In 1945, it was reported that Vessels bought a yearling bull named President Mischief 9th for $16,750 (over $270,000 in 2023 dollars), the highest price ever paid for a bull in California. In 1946, Vessels purchased 435 acres in what would become the City of Cypress. Around that same time, Vessels and Huntley Gordon of Chino, California, "traveled through Texas and Oklahoma buying railroad carloads of good mares. The need for a stallion was solved when Vessels bought *Clabber* for $5,000 dollars and shipped the "Iron Horse" from Arizona to his ranch in Cypress, California". *Clabber* was named the World's Champion Quarter Horse by the American Quarter Horse Racing Association in 1941. During his racing career, he was used as a rope horse and a racehorse and once ran three quarter-mile races in one day and won them each in 23 seconds. This buying spree was the foundation for Vessels Stallion Farm.

In 1947, Frank Vessels, Sr., built a race track on his 435-acre ranch and stallion farm in present-day Cypress.[48] It was initially used for training and match racing the Quarter Horses (QH) he bred there, but by the Spring, Vessels' new race track "located two miles west of Stanton on Katella Road near the Los Alamitos Air Station" began to host motorcycle races sanctioned by the American Motorcycle Association.[49] In August 1947, a crowd variously estimated at between one and two thousand showed up to watch the first full card of QH racing, six non-pari-mutuel races (fans could not bet on the horses). Soon the QH races became a weekly event.[50] At that time, the track was located a little southwest of where it is today in an area between Vessels' home and the railroad tracks. The area is now developed with Ovation at Flora Park, a 55+ residential community.

Attendance at the QH races was so high that Vessels had to scale back the races to once a month. During this time, it was only legal to bet on thoroughbred (TB) horse races and standardbreds

48 Long Beach Press-Telegram. 1947. *Cycle Club Bills Races on New Vessels Track*. page 16.

50 Chamberlain, Richard. 2000. *Los Alamitos Race Course 50 Years of Racing 1951-2000.* Brochure provided by Facilities Manager, Frank Sherran, June 2022.

(trotters), because the sport generated State tax revenues, which were used, among other things, to improve the breeds. In 1948, the State Attorney General ruled that Quarter Horse racing was legal based on current law, because by then registered Quarter Horses were a recognized breed. Despite this ruling, the California Horse Racing Board (CHRB), which was controlled by the breeders of thoroughbreds, refused to allow betting on QH races.[51] This prompted the QH breeders to organize. Vessels founded and became president of the Pacific Coast Quarter Horse Association, an affiliate of the national association, and began lobbying Sacramento for pari-mutuel wagering on Quarter Horses.[52] The State Legislature passed a bill allowing the State's six major tracks to include one Quarter Horse race per day. Bay Meadows at San Mateo was the first, carding 25 sprints.[53] Finally, the CHRB agreed to pari-mutuel betting on QH races. This had a profound impact on the sport of horse racing and the industry of horse breeding in California.

In December 1951, the first pari-mutuel all-Quarter Horse meet was held at Vessels' track, with more than 400 sprinters from various states and over 4,100 spectators the first day.[54] On closing day, more than 7,000 fans showed up, indicating that Quarter Horse racing would maintain its popularity.[55] In 1952, *Monita* and *Black Easter Bunny* won "divisions of the first Los Alamitos Invitational Championship, then called the California Championship."[56]

By 1953, a new track was under construction northwest of the original track (Historicaerials.com var.[57]). The new track (in the current location) opened in 1954 in time for the Fall meet and soon became the "premier Quarter Horse track in the country."[58] By 1959, Los Alamitos Race Course was the second largest revenue generator in the City of Cypress. Frank Vessels, Sr., was inducted into the American Quarter Horse Association Hall of Fame (1989). Los Alamitos Race Course is the premiere Quarter Horse (QH) race track in California, hosting the Champion of Champion stakes race since 1972 ($750,000 purse, 440 yards distance.) The golden age of horse racing came to an end around 1970, when attendance declined due to off track betting (OTB) and competition from other forms of entertainment. The track stayed in the Vessels family until 1984, when it was sold to Hollywood Park.[59] By 1989, it was under a new ownership group, including Edward Allred, that soon began a series of renovations to the buildings and the track's interior.[60]

59 Ibid.

60 Los Angeles Times. 1991. Los Alamitos: Track Celebrates 40th Anniversary. Website: https://www.latimes.com/archives/la-xpm-1991-12-04-sp-244-story.html (accessed March 2026).

Over time, portions of the property originally bought by Frank Vessels, Sr. were sold and incrementally redeveloped into a mix of urban land uses, including recreational, commercial, and residential uses. By 1992, a golf course to the northwest and southwest of the track are visible in aerial photographs. By 2005, several commercial buildings and parking lots had been constructed east of the track along Walker Street. Between 2005 and 2009, a church replaced part of the golf course southwest of the track. After the Hollywood Park racetrack in Inglewood closed in December 2013, the track itself was changed to accommodate thoroughbred racing. Circa 2019, the Ovation at Flora Park retirement community was built south of the barns and southwest of the track on land formerly occupied by a golf course. An apartment building, townhomes, a hotel, and a shopping center were recently constructed on areas that were formerly used as parking lots for the race track.

Although Los Alamitos Race Course has sustained alterations to most, if not all, of its buildings and character-defining features, including the original race track, it retains enough integrity to convey an association with the historic period. All character-defining features remain including the grandstand, race track, and chute on the south side of the track. The Clubhouse and Annex/Burgart's are not character-defining features because these features do not retain sufficient integrity to reflect the Los Alamitos Race Course's period of significance. The period of significance for Los Alamitos Race Course is 1954, when the track was built at the current location, to 1970, which is the end of the golden age of horse racing.

4.5.4 Regulatory Setting

The following section describes the federal, State, regional, and local regulatory framework applicable to analyzing potential impacts related to cultural resources from development of the proposed project.

4.5.4.1 Federal Regulations

The National Historic Preservation Act of 1966 (NHPA). The NHPA requires that the federal government list significant historic resources on the National Register of Historic Places (National Register). Federal agencies must consult the National Register when planning to undertake or grant approval through permits for a project. Prior to the issuance of any license or implementation of any project, the federal agency must consider the effects of a project or license on any historical buildings, sites, structures, or objects that are included on, or eligible for inclusion on, the National Register (16 United States Code [USC] Section 470(f)). This typically includes consultation with the federal agency responsible for the undertaking; the State Historic Preservation Officer (SHPO); local Native American groups and individuals; local and State historical societies and organizations; and relevant archival sources, including the appropriate facility of the California Historical Resources Information System (CHRIS). A cultural resource is evaluated for eligibility for listing in the National Register according to four criteria. These criteria generally require that the resource be 50 years of age or older and significant at the local, State, or national level according to one or more of the following:

A. It is associated with events that have made a significant contribution to the broad patterns of our history;

B. It is associated with the lives of persons significant in our past;

C. It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master, or possesses high artistic values, or that represent a significant and distinguishable entity whose components lack individual distinction; and/or

D. It has yielded, or may be likely to yield, information important to prehistory or history.

Properties that are not 50 years of age or older must have "exceptional significance" in accordance with National Register Criteria Considerations. The National Register also requires that a resource possess integrity, which is defined as "the ability of a property to convey its significance." The aspects of integrity are location, design, setting, materials, workmanship, feeling, and association. To determine which of these factors are most important will depend on the particular National Register criterion under which the resource is considered eligible for listing.

The Native American Graves Protection and Repatriation Act (NAGPRA). The NAGPRA (Public Law 101-601; 25 USC 3001-3013) describes the rights of Native American lineal descendants, Indian tribes, and Native Hawaiian organizations with respect to the treatment, repatriation, and disposition of Native American human remains, funerary objects, sacred objects, and objects of cultural patrimony, referred to collectively in the statute as cultural items, with which they can show a relationship of lineal descent or cultural affiliation. It requires that federal agencies and museums receiving federal funds inventory holdings of Native American human remains and funerary objects and provide written summaries of other cultural items.[61]

4.5.4.2 State Regulations

***State CEQA Guidelines* Section 15064.5.** Pursuant to Section 15064.5 of the *State CEQA Guidelines*, the term "historical resource" shall include:

(1) A resource listed in, or determined to be eligible by, the State Historical Resources Commission, for listing in the California Register of Historical Resources [California Register] (Pub. Res. Code §5024.1, Title 14 California Code of Regulations [CCR], Section 4850 et seq.).

(2) A resource included in a local register of historical resources, as defined in section 5020.1(k) of the Public Resources Code or identified as significant in an historical resource survey meeting the requirements section 5024.1(g) of the Public Resources Code, shall be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.

(3) Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be an historical resource, provided the lead agency's

[61] National Park Service (NPS). The Native American Graves Protection and Repatriation Act (NAGPRA). Website: https://www.nps.gov/archeology/tools/laws/nagpra.htm (accessed March 2026).

determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources (Pub. Res. Code, § 5024.1, Title 14 CCR, Section 4852) including the following:

A. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.

B. Is associated with the lives of persons important in our past.

C. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.

D. Has yielded, or may be likely to yield, information important in prehistory or history.

In addition, Section 15064.5(a)(4) of the *State CEQA Guidelines* states that the fact that a resource is not listed in, or determined to be eligible for listing in the California Register, not included in a local register of historical resources (pursuant to PRC Section 5020.1(k)), or identified in an historical resources survey (meeting the criteria in PRC Section 5024.1(g)) does not preclude a lead agency from determining that the resource may be an historical resource as defined in PRC Sections 5020.1(j) or 5024.1.

Further, Section 15064.5(b) of the *State CEQA Guidelines* states that a project with an effect that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment. A "substantial adverse change" to a historical resource "means demolition, destruction, relocation, or alteration such that the significance of a historical resource would be impaired."

California Health and Safety Code (HSC) Section 7050.5. California HSC Section 7050.5 states that, in the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains until the Coroner of the county in which the remains are discovered has determined whether or not the remains are subject to the Coroner's authority. If the human remains are of Native American origin, the Coroner must notify the Native American Heritage Commission (NAHC) within 24 hours of this identification. The NAHC will identify a Native American Most Likely Descendant (MLD) to inspect the site and provide recommendations for the proper treatment of the remains and associated grave goods.

Public Resources Code Section 5097.5. PRC Section 5097.5 provides for the protection of cultural resources and prohibits the removal, destruction, injury, or defacement of archaeological features on any lands under the jurisdiction of State or local authorities.

California Register of Historical Resources (PRC Section 5020 et seq.). State law also protects cultural resources by requiring evaluations of the significance of prehistoric and historic resources in CEQA documents. A cultural resource is an important historical resource if it meets any of the

criteria found in *State CEQA Guidelines* Section 15064.5(a). These criteria are nearly identical to those for the National Register, which are listed above under Section 4.5.4.1, Federal Regulations.

The SHPO maintains the California Register. Properties listed, or formally designated eligible for listing, on the National Register are nominated to the California Register and then selected to be listed on the California Register, as are State Landmarks and Points of Interest.

The California Register criteria are based on National Register criteria. For a property to be eligible for inclusion in the California Register, one or more of the following criteria must be met:

1. It is associated with the events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States;

2. It is associated with the lives of persons important to local, California, or national history;

3. It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master, or possesses high artistic values; and/or

4. It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

In addition to meeting one or more of the above criteria, the California Register requires that sufficient time has passed since a resource's period of significance to "obtain a scholarly perspective on the events or individuals associated with the resource." Fifty years is used as a general estimate of time needed to develop the perspective to understand the resource's significance (California Code of Regulations [CCR] 4852[d][2]).

The California Register also requires that a resource possess integrity, which is defined as "the authenticity of an historical resource's physical identity evidenced by the survival of characteristics that existed during the resource's period of significance".[62] To retain integrity, a resource should have its original location, design, setting, materials, workmanship, feeling, and association. Which of these factors is most important depends on the particular criterion under which the resource is considered eligible for listing.[63]

4.5.4.3 Regional Regulations

There are no regional regulations that are applicable to cultural resources relevant to the proposed project.

---

62 California Office of Historic Preservation (OHP). 1999. *California Register and National Register: A Comparison (for purposes of determining eligibility for the California Register),* OHP Technical Assistance Series #6. Pg. 2.

63 Ibid.

4.5.4.4 Local Regulations

Cypress Town Center and Commons Specific Plan 3.0. The Cypress Town Center and Commons Specific Plan 3.0 does not contain any provisions related to cultural resources.

Cypress General Plan. The Conservation/Open Space/Recreation (COSR) Element of the Cypress General Plan identifies goals and policies related to cultural resources (and includes references to paleontological resources). Goal COSR-5 is to "preserve Cypress' archaeologic and palaeontologic resources."[64] COSR-5.1 and COSR-5.2 were identified as policies in order to achieve Goal COSR-5. Policy COSR-5.1 is "to update records of resource finds and locations when required"[65] and COSR-5.2 states that "[p]rior to development in previously undeveloped areas, [the City will] require strict adherence to the CEQA guidelines for environmental documentation and mitigation measures where development will affect archaeological or paleontological resources."[66]

However, the City's General Plan does not identify any historic resources and does not contain any specific policies to protect historic resources. In fact, the City's General Plan states that a record search was conducted by the Regional Information Center at UCLA on November 1, 1991, and yielded negative results for any recorded prehistoric or historic sites. This search also involved a review of maps from the years 1896–1942, which showed a high volume of development between 1942 and 1996. The City contains no National Register listed or eligible properties, or any State Landmarks.

4.5.5 Thresholds of Significance

The thresholds of significance for cultural resources impacts used in this analysis are consistent with Appendix G of the *State CEQA Guidelines*. Based on these thresholds, implementation of the proposed project would have a significant adverse impact with respect to cultural resources if it would:

Threshold 4.5.1: Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5;

Threshold 4.5.2: Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5; or

Threshold 4.5.3: Disturb any human remains, including those interred outside of dedicated cemeteries.

64 City of Cypress. 2001. *Cypress General Plan Conservation/Open Space/Recreation Element.* September 10, 2001. Website: https://www.cypressca.org/home/showpublisheddocument/686/63612 3123792970000 (accessed March 2026).

65 Ibid.

66 Ibid.

4.5.6 Project Impacts

Threshold 4.5.1: Would the project cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?

Significant and Unavoidable Impact. The approximately 134-acre Buildout Area includes approximately 97 acres owned by the Los Alamitos Race Course (LARC). The LARC Property includes a variety of existing structures and facilities located on the LARC Property that support horse racing, training, and community activities. Structures include a race track, grandstand structure, three artificial lakes inside the race track, a one-story clubhouse and restaurant structures, lighting structures, approximately 41 permanent one-story barns and several temporary structures and barns. The LARC Property also contains parking areas, landscaping, drainage features, sheds, maintenance areas, and perimeter fencing. The LARC Property's primary structures include the Main Grandstand, Clubhouse Building, and Annex/Burgart's. The Main Grandstand, built in 1958, is a five-story, 140,000-square-foot structure standing approximately 65 feet high, with a seating capacity of 6,500 people. The Clubhouse Building, constructed in 1955, is a two-story, 35,000-square-foot structure with a capacity of 2,900 people, including an additional 25,000 square feet of patron space. The three-story Annex/Burgart's building was built between the Grandstand and the Clubhouse by 1963 and originally had a rooftop patio, which was enclosed in the 1980s. In 1976, permits were issued for alterations to the Annex/Burgart's building, which indicates that the bar and dining area were to be enlarged and a restroom and future bar were planned at ground level in the breezeway between the grandstand and clubhouse. The south elevation was extensively remodeled, including removal/replacement of all windows and enclosure of the rooftop patio. These alterations occurred outside the period of significance (post-1970).

As noted, there are a total of approximately 41 barns supporting the horse racing and training operations on the LARC Property. This includes 36 cinder block barns built in 1958, each approximately 14,000 square feet (totaling 504,000 square feet). Additionally, there are five modular-style barns built in 2013, each about 12,480 square feet (totaling 62,400 square feet). The LARC Property also features the 1,960-square-foot Horseman's Restaurant, constructed in 1999, along with various temporary structures.

As part of the EIR prepared for the 2021–2029 Cypress Housing Element Implementation Project, a Historic Resources Assessment (HRA) was prepared in October 2023. The HRA included archival research, an intensive-level field survey, and an evaluation of the LARC Property under the criteria for listing in the National Register of Historic Places (National Register) and California Register of Historical Resources (California Register). Upon these evaluations, the LARC Property was determined to be eligible for both the National Register and the California Register. These eligibilities stem from the LARC's association with the establishment and success of organized Quarter House racing in California (National Register Criterion A/California Register Criterion 1) and with Frank Vessels, Sr., who had a profound impact on quarter horse racing and breeding in California (National Register Criterion B and California Register Criterion 2). California Department of Parks and Recreation (DPR) 523 series forms recording and evaluating the site as a historic resource were prepared and are attached as an appendix to the HRA (**Appendix D**).

Subsequent to the preparation of the HRA in October 2023, an Addendum to the HRA was prepared to update and supplement the HRA in connection with the proposed project to (1) clarify the character-defining features of buildings and features that comprise LARC, as they relate to the Clubhouse and Annex/Burgart's building, (2) identify how the proposed project would impact LARC's eligibility as a historic resource, and (3) identify feasible mitigation measures to reduce the proposed project's significant environmental impacts to LARC. Based on the HRA Addendum's findings, the primary buildings and features that comprise the LARC Property are eligible for listing in the National Register and California Register under Criteria A/1 and B/2 for LARC's association with the establishment and success of organized quarter horse racing in California (A/1) and Frank Vessels, Sr (B/2). As such, the LARC Property is considered a "historical resource" for the purposes of CEQA. The HRA identified the LARC character-defining features as (1) the grandstand, (2) the 1954 quarter-mile chute, and (3) the pre-1970 track, with a period of significance of 1954 to 1970. The Clubhouse and Annex/Burgart's building are not character-defining features or part of the historical resource because these features do not retain sufficient integrity to reflect the property's period of significance. According to the integrity analysis performed as part of the HRA Addendum, the cumulative changes to the Clubhouse, particularly the replacement of original windows, removal of trim, and modifications to the north and south elevations, have diminished the integrity of design, materials, and workmanship associated with its original appearance. As a result, the Clubhouse is not considered a character-defining feature of LARC. In addition, due to the alterations and resulting low integrity of design, materials, workmanship, and feeling, the Annex/Burgart's building is not a character-defining feature of LARC.

Actions that result in the diminishment of any of the character-defining features of the LARC Property, such as removal or alteration, could result in a significant impact under CEQA. The proposed project evaluated in this Draft EIR assumes that development of the land uses allowed by the Specific Plan within the Buildout Area would require the demolition and removal of all or a substantial portion of the existing improvements associated with the LARC Property, including all of the character-defining features as well as the Clubhouse and Annex/Burgart's building, accessory buildings, barns and structures and three artificial lakes. The demolition of the grandstand, chute, and track would be a potentially significant impact.

Based on *State CEQA Guidelines* Section 15064.5(b), the proposed project would have a significant impact on historical resources if it would cause a substantial adverse change in the significance of a historical resource. Historical resources include properties eligible for listing on the National Register, the California Register, or a local register or survey of historical resources. In addition, as described in *State CEQA Guidelines* Section 15064.5, "substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired." Demolition is considered a material impairment of the historical resource, and no feasible mitigation measures are available to fully mitigate the demolition of a historical resource to a less than significant level. However, implementation of mitigation measures could reduce significant adverse impacts but not completely mitigate or avoid the significant impact. If the historical significance of the building is thoroughly documented, well photographed, and publicly available, the demolition of the building would have a reduced impact on the historical significance of the building, though the impact would still be significant. Implementation of **Mitigation Measures**

CUL-1 through **CUL-3**, below, which requires that photographs and memorabilia, including brochures, promotional flyers, marketing materials, special events announcements, and the like (or copies of the same) be available to a local library or an Orange County-based historical society, a historical marker or the Vessels' name, the track logo, racing terminology, and/or the names or likenesses (e.g., statuary, wall or garden art, and photographs) of noteworthy Quarter Horses, and documentation of the historic resource in accordance with the Historic American Building Survey (HABS) standards, would reduce, but not avoid, adverse impacts to the historical resource.

Mitigation Measure CUL-1 Prior to demolition activities of any character-defining features, the owner of Los Alamitos Race Course, or subsequent project proponents, shall make photographs and memorabilia, including brochures, promotional flyers, marketing materials, special events announcements and the like (or copies of the same) available to a local library or an Orange County-based historical society:

a. For use in an exhibit(s) about horse racing, quarter horses, Frank Vessels, Sr., the Vessels family, pari-mutuel betting and/or the history of Cypress; and/or

b. To be part of a permanent archive for research purposes.

Mitigation Measure CUL-2 Require future development on portions of the Los Alamitos Race Course property to incorporate one or more of the following:

a. A historical marker that provides information about Frank Vessels, Sr. and Los Alamitos Race Course. The marker should be clearly visible and accessible to the public.

b. The Vessels' name, the track logo, racing terminology, and/or the names or likenesses (e.g., statuary, wall or garden art, and photographs) of noteworthy Quarter Horses (such as *Clabber, Go Man Go,* or *Moonist*).

Mitigation Measure CUL-3 Prior to, or in conjunction with, approval of any demolition or development permits that involves the destruction of any portion of the Los Alamitos Race Course property, the Project Applicant should be required to commission documentation of the property in the form of Historic American Building Survey (HABS)-like documentation that complies with the *Secretary of the Interior's Standards for Architectural and Engineering Documentation* (NPS 1990), if any of the character-defining features as identifies are still present. The documentation should generally follow the HABS Level III requirements and include digital photographic recordation of the complex, a detailed historic narrative report, and compilation of historic research. Photographic documentation should include:

- General views of the site and landscape as a whole
- Photographs of the 550-yard chute, track, and winner's circle
- Photographs of each exterior elevation of all buildings and structures in the complex
- Photographs of the interior of the Grandstand.

The documentation should be completed by a qualified architectural historian or historian who meets the Secretary of the Interior's Professional Qualification Standards for History and/or Architectural History (NPS 1983). The original archival-quality documentation shall be offered as donated material to the following entities: South Central Coastal Information Center at CSU Fullerton, Preserve Orange County, the Orange County Historical Society and other repositories to be determined such as local libraries and the American Quarter Horse Association Hall of Fame.

Because implementation of the proposed project would demolish the character-defining features of the LARC Property, implementation of the proposed project would result in a substantial adverse change to a historic architectural resource under CEQA. Implementation of **Mitigation Measures CUL-1** through **CUL-3** would require documenting the character-defining features of LARC Property, but it would not avoid demolition of the character-defining features; therefore, impacts to built-environment historic resources as defined in *State CEQA Guidelines* Section 15064.5 would be significant and unavoidable.

Threshold 4.5.2: Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

Less Than Significant Impact. As previously discussed, no known archaeological resources exist within the Buildout Area, as determined by the record search performed for the Cypress City Center Project, which included the Buildout Area. Although no cultural resources have been identified within the Buildout Area, according to the Geotechnical Investigation,[67] the Buildout Area is underlain by 3–5 feet of fill material on top of native alluvial soils. Undisturbed native alluvial soils may contain previously unknown archaeological resources.

Implementation of the proposed project would facilitate the development of up to 1,791 additional residential units and approximately 440,000 square feet of non-residential development within the Buildout Area. Future construction facilitated by the proposed project would include ground disturbing activities including grading and excavation. Ground-disturbing activity into the native alluvial soils associated with project implementation has the potential to unearth previously unknown archaeological deposits or resources, resulting in a potential substantial adverse change in

[67] Geotechnologies, Inc. 2024. *Environmental Impact Report Soils and Geology Issues, Proposed Mixed-Use Development, 4961 Katella Avenue and 5100 Cerritos Avenue, Cypress, California.* May 2. (**Appendix F**)

the significance of a unique archaeological resource, as defined in *State CEQA Guidelines* Section 15064.5.

However, future development facilitated under the proposed project would be required to adhere to **Regulatory Compliance Measure CUL-1**, which details provisions in the event that unknown cultural resources are discovered during ground-disturbing construction activities, consistent with the California Code of Regulations (CCR) Section 15064.5(e) and State Health and Safety Code Section 7050.5.

Regulatory Compliance Measure CUL-1	**Unknown Archaeological Resources.** In the event that archaeological resources are discovered during excavation, grading, or construction activities, work shall cease within 50 feet of the find until a qualified archaeologist from the Orange County List of Qualified Archaeologists has evaluated the find in accordance with federal, State, and local guidelines to determine whether the find constitutes a "unique archaeological resource," as defined in Section 21083.2(g) of the California Public Resources Code (PRC). A future project applicant and its construction contractor shall not collect or move any archaeological materials and associated materials. Construction activity may continue unimpeded on other portions of the project site. Any found deposits shall be treated in accordance with federal, State and local guidelines, including those set forth in PRC Section 21083.2. Prior to commencement of grading activities, the Director of the City of Cypress (City) Community Development Department, or designee, shall verify that all project grading and construction plans include specific requirements regarding California PRC (Section 21083.2[g]) and the treatment of archaeological resources as specified above.

Implementation of **Regulatory Compliance Measure CUL-1** would ensure that: (1) if archaeological cultural resources are identified during excavation, these would be evaluated, documented, and studied in accordance with standard archaeological practice, and (2) archaeological deposits and human remains would be treated in a culturally appropriate manner and in accordance with appropriate State codes and regulations. Therefore, implementation of the proposed project would result in less than significant impacts related to archaeological resources.

Threshold 4.5.3: Would the project disturb any human remains, including those interred outside of dedicated cemeteries?

Less Than Significant Impact. There are no known human remains on the project site. However, as previously discussed, future construction facilitated by the proposed project would include ground disturbing activities including grading and excavation. Ground-disturbing activity associated with project implementation has the potential to disturb previously unknown human remains.

In the event that human remains are identified during future ground-disturbing activities, these remains would be treated in accordance with Section 7050.5 of the California Health and Safety Code and PRC Section 5097.98, as detailed in **Regulatory Compliance Measure CUL-2**. Section 7050.5 of the California Health and Safety Code states that, in the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, there shall be no further excavation or disturbance within 50 feet of the find or any nearby area reasonably suspected to overlie adjacent remains until the coroner of the county in which the remains are discovered has determined whether or not the remains are subject to the Coroner's authority. If the human remains are of Native American origin, the coroner must notify the NAHC within 24 hours of this identification. The NAHC will identify an MLD to inspect the site and provide recommendations for the proper treatment of the remains and associated grave goods.

Regulatory Compliance Measure CUL-2

Human Remains. In the event that human remains are encountered on the project site, work within 50 feet of the discovery shall be redirected and the County Coroner notified immediately consistent with the requirements of California Code of Regulations (CCR) Section 15064.5(e). State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. If the remains are determined to be Native American, the County Coroner shall notify the Native American Heritage Commission (NAHC), which shall determine and notify a Most Likely Descendant (MLD). With the permission of the property owner, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. The MLD may recommend scientific removal and non-destructive analysis of human remains and items associated with Native American burials. Consistent with CCR Section 15064.5(d), if the remains are determined to be Native American and an MLD is notified, the City of Cypress shall consult with the MLD as identified by the NAHC to develop an agreement for treatment and disposition of the remains. Prior to the issuance of grading permits, the Director of the City of Cypress Community Development

Department, or designee, shall verify that all grading plans specify the requirements of CCR Section 15064.5(e), State Health and Safety Code Section 7050.5, and PRC Section 5097.98, as stated above.

PRC Section 5097.98 states that the NAHC, upon notification of the discovery of Native American human remains pursuant to Health and Safety Code Section 7050.5, shall immediately notify those persons it believes to be descended from the deceased (i.e., the Most Likely Descendant or "MLD"). With permission from the landowner or a designated representative, the MLD may inspect the remains and any associated cultural materials and make recommendations for treatment or disposition of the remains and associated grave goods. The MLD shall provide recommendations or preferences for treatment of the remains and associated cultural materials within 48 hours of being granted access to the site.

In addition, as discussed in Section 4.18, Tribal Cultural Resources, the proposed project would be required to implement **Mitigation Measures TCR-1** and **TCR-4**, which detail provisions for the treatment of Native American human remains and associated funerary objects, if encountered during project construction.

Future development facilitated by the proposed project would be required to comply with the appropriate procedures required under State law, as detailed in **Regulatory Compliance Measure CUL-2,** and the provisions detailed in **Mitigation Measures TCR-3** and **TCR-4** for the treatment of human remains in order to ensure that descendant communities have significant input in the treatment and final disposition of human remains, if encountered at the project site during future development activities. Therefore, implementation of the proposed project would result in less than significant impacts related to human remains.

4.5.7 Level of Significance Prior to Mitigation

Impacts on historic resources with implementation of the proposed project would be potentially significant.

4.5.8 Regulatory Compliance Measures and Mitigation Measures

4.5.8.1 Regulatory Compliance Measures

Future development facilitated under the proposed project would be required to adhere to the following regulatory compliance measures.

Regulatory Compliance Measure CUL-1 **Unknown Archaeological Resources.** In the event that archaeological resources are discovered during excavation, grading, or construction activities, work shall cease within 50 feet of the find until a qualified archaeologist from the Orange County List of Qualified Archaeologists has evaluated the find in accordance with federal, State, and local guidelines to determine

whether the find constitutes a "unique archaeological resource," as defined in Section 21083.2(g) of the California Public Resources Code (PRC). A future project applicant and its construction contractor shall not collect or move any archaeological materials and associated materials. Construction activity may continue unimpeded on other portions of the project site. Any found deposits shall be treated in accordance with federal, State and local guidelines, including those set forth in PRC Section 21083.2. Prior to commencement of grading activities, the Director of the City of Cypress (City) Community Development Department, or designee, shall verify that all project grading and construction plans include specific requirements regarding California PRC (Section 21083.2[g]) and the treatment of archaeological resources as specified above.

Regulatory Compliance Measure CUL-2

Human Remains. In the event that human remains are encountered on the project site, work within 50 feet of the discovery shall be redirected and the County Coroner notified immediately consistent with the requirements of California Code of Regulations (CCR) Section 15064.5(e). State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. If the remains are determined to be Native American, the County Coroner shall notify the Native American Heritage Commission (NAHC), which shall determine and notify a Most Likely Descendant (MLD). With the permission of the property owner, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. The MLD may recommend scientific removal and non-destructive analysis of human remains and items associated with Native American burials. Consistent with CCR Section 15064.5(d), if the remains are determined to be Native American and an MLD is notified, the City of Cypress shall consult with the MLD as identified by the NAHC to develop an agreement for treatment and disposition of the remains. Prior to the issuance of grading permits, the Director of the City of Cypress Community Development Department, or designee, shall verify that

all grading plans specify the requirements of CCR Section 15064.5(e), State Health and Safety Code Section 7050.5, and PRC Section 5097.98, as stated above.

4.5.8.2 Mitigation Measures

The proposed project would be required to implement the following mitigation measures.

Mitigation Measure CUL-1 Prior to demolition activities of any character-defining features, the owner of Los Alamitos Race Course, or subsequent project proponents, shall make photographs and memorabilia, including brochures, promotional flyers, marketing materials, special events announcements and the like (or copies of the same) available to a local library or an Orange County-based historical society:

a. For use in an exhibit(s) about horse racing, quarter horses, Frank Vessels, Sr., the Vessels family, pari-mutuel betting and/or the history of Cypress; and/or

b. To be part of a permanent archive for research purposes.

Mitigation Measure CUL-2 Require future development on portions of the Los Alamitos Race Course property to incorporate one or more of the following:

a. A historical marker that provides information about Frank Vessels, Sr. and Los Alamitos Race Course. The marker should be clearly visible and accessible to the public.

b. The Vessels' name, the track logo, racing terminology, and/or the names or likenesses (e.g., statuary, wall or garden art, and photographs) of noteworthy Quarter Horses (such as *Clabber, Go Man Go,* or *Moonist*).

Mitigation Measure CUL-3 Prior to, or in conjunction with, approval of any demolition or development permits that involves the destruction of any portion of the Los Alamitos Race Course property, the Project Applicant should be required to commission documentation of the property in the form of Historic American Building Survey (HABS)-like documentation that complies with the *Secretary of the Interior's Standards for Architectural and Engineering Documentation* (NPS 1990), if any of the character-defining features as identifies are still present. The documentation should generally follow the HABS Level III requirements and include digital photographic recordation of the complex, a detailed historic narrative report, and compilation of historic research. Photographic documentation should include:

- General views of the site and landscape as a whole
- Photographs of the 550-yard chute, track, and winner's circle
- Photographs of each exterior elevation of all buildings and structures in the complex
- Photographs of the interior of the Grandstand.

The documentation should be completed by a qualified architectural historian or historian who meets the Secretary of the Interior's Professional Qualification Standards for History and/or Architectural History (NPS 1983). The original archival-quality documentation shall be offered as donated material to the following entities: South Central Coastal Information Center at CSU Fullerton, Preserve Orange County, the Orange County Historical Society and other repositories to be determined such as local libraries and the American Quarter Horse Association Hall of Fame.

4.5.9 Level of Significance after Mitigation

Even with implementation of **Mitigation Measures CUL-1** through **CUL-3**, the proposed project would result in a significant and unavoidable impact related to the substantial adverse change of a historical resource. No other feasible mitigation measures have been identified to reduce this impact to less than significant.

4.5.10 Cumulative Impacts

Defined in Section 15130 of the *State CEQA Guidelines*, cumulative impacts are the incremental effects of an individual project when viewed in connection with the effects of past, current, and reasonably foreseeable projects in an area of interest. The cumulative impact area for cultural resources is the North Orange County region, including the City of Cypress. Potential impacts of the proposed project to unknown cultural resources, when combined with other past, current, and reasonably foreseeable projects in the city, including the related projects identified in **Table 4.A: Summary of Related Projects** and **Figure 4.1**, in Chapter 4.0, Existing Setting, could contribute to a cumulatively significant impact due to the overall loss of cultural resources in the region, including historical resources.

Each development proposal received by the City is required to undergo individual environmental review pursuant to CEQA. Furthermore, impacts of other projects on cultural resources are generally site-specific because they result from ground -disturbing activities that would require a site-specific impact analysis to determine the nature and extent of the resources and identify appropriate mitigation measures that would reduce or avoid significant impacts. Similar to the proposed project, ground disturbance associated with related projects could result in potentially significant impacts on previously unidentified archaeological sites and associated human remains that may be unearthed.

