided to OCHCA as part of the public review process. The implementation of the recommendations provided in the Phase I ESA, as required by **Mitigation Measure HAZ-1**, would reduce potential impacts associated with the release of hazardous materials into the environment through reasonably foreseeable upset and accident conditions to less than significant. In addition, no active recognized environmental conditions (REC) were identified within the Buildout Area, and no additional subsurface investigations were recommended. The City has not received any correspondence from OCHCA in response to the NOP and Draft EIR.

Although there is no evidence of existing contamination within the Buildout Area that would create a significant hazard to the public or the environment based on the results of the Phase I ESA, the City will consider entering into a voluntary agreement with a self-certified local agency, DTSC, or the RWQCB as part of the development process.

Response to Comment S-1-4

This comment recommends that all imported soil/fill material be tested to ensure all chemicals of concern (COCs) meet screening levels as outlined in DTSC's Preliminary Endangerment Assessment Guidance Manual. This comment also advises referencing the DTSC Information Advisory Clean Imported Fill Material Fact Sheet if importing soil/fill is necessary, documenting of the origins of the soil/fill material, and, if applicable, conducting sampling to ensure that the imported soil/fill material is suitable for the intended land use.

Development within the Buildout Area facilitated by the proposed project would occur on a project-by-project basis and the specific design and sequencing of those projects cannot be determined at this time. Future construction would include grading and excavation activities that could require the import of soil/fill material. Consistent with DTSC's guidance, future development under the proposed project would be required to test all imported soil and fill material or source soil and fill material from a provider that is able to certify that the soil has been tested and meets established safety standards in order to minimize the possibility of introducing contaminated soil and fill material to the project site, consistent with standard construction practices.

Response to Comment S-1-5

This comment provides concluding remarks and contact information.

The City acknowledges this comment and looks forward to future communications with DTSC regarding development of the proposed project.

https://dot.ca.gov/caltrans-near-me/district-12

April 30, 2026

Ms. Alicia Velasco
Planning Director
City of Cypress
5275 Orange Avenue
Cypress, California 90630

File: LDR/CEQA
SCH: 2025040377
12-ORA-2025-03062
I-605, PM R1.441
I-405, PM 20.812
SR 22, PM R1.104
SR 39, PM 11.211

Dear Ms. Velasco,

Thank you for including the California Department of Transportation (Caltrans) in the review of the Draft Environmental Impact Report (DEIR) for the Specific Plan 3.0 Buildout Project (Project). The proposed Project includes the approval of Vesting Tentative Tract Map No. 19247 (VTTM 19247). The land subject to VTTM 19247 is greater than the Specific Plan Area because VTTM 19247 includes Lots 8 and 9, which are part of the existing Grace Church property and include approximately 17.55 acres of land located outside the area governed by the Specific Plan. The environmental analyses in this DEIR do not consider future development of Lots 8 and 9. The development scenario evaluated in the DEIR will include 1,791 residential units and 480,000 square feet of non-residential uses. VTTM 19247 includes 14 numbered lots. The proposed project includes residential development on Lots 2 through 4, 7, and 10 through 14, non-residential development on Lots 10 through 14, and the development of park and recreational improvements on Lots 1, 5 and 6. S-2-1

Regional vehicular access to the Project area is provided by Interstates (I-) 605 and I-405, which are approximately 1.5 miles to the west and 2.1 miles to the south, respectively; State Route (SR) 39, approximately 2.7 miles to the east; and SR 22, approximately 2 miles to the south. I-605, I-405, SR 39, and SR 22 are under the ownership and operation of Caltrans, which acts as a commenting agency for this project. Accordingly, Caltrans has provided the following feedback: S-2-2

1. On May 5th, 2025, the Caltrans District 12 Branch of Local Development Review (LDR)-Climate Change-Transit Planning submitted a letter to City of Cypress that included the following comment: "Analysis and discussion of the 95% vehicle queue is being requested. This is due to the additional trips on the off-ramp(s) that lead to the site and/or left-turn lane to on-ramp that came from the site at Valley View Street interchange. If there is an overflow to the adjacent lane(s), there is a potential cause of safety concerns." The comment is not included in Table 2.A (Notice of Preparation Agency Comments Received) of the DEIR. Please revise the table to include the comment. In addition, to ensure that any potential safety concern is addressed, please address the comment. S-2-3

2. Analysis and discussion of the 95% vehicle queue is being requested. This is due to the additional trips on the I-605 off-ramp(s) that lead to the site and/or right and left-turn lanes to on-ramp that came from the site at Katella Ave and W Cerritos Ave. If there is an overflow to the adjacent lane(s), there is a potential cause of safety concerns. S-2-4

3. The Traffic Study for: Cypress Specific Plan 3.0 Buildout indicates that the Project would generate approximately 21,041 vehicle trips daily, with 1,019 trips in the morning peak hour and 1,418 trips in the evening peak hours. In addition, figure 6A and 6B shows the percentage of traffic distribution direction toward state facilities. For I-605 and Cerritos ramps, I-605 and Katella Ramps, and SR 22 and Valley View Street Ramps, please demonstrate whether the project-related traffic effect is considered deficient or not under the Highway Capacity Manual (HCM) methodology and per Caltrans Guidelines. S-2-5

4. Please ensure that Caltrans is informed of any subsequent bids or future phases of development associated with this Specific Plan. S-2-6

5. Caltrans supports local developments that are consistent with State planning priorities intended to promote equity, strengthen the economy, protect the environment, and promote public and health safety. This can be achieved by promoting smart growth principles in projects which provide a diversity of housing choices and destinations accessible by active transportation (i.e. bicycle and pedestrian) and transit users. S-2-7

6. Caltrans recommends outlining the expected number of units that will be made affordable and the income levels of the affordable units in support of the final 2014-2021 Regional Housing Needs Assessment (RHNA) adopted by Southern California Association of Governments (SCAG), which identified the 2021-2029 future housing need for City of Cypress as 3,936 units, including 1,807 lower-income units. S-2-8

7. Caltrans recognizes there is a strong link between transportation and land use. Development can have a significant impact on traffic and congestion on State transportation facilities. In particular, the pattern of land use can affect both local vehicle miles traveled and the number of trips. Caltrans supports collaboration with local agencies to work towards a safe, functional, interconnected, multi-modal transportation network integrated through applicable "smart growth" type land use planning and policies. S-2-9

8. Caltrans supports measures to unbundle residential parking costs from property costs to decrease vehicle ownership and incentivize the use of public transit, resulting in a reduction of Vehicle Miles Traveled (VMT) and GHG emissions. For additional guidance, please refer to CAPCOA Handbook Strategy T-16. S-2-10

9. Caltrans encourages the design of Complete Streets that include high-quality pedestrian, bicycle, and transit facilities that are safe and comfortable for users of all ages and abilities. Improvements may include providing secure bicycle parking, pedestrian-oriented LED lighting, wayfinding signage, and comfortable connections to nearby active transportation and/or transit facilities. Complete Streets improvements also promote regional connectivity, improve air quality, reduce congestion, promote improved first-/last-mile connections, and increase safety for all modes of transportation. Continue to incorporate Complete Streets in project development. S-2-11

10. The project is adjacent or close to several existing bike facilities: Class I bike lanes on Walker Street; Class II bike lanes on Moody Street and Walker Street; and Class III bike lanes on Cerritos Avenue. Caltrans S-2-12

therefore recommends the inclusion of secure and functional short-term bike parking. Short-term bike parking at public locations should be placed in visible areas that are close to main destinations and should be installed at least 24" away from walls and other objects (e.g. trash cans, plants, etc.). With the increasing popularity of electric bikes and cargo/utility bikes, bike parking should also be designed to accommodate different styles, sizes, and weights of bikes (e.g. cargo bike, bike with trailer, adult tricycle, etc.). For additional guidance on bicycle parking best practices, see the "Essentials of Bike Parking" guidance created by the Association of Pedestrian and Bicycle Professionals (link to online PDF: https://www.apbp.org/Publications). S-2-12 cont.

11. During construction, please ensure that appropriate detours and safety measures are in place that prioritize mobility, access, and safety for all modes of transportation, including bicyclists, pedestrians, and transit users. S-2-13

12. Orange County Transportation Authority (OCTA) Route 50 runs along Katella Avenue and currently has existing bus stops near Lexington Drive, Siboney Street, Winners Circle, and Walker Street in the vicinity of the Buildout Area. Route 50 provides transportation to/from the Cities of Orange and Long Beach via Katella Avenue. OCTA Route 123 runs along Valley View Street. Caltrans encourages collaboration with OCTA to increase transit frequency to reduce waiting and overall travel times, which improves the user experience and increases the attractiveness of transit service. This results in a mode shift from single occupancy vehicles to transit, which reduces VMT and associated Greenhouse Gas (GHG) emissions. For additional guidance, please refer to the California Air Pollution Control Officers Association (CAPCOA) Handbook Strategy T-26. S-2-14

13. Please consider providing improvements to the nearest bus stops in each direction, such as bus shelters and other amenities. The developer could also consider adopting nearby bus stops for ongoing cleaning and maintenance to make it safer and more comfortable to ride transit. For additional guidance, please refer to CAPCOA Handbook Strategy T-46. S-2-15

14. Please consider providing transit subsidies to residents as an incentive to increase transit ridership, resulting in a reduction of VMT and GHG S-2-16

emissions. For additional guidance, please refer to CAPCOA Handbook Strategy T-9. S-2-16 cont.

15. The Draft EIR should quantify project generated truck activity, including daily/peak hour truck trips by class, delivery schedules, staging behavior, and loading/unloading profiles. S-2-17

16. Please evaluate whether the State Highway System (SHS) on-/off-ramps serving the project area have adequate storage capacity to prevent truck queues from spilling back into the mainline or onto local streets, and whether signal timing at ramp terminals provides sufficient clearance for heavy vehicles. Sight distance at driveways and intersections must remain unobstructed to ensure safe truck ingress/egress. S-2-18

17. The Final EIR should include a detailed analysis of internal circulation, including how trucks will navigate separate areas for processing, loading, staging, and employee/customer parking. Clear separation of functions reduces conflict risk and improves operational efficiency. S-2-19

18. If on-street loading or curbside deliveries are proposed, please ensure freight-only spaces do not intrude into bicycle lanes or travel lanes, loading ramps do not block pedestrian pathways, delivery windows avoid peak commute hours, and enforcement mechanisms are in place. S-2-20

19. The Final EIR should also address truck turning radii, internal posted speed limits, height clearances, and potential conflicts with vulnerable road users. For locations with high pedestrian/bicycle activity, additional safety treatments (e.g., marked crossings, lighting, sight line improvements) should be considered. S-2-21

20. Projects in the buildout should include zero or near zero emissions infrastructure, such as electric charging stations for passenger vehicles and Zero Emission Vehicle(ZEV) Trucks. S-2-22

21. If the project area overlaps with Assembly Bill (AB) 617 communities or high scoring CalEnviroScreen tracts, the Final EIR should describe how community identified concerns (noise, air quality, mobility barriers) will be S-2-23

mitigated to less than significant levels where feasible. Consider measures such as urban greening (e.g., green walls), enhanced buffer zones, dedicated truck routes to avoid sensitive land uses, and air and noise reduction strategies. S-2-23 cont.

22. Project plans and traffic control plans must be stamped and signed by a licensed engineer. For all plans, including traffic control plans, Caltrans Right-of-Way (R/W) lines should be clearly labeled, which include existing and proposed (if there are any changes to Caltrans R/W), the north arrow, the edge of pavement, and edge of the sidewalk, if applicable. When submitting the application, please include final Environmental Clearance Documentation, relevant design details including design exception approvals and construction and drainage plans, traffic control plans, traffic management plan and traffic impact study if proposed traffic delay of 30 minutes above normal recurring traffic delay is anticipated, any Caltrans R/W certifications if needed, maintenance agreement as needed, shoring plans for any excavation 5-feet or more, ADA certification, and any letter of authorizations. S-2-24

Caltrans' mission is to improve lives and communities through transportation. Please continue to coordinate with Caltrans for any future developments that could potentially impact State transportation facilities. If you have any questions, please do not hesitate to contact Arlo Phan at Arlo.Phan@dot.ca.gov. S-2-25

Sincerely,

Cole Iwamasa

Cole Iwamasa (on Behalf of Scott Shelley)
Office Chief
Division of Transportation Planning
Caltrans, District 12

2.2.2 CALIFORNIA DEPARTMENT OF TRANSPORTATION (CALTRANS), DISTRICT 12

Letter Code: S-2
Date: April 30, 2026

Response to Comment S-2-1

This comment provides introductory remarks and summarizes the proposed project evaluated in the Draft EIR.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment S-2-2

This comment states that because regional vehicular access to the Buildout Area is provided by Interstate (I-) 605, I-405, State Route (SR-) 39, and SR-22, which are owned and operated by Caltrans, Caltrans has provided comment on the proposed project and Draft EIR.

The City acknowledges this comment. The responses to the specific comments provided by Caltrans are provided in Response to Comment S-2-3 through Response to Comment S-2-24, below.

Response to Comment S-2-3

This comment states that the letter sent by Caltrans District 12 on May 5, 2025, in response to the NOP prepared for the proposed project, which requested analysis and discussion of the 95 percent vehicle queue, was not included in Table 2.A: Notice of Preparation Agency Comments Received, of the Draft EIR, and requested the comment letter be added and addressed.

As provided in Section 3.0, Errata, of this Final EIR, Table 2.A: Notice of Preparation Agency Comments Received, of the Draft EIR has been updated to include the NOP comment letter from Caltrans. It should be noted that although this NOP comment letter was not included in Table 2.A of the Draft EIR, this letter was summarized and discussed in Section 4.17, Transportation, of the Draft EIR.

Refer to Response to Comment S-2-4, below, for the discussion of the 95 percent vehicle queue and potential safety concerns.

Response to Comment S-2-4

This comment requests the analysis and discussion of the 95 percent vehicle queue and the potential safety concerns if there is an overflow to adjacent lane(s).

In response to the NOP released in April 2025 for the proposed project, Caltrans requested that the Draft EIR include an analysis and discussion of the 95 percent vehicle queue due to the additional trips on the State on/off-ramps that lead to and from the Buildout Area, including at the SR-22/Valley View Street interchange. Based on the anticipated number of vehicles that would use these on/off-ramps, as provided by the Traffic Study prepared for the proposed project, this analysis

was determined not to be warranted in order to conclude that traffic safety impacts, including substantially increasing hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses, would be less than significant. As such, the Draft EIR did not include the queuing analysis.

Nonetheless, in response to Caltrans' scoping comments as well as similar comments included in its Draft EIR comment letter requesting a 95 percent queuing analysis, Kimley Horn Associates prepared the *Caltrans 95% Vehicle Queue Analysis* (95% Vehicle Queue Analysis)[1] which was sent to Caltrans on April 30, 2026 to address the concerns raised by the commenter. As described above, the queuing analysis is not required under CEQA because the proposed project's contribution to traffic volumes on nearby on/off-ramps would be limited and have a less than significant impact related to traffic safety (e.g., geometric design, incompatible uses, etc.). The queuing analysis is also not required under a VMT analysis. The results of the analysis indicate the following:

- Westbound left and right vehicle queues on the SR-22 Westbound Off-ramp for the Build-Out 2038 and Build-Out 2038 Plus Project would be contained with the existing storage capacity during both peak hours. The proposed project would add approximately two vehicles to the westbound right-turn movement during the PM peak hour.

- Northbound right-turn vehicle queues at the Valley View Street/Bolsa Chica Road intersection at Garden Grove Boulevard would exceed the pocket storage for the Build-Out 2038 and Build-Out 2038 Plus Project conditions; however, the fourth through lane is a drop lane that becomes the right-turn pocket and there is sufficient lane storage to accommodate the turn movement queue. The proposed project would not add vehicles to this movement.

- Southbound left-turn vehicle queues at the Valley View Street/Bolsa Chica Road intersection at Garden Grove Boulevard would exceed the pocket storage for the Build-Out 2038 and Build-Out 2038 Plus Project conditions by approximately a half-length of a passenger vehicle. However, the dual turn pocket opening would be sufficient to accommodate this queue exceedance. The proposed project would add approximately one vehicle.

- Westbound left and right vehicle queues on the SR-22 Westbound Off-ramp for the Build-Out 2038 and Build-Out 2038 Plus Project would exceed the pocket storage for the Build-Out 2038 and Build-Out 2038 Plus Project. However, the westbound lanes become drop lanes into both the left and right-turn pockets and there is approximately 700 feet to the next intersection to accommodate the anticipated vehicle queues. The proposed project would add approximately one vehicle in the PM peak hour and would not add vehicles to the westbound left-turn movement.

Overall, because the 95% Vehicle Queue Analysis determined that the vehicle queues with implementation of the proposed project could be adequately accommodated by the existing lane configurations, implementation of the proposed project would not result in potential safety concerns due to an overflow to adjacent lanes. Therefore, the 95% Vehicle Queue Analysis confirms that traffic safety impacts with implementation of the proposed project, including substantially

[1] Kimley-Horn and Associates, Inc. 2026. *Caltrans 95% Vehicle Queue Analysis*. April 30.

increasing hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses, would remain less than significant, as provided in the Draft EIR.

In addition, as discussed in Section 4.17, Transportation, of the Draft EIR, except as otherwise provided in the Specific Plan, all roadway improvements in and around the Buildout Area shall be designed and constructed in accordance with Chapter 25, Article 5, Public Improvements, of the City's Municipal Code and applicable Public Works Design Standards, which establish minimum requirements for street widths, curb return radii, intersection design, and driveway access. Except as otherwise provided in the Specific Plan, driveway design and access control shall also comply with the City's Municipal Code, Appendix I (Zoning), Chapter 3.14 – Off-Street Parking and Loading, which regulates driveway width, location, and spacing to prevent hazardous conflicts between vehicular and pedestrian movements. In addition, except as otherwise provided in the Specific Plan, all final site and roadway improvement plans shall conform to the City's Public Works Design Criteria Manual, which incorporates *California Manual on Uniform Traffic Control Devices* (CA MUTCD) standards for intersection control, sight distance, and geometric design. Further, all final improvement and site access plans shall be subject to review and approval by the City's Public Works prior to issuance of building permits. Compliance with these requirements and design standards would ensure that new roadway and driveway improvements avoid sharp curves, unsafe intersection geometry, and visual obstructions, thereby maintaining safe and efficient circulation within and adjacent to the Buildout Area. For these reasons, the proposed project's impact related to a substantial increase in hazards due to a design feature or incompatible use would be less than significant, as provided in the Draft EIR.

Response to Comment S-2-5

This comment is related to the Traffic Study prepared for the proposed project and requests that potential deficiencies under the Highway Capacity Manual (HCM) methodology and/or the Caltrans Guidelines be demonstrated for the I-605 and Cerritos Avenue ramps, the I-605 and Katella Avenue ramps, and the SR-22 and Valley View Street ramps.

The City acknowledges this comment. As previously discussed, transportation impacts under CEQA are evaluated based on a project's effect on VMT, not LOS. The Traffic Study is only referenced in the Draft EIR as it relates to the anticipated number of daily vehicle trips associated with full buildout of the proposed project. No analysis contained in the Traffic Study is included in the Draft EIR, and the Traffic Study is provided on the City's website for informational purposes only. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment S-2-6

This comment requests that Caltrans be informed of any subsequent bids or future phases of development associated with implementation of the Specific Plan.

The City will continue to inform and coordinate with Caltrans regarding future development of the Buildout Area associated with implementation of the proposed project. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment S-2-7

This comment states that Caltrans supports local developments that are consistent with State planning priorities intended to promote equity, strengthen the economy, protect the environment, and promote public and health safety, which can be achieved by promoting smart growth principles in projects which provide a diversity of housing choices and destinations accessible by active transportation (i.e. bicycle and pedestrian) and transit users.

As discussed in Chapter 3.0, Project Description, of the Draft EIR, the Specific Plan includes six land use districts that permit housing at a range of densities, which allows for the development of various housing typologies. Specifically, the Specific Plan's Mixed-Use (Town Center/HDR) District permits higher-density residential development with a maximum density of 30 dwelling units per gross acre. The Mixed-Use (Town Center/MDR) District allows for medium-density residential development with a maximum density of 15 dwelling units per acre. The Specific Plan also includes a Residential District that allows a mix of attached and detached single family residential uses as well as two other land use districts that would allow medium density residential development. Therefore, the proposed project would provide for a variety of residential densities and housing typologies.

In addition, as discussed in Section 4.17, Transportation, of the Draft EIR, implementation of the proposed project would provide sidewalks along the project frontages and throughout the Buildout Area that would provide connections to existing pedestrian and bicycle facilities in the surrounding area. Specifically, the proposed project is assumed to include the addition of approximately 1 mile of bicycle facilities, connecting to the existing bicycle network. In addition, pedestrian access via sidewalks to the Buildout Area would be from Katella Avenue, Cerritos Avenue, Lexington Drive, and Vessels Circle, as extended. Additional pedestrian circulation improvements include sidewalks along the extension of Moody Street south of Cerritos Avenue. These pathways, together with the existing pedestrian infrastructure on the surrounding streets, would ensure seamless integration with the broader pedestrian network, effectively linking the Buildout Area with nearby amenities and transit options.

Additionally, as detailed in **Mitigation Measure TRA-1**, the proposed project would be required to implement feasible TDM strategies to mitigate the proposed project's VMT impact, which include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network and improving the pedestrian network, including the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area. All future development facilitated by the proposed project would also be required to comply with City policies regarding bicycle parking and other infrastructure. In addition, the proposed project would not include features that would disrupt existing or planned bicycle or pedestrian facilities, and the Buildout Area is located in proximity to transit service provided by the Orange County Transportation Authority (OCTA) along Katella Avenue and Valley View Street. OCTA Route 50 runs along Katella Avenue, with existing bus stops located near Lexington Drive, Siboney Street, Winners Circle, and Walker Street in the vicinity of the Buildout Area. Therefore, the proposed project would improve pedestrian and bicycle mobility in the Buildout Area and in the surrounding area and would help further the City's goals of promoting alternative transportation.

Therefore, the proposed project would be consistent with State planning priorities intended to promote equity, strengthen the economy, protect the environment, and promote public and health safety. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment S-2-8

This comment recommends that the expected number of affordable units and the income levels for the affordable units be outlined for the proposed project.

The Draft EIR analyzed buildout of the Specific Plan within the Buildout Area at a "programmatic" level. According to Section 15168 of *State CEQA Guidelines,* a Program EIR may be prepared for a series of actions that are related geographically, as logical parts in a chain of contemplated actions, or in connection with the issuance of plans that govern the conduct of a continuing program (per Section 15168(a)). If a later activity is found to be within the scope of the Program EIR, no further environmental documents would be required.

Because the proposed project is analyzed in the Draft EIR at the programmatic level, the specific future projects associated with implementation of the proposed project, including the specific number of affordable (low income), moderate (medium income), or market rate units that would be constructed within the Buildout Area, cannot be determined at this time. However, future development projects associated with implementation of the proposed project would be reviewed by the City on a project-by-project basis in order to ensure that the proposed development application specifies the income levels for proposed residential units.

Response to Comment S-2-9

This comment states that Caltrans supports collaboration with local agencies to work towards a safe, functional, interconnected, multi-modal transportation network integrated through applicable "smart growth" type land use planning and policies.

The City acknowledges this comment and will continue to coordinate with Caltrans regarding future development of the Buildout Area associated with implementation of the proposed project. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment S-2-10

This comment states that Caltrans supports measures to unbundle residential parking costs from property costs to decrease vehicle ownership and incentivize the use of public transit, resulting in a reduction of VMT and GHG emissions.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment S-2-11

This comment states that Caltrans encourages the design of Complete Streets that include high-quality pedestrian, bicycle, and transit facilities that are safe and comfortable for users of all ages and abilities.

Although the City does not currently have a Complete Streets requirement for new development, future development projects associated with implementation of the proposed project would consider the incorporation of Complete Streets design. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment S-2-12

This comment states that because the Buildout Area is in proximity to several existing bike facilities, including Class I bike lanes on Walker Street, Class II bike lanes on Moody Street and Walker Street, and Class III bike lanes on Cerritos Avenue, Caltrans recommends the inclusion of secure and functional short-term bike parking.

As discussed in Section 4.17, Transportation, of the Draft EIR, all future development associated with implementation of the proposed project would be required to comply with City policies regarding bicycle parking and other infrastructure. Accordingly, secure and functional short-term bike parking would be provided as part of future development. However, because the specific future projects associated with implementation of the proposed project cannot be determined at this time, the specific number and location of short-term bike parking also cannot be determined at this time. As part of the design review process for future development projects, these projects would be required to submit a detailed site plan that depicts the locations of short-term bike parking that would be included in each development, consistent with the Specific Plan and City requirements.

Response to Comment S-2-13

This comment requests that appropriate detours and safety measures are in place during construction that prioritize mobility, access, and safety for all modes of transportation, including bicyclists, pedestrians, and transit users.

As discussed in Section 4.17, Transportation, of the Draft EIR, temporary delays in traffic may occur during construction activities associated with implementation of the proposed project due to oversized vehicles traveling at lower speeds on the surrounding roadways turning into the Buildout Area. In addition, construction activities may require temporary road or lane closures in the vicinity of the Buildout Area. However, traffic generated by construction activity would be limited in duration and a Transportation Construction Plan (TCP) for construction activities associated with each development project within the Buildout Area would be submitted to the City of Cypress Public Works Department for review and approval. The TCP would include safety measures that prioritize mobility, access, and safety for all modes of transportation, including bicyclists, pedestrians, and transit users. Therefore, this request from Caltrans would be implemented during future construction activities and construction traffic impacts would be less than significant, as identified in the Draft EIR.

Response to Comment S-2-14

This comment encourages collaboration with OCTA to increase transit frequency in the vicinity of the Buildout Area to reduce waiting and overall travel times.

As discussed in Section 4.17, Transportation, of the Draft EIR, the City's General Plan Circulation Element contains Policy CIR-2.6, which requires the City to respond to increases in demand for additional bus service through interaction with OCTA and other available resources. Consistent with this policy, the City continually assesses ridership demand and coordinates with OCTA in order to address any potential service deficiencies in service. OCTA has also recently completed the 2024 Orange County Transit Vision Master Plan,[2] which aims to integrate, enhance, and expand multimodal transportation services throughout the County and is currently developing the Directions 2050 plan[3] to update OCTA's Long-Range Transportation Plan (LRTP). Directions 2050 will look ahead to 2050 and outline strategies to ensure that the County's transportation system remains efficient, safe, balanced, and sustainable, and addresses the provision of transit services. OCTA's Fiscal Year (FY) 2025-2026 budget also highlights increased transit service, including adding more bus service to meet rising demand, and investments in transit infrastructure.[4] Therefore, the City is already coordinating with OCTA regarding improving transit services. Further, as discussed in Section 4.17 of the Draft EIR, implementation of the proposed project would not interfere with implementation of these transit planning documents, including the specific actions to address the growing need for expanded transit service.

Response to Comment S-2-15

This comment requests the consideration of providing improvements to the nearest bus stops in each direction or adopting nearby bus stops for ongoing cleaning and maintenance.

As discussed above and in Section 4.17, Transportation, of the Draft EIR, implementation of the proposed project would not result in any significant impacts related to transit services and no improvements to bus stops are currently proposed. Future project developers associated with implementation of the proposed project may consider the provision of bus stop improvements or the adoption of the nearby bus stops.

Response to Comment S-2-16

This comment requests the consideration of providing transit subsidies as an incentive to increase transit ridership.

---

2 Orange County Transportation Authority (OCTA). 2025a. *2024 Orange County Transit Vision Master Plan*. May.

3 Orange County Transportation Authority (OCTA). 2025c. OCTA Seeks Public Input to Help Shape Orange County's Transportation Future. October 3. Website: https://www.octa.net/news/news-releases/octa-seeks-public-input (accessed October 2025).

4 Orange County Transportation Authority (OCTA). 2025b. OCTA Approves $1.74 Billion Balanced Budget for FY 2025-26. June 6. Website: https://www.octa.net/news/news-releases/octa-approves-174-billion-balanced-budget-for-fy-2025-26 (accessed October 2025).

As discussed above and in Section 4.17, Transportation, of the Draft EIR, implementation of the proposed project would not result in any significant impacts related to transit services and no transit subsidies for future occupants are currently proposed. Future project developers associated with implementation of the proposed project may consider the provision of transit subsidies for future occupants.

Response to Comment S-2-17

This comment states that the Draft EIR should quantify project-generated truck activities, including daily/peak hour truck trips by class, delivery schedules, staging behavior, and loading/unloading profiles.

As previously discussed, because the proposed project is analyzed in the Draft EIR at the programmatic level, the specific future projects associated with implementation of the proposed project cannot be determined at this time. The Draft EIR assumes the construction of up to 440,000 square feet of non-residential development, which could include retail, commercial, office, or other similar uses. However, because the specific future projects and non-residential uses cannot be determined at this time, the specific delivery schedules, staging behavior, and loading/unloading profiles also cannot be determined at this time. In addition, although some of these uses may include some light delivery activities, the proposed uses do not typically generate a significant number of truck trips.

In addition, future development projects associated with implementation of the proposed project would be reviewed by the City on a project-by-project basis in order to ensure that project operations would not result in disruptions of public roadways due to delivery staging behavior or loading/unloading activities that go beyond what was analyzed in the Draft EIR. Specifically, through the design review process, future development projects would be required to submit a detailed site plan that depicts delivery truck routes and loading/unloading area, if necessary, consistent with City requirements.

Response to Comment S-2-18

This comment requests the evaluation of whether the State Highway System (SHS) on-/off-ramps serving the project area have adequate storage capacity to prevent truck queues from spilling back into the mainline or onto local streets, and whether signal timing at ramp terminals provides sufficient clearance for heavy vehicles.

The City acknowledges this comment. As previously discussed in the Response to Comment S-2-4, the 95% Vehicle Queue Analysis completed for the proposed project determined that the vehicle queues at the Valley View Street/Bolsa Chica Road and Garden Grove Boulevard intersection and the SR-22 Westbound off-ramp with implementation of the proposed project could be adequately accommodated by the existing lane configurations and that implementation of the proposed project would not result in potential safety concerns due to an overflow to adjacent lanes. Therefore, traffic safety impacts with implementation of the proposed project, including substantially increasing hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses, would remain less than significant, as provided in the Draft EIR. Given that the

Specific Plan does not allow the types of commercial and industrial land uses that would generate substantial truck traffic on nearby roadways, including the SHS, no additional analysis is warranted.

Response to Comment S-2-19

This comment states that the Final EIR should include a detailed analysis of internal circulation, including how trucks will navigate separate areas for processing, loading, staging, and employee/customer parking.

As previously discussed, because the proposed project is analyzed in the Draft EIR at the programmatic level, the specific future projects associated with implementation of the proposed project, including the specific internal circulation improvements beyond the main "backbone" roadways and how trucks would navigate separate areas for processing, loading, staging, and employee/customer parking, cannot be determined at this time. However, future development projects associated with implementation of the proposed project would be reviewed by the City on a project-by-project basis in order to ensure that the proposed development complies with City requirements relating to circulation improvements and that project operations would not result in disruptions of public roadways due to loading and staging activities. Specifically, through the design review process, future development projects would be required to submit a detailed site plan that depicts delivery truck routes, loading/unloading areas, and employee/customer parking, consistent with City requirements.

Response to Comment S-2-20

This comment states that if on-street loading or curbside deliveries are proposed, they should be designed to ensure that freight-only spaces do not intrude into bicycle lanes or travel lanes, loading ramps do not block pedestrian pathways, delivery windows avoid peak commute hours, and enforcement mechanisms are in place.

As discussed above, because the proposed project is analyzed in the Draft EIR at the programmatic level, the specific future projects associated with implementation of the proposed project, including the specific internal circulation improvements and locations of loading or curbside deliveries zones, cannot be determined at this time. However, future development projects associated with implementation of the proposed project would be reviewed by the City on a project-by-project basis in order to ensure that the proposed development complies with City requirements relating to circulation improvements. Specifically, through the design review process, future development projects would be required to submit a detailed site plan that depicts delivery truck routes and loading/unloading areas to ensure that freight-only spaces do not intrude into bicycle lanes or travel lanes, loading ramps do not block pedestrian pathways, delivery windows avoid peak commute hours, and enforcement mechanisms are in place.

Response to Comment S-2-21

This comment states that the Final EIR should address truck turning radii, internal posted speed limits, height clearances, and potential conflicts with vulnerable road users. This comment also states that additional safety treatments (e.g., marked crossings, lighting, sight line improvements) should be considered in locations with high pedestrian/bicycle activity.

The proposed project is analyzed in the Draft EIR at the programmatic level. The specific future projects associated with implementation of the proposed project, including the specific internal circulation improvements, cannot be determined at this time. Future development projects associated with implementation of the proposed project would be reviewed by the City on a project-by-project basis in order to ensure that the proposed development complies with City requirements relating to truck turning radii, internal posted speed limits, height clearances, and potential conflicts with vulnerable road users.

However, except as otherwise provided in the Specific Plan, all roadway improvements in and around the Buildout Area shall be designed and constructed in accordance with Chapter 25, Article 5, Public Improvements, of the City's Municipal Code and applicable Public Works Design Standards, which establish minimum requirements for street widths, curb return radii, intersection design, and driveway access. Except as otherwise provided in the Specific Plan, driveway design and access control shall also comply with the City's Municipal Code, Appendix I (Zoning), Chapter 3.14 – Off-Street Parking and Loading, which regulates driveway width, location, and spacing to prevent hazardous conflicts between vehicular and pedestrian movements. In addition, except as otherwise provided in the Specific Plan, all final site and roadway improvement plans shall conform to the City's Public Works Design Criteria Manual, which incorporates *California Manual on Uniform Traffic Control Devices* (CA MUTCD) standards for intersection control, sight distance, and geometric design. Further, all final improvement and site access plans shall be subject to review and approval by the City's Public Works prior to issuance of building permits. Compliance with these requirements and design standards would ensure that new roadway and driveway improvements avoid sharp curves, unsafe intersection geometry, and visual obstructions, thereby maintaining safe and efficient circulation within and adjacent to the Buildout Area. For these reasons, the proposed project's impact related to a substantial increase in hazards due to a design feature or incompatible use would be less than significant, as provided in the Draft EIR.

Response to Comment S-2-22

This comment states that future projects within the Buildout Area should include zero or near zero emissions infrastructure, such as electric charging stations for passenger vehicles and Zero Emission Vehicle (ZEV) trucks.

As discussed in Section 4.8, Greenhouse Gas Emissions, of the Draft EIR, **Mitigation Measure AIR-1** would require future development facilitated by the proposed project provide enhanced electric vehicle charging infrastructure that meets the requirements of the latest version of the CALGreen Code Tier 2 Voluntary Standards, consistent with the California Air Resources Board's (CARB) Scoping Plan guidance.

Response to Comment S-2-23

This comment states that if the project area overlaps with Assembly Bill (AB) 617 communities or high scoring CalEnviroScreen tracts, the Final EIR should describe how community identified concerns (noise, air quality, mobility barriers) will be mitigated to less than significant levels where feasible. This comment also suggested measures to achieve this, including urban greening (e.g., green walls), enhanced buffer zones, dedicated truck routes to avoid sensitive land uses, and air and noise reduction strategies.

According to the California Environmental Health Screening Tool (CalEnviroScreen 5.0),[5] the Buildout Area and the areas located directly east and west of the Buildout Area are scored at 55.88, meaning that they are around the 56th percentile statewide for all CalEnviroScreen 5.0 considerations. This indicates moderate cumulative environmental and socioeconomic burden relative to other California communities. Areas located directly north of the Buildout Area are scored at 49.11 and areas located directly south are scored at 41.9, meaning they are around 49th and 42nd percentile statewide for all CalEnviroScreen 5.0 considerations. This indicates a lower than average cumulative environmental and socioeconomic burden relative to other California communities. Accordingly, the Buildout Area and surrounding area are not high scoring CalEnviroScreen tracts. In addition, the South Coast Air Quality Management District (SCAQMD) does not designate any specific AB 617 communities within the City of Cypress.[6]

Response to Comment S-2-24

This comment states that project plans and traffic control plans must be stamped and signed by a licensed engineer, and all Caltrans Right-of-Way (R/W) lines should be clearly labeled. This comment also provides the requirements for submitting the application to Caltrans.

All future project plans and traffic control plans shall be stamped and signed by a licensed engineer. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment S-2-25

This comment provides concluding remarks and contact information.

The City acknowledges this comment and looks forward to future coordination with Caltrans regarding development of the proposed project.

Draft Environmental Impact Report (EIR) for the Specific Plan 3.0 Buildout Project (Proposed Project) (SCH#: 2025040377)

South Coast Air Quality Management District (South Coast AQMD) staff appreciate the opportunity to review the above-mentioned document. The City of Cypress is the California Environmental Quality Act (CEQA) Lead Agency for the Proposed Project. To provide context, South Coast AQMD staff have provided a brief summary of the project information and prepared the following comments which are organized by topic of concern.

Summary of Proposed Project Information in the Draft EIR

R-1-1

Based on the Draft EIR, the Proposed Project consists of the development of approximately 134 acres within the Cypress Town Center and Commons Specific Plan 3.0 area, including 1,791 residential units, non-residential uses (440,000 square feet), and 18.2 acres of park and recreational improvements. The project also includes 112 attached townhomes on Lot 14, which totals 7.33 acres. Based on a review of aerial photographs, South Coast AQMD staff found that the nearest sensitive receptor (e.g., single-family residential uses) is located 10 feet east of the Lot 14 site. The Proposed Project is located at 4961 Siboney Street in Cypress.

South Coast AQMD Comments

Overlapping Construction and Operational Activities

R-1-2

Even though the Proposed Project consists of approximately a total of 134 acres of land over the course of 12-year construction, the Draft EIR does not analyze the scenario of overlapping between the construction and operational activities. Therefore, South Coast AQMD staff recommends that the Lead Agency revise the air quality analysis section to consider the overlapping construction and operation. The estimated overlapped emissions should then be compared to South Coast AQMD's regional air quality CEQA operational thresholds to determine their level of significance, which should be included in the Final EIR. If the overlapped emissions analysis is not included in the Final EIR, the Lead Agency should provide reasons for not having them supported by substantial evidence in the record.

Air Quality Mitigation Measures for NOx and PM Emissions from Construction

R-1-3

Given the long-range plan of the Proposed Project from (project duration: 2026-2038), Tier 2 technology is not the cleanest technology when construction occurs later for individual projects. According to the CARB's Strategies for Reducing Emissions from Off-Road Construction Equipment, the implementation of off-road Tier 5 starting in 2027 or 2028 and the Governor's Executive Order in September 2020 requires CARB to develop and propose a full transition to Zero Emission (ZE) by 2035.[14] Considering the scope of the project, it is crucial to ensure that the levels of construction emissions, specifically NOx and PM_{10}, remain below significant thresholds during the construction period for each proposed individual project. Moving towards achieving this goal, where feasible, involves opting for electric engines instead of diesel-fueled engines for the construction equipment. This proactive choice not only aligns with environmental concerns but also demonstrates a commitment to minimizing the project's environmental footprint. The abatement of NOx can also be pursued by enforcing greener constructions, such as limiting the usage of older engines in favor of adopting the latest available technologies or even incorporating exhaust retrofits such as cutting-edge exhaust aftertreatment techniques. Additionally, several other resources to assist the Lead Agency with identifying additional potential mitigation measures for the Proposed Project are included in the South Coast AQMD's CEQA Air Quality Handbook[15] for both operational and construction emissions.

R-1-3 cont.

Emission Reductions from Health Risk Strategies

South Coast AQMD is concerned about the potential public health impacts of sitting existing and new sensitive populations within the proximity of existing air pollution sources (e.g., freeway, railroad). For this reason, prior to approving this Proposed Project as well as any future development projects, the Lead Agency is recommended to consider the impacts of air pollutants on people who will live in the new project area and provide effective mitigation. Additionally, South Coast AQMD suggests that the Lead Agency review and apply the guidance provided in: 1) the California Air Resources Board (CARB) Air Quality Land Use and Handbook: A Community Health Perspective[1] which provides criteria for evaluating and reducing air pollution impacts associated with new projects involving land use decisions; and 2) CARB's technical advisory which contains strategies to reduce air pollution exposure near high-volume roadways.[2]

R-1-4

Many strategies are available for residential receptors to reduce being exposed to particulate matter, including, but not limited to, HVAC systems equipped with filters rated at a minimum efficiency reporting value (MERV) 13 or higher air filtration capabilities. In some cases, MERV 15 or better is recommended, for building design, orientation, location, vegetation barriers, landscaping screening, etc. Enhanced filtration units are capable of reducing exposure. However, enhanced filtration systems have limitations. For example, filters rated MERV 13 or higher are able to screen out greater than or equal to 50% of DPM[3] but they have no ability to filter out volatile organic compound (VOC) emissions. Also, in a study that South Coast AQMD conducted to investigate filters rated at MERV 13 or better in classrooms,[45] a cost burden is

[1] California Air Resources Board (CARB), Air Quality Land Use and Handbook: A Community Health Perspective, April 2005. Available at: https://ww2.arb.ca.gov/sites/default/files/2023-05/Land%20Use%20Handbook_0.pdf
[2] CARB's Strategies to Reduce Air Pollution Exposure Near High-Volume Roadways. Available at: https://ww2.arb.ca.gov/sites/default/files/2017-10/rd_technical_advisory_final.pdf
[3] U.S. EPA, "What is a MERV rating?" Available at: https://www.https://www.epa.gov/indoor-air-quality-iaq/what-merv-rating.
[4] South Coast AQMD, Draft Pilot Study of High-Performance Air Filtration For Classroom Applications, October 2009. Available at: https://www.aqmd.gov/docs/default-source/ceqa/handbook/aqmdpilotstudyfinalreport.pdf.

expected to be within the range of $120 to $240 per year to replace each filter panel. The initial start-up cost could substantially increase if an HVAC system needs to be installed and if standalone filter units are required. Installation costs may vary, including costs for conducting site assessments and obtaining permits and approvals before filters can be installed. Other costs may include filter life monitoring, annual maintenance, and training for conducting maintenance and reporting. In addition, the filters would not have any effect unless the HVAC system is running. Therefore, when in use, the increased energy consumption from each HVAC system should be evaluated in the Draft EIR. While the filters operate 100 percent of the time when the HVAC is in use while the residents are indoors, the environmental analysis does not generally account for the times when the residents are not using their HVAC and instead have their windows or doors open or are moving throughout the common space outdoor areas of the Proposed Project. Furthermore, when used filters are replaced with new filters, emissions associated with trucks delivering the new filters and waste disposal trucks transporting the used filters to disposal sites should be evaluated in the Draft EIR. Therefore, any presumed effectiveness and feasibility of a particular HVAC filter should be carefully evaluated in more detail based on supporting evidence before assuming they will sufficiently alleviate exposure to DPM emissions. R-1-4 cont.

South Coast AQMD Air Permits and Role as a Responsible Agency

If implementation of the Proposed Project would require the use of new stationary and portable sources, including but not limited to emergency generators, fire water pumps, boilers, etc., one or more air permits from South Coast AQMD will be required. The Final EIR should include a discussion about the potentially applicable South Coast AQMD rules that may be applicable to the Proposed Project. Those rules may include, for example, Rule 201 – Permit to Construct,[6] Rule 203 – Permit to Operate,[7] Rule 401 – Visible Emissions,[8] Rule 402 – Nuisance,[9] Rule 403 – Fugitive Dust,[10] Rule 1110.2 – Emissions from Gaseous and Liquid Fueled Engines,[11] Rule 1113 – Architectural Coatings, [12] Rule 1166 – Volatile Organic Compound Emissions from Decontamination of Soil, [13] Rule 1179 – Publicly Owned Treatment Works Operations, [14] Regulation XIII – New Source Review, [15] Rule 1401 – New Source Review of Toxic Air Contaminants, [16] Rule 1466 – Control of Particulate Emissions from Soils with Toxic Air Contaminants,[17] Rule 1470 – Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines,[18] etc. It is important to note if air permits from South Coast AQMD are required, the role of South Coast AQMD would change from a Commenting R-1-5 R-1-6 R-1-7

Agency to a Responsible Agency under CEQA. In addition, if South Coast AQMD is identified as a Responsible Agency, per CEQA Guidelines Sections 15086, the Lead Agency is required to consult with South Coast AQMD. R-1-7 cont.

Conclusion

As set forth in California Public Resources Code Section 21092.5(a) and CEQA Guidelines Section 15088(a-b), the Lead Agency shall evaluate comments from public agencies on the environmental issues and prepare a written response at least 10 days prior to certifying the Final EIR. As such, please provide South Coast AQMD written responses to all comments contained herein at least 10 days prior to the certification of the Final EIR. In addition, as provided by CEQA Guidelines Section 15088(c), if the Lead Agency's position is at variance with recommendations provided in this comment letter, detailed reasons supported by substantial evidence in the record to explain why specific comments and suggestions are not accepted must be provided. R-1-8

Thank you for the opportunity to provide comments. South Coast AQMD staff are available to work with the Lead Agency to address any air quality questions that may arise from this comment letter. Please contact Sahar Ghadimi, Air Quality Specialist, at sghadimi@aqmd.gov should you have any questions.

Sincerely,

Sam Wang

2.3.1 SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT (SCAQMD)

Letter Code: R-1
Date: April 30, 2026

Response to Comment R-1-1

This comment provides introductory remarks and summarizes the scope of the Draft EIR.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment R-1-2

This comment states the Draft EIR does not analyze the scenario of overlapping construction and operational activities and recommends that the air quality analysis and Draft EIR section be revised to consider air emissions of overlapping construction and operation. This comment also states that if the overlapped emissions analysis is not included in the Final EIR, the City should provide reasons for not having them supported by substantial evidence in the record.

The commenter's concern regarding overlapping construction activities has already been addressed in the Draft EIR. As discussed in Section 4.3, Air Quality, the air quality analysis included a separate CalEEMod modeling scenario specifically developed to evaluate a conservative worst-case construction condition involving simultaneous grading activities across multiple development areas within the Buildout Area. This scenario was intended to represent overlapping construction schedules and to capture peak construction emissions associated with concurrent grading activities.

With respect to overlapping construction and operational activities, the proposed project is a program-level Specific Plan buildout project. Development within the Buildout Area would occur incrementally over time on a project-by-project basis, and the specific timing, sequencing, location, and design of future development projects cannot be determined at this time. As discussed in the Draft EIR, future development may occur in phases based on market conditions, infrastructure availability, financing, and other factors. Therefore, while it is reasonably foreseeable that some portions of the Buildout Area could become operational while construction continues elsewhere, the precise extent and timing of such overlap cannot be known and would be speculative.

CEQA requires analysis of reasonably foreseeable environmental effects but does not require agencies to speculate regarding future project details that are unknown at the time of environmental review. Accordingly, the Draft EIR evaluated a conservative full-buildout operational scenario and a worst-case construction scenario to disclose the maximum anticipated emissions associated with implementation of the proposed project.

Furthermore, the Draft EIR determined that operational emissions at full buildout would exceed applicable SCAQMD regional significance thresholds. As discussed in Section 4.3, even with implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1**, operational VOC emissions would remain above SCAQMD significance thresholds, resulting in a significant and

unavoidable operational air quality impact. Because operational emissions alone would exceed SCAQMD significance thresholds, any scenario involving overlapping construction and operational activities would also result in emissions that exceed significance thresholds (as concluded on page 4.3-29).

As there are no additional feasible mitigation measures that would reduce project operational-source VOC emissions to a less than significant level, proposed project operation would result in a significant and unavoidable impact related to a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard. Therefore, the Draft EIR determined that emissions related to operational activities would be considered significant and unavoidable. The evaluation of overlapping construction and operational emissions would not result in the identification of a new significant impact, a substantially more severe impact, or additional feasible mitigation beyond that already disclosed in the Draft EIR. As such, this comment does not identify any new significant environmental issues or impacts that were not already analyzed and disclosed in the Draft EIR.

Response to Comment R-1-3

This comment states that given the scope of the proposed project, it is crucial to ensure that the levels of construction emissions, specifically NOx and particulate matter less than 10 microns in diameter (PM_{10}), remain below significant thresholds during the construction period for each proposed individual project, and that Tier 2 technology is not the cleanest technology when construction occurs later for individual projects. This comment also states that, according to the CARB's Strategies for Reducing Emissions from Off-Road Construction Equipment, the implementation of off-road Tier 5 would start in 2027 or 2028 and the Governor's Executive Order in September 2020 requires CARB to develop and propose a full transition to Zero Emission (ZE) by 2035.

As shown in Table 4.3.F and Table 4.3.G in Section 4.3, Air Quality, of the Draft EIR, utilization of Tier 2 construction equipment would result in project-related construction emissions that would be below the SCAQMD's significance thresholds. Further, as discussed in Section 4.3 of the Draft EIR, according to SCAQMD guidance, projects that exceed the significance thresholds are considered by SCAQMD to result in cumulatively considerable air quality impacts, whereas projects that do not exceed applicable thresholds are generally not considered to result in cumulatively considerable impacts. Because construction emissions associated with the proposed project would not exceed any applicable significance threshold, construction activities would not result in a cumulatively considerable contribution to regional air quality impacts. In addition, as discussed in Section 4.3, construction emissions estimates presented in the Draft EIR are conservative as they are based on default construction equipment assumptions and do not account for the Tier 4 Final or cleaner equipment requirement detailed in **Mitigation Measure AIR-2**. Actual construction emissions would therefore be expected to be lower than those presented in the modeling results and in Table 4.3.F of the Draft EIR. Accordingly, with compliance with regulatory requirements (as specified in **Regulatory Compliance Measures AIR-1** through **AIR-4**), construction impacts related to a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under applicable federal or State ambient air quality standards would be less than significant, and no additional mitigation is required.

Furthermore, the air quality analysis utilized the California Emissions Estimator Model version 2022.1 (CalEEMod) to quantify the criteria pollutant emissions for both construction and operation of the proposed project, as recommended by the SCAQMD. The cleanest available tier for construction equipment in CalEEMod is Tier 4 Final equipment, which was used in this analysis. Tier 5 construction equipment is not available in CalEEMod. As such, since impacts would be less than significant, identification and analysis of additional mitigation, such as Tier 5 or ZE construction equipment, is not required.

Response to Comment R-1-4

This comment expresses concern regarding the potential public health impacts associated with siting existing and new sensitive populations within the proximity of existing air pollution sources and recommends the City consider guidance contained in CARB's *Air Quality Land Use and Handbook: A Community Health Perspective* and CARB's technical advisory regarding strategies to reduce air pollution exposure near high-volume roadways. The comment also recommends consideration of enhanced filtration systems, HVAC design features, vegetation barriers, landscaping, and other exposure-reduction measures for future residential development.

Section 4.3, Air Quality, of the Draft EIR evaluates the potential for operational health risks to new sensitive receptors that would be developed within the Buildout Area, including future residential uses, and discusses the recommendations contained in CARB's *Air Quality Land Use and Handbook: A Community Health Perspective*. As discussed in the Draft EIR, none of the uses outlined in CARB's siting recommendations (e.g., freeways, distribution centers, rail yards, ports, etc.) are within 500 feet of the Buildout Area. The closest potential uses are the industrial uses on the western and eastern boundaries, which are further than 500 feet. The proposed project is consistent with CARB's siting recommendations. Further, none of the uses outlined in CARB's recommendations for siting new sensitive land uses are allowed under the Specific Plan and as such are not part of the proposed project, which includes non-residential and residential uses. Therefore, the uses allowed under the proposed project would not be a substantial source of Toxic Air Contaminants (TACs) that would require specific siting distances based on the CARB recommendations.

The commenter also recommends implementation of enhanced filtration systems, such as MERV-13 or higher filters, HVAC system design features, vegetation barriers, and other exposure-reduction strategies. The City acknowledges these recommendations and notes that such measures may be considered during future project-level design and site planning, as appropriate. However, because the Draft EIR did not identify a significant health risk impact associated with exposure of future residents to nearby air pollution sources, implementation of enhanced filtration systems or other exposure-reduction measures is not required to mitigate a significant impact under CEQA.

As noted by the commenter, filtration systems have inherent limitations and may involve considerations related to energy consumption, maintenance, filter replacement, and long-term operation. Because the Draft EIR did not identify a significant air quality health risk impact requiring mitigation, further evaluation of the effectiveness, operational requirements, or environmental effects associated with such filtration systems is not warranted. Nevertheless, future project applicants may voluntarily incorporate enhanced filtration systems, building orientation strategies,

landscaping features, or other design measures during subsequent project design to further improve indoor air quality and occupant comfort.

Furthermore, CEQA generally does not require evaluation of the effects of existing environmental conditions on future project users or residents unless the project would exacerbate an existing environmental hazard or condition. The proposed project would not introduce substantial new TAC sources, nor would it increase emissions from existing nearby sources. Accordingly, the proposed project would not exacerbate any existing air quality hazards in the project vicinity. Therefore, the proposed project would not pose an operational health risk to future tenants or occupants and impacts would be less than significant, as provided in the Draft EIR.

Response to Comment R-1-5

This comment states that if implementation of the proposed project would require the use of new stationary and portable sources, including but not limited to emergency generators, fire water pumps, boilers, etc., one or more air permits from SCAQMD would be required.

The City acknowledges that future development projects implemented within the Buildout Area may include equipment that is subject to SCAQMD permitting requirements. As discussed in Chapter 3.0, Project Description, of the Draft EIR, the proposed project consists of the reasonably foreseeable buildout of a portion of the area governed by the Specific Plan that includes approximately 134 acres of land (Buildout Area) in the city. Full buildout envisioned under the proposed project would include up to 1,791 residential units and 440,000 square feet of non-residential development. Because specific site plans, building designs, tenant improvements, and equipment specifications have not yet been prepared for future development projects, the precise types, sizes, locations, and operational characteristics of equipment that may require SCAQMD permits are not known at this time.

Accordingly, the Draft EIR evaluates the reasonably foreseeable environmental impacts associated with buildout of the proposed project based on currently available information. Should future development projects propose equipment that is subject to SCAQMD permitting requirements, including but not limited to emergency generators, fire pumps, boilers, or other permitted sources, those projects would be subject to review by SCAQMD and would be required to comply with all applicable federal, State, and local regulations, including applicable SCAQMD permitting requirements and rules. In addition, if permits are required, SCAQMD would serve as a Responsible Agency for the applicable future development project, consistent with CEQA.

In addition, as discussed in Section 4.3, Air Quality, of the Draft EIR, **Mitigation Measure AIR-1** requires that, prior to issuance of grading permits for development projects in the Buildout Area, the City shall identify project design details and specifications, where feasible, to document implementation and compliance with applicable emission reduction measures. Compliance with all applicable SCAQMD rules, permit conditions, and regulatory requirements would further reduce and control emissions associated with future development projects implemented within the Buildout Area.

Therefore, the Draft EIR adequately discloses the potential for future permitted equipment and recognizes that additional project-specific review may be required once sufficient design information becomes available.

Response to Comment R-1-6

This comment states that the Final EIR should include a discussion about the potentially applicable SCAQMD rules that may be applicable to the proposed project.

As discussed in Section 4.3, Air Quality, of the Draft EIR, the SCAQMD is the regional agency responsible for regulating stationary and area sources of air emissions within the South Coast Air Basin and for implementing both the federal and California Clean Air Acts through its regulatory programs. Further, all applicable SCAQMD rules and regulations that would be implemented during project implementation are listed on pages 4.3-15 through 4.3-17 of the Draft EIR. The proposed project would be required to implement all applicable SCAQMD rules and permitting requirements n order to limit potential impacts. No revisions are necessary, and no further response is required.

Response to Comment R-1-7

This comment states that if air permits from the SCAQMD are required, the role of the SCAQMD would change from a Commenting Agency to a Responsible Agency under CEQA, which would require consultation between the City as the Lead Agency and the SCAQMD.

The City acknowledges this comment. If air permits from the SCAQMD are required, the City looks forward to coordinating with the SCAQMD regarding development of the proposed project. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment R-1-8

This comment provides concluding remarks, contact information, and request that's the City provide the SCAQMD with written responses to all comments contained in the comment letter at least 10 days prior to the certification of the Final EIR, as required by California Public Resources Code Section 21092.5(a) and CEQA Guidelines Section 15088(a-b). This comment also states that if the City's position is at variance with the recommendations provided in the comment letter, detailed reasons supported by substantial evidence in the record to explain why specific comments and suggestions are not accepted must be provided.

The City acknowledges this comment and has provided written responses to all comments contained in the comment letter in this Final EIR, which will be available at least 10 days prior to the certification hearing for the proposed project. Responses to the specific comments raised in the SCAQMD's comment letter are provided above and no further response is necessary.

Comment Letter L-1

April 14, 2026

Alicia Velasco
Planning Director
City of Cypress
Community Development Department, Planning Division
5275 Orange Avenue, Cypress, CA 90630

SUBJECT: Specific Plan 3.0 Buildout Project – Notice of Preparation of a Draft Environmental Impact Report

Thank you for providing the Notice of Availability (NOA) of a Draft Environmental Impact Report for the Specific Plan 3.0 Buildout Project. "The proposed project evaluated in the Draft EIR includes 1,791 residential units and 440,000 square feet of non-residential uses that could occur within the Buildout Area." This project will have an impact to the Orange County Sanitation District (OC San) collection system, and OC San has previously issued a sewer capacity verification letter for it. L-1-1 L-1-2

OC San has a few issues; first the proposed improvements include a connection to an existing OC San sewer main. Important to note only local public sewers are allowed to connect directly to OC San sewer mains, and a trunk connection permit is required. Utility plans should be submitted to OC San's Planning Division for review as soon as they are available. Second, the proposed improvements are in a proximity to the existing OC San easement along Lexington Drive. Please note that any encroachment into the easement will require an encroachment agreement. L-1-3 L-1-4 L-1-5

If you have any questions regarding this letter, please contact Kevin Hadden, Planning Division, at 714 593-7462 or khadden@ocsan.gov. L-1-6

2.4.1 ORANGE COUNTY SANITATION DISTRICT (OC SAN)

Letter Code: L-1
Date: April 14, 2026

Response to Comment L-1-1

This comment provides introductory remarks and summarizes the scope of the Draft EIR.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment L-1-2

This comment states that the proposed project would have an impact to the Orange County Sanitation District (OC San) collection system and that OC San has previously issued a sewer capacity verification letter for the proposed project.

As discussed in Section 4.19, Utilities and Service Systems, of the Draft EIR, the Sewer Capacity Study prepared for the proposed project, which is included as **Appendix M** to the Draft EIR, analyzed the hydraulic pipe capacity for the proposed sewer lateral connection in Lexington Drive, three different locations along the proposed Moody Street Extension sewer main, and for the proposed Vessels Circle Extension sewer lateral that would connect to Moody Street Extension. The results of this analysis demonstrate that the proposed sewer lines would have adequate capacity to serve the proposed project. In addition, the Sewer Capacity Study found that the existing 18-inch pipe at proposed Sewer Connection B and the existing 21-inch pipe at the existing connection to the 30-inch OC San sewer trunk line would be adequate to serve the proposed project and no replacement facilities with increased capacity would be necessary. In addition, as provided in the Sewer Capacity Verification Letter prepared by OC San and dated July 3, 2024,[7] which is referenced in this comment, OC San has determined that it would have sufficient treatment capacity in its facilities to accept the estimated wastewater flows from the Buildout Area, as conveyed to OC San by the City's municipal sanitary sewer system. Additionally, fees required by OC San would sufficiently offset potential impacts generated by the proposed project.

As also discussed in Section 4.19 of the Draft EIR, all future projects implemented in accordance with the proposed project would be required to adhere to the Specific Plan and comply with applicable development regulations pertaining to wastewater treatment. As a part of the development review process, all future projects would be required to demonstrate that existing public utilities would be sufficient to serve the future projects' needs. Further, as discussed in the Sewer Capacity Study prepared for the proposed project, if buildout within the Buildout Area exceeds 440,000 square feet of non-residential floor area, each future applicant for a project that would cause the overall non-residential floor area within the Buildout Area to exceed, or further exceed, 440,000 square feet, would be required to prepare and submit to the City a supplemental study assessing sewer capacity

[7] Orange County Sanitation District (OC San). 2024. Orange County Sanitation District Sewer Capacity Verification, 4961 Katella Avenue, Cypress, CA 90720. July 4.

for such project. If the supplemental study concludes that no additional improvements beyond what is recommended in the Sewer Capacity Study are required to provide sufficient sewer capacity, then no additional improvements shall be required. However, if additional improvements, such as sewer upsizing or alternate/relief sewer lines, are recommended as necessary to provide sufficient sewer capacity for a future project, the applicant would be required to construct the improvements as part of the project.

Therefore, implementation of the proposed project would not result in a significant impact on the OC San collection system.

Response to Comment L-1-3

This comment states that the proposed project includes improvements that would connect to existing OC San sewer mains and notes that only local public sewers are permitted to directly connect to OC San sewer mains. The comment also states that a trunk connection permit from OC San would be required for all sewer main connection.

As discussed in Section 4.19, Utilities and Service Systems, of the Draft EIR, implementation of the proposed project would include the installation of two new sewer connections to existing sewer main lines, including (1) a new 10-inch sewer lateral extending from Lot 2 and connecting to the existing 30-inch sewer trunk line owned and maintained by OC San within Lexington Drive (Sewer Connection A), and (2) a new 8-inch sewer main line that would run north to south along the proposed Moody Street extension (Sewer Connection B), collecting sewer lateral flows from the adjacent lots before connecting to the existing 18-inch VCP City sewer main at the intersection of Siboney (Moody Street) and Katella Avenue. This proposed sewer line would be an 8-inch line where it commences and would gradually increase in size to a 15-inch line at Sewer Connection B. In addition, as recommended by the Sewer Capacity Study prepared for the proposed project, Lots 10 and 11 located on the north side of Vessels Circle would connect to the existing 8-inch City sewer line located southeast of Lot 11.

The proposed sewer infrastructure would be constructed as a local sewer system and, upon completion, would be dedicated to the City, thereby becoming part of the local public sewer system. Therefore, only local public sewers would directly connect to existing OC San sewer mains. In addition, the proposed project would obtain all necessary trunk connection permits from OC San prior to constructing the proposed connections to the existing OC San sewer system.

Response to Comment L-1-4

This comment states that utility plans should be submitted to OC San's Planning Division for review as soon as they are available.

Future development under the proposed project would be required to comply with applicable wastewater service provider requirements and regulations as part of future development. As discussed above and in Section 4.19, Utilities and Service Systems, of the Draft EIR, implementation of the proposed project would include the installation of various new sewer connections to existing sewer main lines and a new 8-inch sewer main line that would run north to south along the proposed Moody Street extension (Sewer Connection B). Consistent with OC San requirements,

utility plans would be submitted to OC San during the design phase for review in order to ensure consistency with applicable standards and requirements.

Response to Comment L-1-5

This comment states that the proposed sewer improvements would be located near an existing OC San easement along Lexington Drive and notes that any encroachment into this easement would require an encroachment agreement.

The proposed project would be required to comply with applicable OC San standards and obtain necessary permits and approvals for any work within OC San easements. Accordingly, the project applicant would coordinate with OC San and obtain an encroachment agreement prior to any encroachment into the existing OC San easement along Lexington Drive, if necessary.

Response to Comment L-1-6

This comment provides concluding remarks and contact information.

The City acknowledges this comment and looks forward to future coordination with OC San regarding development of the proposed project.

SUBJECT: RESPONSE TO THE NOTICE OF AVAILABILITY OF A DRAFT ENVIRONMENTAL IMPACT REPORT (DEIR) FOR THE SPECIFIC PLAN 3.0 BUILDOUT PROJECT

Dear Director Velasco:

Thank you for the opportunity to comment on the Notice of Availability of a Draft Environmental Impact Report (DEIR) for the Specific Plan 3.0 Buildout Project in the City of Cypress. We understand that the final project will analyze the environmental impact associated with the proposed project implementation, assess alternatives, and propose mitigation measures for identified potentially significant impacts to minimize, offset, or otherwise reduce or avoid those environmental impacts. L-3-1

Particularly concerning the City of Los Alamitos is the scope of the DEIR, which will support adding 1,926 residential unit sites and the possibility of 879,170 square feet of non-residential area on the edge of Los Alamitos. As a neighbor of the City of Cypress, the City of Los Alamitos supports the City's intent to meet its designated housing allocation, but would like to share concerns with the project's potential impacts on our adjacent community, especially the reports noted significant and unavoidable air quality and transportation impacts that come with increased density in a once-suburban area, which eventually could significantly impact quality of life. L-3-2 Of the alternatives to the project, the "Historic Preservation Alternative" was considered the Environmentally Superior Alternative, and the City of Los Alamitos would agree that, barring increased housing mandates, this would be the most desirable outcome for the project. L-3-3

Transportation

In the transportation study, the residential VMT impact would exceed the significance threshold by 10.4 percent. Therefore, the proposed project's VMT impact would be significant and unavoidable. As a further result of these locations slated for increased density near Katella Avenue, the City of Los Alamitos would see a concentration of noise, air quality, and transportation L-3-4

impacts due to the increased volume of traffic in and around the project area, as well as traveling to the westbound 605 interstate freeway. The proximity of these new units to the City of Los Alamitos' neighborhoods will create additional cumulative rush-hour congestion and health issues for the City of Los Alamitos' residents, who have already experienced increased traffic from other large housing projects in this area, particularly in the City of Cypress. L-3-4 cont.

Air Quality

As stated in the report, the project would result in a significant and unavoidable impact related to a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard. This would, of course, negatively affect the residents of Los Alamitos. L-3-5

Possible Transportation and Air Quality Mitigation

The above large concerns aside, as a couple of small mitigation measures that the City of Los Alamitos would urge, given the increased traffic projected by the DEIR, it is recommended that the City of Cypress request that the Orange County Transportation Authority (OCTA) increase bus connections and frequent bus routes throughout high-traffic periods. It is also suggested that additional bike lane connections be planned as a City policy, such as through an Active Transportation Plan (ATP), with links to the City of Los Alamitos' existing and future bike lanes. L-3-6

Corrections to the VMT Study

As part of our analysis of the project, our City's Traffic Engineer reviewed the VMT analysis. He has provided comments on the analysis, which are attached to this correspondence. However, he notes that, with this large project, the conclusion is likely to be that the project will have significant and unavoidable impacts. L-3-7

Thank you again for the opportunity to comment on the Notice of Availability of a Draft Environmental Impact Report (DEIR) for the Specific Plan 3.0 Buildout Project in the City of Cypress. If you have any questions regarding the City's comments, please contact Tom Oliver, Senior Planner, at toliver@cityoflosalamitos.org or 562-431-3538 ext. 303. L-3-8

Sincerely,

R. Noda

VMT ANALYSIS
SPECIFIC PLAN 3.0 BUILDOUT PROJECT

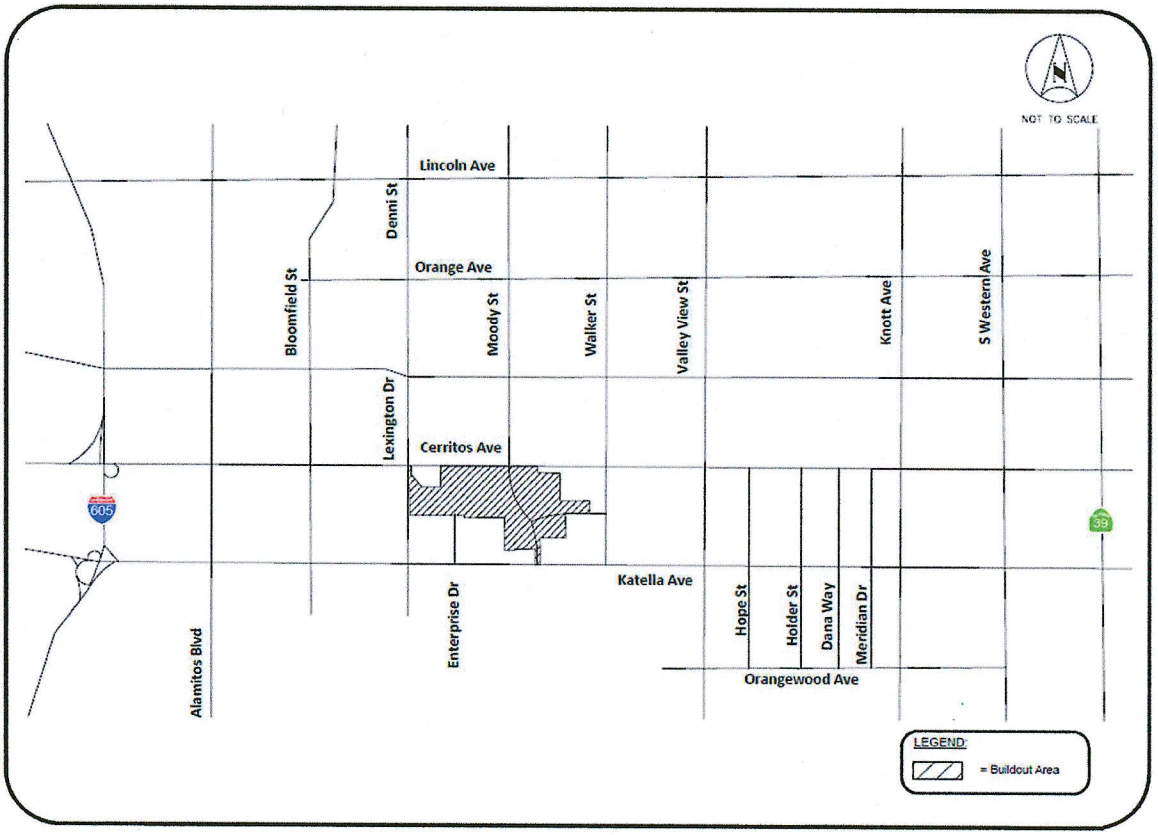
INTRODUCTION

This memorandum documents the vehicle miles traveled (VMT) analysis conducted for the proposed Specific Plan 3.0 Buildout Project (Project) located at 4961 Katella Avenue in the City of Cypress (City). The City utilizes the methodology and significant threshold criteria identified in the "Guidelines For Evaluating Vehicle Miles Traveled Under CEQA for Orange County, dated September 17, 2020" (County Guidelines), which the VMT analysis has been based upon.

PROJECT DESCRIPTION

The project site consists of approximately 134 acres of land (Buildout Area) subject to Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) that was approved by Cypress voters on November 5, 2024 pursuant to Measure S. The Specific Plan establishes a comprehensive plan and regulatory framework for the use and development of the Buildout Area. The Project includes single-family and multi-family residential development that reflects the maximum buildout allowed under the Specific Plan. The Buildout Area is shown in its regional setting on **Figure 1**.

The Specific Plan permits the development of a maximum of an additional 1,791 residential units on the Buildout Area.



With respect to non-residential development, the Specific Plan permits an aggregate maximum of 874,354 square feet of non-residential floor area within the Buildout Area. However, based on current and reasonably foreseeable future market conditions, and taking into account the additional residential units, it is anticipated that only a portion of the maximum amount of non-residential development allowed under the Specific Plan will be developed. The analysis herein is therefore conservatively based on the development of 440,000 square feet of non-residential floor area, which is approximately 50% of the maximum non-residential floor area permitted under the Specific Plan. The proposed residential and non-residential development includes:

- Single-Family Attached Housing – 269 Dwelling Units
- Single-Family Detached Housing – 141 Dwelling Units
- Senior/Multi-Family Housing (Low-Rise) – 535 Dwelling Units
- Multi-Family Housing (Low-Rise) – 338 Dwelling Units
- Multi-Family Housing (Mid-Rise) – 508 Dwelling Units
- 440,000 square feet of non-residential uses (retail and other commercial uses) on multiple lots.

For the purposes of this analysis, non-residential land uses are categorized into two types: retail and other commercial uses. It is anticipated that most of the non-residential development within

the Buildout Area will consist of retail space, but that the non-residential development may include a limited amount of commercial uses that, while similar to retail in customer orientation, are primarily service-based—such as hotels, motels, or similar service-oriented uses, as well as some neighborhood office space.

Figure 1 – Vicinity Map

VMT SCREENING

A VMT screening was conducted to evaluate the Project based on the pre-established criteria outlined in the County Guidelines for presuming a less-than-significant impact. These criteria assess whether the Project or its location has specific characteristics that justify such a presumption. Specifically, the following applicable screening criteria in the County Guidelines have been considered for the Project:

1. Project in High-Quality Transit Area (HQTA)

   A project located within 0.5 mile from an existing major transit stop[1] or within 0.5 mile from an existing stop along a high-quality transit[2] corridor is considered an HQTA project and is

[1] Under the amended Pub. Resources Code § 21064.3 – "'Major transit stop' means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 20 minutes or less during the morning and afternoon peak commute periods."
[2] Pub. Resources Code § 21155 - For purposes of this section, a "'high-quality transit corridor' means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours."

presumed to result in a less-than-significant VMT impact. The Buildout Area is served by Orange County Bus stop (Route 50). However, this stop does not have bus routes operating with a frequency of 20 minutes interval and therefore cannot be considered a major transit stop. As a result, the Project does not meet this criterion.

2. Neighborhood Retail Project

The County Guidelines include a 50,000-square foot screening threshold for the totality of local-serving retail on a project site, but in doing so, the County Guidelines depart from how the Governor's Office of Planning and Research (OPR) applies this threshold in its *Technical Advisory on Evaluating Transportation Impact In CEQA* dated April 2018 (OPR Technical Advisory).

Specifically, page 16 of the OPR Technical Advisory discusses the 50,000-square-foot threshold, stating:

> Generally, however, retail development including stores larger than 50,000 square feet might be considered regional-serving, and so lead agencies should undertake an analysis to determine whether the project might increase or decrease VMT.

This language is commonly understood to mean that the threshold applies on a per-store basis. The intent is to identify larger, individual retail tenants—such as big-box stores—that are more likely to attract regional trips and therefore increase VMT. In contrast, smaller stores below this threshold are generally presumed to be local-serving, with the potential to reduce trip lengths by serving nearby residents.

The County Guidelines, however, apply the 50,000-square-foot threshold to a entire project's total retail space. On page 10, they define "Neighborhood Retail Project" as follows:

> Neighborhood Retail Project: The project involves local-serving retail space of less than 50,000 square feet.

This approach imposes an overly conservative standard that differs from OPR's intent. OPR's guidance focuses on evaluating the size and function of individual stores, recognizing that smaller-format stores typically serve local markets, even when grouped together in a single retail center. By aggregating the square footage across an entire project, the County Guidelines effectively require groupings of small and mid-sized retail tenants—such as grocery stores, pharmacies, and service shops, which are commonly co-located—to be evaluated collectively. As a result, typical neighborhood-serving retail centers may lose the presumption of a less-than-significant VMT impact simply because the combined project square footage exceeds 50,000, even when no individual tenant would trigger additional review under OPR's framework.

Notably, page 1 of the County Guidelines states:

> This document serves as a guide for application and substantial evidence for the County of Orange's (County) adopted project screenings, significance thresholds, and mitigation strategies, modeled after the Governor's Office of Planning and Research's (OPR) Technical Advisory (TA) for CEQA transportation studies.

Despite this statement, the County's characterization of the 50,000-square-foot threshold diverges in a significant way from the OPR Technical Advisory. Rather than using store-level size as a proxy for travel behavior—as OPR recommends—the County Guidelines apply a more rigid, and unsubstantiated, project-level cutoff that will require a detailed VMT analysis for projects that do not involve regional-serving retail.

The proposed Project assumes approximately 440,000 square feet of retail and other commercial space pursuant to the Specific Plan that is intended to provide retail and other service-oriented uses, as well as a limited amount of other types of commercial space, that enhance access to essential goods and services while supporting local employment opportunities. The 440,000 square feet will be distributed on multiple sites within the Buildout Area in a manner that maintains a local-serving character appropriate for the surrounding community. Because the Project is conceptual buildout under the Specific Plan, specific non-residential tenants have not yet been identified. However, Section 3.3.1 of the Specific Plan outlines the range of permitted retail and other commercial uses, which include, for example, general merchandise stores, financial services, hardware stores, florists, barber/beauty shops, and family entertainment centers with party facilities.

As discussed previously, the County Guidelines adopt a 50,000-square-foot threshold to screen out retail projects presumed to have a less-than-significant VMT impact. However, as noted, the County Guidelines apply this threshold to the total retail floor area rather than on a per-store basis, diverging from the OPR Technical Advisory, which more appropriately applies the 50,000-square-foot threshold to individual stores—flagging large-format tenants (such as big-box retailers) that might draw regional trips and therefore generate higher VMT.

How about grocery store, hotel, and offices.

It is anticipated that no single retail establishment developed as part of the Project will exceed 50,000 square feet in size. Accordingly, even though the total non-residential space will exceed 50,000 square feet, each individual retail tenant is anticipated to fall below the OPR's screening threshold for regional-serving retail uses. In this way, the Project remains consistent with the intended function of the 50,000-square-foot threshold as construed in the OPR Technical Advisory: supporting the presumption that typical small-format, local-serving retail establishments are unlikely to result in a significant VMT impact.

L-3-9

Applying this approach, the Project's retail component—comprised of a collection of smaller, neighborhood-oriented stores—would not trigger additional VMT analysis under the OPR

framework. Although the County Guidelines take a more conservative position by aggregating total project area, the underlying purpose of the threshold is still met because the Project will primarily serve local demand without inducing substantial new regional vehicle trips. Therefore, the development of the Project's retail uses should be presumed to result in a less-than-significant VMT impact.

In addition to retail uses, the non-residential component of the Project may include other uses that are not primarily retail in nature, but are less impactful than retail from a VMT standpoint. One example is hotels or motels. A qualitative VMT assessment supports the conclusion that these anticipated hotel or motel uses, like the retail uses, are unlikely to result in a significant VMT impact. Non-destination hotels and motels primarily serve existing travel demand rather than generating new trips, particularly when located near freeways. These facilities accommodate overnight travelers and event attendees already in the region, often helping to reduce overall trip lengths.

How this was assessed

L-3-10

this is a regional trips, and not necessarily Cypress local trips

L-3-11

The impact of these uses on the transportation system is generally negligible, and in some cases beneficial, provided they do not significantly alter the local supply, become major attractions, or introduce substantial new travel demand. None of these conditions are anticipated in connection with the potential hotel or motel uses associated with the Project. As a result, these uses are also presumed to have a less-than-significant VMT impact.

Notwithstanding that OPR's definition of the 50,000-square-foot threshold is a well-supported approach that is widely followed in VMT analyses of retail projects throughout California, in recognition of the more conservative approach in the County Guidelines to apply the 50,000-square-foot threshold to total project retail area, a quantitative analysis is provided below, in the section title "Quantitative Retail VMT Analysis and Impact Determination," in accordance with the County Guidelines. As shown therein, even when applying the County's more stringent methodology, the Project's retail component will have a less-than-significant VMT impact, further substantiating the conclusion that the Project's neighborhood-serving retail and other commercial uses do not generate substantial new regional vehicle travel.

3. Low VMT Area Projects

Projects located in areas with low VMT are generally presumed to have a less-than-significant VMT impact. The Buildout Area is within a region where residential uses generate less than 85% of the regional average VMT per capita. However, according to the County Guidelines, this screening criterion does not apply to large projects generating 1,000 or more daily vehicle trips. Since the Project is expected to generate over 1,000 daily vehicle trips, a quantitative VMT analysis is required to accurately assess its impacts, and the Project cannot be screened out based on this criterion.

Land development projects that meet applicable VMT screening criteria may be presumed to have a less-than-significant VMT impact. However, any projects or portions of projects that do not meet

these criteria require a detailed VMT analysis using the latest regional travel demand model approved by the County. The Project's compliance with these screening criteria was reviewed and evaluated based on the County Guidelines.

Conclusion of VMT Screening Assessment

The Project does not meet the HQTA or Low VMT Area screening criteria, but does qualify as a neighborhood-serving retail development under the OPR Technical Advisory. A supplemental quantitative analysis conducted in accordance with the County Guidelines confirms that the Project's non-residential uses result in a less-than-significant VMT impact, supporting the conclusion that the Project satisfies both the intent and technical requirements for VMT screening.

However, the residential component does not meet any of the applicable project-type screening criteria and, therefore, cannot be presumed to have a less-than-significant VMT impact. Consequently, a full VMT analysis was conducted for the proposed residential land use in accordance with the County Guidelines, as detailed below.

VEHICLE MILES TRAVELED (VMT) ANALYSIS

A VMT analysis was conducted for both the residential and non-residential components of the Project using the most recent version of the Orange County Transportation Analysis Model (OCTAM), Version 5.1. OCTAM is a trip-based travel demand model that simulates travel behavior based on socio-economic data, including household, population, and employment characteristics, to estimate trip generation and mode choice.

To accurately reflect the proposed Project within the model, updates were made to the socio-economic data for the Traffic Analysis Zone (TAZ) encompassing the site—TAZ 440. This included adjustments to both residential households and employment estimates associated with retail and other commercial uses.

The OCTAM model uses 2019 as its base year and 2050 as its horizon year. Accordingly, the VMT analysis was conducted under the following scenarios:

- **Existing Conditions**: Reflecting the 2019 model base year.
- **Existing Plus Project Conditions**: Reflecting 2019 conditions with the proposed Project incorporated.
- **Cumulative Plus Project Conditions**: Reflecting 2050 conditions with the Project incorporated.

Project Land Use Conversion

To model the full Project accurately, the land use program described in the Specific Plan was converted into terms compatible with OCTAM. As the detailed VMT impact determinations focus on the full land use mix, both residential and non-residential land uses were integrated into the model to ensure accurate representation of internal trip-making behavior (e.g., residents accessing on-site retail and other commercial uses or jobs).

L-3-12

If the retail portion is unknown, how would the model calculates internal trip portion?

In OCTAM, non-residential land uses are modeled using employment estimates categorized as retail, service, or basic employment. Therefore, the retail square footage assumed for the Project was converted to employment estimates based on trip generation-based assumptions. Specifically, employment was calculated using rates from the Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition. Retail employment was estimated at a rate of approximately two employees per 1,000 square feet. Based on the anticipated land use mix, 90% of non-residential employment was assigned to the retail category and 10% to service, consistent with expected project uses such as general merchandise, food services, personal care, and small-scale office.