When the City considers future development proposals, both within the Buildout Area and citywide, these proposals would undergo environmental review pursuant to CEQA and when necessary, mitigation measures would be adopted as appropriate. In most cases, this environmental review and compliance with project conditions of approval and relevant policies of the General Plan would ensure that significant impacts on cultural resources would be avoided or otherwise mitigated to less than significant levels. Moreover, some of the related projects identified in **Table 4.A**, which included ground disturbing activities associated with construction of the related projects, have undergone environmental review pursuant to CEQA, which included an analysis of potential impacts on cultural resources, including historical resources. According to the EIRs prepared for the Shea Properties Mixed Use Development Project (Related Project 1), Melia Homes -Citrus Square Project (Related Project 2), and the Los Alamitos Medical Center Project (Related Project 7), impacts on cultural resources with implementation of the projects would be less than significant with implementation of measures similar to **Regulatory Compliance Measures CUL-1** and **CUL-2** that would ensure there are no impacts to unknown cultural resources during construction. Further, the EIRs determined that cumulative impacts related to cultural resources would be less than significant. In addition, Goodman Commerce Center and the 5665 Plaza Drive Projects (Related Project 3) were analyzed in an Initial Study/Mitigated Negative Declaration (IS/MND) in 2023 and an EIR in 2024, respectively, which determined that all impacts on cultural resources would also be less than significant with implementation of measures similar to **Regulatory Compliance Measures CUL-1** and **CUL-2.** In addition, none of the above referenced related projects included the demolition of historical resources or resulted in the substantial adverse change in the significance of historic resources. The Sycamore Creek Charter School Project (Related Project 6) and 4562 Katella Avenue Project (Related Project 8) were determined to be exempt from CEQA review under Section 15332 of the *State CEQA Guidelines* (for infill development) and Notices of Exemption (NOEs) were prepared. In order for a project to be exempt under Section 15332 of the *State CEQA Guidelines*, the project must not result in impacts on historical resources. As such, development of the related projects in combination with the proposed project would not result in significant impacts on cultural resources. The LTP Modern Machine Project (Related Project 5) and 8561 Belmont Street Project (Related Project 4) would also be required to undergo environmental review pursuant to CEQA, which would include an analysis of potential impacts on cultural resources and the identification of any mitigation measures to reduce potential impacts, if necessary.

Built Historic Resources: The cumulative context for built historic resources is both the City of Cypress as well as quarter horse racing tracks in California. As identified in the 2023 HRA and 2025 Addendum, LARC is eligible for listing in the California Register and National Register under Criteria A/1 and B/2 for its association with the establishment of organized quarter horse racing in California and its connection to Frank Vessels, Sr. The Grandstand, oval track, and 550-yard chute are the property's primary character-defining features that retain integrity from the period of significance (1954–1970). Although the Clubhouse and Annex/Burgart's buildings have been altered and no longer contribute to the resource's significance, demolition of the race course would remove the physical features that embody its historic association and setting. Regionally, the loss of comparable facilities such as the Hollywood Park racetrack in Los Angeles County and the Bay Meadows racetrack in San Mateo County has already diminished the State's inventory of mid-century equestrian and recreational landmarks; therefore, demolition of the LARC would incrementally

contribute to this cumulative loss of significant resources. Cumulative impacts would be cumulatively considerable.

Even with the implementation of **Mitigation Measures CUL-1** through **CUL-3**, which includes HABS-level documentation, archival research, and interpretive elements commemorating Frank Vessels, Sr. and the history of quarter horse racing, the project's contribution to cumulative impacts on historic resources would remain cumulatively considerable and therefore significant and unavoidable under *State CEQA Guidelines* Sections 15064(h) and 15130. The demolition of all character-defining features would constitute a substantial adverse change in the significance of a historical resource pursuant to PRC Sections 5020.1(q) and 21084.1. While mitigation would preserve historical information and interpretive value, it would not prevent the permanent loss of the physical features that convey LARC's historic identity; as such, the project would result in a significant cumulative impact on historic resources that cannot be reduced to a less than significant level.

Buried Archeological Resources: Ground disturbance associated with future development facilitated by the proposed project could result in a potentially significant impact to cultural resources if previously undiscovered cultural resources are unearthed during ground-disturbing activity. However, future development facilitated under the proposed project would be required to adhere to **Regulatory Compliance Measures CUL-1** and **CUL-2,** which would ensure less than significant impacts on cultural resources.

Thus, there is low potential for the proposed project to contribute to a significant cumulative impact associated with the significance of an archaeological resource or human remains pursuant to Section 15064.5 of the *State CEQA Guidelines*. Collectively, recent past, approved, and probable future projects that may occur in the vicinity, including the proposed project, would not result in a cumulative increase in impacts on archaeological resources or human remains, because these resources would be avoided or otherwise removed, analyzed, and reported (i.e., by a qualified archaeologist).

This page intentionally left blank

4.6 ENERGY

This section evaluates the potential impacts on energy resources from implementation of the proposed Specific Plan 3.0 Buildout Project (proposed project), with particular emphasis on whether the proposed project would result in the wasteful, inefficient, or unnecessary consumption of energy resources or conflict with any applicable plans for renewable energy and energy efficiency.

4.6.1 Scoping Process

The City of Cypress (City) received six comment letters during the public review period of the Notice of Preparation (NOP). For a copy of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). One of the comment letters, from the South Coast Air Quality Management District (SCAQMD), included comments related to energy consumption.

4.6.2 Methodology

The energy use analysis presented in this section is based on modeling conducted using the California Emissions Estimator Model (CalEEMod) version 2022.1. Modeling results are provided in **Appendix B** of this Draft EIR.

Operational fuel consumption (gasoline and diesel) associated with vehicle trips was estimated using project trip generation assumptions incorporated into CalEEMod and fuel efficiency factors from the California Air Resources Board (CARB) EMFAC2025 model. The CalEEMod analysis assumed full buildout of the proposed project, consisting of up to 1,791 additional residential units and 440,000 square feet of non-residential development. Default CalEEMod assumptions for electricity and natural gas consumption were applied to estimate building energy use.

Construction-related fuel consumption, including fuel use from construction equipment, haul trucks, vendor trips, and worker commute trips, was also estimated using CalEEMod trip outputs combined with fuel efficiency factors from the CARB EMFAC2025 model.

Consistent with Appendix F of the *State CEQA Guidelines*, the analysis evaluates four primary energy sources relevant to the proposed project: electricity, natural gas, construction-related fuel, and operational vehicle fuel. To provide regional context, projected project energy consumption is compared to overall energy use within Orange County where applicable. Electricity and natural gas consumption are reported as annual totals based on CalEEMod default building energy assumptions, while construction and operational transportation fuel use are quantified based on modeled trip activity over the applicable analysis periods.

Operational transportation energy use was estimated using the net project trip generation assumptions incorporated into the CalEEMod model to quantify future gasoline and diesel consumption. This analysis represents a conservative estimate of project-related energy demand because existing on-site energy consumption associated with the current operations, including building energy use, lighting, and fuel consumption, was not quantified or deducted from the future energy use totals.

4.6.3 Existing Environmental Setting

4.6.3.1 Electricity

Electricity is a manmade resource. The production of electricity requires the consumption or conversion of energy resources (including water, wind, oil, gas, coal, solar, geothermal, and nuclear resources) into energy. Electricity is used for a variety of purposes (e.g., lighting, heating, cooling, and refrigeration, and for operating appliances, computers, electronics, machinery, and public transportation systems).

According to the most recent data available, in 2023, California's electricity was generated primarily by renewable sources (56.1 percent), natural gas (43.7 percent), large hydroelectric (12.6 percent), nuclear (8.2 percent), coal (less than 1.0 percent), and other unspecified sources. Total electric generation in California in 2023 was 281,140 gigawatt-hours (GWh), down 2.1 percent from the 2022 total generation of 287,220 GWh.[1]

The Buildout Area is within the service territory of Southern California Edison (SCE). Approximately 49 percent of SCE's power is estimated to come from carbon-free sources, including wind and solar, along with other carbon-free sources such as large hydroelectric and nuclear power.[2] SCE provides electricity to more than 15 million people in a 50,000 square mile area of Central, Coastal, and Southern California.[3] According to the California Energy Commission (CEC), total electricity consumption in the SCE service area in 2024 was 79,341 GWh. Total electricity consumption in Orange County in 2024 was 19,225 GWh (19,225,000,000 kilowatt-hours [kWh]).[4] Existing electricity consumption in the Buildout Area is associated with the existing race course and stables; however, the existing electricity consumption associated with the land uses in the Buildout Area is unknown and has not been quantified or included as part of this analysis.

4.6.3.2 Natural Gas

Natural gas is a nonrenewable fossil fuel. Fossil fuels are formed when layers of decomposing plant and animal matter are exposed to intense heat and pressure under the surface of the Earth over millions of years. Natural gas is a combustible mixture of hydrocarbon compounds (primarily methane) that is used as a fuel source. Natural gas is found in naturally occurring reservoirs in deep underground rock formations. Natural gas is used for a variety of uses (e.g., heating buildings, generating electricity, and powering appliances such as stoves, washing machines and dryers, gas fireplaces, and gas grills).

Natural gas consumed in California is used for electricity generation (45 percent), residential uses (21 percent), industrial uses (25 percent), and commercial uses (9 percent). California continues to depend on out-of-state imports for nearly 90 percent of its natural gas supply.[5]

The Southern California Gas Company (SoCalGas) is the natural gas service provider for the Buildout Area. SoCalGas provides natural gas to approximately 21.8 million people in a 24,000 sq mi service area throughout Central and Southern California, from Visalia to the Mexican border.[6] According to the CEC, total natural gas consumption in the SoCalGas service area in 2024 was 4,959 million therms.[7] Total natural gas consumption in Orange County in 2024 was 561.7 million therms.[8] Existing natural gas consumption in the Buildout Area is associated with the existing Race Course; however, the existing natural gas consumption has not been quantified as part of this analysis.

4.6.3.3 Petroleum/Transportation Energy

Petroleum is also a non-renewable fossil fuel. Petroleum is a thick, flammable, yellow-to-black mixture of gaseous, liquid, and solid hydrocarbons that occurs naturally beneath the earth's surface. Petroleum is primarily recovered by oil drilling. It is refined into a large number of consumer products, primarily fuel oil, gasoline, and diesel.

Gasoline is the most used transportation fuel in California, with 97 percent of all gasoline being consumed by light-duty cars, pickup trucks, and sport utility vehicles. According to the most recent data available, in 2021, total gasoline consumption in California was 289,918 thousand barrels (12.2 billion gallons) or 1,464.7 trillion British Thermal Units (BTU).[9] Of the total gasoline consumption, 273,289 thousand barrels (11.5 billion gallons) or 1,380.7 trillion BTU were consumed for transportation.[10] Diesel fuel is the second largest transportation fuel used in California, representing 17 percent of total fuel sales behind gasoline. In 2024, 3.5 billion gallons of diesel (including offroad diesel) was sold in California.[11] Based on fuel consumption obtained from CARB's California Emissions Factor Model, Version 2025 (EMFAC2025), approximately 1,003.9 million gallons of gasoline and approximately 170.5 million gallons of diesel will be consumed from vehicle trips in Orange County in 2025. Gasoline and diesel fuel consumption in the Buildout Area is

associated with employee, horse trainer, and attendee vehicle trips associated with the existing Race Course. The existing gasoline and diesel fuel consumption within the Buildout Area was not quantified as part of this analysis; however, the existing trips were included in the proposed project's estimated trip generation.

4.6.4 Regulatory Setting

Federal and State agencies regulate energy use and consumption through various means and programs. On the federal level, the United States Department of Transportation, the United States Department of Energy, and the United States Environmental Protection Agency are three federal agencies with substantial influence over energy policies and programs. Generally, federal agencies influence and regulate transportation energy consumption through establishment and enforcement of fuel economy standards for automobiles and light trucks, through funding of energy-related research and development projects, and through funding for transportation infrastructure improvements. On the State level, the California Public Utilities Commission (CPUC) and the CEC are two agencies with authority over different aspects of energy.

The CPUC regulates privately owned electric, natural gas, telecommunications, water, railroad, rail transit, and passenger transportation companies and serves the public interest by protecting consumers and ensuring the provision of safe, reliable utility service and infrastructure at reasonable rates, with a commitment to environmental enhancement and a healthy California economy.

The CEC is the State's primary energy policy and planning agency. The CEC forecasts future energy needs, promotes energy efficiency, supports energy research, develops renewable energy resources, and plans for/directs State response to energy emergencies. The applicable federal, State, regional, and local regulatory framework is discussed below.

4.6.4.1 Federal Regulations

Energy Policy Act of 2005. The Energy Policy Act of 2005 seeks to reduce reliance on nonrenewable energy resources and provides incentives to reduce current demand on these resources. For example, under this Act, consumers and businesses can obtain federal tax credits for purchasing fuel-efficient appliances and products (including hybrid vehicles), building energy-efficient buildings, and improving the energy efficiency of commercial buildings. Additionally, tax credits are available for the installation of qualified fuel cells, stationary microturbine power plants, and solar power equipment.

Corporate Average Fuel Economy Standards. On March 31, 2022, the National Highway Traffic Safety Administration (NHTSA) finalized the CAFE standards for Model Years 2024–2026 Passenger Cars and Light Trucks. The amended CAFE standards would require an industry wide fleet average of approximately 49 mpg for passenger cars and light trucks in model year 2026, by increasing fuel efficiency by 8 percent annually for model years 2024–2025, and 10 percent annually for model year 2026. The final standards are estimated to save about 234 billion gallons of gasoline between model years 2030 to 2050. Heavy-duty pickup truck and van fuel efficiency will increase 10 percent per year for model years 2030–2032 and 8 percent per year for model years 2033–2035.

4.6.4.2 State Regulations

Executive Order B-55-18. EO) B-55-18, signed September 10, 2018, sets a goal "to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net negative emissions thereafter." EO B-55-18 directs the CARB to work with relevant State agencies to ensure future Scoping Plans identify and recommend measures to achieve the carbon neutrality goal. The goal of carbon neutrality by 2045 is in addition to other statewide goals, meaning not only should emissions be reduced to 80 percent below 1990 levels by 2050, but that, by no later than 2045, the remaining emissions be offset by equivalent net removals of CO_2e from the atmosphere, including through sequestration in forests, soils, and other natural landscapes.

Executive Order B-48-18. In January 2018, Governor Brown signed EO B-48-18 requiring all State entities to work with the private sector to have at least 5 million zero emission vehicles (ZEVs) on the road by 2030, as well as install 200 hydrogen fueling stations and 250,000 electric vehicle charging stations by 2025. It specifies that 10,000 of the electric vehicle charging stations should be direct current fast chargers. This order also requires all State entities to continue to partner with local and regional governments to streamline the installation of ZEV infrastructure. The Governor's Office of Business and Economic Development is required to publish a Plug-in Charging Station Design Guidebook and update the 2015 Hydrogen Station Permitting Guidebook to aid in these efforts. All State entities are required to participate in updating the 2016 Zero-Emissions Vehicle Action Plan to help expand private investment in ZEV infrastructure with a focus on serving low-income and disadvantaged communities. Additionally, all State entities are to support and recommend policies and actions to expand ZEV infrastructure at residential land uses, through the LCFS Program, and recommend how to ensure affordability and accessibility for all drivers.

Executive Order N-79-20. EO N-79-20, which was signed by the Governor on September 23, 2020, sets the following goals for the State: 100 percent of in-state sales of new passenger cars and trucks shall be zero-emission by 2035; 100 percent of medium- and heavy-duty vehicles in the State shall be zero-emission by 2045 for all operations where feasible and by 2035 for drayage trucks; and 100 percent of off-road vehicles and equipment in the State shall be zero-emission by 2035, where feasible.

Assembly Bill 1575, Warren-Alquist Act. In 1975, largely in response to the oil crisis of the 1970s, the State Legislature adopted Assembly Bill (AB) 1575 (also known as the Warren-Alquist Act), which created the CEC. The statutory mission of the CEC is to forecast future energy needs; license power plants of 50 megawatts (MW) or larger; develop energy technologies and renewable energy resources; plan for and direct State responses to energy emergencies; and, perhaps most importantly, promote energy efficiency through the adoption and enforcement of appliance and building energy efficiency standards. AB 1575 also amended Public Resources Code (PRC) Section 21100(b)(3) and *State CEQA Guidelines* Section 15126.4 to require EIRs to include, where relevant, mitigation measures proposed to minimize the wasteful, inefficient, and unnecessary consumption of energy caused by a project. Thereafter, the State Resources Agency created Appendix F to the *State CEQA Guidelines*. Appendix F assists EIR preparers in determining whether a project will result in the inefficient, wasteful, and unnecessary consumption of energy. Appendix F of the *State CEQA Guidelines* also states that the goal of conserving energy implies the wise and efficient use of energy and the means of achieving this goal, including (1) decreasing overall per

capita energy consumption; (2) decreasing reliance on fossil fuels such as coal, natural gas, and oil; and (3) increasing reliance on renewable energy sources.

Senate Bill 1389, Energy: Planning and Forecasting. In 2002, the State Legislature passed Senate Bill (SB) 1389, which required the CEC to develop an integrated energy plan every 2 years for electricity, natural gas, and transportation fuels, known as the Integrated Energy Policy Report. The plan calls for the State to assist in the transformation of the transportation system to improve air quality, reduce congestion, and increase the efficient use of fuel supplies with the least environmental and energy costs. To further this policy, the plan identifies a number of strategies, including assistance to public agencies and fleet operators in implementing incentive programs for ZEVs and their infrastructure needs, and encouragement of urban designs that reduce vehicle miles traveled (VMT) and accommodate pedestrian and bicycle access.

In compliance with the requirements of SB 1389, the CEC adopts an Integrated Energy Policy Report every 2 years and an update every other year. The most recently adopted report includes the *2024 Integrated Energy Policy Report Update*.[12] The *2024 Integrated Energy Policy Report Update* covers a broad range of topics, including decarbonizing buildings, energy efficiency, energy equity, integrating renewable energy, updates on electricity reliability, climate adaptation activities for the energy sector, natural gas assessment, transportation energy demand forecast, and the California Energy Demand Forecast. The *2024 Integrated Energy Policy Report Update* provides the results of the CEC's assessments of a variety of energy issues facing California. Many of these issues will require action if the State is to meet its climate, energy, air quality, and other environmental goals while maintaining energy reliability and controlling costs.

Senate Bill 350 (2015) Clean Energy and Pollution Reduction Act. SB 350, signed by Governor Jerry Brown on October 7, 2015, updates and enhances AB 32 by introducing the following set of objectives in clean energy, clean air, and pollution reduction for 2030:

- Raise California's renewable portfolio standard from 33 percent to 50 percent; and
- Increasing energy efficiency in buildings by 50 percent by the year 2030.

The 50 percent renewable energy standard will be implemented by the California Public Utilities Commission for the private utilities and by the California Energy Commission for municipal utilities. Each utility must submit a procurement plan showing it will purchase clean energy to displace other non-renewable resources. The 50 percent increase in energy efficiency in buildings must be achieved through the use of existing energy efficiency retrofit funding and regulatory tools already available to State energy agencies under existing law. The addition made by this legislation requires State energy agencies to plan for and implement those programs in a manner that achieves the energy efficiency target.

Renewable Portfolio Standard. SB 1078 established the California Renewable Portfolio Standards program in 2002. SB 1078 initially required that 20 percent of electricity retail sales be served by renewable resources by 2017; however, this standard has become more stringent over time. In

[12] California Energy Commission (CEC). 2024. *2024 Integrated Energy Policy Report Update.* Docket Number 24-IEPR-01.

2006, SB 107 accelerated the standard by requiring that the 20 percent mandate be met by 2010. In April 2011, SB 2 required that 33 percent of electricity retail sales be served by renewable resources by 2020. In 2015, SB 350 established tiered increases to the Renewable Portfolio Standards of 40 percent by 2024, 45 percent by 2027, and 50 percent by 2030. In 2018, SB 100 increased the requirement to 60 percent by 2030 and required that all the State's electricity come from carbon-free resources by 2045. SB 100 took effect on January 1, 2019.[13]

Assembly Bill 1279. AB 1279 was signed in September 2022 and codifies the State goals of achieving net carbon neutrality by 2045 and maintaining net negative greenhouse gas (GHG) emissions thereafter. This bill also requires California to reduce statewide GHG emissions by 85 percent compared to 1990 levels by 2045 and directs CARB to work with relevant State agencies to achieve these goals.

California Energy Code. Energy consumption by new buildings in California is regulated by the Building Energy Efficiency Standards in Part 6 of Title 24 of the California Code of Regulations (CCR), known as the Energy Code. The CEC first adopted the Building Energy Efficiency Standards for Residential and Nonresidential Buildings in 1978 in response to a legislative mandate to reduce energy consumption in the State. The Energy Code is updated every 3 years, with the most recent update consisting of the 2025 Energy Code that became effective January 1, 2026. The efficiency standards apply to both new construction and rehabilitation of both residential and nonresidential buildings, and regulate energy consumed for heating, cooling, ventilation, water heating, and lighting. The building efficiency standards are enforced through the local building permit process. Local government agencies may adopt and enforce energy standards for new buildings, provided these standards meet or exceed those provided in the Energy Code.

California Green Building Standards Code (CALGreen Code). In 2010, the California Building Standards Commission (CBSC) adopted Part 11 of the Title 24 Building Energy Efficiency Standards, referred to as the California Green Building Standards Code (CALGreen Code). The CALGreen Code took effect on January 1, 2011. The CALGreen Code is updated on a regular basis, with the most recent update consisting of the 2025 CALGreen Code standards that became effective January 1, 2023. The CALGreen Code establishes mandatory measures for residential and nonresidential building construction and encourages sustainable construction practices in the following five categories: (1) planning and design, (2) energy efficiency, (3) water efficiency and conservation, (4) material conservation and resource efficiency, and (5) indoor environmental quality. The mandatory measures are enforced through the local building permit process. Although the CALGreen Code was adopted as part of the State's efforts to reduce GHG emissions, the CALGreen Code standards have co-benefits of reducing energy consumption from residential and nonresidential buildings subject to the standard.

Appliance Efficiency Regulations. Appliance Efficiency Regulations set minimum energy and water performance standards for products like refrigerators, lighting, and air conditioners, driven by the CEC (Title 20), complementing federal rules, to promote efficiency and reduce energy use.

[13] California Public Utilities Commission (CPUC). 2019. Renewables Portfolio Standard Program. Website: cpuc.ca.gov/rps (accessed September 2025).

California Energy Efficiency Strategic Plan. On September 18, 2008, the CPUC adopted California's first Long-Term Energy Efficiency Strategic Plan, presenting a roadmap for energy efficiency in California. The Strategic Plan was updated in 2011. The plan articulates a long-term vision and goals for each economic sector and identifies specific near-term, mid-term, and long-term strategies to assist in achieving those goals. The Plan also reiterates the following four specific programmatic goals known as the "Big Bold Energy Efficiency Strategies" that were established by the CPUC in Decisions D.07-10-032 and D.07-12-051:

- All new residential construction will be zero net energy (ZNE) by 2020.
- All new commercial construction will be ZNE by 2030.
- 50 percent of commercial buildings will be retrofitted to ZNE by 2030.
- 50 percent of new major renovations of State buildings will be ZNE by 2025.

Low Carbon Fuel Standard and Advanced Clean Cars. EO S-01-07 established a low carbon fuel standard (LCFS) with a Statewide goal to be established to reduce the carbon intensity of California's transportation fuels that applies to all refiners, blenders, producers, or importers ("Providers") of transportation fuels in California, including fuels used by off-road construction equipment. CARB approved amendments in 2018 to readjust carbon intensity benchmarks to meet California's 2030 GHG reductions targets under SB 32. These amendments include opportunities to promote zero emission vehicle (ZEV) adoption, carbon capture and sequestration, and advanced technologies for decarbonization of the transportation sector.

4.6.4.3 Regional Regulations

Southern California Association of Governments. On April 4, 2024, the Southern California Association of Governments (SCAG) adopted Connect SoCal—the 2024–2050 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal 2024) for the SCAG region.[14] In general, Connect SoCal 2024 outlines a development pattern for the region, which, when integrated with the transportation network and other transportation measures and policies, would reduce vehicle miles traveled from automobiles and light-duty trucks and thereby reduce GHG emissions from these sources. For the SCAG region, CARB has set GHG reduction targets at 19 percent below 2005 per capita emissions levels by 2035. Connect SoCal 2024 lays out a strategy for the region to meet these targets. Overall, Connect SoCal 2024 is meant to provide growth strategies that will achieve the regional GHG emissions reduction targets. Land use strategies to achieve the region's targets include planning for new growth around high-quality transit areas and livable corridors, and creating neighborhood mobility areas to integrate land use and transportation and plan for more active lifestyles.[15] However, local General Plans, Specific Plans, or zoning are not required to be consistent with Connect SoCal 2024; SCAG is required to consider local land use controls when drafting the RTP/SCS.

Website: https://scag.ca.gov/sites/default/files/2024-05/23-2987-connect-socal-2024-final-complete-040424.pdf (accessed October 2025).

[15] Ibid.

California Gas Report. The California Gas Report presents a comprehensive outlook on natural gas requirements and supplies for California, as well as historical gas supply and recorded gas requirements for the previous five years. A comprehensive report is prepared in even-numbered years, followed by a supplemental report in odd-numbered years. The projections in the California Gas Report are for long-term planning and do not necessarily reflect the day-to-day operational plans of the utilities. The latest California Gas Report is the 2025 California Gas Report Supplement.

4.6.4.4 Local Regulations

Cypress Municipal Code. The City of Cypress has adopted the 2022 CALGreen Code and incorporated the CALGreen Code by reference into the City Municipal Code (Chapter 5, Buildings, Article 1, Building Code, Section 5-1 California Building Codes – Adopted; where filed).

City of Cypress General Plan. The following goals and policies from the City of Cypress General Plan are applicable to the proposed project:

- **COSR-3:** Conserve energy resources through the use of available technology and conservation practices.
- **COSR-3.1:** Encourage innovative site planning and building designs that minimize energy consumption by taking advantage of sun/shade patterns, prevailing winds, landscaping, and building materials.
- **COSR-3.2:** Encourage new development and existing structures to install energy saving features.
- **AQ-1.3:** Locate multiple family developments close to commercial areas to encourage pedestrian rather than vehicular travel.
- **AQ-1.4:** Develop neighborhood parks near concentrations of residents to encourage pedestrian travel to the recreation facilities.
- **AQ-4.1:** Promote energy conservation in all sectors of the City including residential, commercial, and industrial.
- **AQ-4.3:** Adopt incentives and regulations to reduce emissions from swimming pool heaters and residential and commercial water heaters.

Cypress Town Center and Commons Specific Plan 3.0. The following sustainable guidelines from the Specific Plan are applicable to the proposed project:

4.6 Lighting

1. Encourage the use of low-contrast lighting, low-voltage fixtures and energy-efficient bulbs, such as compact fluorescent and light emitting diodes.
2. Promote the use of lights with automated occupancy sensors in nonresidential buildings that automatically shut off when rooms are unoccupied.

3. Utilize solar-powered lights in landscaped areas for energy savings where possible.

4.7 Building Envelope

1. Install radiant barriers to reduce summer heat gain and winter heat loss.

2. Use natural ventilation techniques, such as operable windows, to take advantage of airflow for cooling interiors and reduce energy demand.

3. Use passive design to improve building energy performance through skylights, building orientation, landscaping and colors.

4. Consider reducing heat gain with the use of "cool roofs" that are painted with a highly reflective coating or employ light-colored materials.

5. Utilize water- and energy-saving fixtures and appliances, such as showerheads, toilets, washing machines, clothes dryers, refrigerators, and dishwashers certified as Energy Star compliant.

6. Encourage the use of recirculating hot water systems, which reduce the need to heat water, or tankless water heaters that heat water as needed instead of storing hot water in tanks, thereby reducing standby energy use.

7. Utilize a minimum insulation value of R30 in ceilings to reduce the need for additional heating and cooling.

8. Utilize programmable thermostats to provide more efficient and effective heating and cooling.

4.9 Energy Conservation

1. Utilize energy-efficient windows, such as models with spectrally selective low-e glass and with wood, vinyl, or fiberglass frames.

2. Utilize efficient building materials that take advantage of heat storage or thermal mass to reduce energy needed for heating and cooling interiors.

3. Reduce the number and area of east and west facing windows to reduce heat gain.

4. Insulate domestic hot water pipes where feasible.

5. Insulate attics.

6. Use dual pane and tinted windows where appropriate.

4.10 Heating, Ventilation, and Air Conditioning

1. Design and install heating, ventilation, and air conditioning (HVAC) systems according to the standards provided by the Air Conditioning Contractors of America handbooks or other comparable high-performance HVAC standards.

2. Install sealed-combustion/sealed-duct furnaces and water heaters for increased efficiency and indoor air quality.

3. Install only Energy Star-qualified ceiling fans to circulate air and reduce the demand on heating and cooling systems.

4. Locate windows in a manner that promotes natural cross ventilation.

5. Promote smart climate controls for both residential and commercial buildings to efficiently regulate temperature controls.

4.6.5 Thresholds of Significance

The thresholds of significance for energy impacts used in this analysis are consistent with Appendix G of the *State CEQA Guidelines*. Based on these thresholds, implementation of the proposed project would have a significant adverse impact with respect to energy if it would:

Threshold 4.6.1: Result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation; or

Threshold 4.6.2: Conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

4.6.6 Project Impacts

Threshold 4.6.1: Would the project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less Than Significant Impact. The proposed project would consume energy through day-to-day operations and fuel usage associated with project construction. This section discusses energy use resulting from future buildout envisioned under the proposed project and evaluates whether the proposed project would result in the wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation.

Construction. Construction is anticipated to commence in 2026 and be completed by 2038.Project-related demolition and construction activities would require energy resources primarily in the form of fuel consumption to operate heavy equipment, light-duty vehicles, machinery, and generators. Construction activities would include demolition, site preparation, grading, building construction, paving, and architectural coatings (painting). The construction-

related equipment would be fueled by diesel fuel and gasoline. No natural gas demand is anticipated during construction. While some electricity may be required during construction activities, associated with generators and lighting, this analysis assumes that most energy required during project construction would be associated with fuel consumption.

As identified above, transportation energy represents the largest energy use during construction and would occur from the transport and use of construction equipment, delivery vehicles and haul trucks, and construction worker vehicles that would use petroleum fuels (e.g., diesel fuel and/or gasoline). Therefore, the analysis of energy use during construction focuses on fuel consumption. Construction trucks and vendor trucks hauling materials to and from the Buildout Area would be anticipated to use diesel fuel, whereas construction workers traveling to and from the Buildout Area would be anticipated to use gasoline-powered vehicles. Fuel consumption from transportation uses depends on the type and number of trips, VMT, the fuel efficiency of the vehicles, and the travel mode.

Estimates of fuel consumption (diesel fuel and gasoline) from construction equipment, construction trucks, and construction worker vehicles were based on default construction equipment assumptions and trip estimates from CalEEMod and fuel efficiencies from EMFAC2025.

Construction associated with buildout envisioned under the proposed project is anticipated to occur over an approximately 12-year timeline, which was included in CalEEMod. As described in Section 4.3, Air Quality, specific construction information for specific development projects, such as construction phasing and schedule, is not yet known; however, construction of the entire Buildout Area is assumed to commence in 2026 and conclude in 2038, which was included in CalEEMod. Other assumptions in the model include:

- Construction activities would include demolition, site preparation, grading, building construction, paving, and architectural coatings (painting).

- The proposed project would require the cut of 248,600 cubic yards of soil and fill of 333,500 cubic yards of soil, which would result in the net import of 84,900 cubic yards of soil.

- The proposed project would require the demolition of approximately 768,360 square feet of existing buildings. Based on information provided by the project applicant, demolition activities would require up to four excavators, two track loaders, a crawler crane, and several bobcats/backhoes.

- Tier 2 construction equipment would be used and the proposed project would comply with SCAQMD Rule 403 measures, which would ensure fuel efficiency.

- Default assumptions (e.g., construction worker and truck trips and fleet activities) from CalEEMod were used where specific information regarding construction was not available.

Fuel consumption estimates are presented **in Table 4.6.A**: **Energy Consumption Estimates during Construction**. CalEEMod output sheets are included in **Appendix B** and detailed energy calculations are included **in Appendix E** of this Draft EIR.

Table 4.6.A: Energy Consumption Estimates during Construction

Energy Type	Total Energy Consumption	Annual Energy Consumption
Gasoline (gallons)	5,892,834.6	491,069.5
Diesel Fuel (gallons)	2,352,156.6	196,013.0

Source: Compiled by LSA Associates, Inc. (November 2025).

As indicated in **Table 4.6.A**, construction associated with the future buildout envisioned under the proposed project would consume approximately 5,892,834.6 gallons of gasoline and approximately 2,352,156.6 gallons of diesel fuel. As discussed above, the proposed project would be constructed over an approximately 12-year period; therefore, when averaged over 12 years, the proposed project would consume approximately 491,069.5 gallons of gasoline per year and 196,013.0 gallons of diesel fuel per year during construction. Based on fuel consumption obtained from EMFAC2025, approximately 1,003.9 million gallons of gasoline and approximately 170.5 million gallons of diesel will be consumed from vehicle trips in Orange County in 2025. Therefore, construction associated with future buildout of the proposed project would increase the annual fuel consumption from vehicle trips in Orange County by approximately 0.6 percent for gasoline fuel usage and approximately 1.4 percent for diesel fuel usage. Based on current crude oil production, it is assumed that there would be sufficient gasoline and diesel fuel to meet the project's needs.[16]

Due to the minimal increase in annual fuel consumption in Orange County, project construction activities would have a negligible effect on local and regional energy supplies. Furthermore, impacts related to energy use during construction would be temporary and relatively small in comparison to Orange County's overall use of the State's available energy resources. No unusual project characteristics would necessitate the use of construction equipment that would be less energy efficient than at comparable construction sites in the region or the State. In addition, construction activities are not anticipated to result in an inefficient use of energy as gasoline and diesel fuel would be supplied by construction contractors who would conserve the use of their supplies to minimize their costs on the project. The proposed project would also utilize construction equipment that meets Tier 2 emissions standards or higher, which would ensure fuel efficiency. Assuming the use of Tier 2 construction equipment is conservative as construction contractors would utilize Tier 4 equipment when feasible. Construction of the proposed project would not cause or result in the need for additional energy facilities or an additional or expanded delivery system. Additionally, construction equipment and trucks would comply with CARB's anti-idling regulations, including the In-Use Off-Road Diesel-Fueled Fleets regulation, which would result in efficient use of construction-related energy and reduce fuel consumption. Furthermore, on-road vehicles, such as haul trucks and worker vehicles, would be subject to federal fuel efficiency requirements. For these reasons, the proposed project would

[16] United States Energy Information Administration (EIA). 2026. *Short-Term Energy Outlook.* Website: https://www.eia.gov/outlooks/steo/report/petro_prod.php (accessed January 2026).

not cause wasteful, inefficient, or unnecessary consumption of energy resources during construction, and impacts would be less than significant.

Operation. Energy use associated with operation of the proposed project would consist of natural gas use, electricity consumption, and fuel used for vehicle trips associated with the project. Electricity and natural gas for the development allowed within the Buildout Area would be supplied by SCE and SoCalGas, respectively, through connections to existing service lines. Electricity and natural gas use in buildings is divided into energy consumed by the built environment and energy consumed by uses that are independent of the construction of the building such as in plug-in appliances. In California, the California Building Standards Code Title 24 governs energy consumed by the built environment, mechanical systems, and some types of fixed lighting. Non-building energy use, or "plug-in" energy use can be further subdivided by specific end-use (refrigeration, cooking, appliances, etc.). Annual natural gas and electricity usage estimates associated with project operation were estimated through CalEEMod.

In addition, operation of the proposed project would result in energy usage associated with gasoline and diesel to fuel project-related trips. As identified in **Table 4.17.A** in Section 4.17, Transportation, buildout of the proposed project is expected to generate approximately 21,041 net new average daily trips. The amount of operational fuel use was estimated using CARB's EMFAC2025 model, which provided projections for typical daily fuel usage in Orange County.