L-3-13

How this was assessed

These estimates were added to the baseline household and employment values within TAZ 440 for use in both the existing plus project and cumulative plus project model runs. Employment associated with the existing Los Alamitos Race Course was not included, as the continued operation of the racetrack is not part of the proposed Project. Per applicant input, 95 racecourse-related jobs were excluded from the adjusted baseline.

Table 1 below summarizes the final land use inputs applied to the travel demand model for analysis.

Table 1 – Project Model Inputs

Project Land Use	Household	Retail Employment	Service Employment
Project TAZ	1,791	706	79

Project Home-Based VMT Per Capita For Residential Project Component

The residential component of the Project was evaluated using a measurement called Home-Based VMT (Vehicle Miles Traveled) per Capita. This metric estimates the average amount of driving generated by each project resident. The calculation is based on the Production-Attraction (PA) method from the OCTAM model, a tool used to analyze travel behavior. Below are the key steps in this process:

1. **Trips Generated**: The model first estimates how many trips will start or end at the residential units in the Project. These trips could include commuting to work, going to school, shopping, or participating in other activities.
2. **Trip Lengths**: The model then calculates the average distance of each trip. Some trips might be short, such as visiting a nearby store, while others might be longer, like driving to a workplace.
3. **Travel Mode Selection**: Based on the trip's length, purpose, and the availability of different transportation options, the model determines how each trip will be completed—whether by walking, biking, or driving.
4. **Total Travel Distance**: The model adds up the total distance for trips made by vehicles only. This total is referred to as the Home-Based Production VMT.

5. **Dividing by Population**: Finally, the total vehicle travel distance is divided by the number of residents in the project, resulting in the average driving distance per person, known as Home-Based VMT per Capita.

This metric is used to evaluate how well a project is designed to reduce driving. For example, if a project is located close to jobs, schools, and stores, or offers convenient options for walking, biking, or public transit, residents are likely to drive less. This would result in a lower Home-Based VMT per Capita, indicating a more efficient and sustainable design.

Residential VMT Significance Threshold and Impact Determination

The City's threshold, of significance for a project's VMT impact with respect to residential uses, based on the County Guidelines, is described in **Table 2**. While the proposed Project includes both residential and retail and other commercial land uses, since only the residential component of the Project is subject to VMT impact evaluation, only the threshold of significance for residential is described in this section.

Table 2 – VMT Threshold of Significance

Land Use	Threshold of Significance
Residential	13.21 VMT per capita * (15% below existing regional average)

* Base Year 2019 OCTAM Travel demand model

The following summarizes the results of the residential VMT analysis. **Table 3** shows the Home-Based VMT per Capita results for the existing plus project (2019) and cumulative plus project (2050) conditions. As shown in **Table 3**, Home-Based VMT per Capita for the Project is higher than the County's residential VMT significance thresholds under both existing and cumulative plus project conditions.

Table 3 – Residential VMT Impact

Analysis Scenario	Home-Based VMT/Capita
Significance Threshold (15% Below Existing regional average)	13.21
Existing Plus Project (2019)	14.29
Cumulative Plus Project (2050)	14.94
VMT in Excess of Significance Threshold	1.73
VMT % In Excess of Threshold	11.6%

The VMT % in Excess of Threshold of 11.6% was calculated based on the ratio of the VMT in Excess of Significance Threshold, which is 1.73, as compared to the greater of the Project's residential VMT impacts, which here is the Cumulative Plus Project (2050) Home-Based VMT/Capita of 14.94.

1.73 / 14.94 = 11.6%

The 11.6% represents the greatest exceedance of the residential significance threshold. As shown, however, the Project's Home-Based VMT per Capita for the Project's residential component exceeds the residential VMT significance threshold under both the existing and cumulative plus project conditions.

Quantitative Retail VMT Analysis and Impact Determination

In addition to the qualitative VMT assessment provided above, a quantitative analysis was conducted to evaluate the Project's retail land use component in accordance with the significance thresholds and methodology outlined in the Orange County Vehicle Miles Traveled (VMT) Guidelines. The analysis was designed to determine whether the inclusion of retail uses would result in a significant increase in Countywide VMT under both existing and cumulative conditions.

Retail VMT Significance Threshold and Impact Determination

As stated on page 10 of the County Guidelines, the applicable significance threshold for retail projects is based on the net change in total (i.e., Countywide) VMT:

> Recommended threshold for retail projects: A net increase in total VMT may indicate a significant transportation impact.

Under this threshold, a project's retail component is considered to have a less-than-significant VMT impact if it does not increase total Countywide VMT. The intent of this metric is to account for whether new retail uses shorten overall travel distances by redirecting existing trips closer to origin points (i.e., internalizing trips), thereby reducing VMT at a regional scale.

To apply this threshold, OCTAM model runs were conducted comparing "plus project" conditions with and without the retail component, while keeping the proposed residential component unchanged. This isolates the impact of the retail uses on Countywide VMT by assessing whether their inclusion in the Project results in a net increase or decrease in vehicle travel. The analysis was conducted under both:

- Existing conditions (2019), using the model base year; and
- Cumulative conditions (2050), based on the model's forecast year.

As shown in **Table 4**, the inclusion of the retail component results in a net **decrease** in total Countywide VMT under both existing and cumulative scenarios with the addition of the Project. This reduction occurs because integrating retail uses into the project area enables more trips to occur internally or over shorter distances, reducing the need for residents to travel off-site for essential services and goods.

Table 4 – Retail VMT Impact

Analysis Scenario	Total Countywide VMT
Significance Threshold (Net Increase in Total VMT)	>0
Existing Plus Project (2019) Without Retail	146,839,424
Existing Plus Project (2019) With Retail	146,828,973
Cumulative Plus Project (2050) Without Retail	157,660,001
Cumulative Plus Project (2050) With Retail	157,643,286
Net Change in VMT With Retail (2019)	-10,451
Net Change in VMT With Retail (2050)	-16,715

Note: Total VMT is reported based on the Origin-Destination Method.

POTENTIAL VMT MITIGATION MEASURES

As previously discussed, the Project's retail and other commercial uses component was determined to result in a less-than-significant VMT impact based on both qualitative and quantitative evaluations. However, the residential component was found to exceed the County's significance threshold for VMT, which is based on whether a project's home-based VMT per capita is 15 percent or more below the regional average. Since the Project exceeds this residential significance threshold, the Project's residential component is considered to have a significant VMT impact under CEQA.

When a significant VMT transportation impact is identified, feasible mitigation measures must be considered and, if relevant and feasible, implemented pursuant to the California Environmental Quality Act (CEQA) to avoid or reduce the impact to a less-than-significant level.

One way to potentially mitigate a project's significant VMT impact is by implementing feasible Transportation Demand Management (TDM) strategies. In this regard, the California Air Pollution Control Officers Association (CAPCOA) publishes the *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity* in December 2021 (CAPCOA Guidelines), which provides methods for estimating the mitigation effects of various TDM strategies. This document is commonly used throughout the State to identify and document potentially feasible TDM strategies.

Based on a review of these TDM strategies, the following potential mitigation measures were evaluated for their applicability to this Project and their potential to reduce the Project's significant residential VMT impact.

- **Construct or Improve Bike Facility (CAPCOA Handbook Strategy T-19-A)**: This mitigation measure would require the Project to include a new bicycle facility or facilities or improve an existing facility that would connect the Project to the existing regional bicycle network. The construction/improvement of bicycle facilities would provide residents with the opportunity to bike to their destination rather than drive, reducing the number of vehicle trips and overall Project-generated VMT.

  Provide a map showing the new bike path.

  The Project is assumed to include the addition of approximately 1 mile of bicycle facilities, connecting to the existing bicycle network. Applying the calculation parameters applicable to the surrounding area as provided in the CAPCOA Handbook for Measure T-19-A, this improvement is estimated to achieve a 0.1% reduction in VMT by enhancing active transportation options, increasing network connectivity, and encouraging a shift away from single-occupancy vehicle trips.

L-3-14

Figure 2, on the following page, shows the existing Bikeways per the Orange County Transportation Authority (OCTA) Bikeways map. The segment of Cerritos Avenue, adjacent to the Buildout Area, is an existing Class II Bike facility with buffered bike lanes. West of Denni Street/Lexington Drive and east of Walker Street it is a Class III Bike facility. Denni Street is an existing Class III Bike facility. Moody Street and Walker Street have existing Class II Bike facilities with a dedicated bike lane.

- **Provide Pedestrian Network Improvement (CAPCOA Handbook Strategy T-18):** This mitigation measure requires the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area. The construction of such pedestrian facilities would provide residents with the opportunity to walk to their destination rather than drive, reducing the number of vehicle trips and overall Project-generated VMT. The Project will add approximately 1.7 miles of new sidewalks along the Moody Street and Vessels Circle extensions, which will be public streets. From the CAPCOA Guidelines, the recommended study area of 0.6 mile from the project perimeter was used to determine the length of existing off-site sidewalks, within that radius, which is 7.7 miles. The Project will increase the existing study area sidewalk length from 7.7 miles to 9.4 miles, which would reduce VMT by 1.1% according to the formula provided in the County Guidelines. This estimate assumes moderate improvements to pedestrian infrastructure, such as creating new connections to Moody Street and Vessels Circle, as well as typical safety and accessibility upgrades.

  Pedestrian access by sidewalks to the Buildout Area will be from Katella Avenue, Cerritos Avenue, Lexington Drive, and Vessels Circle, as extended. Further pedestrian circulation improvements include sidewalk along the extension of Moody Street south of Cerritos Avenue. These pathways, together with the existing pedestrian infrastructure on the surrounding streets, will ensure seamless integration with the broader pedestrian network, effectively linking the Buildout Area with nearby amenities and transit options

Figure 2 – Existing Bikeways Near Buildout Area

Source: OCTA Orange County Bikeways Map

L-3-15

Table 5 summarizes the Residential VMT reductions taken from implementing both the T-19-A, Construct or Improve Bike Facility and T-18, Provide Pedestrian Network Improvement, totaling 1.2%. This results in a net increase in Residential VMT % in excess of the significance threshold with mitigation of 10.4%.

Table 5 – Residential VMT Impact with Mitigation

Analysis Scenario	Home-Based VMT/Capita
Significance Threshold (15% Below Existing regional average)	13.21
VMT % In Excess of Threshold	11.6%
VMT Reduction from Mitigations	1.2%
VMT % In Excess of Threshold with Mitigation	10.4%

FINDINGS AND CONCLUSIONS

Based on the results of this analysis, the following findings and conclusions are made:

- Based on a qualitative analysis of the Project's non-residential component, which includes retail and other commercial uses, pursuant to the screening threshold in the OPR Technical Advisory as well as quantitative analysis pursuant to the County Guidelines, the Project's non-residential component would not result in a net increase in VMT and the Project would therefore have a less-than-significant VMT transportation impact with respect to such component.
- The Project's residential VMT impact would exceed the City's significance threshold and the Project would therefore have a significant residential VMT impact. It has been determined that two feasible mitigation measures would reduce that significant impact. First, improvements to the pedestrian network in accordance with CAPCOA Handbook Strategy T-18 would reduce the Project's residential VMT impact by 1.1%. Second, the improvement of bike facilities in accordance with CAPCOA Handbook Strategy T-19-A would reduce the Project's residential VMB impact by 0.1%. With the implementation of these feasible mitigation measures, the Project's residential VMT impact would remain significant, with a residential VMT impact of 10.4% over the significance threshold, so that the Project's residential VMT impact would be significant and unavoidable.

2.4.3 CITY OF LOS ALAMITOS

Letter Code: L-3
Date: April 20, 2026

Response to Comment L-3-1

This comment provides introductory remarks and summarizes the scope of the Draft EIR.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment L-3-2

This comment states that although the City of Los Alamitos supports the City of Cypress' intent to meet its designated housing allocation, the City of Los Alamitos has concerns regarding potential impacts on Los Alamitos residents due to the proposed project's significant and unavoidable air quality and transportation impacts.

The City acknowledges this comment. As discussed in the Draft EIR, implementation of the proposed project would result in significant and unavoidable impacts related to transportation (VMT) and air quality (conflict with applicable air quality management plans and operational air quality emissions). Although the Draft EIR included **Mitigation Measures AIR-1** and **TRA-1**, which would reduce these impacts, implementation of these measures would not reduce the impacts to less than significant. Therefore, while air quality and transportation impacts would remain significant and unavoidable, the Draft EIR identifies and prescribes all feasible mitigation measures that would reduce the impact to the extent practicable, as required by CEQA.

Because the comment does not contain any other substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment L-3-3

This comment states that the City of Los Alamitos agrees that the Historic Preservation Alternative is the Environmentally Superior Alternative and that implementation of this alternative would be the most desirable outcome for the proposed project, barring increased housing mandates.

As discussed in Chapter 5.0, Alternatives, of the Draft EIR, the Historic Preservation Alternative would avoid the significant and unavoidable impact to historical resources as defined in Section 15064.5 of the *State CEQA Guidelines* associated with the proposed project. Therefore, the Draft EIR identified the Historic Preservation Alternative as the Environmentally Superior Alternative. However, implementation of the Historic Preservation Alternative would still result in significant and unavoidable impacts associated with air quality (conflict with applicable air quality management plans and operational air quality emissions) and transportation (VMT), similar to the proposed project. In addition, although these impacts would still be considered less than significant, impacts related to noise and public services would be greater when compared to the proposed project, as the Historic Preservation Alternative would include the conversion of the Los Alamitos Race Course

(LARC) character-defining features, including the original pre-1970 track, the 1954 quarter-mile chute, the infield and ponds, and a portion of the grandstand into a performance venue for future concerts, plays, and other entertainment performances.

Further, as discussed in Chapter 5.0, the Historic Preservation Alternative would not meet the project objectives to the same extent as the proposed project. Specifically, while the Historic Preservation Alternative would facilitate development of 1,400 residential units within the Buildout Area, which would help meet the significant unmet demand for housing in the City and the project vicinity, the Historic Preservation Alternative would result in 391 fewer residential units than the proposed project. In addition, this alternative would require amendments, approved by the voters, to allow for the performance venue within the Specific Plan, which is not a use currently permitted within the Specific Plan area. Therefore, the Historic Preservation Alternative would be inconsistent with the voter-approved Specific Plan.

Because the comment does not contain any other substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment L-3-4

This comment claims that Los Alamitos residents would experience increased traffic, noise, and air quality impacts due to the proposed project's significant and unavoidable residential VMT impact, which would create additional cumulative rush-hour congestion and health issues for Los Alamitos residents, who have already experiences increased traffic from other large housing projects in the area, particularly in the City of Cypress.

As previously discussed, transportation impacts under CEQA are to be evaluated based on a project's effect on VMT as opposed to vehicle delay and LOS (i.e., traffic congestion). This change came into effect on December 28, 2018, when the California Office of Administrative Law cleared the revised *State CEQA Guidelines* for use and removed vehicle delay and LOS from consideration under CEQA. Therefore, the Draft EIR discusses potential VMT impact with implementation of the proposed project. As discussed in Section 4.17, Transportation, of the Draft EIR, the residential component of the proposed project would result in a higher VMT per capita than the County's residential VMT significance thresholds under both existing and cumulative plus project conditions by 11.6 percent. As such, the proposed project would be required to implement feasible Transportation Demand Management (TDM) strategies to mitigate the proposed project's VMT impact, as detailed in **Mitigation Measure TRA-1**. However, implementation of **Mitigation Measure TRA-1** would only reduce the proposed project's residential VMT impact by 1.2 percent. Accordingly, even with implementation of the identified TDM strategies, the proposed project's residential VMT impact would remain significant, with a residential VMT impact of 10.4 percent over the significance threshold. Therefore, the proposed project's VMT impact would be significant and unavoidable, as identified in the Draft EIR.

Section 4.17 of the Draft EIR also analyzed cumulative transportation impacts, including cumulative VMT impacts associated with the cumulative plus project (2050) scenarios. The cumulative plus project (2050) scenario reflects 2050 conditions with the proposed project incorporated. As discussed in Section 4.17, even with implementation of **Mitigation Measure TRA-1**, which requires

inclusion of pedestrian sidewalks and bicycle lanes, the proposed project would result in a significant and unavoidable impact related to residential VMT. Pursuant to the *Technical Advisory on Evaluating Transportation Impacts in CEQA* prepared by the Governor's Office of Planning and Research (OPR; now the Governor's Office of Land Use and Climate Innovation [LCI]),[8] if a project individually has a significant VMT impact, then it also has a significant cumulative VMT impact, and vice-versa. Therefore, the proposed project would have a significant and unavoidable cumulative residential VMT impact, while the cumulative impact related to non-residential VMT would be less than significant. Accordingly, the Draft EIR determined that implementation of the proposed project, in addition to other recently completed, planned, and reasonably foreseeable projects within the City and surrounding area, could result in cumulative transportation impacts.

Section 4.13, Noise, of the Draft EIR analyzed potential operational traffic noise impacts. As discussed in Section 4.13 of the Draft EIR, the results of this analysis indicate that the increase in noise associated with project-related traffic, comparing existing without project traffic volumes to existing plus project traffic volumes, would be up to 0.3 A-weighted decibel Community Noise Equivalent Level (dBA CNEL) along the analyzed road segments, located adjacent to the Buildout Area. A noise level increase of less than 3 dBA would not be perceptible to the human ear in an outdoor environment. Because project-related traffic would not result in a perceptible increase (i.e., 3 dBA or greater) in ambient roadway noise levels, off-site traffic noise impacts would be less than significant. In addition, because residents of Los Alamitos would be located further west and south of the analyzed road segments, they would experience less than 0.3 dBA CNEL, which would not be perceptible to the human ear in an outdoor environment. Therefore, implementation of the proposed project and the additional vehicles traveling the vicinity of the Buildout Area would not result in significant noise impacts that would increase health issues for Los Alamitos residents.

As discussed in Section 4.3, Air Quality, of the Draft EIR, the primary emissions associated with the proposed project are regional in nature, meaning that air pollutants are rapidly dispersed on release or, in the case of vehicle emissions associated with the proposed project, emissions are released in other areas of the South Coast Air Basin (Basin). Further, as discussed in Section 4.3, Air Quality, of the Draft EIR, implementation of the proposed project would not expose sensitive receptors, including residential uses in the City of Los Alamitos located west and south of the Buildout Area, to substantial pollutant concentrations with implementation of **Mitigation Measure AIR-2**, which requires use of USEPA Tier 4 Final or cleaner construction equipment if and to the extent commercially available, or the cleanest available technology that is commercially available and feasible to reduce construction-related diesel particulate matter (DPM) emissions at the source. If Tier 4 Final equipment or cleaner construction equipment is not commercially available for a majority of the construction equipment and the individual development project would be larger than 20 acres, **Mitigation Measure AIR-2** requires the preparation of a project-specific construction Health Risk Assessment (HRA), which may identify additional feasible risk-reduction measures for implementation, as appropriate. Therefore, implementation of the proposed project would not expose Los Alamitos residents to substantial pollutant concentrations that would increase health issues for Los Alamitos residents.

[8] Governor's Office of Land Use and Climate Innovation (LCI) (previously the Governor's Office of Planning and Research [OPR]). 2018. *Technical Advisory on Evaluating Transportation Impact In CEQA*. April.

Section 4.3 also included an analysis of operational public health effects. Known health effects related to ozone include worsening of bronchitis, asthma, and emphysema and a decrease in lung function. Particulate matter can also lead to a variety of health effects in people. These include premature death of people with heart or lung disease, heart attacks, irregular heartbeat, decreased lung function, and increased respiratory symptoms. Although the emissions from operations resulting from buildout of the proposed project are expected to exceed the SCAQMD's project level thresholds, it should be noted that exceeding or not exceeding the SCAQMD's numeric regional mass daily thresholds does not, by itself, directly correlate to a determination regarding health risk impacts on nearby sensitive receptors. The project level thresholds are intended to provide a means of consistency in significance determination within the environmental review process, and do not provide a finding on health risk impacts on nearby sensitive receptors, including residential uses in the City of Los Alamitos located west and south of the Buildout Area.

The SCAQMD acknowledges that it has only been able to correlate potential health outcomes for very large emissions sources; specifically, 6,620 pounds per day (lbs/day) of NO_X, and 89,180 lbs/day of VOCs were expected to result in approximately 20 premature deaths per year and 89,947 school absences due to ozone.[9] As provided in Section 4.3, with implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1**, operation of the proposed project would generate a maximum of 37.3 lbs/day of NO_X and 104.2 lbs/day of VOCs well below the VOC emission directly corelate to health impacts. Therefore, emissions associated with the proposed project are not sufficiently high to correlate health effects on a Basin-wide level, which includes the City of Los Alamitos. Furthermore, air quality trends for emissions of NO_X, VOCs, and ozone (which is a byproduct of NO_X and VOCs) have been trending downward within the Basin even as development has increased over the last several years. Therefore, proposed project implementation is not expected to result in any Basin-wide increase in health effects that would reduce neighborhood livability and would therefore not result in health issues for Los Alamitos residents.

The Draft EIR recognizes that emissions of ozone precursors (VOCs) can contribute to regional exceedances of air quality standards and that such exceedances are associated with increased respiratory and cardiovascular symptoms in sensitive populations. However, the proposed project's emissions are small relative to regional totals and SCAQMD addresses and manages air basin-wide concentrations through its Air Quality Management Plan. Further, the precise concentrations at which VOC would trigger these symptoms for a single project is not currently scientifically feasible. It is also not technically feasible to directly correlate regional emissions to specific localized health public health effects (e.g., the number of asthma cases) from an individual project. In addition, is not scientifically feasible to assess potential impacts on Los Alamitos residents specifically. Accordingly, the Draft EIR discloses these impacts as significant and unavoidable and includes all feasible mitigation measures to minimize emissions during operation, as discussed above. Therefore, while air quality and transportation impacts would remain significant and unavoidable, the Draft EIR identifies and prescribes all feasible mitigation measures that would reduce the impact to the extent practicable, as required by CEQA.

[9] Supreme Court of California. 2015. *Sierra Club, Revive the San Joaquin, and League of Women Voters of Fresno, Plaintiffs and Appellants, v. County of Fresno, Defendant and Despondent, and Friant Ranch, L.P., Real Part in Interest and Despondent.* April.

Section 4.3 of the Draft EIR also analyzed cumulative air quality impacts, including cumulative health risk impacts. As discussed in Section 4.3, because diesel particulate matter emissions from construction activities would be minimized through required use of Tier 4 Final or cleaner equipment or subject to project-specific review where warranted, the proposed project's contribution to cumulative localized health risk impacts would not be cumulatively considerable. Therefore, cumulative impacts related to construction TAC exposure to sensitive receptors would be less than significant with mitigation.

Overall, while air quality and VMT impacts would remain significant and unavoidable, the Draft EIR identifies and prescribes all feasible mitigation measures that would reduce the impact to the extent practicable, as required by CEQA.

Response to Comment L-3-5

This comment claims that the proposed project' significant and unavoidable impact associated with a cumulatively considerable net increase of criteria pollutants for which the project region is nonattainment under an applicable federal or state ambient air quality standard would negatively impact City of Los Alamitos residents.

As discussed above, while implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1** would incorporate design features that would contribute to reducing criteria air pollutant emissions generated during operational activities associated with the full buildout envisioned under the proposed project, the long-term operational VOC emissions associated with the proposed project would cumulatively contribute to the nonattainment designations in the Basin and project impacts would not be lowered below SCAQMD thresholds. Therefore, while air quality impacts would remain significant and unavoidable, the Draft EIR identifies and prescribes all feasible mitigation measures that would reduce the impact to the extent practicable, as required by CEQA.

However, as discussed above, emissions associated with the proposed project are not sufficiently high to correlate health effects on a Basin-wide level, which includes the City of Los Alamitos. Furthermore, air quality trends for emissions of NO_X, VOCs, and ozone (which is a byproduct of NO_X and VOCs) have been trending downward within the Basin even as development has increased over the last several years. Therefore, proposed project implementation is not expected to result in any Basin-wide increase in health effects that would reduce neighborhood livability and would therefore not result in significantly impact Los Alamitos residents. Refer to Response to Comment L-3-4, above, for additional discussion.

Response to Comment L-3-6

This comment recommends that in order to address the increased traffic with the proposed project and other projects in the area, the City of Los Alamitos requests that the Orange County Transportation Authority (OCTA) increase bus connections and frequent bus routes during high-traffic periods, and that additional bike lane connections be planned through an Active Transportation Plan (ATP) with links to the City of Los Alamitos' existing and future bike lanes.

As discussed in Section 4.17, Transportation, of the Draft EIR, the City's General Plan Circulation Element contains Policy CIR-2.6, which requires the City to respond to increases in demand for

additional bus service through interaction with OCTA and other available resources. Accordingly, the City continually assesses ridership demand and coordinates with OCTA in order to address any deficiencies in service. OCTA has also recently completed the 2024 Orange County Transit Vision Master Plan,[10] which aims to integrate, enhance, and expand multimodal transportation services throughout the County and is currently developing the Directions 2050 plan[11] to update OCTA's LRTP. Directions 2050 will look ahead to 2050 and outline strategies to ensure that the County's transportation system remains efficient, safe, balanced, and sustainable, and addresses the provision of transit services. OCTA's FY 2025-2026 budget also highlights increased transit service, including adding more bus service to meet rising demand, and investments in transit infrastructure.[12] Therefore, the City is already coordinating with OCTA regarding the need for potential transit service improvements. Further, implementation of the proposed project would not interfere with implementation of these transit planning documents, including the specific actions to address the growing need for expanded transit service.

At this time, the City does not have an adopted ATP or plans to prepare an ATP. Because the comment does not contain any other substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment L-3-7

This comment states that the City of Los Alamitos' Traffic Engineer reviewed the VMT analysis prepared for the proposed project, which is included as **Appendix K** of the Draft EIR, and has provided comments on the analysis, which are provided as an attachment to the comment letter. This comment also states that the Traffic Engineer agrees that VMT impacts associated with implementation of the proposed project would be significant and unavoidable.

Specific responses to the comments provided by the City of Los Alamitos' Traffic Engineer on the *Vehicle Miles Traveled (VMT) Analysis for Specific Plan 3.0 Buildout Project* (VMT Memo)[13] prepared for the proposed project are provided in Response to Comment L-1-9 through Response to Comment L-1-14, below.

Response to Comment L-3-8

This comment provides concluding remarks and contact information.

The City acknowledges this comment and looks forward to future communications with the City of Alamitos regarding development of the proposed project.

Response to Comment L-3-9

This comment asks if future grocery stores, hotel, or office uses developed as part of the proposed project would exceed 50,000 square feet in size.

The proposed project is the conceptual buildout under Specific Plan 3.0 and no specific future non-residential tenants or operators have been identified. It is expected that no single retail establishment developed as part of the proposed project, including grocery store, hotel, or office uses, would exceed 50,000 square feet in size. As discussed in the VMT Memo prepared for the proposed project, included as **Appendix K** to the Draft EIR, even though the proposed project would result in up to 440,000 square feet of non-residential uses, each individual retail tenant is anticipated to fall below the Office of Land Use and Climate Innovation's (LCI) screening threshold for regional-serving retail uses. Therefore, the proposed project would be consistent with the intended function of the 50,000-square-foot threshold, as construed in the appropriate technical advisory, and VMT impacts associated with future retail establishments are presumed to be less than significant.

Regardless, the VMT Memo assessed potential impacts related to retail uses larger than 50,000 square feet and found that even if the retail use exceeds the 50,000 square foot threshold (like a grocery store), the proposed project would still have a net reduction in VMT. Table 4 in **Appendix K** of the Draft EIR shows that the Retail VMT would be less than significant. Hotel uses are not assessed using the travel demand model since the model does not have a specific hotel land use to include. A qualitative analysis was completed for hotel uses, as discussed in more detail in Response to Comment L-3-10, below. Office uses are assumed to be within 10 percent of the proposed retail uses, however these office uses are anticipated to be customer-based rather than employee-based and therefore have similar VMT results.

Response to Comment L-3-10

This comment asks how the qualitative VMT assessment of the other potential non-residential uses that could be developed within the Buildout Area that are not primarily retail in nature, such as hotels or motels, was assessed.

The VMT Memo prepared for the proposed project included a qualitative VMT assessment based on the anticipated travel characteristics of the potential hotel or motel use within the Buildout Area. The analysis assumed a hotel/motel use would be non-destination in nature and would serve travelers already moving within or through the region, which is pre-determined based on their final destination. This assessment was not restricted to trips within the City of Cypress only and is a reasonable assumption based on the final destination being a family visit, business visit to nearby offices, or central location to Southern California attractions.

Response to Comment L-3-11

This comment appears to note that although non-destination hotels and motels do accommodate overnight travelers and event attendees already in the region, these uses would reduce overall trip lengths in the region and not necessarily local vehicle trips within the City of Cypress.

For VMT purposes, the relevant question is whether the use would generate substantial new regional travel or increase trip lengths compared with existing travel patterns. Non-destination hotels and motels typically accommodate travelers who are already in the region for business, events, freeway travel, or other purposes. Therefore, these types of lodging facilities generally capture or redistribute existing regional lodging demand rather than creating a new major destination that would induce additional long-distance travel. In some cases, providing lodging near a traveler's destination or travel route can reduce overall trip length compared with lodging located farther away.

Therefore, although the anticipated vehicle trips may be regional in nature and not necessarily local to the Cypress area, the anticipated hotel or motel use is not expected to substantially increase VMT as it would not significantly alter regional lodging supply, function as a major attraction, or introduce substantial new travel demand.

Response to Comment L-3-12

This comment asks for clarification regarding how the internal trip capture was determined in the project-specific VMT analysis if the retail portion of the proposed project cannot be determined at this time.

The VMT model identifies project land use input as a general retail use and does not require the specific type of retail be identified. The model is a trip-based travel demand model that simulates travel behavior based on socio-economic data, including household, population, employment characteristics and proximities between different land uses type, to estimate trip generation and mode choice. In addition, the model includes residential and retail land uses within the project zone which accounts for internal capture within the zone.

Response to Comment L-3-13

This comment asks how the retail employment rate of approximately two employees per 1,000 square feet was assessed.

The retail employment rate of approximately two employees per 1,000 square feet is derived using the Institute of Transportation Engineers (ITE) Trip Generation Manual for General Retail uses. Based on an equal combination of the ITE trip rates by square feet and trip rates by number of employees, the proposed project is forecast to generate approximately two employees per 1,000 square feet.

Response to Comment L-3-14

This comment requests a map that shows the proposed new bike facilities associated with the proposed project be provided.

Figure 2 in the VMT Memo prepared for the proposed project has been revised to include the planned Class II On-Road bike path that would bisect the Buildout Area connect Cerritos Avenue and Katella Avenue and the planned Class III On-Road bike path that would extend west from Walker Street. Refer to Section 3.0, Errata, of this Final EIR.

The Draft EIR analyzed buildout of the Specific Plan within the Buildout Area at a "programmatic" level. Because the proposed project is examined at a programmatic level, the Draft EIR only discusses and analyzes the overarching, "maximum development" scenario and the specific future development projects and associated future bicycle infrastructure are not discussed in the Draft EIR because they cannot be determined at this time. Future development projects associated with implementation of the proposed project would be reviewed by the City on a project-by-project basis in order to ensure that the proposed development is consistent with the Specific Plan. Specifically, through the design review process, future development projects would be required to submit a detailed site plan that depicts the bicycle facilities that would be included in each development, consistent with the Specific Plan.

Response to Comment L-3-15

This comment requests that Figure 2, Existing Bikeways Near Buildout Area, in the VMT analysis memorandum show the proposed new bike facilities and classifications associated with the proposed project.

As noted in the Response to Comment L-3-15, Figure 2 in the VMT Memo prepared for the proposed project in **Appendix K** of the EIR has been revised to include the planned Class II On-Road bike path that would bisect the Buildout Area and connect Cerritos Avenue and Katella Avenue and the planned Class III On-Road bike path that would extend west from Walker Street. Refer to Section 3.0, Errata, of this Final EIR.

Comment Letter L-4

GARDEN GROVE

CITY OF GARDEN GROVE

April 30, 2026

Alicia Velasco, Planning Director
City of Cypress Community Development Department, Planning Division
5275 Orange Avenue
Cypress, California 90630

RE: NOTICE OF AVAILABILITY OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE SPECIFIC PLAN 3.0 BUILDOUT PROJECT

Dear Alicia Velasco,

Thank you for providing the Notice of Availability for the Specific Plan 3.0 Buildout Project Draft EIR ("Project"), in the City of Cypress ("City"). City of Garden Grove Staff have reviewed the available documents, and the following comments are provided for your consideration: L-4-1

- The Draft EIR assumes approximately 50% buildout of the non-residential floor area (440,000 sq. ft. of the 879,170 sq. ft. of maximum development capacity that would be approved under the Specific Plan). [DEIR at pp. 1-2, 3-14.] To support this assumption, the Draft EIR states:

  > "[I]t is anticipated that, based on current and reasonably foreseeable future market conditions, the buildout of the Buildout Area will include substantially less than 879,170 square feet of non-residential development. Therefore, the environmental analyses in this Draft EIR are based in part on the assumption that only 440,000 square feet of non-residential development will occur within the Buildout Area. This represents approximately 50 percent of the maximum amount of permitted non-residential development." [DEIR at pp. 1-2, 3-14.] L-4-2

  The Draft EIR does not explain its methodology for arriving at the 50% figure. While the City of Cypress is "not required to engage in speculation in order to analyze a 'worst case scenario'" (see *Napa Citizens for Honest Government v. Napa County Bd. of Supervisors* (2001) 91 Cal.App.4th 342, 373), the City must support its 50% buildout assumption with substantial evidence under CEQA Guidelines Section 15384. The City should provide greater support for its assumption that only 50% of the non-residential development will be built out.

  The Draft EIR adds: "If non-residential development that cumulatively exceeds 440,000 square feet is later proposed within the Buildout Area, additional environmental review in accordance with the provisions of CEQA and the *State CEQA Guidelines* may be required if and to the extent such non-residential development requires any discretionary action by the City." [DEIR at p. 3-14.] However, it is unclear what additional "discretionary action by the City" (as opposed to ministerial approval) L-4-3

would be necessary if the Specific Plan allowing a maximum buildout of 879,170 square feet of non-residential development is approved. L-4-3 cont.

- In reviewing the Level of Service (LOS) analysis, it is noted that LOS at the Valley View Street and SR-22 ramp intersections degrades from LOS C under existing conditions to LOS D under Buildout Year 2038 conditions. These intersections serve as critical access points to the SR-22 Freeway and provide connectivity to the I-405 Freeway. As such, they are particularly sensitive to increases in traffic volumes and delay. While LOS D may be considered acceptable, degradation at freeway ramp intersections is concerning because it can lead to: L-4-4
    - Increased queuing and potential spillback onto Valley View Street
    - Reduced efficiency of traffic progression along the corridor
    - Impacts to upstream intersections, including those within Garden Grove

  In addition, the current analysis does not appear to account for corridor-level operational behavior along Valley View Street. As a major north-south arterial that is signal-coordinated, changes in traffic volumes can have broader system effects beyond a single intersection. Incremental increases in traffic can:
    - Disrupt signal progression
    - Break up vehicle platoons
    - Increase stops and delays across multiple intersections
    - Create cumulative impacts along the corridor

  These effects are particularly relevant at key downstream intersections such as:
    - Valley View Street / Chapman Avenue
    - Valley View Street / Lampson Avenue
    - Valley View Street / West Grove Avenue

  L-4-5

  Given that project traffic traveling southbound on Valley View Street must pass through these ramp intersections to access the regional freeway system, even a modest increase in volume can contribute to cumulative operational impacts. Accordingly, the City requests that the analysis be expanded to include the following downstream intersections within Garden Grove to better evaluate corridor-level and freeway access impacts:
    - Valley View Street / Chapman Avenue
    - Valley View Street / West Grove Avenue
    - Valley View Street / Belgrave Avenue
    - Valley View Street / Lampson Avenue
    - Valley View Street / Cerulean Avenue

  There are additional concerns that the assumed buildout of non-residential floor area will is only at 50%. Should the entirety of the approve 879,170 square feet of non-residential floor area be built out, the added non-residential uses will also contribute to further degradation of LOS on Valley View Street. L-4-6

If you have any questions, please contact me at (714) 741-5303 or priitk@ggcity.org. L-4-7

Sincerely,

Priit Kaskla, AICP
Senior Planner

2.4.4 CITY OF GARDEN GROVE

Letter Code: L-4
Date: April 30, 2026

Response to Comment L-4-1

This comment provides introductory remarks and states that the City of Garden Grove has reviewed the Draft EIR.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment L-4-2

This comment asks the City to provide greater support for its assumption that only approximately 50 percent (approximately 440,000 square feet) of the total maximum non-residential development capacity approved under the Specific Plan (879,170 square feet) would be built out.

As discussed in Chapter 3.0, Project Description, of the Draft EIR, the Specific Plan permits an aggregate maximum of 879,170 square feet of non-residential floor area within the Buildout Area. However, the application submitted to the City by the Applicant for buildout of the Buildout Area under the Specific Plan proposes approximately 440,000 square feet of non-residential area. As such, the proposed project evaluated in the Draft EIR is based in part on the assumption that only 440,000 square feet of non-residential development will occur within the Buildout Area. The amount of anticipated non-residential floor area is based on current and reasonably foreseeable future market conditions. Accordingly, the buildout of the Buildout Area as well as the associated Development Agreement will include substantially less than 879,170 square feet of non-residential development.

Response to Comment L-4-3

This comment refers to page 3-14 of the Draft EIR, which states that additional environmental review may be required if and to the extent that cumulative non-residential development exceeds 440,000 square feet, and states that it is unclear what additional discretionary action would be necessary if the Specific Plan allows a maximum buildout of 879,170 square feet of non-residential development is approved.

Future development projects associated with implementation of the proposed project would be required to submit development applications for review and approval by the City. Through this application review process, the City would monitor and track the cumulative non-residential development within the Buildout Area to ensure that it would not exceed the 440,000 square foot assumption that was analyzed in the Draft EIR. If future buildout exceeds 440,000 square feet of non-residential floor area, each future applicant for a project that would cause the overall non-residential floor area within the Buildout Area to exceed, or further exceed, 440,000 square feet, would be required to prepare and submit to the City supplemental studies and analysis, which may include additional environmental review pursuant to CEQA, for such a project. In addition, if future

buildout exceeds 440,000 square feet of non-residential floor area, the Development Agreement could require updates, which would be subject to City discretionary approval.

Response to Comment L-4-4

This comment states that according to the LOS analysis prepared for the proposed project, the LOS at the Valley View Street and SR-22 ramp intersections degrades from LOS C under existing conditions to LOS D under Buildout Year 2038 conditions, which could lead to degradation at the freeway ramp intersection.

The City acknowledges this comment. As previously discussed, transportation impacts under CEQA are to be evaluated based on a project's effect on VMT as opposed to vehicle delay and LOS. This change came into effect on December 28, 2018, when the California Office of Administrative Law cleared the revised *State CEQA Guidelines* for use and removed vehicle delay and LOS from consideration under CEQA. Because the additional corridor-level operational analysis requested by the City of Garden Grove is also related to LOS, it is also not required by CEQA.

Consistent with CEQA requirements, potential transportation impacts were assessed based on project-specific VMT analysis, as provided in the VMT Memo prepared for the proposed project. However, the Traffic Study prepared for the proposed project, which is not included in the Draft EIR, was prepared consistent with the Orange County Congestion Management Program (CMP) and addressed potential LOS impacts with implementation of the proposed project. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment L-4-5

This comment states that the LOS analysis does not appear to account for corridor-level operational behavior along Valley View Street, and requests that the LOS analysis be expanded to include several downstream intersections within the City of Garden Grove to better evaluate corridor-level and freeway access impacts.

The City acknowledges this comment. As discussed above, transportation impacts under CEQA are evaluated based on a project's effect on VMT, not LOS. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment L-4-6

This comment claims that should the entirety of the approved 879,170 square feet of non-residential floor area be built out, the added non-residential uses would also contribute to further degradation of LOS on Valley View Street.

The City acknowledges this comment. As discussed above, transportation impacts under CEQA are evaluated based on a project's effect on VMT, not LOS. Further, as discussed above, the City would monitor and track the cumulative non-residential development within the Buildout Area to ensure that it would not exceed the 440,000 square foot assumption that was analyzed in the Draft EIR. If

future buildout exceeds 440,000 square feet of non-residential floor area, each future applicant for a project that would cause the overall non-residential floor area within the Buildout Area to exceed, or further exceed, 440,000 square feet, would be required to prepare and submit to the City supplemental studies and analysis, which may include additional environmental review pursuant to CEQA, for such a project. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment L-4-7

This comment provides contact information.

The City acknowledges this comment and looks forward to future communications with the City of Garden Grove regarding development of the proposed project.

Comment Letter I-1

From: ernesto munoz
To: Alicia Velasco
Cc: City Council
Subject: Comment on Draft Los Alamitos Race Track EIR – Specific Plan 3.0 Buildout Project (Opposition and Request for Reduced-Density Alternative)
Date: Monday, April 20, 2026 8:02:41 PM

Dear Ms. Velasco, Planning Director, Commissioners, and honorable City Council Members,

My name is Ernesto Muñoz. I am a registered Civil Engineer in the State of California, a 32-year resident of the City of Cypress, and a former member of the City's engineering staff.

I am writing to formally comment on the Draft Environmental Impact Report (EIR) for the Specific Plan 3.0 Buildout Project and Housing Element implementation.

Based on both my professional background and long-term familiarity with Cypress infrastructure and traffic patterns, I must respectfully oppose the project as currently proposed. I-1-1

1. Traffic and Vehicle Miles Traveled (VMT) Impacts

The VMT analysis prepared by Kimley-Horn indicates a substantial increase in total vehicle miles traveled associated with the nearly 1,800 proposed residential units. From an engineering and practical standpoint, this translates directly into increased congestion on key arterial and collector roadways serving the project area and surrounding neighborhoods.

Of particular concern are the cumulative impacts to intersections and corridors that already experience peak-hour congestion, including: I-1-2
Katella Avenue & Valley View Street
Katella Avenue & Walker Street
Lincoln Avenue & Valley View Street
Lincoln Avenue & Walker Street
Ball Road & Valley View Street

In addition, local neighborhood circulation near my residence—including connections feeding into Valley View Street and Lincoln Avenue—will experience increased cut-through traffic as drivers seek to avoid congested arterials. These are not speculative concerns; they reflect well-documented driver behavior patterns in built-out suburban systems under added demand.

Under CEQA, VMT is used precisely because it correlates with congestion, emissions, and environmental degradation. The increase identified in the EIR is therefore a clear indicator of significant and unavoidable impacts.

2. Air Quality, Greenhouse Gas, and Quality of Life Impacts I-1-3

Increased VMT will directly result in:

Higher greenhouse gas emissions
Degradation of local air quality
Increased noise levels and reduced neighborhood livability

These impacts are inconsistent with the City's long-standing goals of maintaining a safe, stable, and high-quality residential environment. Cypress is largely built out, and incremental increases of this magnitude have disproportionate effects on both infrastructure and quality of life.

I-1-3 cont.

3. Professional Concern Regarding Scale and Infrastructure Capacity

Based on my experience as a civil engineer and former City staff member, the proposed scale —approaching 1,800 units—represents an intensity of development that exceeds what the existing circulation network can reasonably absorb without substantial degradation of service levels and community character.

I-1-4

While I recognize the City's obligations under RHNA, those obligations do not require maximizing density at every opportunity without balancing infrastructure constraints and environmental impacts.

4. Failure to Adequately Evaluate a Reasonable Reduced-Density Alternative

CEQA requires a good-faith evaluation of feasible alternatives that can reduce significant impacts. A reduced-density alternative has not been meaningfully advanced as a preferred option.

I respectfully request that the City evaluate and adopt a reduced-density alternative consisting of approximately 1,253 units (a 30% reduction from the proposed ~1,800 units). This alternative would:

I-1-5

Reduce VMT and peak-hour traffic volumes
Improve intersection performance and reduce cut-through traffic
Lower greenhouse gas emissions and air quality impacts
Better preserve neighborhood character and quality of life
Importantly, such a reduction would still allow the City to make substantial progress toward meeting its housing obligations while mitigating the most severe impacts.

5. Request for Project Revision and Recirculation

Given the magnitude of the impacts identified, I respectfully request that the City:
Revise the project to incorporate a reduced-density alternative (~1,253 units)

Fully analyze this alternative in a recirculated EIR

I-1-6

Incorporate meaningful VMT-reduction strategies and enforceable mitigation measures

Reevaluate the project's consistency with infrastructure capacity and community character

6. Conclusion

As both a professional engineer and long-time resident, I believe the current proposal places an undue burden on Cypress's transportation network and overall livability. A reduced-density

I-1-7

alternative represents a reasonable and necessary path forward that better balances state housing requirements with local environmental and community considerations.

I-1-7 cont.

Thank you for your time and consideration of these comments.

Sincerely,

Ernesto Muñoz, P.E.

2.5.1 ERNESTO MUÑOZ

Letter Code: I-1
Date: April 20, 2026

Response to Comment I-1-1

This comment provides introductory remarks and states that the commenter opposes the proposed project as currently designed.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-1-2

This comment claims that the substantial increase in total VMT associated with implementation of the proposed project would translate into increased congestion on roadways serving the project area and surrounding neighborhoods and would result in a significant and unavoidable impact related to VMT, congestion, emissions, and environmental degradation.

VMT measures the amount of driving a project is expected to generate compared to the regional average. It looks at the average number of miles people travel each day for activities like commuting, shopping, and errands. Under CEQA, VMT is used to evaluate a project's transportation impacts as well as impacts on air quality and greenhouse gas emissions, since more travel generally results in more pollution. Projects located near jobs, shops, and public transit tend to have lower VMT, while those in more auto-dependent areas tend to have higher VMT. Importantly, VMT does not measure traffic congestion or roadway conditions. It focuses on how far people travel, not how traffic flows. As previously discussed, transportation impacts under CEQA are to be evaluated based on a project's effect on VMT as opposed to vehicle delay and LOS. This change came into effect on December 28, 2018, when the California Office of Administrative Law cleared the revised *State CEQA Guidelines* for use and removed vehicle delay and LOS from consideration under CEQA.

As discussed in Section 4.17, Transportation, of the Draft EIR, the proposed project's non-residential component is presumed to result in a less than significant VMT impact as future non-residential development under the proposed project would qualify as a neighborhood-serving retail development under the LCI Technical Advisory. A supplemental quantitative analysis was also conducted in accordance with the County Guidelines that confirmed that the proposed project's non-residential uses would result in a less than significant VMT impact, supporting the conclusion that the proposed project satisfies both the intent and technical requirements for VMT screening. However, the residential component of the proposed project would result in a higher VMT per capita than the County's residential VMT significance thresholds under both existing and cumulative plus project conditions by 11.6 percent. As such, the proposed project would be required to implement feasible TDM strategies to mitigate the proposed project's VMT impact, as detailed in **Mitigation Measure TRA-1**. These VMT reduction measures include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network and improving the pedestrian network, including the construction of off-site sidewalks to improve

sidewalk coverage and pedestrian access to the surrounding area. However, the implementation of these measures would only reduce the proposed project's residential VMT impact by 1.2 percent. As such, even with implementation of the identified TDM strategies, the proposed project's residential VMT impact would remain significant, with a residential VMT impact of 10.4 percent over the significance threshold. Therefore, the proposed project's VMT impact would be significant and unavoidable, as identified in the Draft EIR. However, it should be noted that VMT does not measure traffic congestion or roadway conditions, as discussed above.

Refer to Response to Comments R-1-2 and L-3-5, above for a discussion of air quality emissions and the mitigation measures prescribed to reduce potential impacts. Overall, even with the implementation of potential VMT reductions required in **Mitigation Measure TRA-1**, VOC emissions would remain above the SCAQMD thresholds. As there are no additional feasible mitigation measures that would reduce project operational-source VOC emissions to a less than significant level proposed project operation would result in a significant and unavoidable impact related to a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard, as identified in the Draft EIR.

However, it should be noted that implementation of the proposed project would not result in any significant impacts associated with greenhouse gas (GHG) emissions, as discussed in Section 4.8, Greenhouse Gas Emissions, of the Draft EIR. As discussed in Section 4.8, the proposed project would be consistent with the land use and growth assumptions underlying the Southern California Association of Governments' (SCAG) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (Connect SoCal 2024) and would implement planned housing growth identified in the City's adopted and California Department of Housing and Community Development (HCD)-certified Housing Element. The project's GHG emissions were quantitatively estimated for both construction and operational phases in accordance with *State CEQA Guidelines* Section 15064.4 and were evaluated in the context of statewide regulatory programs, regional emissions reduction strategies, and project-specific mitigation measures. The CARB 2022 Climate Change Scoping Plan was used as statewide policy guidance to inform the analysis. The City considered the project's overall consistency with statewide and regional emissions reduction trajectories, including implementation of State-mandated housing growth within a CARB-certified regional planning framework. With implementation of **Mitigation Measure GHG-1**, **Mitigation Measure AIR-1**, and **Mitigation Measure TRA-1**, the project's incremental contribution to cumulative GHG emissions would not be cumulatively considerable. Therefore, impacts related to the generation of GHG emissions, either directly or indirectly, and potential conflict with applicable plans, policies, or regulations adopted to reduce greenhouse gas emissions would be less than significant with mitigation.

As summarized above, the Draft EIR adequately analyzed and identified potential impacts associated with air quality emissions, GHG emissions, and transportation (VMT) and identified all feasible mitigation measures to reduce the significant impacts to the greatest extent practicable. Therefore, while air quality and transportation impacts would remain significant and unavoidable, the Draft EIR identifies and prescribes all feasible mitigation measures that would reduce the impact to the extent practicable, as required by CEQA.

Response to Comment I-1-3

This comment claims that the increased VMT associated with implementation of the proposed project would directly result in increased GHG emissions, the degradation of local air quality, increased noise levels, and reduced neighborhood livability, which is inconsistent with the City's long-standing goals of maintaining a safe, stable, and high-quality residential environment.

As previously discussed, implementation of the proposed project would result in a significant and unavoidable VMT impact associated with the proposed residential uses, even with implementation of the VMT reduction strategies provided in **Mitigation Measure TRA-1**. Increased VMT would result in increased GHG emissions and traffic noise and could result in the degradation of local air quality, all of which could impact neighborhood livability. The proposed project's potential impacts associated with GHG emissions, noise, and local air quality are discussed below. Overall, as further discussed below, although the proposed project would result in a significant and unavoidable VMT impact, this would not result in other significant impacts related to GHG emissions, traffic noise, and local air quality that would substantially reduce neighborhood livability.

As discussed above, although implementation of the proposed project would increase GHG emissions during project construction and operation, the proposed project would be consistent with the land use and growth assumptions underlying Connect SoCal 2024 and would implement planned housing growth identified in the City's adopted and HCD-certified Housing Element. Additionally, the City considered the project's overall consistency with statewide and regional emissions reduction trajectories, including implementation of State-mandated housing growth within a CARB-certified regional planning framework. The analysis found that the proposed project would be consistent with all statewide and regional emissions reduction trajectories and would not conflict with CARB's 2022 Scoping Plan as the proposed project would not conflict with the key project attributes provided in the 2022 Scoping Plan related to transportation electrification, VMT reduction, and building decarbonization. Therefore, impacts related to the generation of GHG emissions, either directly or indirectly, and potential conflict with applicable plans, policies, or regulations adopted to reduce greenhouse gas emissions would be less than significant with implementation of **Mitigation Measure GHG-1**, **Mitigation Measure AIR-1**, and **Mitigation Measure TRA-1.** Therefore, implementation of the proposed project would not result in significant GHG emissions that would reduce neighborhood livability.

In addition, as discussed above, implementation of the proposed project would result in a significant and unavoidable impact related to operational air quality emissions, even with implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1.** These potential impacts have been adequately analyzed and identified in the Draft EIR and all feasible mitigation measures to reduce these impacts to the greatest extent practicable have been identified and prescribed in the Draft EIR, as required by CEQA. However, as discussed in Section 4.3, Air Quality, of the Draft EIR, implementation of the proposed project would not expose sensitive receptors, such as residential uses, to substantial pollutant concentrations with implementation of **Mitigation Measure AIR-2**, which requires use of USEPA Tier 4 Final or cleaner construction equipment if and to the extent commercially available, or the cleanest available technology that is commercially available and feasible to reduce construction-related diesel particulate matter (DPM) emissions at the source. If Tier 4 Final equipment or cleaner construction equipment is not commercially available for a

majority of the construction equipment and the individual development project would be larger than 20 acres, **Mitigation Measure AIR-2** requires the preparation of a project-specific construction health risk assessment (HRA), which may identify additional feasible risk-reduction measures for implementation, as appropriate.

Refer to Response to Comment L-3-4, above for a discussion of the proposed project's anticipated operational public health effects. Overall, as previously discussed, proposed project implementation is not expected to result in any Basin-wide increase in health effects that would reduce neighborhood livability.

The Draft EIR also recognizes that emissions of ozone precursors (VOCs) can contribute to regional exceedances of air quality standards and that such exceedances are associated with increased respiratory and cardiovascular symptoms in sensitive populations. However, the proposed project's emissions are small relative to regional totals and SCAQMD addresses and manages air basin-wide concentrations are addressed through the SCAQMD's Air Quality Management Plan. Further, the precise concentrations at which VOCs would trigger these symptoms for a single project is not currently scientifically feasible. It is also not technically feasible to directly correlate regional emissions to specific localized health public health effects (e.g., the number of asthma cases) from an individual project. Accordingly, the Draft EIR discloses these impacts as significant and unavoidable and includes all feasible mitigation measures to minimize emissions during operation, as discussed above.

Section 4.13, Noise, of the Draft EIR analyzed potential operational traffic noise impacts. As discussed in Section 4.13 of the Draft EIR, the results of this analysis indicate that the increase in noise associated with project-related traffic, comparing existing without project traffic volumes to existing plus project traffic volumes, would be up to 0.3 A-weighted decibel Community Noise Equivalent Level (dBA CNEL) along the analyzed road segments. A noise level increase of less than 3 dBA would not be perceptible to the human ear in an outdoor environment. Because project-related traffic would not result in a perceptible increase (i.e., 3 dBA or greater) in ambient roadway noise levels, off-site traffic noise impacts would be less than significant, and would not substantially reduce neighborhood livability.

Overall, the Draft EIR adequately analyzed and identified potential impacts associated with air quality emissions, GHG emissions, and noise, disclosed their potential impact on surrounding neighborhoods, and identified all feasible mitigation measures to reduce the significant impacts to the greatest extent practicable, as required by CEQA. Implementation of identified mitigation measures would further the City's long-standing goals of maintaining a safe, stable, and high-quality residential environment while allowing for development of new residential and non-residential uses to help meet the unmet demand for housing in the City and the project vicinity, consistent with the with the City's Housing Element, Regional Housing Needs Allocation (RHNA) requirements, and the voter-approved Specific Plan.

Response to Comment I-1-4

This comment claims that the scale of the proposed project would exceed what the existing circulation network can reasonably absorb without substantial degradation of service levels and community character.

As previously discussed in the Response to Comment I-1-2, transportation impacts under CEQA are to be evaluated based on a project's effect on VMT as opposed to vehicle delay and LOS. Accordingly, the Draft EIR does not consider degradation of LOS as part of the transportation analysis. In addition, the City's Public Works Department has already assessed the potential impacts to transportation infrastructure with implementation of the proposed project and identified a range of infrastructure improvements to ensure that the surrounding roadways would be able to accommodate the additional vehicles associated with operation of the proposed project.

As described in Chapter 3.0, Project Description, of the Draft EIR, the Specific Plan allows a maximum of 1,791 residential units and, for purposes of the environmental review in the Draft EIR, up to 440,000 square feet of non-residential development within the Buildout Area. As discussed in Section 4.1, Aesthetics, of the Draft EIR, this proposed development density within the Buildout Area would be higher than what currently exists. However, the Specific Plan provides specific development standards for residential and mixed-use development, including maximum structure height and setback requirements, which would be applicable to the future development under the proposed project. As provided in Table 3-1 of the Specific Plan, future single-family detached residential structures shall not exceed 35 feet and 2 stories, and future single-family attached residential structures shall not exceed 35 feet and 3 stories. In addition, future senior housing structures shall not exceed 35 feet in height, and future structures within the mixed-use district shall not exceed 75 feet in height.

Existing development in the vicinity of the Buildout Area includes residential and commercial buildings that generally range in height from one to three stories. In addition, some surrounding development, such as the Homewood Suites and the Acadia Apartments located approximately 800 feet south of the Buildout Area, exceed three stories and approach 75 feet in height. As such, the development allowed in the Buildout Area pursuant to the Specific Plan would be consistent with the mass and scale of existing development near the Buildout Area. In addition, future development facilitated by the proposed project would be required to adhere to the development and design guidelines contained in the Specific Plan, including landscaping requirements and those related to size and scale of the future buildings.

Therefore, while the proposed project would change the aesthetic character of the Buildout Area due to an increase in proposed development density, all development pursuant to the Specific Plan would be required to comply with all relevant sustainable design strategies stated or referenced in the Specific Plan and would be required to comply with the design regulations in the City's Zoning Ordinance that relate to scenic quality. Therefore, implementation of the proposed project at the scale proposed would not result in significant impacts related to community character.

Response to Comment I-1-5

This comment claims that the Draft EIR does not adequately analyze a reduced density alternative and requests that the City evaluate and adopt a reduced density alternative consisting of approximately 1,253 units (a 30 percent reduction from the proposed project). This comment also claims that the implementation of a reduced density alternative would reduce VMT and peak-hour traffic volumes, improve intersection performance and reduce cut-through traffic, lower GHG emissions and air quality impacts, and better preserve neighborhood character and quality of life, while still allowing the City to make substantial progress toward meeting its housing obligations.

Refer to Section 2.1.3, Reduced Development Alternative, for the Master Response to comments regarding implementation of a reduced development alternative and associated impacts.

Response to Comment I-1-6

This comment requests that the City revise the proposed project to incorporate a reduced density alternative, revise the Draft EIR to fully analyze a reduced density alternative, incorporate meaningful VMT-reduction strategies and enforceable mitigation, reevaluate the project's consistency with infrastructure capacity and community character, and recirculate the Draft EIR.

As discussed in Section 2.1.2, Reduced Development Alternative above, the Draft EIR included a full analysis of a reduced density alternative (Reduced Density Alternative [30% Reduction]). The Draft EIR also identified and prescribed all feasible mitigation requiring VMT reduction strategies be incorporated into future development of the proposed project (**Mitigation Measure TRA-1**) and included a consistency evaluation related to community character, as discussed above. Further, as noted above, LOS is no longer the standard for evaluating a project's potential impact on transportation, and the Draft EIR included a project-specific VMT Memo. Therefore, the Draft EIR adequately analyzes all potential project impacts and includes all feasible mitigation measures, as necessary and required by CEQA. No revisions to the Draft EIR are necessary and recirculation of the Draft EIR is not required.

Response to Comment I-1-7

This comment provides concluding remarks and summarizes the comments discussed above.

The City acknowledges this comment. Because the comment does not contain any new substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, beyond those provided and responses to above, no further response is required. Refer to Response to Comment I-1-2 through Response to Comment I-1-6, above.

Comment Letter I-2

From: George Pardon
To: Alicia Velasco
Cc: City Council
Subject: Draft EIR for Cypress Town Center and Commons Specific Plan 3.0 Buildout Project
Date: Sunday, April 26, 2026 10:37:26 PM

Dear Planning Director Velasco,

I-2-1

I am writing to convey my concerns with the above referenced EIR.

With traffic already increasing on other streets in Cypress as drivers seek alternatives to Katella Ave, I was alarmed to read that the proposed project anticipates that Vehicle Miles Traveled (VMT) will be 11.6% over the significance threshold. Even with proposed mitigations, VMT would be 10.4% over the significance threshold. This VMT is higher per capita than the County's residential VMT. While the EIR indicates the proposed project's VMT impact would be significant, the EIR also says it is unavoidable although one alternative project proposed would reduce the number of residential units by 30% from almost 1,800 units to 1,253 units. What's interesting is that this reduced scope would be very close to the scope previously approved by residents prior to Measure S. It's unfortunate that this EIR information was not provided before residents were asked to vote on Measure S. It's also unfortunate that a community meeting has not been held by the city to discuss the impacts of this proposed project. Another significant problem with Measure S is that residents were only given the option of putting 676 more units on the race course or 766 more units in the Lincoln Avenue Specific Plan. When asked about options in the business park area, the city simply responded that those businesses weren't interested. The residents were not given the option of 'None of the Above' in Measure S.

I-2-2

Another concern is that this plan continues to refer to the Cypress Town Center yet with this added density, the development of a town center with the retail, restaurants, and entertainment that was proposed in the previous ballot measure is unlikely. Unfortunately, the likely loss of a town center was not mentioned in Measure S.

I-2-3

The scope of this project should be revisited because the Housing Element that added the 676 units to the race course was developed during the Covid-19 pandemic which limited significant public input. The Housing Element states that "Due to the Covid-19 pandemic, all workshops were held virtually through the Webex video conference platform." I also think there would be value in evaluating if there are additional land use alternatives that may have come about since the pandemic.

I-2-4

I believe the best choice would be for the City Council to approve the alternative that reduces the number of residential units by 30%. I understand that if the reduced number of units is approved by the City Council, the State will likely require the units to be zoned somewhere else. If other locations are considered, there is no reason why the only alternative needs to be the Lincoln Avenue Specific Plan as proposed in Measure S. One outstanding option would be the 25-acre Yamaha site on Katella Ave since Yamaha is leaving. The Yamaha site is conveniently located near restaurants and shopping. There are likely more options without considering the race course and Lincoln Avenue as alternatives.

While I know that revisiting the issue of finding an alternative site for the units removed from the race course will likely have some time and financial costs, the ramifications of the traffic in the project as proposed would have long lasting negative impacts on our community. I-2-5

I have reached out to the staff in the Housing and Community Development office in Sacramento and they responded in writing stating that 'cities are able to revise their housing element and sites inventory after adoption, doing so would require a submittal of any draft changes to HCD for review as a new housing element submission for approval.'

I respectfully request that you approve the EIR for this project with the alternative of reducing the number of residential units by 30%.

Sincerely,

George Pardon
37-year Cypress resident

cc: Cypress City Council

2.5.2 GEORGE PARDON

Letter Code: I-2
Date: April 26, 2026

Response to Comment I-2-1

This comment provides introductory remarks and states that the commenter has concerns with implementation of the proposed project.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-2-2

This comment expresses concern over the proposed project's significant and unavoidable VMT impact when there is a Reduced Development Alternative that would reduce the number of residential units by 30 percent. This comment also includes comments related to Measure S.

Refer to Section 2.1.2, Reduced Development Alternative, for the Master Response to comments regarding implementation of a reduced development alternative and associated transportation impacts.

As the remainder of this comment is related to Measure S and not the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-2-3

This comment claims that development of a town center with retail, restaurants, and entertainment, which was proposed in the approved ballot measure, would be unlikely due to the residential density proposed under the project.

The proposed project evaluated in the Draft EIR includes 1,791 residential units and 440,000 square feet of non-residential uses that could occur within the Buildout Area. Although the Specific Plan permits a maximum of 879,170 square feet of non-residential floor area within the Buildout Area, it is anticipated that, based on current and reasonably foreseeable future market conditions, the buildout of the Buildout Area will include substantially less than 879,170 square feet of non-residential development. Therefore, the environmental analyses in the Draft EIR are based on the assumption that only 440,000 square feet of non-residential development will be built within the Buildout Area. This represents approximately 50 percent of the maximum amount of non-residential development permitted in the Specific Plan and is consistent with the provisions of the draft Development Agreement and related planning application being considered by the City as part of the proposed project.

The Draft EIR analyzed the proposed project based on reasonably foreseeable market conditions, including the maximum number of residential units and non-residential square footage that could be developed without requiring an amendment to the Specific Plan or additional environmental

review pursuant to CEQA. Future development within the Buildout Area will be required to comply with the permitted uses and applicable development standards of the Specific Plan. It is also not unusual for development projects of this size and scale to be reduced or modified over time in response to market conditions.

Response to Comment I-2-4

This comment states that the scope of the proposed project should be revisited as the City's Housing Element, which added 676 units to the racecourse property, was developed during the COVID-19 pandemic which limited significant public input.

The proposed project was developed based on the Specific Plan that was approved by the voters of the City of Cypress on November 5, 2024, by the voters of the City of Cypress. As this comment is related to the City's Housing Element and not the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-2-5

This comment recommends that the City Council should approved the Reduced Development Alternative (30% Reduction) described in the Draft EIR. This comment also includes comments related to rezoning other areas of the city for residential development and updating the City's Housing Element.

Refer to Section 2.1.3, Reduced Development Alternative, for the Master Response to comments regarding implementation of a reduced development alternative and associated impacts.

As the remainder of this comment is related to rezoning other areas of the city for residential development and updating the City's Housing Element and not the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Comment Letter I-3

April 29, 2016

Alicia Velasco, Planning Director

RE: Formal Comments on the Environmental Impact Report (EIR) and Vesting Tentative Tract Map for the Los Alamitos Racetrack Project

Dear Ms. Velasco,

I am submitting these formal comments regarding the Environmental Impact Report (EIR) and the proposed Vesting Tentative Tract Map for the Los Alamitos Racetrack development. I-3-1

The project, as currently proposed, appears to raise significant legal and procedural concerns regarding compliance with the Subdivision Map Act (State Law), the City's Specific Plan, the City's Municipal Code, and the City's General Plan. I-3-2

1. Potential Non-Conformance with Gov. Code § 66473.5 and the Specific Plan Government Code § 66473.5 requires that a tentative map be in "substantial conformance" with the applicable Specific Plan. The voter-approved Specific Plan explicitly "envisions" a network of dedicated pedestrian and bicycle trails to ensure connectivity between neighborhoods, parks, and the town center (see Specific Plan Pages 1-1, 1-6, 2-1, 2-4, 6-3, and 6-4).

The current Vesting Tentative Map removes these dedicated off-street trails entirely, replacing them with vague references to on-street facilities or leaving the connectivity undefined. This discrepancy raises serious questions as to whether the map meets the statutory requirement of substantial conformance. A map that omits a core component of the governing Specific Plan may not be considered in substantial conformance.

Furthermore, the VMT analysis states that the project is 'assumed' to include only 'approximately 1 mile' of on-street bicycle facilities to achieve a 0.1% VMT reduction. This admission highlights a potential flaw in the project's consistency: the developer may be using minimal on-street lanes to satisfy CEQA/VMT requirements while omitting the “envisioned” trail system stated within the Specific Plan. Who knows? Who can tell from this statetment? I-3-3

If the project relies solely on on-street lanes to meet VMT mitigation, how can the City certify that the project is in 'substantial conformance' with the Specific Plan, which discusses a 'trail system' for 'exercise and casual enjoyment' distinct from street traffic? Does the City consider on-street bike lanes a valid substitute for the dedicated trail easements that one could envision in the Specific Plan, and if so, on what legal basis? What about sidewalks for pedestrian trails? Why are their no cross section of said facilities? Do the subsequent developers flexibility to design what it wants take priority over the public’s right to know?

2. Potential Non-Compliance with Municipal Code § 25-57 and the Subdivision Map Act Under the Subdivision Map Act, a Vesting Tentative Map is a privileged status that requires strict adherence to local ordinances. City Municipal Code § 25-57(d) explicitly lists nine (9) distinct categories of engineering information that must be submitted for a Vesting Map, including certified drawings for streets, drainage, grading, utilities, etc... I-3-4

The current EIR submission includes only a partial depiction (Figure 3.5) and appears to lack the full suite of certified engineering drawings required by § 25-57(d). Specifically, the public record appears

to lack the certified engineering drawings for street locations, widths, and alignments required by § 25-57(d)(6), as well as the supporting data for the other eight categories.

Because the City has not made the full engineering package available for public review, and because the EIR does not demonstrate that these mandatory submissions have been received and verified, it is unclear whether the City can legally determine that the map is in substantial conformance with the ordinance. Is the submitted application in compliance with all the requirements of

Furthermore, if the City intends to proceed without these submissions, § 25-57(e) requires a written finding based on "substantial evidence" that such information is "unnecessary, duplicative, or inapplicable." Given that the Specific Plan envisions a complex trail and street network, it appears legally difficult to claim that engineering drawings for these features are "unnecessary." The absence of these drawings in the public record creates a presumption that the map is incomplete and non-compliant.

I-3-4 cont.

Given these discoveries, is the application in compliance with “Article II: Division of Land by Tract Map" and "Article IX: Vesting Tentative Map” of the municipal code?

3. Potential Violation of CEQA Guidelines § 15126.2 CEQA Guidelines § 15126.2 requires that an EIR provide an accurate, stable, and finite description of the project. The Specific Plan describes a project with a dedicated trail system. The current EIR describes a project with only on-street bike routes or "assumed" facilities, failing to analyze the environmental impacts of removing the dedicated trail system.

I-3-5

By describing a project that differs materially from the Specific Plan and omitting the required engineering details, the EIR may fail to provide the public and decision-makers with an accurate description of the project. This omission could render the EIR legally inadequate under CEQA.

4. Reliance on Outdated General Plan Circulation Element The City's General Plan Circulation Element was adopted on September 10, 2001, and contains build-out tables projecting Level of Service metrics to 2020. State law has since changed to require Vehicle Miles Traveled (VMT) analysis, yet the Circulation Element has not been updated to reflect these requirements.

I-3-6

The EIR includes a VMT analysis, but it relies on an outdated Circulation Element that contains obsolete Level of Service standards and missing exhibits. This creates a fundamental inconsistency: the EIR analyzes the project using current state standards while the governing General Plan uses 25-year-old metrics. Additionally, the Traffic Study referenced in the EIR is posted separately from the EIR itself, with bike lane recommendations marked as "for informational purposes" only, meaning they may not carry binding weight.

I-3-7

5. Circulation Connectivity and Infrastructure Efficiency Vessels Street currently terminates at Moody Street. Extending Vessels westward through the development would connect to Enterprise Drive (which runs north-south) and ultimately terminate into Lexington Avenue, a through street that runs north-south. This connection is not included in the proposed map.

I-3-8

This raises significant concerns regarding the efficiency of public infrastructure and circulation planning. A public street that terminates at Moody instead of extending to Lexington may miss an opportunity to create a through connection that would improve traffic distribution and provide alternative routes for pedestrians and cyclists. If the intention was for this corridor to remain disconnected, there should be a documented rationale explaining why a through street was not

prioritized, particularly given the General Plan's stated goals of facilitating movement and alternative transportation.

Furthermore, this potential connection would provide needed relief from residents who traveling eastward on Katella Avenue, can not make a left turn northward on Enterprise Drive. I-3-8 cont.

Not only does east – west connection provide relief, does it also not provide redundancy for ambulance, fire and police to access the development? Was any of this studied as part of the EIR and would this east – west connection enhance the public health, safety and welfare?

6. Lack of Access to the Actual Vesting Tentative Map The public record currently includes only a small, low-resolution image of the map labeled "Figure 3.5" within the EIR. The actual Vesting Tentative Tract Map—the legal document that defines the project's boundaries, easements, and dedications—is not provided as a separate, accessible PDF or physical document.

It appears procedurally improper to treat the Vesting Map as a mere "exhibit" within a larger report. The Vesting Map is the primary legal instrument of the project. Hiding the actual map behind a small figure may prevent the public from verifying easement widths, lot dimensions, and connectivity points. If the actual map is buried in a separate study or engineering file, the City may be failing to provide the public with the ability to inspect the very document that grants the developer their vested rights. I-3-9

Given these discoveries, is the application and map in compliance with “Article II: Division of Land by Tract Map" and "Article IX: Vesting Tentative Map” of the municipal code?

Request for Action and Required Responses

Before certifying the EIR or recommending approval of the Vesting Tentative Map, the City should ensure the project is conditioned to include the dedicated pedestrian and bicycle trails and the required engineering drawings. Approving this project without these elements could result in violations of state law, the Specific Plan, local ordinance, and the General Plan. I-3-10

To ensure the administrative record is complete, I request written responses to the following questions in the Staff Report and Final EIR:

1. **Substantial Conformance:** On what specific legal or factual basis does the City conclude that a tentative map lacking the dedicated trail easements mandated by the Specific Plan is in "substantial conformance" with Gov. Code § 66473.5? I-3-11

2. **Completeness of Submission:** The Municipal Code § 25-57(d) requires nine specific categories of engineering data for a Vesting Map. The current EIR only displays a partial figure (Figure 3.5). Can the City confirm in writing that the full set of certified engineering drawings for all nine categories has been submitted, accepted as complete, and is available for public inspection? If not, on what basis is the map being processed as a Vesting Map? I-3-12

3. **Waiver Validity:** If any of the nine required engineering categories are missing from the submission, where is the written finding required by § 25-57(e) stating that such information is "unnecessary, duplicative, or inapplicable" and that waiving it will not hamper prudent public policy? I-3-13

Also regarding any deviations from the code or the Specific Plan, is there any documentation that the developer has requested any item under § 25-61, 25-62 or Specific Plan Section 2.2.5 Alternative Street Sections? If so, what are they, what was the result and why was not any of this disclosed to the I-3-14

publc on the website or in the EIR? How will any of these be covered in the agenda report? Also, given § 25-61 could involve the process of changing the Specific Plan, does a change to the Specific Plan require a vote of the people or can it be changed within the authority of the City Council and municipal code? I-3-14 cont.

4. **CEQA Description:** How does the EIR satisfy the requirement of § 15126.2 to provide an "accurate" description of the project when it omits the dedicated trail system and the required street cross-sections? I-3-15

5. **Future Certainty:** If the City approves this map without dedicated trail easements and engineering drawings, what specific legal mechanism exists to guarantee that future developers of the 11 lots will dedicate the necessary land for trails, given that the Specific Plan requires them? I-3-16

6. **General Plan Consistency:** How does the EIR ensure consistency with the General Plan Circulation Element when that Element was adopted in 2001, contains build-out projections to 2020, and has not been updated to reflect current VMT requirements? I-3-17

7. **Traffic Study Binding Status:** The Traffic Study is posted separately from the EIR and marks bike lane recommendations as "for informational purposes." What binding conditions will be placed on the map to ensure the bike lane widths, buffers, and intersection treatments identified in the Traffic Study are actually constructed? I-3-18

8. **Street Connectivity Rationale:** Vessels Street terminates at Moody Street but could extend westward to connect to Enterprise Drive and ultimately Lexington Avenue, a through street. What is the City's justification for not requiring this through connection, and how does this decision align with the General Plan's circulation goals of facilitating movement and alternative transportation? Was the connection studied related to improving potential public health, safety and welfare? How would the connection improve or degrade traffic patterns with regards to the existing senior development on Katella Avenue including not only turning movements but pedestrian and bike mobility? I-3-19

9. **Map Accessibility and Certification:** Where is the actual, certified Vesting Tentative Tract Map located in the public record? Why was it not provided as a standalone, high-resolution PDF document? If the map is buried in a separate study or engineering file, please provide a direct link or location for immediate public access to the full map, including all easements and lot lines, to allow for meaningful public review. Given issues raised in this letter, what items in the development application and map are not in compliance or have been waived and under what authority with “Article II: Division of Land by Tract Map" and "Article IX: Vesting Tentative Map” of the municipal code? I-3-20

10. **Development Agreement** - Page 3-23 of the EIR mentions the developer is seeking approval of the Vesting Map and a Development Agreement pursuant to Section 65864 et seq. of the California Government Code. Will the public have access to evaluate the development agreement or at least a draft prior to the approval meeting by City Council? What is anticipated to be in the development agreement regarding any trails? I-3-21

11. **Attached Letter to City Council** – I have attached the letter I sent to the City Manager and City Council. Please review and answer all the questions posed in the attached letter. They are usually denoted with bullet points. I-3-22

I expect and request these comments to be included in the official administrative record and for these specific legal and factual questions to be addressed in the Staff Report and the City's findings prior to any vote on the EIR certification or more importantly any subsequent approval of the Vesting Tentative Map. I-3-23

Sincerely,

Concerned Bike Rider

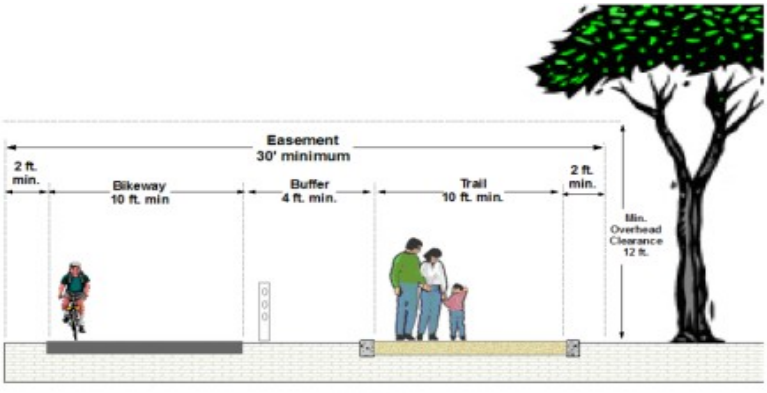
Attachment – 4/28/26 Letter to City Manager and City Council

April 28, 2026

Subject: Where are the trails for bikes and pedestrians? Call to Action to City Council.

Dear City Council and City Manager,

A bit about me. I have been riding bikes for years. I still remember when the original ballot measure for this property first came around. Someone approached me outside a local store asking me to sign the petition to get it on the ballot. At the time, there was a buzz about what the development would include for the public. What really stood out in the initial plan, aside from the generous donation for the soccer park, was the mention of trails and greenways for both bikes and pedestrians. I ride three bikes myself: a cross/city bike, a beach cruiser, and a pedal-assist e-bike. Those trails matter to me. On top of that, I have had a bad scare riding near traffic where a vehicle got too close, almost running me off the road. That experience made me even more aware of how important safe bike infrastructure is.



I recently saw on a local blog/Facebook posts that the Environmental Impact Report (EIR) for the Los Alamitos Racetrack is out for comment so I took a look. Having worked in the development area, I knew I needed to dig deeper once I started reading the EIR. It is a huge document and a huge project. Some of the attached appendix are huge. I reached out to my network including consultants and city staff from different cities in the LA area, to help me better understand the project and the documents. Based on that combined perspective, here are my "pro bono publico" comments to the City Council, the City Manager, and the Orange County Bicycle Coalition.

I-3-24

This letter will be a frank discussion on the development and a plea for action by the City Council. I apologize if I have misinterpreted anything or got something wrong; going through this process to research bike and pedestrian trails was difficult. There was not one exhibit/map in the EIR providing any certainty. Just imagine what the average person would encounter. It became a learning experience for me to go through it.

I will write a separate letter with my formal comments to the EIR, addressed directly to the Planning Director as noted on in the EIR, to preserve rights and ensure answers are provided as required by law. In my experience, responses to comments are often too formal, filled with planning jargon and developer legalese, and would rarely lead to the outcome I hope for. I am not trying to stop the project, but rather to ensure it includes with certainty what was claimed in the Specific Plan. That is where the City Council comes in, as I will explain.

As my subject line asks: Where are the trails & greenways?

Cross Section from another city's Circulation Element

Touted "Greenway" in a Southern California City

Before City Council approves this project, I believe there must be certainty regarding the size, dimensions, and characteristics of any trails on the private lots. After reviewing the EIR, my general opinion for the City Council is twofold: (1) the proposed development may not meet the requirements of the voter-approved Specific Plan, and (2) the proposed development may not meet the requirements of the city code for a Vesting Tentative Map.

I-3-25

Everything comes down to this one question. Simply put, do you believe sidewalks and painted street bike lanes on the streets are "trails" as written in the Specific Plan approved by the voters or do you see trails as off-road, separate and with certain definable characteristics?

Proposed Development Does Not Meet the Requirements of the Voter-Approved Specific Plan

First, a simple word search of the Specific Plan reveals the following (bold added):

1. Page 1-1 states, *"**Trails and greenways** are envisioned to connect the neighborhoods and provide pedestrian and bike routes to the public parks and town center."*

2. Page 1-6 notes, *"This Specific Plan places a strong emphasis on wellness in that active recreation opportunities are integrated into the land use districts. **A trail system** is envisioned within the residential and public park districts affording residents and visitors opportunities to **walk, jog, run, bike for exercise or simply for casual enjoyment, and will provide convenient access** to the public parks, theaters, shopping, dining, and workplaces."*

I-3-26

3. Page 2-1 says, *"**Greenways and trails** will connect the neighborhoods to the town center and the parks in the Public Park District to allow for **easy pedestrian and bicycle access** to these destinations."*

4. Page 2-4 mentions, *"The Residential District includes approximately 73.6 acres of land and is intended to accommodate a variety of residential opportunities. In addition to the residential units, **trails and greenways** are envisioned to connect the neighborhoods and provide pedestrian and bike routes to the central public park and town center."*

5. Page 6-3 adds, *"**Trails and greenways** will connect the residential Subdistricts and Senior Housing/Medium-Density Residential District, and provide convenient pedestrian and bike access to the public parks and town center."*

6. Page 6-4 states, *"**Greenways and pedestrian and biking trails** are envisioned to facilitate alternative modes of transportation by connecting the Residential District to the central public park and town center and the Senior Housing/Medium-Density Residential District to the western public park. In addition, the Town Center District is envisioned as a pedestrian-friendly entertainment and retail destination, designed for patrons to stroll by the various businesses."*

On six different pages, the term "trails" is explicitly mentioned to allow both pedestrians and bikes to connect to other areas of the development. Yet there is not a single trail delineated on any of the private parcels within the EIR. The discussion on bikes seems to be completely absent in the EIR except on page 4.17-15, where it states, *"the proposed project is assumed to include the addition of approximately 1 mile of bicycle facilities, connecting to the existing bicycle network."*

I-3-26 cont.

If this "trail" language winds up being just painted bike lanes on the arterial streets of Moody and Vessels, then the specific language is so vague and ambiguous it rises to the level of "puffery," as they say in advertising. If it can mean anything, it means nothing. It shouldn't. We all should know what a "reasonable, rational" person thinks when someone says "trail." The Specific Plan says, "A trail system is envisioned within the residential… district."

Attached is a picture from another city's circulation element which I believe displays what people think of as a "trail."

It seems improbable to have any type of trail connectivity or congruity if there are not at least drawn lines and easements for the trails on the subdivision map for the development of 134 acres over 11 or so lots that are going to be further subdivided. There are no cross sections or guidelines for the dimensions of the trails. If the developer's plan is to have subsequent developers propose a plan later, the city may end up with a mish-mash.

I-3-27

- For instance, how does Lot 2's trail connect with anything through Lot 3 and Lot 4? Are we to guess? Will there be none?

Furthermore, pages 10 through 13 of the VMT analysis talk about sidewalks and and what I assume are on-street bike routes.

- So are we believe that all the language regarding trails for pedestrians are nothing more than residential concrete sidewalk?

I-3-28

On page 11 of the VMT analysis, Provide Pedestrian Network Improvement talks about sidewalk.

I-3-29

- Does that mean all the sidewalks in the the city are trails under the Specific Plan language interpretation?

Imagine bragging to your City Council colleagues in other cities that your city has so many pedestrian trails and their reaction when you tell him you count sidewalk as a pedestrian trail. Again, a cross simple cross section would clear this up because there is a big difference between a five foot sidewalk adjacent to a curb and an eight foot meandering sidewalk within a large parkway/greenway area. The Specific Plan mentions “greenways” which is not defined within the plan. I-3-29 cont.

- Are we to assume, since there is no definition, a “greenway” can be a road that is painted green?

I bring up this as another sarcastic example up simply to reinforce that when words are not defined their basic and simple meaning should be used. Also, in the specific plan, the “greenway” term is always used with “trails,” thereby reinforcing the voter’s potential image of the graphic presented above. More specifically in the Specific Plan “*Greenways and pedestrian and biking trails”* conjures up this exact image. I-3-30

The VMT analysis seems to admit that the project's 'bicycle facility' mitigation is merely 'assumed' to include 'approximately 1 mile' of on-street lanes (Class II/III). This may confirm the developer's strategy: they are relying on on-street bike lanes to satisfy state VMT reduction requirements, while completely ignoring or potentially over generally interpreting the voter-approved Specific Plan's envisioning of a 'trail system' within the residential districts. Also, there is not even an attempt at a breakdown the mileage of Class II vs Class III that I found. I have provided a drawing below for what is a Class II versus Class III bike lanes. The City’s own project along Cerritos Avenue has an off road trail component. Riding in Class III bike lanes is mostly used for existing streets where right of way acquisition is expensive or not feasible and not for design for new bike routes when the right of way does not exist yet. I-3-31

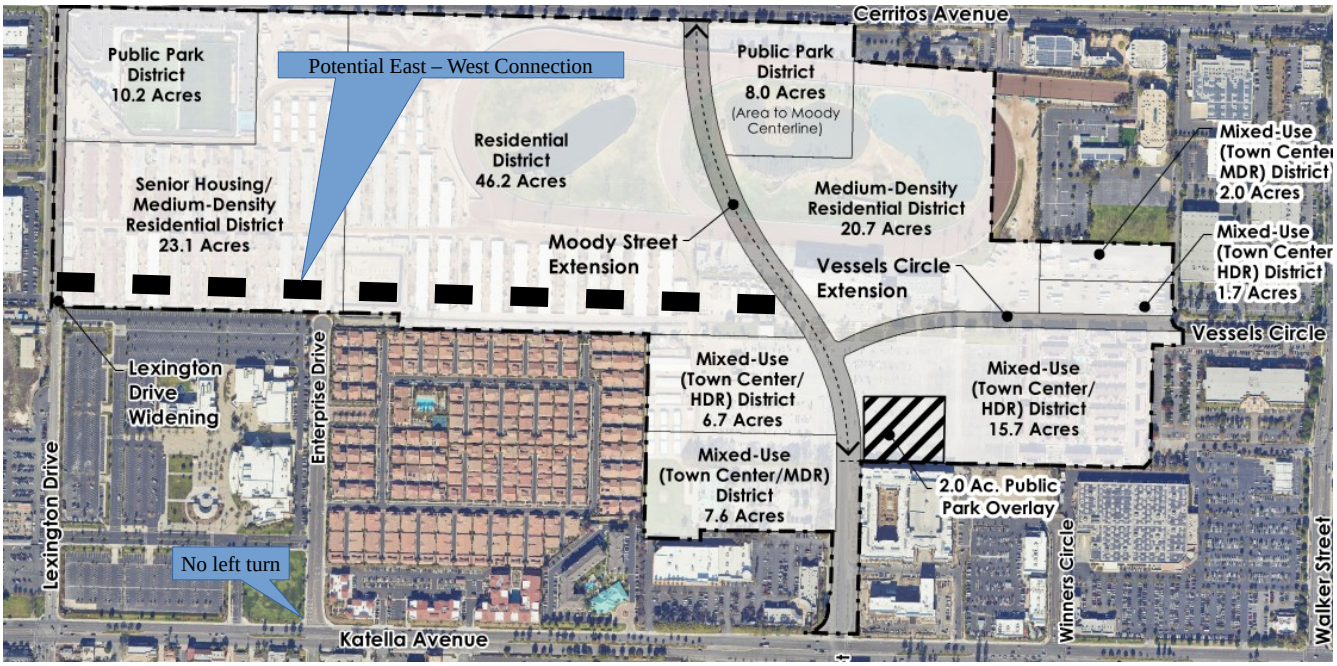
- Would most people think about riding in Class III lanes <u>with vehicles</u> in traffic lane for *“simply casual enjoyment”* as mentioned in the Specific Plan? Would the City Council? Would they want to take their children for a casual ride in the traffic lane? How about Seniors? Does that feel like a setting where these groups can have casual enjoyment?

- Class II Bikeway (Bike Lane): A striped and stenciled lane for one-way bicycle travel on a street or highway. This facility can include a buffered space between the bike lane and vehicle lane (referred to as a buffered bike lane). This type of bike lane clan can also be adjacent to on-street parking.

- Class III Bikeway (Bike Route): A signed route along a street where the bicyclist shares the right-of-way with motor vehicles. This facility can also be augmented using shared-lane markings (also known as sharrows). An enhanced bike route, known as a Bicycle Boulevard (typically on lower volume arterials), can include traffic calming treatments to slow down vehicles.

Screenshot from another city's Circulation Element

The Specific Plan discusses trails, envisioning a network for 'walk, jog, run, bike for exercise.' By substituting on-street lanes for off-street trails, the project seems to fail to deliver the 'wellness' and 'safe connectivity' promised to voters. The 0.1% VMT reduction cited in the analysis could have been improved by including the very off-street trail network that the Specific Plan talked about for public safety and recreation. This does not seem to be compliance; but rather a substitution of a lower standard for a higher one alluded to in the Specific Plan.



- How can these on street sidewalks and ride in the travel lane bike routes even meet the intent of the language of the Specific Plan as compared to off-road trails?

I-3-31 cont.

The mitigation measure regarding bike lanes mentions a development agreement (Development Agreement pursuant to Section 65864 et seq. of the California Government Code.) and on page 3-23 of the EIR as part of the approval.

- Will the public have access to evaluate the Development Agreement prior to the approval meeting?
- Will it be enough time to review?

I-3-32

Dashed Line Represents East-West Public Road Connection from Lexington Drive – Connecting to Enterprise then going eastward to Moody Street.

I-3-33

Vessels Street Extension to Lexington

When I was thinking about how to put trails in, it seems obvious to at least me there should be a through east-west trail, and then thought why isn't there a public through street. I did not find any reference in the documents and am quite perplexed why there is not this public street that continues Vessels west to connect with Enterprise Drive and ultimately Lexington Avenue. There doesn't seem to be a point of the city having a public street at Enterprise Drive if it was not going to connect with something going east, west or both. It seems a waste of a public road that the city has to maintain which could have been a private drive and stayed with the adjacent properties.

- More importantly, would another east – west connection provide redundancy for medical, fire and police to get to an emergency? Were these options present to OCFA, Police, Ambulance regarding if they would improve safety?
- Wouldn't this be a logical place to put an off road "g*reenway and pedestrian and biking trail"* adjacent to the this roadway?

Also, once you plot east – west connection on a map (see the dashed line above), it appears to solve the problem I have heard about from the recently built 55 and over community who can not make a left at Enterprise Drive from eastbound Katella Avenue.

- Does this connection alleviate the issue experience by the the Senior Community on Katella Avenue adjacent to Enterprise?

I have heard and read about complaints that they have to make the u-turn at Siboney Street. That District 4 council member (Mayor Madrano) should be very interested in this for the potential of his existing constituents to make a left at Lexington Drive, then a right eastward at this extension then right

southward on Enterprise Drive. It would also enable these residents to access this new development without creating longer trips on Katella Avenue which could reduce vehicle miles especially if it includes a trail. If I lived or moved there one day, I would surely want one.

- Why was east-west connection not studied regarding traffic operations, increased usage of bikes and pedestrians and public safety redundancy and efficacy?

I-3-33 cont.

Before it is brought up that this was not within the Specific Plan, Moody Street going through was not in the Specific Plan either. The Specific Plan, as well as the Subdivision Map Process, both allow modification to infrastructure.

Note the east – west connection depicted by the "dashed" line in the figure could be placed more northerly away from the existing Senior Development in case northerly houses objected but then Enterprise Drive would need to be extended northward to intersect.

I-3-34

Given that the EIR states that **'the Transportation (residential vehicle miles traveled [VMT]) would remain significant and unavoidable,'** and this public street could contribute to a reduction in vehicle miles traveled, especially if an off-road trail is included, this issue should be resolved. Regardless, a public east-west connection seems a straightforward solution from a 'traffic operations' standpoint, as it mitigates an existing access problem. This should be addressed now prior to approval or as part of the approval of the subdivision map.

I-3-35

Tentative Map Figure in the EIR

The following really gets to me. Even the figure for the Tentative Map does not provide street cross sections, either on the public streets or the private lots, so the public has no way of knowing whether these streets will be able to handle off-road trails. I can safely assume the proposed public streets won't fit an off-road trail within the right-of-way on either Moody or Vessels. Section 2.2.5 of the Specific Plan says the streets shall be designed in conformance "with the Circulation Element of the City's General Plan and the City of Cypress Standard Plans." A major street needs to be 120 feet wide, and a primary street needs to be 100 feet wide. Any deviation from standards should be clearly identified. An off road trail can not fit within those types of right of way irregardless. I will address the Vesting Tentative Tract Map exhibit later, which does not seem to be the actual map. From my search of the document, only Figure 3.5 is listed as the Vesting Map in the table of contents. There is no appendix document labeled as the Vesting Map either. This is disconcerting from a transparency viewpoint.

I-3-36

The Time is Now for Bike Planning

Bike planning should be done now. It should not be piece by piece. Later does not suffice and this does not seem that hard. One could easily create a loop trail that goes along the perimeter of most of the 134 acres that connects to the new and existing public streets. I hesitate to draw one but easily could and I bet so could the public.

There are myriad ways you could show concepts as well as cross sections. This was not done within the EIR, nor is it shown as a dedication on the Vesting Map. It's now making me think why it wasn't done in the Specific Plan.

Future developers that buy any of the lots should know what potential land they will need to dedicate, and it should be a requirement of this map. Figure 3.5 (Vesting Map) has no easement or dedications between parcels for access either by road or for bike and pedestrians. Side note, lot 10 appears to be "landlocked" and it should be described directly on the map how it has access *"25-12 c All lots created*

by the division of land, whether by tract or parcel map, shall have frontage or approved access to a dedicated public street or highway."

- Does this process maximize land value for the existing owners by "passing the buck" of where trails will go to the next developer and the city to figure out? If not, how will the public have confidence of where the trails and connection points will be if not on the map now?
- Or are they not just going to build any off-road trails at all?
- Will the city even have the power to force adequate dedications on future developers if this ambiguity is kept the same?
- What safeguards are in place in case all the subsequent developments propose private streets and gates (like those on the Senior Development on Katella Avenue) that there will still be through access for visitors? It appears the provided map provides no safeguards. Each parcel could deny access through the other parcel thereby negating any talk of a connecting "trails and greenways" network in the Specific Plan. I-3-36 cont.

I believe the city has a rational and reasonable nexus to determine the size and scope of the bike and pedestrian trail system ("trails and greenways") now, with the adoption of this map, given its powers under the Subdivision Map Act and the language of the Specific Plan. I encourage this new City Council to reread the above-cited paragraphs from the Specific Plan regarding trails. Picture in your mind what the paragraphs with "trails and greenways" conjured for you and what you think the public thought it meant when they voted.

If an argument is made that the developer cannot plan for it now, the same argument could have been made for the proposed arterial street system. They are dedications. They can be changed.

- If a dedicated trail on the Vesting Map does not work for a subsequent development, could not the subsequent developer propose an alternative location while keeping the same cross section on their subdivision map with the same connectivity points?

Having the trail on the Vesting Map now would seem to put the city in a more advantageous position and keep the integrity and connectivity of any multi-parcel trail.

Lastly, the new City Council should be aware that this developer funded Voter Approved Initiative DID NOT require an environmental analysis. My understanding is the city did not draft the Specific Plan and it has never been evaluated from an environmental and practical perspective. Lastly, Specific Plans can be changed and that is always an option for the developer or the city. See "§ 25-61Development inconsistent with zoning;" conditional approval for if the developer wants to change the specific plan during this process. I do not believe the city can change a specific plan unless the application is no longer active. I-3-37

Also, it begs the following questions.

- Isn't this the first time this development, as well as the items in the Specific Plan, are being evaluated from an environmental (EIR) and practical perspective?
- Does an actual change to the Specific Plan, not authorized within its framework, need to go to the voters or are they now under the authority of the City Council? I-3-38
- Assuming the Vesting Map is approved without changes to the Specific Plan, are subsequent developers who purchase the lots and submit new subdivision maps also 'grandfathered' under I-3-39

that Specific Plan? If so, is there a time limit on this protection, or can the City change the Specific Plan later, forcing subsequent developers to comply with the new rules?

I-3-39 cont.

The latter question is important, because actions could potentially “tie the hands” of future City Council or public initiated measures depending on the answer.

Vesting Tentative Subdivision Map

The developer did not submit a regular Tentative Tract Map. Instead, they submitted a Vesting Map. This requires them to do everything they would have done with a Tentative Map (Section 25-10, subsections (e)(1-14) and (f)(1-4)) and then meet additional requirements to obtain a Vesting Map (Section 25-57, Filing and Processing). If all these code sections are complicated, think of how some of the general public feels reading them to ascertain what the rules are for this development.

My understanding is that a Vesting Tentative Subdivision Map holds significant value for a developer because it locks in their rights. In exchange, cities typically enforce code requirements that push work normally done at the building permit stage to happen much earlier. This should include completed street construction plans as well as dedications shown on the map. If those were done, the public would know exactly where the trail connectivity is supposed to go for all the parcels. The developer could have submitted a regular Tentative Subdivision Map that does not have these requirements, though it can be argued that even those requirements demand showing the dedications on the map (Section 25-10, subsections (e)(10 & 14)).

Your municipal code is very specific about this for Vesting Maps. Section 25-57, subsection (d)(6) explicitly requires for streets:

> *"Certified, engineering drawings showing the location, widths, and horizontal and vertical alignments of all public and private streets and alleys within and adjacent to the boundaries of the vesting tentative map site."*

I-3-40

My assumption, based on the map I saw within the EIR, is that these have not been prepared. Furthermore, the code is equally specific about how any of the nine categories (Section 25-57, subsection (d)(1-9)) can be waived. Any waiver requires written findings based on "substantial evidence" proving the information is "unnecessary, duplicative, and inapplicable." The code further states that prudent public policy and decision-making will not be hampered by such a waiver. In my opinion, delaying trail planning and withholding detailed cross-sections **is the exact opposite of prudent planning**.

The code states in its entirety:

> *"(e) Should the information required in subsection (d) above be deemed unnecessary, duplicative, or inapplicable to a particular development proposal for which a vesting tentative map is sought to be filed, the city's director of public works/city engineer shall have the authority to waive said informational requirement upon a written finding that said informational requirement is unnecessary, duplicative, or inapplicable to a particular development proposal. Said written finding shall be based on substantial evidence and include a statement that the public health, safety, or welfare will not be placed in jeopardy or danger and that prudent public policy and decision-making will not be hampered by the waiving of said informational requirement."*

I am assuming the city has Vesting Map requirements in the municipal code for a good reason all these years. Not adhering to them for this large development seems like forcing a square peg into a round

hole. If neither the regular tentative map or vesting map code ordinances addressed what the developer was trying to accomplish given their concept, they could have petitioned the city to make changes to its subdivision ordinance prior to submittal of their application. This begs another question why is the City even granting a Vesting map. Ask the City Attorney to specifically state on record to the public, what advantages or specific legal rights do the developers gain from having a vesting map and why would the city bend on these rules.

I am certain there is tremendous interest in purchasing these parcels when they become available. I am betting the developer could sell the land outright as it is currently configured and develop under one master development. I am also betting that it would not provide the maximum amount for the land sold. For curiosity, council members could ask what ballpark percentage value does that increase the parcels they will now be selling or developing? What is the average cost per acre of this land expected in the sale if a vesting map were approved? Ask any developer who may want to buy the property. From my recollection and research, didn't William Lyon Homes, Shea Properties and Melia Homes all develop properties around the site?

There needs to be transparency regarding the Vesting Map as well as the development meeting all the requirements in "Article II: Division of Land by Tract Map" and "Article IX: Vesting Tentative Map." This should be addressed in any report to the City Council as it would be beneficial to the public to have this information on the website so the public can confirm exactly what code or rules or rules are being waived, set aside, or modified for this development.

Back to what got me started in the first place to this tremendous effort. It is hard to believe that Figure 3.5, labeled "Vesting Tentative Tract No. 19247," is the actual submittal to the city; it appears to be merely a snippet or depiction. Maybe I am wrong but it doesn't even have street widths, lot dimensions, lot classification.... Clearly the map is missing pages or something since it contains cross sections that are labeled (A-A) through (K-K). Took me a while to find, but see the City's Checklist for Vesting Maps for a complete checklist of what is required and compare to what is missing. The checklist matches what is in the code. Here is a Tentative Map from your agenda system that went to City Council for approval for a 45 unit residential development on Orange Avenue for comparison. Note the difference between what goes to Council for approval and what is shown in this figure. The linked map has a stamp. My recollection is the City of Irvine requires all tentative maps to be stamped by a licensed civil engineer. I-3-40 cont.

The lack of this document is frustrating and I can not think of a reason why it is not a separate attachment clearly called out by name. This would seem to deprive the public the ability to evaluate the project.

While I could file a Public Records Act request to obtain the full developer submittal of the complete Vesting Map if I am correct, the right thing to do is for the city to post the complete documents on its website for public review and transparency.

I also assume there has to be some type of documentation the city uses to deem an application complete in compliance with code Section 25-57 and other related sections.

Questions:

- Why is the city granting a Vesting Map if it does not meet many or most of the requirements?
- Does the proposed Vesting Map meet all the requirements of Article I and IX in the municipal code?

- Where is the Vesting Map and why has it not been posted publicly as part of this EIR in a location as a separate attachment that is readily apparent to the reader?
- Also, if this map involves infrastructure which it does, shouldn't it be stamped by a Licensed Professional Engineer who prepared pursuant to Business and Professions Code section 6735? This question assumes that the figure is the map.
- How can the EIR be effectively evaluated by the public as a project if the most important project document, the actual Vesting Tentative Map is not attached? Is this good practice or even legal? Does the EIR need to be recirculated again due to this?
- When was the Vesting Map application was first submitted? When was the application deemed complete, or was it ever deemed complete? If so by whom, and where is the documentation?

I-3-40 cont.

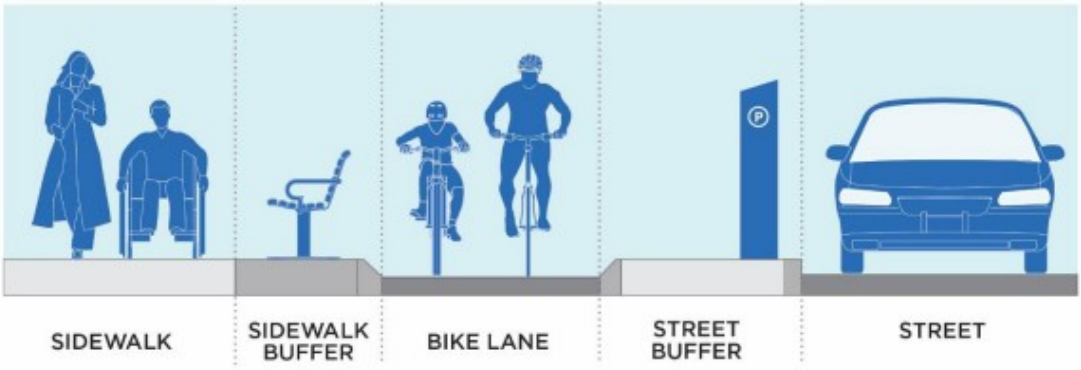
My understanding from the EIR, the project is the Vesting Tentative Map. The developer is also asking for approval of a development agreement. These are what you will be approving. Ask your City Attorney if you can approve a Subdivision Map that does not comply with all its local ordinances.

2001 Cypress General Plan

As background, the Circulation Element states: *"The circulation plan is developed to meet present and future travel demand throughout the City. This Element is a general guide for the planning, development, and enhancement of the City of Cypress circulation system, based on existing and anticipated land uses."*

In a later section of this letter, I will discuss how I believe the General Plan appears to be way past its time to be updated now going on its 25th year. Even the traffic services level projections only went to 2020.

I searched for goals within the Circulation Element to compare against the development for consistency. I found three that I believe are relevant specifically to this project with regards to bikes.



> *"CIR-1.5: The City of Cypress will continue involvement in plans and programs related to the Circulation Element. This involvement is anticipated to result in traffic studies to be undertaken by City staff, to identify specific circulation programs and improvements to be implemented, in order to satisfy the various related programs."*
>
> *"CIR-2: To facilitate alternative modes of transportation, including public transportation, bicycles, ridesharing, and pedestrians, to support the land use plans and related transportation needs."*
>
> *"CIR-2.4: Encourage development and site design which facilitate implementation of high quality, desirable bicycle routes which meet or exceed established standards."*

I-3-41

Pay particular attention that the goal and policy is to "meet or exceed standards." Again, there is a canvas of 134 acres, yet there is not one designated off-road trail delineated anywhere on any of the parcels. The City Council has the ultimate authority here to direct public policy and condition the map with a trail system it believes is adequate within the law.

- Where has the City undertaken any study to examine bicycle movement overall and especially within the development (CIR-2)?

- While there was much talk in the voter-approved Specific Plan about "envisioning" trails, where is any documentation that the city possesses regarding any of this so called “envisioning” plans from the developer?

I-3-41 cont.

Under additional considerations, I talk about how General Plan way overdue for a complete overhaul including its Circulation Element. Here above is a concept of complete streets from another update Circulation Element that could be applied on the Moody Extension. It is assumed it would require additional right of way from what the developer is proposing to provide a street buffer between the bike lane and the sidewalks. When such a large tract is developing, these are some of the few times a city can achieve this with out expensive right of way acquisition. Something else for the Council to consider in addition to the trails. This street buffer would have also prevented my near miss where a vehicle almost took me out.

I-3-42

- Is the City settling for less safety without barrier or separation on the on-street bike routes instead of adopting a complete street for the project?

Although state law requires a three-foot buffer for passing, relying on driver compliance is insufficient. **Physical separation provides the necessary protection to save lives when that buffer is violated.** Some type of physical buffer should be conditioned as part of the approval of the Vesting Map.

Summary

Let's paint a picture. Imagine the City Council requiring a looped networked off-road trail system throughout these parcels, connecting with the existing trail on Cerritos Avenue, which could be widened starting at the new soccer park. This loop would serve all new residents, including seniors, by connecting them to the development safely, free from vehicle interference, while still utilizing on-street routes when needed. It would also connect to the large 55-and-over development on Katella Avenue and serve as a vital amenity for both residents and visitors.

I urge the City Council to delay or deny any approval of the Vesting Tentative Map until these trail specifics are resolved. While the EIR and the map are connected, they are separate actions that do not need to happen simultaneously. The map approval does not have to occur at the same meeting as the environmental document. Even if the EIR is approved, the map can and should be conditioned to ensure the trails are built and can be approved subsequently. I propose that the City hire its own third-party consultant to independently evaluate and propose specific trail locations, dimensions, and materials for this 134-acre development. This step is necessary to provide the public with certainty regarding what will actually be built.

I-3-43

This aligns with General Plan Policy CIR-1.5, which states the “City staff” will identify specific circulation programs and improvements. Since the developer has failed to provide certainty, it is the City's duty to identify alternative transportation means. The City Council has the power under the Subdivision Map Act to condition the map with dedications, easements, construction timelines, and adequate bonding. I would argue there is a clear nexus based on the language in the voter-approved Specific Plan, and it is entirely reasonable for a project of this scope and acreage to require in and it is what the public expects. With the Public Works Department and City Attorney, you can draft a "bulletproof" condition that holds the developer accountable. The study you approve would provide the blueprint.

Ultimately, the Council must decide: Do you believe sidewalks and painted bike lanes satisfy the voter-approved Specific Plan's definition of "trails," or do you recognize that true trails are off-road, separate, and distinct? If the “trails and greenways” are not developed, the responsibility will rest at the feet of the City Council.

Do not hide behind legal or other advice to maintain silence. While the Council as a body cannot deliberate until this is on the agenda, individual members can and must speak up. Every council member has the power and duty to individually request that the City Manager direct staff to answer these questions immediately, creating a transparent public record that leaves no room for excuses, delays, or claims of ignorance when the vote comes. I-3-43 cont.

Be aware of the political risk. Voters may demand that incumbents not only pledge support for off-road trails but actively fight for them from the dais. This could become an election issue in November. If they fail to do so, they risk being voted out. This standard is even stricter for candidates: since they are not bound by the Brown Act, they have the freedom to speak clearly now how they feel about requiring the project to have true off road trails. Voters may reject any candidate who won't commit to this vision. Let's ensure the outcome is a beautiful off-road trail and greenway system, not a missed opportunity.

Many of you are new council members, and Cypress has a new City Manager. I trust you will give this matter the detailed, thorough review it deserves. I have copied the Orange County Bicycle Coalition and welcome any interested public to join this effort. I recognize that without a Planning Commission, the burden of oversight falls entirely on you; you are the only "public eyes" standing between the community and this project. Please rise to that challenge.

Sincerely,

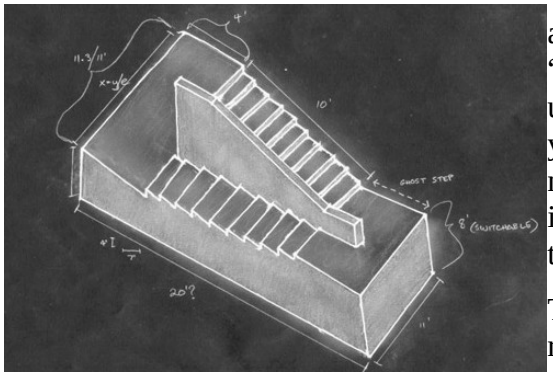
Concerned Bike Rider

cc: Orange County Bicycle Coalition

Additional Considerations

I would like to ask the Council to consider a few more points regarding the EIR and this process.

Outdated General Plan

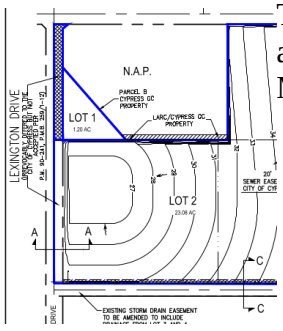


Let's talk about the age of the General Plan. The City of Cypress General Plan was adopted on September 10, 2001. At what point is the City going to do a comprehensive update of the General Plan, since it is going on 25 years old? Of note, within the Circulation Element, the build-out tables for Level of Service are projected to 2020. While I understand state law has changed, the Circulation Element should have been updated to reflect the new requirements of Vehicle Miles Traveled (VMT). From my research, Level of Service metrics are still valuable in traffic engineering efforts to ensure that I-3-44

developers build appropriate improvements for any subdivision map-related efforts, traffic mitigation fees, and compliance with any required Congestion Management Plans.

While I saw the city is updating certain elements of the General Plan (safety and open space) because of state law, I did not see any indication of the Circulation Element https://www.cypressca.org/departments/general-plan-survey being updated.

- While I saw the environmental consultant did a VMT analysis in the EIR, how can it be legal or good practice to let such an outdated Circulation Element stay in place with outdated service numbers? There seems to be zero bike planning?



What this likely tells me is that the city has done next to no planning on a citywide basis regarding bike and pedestrian movement, or that it is buried in some other project-related document. The mere fact that the Racetrack is developing should have triggered a revision to the General Plan regarding on-street bike lanes on the extension of Lexington and now Moody. So I ask: Where has the city done any bike planning regarding its Circulation Element as an effective means of alternative transportation? From a neighboring city's Circulation Element "Convenient bicycling and walking facilities play an important role in improving public health, reducing congestion and GHG emissions, and improving local economic vitality by supporting shorter trips to local neighborhood retail establishments." I-3-44 cont.

Escherian Stairwell

Yet, because the racetrack existed, there were no plans for any bike routes or trails through the racetrack. It is sort of an "Escherian Stairwell." You can never plan for the racetrack until the racetrack develops and then it is too late because you didn't plan for the racetrack. (My lawyers out there might know this term from a 2018 case on qualified immunity and I thought it was apropos to this situation as the planning never happens).

The City missed an opportunity to place bike lanes and off road trails along Lexington/Denni as part of their park project and also when the church was built. It seems this seemingly "piecemeal" effort over decades has missed opportunities for bike planning and the General Plan was never revised to consider development of the racetrack but the city knew it would be ultimately developed even accepted dedications Lexington Drive as discussed next.

EIR Screenshot

The figure for the Vesting Map denotes that the Lexington Street parcels were already dedicated to the city and accepted by the City by a previous Parcel Map.

- Does this mean the Racetrack has been using city property on Lexington all these years or is there an agreement available? If so, what does it entail? I-3-45
- According to the Traffic Study, "Along some segments, Class II bike lanes are provided, while other segments are designated Class III bike routes. What, if any on street bike lanes, will be placed along Lexington Drive since there is no cross section A/A in the figure? I-3-46
- What does the cross hatching mean on the upper Lexington Dedication? I-3-47

- What is this “LARC/OC property” denoted on the southerly portion of the park? There is no lot on the County’s GIS system so it seems to be part of the parcel? Is it an easement? Normally property, even if shared are parcels, otherwise there is an agreement to use or an easement. It looks like an access road the Racetrack is using on the park? What are the city’s plan for this? Will the Vesting Map be revised to truly reflect what it is and refer to the appropriate legal document for its authorization? Since bike trails were not provide on Lexington, west of Lexington Park, the city could use this as part of a trail.

I-3-47 cont.

Lastly, as a side note: When you go to the Circulation Element, you will find all of the exhibits are missing if you go to the section individually. Luckily, they are there when you download the entire document. The same cannot be said for the EIR for the General Plan. The planning department should correct.

I-3-48

Traffic Study (Not included in the EIR but the most useful)

The website says, "You can find the LARC traffic study here. Please note, the traffic study is not included as part of the EIR public review process and is posted for informational purposes."

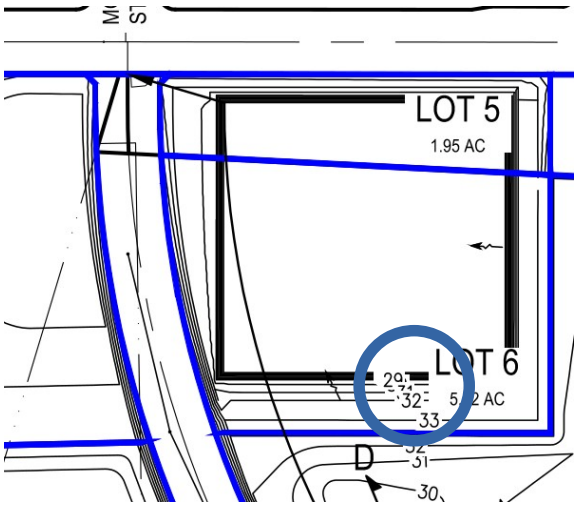
I did review it and found this was the only place where information was provided regarding bike lanes. Chalk one up for the engineers. If you search for "bike," you can find instances where it says "bike lane":

> Page 57: *"#15 – Cerritos Avenue at Moody Street (see Figure 10) - Provide bike lanes on Moody Street"*
>
> Page 58: *"#31 – Vessels Circle at Moody Street (see Figure 11) – Provide bike facilities on both Moody Street and Vessels Circle."*
>
> Page 59: Within the table on 31, *"Provide bike facilities on both Moody Street and Vessels Circle," but then there is a note that these are for "informational purposes."*
>
> Page 99: *"#15 – Cerritos Avenue at Moody Street - Provide bike facilities on both Moody Street and Vessels Circle."*
>
> Page 99: *"#31 – Vessels Circle at Moody Street – Provide bike facilities on both Moody Street and Vessels Circle."*

I-3-49

I then searched the document for "width" and got <u>no</u> results. I also searched for "trail" and got <u>no</u> results.

So the public cannot determine how wide the on-street bike lane will be, whether it has a three-foot area striped as a buffer, nor whether the bike lane is carried all the way up through the intersections because none of the final street plans have been done per the Vesting Map requirements. Even if the driveway locations are unknown, you can still have conditions on the map and for the public which state the widths and dimensions for a cross section that shows the bike lanes. The map is an open canvas right now. A "by right" development on one of the parcels could negate the future ability to obtain dedications without paying for them.

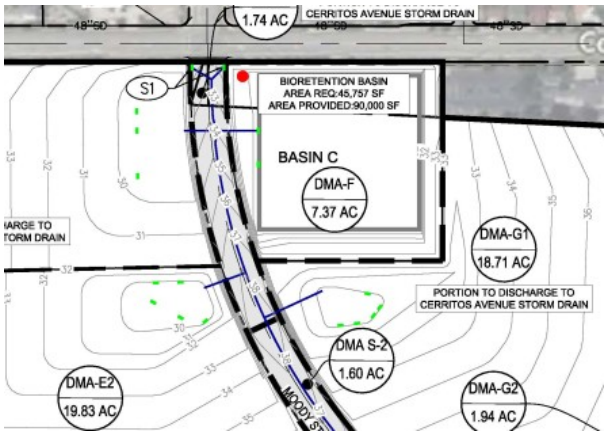


<u>Concerns Regarding Park Usability and Drainage</u>

Though not my primary issue, as I am already reviewing this matter, I must raise another significant concern. After reviewing the map, I am not a drainage expert, but the contours suggest the park will function as a four-foot-deep lake during rain events. I searched the first document of the EIR for "lake"

I-3-50

and found no mention of the parkland being used as a defacto "bathtub" for runoff. The EIR contains the drainage data, but Park Section in 4.16 no comment regarding the usability of the park under these conditions within 4.16 on Parks. Flooding the park reminds me of how the church parking lot on Katella often floods when it rains heavily, supposedly by design, rendering it unusable.



- Why is the usability of the “8 acre” park not covered in the EIR?

EIR Screenshot

I-3-50 cont.

After further review of the EIR, I found this below in a later section of the EIR. It appears the park property is receiving water from other lots so they won’t have to retain the drainage. This seems as a direct benefit to the developer for the lots which drain into it. It is not that there are basins on the lots, it is the parkland is acting as one giant basin for all these other lots making that land less usable for general park usage. While I appreciate nature parks, one cannot walk around in actual drainage basins during storm seasons, and they are usually closed off. Perhaps this one will be uniquely designed, but how is the reader to know, and who will guarantee it?

EIR Screenshot

This is what the voters read from Section 1.1 of the Specific Plan:

"Another critical component of this Specific Plan is 20 acres of public park space that will bespread throughout the Specific Plan Area. Two public parks, one 10.2 acres ***and the other 8 acres****, will be located within the public park district, adjacent to Cerritos Avenue."*

The Specific Plan does not contain any mention that the intent was to use this parkland as a giant basin. If that is the case, the Specific Plan should have stated this clearly. This highlights a downfall of the voter-approved Specific Plan to Vesting Map process: developers can paint one picture while the details remain "unworked" out because the environmental analysis was not completed prior to approval. The Specific Plan language appears to set an expectation of a park, not a drainage facility. This "basin" issue is not my only concern, but it gives me serious doubt about the entire process.

I-3-50 cont.

- How deep is the potential water within the square? (It appears to at least four feet deep)
- How is this in conformance with the Specific Plan?
- Is it just crafted language to disguise that the promised parkland is really a basin?
- Who is going to pay for the maintenance of this basin and will it be designed with any type of aesthetics?

This should be stated in a general project description on the website for the public. We need to know that the other park mentioned in the Specific Plan is a basin. Otherwise, you risk people attending meetings feeling misled by a "bait and switch" given the lack of mention in the Specific Plan.

Manufacturer Website Screenshot

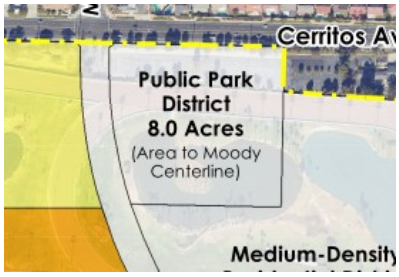
If the developer gains a benefit and increased land value from the basin by having more develop-able land on other parcels they can sell, why is the City not requiring that this basin be placed underground on the subdivision map?

I recall hearing the developer built a large underground basin for the Senior Housing Development on Katella Avenue. I did a search and found it stored over 232,000 cubic feet of water. So it is possible.

Doing so would allow the open space to be usable year-round for the enjoyment of the new tract, all city residents, and visitors. A cost analysis could be done comparing what the value of using the parkland for drainage on the land value versus having each parcel retain their drainage. This would give City Council a clear understanding of what they are trading for a park that seems really can't be used for public enjoyment like a normal park.

The 2001 General Plan breaks down parks into Community Parks (10 acres or more), Neighborhood Parks (3 to 5 acres) and Mini Parks. This would fall in between the first two but more toward a community park which should provide recreation for large groups of people.

In case it is argued that the General Plan does mention the Nature Park off Cerritos



1970 Orange County GIS Aerial Photo

Avenue, it is not comparable. I have been to the Nature Park. It is closed most of the year ("We will be back Summer 2026! Stay tuned for updates.") and city's website mentions is a flood control basin built in the 1960's. There is no ADA access for the Nature Park for many parts including getting down in the basin. I find it hard to square with the Specific Plan language provided above that gives the impression that the 8 acre Park would be usable park area and instead be used as a retention basin for other properties drainage. Furthermore, in my estimation the nature park is just a mere visual screening for the surrounding community and was built as a basin as you can see from a 1970 photo then screened later. I-3-50 cont.

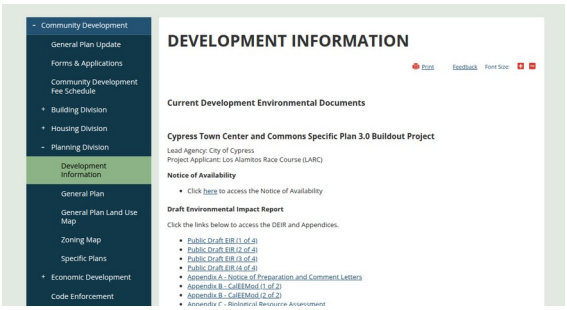
- How is the proposed public park, which is a drainage basin, in conformance with the General Plan Recreation Element for general park usage?

I am also trying to figure out the 8 acres mentioned in the specific plan above with caveat "area to Moody Centerline" when the actual area is 7.37 acres. I think I understand what developer did here but it seems slight of hand to include a proposed primary arterial street as if it were a park. Just say 7.37 acres. (*"Two public parks, one 10.2 acres and the other 8 acres")* I-3-51

EIR Screenshot

The creation of the park involves some type of land swap with Lot 5, what I am assuming is the church property.

- Is there a conflict of interest for anyone, if any, who is involved in the on the project on the city side/council member is a member or higher position within the church? I-3-52

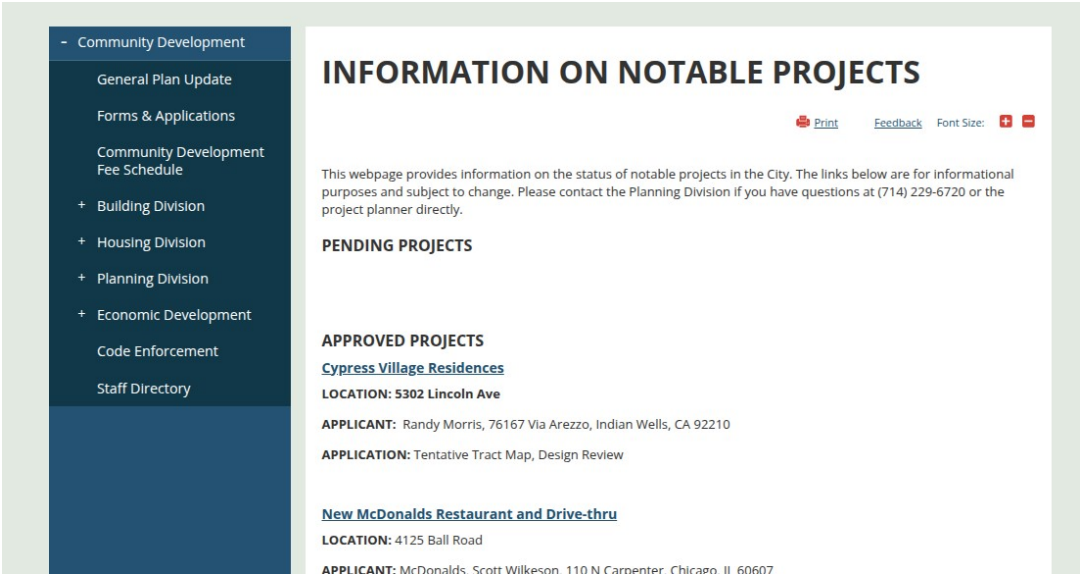


Before I even attempt to review the drainage study, though I probably won't, I noticed it does not contain approval statement like the Traffic Study or the Sewer Study. I-3-53

- Is there a more recent version with a plan checker approval?

Project Page & Transparency I-3-54

Why is there no development project page for one of the largest developments in Cypress's history?



All that is on the website is the EIR with no explanation or history to preface this development or help the resident wade through what is a technical document. This property and project have been going on probably before even approval of the Specific Plan adoption in 2017 and this is all the public gets. (https://www.cypressca.org/departments/community-development/planning-division/development-information)

Also note, it doesn't even say on the landing page where the public can comment on it or even if there is a deadline for comments. How many of the public would know to click the Notice of Availability to find out? It gives the impression, whether accidental or intentional, that public comments were not wanted. This is also where a link to the full Vesting Tentative Map should a prominent hyperlink. I-3-54 cont.

What is even odder is I found https://www.cypressca.org/departments/community-development/information-on-notable-projects by a random search with no direct links to it still on the webpage yet the racetrack project is not on it.

Click on the link of each project. There is more information about the McDonald's when you click on the link than there is regarding the development buildout of the racetrack.

For some other comparisons, here a some examples where cities host project pages for the public to better understand what is going on:

Santa Ana: https://www.santa-ana.org/major-planning-projects-and-monthly-development-project-reports/

Newport Beach: https://www.newportbeachca.gov/government/departments/community-development/planning-division/current-projects-and-cases/residences-at-4440-von-karman

Garden Grove: https://ggcity.org/planning/current-projects

I-3-54 cont.

Also, the previous Specific Plan, prior to the voter approved has been removed from the website. Not sure why but it would have been good context and more transparent for the public.

Since the City uses Laserfiche, a digital outward facing file system, any document related to the project, the previous specific plan, and all the historical documents regarding to this land as well as the developer submittals, including the Vesting Tentative Map, could all have been placed within a folder for public access like the city does for public record requests.

I-3-55

Transparency should always be the goal. I am guessing these files just sit on the city's servers. The only thing I see available in the Planning Section https://ecms.cypressca.org/WebLink/Browse.aspx?id=33433&dbid=0&repo=CityOfCypress is the 2020 City Center Project EIR.

They are public documents, why can't the public easily see them. Especially for a project that is this large in the city's history.

This page intentionally left blank

2.5.3 UNIDENTIFIED COMMENTER (QUINN2767@PROTON.ME)

Letter Code: I-3
Date: April 29, 2026

Response to Comment I-3-1

This comment provides introductory remarks.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-2

This comment claims that the project, as currently proposed, appears to be inconsistent with the Subdivision Map Act (State Law), the City's Specific Plan, the City's Municipal Code, and the City's General Plan.

Refer to Section 2.1.1, Consistency with Specific Plan, for the Master Response to comments regarding the proposed project's consistency with the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan). In addition, as discussed in Section 4.11, Land Use and Planning, of the Draft EIR, the proposed project would be consistent with the City's Municipal Code and the City's General Plan. The proposed project would also be consistent with the requirements of the Subdivision Map Act.

Response to Comment I-3-3

This comment claims that the proposed project and VTTM appear inconsistent with the voter-approved Specific Plan and Government Code Section 66473.5, as the VTTM does not depict a network of dedicated pedestrian and bicycle trails to ensure connectivity between neighborhoods, parks, and the town center.

Refer to Section 2.1.1, Consistency with Specific Plan, for the Master Response to comments regarding the proposed project's consistency with the Specific Plan, including internal circulation requirements.

The Subdivision Map Act governs how land is divided, sets the rules for creating parcels and lots, and contains requirements for VTTMs. Because the comment does not contain any other substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-4

This comment claims that the VTTM may not be in compliance with the City's Municipal Code or the Subdivision Map Act, as the Draft EIR only includes a partial depiction of the VTTM and the full VTTM is not available to the public.

The proposed VTTM No. 19247 is available for review in its entirety for anyone who submits a public records request to the City. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-5

This comment claims that the Draft EIR may be in violation of Section 15126.2 of the *State CEQA Guidelines*, which requires that an EIR provide an accurate, stable, and finite description of the project, as the project described in the Draft EIR appears to differ materially from the Specific Plan and therefore may fail to provide the public and decision-makers with an accurate description of the proposed project.

Section 15126.2 of the *State CEQA Guidelines* provides guidance related to the consideration and discussion of significant environmental impacts in an EIR and is not related to the content of project descriptions. Section 15124 of the *State CEQA Guidelines* outlines the requirements for a project description in an EIR. As outlined in Section 15124, a project description shall contain the following information, but should not supply extensive detail beyond that needed for evaluation and review of the environmental impact:

a) The precise location and boundaries of the proposed project shall be shown on a detailed map, preferably topographic. The location of the project shall also appear on a regional map.

b) A statement of the objectives sought by the proposed project. A clearly written statement of objectives will help the lead agency develop a reasonable range of alternatives to evaluate in the EIR and will aid the decision makers in preparing findings or a statement of overriding considerations, if necessary. The statement of objectives should include the underlying purpose of the project and may discuss the project benefits.

c) A general description of the project's technical, economic, and environmental characteristics, considering the principal engineering proposals if any and supporting public service facilities.

    i. A statement briefly describing the intended uses of the EIR, including a list of the agencies that are expected to use the EIR in their decision making, a list of permits and other approvals required to implement the project, and a list of related environmental review and consultation requirements required by federal, state, or local laws, regulations, or policies.

As previously discussed, the Draft EIR analyzed buildout of the Specific Plan within the Buildout Area at a "programmatic" level. Section 15168 of the *State CEQA Guidelines* provides guidance related to the preparation of a Program EIR. A Program EIR does not describe one fixed project; instead, it describes a series of related actions or a framework for future projects. As such, the project description for a Program EIR can be broader and more flexible, while still providing enough information to support a meaningful analysis of the maximum development potential. Using

guidance from Sections 15126.2 and 15168 of the *State CEQA Guidelines*, a project description for a Program EIR must describe the policy, plan, or program, the types of activities/projects it would allow, the geographic area covered, and the buildout schedule and assumptions. In addition, a project description for a Program EIR must include a "reasonable level of detail" to identify potential impacts and compare alternatives to the proposed project but does not need to rely on final engineering plans or detailed site plans.

Based on the above, the project description for the proposed project, as provided in Chapter 3.0, Project Description, of the Draft EIR, has been prepared consistent with the *State CEQA Guidelines*. Consistent with Section 15126.2 of the *State CEQA Guidelines*, as modified by the direction in Section 15168 of the *State CEQA Guidelines*, Chapter 3.0 contains (1) the precise location and boundaries of the Buildout Area, including figures that show the Buildout Area's local and regional context (refer to Section 3.1, Project Location and Existing Environmental Setting, of the Draft EIR); (2) a statement of objectives, including the underlying purpose of the proposed project (refer to Section 3.4, Project Objectives, of the Draft EIR); and (3) a general description of the project's technical, economic, and environmental characteristics appropriate for a programmatic document, including a description of the policy, plan, or program (i.e., the Specific Plan and VTTM No. 19247), the types of activities/projects it would allow, and the buildout schedule and assumptions (refer to Section 3.5, Project Description, of the Draft EIR). As such, the project description contained in Chapter 3.0 of the Draft EIR is not in violation of *State CEQA Guidelines* requirements.

In addition, the proposed project assumes buildup under the Specific Plan, as provided in Chapter 3.0 of the Draft EIR. Specifically, the proposed project would include the construction of an additional 1,791 residential units to meet the maximum allowable number of residential units (1,926 residential units), consistent with the Specific Plan, and the construction of approximately 440,000 square feet of non-residential development. Although the Specific Plan permits an aggregate maximum of 879,170 square feet of non-residential floor area within the Buildout Area, based on current and reasonably foreseeable future market conditions, it is anticipated that the buildout of the Buildout Area will include substantially less than 879,170 square feet of non-residential development (i.e., 440,000 square feet). The proposed project also includes circulation and access improvements, utility improvements, and open space/parkland development, consistent with the Specific Plan. Accordingly, the proposed project is consistent with the Specific Plan and therefore does not differ materially from the Specific Plan. Refer to Section 2.1.1, Consistency with Specific Plan, for the Master Response to comments regarding the proposed project's consistency with the Specific Plan.

Response to Comment I-3-6

This comment claims that there appears to be a fundamental inconsistency between the proposed project's transportation analysis and the City's General Plan because the VMT analysis prepared for the proposed project relies on the City's General Plan Circulation Element, which was adopted on September 10, 2001, and contains outdated LOS standards.

The City acknowledges this comment. As the City's General Plan Circulation Element was prepared and adopted in 2001, prior to the *State CEQA Guidelines* update that changed the basis for transportation impacts under CEQA from LOS to VMT, the City's General Plan Circulation Element

does not contain any VMT significant thresholds or metrics and instead contains outdated LOS standards. However, the project-specific VMT Memo prepared for the proposed project and included as **Appendix K** to the Draft EIR, was prepared using the methodology and significance threshold criteria identified in the *Guidelines For Evaluating Vehicle Miles Traveled Under CEQA for Orange County*,[14] dated September 17, 2020 (County Guidelines), and does not rely on the City's General Plan Circulation Element. Therefore, the VMT analysis prepared for the proposed project has been prepared pursuant to all applicable guidance documents and accurately reflects the proposed project's potential impact on transportation under CEQA.

In addition, the City's General Plan Circulation Element is not a part of the proposed project that is analyzed in the Draft EIR. Because the comment does not contain any other substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-7

This comment states that the Traffic Study referenced in the Draft EIR was posted separately from the Draft EIR and that the bike lane recommendations in the Traffic Study do not appear binding as they are noted as "for informational purposes only."

The City acknowledges this comment. As previously discussed, transportation impacts under CEQA are to be evaluated based on a project's effect on VMT as opposed to vehicle delay and LOS. This change came into effect on December 28, 2018, when the California Office of Administrative Law cleared the revised *State CEQA Guidelines* for use and removed vehicle delay and LOS from consideration under CEQA. As such, Section 4.17, Transportation, of the Draft EIR contains a project-specific VMT analysis based on the VMT Memo prepared for the proposed project, which is included as **Appendix K** to the Draft EIR, in order to assess transportation impacts under CEQA. The Traffic Study is only referenced in the Draft EIR as it relates to the anticipated number of daily vehicle trips associated with full buildout of the proposed project. No analysis contained in the Traffic Study is included in the Draft EIR, and the Traffic Study is provided on the City's website for informational purposes only. In addition, the bike lane recommendations in the Traffic Study are noted as "for informational purposes only" as they are recommendations and may not reflect the final locations of the bike lanes. Because the specifics of future projects within the Buildout Area cannot be determined at this time, it is not known if the bike lane recommendations provided in the Traffic Study would appropriately fit or be feasible within the ultimate buildout of the Buildout Area.

However, the proposed project is assumed to include the addition of approximately 1 mile of bicycle facilities, connecting to the existing bicycle network. Additionally, as detailed in **Mitigation Measure TRA-1**, the proposed project would be required to implement feasible TDM strategies to mitigate the proposed project's VMT impact, which include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network. All future development facilitated by the proposed project would be required to implement **Mitigation Measure TRA-1** and

[14] Orange County. 2020. G*uidelines For Evaluating Vehicle Miles Traveled Under CEQA for Orange County.* September 17, 2020.

would also be required to comply with City policies regarding bicycle parking and other infrastructure.

Further, future development projects associated with implementation of the proposed project would be reviewed by the City on a project-by-project basis in order to ensure that the proposed development is consistent with the Specific Plan and City requirements related to bike lanes and bicycle infrastructure. Specifically, through the design review process, future development projects would be required to submit a detailed site plan that depicts the bike lanes and other trails that would be included in each development, consistent with the planned "backbone" circulation improvements set forth in the Specific Plan. Overall, future development projects would be required to incorporate bike lanes into individual project designs on an as-needed basis in order to ensure consistency with the Specific Plan and other City requirements, even if these bike lanes do not match the general recommendations provided in the Traffic Study.

Response to Comment I-3-8

This comment claims that the extension of Vessels Circle westward to terminate at Moody Street instead of extending further west to Lexington Drive may miss an opportunity to create a through connection that would improve traffic distribution, provide alternative routes for pedestrians and cyclists, provide needed relief for residents traveling eastward om Katella Avenue, and provide redundancy for ambulance, fire, and police services.

Refer to Section 2.1.3, Vessels Circle Through Connection, for the Master Response to comments regarding the Vessels Circle through connection.

Response to Comment I-3-9

This comment claims that the VTTM has not been provided as a complete document and questions if the VTTM is in compliance with the City's Municipal Code.

The proposed VTTM No. 19247 is available for review in its entirety for anyone who submits a public records request to the City. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-10

This comment states that the City should ensure the proposed project is conditioned to include the dedicated pedestrian and bicycle trails, as detailed in the Specific Plan, and requests the required engineering drawings associated with the VTTM be provided prior to certifying the EIR or recommending approval of the VTTM.

Refer to Section 2.1.1, Consistency with Specific Plan, for the Master Response to comments regarding the proposed project's consistency with the Specific Plan. Future development within the Buildout Area associated with implementation of the proposed project would be required to demonstrate consistency with the Specific Plan, including pedestrian and bicycle trails and "backbone" circulation improvements described in the Specific Plan. In addition, the proposed VTTM

No. 19247 is available for review in its entirety for anyone who submits a public records request to the City.

Response to Comment I-3-11

This comment requests information regarding the City's legal or factual basis for concluding that the VTTM, which does not depict the dedicated trails described in the Specific Plan, is in "substantial conformance" with Government Code Section 66473.5.

The proposed VTTM No. 19247 is available for review in its entirety for anyone who submits a public records request to the City. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-12

This comment asks if the full set of certified engineering drawings for all nine categories required by the City's Municipal Code for VTTMs has been submitted, accepted as complete, and are available for public inspection

The proposed VTTM No. 19247 is available for review in its entirety for anyone who submits a public records request to the City. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-13

This comment requests that if any of the nine required engineering categories for VTTM provided in the City's Municipal Code have been waived by the City, written findings be provided that state such information is "unnecessary, duplicative, or inapplicable" and that such a waiver will not hamper prudent public policy.

The proposed VTTM No. 19247 is available for review in its entirety for anyone who submits a public records request to the City. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-14

This comment asks if there is any documentation that the project developer has requested any item under Sections 25-61 or 25-62 of the City's Municipal Code or Section 2.2.5 of the Specific Plan and if there was, why this was not available to the public.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-15

This comment asks how the Draft EIR satisfies Section 15126.2 of the *State CEQA Guidelines* when it omits the dedicated trail system and required street cross-sections.

Refer to Response to Comment I-3-5, above.

Response to Comment I-3-16

This comment asks what specific legal mechanism exists to guarantee that future developers of the 11 lots will dedicate the necessary land for trails if the City approves the VTTM without the dedicated trails and engineering drawings.

The proposed VTTM No. 19247 is available for review in its entirety for anyone who submits a public records request to the City. Future development within the Buildout Area associated with implementation of the proposed project would be required to demonstrate consistency with the Specific Plan, including through the addition of pedestrian and bicycle trails. Specifically, through the design review process, future development projects would be required to submit a detailed site plan that depicts the pedestrian pathways and bicycle trails that would be included in each development, consistent with the Specific Plan.

Response to Comment I-3-17

This comment asks how the Draft EIR ensures consistency with the General Plan Circulation Element when the Circulation Element was adopted in 2001, only contains build-out projections to 2020, and has not been updated to reflect current VMT requirements.

The Draft EIR contains a consistency analysis with the most recently adopted Circulation Element, as required by CEQA. Table 4.11.D: General Plan Consistency Analysis, in Section 4.11, Land Use and Planning, of the Draft EIR provides a consistency analysis of the goals and policies from the City's General Plan pertaining to the circulation system that are relevant to the proposed project. As provided in Table 4.11.D, the proposed project would not conflict with any of the goals and policies contained in the City's General Plan related to the circulation system.

Response to Comment I-3-18

This comment asks what binding conditions will be placed on the VTTM to ensure the bike lane widths, buffers, and intersection treatments identified in the Traffic Study are actually constructed.

As previously discussed, the bike lane recommendations in the Traffic Study are noted as "for informational purposes only" as they are proposed locations only. Because the specific future projects cannot be determined at this time, it is not known if the bike lane recommendations provided in the Traffic Study would appropriately fit or be feasible within the ultimate buildout of the Buildout Area. However, as previously discussed, future development within the Buildout Area associated with implementation of the proposed project would be required to demonstrate consistency with the Specific Plan, including through the addition of pedestrian and bicycle trails, prior to individual project approval. Specifically, through the design review process, future development projects would be required to submit a detailed site plan that depicts the pedestrian

pathways and bicycle trails that would be included in each development, consistent with the planned "backbone" circulation improvements set forth in the Specific Plan. Overall, future development projects would be required to incorporate bike lanes into individual project designs on an as-needed basis in order to ensure consistency with the Specific Plan and other City requirements, even if these bike lanes do not match the general recommendations provided in the Traffic Study.

Response to Comment I-3-19

This comment asks for the City's justification for not requiring the Vessels Circle through connection, including how the decision aligns with the General Plan's circulation goals of facilitating movement and alternative transportation. This comment also asks if the through connection was studied related to improving potential public health, safety and welfare, improving or degrading traffic patterns with regards to the existing senior development on Katella Avenue and pedestrian and bike mobility.

Refer to Section 2.1.3, Vessels Circle Through Connection, for the Master Response to comments regarding the Vessels Circle through connection.

Response to Comment I-3-20

This comment asks where the full, certified VTTM is located and why it was not provided in the Draft EIR. This comment also reiterates the commenter's concern regarding the VTTM's compliance with the City's Municipal Code requirements.

The proposed VTTM No. 19247 is available for review in its entirety for anyone who submits a public records request to the City. The Draft EIR does not include, nor is it required to include, the full proposed VTTM No. 19247. Figure 3-5: Vesting Tentative Map No. 19247, contained in the Draft EIR is intended to provide a high-level depiction of the proposed lots and the main "backbone" circulation improvements within the Buildout Area.

Response to Comment I-3-21

This comment asks if the public will have an opportunity to review the Development Agreement and if the Development Agreement contains information related to trails.

The Development Agreement for the proposed project is currently being prepared by the City and will be available to the public for review once it is completed and prior to its consideration by the City Council. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-22

This comment states that the commenter has attached a letter that they sent to the City Manager and City Council, and requests that all questions posed in the attached letter be answered.

Response to Comment I-3-25 through Response to Comment I-3-41, below, address the comments and questions posed in the attached letter.

Response to Comment I-3-23

This comment requests that the commenter's comments be included in the official administrative record and the specific legal and factual questions raised by the commenter be addressed in the Staff Report and the City's findings prior to EIR certification and subsequent approval of the VTTM.

This Final EIR provides responses to all comments and questions that address environmental issues or the adequacy of the Draft EIR prepared for the proposed project. Comments that (1) do not address the adequacy or completeness of the Draft EIR; (2) do not raise environmental issues; or (3) do request the incorporation of additional information not relevant to environmental issues, do not require a response in this Final EIR, pursuant to Section 15088(a) of the *State CEQA Guidelines*. This Final EIR and the written responses contained herein will be available at least 10 days prior to the EIR certification hearing for the proposed project.

Response to Comment I-3-24

This comment provides introductory remarks and states that the following letter includes comments on the proposed project, focusing on the provision of trails and greenways.

The City acknowledges this comment and has provided responses to the comments raised in the letter below. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-25

This comment claims that the proposed development may not meet the requirements of the voter-approved Specific Plan or the City's Municipal Code requirements for a VTTM as there is uncertainty regarding the size, dimensions, and characteristics of any trails within the Buildout Area associated with implementation of the proposed project.

Refer to Section 2.1.1, Consistency with Specific Plan, for the Master Response to comments regarding the proposed project's consistency with the Specific Plan.

The proposed VTTM No. 19247 is available for review in its entirety for anyone who submits a public records request to the City. Because the comment does not contain any other substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-26

This comment claims that the proposed development does not meet the requirements of the voter-approved Specific Plan.

Refer to Section 2.1.1, Consistency with Specific Plan, for the Master Response to comments regarding the proposed project's consistency with the Specific Plan.

Response to Comment I-3-27

This comment claims that it seems improbable to have any trail connectivity or congruity if the trails are not depicted on the subdivision map for the Buildout Area and asks how future trails on Lot 2 would connect within trails through Lots 3 and 4.

Refer to Section 2.1.1, Consistency with Specific Plan, for the Master Response to comments regarding the proposed project's consistency with the Specific Plan.

Future development projects associated with implementation of the proposed project would be reviewed by the City on a project-by-project basis in order to ensure that the proposed development is consistent with the Specific Plan. Specifically, through the design review process, future development projects would be required to submit a detailed site plan that depicts the pedestrian pathways and bicycle trails that would be included in each development, consistent with the Specific Plan, and how these pathways and trails would connect to other existing and planned pathways and trails in the surrounding area. Therefore, although the specific trails that may be located within Lots 2, 3, and 4 cannot be determined at this time, the City would ensure their construction and continuity through the design review process.

Response to Comment I-3-28

This comment asks if the language regarding trails in the Specific Plan refers to only concrete sidewalks and on-street bike routes.

Refer to Section 2.1.1, Consistency with Specific Plan, for the Master Response to comments regarding the proposed project's consistency with the Specific Plan.

As described above, future development projects associated with implementation of the proposed project would be reviewed by the City on a project-by-project basis in order to ensure that the proposed development is consistent with the Specific Plan. Specifically, through the design review process, future development projects would be required to submit a detailed site plan that depicts the pedestrian pathways and bicycle trails that would be included in each development, consistent with the Specific Plan. These pathways and trails could include concrete sidewalks and on-street bike routes, or be separate trails, not adjacent to roadways.

However, it should be noted that although the Specific Plan includes the provision of pedestrian and bicycle trails within the Buildout Area, it does not require that these trails be public or dedicated to the City. The Specific Plan requirements related to providing pedestrian and bicycle trails may also be satisfied by providing private pedestrian and bicycle trails for use by residents that would connect to the City's public pedestrian and bicycle network in the surrounding area.

Response to Comment I-3-29

This comment asks if all sidewalks in the city are trails under the Specific Plan language interpretation.

The Specific Plan is the document that governs land use and circulation improvements within the Specific Plan area; it does not regulate land use and circulation improvements within other parts of the city. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-30

This comment raises concerns over the ambiguity of what a "greenway" is, since there is no definition of "greenway" in the Specific Plan.

A "greenway" is a linear open space corridor that provides recreational and non-motorized transportation opportunities. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-31

This comment claims that the approximately 1 mile of on-street bike lanes associated with the proposed project is being used to satisfy VMT reduction requirements while ignoring the "off-road trail system" envisioned in the Specific Plan.

Although the provision of approximately 1 mile of on-street bike lanes would provide some VMT reduction benefits, it is not associated with the VMT reduction strategies provided in **Mitigation Measure TRA-1**. **Mitigation Measure TRA-1** would require that the proposed project prepare and implement feasible TDM strategies to mitigate the proposed project's VMT impact, which include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network (beyond the approximately 1 mile of on-street bike lanes that is considered part of the proposed project) and improving the pedestrian network, including the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area.

Refer to Section 2.1.1, Consistency with Specific Plan, for additional discussion regarding the proposed project's consistency with the Specific Plan.

Response to Comment I-3-32

This comment asks if the public will have the opportunity to review the Development Agreement associated with the proposed project.

The Development Agreement for the proposed project is currently being prepared by the City and will be available to the public for review once it is completed and prior to its consideration by the City Council. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-33

This comment asks why there is no proposed east-west through connection through the Buildout Area, which would provide redundancy for medical, fire, and police to get to an emergency, provide an opportunity for a pedestrian and biking trail, and alleviate the traffic congestion issues experienced by the senior community on Katella Avenue.

Refer to Section 2.1.3, Vessels Circle Through Connection, for the Master Response to comments regarding the Vessels Circle through connection.

As previously discussed, transportation impacts under CEQA are required to be evaluated based on a project's effect on VMT as opposed to vehicle delay and LOS. Accordingly, the Draft EIR does not consider potential traffic delay (LOS) impacts or concerns associated with other developments in the city, such as the senior community on Katella Avenue, and is not required to alleviate existing traffic delay issues in the surrounding area resulting from other developments. No further response is required.

Response to Comment I-3-34

This comment claims that although a Vessels Circle through connection was not included in the Specific Plan, the proposed Moody Street connection was also not included in the Specific Plan, and the Specific Plan allows for infrastructure modifications.

The Specific Plan approved by City of Cypress voters on November 5, 2024, does include the proposed extension of Moody Street from Cerritos Avenue to Katella Avenue. Therefore, the proposed project consists of the reasonably foreseeable buildout of the Buildout Area with implementation of the voter-approved Specific Plan, including the proposed Moody Street extension and the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension. The City currently has no plans to modify the voter-approved Specific Plan. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-35

This comment claims that a Vessels Circle through connection would contribute to a reduction in VMT, which would resolve the proposed project's significant and unavoidable VMT impact.

Refer to Section 2.1.3, Vessels Circle Through Connection, for the Master Response to comments regarding the Vessels Circle through connection.

Response to Comment I-3-36

This comment is related to the information provided on the proposed VTTM No. 19247 and states that the proposed VTTM should include the depictions and cross sections of bicycle trails.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-37

This comment states that the City Council should be aware the voter-approved Specific Plan was not prepared by the City and has never been evaluated from an environmental and practical perspective. This comment also states that the developer can change the requirements of the Specific Plan through conditional approval by the City, and cites Section 25-61 of the City's Municipal Code.

The Draft EIR analyzes the proposed project, which consists of the reasonably foreseeable buildout of the voter-approved Specific Plan. As such, the Draft EIR evaluates buildout of the Specific Plan from an environmental perspective. CEQA does not require an EIR to analyze the practicality of a plan or program.

In addition, it should be noted that Section 25-61 of the City's Municipal Code is not related to changes to a specific plan and instead provides guidance for the preparation of Vesting Tentative Maps that do not match the current zoning at the time they're submitted. Any proposed modification to the current voter-approved Specific Plan, including from future developers, would be subject to applicable approval procedures, including voter approval, and may require additional environmental review pursuant to CEQA.

Response to Comment I-3-38

This comment asks if a modification to the Specific Plan would require voter approval or the City Council.

As provided in Section 5.6, Amendments and Adjustments, of the voter-approved Specific Plan, the Specific Plan may generally only be amended through voter approval. However, Section 5.6.2 of the Specific Plan allows the Director of Community Development to approve modifications to the Specific Plan that do not substantially alter the distribution, location, extent or density of the uses, improvements and facilities required pursuant to the Specific Plan, in accordance with the procedures set forth in Section 4.19.050, Adjustments, of the City's Municipal Code.

Specifically, the Director of Community Development shall be required to approve any requested adjustment if the proposed adjustment is generally consistent with the intent of this Specific Plan and is one of the permitted adjustments described in Section 5.6.2 of the Specific Plan. These adjustments include the following:

1. Changes in the boundaries of any Land Use District or Subdistrict that result in less than a 10 percent change in the original acreage within any Land Use District Areas, provided that the Public Park District does not include less than 18 acres of land and the size of the Public Park Overlay is not less than 2 acres.

2. The transfer of up to 5 percent of the number of residential units allowed or required in a Residential Subdistrict to another Residential Subdistrict, provided that the total number of residential units shall not exceed 1,926 units.

3. Various modifications in development standards, provided that they meet the requirements set forth in Section 5.6.2 of the Specific Plan.

4. Modifications to the conceptual layout of circulation and infrastructure plans shown in Chapter 2 of this Specific Plan, the sizing of infrastructure facilities, and the width of street sections, based on more detailed site planning, traffic studies, environmental review and/or civil engineering plans.

5. Other minor modifications to, or minor relief from, the standards, regulations, requirements and restrictions in this Specific Plan as the Director of Community Development finds is consistent with the intent of this Section and similar to the permitted adjustment described in Section 5.6.2 of the Specific Plan.

In the event that an application or applications are submitted to the City for a development project that requests multiple entitlements, including one or more adjustments, then the City Council, acting as the City's planning agency, shall have original jurisdiction with respect to such adjustment(s) and shall consider and take action on the requested adjustment(s) together with the other requested entitlements. The approval of an adjustment pursuant to Section 5.6.2 of the Specific Plan does not constitute an amendment to the Specific Plan and does not require a vote of the people.

Response to Comment I-3-39

This comment asks if the proposed VTTM is approved and if new subdivision maps are submitted by future subsequent developers who purchase the lots, would the new subdivision maps be "grandfathered" in under the voter-approved Specific Plan or could they be subject to future modifications to the Specific Plan.

This City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-40

This comment is related to the content of the proposed VTTM No. 19247 and questions if the proposed VTTM No. 19247 has been prepared consistent with all applicable regulations, including the City's Municipal Code.

The proposed VTTM No. 19247 is available for review in its entirety for anyone who submits a public records request to the City. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-41

This comment cites three goals contained in the City's General Plan Circulation Element (CIR-1.5, CIR-2, and CIR-2.4), claims that there are no designated off-road bicycle trails delineated within the

Buildout Area, and asks if the City has studied or examined bicycle movement overall and within the development.

Section 4.11, Land Use and Planning, of the Draft EIR, provides a consistency analysis of the goals and policies from the City's General Plan that are relevant to the proposed project, including Policies CIR-2.5 and CIR-2.8, relating to pedestrian and bicycle facilities. Policy-1.5, which states that the City will continue involvement in plans and programs related to the Circulation Element; Goal CIR-2, which outlines the City's goal to facilitate alternative modes of transportation; and Policy CIR-2.4, which states the City should encourage development and site design which facilitate implementation of high quality, desirable bicycle routes which meet or exceed established standards, are goals and policies for implementation by the City, and not specific developments or projects.

Further, the proposed project would include sidewalks along the project frontages and pedestrian sidewalks and bicycle pathways throughout the Buildout Area that provide connections to existing pedestrian and bicycle facilities in the surrounding area. Specifically, the proposed project is assumed to include the addition of approximately 1 mile of bicycle facilities, connecting to the existing bicycle network. Further pedestrian circulation improvements include sidewalks along the extension of Moody Street south of Cerritos Avenue. These pathways, together with the existing pedestrian infrastructure on the surrounding streets, would ensure seamless integration with the broader pedestrian network, effectively linking the Buildout Area with nearby amenities and transit options.

Additionally, as required by **Mitigation Measure TRA-1**, the proposed project would implement feasible TDM strategies to mitigate the proposed project's VMT impact, which include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network and improving the pedestrian network, including the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area. Therefore, the proposed project would not conflict with any adopted bicycle or pedestrian system plans, guidelines, policies, or standards, and would be consistent with the City's goals related to provided pedestrian and bicycle infrastructure. As such, the Draft EIR determined that impacts to bicycle and pedestrian facilities would be less than significant.

In addition, as previously discussed, future development projects associated with implementation of the proposed project would be reviewed by the City on a project-by-project basis in order to ensure that the proposed development is consistent with the Specific Plan and would comply with City policies regarding bicycle parking and other infrastructure. Specifically, through the design review process, future development projects would be required to submit a detailed site plan that depicts the pedestrian pathways and bicycle trails that would be included in each development, consistent with the Specific Plan and the goals and policies contained in the City's General Plan Circulation Element.

Refer to Section 2.1.1, Consistency with Specific Plan, for additional discussion regarding the proposed project's consistency with the Specific Plan and the provision of bicycle trails within the Buildout Area.

Response to Comment I-3-42

This comment asks if the City is settling for less safety by not providing a barrier or separation on the on-street bike routes, instead of adopting a "complete street" for the proposed project.

As previously discussed, future development projects associated with implementation of the proposed project would be reviewed by the City on a project-by-project basis in order to ensure that the proposed development is consistent with the Specific Plan and would comply with City policies regarding bicycle infrastructure, including safety requirements. As such, proposed bike paths, which may include off-street trails and/or on-street bike lanes, would be required to meet relevant safety criteria.

Response to Comment I-3-43

This comment provides a summary of the specific comments discussed above.

The City acknowledges this comment. Because the comment does not contain any new substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, beyond those provided and responses to above, no further response is required. Refer to Response to Comment I-3-25 through Response to Comment I-3-41, above.

Further, future development projects associated with implementation of the proposed project would be reviewed by the City on a project-by-project basis in order to ensure that the proposed development is consistent with the Specific Plan and would comply with City policies regarding bicycle infrastructure, including safety requirements. As such, proposed bike paths, which may include off-street trails and/or on-street bike lanes, would be required to meet relevant safety criteria.

Response to Comment I-3-44

This comment states that the City's General Plan, particularly the Circulation Element, is outdated and should be updated.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-45

This comment asks that since the proposed VTTM No. 19247 denotes that the Lexington Drive parcels were already dedicated to the city and accepted by the City in a previous parcel map, if the race course has been using City property or if there is an agreement that can be made available to the public.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-46

This comment asks what, if any, on-street bike lanes would be placed along Lexington Drive.

As previously discussed, because the proposed project is analyzed in the Draft EIR at the programmatic level, the specific future projects associated with implementation of the proposed project, including the specific bike lanes that would be constructed as part of buildout cannot be determined at this time. Future development projects associated with implementation of the proposed project would be reviewed by the City on a project-by-project basis in order to ensure that the proposed development is consistent with the Specific Plan and would comply with City policies regarding bicycle infrastructure. Specifically, through the design review process, future development projects would be required to submit a detailed site plan that depicts the pedestrian pathways and bicycle trails that would be included in each development.

Response to Comment I-3-47

This comment contains questions on the symbols and notations on the proposed VTTM No. 19247, including what the cross-hatching means on the upper Lexington Dedication and what "LARC/OC property" denoted on the southerly portion of the park means.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-48

This comment claims that there are exhibits missing from the City's General Plan Circulation Element posted on the City's website.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-49

This comment is related to the Traffic Study prepared for the proposed project and claims that there is no information provided in the Traffic Study related to the specific design and dimensions of future bicycle lanes/trails.

As previously discussed, because the proposed project is analyzed in the Draft EIR at the programmatic level, the specific future projects associated with implementation of the proposed project, including the specific bike lanes that would be constructed as part of buildout cannot be determined at this time. Future development projects associated with implementation of the proposed project would be reviewed by the City on a project-by-project basis in order to ensure that the proposed development is consistent with the Specific Plan and would comply with City policies regarding bicycle infrastructure. Specifically, through the design review process, future development projects would be required to submit a detailed site plan that depicts the pedestrian pathways and bicycle trails that would be included in each development. These future site plans would detail the

specific design and dimensions of the bicycle lanes/trails that would be included in each development.

Response to Comment I-3-50

This comment raises concerns over the use of Lots 5 and 6, which is designated as Public Park District in the Specific Plan, being used for stormwater detention as it may contain standing water during heavy rain events. This comment refers to another development in the city that included an underground basin and suggests a similar approach would allow year-round use of the parkland proposed for Lots 5 and 6. The comment also questions whether the proposed dual use of Lots 5 and 6 as both a park and stormwater detention area is consistent with the Specific Plan and City's General Plan Recreation Element.

As discussed in Chapter 3.0, Project Description, of the Draft EIR, the proposed project evaluated in the Draft EIR assumes that the Buildout Area would include approximately 11 acres of land on which park and recreational uses would be developed, including the land in Lots 1, 5, and 6 and the two additional acres of public park space that may be located in one or more of the land use districts established in the Specific Plan. The specific amenities and improvements that would be developed in the Public Park District and the additional two acres of public park space would be determined in connection with future development projects that are proposed within the Buildout Area. As provided in Section 4.10, Hydrology and Water Quality, of the Draft EIR, Lots 5 and 6 would contain a proposed detention basin (Basin C), which would collect, detain, and treat stormwater runoff from Drainage Area C, which consists of approximately 61.87 acres in the central portion of the Buildout Area, before discharging to the Cerritos Avenue Storm Drain. As provided in Section 4.10, Basin C would be designed as either an underground detention system and/or a surface detention basin that would collect and store the 100-year high-confidence storm event runoff volume, depending on the final design considerations of the ultimate buildout condition. Because the final design of Basin C is not yet known, Basin C could contain standing water during a heavy rain event if it is constructed as a surface detention basin, or it could be constructed as an underground detention system.

Nevertheless, if Basin C is designed as a surface detention basin and may contain some standing water during heavy rain events, the use of Lots 5 and 6 as both a park and a stormwater detention basin is consistent with common and accepted planning and engineering practices, both within the City, the County, and many other jurisdictions across the State. Multi-benefit stormwater facilities are routinely designed to function as passive or active recreational areas during dry weather conditions while providing temporary stormwater storage during storm events. Such dual-use facilities are consistent with modern stormwater management approaches, including low impact development (LID) and integrated water management strategies, which emphasize maximizing the functional use of land while providing flood control and water quality benefits.

The proposed Basin C, if designed to be a surface detention basin, would be designed to remain dry and available for recreational use under typical conditions. During storm events, Basin C may temporarily hold water for a limited duration to detain peak flows and reduce potential downstream flooding and erosion impacts. These temporary inundation periods are expected to be infrequent,

short-term, and consistent with the design standards provided in the Orange County MS4 Permit. Following storm events, Basin C would drain and return to its intended recreational function.

Although the Specific Plan does not explicitly state that the proposed park would also be used for stormwater management and treatment, the Specific Plan does not preclude this dual use. The Specific Plan also states that existing flood control systems around the Specific Plan area are insufficient and that new development within the Buildout Area would require each development project to be graded and landscaped to reduce the volume of storm water that flows off the Specific Plan Area. In other words, the Specific Plan contemplates maximizing onsite storage of storm water flows and infiltration at various places in the Specific Plan area for each development project in order to reduce potential impacts from runoff into the City's storm drain system.

In addition, this type of design is consistent with applicable regulatory frameworks, including municipal stormwater requirements adopted pursuant to National Pollutant Discharge Elimination System (NPDES) permits and local drainage standards, which encourage or require on-site stormwater detention and multi-benefit use of open space areas. Nothing in these regulations prohibits the co-location of stormwater infrastructure within parkland; rather, such integration is widely encouraged as an efficient and environmentally beneficial land use strategy. In addition, the use of detention basins within designated park areas is not prohibited by the Specific Plan or the City's General Plan Recreation Element.

Accordingly, the proposed use of Lots 5 and 6 for stormwater detention would not preclude its use for recreation but rather would result in a dual-purpose facility that provides both recreational amenities and necessary stormwater management functions.

Response to Comment I-3-51

This comment states that the Specific Plan specifies a second, 8-acre park, located within the Public Park District and adjacent to Cerritos Avenue, in addition to a 10.2-acre public park; however, Lots 5 and 6 would consist of only 7.37 acres of land.

The Specific Plan establishes the development of standards for land uses proposed as part of the proposed project. As established in the Specific Plan, 18.2 acres of land shall be set aside exclusively for two public parks within the Public Park District. This area was considered to be large enough to provide passive and active recreational uses. An additional 2 acres of public park will be, or have been, provided in one or more of the other Land Use Districts, for a total of approximately 20 acres of public parks.

As the 9-acre Lexington Park has already been developed adjacent to Lots 1 and 2 of VTTM 19247, the Buildout Area would include approximately 11 additional acres of land on which park and recreational uses would be developed. The specific amenities and improvements that would be developed in the Public Park District and additional 2 acres of public park space would be determined in connection with future development projects that are proposed within the Buildout Area. As such, the 7.37 acres of parkland within Lots 5 and 6 would represent a portion of the total parkland development within the Buildout Area, and the overall implementation of the proposed project would develop the Buildout Area with a total of approximately 20 acres of public parkland,

consistent with Specific Plan requirements. In addition, as shown in Figure 2-1 in the voter-approved Specific Plan, the Public Park District adjacent to Cerritos Avenue is identified as 8-acres to the Moody Street centerline. Therefore, the Public Park District would include 7.37 acres of parkland within Lots 5 and 6, with 0.64 acres of the 8-acre Public Park District being within Moody Street. Overall, the amount of open space, improvements, and amenities in the final buildout is not known or defined at this programmatic stage of the proposed project, but would be consistent with requirements in the Specific Plan.

Response to Comment I-3-52

This comment notes that there is a land swap between the project developer and the Grace Church and asks if there is a conflict of interest for anyone who is involved on the project, including City Council, due to being a member of the church.

As discussed in Chapter 3.0, Project Description, of the Draft EIR, the proposed VTTM 19247 includes lots with a total land area of approximately 151.6 acres. The land subject to VTTM 19247 is greater than the Buildout Area as VTTM 19247 includes Lots 8 and 9 (17.55 acres), which are, or will be, part of the Grace Church property, located outside the area governed by the Specific Plan. The environmental analyses in the Draft EIR do not consider future development on Lots 8 and 9 of VTTM 19247. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-3-53

This comment asks if there is a more recent version of the Drainage Report that has been approved by the City.