Table 4.6.B: Energy Consumption Estimates at Buildout provides the proposed project's estimated annual operational energy usage. The energy estimates presented in **Table 4.6.B** are conservative as they do not take into account the energy usage from the existing uses except for the existing trip generation.

Table 4.6.B: Energy Consumption Estimates at Buildout

Energy Type	Annual Energy Consumption
Electricity Consumption (kWh/year)	12,369,646.0
Natural Gas Consumption (therms/year)	142,377.0
Fuel Consumption	
Gasoline (gallons/year)	326,558.6
Diesel Fuel (gallons/year)	27,084.4

Source: Compiled by LSA Associates, Inc. (November 2025).
kWh = kilowatt-hours

Electricity. As shown in **Table 4.6.B**, the estimated potential increase in operational electricity demand associated with future buildout envisioned under the proposed project is 12,369,646.0 kWh per year. Total electricity demand in Orange County in 2024 was 19,225 GWh (19,225,000,000 kWh). Therefore, operational activities associated with buildout of the proposed project would increase the annual electricity consumption in Orange County by approximately 0.06 percent. While operational activities associated with buildout of the proposed project would result in an increase in demand for electricity, SCE has provided a will-serve letter. As such, SCE would be able to accommodate the project's future electricity

demand during peak and base period demands without having to expand or construct new infrastructure.

Natural Gas. As shown in **Table 4.6.B**, the estimated potential increase in operational natural gas demand associated with future buildout envisioned under the proposed project is 142,377.0 therms per year. Total natural gas consumption in Orange County in 2024 was 561.7 million therms. Therefore, operational activities associated with buildout of the proposed project would negligibly increase the annual natural gas consumption in Orange County by approximately 0.03 percent. While operational activities associated with buildout of the proposed project would result in an increase in demand for natural gas, SoCalGas has provided a will-serve letter. As such, SoCalGas would be able to meet the natural gas demand during peak and base period demands of the related projects without additional facilities.

The proposed project's electrical and natural gas demand would be relatively small in comparison to Orange County's overall use of the State's available electricity resources. Therefore, the proposed project's electrical demand would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region. In addition, SCE is the private utility that would supply the proposed project's electricity services. SCE is positioned to meet the State's 60 percent goal for renewable energy by 2030 and the 100 percent goal for achieving carbon neutrality by 2045 mandate set forth in SB 100. SCE plans to continue to provide reliable service to their customers and upgrade their distribution systems as necessary to meet future demand.

Furthermore, the proposed project would be constructed using energy efficient modern building materials and construction practices, and would use new modern appliances and equipment, in accordance with the Appliance Efficiency Regulations (Title 20, CCR Sections 1601 through 1608). Future development would also be designed to meet sustainability goals, including the CALGreen Code and Title 24 energy efficiency requirements. CALGreen Code and Title 24 building energy efficiency standards establish minimum efficiency standards related to various building features, including appliances, water and space heating and cooling equipment, building insulation and roofing, and lighting, which would reduce energy usage. As such, electrical and natural gas demand associated with project operations would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region.

Fuel Consumption. Buildout of the proposed project would also result in energy usage associated with gasoline and diesel fuel consumed by project-related vehicle trips. As shown in **Table 4.6.B**, fuel use associated with the vehicle trips generated by buildout of the proposed project is estimated at approximately 326,558.6 gallons of gasoline and 27,084.4 gallons of diesel fuel per year. Based on fuel consumption obtained from EMFAC2025, approximately 1,003.9 million gallons of gasoline and approximately 170.5 million gallons of diesel will be consumed from vehicle trips in Orange County in 2025. Therefore, vehicle trips associated with buildout of the proposed project would increase the annual fuel consumption in Orange County by approximately 0.03 percent for gasoline fuel usage and approximately 0.02 percent for diesel fuel usage. Therefore, gasoline and diesel fuel

demand generated by vehicle trips associated with the proposed project would be a minimal fraction of gasoline and diesel fuel consumption in Orange County.

In addition, vehicles associated with trips to and from the Buildout Area would be subject to fuel economy and efficiency standards, which are applicable throughout the State. As such, the fuel efficiency of vehicles associated with future project operations would increase throughout the life of the project due to increasingly stringent standards over time. In addition, transit service in the vicinity of the Buildout Area is provided by the Orange County Transportation Authority (OCTA) along Katella Avenue and Valley View Street. As discussed in Section 4.17, Transportation, the proposed project is expected to generate approximately 210 daily transit trips, which would not interfere with the City's transit infrastructure planning, including the specific actions to address the growing need for expanded transit service. In addition, the proposed project would include the addition of approximately 1 mile of bicycle facilities, connecting to the existing bicycle network.

Pedestrian access via sidewalks to the Buildout Area would be from Katella Avenue, Cerritos Avenue, Lexington Drive, and Vessels Circle, as extended. Further pedestrian circulation improvements include sidewalks along the extension of Moody Street south of Cerritos Avenue. These pathways, together with the existing pedestrian infrastructure on the surrounding streets, would ensure integration with the broader pedestrian network, effectively linking the Buildout Area with nearby amenities and transit options.

As discussed further in Section 4.17, Transportation, future development under the proposed project would be required to implement **Mitigation Measure TRA-1**, which requires the implementation of feasible TDM strategies to mitigate the proposed project's VMT impact. The TDM strategies include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network and improving the pedestrian network, including the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area. All future development facilitated by the proposed project would be required to comply with City policies regarding bicycle parking and other infrastructure. In addition, the proposed project would not include features that would disrupt existing or planned bicycle or pedestrian facilities. As such, implementation of **Mitigation Measure TRA-1** would help to reduce project-generated vehicle trips and VMT and encourage travel by other modes. In addition, since the proposed project would support the ability of future residents and visitors to use alternative transportation and would result in fuel usage that is a small fraction of current annual fuel use in Orange County, fuel consumption associated with vehicle trips generated by project operations would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region.

Therefore, the proposed project would not result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation. Impacts would be less than significant, and no mitigation is required.

Threshold 4.6.2: Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Less Than Significant Impact. In 2002, the Legislature passed SB 1389, which required the CEC to develop an integrated energy plan every two years for electricity, natural gas, and transportation fuels, known as the Integrated Energy Policy Report. The plan calls for the State to assist in the transformation of the transportation system to improve air quality, reduce congestion, and increase the efficient use of fuel supplies with the least environmental and energy costs. To further this policy, the plan identifies a number of strategies, including assistance to public agencies and fleet operators in implementing incentive programs for ZEVs and their infrastructure needs, and encouragement of urban designs that reduce VMT and accommodate pedestrian and bicycle access.

The CEC's *2024 Integrated Energy Policy Report Update* provides the results of the CEC's assessments of a variety of energy issues facing California. As indicated above, energy usage associated with buildout envisioned under the proposed project from construction activities would be temporary in nature and would be relatively small in comparison to the overall use in the County. In addition, energy usage associated with future operation of buildout of the proposed project would be relatively small in comparison to the overall use in Orange County, and the State's available energy resources. Therefore, energy impacts at the regional level would be negligible. Because California's energy conservation planning actions are conducted at a regional level, and because the proposed project's total impact on regional energy supplies would be minor, buildout of the proposed project would not conflict with or obstruct California's energy conservation plans as described in the CEC's Integrated Energy Policy Report.

In addition, Connect SoCal 2024 identifies land use strategies that focus on new housing and job growth in areas served by high quality transit and other opportunity areas would be consistent with a land use development pattern that supports and complements the proposed transportation network. The forecasted development pattern, when integrated with the financially constrained transportation investments identified in Connect SoCal 2024, would reach emissions reduction target set by CARB, including the regional target of reducing GHG emissions from autos and light-duty trucks by 19 percent by 2035 (compared to 2005 levels). Buildout of the proposed project introduces new housing consistent with planned regional housing growth included in the SCAG Regional Housing Needs Assessment (RHNA) Allocation. As such, because the proposed project would accommodate planned regional housing growth included in the SCAG RHNA, the proposed project would not conflict with SCAG's regional strategies outlined in Connect SoCal 2024.

The proposed project would be constructed using energy efficient modern building materials and construction practices, and would use new modern appliances and equipment, in accordance with the Appliance Efficiency Regulations (Title 20, CCR Sections 1601 through 1608). Future development would also be designed to meet sustainability goals, including the CALGreen Code and Title 24 energy efficiency requirements. CALGreen Code and Title 24 building energy efficiency standards establish minimum efficiency standards related to various building features, including appliances, water and space heating and cooling equipment, building insulation and roofing, and lighting, which would reduce energy usage.

Additionally, as demonstrated above, given that the proposed project would result in a minimal increase in annual electricity and natural gas consumption and that SCE and SoCalGas have provided will-serve letters, the proposed project would not result in the wasteful, inefficient, or unnecessary consumption of energy. Therefore, potential impacts related to conflict with or obstruction of a State or local plan for renewable energy or energy efficiency would be less than significant, and no mitigation is required.

4.6.7 Level of Significance Prior to Mitigation

The proposed project would result in less than significant impacts related to energy, and no mitigation is required.

4.6.8 Regulatory Compliance Measures and Mitigation Measures

4.6.8.1 Regulatory Compliance Measures

No Regulatory Compliance Measures are applicable to the proposed project pertaining to energy.

4.6.8.2 Mitigation Measures

Although the implementation of the following mitigation measure would reduce the proposed project's less than significant impact related to energy, its implementation is not required to reduce the proposed project's energy impacts to less than significant.

Mitigation Measure TRA-1

Transportation Demand Management Strategies. The Development Agreement between the City of Cypress and a future project applicant regarding the proposed project shall include a provision requiring that any future project applicants for subsequent residential development projects within the Buildout Area demonstrate the project's consistency with the measures set forth in Items 1 and 2 below that are applicable to such project prior to its approval to the satisfaction of the City of Cypress Planning Director.

1. **Construct or Improve Bike Facility (California Air Pollution Control Officers Association [CAPCOA] Handbook Strategy T-19-A):** This transportation demand management strategy requires the project to include a new bicycle facility or facilities or improve an existing facility that would connect the project to the existing regional bicycle network. The construction/ improvement of bicycle facilities would provide residents with the opportunity to bike to their destination rather than drive, reducing the number of vehicle trips and overall project-generated vehicle miles traveled (VMT).

2. **Provide Pedestrian Network Improvement (CAPCOA Handbook Strategy T-18):** This transportation demand management strategy requires the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area.

4.6.9 Level of Significance after Mitigation

The proposed project would result in less than significant impacts related to energy, and no mitigation is required.

4.6.10 Cumulative Impacts

The proposed project would have a significant effect on the environment if it, in combination with other past, present, and future projects, would contribute to a significant cumulative impact related to energy.

The geographic area for cumulative analysis of electricity is the SCE service area, while the geographic area for cumulative analysis of natural gas service is the SoCalGas service area. Although the proposed project would result in an increase in demand for electricity, this increase would not require SCE to expand or construct infrastructure that could cause substantial environmental impacts due to SCE's will-serve letter and the proposed project's minimal increase in annual energy consumption. As discussed previously, total electricity consumption in the SCE service area in 2024 was 79,341 GWh. By 2030, consumption is anticipated to increase by approximately 12,000 GWh for the low-demand scenario and by approximately 22,000 GWh for the high-demand scenario.[17] While this forecast for the overall service area represents a large increase in electricity consumption, the proposed project's consumption would be minimal in comparison to the total overall increase in energy consumption. Therefore, given the will-serve letter and SCE's planned increase in total electricity consumption, the proposed project, in combination with cumulative development, is within SCE's system-wide net annual increase in electricity supplies over the 2018 to 2030 period, and there are sufficient planned electricity supplies in the region for estimated net increases in energy demands.

Furthermore, as demonstrated in **Table 4.6.B** above, the estimated potential increase in operational electricity demand associated with future buildout envisioned under the proposed project is 12,369,646.0 kWh per year. Therefore, operational activities associated with buildout of the proposed project would increase the annual electricity consumption in the SCE service area by approximately 0.03 percent. As such, the proposed project's share of cumulative electricity consumption would be negligible. In addition, as described above, future development under the proposed project is required to comply with various federal and State regulations to improve energy efficiency in buildings, equipment, and appliances, which would help to reduce electricity consumption associated with the proposed project. Therefore, the proposed project's contribution

[17] California Energy Commission (CEC). 2018. *California Energy Demand, 2018–2030 Revised Forecast*. Publication Number: CEC-200-2018-002-CMF. February. Website: https://efiling.energy.ca.gov/getdocument.aspx?tn=223244 (accessed November 2025).

to impacts related to the inefficient, wasteful, and unnecessary consumption of electricity would not be cumulatively considerable.

Similarly, the proposed project is not anticipated to require additional natural gas infrastructure as a result of the cumulative development due to SoCalGas' will-serve letter and the proposed project's minimal increase in annual natural as consumption. Total natural gas consumption in the SoCalGas service area in 2024 was 4,959 million therms. Between 2018 and 2030, total natural gas consumption in the SoCalGas service area is forecast to remain steady for the low- and mid-demand scenarios and to increase by approximately 650 million therms in the high-demand scenario due to intense energy efficiency efforts.[18] As shown in **Table 4.6.B** above, the estimated potential increase in operational natural gas demand associated with future buildout envisioned under the proposed project is 142,337.0 therms per year. Therefore, operational activities associated with buildout of the proposed project would increase the annual natural gas consumption in the SoCalGas service area by less than 0.01 percent. As such, the proposed project's share of consumption of natural gas in the SoCalGas service area would be minimal. Given the will-serve letter and SoCalGas' planned increase in total natural gas consumption, It is anticipated that SoCalGas would be able to meet the natural gas demand of the related projects without additional facilities. Therefore, the proposed project's contribution to impacts related to the inefficient, wasteful, and unnecessary consumption of natural gas would not be cumulatively considerable.

In addition, both SCE and SoCalGas demand forecasts include the growth contemplated by the proposed project and the related projects. Increased energy efficiency to comply with building energy efficiency standards would reduce energy consumption on a per-square-foot basis. Furthermore, utility companies are required to increase their renewable energy sources to meet the Renewable Portfolio Standards mandate of 60 percent renewable supplies by 2030. SCE and SoCalGas plan to continue to provide reliable service to their customers and upgrade their distribution systems as necessary to meet future demand.

Future development associated with buildout of the proposed project would also result in energy usage associated with gasoline and diesel fuel consumed by project-related vehicle trips. As shown in **Table 4.6.B**, fuel use associated with the vehicle trips generated by future buildout of the proposed project is estimated at approximately 326,558.6 gallons of gasoline and 27,084.4 gallons of diesel fuel per year. Based on fuel consumption obtained from EMFAC2025, approximately 1,003.9 million gallons of gasoline and approximately 170.5 million gallons of diesel will be consumed from vehicle trips in Orange County in 2025. Therefore, vehicle trips associated with buildout of the proposed project would increase the annual fuel consumption in Orange County by approximately 0.03 percent for gasoline fuel usage and approximately 0.02 percent for diesel fuel usage. As such, although transportation energy use would increase, this negligible increase in transportation energy use would not represent a major amount of energy use when compared to the amount of existing fuel consumption and total number of vehicle trips and VMT throughout Orange County and the region. Therefore, given the project's negligible increase in fuel consumption and the availability of gasoline and diesel fuel, the proposed project's contribution to impacts

[18] California Energy Commission (CEC). 2018. *California Energy Demand, 2018–2030 Revised Forecast*. Publication Number: CEC-200-2018-002-CMF. February. Website: https://efiling.energy.ca.gov/getdocument.aspx?tn=223244 (accessed November 2025).

related to the inefficient, wasteful, and unnecessary consumption of fuel would not be cumulatively considerable.

In addition, vehicles associated with trips to and from the Buildout Area would be subject to fuel economy and efficiency standards, which are applicable throughout the State. As such, the fuel efficiency of vehicles associated with project operations would increase throughout the life of the proposed project due to increasingly stringent standards over time. As discussed further in Section 4.17, Transportation, the future development under the proposed project would be required to implement **Mitigation Measure TRA-1**, which requires the implementation of feasible TDM strategies to mitigate the proposed project's residential VMT impact, which include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network and improving the pedestrian network, including the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area. All future development facilitated by the proposed project, and cumulative projects throughout the City, would be required to comply with City policies regarding bicycle parking and other infrastructure. In addition, the proposed project would not include features that would disrupt existing or planned bicycle or pedestrian facilities. As such, implementation of **Mitigation Measure TRA-1** would help to reduce project-generated vehicle trips and residential VMT and encourage travel by other modes. In addition, since the proposed project would result in fuel usage that is a small fraction of current annual fuel use in Orange County, fuel consumption associated with vehicle trips generated by project operations would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region.

Furthermore, as previously discussed, the proposed project would be consistent with the CEC's *2024 Integrated Energy Policy Report Update* and Connect SoCal 2024. As the project is consistent with the identified applicable renewable energy and energy efficiency plans, its contribution to cumulative impacts related to consistency with adopted energy conservation plans, or state or local energy standards for renewable energy or energy efficiency would not be cumulatively considerable.

As demonstrated above, the proposed project, in combination with other past, present, and potential future projects, would not result in wasteful, inefficient, or unnecessary consumption of energy or conflict with or obstruct a State or local plan for renewable energy or energy efficiency. Therefore, the proposed project's contribution to impacts related to energy would not be cumulatively considerable, and this impact would be less than significant. No mitigation is required.

4.7 GEOLOGY AND SOILS

This section provides a discussion of the existing geology and soils setting and an analysis of the potential for the Specific Plan 3.0 Buildout Project (proposed project) to result in impacts related to geology and soils. This section addresses potential impacts due to the local geology underlying the Buildout Area, as well as slope stability, ground settlement, soil conditions, grading, and regional and local seismic conditions. This section also evaluates potential impacts to paleontological resources.

The geology and soils analysis in this section is based in part on the technical analysis contained in the *Environmental Impact Report, Soils and Geology Issues, Proposed Mixed-Use Development, 4961 Katella Avenue and 5100 Cerritos Avenue, Cypress, California* (Geotechnical Investigation)[1] (**Appendix F**) that was prepared for the proposed project. The paleontological analysis relies on the Geotechnical Investigation and on a literature review and locality search completed for the Buildout Area. This section also incorporates data from the City of Cypress General Plan,[2] numerous State and federal studies of geologic and seismic hazards in the vicinity of the City, site-specific investigations in the Buildout Area, and field observations.

4.7.1 Scoping Process

The City of Cypress (City) received six comment letters during the public review period for the Notice of Preparation (NOP). For copies of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). No comment letters included comments related to geology and soils.

4.7.2 Methodology

To assess the potential impacts of the proposed project with respect to geologic and soil conditions, Geotechnologies conducted a soils and geotechnical investigation in March 2024, which was then revised in May 2024 (Geotechnical Investigation). The discussion below describes the scope of the investigation, including methods used during background research and data review, site reconnaissance, field exploration, and engineering analyses.

4.7.2.1 Background Research and Data Review

Existing geologic literature (i.e., geologic maps, boring logs, and other applicable data) was reviewed by Geotechnologies, Inc. as is reflected in **Appendix F**.

4.7.2.2 Field Exploration

As part of the Geotechnical Investigation (**Appendix F**), the Buildout Area was explored on January 3, 4, and 5, 2024, by excavating six borings and by performing seven Cone Penetration Test (CPT) soundings. The borings were excavated to depths ranging between 50 and 60 feet below grade, with the aid of a truck-mounted drilling machine. The CPTs were conducted to depths ranging between 60.31 and 60.52 feet below the existing grade. The boring and CPT locations and the interpretation

2 City of Cypress. 2001. *Cypress General Plan Safety Element.*

of the geologic materials encountered are provided in the Boring Logs, Plates A-1 through A-6 and CPT Data Logs, which are included as an appendix to the Geotechnical Investigation (**Appendix F**).

4.7.2.3 Liquefaction Analysis

Geotechnologies performed a total of ten liquefaction analyses utilizing Standard Penetration Test (SPT) data collected in the borings, laboratory test data, and CPT data. The liquefaction potential evaluations were performed by utilizing a magnitude 6.77 earthquake and a peak horizontal acceleration of 0.70g (acceleration due to gravity), consistent with American Society of Civil Engineers (ASCE), the California Department of Health Care Access and Information (HCAI), the California Geological Survey (CGS), and the United States Geological Survey (USGS) guidelines. CPT data were also analyzed utilizing liquefaction assessment software.

4.7.3 Existing Environmental Setting

4.7.3.1 Buildout Area

According to the Geotechnical Investigation, the topography of the Buildout Area is relatively level, with no pronounced high or low areas. A variety of existing structures and facilities are located on the Los Alamitos Race Course (LARC) Property that support horse racing, training, and community activities. Structures include a race track, grandstand structure, three artificial lakes inside the total track area, one-story clubhouse and restaurant structures, lighting structures, approximately 41 permanent one-story barns and several temporary structures and barns. The LARC Property also contains parking areas, landscaping, drainage features, sheds, maintenance areas, and perimeter fencing. The Cypress GC Property includes a portion of the former Cypress Golf Club, which ceased operation years ago. LARC currently uses approximately one acre of the Cypress GC Property (designated as Lot 1 in Vesting Tentative Tract Map (VTTM) 19247) as a maintenance yard, while the clubhouse for the former Cypress Golf Club is presently being used as a church.

The land owned by Grace Church within the Buildout Area, designated as Lots 5 and 10 in VTTM 19247, is part of a larger church property that is currently used for religious services and events and includes a small school, open space, and parking areas.

4.7.3.2 Regional Geology

The Buildout Area is located within the Los Angeles Basin and within the Peninsular Ranges Geomorphic Province. The Peninsular Ranges are characterized by northwest-trending blocks of mountain ridges and sediment-floored valleys. The dominant geologic structural features are northwest trending fault zones that either die out to the northwest or terminate at east-west trending reverse faults that form the southern margin of the Transverse Ranges.

The Los Angeles Basin is located at the northern end of the Peninsular Ranges Geomorphic Province. The basin is bounded to the east and southeast by the Santa Ana Mountains and San Joaquin Hills. It is bounded to the northwest by the Santa Monica Mountains. Over 22 million years ago, the Los Angeles basin was a deep marine basin formed by tectonic forces between the North American and Pacific plates. Since that time, over 5 miles of marine and non-marine sedimentary rock as well as intrusive and extrusive igneous rocks have filled the basin. During the last 2 million years, defined by the Pleistocene and Holocene epochs, the Los Angeles basin and surrounding mountain ranges have been

uplifted to form the present-day landscape. Erosion of the surrounding mountains has resulted in deposition of unconsolidated sediments in low-lying areas by rivers such as the Los Angeles River. Areas that have experienced subtle uplift have been eroded with gullies.

4.7.3.3 Local Geology and Subsurface Conditions

As part of the Geotechnical Investigation, six exploratory borings were drilled to depths ranging from approximately 50 to 60 feet and seven CPTs were performed and advanced to depths from 60.31 to 60.52 feet to determine subsurface conditions in the Buildout Area. Fill materials were encountered in all six exploratory borings at depths ranging from 3 to 5 feet below the existing grade, consisting of a mixture of silty sand and sandy silt in colors from yellowish brown to dark brown, with a moist, stiff to medium dense, fine-grained texture and occasional gravel. Fill materials are underlain by native alluvial soils consisting of interlayered mixtures of sandy to silty clay, sandy to clayey silt, silty to clayey sand, and sand. The alluvial soils range from yellowish brown to grayish brown to dark gray in color, and are moist to wet, firm to very stiff, or loose to very dense, and fine grained.

4.7.3.4 Local Groundwater Conditions

Historically, the highest groundwater level beneath the Buildout Area is approximately 10 feet below the ground surface level.[3] Seasonal fluctuations in the level of groundwater may occur due to variations in rainfall, temperature, and other factors not evident at the time the measurements were taken. Fluctuations also may occur across the site.

According to the Geotechnical Investigation, groundwater was encountered at depths of 5 to 12.5 feet below ground surface, indicating the presence of shallow groundwater conditions beneath the Buildout Area. Four of the borings encountered groundwater at depths 5 to 8 feet below ground surface, and two borings encountered groundwater at depths 9 to 12.5 feet below ground surface, which is slightly higher than the historically highest groundwater level for the Buildout Area established by the California Geological Survey Seismic Hazard Zone report of the Los Alamitos Quadrangle in 1998, as described above.[4]

4.7.3.5 Fault Systems and Seismic Conditions

A potentially active fault is defined by the State as a fault with a history of movement within Pleistocene time (between 11,000 and 1.6 million years ago [Ma]). The active and potentially active faults are capable of producing potentially strong seismic shaking at the Buildout Area. It is anticipated that the Buildout Area will periodically experience ground acceleration as a result of earthquakes. The closest mapped active faults to the Buildout Area include the Newport-Inglewood and Whittier Fault Zones located approximately 4.8 miles southwest and 11.6 miles east of the Buildout Area, respectively.

---

3 California Department of Conservation (DOC) California Geological Survey (CGS). 1998, Revised 2006. *Seismic Hazard Zone Report of the Los Alamitos Quadrangle, Plate 1.2,* entitled "Historically Highest Ground Water Contours".

4 Ibid.

The Buildout Area is not located within the boundaries of an "Earthquake Fault Zone," as defined by the State of California in the Alquist-Priolo Earthquake Fault Zoning Act.[5] Furthermore, the Cypress General Plan Safety Element indicates that no active faults have been identified within City boundaries.

Seismic shaking is characterized by the physical movement of the land surface during and subsequent to an earthquake. Seismic shaking has the potential to cause destruction and damage to buildings and property, including damage resulting from damaged or destroyed gas or electrical utility lines, disruption of surface drainage, blockage of surface seepage and groundwater flow, changes in groundwater flow, dislocation of street alignments, displacement of drainage channels and drains and possible loss of life. In addition, ground shaking can induce several kinds of secondary seismic effects, including liquefaction, differential settlement, and landslides.

The intensity of seismic shaking during an earthquake depends largely on the geologic foundation conditions of the materials composing the upper several hundred feet of the Earth's surface. The greatest amplitudes and longest durations of ground shaking occur on thick, water-saturated, unconsolidated alluvial sediments, which may lead to liquefaction (as further described below). Ground shaking can also cause ground failure or deformation due to lurching and liquefaction.

Surface fault rupture refers to the displacement of the ground surface along a fault, which can occur during strong earthquakes. The potential for seismic hazards within the Buildout Area is a consequence of ground shaking caused by events on nearby active faults. However, as previously discussed, the Buildout Area is not located within a designated Alquist-Priolo Earthquake Fault Zone, so the possibility for surface fault rupture is low. The Buildout Area is, however, located approximately 4.8 miles to the northeast of an earthquake fault zone that has been established around the active traces of the Newport-Inglewood Fault.

4.7.3.6 Liquefaction and Lateral Spreading

Liquefaction occurs when saturated, cohesionless soils temporarily lose shear strength (liquefy) due to increased pore water pressures induced by strong ground motion during an earthquake. Intervals of loose sand may, therefore, be subject to liquefaction if these materials are or were to become submerged and also exposed to strong seismic ground shaking. Seismic ground shaking of relatively loose, granular soils that are saturated or submerged can cause the soils to liquefy and temporarily behave as a dense fluid. This loss of support can produce local ground failure such as settlement or lateral spreading that may damage overlying improvements.

Lateral spreading typically occurs as a form of horizontal displacement of relatively flat-lying alluvial material toward an open or "unconfined" face such as an open body of water, channel, or excavation. In soils, this movement is generally due to failure along a weak plane and is often

[5] California Department of Conservation (DOC) California Geological Survey. 2025a. Earthquake Zones of Required Investigation. Website: https://maps.conservation.ca.gov/cgs/informationwarehouse/eqzapp/ (accessed January 21, 2025).

associated with liquefaction. The Safety Element of the City's General Plan and the California Geological Survey identify the Buildout Area as an area at a potentially high risk of liquefaction.[6]

As discussed in the Geotechnical Investigation, the Buildout Area is located within an area designated as "liquefiable" based on groundwater depth records, soil type and distance to a fault capable of producing a substantial earthquake. Therefore, Geotechnologies performed a total of ten liquefaction analyses utilizing SPT data collected in the borings, laboratory test data, and CPT data. The liquefaction potential evaluations were performed by utilizing a magnitude 6.77 earthquake and a peak horizontal acceleration of 0.70g, consistent with ASCE, HCAI, CGS, and USGS guidelines. The liquefaction analyses of three of the borings revealed that some of the soil layers located on the Buildout Area between 7.5 to 60 feet below existing grade may liquefy in the event of an earthquake on a local or regional fault.

CPT data were also analyzed utilizing liquefaction assessment software, which indicated some of the soil layers at varying depths below the ground surface are susceptible to liquefaction. These layers are located between approximately a few inches and several feet in thickness. The Geotechnical Investigation concluded that differential settlement at the existing ground surface due to liquefaction could be expected to range between 1.24 and 3.67 inches without stabilization techniques at the upper soils being implemented.

4.7.3.7 Subsidence

The phenomenon of widespread land sinking, or subsidence, is generally related to substantial over pumping of groundwater or petroleum reserves from deep underground reservoirs. Like most of northern Orange County, the City lies atop the Orange County Groundwater Basin (Orange County Basin). Although slight subsidence has been observed elsewhere in the Orange County Basin in Santa Ana (likely due to groundwater withdrawal) and in the Huntington Beach area (likely due to oil extraction), there is no recent history of subsidence in the vicinity of the Buildout Area.[7] Groundwater levels and storage in the Orange County Basin are managed by the Orange County Water District (OCWD) in a manner that reduces the potential for land subsidence to occur. The Geotechnical Investigation concluded that the Buildout Area is not located within a zone of known subsidence due to oil or other fluid withdrawal.

4.7.3.8 Lateral Spreading

Lateral spreading can occur when blocks of mostly intact surficial soil displace down gradient or towards a free face along a shear zone that has formed within the liquefied sediment. It is the most pervasive type of liquefaction-induced ground failure. The Buildout Area, and its vicinity, are relatively level, and there are no free faces present at the site or its surroundings. Therefore,

---

6 California Department of Conservation (DOC) California Geological Survey. 2025a. Earthquake Zones of Required Investigation. Website: https://maps.conservation.ca.gov/cgs/informationwarehouse/eqzapp/ (accessed January 21, 2025).

7 California Department of Water Resources (DWR). 2013. *California's Groundwater Update 2013*. Natural Resources Agency. Website: https://cawaterlibrary.net/wp-content/uploads/2017/05/GWU2013_Ch6_SouthCoast_Final.pdf (accessed January 22, 2025).

according to the Geotechnical Investigation, the potential for lateral spreading occurring within the Buildout Area is low.

4.7.3.9 Compressible/Collapsible Soils

Compressible soils are soils that consolidate when exposed to new loading, such as Artificial Fill or foundation loads. Soil collapse occurs when soils substantially decrease in volume following an increase in moisture content. The results of the subsurface investigation within the Buildout Area indicated that the majority of the Buildout Area is underlain by fill materials and alluvial soils, which generally consist of silty sand and sandy silt, and interlayered mixtures of sandy to silty clay, sandy to clayey silt, silty to clayey sand, and sand. The Geotechnical Investigation concluded that the Buildout Area soils are not considered prone to collapsing or compressing.

4.7.3.10 Landslides and Unstable Slopes

Landsliding can occur in areas where topography is generally sloped. The Buildout Area is considered to have level topography, with no substantial slopes. Therefore, according to the Geotechnical Investigation, the probability of seismically induced landslides occurring within the Buildout Area is considered to be negligible.

4.7.3.11 Paleontological Resources

Results of the literature review indicate that the Buildout Area is located within the Peninsular Ranges Geomorphic Province, a 900-mile long northwest-southeast trending structural block that extends from the Transverse Ranges in the north to the tip of Baja California in the south and includes the Los Angeles Basin.[8,9] This province is characterized by mountains and valleys that trend in a northwest-southeast direction, roughly parallel to the San Andreas Fault Zone.[10,11] Within this larger region, the Buildout Area is located in the Los Angeles Basin, a broad alluvial lowland bounded to the north and east by the San Gabriel and Santa Ana Mountains, respectively, and by the Pacific Ocean to the southwest.[12] The basin is underlain by a structural depression that has discontinuously accumulated thousands of feet of marine and terrestrial deposits since the Late Cretaceous (approximately 100.5 Ma).[13]

Subsurface exploration for the proposed project, including six exploratory borings and seven CPTs, identified a thin mantle of artificial fill (3–5 feet thick) underlain by native Quaternary alluvial deposits. The artificial fill consists primarily of silty sand and sandy silt with occasional gravel, whereas the alluvium is interlayered with sandy to silty clay, sandy to clayey silt, silty to clayey sand,

13 Ibid.

and sand.[14] Groundwater was encountered between 5 and 12.5 feet below grade, consistent with historically shallow groundwater levels in the basin.[15]

Artificial fill consists of sediments that have been removed from one location and transported to another location by human activity, rather than by natural means. The transportation distance can vary from a few feet to many miles, and composition is dependent on the source and purpose. Artificial fill will sometimes contain modern debris such as asphalt, wood, bricks, concrete, metal, glass, plastic, and even plant material. While artificial fill may contain fossils, these fossils have been removed from their original location and are thus out of stratigraphic context. Therefore, they are not considered important for scientific study, and artificial fill has no paleontological sensitivity.[16]

The underlying alluvial deposits are late Quaternary in age (Pleistocene to Holocene) and vary in paleontological sensitivity depending on depth. The upper Holocene deposits (less than 11,700 years old) are generally considered to have low sensitivity, as fossils from this interval are relatively uncommon and typically lack scientific significance.[17] In contrast, the deeper Pleistocene deposits (older than 11,700 years) are assigned high paleontological sensitivity because they may yield significant vertebrate fossils (e.g., mammoth, horse, camel, bison), as well as smaller mammals, reptiles, and plants elsewhere in the region.[18]

According to the locality search conducted by the National History Museum of Los Angeles County (NHMLA), there are no known fossil localities within the Buildout Area or in the City. However, the search did return fossil localities, present in the same type of sedimentary deposits that underlay[19] the Buildout Area, located within a 10-mile radius of the Buildout Area. Such deposits are often paleontologically sensitive, as they can contain vertebrate fossils (e.g., mammoths, ground sloths, camelids) at depth. Typically, the upper 5 feet of shallow fill and disturbed soils are low sensitivity, but deeper undisturbed alluvium is considered to have high sensitivity under Society of Vertebrate Paleontology (SVP) guidelines.[20] The closest locality, LACM VP 3660 is northwest of the Buildout Area at Cover Street and Pixie Avenue, approximately 6.8 miles northwest in the City of Lakewood. This locality produced specimens of Mammoth (*Mammuthus*) at a depth of 19 feet below ground surface. Farther to the west in Long Beach, approximately 13 miles away, localities LACM VP 3260 and LACM VP 7493 produced fossils of Bison (*Bison*) at 8.5 feet below ground surface and camel (*Camelidae*) at surface. A copy of the results letter from the NHMLA is included in **Appendix F.**

4.7.4 Regulatory Setting

The following section describes the federal, State, regional, and local regulatory framework applicable to analyzing potential impacts related to geology and soils from development of the proposed project.

4.7.4.1 Federal Regulations

There are no federal policies or regulations related to geology and soils that are applicable to the proposed project.