Appendix H-1 of the Draft EIR provides the *Master Plan of Drainage for Specific Plan 3.0 Buildout Project, 4961 Katella Avenue, Cypress, CA* (Drainage Report)[15] prepared for the proposed project and dated February 25, 2026. Since publication of the Draft EIR, minor updates to the Drainage Report were made to provide internal document consistency updates and to include an updated exhibit from the *Preliminary Water Quality Management Plan, Specific Plan 3.0 Buildout Project* (PWQMP),[16] which is included as **Appendix H-2** to the Draft EIR. This updated Drainage Report[17] was reviewed and approved by the City on March 11, 2026. These minor revisions did not substantially change the information and discussion provided in the Drainage Report and do not require revisions to the hydrology and water quality analysis contained in the Draft EIR or Section 4.10, Hydrology and Water Quality, of the Draft EIR.

---

15 TAIT & Associates, Inc. 2026a. *Master Plan of Drainage for Specific Plan 3.0 Buildout Project, 4961 Katella Avenue, Cypress, CA.* February 25.

16 TAIT & Associates, Inc. 2025. *Preliminary Water Quality Management Plan, Specific Plan 2.0 Buildout Project.* October 29.

17 TAIT & Associates, Inc. 2026b. *Master Plan of Drainage for Specific Plan 3.0 Buildout Project, 4961 Katella Avenue, Cypress, CA.* March 11.

As provided in Section 3.0, Errata, of this Final EIR, **Appendix H-1** of the Draft EIR has been updated to include the approved Drainage Report. As discussed above, the minor revisions made to the Drainage Report do not require revisions to the hydrology and water quality analysis contained in the Draft EIR or Section 4.10, Hydrology and Water Quality, of the Draft EIR.

Response to Comment I-3-54

This comment expresses frustration over the amount and accessibility of project information available on the City's website.

Information relating to the proposed project and Specific Plan is available on the City's website at the following link: https://www.cypressca.org/departments/community-development/planning-division/development-information.

In addition, in accordance with Public Resources Code Sections 21091(a) and 21092(b) and Sections 15105 and 15087(a) of the *State CEQA Guidelines*, a Notice of Availability (NOA) informing the public that a Draft EIR was prepared for the proposed project and was available for public review was posted to the City's website on March 16, 2026. The NOA was also mailed to responsible and trustee agencies and those who had requested it as part of the Notice of Preparation (NOP) scoping process, and hardcopy versions of the NOA were posted at several locations in the vicinity of the Buildout Area. As detailed in the NOA, an electronic version of the Draft EIR was available to the public on the City's website and a copy of the Draft EIR was available for public review at the Cypress Civic Center. Therefore, the Draft EIR was posted and circulated for public review in accordance with all applicable noticing and CEQA public review requirements. In addition, Section 3.2, Specific Plan Background, in Chapter 3.0, Project Description, of the Draft EIR includes a discussion of the history of the Buildout Area and the iterations of the Specific Plans that were approved by the voters.

Response to Comment I-3-55

This comment states that the previous Specific Plan, prior to the current voter-approved Specific Plan, has been removed from the City's website and that the public should be able to review it.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Comment Letter I-4

From: ernie hanaoka <ernie628@gmail.com>
Sent: Thursday, April 30, 2026 4:30 PM
To: Alicia Velasco <avelasco@cypressca.org>
Cc: ernie628 <ernie628@gmail.com>; Cheryl Hanaoka <cheryl6283@gmail.com>
Subject: EIR could expand Katella Ave. traffic to beyond "significance" threshold

To: Alicia Velasco, Planning Director for the City of Cypress

We are Ernest and Cheryl Hanaoka, residents of Cypress (NE corner of Moody and Cerritos Ave.) I-4-1

We are concerned with the proposed over congestion of low to medium income residences of the previous Los Alamitos race track property. I-4-2

Parton explained that one alternative is to reduce the number of units by 30% from more than 1900 units to 1,253 units, which would ironically "be significantly closer to the scope previously approved by residents, prior to Measure S, which was 1,250 residences. I-4-3

If the City Council approves the reduced scope in the EIR, the State will likely require the units to be zoned somewhere else. There is no reason why the only alternative needs to be Lincoln Avenue as proposed in Measure S. I-4-4

In fact, Pardon said the housing element and other strategies were partly developed during the pandemic and now deserve a second look because conditions have changed. I-4-5

We agree with George Pardon's assessment. I-4-6

Please re-assess the Katella Ave EIR and reduce the number of proposed residences. I-4-7

Thank you for your consideration,
Ernest and Cheryl Hanaoka

This page intentionally left blank

2.5.4 ERNEST AND CHERYL HANAOKA

Letter Code: I-4
Date: April 30, 2026

Response to Comment I-4-1

This comment provides introductory remarks.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-4-2

This comment states that the commenters are concerned with the proposed over-congestion of low to medium income residences within the LARC property.

The proposed project was developed based on the Specific Plan that was approved by the voters of the City of Cypress on November 5, 2024, which allows for a maximum of 1,926 residential units, including the 135 units already permitted on the seven-acre Melia Property. Therefore, an additional 1,791 residential units (1,926 – 135) may be developed within the Buildout Area, as analyzed in the Draft EIR. The proposed project is consistent with the limits on residential development capacity provided in the voter-approved Specific Plan. In addition, it should be noted that the specific number of affordable (low income), moderate (medium income), or market rate units that would be constructed within the Buildout Area cannot be determined at this time. Future development projects associated with implementation of the proposed project would be reviewed by the City on a project-by-project basis in order to ensure that the proposed development complies with all State and affordable housing requirements.

Response to Comment I-4-3

This comment states that a community member has claimed that there is an alternative that would reduce the number of units by 30 percent (from more than 1,900 units to 1,253 units), which would be significantly closer to the scope previously approved by residents (1,250 residences), prior to Measure S.

The proposed project evaluated in the Draft EIR includes the construction of approximately 1,791 residential units, not over 1,900 residential units, within the Buildout Area. As summarized in Table 3.A: Specific Plan Land Use Plan Summary, in the Draft EIR, although the Specific Plan allows for a maximum of 1,926 residential units, this includes the units allowed on the seven-acre Melia Property. Melia Homes has previously developed the Belmont residential project with 135 units on the Melia Property. Therefore, an additional 1,791 residential units (1,926 – 135) may be developed within the Buildout Area.

On November 5, 2024, the voters of the City of Cypress approved the current Specific Plan pursuant to “Measure S” as part of the City’s Housing Element Implementation Project. The current Specific Plan replaced and superseded the 2018 Specific Plan. Because the current Specific Plan was

approved by voters pursuant to Measure S, this Specific Plan, which allows for a maximum of 1,926 residential units (including the 135 units already allowed on the seven-acre Melia Property), is the current and appropriate land use plan governing development within the Buildout Area.

Refer to Section 2.1.3, Reduced Development Alternative, for the Master Response to comments regarding implementation of a reduced development alternative and associated impacts.

Response to Comment I-4-4

This comment claims that if the City approved the Reduced Development Alternative, the State would likely require the units to be zoned somewhere, and there is no reason why the only alternative needs to be Lincoln Avenue, as proposed in Measure S.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-4-5

This comment states that a community member claimed that the City's Housing Element was partly developed during the COVID-19 pandemic and now deserves a second look as conditions have changed.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-4-6

This comment states that the commenters agree with another community member's assessment of the proposed project.

The City acknowledges this comment. Because the comment does not contain any substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, no further response is required.

Response to Comment I-4-7

This comment asks the City to re-assess the Draft EIR and reduce the number of proposed residences.

The City acknowledges this comment. Because the comment does not contain any new substantive comments or questions about the environmental analysis or conclusions contained in the Draft EIR, beyond the comments described above, and no further response is required.

3.0 ERRATA

This section of the Final Environmental Impact Report (EIR) provides changes to the Draft EIR that have been made to clarify, correct, or add to the environmental impact analysis for the proposed Specific Plan 3.0 Buildout Project (project). Such changes are a result of further review of, and public comments related to, the Draft EIR. The changes described in this section are generally minor changes that do not constitute significant new information, change the conclusions of the environmental analysis, or require recirculation of the document (*State California Environmental Quality Act [CEQA] Guidelines* Section 15088.5).

Such changes to the Draft EIR are indicated in this section under the appropriate Draft EIR section. Deletions are shown with ~~strikethrough~~ and additions are shown with underline.

1) Chapter 2.0, Introduction, Section 2.2.3, Draft EIR Public Review Period

Table 2.A: Notice of Preparation Agency Comments Received has been revised to include the letter received by the California Department of Transportation (Caltrans), District 12 on May 5, 2025, in response to the Notice of Preparation (NOP) prepared for the proposed project.

This change was made for clarification only and has no effect on the analysis or conclusions contained in the Draft EIR. In addition, it should be noted that although this NOP comment letter was not included in Table 2.A of the Draft EIR, this letter was summarized and discussed in Section 4.17, Transportation, of the Draft EIR. Table 2.A of the Draft EIR is revised as follows:

Table 2.A: Notice of Preparation Agency Comments Received

Agency/ Organization/ Individual	Date	Comments	Addressed in Section(s) of the EIR
Native American Heritage Commission (NAHC)	April 8, 2025	The NAHC outlined the City's tribal consultation requirements under Assembly Bill 52.	Tribal Cultural Resources
South Coast Air Quality Management District (SCAQMD)	April 23, 2025	SCAQMD raised concerns regarding potential air quality impacts, greenhouse gas emissions, and health risks associated with the Specific Plan 3.0 Buildout Project. SCAQMD recommends that the City rely on the SCAQMD's *CEQA Air Quality Handbook* and use California Emissions Estimator Model (CalEEMod) to quantify emissions, applying both regional air quality significance thresholds and localized significance thresholds (LSTs). SCAQMD requests that the Draft EIR evaluate all phases of construction and operation, including overlapping activities, indirect sources (e.g., vehicle trips), and identify any new stationary or portable equipment that would require SCAQMD permits, recognizing the agency as a Responsible Agency if applicable. SCAQMD emphasizes that if significant adverse impacts are identified, all feasible mitigation measures that go beyond existing legal requirements must be implemented, referencing resources	Air Quality and Greenhouse Gas Emissions

Table 2.A: Notice of Preparation Agency Comments Received

Agency/ Organization/ Individual	Date	Comments	Addressed in Section(s) of the EIR
		such as the 2022 Air Quality Management Plan Mitigation Monitoring and Reporting Plan. SCAQMD further recommends evaluating health risk reduction strategies, such as using enhanced air filtration systems rated MERV 13 (Minimum Efficiency Reporting Value) or better, and requests that the Draft EIR analyze related secondary impacts including increased energy consumption, maintenance, waste generation, and potential limitations in filtration effectiveness.	
Southern California Association of Governments (SCAG)	May 5, 2025	SCAG recommends that the City of Cypress evaluate the project's alignment with the Connect SoCal 2024 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), which outlines goals to reduce greenhouse gas emissions, improve regional air quality, and support an integrated multimodal transportation network. SCAG emphasizes the use of its growth forecasts for population, housing, and employment in assessing potential impacts and planning infrastructure accordingly. Although SCAG does not implement or approve projects, it advises the City to consult the Connect SoCal 2024 Program Environmental Impact Report for guidance on identifying appropriate CEQA mitigation strategies. These may include measures to minimize emissions, reduce vehicle miles traveled, and enhance transportation efficiency. SCAG also highlights that achieving regional sustainability goals depends on local agency action and encourages the use of a side-by-side consistency analysis comparing project features with RTP/SCS goals.	Air Quality, Transportation
Orange County Public Works (OCPW)	May 5, 2025	OCPW stated that it has no comments regarding the Notice of Preparation (NOP) for the Draft EIR.	Not applicable
California Department of Transportation (Caltrans), District 12	May 5, 2025	Caltrans requested that analysis and discussion of the 95 percent vehicle queue be included in the traffic analysis due to the additional trips on the off-ramp(s) that lead to the site and/or left-turn lane to on-ramp that came from the site at the Valley View Street interchange. Caltrans also stated that if there is an overflow to the adjacent lane(s), there is a potential cause of safety concerns.	Transportation
City of Garden Grove[1]	June 3, 2025	The City of Garden Grove requested that a Level of Service (LOS) analysis be prepared for key intersections in the City of Garden Grove that may be impacted by project-related traffic. The City of Garden Grove also provided their Traffic Impact Analysis guidelines.	Transportation

Source = LSA (2026).
Notes: All NOP response letters are included in **Appendix A** of this Draft EIR.
[1] The comment letter from the City of Garden Grove was received after the close of the NOP comment period.

2) Section 4.10, Hydrology and Water Quality

Since publication of the Draft EIR, minor updates to the Drainage Report were made to provide internal document consistency updates and to include an updated exhibit from the Preliminary Water Quality Management Plan (PWQMP) prepared for the proposed project, which is included as **Appendix H-2** to the Draft EIR. Accordingly, **Appendix H-1** of the Draft EIR, which provides the Drainage Report prepared for the proposed project, has been updated to include the Drainage Report that was reviewed and approved by the City on March 11, 2026.

This change was made for clarification only and has no effect on the analysis or conclusions contained in the Draft EIR. The minor revisions made to the Drainage Report did not substantially change the information and discussion provided in the Drainage Report and do not require revisions to the hydrology and water quality analysis contained in the Draft EIR or further revisions Section 4.10, Hydrology and Water Quality, of the Draft EIR.

3) Section 4.17, Transportation

Based on comments received on the Draft EIR and project-specific VMT analysis, Figure 2 in the *Vehicle Miles Traveled (VMT) Analysis for Specific Plan 3.0 Buildout Project* (VMT Memo) prepared for the proposed project has been revised to include the planned Class II On-Road bike path that would bisect the Buildout Area connect Cerritos Avenue and Katella Avenue and the planning Class III On-Road bike path that would extend west from Walker Drive. Accordingly, **Appendix K** of the Draft EIR, which provides the VMT Memo prepared for the proposed project, has been updated to include the revised VMT Memo.

This change was made for clarification only and has no effect on the analysis or conclusions contained in the Draft EIR. The minor revisions made to the VMT Memo do not substantially change the information and discussion provided in the VMT Memo and do not require revisions to the VMT analysis contained in the Draft EIR or further revisions Section 4.17, Transportation, of the Draft EIR.

1.0 EXECUTIVE SUMMARY

1.1 INTRODUCTION

The California Environmental Quality Act (CEQA) requires that local government agencies, before taking action on projects over which they have discretionary approval authority, consider the environmental consequences of such projects. An Environmental Impact Report (EIR) is a document designed to provide to the public and to local and State governmental agency decision-makers an analysis of potential environmental consequences of a project to support informed decision-making.

This Draft EIR (Draft EIR) has been prepared by the City of Cypress (City) to evaluate environmental impacts associated with the proposed Specific Plan 3.0 Buildout Project (proposed project); to discuss alternatives; and to propose mitigation measures that will minimize, offset, or otherwise reduce or avoid the identified potentially significant environmental impacts.

This Draft EIR has been prepared pursuant to the requirements of CEQA and the *State CEQA Guidelines*. The City is the Lead Agency, and as such, has reviewed all submitted drafts, technical studies, and reports for consistency with applicable City regulations and policies and has commissioned the preparation of this EIR to reflect its own independent judgment.

Data for this Draft EIR was obtained from on-site field observations; discussion with affected agencies; review of adopted plans and policies; review of available studies, reports, and data; and specialized environmental assessments prepared for the project (e.g., air quality, biology, geology, hazards, historic, hydrology and water quality, noise, utilities, and traffic).

The Executive Summary is intended to highlight the major areas of importance in the environmental analysis for the proposed project as required by *State CEQA Guidelines* Section 15123. The Executive Summary includes a brief description of the proposed project, areas of controversy known to the City, including issues raised by agencies and the public, a summary of the significant unavoidable impacts of the proposed project, and a summary of alternatives evaluated in the EIR. This Executive Summary also provides a table summarizing (1) the potential environmental impacts that would occur as a result of project implementation and operation; (2) the level of significance prior to implementation of mitigation measures; (3) regulatory compliance measures and mitigation measures that avoid or reduce the significant impacts of the proposed project, and (4) the level of significance after mitigation measures are implemented.

1.2 SUMMARY OF PROJECT DESCRIPTION

The proposed project analyzed in this Draft EIR consists of the reasonably foreseeable buildout of a portion of the area governed by the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) that includes approximately 134 acres of land (Buildout Area) in Cypress. The City of Cypress voters approved the Specific Plan on November 5, 2024, pursuant to "Measure S" as part of the Housing Element Implementation Project. The proposed project includes the approval of Vesting Tentative Tract Map No. 19247 (VTTM 19247). VTTM 19247 includes lots with a total land area of approximately 151.6 acres. The land subject to VTTM 19247 is greater than the Buildout Area as VTTM 19247 includes Lots 8 and 9 (17.55 acres), which are, or will be, part of the Grace Church

property, which is located outside the area governed by the Specific Plan. The environmental analyses in this Draft EIR do not consider future development on Lots 8 and 9 of VTTM 19247.

In addition, the proposed project does not consider the development of two discrete portions of the land subject to the Specific Plan, which include (1) seven acres of land within the area governed by the Specific Plan (Melia Property) that Melia Homes has previously developed as the Belmont residential project (State Clearinghouse [SCH] 2020099025) and (2) nine acres of land on which the City has previously developed Lexington Park. The Specific Plan also included 20 acres of public park space spread throughout the Specific Plan Area. The City previously constructed Lexington Park on nine acres of that land, which land was donated to the City by Cypress GC, LLC.

The proposed project evaluated in this Draft EIR includes 1,791 residential units and 440,000 square feet of non-residential uses that could occur within the Buildout Area.

1.2.1 Project Characteristics

Residential Development: As summarized in **Table 3.A: Specific Plan Land Use Plan Summary** in Chapter 3.0, Project Description, the Specific Plan allows for a maximum of 1,926 residential units, including the units allowed on the seven-acre Melia Property. Melia Homes previously developed the Belmont residential project with 135 units on the Melia Property. Therefore, as shown in **Table 3.A**, an additional 1,791 residential units (1,926 – 135) may be developed within the Buildout Area.

Non-Residential Development: As shown in **Table 3.A**, the Specific Plan permits an aggregate maximum of 879,170 square feet of non-residential floor area within the Buildout Area. However, it is anticipated that, based on current and reasonably foreseeable future market conditions, the buildout of the Buildout Area will include substantially less than 879,170 square feet of non-residential development. Therefore, the environmental analyses in this Draft EIR are based in part on the assumption that only 440,000 square feet of non-residential development will occur within the Buildout Area. This represents approximately 50 percent of the maximum amount of permitted non-residential development. If non-residential development that cumulatively exceeds 440,000 square feet is later proposed within the Buildout Area, additional environmental review in accordance with the provisions of CEQA and the *State CEQA Guidelines* may be required if and to the extent such non-residential development requires any discretionary action by the City.

Development of Lot 14: Melia Homes has proposed a project (Lot 14 Project) on the entirety of Lot 14 in proposed VTTM 19247, which includes approximately 7.33 acres of land, as shown on **Figure 3-5: Vesting Tentative Map No. 19247** and **Table 3.B: Maximum/Reasonably Foreseeable Project Buildout**, in Chapter 3.0, Project Description. The Lot 14 Project includes the subdivision of proposed Lot 14 into 8 lots (Lots 1–6, A and B) for condominium purposes for the construction and sale of 112 attached townhomes, with common areas for landscaping, recreation center, parking, drive aisles and easements. The Lot 14 Site is located in the Mixed-Use (Town Center/MDR) District established in the Specific Plan.

As shown in in **Table 3.B**, the analyses in this Draft EIR are based on the assumed development of Lot 14 with 128 residential units and a portion of the 440,000 square feet of non-residential

development that is anticipated to occur in the Buildout Area. Given that the Lot 14 Project includes only 112 residential units (fewer than the 120 residential units assumed for analytical purposes in this Draft EIR) and no non-residential uses, the environmental analyses in this Draft EIR fully account for the proposed Lot 14 Project and are conservative in that they overstate the environmental impacts associated with the development of Lot 14.

1.2.2 Relationship to Lots in VTTM 19247

As shown in **Figure 3-5: Vesting Tentative Map No. 19247** in Chapter 3.0, Project Description, proposed VTTM 19247 would divide the Buildout Area and other land currently owned by Grace Church into 14 numbered lots. The numbered lots would accommodate the development of residential, non-residential and park and recreational uses. VTTM 19247 also includes existing Siboney Street, land that would be used to expand a portion of Lexington Drive adjacent to Lot 1 and Lexington Park, the further extension of Vessels Circle between Lots 7 and 12 and the extension of Moody Street to connect to Siboney Street, with Siboney Street becoming part of Moody Street.

In accordance with the approved Specific Plan, the proposed project evaluated in this Draft EIR includes residential development on Lots 2 through 4, 7, and 10 through 14, non-residential development on Lots 10 through 14, and the development of park and recreational improvements on Lots 1, 5 and 6 (as well as two additional acres within the Specific Plan that will be specified in the future).

Development on Lots 1, 5 and 6 is limited to park and recreational uses. The Public Park District includes 18.2 of specifically identified land, which includes the nine acres of land that the City previously developed as Lexington Park following its approval as the Cypress Sports Park Project (SCH No. 2019089093).

The proposed project evaluated in this Draft EIR does not assume any development on Lots 8 and 9. Grace Church owns Lot 9 where its existing church facilities are located. It is anticipated that Grace Church would acquire Lot 8 from LARC in exchange for transferring ownership of Lots 5 and 10 to LARC. Following this anticipated land swap, Grace Church would own Lots 8 and 9, which collectively include approximately 17.55 acres of land and are not located within the Buildout Area. Lots 8 and 9 have been included in VTTM 19247 solely in connection with the contemplated land swap and no development is presently contemplated on those lots by Grace Church.

The maximum residential buildout and reasonably foreseeable non-residential buildout of the Buildout Area pursuant to the Specific Plan, shown in **Table 3.B**, reflects the land swap described above and therefore includes Lots 5 and 10, and excludes Lots 8 and 9.

1.3 POTENTIAL AREAS OF CONTROVERSY

Pursuant to *State CEQA Guidelines* Section 15123, this Draft EIR acknowledges the areas of controversy and issues to be resolved that are known to the City or were raised during the scoping process. The City held a public scoping meeting on April 16, 2025, to present the proposed project and to solicit input from interested parties regarding environmental issues that should be addressed in this Draft EIR. One member of the public attended the scoping meeting. They did not raise any issues or concerns about the proposed project.

During the Notice of Preparation (NOP) comment period, the City received five comment letters, including from the Native American Heritage Commission (NAHC), South Coast Air Quality Management District (SCAQMD), Southern California Association of Governments (SCAG), the Orange County Public Works Department (OCPW), and the California Department of Transportation (Caltrans). These letters included comments related to tribal cultural resources, air quality, greenhouse gas emissions, and transportation impacts with implementation of the proposed project. In addition, one letter, from the City of Garden Grove, was received after the close of the NOP comment period and included comments related to transportation impacts with implementation of the proposed project.

This Draft EIR addresses the above areas of concern in detail, examines project-related and cumulative environmental impacts, identifies significant adverse environmental impacts, and proposes mitigation measures and/or alternatives designed to reduce or eliminate potentially significant impacts. **Appendix A** to this Draft EIR includes the written comments received in response to the NOP and a comment summary.

1.4 SUMMARY OF IMPACTS AND MITIGATION MEASURES

Section 15126.2(b) of the *State CEQA Guidelines* requires that an EIR describe significant environmental impacts that cannot be avoided, including those effects that can be mitigated but not reduced to a less than significant level. This summary provides an overview of the analysis contained in Chapter 4.0, Setting, Impacts, and Mitigation Measures, of this Draft EIR.

1.4.1 Significant Impacts

Under CEQA, a significant impact on the environment is defined as "…a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project, including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance." As discussed in more detail in Chapter 4.0 of this Draft EIR, impacts in the following areas would be potentially significant without the implementation of mitigation measures, but would be reduced to a less than significant level if the mitigation measures recommended in this Draft EIR are implemented:

- Biological Resources
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Transportation
- Tribal Cultural Resources

In addition, as discussed in more detail in Chapter 4.0 of this Draft EIR, impacts in the following areas would be significant and unavoidable, even with implementation of mitigation measures recommended in this Draft EIR, as discussed in more detail below:

- Air Quality
- Cultural Resources
- Transportation

1.4.1.1 Air Quality

Conflict with Air Quality Plan. Although the proposed project would be consistent with Indicator 2 of SCAQMD's 2022 Air Quality Management Plan (AQMP) as the proposed project would not exceed the growth assumptions in the SCAG's 2024–2050 RTP/SCS (Connect SoCal 2024) or the 2022 AQMP, the proposed project would have the potential to conflict or obstruct implementation of applicable air quality plans under Indicator 1 of the 2022 AQMP because buildout of the proposed project would result in significant and unavoidable long-term operational pollutant emissions. Although there is no feasible mitigation to reduce operational pollutant emissions to a less than significant level, **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1** would incorporate design features that would contribute to reducing criteria air pollutant emissions generated during operational activities associated with the proposed project. Nevertheless, because the proposed project would conflict with Indicator 1, impacts related to conflict with the applicable air quality plan would be **significant and unavoidable.**

Operational Emissions. As discussed in Section 4.3, Air Quality, operational emissions associated with the proposed project would exceed the South Coast Air Quality Management District's (SCAQMD) thresholds and it is assumed that construction and operational emissions combined would exceed the significance threshold established by the SCAQMD for daily project emissions. **Mitigation Measure AIR-1,** which requires the implementation of all feasible measures to reduce operational impacts associated with buildout envisioned under the proposed project, and **Mitigation Measure TRA-1,** which requires the implementation of Transportation Demand Management (TDM) strategies to lower project VMT for the proposed project's residential component, would further reduce impacts. With implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1**, NO_x emissions would be reduced to below the SCAQMD's significance criteria. However, VOC emissions would still exceed the SCAQMD's significance criteria. As there are no additional feasible mitigation measures that would reduce project operational-source VOC emissions to a less-than-significant level, operation of the proposed project would result in a **significant and unavoidable** impact related to a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard.

1.4.1.2 Cultural Resources

Historical Resources. Proposed project implementation would include the demolition of the character-defining features of the LARC Property and as such would result in a substantial adverse change to a historic architectural resource under CEQA, as outlined in Section 4.5, Cultural Resources, of this Draft EIR, which is a potentially significant impact.

The proposed project would be required to implement **Mitigation Measures CUL-1** through **CUL-3** which require documentation, interpretation, and archival preservation of the Los Alamitos Race Course's historic significance prior to demolition or redevelopment. Measures include (1) the donation of historic photographs and memorabilia to a local library or Orange County–based historical society for exhibit or archival purposes; (2) incorporation of on-site interpretive features such as a publicly accessible historical marker and/or design elements referencing Frank Vessels, Sr., the Vessels family, racing history, and notable Quarter Horses; and (3) preparation of HABS-like documentation, consistent with the Secretary of the Interior's Standards, by a qualified historian

prior to demolition of any character-defining features. The documentation would include photographic recordation, a detailed historical narrative, and archival research, with materials donated to appropriate local and regional archival repositories. However, impacts to historical resources as defined in *State CEQA Guidelines* Section 15064.5 would remain **significant and unavoidable.**

1.4.1.3 Transportation

Vehicle Miles Traveled. As discussed in Section 4.17, Transportation, the residential component of the proposed project would result in a higher VMT per capita than the County's residential VMT significance thresholds under both existing and cumulative plus project conditions by 11.6 percent, and thus would result in a potentially significant impact. As such, the proposed project would be required to implement feasible TDM strategies to mitigate the proposed project's VMT impact, as detailed in **Mitigation Measure TRA-1**.

These VMT reduction measures include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network and improving the pedestrian network, including the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area. However, the implementation of these measures would only reduce the proposed project's residential VMT impact by 1.2 percent. As such, even with implementation of the identified TDM strategies, the proposed project's residential VMT impact would remain significant, with a residential VMT impact of 10.4 percent over the significance threshold. Therefore, the proposed project's VMT impact would be **significant and unavoidable**.

1.4.2 Cumulative Impacts

CEQA defines cumulative impacts as "two or more individual effects which, when considered together, are considerable, or which can compound or increase other environmental impacts." Section 15130 of the *State CEQA Guidelines* requires that an EIR evaluate potential environmental impacts that are individually limited but cumulatively significant. These impacts can result from the proposed project when combined with other past, present, or reasonably foreseeable future projects. As discussed in more detail in Chapter 4.0 of this Draft EIR, cumulative impacts in the following areas would be significant and unavoidable, even with implementation of mitigation measures recommended in this Draft EIR:

- Air Quality
- Cultural Resources
- Transportation

1.5 ALTERNATIVES

1.5.1 Alternatives Evaluated in this Draft EIR

Public Resources Code (PRC) Section 21100 and *State CEQA Guidelines* Section 15126 require an EIR to identify and discuss a No Project Alternative and a reasonable range of alternatives to the proposed project that would feasibly attain most of the basic objectives of the project and would avoid or substantially lessen any of the significant environmental impacts. The following three alternatives have been determined to represent a reasonable range of alternatives that have the

potential to feasibly attain most of the basic objectives of the proposed project but that may avoid or substantially lessen any of the significant impacts of the proposed project. Therefore, the alternatives considered in this Draft EIR include the following:

- **No Project Alternative.** Under the No Project Alternative, the Buildout Area would not be developed with new residential or non-residential uses. The Buildout Area would remain as it is in its current condition, with no demolition of existing structures, grading, or new construction occurring within the Buildout Area. Specifically, the Buildout Area would remain developed with the existing structures and facilities that support horse racing, training, and community activities, including the race track, grandstand structure, three artificial lakes inside the race track, one-story clubhouse and restaurant structures, lighting structures, approximately 41 permanent one-story barns and several temporary structures and barn; and parking structures. In addition, the roadway improvements and extensions envisioned under the proposed project would not occur.

- **Historic Preservation Alternative.** The Historic Preservation Alternative would develop new residential and non-residential uses within the Buildout Area; however, the character-defining features at the LARC Property would be retained and converted into a performance venue for future concerts, plays, and other entertainment performances. Lots 5 through 8 and portions of Lots 3 and 4 would be used as a park/recreational use that is open to the public when the performance venue is not in use. Overall, the Historic Preservation Alternative would result in development of approximately 1,400 residential units and 440,000 square feet of non-residential development. The existing character-defining features of the LARC Property that would be retained include the original pre-1970 track, the 1954 quarter-mile chute, the infield and ponds, and a portion of the grandstand, as outlined in Section 5.5.2 below. All non-historic features of the race course, including the race-track extensions, barns, temporary buildings, clubhouse building, and annex would be demolished. Siboney Street would only be extended to the intersection of Vessels Circle and would not extend to Moody Street. Existing restaurants, food service, and the three existing lakes within the original race track would be retained.

- **Reduced Development Alternative (30% Reduction).** Under the Reduced Development Alternative, the overall intensity of the proposed project, including residential and commercial development, would be reduced by 30 percent. As such, the Reduced Development Alternative would facilitate the future development of 1,253 residential units and approximately 308,000 square feet of non-residential uses.

1.5.2 Identification of the Environmentally Superior Alternative:

CEQA requires the identification of an Environmentally Superior Alternative among the proposed project and the alternatives evaluated in an EIR. *State CEQA Guidelines* Section 15126.6(e)(2) provides that, if the No Project Alternative is the Environmentally Superior Alternative, then the EIR shall also identify an Environmentally Superior Alternative among the other alternatives and the proposed project.

The No Project Alternative would have the fewest environmental impacts and would be the environmentally superior alternative. However, under CEQA, if the No Project Alternative is the

environmentally superior alternative, the EIR must identify an environmentally superior alternative from among the other alternatives (*State CEQA Guidelines* Section 15126.6(e)(2)). While the No Project Alternative would be environmentally superior in the technical sense in that contribution to the aforementioned impacts would not occur, it would also fail to achieve any of the project's objectives. Because the Historic Preservation Alternative would avoid the significant and unavoidable impact to historical resources as defined in *State CEQA Guidelines* Section 15064.5 associated with the proposed project, the Historic Preservation Alternative is considered the Environmentally Superior Alternative. As discussed above, the Reduced Development Alternative would not avoid the significant and unavoidable impact on historical resources as it would include the demolition and removal of the character-defining features that contribute to the LARC Property's eligibility for listing in the National Register and California Register. None of the selected alternatives would avoid the significant and unavoidable impacts associated with VMT, air quality, or greenhouse gas emissions. Accordingly, the Historic Preservation Alternative is considered the Environmentally Superior Alternative.

1.6 SUMMARY OF IMPACTS AND MITIGATION MEASURES

Information in **Table 1.A: Summary of Impacts and Mitigation Measures from this Draft EIR** summarizes the mitigation measures identified in this Draft EIR and has been organized to correspond with environmental issues discussed in Chapter 4.0. **Table 1.B: Applicable Regulatory Compliance Measures** summarizes the regulatory compliance measures that would be applicable to the proposed project. **Table 1.A** is arranged in four columns: (1) impacts; (2) level of significance without mitigation; (3) regulatory compliance measures and/or mitigation measures; and (4) level of significance with mitigation. **Table 1.B** is arranged in two columns: (1) environmental issue areas and (2) regulatory compliance measures. Levels of significance are categorized as follows:

PS	Potentially Significant
LTSM	Less Than Significant with Mitigation
SU	Significant and Unavoidable

Table 1.A: Summary of Impacts and Mitigation Measures from this Draft EIR

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
4.1 AESTHETICS			
There are no significant impacts related to aesthetics.			
4.2 AGRICULTURE AND FORESTRY RESOURCES			
There are no significant impacts related to agriculture and forestry resources.			
4.3 AIR QUALITY			
Long-term operational emissions associated with the proposed project would exceed the SCAQMD's established significance thresholds, which would be inconsistent with Indicator 1 of the SCAQMD's 2022 AQMP.	PS	**Mitigation Measure AIR-1:** Prior to issuance of grading permits for development projects in the Buildout Area, a future project applicant in collaboration with the City of Cypress Planning Division shall identify project design details and specifications, where feasible, to document implementation and compliance with emission reduction measures. The City of Cypress Planning Division shall verify compliance through: (1) review and approval of construction drawings and building permit submittals demonstrating incorporation of the emission-reduction measures; (2) documentation or reporting from the contractor or a future project applicant, as deemed necessary by the City of Cypress Planning Division, demonstrating adherence to approved measures. The measures below shall be implemented and updated as necessary as they are considered feasible and effective in reducing criteria pollutant emissions generated by the project. These measures shall be reviewed and updated in accordance with the most recent emission-reduction and emission-minimization guidance available, including, at a minimum, the California Air Pollution Control Officers Association (CAPCOA) 2024 guidance. A future project applicant shall incorporate all feasible and updated measures into the final construction drawings, building plans, and contractor specifications for City review, including, but not limited to, the following: • Provide building access and paths which are physically separated from street parking lot traffic and that eliminate physical barriers such as walls, berms, landscaping and slopes that impede the use of pedestrians, bicycle facilities, or public transportation vehicles. • Provide continuous sidewalks separated from the roadway by landscaping and on street parking. • Provide a parking lot design that includes clearly marked and shaded pedestrian pathways between transit facilities and building entrances. • Provide preferential parking spaces near the entrance of buildings for those who carpool/vanpool/rideshare and provide signage. • Install electric vehicle charging capabilities that meet the requirements of the latest version of the California Green Building Standards Code (CALGreen Code) Tier 2 Voluntary Standards. • Install ENERGY STAR certified heating, cooling, and lighting devices, and appliances or equivalent. • Install only electric fireplaces. • Install low-flow water fixtures. • Utilize energy-efficient design features, including appropriate site orientation, use of lighter color roofing and building materials, and use of deciduous shade trees and windbreak trees to reduce fuel consumption for heating and cooling. • Use light-colored paving and roofing materials. • Use low-volatile organic compound (VOC) paints with 10 grams per liter or less. • Require the use of all-electric landscaping equipment. • Maximize the planting of trees in landscaping and parking lots.	SU

Table 1.A: Summary of Impacts and Mitigation Measures from this Draft EIR

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
Long-term operational emissions associated with the proposed project would exceed the SCAQMD's established significance thresholds, which would result in a cumulatively considerable net increase in a criteria pollutant for which the Basin is in nonattainment (i.e., VOC emissions).	PS	**Mitigation Measure AIR-1.** (provided above) **Mitigation Measure TRA-1**: **Transportation Demand Management Strategies.** (Refer to Section 4.17, Transportation, below)	SU
Construction activities associated with future development of the proposed project could generate emissions of particulate matter and diesel exhaust from heavy-duty equipment, which could expose sensitive receptors to substantial pollutant concentrations.	PS	**Mitigation Measure AIR-2:** All construction activities in the Buildout Area shall utilize U.S. EPA Tier 4 Final diesel construction equipment for equipment rated at greater than 50 brake horsepower (bhp) if and to the extent commercially available, or the cleanest available equipment and technology that is commercially available and feasible at the time of construction (e.g., zero-emission or equivalent low-emission equipment), to minimize diesel particulate matter (DPM) emissions. If Tier 4 Final equipment is not commercially available for a majority of the construction equipment and an individual development project would be larger than 20 acres, the City shall require preparation of a construction Health Risk Assessment (HRA) for such development project. If a construction HRA is required, it shall be prepared in accordance with current OEHHA methodology and applicable SCAQMD CEQA and health risk assessment guidance. Additional feasible risk-reduction measures identified through the HRA process shall be implemented as determined necessary by the City.	LTSM
4.4 BIOLOGICAL RESOURCES			
Implementation of the proposed project would remove the single drainage feature located on Lot 3, which could be subject to regulation by the RWQCB and CDFW.	PS	**Mitigation Measure BIO-1: Jurisdictional Delineation.** Prior to commencing construction activities that would impact any of the identified aquatic resources in Lots 2, 3, 4, 6 and 7 of Vesting Tentative Tract Map (VTTM) 19247, a jurisdictional delineation shall be conducted, as follows: • Regional Water Quality Control Board (RWQCB) Jurisdiction (Waters of the State): Delineation shall follow the State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State (State Water Resources Control Board [SWRCB] 2019). • California Department of Fish and Wildlife (CDFW) Jurisdiction (Streambed Alteration Program): The extent of CDFW jurisdiction shall be identified consistent with California Fish and Game Code §§ 1600–1616, including the outer limits of the bed, bank, and channel and the extent of any associated riparian vegetation. • US Army Corps of Engineers (USACE) Jurisdiction (Waters of the United States [WOTUS]): The determination that no federal WOTUS occur onsite shall be documented consistent with 33 CFR § 328.3, the USACE 1987 Wetland Delineation Manual, and the appropriate Regional Supplement (USACE 2008). If impacts to RWQCB and/or CDFW jurisdictional waters are expected to occur, appropriate permits or authorization (e.g., Water Quality Certification/Waste Discharge Requirements, CDFW Lake and Streambed Alteration Agreement) shall be obtained prior to construction.	LTSM
4.5 CULTURAL RESOURCES			
Construction of the proposed project would include the demolition of character defining features of the LARC Property, which is considered a "historical resource" for the purposes of CEQA.	PS	**Mitigation Measure CUL-1:** Prior to demolition activities of any character-defining features, the owner of Los Alamitos Race Course, or subsequent project proponents, shall make photographs and memorabilia, including brochures, promotional flyers, marketing materials, special events announcements and the like (or copies of the same) available to a local library or an Orange County-based historical society: a. For use in an exhibit(s) about horse racing, quarter horses, Frank Vessels, Sr. the Vessels family, pari-mutuel betting and/or the history of Cypress; and/or b. To be part of a permanent archive for research purposes.	SU

Table 1.A: Summary of Impacts and Mitigation Measures from this Draft EIR

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
		Mitigation Measure CUL-2: Require future development on portions of the Los Alamitos Race Course property to incorporate one or more of the following: a. A historical marker that provides information about Frank Vessels, Sr. and Los Alamitos Race Course. The marker should be clearly visible and accessible to the public. b. The Vessels' name, the track logo, racing terminology, and/or the names or likenesses (e.g., statuary, wall or garden art, and photographs) of noteworthy Quarter Horses (such as Clabber, Go Man Go, or Moonist). **Mitigation Measure CUL-3:** Prior to, or in conjunction with, approval of any demolition or development permits that involves the destruction of any portion of the Los Alamitos Race Course property, the Project Applicant should be required to commission documentation of the property in the form of Historic American Building Survey (HABS)-like documentation that complies with the *Secretary of the Interior's Standards for Architectural and Engineering Documentation* (NPS 1990), if any of the character-defining features as identified are still present. The documentation should generally follow the HABS Level III requirements and include digital photographic recordation of the complex, a detailed historic narrative report, and compilation of historic research. Photographic documentation should include: • General views of the site and landscape as a whole • Photographs of the 550-yard chute, track, and winner's circle • Photographs of each exterior elevation of all buildings and structures in the complex • Photographs of the interior of the Grandstand. The documentation should be completed by a qualified architectural historian or historian who meets the Secretary of the Interior's Professional Qualification Standards for History and/or Architectural History (NPS 1983). The original archival-quality documentation shall be offered as donated material to the following entities: South Central Coastal Information Center at CSU Fullerton, Preserve Orange County, the Orange County Historical Society and other repositories to be determined such as local libraries and the American Quarter Horse Association Hall of Fame.	
Ground disturbing activities during construction for future development under the proposed project, including grading and excavation, has the potential to unearth previously unknown human remains.	PS	**Mitigation Measure TCR-3: Unanticipated Discovery of Human Remains and Associated Funerary Objects**. (Refer to Section 4.18, Tribal Cultural Resources) **Mitigation Measure TCR-4: Procedures for Burials and Funerary Remains**. (Refer to Section 4.18, Tribal Cultural Resources)	LTSM
4.6 ENERGY			
There are no significant impacts related to energy.			
4.7 GEOLOGY AND SOILS			
The Buildout Area is located in a liquefaction hazard zone. The on-site soils are considered to be susceptible to liquefaction settlement during an earthquake, and that total settlement at the existing ground surface due to liquefaction could be expected to range between 1.24 and 3.67 inches. Given the nature and size of the proposed development, implementation of the proposed project could result in differential settlements that could directly or indirectly cause potential substantial adverse effects, including risk of loss, injury, or death from liquefaction.	PS	**Mitigation Measure GEO-1: Implementation of Geotechnical Investigation Recommendations.** Future development projects within the Buildout Area shall implement the recommendations of the Geotechnical Investigation prepared for the proposed project, to the satisfaction of the City of Cypress' (City) Building Official, including, but not limited to: **Ground Improvement Techniques.** Ground improvement techniques shall be implemented in the Buildout Area beneath any structure intended for human occupancy. Ground improvements may consist of rammed aggregate piers, vibrated aggregate piers, or similar techniques. The ground improvements must be designed by a qualified ground	LTSM

Table 1.A: Summary of Impacts and Mitigation Measures from this Draft EIR

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
		improvement contractor through coordination with a geotechnical engineer and/or structural engineer to ensure liquefaction in the upper soils. **Building Foundation Techniques.** Subsequent to the installation of any proposed ground improvements, proposed structures, mat or mat-type foundation systems will be used. Conventional foundations may be utilized for support of the lighter at-grade structure if the ground improvements reduce the total and differential settlement to a threshold confirmed by the geotechnical engineer, the structural engineer, and the construction contractor. **Additional site testing and final design evaluation(s)** shall be conducted by a geotechnical consultant to refine and/or enhance these requirements during buildout of the project on an as-needed basis. A future project applicant(s) shall require the geotechnical consultant to assess whether the recommendations in the Geotechnical Investigation need to be modified or refined to address any changes in the project features prior to start of grading. If the geotechnical consultant identifies modifications or refinements to the recommendations, the future project applicant(s) shall make modifications to the final project design and specifications. Examples of additional measures could include: a moisture or vapor retarding system below foundations, additional ground stabilization techniques like cement treatment or aggregate, or removal and replacement of existing soil to eliminate any unsuitable materials or undocumented fill. Design, grading, and construction shall be performed in accordance with applicable requirements in the Municipal Code, the California Building Code, local grading regulations, and any additional measures recommended by the geotechnical consultant in the subsequent geotechnical evaluation(s).	
Proposed structures constructed on or above potentially liquefiable soils may experience bearing capacity failures due to the temporary loss of foundation support or vertical settlements (both total and differential) and/or undergo lateral spreading.	PS	**Mitigation Measure GEO-1: Implementation of Geotechnical Investigation Recommendations.** (provided above)	LTSM
Construction activities associated with implementation of the proposed project could disturb native alluvium at a depth below 10 feet, which could result in impacts on unknown paleontological resources.	PS	**Mitigation Measure GEO-2: Procedures for Unexpected Paleontological Resources Discoveries.** If paleontological resources are discovered during ground-disturbing activities associated with the proposed project, construction personnel shall immediately halt work within 50 feet of the discovery, and a future project applicant/developer or construction supervisor shall contact a qualified paleontologist to assess the discovery for scientific importance. A qualified paleontologist is defined as a person with an M.S. or Ph.D. in geology or paleontology and who meets the standards set forth by the Society of Vertebrate Paleontology. The paleontologist shall make recommendations regarding the collection, treatment, and disposition of the discovery. Scientifically important resources shall be prepared to the point of identification, identified to the lowest taxonomic level possible, cataloged, and curated into the permanent collections of a museum repository. If paleontological resources are discovered, regardless of their scientific importance, paleontological monitoring shall be required for subsequent ground-disturbing activities at a frequency, depth, and/or interval determined by the paleontologist. Paleontological monitoring shall be conducted by a qualified paleontological monitor as set forth in the Society of Vertebrate Paleontology standards. At the conclusion of monitoring, a final monitoring report shall be prepared by the paleontologist to document the results of monitoring and project compliance with all regulations and project requirements. If scientifically important paleontological resources are recovered, this report shall also document those paleontological resources with a catalog, descriptions, and photographs as determined appropriate by the paleontologist. The final monitoring report shall be submitted to the City of Cypress Director of Community Development Department or designee for review and approval. A copy of this final report shall also accompany the fossil	LTSM

Table 1.A: Summary of Impacts and Mitigation Measures from this Draft EIR

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
		material to the museum repository. **Mitigation Measure GEO-3: Worker Sensitivity Training:** Prior to issuance of grading permits, applicants for projects that would include ground-disturbing activities below 10 feet in undisturbed native sediments ranked as having a moderate or high paleontological sensitivity shall be required to retain a qualified paleontologist meeting the requirements set forth by the Society of Vertebrate Paleontology. Prior to and during initial ground-disturbing activities, the qualified paleontologist (or their designee) shall provide worker environmental awareness training to construction personnel. Training shall include recognition of potential fossil materials, appropriate worker response protocols, and contact information for the paleontologist.	
4.8 GREENHOUSE GAS EMISSIONS			
Implementation of the proposed project would generate GHG emissions that could create a significant impact on the environment.	PS	**Mitigation Measure GHG-1:** Prior to issuance of building permits, project applicants for future development within the Buildout Area shall demonstrate to the satisfaction of the City of Cypress (City) Planning Division that the proposed buildings incorporate feasible greenhouse gas (GHG) reduction strategies consistent with current State and local decarbonization goals. Compliance shall be demonstrated through building plans, energy modeling, California Green Building Standards Code (CALGreen Code) checklists, or similar documentation submitted during the plan check process, as deemed necessary by the City. Future project applicants shall comply with either the All-Electric Design Path or the Efficient Mixed-Fuel Design Path, as described below: **Preferred Compliance Path: All Electric Design** - Future development shall be designed and constructed without natural gas infrastructure or natural gas appliances. All space heating, water heating, cooking, and clothes drying systems shall be fully electric. Electrical service panels shall be sized to accommodate expected loads and future electrification needs. **Alternative Compliance Path: Efficient Mixed-Fuel Design** - If a project proposes to install natural gas infrastructure or natural gas appliances, future project applicants shall implement a combination of GHG reduction measures sufficient to minimize GHG emissions from natural gas usage to the maximum extent feasible. Measures may include, but are not limited to, the following: • Exceed Title 24, Part 6 (Building Energy Efficiency Standards) performance requirements by 10–20 percent, where feasible, as demonstrated through energy modeling or prescriptive compliance documentation. • Install on-site solar photovoltaic (PV) systems to the maximum feasible extent, including on rooftops and parking canopy structures, where structurally and technically feasible. • Provide electric-ready infrastructure, including service panel capacity, conduit, wiring, and dedicated circuits, to allow future conversion to all-electric appliances and systems. • Design buildings to achieve, at minimum, Leadership in Energy and Environmental Design (LEED) Silver certification or an equivalent third-party green building rating. • Install programmable thermostats, advanced metering infrastructure, and smart home energy management systems. • Provide heating, ventilation, and air conditioning (HVAC) commissioning consistent with CALGreen Sections 5.410.2–5.410.4, including a commissioning plan, functional performance testing, and a commissioning report. • Install cool roof materials meeting an aged solar reflectance of ≥ 0.30, or the most	LTSM

Table 1.A: Summary of Impacts and Mitigation Measures from this Draft EIR

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
		current CALGreen Code requirement, whichever is more stringent. • Provide infrastructure to accommodate up to 50 percent recycled water use for landscape irrigation, where recycled water supply is available. • Use water-efficient irrigation systems, minimize turf, and incorporate native, low-water, or drought-tolerant plant species. • Install rainwater harvesting systems, where feasible. • Prohibit or restrict the use of potable water for cleaning non-vegetated outdoor surfaces and prohibit systems that apply water to hardscape surfaces. • Implement and maintain robust solid waste diversion programs, including recycling and organic waste collection consistent with Senate Bill (SB) 1383 requirements. All selected GHG reduction measures shall be clearly identified on improvement plans and construction drawings. Compliance with this measure shall be verified by City staff during plan check and confirmed through building inspection prior to final occupancy. **Mitigation Measure AIR-1:** (Refer to Section 4.3, Air Quality, above) **Mitigation Measure TRA-1: Transportation Demand Management Strategies.** (Refer to Section 4.17, Transportation, below)	
Long-term operational emissions associated with the proposed project would exceed the SCAQMD's established significance thresholds, implementation of the proposed project would exceed the City's residential VMT significance threshold of 13.21 VMT per capita, and operation of the proposed project could use natural gas, which could conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases (i.e., CARB 2022 Climate Change Scoping Plan).	PS	**Mitigation Measure GHG-1**. (provided above)	LTSM
4.9 HAZARDS AND HAZARDOUS MATERIALS			
The Phase I ESA identified one controlled recognized environmental condition (CREC) associated with the historical removal of four USTs (two 10,000-gallon, one 2,000-gallon, and one 1,000-gallon) that had been used to store gasoline and diesel for maintenance vehicles. The 1996 regulatory case closure by OCHCA requires notification of OCHCA if a change in land use is proposed. The proposed project includes changes to the existing land uses in the Buildout Area, and could create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment.	PS	**Mitigation Measure HAZ-1:** Prior to the issuance of a building permit, a future project applicant/developer shall demonstrate the recommendations provided in the Phase I Environmental Site Assessment (Phase I ESA) prepared for the Buildout Area have been, or will be, implemented. Recommendations provided in the Phase I ESA include the following: • Preparation and implementation of an Operations and Maintenance (O&M) Program in order to safely manage the suspect asbestos-containing materials (ACMs) and/or lead-based paint (LBP) associated with the existing structures located within the Buildout Area; and • Providing a copy of this Draft Environmental Impact Report (EIR) and the Notice of Completion (NOC) to the Orange County Health Care Agency (OCHCA) in order to notify them of the proposed change in land use facilitated under the proposed project.	LTSM
The Phase I ESA identified one CREC, one historic recognized environmental condition (HREC), and one BER, and implementation of the proposed project could create a significant hazard to the public or the environment through being located on an identified hazardous materials site.	PS	**Mitigation Measure HAZ-1.** (provided above)	LTSM
4.10 HYDROLOGY AND WATER QUALITY			
Implementation of the proposed project would remove the single drainage feature located on Lot 3, which would result in impacts on wetland or riparian habitat.	PS	**Mitigation Measure BIO-1: Jurisdictional Delineation.** (Refer to Section 4.4, Biological Resources, above)	LTSM
4.11 LAND USE AND PLANNING			
There are no significant impacts related to land use and planning.			
4.12 MINERAL RESOURCES			
There are no significant impacts on mineral resources.			
4.13 NOISE			
There are no significant impacts related to noise.			

Table 1.A: Summary of Impacts and Mitigation Measures from this Draft EIR

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
4.14 POPULATION AND HOUSING			
There are no significant impacts related to population and housing.			
4.15 PUBLIC SERVICES			
There are no significant impacts on public services.			
4.16 RECREATION			
There are no significant impacts related to recreation.			
4.17 TRANSPORTATION			
Implementation of the proposed project would exceed the City's residential VMT significance threshold of 13.21 VMT per capita under both existing and cumulative plus project conditions.	PS	**Mitigation Measure TRA-1: Transportation Demand Management Strategies.** The Development Agreement between the City and the Project Applicant regarding the proposed project shall include a provision requiring that any future project applicants for subsequent residential development projects within the Buildout Area demonstrate the project's consistency with the measures set forth in Items 1 and 2 below that are applicable to such project prior to its approval to the satisfaction of the City of Cypress Planning Director. 1. **Construct or Improve Bike Facility (California Air Pollution Control Officers Association [CAPCOA] Handbook Strategy T-19-A):** This transportation demand management strategy requires the project to include a new bicycle facility or facilities or improve an existing facility that would connect the project to the existing regional bicycle network. The construction/improvement of bicycle facilities would provide residents with the opportunity to bike to their destination rather than drive, reducing the number of vehicle trips and overall project-generated vehicle miles traveled (VMT). 2. **Provide Pedestrian Network Improvement (CAPCOA Handbook Strategy T-18):** This transportation demand management strategy requires the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area.	SU
4.18 TRIBAL CULTURAL RESOURCES			
Ground disturbing activities during construction, including grading and excavation, could cause a substantial adverse change in the significance of a tribal cultural resource, as defined in PRC Section 21074.	PS	**Mitigation Measure TCR-1: Tribal Cultural Resources Training and ALERT Sheet Posting.** Prior to the start of any ground-disturbing activities, a qualified archaeologist meeting the Secretary of the Interior standards, in consultation with a representative from a traditionally and culturally affiliated Native American Tribe, under the direction of the City of Cypress Planning Division, shall prepare a Cultural Resources Sensitivity Summary. This summary shall include a brief description of the types of archaeological and tribal cultural resources that may be encountered, visual examples (if available), reporting procedures in the event of a discovery, and appropriate contact information. The summary shall be printed and posted in a visible location at the construction site for the duration of all ground-disturbing activities. An initial worker environmental training shall be provided by a qualified archaeologist in collaboration with a tribal representative prior to the start of construction, under the direction of the City of Cypress Planning Division. The training shall include a review of applicable laws, procedures to follow if resources are discovered, and cultural sensitivity guidance. A sign-in sheet shall be maintained to document attendance. As construction progresses, the construction manager shall be responsible for ensuring that all new personnel receive the same information through on-site orientation and review of the posted materials. Documentation of ongoing training shall be maintained and made available to the City upon request.	LTSM

Table 1.A: Summary of Impacts and Mitigation Measures from this Draft EIR

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
		Mitigation Measure TCR-2: Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities. Prior to the issuance of any grading permits for projects within the Buildout Area that would require "ground-disturbing activity," where such disturbance activity would occur in undisturbed native sediment, a future project applicant/City shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching on both on-site and any off-site locations that are included in the Project Description/ definition and/or required in connection with the projects, such as public improvement work. A copy of the executed monitoring agreement shall be submitted to the Director of the City of Cypress Community Development Department, or their designee, prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity. The tribal monitor shall also provide appropriate insurance certificates. The monitor shall complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs shall identify and describe any discovered tribal cultural resources (TCRs), including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, "TCRs"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs shall be provided to the future project applicant/City upon written request to the Tribe. On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Tribe from a designated point of contact for the future project applicant/City that all ground-disturbing activities and phases that may involve ground-disturbing activities in native (previously undisturbed) soil has occurred (i.e., no tribal monitoring shall be required for landscaping activities occurring after completion of project grading and trenching, as this soil will have been previously monitored) or in connection with the project are complete; or (2) a determination and written notification by the Tribe to the future project applicant/City that no future, planned construction activity and/or development/construction phase associated with the project possesses the potential to impact TCRs. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Tribe's monitor and/or archaeologist. The Tribe will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural, and/or historic purposes. **Mitigation Measure TCR-3: Unanticipated Discovery of Human Remains and Associated Funerary Objects.** Native American human remains are defined in Public Resources Code (PRC) Section 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in PRC Section 5097.98, are also to be treated according to this statute.	

Table 1.A: Summary of Impacts and Mitigation Measures from this Draft EIR

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
		If Native American human remains and/or grave goods are discovered or recognized during ground-disturbing activities associated with projects within the Buildout Area, then all construction activities shall immediately cease within 50 feet of the find. Health and Safety Code Section 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and all ground-disturbing activities shall immediately halt and shall remain halted until the Coroner has determined the nature of the remains. If the Coroner recognizes the human remains to be those of a Native American or has reason to believe they are Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission (NAHC), and PRC Section 5097.98 shall be followed. Human remains and grave/burial goods shall be treated alike per PRC Section 5097.98(d)(1) and (2). If Native American human remains are discovered or recognized on any construction sites within the Buildout Area during ground-disturbing activities and the NAHC subsequently identifies the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe) to be the Most Likely Descendant (MLD), construction activities may resume in other parts of the construction site at a minimum of 200 feet away from discovered human remains and/or burial goods, if the Tribe determines in its sole discretion that resuming construction activities at that distance is acceptable and provides the project manager express consent of that determination (along with any other mitigation measures the Tribe's monitor and/or archaeologist deems necessary). (*State CEQA Guidelines* Section 15064.5(f).) Preservation in place (i.e., avoidance) is the Tribe's preferred manner of treatment for discovered human remains and/or burial goods. Any discovery of human remains/burial goods shall be kept confidential to the extent feasible to prevent further disturbance. **Mitigation Measure TCR-4: Procedures for Burials and Funerary Remains.** If Native American human remains are discovered or recognized on any construction sites within the Buildout Area during ground-disturbing activities and the Native American Heritage Commission subsequently identifies the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe) to be the Most Likely Descendant ("MLD"), the Koo-nas-gna Burial Policy, as described below, shall be implemented. To the Tribe, the term "human remains" encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the preparation of the soil for burial, the burial of funerary objects with the deceased, and the ceremonial burning of human remains. If the discovery of human remains includes four or more burials, the discovery location shall be treated as a cemetery and a separate treatment plan shall be created. The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered as associated funerary objects. Cremations will either be removed in bulk or by means as necessary to ensure complete recovery of all sacred materials.	

Table 1.A: Summary of Impacts and Mitigation Measures from this Draft EIR

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
		In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that burials will be removed. In the event preservation in place is not possible despite good faith efforts by the future project applicant/City and/or landowner, before ground-disturbing activities may resume on the project site, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects. Each occurrence of human remains and associated funerary objects will be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within 6 months of recovery. The site of reburial/repatriation shall be on the project site but at a location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered. The Tribe will work closely with the project's qualified archaeologist to ensure that the excavation is treated carefully, ethically and respectfully. If data recovery is approved by the Tribe, documentation shall be prepared and shall include (at a minimum) detailed descriptive notes and sketches. All data recovery data recovery-related forms of documentation shall be approved in advance by the Tribe. If any data recovery is performed, once complete, a final report shall be submitted to the Tribe and the NAHC. The Tribe does not authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.	
4.19 UTILITIES AND SERVICE SYSTEMS			
There are no significant impacts on utilities and service systems.			
4.20 WILDFIRE			
There are no significant impacts related to wildfire.			

Source: LSA (2026).

Table 1.B: Applicable Regulatory Compliance Measures

Environmental Issue Area	Regulatory Compliance Measure
4.3 AIR QUALITY	
Construction Air Quality Emissions	**Regulatory Compliance Measure AIR-1:** During clearing, grading, earth moving, or excavation operations, excessive fugitive dust emissions shall be controlled by regular watering or other dust preventative measures by using the following procedures, in compliance with South Coast Air Quality Management District (SCAQMD) Rule 403 during construction. The applicable Rule 403 measures are as follows: • Apply nontoxic chemical soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas inactive for 10 days or more). • Water active sites at least twice daily (locations where grading is to occur shall be thoroughly watered prior to earthmoving). • Cover all trucks hauling dirt, sand, soil, or other loose materials, or maintain at least 2 feet (0.6 meter) of freeboard (vertical space between the top of the load and the top of the trailer) in accordance with the requirements of California Vehicle Code Section 23114. • Pave construction access roads at least 100 feet (30 meters) onto the site from the main road. • Reduce traffic speeds on all unpaved roads to 15 miles per hour or less. **Regulatory Compliance Measure AIR-2:** All trucks that are to haul excavated or graded material shall comply with State Vehicle Code Section 23114, with special attention to Sections 23114(b)(F), (e)(2), and (e)(4) as amended, regarding the prevention of such material spilling onto public streets and roads. **Regulatory Compliance Measure AIR-3:** Prior to approval of future project plans and specifications, the City of Cypress shall confirm that the construction bid packages specify: • Contractors shall use high-volume low-pressure paint applicators with a minimum transfer efficiency of at least 50 percent; • Coatings and solvents that will be utilized have a volatile organic compound content lower than required under SCAQMD Rule 1113; and • To the extent feasible, construction/building materials shall be composed of pre-painted materials. **Regulatory Compliance Measure AIR-4:** Future projects shall comply with SCAQMD Rule 402. Rule 402 prohibits the discharge of air contaminants or other material from any type of operations, which can cause nuisance or annoyance to any considerable number of people or to the public or which endangers the comfort or repose of any such persons, or the public.
4.4 BIOLOGICAL RESOURCES	
Special-Status Species	**Regulatory Compliance Measure BIO-1: Preconstruction Bat Surveys.** If construction activities for a specific development project within the Buildout Area, including structure demolition and tree removal, will occur during the bat maternity season (April 1 to August 31), then the City, or designee, shall confirm that the applicable developer has retained a qualified biologist who shall conduct a nighttime bat survey of potential maternity roost habitat no more than 30 days prior to the removal of potential habitat. These surveys shall be initiated no later than 30 minutes before sunset and continue for no less than 1 hour after sunset. If maternity roosts are found and the project would result in impacts to roosting bats, the biologist shall coordinate with CDFW to establish appropriate avoidance buffers around all maternity roost sites, and no construction work shall occur within the buffers until the completion of the maternity season. If deemed necessary through coordination with CDFW, additional measures could include two-step removal of any trees containing maternity roosts (outside of the maternity season), preparation of a Bat Habitat Mitigation and Monitoring Plan (BHMMP), and humane bat eviction/exclusion. **Regulatory Compliance Measure BIO-2: Preconstruction Nesting Bird Surveys and Active Nest Avoidance Buffers.** If potential bird nesting habitat is to be removed from a portion of the Buildout Area in connection with a specific development project during the avian nesting season (January 1 through August 31), including structures, trees, shrubs and suitable ground-nesting areas, a qualified biologist shall conduct a nesting bird survey in such portion of the Buildout Area within 3 days prior to the commencement of structure demolition, vegetation removal, or other construction activities that could remove suitable nesting habitat. If no nesting birds are identified, no additional survey is required. If at any time an active nest is identified, the biologist shall establish suitable buffers around the nests that consider the ecology of the species present and the location of construction activities to ensure that disruption of nesting does not occur. The buffer areas shall be avoided until the nests are no longer occupied and the juvenile birds can survive independently from the nests.
4.5 CULTURAL RESOURCES	
Unknown Archaeological Resources	**Regulatory Compliance Measure CUL-1: Unknown Archaeological Resources.** In the event that archaeological resources are discovered during excavation, grading, or construction activities, work shall cease within 50 feet of the find until a qualified archaeologist from the Orange County List of Qualified Archaeologists has evaluated the find in accordance with federal, State, and local guidelines to determine whether the find constitutes a "unique archaeological resource," as defined in Section 21083.2(g) of the California Public Resources Code (PRC). A future project applicant and its construction contractor shall not collect or move any archaeological materials and associated materials. Construction activity may continue unimpeded on other portions of the project site. Any found deposits shall be treated in accordance with federal, State and local guidelines, including those set forth in PRC Section 21083.2. Prior to commencement of grading activities, the Director of the City of Cypress (City) Community Development Department, or designee, shall verify that all project grading and construction plans include specific requirements regarding California PRC (Section 21083.2[g]) and the treatment of archaeological resources as specified above.
Human Remains	**Regulatory Compliance Measure CUL-2: Human Remains.** In the event that human remains are encountered on the project site, work within 50 feet of the discovery shall be redirected and the County Coroner notified immediately consistent with the requirements of California Code of Regulations (CCR) Section 15064.5(e). State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. If the remains are determined to be Native American, the County Coroner shall notify the Native American Heritage Commission (NAHC), which shall determine and notify a Most Likely Descendant (MLD). With the permission of the property owner, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. The MLD may recommend scientific removal and non-destructive analysis of human remains and items associated with Native American burials. Consistent with CCR Section 15064.5(d), if the remains are determined to be Native American and an MLD is notified, the City of Cypress shall consult with the MLD as identified by the NAHC to develop an agreement for treatment and disposition of the remains. Prior to the issuance of

Table 1.B: Applicable Regulatory Compliance Measures

Environmental Issue Area	Regulatory Compliance Measure
	grading permits, the Director of the City of Cypress Community Development Department, or designee, shall verify that all grading plans specify the requirements of CCR Section 15064.5(e), State Health and Safety Code Section 7050.5, and PRC Section 5097.98, as stated above.
4.9 HAZARDS AND HAZARDOUS MATERIALS	
Airport Hazards	**Regulatory Compliance Measure HAZ-1: Federal Aviation Regulation Title 14 Part 77.** A future project applicant/developer shall notify the Federal Aviation Administration (FAA) of any proposed structure(s) that would penetrate the 100 to 1 imaginary surface that surrounds the runway at Joint Forces Training Base Los Alamitos at least 45 days prior to beginning construction.
4.10 HYDROLOGY AND WATER QUALITY	
Water Quality	**Regulatory Compliance Measure HYD-1: Construction General Permit.** If construction of future projects associated with the proposed project would disturb greater than 1 acre of soil, prior to commencement of construction activities within the proposed Buildout Area, the Construction Contractor shall obtain coverage under the National Pollutant Discharge Elimination System (NPDES) *General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities*, Order WQ 2022-0057-DWQ, NPDES No. CAS000002 (Construction General Permit), or any other subsequent permit. This shall include submission of Permit Registration Documents, including permit application fees, a Notice of Intent (NOI), a risk assessment, a site plan, a Stormwater Pollution Prevent Plan (SWPPP), a signed certification statement, and any other compliance-related documents required by the permit, to the State Water Resources Control Board via the Stormwater Multiple Application and Report Tracking System (SMARTS). Construction activities shall not commence until a Waste Discharge Identification Number is obtained for the project from the SMARTS and provided to the Director of Public Works for the City of Cypress, or designee, to demonstrate that coverage under the Construction General Permit has been obtained. Project construction shall comply with all applicable requirements specified in the Construction General Permit, including but not limited to, preparation of a SWPPP and implementation of construction site best management practices (BMPs) to address all construction-related activities, equipment, and materials that have the potential to impact water quality for the appropriate risk level identified for the project. The SWPPP shall identify the sources of pollutants that may affect the quality of storm water and shall include BMPs (e.g., Sediment Control, Erosion Control, and Good Housekeeping BMPs) to control the pollutants in storm water runoff. Upon completion of construction activities and stabilization of the Buildout Area, a Notice of Termination (NOT) shall be submitted via SMARTS. If construction of future projects associated with the proposed project would disturb less than 1 acre of soil, prior to commencement of construction activities within the Buildout Area, the Construction Contractor shall provide evidence that project construction would comply with Section 4.106 of the 2019 California Green Building Standards Code (CALGreen Code). Section 4.106 of the CALGreen Code requires implementation of BMPs to prevent flooding and erosion and to retain sediment on site (e.g., Sediment Control, Erosion Control, and Good Housekeeping BMPs). **Regulatory Compliance Measure HYD-2: Construction Dewatering Permit.** If groundwater dewatering is required during excavation activities, the Applicant/City shall obtain coverage under the *General Waste Discharge Requirements for Discharges to Surface Waters that Pose an Insignificant (De Minimis) Threat to Water Quality*, Order No. R8-2020-0006, NPDES No. CAG998001 (Construction Dewatering Permit). This shall include submission of a Notice of Intent (NOI) for coverage under the permit to the Santa Ana Regional Water Quality Control Board (RWQCB) at least 45 days prior to the start of dewatering. Groundwater dewatering activities shall comply with all applicable provisions in the permit, including water sampling, analysis, treatment (if required), and reporting of dewatering-related discharges. Upon completion of groundwater dewatering activities, a Notice of Termination shall be submitted to the Santa Ana RWQCB. **Regulatory Compliance Measure HYD-3: Orange County MS4 Permit/City Municipal Code.** Prior to issuance of a grading permit for future projects associated with the proposed project, the future project Applicant shall prepare and submit a final project-specific water quality management plan (WQMP) to specify BMPs that would be implemented to capture, treat, and reduce pollutants of concern in stormwater runoff in compliance with the Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the Incorporated Cities of Orange County within the Santa Ana Region Areawide Urban Storm Water Runoff Orange County, Order R8-2009-0030, NPDES No. CAS618030, as amended by Order No. R8-2010-0062 (Orange County MS4 Permit), Orange County Drainage Area Management Plan (DAMP), and the City of Cypress Local Implementation Plan (LIP). The WQMP shall also incorporate the results of the Final Hydrology and Hydraulic Analyses to demonstrate that the bioretention facilities meet the hydromodification requirements of the Orange County MS4 Permit and Chapter 13-23 of the Cypress Municipal Code. The City Engineer/Public Works Director, or designee, shall ensure that the BMPs specified in the WQMP are incorporated into the final project design of future projects associated with the proposed project.
4.13 NOISE	
Construction Noise	**Regulatory Compliance Measure NOI-1:** The construction contractor shall limit all construction-related activities to between the hours 7:00 a.m. and 8:00 p.m. on weekdays and between the hours of 9:00 a.m. and 8:00 p.m. on Saturdays. No construction shall be permitted outside of these hours or on Sundays or a federal holiday with the exception of certain construction activities that are time sensitive and require a 24-hour rotation. In those situations, a temporary use permit can be obtained from the City of Cypress' Community Development Direct
Stationary Noise	**Regulatory Compliance Measure NOI-2**: Mechanical equipment, including air conditioning units in residential and non-residential zoning districts, shall be enclosed within a structure or completely screened from view from surrounding properties by the use of a fence or wall consistent with Section 3.11.100(b) of the City of Cypress Municipal Code. Additionally, prior to the issuance of building permits, a future applicant/developer shall demonstrate, to the satisfaction of the City Director of Community Development, or designee, that on-site stationary noise sources, such as air conditioners, shall not exceed City noise standards as stated within the City's Municipal Code Sections 13-68 and 13-69.
4.15 PUBLIC SERVICES	
Fire Protection Services	**Regulatory Compliance Measure PS-1:** Any future projects implemented within the Buildout Area in accordance with the City of Cypress (City) Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) would be required to coordinate with the Orange County Fire Authority (OCFA) to determine the appropriate development impact fees required to offset potential impact to OCFA staffing and service ability. Prior to the approval of such projects, the designated site developer shall enter into a Secured Fire Protection Agreement with OCFA that details the agreed-upon development impact fees required for the project.
School Services	**Regulatory Compliance Measure PS-2: Payment of School Fees.** Prior to issuance of any building permits within the Buildout Area in accordance with the Specific Plan, the applicant/ developer of future development projects facilitated by the proposed project shall provide proof to the Director of the City of Cypress Community Development Department, or designee, that payment of all applicable school fees has been made to the appropriate school district(s) in compliance with Section 65995 of the California Government Code.

Table 1.B: Applicable Regulatory Compliance Measures

Environmental Issue Area	Regulatory Compliance Measure
Recreation Facilities	**Regulatory Compliance Measure PS-3: Dedication of Parkland and/or Payment of Park Fees.** Prior to issuance of any building permits within the Buildout Area in accordance with the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan), a future applicant/developer shall provide proof of compliance with the applicable provisions of Chapter 25 (Subdivisions), Article VI, Park and Recreational Facilities, of the City of Cypress Municipal Code.
4.19 UTILITIES AND SERVICE SYSTEMS	
Construction and Demolition Waste	**Regulatory Compliance Measure UTIL-1: Construction and Demolition Ordinance.** The construction contractor shall comply with the provisions of the City of Cypress Ordinance No. 1166 and the 2022 California Green Building Standards Code, which would reduce construction and demolition waste. Ordinance No. 1166 is codified in Article VIII, Materials Questionnaire for Certain Construction and Demolition Projects within the City of Cypress, in the Cypress Municipal Code.

Source: LSA (2026).

This page intentionally left blank

2.0 INTRODUCTION

This Draft Environmental Impact Report (Draft EIR) has been prepared to evaluate the environmental impacts associated with the proposed Specific Plan 3.0 Buildout Project (proposed project) in Cypress, California, which involves the development of approximately 134 acres of land (Buildout Area) subject to the previously approved Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan). The City of Cypress (City) is the "public agency which has the principal responsibility for carrying out or approving the project"[1] and, as such, is the "Lead Agency" for the proposed project under the California Environmental Quality Act (CEQA) (Public Resources Code Section 21000 et seq.). CEQA requires the Lead Agency to consider the information contained in this Draft EIR and the balance of the Final Environmental Impact Report (Final EIR) for the proposed project prior to taking any discretionary action on the proposed project. The Final EIR is intended to serve as an informational document to be considered by the City and any Responsible Agencies during deliberations on the proposed project. Public Resources Code Section 21069 defines a "Responsible Agency" as a public agency other than the Lead Agency that has responsibility for carrying out or approving a project. The approvals and permits associated with the proposed project are described in Chapter 3.0, Project Description.

The City, as Lead Agency, determined that the proposed project may have a significant effect on the environment and that an EIR would be required to more fully evaluate potential adverse environmental impacts that may result from development of the proposed project. As a result, this Draft EIR has been prepared in accordance with CEQA and the *State CEQA Guidelines* (California Code of Regulations [CCR], Title 14, Section 15000 et seq.). This Draft EIR also complies with the procedures established by the City for the implementation of CEQA.

Questions regarding the preparation of this document and City review of the proposed project should be referred to the following person:

Alicia Velasco, Planning Director
City of Cypress Community Development Department
5275 Orange Avenue
Cypress, CA 90630
Phone: (714) 229-6720
Email: avelasco@cypressca.org

2.1 PURPOSE AND TYPE OF EIR/USES OF THE EIR

This Draft EIR has been prepared to evaluate potential environmental impacts that could result from implementation of the proposed project. As the Lead Agency, the City has the principal responsibility for approving the proposed project. In that capacity, the City has decided to prepare this Draft EIR and, after the public review process, will decide whether to certify the Final EIR.

The City and any Responsible Agencies have the authority to make decisions on discretionary actions relating to development of the proposed project. As stated previously, this Draft EIR is intended to

[1] As defined in Public Resources Code Section 21067.

serve as an informational document to be considered by the City and Responsible Agencies during deliberations on the proposed project. No Responsible Agencies have been identified for the proposed project. This Draft EIR evaluates a reasonable worst-case scenario of potential impacts associated with the proposed project and identifies feasible mitigation and alternatives for any identified significant impacts.

The Final EIR will serve as a Program Environmental Impact Report (Program EIR) pursuant to *State CEQA Guidelines* Section 15168. According to Section 15168, a Program EIR may be prepared for a series of actions that are related geographically, as logical parts in a chain of contemplated actions, or in connection with the issuance of plans that govern the conduct of a continuing program (per Section 15168(a)). The advantages of a Program EIR include the ability to provide a more exhaustive consideration of alternatives and cumulative effects than might be possible in a single project-specific EIR; to avoid duplication of basic policy considerations; provide the lead agency with the ability to consider broad program-wide policies and mitigation measures that would apply to specific projects or later activities within the overall program (Section 15168(b)); and use the Program EIR when examining later activities to determine whether any additional environmental document must be prepared (Section 15168(c)). If a later activity is found to be within the scope of the Program EIR, no further environmental documents would be required.

As the Lead Agency for the proposed project under CEQA, the City must consider the information contained in the Final EIR prior to taking any discretionary action with respect to the proposed project. This Draft EIR provides information to the Lead Agency and other public agencies, the general public, and decision-makers regarding the potential environmental impacts from construction and operation of the proposed project. The purpose of the public review of this Draft EIR is to evaluate the adequacy of the environmental analysis in terms of compliance with CEQA. *State CEQA Guidelines* Section 15151 states the following regarding the standards from which adequacy is judged:

> "An EIR should be prepared with a sufficient degree of analysis to provide decision-makers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among experts. The courts have not looked for perfection but for adequacy, completeness, and a good faith effort at full disclosure."

Public Resources Code Section 21002.1(a) states:

> "The purpose of an environmental impact report is to identify the significant effects on the environment of a project, to identify alternatives to the project, and to indicate the manner in which those significant effects can be mitigated or avoided."

An EIR is the most comprehensive form of environmental documentation identified in CEQA and the *State CEQA Guidelines* and provides the information needed to assess the environmental consequences of a proposed project. EIRs are intended to provide an objective, factually supported,

full-disclosure analysis of the environmental consequences associated with a proposed project that has the potential to result in significant, adverse environmental impacts.

2.2 PUBLIC REVIEW PROCESS

In compliance with CEQA and the *State CEQA Guidelines,* the City has taken steps to promote opportunities for the public and other public agencies to participate in the environmental review process. The City issued a Notice of Preparation (NOP) for the proposed project, conducted the scoping process, held a public scoping meeting, and determined that an EIR was required to evaluate the potentially significant environmental effects of the proposed project and related actions. Further, this Draft EIR is subject to public review and comment. These topics related to the environmental review process are described in further detail below.

2.2.1 Notice of Preparation

The City, as the Lead Agency, issued an NOP for the Draft EIR on April 4, 2025, which was distributed via the State Clearinghouse (SCH). The SCH issued a project number for the Draft EIR (SCH No. 2025040377). In accordance with *State CEQA Guidelines* Section 15082, the NOP was circulated to responsible agencies and individuals for a period of 30 days, from April 4 to May 5, 2025, during which time written comments were solicited pertaining to environmental issues and topics that this Draft EIR should evaluate. Comments received during the public review of the NOP are summarized in **Table 2.A: Notice of Preparation Agency Comments Received** and utilized to identify the potential environmental impacts addressed in Chapter 4.0, Existing Setting, of this Draft EIR. The NOP and all comments received during the public review period are provided in **Appendix A,** respectively.

2.2.2 Scoping Meeting

The City held a public scoping meeting to present the project and to solicit input from interested individuals regarding environmental issues that should be addressed in this Draft EIR. The scoping meeting was held virtually via Microsoft Teams on April 16, 2025. No environmental issues or concerns were raised at the scoping meeting.

2.2.3 Draft EIR Public Review Period

This Draft EIR is being distributed to numerous public agencies and other interested parties for review and comment. This Draft EIR is also available at the following locations and on the City's website for the proposed project (available online at: https://www.cypressca.org/home/showpublisheddocument/12927/638720249212130000):

City of Cypress
Community Development Department
5275 Orange Avenue
Cypress, CA 90630

Cypress Branch Library
5331 Orange Avenue
Cypress, CA 90630

Table 2.A: Notice of Preparation Agency Comments Received

Agency/ Organization/ Individual	Date	Comments	Addressed in Section(s) of the EIR
Native American Heritage Commission (NAHC)	April 8, 2025	The NAHC outlined the City's tribal consultation requirements under Assembly Bill 52.	Tribal Cultural Resources
South Coast Air Quality Management District (SCAQMD)	April 23, 2025	SCAQMD raised concerns regarding potential air quality impacts, greenhouse gas emissions, and health risks associated with the Specific Plan 3.0 Buildout Project. SCAQMD recommends that the City rely on the SCAQMD's *CEQA Air Quality Handbook* and use California Emissions Estimator Model (CalEEMod) to quantify emissions, applying both regional air quality significance thresholds and localized significance thresholds (LSTs). SCAQMD requests that the Draft EIR evaluate all phases of construction and operation, including overlapping activities, indirect sources (e.g., vehicle trips), and identify any new stationary or portable equipment that would require SCAQMD permits, recognizing the agency as a Responsible Agency if applicable. SCAQMD emphasizes that if significant adverse impacts are identified, all feasible mitigation measures that go beyond existing legal requirements must be implemented, referencing resources such as the 2022 Air Quality Management Plan Mitigation Monitoring and Reporting Plan. SCAQMD further recommends evaluating health risk reduction strategies, such as using enhanced air filtration systems rated MERV 13 (Minimum Efficiency Reporting Value) or better, and requests that the Draft EIR analyze related secondary impacts including increased energy consumption, maintenance, waste generation, and potential limitations in filtration effectiveness.	Air Quality and Greenhouse Gas Emissions
Southern California Association of Governments (SCAG)	May 5, 2025	SCAG recommends that the City of Cypress evaluate the project's alignment with the Connect SoCal 2024 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), which outlines goals to reduce greenhouse gas emissions, improve regional air quality, and support an integrated multimodal transportation network. SCAG emphasizes the use of its growth forecasts for population, housing, and employment in assessing potential impacts and planning infrastructure accordingly. Although SCAG does not implement or approve projects, it advises the City to consult the Connect SoCal 2024 Program Environmental Impact Report for guidance on identifying appropriate CEQA mitigation strategies. These may include measures to minimize emissions, reduce vehicle miles traveled, and enhance transportation efficiency. SCAG also highlights that achieving regional sustainability goals depends on local agency action and encourages the use of a side-by-side consistency analysis comparing project features with RTP/SCS goals.	Air Quality, Transportation

Table 2.A: Notice of Preparation Agency Comments Received

Agency/ Organization/ Individual	Date	Comments	Addressed in Section(s) of the EIR
Orange County Public Works (OCPW)	May 5, 2025	OCPW stated that it has no comments regarding the Notice of Preparation (NOP) for the Draft EIR.	Not applicable
City of Garden Grove[1]	June 3, 2025	The City of Garden Grove requested that a Level of Service (LOS) analysis be prepared for key intersections in the City of Garden Grove that may be impacted by project-related traffic. The City of Garden Grove also provided their Traffic Impact Analysis guidelines.	Transportation

Source = LSA (2026).
Notes: All NOP response letters are included in **Appendix A** of this Draft EIR.
[1] The comment letter from the City of Garden Grove was received after the close of the NOP comment period.

All comments received from agencies and individuals on this Draft EIR will be accepted during the public comment period, which will not be less than 45 days, in compliance with CEQA and the *State CEQA Guidelines*. All comments on this Draft EIR should be sent to the following City contact person:

Alicia Velasco, Planning Director
City of Cypress Community Development Department
5275 Orange Avenue
Cypress, CA 90630
Email: avelasco@cypressca.org

Following the closure of the public comment period, the City will prepare written responses to all written comments received during the public comment period and will compile these comments and responses, together with any text changes to this Draft EIR, into the Final EIR that includes all of the information required pursuant to *State CEQA Guidelines* Section 15132. The Final EIR will be provided to all public agencies that submitted comments on this Draft EIR at least 10 days prior to certification of the Final EIR. The Final EIR will consist of this Draft EIR or a revision of the draft; comments and recommendations received on this Draft EIR either verbatim or in summary; a list of persons, organizations, and public agencies commenting on this Draft EIR; the response of the City to significant environmental points raised in the review and consultation process and in comments submitted on this Draft EIR; and any other information added by the City.

The City will determine findings regarding the extent and nature of the impacts as presented in the Final EIR. The Final EIR must be certified as complete by the City Council prior to making a decision on the requested entitlements for the proposed project. Public input is encouraged at all public hearings regarding the proposed project.

2.3 SCOPE OF THIS DRAFT EIR

As required by *State CEQA Guidelines* Section 15128, this Draft EIR must identify the effects of the proposed project that are determined to be significant. Consistent with Appendix G of the *State CEQA Guidelines*, this Draft EIR evaluates all environmental issue areas that may be affected by the

proposed project, including but not limited to aesthetics, agriculture and forestry resources, air quality, biological resources, cultural and tribal cultural resources, energy, geology and soils, greenhouse gas emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, noise, population and housing, public services, recreation, transportation, utilities and service systems, and wildfire, as applicable.

2.4 FORMAT OF THIS DRAFT EIR

This Draft EIR contains the information and analysis required by CEQA and the *State CEQA Guidelines,* including Section 15122–15131, and is generally organized as follows:

- **Chapter 1.0: Executive Summary.** Chapter 1.0 contains the Executive Summary of this Draft EIR, which lists all significant project impacts, feasible mitigation measures that have been recommended to reduce any significant impacts of the proposed project, and the level of significance of each impact following feasible mitigation. The summary is presented in a table format.

- **Chapter 2.0: Introduction.** Chapter 2.0 contains a discussion of the purpose and intended use of this Draft EIR.

- **Chapter 3.0: Project Description.** Chapter 3.0 includes a discussion of the proposed project, the Buildout Area and its existing environmental setting, overall project relationship to the Specific Plan, background and related planning documents, the project objectives, and discretionary actions, permits, and other approvals.

- **Chapter 4.0: Environmental Impact Analysis.** Chapter 4.0 includes an analysis of the proposed project's environmental impacts. The environmental setting discussions describe the "existing conditions" of the environment within the Buildout Area as they pertain to the environmental issues being analyzed (*State CEQA Guidelines* Section 15125).

  The impact discussions identify and focus on the potentially significant environmental effects of the proposed project. The direct and indirect effects of the proposed project on the environment are identified and described, giving due consideration to both the short-term and long-term effects, as necessary (*State CEQA Guidelines* Section 15126.2[a]).

  Chapter 4.0 also includes within the analysis of each environmental topic a discussion of the cumulative effects of the proposed project when considered in combination with other projects causing related impacts, as required by *State CEQA Guidelines* Section 15130. The proposed project is the implementation of the Specific Plan and assumes the development of 1,791 residential units and 440,000 square feet of non-residential uses within the Buildout Area.

  The discussions of mitigation measures identify and describe feasible measures that could minimize or lessen potentially significant impacts for each significant environmental effect identified in this Draft EIR (*State CEQA Guidelines* Section 15126[e]). The levels of significance before and after mitigation measures are recommended. Significant unavoidable adverse effects are identified where recommended feasible mitigation measures are not expected to reduce the effects to less than significant levels.

- **Chapter 5.0: Alternatives to the Proposed Project.** In accordance with CEQA, the alternatives discussion in Chapter 5.0 describes a reasonable range of alternatives that could feasibly attain the basic objectives of the proposed project and are capable of eliminating or substantially reducing any of the proposed project's significant unavoidable adverse environmental effects or reducing them to a less than significant level. The alternatives analyzed in Chapter 5.0 include three alternatives: (1) the No Project Alternative, (2) the Historic Preservation Alternative, and (3) the Reduced Development Alternative.

- **Chapter 6.0: Other CEQA Considerations.** Chapter 6.0 contains discussions on the following topics as required by *State CEQA Guidelines* Section 15126: (1) growth-inducing impacts of the proposed project; and (2) whether there are any significant irreversible environmental changes caused by the proposed project, adverse environmental impacts associated with the proposed project for which either no mitigation or only partial mitigation is feasible.

- **Chapter 7.0: List of Preparers.** Chapter 7.0 provides the organizations and persons contacted during preparation of this Draft EIR, the Draft EIR preparers and technical report authors, and other experts involved in the preparation of this Draft EIR.

- **Chapter 8.0: References.** Chapter 8.0 provides the references cited in this Draft EIR.

2.5 INCORPORATION BY REFERENCE

An EIR may incorporate by reference all or portions of another document that is a matter of public record or is generally available to the public, consistent with *State CEQA Guidelines* Section 15150. Informational details from the documents that have been incorporated by reference are summarized in the appropriate sections of this Draft EIR, along with descriptions regarding how the public may review these documents. All documents are available for review at the City of Cypress, Community Development Department. These documents include, without limitation:

- City of Cypress General Plan (available online at: https://www.cypressca.org/departments/community-development/planning-division)

- City of Cypress Municipal Code (available online at: https://qcode.us/codes/cypress/)

- Cypress Town Center and Commons Specific Plan 3.0 (available online at: https://www.cypressca.org/home/showpublisheddocument/12927/638720249212130000)

This page intentionally left blank

3.0 PROJECT DESCRIPTION

This section describes the proposed Specific Plan 3.0 Buildout Project (proposed project), including a project overview and descriptions of the proposed project's location, objectives, and the approvals required for project implementation. Consistent with *State CEQA Guidelines* Section 15050, the City of Cypress (City) is the Lead Agency under CEQA and is responsible for the certification of the Final Environmental Impact Report (Final EIR) and approval of the proposed project. Los Alamitos Race Course (LARC) is the Project Applicant.

The proposed project consists of the reasonably foreseeable buildout of a portion of the area governed by the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) that includes approximately 134 acres of land (Buildout Area) in the City. The proposed project includes the approval of Vesting Tentative Tract Map No. 19247 (VTTM 19247). VTTM 19247 includes lots with a total land area of approximately 151.6 acres. The land subject to VTTM 19247 is greater than the Buildout Area as VTTM 19247 includes Lots 8 and 9 (17.55 acres), which are, or will be, part of the Grace Church property, which is located outside the area governed by the Specific Plan. The environmental analyses in this Draft Environmental Impact Report (Draft EIR) do not consider future development on Lots 8 and 9 of VTTM 19247.

In addition, the proposed project does not consider the development of two discrete portions of the land subject to the Specific Plan, which include (1) seven acres of land within the area governed by the Specific Plan (Melia Property) that Melia Homes has previously developed as the Belmont residential project (State Clearinghouse [SCH] 2020099025) and (2) nine acres of land on which the City has previously developed Lexington Park. The Specific Plan also included 20 acres of public park space spread throughout the Specific Plan Area. The City previously constructed Lexington Park on nine acres of that land, which land was donated to the City by Cypress GC, LLC.

The proposed project evaluated in this Draft EIR includes 1,791 residential units and 440,000 square feet of non-residential uses that could occur within the Buildout Area.

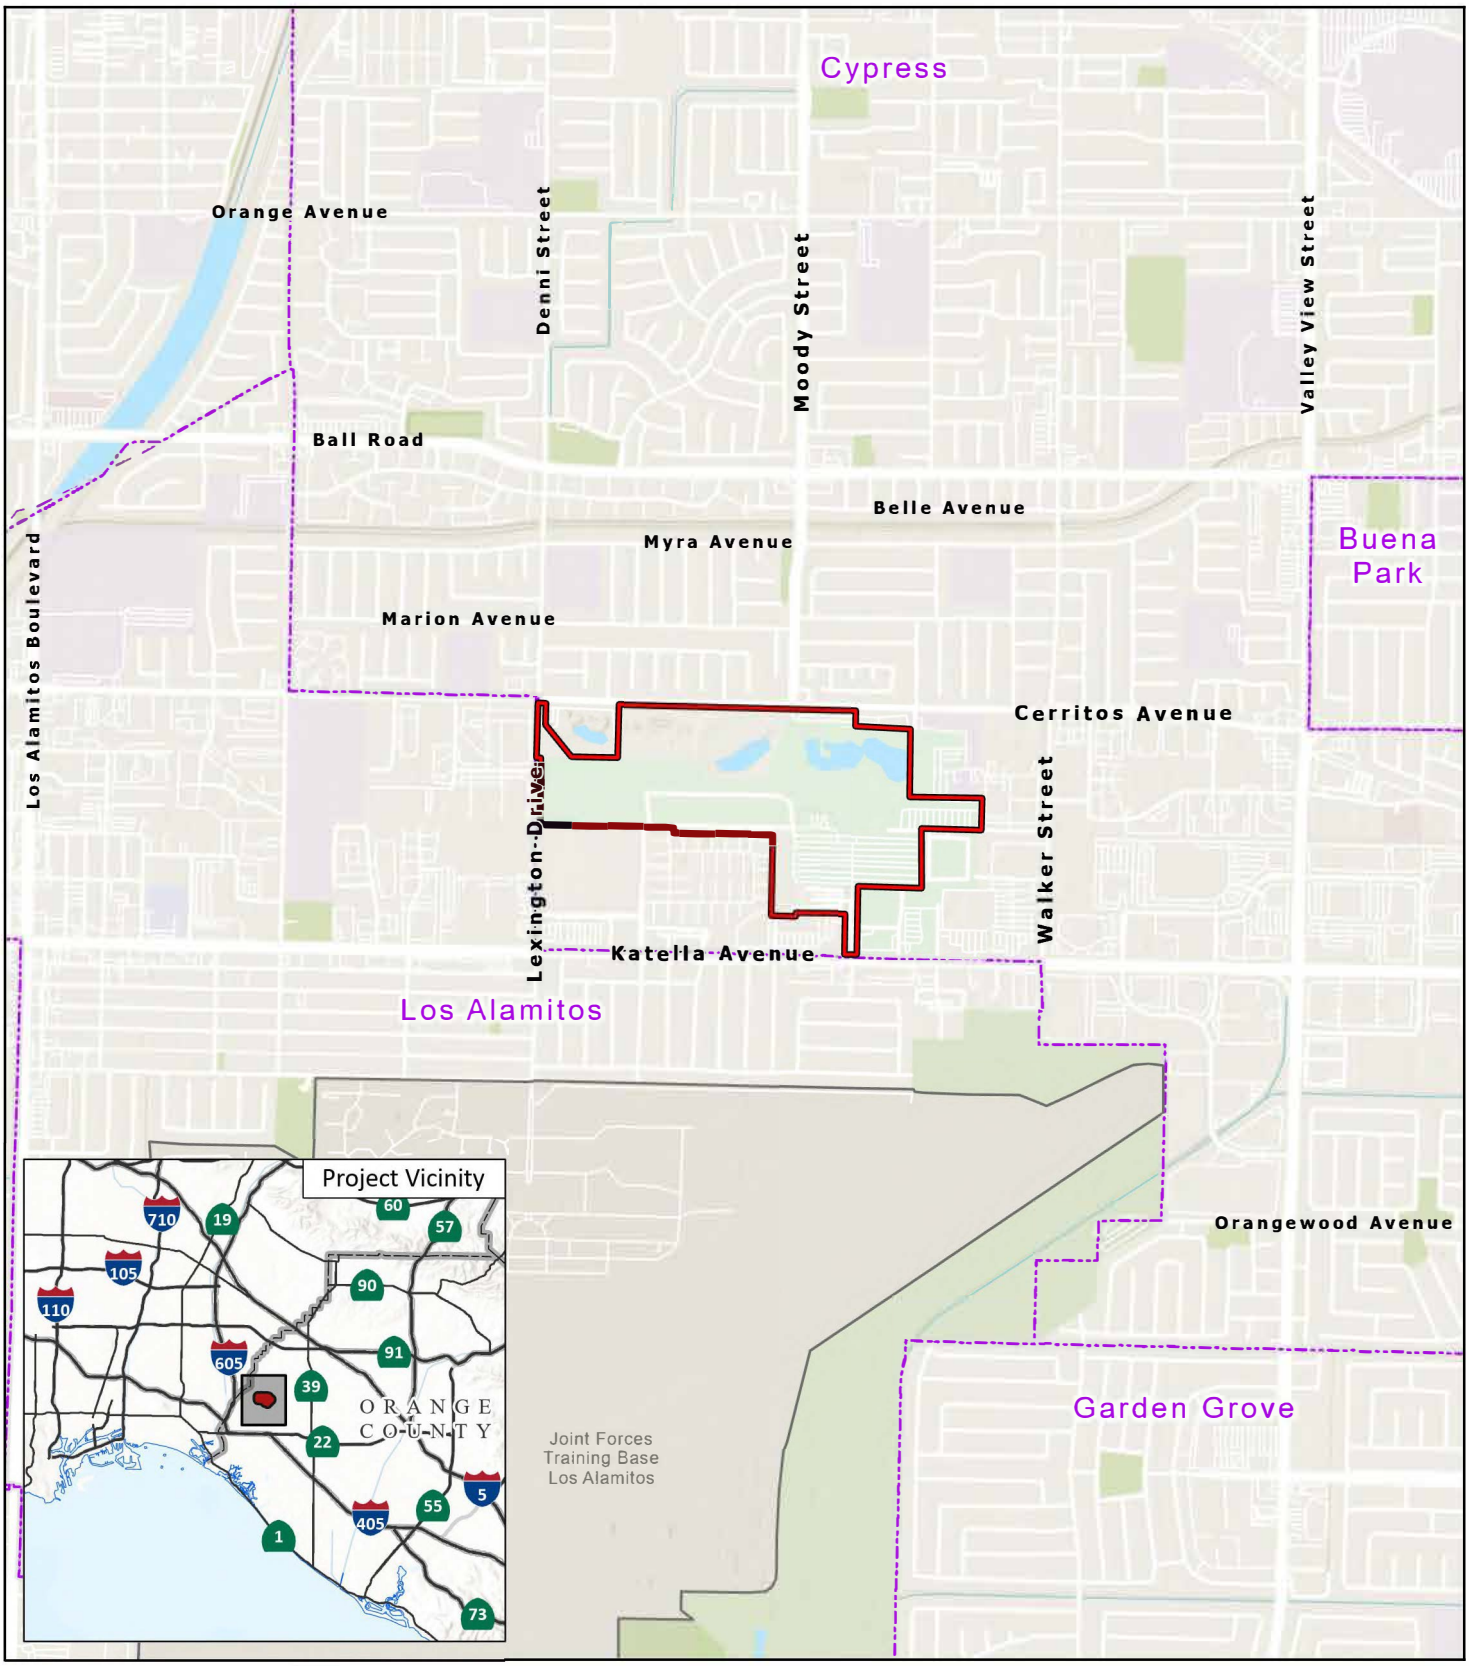
3.1 PROJECT LOCATION AND EXISTING ENVIRONMENTAL SETTING

The following sections describe the location and characteristics of the Buildout Area and provide a brief overview of the existing land uses within and in the vicinity of the Buildout Area.

The Buildout Area has multiple owners. LARC owns approximately 97 acres (LARC Property), Cypress Golf Course (GC), LLC owns approximately 33 acres (Cypress GC Property), and Grace Community Church of Cypress dba Seacoast Grace Church (Grace Church) owns approximately four acres. LARC currently operates Los Alamitos Race Course on the LARC Property. The Cypress GC Property is a portion of the former Cypress Golf Club. Grace Church currently operates a portion of its church on its four acres of land in the Buildout Area.

3.1.1 Project Location

As illustrated in **Figure 3-1: Regional Location**, the Buildout Area is situated in the southern portion of the city of Cypress, within Orange County. The city of Cypress is bordered on the north by the cities of La Palma and Buena Park, on the east by the cities of Anaheim and Stanton, on the south and west by the city of Los Alamitos, and on the west by the cities of Long Beach, Hawaiian Gardens, and Lakewood. The Buildout Area includes all of the land governed by the Specific Plan, except for the Melia Property and Lexington Park, which have previously been developed, and the portions of Lots 8 and 9 in VTTM 19247 that are not part of the land governed by the Specific Plan, see **Figure 3-2: Buildout Area**.



The Buildout Area is generally bounded by Cerritos Avenue to the north, on the east by several existing commercial and institutional uses along and near Walker Street including Grace Church and office and retail uses, on the west by Lexington Drive, and on the south by Katella Avenue and several existing commercial, retail, and residential uses.

Regional vehicular access to the Buildout Area is provided by Interstates 605 and 405 (I-605 and I-405), which are approximately 1.5 miles to the west and 2.1 miles to the south, respectively; Beach Boulevard (State Route 39 [SR-39]), approximately 2.7 miles to the east; and State Route 22 (SR-22), approximately 2 miles to the south.

3.1.2 Existing Land Uses

The Buildout Area is surrounded by a variety of commercial, office, business park, commercial and retail, residential, park and religious uses as shown in **Figure 3-3: Surrounding Land Uses.**

The Buildout Area is bounded by W. Cerritos Avenue to the north, several existing commercial and institutional uses along and near Walker Street to the east, Katella Avenue and several existing commercial, retail and residential uses to the south, and Lexington Drive to the west. Immediately northwest of most of the Buildout Area is Lexington Park, a nine-acre park located at 4600 W. Cerritos Avenue at the southeast corner of the Cerritos Avenue/Lexington Drive intersection, immediately west and north of the Buildout Area. Immediately east and north of the Buildout Area is Grace Church, located at 5100 W. Cerritos Avenue. Southeast of the Buildout Area is the Belmont residential project developed by Melia Homes, which includes only residential uses, and The Square at Cypress developed by Shea Homes, which includes residential, hotel, retail, and service uses, including the Homewood Suites by Hilton located at 5233 Katella Avenue and a Costco Wholesale at 5401 Katella Avenue. Cottonwood Church, located at 4505 Katella Avenue, is located southwest of the Specific Plan Area, along with the Ovation at Flora Park, a senior housing community, and a commercial center that includes restaurant and commercial services uses, a 24 Hour Fitness, and the Residence Inn Cypress Los Alamitos, at 4931 Katella Avenue. East of Lexington Drive are light industrial, office, and commercial uses.

LARC Property (approximately 97 acres): A variety of existing structures and facilities are located on the LARC Property that support horse racing, training, and community activities. Structures include a race track, grandstand structure, two artificial lakes inside the race track, one-story clubhouse and restaurant structures, lighting structures, approximately 41 permanent one-story barns and several temporary structures and barns. The LARC Property also contains parking areas, landscaping, drainage features, sheds, maintenance areas, and perimeter fencing.

The LARC Property's primary structures include the Grandstand, an annex to the Grandstand, and a Clubhouse building. The Grandstand, completed in 1959 and opened in 1960, is a five-story, 140,000-square-foot structure standing approximately 65 feet high. The Clubhouse building, constructed in the mid-1950s, is a two-story, 35,000-square-foot structure, including an additional 25,000 square feet of patron space. The Annex building, completed by 1963, is a three-story building constructed between the Grandstand and the Clubhouse building. The combined seating capacity for the Grandstand, Clubhouse building, and Annex building is approximately 3,700 people. As noted, there are a total of approximately 41 barns supporting the horse racing and training operations on the LARC Property. This includes 36 cinder block barns built in 1958, each approximately 14,000 square feet (totaling 504,000 square feet). Additionally, there are five modular-style barns built in 2013, each about 12,480 square feet (totaling 62,400 square feet).

Cypress Golf Course (approximately 33 acres): The Cypress GC Property includes a portion of the former Cypress Golf Club, which ceased operation years ago. LARC currently uses approximately one acre of the Cypress GC Property (designated as Lot 1 in VTTM 19247) as a maintenance yard, while the clubhouse for the former Cypress Golf Club is presently being used as a church.

Grace Church Property (approximately 4 acres): The land owned by Grace Church within the Buildout Area, designated as Lots 5 and 10 in VTTM 19247, is part of a larger church property that is currently used for religious services and events and includes a small school, open space and parking areas.

3.2 SPECIFIC PLAN BACKGROUND

In 1946, Frank Vessels purchased 435 acres of land that included the Buildout Area in what would become the City of Cypress. Vessels initially used this land to raise cattle and quarter horses. In 1947, Vessels built a racetrack on a portion of the property that was used for car and quarter horse racing. In 1954, a new racetrack was developed at its current location within the Buildout Area. The adjoining Cypress Golf Club (Golf Club) was constructed in 1961 and permanently closed in 2004.

On April 17, 1990, the Cypress City Council adopted the original Cypress Business & Professional Center Specific Plan (Original Specific Plan), which established comprehensive guidance and regulations for the development of approximately 298.2 gross acres of land within the City that included all of the land that is currently governed by the Specific Plan, as well as the former Cypress Golf Club and several other properties in the surrounding areas. Subsequently, on April 24, 1990, in accordance with Measure D, the voters of the City of Cypress approved an initiative that changed the General Plan land use designation and the zoning designation for approximately 75 acres of land within the Original Specific Plan area. The Original Specific Plan was subsequently amended several times in connection with proposed development projects within the Original Specific Plan area.

On June 5, 2012, the voters of the City of Cypress approved "Measure L", a ballot initiative that, among other things, amended and restated in its entirety the Original Specific Plan as previously amended. This Amended and Restated Cypress Business & Professional Center Specific Plan (2012 Specific Plan) established a new Planning Area 9, which consisted of portions of Planning Areas 6, 7, and 8 from the Original Specific Plan, and permitted a range of senior housing, retail, and commercial uses. It also confirmed the intent to redevelop the Cypress GC Property.

On June 5, 2018, the voters of the City of Cypress approved the Cypress Town Center and Commons Specific Plan 2.0 (2018 Specific Plan) pursuant to "Measure A". The 2018 Specific Plan superseded and replaced the 2012 Specific Plan with respect to all of the real property within the area governed by the 2018 Specific Plan (2018 Specific Plan Area).

In May 2018, Cypress GC donated to the City nine acres of land within the 2018 Specific Plan Area located within and adjacent to the designated Public Park District at the southeast corner of Cerritos Avenue and Lexington Drive. The City subsequently developed Lexington Park on that site. Melia Homes recently developed a multi-family residential project with 135 residential units (Melia Project) on the eastern seven acres of the land within the designated Town Center District in the 2018 Specific Plan.

On November 5, 2024, the voters of the City of Cypress approved the current Specific Plan pursuant to “Measure S” as part of the Cypress Housing Element Implementation Project (Housing Implementation Project). The current Specific Plan superseded and replaced the 2018 Specific Plan. Prior to the voter's approval of Measure S, the City Council certified a Final Environmental Impact Report (SCH No. 2023040560) for the Housing Element Implementation Project (Housing Element Implementation Final EIR) that analyzed the environmental impacts associated with adding 676 residential units within the 2018 Specific Plan Area beyond the maximum number of residential units permitted under the 2018 Specific Plan. The 2018 Specific Plan permitted a maximum of 1,250 residential units, so the increase of 676 units now allows a maximum of 1,926 residential units within the 2018 Specific Plan Area (including the 135 residential units previously developed as part of the Melia Project). This Draft EIR conservatively analyzes the environmental impacts associated with the 676 additional residential units as part of the overall proposed project, notwithstanding that the Housing Element Implementation Final EIR recently analyzed those impacts. Accordingly, this Draft EIR incorporates the Housing Element Implementation Final EIR by reference.

3.3 SPECIFIC PLAN CHARACTERISTICS

The Specific Plan includes six land use districts that permit the development of residential, commercial, retail, restaurant, entertainment, and park and recreational uses. As shown on Figure 2-1 (Land Use Plan) of the Specific Plan, the land use districts include a Residential District (46.2 acres), Senior Housing/Medium-Density Residential District (23.1 acres), Mixed-Use (Town Center/HDR) District (24.1 acres), Mixed-Use (Town Center/MDR) (9.5 acres), Medium-Density Residential District (20.7 acres), and Public Park District (20 acres). As shown on Figure 2-2 (Residential Subdistricts) of the Specific Plan, the Residential District has been divided into a Single-Family Detached Subdistrict (19.7 acres) and a Single-Family Attached Subdistrict (27.2 acres), see **Figure 3-4: Specific Plan Land Uses and Allowed Dwelling Units per Acre**.

FIGURE 3-4

Specific Plan 3.0 Buildout Project

Land Uses and Allowed Dwelling Units per Acre

This page intentionally left blank

The Specific Plan includes development standards for each land use district that quantify the maximum amount of residential and non-residential development that can occur within a land use district and the overall area governed by the Specific Plan. Within the land use districts that permit residential uses (which includes all of the land use districts other than the Public Park District), the maximum residential densities range from 8 dwelling units/acre (du/ac) to 30 du/ac. The Specific Plan also includes the general locations of the permitted development, various development restrictions and limitations, infrastructure plans and sustainability guidelines.

The proposed project does not include any proposed amendments or modifications to the adopted Specific Plan. This Draft EIR analyzes programmatically the environmental impacts associated with residential and non-residential development within the Buildout Area based on a reasonably foreseeable buildout scenario, as presented in Section 3.5, Project Description, below.

3.4 PROJECT OBJECTIVES

Section 15124(b) of the *State CEQA Guidelines* states that the project description shall contain "a statement of the objectives sought by the proposed project." Section 15124(b) of the *State CEQA Guidelines* further states that "the statement of objectives should include the underlying purpose of the project."

The underlying purpose of the proposed project is to redevelop the Buildout Area in accordance with the voted-approved Specific Plan. This will be accomplished consistent with the following objectives:

1. Provide a significant number of new residential units in the Buildout Area to help meet the unmet demand for housing in the City and the project vicinity, consistent with the City's Housing Element and the Cypress Town Center and Commons Specific Plan 3.0 approved by the voters of the City of Cypress.

2. Establish a mixed-use town center that is intended to be the City's "main street" and a gathering place for the community with a vibrant mix of entertainment, retail, restaurant, commercial and residential uses.

3. Revitalize a large urban area in the City that is currently significantly underutilized.

4. Diversify the City's existing housing stock by providing various housing product types and densities to meet a range of housing needs of Cypress and area residents.

5. Provide a mix of residential, commercial, retail and park and recreational uses that encourages project residents to walk or bike to and from the commercial areas and attractions and parks within the Buildout Area and provides an enhanced consumer and employee base for the new commercial uses.

6. Develop a project that will invigorate the local economy by providing new employment and business opportunities

7. Provide residential and commercial/retail improvement that will generate new sources of revenue for the City through increased property values and retail sales.

8. Extend existing City streets through all or a portion of the Buildout Area to improve overall traffic circulation in the project vicinity and provide necessary vehicular and pedestrian access for project residents, tenants, visitors and patrons.

9. Develop new residential and senior housing communities with sufficient housing units to support the size, scale and operation of planned public parks and other amenities and common areas included in the proposed project.

3.5 PROJECT DESCRIPTION

The project analyzed in this Draft EIR is the reasonably foreseeable buildout allowed under the current Specific Plan, which City of Cypress voters approved on November 5, 2024, pursuant to "Measure S" as part of the Housing Element Implementation Project.

3.5.1 Project Scope

Residential Development: As summarized in **Table 3.A: Specific Plan Land Use Plan Summary** below, the Specific Plan allows for a maximum of 1,926 residential units, including the units allowed on the seven-acre Melia Property. Melia Homes previously developed the Belmont residential project with 135 units on the Melia Property. Therefore, as shown in **Table 3.A**, an additional 1,791 residential units (1,926 – 135) may be developed within the Buildout Area.

Non-Residential Development: As shown in **Table 3.A**, the Specific Plan permits an aggregate maximum of 879,170 square feet of non-residential floor area within the Buildout Area. However, it is anticipated that, based on current and reasonably foreseeable future market conditions, the buildout of the Buildout Area will include substantially less than 879,170 square feet of non-residential development. Therefore, the environmental analyses in this Draft EIR are based in part on the assumption that only 440,000 square feet of non-residential development will occur within the Buildout Area. This represents approximately 50 percent of the maximum amount of permitted non-residential development. If non-residential development that cumulatively exceeds 440,000 square feet is later proposed within the Buildout Area, additional environmental review in accordance with the provisions of CEQA and the *State CEQA Guidelines* may be required if and to the extent such non-residential development requires any discretionary action by the City.

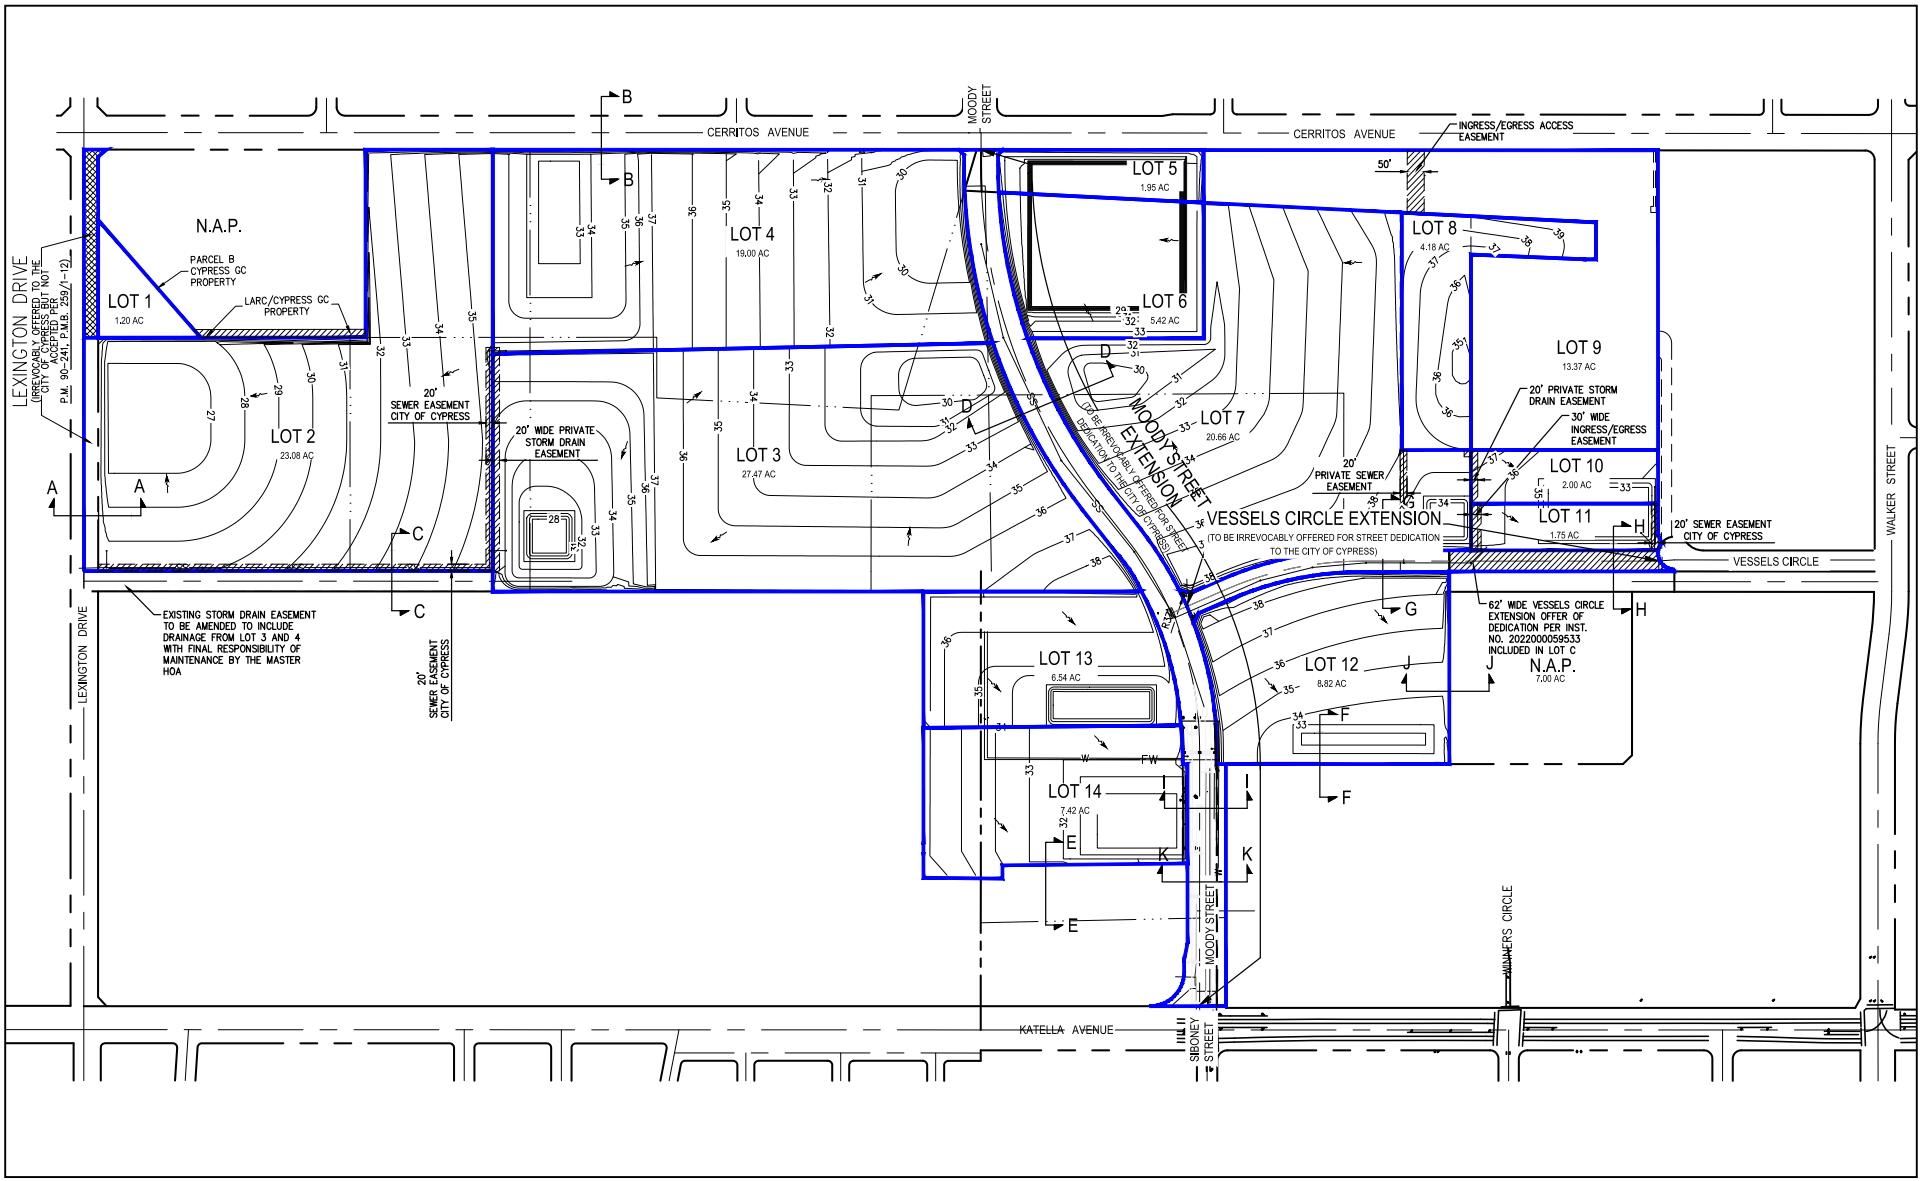
Development of Lot 14: Melia Homes has proposed a project (Lot 14 Project) on the entirety of Lot 14 in proposed VTTM 19247, which includes approximately 7.33 acres of land, as shown on **Figure 3-5: Vesting Tentative Map No. 19247** and **Table 3.B: Maximum/Reasonably Foreseeable Project Buildout** below. The Lot 14 Project includes the subdivision of proposed Lot 14 into 8 lots (Lots 1-6, A and B) for condominium purposes for the construction and sale of 112 attached townhomes, with common areas for landscaping, recreation center, parking, drive aisles, and easements. The Lot 14 Project is located in the Mixed-Use (Town Center/MDR) District established in the Specific Plan.

Table 3.A: Specific Plan Land Use Plan Summary

Land Use District	Area (acres)	Maximum FAR[1]	Maximum Residential Units	Maximum Development Capacity (sq ft)
Public Park	18.2[2]	N/A	N/A	N/A
Mixed-Use (Town Center/HDR)	24.1	0.6:1	1,926 (aggregate total for Residential, Senior Housing/Medium-Density Residential, Medium-Density Residential and Mixed-Use Districts)	629,878
Mixed-Use (Town Center/MDR)	9.5	0.6:1		248,292
Residential	46.2	N/A		N/A
Senior Housing/Medium-Density Residential	23.1	N/A		N/A
Medium-Density Residential	20.7	0.6:1		N/A
Roads	9.6	N/A	N/A	N/A
Total Specific Plan 3.0	151.4[4]	--	1,926[3]	879,170

Source: LSA (2025).

[1] This development restriction on floor area ratio (FAR) does not apply to residential development or the residential component of a mixed-use development. The maximum FAR allowed on any development parcel is 1.0:1.



[2] The minimum amount of public park space within the area governed by the Specific Plan is 20 acres. In addition to the 18.2 acres of public park space within the Public Park District, a 2-acre public park has been designated as a land use overlay within the Mixed-Use (Town Center/HDR) District, provided that this additional required public park space may be located (a) in any Land Use District or multiple Land Use Districts, and (b) adjacent to one or both of the Public Park Districts in order to increase the size of the public parks that would be developed there.

[3] The aggregate total of 1,926 residential units includes the 135 residential units previously developed on the Melia Property. Therefore, an additional 1,791 residential units are allowed in these districts within the Buildout Area.

[4] In preparing VTTM 19247, the acreages for the Land Use Districts and roads within the area governed by the Specific Plan were more accurately calculated, resulting in a slightly reduced total land area of approximately 150.1 acres.

HDR= High-Density Residential
MDR= Medium-Density Residential

Table 3.B: Maximum/Reasonably Foreseeable Project Buildout

Lot Number	Specific Plan Land Use District	Lot Size (ac)	Maximum Number of Dwelling Units (du)/Reasonably Foreseeable Non-Residential Floor Area	Maximum Residential Density (du/ac)	Maximum Effective Residential Density (du/ac)
2	Senior Housing/MDR	23.08	404 du	15-20	17.5*
3	Residential	27.15	269 du	10	9.9
4	Residential	19.00	141 du	8	7.4
7	Medium-Density Residential	20.66	309 du	15	14.9
10	Mixed-Use (Town Center/MDR)	2.00	29 du	15	14.5
11	Mixed-Use (Town Center/HDR)	1.75	51 du	30	29.1
12	Mixed-Use (Town Center/HDR)	8.86	265 du	30	29.9
13	Mixed-Use (Town Center/HDR)	6.52	195 du	30	29.9
14	Mixed-Use (Town Center/MDR)	7.33	128 du	15-20	17.5*
10-14	Non-Residential	26.6	440,000 sq ft Non-Residential	N/A	N/A
Total					1,791 additional dwelling units 440,000 square feet of non-residential floor area

Source: LSA (2025).
ac = acres
Specific Plan = Cypress Town Center and Commons Specific Plan 3.0
du = dwelling units
du/ac = dwelling units per acre
HDR = High-Density Residential
MDR = Medium-Density Residential
N/A = not applicable
sq ft = square feet
* This number of dwelling units per acre is a midpoint between the maximum density for medium-density residential (15 du/ac) and the maximum density for senior housing (20 du/ac) allowed on this lot pursuant to the Specific Plan.

As shown in **Table 3.B: Maximum/Reasonably Foreseeable Project Buildout** below, the analyses in this Draft EIR are based on the assumed development of Lot 14 with 128 residential units and a portion of the 440,000 square feet of non-residential development that is anticipated to occur in the Buildout Area. Given that the Lot 14 Project includes only 112 residential units (fewer than the 120 residential units assumed for analytical purposes in this Draft EIR) and no non-residential uses, the environmental analyses in this Draft EIR fully account for the proposed Lot 14 Project and are conservative in that they overstate the environmental impacts associated with the development of Lot 14.

3.5.2 Relationship to Lots in VTTM 19247

As shown in **Figure 3-5: Vesting Tentative Map No. 19247,** proposed VTTM 19247 would divide the Buildout Area and other land currently owned by Grace Church into 14 numbered lots. The numbered lots would accommodate the development of residential, non-residential and park and recreational

uses. VTTM 19247 also includes existing Siboney Street, land that would be used to expand a portion of Lexington Drive adjacent to Lot 1 and Lexington Park, the further extension of Vessels Circle between Lots 7 and 12 and the extension of Moody Street to connect to Siboney Street, with Siboney Street becoming part of Moody Street.

In accordance with the approved Specific Plan, the proposed project evaluated in this Draft EIR includes residential development on Lots 2 through 4, 7, and 10 through 14, non-residential development on Lots 10 through 14, and the development of park and recreational improvements on Lots 1, 5, and 6 (as well as two additional acres within the Specific Plan that will be specified in the future).

Development on Lots 1, 5, and 6 is limited to park and recreational uses. The Public Park District includes 18.2 acres of specifically identified land, which includes the nine acres of land that the City has previously developed as Lexington Park following its approval as the Cypress Sports Park Project (SCH No. 2019089093).

The proposed project evaluated in this Draft EIR does not assume any development on Lots 8 and 9. Grace Church owns Lot 9 where its existing church facilities are located. It is anticipated that Grace Church would acquire Lot 8 from LARC in exchange for transferring ownership of Lots 5 and 10 to LARC. Following this anticipated land swap, Grace Church would own Lots 8 and 9, which collectively include approximately 17.55 acres of land and are not located within the Buildout Area. Lots 8 and 9 have been included in VTTM 19247 solely in connection with the contemplated land swap and no development is presently contemplated on those lots by Grace Church.

The maximum residential buildout and reasonably foreseeable non-residential buildout of the Buildout Area pursuant to the Specific Plan, shown in **Table 3.B: Maximum/Reasonably Foreseeable Project Buildout** below, reflects the land swap described above and therefore includes Lots 5 and 10, and excludes Lots 8 and 9.

3.5.3 Circulation and Access

As shown on **Figure 3-5**, consistent with the approved Specific Plan, the proposed project evaluated in this Draft EIR assumes the extension of Moody Street from Cerritos Avenue to Katella Avenue, as well as the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension. The Moody Street extension would traverse the Buildout Area, passing adjacent to Lots 3, 4, 13, and 14 in VTTM 19247, and create a central north-south corridor, while the extension of Vessels Circle within Lot C would, among other things, provide access to Lots 10 and 11 in VTTM 19247. The proposed project also includes, consistent with the Specific Plan, the widening of Lexington Drive within Lot B in VTTM 19247. Future development within the Buildout Area may require the construction of private driveways, accessways and/or streets that connect to the Moody Street and Vessels Circle extensions and existing public streets adjacent to the Buildout Area, but their specific locations and sizes would be determined during the design process.

3.5.4 Open Space and Landscaping

The proposed project evaluated in this Draft EIR also assumes that the Buildout Area would include landscaped areas as required by the Specific Plan and the City of Cypress Municipal Code (Municipal

Code), as applicable. The exact location and amount of landscaped areas have not been designed yet and would be determined in connection with the future development of specific development projects.

The proposed project evaluated in this Draft EIR also assumes that the Buildout Area would include approximately 11 acres of land on which park and recreational uses would be developed, including the land in Lots 1, 5, and 6 and the two additional acres of public park space that may be located in one or more of the land use districts established in the Specific Plan. The specific amenities and improvements that would be developed in the Public Park District and the additional two acres of public park space would be determined in connection with future development projects that are proposed within the Buildout Area.

3.5.5 Water

As set forth in Section 2.3 (Water Plan) of the Specific Plan, the Golden State Water Company (GSWC) provides water supply to the land within the Buildout Area. There are existing water lines within Lexington Drive, Cerritos Avenue, and Katella Avenue, as depicted on Figure 2-4 (Water Plan) in the Specific Plan, that currently serve, and would continue to serve, the Buildout Area. GSWC has indicated that these existing lines are adequate for the approved uses within the Buildout Area.

3.5.6 Wastewater

As set forth in Section 2.4 (Wastewater Plan) of the Specific Plan, existing sewer lines consist of a 30-inch Orange County Sanitation District (OC San) regional sub-trunk in Lexington Drive that flows south to Katella Avenue, 21-inch and 18-inch City sewer lines that connect to the OC San facility at the intersection of Katella Avenue and Lexington Drive, and a trunk line in Enterprise Drive. The existing trunk sewer lines adjacent to the Buildout Area are shown on the Wastewater Plan in Figure 2-5 of the Specific Plan. New development that occurs within the Buildout Area would connect to the existing trunk sewer lines.

Wastewater services for future development within the Buildout Area would be provided by the City of Cypress and OC San. The proposed project evaluated in this Draft EIR assumes the installation of the following two new sewer connections to existing sewer main lines: (1) a new 8-inch line on Lot 2, which would connect to the existing 30-inch sewer trunk line owned and maintained by OC San within Lexington Drive; and (2) a new 8-inch sewer line (which would gradually increase in size to a 15-inch line at the existing main line connection) on Lots 3 to 7 and Lots 10 to 14, running north to south along the proposed extension of Moody Street. The second sewer connection would connect to the existing 18-inch and 21-inch sewer main lines in Katella Avenue that are owned and maintained by the City. To maintain sufficient capacity to serve the development allowed within the Buildout Area, it is anticipated that the 18-inch and 21-inch sewer main lines within Katella Avenue would need to be upsized to a 24-inch main line that would ultimately connect to the existing 30-inch OC San sewer trunk line.

3.5.7 Stormwater

Under existing conditions, the southern portion of the Buildout Area generally drains south towards the Katella Avenue Storm Drain, the northwestern portion of the Buildout Area drains west towards

Lexington Drive, and a small portion of the Buildout Area in the north drains north towards Cerritos Avenue. To accommodate the anticipated drainage patterns within the Buildout Area, it is assumed that an additional outfall would be installed at the existing Vessels Circle Storm Drain. The proposed project evaluated in this Draft EIR also assumes the installation of a tributary line to the Walker Street Storm Drain.

3.5.8 Solid Waste

Solid waste collection for the Buildout Area would be provided by Valley Vista Services of Orange County, a private solid waste hauler. The City currently contracts with Valley Vista Services of Orange County to collect and dispose of the solid waste/refuse generated in the City.

3.5.9 Electricity and Communication

Electricity for the development allowed within the Buildout Area would be supplied by Southern California Edison (SCE) through connections to existing service lines. Telephone, television, and internet services are offered by a variety of providers in the City of Cypress, including AT&T, Frontier Communications, Spectrum, HughesNet, and ViaSat. Non-satellite providers include Frontier and Spectrum Cable. Satellite internet providers include ViaSat, DirectTV, and DishTV. These services are privately operated and offered to each location in the City for a fee defined by the provider.

3.5.10 Construction Assumptions

The proposed project evaluated in this Draft EIR assumes that development of the land uses allowed by the Specific Plan within the Buildout Area would require the demolition and removal of all or a substantial portion of the existing improvements associated with Los Alamitos Race Course, including the race track and infield area, grandstand, buildings, barns and structures and two artificial lakes. That would be followed by the grading for and construction of specific development projects within discrete portions of the Buildout Area. It is anticipated that construction would commence in 2026 and be completed in 2038.

As discussed above, development within the Buildout Area would occur on a project-by-project basis and the specific design and sequencing of those projects cannot be determined at this time. However, the construction analyses in this Draft EIR are based on two different construction scenarios to provide a conservative, worst-case analysis. The first construction scenario evaluates full buildout of 1,791 additional residential units and 440,000 square feet of non-residential development, consistent with CEQA and South Coast Air Quality Management District (SCAQMD) guidance. Regional construction emissions were calculated for demolition, site preparation, grading, building construction, paving, and architectural coating activities. Operational emissions, including those from vehicle trips and energy use, were also estimated.

The second construction scenario includes construction emissions based on a reasonable worst-case circumstance that includes the simultaneous grading of multiple development areas to reflect a conservative construction scenario. This scenario assumes that grading activities would occur concurrently on five lots—Lots 2, 4, 7, 12, and 13—with full grading of Lots 4, 12, and 13, as well as partial grading of the southern 8 acres of Lot 2 and the northern 11 acres of Lot 7. The purpose of this model run is to capture the potential for overlapping construction schedules. As such, this scenario

focuses on grading to represent the most intensive, concurrent construction activities that would generate peak construction emissions.

3.5.11 Requested Entitlements, Approvals and Permits

The list below includes the anticipated approvals and permits required for the proposed project, with the understanding that the Specific Plan has already been approved by Cypress voters. This Draft EIR analyzes the environmental impacts of the proposed project and provides environmental review sufficient for all necessary entitlements, approvals, permits and other agency actions associated with the proposed project. In accordance with Sections 15050 and 15367 of the *State CEQA Guidelines*, the City is the designated lead agency for the proposed project and has principal authority and jurisdiction for CEQA actions and project approvals. The discretionary entitlements, approvals, and permits for the proposed project include, but are not necessarily limited to the approval of the following:

- Vesting Tentative Tract Map No. 19247; and
- Development Agreement pursuant to Section 65864 *et seq.* of the California Government Code.

In addition to the specific discretionary approvals listed above, subsequent development projects within the Buildout Area would also require discretionary and/or ministerial approvals and permits, including, but not limited to, the approval of site plan review pursuant to Section 5.8 of the Specific Plan, further subdivision maps, demolition permits, grading permits, and building permits.

This page intentionally left blank

4.0 EXISTING SETTING, ENVIRONMENTAL ANALYSIS, IMPACTS, AND MITIGATION MEASURES

OVERVIEW OF ENVIRONMENTAL SETTING

This chapter contains 20 sections, and each section addresses one environmental topic listed in Appendix G to the Guidelines for the California Environmental Quality Act (*State CEQA Guidelines*) (California Code of Regulations [CCR] Title 14, Chapter 3, Sections 15000–15397).

For each environmental impact issue analyzed, this Draft Environmental Impact Report (Draft EIR) includes a detailed explanation of the existing conditions, thresholds of significance that will be applied to determine whether the project's impacts are significant or less than significant, analysis of the environmental impacts, and a determination of whether the project would have a significant impact if implemented. A "significant impact" or "significant effect" means "a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project, including land, air, water, flora fauna, ambient noise, and object of aesthetic significance. An economic or social change by itself shall not considered to be a significant effect on the environment." (14 CCR Section 15382). Each environmental topic section in Chapter 4.0 also includes a discussion of the cumulative effects of the project when considered in combination with other projects, causing related impacts, as required by *State CEQA Guidelines* Section 15130.

Each of the sections is organized into eleven subsections, as follows:

- **Introduction** briefly describes the topics and issues covered in the section.
- **Scoping Process** briefly summarizes the comment letters received in response to the Notice of Preparation (NOP).
- **Methodology** describes the approach and methods employed to complete the environmental analysis for the issue under investigation.
- **Existing Environmental Setting** describes the relevant physical conditions that exist at the time of the issuance of the NOP that may influence or affect the issue under investigation. This section focuses on physical site characteristics that are relevant to the environmental topic being analyzed.
- **Regulatory Setting** lists and discusses the laws, ordinances, regulations, plans, and policies that relate to the specific environmental topic and how they apply to the proposed project.
- **Thresholds of Significance** sets forth the thresholds that are the basis of the conclusions regarding significance, which are primarily the criteria in Appendix G to the *State CEQA Guidelines* and the City of Cypress' (City) *Initial Study/Environmental Checklist*.
- **Project Impacts** describes the potential environmental changes to the existing physical conditions that may occur if the proposed project is implemented. Evidence is presented to show the cause-and-effect relationship between the proposed project and potential changes in

the environment. In accordance with *State CEQA Guidelines* Section 15126.2(a), this Draft EIR is required to "identify and focus on the significant environmental effects" of the proposed project. The magnitude, duration, extent, frequency, and range or other parameters of a potential impact are ascertained to the extent feasible to determine whether impacts may be significant. In accordance with CEQA and the *State CEQA Guidelines*, potential project impacts, if any, are classified as follows for each of the environmental topics discussed in this Draft EIR.

- **Significant and Unavoidable Impact:** An impact is considered *significant and unavoidable* when the Lead Agency finds that even with the application of all feasible mitigation measures or project alternatives, the project would still result in a substantial adverse change in the identified significant environment. In other words, no reasonable actions are available that would reduce the impact to a less than significant level. If the proposed project is approved with significant and unavoidable impacts, the decision-making body is required to adopt a statement of overriding considerations pursuant to *State CEQA Guidelines* Section 15093 explaining why the project benefits outweigh the unavoidable adverse environmental effects caused by those significant and unavoidable environmental impacts.

- **Less Than Significant with Mitigation Incorporated:** An impact is considered less than significant with mitigation incorporated when the proposed project could potentially cause a significant environmental effect, but feasible mitigation measures or project modifications are available and would be implemented to avoid or substantially reduce the significant impact to below the threshold of significance. After mitigation, no significant adverse environmental effects would remain. If the proposed project is approved, the decision-making body is required to make findings pursuant to *State CEQA Guidelines* Section 15091 that significant impacts have been mitigated to the extent feasible through implementation of mitigation measures.

- **Less Than Significant Impact:** An impact is considered less than significant when the proposed project would not result in a substantial adverse change in the environment, and the level of effect would not exceed the applicable threshold of significance established under CEQA. In this case, the impact would be minor, temporary, or adequately controlled through standard regulations, project design features, or existing policies, such that no mitigation measures are required to reduce the impact. No mitigation is required for less than significant impacts.

- **No Impact:** A determination of no impact is made when the proposed project would not result in any change to the physical environment for the resource in question. In this case, there would be no effect on existing environmental conditions, and the impact would not occur under any circumstances.

- **Level of Significance Prior to Mitigation** summarizes the potentially significant impacts of the project, if any, prior to mitigation.

- **Regulatory Compliance Measures and Mitigation Measures** describe relevant laws or regulations that must be adhered to with respect to the construction and/or operation of the

proposed project and that would reduce or lessen potential impacts related to a particular environmental area and identifies project-specific measures that avoid, minimize, rectify, reduce, eliminate, or compensate for a potentially significant impact.

- **Level of Significance after Mitigation** describes the significance of potential impacts after implementation of feasible, recommended mitigation measures. Potential significant and unavoidable impacts are clearly stated in this section.

- **Cumulative Impacts** refers to potential environmental changes to the existing physical conditions that may occur as a result of project implementation together with all other reasonably foreseeable, planned, and approved future projects in the vicinity of the approximately 134 acres of land on which the proposed project would be developed (Buildout Area) that produce related impacts. *State CEQA Guidelines* Section 15355 defines cumulative impacts as "two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts." Cumulative impacts may result from individually minor but collectively significant projects taking place over a period of time. Projects that have progressed to the stage where a project application has been filed are normally treated as foreseeable probable future projects. For each of the environmental topics considered in this Draft EIR, the geographic scope of the cumulative analysis is defined.

Thresholds of Significance

The threshold questions used in this Draft EIR are consistent with Appendix G to the *State CEQA Guidelines*.

Related Projects

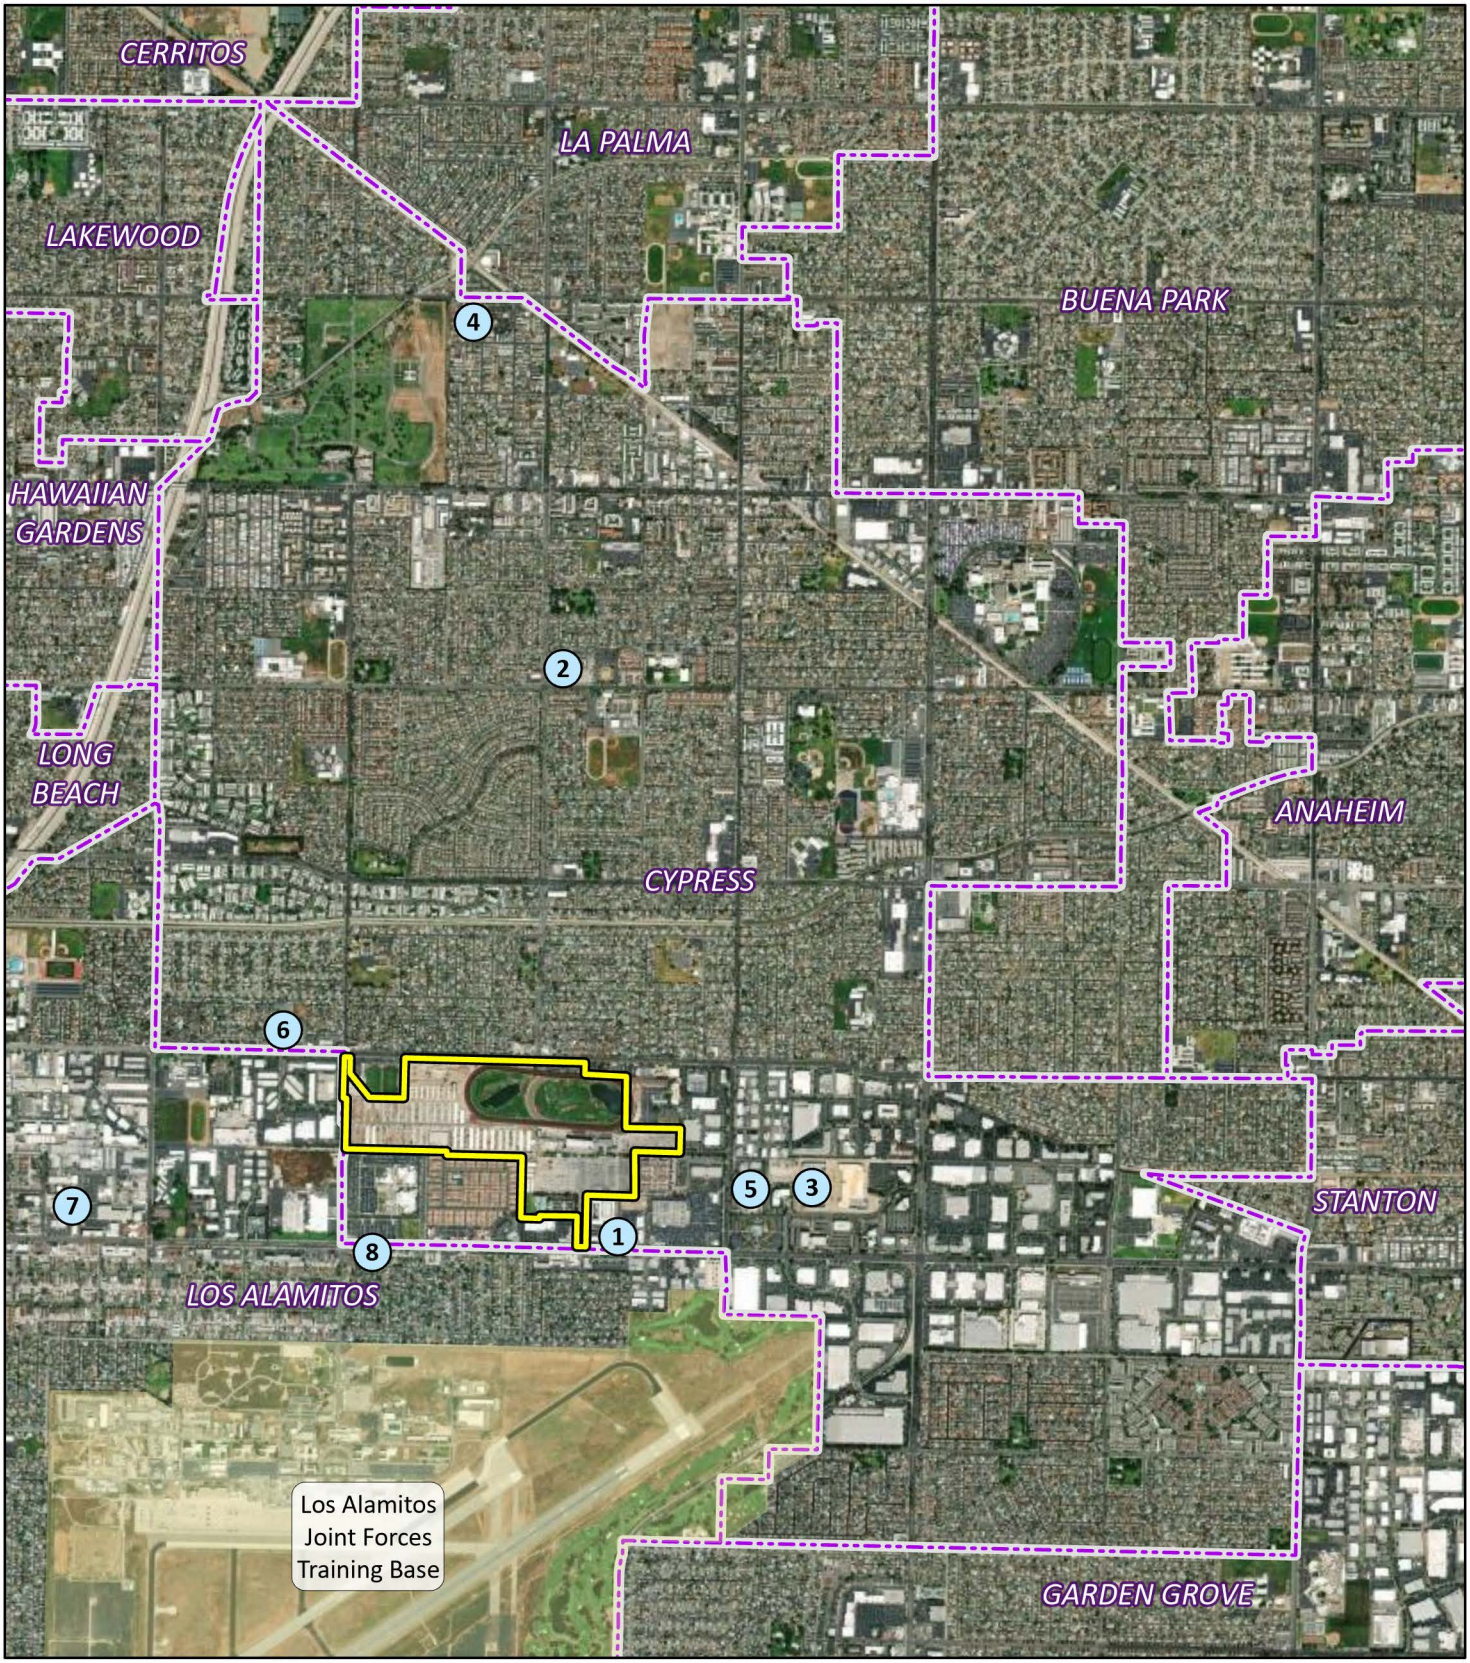
In accordance with *State CEQA Guidelines* Section 15130, cumulative impacts are anticipated impacts of the proposed project along with reasonably foreseeable growth. Reasonably foreseeable growth may be based on either:

- A list of past, present, and probable future projects producing related or cumulative impacts, including, if necessary, those projects outside the control of the agency; or

- A summary of projections contained in the adopted General Plan or related planning document, or in a prior environmental document that has been adopted or certified, and that described or evaluated regional or area-wide conditions contributing to the cumulative impact.

Each environmental topic in this Draft EIR includes a cumulative impact analysis that follows the CEQA-recommended approaches outlined in *State CEQA Guidelines* Section 15130. For topic areas using the project list approach, the analysis begins with a summary of the past, present, and reasonably foreseeable future projects that could contribute to cumulative impacts, including a summary of CEQA findings for the project that underwent environmental clearance. Each section identifies the relevant projects and, where appropriate, specifies the geographic scope for the cumulative analysis if it differs from the overall cumulative project list (for example, when a resource area's impact footprint is broader or more localized than the Buildout Area). For topic areas where the plan-based approach is more appropriate, the analysis relies on regional growth

projections and assumptions from adopted plans and previously certified environmental documents, consistent with CEQA's second allowable method, like air quality, greenhouse gas emissions and energy. This structure ensures that each cumulative impact discussion is tailored to the resource analyzed and grounded in the appropriate scale of cumulative effect.



The discussion of cumulative impacts "should be guided by the standards of practicality and reasonableness" (*Environmental Protection Info. Center v. Department of Forestry & Fire Protection* (2008) 44 Cal.4th 459, 524). A proposal that has not crystallized to the point that it would be reasonable and practical to evaluate its cumulative impacts need not be treated as a probable future project (*City of Maywood v. Los Angeles Unified School District* (2012) 208 Cal.App.4th 362, 397). Rather, a potential future project qualifies for inclusion in an analysis of cumulative impacts only to the extent the future project is "both probable and sufficiently certain to allow for meaningful cumulative impact analysis" (*Id.* at 398; see *City of Long Beach v. Los Angeles Unified School Dist.* (2009) 176 Cal.App.4th 889, 902 [when "review[ing] the agency's decision to include information in the cumulative impacts analysis[,] … [w]e determine whether inclusion was reasonable and practical"]).

Table 4.A: Summary of Related Projects and **Figure 4-1: Related Projects** provide a list of related projects within the cities of Cypress and Los Alamitos.

Table 4.A: Summary of Related Projects

Project No.	Related Project and Location	Description
1	Shea Properties Mixed Use Development (5155–5253 Katella Avenue, Cypress)	Development of a 43,200-square-foot theater, five-story hotel with up to 120 rooms, approximately 20,800 square feet of retail and restaurant uses, and a four-story residential component with up to 251 market-rate apartment units.
2	Melia Homes – Citrus Square (9470 Moody Street, Cypress)	Development of 135 dwelling units, including 56 two-story condominiums and 79 three-story row townhomes.
3	Goodman Commerce Center (5755 and 5885 Plaza Drive, Cypress)	Development of 581,663 square feet of warehouse space.
4	8561 Belmont Street, Cypress	Development of eight multi-family housing units.
5	LTP Modern Machine (10900 Walker Street, Cypress)	Development of a 24,252-square-foot warehouse facility.
6	Sycamore Creek Charter School (4321 Cerritos Avenue, Cypress)	Private school for 340 students.
7	Los Alamitos Medical Center, Los Alamitos	Development of a medical center consisting of 218 beds.
8	4562 Katella Avenue, Los Alamitos	Development of a 5,020-square-foot general office building.

4.1 AESTHETICS

This section identifies the existing aesthetic condition of the Buildout Area and the surrounding area and evaluates the potential impacts of the Specific Plan 3.0 Buildout Project (proposed project) relating to scenic vistas, scenic resources, visual resources and lighting. Information in this section is based on the design guidelines and development standards contained in the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan), the City of Cypress Zoning Ordinance, and the Cypress General Plan Conservation/Open Space/Recreation Element.[1]

4.1.1 Scoping

The City of Cypress (City) received six comment letters during the public review period of the Notice of Preparation (NOP). For copies of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). No comment letters included comments related to aesthetics.

4.1.2 Methodology

The assessment of aesthetic impacts is subjective by nature. This analysis identifies and objectively examines factors that contribute to the perception of aesthetic impacts that could be caused by the proposed project. The potential aesthetic impacts of the proposed project were assessed based on consideration of several factors, including setting, scale, mass, and proportion. Public viewer groups are limited to motorists and pedestrians along public roadways in the project vicinity, as well as users of nearby parks and/or public open spaces.

The concepts and terminology used in this analysis are described below.

4.1.2.1 Scenic Resources

Scenic resources are defined as natural or manmade elements that contribute to an area's scenic value and are generally viewed as visually pleasing or otherwise in a positive light. Scenic resources may include landforms, vegetation, trees, rock outcroppings, water, or historic buildings within a state scenic highway, and may include a cultural modification to the natural environment. A development could impact a scenic resource directly through physical changes (e.g., removal, disturbance, or development on a ridgeline, hillside, peak or shoreline) and/or through limiting access to the scenic resource to the viewing public. The degree to which these resources are present or significant is based on the values of the community and the viewing public.

4.1.2.2 Scenic Vista

A scenic vista typically consists of an expansive view or viewshed designated by the community or a feature valued by the viewing public. A development project can affect a scenic vista by either blocking or partially obstructing publicly available views of the vista, or by blocking access to said vistas.

[1] City of Cypress. 2001. *Cypress General Plan Conservation, Open Space/Recreation Element*. Website: https://www.cypressca.org/home/showpublisheddocument/686/636123123792970000 (accessed March 2026).

4.1.2.3 Scenic Corridors

Scenic corridors are public features that facilitate movement (primarily by automobile, transit, bicycle, or foot) from one location to another and provide expansive views of natural landscapes and/or visually attractive manmade development. Scenic corridors analyzed under the California Environmental Quality Act (CEQA) typically include State-designated scenic highways and locally designated scenic routes.

4.1.2.4 Scenic Character

The scenic character of an area is defined by the natural or manmade features that create an overall impression of an area. In this context, scenic character will vary widely based on one's location. For example, the scenic character of a residential neighborhood may be defined by a pleasing streetscape with mature landscaping and well-maintained residences, while that of a commercial area may be defined by the age, style, and mix of uses; the pedestrian scale (or lack thereof); access and parking areas; landscaping; and public amenities. In general, scenic character can be organized around four basic elements: (1) site utilization; (2) buildings and structures; (3) landscaping; and (4) signage. Adverse effects to scenic character may result from the development of incompatible uses, the absence of required public amenities, poor building siting and design, and/or insufficient, inappropriate, incompatible signage, landscaping, screening, or lighting.

4.1.2.5 Glare

Glare is a continuous or periodic intense light that may cause eye discomfort or be temporarily blinding to humans. Glare in the form of sunlight reflecting off windows and building surfaces may affect adjacent uses or interfere with the operation of motor vehicles, aviation, or other activities. Glare can also be produced during evening and nighttime hours by artificial light sources, such as illuminated signage and vehicle headlights. Glare-sensitive uses generally include residences and transportation corridors (i.e., roadways).

4.1.2.6 Light Sources

A light source is a device that produces illumination, including incandescent bulbs, fluorescent and neon tubes, halogen and other vapor lamps, light-emitting diode (LED) fixtures, and reflecting surfaces or refractors incorporated into a lighting fixture. Any translucent enclosure of a light source is considered to be part of the light source.

4.1.2.7 Vantage Point

A vantage point is a particular point of observation.

4.1.2.8 Light and Glare

The analysis of light and glare identifies the location of light-sensitive land uses and describes the existing ambient conditions in and in the vicinity of the Buildout Area. The analysis describes the proposed project's light and glare sources and the extent to which project lighting, including any potential illuminated signage, would spill off the Buildout Area onto adjacent light-sensitive areas. The analysis also describes the affected street frontages, the direction in which the light would be focused, and the extent to which the proposed project would illuminate sensitive land uses. The

analysis also considers the potential for glare in the form of sunlight to reflect off of windows and building surfaces and the extent to which such glare would affect adjacent uses or interfere with the operation of motor vehicles, aviation, or other activities.

4.1.3 Environmental Setting

The Buildout Area is relatively flat with slight elevation changes throughout. A variety of existing structures and facilities are located on the Los Alamitos Race Course (LARC) Property that support horse racing, training, and community activities. Structures include a race track, grandstand structure, two artificial water features inside the race track, one-story clubhouse and restaurant structures, lighting structures, approximately 41 permanent one-story barns and several temporary structures and barns. The LARC Property also contains parking areas, landscaping, drainage features, sheds, maintenance areas, and perimeter fencing. Regional vehicular access to the Buildout Area is provided by Interstates 605 and 405 (I-605 and I-405), which are approximately 1.5 miles to the west and 2.1 miles to the south, respectively; Beach Boulevard (State Route 39 [SR-39]), approximately 2.7 miles to the east; and State Route 22 (SR-22), approximately 2 miles to the south.

The Buildout Area is bounded by W. Cerritos Avenue to the north, several existing commercial and institutional uses along and near Walker Street to the east, Katella Avenue and several existing commercial, retail and residential uses to the south, and Lexington Drive to the west. Immediately northwest of most of the Buildout Area is Lexington Park, a 9-acre park located at 4600 W. Cerritos Avenue at the southeast corner of the Cerritos Avenue/Lexington Drive intersection, immediately west and north of the Buildout Area. Immediately east and north of the Buildout Area is Grace Church, located at 5100 W. Cerritos Avenue.

The area southeast of the Buildout Area is developed with the Belmont residential project by Melia Homes, which consists exclusively of residential uses, and The Square at Cypress by Shea Homes, which includes residential, hotel, retail, and service uses. Farther east, a retail center at 5401 Katella Avenue contains a Costco Wholesale warehouse and gas station, as well as other commercial uses.

Southwest of the Buildout Area, along Katella Avenue, are Cottonwood Church (4505 Katella Avenue), the Ovation at Flora Park senior housing community, and a commercial center that includes restaurant, retail, service uses, a 24 Hour Fitness, and the Residence Inn Cypress Los Alamitos (4931 Katella Avenue). West of Lexington Drive, existing development includes light industrial, office, and commercial uses. Buildings within the vicinity of the Buildout Area generally range from one to four stories (approximately 15 to 70 feet in height) and include a mix of residential, commercial, industrial, and public uses.

The Buildout Area includes approximately 134 acres of land. As such, there are many different public vantage points of the Buildout Area. It is visible from the north by vehicles and pedestrians traveling southbound along Moody Street and along both sides of W. Cerritos Avenue. From the east, the Buildout Area is visible to vehicles and pedestrians traveling along Vessels Circle and other access roadways. From the west, the Buildout Area is visible to vehicles and pedestrians traveling along Lexington Drive and people visiting Lexington Park. From the south, the Buildout Area is visible to vehicles and pedestrians traveling along Katella Avenue and Enterprise Drive.

4.1.4 Regulatory Setting

The following section describes the federal, State, regional, and local regulatory framework applicable to analyzing potential impacts related to aesthetics from development of the proposed project.

4.1.4.1 Federal Regulations

No federal regulations pertaining to aesthetics are applicable to the proposed project.

4.1.4.2 State Regulations

Caltrans Scenic Highway Program. The California Department of Transportation's (Caltrans) Scenic Highway Program protects the natural scenic beauty of the State's highways and corridors through its designated scenic highways throughout the State.[2] Caltrans designates freeways, highways, roads, or other public rights-of-way (ROW) as scenic highways pursuant to a variety of factors, including whether the ROW traverses an area of outstanding scenic quality and contains striking views, flora, geology, and other unique natural attributes. Other considerations given to a scenic highway designation include how much of the natural landscape a traveler may see and the extent to which visual intrusions degrade the scenic corridor.

According to Caltrans, the only State-designated Scenic Highway in Orange County is a 4-mile portion of State Route 91 (SR-91) from State Route 55 (SR-55) to east of the Anaheim city limits. This portion of SR-91 is approximately 12 miles northeast of the Buildout Area. The nearest State highway that is eligible for official designation as a State Scenic Highway is a portion of Pacific Coast Highway (PCH or State Route 1 [SR-1]), which is located approximately 5.5 miles southwest of the Buildout Area in the City of Seal Beach.

Title 24 of the California Code of Regulations Building Energy Efficiency Standards. The California Building Code (California Code of Regulations [CCR], Title 24)—including Title 24, Part 6—includes Section 140.7 and Section 130.2 of the 2022 Building Energy Efficiency Standards, which regulate outdoor lighting characteristics such as maximum power, brightness, shielding, and the use of sensor controls to automatically turn lighting on and off. Lighting standards vary by designated lighting zones, which are established based on ambient light levels and land use intensity. These zones are classified using population data from the 2010 United State (U.S.) Census and range from Lighting Zone 0 (very low ambient light) to Lighting Zone 4 (high ambient light). Specifically, Lighting Zone 1 represents low ambient illumination (e.g., rural or natural areas), Zone 2 represents moderate ambient illumination (e.g., rural/suburban), and Zone 3 applies to urban areas with moderately high ambient illumination. The Buildout Area is located in Lighting Zone 3 (LZ3), and outdoor lighting for the proposed project would be required to comply with all applicable standards for this zone, including limits on lighting power density and requirements for full cutoff fixtures and motion-sensing controls, thereby reducing energy consumption and minimizing light pollution.

[2] California Department of Transportation (Caltrans). 2008. Scenic Highway Guidelines. Website: https://dot.ca.gov/programs/design/lap-landscape-architecture-and-community-livability/lap-liv-i-scenic-highways (accessed March 2026).

4.1.4.3 Regional Regulations

No regional regulations pertaining to aesthetics are applicable to the proposed project.

4.1.4.4 Local Regulations

Cypress Town Center and Commons Specific Plan 3.0. The Specific Plan includes sustainable design strategies for development within the Buildout Area and incorporates by reference relevant design strategies in the California Green Building Standards Code and the City's Residential Green Building Suggestions and Water Efficient Landscape Guidelines. Applicants for specific development projects within the Buildout Area would comply with, as applicable, these sustainable design strategies. The sustainable design strategies expressly stated in the Specific Plan with respect to scenic quality include the following:

- Encourage the use of low-contrast lighting, low-voltage fixtures and energy-efficient bulbs, such as compact fluorescent and light emitting diodes.
- Prioritize the use of native and drought tolerant plant species to reduce water demand.
- Limit the use of turf as groundcover and encourage water-conserving native groundcovers or perennial grasses, shrubs, and trees.
- Provide landscaped shade canopies to reduce the heat island effect in surface parking areas.
- Use renewable or recycled building materials to the extent feasible. Such materials may include flooring alternatives like bamboo, wheatboard, and cork. Linoleum, exposed concrete, and recycled-content ceramic tiles are also desirable materials.

The Specific Plan also specifies that all multi-family residential development within the Buildout Area shall comply with the applicable requirements in Section 3.17.310 of the Zoning Ordinance, which includes objective development standards relating to aesthetics and scenic quality, including exterior lighting and landscaping and open space requirements, except as otherwise required or permitted by State law or provided under the Specific Plan.

Cypress Zoning Ordinance. The Specific Plan establishes the zoning for the Buildout Area and prevails over and supersedes conflicting provisions in the City's Zoning Ordinance (Appendix I to the Municipal Code). Where no such conflict exists, the applicable requirements in the Zoning Ordinance shall apply. The Zoning Ordinance includes development standards relevant to aesthetics and scenic quality that do not conflict with the Specific Plan and therefore apply to the Buildout Area, as follows:

- **Section 3.11.060.A (Exterior Fixtures):** Lighting fixtures shall be architecturally compatible with the character of the surrounding structure(s) and shall be energy efficient. Fixtures shall be appropriate in height, intensity, and scale to the use they are serving.
- **Section 3.11.060.B (Intensity):** The level of parking lot light projected onto any ground or wall surface shall not be less than two (2) footcandles nor more than five (5) footcandles at the base

of the light fixture. Building-mounted decorative lights shall not exceed five (5) footcandles measured five (5) feet from the light source.

- **Section 3.11.060.C (Security Lighting):** Security lighting shall provide a minimum of two (2) footcandles and a maximum of three (3) footcandles at the ground level of the entrance.

- **Section 3.11.060.D (Shielding of Light Source):** Where the light source is visible from outside the project boundary, shielding shall be required to reduce glare so that neither the light source nor its image from a reflective surface shall be directly visible from any point beyond the property line. This requirement shall not apply to traffic safety lighting or public street lighting.

- **Section 3.14.050.C.4 (Required Improvements for Off-Street Parking Areas):** Off-street parking areas shall have lighting as specified by the building official and police department, with special attention to directing light and glare away from adjacent properties. The level of parking lot light shall not exceed one footcandle at a site's property lines.

- **Section 3.15.060 (General Provisions for All Signs):** All signs shall be structurally safe, consist of rust-inhibitive material, be maintained in good condition, and be consistent with the requirements of Section 3.15, including standards related to the sign height, width, and area.

- **Section 3.15.070 (Prohibited Signs):** The following signs are specifically prohibited within the City: (1) Signs painted or imprinted upon, or attached in any way to a motor vehicle, vehicle part, or trailer that is parked or stored at all times on or within 50 feet of the City's arterial highways, and for a period in excess of 24 hours on all other public rights-of-way; (2) Roof signs; (3) The exhibition, posting, or displaying of any statement, symbol, or picture of an obscene nature upon any sign or wall; (4) Signs painted on structures in all zoning districts except the CH (Commercial Heavy) zoning district; (5) Any sign rotating or simulating movement by fluttering, spinning, or the use of reflective devices; (6) Any sign blinking, flashing, or animated by lighting in any fashion; (7) Canopy signs that project above the canopy; (8) Signs encroaching upon or overhanging adjacent property; (9) Any sign erected, constructed, enlarged, modified, or relocated within the City without a building permit; (10) Any electrical sign or sign illuminated by electricity that is erected, constructed, enlarged, modified, or relocated within, without both a building permit and an electrical permit; (11) Any sign that simulates or imitates in size, color, lettering, or design and traffic sign or signal, or which makes use of the words "stop," "look," "danger," or any other words, phrases, symbols, or characters in a manner that interferes with, misleads, or confuses traffic; (12) Aerial signs and displays; (13) Inflatable displays; (14) Portable A-frame signs; and (15) Supergraphic signs.

- **Section 3.15.110 (Standards for Specific Types of Signs):** Neon signs, non-profit organization special event signs, political campaign signs, signs over a public right-of-way, special purpose signs, temporary signs, and window signs shall be subject to the development standards set forth in this section.