4.7.4.2 State Regulations

Alquist-Priolo Earthquake Fault Zoning Act (1972) (Pub. Resources Code § 2621 *et seq*.). The Alquist-Priolo Earthquake Fault Zoning Act of 1972 and updates (Pub. Resources Code, Section 2621, *et seq.)* is the principal California State guidance to prevent the construction of habitable structures on the surface trace of active earthquake faults. If an active fault is found, a structure for human occupancy must be set back from the fault (generally 50 feet). The Alquist-Priolo Earthquake Fault Zoning Act only addresses the hazard of surface fault rupture; it does not consider other earthquake hazards. There are no known earthquake fault zones on or in the near vicinity of the Buildout Area; therefore, regulations recommended by the CGS for investigations conducted in such zones do not specifically apply.

Seismic Hazard Mapping Act (1990) (Pub. Resources Code §§ 2690-2699.6). The Seismic Hazard Mapping Act (SHMA) was adopted by the State in 1990 to address the potential hazards posed by secondary effects of seismic activity, including strong ground shaking, soil liquefaction, and associated ground failure and seismically induced landslides. The CGS prepares and provides local governments with seismic hazard zone maps that identify areas susceptible to amplified shaking, liquefaction, earthquake-induced landslides, and other ground failures. The seismic hazard zones are referred to as "zones of required investigation" because site-specific geological investigations are required for construction projects located within these areas. Before a project can be permitted, a geologic investigation, evaluation, and written report must be prepared by a licensed geologist to demonstrate that the potential hazards can be successfully mitigated.

Public Resources Code. Section 5097.5 of the PRC provides for the protection of cultural and paleontological resources and prohibits the removal, destruction, injury, or defacement of archaeological and paleontological features on any lands under the jurisdiction of State or local authorities.

4.7.4.3 Regional Regulations

There are no regional policies or regulations related to geology and soils that are applicable to the proposed project.

4.7.4.4 Local Regulations

Cypress Town Center and Commons Specific Plan 3.0. The Cypress Town Center and Commons Specific Plan 3.0 does not contain any provisions related to geology and soils.

City of Cypress General Plan Conservation/Open Space/Recreation Element. The City of Cypress General Plan identifies goals and policies related to paleontological resources. Goal COSR-5 in the Conservation/Open Space/Recreation Element (2000) of the City's General Plan addresses paleontological resources (and potential resources) and indicates that conservation of the resources and investigation of potential resource areas is an important undertaking for connecting with the community's past.

The following goals and policies apply to the proposed project:

- **COSR-5:** Preserve Cypress' archaeologic and paleontological resources.
    - **COSR-5.1**: Update records of resource finds and locations when required.
    - **COSR-5.2**: Prior to development in previously undeveloped areas, require strict adherence to the CEQA guidelines for environmental documentation and mitigation measures where development will affect archaeological or paleontological resources.

City of Cypress Municipal Code. Building and construction in the City are subject to the regulations of the City of Cypress Municipal Code. California Code of Regulations (CCR), Title 24, Part 2, the California Building Code (CBC) (2022), provides minimum standards for building design in the State. Local codes are permitted to be more restrictive than Title 24, but not less restrictive. The procedures and limitations for the design of structures are based on site characteristics, occupancy type, configuration, structural system height, and seismic design category. The seismic ratings used in the CBC are derived from the International Building Code specifications. Most of coastal Southern California, including the Buildout Area, is located in Seismic Design Category D. Construction activities are subject to occupational safety standards for excavation, shoring, and trenching as specified in the California Occupational Safety and Health Administration (Cal/OSHA) regulations (CCR, Title 8). In addition, future development allowed under the approved Specific Plan would be required to adhere to the regulatory standards described in **Regulatory Compliance Measure GEO-1**, provided below, which includes the seismic and building standards in the City's Building Code that adopt the CBC with amendments and modifications.

4.7.5 Thresholds of Significance

The thresholds of significance for geology and soils impacts used in this analysis are consistent with Appendix G of the *State CEQA Guidelines*. Based on these thresholds, implementation of the proposed project would have a significant impact with respect to geology and soils if it would:

Threshold 4.7.1: Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

(i): Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidences of known fault; (Refer to Division of Mines and Geology Special Publication 42)

(ii): Strong seismic ground shaking;

(iii): Seismic-related ground failure, including liquefaction;

(iv): Landslides;

Threshold 4.7.2: Result in substantial soil erosion or the loss of topsoil;

Threshold 4.7.3: Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on-site or off-site landslides, lateral spreading, subsidence, liquefaction, or collapse;

Threshold 4.7.4: Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating direct or indirect substantial risks to life or property;

Threshold 4.7.5: Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater; or

Threshold 4.7.6: Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.

4.7.6 Project Impacts

Potential impacts of the proposed project related to geology and soils are discussed below pursuant to the thresholds established in Section 4.7.5, above.

Threshold 4.7.1(i): Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidences of known fault? (Refer to Division of Mines and Geology Special Publication 42)

***No Impact*.** As with all of Southern California, the Buildout Area is subject to strong ground motion resulting from earthquakes on nearby faults. The entire region of Southern California is considered to be seismically active.[21] There are, however, no known faults crossing the Buildout Area. According to the United States Geological Survey (USGS) Quaternary Faults Map, the closest fault to the Buildout Area, the Newport-Inglewood Fault System, is 4.8 miles southwest. The Whittier-Elsinore Fault System is the second closest fault to the Buildout Area, located approximately 11.6 miles east of the site.

The Buildout Area is not within an Alquist-Priolo Fault Hazard Zone. Additionally, according to the City's General Plan Safety Element, there are no active or potentially active faults in the City. As

[21] City of Cypress. 2001. *Cypress General Plan Safety Element.* Website: https://www.cypressca.org/home/showdocument?id=714 (accessed January 20, 2025).

such, the chance for surface fault rupture, during or as a consequence of seismic activity, is considered unlikely. Therefore, future development of the land uses allowed under the Specific Plan would not expose people or structures to substantial adverse effects involving the rupture of a known earthquake fault as delineated in the most recent Alquist-Priolo Fault Zone Map. Therefore, the proposed project would have no impact related to this threshold. No mitigation measures are required.

Threshold 4.7.1(ii): Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: Strong seismic ground shaking?

Less Than Significant Impact. According to the California Geological Survey, there are no active faults or Alquist-Priolo Fault Zones within the City. However, the Buildout Area is located in the highly seismic Southern California region within the influence of several fault systems. The degree of seismic ground shaking will depend on several factors including the fault location, distance from the Buildout Area, the soil conditions, the depth to groundwater, and the earthquake magnitude. As specified in **Regulatory Compliance Measure GEO-1**, new development within the Buildout Area would be subject to the seismic design criteria of the 2022 California Building Standards Code requirements that aim to prevent building collapse and reduce the impacts of seismic ground shaking. Adherence to these requirements would reduce injury and loss of life and building damage after an earthquake. Therefore, with the implementation of **Regulatory Compliance Measure GEO-1**, impacts related to seismic ground shaking would be less than significant. No mitigation measures are required.

Threshold 4.7.1(iii): Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: Seismic-related ground failure, including liquefaction?

Less Than Significant with Mitigation Incorporated. The entirety of the City is in a CGS Liquefaction Zone.[22] A CGS Liquefaction Zone is defined as an area where historical occurrence of liquefaction, or local geological, geotechnical and ground water conditions indicate a potential for permanent ground displacements such that mitigation as defined in PRC Section 2693(c) would be required. Soil liquefaction is a phenomenon in which cyclical stresses, produced by earthquake-induced ground motion, create excess pore pressures in relatively cohesionless and low plastic soils. According to the National Resource Conservation Service Web Soil Survey, the soil and the underlying geologic structure under the City include discontinuous human-transported material over mixed alluvium deposits that may become unstable during intense ground shaking. The Buildout Area is underlain by a thin mantle of fill materials and native alluvial soils. Based on the Geotechnical Investigation, site soils are considered to be susceptible to liquefaction settlement during an earthquake.

In addition, the Buildout Area was observed to have a relatively shallow groundwater level, which would increase the risk of liquefaction. According to the Orange County General Plan Safety Element

[22] California Department of Conservation (DOC) California Geological Survey. 2025a. Earthquake Zones of Required Investigation. Website: https://maps.conservation.ca.gov/cgs/informationwarehouse/eqzapp/ (accessed January 21, 2025).

(2013), the City is underlain by a granular sand soil with high water content and is located within a liquefaction zone associated with the Newport-Inglewood Fault and the San Andreas Fault.

The Geotechnical Investigation prepared for the proposed project provides recommendations to reduce the potential for liquefaction at the Buildout Area. The Geotechnical Investigation concluded that total settlement at the existing ground surface due to liquefaction could be expected to range between 1.24 and 3.67 inches. Given the nature and size of the proposed development, the possibility of differential settlements under current conditions that could directly or indirectly cause potential substantial adverse effects, including risk of loss, injury, or death from liquefaction would be considered significant without stabilization techniques at the upper soils being implemented. Therefore, future construction contractors would be required to comply with the recommendations in the Geotechnical Investigation, as detailed in **Mitigation Measure GEO-1** provided below, to ensure impacts are reduced to a less than significant level. **Mitigation Measure GEO-1** would require that the upper soils of the Buildout Area be stabilized with ground improvement techniques beneath any structure intended for human occupancy. The ground improvements may consist of Rammed Aggregate Piers, Vibrated Aggregate Piers, or similar techniques, and would be required to be designed by a qualified ground improvement contractor in an interactive process with the geotechnical engineer and structural engineer.

In addition to proposed ground improvements, any future development within the Buildout Area would be required to be supported on a mat, or mat-type foundation system. Conventional foundations may be utilized for support of lighter at-grade structures if ground improvements reduce the total potential liquefaction settlement potential to a threshold suitable for this type of foundation.

With the addition of the ground improvements in **Mitigation Measure GEO-1**, the potential for surface manifestations of liquefaction that would impact proposed structures in the Buildout Area is considered low, and impacts would be less than significant.

Threshold 4.7.1(iv): Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: Landslides?

No Impact. According to the City's General Plan Safety Element, landslides have not been recorded within the City boundaries and are not anticipated based on the lack of any significant topographic features. Further, according to the CGS's Landslide Inventory, there are no recorded landslides within the vicinity of the Buildout Area.[23] Both the Buildout Area and surrounding properties are flat with no unusual geographic features. Therefore, neither the Buildout Area nor the surrounding area have the potential for impacts related to landslides. No mitigation is required.

Threshold 4.7.2: Would the project result in substantial soil erosion or the loss of topsoil?

Less Than Significant Impact. Construction in the Buildout Area would result in soil erosion and siltation compared to existing conditions. Construction activities would occur on a project-by-project

[23] California Department of Conservation (DOC) California Geological Survey. 2025b. Landslide Inventory. Website: https://maps.conservation.ca.gov/cgs/lsi/app/ (accessed January 21, 2025).

basis, but would likely include site clearing, excavations, grading, and filling. The increased erosion potential could result in short-term water quality impacts as discussed in Section 4.10, Hydrology and Water Quality, of this Draft EIR. Implementation of the proposed project would increase impervious surfaces in the Buildout Area by about 10 percent. This increase would result in higher volumes and velocities of stormwater runoff, which could lead to soil erosion or loss of topsoil.

Any projects in the Buildout Area that would disturb more than one acre of soil would be required to implement **Regulatory Compliance Measure HYD-1**, provided in Section 4.10, which requires preparation of a Stormwater Pollution Prevention Plan (SWPPP). The SWPPP details Erosion Control and Sediment Control Best Management Practices (BMPs) that would be implemented during project construction to minimize erosion and retain sediment on site. If construction of future development associated with the proposed project would disturb less than one acre of soil, those projects would be required to comply with Section 4.106 of the California Green Building Standards Code (CALGreen Code)**.** Section 4.106 of the CALGreen Code requires implementation of BMPs to prevent flooding and erosion and to retain sediment on site. With incorporation of construction BMPs as required by **Regulatory Compliance Measure HYD-1**, impacts related to erosion during construction would be less than significant, and no mitigation is required.

Implementation of the proposed project would increase impervious surfaces in the Buildout Area by about 10 percent. This increase would result in higher volumes and velocities of stormwater runoff, which could lead to soil erosion or loss of topsoil. Increases in stormwater runoff velocity can lead to downstream erosion in receiving waters. However, future development associated with the proposed project would be required to comply with **Regulatory Compliance Measure HYD-3**, also provided in Section 4.10, which mandates that stormwater runoff be captured in detention basins and/or proprietary flow-based biofiltration systems. These features would detain, filter, and treat runoff prior to discharge into the surrounding storm drain system, thereby substantially reducing the potential for erosion and protecting downstream water quality.

Additionally, according to the Preliminary Water Quality Management Plan (**Appendix H-2**) only one drainage management area in the Buildout Area drains through the Walker Street Storm Drain to a portion of the Bolsa Chica Channel that is not concrete lined and more susceptible to erosion. As required by **Regulatory Compliance Measure HYD-3**, future development associated with the proposed project will include measures to reduce changes to the natural flow of water to reduce erosion. For these reasons, operational impacts related to substantial on-site, off-site, or downstream erosion or siltation would be less than significant, and no mitigation is required.

Threshold 4.7.3: Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on-site or off-site landslides, lateral spreading, subsidence, liquefaction, or collapse?

***Less Than Significant with Mitigation Incorporated*.** Landslides and other forms of mass wasting, including mud flows, debris flows, and soil slips, occur as soil moves downslope under the influence of gravity. Landslides are frequently triggered by intense rainfall or seismic shaking. The Buildout Area is relatively flat. As such, landslides and other forms of slope instability do not represent a

significant hazard to the Buildout Area or the surrounding area. In addition, as discussed in Response 4.7.1(iv), the Buildout Area is not within an area susceptible to landslides.

Based on the preliminary grading plans, approximately 95,370 cubic yards of material would need to be imported to the Buildout Area to facilitate proposed project implementation. Construction of future projects may also require trenching to accommodate the installation of utilities. All excavation and grading required for construction must be performed in accordance with City of Cypress Municipal Code Chapter 10 and State Building Codes, and the State Division of Occupational Safety and Health requirements.

Subsidence, the sinking of the land surface due to oil, gas, and water production, causes loss of pore pressure as the weight of the overburden compacts the underlying sediments. No subsidence associated with fluid withdrawal is known to have occurred on or in the vicinity of the Buildout Area.

According to the Geotechnical Investigation, groundwater within the Buildout Area has a historic depth of less than 10 feet below ground surface, ranging from approximately 5 to 12.5 feet below ground surface.[24] As shallow groundwater is present, it is likely that groundwater dewatering would be required during excavation activities. However, any groundwater dewatering would need to implement **Regulatory Compliance Measure HYD-2,** also provided in Section 4.10, which outlines requirements of the Groundwater Dewatering Permit, as specified in Section 4.10. During operation of the proposed project, no groundwater dewatering would occur. Therefore, subsidence associated with dewatering is not anticipated to occur during construction or operation of the proposed project.

As discussed in Response 4.7.1(iii), structures built on or above potentially liquefiable soils may experience bearing capacity failures due to the temporary loss of foundation support or vertical settlements (both total and differential) and/or undergo lateral spreading. Loss of bearing and ground settlement are of concern within the Buildout Area. This would be a potentially significant impact. However, as part of the proposed project, the construction contractor would comply with all recommendations in the Geotechnical Investigation and include ground improvement techniques, stable foundations would be required for all future projects (**Mitigation Measure GEO-1**), and all development would be required to comply with the CBC (**Regulatory Compliance Measure GEO-1**). Therefore, impacts would be less than significant with mitigation incorporated.

Threshold 4.7.4: Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating direct or indirect substantial risks to life or property?

No Impact. According to the City's General Plan Program EIR, Geologic and Seismic Hazards Chapter,[25] all soil types within the City are suitable for urban development. Of the known soil types

[24] California Department of Conservation (DOC) California Geological Survey (CGS). 2006. *Seismic Hazard Zone Report of the Los Alamitos Quadrangle, Plate 1.2*.

[25] City of Cypress. 2001. *Cypress General Plan Environmental Impact Report*, Geologic and Seismic Hazards, pp. 4.6-13. Website: https://www.cypressca.org/home/showpublisheddocument/678/636123124960830000 (accessed January 21, 2025).

within the City, none are expansive. Therefore, there is low potential for risks to life or property as a result of the future development within the Buildout Area being located on expansive soil, and the proposed project would have no impact related to expansive soils. No mitigation is required.

Threshold 4.7.5: Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

No Impact. Future development within the Buildout Area would be served by the City and the Orange County Sanitation District. The proposed project includes the installation of wastewater infrastructure identified in the Specific Plan to serve the future development allowed under the Specific Plan, including two new sewer connections to existing main sewer lines. As detailed in Chapter 3.0, Project Description, future development within the Buildout Area would not include the development of or use of any septic tanks or alternative wastewater disposal systems, as all wastewater generation would be served by the City's existing sewer system. Therefore, the proposed project would not have any impacts related to soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems. No mitigation measures are required.

Threshold 4.7.6: Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less Than Significant with Mitigation Incorporated. According to the City of Cypress General Plan EIR, there are no known paleontological resources in the City. A search of the paleontology collection records for the locality and specimen data at the NHMLA was requested for the proposed project and results were returned on June 1, 2025. The record search did not identify any existing fossil localities within the Buildout Area. However, the search did return fossil localities, present in the same type of sedimentary deposits that underlay[26] the Buildout Area, located within a 10-mile radius of the Buildout Area.

As detailed in the Geotechnical Investigation, fill soils are present in the upper 3 to 5 feet of the Buildout Area, and are mainly composed of silty sand and sandy silt, yellowish. Underlying the fill are native soils at a depth of approximately 10 feet, consisting of interlayered sandy to silty clay, sandy to clayey silt, silty to clayey sand, and sand. Based on the geologic setting, the native soils are Quaternary alluvial deposits within the Los Angeles Basin. Such deposits are often paleontologically sensitive, as they can contain vertebrate fossils (e.g., mammoths, ground sloths, camelids) at depth. Typically, the upper 5 feet of shallow fill and disturbed soils are low sensitivity, but deeper undisturbed alluvium is considered to have high sensitivity under SVP guidelines.[27]

Therefore, construction activities associated with the proposed project that have the potential to disturb native alluvium at a depth below 10 feet would have the potential to have a potentially

[26] Geotechnologies, Inc. 2024. *Environmental Impact Report Soils and Geology Issues, Proposed Mixed-Use Development, 4961 Katella Avenue and 5100 Cerritos Avenue, Cypress, California.* May 2. (**Appendix F**)

[27] Society of Vertebrate Paleontology (SVP). 2010. *Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources*. Bethesda, MD.

significant impact on paleontological resources without implementation of mitigation measures. Therefore, **Mitigation Measures GEO-2** and **GEO-3** shall be required. With implementation of these mitigation measures, which make provisions for unknown paleontological resources, discovery stop work procedures, and worker training procedures, project impacts would be mitigated to a less than significant level.

4.7.7 Level of Significance Prior to Mitigation

The potential for surface fault rupture, erosion, subsidence, landslides, lateral spreading, and expansive soil is less than significant, and no mitigation is required. The potential impacts related to seismic shaking and liquefaction would be potentially significant prior to mitigation. The proposed project would also have potentially significant impacts on paleontological resources prior to the implementation of mitigation.

4.7.8 Regulatory Compliance Measures and Mitigation Measures

4.7.8.1 Regulatory Compliance Measures

The following regulatory compliance measure is a requirement of the CBC that is applicable to the proposed project and is considered in the analysis of potential impacts related to geology and soils. The City considers this requirement to be mandatory; therefore, it is not a mitigation measure.

Regulatory Compliance Measure GEO-1 **Compliance with Seismic and Standards in the Building Code.** Prior to issuance of any building permit within the Buildout Area, the City of Cypress (City) Engineer, Building Official, or their designee, and a future project applicant's soils engineer shall review the building plans to verify that the structural design conforms to the requirements of the City of Cypress' latest adopted edition of the California Building Standards Code. Structures and walls shall be designed in accordance with applicable sections of the City's Building Code.

4.7.8.2 Mitigation Measures

In addition to the regulatory requirements and regulatory compliance measure described above, the following mitigation measures would reduce potential impacts related to seismic ground shaking, liquefaction, and paleontological resources to a less than significant level.

Mitigation Measure GEO-1 **Implementation of Geotechnical Investigation Recommendations.** Future development projects within the Buildout Area shall implement the recommendations of the Geotechnical Investigation prepared for the proposed project, to the satisfaction of the City of Cypress' (City) Building Official, including, but not limited to:

Ground Improvement Techniques. Ground improvement techniques shall be implemented in the Buildout Area beneath any structure intended for human occupancy. Ground improvements

may consist of rammed aggregate piers, vibrated aggregate piers, or similar techniques. The ground improvements must be designed by a qualified ground improvement contractor through coordination with a geotechnical engineer and/or structural engineer to ensure liquefaction in the upper soils.

Building Foundation Techniques. Subsequent to the installation of any proposed ground improvements, proposed structures, mat or mat-type foundation systems will be used. Conventional foundations may be utilized for support of the lighter at-grade structure if the ground improvements reduce the total and differential settlement to a threshold confirmed by the geotechnical engineer, the structural engineer, and the construction contractor.

Additional site testing and final design evaluation(s) shall be conducted by a geotechnical consultant to refine and/or enhance these requirements during buildout of the project on an as-needed basis. A future project applicant(s) shall require the geotechnical consultant to assess whether the recommendations in the Geotechnical Investigation need to be modified or refined to address any changes in the project features prior to start of grading. If the geotechnical consultant identifies modifications or refinements to the recommendations, the future project applicant(s) shall make modifications to the final project design and specifications. Examples of additional measures could include: a moisture or vapor retarding system below foundations, additional ground stabilization techniques like cement treatment or aggregate, or removal and replacement of existing soil to eliminate any unsuitable materials or undocumented fill. Design, grading, and construction shall be performed in accordance with applicable requirements in the Municipal Code, the California Building Code, local grading regulations, and any additional measures recommended by the geotechnical consultant in the subsequent geotechnical evaluation(s).

Mitigation Measure GEO-2

Procedures for Unexpected Paleontological Resources Discoveries. If paleontological resources are discovered during ground-disturbing activities associated with the proposed project, construction personnel shall immediately halt work within 50 feet of the discovery, and a future project applicant/developer or construction supervisor shall contact a qualified paleontologist to assess the discovery for scientific importance. A qualified paleontologist is defined as a person with an M.S. or Ph.D. in geology or paleontology and who meets the standards set forth by the Society of Vertebrate Paleontology. The paleontologist shall make recommendations

regarding the collection, treatment, and disposition of the discovery. Scientifically important resources shall be prepared to the point of identification, identified to the lowest taxonomic level possible, cataloged, and curated into the permanent collections of a museum repository. If paleontological resources are discovered, regardless of their scientific importance, paleontological monitoring shall be required for subsequent ground-disturbing activities at a frequency, depth, and/or interval determined by the paleontologist. Paleontological monitoring shall be conducted by a qualified paleontological monitor as set forth in the Society of Vertebrate Paleontology standards. At the conclusion of monitoring, a final monitoring report shall be prepared by the paleontologist to document the results of monitoring and project compliance with all regulations and project requirements. If scientifically important paleontological resources are recovered, this report shall also document those paleontological resources with a catalog, descriptions, and photographs as determined appropriate by the paleontologist. The final monitoring report shall be submitted to the City of Cypress Director of Community Development Department or designee for review and approval. A copy of this final report shall also accompany the fossil material to the museum repository.

Mitigation Measure GEO-3 **Worker Sensitivity Training**: Prior to issuance of grading permits, applicants for projects that would include ground-disturbing activities below 10 feet in undisturbed native sediments ranked as having a moderate or high paleontological sensitivity shall be required to retain a qualified paleontologist meeting the requirements set forth by the Society of Vertebrate Paleontology. Prior to and during initial ground-disturbing activities, the qualified paleontologist (or their designee) shall provide worker environmental awareness training to construction personnel. Training shall include recognition of potential fossil materials, appropriate worker response protocols, and contact information for the paleontologist.

4.7.9 Level of Significance after Mitigation

With implementation of **Regulatory Compliance Measure GEO-1** and **Mitigation Measures GEO-1** through **GEO-3,** all identified potentially significant impacts related to geotechnical hazards and paleontological resources would be reduced below a level of significance.

4.7.10 Cumulative Impacts

As defined in Section 15130 of the *State CEQA Guidelines*, cumulative impacts are the incremental effects of an individual project when viewed in connection with the effects of past, current, and probable future projects within the cumulative impact area for geology and soils. Typically, geology

and soils impacts are specific to a particular project area and there is little, if any, cumulative relationship between the development of a proposed project and development within a larger geographic area. Therefore, the cumulative impact area for geology and soils is the Buildout Area. Moreover, while seismic conditions are regional in nature, seismic impacts on a given project area are site-specific. For example, development within the Buildout Area would not alter geologic events or soil features/characteristics (such as ground shaking, seismic intensity, or soil expansion or compression). Therefore, the proposed project would not affect the level of intensity at which a seismic event on an adjacent site is experienced.

While seismic events may affect a broad region, development of the cumulative projects would not increase the intensity, frequency, or duration of seismic events or the properties of off-site geology or soils. The CBC (adopted by reference in Chapter 15.08 [Construction Codes] of the City's Municipal Code) contains provisions to safeguard against major structural failures or loss of life caused by earthquakes, liquefaction, ground shaking, landslides, and other seismically induced hazards, as codified in **Regulatory Compliance Measure GEO-1**. In addition, the Geotechnical Investigation recommendations would reduce potential impacts related to seismic ground shaking, liquefaction, compressible/collapsible soils, and paleontological resources as required by **Mitigation Measures GEO-1** and **GEO-3.**

Related projects would also require environmental review pursuant to CEQA including, as necessary, site-specific investigation of potential geologic, seismic, or soil-related impacts. It is reasonable to expect that such site-specific investigation would appropriately identify the siting, design, and construction criteria established in the CBC and/or by the City to address site-specific geologic/soil conditions affecting future development, and that the City would condition future development to fully satisfy said criteria. Therefore, any potential cumulative geologic, seismic, or soil-related impacts would be rendered to a less than significant level, and the project's contribution to such impacts would not be cumulatively considerable.

It is not anticipated that development of the related projects would have any geotechnical impact on the Buildout Area or the buildings that would be constructed as part of the proposed project, nor would the project have geotechnical impacts on any of the eight related projects identified in **Table 4.A: Summary of Related Projects,** in Chapter 4.0, Existing Setting. Therefore, the proposed project and the applicable related projects would not have the potential to cause cumulatively significant adverse impacts related to geology and soils.

Potential impacts of the proposed project to unknown paleontological resources and unique geologic features, when combined with the impacts of past, present, and reasonably foreseeable probable future projects in the City, could contribute to a cumulatively significant impact due to the overall loss of paleontological remains unique to the region. Some of the related projects identified in **Table 4.A** have undergone environmental review pursuant to CEQA, which included an analysis of potential impacts relating to paleontological resources. According to the EIRs prepared for the Shea Properties Mixed Use Development Project (Related Project 1) and Melia Homes -Citrus Square Project (Related Project 2) and the Initial Study/Mitigated Negative Declaration (IS/MND) prepared for the Goodman Commerce Center Project (Related Project 3), impacts related to paleontological resources would be less than significant with implementation of mitigation measures, including procedures for unexpected paleontological resources discoveries. The EIR prepared for the Los

Alamitos Medical Center Project (Related Project 7) determined that impacts related to paleontological resources would not occur with implementation of the Los Alamitos Medical Center Project and all three EIRs determined that cumulative impacts related to paleontological resources would be less than significant. The Sycamore Creek Charter School Project (Related Project 6) and 4562 Katella Avenue Project (Related Project 8) were determined to be exempt from CEQA review under Section 15332 of the *State CEQA Guidelines* (for infill development) and Notices of Exemption (NOEs) were prepared. In order for a project to be exempt under Section 15332 of the *State CEQA Guidelines*, the project must not result in significant effects due to unusual circumstances, which includes impacts to paleontological resources. As such, development of the related projects in combination with the proposed project would not result in significant impacts relating to paleontological resources. The LTP Modern Machine Project (Related Project 5) and 8561 Belmont Street Project (Related Project 4) would also be required to undergo environmental review pursuant to CEQA, which would include an analysis of potential impacts relating to paleontological resources and the identification of any mitigation measures to reduce potential impacts, if necessary. In addition, with implementation of **Mitigation Measures GEO-2** and **GEO-3**, implementation of the proposed project would not result in significant impacts on paleontological resources. If there were any potential for significant impacts to paleontological resources or unique geologic features, an investigation would be required to determine the nature and extent of the resources and identify appropriate mitigation measures. Since all projects within the cumulative study area would be required to implement appropriate mitigation measures and adhere to applicable regulations, implementation of the proposed project, when evaluated in combination with the development of projects listed in **Table 4.A: Summary of Related Projects**, would not contribute to a cumulatively considerable impact related to paleontological resources. Therefore, there would be no cumulatively significant impact related to paleontological resources.

4.8 GREENHOUSE GAS EMISSIONS

This section evaluates the potential impacts related to greenhouse gas (GHG) emissions from implementation of the Specific Plan 3.0 Buildout Project (proposed project) using methodologies and assumptions recommended in the air quality impact assessment guidelines of the South Coast Air Quality Management District (SCAQMD). This section summarizes existing GHG emissions and discusses global climate change, its causes, and the contribution of human activities. This section also estimates the likely GHG emissions that would result from construction and operational activities associated with build out of the proposed project, including vehicular traffic, energy consumption and other emission sources.

4.8.1 Scoping Process

The City of Cypress (City) received six comment letters during the public review period of the Notice of Preparation (NOP). For a copy of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). One of the comment letters, from the Southern California Association of Governments (SCAG), included comments related to GHG emissions.

SCAG recommended that this Draft EIR evaluate the proposed project's consistency with the Connect SoCal 2024 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (Connect SoCal 2024), which outlines goals to reduce greenhouse gas emissions, improve regional air quality, and support an integrated multimodal transportation network. Although SCAG does not implement or approve projects, it advised the City to consult the Connect SoCal 2024 Program Environmental Impact Report (PEIR) for guidance on identifying appropriate CEQA mitigation strategies. These may include measures to minimize emissions, reduce vehicle miles traveled, and enhance transportation efficiency. SCAG also highlighted that achieving regional sustainability goals depends on local agency action and encourages the use of a side-by-side consistency analysis comparing project features with Connect SoCal 2024 goals. These comments are addressed in this section.

4.8.2 Methodology

This Draft EIR uses the State-recommended approach of evaluating whether the project maintains consistency with Statewide climate goals by incorporating and enabling key planning-level GHG-reducing attributes. The significance of the project's GHG emissions impacts is based on the project's compliance with Statewide GHG reduction regulations and requirements, including the 2022 Scoping Plan and Connect SoCal 2024.

A lead agency may also use modeling to estimate GHGs from a project.[1] This allows the lead agency to quantify GHGs resulting from a project. Here, any quantification is for informational purposes, and is not used for a comparative analysis or as a threshold of significance. To that end, this section includes quantified GHG emissions from the California Emissions Estimator Model (CalEEMod) version 2022.1 to for both construction and operation activities associated with the proposed project. CalEEMod output is contained in **Appendix B.**

[1] *State CEQA Guidelines* Section 15064.4.

This estimate further serves to inform the public and decisionmakers of the extent to which the proposed project may increase or reduce GHGs compared to existing conditions. The primary purpose of quantifying the proposed project's GHG emissions is to satisfy *State CEQA Guidelines* Section 15064.4(a), which calls for a good-faith effort to describe and calculate emissions. The estimated emissions inventory is also used to estimate GHG reductions associated with the proposed project. However, the determination of whether or not the proposed project would have a significant impact with regard to GHG emissions is not based on the numeric or quantified GHG emissions resulting from the proposed project.

4.8.3 Existing Environmental Setting

The following describes existing GHG emissions in Cypress, beginning with typical GHG sources, impacts of global climate change, the regulatory framework surrounding these issues, and current emission levels.

4.8.3.1 Background

The following section provides background information on GHGs and global climate change.

Greenhouse Gases. Global climate change is the observed increase in the average temperature of the Earth's atmosphere and oceans in recent decades. The Earth's average near-surface atmospheric temperature rose 0.6 ± 0.2 degrees Celsius (°C) or 1.1 ± 0.4 degrees Fahrenheit (°F) in the 20th century. The prevailing scientific opinion on climate change is that most of the warming observed over the last 50 years is attributable to human activities. The increased amounts of carbon dioxide and other GHGs are the primary causes of the human-induced component of warming. GHGs are released by the burning of fossil fuels, land clearing, agriculture, and other activities, and lead to an increase in the greenhouse effect.[2]

GHGs are present in the atmosphere naturally, are released by natural sources, or are formed from secondary reactions taking place in the atmosphere. The gases that are widely seen as the principal contributors to human-induced global climate change are the following:

- Carbon dioxide (CO_2)
- Methane (CH_4)
- Nitrous oxide (N_2O)
- Hydrofluorocarbons (HFCs)
- Perfluorocarbons (PFCs)
- Sulfur hexafluoride (SF_6)

[2] The temperature on Earth is regulated by a system commonly known as the "greenhouse effect." Just as the glass in a greenhouse allows heat from sunlight in and reduces the heat escaping, GHGs such as carbon dioxide, methane, and nitrous oxide in the atmosphere keep the Earth at a relatively even temperature. Without the greenhouse effect, the Earth would be a frozen globe; thus, although an excess of GHGs results in global warming, the *naturally occurring* greenhouse effect is necessary to keep the planet at a comfortable temperature.

Over the last 200 years, humans have caused substantial quantities of GHGs to be released into the atmosphere. These extra emissions are increasing GHG concentrations in the atmosphere and enhancing the natural greenhouse effect, which is believed to be causing global warming. While man-made GHGs include naturally occurring GHGs such as CO_2, CH_4, and N_2O, some gases, such as HFCs, PFCs, and SF_6, are completely new to the atmosphere.

Certain gases, such as water vapor, are short-lived in the atmosphere. Others remain in the atmosphere for significant periods of time, contributing to climate change in the long term. Water vapor is excluded from the list of GHGs above because it is short-lived in the atmosphere and its atmospheric concentrations are largely determined by natural processes, such as oceanic evaporation. For the purposes of this analysis, the term "GHGs" will refer collectively only to the six gases listed above, consistent with the GHGs that the California Air Resources Board (CARB) is responsible to monitor and regulate.

These gases vary considerably in terms of Global Warming Potential (GWP), which is a concept developed to compare the ability of each GHG to trap heat in the atmosphere relative to another gas. The global warming potential is based on several factors, including the relative effectiveness of a gas to absorb infrared radiation and length of time that the gas remains in the atmosphere ("atmospheric lifetime"). The GWP of each gas is measured relative to carbon dioxide, the most abundant GHG; the definition of GWP for a particular GHG is the ratio of heat trapped by one unit mass of the GHG to the ratio of heat trapped by one unit mass of CO_2 over a specified time period. GHG emissions are typically measured in terms of pounds or tons of "CO_2 equivalents" (CO_2e). **Table 4.8.A: Global Warming Potential of Greenhouse Gases** shows the GWP for each type of GHG. For example, sulfur hexafluoride is 23,900 times more potent at contributing to global warming than carbon dioxide.

Table 4.8.A: Global Warming Potential of Greenhouse Gases

Gas	Atmospheric Lifetime (Years)	Global Warming Potential (100-year Time Horizon)
Carbon Dioxide (CO_2)	50–200	1
Methane (CH_4)	12	21
Nitrous Oxide (N_2O)	114	310
HFC-32	270	11,700
HFC-134a	14	140
HFC-152a	1.4	140
PFC: Tetrafluoromethane (CF_4)	50,000	6,500
PFC: Hexafluoromethane (C_2F_6)	10,000	9,200
Sulfur Hexafluoride (SF_6)	3,200	23,900

CARB = California Air Resources Board

The following summarizes the characteristics of the six GHGs and black carbon. Black carbon, a solid particle that is classified as a potent short-lived climate pollutant, also contributes to climate change and is therefore discussed below.

Carbon Dioxide. In the atmosphere, carbon generally exists in its oxidized form, as carbon dioxide (CO_2). Natural sources of CO_2 include the respiration (breathing) of humans, animals, and plants, volcanic out gassing, decomposition of organic matter and evaporation from the oceans. Human caused sources of CO_2 include the combustion of fossil fuels and wood, waste incineration, mineral production, and deforestation. Natural sources release approximately 150 billion tons of CO_2 each year, far outweighing the 7 billion tons of manmade emissions of CO_2 each year. Nevertheless, natural removal processes, such as photosynthesis by land- and ocean-dwelling plant species, cannot keep pace with this extra input of manmade CO_2, and consequently, the gas is building up in the atmosphere.

In 2022, total annual CO_2 accounted for approximately 81.0 percent of California's overall GHG emissions.[3] Transportation is the single largest source of CO_2 in California, which is primarily comprised of on-road travel. Electricity production, industrial and residential sources also make important contributions to CO_2 emissions in California.

Methane. Methane (CH_4) is produced when organic matter decomposes in environments lacking sufficient oxygen. Natural sources include wetlands, termites, and oceans. Decomposition occurring in landfills accounts for the majority of human-generated CH_4 emissions in California and in the United States as a whole. Agricultural processes such as intestinal fermentation, manure management, and rice cultivation are also significant sources of CH_4 in California. Total annual emissions of CH_4 accounted for approximately 9.8 percent of GHG emissions in California in 2022.[4]

Nitrous Oxide. Nitrous oxide (N_2O) is produced naturally by a wide variety of biological sources, particularly microbial action in soils and water. Tropical soils and oceans account for the majority of natural source emissions. Nitrous oxide is a product of the reaction that occurs between nitrogen and oxygen during fuel combustion. Both mobile and stationary combustion emit N_2O, and the quantity emitted varies according to the type of fuel, technology, and pollution control device used, as well as maintenance and operating practices. Agricultural soil management and fossil fuel combustion are the primary sources of human-generated N_2O emissions in California. Nitrous oxide emissions accounted for approximately 3.4 percent of GHG emissions in California in 2022.[5]

Hydrofluorocarbons, Perfluorocarbons, and Sulfur Hexafluoride. Hydrofluorocarbons (HFCs) are primarily used as substitutes for ozone-depleting substances regulated under the Montreal Protocol.[6] Perfluorocarbons (PFCs) and sulfur hexafluoride (SF_6) are emitted from various industrial processes, including aluminum smelting, semiconductor manufacturing, electric power transmission and distribution, and magnesium casting. There is no aluminum or magnesium production in California;

[3] California Air Resources Board (CARB). 2024. Assembly Bill 32 Greenhouse Gas Emissions Inventory for 2000-2022 – by Gas.

[4] Ibid.

[5] Ibid.

[6] The Montreal Protocol is an international treaty that was approved on January 1, 1989, and was designated to protect the ozone layer by phasing out the production of several groups of halogenated hydrocarbons believed to be responsible for ozone depletion.

however, the rapid growth in the semiconductor industry leads to greater use of PFCs. HFCs, PFCs, and SF_6 accounted for about 5.7 percent of GHG emissions in California in 2022.[7]

Black Carbon. Black carbon is the most strongly light-absorbing component of PM, formed by burning fossil fuels such as coal, diesel, and biomass. Black carbon is emitted directly into the atmosphere in the form of $PM_{2.5}$ and is the most effective form of PM, by mass, at absorbing solar energy. Per unit of mass in the atmosphere, black carbon can absorb one million times more energy than CO_2.[8] Black carbon contributes to climate change both directly, such as absorbing sunlight, and indirectly, such as affecting cloud formation. However, because black carbon is short-lived in the atmosphere, it can be difficult to quantify its effect on global warming.

Most U.S. emissions of black carbon come from mobile sources (52 percent), particularly from diesel-fueled vehicles. The other major source of black carbon is open biomass burning, including wildfires, although residential heating and industry also contribute. CARB estimates that the annual black carbon emissions in California will be reduced approximately 50 percent below 2013 levels by 2030.[9]

Emissions Inventories. An emissions inventory that identifies and quantifies the primary human-generated sources and sinks of GHGs is a well-recognized and useful tool for addressing climate change. This section summarizes the latest information on global, United States, and California GHG emission inventories.

Global Emissions. Worldwide emissions of GHGs in 2021, the latest inventory year available, totaled 19.2 billion metric tons (MT) of CO_2e. Global estimates are based on country inventories developed as part of the programs of the United Nations Framework Convention on Climate Change.[10]

United States Emissions. In 2022, the year for which the most recent data are available, the United States emitted about 6,343.2 million metric tons of CO_2e (MMT CO_2e). Overall, emissions in 2022 increased by 0.2 percent compared to the 2021 total GHG emissions. This increase in total GHG emissions was driven by fossil fuel combustion due primarily to economic activity rebounding after the height of the COVID-19 pandemic. However, GHG emissions in 2022 were 16.7 percent below those of 2005 levels. Of the five major sectors—residential and commercial, agricultural, industry, transportation, and electricity generation—transportation accounted for the highest amount of GHG

10 United Nations Framework Convention on Climate Change (UNFCCC). 2023. GHG Data from UNFCCC. Website: unfccc.int/process-and-meetings/transparency-and-reporting/greenhouse-gas-data/ghg-data-unfccc/ghg-data-from-unfccc (accessed October 2025).

emissions in 2022 (28 percent), with electricity generation second at 25 percent and emissions from industry third at 23 percent.[11]

State of California Emissions. The State emitted approximately 371.1 MMT CO_2e emissions in 2022, 9.3 MMT CO_2e lower than 2021 levels.[12] CARB estimates that transportation was the source of approximately 39 percent of the State's GHG emissions in 2022. The next largest sources included industrial sources at approximately 23 percent and electricity generation at 16 percent. The remaining sources of GHG emissions were residential activities at 8 percent, agriculture at 8 percent, and commercial activities at 6 percent.[13]

4.8.4 Regulatory Setting

The following section describes the federal, State, regional, and local regulatory framework applicable to analyzing potential impacts related to GHG emissions from development of the proposed project.

4.8.4.1 Federal Regulations

Federal regulations applicable to GHG emissions are described below.

Federal Clean Air Act. The United States has historically had a voluntary approach to reducing GHG emissions. However, on April 2, 2007, the United States Supreme Court ruled that the USEPA has the authority to regulate CO_2 emissions under the Federal Clean Air Act. While there currently are no adopted federal regulations for the control or reduction of GHG emissions, the USEPA commenced several actions in 2009 to implement a regulatory approach to global climate change.

This includes the 2009 USEPA final rule for mandatory reporting of GHGs from large GHG emission sources in the United States. Additionally, the USEPA Administrator signed an endangerment finding action in 2009 under the Federal Clean Air Act, finding that six GHGs (CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6) constitute a threat to public health and welfare, and that the combined emissions from motor vehicles cause and contribute to global climate change, leading to national GHG emission standards.

Energy Independence and Security Act. Signed on December 19, 2007 by President Bush, the Energy Independence and Security Act of 2007 (EISA) aims to: move the United States toward greater energy independence and security; increase the production of clean renewable fuels; protect consumers; increase the efficiency of products, buildings, and vehicles; promote research on and deploy greenhouse gas capture and storage options; improve the energy performance of the Federal Government; and increase U.S. energy security, develop renewable fuel production, and improve vehicle fuel economy. EISA reinforces the energy reduction goals for federal agencies put forth in Executive Order (EO) 13423, as well as introduces more aggressive requirements. The three key

[13] Ibid.

provisions enacted are the Corporate Average Fuel Economy (CAFE) Standards, the Renewable Fuel Standard, and the appliance/lighting efficiency standards.

Corporate Average Fuel Economy Standards. On March 31, 2022, the National Highway Traffic Safety Administration (NHTSA) finalized the CAFE standards for Model Years 2024–2026 Passenger Cars and Light Trucks. The amended CAFE standards would require an industry wide fleet average of approximately 49 miles per gallon for passenger cars and light trucks in model year 2026, by increasing fuel efficiency by 8 percent annually for model years 2024–2025, and 10 percent annually for model year 2026. The final standards are estimated to save about 234 billion gallons of gasoline between model years 2030 to 2050. Heavy-duty pickup truck and van fuel efficiency will increase 10 percent per year for model years 2030–2032 and 8 percent per year for model years 2033–2035.

4.8.4.2 State Regulations

Key efforts by the State are described below.

Executive Order S-3-05 (2005). Governor Arnold Schwarzenegger signed EO S-3-05 on June 1, 2005, which proclaimed that California is vulnerable to the impacts of climate change. To combat those concerns, the executive order established California's GHG emissions reduction targets:

- GHG emissions should be reduced to 2000 levels by 2010
- GHG emissions should be reduced to 1990 levels by 2020
- GHG emissions should be reduced to 80 percent below 1990 levels by 2050

Executive Order B-30-15 (2015). Governor Jerry Brown signed EO B-30-15 on April 29, 2015, which added the following immediate target:

- GHG emissions should be reduced to 40 percent below 1990 levels by 2030

All State agencies with jurisdiction over sources of GHG emissions were directed to implement measures to achieve reductions of GHG emissions to meet the 2030 and 2050 targets. The CARB was directed to update the AB 32 Scoping Plan to reflect the 2030 target and therefore is moving forward with the update process. The mid-term target is critical to help frame the suite of policy measures, regulations, planning efforts, and investments in clean technologies and infrastructure needed to continue reducing emissions.

Executive Order B-55-18. EO B-55-18, signed September 10, 2018, sets a goal "to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net negative emissions thereafter." EO B-55-18 directs the CARB to work with relevant State agencies to ensure future Scoping Plans identify and recommend measures to achieve the carbon neutrality goal. The goal of carbon neutrality by 2045 is in addition to other statewide goals, meaning not only should emissions be reduced to 80 percent below 1990 levels by 2050, but that, by no later than 2045, the remaining emissions be offset by equivalent net removals of CO_2e from the atmosphere, including through sequestration in forests, soils, and other natural landscapes.

Executive Order N-79-20. EO N-79-20, which was signed by the Governor on September 23, 2020, sets the following goals for the State: 100 percent of in-state sales of new passenger cars and trucks shall be zero-emission by 2035; 100 percent of medium- and heavy-duty vehicles in the State shall be zero-emission by 2045 for all operations where feasible and by 2035 for drayage trucks; and 100 percent of off-road vehicles and equipment in the State shall be zero-emission by 2035, where feasible.

Executive Order B-48-18. In January 2018, Governor Brown signed EO B-48-18 requiring all State entities to work with the private sector to have at least 5 million zero emission vehicle (ZEVs) on the road by 2030, as well as install 200 hydrogen fueling stations and 250,000 electric vehicle charging stations by 2025. It specifies that 10,000 of the electric vehicle charging stations should be direct current fast chargers. This order also requires all State entities to continue to partner with local and regional governments to streamline the installation of ZEV infrastructure. The Governor's Office of Business and Economic Development is required to publish a Plug-in Charging Station Design Guidebook and update the 2015 Hydrogen Station Permitting Guidebook to aid in these efforts. All State entities are required to participate in updating the 2016 Zero-Emissions Vehicle Action Plan to help expand private investment in ZEV infrastructure with a focus on serving low-income and disadvantaged communities. Additionally, all State entities are to support and recommend policies and actions to expand ZEV infrastructure at residential land uses, through the LCFS Program, and recommend how to ensure affordability and accessibility for all drivers.

Assembly Bill 32 (2006), California Global Warming Solutions Act. California's major initiative for reducing GHG emissions is Assembly Bill (AB) 32, passed by the State Legislature on August 31, 2006. This effort aims to reduce GHG emissions to 1990 levels by 2020. The CARB has established the level of GHG emissions in 1990 at 427 MMT CO_2e. The emissions target of 427 MMT requires the reduction of 169 MMT from the State's projected business-as-usual 2020 emissions of 596 MMT. AB 32 requires the CARB to prepare a Scoping Plan that outlines the main State strategies for meeting the 2020 deadline and to reduce GHGs that contribute to global climate change. The Scoping Plan was approved by the CARB on December 11, 2008, which contains the main strategies California will implement to achieve the reduction goals and includes CARB-recommended GHG reductions for each emissions sector of the State's GHG inventory.

Assembly Bill 32 (2006), California Global Warming Solutions Act. The CARB approved the First Update to the Climate Change Scoping Plan (First Update) on May 22, 2014. The First Update identifies opportunities to leverage existing and new funds to further drive GHG emission reductions through strategic planning and targeted low carbon investments. The First Update defines CARB climate change priorities until 2020 and also sets the groundwork to reach long-term goals set forth in EOs S-3-05 and B-16-2012. The First Update highlights California's progress toward meeting the "near-term" 2020 GHG emission reduction goals as defined in the initial Scoping Plan. It also evaluates how to align the State's "longer-term" GHG reduction strategies with other State policy priorities for water, waste, natural resources, clean energy, transportation, and land use. The CARB released a second update to the Scoping Plan, the 2017 Scoping Plan,[14] to reflect the 2030 target set by EO B-30-15 and codified by SB 32.

[14] California Air Resources Board (CARB). 2017a. *California's 2017 Climate Change Scoping Plan*. November.

A third update to the Scoping Plan, the 2022 Scoping Plan[15] was approved in December 2022 and assesses progress toward achieving the SB 32 2030 target and laying out a path to achieve carbon neutrality no later than 2045. The 2022 Scoping Plan focuses on outcomes needed to achieve carbon neutrality by assessing paths for clean technology, energy deployment, natural and working lands, and others, and is designed to meet the State's long-term climate objectives and support a range of economic, environmental, energy security, environmental justice, and public health priorities.

Senate Bill 350 (2015) Clean Energy and Pollution Reduction Act. Senate Bill (SB) 350, signed by Governor Jerry Brown on October 7, 2015, updates and enhances AB 32 by introducing the following set of objectives in clean energy, clean air, and pollution reduction for 2030:

- Raise California's renewable portfolio standard from 33 percent to 50 percent; and
- Increasing energy efficiency in buildings by 50 percent by the year 2030.

The 50 percent renewable energy standard will be implemented by the California Public Utilities Commission for the private utilities and by the California Energy Commission for municipal utilities. Each utility must submit a procurement plan showing it will purchase clean energy to displace other non-renewable resources. The 50 percent increase in energy efficiency in buildings must be achieved through the use of existing energy efficiency retrofit funding and regulatory tools already available to State energy agencies under existing law. The addition made by this legislation requires State energy agencies to plan for and implement those programs in a manner that achieves the energy efficiency target.

Senate Bill 32, California Global Warming Solutions Act of 2016, and Assembly Bill 197. In 2016, the Governor signed SB 32 and AB 197. SB 32 affirms the importance of addressing climate change by codifying into statute the GHG emissions reductions target of at least 40 percent below 1990 levels by 2030 contained in Governor Brown's April 2015 EO B-30-15. SB 32 builds on AB 32 and keeps California on the path toward achieving the State's 2050 objective of reducing emissions to 80 percent below 1990 levels, consistent with an IPCC analysis of the emissions trajectory that would stabilize atmospheric GHG concentrations at 450 parts per million CO_2e and reduce the likelihood of catastrophic impacts from climate change.

The companion bill to SB 32, AB 197, provides additional direction to the CARB related to the adoption of strategies to reduce GHG emissions. Additional direction in AB 197 meant to provide easier public access to air emissions data that are collected by the CARB was posted in December 2016.

Senate Bill 100. On September 10, 2018, Governor Brown signed SB 100, which raises California's Renewables Portfolio Standard (RPS) requirements to 60 percent by 2030, with interim targets, and 100 percent by 2045. The bill also establishes a State policy that eligible renewable energy resources and zero-carbon resources supply 100 percent of all retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all State agencies by December 31, 2045.

[15] California Air Resources Board (CARB). 2022a. *2022 Scoping Plan*. November 16. Website: https://ww2.arb.ca.gov/sites/default/files/2022-12/2022-sp.pdf (accessed October 2025).

Under the bill, the State cannot increase carbon emissions elsewhere in the western grid or allow resource shuffling to achieve the 100 percent carbon-free electricity target.

Assembly Bill 1279. AB 1279 was signed in September 2022 and codifies the State goals of achieving net carbon neutrality by 2045 and maintaining net negative GHG emissions thereafter. This bill also requires California to reduce statewide GHG emissions by 85 percent compared to 1990 levels by 2045 and directs CARB to work with relevant State agencies to achieve these goals.

California Building Efficiency Standards (Title 24, Part 6). The California Building Standards Code, or Title 24 of the California Code of Regulations (CCR) contains the regulations that govern the construction of buildings in California. Within the Building Standards Code, two parts pertain to the incorporation of both energy efficient and green building elements into land use development. Part 6 is California's Energy Efficiency Standards for Residential and Non-Residential Buildings. These standards were first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption and are updated on an approximately 3-year cycle to allow consideration and possible incorporation of new energy efficient technologies and methods. In November 2008, the California Building Standards Commission established the California Green Building Standards Code (CALGreen Code), which sets performance standards for residential and non-residential development to reduce environmental impacts and encourage sustainable construction practices. The CALGreen Code addresses energy efficiency, water conservation, material conservation, planning and design, and overall environmental quality. The current set of standards were adopted in 2022 and will apply to projects seeking building permits on or after January 1, 2023. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases GHG emissions.

Low Carbon Fuel Standard and Advanced Clean Cars. EO S-01-07 established a low carbon fuel standard (LCFS) with a Statewide goal to be established to reduce the carbon intensity of California's transportation fuels that applies to all refiners, blenders, producers, or importers ("Providers") of transportation fuels in California, including fuels used by off-road construction equipment. CARB approved amendments in 2018 to readjust carbon intensity benchmarks to meet California's 2030 GHG reductions targets under SB 32. These amendments include opportunities to promote ZEV adoption, carbon capture and sequestration, and advanced technologies for decarbonization of the transportation sector.

4.8.4.3 Regional Regulations

South Coast Air Quality Management District. In 2008, the SCAQMD formed a Working Group to identify GHG emissions thresholds for land use projects that could be used by local lead agencies in the Basin. The Working Group developed several different options that are contained in the SCAQMD 2008 draft guidance document titled Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans[16] that could be applied by lead agencies. On September 28, 2010, SCAQMD Working

[16] South Coast Air Quality Management District (SCAQMD). 2008. *Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans.* Website: https://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/ghgboardsynopsis.pdf (accessed October 2025).

Group Meeting No. 15 provided further guidance, including a tiered approach for evaluating GHG emissions for development projects where the SCAQMD is not the lead agency. The SCAQMD has not presented a finalized version of these thresholds to the governing board.

The SCAQMD identifies the emissions level for which a project would not be expected to substantially conflict with any State legislation adopted to reduce statewide GHG emissions. As such, the utilization of a service population represents the rates of emissions needed to achieve a fair share of the State's mandated emissions reductions. Overall, the SCAQMD identifies a GHG efficiency level that, when applied statewide or to a defined geographic area, would meet the 2020 and post-2020 emissions targets as required by AB 32 and SB 32. If projects are able to achieve targeted rates of emissions per the service population, the State will be able to accommodate expected population growth and achieve economic development objectives, while also abiding by AB 32's emissions target and future post-2020 targets.

Southern California Association of Governments. On April 4, 2024, SCAG adopted Connect SoCal—the 2024–2050 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal 2024) for the SCAG region.[17] In general, Connect SoCal 2024 outlines a development pattern for the region, which, when integrated with the transportation network and other transportation measures and policies, would reduce vehicle miles traveled from automobiles and light-duty trucks and thereby reduce GHG emissions from these sources. For the SCAG region, CARB has set GHG reduction targets at 19 percent below 2005 per capita emissions levels by 2035. Connect SoCal 2024 lays out a strategy for the region to meet these targets. Overall, Connect SoCal 2024 is meant to provide growth strategies that will achieve the regional GHG emissions reduction targets. Land use strategies to achieve the region's targets include planning for new growth around high-quality transit areas and livable corridors, and creating neighborhood mobility areas to integrate land use and transportation and plan for more active lifestyles.[18] However, local General Plans, Specific Plans, or zoning are not required to be consistent with Connect SoCal 2024; SCAG is required to consider local land use controls when drafting the RTP/SCS.

South Coast Air Quality Management District. In 2008, the SCAQMD formed a Working Group to identify GHG emissions thresholds for land use projects that could be used by local lead agencies in the Basin. The Working Group developed several different options that are contained in the SCAQMD 2008 draft guidance document titled Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans[19] that could be applied by lead agencies. On September 28, 2010, SCAQMD Working Group Meeting #15 provided further guidance, including a tiered approach for evaluating GHG

emissions for development projects where the SCAQMD is not the lead agency. The SCAQMD has not presented a finalized version of these thresholds to its Governing Board.

The SCAQMD identifies the emissions level for which a project would not be expected to substantially conflict with any State legislation adopted to reduce statewide GHG emissions. As such, the utilization of a service population represents the rates of emissions needed to achieve a fair share of the State's mandated emissions reductions. Overall, the SCAQMD identifies a GHG efficiency level that, when applied statewide or to a defined geographic area, would meet the post-2020 emissions targets as required by AB 32 and SB 32.

4.8.4.4 Local Regulations

The City of Cypress does not currently have an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions.

4.8.5 Thresholds of Significance

The thresholds of significance for greenhouse gas emissions impacts used in this analysis are consistent with Appendix G of the *State CEQA Guidelines*. Based on Appendix G, implementation of the proposed project would have a significant impact with respect to greenhouse gas emissions if it would:

Threshold 4.8.1: Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; or

Threshold 4.8.2: Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

Section 15064.4 of the *State CEQA Guidelines* provides that a lead agency should make a good-faith effort, based on scientific and factual data, to describe, calculate, or estimate the amount of GHG emissions resulting from a project. The Guidelines further provide that a lead agency has discretion to determine the appropriate methodology for evaluating significance, including the use of quantitative modeling, qualitative analysis, performance-based standards, or consistency with applicable plans and regulations. Consistent with Section 15064.4, this analysis quantitatively estimates both construction-related and operational GHG emissions associated with the proposed project. However, the quantification is for informational purposes, and is not used for a comparative analysis or as a threshold of significance.

4.8.5.1 SCAQMD Guidance

The SCAQMD released a draft guidance document in 2008 titled, *Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold*,[20] which presented potential screening thresholds and a tiered evaluation framework. However, the SCAQMD's draft interim CEQA thresholds guidance document was not adopted or approved by its Governing Board, and therefore no SCAQMD-adopted quantitative thresholds are applicable to the proposed project. Accordingly, the

City does not rely on the SCAQMD's draft numeric screening thresholds as significance criteria for this project.

4.8.5.2 Selected Thresholds for Proposed Project Analysis

Because no locally adopted quantitative GHG threshold or CEQA-qualified Climate Action Plan applies to the project, the City evaluates significance based on:

- Consistency with statewide GHG reduction regulations and policies, including the CARB 2022 Climate Change Scoping Plan;
- Consistency with Connect SoCal 2024, which integrates regional growth projections and greenhouse gas reduction targets consistent with SB 375; and
- Consideration of applicable statewide regulatory programs that will reduce emissions intensity over time (e.g., SB 100, Advanced Clean Cars II, Low Carbon Fuel Standard, Title 24).

The 2022 Climate Change Scoping Plan provides statewide policy guidance and identifies strategies and planning considerations that support long-term decarbonization. The Scoping Plan's discussion of project attributes is used in this analysis as qualitative guidance to inform the overall evaluation of consistency with statewide climate policy. The City's significance determination is based on the project's incremental contribution to cumulative emissions in light of statewide regulatory programs and regional planning assumptions.

Neither CARB nor SCAQMD has adopted a quantitative threshold of significance for construction-related GHG emissions. Consistent with *State CEQA Guidelines* Section 15064.4, construction emissions are quantitatively estimated and disclosed along with operational emissions as part of a good-faith effort to estimate project emissions and to inform the overall significance determination.

4.8.5.3 Summary of Significance Framework

The significance of greenhouse gas emissions for the proposed project is determined based on whether the project's incremental contribution to cumulative GHG emissions would be cumulatively considerable in light of:

- Statewide statutory emission reduction targets,
- Regional growth assumptions and emissions modeling,
- Applicable regulatory programs, and
- Project-specific mitigation measures.

The City recognizes that GHG impacts are inherently cumulative and therefore evaluates the project's consistency with statewide and regional emissions reduction trajectories rather than relying on a single numeric threshold, consistent with *State CEQA Guidelines* Section 15064.4.

4.8.6 Project Impacts

Threshold 4.8.1: Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Threshold 4.8.2: Would the project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

***Less than Significant Impact with Mitigation*.** The proposed project consists of the reasonably foreseeable buildout of a portion of the area governed by the Cypress Town Center and Commons Specific Plan that includes approximately 134 acres of land in the City. The proposed project would include the development of up to 1,791 additional residential units within the Buildout Area and 440,000 square feet of non-residential development. The following analysis describes the construction- and operation-related GHG emissions associated with buildout of the proposed project and assesses whether the project's incremental contribution to cumulative GHG emissions would be cumulatively considerable.

Consistent with *State CEQA Guidelines* Section 15064.4, construction and operational GHG emissions associated with the proposed project are quantitatively estimated to disclose the magnitude and sources of emissions.

As described below, with implementation of **Mitigation Measure GHG-1**, **Mitigation Measure AIR-1**, and **Mitigation Measure TRA-1**, impacts related to greenhouse gas emissions would be **less than significant with mitigation**.

Construction Greenhouse Gas Emissions. The following analysis estimates the potential construction GHG emissions associated with future buildout envisioned under the proposed project. These estimates are for informational purposes and provided to supplement the environmental analysis and public disclosure requirements of CEQA in accordance with *State CEQA Guidelines* Section 15064.4.

Construction activities associated with future buildout envisioned under the proposed project would produce combustion emissions from various sources. During construction, GHGs would be emitted through the operation of construction equipment and from worker and builder supply vendor vehicles, each of which typically use fossil-based fuels to operate. The combustion of fossil-based fuels creates GHGs such as CO_2, CH_4, and N_2O. Furthermore, CH_4 is emitted during the fueling of heavy equipment. Exhaust emissions from on-site construction activities would vary daily as construction activity levels change.

Construction emissions were estimated for future buildout envisioned under the proposed project using CalEEMod. As described in Section 4.3, Air Quality, information regarding the exact scope of each future development project is not yet known; however, construction is assumed to commence in 2026 and conclude in 2038, which was the assumption included in CalEEMod. Construction activities would include demolition, site preparation, grading, building construction, paving, and architectural coatings (painting). The proposed project would require the cut of 248,600 cubic yards of soil and fill of 333,500 cubic yards of soil, which would result in the net import of 84,900 cubic yards of soil, which was also included in CalEEMod. In addition, the proposed project would require the

demolition of approximately 768,360 square feet of existing buildings. Based on information provided by the project applicant, demolition activities would require the use of up to four excavators, two track loaders, a crawler crane, and several bobcats/backhoes, which were included in CalEEMod. This analysis uses default construction equipment in CalEEMod for all other construction phases. This analysis also conservatively assumes the use of Tier 2 construction equipment and that the proposed project would comply with SCAQMD Rule 403 dust control measures. It should be noted that this is a conservative analysis that does not take into account the expected emission reductions that would be achieved through the implementation of **Mitigation Measure AIR-2**, which requires the use of Tier 4 Final or cleaner construction equipment if and to the extent commercially available, or the cleanest available technology that is commercially available and feasible. All other construction details are not yet known; therefore, default assumptions (e.g., construction worker and truck trips and fleet activities) from CalEEMod were used. CalEEMod output sheets are included in **Appendix B**.

Using CalEEMod, it is estimated that future buildout envisioned under the proposed project would generate approximately 32,899.0 MT CO_2e during the 12-year construction period of the project. Construction GHG emissions were amortized over the life of the project (assumed to be 30 years) and added to the operational emissions. When annualized over the life of the project, amortized construction emissions would be approximately 1,096.6 MT CO_2e.

Operational Greenhouse Gas Emissions. As identified above, the proposed project consists of the reasonably foreseeable buildout of up to 1,791 additional residential units within the Buildout Area and 440,000 square feet of non-residential development. As such, the following analysis estimates the potential operational-related energy usage associated with future buildout envisioned under the proposed project.

Long-term GHG emissions are typically generated from mobile sources (e.g., vehicle trips), area sources (e.g., maintenance activities and landscaping), and indirect emissions from sources associated with energy consumption, waste sources (land filling and waste disposal), and water sources (water supply and conveyance, treatment, and distribution). Mobile-source GHG emissions would include project-generated vehicle trips to and from the project. Area-source emissions would be associated with activities such as landscaping and maintenance in the Buildout Area. Energy source emissions would be generated at off-site utility providers because of increased electricity demand generated by the project. Waste source emissions generated by the proposed project include energy generated by land filling and other methods of disposal related to transporting and managing project-generated waste. In addition, water source emissions associated with the proposed project are generated by water supply and conveyance, water treatment, water distribution, and wastewater treatment.

In accordance with *State CEQA Guidelines* Section 15064.4(c), GHG emissions were estimated for future buildout envisioned by the proposed project using CalEEMod, assuming up to 1,791 residential units and 440,000 square feet of non-residential development as identified in **Table 3.B** in Chapter 3.0, Project Description. Trip generation rates used in CalEEMod for project were based on the project's trip generation estimate of 21,041 net new average daily trips, as identified in **Table 4.17.A** in Section 4.17, Transportation. It is not yet known whether future buildout under the proposed project would include natural gas; therefore, this analysis conservatively uses default assumptions for natural gas usage. This analysis assumes there would be no woodburning hearths. Where project-specific data were not available, default assumptions (e.g., electricity usage, water usage, and solid

waste generation) from CalEEMod were used to estimate project emissions. **Table 4.8.B**: **Greenhouse Gas Emissions (MT/yr)** shows the calculated GHG emissions for the proposed project. The emissions presented in **Table 4.8.B** are for informational purposes and conservative as they do not take into account the emissions from the existing uses, except for the existing trip generation.

Table 4.8.B: Greenhouse Gas Emissions (MT/yr)

Emissions Source	Operational Emissions (MT/yr)			
	CO_2	CH_4	N_2O	CO_2e
Mobile Sources	16,389.0	0.7	0.7	16,606.0
Area Sources	406.8	<0.1	<0.1	407.3
Energy Sources	3,493.4	0.4	<0.1	3,510.4
Water Sources	170.2	3.3	0.1	275.6
Waste Sources	161.6	16.1	0.0	565.3
Total Project Operational Emissions				**21,364.6**
Amortized Construction Emissions				1,096.6
Total Annual Emissions				**22,461.2**

Source: Compiled by LSA (November 2025).
CH_4 = methane
CO_2 = carbon dioxide
CO_2e = carbon dioxide equivalent
MT/yr = metric tons per year
N_2O = nitrous oxide
SCAQMD = South Coast Air Quality Management District

The proposed project would generate approximately 22,461 MT CO_2e per year, including amortized construction emissions. The City has made a good-faith effort to quantify both construction-related and operational GHG emissions associated with the proposed project using available project information and accepted modeling tools. The resulting emissions estimates are provided to disclose the anticipated magnitude and sources of project-related GHG emissions and to inform decision makers and the public. However, the significance determination is not based on the magnitude of quantified emissions, but rather on evaluation of the project's consistency with applicable statewide and regional policies, regulatory programs, and mitigation measures, as further discussed below.

As described in Section 4.8.5, no locally adopted quantitative GHG threshold or CEQA-qualified Climate Action Plan apply to the project. Therefore, the City evaluates significance based on *State CEQA Guidelines* Section 15064.4, which allows lead agencies to consider quantified emissions, consistency with applicable plans and regulations, or the extent to which a project contributes to cumulative greenhouse gas emissions in light of Statewide and regional emissions reduction programs. The following analysis follows the State-recommended framework described in the 2022 Scoping Plan to evaluate whether the project generally aligns with statewide climate goals through the incorporation of planning-level GHG-reducing attributes. Accordingly, the significance determination is based on the project's consistency with applicable Statewide and regional GHG reduction policies, including the 2022 Scoping Plan and Connect SoCal 2024.

CARB's Scoping Plan. The following discussion evaluates future buildout envisioned under the proposed project according to the goals of the 2022 Scoping Plan, EO B-30-15, AB 1279, SB 32, and AB 197.

EO B-30-15 established an interim target of reducing statewide GHG emissions to 40 percent below 1990 levels by 2030. SB 32 codified this target and reinforced California's long-term emissions reduction trajectory established under AB 32. The companion bill to SB 32, AB 197, provides additional direction to the CARB related to the adoption of strategies to reduce GHG emissions. AB 1279 establishes State policy to achieve carbon neutrality and to reduce Statewide anthropogenic GHG emissions to at least 85 percent below 1990 levels by 2045.

The 2022 Scoping Plan[21] establishes a statewide strategy for achieving these statutory goals. The Scoping Plan is a statewide policy document and does not establish project-level CEQA significance thresholds. Rather, it identifies sector-based decarbonization strategies, regulatory programs, and broad land use and transportation policies intended to reduce emissions over time through widespread implementation. The 2022 Scoping Plan emphasizes expansion of clean energy generation, electrification of buildings and transportation systems, and transition away from fossil fuel use. Statewide programs such as EO N-79-20, which directs that all new passenger vehicles sold in California be zero-emission by 2035, are anticipated to substantially reduce transportation-related emissions over time.

Appendix D (Local Actions)[22] of the 2022 Scoping Plan includes "key project attributes" that may indicate alignment of residential or mixed-use development with statewide climate objectives. These attributes are not mandatory requirements and do not constitute adopted CEQA thresholds of significance. Instead, they provide general guidance for evaluating whether development patterns support the State's long-term decarbonization strategy.

The City reviewed the proposed project relative to the 2022 Scoping Plan's policy framework. **Table 4.8.C: Project Consistency with the 2022 Scoping Plan Key Residential and Mixed-Use Project Attributes that Reduce GHGs** summarizes project consistency with the Scoping Plan's planning-level attributes. The analysis demonstrates that the project generally supports the State's decarbonization strategy through infill development patterns, transit accessibility, and implementation of project-specific mitigation measures.

With implementation of **Mitigation Measure AIR-1**, future development facilitated by the proposed project would provide enhanced electric vehicle charging infrastructure consistent with Scoping Plan guidance. The project would also avoid conversion of natural or working lands and, with implementation of **Mitigation Measure TRA-1**, would incorporate transportation demand management strategies supportive of reduced vehicle travel. Building energy performance and electrification measures required under **Mitigation Measure GHG-1** further support long-term building decarbonization objectives.