- **Section 3.17.310(D)(4) (Objective Standards for Multi-Family Dwellings):** Sets forth exterior lighting requirements for multi-family residential developments. It mandates that lighting be provided for key areas such as building entries, pedestrian pathways, open spaces, parking

areas, and trash enclosures. Fixtures must use high-efficiency, warm-white bulbs and be architecturally compatible with the development. Pedestrian pathway lighting must be spaced no more than 30 feet apart and mounted at heights between 3 and 12 feet. Parking lot lighting must maintain an average illumination level between 2 and 5 footcandles, with fixture heights not exceeding 15 feet and designed to prevent glare or light spill onto adjacent properties. A photometric lighting plan demonstrating compliance is required prior to issuance of building permits. To further limit light trespass, illumination at property lines must not exceed 0.5 footcandle.

4.1.5 Thresholds of Significance

The thresholds of significance for aesthetic impacts used in this analysis are consistent with Appendix G to the *State CEQA Guidelines*. Based on these thresholds, the proposed project would have a significant impact with respect to aesthetics and visual resources if it would:

Threshold 4.1.1: Have a substantial adverse effect on a scenic vista;

Threshold 4.1.2: Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway;

Threshold 4.1.3: In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings. (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, conflict with applicable zoning and other regulations governing scenic quality; or

Threshold 4.1.4: Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area.

4.1.6 Project Impacts

Threshold 4.1.1: Would the project have a substantial adverse effect on a scenic vista?

***No Impact*.** The City's General Plan does not provide a definition of scenic vista. However, a scenic vista can be defined as a viewpoint that provides expansive views of a highly valued landscape for the benefit of the general public. Aesthetic components of a scenic vista generally include (1) scenic quality, (2) sensitivity level, and (3) view access. Potential scenic vistas include areas with views of the coastline, mountains, or other prominent scenic features that are considered significant visual resources for residents and businesses.

The City is almost entirely developed, and no public vantage point provides substantial views of any water bodies, mountains, hills, or any other significant visual resources.[3] Given that no scenic vista is currently viewable from any public vantage point in proximity to the Buildout Area, the development of the proposed project would not alter an existing scenic vista or block views of any

[3] City of Cypress. 2001. *Cypress General Plan.* September.

scenic vistas. Therefore, the proposed project would not have a substantial adverse effect on a scenic vista, and no impact would occur.

Threshold 4.1.2: Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact. The Caltrans Scenic Highway Program protects the natural scenic beauty of the State's highways and corridors by designating scenic highways throughout the State. Caltrans designates freeways, highways, roads, or other public ROW as scenic highways pursuant to a variety of factors, including whether the ROW traverses an area of outstanding scenic quality and contains striking views, flora, geology, and other unique natural attributes. Other considerations given to a scenic highway designation include how much of the natural landscape a traveler may see and the extent to which visual intrusions degrade the scenic corridor.

There are no designated State Scenic Highways within the City's limits. According to the List of Eligible and Officially Designated State Scenic Highways published by Caltrans, the only State-designated Scenic Highway in the County is a 4-mile segment of SR-91 from SR-55 to the east of the Anaheim city limits.[4] That segment of SR-91 is approximately 12 miles northeast of the Buildout Area. The nearest State highway that is eligible for official designation as a State Scenic Highway is a segment of PCH (or SR-1) located in the City of Seal Beach, approximately 5.5 miles southwest of the Buildout Area. Due to distance and intervening land uses, no portion of the Buildout Area is visible from the officially designated segment of SR-91 or the eligible segment of PCH. Therefore, the proposed project would have no impact related to the substantial damage of scenic resources within a State Scenic Highway, and no mitigation is required.

Threshold 4.1.3: In nonurbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

***Less Than Significant Impact*.** According to the U.S. Census Bureau, the City is located within the Los Angeles—Long Beach—Anaheim, CA Urbanized Area.[5] As described in the *State CEQA Guidelines* Section 15387 and defined by the U.S. Census Bureau, an "urbanized area" is a central city or a group of contiguous cities with a population of 50,000 or more people, together with adjacent densely populated areas having a population density of at least 1,000 people per square mile.[6] Given

[4] California Department of Transportation (Caltrans). 2015. Last modified July 2019. List of Eligible and Officially Designated State Scenic Highways. Website: https://dot.ca.gov/-/media/dot-media/programs/design/documents/desig-and-eligible-aug2019_a11y.xlsx (accessed May 19, 2025).

[5] United States Census Bureau. 2010a. Los Angeles—Long Beach—Anaheim, CA Urbanized Area No. 51445. Website: https://www2.census.gov/geo/maps/dc10map/UAUC_RefMap/ua/ua51445_los_angeles--long_beach--anaheim_ca/DC10UA51445_000.pdf (accessed May 19, 2025).

[6] United States Census Bureau. 2010b. Census Urban Area FAQs. Website: https://www.census.gov/programs-surveys/geography/about/faq/2010-urban-area-faq.html (accessed May 19, 2025).

that the collective population of the City of Cypress and the contiguous cities substantially exceeds 50,000, the Buildout Area and the surrounding project vicinity are located in an urbanized area. Therefore, the applicable portion of Threshold 4.1.3 is whether the proposed project would conflict with applicable zoning and other regulations governing scenic quality.

The proposed project would include higher density development within the Buildout Area than currently exists. As described in the Chapter 3.0, Project Description, the Specific Plan allows a maximum of 1,791 residential units and, for purposes of the environmental review in this Draft EIR, up to 440,000 square feet of non-residential development within the Buildout Area. The Specific Plan provides specific development standards for residential and mixed-use development, including maximum structure height and setback requirements, which would be applicable to the future development under the proposed project. As provided in Table 3-1 of the Specific Plan, future single-family detached residential structures shall not exceed 35 feet and 2 stories, and future single-family attached residential structures shall not exceed 35 feet and 3 stories. In addition, future senior housing structures shall not exceed 35 feet in height, and future structures within the mixed-use district shall not exceed 75 feet in height. Existing development in the vicinity of the Buildout Area includes residential and commercial buildings that generally range in height from one to three stories. In addition, some surrounding development, such as the Homewood Suites and the Acadia Apartments located approximately 800 feet south of the Buildout Area, exceed three stories and approach 75 feet in height. As such, the development allowed in the Buildout Area pursuant to the Specific Plan would be consistent with the mass and scale of existing development near the Buildout Area. In addition, future development facilitated by the proposed project would be required to adhere to the development and design guidelines contained in the Specific Plan, including landscaping requirements and those related to size and scale of the future buildings.

The proposed project would change the aesthetic character of the Buildout Area. However, all development pursuant to the Specific Plan would be required to comply with all relevant sustainable design strategies stated or referenced in the Specific Plan. In addition, all development within the Buildout Area would be required to comply with the design regulations in the Zoning Ordinance that relate to scenic quality, including the objective design standards in Section 3.17.110 of the Zoning Ordinance with respect to multi-family development that are not inconsistent with the Specific Plan and Section 3.15 of the Zoning Ordinance related to signage design standards. Therefore, the proposed project would have a less than significant impact related to conflict with applicable zoning and other regulations governing scenic quality, and no mitigation is required.

Threshold 4.1.4: Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less Than Significant Impact. Currently, lighting is produced in the vicinity of the Buildout Area by surrounding commercial and residential development, street lighting, and vehicles on adjacent roadways, including Katella Avenue, West Cerritos Avenue, Lexington Drive, and Walker Street. In addition, existing uses within the Buildout Area, such as the race track, include outdoor lighting features. In the existing condition, the surface parking area on the south side of the Grandstand building is lit by light poles that are approximately 20 feet tall. Additionally, during evening horse racing events, the race track is illuminated by approximately 45 high-mast lights, with additional lighting mounted on the roof of the Grandstand building. Existing light sources in the vicinity of the

Buildout Area also include headlights on nearby roadways, building facade and interior lighting, and pole-mounted lighting in the parking areas of adjacent development. Lighting from existing distant development within the City also contributes to the background lighting in the vicinity of the Buildout Area.

Construction: Construction activities would occur only during daylight hours. Any construction-related illumination during evening and nighttime hours would be used for safety and security purposes only and would occur only for the duration required for the temporary construction process. Light resulting from construction activities would not substantially impact sensitive uses, substantially alter the character of surrounding uses or interfere with the performance of off-site activities. In addition, construction activities are not anticipated to result in flat, shiny surfaces that would reflect sunlight or cause other natural glare. Minor glare from sunlight on construction equipment and vehicle windshields is not anticipated to impact visibility in the area as the construction sites would be fenced and shielded from pedestrian and vehicular views. In addition, construction vehicles would not operate at night and thus would not create nighttime sources of glare. Therefore, construction of the proposed project would not create a new source of substantial light or glare that would adversely affect day or nighttime views in the area, and light and glare impacts associated with construction would be less than significant. No mitigation is required.

Operation: Implementation of the proposed project would facilitate the removal of the existing uses within the Buildout Area and allow up to 1,791 residential units and, for environmental review purposes, 440,000 square feet of non-residential development. As development occurs within the Buildout Area, new housing and non-residential development would result in new sources of light and glare, including from new street and pedestrian lighting, individual lighting from new buildings, reflective building materials, such as glass, stainless steel, aluminum, and photovoltaic panels. In addition, the proposed project would increase vehicle trips to and from the Buildout Area that would incrementally increase ambient nighttime illumination in the area.

All project lighting is required to meet all applicable lighting standards in the City's Zoning Ordinance. As required by Section 3.11.060.A (Exterior Features) of the Zoning Ordinance, lighting fixtures shall be architecturally compatible with the character of the surrounding structure(s) and shall be energy efficient. Fixtures shall be appropriate in height, intensity, and scale to the use they are serving. In accordance with Section 3.11.060.B (Intensity), the level of parking lot light projected onto any ground or wall surface shall not be more than 5 footcandles at the base of the light fixture and building-mounted decorative lights shall not exceed 5 footcandles measured 5 feet from the light source. In accordance with Section 3.11.060.C (Security Lighting), security lighting shall provide a maximum of 3 footcandles at the ground level of the project entrances. Pursuant to Section 3.11.060.D (Shielding of Light Source), where a project light source is visible from outside the project boundary (other than public street lighting), the light source shall be shielded to reduce glare so that neither the light source nor its image from a reflective surface shall be directly visible from any point beyond the property line. As required by Section 3.14.050.C.4 (Required Improvements for Off-Street Parking Areas), the level of parking lot light shall not exceed 1 footcandle at the boundaries of the Buildout Area.

Section 4.6: Lighting, of the Specific Plan includes policies to minimize light impacts on surrounding uses: (1) encourage the use of low-contrast lighting, low-voltage fixtures and energy-efficient bulbs, such as compact fluorescent and light emitting diodes; (2) promote the use of lights with automated occupancy sensors in nonresidential buildings that automatically shut off when rooms are unoccupied; and (3) utilize solar-powered lights in landscaped areas for energy savings where possible.

In addition, all illuminated and neon signs associated with future development within the Buildout Area would be required to adhere to the development standards detailed in Section 3.15.110 (Standards for Specific Types of Signs) of the Zoning Ordinance. Section 3.15.110(A) states that the use of neon signs shall enhance the viewer's appreciation of the City's nighttime atmosphere and shall be primarily aesthetic and decorative with a utilitarian function only when used as signage. In addition, neon signage and linear tubing shall be UL listed with a maximum 20 amps per circuit and shall be designed to accommodate a dimmer in order to reduce the brightness of the neon. Neon linear tubing shall also not exceed one-half in width, shall reinforce the architecture of a structure, and shall be concealed from view when possible through the use of architectural features (e.g., parapets, cornices, etc.), and neon signs adjacent to residential uses shall be a maximum of one-half footcandle from the property line.

Although the proposed project would increase the overall intensity of on-site land uses and associated lighting, the increase in lighting would not result in substantial increases in light intensity at off-site locations through compliance with the applicable lighting standards in the Specific Plan and the Zoning Ordinance. In addition, light intensity diminishes rapidly as an observer moves away from the light source. As such, the intensity of project-related lighting would be concentrated on-site with little potential to create perceptible changes in ambient lighting intensity at off-site, light-sensitive locations.

Daytime glare can result from natural sunlight reflecting from a shiny surface that would interfere with the performance of an off-site activity, such as the operation of a motor vehicle. Reflective surfaces can be associated with window glass and polished surfaces. The proposed buildings would incorporate a variety of building materials, which would primarily be non-reflective materials (i.e., neutral colors and a variety of materials, such as tile, cement, plaster, and wood). Therefore, the proposed project would not have the potential to produce a substantial degree of glare.

Nighttime lighting and glare sources from the proposed project could also include lighting from interior and exterior building lighting, security lighting, parking lot lighting, and vehicle headlights. The nighttime glare produced by these sources would be similar to the existing nighttime glare produced by the surrounding commercial/retail, residential and hotel uses and would not result in enough glare to be considered substantial or affect nighttime view because lighting would be required to meet all applicable lighting standards in the Specific Plan and the Zoning Ordinance as discussed above.

For these reasons, the proposed project would not create a new source of substantial light or glare that would adversely affect day or nighttime views in the surrounding urban area, and project impacts would be less than significant. No mitigation is required.

4.1.7 Level of Significance Prior to Mitigation

The proposed project would not result in any significant impacts related to aesthetics, and no mitigation is required.

4.1.8 Regulatory Compliance Measures and Mitigation Measures

No regulatory compliance measures are applicable to the proposed project, and no mitigation measures are required.

4.1.9 Level of Significance after Mitigation

The proposed project would not result in any significant impacts related to aesthetics, and no mitigation is required.

4.1.10 Cumulative Impacts

As defined in Section 15130 of the *State CEQA Guidelines*, cumulative impacts are impacts created as a result of the combination of an individual project together with other past, current, and probable future projects causing related impacts. An EIR must discuss cumulative impacts of a project when the project's incremental effect is cumulatively considerable. The cumulative impact area for aesthetics related to the proposed project are projects located within 0.5 mile of the Buildout Area, as these projects would be collectively visible from the same public vantage points.

Of the eight related projects provided in **Table 4.A: Summary of Related Projects** in Chapter 4.0, Existing Setting, of this Draft EIR, five projects that are approved or under construction within the cities of Cypress and Los Alamitos are within 0.5 mile of the Buildout Area, including the Shea Properties Mixed Use Development Project (Related Project 1), Goodman Commerce Center Project (Related Project 3), LTP Modern Machine Project (Related Project 5), Sycamore Creek Charter School Project (Related Project 6), and 4562 Katella Avenue Project (Related Project 8). The Melia Homes Project (Related Project 2), 8561 Belmont Street Project (Related Project 4), and Los Alamitos Medical Center Project (Related Project 7) are farther than 0.5 mile from the Buildout Area and would not be collectively visible from the same public vantage points. Therefore, these projects are not included in this cumulative aesthetic analysis.

Overall, the development of the related projects in combination with the proposed project would not substantially degrade the existing character or quality of the environment because the project area is already highly urbanized, and these related projects are or would be well designed to be compatible with one another and the existing buildings in the surrounding area. In addition, similar to the proposed project, all related projects would be required to adhere to existing City regulations relating to aesthetic and visual character, including specific development standards for the respective project sites, Section 3.15 of the Zoning Ordinance related to signage design standards, and lighting standards detailed in Section 3.11 of the Zoning Ordinance. In addition, as discussed above, existing development in the vicinity of the Buildout Area is similar in size and scale as the future development envisioned in the Buildout Area. As such, implementation of the proposed project represents a continuation of the existing development pattern in the City, and the proposed project's potential cumulative impact with respect to visual character would be less than significant.

Moreover, some of the related projects within 0.5 mile of the Buildout Area have undergone environmental review pursuant to CEQA, which included an analysis of potential aesthetic impacts. According to the EIR prepared for the Shea Properties Mixed Use Development (Related Project 1), no impacts relating to scenic vistas would occur with implementation of the project and less than significant impacts to visual character and light and glare would occur. Further, the EIR determined that cumulative aesthetic impacts would be less than significant. In addition, Goodman Commerce Center and the 5665 Plaza Drive Projects (Related Project 3) were analyzed in an Initial Study/ Mitigated Negative Declaration (IS/MND 2023), and an EIR in 2024 respectively, which determined that all impacts relating to aesthetics would be less than significant, or no impact would occur. The Sycamore Creek Charter School Project (Related Project 6) and 4562 Katella Avenue Project (Related Project 8) were determined to be exempt from CEQA review under Section 15332 of the *State CEQA Guidelines* (for infill development) and Notices of Exemption (NOEs) were prepared. In order for a project to be exempt under Section 15332 of the *State CEQA Guidelines*, the project must be consistent with the applicable General Plan designation and General Plan policies, as well as with applicable zoning designation and regulations, including those related to aesthetic resources. As such, development of the related projects in combination with the proposed project would not result in significant aesthetic impacts. The LTP Modern Machine Project (Related Project 5) would also be required to undergo environmental review pursuant to CEQA, which would include an analysis of potential aesthetic impacts and the identification of any mitigation measures to reduce potential impacts, if necessary.

With regard to light and glare, the Buildout Area is located within a highly urbanized community surrounded by major arterial streets, with urban lighting characteristics exhibiting relatively high ambient nighttime light levels. As such, the proposed project and nearby related projects, including those listed above (which would include many of the same types of land uses as would be allowed within the Buildout Area under the Specific Plan) would not substantially alter the existing light and glare currently experienced in the area. In addition, cumulative lighting would not be expected to interfere with the performance of off-site activities given the relatively high ambient nighttime artificial light levels already present. Furthermore, the related projects are also required to adhere to applicable City requirements regarding lighting, similar to the proposed project, which would minimize the cumulative light and glare impact. As such, there would be no cumulatively considerable impact related to light and glare.

Therefore, because the proposed project would not result in significant impacts related to aesthetics, and the proposed project in combination with the related projects within 0.5 mile of the Buildout Area would be required to adhere to State and local regulations designed to reduce and/or avoid impacts related to aesthetics, the proposed project's impact related to aesthetics would not be cumulatively considerable.

This page intentionally left blank

4.2 AGRICULTURE AND FORESTRY RESOURCES

This section evaluates the potential for implementation of the Specific Plan 3.0 Buildout Project (proposed project) to result in impacts to agriculture and forestry resources. This section also describes the existing setting for agriculture and forestry resources within and near the Buildout Area and sets forth the relevant regulatory requirements that apply to the proposed project's potential impacts on agriculture and forestry resources.

4.2.1 Scoping Process

The City of Cypress (City) received six comment letters during the public review period of the Notice of Preparation (NOP). For a copy of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). None of the comment letters included comments related to agriculture and forestry resources.

4.2.2 Methodology

This section is based, in part, on information provided by the California Department of Conservation (DOC) Farmland Mapping and Monitoring Program (FMMP), the United States Department of Agriculture (USDA), and the Natural Resources Conservation Service (NRCS), as well as applicable provisions of the City of Cypress' General Plan and the County of Orange's (County) General Plan. Impacts to agriculture and forestry resources were assessed based on documents and maps from the DOC, the County Agricultural Commissioner's Office, and the City's General Plan. Impacts to forestry resources were considered based on the proposed project's potential to convert or accelerate deterioration of forestry resources.

This information was used in this section of the Draft EIR to assess potential impacts to agriculture and forestry resources within the Buildout Area. Impacts that could result from implementation of the proposed project were evaluated qualitatively based on existing conditions in the Buildout Area,[1] expected construction practices, and operational activities.

4.2.3 Existing Environmental Setting

The Buildout Area is predominantly characterized by urban development and urban built-out land. The Buildout Area is surrounded by West Cerritos Avenue to the north; Grace Church and commercial uses to the east; Cypress Corporate Park, Cottonwood Church, the Square at Cypress, the Belmont residential project, the Ovation at Flora Park, a commercial center, a 24 Hour Fitness, a Marriott Hotel, commercial and retail services including a Costco Warehouse and restaurants, and Katella Avenue to the south; and Lexington Park and Lexington Drive to the west.

The Buildout Area is not used for agricultural production and is not designated Prime Farmland, Unique Farmland, or Farmland of Statewide Importance on maps prepared as part of the DOC FMMP. As of 2020, the entire Buildout Area and surrounding area was designated as "Urban and

[1] As described in Chapter 3.0 of this Draft EIR, the baseline condition generally consists of the existing conditions in and in the vicinity of the Buildout Area at the time the NOP was published (April 4, 2022).

Built-Up Land."[2] The nearest Prime Farmland is located approximately 2.5 miles southwest of the site, south of Interstate 405 and adjacent to the Seal Beach National Wildlife Refuge. There are no parcels within the Buildout Area that are currently under a Williamson Act contract.

4.2.3.1 Forestry Resources

As discussed above, the Buildout Area is predominantly characterized by urban built-out land and is currently developed and highly disturbed. Specifically, under existing conditions, the Buildout Area is occupied by the Los Alamitos Race Course (LARC) and Grace Church and does not contain any forest land.

4.2.4 Regulatory Setting

The following section describes the federal, State, regional, and local regulatory framework applicable to analyzing potential impacts related to agriculture and forestry resources from development of the proposed project.

4.2.4.1 Federal Regulations

No federal plans, policies, regulations, or laws related to agriculture and forestry resources are applicable to the Buildout Area because the Buildout Area is privately owned and does not include any lands owned by the federal government or require federal approvals related to agriculture and forestry resources.

4.2.4.2 State Regulations

California Department of Conservation Farmland Mapping and Monitoring Program. Pursuant to California Government Code Section 65570, the DOC FMMP compiles consistent, timely, and accurate data to decision-makers for use in planning for the present and future of California's agricultural land resources. The FMMP provides maps and statistical data to the public, academia, and local, State, and federal governments on the nature, location, and extent of farmland, grazing land, and urban built-up areas in the State to assist in making informed decisions for the best utilization of California's farmland. Government Code Section 65570 mandates the FMMP to biennially report to the State Legislature on the conversion of farmland and grazing land and to provide maps and data to local government and the public. The FMMP also was directed to prepare and maintain an automated map and database system to record and report changes in the use of agricultural lands. These maps combine soil survey and current land use information from the USDA and NRCS to provide an inventory of agricultural resources in each county. The maps show urbanized lands and a qualitative sequence of agricultural designations. Pursuant to the FMMP, all lands within California are classified into one of seven map categories. The minimum mapping unit is generally 10 acres, except as otherwise noted.[3] Provided below is a description of the various map

[2] California Department of Conservation (DOC). 2020. California Important Farmland Finder. Website: https://maps.conservation.ca.gov/DLRP/CIFF/ (accessed January 20, 2025).

[3] California Department of Conservation (DOC). 2004. *A Guide to the Farmland Mapping and Monitoring Program.* Website: https://www.conservation.ca.gov/dlrp/fmmp/Documents/fmmp/Archive/fmmp_guide_2004.pdf (accessed February 5, 2025).

categories established by the FMMP, assessing the importance of agricultural land based on factors such as soil characteristics, climate, and water supply:

- **Prime Farmland:** The best combination of physical and chemical features and able to sustain long-term agricultural production. This land has the soil quality, growing season, and moisture supply needed to produce sustained high yields. Land must have been used for irrigated agricultural production at some time during the 4 years prior to the mapping date.

- **Farmland of Statewide Importance:** Similar to Prime Farmland but with minor shortcomings, such as steeper slopes or less ability to store soil moisture. Land must have been used for irrigated agricultural production at some time during the 4 years prior to the mapping date.

- **Unique Farmland:** Lesser-quality soils used for the production of the State's leading agricultural crops. This land is usually irrigated but may include unirrigated orchards or vineyards. Land must have been cultivated at some time during the 4 years prior to the mapping date.

- **Farmland of Local Importance:** Land of importance to the local economy, as defined by each county's local advisory committee and adopted by its board of supervisors. This refers to all farmable lands in Orange County that do not meet the definitions of Prime, Statewide, or Unique. This includes land that is or has been used for irrigated pasture, dryland farming, confined livestock and dairy, poultry facilities, aquaculture, and grazing land.

- **Grazing Land:** This type of land is occupied with vegetation suited to grazing livestock. This category was developed in cooperation with the California Cattleman's Association, the University of California Cooperative Extension, and other groups interested in the extent of grazing activities. The minimum mapping unit is 40 acres.

- **Urban and Built-Up Land:** This type of land is occupied by structures with a building density of at least one unit to 1.5 acres, or approximately six structures to a 10-acre parcel. Common examples of land uses include residential, industrial, commercial, institutional facilities, public administrative purposes, railroad and transportation yards, cemeteries, airports, golf courses, sanitary landfills, sewage treatment, and water control structures, and other developed purposes.

- **Other Land:** This type of land is not included in any other mapping category. Common examples include low-density rural developments; brush; timber wetland; riparian area not suitable for livestock grazing; confined livestock, poultry, or aquaculture facilities; strip mines; and water bodies smaller than 40 acres. Vacant and non-agricultural land surrounded on all sides by urban development that is greater than 40 acres is mapped as Other Land.

Williamson Act and Farmland Security Act. The California Land Conservation Act of 1965 (CLCA), better known as the Williamson Act (Government Code Section 51200 et seq.), enables local governments to enter into contracts with private landowners for the purpose of restricting specific parcels of land to agricultural or related open space use. In return, landowners receive property tax assessments that are much lower than normal because they are based on farming and open space uses as opposed to full market value. Pursuant to Government Code Section 51230, counties and

cities may establish Agricultural Preserves, which define the boundaries of those areas within which the city or county will be willing to enter into contracts pursuant to the CLCA. Contracts pursuant to the CLCA are only allowed for areas within established Agricultural Preserves. Williamson Act contracts have a minimum term of 10 years, with renewal occurring automatically each year, although local governments can establish initial contract terms for longer periods of time. The contracts run with the land and are binding on all successors in the interest of the landowner. Only land located within an Agricultural Preserve is eligible for a Williamson Act contract. An Agricultural Preserve boundary is designated by a resolution of the board of supervisors or city council having jurisdiction. The rules of each Agricultural Preserve specify the uses allowed. Land uses within an Agricultural Preserve must be agricultural in nature or other such uses that are not incompatible with agricultural uses, as identified by the local government, for the duration of the contract. Agricultural Preserves generally must be at least 100 acres in size; however, a city or county may allow for lesser acreage if a finding is made that the characteristics of the agricultural enterprises in the area are unique and that the establishment of preserves of less than 100 acres is consistent with the general plan of the county or city.

In return for entering into a contract, the landowner is granted preferential taxes that are based on agricultural and related land uses rather than fair market value. Contracts may be canceled at the option of the landowner or local government by initiating the process of term non-renewal. Under this process, the remaining contract term (9 years in the case of an original term of 10 years) is allowed to lapse, with the contract null and void at the end of the term. During the non-renewal process, the annual tax assessment continually increases each year until it is equivalent to current tax rates at the end of the non-renewal period. Under a set of specifically defined circumstances, a contract may be cancelled without completing the process of term non-renewal. Contract cancellation, however, involves a comprehensive review and approval process and the payment of a fee by the landowner.

In August 1998, Senate Bill (SB) 1182 established the Farmland Security Zone (FSZ) provisions of the Williamson Act. An FSZ is created within an Agricultural Preserve by approval of the county board of supervisors and at the request of a landowner or group of landowners. FSZ contracts offer landowners greater property tax reductions in return for an initial contract term of 20 years, with renewal occurring automatically each year. Land restricted by an FSZ contract is valued for property assessment purposes at 65 percent of its Williamson Act valuation, or 65 percent of its Proposition 13 valuation, whichever is lower. New special taxes for urban-related services must be levied at an unspecified reduced rate unless the tax directly benefits the land or living improvements. Cities and special districts that provide non-agricultural services are generally prohibited from annexing land enrolled under an FSZ contract. Similarly, school districts are prohibited from using FSZ lands for school facilities.

Z'Berg-Nejedly Forest Practice Act. The Z'Berg-Nejedly Forest Practice Act (Forest Practice Act) identifies operating methods and procedures that seek to protect fish, wildlife, forests, and streams within timber harvesting areas. The Forest Practice Act is intended to achieve "maximum sustained production of high-quality timber products…while giving consideration to values relating to recreation, watershed, wildlife, range and forage, fisheries, regional economic vitality, employment

and aesthetic enjoyment."[4] The regulations created by the Forest Practice Act define factors such as the size and location of harvest areas, include measures to prevent unreasonable damage to residual trees, and address the protection of riparian areas, watercourses and lakes, wildlife, and habitat areas.

Z'Berg-Warren-Keene-Collier Forest Taxation Reform Act. According to the Z'Berg-Warren-Keene-Collier Forest Taxation Reform Act[5] enacted in 1976, counties must provide for the zoning of land used for growing and harvesting timber as Timberland Production Zones (TPZs). TPZs were established to preserve and protect timberland from conversion to other uses and avoid land use conflicts.

Timberland Productivity Act. The Timberland Productivity Act represents the Legislature's declared intent "to fully realize the productive potential of the forest resources and timberlands of the state." The act imposes mandatory restrictions on parcels zoned as timberland production. Such parcels "shall be zoned so as to restrict their use to growing and harvesting timber and to compatible uses."[6] In exchange, property owners are required to pay property taxes on the land based solely on its value for timber harvest and not for its development potential, as is the case with qualifying agricultural and open space lands under the Williamson Act. Government Code Section 51104(g) of the Timberland Productivity Act defines "timberland production zone" as an area which has been zoned pursuant to Section 51112 or 51113 and is devoted to and used for growing and harvesting timber, or for growing and harvesting timber and compatible uses. Compatible uses are defined under Section 51104(h) and include management for watersheds; management for habitat or hunting and fishing; access roads and staging areas for timber harvesting; gas, electric, water, or communication transmission facilities; grazing; or a residence or other structure necessary for timber management.

California Government Code Section 21095 - California Agricultural Land Evaluation and Site Assessment Model. Land Evaluation and Site Assessment (LESA) is a term used to define an approach for rating the relative quality of agricultural land based upon specific measurable features.The formulation of a California LESA Model is the result of Senate Bill 850 (Chapter 812/1993), which charges the Resource Agency (in consultation with the Governor's Office of Planning and Research) with developing an amendment to Appendix G of the *State CEQA Guidelines* concerning agricultural lands. Such an amendment is intended "to provide lead agencies with an optional methodology to ensure that significant effects on the environment of agricultural land conversions are quantitatively and consistently considered in the environmental review process" (Public Resources Code Section 21095).

A LESA analysis is based on the following definition of agricultural land contained in CEQA, Public Resources Code Section 21060.1:

4 Public Resources Codes Section 4513[b].
5 Government Code Sections 51110–51119.5: Article 2.
6 Government Code Section 51115.

21060.1 (a) "Agricultural land" means prime farmland, farmland of statewide importance, or unique farmlands, as defined by the United States Department of Agriculture land inventory and monitoring criteria, as modified for California.

21060.1 (b) In those areas of the state where lands have not been surveyed for the classifications specified in subdivision (a), "agricultural land" means land that meets the requirements of "prime agricultural land" as defined in paragraph (1), (2), (3), or (4) of subdivision (c) of Section 51201 of the Government Code [the Williamson Act].

California Government Code Section 12220(g) – Forest Land. "Forest land" is land that can support 10-percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits.

California Government Code Section 4526 - Timberland. "Timberland" means land, other than land owned by the federal government and land designated by the board as experimental forest land, which is available for, and capable of, growing a crop of trees of a commercial species used to produce lumber and other forest products, including Christmas trees. Commercial species shall be determined by the board on a district basis.

California Government Code Section 51104(g) – Timberland Production Zone. Government Code Section 51104(g) defines "timberland production zone" to mean an area that has been zoned pursuant to Government Code Sections 51112 or 51113 and is devoted to and used for growing and harvesting timber, or for growing and harvesting timber and compatible uses. Compatible uses are defined under Government Code Section 51104(h).

4.2.4.3 Regional Regulations

There are no regional regulations that apply to the proposed project with respect to agriculture and forestry resources.

4.2.4.4 Local Regulations

City of Cypress General Plan. The following provision from the City's General Plan Conservation/ Open Space/Recreation Element[7] is related to agriculture and forestry resources. The Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) does not contain any applicable provisions regarding agriculture or forestry resources.

- **Conservation/Open Space/Recreation Element**
    - **Policy COSR-2.4:** Provide the opportunity to continue using land for agricultural crops as an interim use prior to further development.

[7] City of Cypress. 2001. *Cypress General Plan Conservation, Open Space/Recreation Element*. Adopted 2001. Website: https://www.cypressca.org/home/showpublisheddocument/686/636123123792970000 (accessed January 21, 2025).

4.2.5 Thresholds of Significance

The thresholds of significance for agriculture and forestry resources impacts used in this analysis are consistent with Appendix G of the *State CEQA Guidelines*. Based on these thresholds, implementation of the proposed project would have a significant adverse impact with respect to agriculture and forestry resources if it would:

Threshold 4.2.1: Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use;

Threshold 4.2.2: Conflict with existing zoning for agricultural use or a Williamson Act contract;

Threshold 4.2.3: Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g));

Threshold 4.2.4: Result in the loss of forest land or conversion of forest land to non-forest use; or

Threshold 4.2.5: Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use.

4.2.6 Project Impacts

Potential impacts of the proposed project related to agriculture and forestry resources are discussed below pursuant to the thresholds established in Section 4.2.5, above.

Threshold 4.2.1: **Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?**

No Impact. Historically, the Buildout Area was used as agricultural land until 1946, when it was developed for cattle and horse ranch uses. The Los Alamitos Race Course was built at its current location in 1954, and the adjacent Cypress Golf Course was constructed in 1961. The Cypress Golf Course was permanently closed in 2004, demolished, and re-graded with all vegetation removed. From 1952 to the present, the Buildout Area was developed with several uses, including the Cypress Golf Club; Tee Time Res (2001); Cypress Junior Golf League (2003); and Cypress GC LLC, Seventh-Day Adventist Church (2007–present). In addition, Grace Church was developed around 2007, east of the race track and is currently in use.

As shown in **Figure 3-2: Aerial Imagery Surrounding Land Uses** in Chapter 3.0, Project Description, of this Draft EIR, the Buildout Area is surrounded by a variety of commercial, office, business park, commercial and retail services, park, residential uses, and religious facilities uses. The Buildout Area

is not currently used for agricultural production and is not designated Prime Farmland, Unique Farmland, or Farmland of Statewide Importance on maps prepared as part of the Farmland Mapping and Monitoring Program for the California Resources Agency.[8] According to the California Department of Conservation's California Important Farmland Finder, the entire Buildout Area and surrounding area is designated as "Urban and Built-Up Land." The proposed project would not convert farmland to non-agricultural use or result in the conversion of farmland to a non-agricultural use. Therefore, no impact to agricultural resources would occur, and no mitigation is required.

Threshold 4.2.2: Would the project conflict with existing zoning for agricultural use or a Williamson Act contract?

No Impact. As stated previously, the Buildout Area is not used for agricultural production and is not protected by, or eligible for, a Williamson Act contract. The area surrounding the Buildout Area consists of Urban and Built-Up Land, and the Buildout Area itself is non-enrolled land (land not enrolled in a Williamson Act contract and not mapped by the Farmland Mapping and Monitoring Program).[9] There is no agriculturally zoned land nor is there land under a Williamson Act contract in the City.[10] Therefore, no impacts to agricultural use or a Williamson Act contract would occur, and no mitigation is required.

Threshold 4.2.3: Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

No Impact. All of the land within the Buildout Area is designated as Specific Plan Area by the City's General Plan and Cypress Town Center and Commons (PC) under the City's Zoning Ordinance. As outlined in the Specific Plan, the Buildout Area can be developed with Recreational/Open Space uses, Commercial/Mixed Use uses, and Residential uses. The Buildout Area is not used for timberland production, is not zoned as forest land, timberland, or timberland zoned Timberland Production, and does not contain forest or timberland resources. In addition, there is no forest land or timberland in the vicinity of the Buildout Area. The proposed project would not conflict with any existing zoning for, or cause rezoning of, forest land to non-forest use. Therefore, no impacts to forest land or timberland would occur, and no mitigation is required.

Threshold 4.2.4: Would the project result in the loss of forest land or conversion of forest land to non-forest use?

---

8 California Department of Conservation (DOC). 2022. California Resources Agency. Farmland Mapping and Monitoring Program. Website: https://maps.conservation.ca.gov/dlrp/ciff/ (accessed January 20, 2025).

9 California Department of Conservation (DOC). 2023. California Resources Agency. California Williamson Act Enrollment Finder. Website: https://maps.conservation.ca.gov/dlrp/WilliamsonAct/App/index.html (accessed January 20, 2025).

10 City of Cypress. 2025. City of Cypress Zoning Map. August. Website: https://www.cypressca.org/departments/community-development/zoning-map (accessed January 20, 2025).

No Impact. Refer to Response 4.2.3 above. The proposed project would not result in the loss of forest land or conversion of forest land to non-forest use. Therefore, no impacts to forest land would occur, and no mitigation is required.

Threshold 4.2.5: Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

No Impact. The Buildout Area is not used for agricultural or timberland production or designated or zoned for agricultural uses or as forest land, timberland, or timberland zoned Timberland Production. In addition, there is no forest land, timberland, or agriculturally zoned land in the vicinity of the Buildout Area. The proposed project would not convert farmland to non-agricultural use or forest land to non-forest use. Likewise, the proposed project would not contribute to environmental changes that could result in the conversion of farmland to non-agricultural use or conversion of forest land to non-forest use. Therefore, no impacts to farmland or forest land would occur, and no mitigation is required.

4.2.7 Level of Significance Prior to Mitigation

The proposed project would not result in any significant impacts related to agriculture and forestry resources, and no mitigation is required.

4.2.8 Regulatory Compliance Measures and Mitigation Measures

No mitigation measures or regulatory compliance measures are required.

4.2.9 Level of Significance after Mitigation

The proposed project would not result in any significant impacts related to agriculture and forestry resources.

4.2.10 Cumulative Impacts

As defined in Section 15130 of the *State CEQA Guidelines*, cumulative impacts are the incremental effects of an individual project when viewed in connection with the effects of past, current, and probable future projects within the cumulative impact area for agriculture and forestry. The cumulative impact area for agriculture and forestry is the entire County of Orange, which contains approximately 18,142 acres of land identified as Important Farmland (Prime Farmland, Unique Farmland, and Farmland of Statewide Importance).[11] However, neither the Buildout Area nor any of the surrounding land uses contain or are zoned for forest land, timberland, timberland production, or agriculture.

Cumulative impacts are addressed only for those thresholds that would result in a project-related impact, whether it be less than significant or less than significant with mitigation. If the project would result in no impact with respect to a particular threshold, by definition, it would not

[11] County of Orange. n.d. *Orange County General Plan Resources Element.* pp.VI-9. Website: https://ocds.ocpublicworks.com/sites/ocpwocds/files/import/data/files/40235.pdf (accessed February 5, 2025).

contribute to a cumulative impact. Therefore, the proposed project would have no cumulatively considerable impact on agricultural or forestry resources.

As detailed in this section, the proposed project would have no impact on agriculture and forestry resources. The Buildout Area is characterized by urban land uses. Under existing conditions, the Buildout Area is currently occupied by the LARC, Grace Church, and Cypress GC properties, is zoned Cypress Town Center and Commons (PC) under the City's Zoning Ordinance, and is designated Specific Plan Area by the City's General Plan, allowing for Recreational/Open Space uses, Commercial/Mixed Use uses, and Residential uses.

The proposed project would not result in the conversion of agricultural land to non-agricultural uses. As of 2023, the County of Orange has no inventory of Williamson Act contract lands. Therefore, there are no Williamson Act contract lands within the Buildout Area. The Buildout Area is not zoned for forest land or timberland, nor is it occupied by forest land resources. As such, implementation of the proposed project would not result in rezoning from forest land or timberland to non-forest land or non-timberland zoning, nor would reduction of forest land resources occur.

Because the proposed project would have no impact on agriculture and forestry resources, it would not contribute to a cumulatively considerable impact on agriculture and forestry resources. Therefore, there would be no cumulatively significant impact on agriculture and forestry resources, and no mitigation is required.

4.3 AIR QUALITY

This section evaluates the potential air quality impacts from implementation of the proposed Specific Plan 3.0 Buildout Project (proposed project) using methodologies and assumptions recommended in the air quality impact assessment guidelines of the South Coast Air Quality Management District (SCAQMD) in its *California Environmental Quality Act (CEQA) Air Quality Handbook,*[1] and associated updates. In keeping with these guidelines, this section describes existing air quality and evaluates short-term impacts during construction, long-term emissions associated with operation, and how potential impacts correlate to human health. Air quality modeling data are included in **Appendix B**.

4.3.1 Scoping Process

The City of Cypress (City) received six comment letters during the public review period of the Notice of Preparation (NOP). For a copy of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). Two of the comment letters, from the Southern California Association of Governments (SCAG) and SCAQMD, included comments related to air quality.

SCAG recommended that this Draft EIR evaluate the proposed project's consistency with the Connect SoCal 2024 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (Connect SoCal 2024), which outlines goals to reduce greenhouse gas emissions, improve regional air quality, and support an integrated multimodal transportation network. Although SCAG does not implement or approve individual development projects, it advised the City to consult the Connect SoCal 2024 Program Environmental Impact Report (PEIR) for guidance on identifying appropriate CEQA mitigation strategies to minimize emissions, reduce vehicle miles traveled, and enhance transportation efficiency. SCAG also highlighted that achieving regional sustainability goals depends on local agency action and encourages the use of a side-by-side consistency analysis comparing project features with Connect SoCal 2024 goals.

SCAQMD provided recommendations on how to analyze air quality impacts, greenhouse gas emissions impacts, and health risk reduction strategies for the proposed project. SCAQMD recommends that the City rely on the SCAQMD's *CEQA Air Quality Handbook* and use the California Emissions Estimator Model (CalEEMod) to quantify air quality emissions, applying both regional air quality significance thresholds and localized significance thresholds (LSTs). SCAQMD requests that the Draft EIR evaluate all phases of construction and operation, including overlapping activities, indirect sources (e.g., vehicle trips), and identify any new stationary or portable equipment that would require SCAQMD permits, recognizing the agency as a Responsible Agency if applicable. SCAQMD emphasizes that if significant adverse impacts are identified, all feasible mitigation measures that go beyond existing legal requirements must be implemented, referencing resources such as the 2022 Air Quality Management Plan Mitigation Monitoring and Reporting Plan. SCAQMD further recommends evaluating health risk reduction strategies, such as using enhanced air filtration systems rated MERV-13 (Minimum Efficiency Reporting Value) or better, and requests that the Draft

[1] South Coast Air Quality Management District (SCAQMD). 1993. *CEQA Air Quality Handbook*. Website: http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-(1993) (accessed October 2025).

EIR analyze related secondary impacts including increased energy consumption, maintenance, waste generation, and potential limitations in filtration effectiveness.

These comments are addressed in this section.

4.3.2 Methodology

This analysis utilized the CalEEMod version 2022.1 to quantify the criteria pollutant emissions for both construction and operation of the proposed project. The maximum daily emissions are calculated for the criteria pollutants. The CalEEMod output is contained in **Appendix B** of this Draft EIR.

CalEEMod provides a platform to calculate both construction emissions and operational emissions from a project. It calculates both the daily maximum and annual average for criteria pollutants as well as total or annual greenhouse gas (GHG) emissions. The model also provides default values for energy and water use. Specifically, the model performs the following calculations:

- Short-term construction emissions associated with demolition, site preparation, grading, building, paving, and architectural coating (painting) from off-road construction equipment; on-road mobile equipment associated with workers, vendors, delivery, and hauling; fugitive dust associated with grading, demolition, truck loading, and roads; and emissions of volatile organic compounds (VOCs) from architectural coating and paving.

- Operational emissions, such as on-road mobile vehicle traffic generated by the land uses, fugitive dust associated with roads, VOCs from architectural coatings, off-road emissions from landscaping equipment, VOCs from consumer products and cleaning supplies, natural gas usage in the buildings, electricity usage in the buildings, water usage by the land uses, and solid waste disposal by the land uses.

As such, this analysis utilized CalEEMod to evaluate construction and operation of the proposed project. This analysis included two model runs to evaluate a worst-case construction scenario. The first model run evaluates full buildout of up to 1,791 additional residential units and 440,000 square feet of non-residential development, consistent with CEQA and SCAQMD guidance. Regional construction emissions were calculated for demolition, site preparation, grading, building construction, paving, and architectural coating activities. Operational emissions, including those from vehicle trips and energy use, were also estimated.

The second model run includes construction emissions only through a phased approach to grading that includes the simultaneous grading of multiple development areas to reflect a conservative worst-case construction scenario. This scenario assumes that grading activities would occur concurrently on five lots—Lots 2, 4, 7, 12, and 13—with full grading of Lots 4, 12, and 13, as well as partial grading of the southern 8 acres of Lot 2 and the northern 11 acres of Lot 7. The purpose of this model run is to capture the potential for overlapping construction schedules and to model the potential worst-case scenario for grading activities. As such, this modeling run focuses solely on grading to represent the most intensive construction activities that would generate peak construction emissions.

In addition, CalEEMod contains default values and existing regulation methodologies to use in each specific local air quality district region. Appropriate statewide default values can be used if regional default values are not defined. This analysis used project-specific inputs and relevant model default factors for the Orange County area, which is within the SCAQMD jurisdiction for the emissions inventory, consistent with SCAQMD requirements. Specific modeling inputs and assumptions are described in Section 4.3.6 below.

4.3.3 Existing Environmental Setting

The City of Cypress is part of the South Coast Air Basin (Basin) and is under the jurisdiction of SCAQMD. Background information about air pollutants and health effects, climate, meteorological conditions, and regional air quality conditions in the Basin and local air quality conditions in the vicinity of the Buildout Area is provided below.

4.3.3.1 Criteria Air Pollutants and Health Effects

Both State and federal governments have established health-based Ambient Air Quality Standards (AAQS) for the following criteria air pollutants: carbon monoxide (CO), ozone (O_3), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), lead (Pb), and suspended particulate matter (PM). In addition, the State has set standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles. These standards are designed to protect the health and welfare of the populace with a reasonable margin of safety. Long-term exposure to elevated levels of criteria pollutants may result in adverse health effects. However, emission thresholds established by an air quality district are used to manage total regional emissions within an air basin based on the air basin's attainment status for criteria pollutants. These emission thresholds were established for individual projects that would contribute to regional emissions and pollutant concentrations and could adversely affect or delay the projected attainment target year for certain criteria pollutants.

At the regional level, the SCAQMD is the regulatory agency responsible for ensuring that State and national AAQS are achieved and maintained for the Air Basin. In developing thresholds of significance for air pollutants, the SCAQMD considered the emission levels for which a project's individual emissions would be cumulatively considerable. Because of the conservative nature of the criteria pollutant emissions thresholds set by the SCAQMD and the basin-wide context of individual project emissions, there is no known direct correlation between a single project and localized air quality-related health effects. One individual project that generates emissions exceeding a threshold does not necessarily result in adverse public health effects for residents in the project vicinity. This condition is especially true when the criteria pollutants exceeding thresholds are those with regional effects, such as ozone precursors like nitrogen oxides (NO_x) and VOCs. As shown in **Figure 3-3: Surrounding Land Uses** in Chapter 3.0, Project Description, the closest existing sensitive receptors to the Buildout Area include the following: residential uses located north of the Buildout Area across Cerritos Avenue; residential/mixed-use buildings located adjacent to the eastern boundary of the Buildout Area along Katella Avenue; senior housing located adjacent to the southern and western boundaries of the Buildout Area along Katella Avenue; and residential uses located south of the Buildout Area across Katella Avenue.

Occupants of certain types of facilities such as schools, daycare centers, parks and playgrounds, hospitals, and nursing and convalescent homes are considered to be more sensitive than the general

public to air pollutants because these population groups have increased susceptibility to respiratory disease. Persons engaged in strenuous work or exercise also have increased sensitivity to poor air quality. Residential areas are considered more sensitive to air quality conditions, compared to commercial and industrial areas, because people generally spend longer periods of time at their residences, with greater associated exposure to ambient air quality conditions. Recreational uses are also considered sensitive compared to commercial and industrial uses due to greater exposure to ambient air quality conditions associated with exercise.

Criteria Pollutants. As identified above, State and federal AAQS have been established for the following criteria pollutants: CO, O_3, NO_2, SO_2, Pb, and PM. These pollutants are regulated due to their potential to cause adverse effects on public health and the environment. In addition, key pollutant constituents—such as VOCs, which contribute to ozone formation—are also evaluated in air quality analyses. The characteristics, primary sources, and health effects of these criteria pollutants and related constituents are described below.

Ozone. Rather than being directly emitted, ozone (smog) is formed by photochemical reactions between NO_x and VOCs. Ozone is a pungent, colorless gas. Elevated ozone concentrations result in reduced lung function, particularly during vigorous physical activity. This health problem is particularly acute in sensitive receptors such as the sick, elderly, and young children. Ozone levels peak during the summer and early fall months.

Particulate Matter. Particulate matter is the term used for a mixture of solid particles and liquid droplets found in the air. Coarse particles are those that are 10 microns or less in diameter, or PM_{10}. Fine, suspended particulate matter with an aerodynamic diameter of 2.5 microns or less, or $PM_{2.5}$, is not readily filtered out by the lungs. Nitrates, sulfates, dust, and combustion particulates are major components of PM_{10} and $PM_{2.5}$. These small particles can be directly emitted into the atmosphere as byproducts of fuel combustion; through abrasion, such as tire or brake lining wear; or through fugitive dust (wind or mechanical erosion of soil). They can also be formed in the atmosphere through chemical reactions. Particulates may transport carcinogens and other toxic compounds that adhere to the particle surfaces and can enter the human body through the lungs.

Carbon Monoxide. CO is formed by the incomplete combustion of fossil fuels, almost entirely from automobiles. It is a colorless, odorless gas that can cause dizziness, fatigue, and impairments to central nervous system functions. CO passes through the lungs into the bloodstream, where it interferes with the transfer of oxygen to body tissues.

Nitrogen Dioxide. NO_2 is a reddish-brown gas that is a byproduct of combustion processes. Automobiles and industrial operations are the main sources of NO_2. Aside from its contribution to ozone formation, NO_2 also contributes to other pollution problems, including a high concentration of fine particulate matter, poor visibility, and acid deposition. NO_2 may be visible as a coloring component on high pollution days, especially in conjunction with high ozone levels. NO_2 decreases lung function and may reduce resistance to infection.

Sulfur Dioxide. SO_2 is a colorless, irritating gas formed primarily from incomplete combustion of fuels containing sulfur. Industrial facilities also contribute to gaseous SO_2 levels in the region. SO_2

irritates the respiratory tract, can injure lung tissue when combined with fine particulate matter, and reduces visibility and the level of sunlight.

Lead. Leaded gasoline (phased out in the United States beginning in 1973), paint (on older houses and cars), smelters (metal refineries), and the manufacture of lead storage batteries have been the primary sources of lead released into the atmosphere. Lead has multiple adverse neurotoxic health effects, and children are at special risk. Some lead-containing chemicals cause cancer in animals. Lead levels in the air have decreased substantially since leaded gasoline was eliminated. Ambient lead concentrations are only monitored on an as-warranted, site-specific basis in California. On October 15, 2008, the United States Environmental Protection Agency (USEPA) strengthened the national ambient air quality standard for lead by lowering it from 1.5 to 0.15 micrograms per cubic meter ($\mu g/m^3$). The USEPA revised the monitoring requirements for lead in December 2010. These requirements focus on airports and large urban areas, resulting in an increase in 76 monitors nationally.

Volatile Organic Compounds. VOCs (also known as reactive organic gases [ROGs] and reactive organic compounds [ROCs]) are formed from the combustion of fuels and the evaporation of organic solvents. VOCs are not defined as criteria pollutants, however, because VOCs accumulate in the atmosphere more quickly during the winter, when sunlight is limited and photochemical reactions are slower, they are a prime component of the photochemical smog reaction. There are no attainment designations for VOCs.

4.3.3.2 Toxic Air Contaminants.

In addition to the criteria pollutants discussed above, toxic air contaminants (TACs) are another group of pollutants of concern. TACs are injurious in small quantities and are regulated by the USEPA and California Air Resources Board (CARB). Some examples of TACs include benzene, butadiene, formaldehyde, and hydrogen sulfide. The identification, regulation, and monitoring of TACs is relatively recent compared to that for criteria pollutants.

TACs do not have AAQS, but are regulated by USEPA, CARB, and SCAQMD. In 1998, the CARB identified particulate matter from diesel-fueled engines as a TAC. The CARB has completed a risk management process that identified potential cancer risks for a range of activities using diesel-fueled engines.[2] High-volume freeways, stationary diesel engines, and facilities attracting heavy and constant diesel vehicle traffic (e.g., distribution centers and truck stops) were identified as posing the highest risk to adjacent receptors. Other facilities associated with increased risk include warehouse distribution centers, large retail or industrial facilities, high-volume transit centers, and schools with a high volume of bus traffic. Health risks from TACs are a function of both concentration and duration of exposure.

Unlike TACs emitted from industrial and other stationary sources noted above, most diesel particulate matter is emitted from mobile sources—primarily “off-road” sources such as

[2] California Air Resources Board (CARB). 2000. Stationary Source Division and Mobile Source Control Division. *Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and Vehicles.* October.

construction and mining equipment, agricultural equipment, and truck-mounted refrigeration units, as well as "on-road" sources such as trucks and buses traveling on freeways and local roadways.

Although not specifically monitored, recent studies indicate that exposure to diesel particulate matter may contribute significantly to a cancer risk (a risk of approximately 500 to 700 in 1,000,000) that is greater than all other measured TACs combined.[3] The technology for reducing diesel particulate matter emissions from heavy-duty trucks is well established, and both State and federal agencies are moving aggressively to regulate engines and emission control systems to reduce and remediate diesel emissions. The CARB anticipates that by 2020, average statewide diesel particulate matter concentrations will decrease by 85 percent from levels in 2000 with full implementation of the CARB's Diesel Risk Reduction Plan,[4] meaning that the statewide health risk from diesel particulate matter is expected to decrease from 540 cancer cases in 1,000,000 to 21.5 cancer cases in 1,000,000.

Table 4.3.A: Sources and Health Effects of Air Pollutants summarizes the sources and health effects of air pollutants discussed in this section. **Table 4.3.B: Federal and State Ambient Air Quality Standards** presents a summary of both California ambient air quality standards (CAAQS), and national ambient air quality standards (NAAQS).

4.3.3.3 Climate/Meteorology

Air quality in the Basin is affected not only by various emission sources (mobile and industry, etc.), but also by atmospheric conditions such as wind speed, wind direction, temperature, and rainfall, etc. The combination of topography, low mixing height, abundant sunshine, and emissions from the second-largest urban area in the United States contributes to air pollution in the Basin.

The Basin is a coastal plain characterized by connecting broad valleys and low hills, delineated by the Pacific Ocean as its southwestern border, and fringed by high mountains that form the inland portion of its border. The region lies in the semi-permanent high-pressure zone of the eastern Pacific Ocean. The resulting climate is mild and tempered by cool ocean breezes. It maintains moderate temperatures and comfortable humidity, and precipitation is typically limited to a few storms during the winter wet season. This weather pattern is fairly predictable. However, periods of extremely hot weather, winter storms, or Santa Ana winds do take place.

Although the Basin has a semi-arid climate, air near the earth's surface is generally moist due to the presence of a shallow marine layer. With very low average wind speeds, there is a limited ability to disperse air contaminants horizontally. The typical wind flow pattern fluctuates only with occasional winter storms or strong northeasterly Santa Ana winds from the mountains and deserts northeast of the Basin. Summer wind flow patterns represent worst-case conditions for air pollution, as this is a period of higher temperatures and more sunlight, which results in O_3 formation.

[4] Ibid.

Table 4.3.A: Sources and Health Effects of Air Pollutants

Pollutants	Sources	Primary Effects
Carbon Monoxide (CO)	• Incomplete combustion of fuels and other carbon-containing substances, such as motor exhaust • Natural events, such as decomposition of organic matter	• Reduced tolerance for exercise • Impairment of mental function • Impairment of fetal development • Aggravation of some heart diseases (angina) • Death at high levels of exposure
Nitrogen Dioxide (NO_2)	• Motor vehicle exhaust • High temperature stationary combustion • Atmospheric reactions	• Aggravation of respiratory illness • Reduced visibility • Reduced plant growth • Formation of acid rain
Ozone (O_3)	• Atmospheric reaction of organic gases with nitrogen oxides in sunlight	• Aggravation of respiratory and cardiovascular diseases • Irritation of eyes • Impairment of cardiopulmonary function • Plant leaf injury
Lead (Pb)	• Contaminated soil	• Impairment of blood functions and nerve construction • Behavioral and hearing problems in children
Suspended Particulate Matter ($PM_{2.5}$ and PM_{10})	• Stationary combustion of solid fuels • Construction activities • Industrial processes • Atmospheric chemical reactions	• Reduced lung function • Aggravation of the effects of gaseous pollutants • Aggravation of respiratory and cardiorespiratory diseases • Increased cough and chest discomfort • Soiling • Reduced visibility
Sulfur Dioxide (SO_2)	• Combustion of sulfur-containing fossil fuels • Smelting of sulfur-bearing metal ores Industrial processes	• Aggravation of respiratory diseases (asthma, emphysema) • Reduced lung function • Irritation of eyes • Reduced visibility • Plant injury • Deterioration of metals, textiles, leather, finishes, and coatings, etc.

Table 4.3.B: Federal and State Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards [1]		Federal Standards [2]		
		Concentration [3]	Method [4]	Primary [3,4]	Secondary [3,6]	Method [7]
Ozone (O_3)[8]	1-Hour	0.09 ppm (180 µg/m³)	Ultraviolet Photometry	–	Same as Primary Standard	Ultraviolet Photometry
	8-Hour	0.07 ppm (137 µg/m³)		0.070 ppm (137 µg/m³)		
Respirable Particulate Matter (PM_{10})[9]	24-Hour	50 µg/m³	Gravimetric or Beta Attenuation	150 µg/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m³		–		
Fine Particulate Matter ($PM_{2.5}$)[9]	24-Hour	–		35 µg/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m³	Gravimetric or Beta Attenuation	9.0 µg/m³ [o]	15.0 µg/m³ [o]	
Carbon Monoxide (CO)	1-Hour	20 ppm (23 mg/m³)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m³)	–	Non-Dispersive Infrared Photometry (NDIR)
	8-Hour	9 ppm (10 mg/m³)		9 ppm (10 mg/m³)		
	8-Hour (Lake Tahoe)	6 ppm (7 mg/m³)		–	–	
Nitrogen Dioxide (NO_2)[10]	1-Hour	0.18 ppm (339 µg/m³)	Gas Phase Chemi-luminescence	100 ppb (188 µg/m³)	–	Gas Phase Chemi-luminescence
	Annual Arithmetic Mean	0.03 ppm (57 µg/m³)		53 ppb (100 µg/m³)	Same as Primary Standard	
Sulfur Dioxide (SO_2)[11]	1-Hour	0.25 ppm (655 µg/m³)	Ultraviolet Fluorescence	75 ppb (196 µg/m³)[k]	–	Ultraviolet Fluorescence; Spectro-photometry (Pararosaniline Method)
	3-Hour	–		–	0.5 ppm (1300 µg/m³)	
	24-Hour	0.04 ppm (105 µg/m³)		0.14 ppm (for certain areas)	–	
	Annual Arithmetic Mean	–		0.030 ppm (for certain areas)[k]	–	
Lead (Pb)[12,13]	30-Day Average	1.5 µg/m³	Atomic Absorption	–	–	High-Volume Sampler and Atomic Absorption
	Calendar Quarter	–		1.5 µg/m³ (for certain areas)[l]	Same as Primary Standard	
	Rolling 3-Month Average	–		0.15 µg/m³		
Visibility-Reducing Particles [14]	8-Hour	See footnote 14	Beta Attenuation and Transmittance through Filter Tape	No Federal Standards		
Sulfates	24-Hour	25 µg/m³	Ion Chromatography			
Hydrogen Sulfide	1-Hour	0.03 ppm (42 µg/m³)	Ultraviolet Fluorescence			
Vinyl Chloride [12]	24-Hour	0.01 ppm (26 µg/m³)	Gas Chromatography			

Source: Ambient Air Quality Standards (California Air Resources Board 2024).

Table notes continued on the following page.

[1] California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1- and 24-hour), nitrogen dioxide, and particulate matter (PM_{10}, $PM_{2.5}$, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

[2] National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM_{10}, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m^3 is equal to or less than one. For $PM_{2.5}$, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact USEPA for further clarification and current national policies.

[3] Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

[4] Any equivalent measurement method which can be shown to the satisfaction of the CARB to give equivalent results at or near the level of the air quality standard may be used.

[5] National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

[6] National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

[7] Reference method as described by the USEPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the USEPA.

[8] On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.

[9] On February 7, 2024, the national annual $PM_{2.5}$ standard was lowered from 12.0 µg/m^3 to 9.0 µg/m^3. The existing national 24-hour $PM_{2.5}$ standards (primary and secondary) were retained at 35 µg/m^3, as was the annual secondary standard of 15 µg/m^3. The existing 24-hour PM_{10} standards (primary and secondary) of 150 µg/m^3 also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.

[10] To attain the 1-hour national standard, the three-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

[11] On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the three-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.
Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.

[12] The CARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

[13] The national standard for lead was revised on October 15, 2008, to a rolling 3-month average. The 1978 lead standard (1.5 µg/m^3 as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

[14] In 1989, the CARB converted both the general Statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the Statewide and Lake Tahoe Air Basin standards, respectively.

°C = degrees Celsius
µg/m^3 = micrograms per cubic meter
CARB = California Air Resources Board
mg/m^3 = milligrams per cubic meter
ppb = parts per billion
ppm = parts per million
USEPA = United States Environmental Protection Agency

Air pollutant emissions within the Basin are generated primarily by stationary and mobile sources. Stationary sources can be divided into two major subcategories: point and area sources. Point sources occur at a specific location and are often identified by an exhaust vent or stack. Examples

include boilers or combustion equipment that produce electricity or generate heat. Area sources are widely distributed and include such sources as residential and commercial water heaters, painting operations, lawnmowers, agricultural fields, landfills, and some consumer products. Mobile sources refer to emissions from motor vehicles, including tailpipe and evaporative emissions, and are classified as either on-road or off-road. On-road sources may be legally operated on roadways and highways. Off-road sources include aircraft, ships, trains, and self-propelled construction equipment. Air pollutants can also be generated by the natural environment, such as when high winds suspend fine dust particles.

4.3.3.4 Attainment Status

The CARB is required to designate areas of the State as attainment, nonattainment, or unclassified for all State standards. An *attainment* designation for an area signifies that pollutant concentrations did not violate the standard for that pollutant in that area. A *nonattainment* designation indicates that a pollutant concentration violated the standard at least once, excluding those occasions when a violation was caused by an exceptional event, as defined in the criteria. An *unclassified* designation signifies that data does not support either an attainment or nonattainment status. The California Clean Air Act (CCAA) divides districts into moderate, serious, and severe air pollution categories, with increasingly stringent control requirements mandated for each category.

The USEPA designates areas for O_3, CO, and NO_2 as either: does not meet the primary standards (or cannot be classified), or better than national standards. For SO_2, areas are designated as: does not meet the primary standards, does not meet the secondary standards, cannot be classified, or better than national standards.

Table 4.3.C: Attainment Status of Criteria Pollutants in the South Coast Air Basin provides a summary of the attainment status for the Basin with respect to the NAAQS and the CAAQS.

Table 4.3.C: Attainment Status of Criteria Pollutants in the South Coast Air Basin

Pollutant	State	Federal
O_3 1 hour	Nonattainment	Extreme Nonattainment
O_3 8 hour	Nonattainment	Extreme Nonattainment
PM_{10}	Nonattainment	Attainment/Maintenance
$PM_{2.5}$	Nonattainment	Serious Nonattainment
CO	Attainment	Attainment/Maintenance
NO_2	Attainment	Attainment/Maintenance
SO_2	N/A	Attainment/Unclassified
Lead	Attainment	Attainment[1]
All others	Attainment/Unclassified	Attainment/Unclassified

SCAQMD = South Coast Air Quality Management District
SO_2 = sulfur dioxide

4.3.3.5 Regional Air Quality

The Southern California region lies in the semi-permanent high-pressure zone of the eastern Pacific. As a result, the climate is mild and tempered by cool sea breezes. The usually mild climate is interrupted infrequently by periods of extremely hot weather, winter storms, or Santa Ana winds. Meteorological conditions and topography affect the dispersion of pollutants and make the Basin susceptible to air pollution. The extent and severity of the air pollution problem in the Basin is also affected by manmade influences, such as development patterns and lifestyle.

The greatest air pollution impacts throughout the Basin occur from June through September. This condition is generally attributed to the high emissions, as well as light winds and shallow vertical atmospheric mixing, which reduce dispersion. Pollutant concentrations in the Basin vary with location, season, and time of day. O_3 concentrations, for example, tend to be higher in the inland valleys than either along the coast or in the far inland areas of the Basin and adjacent desert. Over the past 30 years, substantial progress has been made in reducing air pollution levels in Southern California. However, the Basin still fails to meet federal standards for O_3 and $PM_{2.5}$.

4.3.3.6 Local Air Quality

Air quality monitoring stations are located throughout the nation and are maintained by the local air pollution control district and State air quality regulating agencies. The SCAQMD, together with the CARB, maintains ambient air quality monitoring stations in the Basin. The air quality monitoring station closest to the Buildout Area is the 1630 W. Pampas Lane ambient air quality monitoring station in Anaheim. The air quality trends from this station are used to represent the ambient air quality in the vicinity of the Buildout Area. Ambient air quality data in the vicinity of the Buildout Area from 2022 to 2024 are shown in **Table 4.3.D: Ambient Air Quality at the Anaheim 1630 W. Pampas Lane Monitoring Station**. SO_2 is not monitored in Orange County.

Pollutant monitoring results for the years 2022 to 2024 at the Anaheim 1630 W. Pampas Lane ambient air quality monitoring station indicate that air quality in the project vicinity has generally been good. As indicated in the monitoring results, no violations of the federal PM_{10} standard occurred during the 3-year period. The State PM_{10} standard was exceeded five times in 2017, twice in 2018, and four times in 2019. $PM_{2.5}$ levels exceeded the federal standard once in 2022 and 2023 and an unknown number of times in 2024. In addition, the federal PM_{10} standard was exceeded once in 2023 and five times in 2024. The State 1-hour ozone standard was exceeded once in 2022 and three times in 2024. In addition, the State and federal 8-hour ozone standards were each exceeded once in 2022, twice in 2023, and three times in 2024. The CO, SO_2, and NO_2 standards were also not exceeded in this area during the 3-year period.

4.3.4 Regulatory Setting

The USEPA and the CARB regulate direct emissions from motor vehicles. The SCAQMD is the regional agency primarily responsible for regulating air pollution emissions from stationary sources (e.g., factories) and indirect sources (e.g., traffic associated with new development), as well as monitoring ambient pollutant concentrations.

Table 4.3.D: Ambient Air Quality at the Anaheim 1630 W. Pampas Lane Monitoring Station

Pollutant	Standard	2022	2023	2024
Carbon Monoxide (CO)				
Maximum 1-hour concentration (ppm)		2.4	2.2	2.8
Number of days exceeded:	State: > 20 ppm	0	0	0
	Federal: > 35 ppm	0	0	0
Maximum 8-hour concentration (ppm)		1.4	1.6	2.4
Number of days exceeded:	State: > 9 ppm	0	0	0
	Federal: > 9 ppm	0	0	0
Ozone (O_3)				
Maximum 1-hour concentration (ppm)		0.102	0.089	0.104
Number of days exceeded:	State: > 0.09 ppm	1	0	3
Maximum 8-hour concentration (ppm)		0.077	0.077	0.079
Number of days exceeded:	State: > 0.07 ppm	1	2	3
	Federal: > 0.08 ppm	1	2	3
Coarse Particulates (PM_{10})				
Maximum 24-hour concentration (µg/m^3)		67.0	99.4	118.9
Number of days exceeded:	State: > 50 µg/m^3	1	1	ND
	Federal: > 150 µg/m^3	0	0	0
Annual arithmetic average concentration (µg/m^3)		20.9	20.6	27.7
Exceeded for the year:	State: > 20 µg/m^3	Yes	Yes	Yes
	Federal: > 50 µg/m^3	No	No	No
Fine Particulates ($PM_{2.5}$)				
Maximum 24-hour concentration (µg/m^3)		33.1	50.7	49.7
Number of days exceeded:	Federal: > 35 µg/m^3	0	1	5
Annual arithmetic average concentration (µg/m^3)		9.9	9.1	10.5
Exceeded for the year:	State: > 12 µg/m^3	No	No	No
	Federal: > 12 µg/m^3	No	No	No
Nitrogen Dioxide (NO_2)				
Maximum 1-hour concentration (ppm)		0.053	0.051	0.053
Number of days exceeded:	State: > 0.250 ppm	0	0	0
Annual arithmetic average concentration (ppm)		0.012	0.010	0.011
Exceeded for the year:	Federal: > 0.053 ppm	No	No	No
Sulfur Dioxide (SO_2)				
Maximum 1-hour concentration (ppm)		ND	ND	ND
Number of days exceeded:	State: > 0.25 ppm	ND	ND	ND
Maximum 24-hour concentration (ppm)		ND	ND	ND
Number of days exceeded:	State: > 0.04 ppm	ND	ND	ND
	Federal: > 0.14 ppm	ND	ND	ND
Annual arithmetic average concentration (ppm)		ND	ND	ND
Exceeded for the year:	Federal: > 0.030 ppm	ND	ND	ND

µg/m^3 = micrograms per cubic meter
CARB = California Air Resources Board
ND = No data. There was insufficient (or no) data to determine the value.
ppm = parts per million
USEPA = United States Environmental Protection Agency

The following section describes the federal, State, regional, and local regulatory framework applicable to analyzing potential impacts related to air quality from development of the proposed project.

4.3.4.1 Federal Regulations

At the federal level, the USEPA has been charged with implementing national air quality programs. The USEPA's air quality mandates are drawn primarily from the Federal Clean Air Act (FCAA), discussed below.

Federal Clean Air Act. The FCAA was enacted in 1963 and was amended in 1970, 1977, and 1990. The FCAA required the USEPA to establish primary and secondary NAAQS and required each state to prepare an air quality control plan referred to as a State Implementation Plan (SIP). The FCAA Amendments of 1990 added requirements for states with nonattainment areas to revise their SIPs to incorporate additional control measures to reduce air pollution. The SIP is periodically modified to reflect the latest emission inventories, planning documents, and rules and regulations of the air basins as reported by their jurisdictional agencies. The USEPA has responsibility to review all state SIPs to determine conformity with the mandates of the FCAA and determine if implementation will achieve air quality goals. If the USEPA determines a SIP to be inadequate, a Federal Implementation Plan may be prepared for the nonattainment area, which imposes additional control measures. Failure to submit an approvable SIP or to implement the plan within the mandated timeframe may result in sanctions on transportation funding and stationary air pollution sources in the air basin.

The USEPA is also required to develop National Emission Standards for Hazardous Air Pollutants, which are defined as those that may reasonably be anticipated to result in increased deaths or serious illness, and that are not already regulated. An independent science advisory board reviews the health and exposure analyses conducted by the USEPA on suspected hazardous pollutants prior to regulatory development.

4.3.4.2 State Regulations

The CARB is the agency responsible for the coordination and oversight of State and local air pollution control programs in California and for implementing the CCAA, as discussed below.

California Clean Air Act. In 1988, the CCAA required that all air quality districts in the State endeavor to achieve and maintain CAAQS for CO, O_3, SO_2, and NO_2 by the earliest practical date. The CCAA provides districts with authority to regulate indirect sources and mandates that air quality districts focus particular attention on reducing emissions from transportation and area-wide emission sources. Each nonattainment district is required to adopt a plan to achieve a 5 percent annual reduction, averaged over consecutive 3-year periods, in district-wide emissions of each nonattainment pollutant or its precursors. A Clean Air Plan shows how a district would reduce emissions to achieve air quality standards. Generally, the State standards for these pollutants are more stringent than the national standards.

California Air Resources Board. The CARB is the State's clean air agency. The CARB's goals are to attain and maintain healthy air quality, protect the public from exposure to TACs, and oversee compliance with air pollution rules and regulations.

Assembly Bill 2588 Air Toxics "Hot Spots" Information and Assessment Act. Under Assembly Bill (AB) 2588, stationary sources of air pollutants are required to report the types and quantities of certain substances that their facilities routinely released into the air. The goals of the Air Toxics "Hot Spots" Act are to collect emission data, identify facilities having localized impacts, determine health risks, and notify nearby residents of significant risks.

The California Air Resources Board Handbook. The CARB has developed an Air Quality and Land Use Handbook[5] (CARB Handbook), which is intended to serve as a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process. According to the CARB Handbook, air pollution studies have shown an association between respiratory and other non-cancer health effects and proximity to high traffic roadways. Other studies have shown that diesel exhaust and other cancer-causing chemicals emitted from cars and trucks are responsible for much of the overall cancer risk from airborne toxics in California. The CARB Handbook recommends that county and city planning agencies strongly consider proximity to these sources when finding new locations for sensitive land uses such as homes, medical facilities, daycare centers, schools, and playgrounds.

Land use designations with air pollution sources of concern include freeways, rail yards, ports, refineries, distribution centers, chrome plating facilities, dry cleaners, and large gasoline service stations. Key recommendations in the CARB Handbook include taking steps to avoid siting new, sensitive land uses:

- Within 500 feet of a freeway, urban roads with 100,000 vehicles/day, or rural roads with 50,000 vehicles/day;
- Within 1,000 feet of a major service and maintenance rail yard;
- Immediately downwind of ports (in the most heavily impacted zones) and petroleum refineries;
- Within 300 feet of any dry cleaning operation (for operations with two or more machines, provide 500 feet); and
- Within 300 feet of a large gas station (defined as a facility with a throughput of 3.6 million gallons per year or greater).

The CARB Handbook specifically states that its recommendations are advisory and acknowledges land use agencies have to balance other considerations, including housing and transportation needs, economic development priorities, and other quality of life issues.

The recommendations are generalized and do not consider site-specific meteorology, freeway truck percentages, or other factors that influence risk for a particular project site. The purpose of this guidance is to further examine project sites for actual health risk associated with the location of new sensitive land uses.

[5] California Air Resources Board (CARB). 2005. *Air Quality and Land Use Handbook: A Community Health Perspective* (CARB Handbook). April.

4.3.4.3 Regional Regulations

South Coast Air Quality Management District. The SCAQMD has jurisdiction over most air quality matters in the Basin. This area includes all of Orange County, Los Angeles County except for the Antelope Valley, the non-desert portion of western San Bernardino County, and the western and Coachella Valley portions of Riverside County. The SCAQMD is the agency principally responsible for comprehensive air pollution control in the Basin and is tasked with implementing certain programs and regulations required by the Clean Air Act (CAA) and the CCAA. The SCAQMD prepares plans to attain CAAQS and NAAQS. SCAQMD is directly responsible for reducing emissions from stationary (area and point) sources. The SCAQMD develops rules and regulations, establishes permitting requirements, inspects emissions sources, and enforces such measures though educational programs or fines, when necessary.

- **Regulation IV - Prohibitions:** This regulation sets forth the restrictions for visible emissions, odor nuisance, fugitive dust, various air pollutant emissions, fuel contaminants, start-up/shutdown exemptions, and breakdown events.
    - **Rule 402 - Nuisance:** This rule restricts the discharge of any contaminant in quantities that cause or have a natural ability to cause injury, damage, nuisance, or annoyance to businesses, property, or the public. Future development projects that are implemented in the Buildout Area will be required to comply with Rule 402.
    - **Rule 403 - Fugitive Dust:** This rule requires the prevention, reduction, or mitigation fugitive dust emissions from a project site. Rule 403 restricts visible fugitive dust to a project property line, restricts the net PM_{10} emissions to less than 50 micrograms per cubic meter ($\mu g/m^3$) and restricts the tracking out of bulk materials onto public roads. Additionally, Rule 403 requires a future project applicant for a development project in the Buildout Area to use one or more of the best available control measures (identified in the tables within the rule). Control measures may include adding freeboard to haul vehicles, covering loose material on haul vehicles, watering, using chemical stabilizers, and/or ceasing all activities. Finally, Rule 403 requires that a contingency plan be prepared if so determined by the USEPA. In addition, SCAQMD Rule 403(e), Additional Requirements for Large Operations, includes requirements to provide Large Operation Notification Form 403 N, appropriate signage, additional dust control measures, and employment of a dust control supervisor that has successfully completed the Dust Control training class in the South Coast Air Basin. Future development projects that are implemented in the Buildout Area will be required to comply with Rule 403.
- **Regulation XI - Source Specific Standards:** Regulation XI sets emissions standards for different sources.
    - **Rule 1113 - Architectural Coatings:** This rule limits the amount of VOCs from architectural coatings and solvents, which lowers the emissions of odorous compounds. Future development projects that are implemented in the Buildout Area will be required to comply with Rule 1113.

- **Regulation XIV – Toxics and Other Non-Criteria Pollutants:** This regulation sets forth the restrictions for visible emissions, odor nuisance, fugitive dust, various air pollutant emissions, fuel contaminants, start-up/shutdown exemptions, and breakdown events.
    - **Rule 1401 – New Source Review of Toxic Air Contaminants:** This rule specifies limits for maximum individual cancer risk (MICR), cancer burden, and noncancer acute and chronic hazard index (HI) from new permit units, relocations, or modifications to existing permit units which emit toxic air contaminants.
    - **Rule 1403 – Asbestos Emissions from Demolition/Renovation Activities:** The purpose of this rule is to specify work practice requirements to limit asbestos emissions from building demolition and renovation activities, including the removal and associated disturbance of asbestos-containing materials (ACMs). Demolition activities associated with the proposed project will be required to comply with Rule 1403.

The SCAQMD is responsible for demonstrating regional compliance with ambient air quality standards but has limited direct involvement in reducing emissions from fugitive, mobile, and natural sources. To that end, the SCAQMD works cooperatively with CARB, SCAG, county transportation commissions, local governments, and other federal and State government agencies. It has responded to this requirement by preparing a series of Air Quality Management Plans (AQMP) to meet the CAAQS and NAAQS. SCAQMD and SCAG are responsible for formulating and implementing the AQMP for the South Coast Air Basin. The main purpose of an AQMP is to bring the area into compliance with federal and State air quality standards. Every several years, SCAQMD prepares a new AQMP, updating the previous plan and the 20-year horizon.[6] The Final 2022 Air Quality Management Plan is the currently adopted AQMP. Key elements of the Final 2022 AQMP include:

- Calculating and taking credit for co-benefits from other planning efforts (e.g., climate, energy, and transportation)
- A strategy with fair-share emission reductions at the federal, State, and local levels
- Investment in strategies and technologies meeting multiple air quality objectives
- Seeking new partnerships and significant funding for incentives to accelerate deployment of zero-emission and near-zero emission technologies
- Enhanced socioeconomic assessment, including an expanded environmental justice analysis
- Attainment of the 24-hour $PM_{2.5}$ standard in 2019 with no additional measures

[6] South Coast Air Quality Management District (SCAQMD). 2022. *2022 Air Quality Management Plan*. December. Website: https://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/2022-air-quality-management-plan/final-2022-aqmp/final-2022-aqmp.pdf?sfvrsn=16 (accessed November 2025).

- Attainment of the annual $PM_{2.5}$ standard by 2025 with implementation of a portion of the O_3 strategy

- Attainment of the 1-hour O_3 standard by 2022 with no reliance on "black box" future technology (CAA Section 182(e)(5) measures)

The 2022 AQMP builds upon measures already in place from previous AQMPs. It also includes a variety of additional strategies such as regulation, accelerated deployment of available cleaner technologies (e.g., zero emissions technologies, when cost-effective and feasible, and low NOX_x technologies in other applications), best management practices, co-benefits from existing programs (e.g., climate and energy efficiency), incentives, and other CAA measures to achieve the 2015 8-hour ozone standard.

In addition, the SCAQMD has established daily emissions thresholds for construction and operation of a proposed project in the Basin. The SCAQMD's project level thresholds are based in part on Section 180 (e) of the Clean Air Act, which identifies ambient pollutant concentrations associated with the onset of significant adverse health effects—often referred to as 'significant harm levels.' These federal benchmarks guide U.S. EPA and local air districts in defining levels of exposure that may pose imminent and substantial endangerment to public health, and they support the development of State Implementation Plans and regional attainment strategies. Within this framework, SCAQMD establishes project-level thresholds to promote consistency, transparency, and regulatory defensibility in evaluating the significance of air quality impacts during the environmental review process.

Southern California Association of Governments. SCAG is a council of governments for Los Angeles, Orange, Riverside, San Bernardino, Imperial, and Ventura counties. It is a regional planning agency and serves as a forum for regional issues relating to transportation, the economy and community development, and the environment. SCAG is the federally designated Metropolitan Planning Organization (MPO) for the majority of the Southern California region and is the largest MPO in the nation. With regard to air quality planning, SCAG prepares the Regional Transportation Plan (RTP) and Regional Transportation Improvement Program (RTIP), which address regional development and growth forecasts and form the basis for the land use and transportation control portions of the AQMP and are used in the preparation of the air quality forecasts and consistency analysis included in the AQMP. The RTP, RTIP, and AQMP are based on projections originating within local jurisdictions.

Although SCAG is not an air quality management agency, it is responsible for developing transportation, land use, and energy conservation measures that affect air quality. SCAG's Regional Comprehensive Plan (RCP) provides growth forecasts that are used in the development of air quality-related land use and transportation control strategies by the SCAQMD. The RCP is a framework for decision-making for local governments, assisting them in meeting federal and State mandates for growth management, mobility, and environmental standards, while maintaining consistency with regional goals regarding growth and changes. Policies within the RCP include consideration of air quality, land use, transportation, and economic relationships by all levels of government.

SCAG adopted the Connect SoCal: The 2024–2050 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (Connect SoCal 2024)[7] on April 4, 2024. Connect SoCal 2024 is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. The Connect SoCal 2024 identifies that the SCAG area would reach the GHG emissions reduction target set by CARB, including the regional target of reducing GHG emissions from autos and light-duty trucks from 2005 levels by 19 percent by 2035.