Table 4.8.C: Project Consistency with the 2022 Scoping Plan Key Residential and Mixed-Use Project Attributes that Reduce GHGs

Priority Areas	Key Project Attribute	Would the Project Conflict?
Transportation Electrification	Provides EV charging infrastructure that, at minimum, meets the most ambitious voluntary standard in the California Green Building Standards Code at the time of project approval.	***No Conflict.*** The CALGreen Code requires provision of infrastructure to accommodate electric vehicle (EV) chargers for new single-family and attached dwelling units/town houses. It is not yet known whether future development facilitated by the proposed project would include electric vehicle charging; however, **Mitigation Measure AIR-1** requires that all future development facilitated the proposed project install EV charging capabilities that meet the requirements of the latest version of the CALGreen Code Tier 2 Voluntary Standards. With implementation of **Mitigation Measure AIR-1**, the proposed project would not conflict with this key project attribute.
VMT Reduction	Is located on infill sites that are surrounded by existing urban uses and reuses or redevelops previously undeveloped or underutilized land that is presently served by existing utilities and essential public services (e.g., transit, streets, water, sewer).	***No Conflict.*** The Buildout Area consists of 134 acres within the boundaries of the Specific Plan. As stated above, the Buildout Area is currently surrounded by a variety of land uses, including commercial, office, business park, retail, park, residential, religious facilities, and mixed-use land uses. The Buildout Area is currently occupied by the Los Alamitos Race Course and related facilities is presently served by existing utilities and essential public services (e.g., transit, streets, water, sewer). As such, the project would facilitate development on infill sites surrounded by existing urban uses.
	Does not result in the loss or conversion of natural and working lands.	***No Conflict.*** The Buildout Area is surrounded by a variety of commercial, office, business park, commercial and retail services, park, residential uses, and religious facilities uses. The Specific Plan designates the Buildout Area for a mix of urban land uses, including parks, residential and local serving commercial uses. The Buildout Area is not currently zoned for or used as natural or working lands. Therefore, the proposed project would not conflict with this key project attribute.
	Consists of transit-supportive densities (minimum of 20 residential dwelling units per acre), or is in proximity to existing transit stops (within a half mile), or satisfies more detailed and stringent criteria specified in the region's SCS.	***No Conflict with Mitigation Measure TRA-1.*** The Specific Plan includes six land use districts that permit the development of residential, commercial, retail, restaurant, entertainment and park and recreational uses within the Buildout Area. Within the land use districts that permit residential uses (which includes all of the land use districts other than the Public Park District), the maximum residential densities range from 8 dwelling units/acre (du/ac) to 30 du/ac. In addition, bus service is currently provided by the Orange County Transportation Authority (OCTA) along Katella Avenue and Valley View Street. All future development facilitated by the proposed project would be required to comply with City policies regarding bicycle parking and other infrastructure. Additionally, the proposed

Table 4.8.C: Project Consistency with the 2022 Scoping Plan Key Residential and Mixed-Use Project Attributes that Reduce GHGs

Priority Areas	Key Project Attribute	Would the Project Conflict?
		project would implement **Mitigation Measure TRA-1**, which requires that any future project applicants for residential development projects within the Buildout Area demonstrate the project's consistency with the Specific Plan-level vehicle miles traveled (VMT) mitigation framework that applies to such project prior to its approval. This framework provides for the construction or improvement of bicycle facilities or sidewalks, which would encourage non-vehicular transportation. Therefore, future buildout envisioned under the proposed project would support the ability to use alternative modes of transportation. Because the proposed project would promote initiatives to reduce vehicle trips and VMT and would increase the use of alternate means of transportation, The proposed project would not conflict with this key project attribute.
	Reduces parking requirements by: eliminating parking requirements or including maximum allowable parking ratios (i.e., the ratio of parking spaces to residential units or square feet); or providing residential parking supply at a ratio of less than one parking space per dwelling unit; or for multifamily residential development, requiring parking costs to be unbundled from costs to rent or own a residential unit.	***No Conflict with Mitigation Measure TRA-1.*** The Specific Plan requires future development within the Buildout Area to comply with the parking standards established in the Cypress Zoning Ordinance. Accordingly, the proposed project does not include policies or development standards that would reduce parking requirements (e.g., elimination of minimum parking requirements, parking maximums, reduced residential parking ratios, or unbundled residential parking costs). However, **Mitigation Measure TRA-1** requires that future residential development projects demonstrate consistency with the Specific Plan-VMT mitigation framework prior to project approval. This requirement ensures that future projects incorporate transportation demand management measures and project design features intended to reduce automobile travel and associated VMT. Therefore, although the proposed project does not directly reduce parking requirements, implementation of **Mitigation Measure TRA-1** would ensure that the project does not conflict with this key Scoping Plan attribute from an overall VMT reduction perspective.
	At least 20 percent of units included are affordable to lower-income residents.	***No Conflict.*** The proposed project does not conflict with this goal because it delivers a range of residential uses, from single-family to high-density housing. This diversity of housing types would offer options to accommodate varying household needs within the community. As such, the project supports the provision of varied housing opportunities and would not conflict with this policy.

Table 4.8.C: Project Consistency with the 2022 Scoping Plan Key Residential and Mixed-Use Project Attributes that Reduce GHGs

Priority Areas	Key Project Attribute	Would the Project Conflict?
	Results in no net loss of existing affordable units.	***No Conflict.*** The proposed project would require the demolition and removal of all or a substantial portion of the existing improvements associated with Los Alamitos Race Course, including the race track and infield area, grandstand, buildings, barns and structures and two artificial lakes. The removal of these structures would not result in a net loss of existing affordable uses. As such, the proposed project would not conflict with this key project attribute.
Building Decarbonization	Uses all-electric appliances without any natural gas connections and does not use propane or other fossil fuels for space heating, water heating, or indoor cooking.	***No Conflict with Mitigation Measure GHG-1***. The specific building systems and energy sources for future development facilitated by the proposed project have not yet been determined; therefore, it is not known at this time whether all future development would be fully all-electric or include natural gas infrastructure. However, **Mitigation Measure GHG-1** requires future development projects to either implement all-electric building design or, where all-electric design is determined to be infeasible, incorporate additional greenhouse gas reduction measures to minimize emissions associated with building energy use. These measures include, but are not limited to, exceeding applicable Title 24 energy efficiency standards, achieving Leadership in Energy and Environmental Design (LEED) or equivalent sustainability performance, installation of on-site solar photovoltaic (PV) systems, and implementation of energy and water conservation features. Through implementation of **Mitigation Measure GHG-1**, future development would reduce building-related GHG emissions consistent with statewide building decarbonization objectives identified in the 2022 Scoping Plan. Therefore, the proposed project would not conflict with this key Scoping Plan attribute.

Source: CARB (2022) and Compiled by LSA (November 2025).

California has adopted numerous statewide regulatory programs that will substantially reduce emissions intensity over time, including:

- Advanced Clean Cars II and Executive Order N-79-20 (100 percent new passenger vehicle ZEV sales by 2035);
- The Low Carbon Fuel Standard;
- Senate Bill 100 (carbon-free electricity by 2045);

- Title 24 Building Energy Efficiency Standards;
- CALGreen standards; and
- Senate Bill 1383 methane reduction requirements.

Transportation emissions represent the largest portion of project operational emissions. Although the project would introduce additional vehicle trips, per-mile GHG intensity is expected to decline substantially over the life of the project due to mandatory fleet electrification and fuel decarbonization requirements. Similarly, electricity-related emissions will decline as grid carbon intensity decreases pursuant to SB 100. Therefore, while the project would generate operational emissions, those emissions will occur within a regulatory environment designed to ultimately reduce GHG emissions from transportation-related sources on a statewide basis, independent of project-specific mitigation.

As discussed in Section 4.17, Transportation, the project would result in a significant and unavoidable VMT impact under *State CEQA Guidelines* Section 15064.3. VMT significance under CEQA evaluates transportation efficiency and environmental impacts associated with vehicle travel patterns. It does not, by itself, determine whether a project's GHG emissions are cumulatively considerable. Although transportation activity would increase, statewide regulatory programs will reduce GHG emissions per mile traveled over time. Therefore, a significant VMT impact does not compel a conclusion that the project's GHG emissions would conflict with statewide climate goals. GHG impacts are evaluated separately pursuant to *State CEQA Guidelines* Section 15064.4.

To provide additional context, the City evaluated the project's operational greenhouse gas emissions on a per capita basis. Based on an estimated residential population of approximately 5,516 persons at buildout, annual operational emissions of approximately 22,461 MT CO_2e equate to approximately 4.1 MT CO_2e per capita per year**.** For comparison, California's statewide per capita emissions were approximately 9 MT CO_2e per person in recent reporting years. The project's per capita emissions are therefore substantially below the current statewide average and are expected to decline further over time due to fleet electrification, fuel decarbonization, and grid decarbonization under SB 100 and related regulatory programs. This per capita efficiency analysis demonstrates that the project would accommodate State-mandated housing growth at an emissions intensity consistent with Statewide climate objectives.

Furthermore, **Mitigation Measure GHG-1** as presented below, **Mitigation Measure AIR-1**, and **Mitigation Measure TRA-1** require:

- All-electric design or implementation of feasible GHG reduction measures for mixed-fuel projects;
- Enhanced EV charging infrastructure; and
- Transportation demand management strategies.

These measures further reduce project emissions and support long-term decarbonization.

The City has determined that prohibiting natural gas usage is infeasible due to cost-effectiveness considerations, based in part on 2022 studies conducted by the California Public Utilities Commission (CPUC) and the California Energy Commission (CEC).[23] Furthermore, in 2023 and again in 2024, the Ninth Circuit Court of Appeals held that a City ordinance prohibiting natural gas infrastructure in new construction was preempted by the federal Energy Policy and Conservation Act and was therefore unlawful.[24] For these reasons, the City, as lead agency for the environmental review of the proposed project, has found that requiring mitigation to prohibit the usage of natural gas in future projects is not feasible. Accordingly, **Mitigation Measure GHG-1** requires that future development under the proposed project either be all-electric or incorporate additional emission reduction measures if all-electric development is not feasible.

Mitigation Measure GHG-1

Prior to issuance of building permits, project applicants for future development within the Buildout Area shall demonstrate to the satisfaction of the City of Cypress (City) Planning Division that the proposed buildings incorporate feasible greenhouse gas (GHG) reduction strategies consistent with current State and local decarbonization goals. Compliance shall be demonstrated through building plans, energy modeling, California Green Building Standards Code (CALGreen Code) checklists, or similar documentation submitted during the plan check process, as deemed necessary by the City.

Future project applicants shall comply with either the All-Electric Design Path or the Efficient Mixed-Fuel Design Path, as described below:

Preferred Compliance Path: All Electric Design - Future development shall be designed and constructed without natural gas infrastructure or natural gas appliances. All space heating, water heating, cooking, and clothes drying systems shall be fully electric. Electrical service panels shall be sized to accommodate expected loads and future electrification needs.

Alternative Compliance Path: Efficient Mixed-Fuel Design - If a project proposes to install natural gas infrastructure or natural gas appliances, a future project applicant shall implement a combination of GHG reduction measures sufficient to minimize GHG emissions from natural gas usage to the maximum extent feasible. Measures may include, but are not limited to, the following:

[23] Southern California Edison (SCE). 2022. *2019 Reach Code Cost-Effectiveness Analysis. Full Service and Quick-Service Restaurants.* February.

[24] United States Court of Appeals for the Ninth Circuit. Filed April 17, 2023. California Restaurant Association v. City of Berkeley, (9th Cir. 2023) 65 F. 4th 1045, amended and superseded by (9th Cir. 2024) 89 F.4th 1094.

- Exceed Title 24, Part 6 (Building Energy Efficiency Standards) performance requirements by 10–20 percent, where feasible, as demonstrated through energy modeling or prescriptive compliance documentation.
- Install on-site solar photovoltaic (PV) systems to the maximum feasible extent, including on rooftops and parking canopy structures, where structurally and technically feasible.
- Provide electric-ready infrastructure, including service panel capacity, conduit, wiring, and dedicated circuits, to allow future conversion to all-electric appliances and systems.
- Design buildings to achieve, at minimum, Leadership in Energy and Environmental Design (LEED) Silver certification or an equivalent third-party green building rating.
- Install programmable thermostats, advanced metering infrastructure, and smart home energy management systems.
- Provide heating, ventilation, and air conditioning (HVAC) commissioning consistent with CALGreen Code Sections 5.410.2–5.410.4, including a commissioning plan, functional performance testing, and a commissioning report.
- Install cool roof materials meeting an aged solar reflectance of ≥ 0.30, or the most current CALGreen Code requirement, whichever is more stringent.
- Provide infrastructure to accommodate up to 50 percent recycled water use for landscape irrigation, where recycled water supply is available.
- Use water-efficient irrigation systems, minimize turf, and incorporate native, low-water, or drought-tolerant plant species.
- Install rainwater harvesting systems, where feasible.
- Prohibit or restrict the use of potable water for cleaning non-vegetated outdoor surfaces and prohibit systems that apply water to hardscape surfaces.
- Implement and maintain robust solid waste diversion programs, including recycling and organic waste collection consistent with Senate Bill (SB) 1383 requirements.

- All selected GHG reduction measures shall be clearly identified on improvement plans and construction drawings. Compliance with this measure shall be verified by City staff during plan check and confirmed through building inspection prior to final occupancy.

With implementation of **Mitigation Measure GHG-1**, the proposed project would incorporate building design and operational measures that reduce greenhouse gas emissions and support the decarbonization strategies identified in the 2022 Scoping Plan. While the project may not include every planning-level attribute described in the Scoping Plan, those attributes are intended as qualitative guidance and do not constitute adopted CEQA significance thresholds. Based on the project's overall consistency with statewide regulatory programs and long-term emissions reduction strategies, the City concludes that the project would generally align with the policy objectives of the 2022 Scoping Plan and would not, on this basis, conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing greenhouse gas emissions.

SCAG's 2024-2050 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal 2024). Connect SoCal 2024 identifies land use strategies intended to reduce VMT and GHG emissions by focusing housing and employment growth in urbanized areas served by transit and other opportunity areas. The RTP/SCS emphasizes integrated land use and transportation planning, improved system efficiency, complete streets, preservation of the transportation system, expansion of transit options, and promotion of compact development patterns.

Connect SoCal 2024 includes transportation investments and regional growth forecasts that collectively demonstrate achievement of CARB-assigned greenhouse gas reduction targets under SB 375. Specifically, Connect SoCal 2024 demonstrates attainment of the regional target of reducing per-capita GHG emissions from passenger vehicles and light-duty trucks by 19 percent by 2035 compared to 2005 levels. While Connect SoCal 2024 does not require local General Plans, Specific Plans, or zoning to be consistent with the strategy, it establishes a regional framework that encourages local jurisdictions to align land use decisions with regional sustainability objectives.

The proposed project consists of reasonably foreseeable buildout of a portion of the Specific Plan area, including development of up to 1,791 residential units and 440,000 square feet of non-residential uses within an existing urbanized area. The Buildout Area has been identified in the Housing Element and would assist the City in meeting its Regional Housing Needs Allocation (RHNA) obligations. RHNA allocations are incorporated into SCAG's regional growth forecasts and are therefore represented within the assumptions used in the emissions modeling completed for Connect SoCal 2024.

Connect SoCal 2024's modeling assumes housing growth consistent with RHNA allocations while demonstrating achievement of regional per-capita GHG reduction targets. The number of residential units in the proposed project does not exceed SCAG's regional growth assumptions. As an infill development located within an existing urbanized area and near existing transit service, the project's development pattern is consistent with the strategy of accommodating growth in developed areas to reduce pressure for outward expansion and associated transportation emissions contained in Connect SoCal 2024.

According to the United States Census Bureau, the average household size in Cypress from 2019-2023 was approximately 3.08 persons per household.[25] Based on this ratio, the proposed project would accommodate approximately 5,516 persons at full buildout. According to the Connect SoCal 2024 Growth Forecast Technical Report,[26] Cypress's population is anticipated to increase from approximately 50,200 people in 2019 to 56,200 people in 2050, and the City's Sixth Cycle RHNA allocation identifies a housing need of 3,936 units for the 2021–2029 planning period.[27] Development facilitated by the proposed project would contribute to accommodating this planned regional growth rather than introducing growth beyond that contemplated in Connect SoCal 2024.

Because the project implements planned housing growth assumed within SCAG's CARB-certified regional emissions modeling framework, implementation of the project would not interfere with SCAG's ability to achieve the regional greenhouse gas reduction targets established under SB 375. In addition, mitigation measures incorporated into the project, including **Mitigation Measure GHG-1, Mitigation Measure AIR-1,** and **Mitigation Measure TRA-1**, are generally consistent with strategies identified in the Connect SoCal 2024 Program Environmental Impact Report for reducing emissions and improving transportation efficiency.

Accordingly, the proposed project would be consistent with the land use and growth assumptions underlying Connect SoCal 2024 and would not conflict with the region's ability to achieve adopted GHG reduction targets. As identified above, the proposed project would help the City meet its RHNA allocation, which is consistent with SCAG's objectives to provide more housing in Priority Development Areas to preserve natural lands and open spaces and to address the existing housing need as defined by the RHNA. As such, the proposed project would be consistent with Connect SoCal 2024.

Summary. As discussed above, the proposed project would be consistent with the land use and growth assumptions underlying Connect SoCal 2024 and would implement planned housing growth identified in the City's adopted and HCD-certified Housing Element. The project's GHG emissions were quantitatively estimated for both construction and operational phases in accordance with *State CEQA Guidelines* Section 15064.4 and were evaluated in the context of statewide regulatory programs, regional emissions reduction strategies, and project-specific mitigation measures. The CARB 2022 Climate Change Scoping Plan was used as statewide policy guidance to inform the analysis. The City considered the project's overall consistency with statewide and regional emissions reduction trajectories, including implementation of State-mandated housing growth within a CARB-certified regional planning framework. With implementation of **Mitigation Measure GHG-1**, **Mitigation Measure AIR-1**, and **Mitigation Measure TRA-1**, the project's incremental contribution to cumulative GHG emissions would not be cumulatively considerable. Therefore, impacts related to the generation of greenhouse gas emissions, either directly or indirectly, and potential conflict with applicable plans,

27 Southern California Association of Governments (SCAG). 2021. SCAG 6th Cycle Final RHNA Allocation Plan. Website: https://scag.ca.gov/sites/main/files/file-attachments/6th_cycle_final_rhna_allocation_plan_070121.pdf?1646938785 (accessed January 28, 2025).

policies, or regulations adopted to reduce greenhouse gas emissions would be less than significant with mitigation.

4.8.7 Level of Significance Prior to Mitigation

The proposed project would result in potentially significant impact related to GHG emissions.

4.8.8 Mitigation Measures

Mitigation Measure GHG-1 Prior to issuance of building permits, project applicants for future development within the Buildout Area shall demonstrate to the satisfaction of the City of Cypress (City) Planning Division that the proposed buildings incorporate feasible greenhouse gas (GHG) reduction strategies consistent with current State and local decarbonization goals. Compliance shall be demonstrated through building plans, energy modeling, California Green Building Standards Code (CALGreen Code) checklists, or similar documentation submitted during the plan check process, as deemed necessary by the City.

Future project applicants shall comply with either the All-Electric Design Path or the Efficient Mixed-Fuel Design Path, as described below:

Preferred Compliance Path: All Electric Design - Future development shall be designed and constructed without natural gas infrastructure or natural gas appliances. All space heating, water heating, cooking, and clothes drying systems shall be fully electric. Electrical service panels shall be sized to accommodate expected loads and future electrification needs.

Alternative Compliance Path: Efficient Mixed-Fuel Design - If a project proposes to install natural gas infrastructure or natural gas appliances, the project applicant shall implement a combination of GHG reduction measures sufficient to minimize GHG emissions from natural gas usage to the maximum extent feasible. Measures may include, but are not limited to, the following:

- Exceed Title 24, Part 6 (Building Energy Efficiency Standards) performance requirements by 10–20 percent, where feasible, as demonstrated through energy modeling or prescriptive compliance documentation.

- Install on-site solar photovoltaic (PV) systems to the maximum feasible extent, including on rooftops and parking canopy structures, where structurally and technically feasible.

- Provide electric-ready infrastructure, including service panel capacity, conduit, wiring, and dedicated circuits, to allow future conversion to all-electric appliances and systems.
- Design buildings to achieve, at minimum, Leadership in Energy and Environmental Design (LEED) Silver certification or an equivalent third-party green building rating.
- Install programmable thermostats, advanced metering infrastructure, and smart home energy management systems.
- Provide heating, ventilation, and air conditioning (HVAC) commissioning consistent with CALGreen Code Sections 5.410.2–5.410.4, including a commissioning plan, functional performance testing, and a commissioning report.
- Install cool roof materials meeting an aged solar reflectance of ≥ 0.30, or the most current CALGreen Code requirement, whichever is more stringent.
- Provide infrastructure to accommodate up to 50 percent recycled water use for landscape irrigation, where recycled water supply is available.
- Use water-efficient irrigation systems, minimize turf, and incorporate native, low-water, or drought-tolerant plant species.
- Install rainwater harvesting systems, where feasible.
- Prohibit or restrict the use of potable water for cleaning non-vegetated outdoor surfaces and prohibit systems that apply water to hardscape surfaces.
- Implement and maintain robust solid waste diversion programs, including recycling and organic waste collection consistent with Senate Bill (SB) 1383 requirements.

All selected GHG reduction measures shall be clearly identified on improvement plans and construction drawings. Compliance with this measure shall be verified by City staff during plan check and confirmed through building inspection prior to final occupancy.

Mitigation Measure AIR-1 Prior to issuance of grading permits for development projects in the Buildout Area, a future project applicant in collaboration with the City of Cypress (City) Planning Division shall identify project design details and specifications, where feasible, to document implementation and

compliance with emission reduction measures. The City of Cypress Planning Division shall verify compliance through: (1) review and approval of construction drawings and building permit submittals demonstrating incorporation of the emission-reduction measures; (2) documentation or reporting from the contractor or a future project applicant, as deemed necessary by the City of Cypress Planning Division, demonstrating adherence to approved measures.

The measures below shall be implemented and updated as necessary as they are considered feasible and effective in reducing criteria pollutant emissions generated by the project. These measures shall be reviewed and updated in accordance with the most recent emission-reduction and emission-minimization guidance available, including, at a minimum, the California Air Pollution Control Officers Association (CAPCOA) 2024 guidance. A future project applicant shall incorporate all feasible and updated measures into the final construction drawings, building plans, and contractor specifications for City review, including, but not limited to, the following:

- Provide building access and paths which are physically separated from street parking lot traffic and that eliminate physical barriers such as walls, berms, landscaping and slopes that impede the use of pedestrians, bicycle facilities, or public transportation vehicles.
- Provide continuous sidewalks separated from the roadway by landscaping and on street parking.
- Provide a parking lot design that includes clearly marked and shaded pedestrian pathways between transit facilities and building entrances.
- Provide preferential parking spaces near the entrance of buildings for those who carpool/vanpool/rideshare and provide signage.
- Install electric vehicle charging capabilities that meet the requirements of the latest version of the California Green Building Standards Code (CALGreen Code) Tier 2 Voluntary Standards.
- Install ENERGY STAR certified heating, cooling, and lighting devices, and appliances or equivalent.
- Install only electric fireplaces.
- Install low-flow water fixtures.

- Utilize energy-efficient design features, including appropriate site orientation, use of lighter color roofing and building materials, and use of deciduous shade trees and windbreak trees to reduce fuel consumption for heating and cooling.
- Use light-colored paving and roofing materials.
- Use low-volatile organic compound (VOC) paints with 10 grams per liter or less.
- Require the use of all-electric landscaping equipment.
- Maximize the planting of trees in landscaping and parking lots.

Mitigation Measure TRA-1

Transportation Demand Management (TDM) Strategies. The Development Agreement between the City of Cypress and the Project Applicant governing the development of the Buildout Area shall include a provision requiring that any future project applicants for subsequent residential development projects within the Buildout Area demonstrate the project's consistency with the Specific Plan-level vehicle miles traveled (VMT) mitigation framework set forth in Items 1 and 2 below that are applicable to such project prior to its approval.

The project-level VMT Evaluation and TDM Plan shall be prepared to the satisfaction of the City of Cypress Planning Director.

1. **Construct or Improve Bike Facility (California Air Pollution Control Officers Association [CAPCOA] Handbook Strategy T-19-A):** This transportation demand management strategy requires the project to include a new bicycle facility or facilities or improve an existing facility that would connect the project to the existing regional bicycle network. The construction/improvement of bicycle facilities would provide residents with the opportunity to bike to their destination rather than drive, reducing the number of vehicle trips and overall project-generated VMT.
2. **Provide Pedestrian Network Improvement (CAPCOA Handbook Strategy T-18):** This transportation demand management strategy requires the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area.

4.8.9 Level of Significance after Mitigation

With implementation of **Mitigation Measure GHG-1, Mitigation Measure AIR-1** and **Mitigation Measure TRA-1**, the proposed project's incremental contribution to cumulative GHG emissions would

be reduced and would not be cumulatively considerable. As discussed in Section 4.8.6, the project's construction and operational GHG emissions were quantitatively estimated consistent with CEQA Guidelines Section 15064.4 and evaluated in the context of applicable statewide and regional greenhouse gas reduction frameworks, including the CARB 2022 Climate Change Scoping Plan and Connect SoCal 2024.

The project would implement planned housing growth identified in the City's adopted and HCD-certified Housing Element and would not exceed regional growth assumptions incorporated into SCAG's CARB-certified emissions modeling. In addition, applicable statewide regulatory programs and project-level mitigation measures would further reduce emissions over time.

Therefore, impacts related to the generation of greenhouse gas emissions, either directly or indirectly, and potential conflict with applicable plans, policies, or regulations adopted for the purpose of reducing GHG emissions would be less than significant with mitigation.

4.8.10 Cumulative Impacts

GHG impacts are by their nature cumulative impacts. Localized impacts of climate change are the result of the cumulative impact of global emissions. The combined benefits of reductions achieved by all levels of government help to slow or reverse the growth in GHG emissions. In the absence of comprehensive international agreements on appropriate levels of reductions achieved by each country, another measure of cumulative contribution is required. This serves to define the State's share of the reductions regardless of the activities or lack of activities of other areas of the U.S. or the world. Therefore, a cumulative threshold based on consistency with State targets and actions to reduce GHGs is an appropriate standard of comparison for significance determinations.

As described above, both construction and operational GHG emissions associated with the proposed project were quantitatively estimated and evaluated in the context of statewide and regional planning frameworks, including the CARB 2022 Climate Change Scoping Plan and Connect SoCal 2024. The Scoping Plan's project attributes are considered as qualitative guidance and are not applied as mandatory pass/fail significance thresholds. The proposed project incorporates key project attributes that are generally supportive of California's long-term GHG emissions reduction goals and carbon neutrality objectives.

The proposed project represents planned infill growth within an existing urbanized area and has been identified as a key housing opportunity site in the City's adopted and HCD-certified Housing Element. Housing growth facilitated by the project would support the City's RHNA goals, which are incorporated into SCAG's RTP/SCS growth assumptions and associated GHG emissions modeling completed for Connect SoCal 2024. Therefore, the proposed project would not exceed regional growth projections or interfere with implementation of regional strategies to achieve SB 375 per-capita GHG reduction targets.

In addition, implementation of project-specific mitigation measures would reduce project-related emissions, including:

- **Mitigation Measure GHG-1**, which requires future development to implement either all-electric building design or enhanced mixed-fuel energy performance standards supported by energy modeling and building efficiency measures;

- **Mitigation Measure AIR-1**, which includes measures such as electric vehicle charging infrastructure and related emission-reducing building and site design features; and

- **Mitigation Measure TRA-1**, which requires transportation demand management strategies intended to reduce vehicle trips and support lower-emission travel options.

These measures, together with statewide regulatory programs such as SB 100, Advanced Clean Cars II, the Low Carbon Fuel Standard, Title 24 building efficiency standards, and SB 1383, will reduce emissions intensity over the life of the project.

Therefore, when considered in the context of applicable statewide and regional emissions reduction frameworks and implementation of project-specific mitigation measures, the project's incremental contribution to cumulative GHG emissions would not be cumulatively considerable. Cumulative GHG impacts would be less than significant with mitigation.

4.9 HAZARDS AND HAZARDOUS MATERIALS

This section evaluates the potential for implementation of the Specific Plan 3.0 Buildout Project (proposed project) to result in impacts to hazards and hazardous materials with consideration of local, State, and federal regulations and policies. This section also describes the existing setting for hazards and hazardous materials conditions at the Buildout Area, relates potentially significant adverse public health impacts anticipated as a result of the proposed project, and provides recommended measures pursuant to the California Environmental Quality Act (CEQA).

The hazards and hazardous materials analysis in this section is based in part on the technical analysis contained in the *Phase I Environmental Site Assessment Report Update, Los Alamitos Race Course Redevelopment, 4961 Katella Avenue, Cypress, California 90720* (Phase I ESA)[1] (**Appendix G**), prepared for the proposed project by Partner Engineering and Science, Inc. (Partner Engineering).

4.9.1 Scoping Process

The City of Cypress (City) received six comment letters during the public review period of the Notice of Preparation (NOP). For copies of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). None of the comment letters included comments related to hazards and hazardous materials.

4.9.2 Methodology

Generally, hazardous materials are chemicals that could potentially cause harm during an accidental release or mishap, and are defined as being toxic, corrosive, flammable, reactive, and an irritant, or strong sensitizer.[2] Hazardous substances include all chemicals regulated under the United States Department of Transportation (USDOT) "hazardous materials" regulations and the United States Environmental Protection Agency (USEPA) "hazardous waste" regulations. Hazardous materials require special handling and disposal because of their potential to damage public health and the environment. The probable frequency and severity of consequences from the routine transport, use, or disposal of hazardous materials is affected by the type of substance, the quantity used or managed, and the nature of the activities and operations.

To assess the impacts of the proposed project with respect to hazardous materials, Partner Engineering performed a Phase I ESA for the Buildout Area.

Partner Engineering performed the Phase I ESA in general accordance with the American Society for Testing Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-21)[3] in an effort to identify, to the extent

---

1 Partner Engineering and Science, Inc. 2025. *Phase I Environmental Site Assessment Report Update, Los Alamitos Race Course Redevelopment, 4961 Katella Avenue, Cypress, California 90720.* July 17. (**Appendix G**)

2 A "sensitizer" is a chemical that can cause a substantial proportion of people or animals to develop an allergic reaction in normal tissue after repeated exposure to a chemical.

3 ASTM Standard E1527-21 constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 United States Code §9601(35)(B).

feasible, potential Recognized Environmental Conditions (RECs)[4] affecting the Buildout Area that: (1) constitute or result in a material violation or a potential material violation of any applicable environmental law; (2) impose any material constraints on the operation of the Buildout Area or require a material change in the use thereof; (3) require clean-up, remedial action or other response with respect to hazardous substances or petroleum products on or affecting the Buildout Area under any applicable environmental law; (4) may affect the value of the Buildout Area; and (5) may require specific actions to be performed with regard to such conditions and circumstances.

4.9.2.1 Background Research and Data Review

Partner Engineering performed a records review for the Buildout Area and surrounding properties in an effort to identify potential RECs in connection with the Buildout Area and assess potential concerns associated with the migration of hazardous substances to the Buildout Area from off-site sources. The records review included reasonably ascertainable historical data, which can be helpful in identifying the past uses of the Buildout Area and surrounding areas, as they may relate to the environmental condition of the Buildout Area.

4.9.2.2 Site Reconnaissance

On July 7, 2025, Partner Engineering visually assessed the Buildout Area for potential RECs, including, but not limited to, potential underground storage tanks, aboveground storage tanks, polychlorinated biphenyl (PCB)-containing equipment, hazardous materials storage or handling areas, containerized or bulk wastes, and visual indications of impacted soil.

4.9.2.3 Testing and Evaluation

As part of the Phase I ESA, Partner Engineering reviewed previous subsurface investigations for the Buildout Area and a nearby property (5100 Katella Avenue).

4.9.3 Existing Environmental Setting

The Buildout Area has a generally flat topography with a gentle slope towards the west. The approximate elevation of the Buildout Area is 33 feet above mean sea level. The Buildout Area is surrounded by a variety of commercial, office, business park, retail, residential, park and religious uses. Additionally, the Buildout Area is bounded by W. Cerritos Avenue to the north, several existing commercial and institutional uses along and near Walker Street to the east, Katella Avenue and several existing commercial, retail and residential uses to the south, and Lexington Drive to the west. Immediately northwest of the Buildout Area is Lexington Park, a 9-acre park located at 4600 W. Cerritos Avenue at the southeast corner of the Cerritos Avenue/Lexington Drive intersection.

[4] A recognized environmental condition (REC) refers to the presence of hazardous substances or petroleum products in, on, or at the project site due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the project site due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the project site under conditions that pose a material threat of a future release to the environment.

Immediately east and north of the Buildout Area is Grace Church, located at 5100 W. Cerritos Avenue. Southeast of the Buildout Area is the Belmont residential project developed by Melia Homes, which includes only residential uses, and The Square at Cypress developed by Shea Homes, which includes residential, hotel, retail, and service uses, including the Homewood Suites by Hilton Cypress Orange County located at 5233 Katella Avenue and a Costco Wholesale at 5401 Katella Avenue. Cottonwood Church, located at 4505 Katella Avenue, is located southwest of the Buildout Area, along with the Ovation at Flora Park, a senior housing community, and a commercial center that includes restaurant and commercial services uses, a 24 Hour Fitness, and the Residence Inn Cypress Los Alamitos, at 4931 Katella Avenue. West of Lexington Drive are light industrial, office, and commercial uses. The 134-acre Buildout Area consists of three properties that contain existing structures and developed areas as detailed below:

Los Alamitos Race Course (LARC) Property (approximately 97 acres): A variety of existing structures and facilities are located on the LARC Property that support horse racing, training, and community activities. Structures include a race track, grandstand structure, two artificial lakes inside the race track, one-story clubhouse and restaurant structures, lighting structures, approximately 41 permanent one-story barns and several temporary structures and barns. The LARC Property also contains parking areas, landscaping, drainage features, sheds, maintenance areas, and perimeter fencing.

The LARC Property's primary structures include the Main Grandstand and Clubhouse Building. The Main Grandstand, built in 1958, is a five-story, 140,000-square-foot structure standing approximately 65 feet high, with a seating capacity of 6,500 people. The Clubhouse Building, constructed in 1955, is a two-story, 35,000-square-foot structure with a capacity of 2,900 people, including an additional 25,000 square feet of patron space. As noted, there are a total of approximately 41 barns supporting the horse racing and training operations on the LARC Property. This includes 36 cinder block barns built in 1958, each approximately 14,000 square feet (totaling 504,000 square feet). Additionally, there are five modular-style barns built in 2013, each about 12,480 square feet (totaling 62,400 square feet). The LARC Property also features the 1,960-square-foot Horseman's Restaurant, constructed in 1999, along with various temporary structures.

Cypress Golf Course (approximately 33 acres): The Cypress GC Property includes a portion of the former Cypress Golf Club, which ceased operation years ago. LARC currently uses approximately one acre of the Cypress GC Property (designated as Lot 1 in Vesting Tentative Tract Map (VTTM) 19247) as a maintenance yard, while the clubhouse for the former Cypress Golf Club is presently being used as a church.

Grace Church Property (approximately 4 acres): The land owned by Grace Church within the Buildout Area, designated as Lots 5 and 10 in VTTM 19247, is part of a larger church property that is currently used for religious services and events and includes a small school, open space and parking areas.

According to aerial photographs, topographic maps, and a City directory obtained from Environmental Data Resources, Inc. (EDR) (provided in **Appendix G**), the Buildout Area was formerly agricultural land as early as 1928; developed with barns associated with the race course by 1952; developed with the current grandstand and race course by 1962; and developed with the current

race course, barns, and church structure by 1994. Tenants on the Buildout Area have included Cypress Golf Club (1996–2001); Tee Time Res (2001); Cypress Junior Golf League (2003); Cypress GC LLC, Seventh-Day Adventist Church (2007–present); Cottonwood Christian Center (2011); and Los Alamitos Race Course and Occupants (1952–present).

The site reconnaissance conducted by Partner Engineering at the Buildout Area did not identify any RECs within the Buildout Area. The site reconnaissance did, however, identify a controlled recognized environmental condition (CREC)[5] associated with four petroleum underground storage tanks (USTs) that were removed from the receiving barn area in the southwest exterior of the race track. The USTs consisted of two 10,000-gallon, one 2,000-gallon, and one 1,000-gallon tank. The tanks contained gasoline and diesel and were used to fuel the various maintenance vehicles on site. Regulatory closure for the former USTs was issued by the Orange County Health Care Agency (OCHCA) on June 26, 1996. Based on the removal of the tanks, the limited residual contamination, and the regulatory closure with a land use stipulation, the site is considered a CREC.

The site reconnaissance also identified a Historical Recognized Environmental Condition (HREC) associated with a 2,000-gallon, two-compartment UST used for gasoline and diesel fuel. The UST, located in the former golf course maintenance area near Lexington Drive (now 4511 Katella Avenue; Assessor's Parcel Number [APN] 241-221-32), was removed in March 2004. Due to the removal of the UST, regulatory oversight and closure, limited impacts below risk thresholds, and subsequent redevelopment of the site, the former UST is considered an HREC.

The Phase I ESA also identified a potential business environmental risk (BER), associated with the age of the existing buildings within the Buildout Area. Due to the age of the existing buildings, Partner Engineering identified a potential that asbestos-containing materials (ACMs) and/or lead-based paint (LBP) are present. However, Partner Engineering noted that all suspect ACMs and painted surfaces were observed in good condition and do not pose a health and safety concern to the occupants of the subject property at this time.

In addition, the Phase I ESA identified potential environmental hazards at the Buildout Area, including the following:

1. Hazardous substances including approximately 20 or more 20-gallon propane tanks and one 60-gallon propane tank for on-site use, located on the western exterior of the grandstand;

2. Seven 55-gallon drums of bleach near the domestic well area, on the southern portion of the Buildout Area;

3. Various emergency generators near the exterior of the grandstand structure;

[5] An REC affecting the Buildout Area that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls.

4. A 100,000-gallon empty Aboveground Storage Tank (AST) and a 50,000-gallon AST filled with water, located on the southwest portion of the Buildout Area, southwest of the grandstand structure; and

5. Electrical equipment that Partner Engineering determined is unlikely to contain PCBs.

A limited non-intrusive vapor screening was completed at the Buildout Area to identify, to the extent feasible, the potential for vapor encroachment conditions (VECs) in connection with the Buildout Area. The screening determined that vapor intrusion is unlikely to be an issue of concern in connection with the existing structures on the Buildout Area. The Buildout Area was visually inspected for the presence of ACMs and given the relative age of the buildings, which were constructed in 1963, there are suspect ACMs in the drywall systems, floor tiles, floor tile mastic, and acoustical ceiling tiles of the church, grandstand, and barn areas.

The Phase I ESA determined that the Buildout Area is located in USEPA Radon Zone 3, which has a low potential for radon (less than 2.0 picocuries per liter [pCi/L]), and therefore radon is not considered an environmental concern. Due to the commercial nature of the Buildout Area, LBP was not included in the scope of the Phase I ESA. No obvious indications of water damage or mold growth were observed during the visual inspection. No hazardous substances, ASTs or USTs, or PCB-containing materials were observed on adjoining properties during the limited adjoining property reconnaissance.

4.9.4 Regulatory Setting

Hazards and hazardous materials are subject to numerous federal, State, and local laws and regulations intended to protect health, safety, and the environment. The USEPA, the California Environmental Protection Agency (Cal/EPA), the California Department of Toxic Substance Control (DTSC), the Santa Ana Regional Water Quality Control Board (RWQCB), and the County of Orange (County) are the primary agencies responsible for enforcing these regulations. Local regulatory agencies enforce many federal and State regulations through the Certified Unified Program Agency (CUPA) program.

The following section describes the federal, State, regional, and local regulatory framework applicable to analyzing potential impacts related to hazards and hazardous materials from development of the proposed project.

4.9.4.1 Federal Regulations

Occupational Safety and Health Administration (OSHA), Title 29 Code of Federal Regulations (CFR). OSHA is the federal agency responsible for ensuring worker safety. These regulations provide standards for safe workplaces and work practices, including those relating to hazardous materials handling.

United States Environmental Protection Agency (USEPA), Title 40 Code of Federal Regulations (CFR) 700–799 (Toxic Substances Control Act). The Toxic Substances Control Act regulates manufacturing, inventory, and disposition of industrial chemicals, including hazardous materials.

It addresses the production, importation, use, and disposal of specific chemicals including PCBs, ACMs, and LBP.

United States Department of Transportation (USDOT) Regulations, Title 49 Code of Federal Regulations (CFR). USDOT, in conjunction with the USEPA, is responsible for enforcement and implementation of federal laws and regulations pertaining to safe storage and transportation of hazardous materials. CFR 49, 171–180, regulates the transportation of hazardous materials, types of material defined as hazardous, and the marking of vehicles transporting hazardous materials.

Federal Air Regulations, Part 77. The Federal Aviation Administration (FAA) is responsible for the review of construction activities that occur in the vicinity of airports. Its role in reviewing these activities is to ensure that new structures do not result in a hazard to navigation. The regulations in the Federal Air Regulations (14 CFR, Part 77) are designed to ensure that no obstructions in navigable air space are allowed to exist that would endanger the public. Federal Air Regulations Part 77 identifies the maximum height at which a structure would be considered an obstacle at any given point around an airport. The extent of the off-airport coverage that needs to be evaluated for tall structure impacts can extend miles from an airport facility. In addition, Federal Air Regulations Part 77 establishes standards for determining whether objects constructed near airports will be considered obstructions in navigable airspace, sets forth notice requirements of certain types of proposed construction or alterations, and provides for aeronautical studies to determine the potential impacts of a structure on the flight of aircraft through navigable airspace.

Resource Conservation and Recovery Act. The Resource Conservation and Recovery Act (RCRA) of 1976 is administered by the USEPA and regulates hazardous waste (materials that have already been discarded or are destined for disposal, treatment, or recycling) from its creation through transport, treatment, storage, and disposal. Its purpose is to protect human health and the environment by ensuring hazardous wastes are properly identified, tracked, and handled. RCRA works alongside USDOT hazardous materials rules, which cover safe transport, to create a complete system for controlling dangerous substances.

Comprehensive Environmental Response, Compensation, and Liability Act. The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980 is administered by the USEPA and regulates hazardous substances that have already been released, or threaten to be released, into the environment. The CERCLA allows the federal government to respond to chemical spills, leaks, or contaminated sites; establishes a cleanup process and gives the USEPA authority to make responsible parties (past or present owners, operators, transporters, or arrangers) pay for cleanup costs; and created the Superfund trust fund to pay for cleanups when no responsible party can be found.

4.9.4.2 State Regulations

State Assembly Bill 2948. In response to the growing statewide concern of hazardous waste management, Assembly Bill 2948 (Tanner 1986) enacted legislation authorizing local governments to develop comprehensive hazardous waste management plans. The intent of each plan is to assure that adequate treatment and disposal capacity is available to manage the hazardous wastes generated within its jurisdiction.

California Occupational Safety and Health Administration (Cal/OSHA) Regulations. Cal/OSHA is responsible for developing and enforcing workplace safety standards and assuring worker safety in the handling and use of hazardous materials. Among other requirements, Cal/OSHA requires many entities to prepare injury and illness prevention plans and chemical hygiene plans and provides specific regulations to limit exposure of construction workers to lead.

Cortese List Statute (California Government Code, §65962.5). This regulation requires the California DTSC to compile and maintain lists of potentially contaminated sites throughout the State and includes the Hazardous Waste and Substances Sites List. The overall list is called the "Cortese" List.

Safe Drinking Water and Toxic Enforcement Act (Proposition 65, California Health and Safety Code, §25249.5 et seq.). The Safe Drinking Water and Toxic Enforcement Act is similar to the federal Safe Drinking Water Act and Clean Water Act in that it regulates the discharge of contaminants to groundwater.

Hazardous Waste Control Law. The Hazardous Waste Control Law (HWCL) regulates hazardous waste, working in parallel with the federal RCRA program. Its purpose is to protect public health and the environment by requiring that hazardous wastes are properly identified, tracked, stored, treated, transported, and disposed of. The law gives the California DTSC primary authority to oversee hazardous waste generators and facilities, and in many areas, it is stricter than the federal RCRA, setting additional requirements specific to California.

4.9.4.3 Regional Regulations

Certified Unified Program Agency (CUPA). Senate Bill 1082 provides for the designation of a CUPA that would be responsible for the permitting process and collection of fees regarding hazardous materials. The CUPA would be responsible for implementing at the local level the Unified Program, which serves to consolidate, coordinate, and make consistent the administrative requirements, permits, inspections, and enforcement activities for the following environmental and emergency management programs: Hazardous Waste; Hazardous Materials Business Plan; California Accidental Release Prevention Program; Underground Hazardous Materials Storage Tanks; Aboveground Petroleum Storage Tanks/Spill Prevention Control & Countermeasure Plans; and Hazardous Waste Generator and On-Site Hazardous Waste Treatment (tiered permitting) Programs.

The Environmental Health Division of the OCHCA is designated as the CUPA for the City, and coordinates the regulation of hazardous materials and hazardous wastes in the City for construction and operational activities through the following programs:

- Aboveground Petroleum Storage Tank (APST)
- Business Emergency Plan (BEP)
- California Accidental Release Prevention (CalARP)
- Hazardous Materials Disclosure (HMD)
- Hazardous Waste (HW)
- Underground Storage Tank (UST)

The Orange County Fire Authority (OCFA) is the administering agency for the chemical inventory and business emergency plan regulations for the City. OCFA's disclosure activities are coordinated with the OCHCA. OCFA's Hazardous Materials Services Section (HMSS) is staffed with technical and administrative personnel who are assigned the implementation and management of the disclosure program.

County of Orange and Orange County Fire Authority (OCFA) Local Hazard Mitigation Plan (2021). This plan identifies risks and vulnerabilities, establishes hazard mitigation strategies, describes emergency organization, task assignments, and general procedures, and provides for coordination of response in the event of an emergency.

Airport Environs Land Use Plan for Joint Forces Training Base Los Alamitos. The Airport Environs Land Use Plan for Joint Forces Training Base Los Alamitos was developed by the Orange County Airport Land Use Commission (ALUC) and serves to ensure safe and compatible development in areas surrounding the military airfield.

South Coast Air Quality Management District Rule 1403. Rule 1403, issued by the South Coast Air Quality Management District (SCAQMD), establishes mandatory work-practice standards to limit asbestos emissions during building demolition, renovation, and related activities where ACMs may be disturbed. Rule 1403 also enforces the requirements for asbestos surveys, prior notification, safe removal, cleanup procedures, and proper disposal of asbestos-containing waste material (ACWM).

4.9.4.4 Local Regulations

Cypress Town Center and Commons Specific Plan 3.0. The Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) contains applicable goals from the Safety Element of the City of Cypress General Plan, including Goals SAF-3, SAF-5, and SAF-8, as detailed below. The Specific Plan also states that any use, storage, or transport of hazardous materials would be in accordance with all applicable federal, State and local laws. The Specific Plan further states that development pursuant to the Specific Plan will be consistent with the height and noise limitations and notification requirements in the ALUC's 2017 *Airport Environs Land Use Plan (AELUP) for Joint Forces Training Base (JFTB) Los Alamitos*,[6] as described in the Safety Element of the City of Cypress General Plan. On July 18, 2024, the ALUC voted in favor of the staff recommendation to find the Specific Plan consistent with the AELUP for JFTB Los Alamitos.

City of Cypress General Plan 2001. The Safety Element of the City of Cypress General Plan contains the following applicable goals and policies related to hazards and hazardous materials:

- **SAF-3 Hazardous Materials.** Minimize risks to life and property associated with the handling, transporting, treating, generating, and storing of hazardous materials.
    - **SAF-3.1**: Locate new and relocate existing land uses that utilize, produce, transport, or store hazardous materials a safe distance from other land uses that may be adversely affected by such activities.

[6] Orange County Airport Land Use Commission (ALUC). 2017. *Airport Environs Land Use Plan (AELUP) for Joint Forces Training Base (JFTB) Los Alamitos*. Amended August 17, 2017.

- **SAF-3.2:** Encourage and support the proper disposal of household waste and waste oil. Monitor dry cleaners, film processors, auto service establishments, and other businesses generating hazardous waste materials to ensure compliance with approved disposal procedures.

- **SAF-3.3:** Prosecute unlicensed dumping of toxic or hazardous materials into the ground or water in Cypress. Increase the fines levied for illegal dumping. Encourage citizens to report dumping when they observe it.

- **SAF-3.4:** Support efforts to enforce State "right to know" laws, which outline the public's right to information about local toxics producers.

- **SAF-5 Fire Protection.** Protect life and property in Cypress from urban fires. Maintain the Orange County Fire Authority's high level of service to community businesses and residents.

  - **SAF-5.1:** Maintain a response time of eight minutes for the first responder engine and provide paramedic service within five minutes.

  - **SAF-5.2:** Evaluate the effects of new development on the Orange County Fire Authority's response time. Ensure through the development review process that new development will not result in reduced emergency service levels.

  - **SAF-5.3:** Maintain and periodically review procedures for dealing with fire emergencies in the City's Disaster Plan.

  - **SAF-5.4:** Establish evacuation routes for an urban fire.

  - **SAF-5.5:** Maintain mutual aid agreements with surrounding jurisdictions for fire protection.

  - **SAF-5.6**: Provide adequate fire equipment access to structures within the community.

  - **SAF-5.7:** Maintain an ongoing fire inspection program to reduce fire hazards associated with older buildings, critical facilities, public assembly facilities, and industrial and commercial buildings.

  - **SAF-5.8:** Promote the utilization of fire-safe building materials and enforce the City's fire sprinkler ordinance.

- **SAF-8 Aircraft Overflight.** Protect Cypress residents from air operation accidents.

  - **SAF-8.1:** Limit development height within the flight approach to the Joint Forces Training Center (JFTC) Los Alamitos to minimize safety hazards to aircraft and protect the airfield.

  - **SAF-8.2:** Monitor legislation and regulations established by the Joint Forces Training Center (JFTC) Los Alamitos.

  - **SAF-8.3:** Establish an emergency response plan for aircraft incidents.

City of Cypress Municipal Code. Article 3, Section 10.050 (Hazardous Materials Storage) of the Cypress Municipal Code includes the regulations that would apply to the proposed project related to the provision of hazardous materials. The intent of this chapter is to ensure that the use, handling, storage, and transportation of hazardous substances comply with all applicable State laws (Government Code Section 65850.2 and Health and Safety Code Section 25505, et seq.) and that appropriate information is reported to the City in a timely manner.

4.9.5 Thresholds of Significance

The thresholds of significance for hazards and hazardous materials impacts used in this analysis are consistent with Appendix G of the *State CEQA Guidelines.* Based on these thresholds, implementation of the proposed project would have a significant impact with respect to hazards and hazardous materials if it would:

Threshold 4.9.1: Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials;

Threshold 4.9.2: Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment;

Threshold 4.9.3: Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school;

Threshold 4.9.4: Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment;

Threshold 4.9.5: For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area;

Threshold 4.9.6: Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan; or

Threshold 4.9.7: Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires.

4.9.6 Project Impacts

Threshold 4.9.1: **Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?**

Less Than Significant Impact. The proposed project would not involve the routine transport of hazardous materials to and from the Buildout Area. During demolition, excavation, on-site grading, and building construction, hazardous materials such as fuels and oils associated with construction equipment, as well as paints, solvents, cement products containing strong basic or acidic chemicals could be routinely used in the Buildout Area throughout construction. These materials are commonly used at construction sites. The amount of hazardous chemicals present during construction would be limited to what is required to operate construction equipment, and construction activities would be required to comply with applicable State and federal regulations for proper transport, use, storage, and disposal of excess hazardous materials and hazardous construction waste. The temporary transport, use, storage, or disposal of fuels, lubricants, paints, and other hazardous materials related to construction would not pose a significant hazard to the public or the environment unless the materials were accidentally spilled or released into the environment. The potential for the release of hazardous materials during project construction is low, and even if a release were to occur, it would not result in a significant hazard to the public, surrounding land uses, or the environment due to the small quantities of these materials associated with construction vehicles. In addition, California standards for workers dealing with hazardous materials are contained in California Code of Regulations (CCR) Title 8 and include practices for all industries (General Industrial Safety Orders), as well as specific practices for construction. Workers at hazardous waste sites (or workers who may be exposed to hazardous wastes that might be encountered during excavation of contaminated soils) must receive specialized training and medical supervision according to the Hazardous Waste Operations and Emergency Response regulations.[7] Additional regulations have been developed for construction workers potentially exposed to lead[8] and asbestos.[9]

The transport, use, storage, or disposal of hazardous materials during construction would be regulated by the OCFA and Cal/OSHA. Additionally, the USDOT Office of Hazardous Materials Safety prescribes strict regulations for the safe transportation of hazardous materials by truck and rail on State highways and rail lines, as described in CFR Title 49 and implemented by CCR Title 13. Worker health and safety is also regulated at the federal level by the United States Department of Labor OSHA. OSHA regulations include training requirements for construction workers and a requirement that hazardous materials are accompanied by manufacturer's Safety Data Sheets (SDSs). The Federal Occupational Safety and Health Act of 1970 authorizes states to establish their own safety and health programs with OSHA approval. Worker health and safety protections in California are regulated by the California Department of Industrial Relations (DIR). The DIR includes the Division of Occupational Safety and Health (DOSH), better known as Cal/OSHA, which acts to protect workers from safety hazards. Cal/OSHA regulations include requirements for protective clothing, training, and limits on exposure to hazardous materials. California standards for workers dealing with hazardous materials are contained in CCR Title 8 and include practices for all industries (General Industrial Safety Orders), and specific practices for construction, and other industries. The routine transport, use, and disposal of hazardous materials within the Buildout Area during construction activities would be required to comply with a project Health and Safety Plan (HASP) prepared in accordance with CCR Title 8, which would reduce potential health hazards for construction workers

7 California Code of Regulations, Title 8, Section 5192.
8 California Code of Regulations, Title 8, Section 1532.1.
9 California Code of Regulations, Title 8, Section 1529.

from the routine transport, use, or disposal of hazardous materials. Construction activities would comply with applicable regulations, as outlined above, including requiring hazardous materials carriers to register with the DTSC as required by the USDOT, which regulates the transport of hazardous materials and waste in connection with construction activities. In addition, **Regulatory Compliance Measures HYD-1 through HYD-3,** provided in Section 4.10, Hydrology and Water Quality, would ensure compliance with waste discharge permit requirements to avoid potential impacts to water quality due to spills or runoff from hazardous materials used during construction. Therefore, impacts related to the routine transport, use, or disposal of hazardous materials during demolition would be less than significant. No mitigation measures would be required.

The proposed project would include development of up to 1,791 new residential units within the Buildout Area, reflecting the remaining allowable units under the Specific Plan after accounting for the previously constructed 135-unit Belmont residential project. In addition, the proposed project is anticipated to include approximately 440,000 square feet of non-residential development, which represents about 50 percent of the 879,170 square feet permitted under the Specific Plan. Operation of residential uses typically do not present a hazard associated with the accidental release of hazardous substances into the environment because residents are not anticipated to use, store, dispose of, or transport large volumes of hazardous materials. Hazardous substances associated with residential uses are typically limited in both amount and use, such that they can be contained without impacting the environment. In addition, the proposed non-residential uses would include commercial space pursuant to the Specific Plan that is intended to provide retail and other service-oriented uses. These types of non-residential uses would use minimal amounts of hazardous materials during operations that would be similar to those used by residential uses (i.e., cleaning products, pesticides/herbicides/fertilizers associated with landscaping), and therefore are also unlikely to present a hazard associated with the accidental release of hazardous substances into the environment.

Long-term operations activities typical of the residential and non-residential uses envisioned under the proposed project involve the use and storage of small quantities of potentially hazardous materials in the form of cleaning solvents, fertilizers, and pesticides. For example, maintenance activities related to landscaping include the use of fertilizers and light equipment (e.g., lawn mowers and edgers) that may require fuel. As stated previously, these types of activities do not involve the use of a large or substantial amount of hazardous materials. Further, such materials would be contained, stored, and used in accordance with manufacturers' instructions and handled in compliance with applicable federal, State, and local regulations. In addition, operation of future residential and non-residential development associated with the proposed project would not store, transport, generate, or dispose of large quantities of hazardous substances. Therefore, potential impacts from the routine transport, use, or disposal of hazardous materials resulting from operation of the proposed project would be less than significant, and no mitigation would be required.

The City's Safety Element,[10] which includes Goals SAF-3, SAF-5, and SAF-8 and the associated policies discussed in Section 4.9.4, establishes the framework for addressing public safety hazards, including those related to hazardous materials. Additionally, the OCFA HMSS and the Environmental

[10] City of Cypress. 2001. *Cypress General Plan Safety Element.* Website: https://www.cypressca. org/home/showpublisheddocument/11369/638061 699910600000 (accessed August 2025).

Health Division of the OCHCA serve as the primary agencies overseeing hazardous materials management within the City. The County's Hazardous Material Management Plan[11] ensures that adequate treatment and disposal capacity is available to manage the hazardous waste generated within the County and addresses issues related to the disposal, handling, processing, storage, and treatment of local hazardous materials and waste products.

Future development applications within the Buildout Area would be required to comply with all applicable regulations and standards related to the proper transport, use, storage, and disposal of hazardous materials and hazardous waste. Additionally, future developments would be reviewed by the OCFA for hazardous materials and would be required to comply with waste discharge permit requirements to avoid potential impacts to water quality due to spills or runoff from hazardous materials used during construction. Moreover, any future development projects requiring discretionary actions would be subject to environmental review, in accordance with the provisions of CEQA and the *State CEQA Guidelines.*

Therefore, implementation of the proposed project would result in less than significant impacts related to the routine transport, use, or disposal of hazardous materials, and no mitigation is required.

Threshold 4.9.2: Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

***Less Than Significant with Mitigation Incorporated*.** The Buildout Area was historically used for agricultural purposes until approximately 1947. Based on historical agricultural use, pesticides, or herbicides may have been utilized on the Buildout Area and near-surface soils may have at one time contained these compounds. However, the soils on the Buildout Area were reworked when the Buildout Area was developed beginning in the 1950s, and, therefore, it is not anticipated that any hazardous materials in the soil remain related to past agricultural use.

The Phase I ESA concluded that there was no evidence of RECs at the Buildout Area. However, one CREC was identified related to the historical removal of four USTs—two 10,000-gallon, one 2,000-gallon, and one 1,000-gallon—that had been used to store gasoline and diesel for maintenance vehicles. These tanks were removed in 1988 under the oversight of the OCHCA. Soil and groundwater remediation took place between 1989 and 1993, utilizing vapor extraction and groundwater treatment systems. By 1996, OCHCA granted regulatory case closure, confirming that remaining contamination levels were below thresholds of concern. The closure requires notification of OCHCA if a change in land use is proposed. The proposed project includes changes to the existing land uses in the Buildout Area, so a copy of this Draft EIR and the Notice of Completion (NOC) will be provided to OCHCA, as specified in **Mitigation Measure HAZ-1** and provided below. No active remediation systems or groundwater monitoring wells are currently present within the Buildout Area.

[11] Orange County Fire Authority (OCFA). 2007. Hazardous Material Management Plan. Hazardous Materials Identification. December 6, 2007.

The Phase I ESA also identified an HREC associated with a 2,000-gallon, two-compartment UST used for gasoline and diesel fuel. The UST, located in the former golf course maintenance area near Lexington Drive (now 4511 Katella Avenue; APN 241-221-32), was removed in March 2004. Due to the removal of the UST, regulatory oversight and closure, limited impacts below risk thresholds, and subsequent redevelopment of the site, the former UST is considered an HREC and no longer presents a hazardous environmental condition associated with the Buildout Area.

Additionally, the Phase I ESA identified one potential BER associated with the age of the buildings on site, which may include ACMs or LBP. In accordance with SCAQMD Rule 1403, a comprehensive asbestos survey would be required prior to demolition. All identified ACMs and suspect materials would be removed by a certified asbestos abatement contractor in accordance with applicable regulations. Therefore, through compliance with applicable regulations, the proposed project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving ACMs, and impacts would be less than significant.

The identified presence of a CREC, an HREC, and a BER in association with the Buildout Area represents a potentially significant impact associated with creating a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. To address this potentially significant impact, the Phase I ESA recommended preparation and implementation of an Operations and Maintenance (O&M) Plan to safely manage the suspect ACMs and LBP associated with the existing buildings within the Buildout Area and the notification of the OCHCA as required in the case closure summary from 1996 for the CREC. No additional subsurface investigations were recommended. Future development facilitated by the proposed project would be required to implement these recommendations, as detailed in **Mitigation Measure HAZ-1**.

Based on the analysis provided above, impacts associated with the release of hazardous materials into the environment through reasonably foreseeable upset and accident conditions would be less than significant with adherence to existing regulatory requirements, including SCAQMD Rule 1403, and implementation of **Mitigation Measure HAZ-1,** requiring implementation of the recommendations provided in the Phase I ESA. Therefore, with incorporation of **Mitigation Measure HAZ-1**, project impacts would be less than significant.

Threshold 4.9.3: Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

***Less Than Significant Impact*.** There are five schools located within 0.25 mile of the Buildout Area:

- Grace Christian School, a religious school located at 4545 Myra Avenue;
- Del Sol School, a non-public school located at 5400 Myra Avenue;
- Little School of the West, a preschool located at 5471 West Cerritos Avenue;
- Miracle Land Preschool, a preschool located at 4371 West Cerritos Avenue; and
- Sycamore Creek Charter School, located at 4321 West Cerritos Avenue.

As described above, the proposed project would not create a significant hazard to the public or the environment due to hazardous materials with compliance with federal, State, and local regulations for the management of hazardous materials. In addition, the proposed residential and non-residential uses within the Buildout Area would not present a hazard associated with the accidental release of hazardous substances into the environment as these uses are not anticipated to use, store, dispose or transport large volumes of hazardous materials. Hazardous substances associated with these uses are typically limited in both amount and use such that they can be contained without impacting the environment. Therefore, implementation of the proposed project would not result in hazardous emissions or the handling of hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school. Project impacts are considered less than significant, and no mitigation is required.

Threshold 4.9.4: Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Less Than Significant with Mitigation Incorporated. Database searches of the Buildout Area, including a GeoTracker search and a search of Superfund sites, determined that the Buildout Area is not included on a list of hazardous materials sites that could create a significant hazard to the public or the environment, is not included on the Cortese List compiled pursuant to Government Code Section 65962.5, and is not a recorded Superfund site. As part of the Phase I ESA for the Buildout Area, a comprehensive government records database search was conducted to identify potential environmental concerns within a specified radius of the Buildout Area. The regulatory database search results indicated the Buildout Area was listed in multiple databases, including but not limited to: AST, California Environmental Reporting System (CERS) Tank, Cleanup Sites, Department of Toxic Substances Control's Hazardous Waste Tracking System (HAZNET), Leaking Underground Storage Tank (LUST), and Resource Conservation and Recovery Act Small Quantity Generator (RCRA-SQG). Although the Phase I ESA identified these listings, none were determined to be RECs or HRECs.

Additionally, while the Phase I ESA concluded that the Buildout Area is not associated with any active RECs, it is associated with one CREC, one HREC, and one BER, which include:

- Four underground storage tanks: two 10,000-gallon USTs, one 2,000-gallon UST, and one 1,000-gallon UST, which were used to store unleaded gasoline and diesel for maintenance vehicles. These USTs were removed in 1988 under the oversight of the OCHCA. Following their removal, soil and groundwater remediation was conducted between 1989 and 1993 using soil vapor extraction and groundwater treatment systems. The site was granted regulatory case closure in 1996 by OCHCA, which confirmed that contamination levels were reduced below thresholds of concern. The closure requires notification of OCHCA if a change in land use is proposed. The proposed project includes changes to the existing land uses in the Buildout Area, so a copy of this Draft EIR and the NOC will be provided to OCHCA.

- One underground storage tank: a 2,000-gallon, two-compartment UST used for gasoline and diesel fuel. The UST, located in the former golf course maintenance area near Lexington Drive (now 4511 Katella Avenue; APN 241-221-32), was removed in March 2004. Due to the removal

of the UST, regulatory oversight and closure, limited impacts below risk thresholds, and subsequent redevelopment of the site, the former UST is considered an HREC and no longer presents a hazardous environmental condition associated with the Buildout Area.

- Due to the age of the existing on-site structures, including barns and other buildings, the potential presence of ACMs and LBP represents a BER. No sampling was conducted as part of the Phase I ESA. However, should renovation or demolition of these older structures occur, ACMs and LBP could pose a hazard to workers and occupants if not properly identified and managed. As such, adherence with SCAQMD Rule 1403, which requires that a comprehensive asbestos survey be conducted prior to demolition, would ensure that potential ACMs and LBP would not expose workers or building occupants during construction and demolition activities.

As discussed in Response 4.9.2, impacts associated with the release of hazardous materials into the environment through reasonably foreseeable upset and accident conditions would be potentially significant, but would be reduced to less than significant with adherence to existing regulatory requirements, including the notification of OCHCA due to the proposed change in land use and SCAQMD Rule 1403, and implementation of **Mitigation Measure HAZ-1,** requiring implementation of the recommendations provided in the Phase I ESA. In addition, as the Buildout Area is not included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5, the proposed project would not create a significant hazard to the public or the environment. Impacts would be less than significant with mitigation incorporated.

Threshold 4.9.5: **For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the Buildout Area?**

***Less Than Significant Impact*.** The Buildout Area is located approximately 0.3 mile north of JFTB Los Alamitos. The facilities at JFTB Los Alamitos include two runways and associated taxiways, ramp space, and hangars. According to the ALUC's 2017 AELUP for JFTB Los Alamitos, the Buildout Area is located in the FAA's Part 77 Notification Area (Exhibit D1) and the AELUP height restriction zone for JFTB Los Alamitos (Exhibit D2).[12] Height limitations are imposed on projects within a height restriction zone so that structures or trees (1) do not obstruct the airspace required for takeoff, flight, or landing of aircraft at an airport, or (2) are not otherwise hazardous to the landing or taking off of aircraft. On July 18, 2024, the ALUC found the Specific Plan consistent with the AELUP for JFTB Los Alamitos.

Implementation of the proposed project would not result in a safety hazard or excessive noise for people residing or working in the Buildout Area because any future development within the Buildout Area would be required to comply with all appropriate FAA standards and requirements, including **Regulatory Compliance Measure HAZ-1**, detailed below, which requires that the FAA be notified of any proposed structure(s) that would penetrate the 100 to 1 imaginary surface that surrounds the runway at JFTB Los Alamitos. The FAA would then be responsible for reviewing the height of the

[12] Orange County Airport Land Use Commission (ALUC). 2017. *Airport Environs Land Use Plan for Joint Forces Training Base Los Alamitos*. Amended August 17, 2017.

proposed structures and determining whether they pose a potential aviation hazard. With adherence to the regulatory standards provided in **Regulatory Compliance Measure HAZ-1**, the proposed project would result in less than significant impacts related to the Buildout Area's proximity to a public airport or public use airport, and no mitigation is required.

Threshold 4.9.6: Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

No Impact. As shown in General Plan Safety Element Exhibit SAF-5,[13] evacuation routes within the City include Ball Road, a west-to-east arterial, and Valley View Street, a north-to-south arterial. Although the proposed project would include future development within the Buildout Area of up to 1,791 additional residential units and approximately 440,000 square feet of non-residential floor area, the Buildout Area is not located along either of the emergency evacuation routes identified above.

All emergency evacuation activities are coordinated by the City Police Chief. The Police Chief would issue evacuation orders based on information gathered from emergency experts. Evacuation operations would be conducted by law enforcement agencies, highway/road/street departments, and public and private transportation providers.[14] Future development projects within the Buildout Area would be required to conform with the adopted emergency response or evacuation plan established by the City. Therefore, the proposed project would not impair implementation of or physically interfere with the adopted emergency response plan or emergency evacuation plan. No impact would occur, and no mitigation is required.

Threshold 4.9.7: Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

No Impact. According to the California Department of Forestry and Fire Protection's (CAL FIRE) Very High Fire Hazard Severity Zone Maps for the Orange County region, there are no portions of the City in a very high fire hazard severity zone (VHFHSZ).[15] As such, the proposed project would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires. Future developments under the proposed project would be required to conform with applicable City standards and criteria, including consistency with the City's General Plan goals and policies as detailed in Section 4.9.4, Regulatory Setting, and the City's Building Code, including general fire safety provisions consistent with the California Fire Code;[16] automatic, on-site fire

protection systems, such as sprinklers in multi-occupancy buildings; and maintenance of certain vegetation that poses a fire hazard risk.[17] Therefore, the proposed project would not result in impacts related to the exposure of people or structures to a significant risk of loss, injury or death involving wildland fires, and no mitigation is required.

4.9.7 Level of Significance Prior to Mitigation

Impacts related to significant hazards to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment would be significant prior to mitigation.

4.9.8 Regulatory Compliance Measures and Mitigation Measures

4.9.8.1 Regulatory Compliance Measures

The following regulatory compliance measure includes existing regulations that are applicable to the proposed project and are considered in the analysis of potential impacts related to hazards and hazardous materials. The City considers these requirements to be mandatory; therefore, they are not mitigation measures.

Regulatory Compliance Measure HAZ-1 **Federal Aviation Regulation Title 14 Part 77.** A future project applicant/developer shall notify the Federal Aviation Administration (FAA) of any proposed structure(s) that would penetrate the 100 to 1 imaginary surface that surrounds the runway at Joint Forces Training Base Los Alamitos at least 45 days prior to beginning construction.

4.9.8.2 Mitigation Measures

Future development facilitated under the proposed project would be required to implement the following mitigation measure.