4.3.4.4 Local Regulations

City of Cypress General Plan. The City of Cypress addresses air quality in the Air Quality Element of the City's General Plan.[8] The Air Quality Element contains goals, policies, and implementation actions that are intended to protect the public's health and welfare by reducing current pollution emissions and by requiring new development to comply with air quality standards. The following goals, policies, and implementing actions related to air quality are presented in the Air Quality Element and are applicable to the proposed project:

- **AQ-1.3:** Locate multiple family developments close to commercial areas to encourage pedestrian rather than vehicular travel.
- **AQ-1.4:** Develop neighborhood parks near concentrations of residents to encourage pedestrian travel to the recreation facilities.
- **AQ-3.1:** Adopt incentives, regulations, and/or procedures to minimize particulate emissions from unpaved roads, agricultural uses, and building construction.
- **AQ-4.1:** Promote energy conservation in all sectors of the City including residential, commercial, and industrial.
- **AQ-4.2:** Promote local recycling of wastes and the use of recycled materials.
- **AQ-4.3:** Adopt incentives and regulations to reduce emissions from swimming pool heaters and residential and commercial water heaters.

4.3.5 Thresholds of Significance

The thresholds of significance for air quality impacts used in this analysis are consistent with Appendix G of the *State CEQA Guidelines*. Based on these thresholds, implementation of the proposed project would have a significant adverse impact with respect to air quality if it would:

Threshold 4.3.1: Conflict with or obstruct implementation of the applicable air quality plan;

Connect SoCal 2024: The 2024–2050 Regional Transportation Plan/Sustainable Communities Strategy of the Southern California Association of Governments. Website: https://scag.ca.gov/sites/default/files/2024-05/23-2987-connect-socal-2024-final-complete-040424.pdf (accessed October 2025).

8 City of Cypress. 2001. *Cypress General Plan Air Quality Element.* October 5.

Threshold 4.3.2: Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard;

Threshold 4.3.3: Expose sensitive receptors to substantial pollutant concentrations; or

Threshold 4.3.4: Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

As stated in Appendix G of the *State CEQA Guidelines*, where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make determinations about a project's impacts. This Draft EIR uses the adopted thresholds of the SCAQMD, the local air quality management district, as further discussed below.

4.3.5.1 Regional Emissions Thresholds

SCAQMD has established daily emissions thresholds for construction and operation of a proposed project in the Basin. The emissions thresholds were established based on the attainment status of the Basin with regard to air quality standards for specific criteria pollutants. Because the concentration standards were set at a level that protects public health with an adequate margin of safety, these emissions thresholds are regarded as conservative and would overstate an individual project's contribution to health risks.

Table 4.3.E: SCAQMD Air Quality Significance Thresholds lists the CEQA significance thresholds for construction and operational emissions established for the Basin.

Projects in the Basin with construction- or operation-related emissions that exceed any of their respective emission thresholds would be considered significant under SCAQMD guidelines. These thresholds, which SCAQMD developed and that apply throughout the Basin, apply as both project and cumulative thresholds. If a project exceeds these standards, it is considered to have a project-specific and cumulative impact.

4.3.5.2 Local Microscale Concentration Standards

The significance of localized project impacts under CEQA depends on whether ambient CO levels in the vicinity of the project are above or below State and federal CO standards. Because ambient CO levels are below the standards throughout the Basin, a project would be considered to have a significant CO impact if project emissions result in an exceedance of one or more of the 1-hour or 8-hour standards. The following are applicable local emission concentration standards for CO:

- California State 1-hour CO standard of 20 parts per million (ppm)
- California State 8-hour CO standard of 9 ppm

Table 4.3.E: SCAQMD Air Quality Significance Thresholds

Mass Daily Thresholds *(see note)*		
Pollutant	**Construction**	**Operation**
NO_x	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM_{10}	150 lbs/day	150 lbs/day
$PM_{2.5}$	55 lbs/day	55 lbs/day
SO_x	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day
Lead	3 lbs/day	3 lbs/day
Toxic Air Contaminants (TACs), Odor, and GHG Thresholds		
TACs (including carcinogens and non-carcinogens)	Maximum Incremental Cancer Risk ≥ 10 in 1 million Cancer Burden > 0.5 excess cancer cases (in areas ≥ 1 in 1 million) Chronic & Acute Hazard Index ≥ 1.0 (project increment)	
Odor	Project creates an odor nuisance pursuant to South Coast AQMD Rule 402	
GHG	10,000 MT/yr CO_2e for industrial facilities	
Ambient Air Quality Standards for Criteria Pollutants		
NO_2 1-hour average annual arithmetic mean	South Coast AQMD is in attainment; project is significant if it causes or contributes to an exceedance of the following attainment standards: 0.18 ppm (state) 0.03 ppm (state) and 0.0534 ppm (federal)	
PM_{10} 24-hour average annual average	10.4 µg/m^3 (construction) and 2.5 µg/m^3 (operation) 1.0 µg/m^3	
$PM_{2.5}$ 24-hour average	10.4 µg/m^3 (construction) and 2.5 µg/m^3 (operation)	
SO_2 1-hour average 24-hour average	0.25 ppm (state) & 0.075 ppm (federal – 99th percentile) 0.04 ppm (state)	
Sulfate 24-hour average	25 µg/m^3 (state)	
CO 1-hour average 8-hour average	South Coast AQMD is in attainment; project is significant if it causes or contributes to an exceedance of the following attainment standards: 20 ppm (state) and 35 ppm (federal) 9.0 ppm (state/federal)	
Lead 30-day Average Rolling 3-month average	1.5 µg/m^3 (state) 0.15 µg/m^3 (federal)	

Source: SCAQMD *CEQA Air Quality Handbook* (SCAQMD 1993).
Note: The mass daily thresholds for project construction and operation were used in this analysis. All other significance thresholds were included for informational purposes only.
CO = carbon monoxide
lbs/day = pounds per day
NO_x = nitrogen oxides
PM_{10} = particulate matter less than 10 microns in size
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
SCAQMD = South Coast Air Quality Management District
SO_x = sulfur oxides
VOCs = volatile organic compounds

4.3.6 Project Impacts

Threshold 4.3.1: Would the project conflict with or obstruct implementation of the applicable air quality plan?

***Significant and Unavoidable Impact*.** A consistency determination plays an essential role in local agency project review by linking local planning and unique individual projects to the air quality plans. A consistency determination fulfills the CEQA goal of fully informing local agency decision-makers of the environmental costs of the project under consideration at a stage early enough to ensure that air quality concerns are addressed. New or amended General Plan elements, Specific Plans, and significantly unique projects need to undergo a consistency review due to the air quality plan strategy being based on projections from local General Plans.

Consistency with the 2022 AQMP would be achieved if a project is consistent with the goals, objectives, and assumptions in this plan to achieve the federal and State air quality standards. Per SCAQMD's *CEQA Air Quality Handbook*, there are two main indicators of a project's consistency with the AQMP:

- **Indicator 1:** Whether the project would result in an increase in the frequency or severity of existing air quality violations, cause or contribute to new violations, or delay timely attainment of the ambient air quality standards or emission reductions in the AQMP.

- **Indicator 2:** Whether the project would exceed the assumptions in the AQMP. The AQMP strategy is, in part, based on projections from local general plans.

Indicator 1: For a project to be consistent with Indicator 1, the pollutants emitted from a project should not exceed the SCAQMD's emissions thresholds or cause a significant impact on air quality. As demonstrated in **Table 4.3.F: Unmitigated Regional Project Buildout Construction Emissions** below, construction emissions associated with full buildout of the proposed project would not exceed the SCAQMD thresholds for VOCs, NO_x, CO, SO_x, $PM_{2.5,}$ or PM_{10} emissions. Implementation of regulatory requirements (as specified in **Regulatory Compliance Measures AIR-1** through **AIR-4**) further reduces the short-term construction period air quality impacts and ensures compliance with the 2022 AQMP.

The project is an infill development within an existing urbanized area that would concentrate new residential uses, as directed by the state through the City's RNHA, near existing bus services. This is consistent with regional goals to reduce air quality emissions. However, even with implementation **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1**, long-term operational emissions associated with the proposed project, would exceed the SCAQMD's established significance thresholds including area, energy, and mobile source emissions. See **Table 4.3.H: Unmitigated Regional Project Operational Emissions** and **Table 4.3.I: Mitigated Project Operational Emissions**. As such, buildout of the proposed land use changes associated with the project would result in significant and unavoidable long-term operational pollutant emissions. Because the proposed project would result in a significant and unavoidable air quality impact, the proposed project would not be consistent with Indicator 1.

Table 4.3.F: Unmitigated Regional Project Buildout Construction Emissions

Project Construction	Maximum Pollutant Emissions (lbs/day)					
	VOCs	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
2026	1.4	46.4	33.9	0.1	9.0	5.0
2027	1.4	52.3	37.8	0.1	9.0	5.0
2028	4.3	52.3	78.1	0.1	19.8	5.3
2029	12.5	31.7	86.7	0.1	23.2	6.1
2030	12.3	31.4	82.9	0.1	23.2	6.1
2031	12.0	30.4	79.2	0.1	23.2	6.1
2032	11.9	30.1	76.1	0.1	23.2	6.1
2033	11.8	28.9	73.1	0.1	23.2	6.1
2034	11.7	28.9	70.8	0.1	23.2	6.1
2035	11.7	28.7	68.5	0.1	23.2	6.1
2036	11.6	28.5	66.3	0.1	23.2	6.1
2037	11.5	28.2	54.7	0.1	23.2	6.1
2038	8.7	14.8	19.5	<0.1	3.6	1.4
Peak Daily Emissions	**12.5**	**52.4**	**86.7**	**0.1**	**23.2**	**6.1**
SCAQMD Thresholds	75.0	100.0	550.0	150.0	150.0	55.0
Exceeds?	**No**	**No**	**No**	**No**	**No**	**No**

Source: Compiled by LSA (December 2025).

[1] Peak daily emissions of VOCs, CO, PM_{10}, and $PM_{2.5}$ occur during overlap of the Building Construction and Architectural Coating phases.

CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size
SCAQMD = South Coast Air Quality Management District
SO_X = sulfur oxides
VOCs = volatile organic compound

Indicator 2: The *CEQA Air Quality Handbook* indicates that consistency with AQMP growth assumptions must be analyzed for projects such as new or amended General Plan elements, Specific Plans, and significant projects. Significant projects include airports, electrical generating facilities, petroleum and gas refineries, designation of oil drilling districts, water ports, solid waste disposal sites, and offshore drilling facilities.

The proposed project consists of the reasonably foreseeable buildout of a portion of the area governed by the Cypress Town Center and Commons Specific Plan that includes approximately 134 acres of land in the city. The proposed project would allow for the development of up to 1,791 additional residential units within the Buildout Area and 440,000 square feet of non-residential development. As such, this analysis evaluates whether buildout of the proposed project would exceed the 2022 AQMP's assumptions.

With respect to determining the proposed project's consistency with AQMP growth assumptions, the projections in the AQMP for achieving air quality goals are based on assumptions in SCAG's Connect SoCal 2024 regarding population, housing, and growth trends. According to the Connect SoCal 2024 Growth Forecast Technical Report,[9] Cypress's population is anticipated to grow by approximately 12 percent between 2019 and 2050 from approximately 50,200 people to 56,200

[9] Southern California Association of Governments (SCAG). 2024b. 2024–2050 RTP/SCS Draft Connect SoCal 2024 Growth Projections.

people. Orange County's population is expected to grow by 7.8 percent between 2019 and 2050 from 3,191,000 people to 3,439,000 people.[10] In addition, according to the SCAG 6th Cycle Final Regional Housing Needs Assessment (RHNA) Allocation Plan, the City's housing need allocation for the planning period between 2021 and 2029 is 3,936 units.[11]

According to the U.S. Census Bureau, the average number of people per household from 2019-2023 in Cypress was approximately 3.08 people.[12] Assuming a ratio of 3.08 people per household, the proposed project would result in a net increase of approximately 5,516 persons at full buildout, which was assumed to take place over 12 years, for an average of 460 people per year.[13]

Although the buildout envisioned under the proposed project would facilitate the development of new housing in the City, the increase in population associated with the new housing would not exceed SCAG's growth assumptions, as the proposed project is designed to meet the City's housing need. As such, future development implemented in accordance with the proposed project would accommodate planned regional housing growth included in the SCAG RHNA. Therefore, since the purpose of the proposed project is to accommodate planned regional housing growth included in the SCAG RHNA, the proposed project would not exceed the growth assumptions in Connect SoCal 2024 or the 2022 AQMP.

In addition, as discussed in Section 4.11, Land Use and Planning, the proposed project would be consistent with applicable goals in Connect SoCal 2024. Furthermore, the proposed project reinforces the goals, including goals to develop, connect and sustain communities that are livable and thriving and to create a healthy region for the people of today and tomorrow, by providing additional housing opportunities within locations near amenities and already used by the public for commercial, recreational, and/or professional uses. In addition, the proposed project would support the development, connection, and sustainability of communities that are livable and thriving by providing necessary housing for all income levels in a bustling economic corridor. Furthermore, **Table 4.11.D** in Section 4.11 provides a consistency analysis of the goals and policies from the City's General Plan that are relevant to the proposed project. As demonstrated in **Table 4.11.D**, the proposed project would not conflict with the applicable goals in the Air Quality Element of the City's General Plan. Additionally, **Mitigation Measure TRA-1** would require the implementation of feasible Transportation Demand Management (TDM) strategies to mitigate the proposed project's Vehicle Miles Traveled (VMT) impact, which include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network and improving the pedestrian network, including the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area. All future development facilitated by the proposed

[13] 1,791 households x 3.08 persons per household = 5,516 persons

project would be required to comply with City policies regarding bicycle parking and other infrastructure.

Buildout envisioned under the proposed project would not include airports, electrical generating facilities, petroleum and gas refineries, designation of oil drilling districts, water ports, solid waste disposal sites, and offshore drilling facilities; therefore, it is unlikely that the proposed project would interfere with SCAQMD's goals for improving air quality in the region. As demonstrated above, the proposed project would not conflict with the 2022 AQMP and, as such, would not jeopardize attainment of the CAAQS and NAAQS in the area under the jurisdiction of the SCAQMD. The proposed project is therefore considered consistent with Indicator 2. Impacts related to Indicator 2 would be less than significant.

Summary: Based on the discussion above, the proposed project would have the potential to conflict or obstruct implementation of applicable air quality plans under Indicator 1 because buildout of the proposed project would result in significant and unavoidable long-term operational pollutant emissions. As demonstrated above, the proposed project would be consistent with Indicator 2 as the proposed project would not exceed the growth assumptions in Connect SoCal 2024 or the 2022 AQMP. As discussed below, although there is no feasible mitigation to reduce operational pollutant emissions to a less than significant level, **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1** would incorporate design features that would contribute to reducing criteria air pollutant emissions generated during operational activities associated with the proposed project. Therefore, since the proposed project would conflict with Indicator 1, impacts would be significant and unavoidable.

Threshold 4.3.2: Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard?

***Significant and Unavoidable Impact*.** The Basin is currently designated nonattainment for the federal and State standards for O_3 and $PM_{2.5}$. In addition, the Basin is in nonattainment for the State PM_{10} standard. The Basin's nonattainment status is attributed to the region's development history. Past, present, and future development projects contribute to the region's adverse air quality impacts on a cumulative basis. By its very nature, air pollution is largely a cumulative impact. No single project is sufficient in size to, by itself, result in nonattainment of AAQS on a Basin-wide level. Instead, a project's individual emissions contribute to existing cumulatively significant adverse air quality impacts. If a project's contribution to the cumulative impact is considerable, then the project's impact on air quality would be considered significant.

In developing thresholds of significance for air pollutants, the SCAQMD considered the emission levels for which a project's individual emissions would be cumulatively considerable. If a project exceeds the identified significance thresholds, its emissions would be cumulatively considerable, resulting in significant adverse air quality impacts to the region's existing air quality conditions. Therefore, additional analysis to assess cumulative impacts is not necessary.

The following analysis assesses the potential air quality impacts associated with construction and operation of the proposed project.

Construction Emissions. During construction, short-term degradation of air quality may occur due to the release of particulate emissions generated by demolition, grading, paving, building, and other activities. Emissions from construction equipment are also anticipated and would include CO, NO_x, VOCs, directly emitted particulate matter ($PM_{2.5}$ and PM_{10}), and TACs such as diesel exhaust particulate matter.

Construction activities would include demolition, site preparation, grading, building construction, architectural coating, and paving activities. Construction-related effects on air quality are typically greatest during the demolition, grading, and site preparation phases due to the disturbance of soils. If not properly controlled, these activities would temporarily generate particulate emissions. Sources of fugitive dust would include disturbed soils at construction sites. Unless properly controlled, vehicles leaving construction sites would deposit dirt and mud on local streets, which could be an additional source of airborne dust after it dries. PM_{10} emissions would vary from day to day, depending on the nature and magnitude of construction activity and local weather conditions. PM_{10} emissions would depend on soil moisture, silt content of soil, wind speed, and the amount of operating equipment. Larger dust particles would settle near the source, while fine particles would be dispersed over greater distances from the construction site.

Water or other soil stabilizers can be used to control dust, resulting in emission reductions of 50 percent or more. The SCAQMD has established Rule 403 (Fugitive Dust), which would require the contractor to implement measures that would reduce the amount of particulate matter generated during the construction period, which was assumed by CalEEMod.

In addition to dust-related PM_{10} emissions, heavy trucks and construction equipment powered by gasoline and diesel engines would generate CO, SO_2, NO_x, VOCs, and some soot particulate ($PM_{2.5}$ and PM_{10}) in exhaust emissions. If construction activities were to increase traffic congestion in the area, CO and other emissions from traffic would increase slightly while those vehicles idle in traffic. These emissions would be temporary in nature and limited to the immediate area surrounding the construction site.

Construction emissions were estimated for future development envisioned under the proposed project using CalEEMod. This analysis includes two model runs to evaluate a worst-case construction scenario. The first model run evaluates construction emissions associated with full buildout of the proposed project, including the development of up to 1,791 additional residential units and 440,000 square feet of non-residential development within the Buildout Area.

The second model run includes a phased approach to grading that includes the simultaneous grading of multiple development areas to reflect a conservative worst-case construction scenario during grandstand demolition and grading only. Results of both analyses are described below.

Project Buildout Construction Emissions. Construction emissions were estimated for full buildout of the future development allowed under the proposed project using CalEEMod. Specific construction information for specific development projects, such as construction phasing and schedule, is not yet known; however, construction of the entire Buildout Area is assumed to commence in 2026 and conclude in 2038, which was included in CalEEMod. Construction activities would include demolition, site preparation, grading, building construction, paving, and architectural coatings

(painting). TAIT, a licensed civil engineering firm, prepared grading estimates for buildout of the proposed project, concluding the proposed project would require the cut of 248,600 cubic yards of soil and fill of 333,500 cubic yards of soil, which would result in the net import of 84,900 cubic yards of soil. In addition, the proposed project would require the demolition of approximately 768,360 square feet of existing buildings. Based on information provided by the Project Applicant, demolition activities would require up to four excavators, two track loaders, a crawler crane, and several bobcats/backhoes. This analysis also assumes the use of Tier 2 construction equipment and that the proposed project would comply with SCAQMD Rule 403 measures. Assuming the use of Tier 2 construction equipment is conservative as construction contractors often typically use Tier 2 or cleaner equipment due to their wide availability. Default assumptions (e.g., construction worker and truck trips and fleet activities) from CalEEMod were used where specific information regarding construction was not available. Construction-related emissions are presented in **Table 4.3.F**. CalEEMod output sheets are included in **Appendix B**.

As shown in **Table 4.3.F**, construction emissions associated with full buildout of the proposed project would not exceed the SCAQMD thresholds for VOCs, NO_x, CO, SO_x, $PM_{2.5,}$ or PM_{10} emissions. As discussed above, according to SCAQMD guidance, projects that exceed the significance thresholds are considered by SCAQMD to result in cumulatively considerable air quality impacts, whereas projects that do not exceed applicable thresholds are generally not considered to result in cumulatively considerable impacts. Because construction emissions associated with the proposed project would not exceed any applicable significance threshold, construction activities would not result in a cumulatively considerable contribution to regional air quality impacts. In addition, construction emissions estimates presented herein are conservative because they are based on default construction equipment assumptions and do not account for the requirement in **Mitigation Measure AIR-2** that construction activities utilize Tier 4 Final or cleaner equipment. Actual construction emissions would therefore be expected to be lower than those presented in the modeling results and in **Table 4.3.F**. Accordingly, with compliance with regulatory requirements (as specified in **Regulatory Compliance Measures AIR-1** through **AIR-4**), construction impacts related to a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under applicable federal or State ambient air quality standards would be less than significant, and no mitigation is required.

Concurrent Grading Emissions. As described above, in order to provide a conservative analysis of the construction impacts associated with the proposed project, this supplemental analysis evaluates the simultaneous grading of five projects in multiple land use districts. This supplemental analysis is for informational purposes only to evaluate a potential worst-case scenario for grading activities.

This analysis conservatively assumes that the grading for five development projects would simultaneously occur on Lots 2, 4, 7, 12 and 13, including all of Lots 4, 12 and 13, the southern 8 acres of Lot 2 and the northern 11 acres of Lot 7. Grading activities associated with the five development projects would require the cut of 202,000 cubic yards of soil and fill of 263,000 cubic yards of soil, which would result in the net import of 61,000 cubic yards of soil.

Consistent with a conservative worst-case approach, this supplemental analysis uses default construction equipment assumptions in CalEEMod, including a Tier 2 equipment fleet, and assumes compliance with SCAQMD Rule 403 dust control measures. Because specific construction details are

not yet known, default CalEEMod assumptions (e.g., construction worker, truck trips and fleet activities) were used. Construction-related grading emissions are presented in **Table 4.3.G: Unmitigated Regional Concurrent Grading Emissions**. CalEEMod output sheets are included in **Appendix B**.

Table 4.3.G: Unmitigated Regional Concurrent Grading Emissions

Project Construction	Maximum Pollutant Emissions (lbs/day)					
	VOCs	**NO_X**	**CO**	**SO_X**	**PM_{10}**	**$PM_{2.5}$**
2026	1.5	54.7	38.9	0.1	7.5	3.1
2027	1.5	54.5	38.6	0.1	6.5	3.1
Peak Daily Emissions	**1.5**	**54.7**	**38.9**	**0.1**	**7.5**	**3.1**
SCAQMD Thresholds	75.0	100.0	550.0	150.0	150.0	55.0
Exceeds?	**No**	**No**	**No**	**No**	**No**	**No**

Source: Compiled by LSA (December 2025).
CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size
SCAQMD = South Coast Air Quality Management District
SO_X = sulfur oxides
VOCs = volatile organic compound

As shown in **Table 4.3.G**, construction emissions associated with the concurrent grading scenario would not exceed the SCAQMD thresholds for VOCs, NO_x, CO, SO_X, $PM_{2.5,}$ or PM_{10} emissions.

Operational Emissions. Long-term air pollutant emission impacts that would result from future buildout envisioned under the proposed project are those that are associated with mobile sources (e.g., vehicle trips), energy sources (e.g., natural gas), and area sources (e.g., architectural coatings and the use of landscape maintenance equipment).

Mobile source emissions include VOC and NO_X emissions, which contribute to the formation of ozone. Additionally, PM_{10} emissions result from running exhaust, tire and brake wear, and the entrainment of dust into the atmosphere from vehicles traveling on paved roadways. Energy source emissions would typically result from activities in buildings for which natural gas is used. Typically, area source emissions consist of direct sources of air emissions located at a project site, including architectural coatings, consumer products, and the use of landscape maintenance equipment. This analysis utilizes default assumptions for architectural coatings, the use of consumer products (including cleaning supplies, kitchen aerosols, cosmetics and toiletries), and landscape maintenance equipment.

Emission estimates for operation of full buildout envisioned under the proposed project were calculated using CalEEMod, assuming up to 1,791 residential units and 440,000 square feet of non-residential development as identified in **Table 3.B** in Chapter 3.0, Project Description. Trip generation rates used in CalEEMod were based on the project's trip generation estimate of 21,041 net new average daily trips, as identified in Section 4.17, Transportation. It is not yet known whether future buildout under the proposed project would include natural gas; therefore, this analysis conservatively uses default assumptions for natural gas usage. This analysis assumes there would be no woodburning hearths. Where project-specific data were not available, default assumptions (e.g.,

electricity usage, water usage, and solid waste generation) from CalEEMod were used to estimate project emissions.

The primary emissions associated with the project are regional in nature, meaning that air pollutants are rapidly dispersed on release or, in the case of vehicle emissions associated with the project, emissions are released in other areas of the Air Basin. The maximum daily emissions associated with project operational trip generation, energy, and area sources are identified in **Table 4.3.H**. The emissions presented in **Table 4.3.I** are conservative as they do not take into account the emissions from the existing uses, except for the existing trip generation. CalEEMod output sheets are included in **Appendix B**.

Table 4.3.H: Unmitigated Regional Project Operational Emissions

Source	Pollutant Emissions (lbs/day)					
	VOCs	**NO_X**	**CO**	**SO_X**	**PM_{10}**	**$PM_{2.5}$**
Mobile Sources	45.8	27.9	358.9	1.0	116.2	29.8
Area Sources	75.4	25.3	132.2	0.2	2.1	2.1
Energy Sources	0.6	9.7	4.4	0.1	0.8	0.8
Total Emissions	**121.7**	**62.9**	**459.5**	**1.3**	**119.1**	**32.6**
SCAQMD Thresholds	55.0	55.0	550.0	150.0	150.0	55.0
Exceeds?	**Yes**	**Yes**	**No**	**No**	**No**	**No**

Source: Compiled by LSA (December 2025).
Note: The land uses used in this analysis are consistent with the land use codes utilized in the *Traffic Study for Cypress Specific Plan 3.0 Buildout Project*. The emissions presented in this table are based on the unmitigated operational results in CalEEMod.
CalEEMod = California Emissions Estimator Model
CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size
SCAQMD = South Coast Air Quality Management District
SO_X = sulfur oxides
VOCs = volatile organic compound

Table 4.3.I: Mitigated Project Operational Emissions

Source	Pollutant Emissions (lbs/day)					
	VOCs	**NO_X**	**CO**	**SO_X**	**PM_{10}**	**$PM_{2.5}$**
Mobile Sources	45.3	27.6	354.9	1.0	114.9	29.4
Area Sources	58.3	0.0	0.0	0.0	0.0	0.0
Energy Sources	0.6	9.7	4.4	0.1	0.8	0.8
Total Emissions	**104.2**	**37.3**	**359.5**	**1.1**	**115.7**	**30.2**
SCAQMD Thresholds	55.0	55.0	550.0	150.0	150.0	55.0
Exceeds?	**Yes**	**No**	**No**	**No**	**No**	**No**

Source: Compiled by LSA (December 2025).
Note: The emissions presented in this table are based on the mitigated operational results in CalEEMod.
CalEEMod = California Emissions Estimator Model
CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size
SCAQMD = South Coast Air Quality Management District
SO_X = sulfur oxides
VOCs = volatile organic compound

The results shown in **Table 4.3.I** indicate that buildout of the proposed project would exceed the significance criteria for VOCs and NO_X emissions, but CO, SO_X, PM_{10}, or $PM_{2.5}$ emissions would not exceed the significance criteria. Therefore, the proposed project could have a potentially significant effect on regional air quality.

In addition, as discussed in Chapter 3.0, given the size of the property, development within the Buildout Area would occur on a project-by-project basis and the specific design and sequencing of those projects cannot be determined at this time. The exact timing of implementation and phasing for the Buildout Area may vary based on a number of factors, including market and economic demands, as well as physical constraints or timing of roadway/infrastructure improvements. As such, it is possible that construction activities would still be underway while parts of the proposed project become operational. Since the project is a programmatic level document and the timing of projects that would be developed under the Specific Plan are unknown at this time, the precise combination of emissions that would occur is unknown.

However, since operational emissions would exceed SCAQMD thresholds, it is assumed that construction and operational emissions combined would exceed the significance threshold established by the SCAQMD for daily project emissions. Two feasible mitigation measures were identified aimed at reducing operational emissions, **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1.**

Mitigation Measure AIR-1

Prior to issuance of grading permits for development projects in the Buildout Area, a future project applicant in collaboration with the City of Cypress Planning Division shall identify project design details and specifications, where feasible, to document implementation and compliance with emission reduction measures. The City of Cypress Planning Division shall verify compliance through: (1) Review and approval of construction drawings and building permit submittals demonstrating incorporation of the emission-reduction measures; (2) Documentation or reporting from the contractor or a future project applicant, as deemed necessary by the City of Cypress Planning Division, demonstrating adherence to approved measures.

The measures below shall be implemented and updated as necessary as they are considered feasible and effective in reducing criteria pollutant emissions generated by the project. These measures shall be reviewed and updated in accordance with the most recent emission-reduction and emission-minimization guidance available, including, at a minimum, the California Air Pollution Control Officers Association (CAPCOA) 2024 guidance. A future project applicant shall incorporate all feasible and updated measures into the final construction drawings, building plans, and contractor specifications for City review, including, but not limited to, the following:

- Provide building access and paths which are physically separated from street parking lot traffic and that eliminate physical barriers such as walls, berms, landscaping and slopes that impede the use of pedestrians, bicycle facilities, or public transportation vehicles.
- Provide continuous sidewalks separated from the roadway by landscaping and on street parking.
- Provide a parking lot design that includes clearly marked and shaded pedestrian pathways between transit facilities and building entrances.
- Provide preferential parking spaces near the entrance of buildings for those who carpool/vanpool/rideshare and provide signage.
- Install electric vehicle charging capabilities that meet the requirements of the latest version of the California Green Building Standards Code (CALGreen Code) Tier 2 Voluntary Standards.
- Install ENERGY STAR certified heating, cooling, and lighting devices, and appliances or equivalent.
- Install only electric fireplaces.
- Install low-flow water fixtures.
- Utilize energy-efficient design features, including appropriate site orientation, use of lighter color roofing and building materials, and use of deciduous shade trees and windbreak trees to reduce fuel consumption for heating and cooling.
- Use light-colored paving and roofing materials.
- Use low-volatile organic compound (VOC) paints with 10 grams per liter or less.
- Require the use of all-electric landscaping equipment.
- Maximize the planting of trees in landscaping and parking lots.

Mitigation Measure AIR-1 would require the implementation of all feasible measures to reduce operational impacts associated with buildout envisioned under the proposed project. As outlined in the Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities,

and Advancing Health and Equity,[14] these measures are recognized to reduce emissions associated with project operation. **Mitigation Measure TRA-1,** which requires the implementation of a Transportation Demand Management Plan to lower project VMT for the proposed project's residential component, identified in Section 4.17, Transportation, would further reduce impacts. As outlined in the regulatory section, and further discussed in Section 4.8, Greenhouse Gas Emissions, there is a direct correlation between lowering VMT and emissions. The measures listed in **Mitigation Measure AIR-1** were included in CalEEMod. As such, **Table 4.3.I** identifies the results of the analysis with implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1**.

As shown in **Table 4.3.I**, with implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1**, NO_x emissions would be reduced to below the SCAQMD's significance criteria. However, VOC emissions would still exceed the SCAQMD's significance criteria. As shown in **Table 4.3.I**, the proposed project's VOC emissions are primarily associated with mobile sources (i.e., project-generated vehicle trips) and area sources associated with the use of consumer products (including cleaning supplies, kitchen aerosols, cosmetics, and toiletries). While **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1** would incorporate design features that would contribute to reducing criteria air pollutant emissions generated during operational activities associated with the full buildout envisioned under proposed project; the long-term operational VOC emissions associated with the proposed project would cumulatively contribute to the nonattainment designations in the Basin and project impacts would not be lowered below SCAQMD thresholds.

The majority of the project's operational-source emissions are generated by passenger cars associated with trips generated by the project. Even with potential VMT reductions required in **Mitigation Measure TRA-1**, VOC emissions would remain above the SCAQMD thresholds. As there are no additional feasible mitigation measures that would reduce project operational-source VOC emissions to a less-than-significant level proposed project operation would result in a significant and unavoidable impact related to a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard.

Long-Term Microscale (CO Hot Spot) Analysis. Vehicular trips associated with the proposed project would contribute to congestion at intersections and along roadway segments in the vicinity of the Buildout Area. Localized air quality impacts would occur when emissions from vehicular traffic increase as a result of the proposed project. The primary mobile-source pollutant of local concern is CO, a direct function of vehicle idling time and, thus, of traffic flow conditions. CO transport is extremely limited; under normal meteorological conditions, CO disperses rapidly with distance from the source. However, under certain extreme meteorological conditions, CO concentrations near a congested roadway or intersection may reach unhealthful levels, affecting local sensitive receptors (e.g., residents, schoolchildren, the elderly, and hospital patients). Typically, high CO concentrations are associated with roadways or intersections operating at unacceptable levels of service or with extremely high traffic volumes. In areas with high ambient background CO concentrations, modeling is recommended to determine a project's effect on local CO levels.

[14] California Air Pollution Control Officers Association (CAPCOA). 2024. *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity*. October. Website: https://www.caleemod.com/handbook/index.html (accessed November 2025).

The significance of localized project impacts under CEQA depends on whether ambient CO levels in the vicinity of the Buildout Area are above or below State and federal CO standards. Because ambient CO levels are below the standards throughout the Basin, a project would be considered to have a significant CO impact if project emissions result in an exceedance of one or more of the 1-hour or 8-hour standards. The following are applicable local emission concentration standards for CO:

- California State 1-hour CO standard of 20 parts per million (ppm)
- California State 8-hour CO standard of 9 ppm

An assessment of project-related impacts on localized ambient air quality requires that future ambient air quality levels be projected. Existing CO concentrations in the immediate project vicinity are not available. Ambient CO levels monitored at the Anaheim monitoring station, the closest station to the Buildout Area that monitors CO, showed a highest recorded 1-hour concentration of 2.8 ppm (the State standard is 20 ppm) and a highest 8-hour concentration of 2.4 ppm (the State standard is 9 ppm) during the past 3 years (**Table 4.3.D**). The highest CO concentrations would normally occur during peak traffic hours; hence, CO impacts calculated under peak traffic conditions represent a worst-case analysis.

Full buildout envisioned under the proposed project would generate 21,041 net new average daily trips, 1,019 a.m. peak-hour trips, and 1,418 p.m. peak-hour trips. As discussed in the proposed project's Traffic Study,[15] under Existing Conditions, all study intersections currently operate at acceptable levels of service. As described in the Traffic Study, even with the improvements recommended in the Traffic Study, four intersections and roadway segments would continue to operate at deficient levels of service (LOS) during peak hours. However, given the extremely low level of CO concentrations in the Buildout Area, project-related vehicles are not expected to result in CO concentrations exceeding the State or federal CO standards. Impacts related to CO hot spots would be less than significant, and no mitigation is required.

Threshold 4.3.3: Would the project expose sensitive receptors to substantial pollutant concentrations?

Less Than Significant Impact. Sensitive receptors are defined as people that have an increased sensitivity to air pollution or environmental contamSinants. Sensitive receptor locations include schools, parks and playgrounds, daycare centers, nursing homes, hospitals, and residential dwelling units. The following section describes the potential impacts on sensitive receptors from construction and operation associated with buildout envisioned under the proposed project. As shown in **Figure 3-3: Surrounding Land Uses,** in Chapter 3.0, Project Description, the closest existing sensitive receptors to the Buildout Area include the following: residential uses located north of the Buildout Area across Cerritos Avenue; residential/mixed-use buildings located adjacent to the eastern boundary of the Buildout Area along Katella Avenue; senior housing located adjacent to the southern and western boundaries of the Buildout Area along Katella Avenue; and residential uses located south of the Buildout Area across Katella Avenue.

[15] Kimley-Horn and Associates, Inc. 2025. *Cypress Specific Plan 3.0 Buildout Project Traffic Study*. July.

Construction Health Risk to Nearby Sensitive Receptors. The SCAQMD recommends the evaluation of localized air quality impacts to nearby sensitive receptors, such as residential land uses, resulting from construction and operational activities. Localized Significance Thresholds (LSTs)[16] developed by SCAQMD are intended to evaluate site-specific emissions associated with individual projects and are primarily based on emissions generated by heavy-duty construction equipment, grading, and trenching activities. Because LSTs are designed for project-level analyses, they are not directly applicable to program-level environmental documents, such as the proposed project. Nevertheless, future development accommodated under the proposed project could result in construction emissions that may affect nearby sensitive receptors, particularly where construction activities are large in scale, prolonged in duration, or occur in close proximity to residential uses.

Construction activities associated with future development could generate emissions of particulate matter and diesel exhaust from heavy-duty equipment. Diesel particulate matter (DPM) is identified by CARB as a toxic air contaminant, and exposure to elevated concentrations may result in potential cancer and noncancer health risks. The potential magnitude of exposure would vary depending on construction intensity, duration, equipment mix, and receptor proximity. Accordingly, construction-related health risk impacts would be potentially significant in the absence of mitigation.

To reduce construction-related DPM emissions at the source, **Mitigation Measure AIR-2** requires use of U.S. EPA Tier 4 Final or cleaner construction equipment if and to the extent commercially available, or the cleanest available technology that is commercially available and feasible. If Tier 4 Final equipment or cleaner construction equipment is not commercially available for a majority of the construction equipment and the individual development project would be larger than 20 acres, **Mitigation Measure AIR-2** requires the preparation of a project-specific construction Health Risk Assessment (HRA), which may identify additional feasible risk-reduction measures for implementation, as appropriate. With implementation of **Mitigation Measure AIR-2**, impacts related to construction diesel particulate matter exposure to sensitive receptors would be less than significant.

Mitigation Measure AIR-2

All construction activities in the Buildout Area shall utilize U.S. EPA Tier 4 Final diesel construction equipment for equipment rated at greater than 50 brake horsepower (bhp) if and to the extent commercially available, or the cleanest available equipment and technology that is commercially available and feasible at the time of construction (e.g., zero-emission or equivalent low-emission equipment), to minimize diesel particulate matter (DPM) emissions.

If Tier 4 Final equipment is not commercially available for a majority of the construction equipment and an individual development project would be larger than 20 acres, the City shall require preparation of a construction Health Risk Assessment (HRA) for such development project.

[16] South Coast Air Quality Management District (SCAQMD). 2021. Localized Significance Thresholds. Website: http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook/localized-significance-thresholds (accessed October 2025).

If a construction HRA is required, it shall be prepared in accordance with current OEHHA methodology and applicable SCAQMD CEQA and health risk assessment guidance. Additional feasible risk-reduction measures identified through the HRA process shall be implemented as determined necessary by the City.

Operational Public Health Effects. Known health effects related to ozone include worsening of bronchitis, asthma, and emphysema and a decrease in lung function. Particulate matter can also lead to a variety of health effects in people. These include premature death of people with heart or lung disease, heart attacks, irregular heartbeat, decreased lung function, and increased respiratory symptoms. Regional emissions of criteria pollutants contribute to these known health effects. The SCAQMD is the primary agency responsible for ensuring the health and welfare of sensitive individuals and that they are not exposed to elevated concentrations of criteria pollutants in the Basin. To achieve the health-based standards established by the USEPA, the SCAQMD prepares an AQMP that details regional programs to attain the ambient air quality standards.

As demonstrated in **Table 4.3.I** above, even with implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1**, operational emissions associated with future buildout envisioned under the proposed project would exceed the SCAQMD's VOC thresholds. Although the emissions from operations resulting from buildout of the proposed project are expected to exceed the SCAQMD's project level thresholds, it should be noted that exceeding or not exceeding the SCAQMD's numeric regional mass daily thresholds does not, by itself, directly correlate to a determination regarding health risk impacts on nearby sensitive receptors. The project level thresholds are intended to provide a means of consistency in significance determination within the environmental review process, and do not provide a finding on health risk impacts on nearby sensitive receptors.

The reason for this is that the project level criteria pollutant thresholds are in pounds per day emitted into the air, whereas health effects are determined based on the concentration of emissions in the air at a particular receptor (e.g., ppm by volume of air, or $\mu g/m^3$ of air). State and federal ambient air quality standards were developed to protect the most susceptible population groups from adverse health effects and were established in terms of parts per million or micrograms per cubic meter for the applicable emissions.

However, the SCAQMD acknowledges that it has only been able to correlate potential health outcomes for very large emissions sources; specifically, 6,620 pounds per day (lbs/day) of NO_X, and 89,180 lbs/day of VOCs were expected to result in approximately 20 premature deaths per year and 89,947 school absences due to ozone.[17] As shown in **Table 4.3.I**, with implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1**, operation of the proposed project would generate a maximum of 37.3 lbs/day of NO_X and 104.2 lbs/day of VOCs well below the VOC emission directly corelate to health impacts. Therefore, emissions associated with the proposed project are not sufficiently high to correlate health effects on a Basin-wide level.

[17] Supreme Court of California. 2015. *Sierra Club, Revive the San Joaquin, and League of Women Voters of Fresno, Plaintiffs and Appellants, v. County of Fresno, Defendant and Despondent, and Friant Ranch, L.P., Real Part in Interest and Despondent.* April.

Furthermore, air quality trends for emissions of NO_X, VOCs, and ozone (which is a byproduct of NO_X and VOCs) have been trending downward within the Basin even as development has increased over the last several years. Therefore, proposed project implementation is not expected to result in any Basin-wide increase in health effects.

Additionally, in *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, the California Supreme Court clarified that when an EIR finds a project would result in significant air quality impacts, it must include a reasoned analysis connecting the magnitude of the emissions to potential adverse health effects to the extent feasible.

Consistent with this guidance, this Draft EIR provides a discussion of the health effects associated with exposure to each criteria pollutant (see **Table 4.3.A**) and explains the extent to which project emissions would contribute to existing air quality conditions in the Basin.

This Draft EIR recognizes that emissions of ozone precursors (VOC) can contribute to regional exceedances of air quality standards and that such exceedances are associated with increased respiratory and cardiovascular symptoms in sensitive populations. However, the proposed project's emissions are small relative to regional totals and SCAQMD addresses and manages air basin-wide concentrations are addressed through the SCAQMD's Air Quality Management Plan. Further, the precise concentrations at which VOC would trigger these symptoms for a single project is not currently scientifically feasible. It is also not technically feasible to directly correlate regional emissions to specific localized health public health effects (e.g., the number of asthma cases) from an individual project. Accordingly, this Draft EIR discloses these impacts as significant and unavoidable and includes all feasible mitigation measures to minimize emissions during operation.

Operational Health Risk to Nearby Residents. As discussed above, future buildout envisioned under the proposed project would include the development of up to 1,791 additional residential units within the Buildout Area. As such, the proposed project would introduce new sensitive receptors within the Buildout Area. As discussed in Section 4.3.4.2 above, the CARB developed and approved the *Air Quality and Land Use Handbook: A Community Health Perspective* to address the siting of sensitive land uses in the vicinity of freeways, distribution centers, rail yards, ports, refineries, chrome-plating facilities, dry cleaners, and gasoline-dispensing facilities. This guidance document was developed to assess compatibility and associated health risks when placing sensitive receptors near existing pollution sources.

CARB's recommendations for the siting of new sensitive land uses were based on a compilation of recent studies that evaluated data on the adverse health effects from proximity to air pollution sources. The key observation in these studies is that proximity to air pollution sources substantially increases both exposure and the potential for adverse health effects. Respiratory and cardiovascular problems including asthma, lung cancer, and premature death have been associated with living near major roadways and freeways. Children who live near major roadways and freeways have been found to have higher asthma rates and reduced lung function. There are three carcinogenic toxic air contaminants that constitute the majority of the known health risks from motor vehicle traffic: DPM from trucks and benzene and butadiene from passenger vehicles. Exposure to DPM accounts for more than 80 percent of the total carcinogenic risk in the Basin. It has been found that outdoor concentrations are highest near the roadway and decrease with increasing distance downwind of

the source. The CARB recommends avoiding siting new sensitive land uses within 500 feet of urban roads with more than 100,000 vehicles per day or rural roads with more than 50,000 vehicles per day.

Table 4.3.J: CARB Recommendations for Siting New Sensitive Land Uses shows a summary of the other CARB recommendations for siting new sensitive land uses within the vicinity of air pollutant sources. Recommendations in the table are based on data that show that localized air pollution exposures can be reduced by as much as 80 percent by following CARB minimum distance separations.

Table 4.3.J: CARB Recommendations for Siting New Sensitive Land Uses

Source/Category	Advisory Recommendations
Freeways and High-Traffic Roads	Avoid siting new sensitive land uses within 500 feet of a freeway, urban roads with 100,000 vehicles per day, or rural roads with 50,000 vehicles per day.
Distribution Centers	Avoid siting new sensitive land uses within 1,000 feet of a distribution center (that accommodates more than 100 trucks per day, more than 40 trucks with operating transport refrigeration units [TRUs] per day, or where TRU unit operations exceed 300 hours per week). Take into account the configuration of existing distribution centers and avoid locating residences and other sensitive land uses near entry and exit points.
Rail Yards	Avoid siting new sensitive land uses within 1,000 feet of a major service and maintenance rail yard. Within 1 mile of a rail yard, consider possible siting limitations and mitigation approaches.
Ports	Avoid siting new sensitive land uses immediately downwind of ports in the most heavily affected zones. Consult local air districts or CARB on the status of pending analyses of health risks.
Refineries	Avoid siting new sensitive land uses immediately downwind of petroleum refineries. Consult with local air districts and other local agencies to determine an appropriate separation.
Chrome Platers	Avoid siting new sensitive land uses within 1,000 feet of a chrome plater.
Dry Cleaners using Perchloroethylene	Avoid siting new sensitive land uses within 300 feet of any dry cleaning operation. For operations with two or more machines, provide 500 feet. For operations with three or more machines, consult with the local air district. Do not site new sensitive land uses in the same building with perchloroethylene dry cleaning operations.
Gasoline Dispensing Facilities	Avoid siting new sensitive land uses within 300 feet of a large gas station (defined as a facility with a throughput of 3.6 million gallons per year or greater). A 50-foot separation is recommended for typical gas dispensing facilities.

Source: *Air Quality and Land Use Handbook: A Community Health Perspective* (CARB 2005).
CARB = California Air Resources Board

None of the uses outlined in **Table 4.3.J** are allowed under the Specific Plan and as such are not part of the proposed project, which includes commercial and residential uses. Therefore, the uses allowed under the proposed project would not be a substantial source of TACs that would require specific siting distances based on the CARB recommendations as shown in **Table 4.3.J**. In addition, the industrial uses near the Buildout Area on the western and eastern boundaries are further than 500 feet, so any new sensitive receptors, such as proposed residential uses, will be consistent with CARB's siting recommendations.

In general, CEQA does not require an agency to consider the effects of existing environmental conditions on a proposed project's future users or residents. However, if the proposed project would exacerbate an existing environmental hazard or condition, then any impacts of the changed

hazards or conditions on future users or occupants must be evaluated. Here, the industrial uses are further than 500 feet from the Buildout Area and the proposed project would not modify the existing industrial uses on the western and eastern boundaries either directly or indirectly. So, even if the existing industrial uses posed an environmental hazard or condition, the proposed project would not exacerbate that condition or hazard. Thus, the proposed project would not pose an operational health risk to future tenants or occupants and impacts would be less than significant.

Threshold 4.3.4: Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less Than Significant Impact. During construction of future development envisioned under the proposed project, some odors may be present due to diesel exhaust. However, these odors would be temporary and limited to the construction period. The proposed project would not include any activities or operations that would generate objectionable odors and once operational, development envisioned under the proposed project would not be a source of odors. Therefore, the proposed project would not result in other emissions (such as those leading to odors) affecting a substantial number of people. This impact would be less than significant.

4.3.7 Level of Significance Prior to Mitigation

Implementation of the proposed project would result in potentially significant impacts related to air quality.

4.3.8 Regulatory Compliance Measures and Mitigation Measures

4.3.8.1 Regulatory Compliance Measures

Regulatory Compliance Measure AIR-1 During clearing, grading, earth moving, or excavation operations, excessive fugitive dust emissions shall be controlled by regular watering or other dust preventative measures by using the following procedures, in compliance with South Coast Air Quality Management District (SCAQMD) Rule 403 during construction. The applicable Rule 403 measures are as follows:

- Apply nontoxic chemical soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas inactive for 10 days or more).
- Water active sites at least twice daily (locations where grading is to occur shall be thoroughly watered prior to earthmoving).
- Cover all trucks hauling dirt, sand, soil, or other loose materials, or maintain at least 2 feet (0.6 meter) of freeboard (vertical space between the top

of the load and the top of the trailer) in accordance with the requirements of California Vehicle Code Section 23114.

- Pave construction access roads at least 100 feet (30 meters) onto the site from the main road.
- Reduce traffic speeds on all unpaved roads to 15 miles per hour or less.

Regulatory Compliance Measure AIR-2 All trucks that are to haul excavated or graded material shall comply with State Vehicle Code Section 23114, with special attention to Sections 23114(b)(F), (e)(2), and (e)(4) as amended, regarding the prevention of such material spilling onto public streets and roads.

Regulatory Compliance Measure AIR-3 Prior to approval of future project plans and specifications, the City of Cypress shall confirm that the construction bid packages specify:

- Contractors shall use high-volume low-pressure paint applicators with a minimum transfer efficiency of at least 50 percent;
- Coatings and solvents that will be utilized have a volatile organic compound content lower than required under SCAQMD Rule 1113; and
- To the extent feasible, construction/building materials shall be composed of pre-painted materials.

Regulatory Compliance Measure AIR-4 Future projects shall comply with SCAQMD Rule 402. Rule 402 prohibits the discharge of air contaminants or other material from any type of operations, which can cause nuisance or annoyance to any considerable number of people or to the public or which endangers the comfort or repose of any such persons, or the public.

4.3.8.2 Mitigation Measures

The proposed project would be required to implement the following mitigation measures.

Mitigation Measure AIR-1 Prior to issuance of grading permits for development projects in the Buildout Area, a future project applicant in collaboration with the City of Cypress Planning Division shall identify project design details

and specifications, where feasible, to document implementation and compliance with emission reduction measures. The City of Cypress Planning Division shall verify compliance through: (1) review and approval of construction drawings and building permit submittals demonstrating incorporation of the emission-reduction measures; (2) documentation or reporting from the contractor or a future project applicant, as deemed necessary by the City of Cypress Planning Division, demonstrating adherence to approved measures.

The measures below shall be implemented and updated as necessary as they are considered feasible and effective in reducing criteria pollutant emissions generated by the project. These measures shall be reviewed and updated in accordance with the most recent emission-reduction and emission-minimization guidance available, including, at a minimum, the California Air Pollution Control Officers Association (CAPCOA) 2024 guidance. A future project applicant shall incorporate all feasible and updated measures into the final construction drawings, building plans, and contractor specifications for City review, including, but not limited to, the following:

- Provide building access and paths which are physically separated from street parking lot traffic and that eliminate physical barriers such as walls, berms, landscaping and slopes that impede the use of pedestrians, bicycle facilities, or public transportation vehicles.

- Provide continuous sidewalks separated from the roadway by landscaping and on street parking.

- Provide a parking lot design that includes clearly marked and shaded pedestrian pathways between transit facilities and building entrances.

- Provide preferential parking spaces near the entrance of buildings for those who carpool/vanpool/rideshare and provide signage.

- Install electric vehicle charging capabilities that meet the requirements of the latest version of the California Green Building Standards Code (CALGreen Code) Tier 2 Voluntary Standards.

- Install ENERGY STAR certified heating, cooling, and lighting devices, and appliances or equivalent.

- Install only electric fireplaces.
- Install low-flow water fixtures.
- Utilize energy-efficient design features, including appropriate site orientation, use of lighter color roofing and building materials, and use of deciduous shade trees and windbreak trees to reduce fuel consumption for heating and cooling.
- Use light-colored paving and roofing materials.
- Use low-volatile organic compound (VOC) paints with 10 grams per liter or less.
- Require the use of all-electric landscaping equipment.
- Maximize the planting of trees in landscaping and parking lots.

Mitigation Measure AIR-2 All construction activities in the Buildout Area shall utilize U.S. EPA Tier 4 Final diesel construction equipment for equipment rated at greater than 50 brake horsepower (bhp) if and to the extent commercially available, or the cleanest available equipment and technology that is commercially available and feasible at the time of construction (e.g., zero-emission or equivalent low-emission equipment), to minimize diesel particulate matter (DPM) emissions.

If Tier 4 Final equipment is not commercially available for a majority of the construction equipment and an individual development project would be larger than 20 acres, the City shall require preparation of a construction Health Risk Assessment (HRA) for such development project.

If a construction HRA is required, it shall be prepared in accordance with current OEHHA methodology and applicable SCAQMD CEQA and health risk assessment guidance. Additional feasible risk-reduction measures identified through the HRA process shall be implemented as determined necessary by the City.

4.3.9 Level of Significance after Mitigation

Even with implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1**, the proposed project would result in significant and unavoidable air quality impacts related to conflicts with or obstruction of implementation of the applicable air quality plan and a cumulatively considerable net increase of criteria pollutants during operations for which the project region is in nonattainment under applicable federal and state ambient air quality standards. No additional feasible mitigation measures have been identified that would reduce these impacts to a less than significant level.

Implementation of **Mitigation Measure AIR-2** would reduce potential construction-related health risks to nearby sensitive receptors through required use of Tier 4 Final or cleaner construction equipment if and to the extent commercially available or, where warranted, project-specific health risk evaluation. Therefore, construction-related health risk impacts would be less than significant with mitigation.

4.3.10 Cumulative Impacts

According to the SCAQMD, regional air quality impacts are largely cumulative in nature. No single project is typically sufficient in size to independently cause regional nonattainment of ambient air quality standards. Rather, individual projects contribute incrementally to existing regional air quality conditions. The Basin is currently designated nonattainment for the federal and State standards for O_3 and $PM_{2.5}$. In addition, the Basin is currently designated nonattainment for the federal and State ozone and $PM_{2.5}$ standards, and the State PM_{10} standard. Existing nonattainment conditions result from the combined emissions of past, present, and reasonably foreseeable future development within the region.

Because air pollution is cumulative in nature, a project's incremental contribution to cumulative air quality impacts is evaluated based on whether project emissions would be cumulatively considerable. In developing its significance thresholds, SCAQMD identified emission levels at which a project's contribution would be considered cumulatively considerable. Projects exceeding applicable SCAQMD regional thresholds are considered to result in significant cumulative impacts.

If the proposed project's construction or operational emissions exceed applicable SCAQMD thresholds, the project would contribute to cumulatively significant regional air quality impacts. As shown in **Table 4.3.G** and **Table 4.3.H**, buildout of the proposed project would not generate significant construction emissions. However, as shown in **Table 4.3.I**, even with implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1**, the proposed project's operational-related VOC emissions would exceed the SCAQMD's significance criteria. Accordingly, the proposed project would result in a cumulatively considerable contribution to regional air quality impacts, and cumulative impacts related to criteria pollutants would be significant and unavoidable.

With respect to TACs, construction-related diesel particulate matter emissions associated with future development could contribute to localized cumulative health risk exposure at nearby sensitive receptors. Because the proposed project is programmatic in nature, specific construction characteristics for individual future development projects are not known at this time, and quantitative health risk modeling cannot be conducted at a program level. **Mitigation Measure AIR-2** requires use of Tier 4 Final or cleaner construction equipment to substantially reduce diesel particulate matter emissions at the source or if Tier 4 Final equipment or cleaner construction equipment is not commercially available for a majority of the construction equipment and an individual development project would be larger than 20 acres, requires the preparation of a project-specific HRA, which may identify additional feasible risk-reduction measures for implementation, as appropriate. Implementation of these requirements would reduce construction-related health risk impacts to less-than-significant levels. Because diesel particulate matter emissions from construction activities would be minimized through required use of Tier 4 Final or cleaner equipment or subject to project-specific review where warranted, the proposed project's

contribution to cumulative localized health risk impacts would not be cumulatively considerable. Therefore, cumulative impacts related to construction TAC exposure to sensitive receptors would be less than significant with mitigation.

4.4 BIOLOGICAL RESOURCES

This section describes the existing biological resources on and in the vicinity of the Buildout Area and evaluates the potential impacts on those resources with implementation of the Specific Plan 3.0 Buildout Project (proposed project).

The analysis in this section is based in part on the information contained in the *Biological Resources Assessment, Specific Plan 3.0 Buildout Project, Cypress, Orange County, California* (BRA)[1] (**Appendix C**) that was prepared for the proposed project. This section also includes information from Geographic Information System (GIS) data, the California Natural Diversity Database (CNDDB), and on the *Cypress Inventory of Landmark Trees*.[2]

4.4.1 Scoping Process

The City of Cypress (City) received six comment letters during the public review period for the Notice of Preparation (NOP). For copies of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). No comment letters included comments related to biological resources.

4.4.2 Methodology

To assess the potential impacts of the proposed project on biological resources, LSA completed the BRA in February 2026. The discussion below describes the scope of the BRA, including methods used during background research and data review and site reconnaissance.

A literature review was conducted to determine the potential occurrence of special-status plant and animal species on or in the immediate vicinity of the Buildout Area including a 0.5-mile radius surrounding the Buildout Area. A 7-quadrangle database records search for the Los Alamitos, Anaheim, Long Beach, Whittier, La Habra, Newport Beach, and Seal Beach California USGS 7.5-minute quadrangles were accessed on September 24, 2024. Database records from the California Department of Fish and Wildlife (CDFW) CNDDB – Rarefind 5 and the California Native Plant Society (CNPS) Online Inventory of Rare and Endangered Plants of California were utilized to assist in determining the existence or potential occurrence of any special-status plant and animal species[3] in or immediately adjacent to the Buildout Area. Similarly, LSA reviewed the United States Fish and

1 LSA Associates, Inc. (LSA). 2026. *Biological Resources Assessment, Specific Plan 3.0 Buildout Project, Cypress, Orange County, California*. February.

2 City of Cypress. 1996. *Cypress Inventory of Landmark Trees.* July.

3 The term "special-status species" refers to those species that are listed or proposed for listing under the California and Federal Endangered Species Acts (CESA and/or FESA), California Fully Protected Species, California Species of Special Concern, and California Special Animals. It should be noted that "Species of Special Concern" and "California Special Animal" are administrative designations made by the CDFW and carry no formal legal protection status. However, Section 15380 of the *State CEQA Guidelines* indicates that these species should be included in an analysis of project impacts if they can be shown to meet the criteria of sensitivity outlined therein.

Wildlife Service's (USFWS) Information for Planning and Consultation (IPaC) Online System[4] and the USFWS Critical Habitat Mapper[5] which present candidate, threatened, and endangered species; crucial habitat; national wildlife refuges; and/or migratory birds that occur within or near a defined search area. The USFWS listed species (candidate, threatened, and endangered), designated critical habitat, national wildlife refuge, and migratory bird information was searched using the USFWS IPaC system. The USFWS Critical Habitat Mapper was reviewed to determine whether critical habitat has been designated within or in the vicinity of the Buildout Area. In addition, the California Native Plant Society (CNPS) Rare Plant Program online edition Rare Plant Inventory was searched to determine the probability of additional listed plant species. Aerial photographs were also reviewed. Potential surface waters and wetland resources including riparian corridors were determined using the USFWS Wetlands Mapper online edition. Soil types were determined using the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey. Sensitive species known by LSA biologists to occur in the general area were also considered and the literature review also included review of the City of Cypress' Landmark Tree Map.

In addition, a general reconnaissance-level pedestrian field survey was performed on September 25, 2024, between the hours of 9:00 a.m. and 1:00 p.m. During this survey, observations on general site conditions, vegetation, and suitability of habitat for various special-status elements was observed. All plant and animal species observed or otherwise detected were also recorded.

4.4.3 Existing Environmental Setting

4.4.3.1 Vegetation

Vegetation communities and land covers within the Buildout Area consist of developed land cover, with the dominant vegetation types being ornamental and ruderal grassland with patches of herbaceous invasive species. Ruderal grassland areas were spread out throughout the developed land cover and not concentrated in any particular lot within the Buildout Area. The acreages of each vegetation community and land cover type occurring within the Buildout Area is provided below in **Table 4.4.A: Vegetation/Land Cover Classifications at the Buildout Area.**

Table 4.4.A: Vegetation/Land Cover Classifications at the Buildout Area

Vegetation Community/Land Cover	Buildout Area (acres)
Developed	106.47
Ornamental	19.43
Artificial Pond	8.10
Total	**134.00**

Source: Compilation from field survey conducted by LSA (September 25, 2024).

[4] United States Fish and Wildlife Service (USFWS). 2024a. Environmental Conservation Online System (ECOS). Information for Planning and Conservation (IPaC) Trust Resources Report. July 2019. Website: http://ecos. fws.gov/ecp/ (accessed March 2026).

[5] United States Fish and Wildlife Service (USFWS). 2024b. USFWS Critical Habitat Mapper. December 9. Website: http://ecos.fws.gov/crithab/ (accessed March 2026).

The following describes the vegetation and land cover types occurring within the Buildout Area using the Orange County Habitat Classification System (HCS) as articulated by Jones & Stokes Associates, Inc.[6]

Developed—Urban and Commercial. Developed sites consist of paved areas, buildings, and other areas that are cleared or graded for anthropogenic purposes. A majority of the Buildout Area (106.47 acres) consists of this land cover.

Ornamental Landscaping. Ornamental landscaping consists of introduced trees, shrubs, flowers, and turf grass. A strip of planted Ficus trees (*Ficus* sp.) exists along the LARC box office entrance. Additionally, the artificial ponds at the center of the race course are surrounded by Bermuda grass (*Cynodon dactylon*), California fan palms (*Washingtonia filifera*), and Mexican fan palms (*Washingtonia robusta*). Another area planted with Bermuda grass (*Cynodon dactylon*) is present to the far south of the Buildout Area.

Lakes, Reservoirs, and Basins (Artificial Pond). The central portion of the Buildout Area contains three constructed ponds. These ponds were excavated in dry land sometime between 1960 and 1966 (topographic maps). The western pond was created as part of the golf course that historically existed in the western portion of the Buildout Area. The western pond has wooden side walls with a small amount of emergent vegetation. At the time of the site visit the wooden wall was collapsed into the pond in two areas, thus limiting vegetation growth. It appears that the center pond and the eastern pond were created for aesthetics purposes. Both these ponds contained emergent vegetation such as yerba mansa (*Anemopsis californica)* and cattails (*Typha* sp.) along the edges of the pond during the September 2024 field survey. It is unknown how the ponds are replenished with water because no inlets or outlets were observed during the field survey.

4.4.3.1 Plant Species

As described above, the majority of the Buildout Area is developed and unvegetated, with the exception of ornamental landscaping located primarily within the racetrack infield and surrounding built structures. These landscaped areas contain a variety of trees and shrubs, including palms, figs, and turf grass. According to the City's Inventory of Landmark Trees, 26 Mexican fan palms (*Washingtonia robusta*) located within the racetrack infield are designated as Landmark Trees.

The reconnaissance-level biological survey conducted on September 25, 2024, documented 33 vascular plant species[7] within the Buildout Area. A total of 20 (59 percent) of these plant species represent non-native taxa, reflecting a high level of disturbance within the Buildout Area. None of these observed species were identified as special-status plants and no portion of the Buildout Area

[6] Jones & Stokes Associates, Inc. 1993. *Methods Used to Survey the Vegetation of Orange County Parks and Open Space Areas and The Irvine Company Property.* February 10. (JSA 92-032.) Sacramento. Prepared for the County of Orange, Environmental Management Agency, Environmental Planning Division, Santa Ana, California.

[7] A vascular plant is a plant that has a system of tubes inside it that helps move water, nutrients, and food throughout the plant. This system lets the plant grow tall and survive in many types of environments.

contains designated or proposed critical habitat for any federally listed plant species. A complete list of plant species identified on-site is provided in Appendix B of the BRA.

Additionally, according to current biological database records,[8] there are known occurrence records of 30 special-status plant species in the vicinity of the Buildout Area; however, none of these species are expected to occur within the Buildout Area due to the lack of suitable habitat and/or developed/maintained conditions within the Buildout Area. **Table 4.4.B: Summary of Potential Special-Status Species,** below, provides a tabular list of the special-status plant species known to occur within the Buildout Area and the immediate vicinity, their current status, their habitat and distribution, and their occurrence probability.

4.4.3.2 Wildlife

The development surrounding the Buildout Area and the lack of ground cover and suitable foraging habitat make the Buildout Area undesirable for many native wildlife species. During the field survey conducted on September 25, 2024, a total of 19 wildlife species were observed. The wildlife species observed or otherwise detected during the survey are consistent with those typically encountered in and around Orange County. A complete list of wildlife species identified within the Buildout Area is provided in Appendix B of the BRA.

Based on review of the current biological database records,[9] there are known occurrence records of 43 special-status wildlife species in the general vicinity of the Buildout Area. Of the 43 special-status wildlife species, 37 are not expected to occur within the Buildout Area due to the lack of suitable habitat and/or developed/maintained conditions within the Buildout Area. Although not observed during the field survey conducted on September 25, 2024, the following 6 special-status wildlife species identified from the CNDDB and IPaC records search could potentially occur within the Buildout Area:

- Monarch butterfly; wintering sites (*Danaus plexippus plexippus*; Federal Candidate [FC], California Special Animal [SA])
- Ferruginous hawk; wintering (*Buteo regalis*; [SA])
- Swainson's hawk; nesting (*Buteo swainsoni*; California State Threatened [ST])
- Western mastiff bat (*Eumops perotis californicus*; California Species of Special Concern [SSC])
- Western yellow bat (*Lasiurus xanthinus*; [SSC])
- Pocketed free-tailed bat (*Nyctinomops femorosaccus*; [SSC]).

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
PLANTS					
Abronia villosa var. *aurita* **Chaparral sand-verbena**	US: – CA: 1B	Sandy areas (generally flats and benches along washes) in chaparral and coastal sage scrub, and improbably in desert dunes or other sandy areas, below 1,600 meters (5,300 feet) elevation. In California, reported from Riverside, San Diego, Imperial, Los Angeles, and Ventura Counties. Believed extirpated from Orange County. Also reported from Arizona and Mexico (Baja California). Plants reported from desert communities are likely misidentified.	Blooms mostly March through August	HA	**Not Expected.** Suitable habitat (sandy areas in chaparral and coastal sage scrub) is absent from the Buildout Area. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).
Aphanisma blitoides **Aphanisma**	US: – CA: 1B	Sandy or clay soils on slopes or bluffs near the ocean, usually in coastal bluff scrub, coastal dunes, or coastal scrub, below 305 meters (1,000 feet) elevation. Known in California from Ventura, Santa Barbara, Los Angeles, Orange, and San Diego Counties. Also occurs in Mexico.	Blooms March through June (annual herb)	HA	**Not Expected.** Suitable habitat (sandy or clay soils on slopes or bluffs near the ocean) is absent from the Buildout Area. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).
Astragalus hornii var. *hornii* **Horn's milk-vetch**	US: – CA: 1B	Alkaline playas and lake margins from 60 to 850 meters (200 to 2,800 feet) elevation. In California, known only from Inyo and Kern Counties. Believed extirpated from San Bernardino County. Also occurs in Nevada.	Blooms May through October (annual herb)	HA	**Not Expected.** Suitable habitat (alkaline playas and lake margins) is absent from the Buildout Area**.** One historical record from 1896 documents an occurrence within the vicinity of the Buildout Area as the exact location is unknown, but it is noted as extirpated (CNDDB). Additionally, the Buildout Area is outside of the elevation range for this species.

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
Astragalus pycnostachyus var. *lanosissimus* **Ventura marsh milk-vetch**	US: FE CA: SE/1B	Coastal salt marsh within reach of high tide or protected by barrier beaches, or more rarely near seeps on sandy bluffs, below 35 meters (120 feet) elevation. Known only from Santa Barbara and Ventura Counties. Believed extirpated from Los Angeles and Orange Counties.	Blooms June through October (perennial herb)	HA	**Not Expected.** Suitable habitat (coastal salt marsh) is absent from the Buildout Area**.** Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).
Atriplex coulteri **Coulter's saltbush**	US: – CA: 1B	Alkaline or clay soils in ocean bluffs and ridge tops and alkaline low places in coastal bluff scrub, coastal dunes, coastal sage scrub, and valley and foothill grasslands below 460 meters (1,500 feet) elevation. In California, known only from Los Angeles, Orange, Santa Barbara, San Bernardino, San Luis Obispo, Ventura, and San Diego Counties. Also occurs in Mexico. Reports of this species from Riverside County are based on misidentification of Atriplex serenana ssp. davidsonii (The Vascular Plants of Western Riverside County, California. F.M. Roberts et al., 2004).	Blooms March through October	HA	**Not Expected.** Suitable habitat (alkaline or clay soils in ocean bluffs and ridge tops and alkaline low places in coastal bluff scrub, coastal dunes, coastal sage scrub, and valley and foothill grasslands) is absent from the Buildout Area. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).
Atriplex pacifica **South coast saltscale**	US: – CA: 1B	Alkali soils in coastal sage scrub, playas, coastal bluff scrub, coastal dunes, and chenopod scrub below 200 meters (600 feet) elevation, and perhaps formerly up to about 430 meters (1,400 feet) in Los Angeles County. In California, known from the Channel Islands and mainland Los Angeles, San Diego and Orange Counties. Also occurs in Mexico. Believed extirpated from Ventura County. Reports of this species from Riverside County are based on misidentification of Atriplex serenana ssp. davidsonii (The Vascular Plants of	Blooms March through October (annual herb)	HA	**Not Expected.** Suitable habitat (alkali soils in coastal sage scrub, playas, coastal bluff scrub, coastal dunes, and chenopod scrub) is absent from the Buildout Area. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
		Western Riverside County, California. F.M. Roberts et al., 2004).			
Atriplex parishii **Parish's brittlescale**	US: – CA: 1B	Alkali soils in meadows, vernal pools, chenopod scrub, and playas. Usually on drying alkali flats with fine soils. In California, known from Riverside and San Diego Counties. Also occurs in Mexico. Believed extirpated from Los Angeles, Orange, and San Bernardino Counties.	Blooms June through October (annual herb)	HA	**Not Expected.** Suitable habitat (alkali soils in meadows, vernal pools, chenopod scrub, and playas) is absent from the Buildout Area. One historic occurrence from 1881 is documented approximately 3.5 miles northeast of the Buildout Area (CNDDB).
Atriplex serenana var. davidsonii **Davidson's saltscale**	US: – CA: 1B	Alkaline soils in scrub and herbaceous communities from 10 to 460 meters (30 to 1,500 feet) elevation. In California, known only from Los Angeles, Orange, Riverside, San Diego, San Luis Obispo, and Ventura Counties. Believed extirpated from Santa Barbara and perhaps Los Angeles Counties. Also occurs in Mexico.	Blooms April through October (annual herb)	HA	**Not Expected.** Suitable habitat (alkaline soils in scrub and herbaceous communities) is absent from the Buildout Area. One historic occurrence from 1986 is documented approximately 4 miles south of the Buildout Area within Anaheim Bay (CNDDB).
Berberis nevinii **Nevin's barberry**	US: FE CA: SE/1B	Gravelly wash margins in alluvial scrub or coarse soils and rocky slopes in chaparral at 70 to 825 meters (220 to 2,700 feet) elevation. Known occurrences at higher elevations are planted (not natural). Known only from Los Angeles, San Bernardino, Riverside, and San Diego Counties, California.	Blooms March through June (evergreen shrub, survey year-round)	HA	**Not Expected.** Suitable habitat (gravelly wash margins in alluvial scrub or coarse soils and rocky slopes in chaparral) is absent from the Buildout Area. The Buildout Area is outside of the elevation range for this species.
Calochortus plummerae **Plummer's mariposa-lily**	US: – CA: 4	Rocky sites of granitic or alluvial material in valley and foothill grassland, coastal scrub, chaparral, cismontane woodland, and lower montane coniferous forest, at 100 to 1,700 meters (300 to 5,600 feet) elevation. Known from Riverside, San Bernardino, Orange, Los Angeles, and Ventura Counties, California. In the western Riverside County area, this species is known from the foothills of the	Blooms May through July (perennial herb)	HA	**Not Expected.** Suitable habitat (rocky sites of granitic or alluvial material in valley and foothill grassland, coastal scrub, chaparral, cismontane woodland, and lower montane coniferous forest) is absent from the Buildout Area. The Buildout Area is outside of the elevation range for this species.

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
		San Bernardino Mountains, northeastern Santa Ana Mountains, Box Springs Mountains, and from the Lake Skinner area (*The Vascular Plants of Western Riverside County*, California. F.M. Roberts et al., 2004). Appears to intergrade with *Calochortus weedii* var. *intermedius,* which is mostly from Santa Ana Mountains eastward.			
Calochortus weedii var. intermedius **Intermediate mariposa-lily**	US: – CA: 1B	Dry, open rocky slopes and rock outcrops in chaparral, coastal sage scrub, and grassland, at 105 to 855 meters (340 to 2,800 feet) elevation. Known only from Los Angeles, Orange, Riverside, and San Bernardino Counties, California. In the western Riverside County area, this species is known from the hills and valleys west of Lake Skinner and Vail Lake (The Vascular Plants of Western Riverside County, California. F.M. Roberts et al., 2004). Appears to intergrade with *Calochortus plummerae*, which is mostly east and north of Santa Ana Mountains.	Blooms May through July (perennial herb)	HA	**Not Expected.** Suitable habitat (open rocky slopes and rock outcrops in chaparral, coastal sage scrub, and grassland) is absent from the Buildout Area. The Buildout Area is outside of the elevation range for this species.
Calystegia felix **Lucky morning-glory**	US: – CA: 1B	Wetland and marshy areas, sometimes alkaline, sometimes artificially watered, from 30 to 215 meters (100 to 700 feet) elevation. All of the known extant occurrences are associated with well-watered landscaping on recently completed industrial, commercial, and residential developments in the City of Chino within a historical area of artesian springs. Older collections are from areas that are now heavily urbanized areas (including one from South Los Angeles	Blooms March through September (annual or perennial rhizomatous herb)		**Not Expected.** Suitable habitat (wetland and marshy areas) is absent from the Buildout Area. One occurrence from 2014 is documented approximately 2 miles northwest of the Buildout Area within El Dorado Regional Park (CNDDB).

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
		and another from Pico Rivera in Los Angeles County). Known to occur only in western San Bernardino County. Presumed extirpated from Riverside and Los Angeles Counties.			
Centromadia parryi ssp. australis **Southern tarplant**	US: – CA: 1B	In vernally wet areas such as edges of marshes and vernal pools, at edges of roads and trails, and in other areas of compacted, poorly drained, or alkaline soils where competition from other plants is limited, often due to disturbance, below 425 meters (1,400 feet) elevation. In California, known only from Santa Barbara, Ventura, Los Angeles, Orange and San Diego Counties. Also occurs in Mexico.	Blooms May through November (annual herb)	HP	**Not Expected.** Marginally suitable habitat may be present at the edges of the artificial ponds. However, this species blooms from May to November and was not observed during the September 2024 survey. Other compacted roads throughout the Buildout Area are considered unsuitable as they were devoid of vegetation and experience daily disturbance that prevents vegetation growth. There are 27 records of occurrence within the project vicinity. The closest occurrence is to the east of Enterprise Drive approximately 500 feet from the Buildout Area. The record is from 2013 and although it is noted as extant, the area is now entirely developed with housing since 2018 (CNDDB).
Chloropyron maritimum spp. *maritimum* **Salt marsh bird's-beak**	US: FE CA: SE/1B	Coastal dunes and salt marshes. In California, known from Los Angeles, Orange, Santa Barbara, San Bernardino, San Diego, San Luis Obispo, and Ventura Counties. Historical collections referred to this taxon from alkaline meadow in vicinity of San Bernardino Valley and from interior San Diego County are intermediate to C. maritimus ssp. canescens. Also occurs in Mexico.	Blooms May through October (annual herb)	HA	**Not Expected.** Suitable habitat (coastal dunes and salt marshes) is absent from the Buildout Area. One historical record from 1980 documents an occurrence approximately 1 mile north of the Buildout Area and is noted as possibly extirpated. Another historical occurrence from 1983 is documented approximately 3.8 miles southwest of the Buildout Area and presumed extant (CNDDB).

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
Dudleya multicaulis **Many-stemmed dudleya**	US: – CA: 1B	Heavy, often clay soils or around granitic outcrops in chaparral, coastal sage scrub, and grassland below 790 meters (2,600 feet) elevation. Known only from Los Angeles, Orange, Riverside, San Bernardino, and San Diego Counties.	Blooms April through July (perennial herb)	HA	**Not Expected.** Suitable habitat (heavy, often clay soils or around granitic outcrops in chaparral, coastal sage scrub, and grassland) is absent from the Buildout Area. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).
Eryngium aristulatum var. *parishii* **San Diego button-celery**	US: FE CA: SE/1B	Vernal pools and similar mesic habitats in coastal scrub and grassland at 15 to 620 meters (50 to 2,000 feet) elevation. In California, known only from Los Angeles, Orange, Riverside and San Diego Counties. In Riverside County, this species is known only from the Santa Rosa Plateau. Also occurs in Mexico.	Blooms April through June (annual or perennial herb)	HA	**Not Expected.** Suitable habitat (vernal pools and similar mesic habitats in coastal scrub and grassland) is absent from the Buildout Area. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).
Helianthus nuttallii ssp. *parishii* **Los Angeles sunflower**	US: – CA: 1A	Marshes and swamps (coastal salt and freshwater) at 10 to 500 meters (30 to 1,600 feet) elevation. This species is historically known from Los Angeles, Orange and San Bernardino Counties, California. Last seen in 1937. **Possibly extinct.** Plants found in 2002 at Castaic Spring along the Santa Clara River in Los Angeles County were initially reported as possibly this taxon, but instead appear to be hybrids or evolutionary intermediates between *H. nuttallii* and *H. californicus*, based on chromosome counts and pollen morphology (*A Quantitative Analysis of Pollen Variation in Two Southern California Perennial* Helianthus *(Heliantheae: Asteraceae)*, J.M. Porter and N. Fraga, 2004).	Blooms August through October (perennial herb)	HA	**Not Expected.** Suitable habitat (marshes and swamps) is absent from the Buildout Area. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
Isocoma menziesii var. decumbens **Decumbent goldenbush**	US: – CA: 1B	Sandy soils, often in disturbed areas, in coastal scrub and chaparral from 10 to 135 meters (30 to 440 feet) elevation. Known from mainland Orange and San Diego Counties and from San Clemente and Santa Catalina Islands in California. Also occurs in Baja California.	Blooms April through November (shrub)	HA	**Not Expected.** Suitable habitat (sandy soils, often in disturbed areas, in coastal scrub and chaparral) is absent from the Buildout Area. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).
Lasthenia glabrata ssp. coulteri **Coulter's goldfields**	US: – CA: 1B	Vernal pools and alkaline soils in marshes, playas, and similar habitats below 1,220 meters (4,000 feet) elevation. Known from Colusa, Merced, Tulare, Orange, Riverside, Santa Barbara, San Diego, San Luis Obispo, Tehama, Ventura, and Yolo Counties. Believed extirpated from Kern, Los Angeles, and San Bernardino Counties, and possibly also from Tulare County. Also occurs in Mexico.	Blooms February through June (annual herb)	HA	**Not Expected.** Suitable habitat (vernal pools and alkaline soils in marshes, playas, and similar habitats) is absent from the Buildout Area. There are 11 records of occurrence within the project vicinity. The closest occurrence is directly to the east of the Buildout Area. The record is from 1937 and noted as possibly extirpated (CNDDB).
Nama stenocarpa **Mud nama**	US: – CA: 2B	Lake shores, riverbanks, and similar intermittently wet areas at 5 to 500 meters (20 to 1,600 feet) elevation. Known in California from San Diego, Orange, and Riverside Counties and from San Clemente Island. Believed extirpated from Los Angeles and Imperial Counties. Known also from Baja California and Arizona.	Blooms January through July (annual or perennial herb)	HA	**Not Expected.** Suitable habitat (lake shores, riverbanks, and similar intermittently wet areas) is absent from the Buildout Area. One historical record from 1932 documents an occurrence approximately 4 miles southwest of the Buildout Area within Anaheim Bay (CNDDB).
Nasturtium (Rorippa) gambelii **Gambel's watercress**	US: FE CA: ST/1B	Marshes from 5 to 330 meters (20 to 1,100 feet) elevation. Currently believed to occur in California only in Santa Barbara and San Luis Obispo Counties. There are historical records from Los Angeles, Orange, and San Bernardino Counties. A historical report from San Diego County likely constitutes a misidentification. Also occurs in Baja California.	Blooms April through September (perennial herb)	HA	**Not Expected.** Suitable habitat (marshes) is absent from the Buildout Area. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
Navarretia prostrata **Prostrate vernal pool navarretia**	US: – CA: 1B	Vernal pools, usually alkaline, from 15 to 1,210 meters (50 to 4,000 feet) elevation. Known only from Alameda, Fresno, Los Angeles, Merced, Monterey, Orange, Riverside, San Benito, San Diego, and San Luis Obispo Counties. Presumed extirpated from San Bernardino County.	Blooms April through July (annual herb)	HA	**Not Expected.** Suitable habitat (vernal pools) is absent from the Buildout Area. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).
Nemacaulis denudata var. *denudata* **Coast woolly-heads**	US: – CA: 1B	Sandy places such as coastal dunes below 100 meters (300 feet) elevation. Known in California from Orange, Los Angeles, and San Diego Counties. Believed extirpated from Santa Catalina Island. Also occurs in Mexico.	Blooms April through September (annual herb)	HA	**Not Expected.** Suitable habitat (sandy places) is absent from the Buildout Area. One historic occurrence from 1951 is documented approximately 4.5 miles southwest of the Buildout Area (CNDDB).
Orcuttia californica **California Orcutt grass**	US: FE CA: SE/1B	Vernal pools from 15 to 660 meters (50 to 2,200 feet) elevation. In California, known from Los Angeles, Ventura, Riverside, and San Diego Counties. Also occurs in Mexico.	Blooms April through August (annual grass)	HA	**Not Expected.** Suitable habitat (vernal pools) is absent from the Buildout Area. One historic occurrence is documented approximately 3 miles northwest of the Buildout Area (CNDDB). The date is not known for this occurrence but is believed to be prior to 1977 and it is noted as extirpated.
Pentachaeta lyonii **Lyon's pentachaeta**	US: FE CA: SE/1B	Clay soils in edges of openings in fire-adapted coastal sage scrub and chaparral on saddles between hills, on the tops of small knolls, or in flat areas at the base of slopes, particularly where soil crust results in less competition from annual grasses, from 30 to 630 meters (100 to 2,100 feet) elevation. Occurs only in the Santa Monica Mountains in eastern Ventura and western Los Angeles Counties and in the western Simi Hills in Ventura County. Based on historical records, it once occurred on the Palos Verdes Peninsula and on Santa Catalina	Blooms March through August (annual herb)	HA	**Not Expected.** Suitable habitat (clay soils) is absent from the Buildout Area. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
		Island, but has not been seen at these locations since 1910 and 1855, respectively, and is assumed to be extirpated from those areas.			
Phacelia stellaris **Brand's star phacelia**	US: – CA: 1B	Dunes and sandy openings in coastal scrub communities at 5 to 400 meters (20 to 1,300 feet) elevation. In western Riverside County, this species appears to be restricted to sandy washes and benches in alluvial floodplains. Known only from Los Angeles (believed extirpated), Riverside and San Diego Counties, California. The most recent record of this species from Los Angeles County was in 1943.	Blooms March through June (annual herb)	HA	**Not Expected.** Suitable habitat (dunes and sandy openings in coastal scrub communities) is absent from the Buildout Area. One historic occurrence from 1932 is documented approximately 1.3 miles southeast of the Buildout Area and is noted as possibly extirpated (CNDDB).
Sagittaria sanfordii **Sanford's arrowhead**	US: – CA: 1B	Marshes and swamps below 650 meters (2,100 feet) elevation. Occurs in standing or slow-moving fresh water (ponds, marshes, and ditches). Known only from Butte, Del Norte, El Dorado, Fresno, Merced, Mariposa, Placer, Sacramento, Shasta, San Joaquin, and Tehama Counties. Believed extirpated from Southern California.	Blooms May through October (perennial emergent herb)	HA	**Not Expected.** Suitable habitat (marshes and swamps) is absent from the Buildout Area. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).
Sidalcea neomexicana ***Salt Spring checkerbloom***	US: – CA: 2B	Alkaline springs and brackish marshes below 1,530 meters (5,000 feet) elevation. In California, known only from Kern, Orange, Riverside, San Bernardino, San Diego, and Ventura Counties. Believed extirpated from Los Angeles County. Also known from Arizona, New Mexico, Nevada, Utah, and Mexico.	Blooms March through June (perennial herb)	HA	**Not Expected.** Suitable habitat (alkaline springs and brackish marshes) is absent from the Buildout Area. One historical record from 1952 documents an occurrence approximately 1.2 miles southeast of the Buildout Area and is noted as extirpated. Another historical occurrence from 1934 is documented approximately 3.3 miles southwest of the Buildout Area and noted as possibly extirpated (CNDDB).

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
Suaeda esteroa **Estuary seablite**	US: – CA: 1B	Coastal salt marshes below 5 meters (15 feet) elevation. Occurs along immediate coast from Santa Barbara County to Baja California.	Blooms May through October (January) (perennial herb)	HA	**Not Expected.** Suitable habitat (coastal salt marshes) is absent from the Buildout Area. There are 7 records of occurrence within 5 miles of the Buildout Area. The closest record is from 2014 and documents the occurrence approximately 4 miles southwest of the Buildout Area (CNDDB).
Symphyotrichum defoliatum **San Bernardino aster**	US: – CA: 1B	Vernally wet sites (such as ditches, streams, and springs) in many plant communities below 2,040 meters (6,700 feet) elevation. In California, known from Ventura, Kern, San Bernardino, Los Angeles, Orange, Riverside, and San Diego Counties. May also occur in San Luis Obispo County. In the western Riverside County area, this species is scarce, and documented only from Temescal and San Timoteo Canyons (*The Vascular Plants of Western Riverside County, California*. F.M. Roberts et al., 2004).	Blooms July through November (perennial herb)	HA	**Not Expected.** Suitable habitat (vernally wet sites) is absent from the Buildout Area. There are three known occurrences within 5 miles of the Buildout Area (CNDDB). One historical occurrence from 1932 is mapped approximately 3.7 miles southwest and is noted as extirpated. Another occurrence from 1932 is mapped approximately 4 miles southwest and is noted as extirpated. The last occurrence from 1933 documents an occurrence approximately 4.6 miles south that is noted as possibly extirpated.
INVERTEBRATES					
Bombus crotchii **Crotch bumble bee**	US: – CA: SC	Nectars on *Antirrhinum, Phacelia, Clarkia, Dendromecon, Eschscholzia,* and *Eriogonum* in coastal California east to the Sierra-Cascade crest and south into Mexico.	Spring and summer	HA	**Not Expected.** There were no food species identified within the Buildout Area that would be suitable for this species. One occurrence from 2020 is documented approximately 1.5 miles west of the Buildout Area within El Dorado Nature Center (CNDDB).

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
Branchinecta sandiegonensis **San Diego fairy shrimp**	US: FE CA: SA	Small, shallow (usually less than 30 centimeters deep), relatively clear but unpredictable vernal pools on coastal terraces. Pools must retain water for a minimum of 13 days for this species to reproduce (3 to 8 days for hatching, and 10 to 20 days to reach reproductive maturity). Known from Orange and San Diego Counties, and Baja California.	Seasonally following rains in late fall, winter and spring	HA	**Not Expected.** Suitable habitat (vernal pools on coastal terraces) is absent from the Buildout Area. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).
Danaus plexippus plexippus pop. 1 (wintering sites) **Monarch butterfly (California overwintering populations)**	US: FC CA: SA	Winter roosts are located in wind-protected tree groves (Eucalyptus, Monterey Pine, Cypress) with nectar and water sources nearby.	September through March	HP	**Low.** Potentially suitable roosting habitat (*Eucalyptus* trees) is present within the Buildout Area, although wintering habitat is limited and there are no known wintering roost locations in the Buildout Area.
Euphydryas editha quino **Quino checkerspot butterfly**	US: FE CA: SA	Meadows or openings within coastal sage scrub or chaparral below about 5,000 feet where food plants (*Plantago erecta* and/or *Orthocarpus purpurascens*) are present. Historically known from Santa Monica Mountains to northwest Baja California; currently known only from southwestern Riverside County, southern San Diego County, and northern Baja California.	January through late April	HA	**Not Expected.** Suitable habitat (coastal sage scrub or chaparral) is absent from the Buildout Area. One occurrence from 1930 is documented approximately 4.5 miles northeast of the Buildout Area and noted as extirpated (CNDDB).
Streptocephalus woottoni **Riverside fairy shrimp**	US: FE CA: SA	Warm-water vernal pools (i.e., large, deep pools that retain water into the warm season) with low to moderate dissolved solids, in annual grassland areas interspersed through chaparral or coastal sage scrub vegetation. Suitable habitat includes some artificially created or enhanced pools, such as some stock	Seasonally following rains; typically, January through April	HA	**Not Expected.** Suitable habitat (vernal pools) is absent from the Buildout Area. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
		ponds, that have vernal pool like hydrology and vegetation. Known from areas within about 50 miles of the coast from Ventura County south to San Diego County and Baja California.			
FISH					
Oncorhynchus mykiss irideus plexippus pop. 10 **Steelhead - Southern California distinct population segment (DPS)**	US: FE CA: CE/SA	Federal listing refers to runs in coastal basins from the Santa Maria River, south to the southern extent of the range (presently considered to be Malibu Creek. Proposed rulemaking to extend southern portion of the range to San Mateo.	Year-round	HA	**Not Expected.** The artificial ponds are hydrologically isolated and do not allow for passage of native aquatic species. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).
AMPHIBIANS					
Spea hammondii **Western spadefoot**	US: – CA: SSC	Grasslands and occasionally hardwood woodlands; largely terrestrial but requires rain pools or other ponded water persisting at least three weeks for breeding; burrows in loose soils during dry season. Occurs in the Central Valley and adjacent foothills, the non-desert areas of southern California, and Baja California.	October through April (following onset of winter rains)	HA	**Not Expected.** Suitable habitat (grasslands and occasionally hardwood woodlands) is absent from the Buildout Area. One occurrence from 1952 is documented approximately 4 miles southeast of the Buildout Area and noted as possibly extirpated. Another occurrence from 1967 is documented approximately 4.5 miles southwest of the project and noted as possibly extirpated (CNDDB).
REPTILES					
Anniella stebbinsi **Southern California legless lizard**	US: – CA: SSC	Inhabits sandy or loose loamy soils with high moisture content under sparse vegetation in Southern California.	Nearly year round, at least in southern areas	HA	**Not Expected.** Suitable habitat (sandy or loose loamy soils with high moisture content under sparse vegetation) is absent from the Buildout Area. One occurrence from 1969 is documented approximately 1.5-mile northwest and is noted as extirpated (CNDDB).

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
Aspidoscelis hyperythra **Orange-throated whiptail**	US: – CA: SA	Prefers washes and other sandy areas with patches of brush and rocks, in chaparral, coastal sage scrub, juniper woodland, and oak woodland from sea level to 915 meters (3,000 feet) elevation. Perennial plants required. Occurs in Riverside, Orange, San Diego Counties west of the crest of the Peninsular Ranges, in extreme southern San Bernardino County near Colton, and in Baja California.	March through July with reduced activity August through October	HA	**Not Expected.** Suitable habitat (washes and other sandy areas with patches of brush and rocks, in chaparral, coastal sage scrub, juniper woodland, and oak woodland) is absent from the Buildout Area.
Aspidoscelis tigris stejnegeri **Coastal western whiptail**	US: – CA: SSC	Woodlands, riparian areas, and sparsely vegetated areas in a wide variety of habitats including coastal sage scrub and sparse grassland. Occurs in valleys and foothills from Ventura County to Baja California.	April through August	HA	**Not Expected.** Suitable habitat (woodlands, riparian areas, and sparsely vegetated areas) is absent from the Buildout Area.
Emys marmorata **Western pond turtle**	US: FC CA: SSC	Inhabits permanent or nearly permanent water. Absent from desert regions, except in the Mojave Desert along the Mojave River and its tributaries. Requires basking sites such as partially submerged logs, rocks, or open mud banks.	Year-round with reduced activity November through March	HA	**Not Expected.** The three ponds were surveyed for turtle species; however, none were detected during the September 2024 survey. The artificial ponds are hydrologically isolated and do not allow for passage of native aquatic species. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).
Phrynosoma blainvillii (coronatum) **Coast horned lizard**	US: – CA: SSC	Primarily in sandy soil in open areas, especially washes and floodplains, in many plant communities. Requires open areas for sunning, bushes for cover, patches of loose soil for burial, and an abundant supply of ants or other insects. Occurs west of the deserts from northern Baja California north to Shasta County	April through July with reduced activity August through October	HA	**Not Expected.** Suitable habitat sandy soil in open areas) is absent from the Buildout Area. Four occurrences are documented within 5 miles of the Buildout Area (CNDDB). One occurrence from 1957 is documented approximately 4 miles northwest and noted as possibly extirpated. Another

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
		below 2,400 meters (8,000 feet) elevation.			occurrence from 1951 is documented approximately 1.5 miles west and noted as possibly extirpated. The other two occurrences both occur approximately 2.4 miles southwest, one is from 1961 and another is from 1952, and they are both noted as possibly extirpated.
Thamnophis sirtalis pop. 1 **South coast gartersnake**	US: – CA: SSC	Southern California coastal plain from Ventura County to San Diego County, and from sea level to about 2,800 feet. Believed to be restricted to marsh and upland habitats near permanent water that have good strips of riparian vegetation.	Diurnal Year-round	HA	**Not Expected.** Suitable habitat (marsh and upland habitats with riparian vegetation) is absent from the Buildout Area.
BIRDS					
Agelaius tricolor (nesting colony) **Tricolored blackbird**	US: – CA: ST/SSC (breeding)	Open country. Forages in grassland and cropland habitats. Nests in large groups near fresh water, preferably in emergent wetland with tall, dense cattails or tules, but also in thickets of willow, blackberry, wild rose, or tall herbs. Seeks cover for roosting in emergent wetland vegetation, especially cattails and tules, and also in trees and shrubs. Occurs in western Oregon, California, and northwestern Baja California.	Year-round	HA	**Not Expected.** Suitable habitat (open country) is absent from the Buildout Area.
Aimophila ruficeps canescens **Southern California rufous-crowned sparrow**	US: – CA: SA	Steep, rocky coastal sage scrub and open chaparral habitats, particularly scrubby areas mixed with grasslands. From Santa Barbara County to northwestern Baja California.	Year-round, diurnal activity	HA	**Not Expected.** Suitable habitat (steep, rocky coastal sage scrub and open chaparral habitats) is absent from the Buildout Area.

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
Ammodramus savannarum (nesting) **Grasshopper sparrow**	US: – CA: SSC (breeding)	Grasslands, agricultural fields, prairie, old fields and open savanna. Uncommon and very local summer resident on grassy slopes and mesas west of the deserts. Only rarely in migration and in winter. Coastal Southern California.	March through September; also, in winter along the southern California coast	HA	**Not Expected.** Suitable habitat (Grasslands, agricultural fields, prairie, old fields and open savanna) is absent from the Buildout Area. This sparrow depends on native grasslands; the Bermuda grass that is regularly trimmed within the Buildout Area is considered unsuitable. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).
Athene cunicularia (burrow sites) **Burrowing owl**	US: – CA: SSC (breeding)/SC	Open country in much of North and South America. Usually occupies ground squirrel burrows in open, dry grasslands, agricultural and range lands, railroad rights-of-way, and margins of highways, golf courses, and airports. Often utilizes man-made structures, such as earthen berms, cement culverts, cement, asphalt, rock, or wood debris piles. They avoid thick, tall vegetation, brush, and trees, but may occur in areas where brush or tree cover is less than 30 percent.	Year-round	HA	**Not Expected.** Suitable habitat (open country) is absent from the Buildout Area. One occurrence from 1983 is documented approximately 3 miles south of the Buildout Area within the Seal Beach Naval Weapons Station. Another occurrence from 1981 is documented approximately 4 miles southwest of the Buildout Area in the vicinity of Seal Beach (CNDDB). This species is well studied on the coast and immediate inland areas of Orange County. The Weapons Station and Wildlife Refuge offer much better habitat nearby.
Buteo regalis (wintering) **Ferruginous hawk**	US: – CA: SA	Forages in open fields, grasslands and agricultural areas, sagebrush flats, desert scrub, fringes of pinyon-juniper habitats, and other open country in western North America. Not known to breed in California.	Mid-September through mid-April	HP	**Low.** Suitable foraging habitat is present throughout the Buildout Area. One occurrence from 1997 is documented approximately 1 mile southwest of the Buildout Area within the Los Alamitos Armed Forces Reserve Center (CNDDB).

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
Buteo swainsoni (nesting) **Swainson's hawk**	US: – CA: ST	Open desert, grassland, or cropland containing scattered, large trees or small groves. Breeds in stands with few trees in juniper-sage flats, riparian areas, and in oak savannah in the Central Valley. Forages in adjacent grasslands or suitable grain or alfalfa fields, or livestock pastures. Breeds and nests in western North America; winters in South America. Uncommon breeding resident and migrant in the Central Valley, Klamath Basin, Northeastern Plateau, Lassen County, and Mojave Desert. Very limited breeding reported from Lanfair Valley, Owens Valley, Fish Lake Valley, and Antelope Valley. In Southern California, now mostly limited to spring and fall transient. Formerly abundant in California with wider breeding range.	Spring and fall (in migration)	HA	**Low.** The Buildout Area may offer suitable foraging habitat; however, no suitable trees in juniper-sage flats, riparian areas, or oak savannah are present to support breeding. One occurrence from 2019 documents a breeding pair approximately 2.3 miles south of the Buildout Area to the south of Interstate 405 (CNDDB).
Campylorhynchus brunneicapillus sandiegensis **Coastal cactus wren**	US: – CA: SSC (year round)	Inhabits coastal sage scrub, nesting almost exclusively in thickets of cholla (*Opuntia prolifera*) and prickly pear (*Opuntia littoralis* and *Opuntia oricola*), typically below 150 meters (500 feet) elevation. Found in coastal areas of Orange County and San Diego Counties, and extreme northwestern Baja California, Mexico.	Year-round (non-migratory)	HA	**Not Expected.** Suitable habitat (coastal sage scrub, cholla, and prickly pear) is absent from the Buildout Area.
Charadrius alexandrinus nivosus (nesting) **Western snowy plover**	US: FT (coastal population)	Sandy coastal beaches, lakes, alkaline playas. Scattered locations along coastal California and Channel Islands, inland at Salton Sea and at various alkaline lakes.	Coast: Year-round Inland lakes: April through September	HA	**Not Expected.** Suitable habitat (sandy coastal beaches, lakes, alkaline playas) is absent from the Buildout Area.

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
Coccyzus americanus occidentalis (nesting) **Western yellow-billed cuckoo**	US: FT CA: SE	Breeds and nests in extensive stands of dense cottonwood/willow riparian forest along broad, lower flood bottoms of larger river systems at scattered locales in western North America; winters in South America.		HA	**Not Expected.** Suitable habitat (dense cottonwood and willow riparian forest) is absent from the Buildout Area. One historical occurrence from 1912 is documented within the San Gabriel River approximately 4 miles northwest of the Buildout Area and is noted as being extirpated (CNDDB)
Coturnicops noveboracensis **Yellow rail**	US: – CA: SSC	Inhabits freshwater marshes, as a very local breeder in the northeastern interior of California and as a winter visitor (early October to mid-April) on the coast and in the Suisun Marsh region.	Year-round	HA	**Not Expected.** Suitable habitat (freshwater marshes) is absent from the Buildout Area.
Elanus leucurus (nesting) **White-tailed kite**	US: – CA: CFP	Typically nests in riparian trees such as oaks, willows, and cottonwoods at low elevations. Forages in open country. Found in South America and in southern areas and along the western coast of North America.	Year-round	HA	**Not Expected.** Suitable habitat (riparian trees and open country) is absent from the Buildout Area.
Icteria virens (nesting) **Yellow-breasted chat**	US: – CA: SSC	Riparian thickets of willow, brushy tangles near watercourses. Nests in riparian woodland throughout much of western North America. Winters in Central America.	April through September	HA	**Not Expected.** Suitable habitat (riparian thickets) is absent from the Buildout Area.
Laterallus jamaicensis coturniculus **California black rail**	US: – CA: ST/CFP	Requires shallow water in salt marshes, freshwater marshes, wet meadows, or flooded grassy vegetation. Prefers areas of moist soil vegetated by fine-stemmed emergent plants, rushes, grasses, or sedges, with scattered small pools. Known from coastal California, northwestern Baja California, the lower Imperial Valley, and the lower Colorado River of Arizona and California. Now extirpated from virtually all of coastal Southern California.	Year-round	HA	**Not Expected.** Suitable habitat (shallow water in salt marshes, freshwater marshes, wet meadows, or flooded grassy vegetation) is absent from the Buildout Area.

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
Pandion haliaetus (nesting) **Osprey**	US: – CA: SA	Eats mostly live fish caught in shallow water. Occurs along coasts and at inland water bodies throughout much of the Americas. In California, winters in many areas but breeds primarily in the northern part of the state.	Non-breeding season in Southern California	HA	**Not Expected.** Suitable tall trees for nesting with nearby foraging habitat (coasts and at inland water bodies) is absent from the Buildout Area. Artificial ponds within the Buildout Area do not provide suitable habitat to support this species.
Passerculus sandwichensis beldingi **Belding's Savannah sparrow**	US: – CA: SE	Resident in salt marshes, with rare exception (e.g., Islas Todos Santos, Baja California), of Pacific Coast from Santa Barbara County to Baja California.	Year-round	HA	**Not Expected.** Suitable habitat (salt marshes) is absent from the Buildout Area. There are two known occurrences approximately 4 miles southwest of the Buildout Area (CNDDB). One occurrence from 2008 is documented in Los Cerritos Wetlands and another from 2012 is document within the Seal Beach National Wildlife Refuge.
Polioptila californica californica **Coastal California gnatcatcher**	US: FT CA: SSC	Inhabits coastal sage scrub in low-lying foothills and valleys up to about 500 meters (1,640 feet) elevation in cismontane southwestern California and Baja California.	Year-round	HA	**Not Expected.** Suitable habitat (coastal sage scrub) is absent from the Buildout Area.
Rallus obsoletus levipes **Light-footed Ridgeway's rail**	US: FE CA: SE/CFP	Found in salt marshes traversed by tidal sloughs, where cordgrass and pickleweed are the dominant vegetation. Requires dense growth of either pickleweed or cordgrass for nesting or escape cover; feeds on mollusks and crustaceans.	Year-round, vocalizes at night, dawn, and dusk	HA	**Not Expected.** Suitable habitat (salt marshes) is absent from the Buildout Area. The closest known occurrence is from 2012 approximately 4 miles southwest of the Buildout Area within the Seal Beach National Wildlife Refuge (CNDDB).
Riparia riparia (nesting) **Bank swallow**	US: – CA: ST	Nesting habitat is vertical banks of fine textured soils, most commonly along streams and rivers. In Southern California, fairly common spring and fall transient in interior; very uncommon spring transient and rare fall transient along coast. Casual in winter.	Variable Year-round	HA	**Not Expected.** Suitable habitat (vertical banks/cliffs with fine-textured/sandy soils near streams, rivers, lakes, ocean) is absent from the Buildout Area.

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
Rynchops niger (nesting colony) **Black skimmer**	US: – CA: SSC (breeding)	Casual inland; nests and breeds in coastal beach, sandbar, shell bank, island, salt marsh and locally on gravel rooftops. Associates with terns, gulls, plovers.	Year-round diurnal activity	HA	**Not Expected.** Suitable habitat (coastal beach, sandbar, shell bank, island, salt marsh) is absent from the Buildout Area.
Setophagia petechia (nesting) **Yellow warbler**	US: – CA: SSC (breeding)	Riparian woodland while nesting in the western U.S. and northwestern Baja California; more widespread in brushy areas and woodlands during migration. Occurs from western Mexico to northern South America in winter. Migrants are widespread and common. Three subspecies breed in California: *morcomi, brewsteri,* and *sonorana.* (Sonoran yellow warbler nests along the Colorado River.)	Summer, winter, or Year-round, depending on locale	HA	**Not Expected.** Suitable habitat (riparian woodland) is absent from the Buildout Area.
Sternula antillarum browni (nesting colony) **California least tern**	US: FE CA: SE/CFP	Nests along the coast from San Francisco Bay south to northern Baja California. Forages in shallow water. Colonial breeder on bare or sparsely vegetated, flat substrates, sand beaches, alkali flats, landfills, or paved areas.	April through October	HA	**Not Expected.** Suitable habitat (coastal areas with sandy beaches) is absent from the Buildout Area. There are three known occurrences approximately 5 miles southwest of the Buildout Area (CNDDB). One historical occurrence from 1904 is mapped in the vicinity of Seal Beach and is now believed extirpated. Another occurrence from 1980 documents a site that was historically used for nesting from 1970 to 1980 and is now extirpated. The last occurrence from 2016 documents another historical nest site that is still extant within the Seal Beach National Wildlife Refuge.

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
Vireo bellii pusillus **Least Bell's vireo**	US: FE CA: SE	Riparian forests and willow thickets. The most critical structural component of Least Bell's Vireo habitat in California is a dense shrub layer 2 to 10 feet (0.6–3.0 meter) above ground. Willows usually dominant. Nests from central California to northern Baja California. Winters in southern Baja California.	April through September	HA	**Not Expected.** Suitable habitat (riparian forests and willow thickets) is absent from the Buildout Area. One historical record from 1900 was documented 2.8 miles north of the Buildout Area and is noted as being extirpated (CNDDB).
MAMMALS					
Sorex ornatus salicornicus **Southern California saltmarsh shrew**	US: – CA: SSC	Coastal marshes with dense vegetation and woody debris for cover. Known only from Los Angeles, Ventura, and Orange Counties.	Year-round, mostly nocturnal	HA	**Not Expected.** Suitable habitat (coastal marshes) is absent from the Buildout Area. One historical record from 1968 occurs 3.8 miles southwest of the Buildout Area within the Seal Beach Naval Weapons Station (CNDDB).
Eumops perotis californicus **Western mastiff bat**	US: – CA: SSC	Occurs in many open, semi-arid to arid habitats, including conifer and deciduous woodlands, coastal scrub, grasslands, chaparral, etc.; roosts in crevices in vertical cliff faces, high buildings, and tunnels, and travels widely when foraging.	Year-round; nocturnal	HP	**Moderate.** Suitable roosting and foraging habitat are present in the Buildout Area and project vicinity. However, there is a lack of records of this species in the project vicinity. The closest known occurrence is from 1990 approximately 3.6 mile northeast from the Buildout Area (CNDDB).
Lasiurus xanthinus **Western yellow bat**	US: – CA: SSC	Found mostly in desert and desert riparian areas of the southwest US, but also expanding its range with the increased usage of native and non-native ornamental palms in landscaping. Individuals typically roost amid dead fronds of palms in desert oases, but have also been documented roosting in cottonwood trees. Forage over many habitats.	Year-round; nocturnal	HP	**Moderate.** Suitable roosting and foraging habitat are present in the Buildout Area and project vicinity. However, there is a lack of records of this species in the project vicinity. The closest known occurrence is from 1990 approximately 0.85 mile southeast of the Buildout Area (CNDDB).

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability
Nyctinomops femorosaccus **Pocketed free-tailed bat**	US: – CA: SSC	Usually associated with cliffs, rock outcrops, or slopes. May roost in buildings (including roof tiles) or caves. Rare in California, where it is found in Riverside, San Diego, Imperial, and possibly Los Angeles Counties. More common in Mexico.	Year-round; nocturnal	HP	**Low.** Suitable roosting and foraging habitat are present in the Buildout Area and project vicinity. However, there is a lack of records of this species in the project vicinity. The closest known occurrence is from 1989 approximately 10 miles northeast of the Buildout Area (CNDDB).
Nyctinomops macrotis **Big free-tailed bat**	US: – CA: SSC	Inhabits rugged, rocky canyon country in southwestern United States. Found from northern South America and the Caribbean Islands northward to the western United States. In the southwestern U.S., populations appear to be scattered.	Probably year-round	HA	**Not Expected.** Suitable habitat (rugged, rocky canyon country) is absent from the Buildout Area.
Microtus californicus stephensi **South coast marsh vole**	US: – CA: SSC	Inhabits tidal marshes in Los Angeles, Orange, and southern Ventura counties.	Year-round	HA	**Not Expected.** Suitable habitat (tidal marshes) is absent from the Buildout Area**.** One historical record from 1988 occurs 3.75 miles southwest of the Buildout Area within the Seal Beach Wildlife Refuge (CNDDB).
Perognathus longimembris pacificus **Pacific pocket mouse**	US: FE CA: SSC	Historically occupied open habitats on sandy soils along the coast from Los Angeles to the Mexican border. Now known from only four sites in Orange and San Diego Counties.	April through September	HA	**Not Expected.** Suitable habitat (open habitats on sandy soils) is absent from the Buildout Area. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).
Taxidea taxus **American badger**	US: – CA: SSC	Primary habitat requirements seem to be sufficient food and friable soils in relatively open uncultivated ground in grasslands, woodlands, and desert. Widely distributed in North America.	Year-round	HA	**Not Expected.** Suitable habitat (open uncultivated ground in grasslands, woodlands, and desert) is absent from the Buildout Area. Additionally, no known occurrences have been documented within 5 miles of the Buildout Area (CNDDB).

Table 4.4.B: Summary of Potential Special-Status Species

Species	Status	Habitat and Distribution	Activity Period	Habitat Present/Absent	Occurrence Probability

Sources: California Natural Diversity Database (CDFW 2024a); Biogeographic Information and Observation System (CDFW 2024b); and Information for Planning and Consultation (IPaC) database (USFWS 2024a).

US: Federal Classifications
FT = Listed as threatened
FE = Listed as endangered
FC= Federal Candidate for Listing

CA: State Classifications
SE = Listed as endangered
ST = Listed as threatened
SC = State Candidate for Listing
CFP = California Fully Protected
SSC = Species of Special Concern. Refers to animals with vulnerable or seriously declining populations.
SA = Special Animal. Refers to any other animal monitored by the Natural Diversity Database, regardless of its legal or rarity status.

CNPS Designations
1A = Plants presumed extinct in California and rare/extinct elsewhere
1B.1 = Rare threatened, or endangered in California and elsewhere
1B.2 = Plants rare, threatened, or endangered in California and elsewhere; fairly threatened in California
1B.3 = Plants rare, threatened, or endangered in California and elsewhere; not very threatened in California
2B.2 = Plants rare, threatened, or endangered in California, but more common elsewhere; fairly threatened in California
4.3 = Plants of limited distribution; not very threatened in California

CA = California
CDFW = California Department of Fish and Wildlife
CNDDB = California Natural Diversity Database

Western mastiff bat and western yellow bat have a moderate potential to occur within the Buildout Area, while the other four species have a low potential to occur within the Buildout Area. In addition, the Buildout Area is not within designated or proposed critical habitat for any federally listed species.

Table 4.4.B provides a tabular list of the 43 species-status wildlife species known to occur within the Buildout Area and the immediate vicinity, their current status, their habitat and distribution, and their occurrence probability.

During the field survey, 18 bird species were observed. While only these 18 bird species were documented, the Buildout Area provides suitable habitat for additional bird species that may not have been detected. For example, palm trees near the three ponds on Lots 3, 4, 6, and 7 of proposed Vesting Tentative Tract Map (VTTM) 19247 may serve as potential rookery sites for colonial waterbirds such as the great blue heron (*Ardea herodias*). At the time of the survey, no active rookeries or other special breeding sites for birds were observed, likely due to regular trimming of trees in and around the Buildout Area.

Bats. Western mastiff bat and western yellow bat have a moderate potential to occur within the Buildout Area, however neither of these two species are State or federally listed. While western yellow bat is typically associated with desert and desert riparian habitats, its range has continued to expand into sheltering in palms used in landscaping. Based on Buildout Area conditions, it was determined that the western mastiff bat may use the Buildout Area to forage and roost due to suitable structures being present on-site. The Buildout Area contains palms for roosting and foraging opportunities over the Buildout Area. Other ornamental tree species within the Buildout Area could provide habitat to native bats in the form of foliage, bark, or cavity roosts. Bats breed in late spring/early summer (April–August), with foliage-dwelling species utilizing peeling bark, thick clumps of leaves, or cavities in trees often alone or in small maternity colonies. While roosting bats were not observed during the field survey conducted on September 25, 2024, the survey was conducted during daylight hours, while bats are nocturnal and typically inactive during this time.

4.4.3.3 Natural Communities

The CNDDB search identified occurrences of one special-status natural (i.e., plant) community within 5 miles of the Buildout Area: Southern Coastal Salt Marsh. Southern Coastal Salt Marsh was identified from the CNDDB as occurring near Alamitos Bay and another occurrence in Anaheim Bay. Both of these occurrences are historical and are presumed extant. No salt marsh habitat exists within the Buildout Area.

4.4.3.4 Jurisdictional Waters

There is one existing drainage feature, one existing detention basin, and three existing artificial ponds within the Buildout Area. The three artificial ponds are located on Lots 3, 4, 6, and 7 of proposed VTTM 19247, the detention basin is located on Lots 2 and 3, and the drainage feature is located on Lot 3, all within the Buildout Area. Although a formal jurisdictional delineation was not conducted as part of the BRA, the preliminary results of these drainage features and detention basins are discussed below.

The single drainage feature located on Lot 3 originates from a culvert beneath the internal road just northwest of a parking lot. This drainage is an ephemeral, earthen bottom drainage created to carry stormwater. Stormwater flows appear to travel westward underground toward Lexington Drive. Sparse ruderal vegetation was observed within this drainage. This drainage may connect to Coyote Creek, which is tributary to the San Gabriel River and ultimately flows into the Pacific Ocean.

The detention basin on Lots 2 and 3 was observed during the field survey and is considered a manmade basin created to capture flows. The detention basin is located adjacent to the horse barns (Lot 2 and 3), is entirely lined with polyethylene and bordered by a chain-link fence. It appears to divert accumulated water into the adjacent drainage that terminates into an underground drain system. It is currently unknown where the storm system takes these flows.

The three artificial ponds on Lots 3, 4, 6, and 7 are manmade and thus, hydrologically isolated. The ponds contain hydrophytic vegetation along portions of their shoreline, including species that could be considered wetland indicators.

All of these aquatic features were constructed in previously graded or developed areas and do not represent natural stream channels, wetlands, or riparian systems. Their primary functions are aesthetic or related to stormwater conveyance and retention.

4.4.4 Regulatory Setting

This section includes federal, State, regional, and City regulations relevant to biological resources.

4.4.4.1 Federal Regulations

Clean Water Act, Section 404. The United States Army Corps of Engineers (USACE) regulates discharges of dredged or fill material into waters of the United States. These waters include wetlands and non-wetland bodies of water that meet specific criteria, including a direct or indirect connection to interstate commerce. The USACE regulatory jurisdiction pursuant to Section 404 of the federal Clean Water Act (CWA) is founded on a connection, or nexus, between the waterbody in question and interstate commerce. This connection may be direct (through a tributary system linking a stream channel with traditional navigable waters used in interstate or foreign commerce), or it may be indirect (through a nexus identified in the USACE regulations). To be considered a jurisdictional wetland under Section 404, an area must possess three wetland characteristics, each with its unique set of mandatory criteria: hydrophytic vegetation, hydric soils, and wetland hydrology.

United States Endangered Species Act. The USFWS, pursuant to the Federal Endangered Species Act (FESA), protects endangered and threatened species. FESA defines an endangered species as a species in danger of extinction throughout all or a significant part of its range and a threatened species as one that is likely to become endangered in the foreseeable future. USFWS also identifies species proposed for listing as endangered or threatened. Other than for federal actions, there is no formal protection for candidate species under FESA. However, consultation with USFWS regarding species proposed for listing can prevent project delays that could occur if a species is listed prior to project completion.

Migratory Bird Treaty Act. The federal Migratory Bird Treaty Act (MBTA) governs the take, possession, import, export, transport, selling, purchasing, or bartering of migratory birds and their eggs, parts, and nests. Section 704 of the MBTA states that the Secretary of the Interior is authorized and directed to determine if, and by what means, the take of migratory birds should be allowed and to adopt suitable regulations permitting and governing take while ensuring that take is compatible with protection of the species. Most bird species are protected under the MBTA.

4.4.4.2 State Regulations

Regional Water Quality Control Board. The Regional Water Quality Control Board (RWQCB) is responsible for the administration of Section 401 of the CWA. Typically, the areas subject to jurisdiction of the RWQCB coincide with those of the USACE (i.e., waters of the United States, including any wetlands). The RWQCB may also assert authority over "waters of the State" under waste discharge requirements pursuant to the Porter-Cologne Water Quality Control Act. All jurisdictional areas are ultimately subject to resource agency determination.

California Fish and Game Code, Sections 1600 through 1616. Sections 1600 through 1616 of the California Fish and Game Code (CFGC), regulates alterations to lakes, rivers, and streams (defined by the presence of a channel bed and banks with at least an intermittent flow of water) where fish or wildlife resources may be adversely affected.

California Fish and Game Code, Sections 1900 through 1913, Native Plant Protection Act. Sections 1900 through 1913 of the CFGC directs the CDFW to carry out the Legislature's intent to "… preserve, protect and enhance endangered or rare native plants of this state." The NPPA gives the California Fish and Game Commission the power to designate native plants as "endangered" or "rare" and protect endangered and rare plants from take.

California Fish and Game Code, Sections 3503 and 3513, Nesting Birds and Raptors. Various sections of the CFGC provide protection to nesting birds, birds of prey, and species protected under the MBTA. Section 3503 of the CFGC prohibits the destruction of the nest or eggs of any bird as otherwise provided for in the CGFC. Section 3503.5 specifically extends this protection to the nests or eggs of any bird of prey (species of the Orders *Falconiformes* [falcons, hawks, eagles, ospreys] *or Strigiformes* [owls]). The unlawful take, sale, or purchase (whole or in part) of any aigrette or egret, osprey, bird of paradise, goura, or numidi is prohibited under Section 3505. Section 3513 prohibits the unlawful to take or possession of any migratory nongame bird as designated in the MBTA or any part of such migratory nongame bird except as provided by rules and regulations adopted by the Secretary of the Interior under provisions of the MBTA.

California Fish and Game Code, Section 4150. Section 4150 of the CFGC protects nongame mammals, which are defined as any naturally occurring mammal in California that is not a game mammal, fully protected mammal, or fur-bearing mammal. Non-game mammals, which includes bats, bat roosts, and maternity colonies, may not be taken or possessed except as provided by the CFGC or in accordance with applicable regulations.

California Endangered Species Act. The CDFW, through provisions of the California Administrative Code and policies formulated by the California Fish and Game Commission, regulates plant and

animal species in danger of, or threatened with, extinction based on the list of endangered, threatened, and candidate species developed by the Fish and Game Commission. Endangered species are native species or subspecies of plants and animals that are in serious danger of becoming extinct throughout all or a significant part of their range. Threatened species are those species that, although not presently threatened with extinction, are likely to become endangered in the foreseeable future without special protection and management. Candidate species are species that the Fish and Game Commission has formally noticed as being under review for addition to the list of endangered or threatened species or as a species proposed for listing.

California Environmental Quality Act. Section 15380(b) of the *State CEQA Guidelines* provides that a species not listed on the Federal or State lists of protected species may be considered rare or endangered if the species can be shown to meet specified criteria. These criteria have been modeled after the definitions in FESA and CESA and § 2780–2781 of Article 1 of the CFGC dealing with the California Wildlife Protection Act of 1990. This section was included in the guidelines primarily to deal with situations in which a public agency is reviewing a project that may have a significant effect on a species that has not yet been listed by either the USFWS or CDFW.

4.4.4.3 Regional Regulations

There are no regional regulations applicable to the proposed project.

4.4.4.4 Local Regulations

City of Cypress General Plan Conservation/Open Space/Recreation Element. The City of Cypress General Plan identifies goals and policies related to biological resources. Goal COSR-2 in the Conservation/Open Space/Recreation Element (2000) of the City's General Plan addresses biological resources. The following goals and policies apply to the proposed project:

COSR-2	Preserve the few remaining native plant and animal species, as well as the non-native plants, utilized in landscaping throughout the City.
COSR-2.1	Enforce the Landmark Tree Ordinance that prohibits destroying or pruning landmark trees without a permit.
COSR-2.2	Prohibit the construction of any structure within 30 feet of any landmark tree.
COSR-2.3	Provide for the consistent use of street trees along all sidewalks and property frontages.
COSR-2.4	Provide the opportunity to continue using land for agricultural crops as an interim use prior to further development.

The Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan). The Cypress Town Center and Commons Specific Plan 3.0 contains the following provisions related to biological resources, which supersede the City's Landmark Tree Ordinance, as codified in Sections 17-17 through 17-27 of the City's Municipal Code:

- **Tree Replacement.** Existing trees within the Specific Plan Area may be removed, provided that any such proposed tree removal for a development project shall be described in the site plan review application for such project for informational purposes. If any such trees are removed, such trees will be replaced onsite with an equivalent number of specimen trees (48-inch box or larger) to be planted as part of the landscaping for the applicable development project. These replacement trees shall be planted in addition to normal tree planting requirements.

4.4.5 Thresholds of Significance

The thresholds of significance for impacts to biological resources used in this analysis are consistent with Appendix G of the *State CEQA Guidelines*. Based on these thresholds, implementation of the proposed project may be deemed to have a significant impact with respect to biological resources if it would:

Threshold 4.4.1: Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service;

Threshold 4.4.2: Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service;

Threshold 4.4.3: Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;

Threshold 4.4.4: Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;

Threshold 4.4.5: Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; or

Threshold 4.4.6: Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

4.4.6 Project Impacts

Threshold 4.4.1: **Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service?**

***Less Than Significant Impact*.** The Buildout Area is located within an urban fully developed area in the City. Existing development within the Buildout Area includes horse racing and training facilities such as a racetrack, grandstand, clubhouse, over 40 barns, parking areas, and maintenance structures on the LARC Property; the former Cypress Golf Course, which is now partially used as a maintenance yard and church; and the Grace Church property, which contains a church, small school, open space, and parking areas used for religious and community activities.

Habitats and Vegetation Communities. As discussed in Section 4.4.3, Existing Environmental Setting, the Buildout Area primarily consists of developed land cover. The dominant vegetation within this vegetation community includes ornamental landscaping and ruderal grassland with patches of herbaceous invasive species. Other vegetation communities within the Buildout Area include ornamental landscaping and artificial ponds. The ornamental landscaping community consists of introduced trees, shrubs, flowers, and turf grass, and is located throughout the Buildout Area, particularly within the racetrack infield and around existing structures. These areas are regularly maintained and include species such as *Ficus* trees, palms, and Bermuda grass, which provide limited ecological value due to their non-native composition and the high level of human disturbance. The central portion of the Buildout Area also includes three constructed artificial ponds. These ponds were excavated in upland areas and are surrounded by ornamental vegetation, including Bermuda grass and ornamental palms. Although some emergent vegetation such as yerba mansa (*Anemopsis californica*) and cattails (*Typha spp*.) was observed along portions of the pond margins during the September 2024 biological survey, the ponds are hydrologically isolated and lack natural inflow or outflow. As such, they are not considered natural aquatic features or jurisdictional wetlands.

In addition, no portion of the Buildout Area contains designated or proposed critical habitat for any federally listed plant or animal species. Further, there is a high level of existing disturbance within the Buildout Area, and native wildlife habitat is largely absent within the Buildout Area and in the vicinity. The development surrounding the Buildout Area and the lack of ground cover and suitable foraging habitat make the site undesirable for many native wildlife species. Therefore, implementation of the proposed project would have no impact on any native habitats or vegetation communities.

Special-Status Plant Species. As noted above in Section 4.4.3, Existing Environmental Setting, no special-status plants were observed within the Buildout Area during the reconnaissance survey; and none of the 30 special-status plant species from the records searches are expected to occur within the Buildout Area due to the lack of suitable habitat and/or conditions. Therefore, implementation of the proposed project would have no impact on any special-status plant species.

Special-Status Wildlife Species and Migratory/Nesting Birds. No special-status wildlife species were observed during the field survey, and suitable habitat for such species is absent from the Buildout Area due to the high level of development. In addition, no nesting birds or their nests were observed at the time of the field survey.

However, based on a review of resource databases, the following six special-status wildlife species have the potential to occur on or near the Buildout Area:

- Monarch butterfly; wintering sites (*Danaus plexippus plexippus*)
- Ferruginous hawk; wintering (*Buteo regalis*)
- Swainson's hawk; nesting (*Buteo swainsoni*)
- Western mastiff bat (*Eumops perotis californicus*)
- Western yellow bat (*Lasiurus xanthinus*)
- Pocketed free-tailed bat (*Nyctinomops femorosaccus*).

All other species that were identified based on database searches are unlikely or have no potential to occur within the Buildout Area because the Buildout Area is either outside of the known or historical range of the species, the Buildout Area lacks suitable habitat (e.g., marsh, estuarine, perennial stream, vernal pools with sufficient hydrology, chaparral, open forest, or sufficient nesting/roosting substrates), or the Buildout Area lacks connectivity with suitable habitat in the region.

Monarch Butterfly. Originally native to North America, monarch butterfly has dispersed to other parts of the world and non-migratory populations are found from islands in the Pacific Ocean to the western edge of Europe. The western North American migratory monarch population is generally found west of the Rocky Mountains. These butterflies can migrate annually 300 to 1,000 miles (about 500 to 1,600 kilometers). The western population overwinters in hundreds of groves (clusters of trees) along the California coast and into northern Baja California, Mexico.[10] Habitat for the monarch during their winter migration typically include roosts which are located in wind-protected tree groves (Eucalyptus, Monterey Pine, Cypress) with nectar and water sources nearby. Although monarch butterfly has the potential to occur on or near the Buildout Area, the Buildout Area provides low potentially suitable roosting habitat (*Eucalyptus* trees), the wintering habitat is limited, and there are no known wintering roost locations in the Buildout Area. Therefore, implementation of the proposed project is not expected to result in significant impact on the monarch butterfly.

Ferruginous Hawk. Ferruginous hawks forage in open fields, grasslands and agricultural areas, sagebrush flats, desert scrub, fringes of pinyon-juniper habitats, and other open country in western North America; however, they are not known to breed in California. The closest known occurrence per CNDDB records was recorded in 1997 and is located approximately 1 mile southwest of the Buildout Area within the Los Alamitos Armed Forces Reserve Center. Although Ferruginous hawks have the potential to occur within or near the Buildout Area, the Buildout

[10] United States Fish and Wildlife Service (USFWS). n.d. Monarch. Website: https://www.fws.gov/species/monarch-danaus-plexippus(accessed January 20, 2025).

Area provides low suitable foraging habitat, there are no known nesting sites within the Buildout Area or the immediate surrounding area, and no observations of Ferruginous hawks or indication of Ferruginous hawks being present within the Buildout Area have been recorded. Therefore, implementation of the proposed project is not expected to result in any impact on Ferruginous hawks.

Swainson's Hawk. Swainson's hawk occurs in open desert, grassland, or cropland containing scattered trees or small groves. The species breeds in strands with few trees in juniper-sage flats, riparian areas, and in oak savannah in the Central Valley juniper-sage flats, riparian areas, and in oak savannah in the Central Valley. Swainson's hawks forage in adjacent grasslands or suitable grain or alfalfa fields, or livestock pastures. Although, the Buildout Area may offer low suitable foraging habitat, no suitable trees in juniper-sage flats, riparian areas, or oak savannah are present to support breeding. The closest known occurrence per CNDDB records is from 2019, which documented a breeding pair approximately 2.3 miles south of the Buildout Area to the south of I-405. Although Swainson's hawk has the potential to occur on or near the Buildout Area, there are no known nesting sites within the Buildout Area, no observations of Swainson's hawk have been recorded within the Buildout Area, and there is no indication of Swainson's hawk being present within the Buildout Area. Therefore, implementation of the proposed project is not expected to result in any impact on Swainson's hawk.

Special Status Bats. The western mastiff bat is known to occur in many open, semi-arid to arid habitats, including conifer and deciduous woodlands, coastal scrub, grasslands, chaparral, etc. This species roosts in crevices in vertical cliff faces, high buildings, and tunnels, and travels widely when foraging. The closest known occurrence per CNDDB records was recorded in 1990 and is located approximately 0.85-mile southeast of the Buildout Area within the Los Alamitos Armed Forces Reserve Center. Although moderate suitable roosting and foraging habitat is present in the Buildout Area and project vicinity, there is a lack of records of this species in the project vicinity.

The western yellow bat is found mostly in desert and desert riparian areas of the southwest US, but also has expanded its range with the increased usage of native and non-native ornamental palms in landscaping. Individuals typically roost amid dead fronds of palms in desert oases but have also been documented roosting in cottonwood trees. This species is known to forage over many habitats. The closest known occurrence per CNDDB records was recorded in 1990 and is located approximately 0.85-mile southeast of the Buildout Area within the Los Alamitos Armed Forces Reserve Center. Although moderate suitable roosting and foraging habitat is present in the Buildout Area and project vicinity, there is a lack of records of this species in the project vicinity.

The pocketed free-tailed bat is usually associated with cliffs, rock outcrops, or slopes. These species may roost in buildings (including roof tiles) or caves. While rare in California, this species is found in Riverside, San Diego, Imperial, and possibly Los Angeles Counties. The closest known occurrence per CNDDB records was recorded in 1989 approximately 10 miles northeast of the Buildout Area. Although low suitable roosting and foraging habitat are present in the Buildout Area and project vicinity, there is a lack of records of this species in the project vicinity.

As described above, the western mastiff bat and western yellow bat have a moderate potential to occur within the Buildout Area. While western yellow bat is typically associated with desert and desert riparian habitats, their range has continued to expand into sheltering in palms used in landscaping. The Buildout Area provides palms for roosting and this species may also forage over the Buildout Area. The western mastiff bat may use the Buildout Area to forage and roost due to suitable high buildings being present on site. However, no portion of the Buildout Area is within designated or proposed critical habitat for any federally listed species.

Although no sign of roosting bats was observed during the September 2024 field survey, suitable day and night roosting habitat could be present at several of the building structures throughout the Buildout Area and within the ornamental palm trees located around the Buildout Area. Additionally, other ornamental tree species within the Buildout Area could provide habitat to native bats in the form of foliage, bark, or cavity roosts. Bats breed in late spring/early summer (April–August), with foliage-dwelling species utilizing peeling bark, thick clumps of leaves, or cavities in trees often alone or in small maternity colonies. Bats attempting to roost or breed in landscape trees and/or buildings can be subject to impacts from tree removal or trimming activities (e.g., the trimming of palm fronds) and construction activities. Because bats have low reproductive turnover (i.e., most species have only one young per year) and high juvenile mortality, a colony or population of bats will require many years to recover from any impacts that result in mortality or even a decrease in reproductive ability. As such, western yellow bats and western mastiff bats may roost in trees and buildings throughout the Buildout Area and bat-roosting habitat may be subject to the indirect impacts from project construction activities.

As outlined in Section 4.4.4 Regulatory Setting, bats are protected under Section 4150 of the CFGC which protects nongame mammals, which are defined as any naturally occurring mammal in California that is not a game mammal, fully protected mammal, or fur-bearing mammal. Non-game mammals, which includes bats, bat roosts, and maternity colonies, may not be taken or possessed except as provided by the CFGC or in accordance with applicable regulations. Project actions would include removal of all buildings and vegetation in the Buildout Area. As such, the construction of the proposed project could impact bats if demolition took place during bat peak period or roosting season. However, with adherence to **Regulatory Compliance Measure BIO-1** below, which reflects existing, applicable regulations, the proposed project's impact on bats would be less than significant.

Regulatory Compliance Measure BIO-1

Preconstruction Bat Surveys. If construction activities for a specific development project within the Buildout Area, including structure demolition and tree removal, will occur during the bat maternity season (April 1 to August 31), then the City of Cypress, or designee, shall confirm that the applicable developer has retained a qualified biologist who shall conduct a nighttime bat survey of potential maternity roost habitat no more than 30 days prior to the removal of potential habitat. These surveys shall be initiated no later than 30

minutes before sunset and continue for no less than 1 hour after sunset. If maternity roosts are found and the project would result in impacts to roosting bats, the biologist shall coordinate with California Department of Fish and Wildlife (CDFW) to establish appropriate avoidance buffers around all maternity roost sites, and no construction work shall occur within the buffers until the completion of the maternity season. If deemed necessary through coordination with CDFW, additional measures could include two-step removal of any trees containing maternity roosts (outside of the maternity season), preparation of a Bat Habitat Mitigation and Monitoring Plan (BHMMP), and humane bat eviction/exclusion.

Potential impacts on special-status bat species that may be present within the Buildout Area would be addressed through implementation of **Regulatory Compliance Measure BIO-1**, as maternity bat roosts would be identified, no construction work would occur during maternity season, and appropriate site-specific and species-specific minimization measures would be developed in coordination with the CDFW and a qualified bat biologist.

Nesting Birds. Potential direct and/or indirect impacts (e.g., noise during construction) could potentially disrupt or otherwise adversely affect bird nesting activities in and/or adjacent to the Buildout Area if construction activities would occur within the nesting bird season (between February 1 and August 31). However, the implementation of **Regulatory Compliance Measure BIO-2** below would avoid a significant impact on migratory birds. Although large areas of the Buildout Area are paved, it is recommended that **Regulatory Compliance Measure BIO-2** be implemented on Lots 1 through 7 and 10 through 14 due to the presence of structures or trees thereon that may provide suitable habitat for nesting birds.

Regulatory Compliance Measure BIO-2

Preconstruction Nesting Bird Surveys and Active Nest Avoidance Buffers. If potential bird nesting habitat is to be removed from a portion of the Buildout Area in connection with a specific development project during the avian nesting season (January 1 through August 31), including structures, trees, shrubs and suitable ground-nesting areas, a qualified biologist shall conduct a nesting bird survey in such portion of the Buildout Area within 3 days prior to the commencement of structure demolition, vegetation removal, or other construction activities that could remove suitable nesting habitat.

If no nesting birds are identified, no additional survey is required. If at any time an active nest is identified, the biologist shall establish suitable buffers around the nests that consider the ecology of the species present and the location of construction activities to ensure that disruption of nesting does not occur. The buffer areas shall be avoided until the nests are no longer occupied and the juvenile birds can survive independently from the nests.

With implementation of **Regulatory Compliance Measure BIO-2,** the proposed project's potential impact on nesting birds that may be present within the Buildout Area would be less than significant as nests, if present, would be identified and avoided during construction.

Overall, with implementation of **Regulatory Compliance Measure BIO-1** and **Regulatory Compliance Measure BIO-2**, as discussed above, implementation of the proposed project would not have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the CDFW or the USFWS. These impacts would therefore be less than significant, and no mitigation is required.

Threshold 4.4.2: Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service?

***No Impact*.** As discussed above, the CNDDB search identified Southern Coastal Salt Marsh as occurring near Alamitos Bay and another occurrence in Anaheim Bay, which is within 5 miles of the Buildout Area. However, both of these occurrences are historical and are presumed extant. In addition, no salt marsh habitat exists within the Buildout Area. As such, there would be no impact on the Southern Coastal Salt Marsh, or any other sensitive natural community, with implementation of the proposed project, and no mitigation is required.

The Buildout Area currently contains one existing drainage feature, one existing detention basin, and three existing artificial ponds. The single drainage feature is located on Lot 3 and originates from a culvert beneath the internal road just northwest of a parking lot. This drainage is an ephemeral, earthen bottom drainage created to carry stormwater. The detention basin is located on Lots 2 and 3 and is best described as a manmade basin created to capture flows. It appears to divert accumulated water into the adjacent drainage that terminates into an underground drain system. The three artificial ponds are on Lots 3, 4, 6, and 7 and are manmade and thus, hydrologically isolated. The ponds contain hydrophytic vegetation along portions of their shoreline, including species that could be considered wetland indicators. All of these aquatic features were constructed in previously graded or developed areas and do not represent natural stream channels, wetlands, or riparian systems. Their primary functions are aesthetic or related to stormwater conveyance and

retention. As such, no riparian habitat is present within the Buildout Area. Therefore, no impacts to riparian habitat would result from project implementation, and no mitigation is required.

Threshold 4.4.3: Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

***Less Than Significant with Mitigation Incorporated*.** As previously discussed, there is one drainage feature, one detention basin, and three ponds within the Buildout Area. The three artificial ponds identified within the Buildout Area contain hydrophytic vegetation along portions of their shoreline, including species that could be considered wetland indicators. However, the ponds are manmade and hydrologically isolated from other waters. As such, the three ponds are not expected to be regulated by USACE, RWQCB, or CDFW. The detention basin is entirely lined with polyethylene, is best described as a manmade basin created to capture flows, and appears to divert accumulated water into the adjacent drainage that terminates into an underground drain system. Similar to the artificial ponds, because the detention basin is and appears to be hydrologically isolated from other waters, the detention basin is also not expected to be regulated by USACE, RWQCB, or CDFW. However, the single drainage feature located on Lot 3 contains ruderal vegetation and may connect to Coyote Creek, which is tributary to the San Gabriel River and ultimately flows into the Pacific Ocean. Therefore, the removal of this drainage may be subject to regulation by the RWQCB and CDFW. Impacts to these features would be potentially significant, and **Mitigation Measure BIO-1** should be required**.**

Mitigation Measure BIO-1 **Jurisdictional Delineation.** Prior to commencing construction activities that would impact any of the identified aquatic resources in Lots 2, 3, 4, 6, and 7 of Vesting Tentative Tract Map (VTTM) 19247, a jurisdictional delineation shall be conducted, as follows:

- Regional Water Quality Control Board (RWQCB) Jurisdiction (Waters of the State): Delineation shall follow the State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State (State Water Resources Control Board [SWRCB] 2019).

- California Department of Fish and Wildlife (CDFW) Jurisdiction (Streambed Alteration Program): The extent of CDFW jurisdiction shall be identified consistent with California Fish and Game Code §§ 1600–1616, including the outer limits of the bed, bank, and channel and the extent of any associated riparian vegetation.

- United States Army Corps of Engineers (USACE) Jurisdiction (Waters of the United States [WOTUS]): The determination that no federal WOTUS occur on site shall be documented consistent with 33 CFR § 328.3, the USACE 1987 Wetland Delineation

Manual, and the appropriate Regional Supplement (USACE 2008).

If impacts to RWQCB and/or CDFW jurisdictional waters are expected to occur, appropriate permits or authorization (e.g., Water Quality Certification/Waste Discharge Requirements, CDFW Lake and Streambed Alteration Agreement) shall be obtained prior to construction.

With implementation of **Mitigation Measure BIO-1,** potential impacts to State or federally protected wetlands would be reduced to less than significant as jurisdictional waters would be identified and the appropriate permits and approvals would be obtained, as necessary.

In addition, although construction and operational activities have the potential to result in temporary indirect effects to water quality including a potential increase in erosion and sediment transport into downstream aquatic areas and the contamination of waters from construction equipment, these potential indirect effects to hydrology and water quality would be avoided or substantially minimized through the implementation of Best Management Practices (BMPs) and a Water Quality Management Plan as discussed in Section 4.10, Hydrology and Water Quality. Specifically, adherence to **Regulatory Compliance Measures HYD-1** through **HYD-3**, provided in Section 4.10, Hydrology and Water Quality, during construction and operation would address erosion-related impacts through implementation of construction site BMPs and operational-period biotreatment BMPs to avoid erosion and sedimentation impacts to downstream aquatic areas and water quality. As such, there would be no impacts on any downstream State or federally protected wetlands. Therefore, the proposed project's impact on wetlands would be less than significant with mitigation incorporated.

Threshold 4.4.4: Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

***Less Than Significant Impact*.** The Buildout Area is located within an urban, built-out area in the City and is currently disturbed and developed with existing uses. Although the Buildout Area contains one drainage feature, one detention basin, and three artificial ponds, which contain hydrophytic vegetation along portions of their shoreline including species that would be considered wetland indicators, these aquatic resources would not support native resident or migratory fish. Additionally, native wildlife habitat is largely absent within the Buildout Area and in the immediate vicinity. Furthermore, the development surrounding the Buildout Area and the lack of ground cover and suitable foraging habitat make the site undesirable for many native wildlife species.

A total of 19 wildlife species were observed during the September 2024 field survey; however, the wildlife species observed or otherwise detected during the site survey are consistent with those typically encountered in and around urbanized Orange County. In addition, no special-status wildlife species were observed during the site survey, and suitable habitat for such species is absent from

the proposed project disturbance limits due to the high level of development. Further, the Buildout Area does not function as a wildlife movement corridor.

Although no sign of roosting bats was observed during the September 2024 field survey, suitable day and night roosting habitat could be present at several of the building structures throughout the Buildout Area and within the ornamental palm trees located around the Buildout Area. Similarly, although no nesting birds or their nests were observed at the time of the field survey, birds may still use the Buildout Area for nesting. Potential direct and/or indirect impacts (e.g., noise during construction) could potentially disrupt or otherwise adversely affect bird nesting or bat roosting activities in and/or adjacent to the Buildout Area. As such, implementation of the **Regulatory Compliance Measure BIO-1** and **Regulatory Compliance Measure BIO-2,** which would require preconstruction nesting bird surveys, active nest avoidance buffers, and preconstruction bat surveys under specified circumstances, would address potential impacts to nesting birds and roosting bats. Therefore, with implementation of the **Regulatory Compliance Measure BIO-1** and **Regulatory Compliance Measure BIO-2**, any potential impacts related to wildlife nursery sites would be less than significant, and no mitigation is required.

Threshold 4.4.5: Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

***Less Than Significant Impact*.** Construction of the proposed project would involve the removal of existing trees. All tree removal activities would be consistent with Section 3.9 of the Specific Plan, which supersedes the City's Landmark Tree Ordinance, as codified in Sections 17-17 through 17-27 of the City**'s** Municipal Code, and details the tree replacement standards for development within the Buildout Area. Consistent with Specific Plan requirements, all proposed tree removal required for a future development project would be described in the site plan review application and all removed trees would be replaced with an equivalent number of specimen trees, subject to adjustment in accordance with Section 5.6.2 of the Specific Plan.

With adherence to the tree replacement standards detailed in the Specific Plan**,** the proposed project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. The impact would be less than significant, and no mitigation is required.

Threshold 4.4.6: Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

***No Impact*.** There is no adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other regional habitat conservation plan applicable to the City. The Orange County Transportation Authority (OCTA) Natural Community Conservation Plan/Habitat Conservation Plan (NCCP/HCP) includes a Plan Area that covers the entirety of Orange County, including the City of Cypress. However, the City is not a party to the OCTA NCCP/HCP, and development activity within the City is not subject to the provisions of the OCTA NCCP/HCP. Therefore, the OCTA NCCP/HCP does not apply to the proposed project, and the proposed project would not conflict with any local,

regional, or State HCP or NCCP. Therefore, the proposed project would result in no impact related to conflict with any provisions of an HCP or NCCP, and no mitigation is required.

4.4.7 Level of Significance Prior to Mitigation

Prior to implementation of regulatory compliance and mitigation measures, the proposed project has the potential to result in significant impacts to nesting birds, roosting bats, jurisdictional waters, and landmark trees. These impacts could arise from vegetation removal, construction noise, disturbance to bat maternity roosts, alteration of aquatic features, and removal or trimming of protected trees.

4.4.8 Regulatory Compliance Measures and Mitigation Measures

4.4.8.1 Regulatory Compliance Measures

The following regulatory compliance measures are existing requirements of the City's Municipal Code that are applicable to the proposed project and are considered in the analysis of potential impacts related to biological resources. The City considers these requirements to be mandatory; therefore, they are not mitigation measures.

Regulatory Compliance Measure BIO-1

Preconstruction Bat Surveys. If construction activities for a specific development project within the Buildout Area, including structure demolition and tree removal, will occur during the bat maternity season (April 1 to August 31), then the City of Cypress, or designee, shall confirm that the applicable developer has retained a qualified biologist who shall conduct a nighttime bat survey of potential maternity roost habitat no more than 30 days prior to the removal of potential habitat. These surveys shall be initiated no later than 30 minutes before sunset and continue for no less than 1 hour after sunset. If maternity roosts are found and the project would result in impacts to roosting bats, the biologist shall coordinate with the California Department of Fish and Wildlife (CDFW) to establish appropriate avoidance buffers around all maternity roost sites, and no construction work shall occur within the buffers until the completion of the maternity season. If deemed necessary through coordination with CDFW, additional measures could include two-step removal of any trees containing maternity roosts (outside of the maternity season), preparation of a Bat Habitat Mitigation and Monitoring Plan (BHMMP), and humane bat eviction/ exclusion.

Regulatory Compliance Measure BIO-2

Preconstruction Nesting Bird Surveys and Active Nest Avoidance Buffers. If potential bird nesting habitat is to

be removed from a portion of the Buildout Area in connection with a specific development project during the avian nesting season (January 1 through August 31), including structures, trees, shrubs, and suitable ground-nesting areas, a qualified biologist shall conduct a nesting bird survey in such portion of the Buildout Area within 3 days prior to the commencement of structure demolition, vegetation removal, or other construction activities that could remove suitable nesting habitat.

If no nesting birds are identified, no additional survey is required. If at any time an active nest is identified, the biologist shall establish suitable buffers around the nests that consider the ecology of the species present and the location of construction activities to ensure that disruption of nesting does not occur. The buffer areas shall be avoided until the nests are no longer occupied and the juvenile birds can survive independently from the nests.

Regulatory Compliance Measure HYD-1 **Construction General Permit.** *(See Section 4.10, Hydrology and Water Quality)*

Regulatory Compliance Measure HYD-2 **Construction Dewatering Permit.** *(See Section 4.10, Hydrology and Water Quality)*

Regulatory Compliance Measure HYD-3 **Orange County MS4 Permit/City Municipal Code.** *(See Section 4.10, Hydrology and Water Quality)*

4.4.8.2 Mitigation Measures

Future development facilitated under the proposed project would be required to implement the following Mitigation Measures.

Mitigation Measure BIO-1 **Jurisdictional Delineation.** Prior to commencing construction activities that would impact any of the identified aquatic resources in Lots 2, 3, 4, 6, and 7 of Vesting Tentative Tract Map (VTTM) 19247, a jurisdictional delineation shall be conducted, as follows:

- Regional Water Quality Control Board (RWQCB) Jurisdiction (Waters of the State): Delineation shall follow the State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State (State Water Resources Control Board [SWRCB] 2019).

- California Department of Fish and Wildlife (CDFW) Jurisdiction (Streambed Alteration Program): The extent of CDFW jurisdiction shall be identified consistent with California Fish and Game Code §§ 1600–1616, including the outer limits of the bed, bank, and channel and the extent of any associated riparian vegetation.

- United States Army Corps of Engineers (USACE) Jurisdiction (Waters of the United States [WOTUS]): The determination that no federal WOTUS occur on site shall be documented consistent with 33 CFR § 328.3, the USACE 1987 Wetland Delineation Manual, and the appropriate Regional Supplement (USACE 2008).

If impacts to RWQCB and/or CDFW jurisdictional waters are expected to occur, appropriate permits or authorization (e.g., Water Quality Certification/Waste Discharge Requirements, CDFW Lake and Streambed Alteration Agreement) shall be obtained prior to construction.

4.4.9 Level of Significance after Mitigation

The proposed project would not result in significant impacts related to biological resources with implementation of **Mitigation Measure BIO-1**.

4.4.10 Cumulative Impacts

As defined in the *State CEQA Guidelines*, cumulative impacts are the incremental effects of an individual project when viewed in connection with the effects of past, current, and probable future projects within the cumulative impact area for biological resources. The cumulative area for biological impacts is the City and includes the related projects listed in **Table 4.A: Summary of Related Projects** and shown in **Figure 4.1: Related Projects**, in Chapter 4.0, Existing Setting.

As described above, due to the developed and disturbed nature of the Buildout Area, proximity to existing development, implementation of **Mitigation Measure BIO-1**, and adherence to **Regulatory Compliance Measures BIO-1** and **BIO-2**, implementation of the proposed project would not result in significant impacts related to federal and State-listed species, waters of the United States or wetlands, migratory birds and wildlife movement. Additionally, as discussed above, although the Buildout Area is located within the OCTA NCCP/HCP that covers the entirety of Orange County, including the City of Cypress, the City is not a party to the OCTA NCCP/HCP, and development activity within the City is not subject to the provisions of the OCTA NCCP/HCP. Therefore, the OCTA NCCP/HCP does not apply to the proposed project. Additionally, the Buildout Area is not located within a designated habitat reserve and, therefore, the proposed project would not contribute to the loss of natural habitat in the City. The development of the proposed project would not result in the removal of any sensitive habitat species identified in the OCTA NCCP/HCP. Overall, based on the above discussion, implementation of the proposed would not result in significant cumulative effects on biological resources.

In addition, some of the related projects identified in **Table 4.A** have undergone environmental review pursuant to CEQA, which included an analysis of potential impacts on biological resources. According to the EIRs prepared for the Shea Properties Mixed Use Development Project (Related Project 1) and Melia Homes -Citrus Square Project (Related Project 2), impacts on biological resources would be less than significant with adherence to regulatory compliance measures related to compliance with existing NPDES permit requirements and the performance of nesting bird surveys, similar to the proposed project. The EIRs also determined that cumulative impacts related to biological resources would be less than significant. In addition, the Initial Study prepared for the Los Alamitos Medical Center Project (Related Project 7) indicated that impacts on biological resources would also be less than significant. The Goodman Commerce Center and the 5665 Plaza Drive Projects (Related Project 3) was analyzed in an Initial Study/Mitigated Negative Declaration (IS/MND) in 2023 and an EIR in 2024, respectively, which determined that all impacts on biological resources would also be less than significant with adherence to regulatory compliance measures related to compliance with existing NPDES permit requirements and the performance of nesting bird surveys, similar to the proposed project.

Furthermore, the Sycamore Creek Charter School Project (Related Project 6) and 4562 Katella Avenue Project (Related Project 8) were determined to be exempt from CEQA review under Section 15332 of the *State CEQA Guidelines* (for infill development) and Notices of Exemption (NOEs) were prepared. In order for a project to be exempt under Section 15332 of the *State CEQA Guidelines*, the Buildout Area must have no value as habitat for endangered, rare, or threatened species and the proposed project must not have a significant or cumulative effect on the environment. The LTP Modern Machine Project (Related Project 5) and 8561 Belmont Street Project (Related Project 4) would also be required to undergo environmental review pursuant to CEQA, which would include an analysis of potential impacts on biological resources and the identification of any mitigation measures to reduce potential impacts, if necessary. It should also be noted that each related project is located on a site within an urbanized area that is entirely surrounded by existing development. Further, some of the related projects are located on infill sites, meaning the site has already been disturbed as part of prior development. As such, development of the related projects in combination with the proposed project would not result in significant impacts on biological resources.

Collectively, recent past, approved, and probable future projects that may occur in the vicinity, including the proposed project, would not result in a cumulatively significant increase in impacts on biological resources.

4.5 CULTURAL RESOURCES

This section provides a discussion of the existing cultural resource environment and evaluates the potential impacts on cultural resources, including historical and archaeological resources, from implementation of the Specific Plan 3.0 Buildout Project (proposed project). Historical resources include all properties (historic, archaeological, landscapes, traditional, etc.) eligible or potentially eligible for the National Register of Historic Places, or State and local laws and programs. The analysis in this section is based in part on the Historic Resources Assessment (HRA) prepared for the 2021–2029 Cypress Housing Element Implementation Project[1] and the Historic Resources Addendum (HRA Addendum)[2] (both provided in **Appendix D**) prepared for the proposed project. The proposed project's impacts on tribal cultural resources are evaluated separately and can be found in Section 4.18, Tribal Cultural Resources.

4.5.1 Scoping Process

The City of Cypress (City) received six comment letters during the public review period of the Notice of Preparation (NOP). For copies of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). No comment letters included comments related to cultural resources.

4.5.2 Methodology

4.5.2.1 Historical Resources

Race Course Archival Research. Archival research was conducted during the months of May, June, October, and November 2022. Research methods focused on the review of a variety of primary and secondary source materials relating to the history and development of the Los Alamitos Race Course property. Sources included, but were not limited to, information provided by and on file at the Los Alamitos Race Course, online sources, published literature in local and regional history, news articles, historic aerial photographs, and historic maps. Historical themes included horse racing, Quarter Horses, Frank Vessels, Sr., and pari-mutuel betting in California. A complete list of all references consulted in the preparation of the Historic Resources Assessment is provided in **Appendix D**.

Field Survey. On June 10, 2022, an LSA architectural historian and an LSA photographer conducted the intensive-level architectural survey of the Los Alamitos Race Course facility. The pair was escorted by the Los Alamitos Race Course Facilities Manager, who provided information about the buildings and features, as well as historical information about the facility. The trio began with the clubhouse/grandstand building including, but not limited to, Burgart's bar, the Cypress Room, the Vessels Club restaurant, the Finish Line room, the betting area, box seating, and the jockey room. They then toured the barns and other features. During the survey, numerous photographs of the

2 LSA Associates, Inc. (LSA). 2025. *Historic Resources Assessment Addendum to the Housing Element Implementation Project to support Specific Plan 3.0 Implementation Project, Cypress*. November 4. (**Appendix D**)

buildings and track and overview shots were taken. LSA's architectural historian made notations regarding the structural and architectural characteristics and current conditions of the buildings and features. The architectural historian also made notes regarding the historical information provided by the Facilities Manager.

The field survey included numerous buildings, structures, and features, which are described below. Construction and alteration information that was gleaned about the buildings, structures, and features during the survey is included. The focus of the survey was the 0.25-mile track used for horse racing, which provides the main architectural and historical significance to the Los Alamitos Race Course.

California Department of Parks and Recreation (DPR) 523 Series Forms. In August of 2023, California DPR 523 series forms were submitted on behalf of the Los Alamitos Race Course. DPR 523 series forms are used for recording and evaluating resources and for nominating properties to the California Register of Historical Resources. The forms included a description of the Los Alamitos Race Course as well as an evaluation of its historical significance under State and federal criteria, which will be discussed further within Section 4.5.6, Project Impacts.

Supplemental Historic Resources Assessment. In November 2025, an Addendum to the Cypress Housing Element Implementation Project HRA was prepared to update and supplement the HRA in connection with the proposed project.[3] The Addendum clarifies the character-defining features of buildings and features that comprise the Los Alamitos Race Course (LARC), as they relate to the Clubhouse and Annex/Burgart's building; identifies how the proposed project would impact LARC's eligibility as a historic resource; and identifies feasible mitigation measures to reduce the proposed project's significant environmental impacts to LARC.

4.5.2.2 Archaeological Resources

Records Searches. In January 2020, a cultural resource record search was completed as part of the environmental review process for the proposed mixed-use Cypress City Center Project, located directly south of the Buildout Area. The record search was conducted at the South Central Coastal Information Center (SCCIC) of the California Historical Resources Information System (CHRIS) at California State University, Fullerton, and included a review of all prehistoric and historic archaeological sites within a 0.25-mile radius of the Cypress City Center Project. As such, the records search performed as part of the Cypress City Center Project included the Buildout Area, as well as a review of known cultural resource survey and excavation reports in the surrounding area. The California Historic Resources Inventory (HRI), the National Register of Historic Places (National Register), California Historical Landmarks (SHL), California Points of Historical Interest (SPHI), and various local historical registers were examined. No archaeological resources had been previously recorded within the Cypress City Center project site, and none were discovered as a result of the

[3] LSA Associates, Inc. (LSA). 2025. *Historic Resources Assessment Addendum to the Housing Element Implementation Project to support Specific Plan 3.0 Implementation Project, Cypress*. November 4. (**Appendix D**)

record search.[4] The Cypress City Center Project was constructed between 2021 and 2025, and no tribal cultural resources were identified during grading or construction activities. Because the records search for the Cypress City Center Project included the Buildout Area, this record search can be reasonably applied to the proposed project's Buildout Area. As a result of the conditions discussed above, a new cultural resource records search under the proposed project was determined to be unnecessary by the City.

4.5.3 Existing Environmental Setting

4.5.3.1 Pre-Settlement

The area that is now the City of Cypress was prehistorically occupied by several different Native American tribes with unique oral histories, societal structures, and ways of life. To date, no federally recognized tribes claim to have occupied the land that is now considered the City of Cypress.

According to the Cypress General Plan,[5] the level of Gabrielino culture that was encountered by the Spanish in the 18th century was a continuation of a culture formation originating as far back as 1200 AD. Prior to Spanish colonization, the Gabrielino population was estimated at more than 5,000 people. Various Spanish explorers had been in the region earlier, but in 1769, the Spanish under Gaspar de Portola began their colonization of the region. The people were given the name "Gabrielino" by the Franciscan Priests for their association with the Mission San Gabriel Arcangel, which was constructed by 1771 in San Gabriel, approximately 20 miles northwest of the Buildout Area. As a result of their induction into the mission, the Gabrielino population was decimated through disease.

The majority of the information on Gabrielino culture has been obtained from the remains of their material culture; however, much of it was perishable and therefore not available for research purposes. What is known is that they had abundant marine resources, terrestrial animals, and a heavy reliance on acorns. They also engaged in trade networks that included the exchange of resources from the Channel Islands, the mainland, and inland to Arizona, with more than 89 percent of the Gabrielino's physical environment within the extremely rich Sonoran life zone.

4.5.3.2 Settlement and Development

The historic period in California is divided into three periods: Spanish/Mission Period (1769–1821), Mexican/Rancho Period (1821–1848), and the American Period (1848–Present). Spanish exploration of southern California began in the late 1700s as expeditions began seeking routes from San Diego to the Los Angeles basin and further regions of "Alta California." One of the logical, geographic passages between the Pacific Coast and the Los Angeles Basin was what is now known as Santa Ana Canyon. Some of the more notable and documented explorers to use this route, which went through what would become Orange County, were Don Gaspar Portolá, Juan Bautista de Anza, and

Don Pedro Fages. In 1784, General Pedro Fages received a petition from three of his soldiers who wanted land to build homes and graze the cattle they had acquired.[6] Fages agreed and that same year (1784) Manuel Perez Nieto was granted 300,000 acres, which became known as Los Nietos and included the area that would become Cypress.[7] After Manuel's death in 1804, the land was divided among his four surviving children and Juan Jose Nieto received the acres called Los Alamitos (approximately 28,000 acres) and Los Coyotes (approximately 49,000 acres), which include Cypress.[8] In 1806, Nieto built an adobe house in the southwest corner of Rancho Los Alamitos.[9]

In 1821, Mexico won independence from Spain and took over Alta California. In 1834, Juan Jose Nieto was formally granted Los Alamitos by Governor Juan Figueroa and a few months later sold it to the governor for just $500.[10] Figueroa later sold it to Abel Stearns in 1842.[11] Eventually Stearns owned both ranchos (Los Alamitos and Los Coyotes) and "built up the largest land and cattle empire in the area."[12]

In 1848, Alta California came under control of the United States, and in 1850, it was admitted to the Union. In 1861, Stearns borrowed on the Rancho from money lender Michael Reese to finance a business venture in Los Angeles.[13] By 1865, Stearns was in jeopardy of losing his land to Reese so a group of his friends formed the Robinson Trust to save him from bankruptcy.[14] In 1866, Reese foreclosed on a portion of the Rancho and began leasing it to the Bixbys, who were sheep farmers from Maine.[15] Meanwhile, in 1868, the Trust began to sell 120- to 160-acre tracts and by the time Stearns died in 1871, he was on his way to another fortune.[16]

The 1880s was a boom period in southern California that helped complete "the transition from range land to agricultural economy."[17] Between 1866 and 1884 the population of Los Angeles increased from approximately 12,000 to around 100,000 and other cities also were expanding rapidly.[18] Orange County was formed in 1889, putting half of Rancho Los Alamitos in Los Angeles

County and half in Orange County.[19] In 1881, John and Jotham Bixby and Isaac Hellman (a banker) bought Rancho Los Alamitos and joined it to Los Cerritos.[20] They formed the Alamitos Land Company to subdivide part of the Rancho into farm lands.[21] This represents the beginnings of what would become Cypress.

By the late 1880s, white and sweet potatoes, as well as sugar beets were the main crops.[22] However, dairy farming, which was supported by the beet farming, was a major industry with nearby Buena Park at its center.[23] In the Cypress area almost everyone had cows, but sorghum was what the area was really known for.[24] In 1889, the McWilliams family moved to the area, planted sorghum, and established a makeshift processing plant for it.[25] In its first year, it processed 100 gallons of syrup.[26] Soon other farmers planted sorghum and the industry steadily expanded.[27] In 1907, a regular mill was built that processed 15,000 gallons of syrup its first year.[28]

As more people moved into the area, the demand grew for schools. In the early 1890s, there were two schools, Centralia and Bloomfield.[29] In 1895, the Cypress School District was formed, and a building was constructed on an acre of land donated by Charles Lee Damron.[30] The new school was named Cypress School because of the cypress trees planted around the school yard as a windbreak. For many years, it was the only school in the district.[31] "In 1906, Pacific Electric built a line to the area to connect Los Angeles to Santa Ana" and development began to cluster around the rail station "at what is now the intersection of Lincoln Avenue and Walker Street" within the Lincoln Avenue Specific Plan area.[32] At that time, the community was nicknamed Waterville due to the preponderance of artesian wells in the area, but the train station was named Cypress reportedly to be consistent with the school.[33] In 1924, the school was replaced with a larger building that became the center of the community's social life.[34]

During the Depression era, the area was hard hit by the 1933 Long Beach earthquake, which damaged Cypress School, and the 1938 flood, which left most of Waterville under two to three feet of water.[35] The school was rebuilt in 1936 using Public Works Administration funds and was still the only school in the Cypress School District.[36] Although rural communities like Waterville suffered less from the Depression, people still struggled. The needy were assisted by a variety of federal relief programs and many school children received free hot lunches.[37]

"In 1910, a local farmer named George Miller formed the Southern California Dairy Association, and by the 1940s, dairies emerged as the community's leading industry."[38] However, the World War II years brought many changes to the area as several military facilities moved nearby. These included the United States Naval Station in Los Alamitos (next to Cypress), the Seal Beach Ammunition Depot, the United States Naval Air Station in Santa Ana, the Santa Ana Army Air Base, and Irvine Park, which was used as an Army training camp.[39] Aircraft plants and ship yards created jobs in nearby communities such as Long Beach and Santa Monica. The combination of new employment opportunities and men joining the armed services created a shortage of labor in the fields.[40] To alleviate the shortage, workers from Mexico were brought in through treaty arrangements and later German prisoners of war were used to harvest crops.[41]

After the war, returning GIs created such a big demand for housing in surrounding areas that many farmers relocated to Waterville.[42] By the late 1940s, Waterville was the third largest dairy district in the country.[43] When it incorporated in 1956, it took the name Dairy City.[44] In the 1950s, Dairy City (now Cypress), Dairyland (now La Palma), and Dairy Valley (now Cerritos) were collectively known as "Moo-Valley."[45] In 1957, the city's name was changed to Cypress.[46] In the 1960s, skyrocketing real estate prices in Moo Valley resulted in an exodus of dairy farmers to Riverside County.[47]

4.5.3.3 Frank Vessels, Sr. and the Los Alamitos Race Course

Frank Vessels was born in Elizabethtown, Kentucky in 1898. In 1920, he was living in San Bernardino County, California, married to Martha Grace Hagey (known as Grace), and working as an attendant at the State hospital. By 1922, the Vessels had relocated to Huntington Beach, and Frank had a business selling boilers and pipe fittings in Santa Fe Springs. In the late 1920s and 1930s, news articles revealed that Frank had at least one oil well in Huntington Beach (1927), a construction business called Industrial Engineering Company in Long Beach where the Vessels also lived (1930), and he owned a 10-acre citrus grove in San Bernardino County (1935). In 1935, it was reported that plans for an $11,000, nine-room Colonial style home and garage designed by architect George Kahrs for Frank Vessels, manager of the Oil Field Construction Company, were being planned. The residence (still extant) was located at 4470 Olive Avenue in Long Beach. Vessels was active in Long Beach civic affairs during the 1930s and into the early 1940s and was often mentioned in the local newspapers. One article noted that he was captain of the Long Beach Honorary Mounted Police Patrol, which was composed of leading businessmen in the city, and another said he was charter vice president of the Oil Field Service Club.