Mitigation Measure HAZ-1 Prior to the issuance of a building permit, a future project applicant/developer shall demonstrate the recommendations provided in the Phase I Environmental Site Assessment (Phase I ESA) prepared for the Buildout Area have been, or will be, implemented. Recommendations provided in the Phase I ESA include the following:

- Preparation and implementation of an Operations and Maintenance (O&M) Program in order to safely manage the suspect asbestos-containing materials (ACMs) and/or lead-based paint (LBP) associated with the existing structures located within the Buildout Area; and

[17] City of Cypress. *Cypress Municipal Code.* Article 1 Building Code. Website: https://ecode360.com/43161122?highlight=wildfire&searchId=2727684112912523#43161122 (accessed May 6, 2025).

- Providing a copy of this Draft Environmental Impact Report (EIR) and the Notice of Completion (NOC) to the Orange County Health Care Agency (OCHCA) in order to notify them of the proposed change in land use facilitated under the proposed project.

4.9.9 Level of Significance after Mitigation

The proposed project would not result in significant impacts related to hazards and hazardous materials with implementation of **Mitigation Measure HAZ-1**.

4.9.10 Cumulative Impacts

As defined in Section 15130 of the *State CEQA Guidelines*, cumulative impacts are the incremental effects of an individual project when viewed in connection with the effects of past, current, and probable future projects within the cumulative impact area for hazards and hazardous materials. The cumulative impact area for hazards and hazardous materials is the City.

The purpose of this section is to evaluate the cumulative impact that the proposed project is likely to cause in combination with other projects recently approved or proposed in the City. The Buildout Area and surrounding vicinity are largely urbanized with residential, commercial, and industrial uses. As the area continues to develop, implementation of the proposed project in conjunction with the eight related projects identified in **Table 4.A: Summary of Related Projects**, in Chapter 4.0, Existing Setting, of this Draft EIR could create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials.

Some of the related projects identified in **Table 4.A** have undergone environmental review pursuant to CEQA, which included an analysis of potential impacts related to hazards and hazardous materials. According to the EIRs prepared for the Shea Properties Mixed Use Development Project (Related Project 1), Melia Homes -Citrus Square Project (Related Project 2), and the Los Alamitos Medical Center Project (Related Project 7), impacts relating to hazards and hazardous materials would either be less than significant or no impact would occur with implementation of the projects. Further, the EIRs determined that cumulative impacts related to hazards and hazardous materials would be less than significant. In addition, the Goodman Commerce Center Project (Related Project 3) was analyzed in an Initial Study/Mitigated Negative Declaration (IS/MND), which determined that all impacts relating to related to hazards and hazardous materials would either be less than significant, or no impact would occur. The Sycamore Creek Charter School Project (Related Project 6) and 4562 Katella Avenue Project (Related Project 8) were determined to be exempt from CEQA review under Section 15332 of the *State CEQA Guidelines* (for infill development) and Notices of Exemptions (NOEs) were prepared. In order for a project to be exempt under Section 15332 of the *State CEQA Guidelines*, the project cannot be located on a hazardous materials site. As such, development of the related projects in combination with the proposed project would not result in significant impacts related to hazards and hazardous materials. The LTP Modern Machine Project (Related Project 5) and 8561 Belmont Street Project (Related Project 4) would also be required to undergo environmental review pursuant to CEQA, which would include an analysis of potential impacts related to hazards and hazardous materials and the identification of any mitigation measures to reduce potential impacts, if necessary.

For the proposed project, impacts related to hazards and hazardous materials would be less than significant with mitigation incorporated. Each related project is required to address any issues related to hazardous materials or wastes. Federal, state, and local regulations require compliance to protect against contamination from hazardous materials. Therefore, the impacts from the proposed project related to hazards and hazardous materials are not considered to be cumulatively considerable.

4.10 HYDROLOGY AND WATER QUALITY

This section evaluates the potential impacts to hydrology and water quality conditions from construction and implementation of the Specific Plan 3.0 Buildout Project (proposed project). The analysis in this section is based on the *Master Plan of Drainage for Specific Plan 3.0 Buildout Project, 4961 Katella Avenue, Cypress, CA* (Drainage Report)[1] (**Appendix H-1**), the *Preliminary Water Quality Management Plan, Specific Plan 3.0 Buildout Project* (PWQMP)[2] (**Appendix H-2**), the *Water Supply Assessment, Specific Plan 2.0 Buildout Project* (WSA)[3] (**Appendix N**), and the *Environmental Impact Report Soils and Geology Issues, Proposed Mixed-Use Development, 4961 Katella Avenue and 5100 Cerritos Avenue, Cypress, California* (Geotechnical Investigation)[4] (**Appendix F**) that were prepared for the proposed project.

4.10.1 Scoping Process

The City of Cypress (City) received six comment letters during the public review period of the Notice of Preparation (NOP). For copies of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). No comment letters included comments related to hydrology and water quality.

4.10.2 Methodology

The evaluation of potential impacts to hydrology and water quality associated with implementation of the project is based on a review of existing site conditions, the local, regional, State, and federal standards and regulatory documents, available hydrological data, land uses and project design changes in pre- and post-project stormwater flows; and proposed Best Management Practices (BMPs) for control of surface runoff and reduction of pollutants in stormwater runoff. The evaluation also incorporated findings and recommendations from the Drainage Report and PWQMP.

4.10.3 Existing Environmental Setting

4.10.3.1 Watersheds

The Buildout Area is located within the Coyote Creek Subwatershed of the larger San Gabriel River Watershed. The San Gabriel River Watershed covers approximately 689 square miles, primarily in eastern Los Angeles County, with a smaller portion in northwestern Orange County. The Coyote Creek Subwatershed drains approximately 185 square miles to its confluence with the San Gabriel River, 85.5 square miles of which lie in north Orange County, with the remainder in Los Angeles County. The main tributary of the Coyote Creek Watershed is Coyote Creek, which flows from

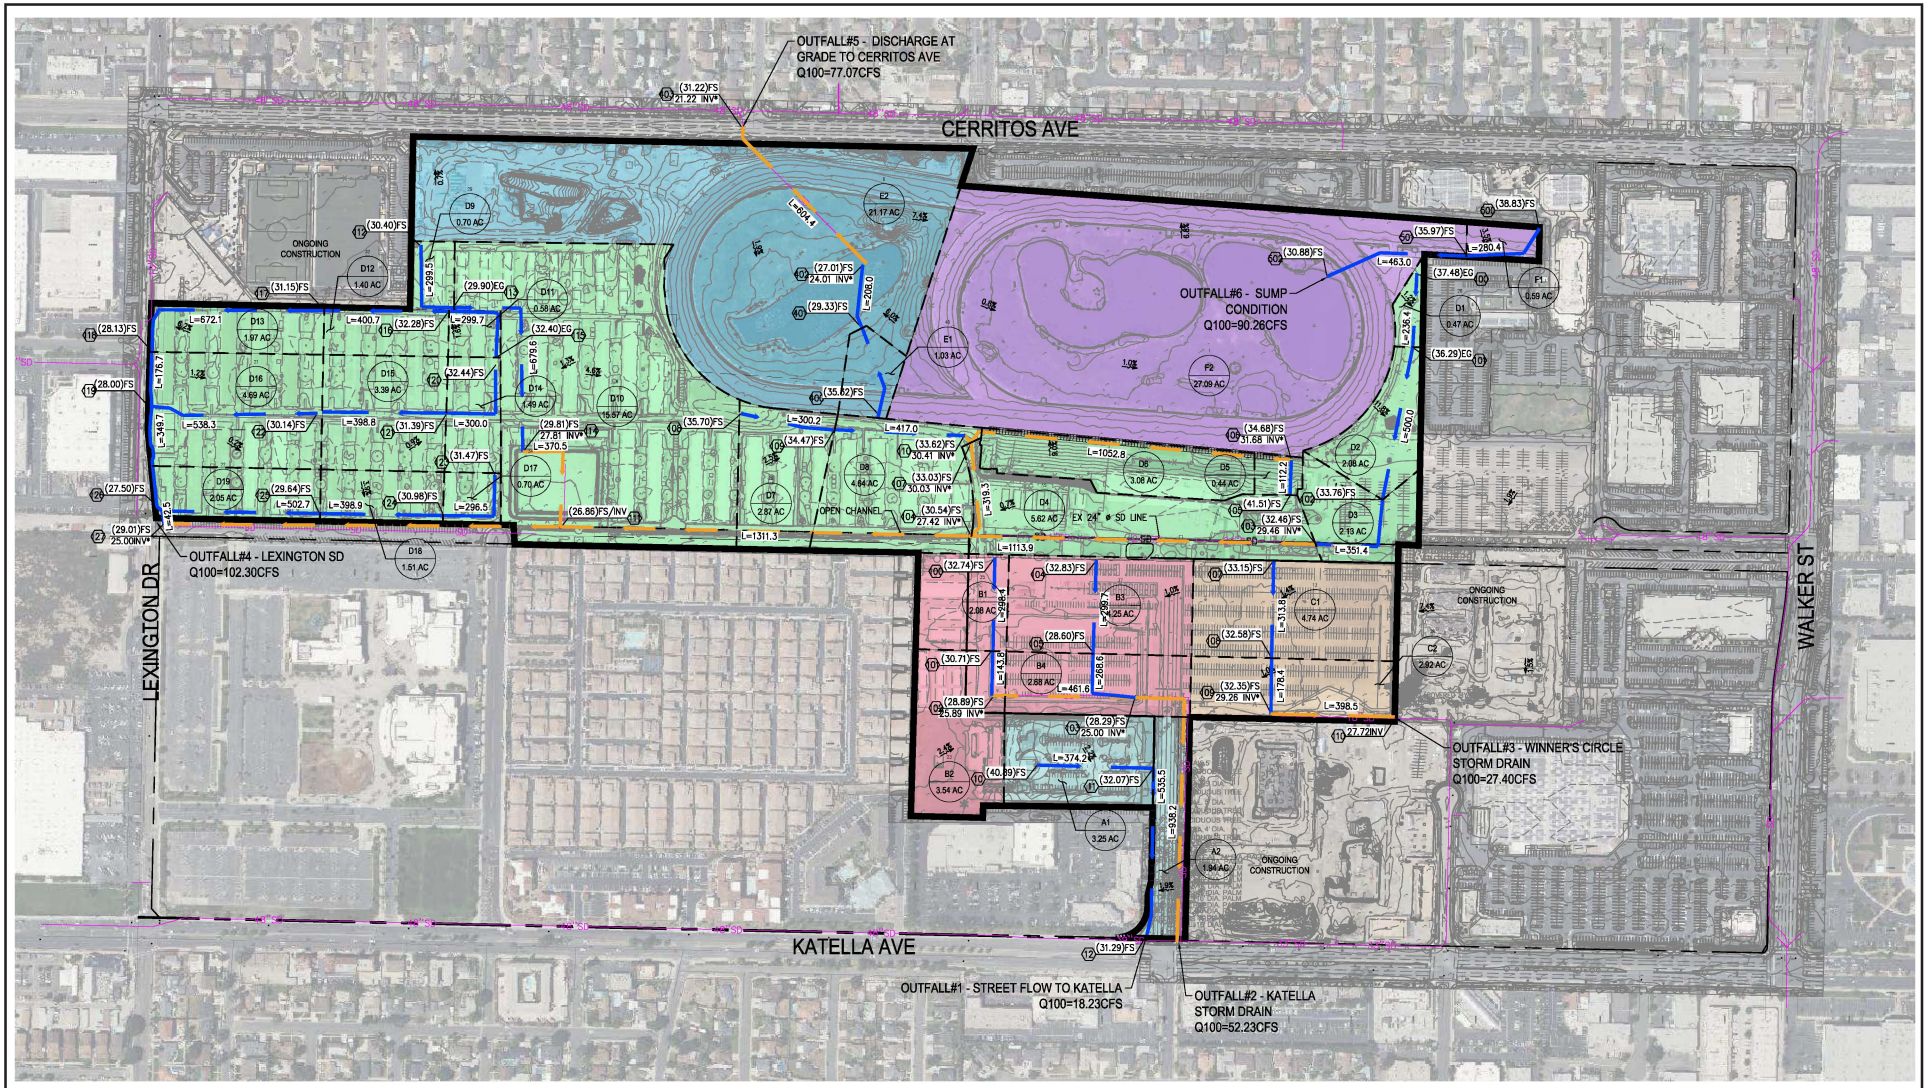
Riverside County and empties into the San Gabriel River just above its tidal prism. The San Gabriel River flows into the Pacific Ocean west of Seal Beach.[5,6]

The Buildout Area is also located within the jurisdictional boundary of the Santa Ana Regional Water Quality Control Board (RWQCB). For planning purposes, the Santa Ana RWQCB uses a watershed classification system that divides surface waters into hydrologic units (HUs), hydrologic areas (HA), and hydrologic subareas (HSA). As designated by the Santa Ana RWQCB, the Buildout Area is located within the Los Angeles-San Gabriel River HU, the Anaheim HA Split, and the Anaheim HSA Split.[7]

4.10.3.2 Drainage



Under existing conditions, the southern portion of the Buildout Area generally drains south towards the Katella Avenue Storm Drain, the northwestern portion of the Buildout Area drains west towards the Lexington Drive Storm Drain, and a small portion of the Buildout Area in the north drains north towards the Cerritos Avenue Storm Drain. The Drainage Report identifies six existing Drainage Areas (A through F) in the Buildout Area, as described below and depicted in **Figure 4.10-1: Existing Condition Drainage Areas.**

- **Drainage Area A** is located at the southernmost end of the Buildout Area and includes approximately 5.19 acres of land. Drainage Area A is developed with the race course driveway entrance, surface asphalt parking, and an existing building. Stormwater within Drainage Area A generally drains south along the race course entry driveway towards Katella Avenue. At the intersection of Katella Avenue and Siboney Street, flows drain west via a curb and gutter towards a catch basin located approximately 1,400 feet west of the intersection. Stormwater runoff is conveyed via this catch basin into the Katella Avenue Storm Drain. The Katella Avenue Storm Drain begins as a 33-inch reinforced concrete pipe (RCP) at the intersection of Katella Avenue and Winner's Circle. From there, the storm drain line flows west and incrementally increases in diameter until eventually leaving the City boundary at the intersection of Katella Avenue and Lexington Drive as a 48-inch RCP.

FIGURE 4.10-1

Specific Plan 3.0 Buildout Area Project

Existing Condition Drainage Areas

This page intentionally left blank

- **Drainage Area B** is located at the southern end of the Buildout Area, northwest of Drainage Area A, and includes approximately 12.55 acres of land. Drainage Area B is developed primarily with surface asphalt parking with a small portion consisting of landscaping and temporary horse stables. Stormwater within Drainage Area B generally drains south towards a series of catch basins located at the southern end of the parking area. A portion of the surface parking is depressed and acts as a detention basin. Flows enter the catch basins where stormwater is conveyed east and then south through an existing storm drain. This storm drain line then connects to an existing 39-inch public storm drain main located in Katella Avenue.

- **Drainage Area C** is located in the southeastern portion of the Buildout Area, east of Drainage Area B, and includes approximately 7.66 acres of land. Drainage Area C is developed with surface asphalt parking. Stormwater within Drainage Area C generally flows south towards a series of catch basins located at the southern end of the parking area. Runoff collected from these inlets is conveyed through the private 18-inch storm drain constructed as part of the commercial development located just east of the race course entry driveway and connects to the 18-inch storm drain within Winner's Circle. This storm drain line then connects to an existing 33-inch public storm drain main located in Katella Avenue.

- **Drainage Area D** is located in the center of the Buildout Area, spanning from the western Buildout Area boundary to the eastern Buildout Area boundary, and includes approximately 59.44 acres of land. Drainage Area D is developed with surface asphalt parking, the race course grandstand, and horse barn facilities. Stormwater within Drainage Area D generally flows west towards the Lexington Drive storm drain line. A trench drain collects runoff from north of the grandstand and conveys it south before it confluences with an existing 24-inch storm drain line in Lexington Drive which picks up runoff from south of the grandstand. Stormwater then discharges to an open channel that conveys flows west. The open channel receives additional overland flow from the horse stables and discharges to another existing 48-inch storm drain line within Lexington Drive. The storm drain line within Lexington Drive ultimately discharges to the Katella Avenue Storm Drain.

- **Drainage Area E** is located in the northwestern portion of the Buildout Area, north of Drainage Area D, and includes approximately 22.20 acres of land. Drainage Area E was part of the former Cypress Golf Club, which included two man-made ponds. The golf course area has since been redeveloped, and one of the ponds has been filled in for use as a temporary horse barn area and the other as a water feature in the infield of the expanded race course. The previous golf course ponds had an underdrain system with a pump that discharged flows to the Cerritos Avenue Storm Drain. This pump is currently not in use. Stormwater within Drainage Area E generally flows north to the pond located in the center of Drainage Area E, where it enters a storm drain line. The storm drain line then discharges into the Cerritos Avenue Storm Drain located north of the Buildout Area. The Cerritos Avenue Storm Drain begins as a 48-inch RCP at Longden Street, and slopes west along Cerritos Avenue until it leaves the City boundary as a 60-inch RCP.

- **Drainage Area F** is located in the northeastern portion of the Buildout Area, north of Drainage Area D and east of Drainage Area E and includes approximately 35.09 acres of land. Drainage Area F consists of the dirt race course and landscaped infield, including two man-made ponds in

the center of Drainage Area F. Stormwater within Drainage Area F generally sheet flows towards the center of the Drainage Area F where the ponds are located. These ponds act as a natural detention system with no existing connection to the public storm drain system.

Ultimately, all existing stormwater from the Buildout Area discharges to the Los Alamitos Channel. The Los Alamitos Channel is an engineered channel that flows through the County-operated Rossmoor Detention Basin and discharges to the San Gabriel River, which ultimately flows into the Pacific Ocean near Seal Beach.

4.10.3.3 Surface Water Quality

According to the PWQMP (**Appendix H-2**), receiving waters for the Buildout Area include the Cerritos Avenue Storm Channel, the Katella Avenue Storm Channel, the Walker Street Storm Channel, the Los Alamitos Channel, Coyote Creek, the San Gabriel River (Reach 1), the San Gabriel River Estuary, San Pedro Bay (near/off-shore zones), and Alamitos Bay.

According to the most recent United States Environmental Protection Agency (USEPA) approved 303(d) list (2024), the San Gabriel River (Reach 1) is impaired for pH, oil and grease, and indicator bacteria; the San Gabriel River Estuary is listed as impaired for metals (nickel and copper), dissolved oxygen, indicator bacteria, chlordane, chlorine, and dioxin; San Pedro Bay (near/off-shore zones) is listed as impaired for pesticides (chlordane, Dichlorodiphenyltrichloroethane [DDT], and total DDT), Polychlorinated biphenyls (PCBs), toxicity, copper, and Dichlorodiphenyldichloroethylene (DDE); and Alamitos Bay is impaired for dissolved oxygen, indicator bacteria, copper, pesticides (Dichlorodiphenyldichloroethane [DDD] and DDT), and PCBs. The most recent USEPA approved 303(d) list (2024) does not list any impairments for the Cerritos Avenue Storm Channel, the Katella Avenue Storm Channel, the Walker Street Storm Channel, the Los Alamitos Channel, or Coyote Creek.[8]

Although the Buildout Area is within the jurisdiction of the Santa Ana RWQCB, the receiving waters with listed impairments discussed above fall under the jurisdiction of the Los Angeles RWQCB. The Los Angeles RWQCB has adopted Total Maximum Daily Loads (TMDLs) that would be applicable to the proposed project for pH and indicator bacteria for the San Gabriel River (Reach 1); nickel, copper, indicator bacteria, and dioxin for the San Gabriel River Estuary; all listed impairments for San Pedro Bay (near/off-shore zones); and indicator bacteria, copper, pesticides (DDD and DDT), and PCBs for Alamitos Bay. Additionally, TMDLs for oil and grease for the San Gabriel River (Reach 1); chlordane and chlorine for the San Gabriel River Estuary; and dissolved oxygen for Alamitos Bay are anticipated in 2037 and TMDLs for dissolved oxygen for the San Gabriel River Estuary is anticipated in 2031.[9]

[8] State Water Resources Control Board (SWRCB). 2024. *2024 California Integrated Report.* Website: https://www.waterboards.ca.gov/water_issues/programs/water_quality_assessment/2024-integrated-report.html (accessed April 2025).

[9] Ibid.

4.10.3.4 Groundwater

According to the California Department of Water Resources (DWR), the Buildout Area overlies the Coastal Plain of the Orange County Groundwater Basin,[10] which underlies a coastal alluvial plain in the northwestern portion of Orange County. The basin is bound on the northwest and the north by the Los Angeles-Orange County line, on the northeast by the Whittier Fault Zone and consolidated rocks of the Puente Hills and Chino Hills, on the east by consolidated rocks of the Santa Ana Mountains, on the south by consolidated rocks of the Laguna Hills and San Joaquin Hills, and on the southwest by the Pacific Ocean. Groundwater recharge to the basin is derived from percolation of Santa Ana River flow, infiltration of precipitation, and injection into wells.[11] The Coastal Plain of the Orange County Groundwater Basin has a surface area of 350 square miles, a storage capacity of 38,000,000 acre-feet.[12]

For management purposes, groundwater basins are designated in the Santa Ana RWQCB's Water Quality Control Plan (Basin Plan) as Groundwater Management Zones. The Buildout Area is within the Orange County Groundwater Management Zone in the Lower Santa Ana River Basin. The Orange County Groundwater Management Zone is bounded to the north by the Chino Hills and Santa Ana Mountains, to the east by State Route 55 (SR-55) and the Irvine Groundwater Management Zone, to the south by the Pacific Ocean, and to the west by a low topographic divide approximated by the Orange County/Los Angeles County line.[13]

According to the Geotechnical Investigation, groundwater within the Buildout Area has a historic groundwater depth of less than 10 feet below ground surface. Exploratory borings conducted as part of the field investigation indicated that groundwater currently ranges from approximately 5 to 12.5 feet below ground surface.

4.10.3.5 Groundwater Quality

Groundwater in the Coastal Plain of the Orange County Groundwater Basin is primarily sodium-calcium bicarbonate based. In general, groundwater total dissolved solids (TDS) concentrations range from 232 to 661 milligrams per liter (mg/L), with an average of 475 mg/L. Groundwater impairments include salinity (from seawater intrusion), colored water (from natural organic materials), high nitrates, and methyl tertiary butyl ether (MTBE).[14]

4.10.3.6 Flooding

According to the Federal Emergency Management Agency (FEMA) Federal Insurance Rate Map (FIRM) No. 06059C0116J (December 3, 2009), the Buildout Area is located within Zone X, which corresponds to areas with a 0.2 percent annual chance flooding (500-year flood). This designation indicates a very low likelihood of flooding within the Buildout Area.

The Buildout Area is downstream of several dams, including Prado Dam, located approximately 23 miles northwest of Cypress in Riverside County, and Carbon Canyon Dam, located approximately 14 miles away in the northeastern portion of the City of Brea. According to the City of Anaheim's Local Hazard Mitigation Plan,[15] which included a modeled dam-failure inundation map for these dams, the Buildout Area is within the Prado Dam inundation zone, but not the Carbon Canyon Dam inundation zone.[16] Prado Dam is an earth-filled dam built in 1941 by the U.S. Army Corps of Engineers (USACE) on the Santa Ana River near the City of Corona in Riverside County. It is the primary flood control facility of the Santa Ana River watershed and its reservoir and related recreation areas include an area of more than 11,500 acres.[17]

There are no large open bodies of water in the vicinity and the proposed project is therefore not at risk of seiche inundation. The Buildout Area is approximately 5.7 miles northeast of the Pacific Ocean and is outside the tsunami inundation zone. Although the levee inundation zone of Coyote Creek/Carbon Creek is located west of the Buildout Area, the Buildout Area itself is not within this inundation area.[18]

4.10.3.7 Soil and Erosion Potential

According to the Natural Resources Conservation Service online soil survey, the soils mapped within the Buildout Area include urban land-Metz-Pico complex, Bolsa silt loam, San Emigdio fine sandy loam, and water. The Buildout Area is generally underlain by artificial fill, alluvial deposits, and disturbed soils associated with existing development. Soils in the Buildout Area are typically well-drained and moderately susceptible to erosion under existing conditions. Slopes within the site are generally mild, and no steep or highly erodible areas are present. Due to the urbanized nature of the site and the presence of impervious surfaces, existing soil erosion potential is low.

4.10.4 Regulatory Setting

The following section describes the federal, state, regional, and local regulatory framework applicable to analyzing potential impacts related to hydrology and water quality from development of the proposed project.

4.10.4.1 Federal Regulations

Clean Water Act. In 1972, the Federal Water Pollution Control Act (now referred to as the Clean Water Act [CWA]) was amended to require that the discharge of pollutants into waters of the United States from any point source be effectively prohibited unless the discharge is in compliance with a National Pollutant Discharge Elimination System (NPDES) permit. In 1987, the CWA was again amended to require that the USEPA establish regulations for the permitting of stormwater discharges (as a point source) by municipal and industrial facilities and construction activities under the NPDES permit program. The regulations require that Municipal Separate Storm Sewer System (MS4) discharges to surface waters be regulated by an NPDES permit.

The CWA requires states to adopt water quality standards for water bodies and have those standards approved by the USEPA. Water quality standards consist of designated beneficial uses for a particular water body (e.g., wildlife habitat, agricultural supply, fishing), along with water quality criteria necessary to support those uses. Water quality criteria are set concentrations or levels of constituents (e.g., lead, suspended sediment, and fecal coliform bacteria) or narrative statements that represent the quality of water that support a particular use. Because California had not established a complete list of acceptable water quality criteria for toxic pollutants, the USEPA Region 9 (Pacific Southwest) established numeric water quality criteria for toxic constituents in the form of the California Toxics Rule (CTR).

When designated beneficial uses of a particular water body are being compromised by water quality, Section 303(d) of the CWA requires identifying and listing that water body as impaired. Once a water body has been deemed impaired, a Total Maximum Daily Load (TMDL) must be developed for each impairing water quality constituent. A TMDL is an estimate of the total load of pollutants from point, nonpoint, and natural sources that a water body may receive without exceeding applicable water quality standards (often with a "factor of safety" included, which limits the total load of pollutants to a level well below that which could cause the standard to be exceeded). Once established, the TMDL is allocated among current and future dischargers into the water body.

Direct discharges of pollutants into waters of the United States are not allowed except in accordance with the NPDES program established in Section 402 of the CWA.

Clean Water Act, Section 303, List of Impaired Water Bodies. The State Water Resources Control Board (SWRCB), in compliance with Section 303(d) of the CWA, prepares a list of impaired and threatened waters (e.g., stream/river segments, lakes). States are required to submit their list for USEPA approval every two years. For each water body on the list, the SWRCB identifies the pollutant causing the impairment, when known. In addition, the SWRCB assigns a priority for development of TMDLs based on the severity of the pollution and the sensitivity of the uses for which the waters are being used, among other factors.

In general, once a water body has been added to a state's list of impaired waters, it remains on the list until the state develops a TMDL and the USEPA approves it. USEPA reporting guidance provides guidelines to keep track of a state's water bodies, from listing as impaired to meeting water quality standards. This tracking system contains a running account of all of the state's water bodies and categorizes each based on the attainment status, which was published as the 2024 California

Integrated Report. The 2024 California Integrated Report was partially approved and partially disapproved by the USEPA on December 13, 2024. The USEPA approved the majority of the 303(d) list but identified 53 water body-pollutant combinations it is considering adding to the 303(d) list. The 2024 California Integrated Report is the current integrated report except for the 53 water body-pollutant combinations in review by the USEPA.[19]

Clean Water Act, Section 402, National Pollutant Discharge Elimination System Permit Program. Under Section 402 of the Clean Water Act, the discharge of pollutants through a point source into waters of the United States is prohibited unless the discharge is in compliance with an NPDES permit. The NPDES program regulates the discharge of pollutants from municipal and industrial wastewater treatment plants and sewer collection systems, as well as stormwater discharges from industrial facilities, municipalities, and construction sites. In California, implementation and enforcement of the NPDES program is conducted through the SWRCB and the nine regional water quality control boards. The regional water boards set standard conditions for each permittee in their region, which includes effluent limitations and monitoring programs.

National Flood Insurance Act. Congress acted to reduce the costs of disaster relief by passing the National Flood Insurance Act of 1968 and the Flood Disaster Protection Act of 1973. The intent of these acts was to reduce the need for large, publicly funded flood control structures and disaster relief efforts by restricting development in floodplains. FEMA administers the National Flood Insurance Program (NFIP) to provide subsidized flood insurance to communities that comply with FEMA regulations limiting development in a floodplain. FEMA issues FIRMs of communities participating in the NFIP. These maps delineate flood hazard zones in the community. The City of Cypress manages local stormdrain facilities, and the Orange County Flood Control District (OCFCD) is responsible for regional flood control planning within Orange County.

4.10.4.2 State Regulations

Porter-Cologne Water Quality Control Act of 1970. The federal CWA places the primary responsibility for the control of water pollution and planning the development and use of water resources with the states, although it does establish certain guidelines for the states to follow in developing their programs.

California's primary statute governing water quality and water pollution is the Porter-Cologne Water Quality Control Act of 1970 (Porter-Cologne Act). The Porter-Cologne Act grants the SWRCB and the nine RWQCBs broad powers to protect water quality and is the primary vehicle for the implementation of California's responsibility under the federal CWA. The Porter-Cologne Act grants the SWRCB and RWQCBs the authority and responsibility to adopt plans and policies, to regulate discharges to surface water and groundwater, to regulate waste disposal sites, and to require cleanup of discharges of hazardous materials and other pollutants. The Porter-Cologne Act also establishes reporting requirements for unintended discharges of any hazardous substance, sewage, oil, or petroleum product.

[19] State Water Resources Control Board (SWRCB). 2024. *2024 California Integrated Report.* Website: https://www.waterboards.ca.gov/water_issues/programs/water_quality_assessment/2024-integrated-report.html (accessed April 2025).

Each RWQCB must formulate and adopt a water quality plan for its region. The regional plans are to conform to the policies set forth in the Porter-Cologne Act and established by the SWRCB in its State water policy. The Porter-Cologne Act also provides that an RWQCB may include in its region a regional plan with water discharge prohibitions applicable to particular conditions, areas, or types of waste. The City, including the Buildout Area, is within the jurisdictional boundaries of the Santa Ana RWQCB (Region 8).

California Toxics Rule. As stated previously, because California had not established a complete list of acceptable water quality criteria for toxic pollutants, USEPA Region 9 established numeric water quality criteria for toxic constituents in the form of the CTR. The CTR provides water quality criteria for certain potentially toxic compounds for inland surface waters, enclosed bays, estuaries, and waters designated for human health or aquatic life uses. The CTR is often used by the RWQCBs when establishing water quality objectives and TMDLs. Although the CTR criteria do not apply directly to discharges of stormwater runoff, they are utilized as benchmarks for toxics in urban runoff. The CTR is used as a benchmark to evaluate the potential ecological impacts of stormwater runoff to receiving waters. The CTR establishes acute and chronic surface water quality standards for certain water bodies. Acute criteria provide benchmarks for the highest permissible concentration below which aquatic life can be exposed for short periods of time without deleterious effects. Chronic criteria provide benchmarks for an extended period of time (i.e., 4 days or more) without deleterious effects. The acute CTR criteria have a shorter relevant averaging period (less than 4 days) and provide a more appropriate benchmark for comparison of stormwater flows.

CTR criteria apply to the receiving water body and are calculated based on the probable hardness values of the receiving waters. At higher hardness values for receiving waters, certain constituents (including copper, lead, and zinc) are more likely to be complexed (bound with) components in the water column. This in turn reduces the bioavailability and resulting in potential toxicity of these metals.

General Construction Activity Storm Water Permit. The National Pollutant Discharge Elimination System (NPDES) *General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities,* Order WQ 2022-0057-DWQ, NPDES No. CAS000002 (Construction General Permit),[20] adopted by the SWRCB, regulates construction activity that includes clearing, grading, and excavation resulting in soil disturbance of at least 1 acre of total land area.

To obtain coverage under the Construction General Permit, a future project applicant must electronically file all permit registration documents with the SWRCB prior to the start of construction. Permit registration documents must include a:

- Notice of Intent (NOI),
- Risk Assessment,
- Site map,
- SWPPP,

[20] State Water Resources Control Board (SWRCB). 2022. *National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (General Permit), Order WQ 2022-0057-DWQ, NPDES No. CAS000002*. Adopted September 8.

- Annual fee, and
- Signed certification statement.

Activities subject to the Construction General Permit include clearing, grading, and disturbances to the ground, such as grubbing or excavation. The permit also covers linear underground and overhead projects, such as pipeline installations. Construction General Permit activities are regulated at a local level by the RWQCB.

The Construction General Permit uses a risk-based permitting approach and mandates certain requirements based on the project risk level (i.e., Level 1, Level 2, or Level 3). The project risk level is based on the risk of sediment discharge and the receiving water risk. The sediment discharge risk depends on the project location and timing (i.e., wet season versus dry season activities). The receiving water risk depends on whether the project would discharge to a sediment-sensitive receiving water. The determination of the project risk level would be made by the project Applicant when the Notice of Intent is filed (and more details of the timing of the construction activity are known).

The performance standard in the Construction General Permit is that dischargers shall minimize or prevent pollutants in stormwater discharges and authorized non-stormwater discharges through the use of controls, structures, and best management practices (BMPs) that achieve Best Available Technology for treatment of toxic and non-conventional pollutants and Best Conventional Technology for treatment of conventional pollutants. A SWPPP must be prepared by a Qualified SWPPP Developer that meets the certification requirements in the Construction General Permit. The purpose of the SWPPP is to (1) identify the sources of sediment and other pollutants that could affect the quality of stormwater discharges and (2) describe and ensure the implementation of BMPs to reduce or eliminate sediment and other pollutants in stormwater as well as non-stormwater discharges resulting from construction activity. Operation of BMPs must be overseen by a Qualified SWPPP Practitioner who meets the requirements outlined in the Construction General Permit.

The SWPPP must also include a construction site monitoring program. Depending on the project risk level, the monitoring program may include visual observations of Buildout Area discharges, water quality monitoring of Buildout Area discharges (pH, turbidity, and non-visible pollutants, if applicable), and receiving water monitoring (pH, turbidity, suspended sediment concentration, and bioassessment).

The Construction General Permit allows non-stormwater discharge of groundwater dewatering effluent if the water is properly filtered and treated to remove sediment and pollutants using appropriate technologies (e.g., filtration, settling, coagulant application with no residual coagulant discharge, minor odor or color removal with activated carbon, small-scale peroxide addition, or other minor treatment). Testing of receiving waters would also be required prior to and during the discharge. The discharge of dewatering effluent is authorized under the Construction General Permit if the following conditions are met:

- The discharge does not cause or contribute to a violation of any water quality standard.

- The discharge does not violate any other provision of the Construction General Permit.
- The discharge is not prohibited by the applicable Basin Plan.
- The discharger has included and implemented specific BMPs required by the Construction General Permit to prevent or reduce the contact of the non-stormwater discharge with construction materials or equipment.
- The discharge does not contain toxic constituents in toxic amounts or (other) significant quantities of pollutants.
- The discharge is monitored and meets the applicable numeric action levels.
- The discharger reports the sampling information in the annual report.

If any of the above conditions are not satisfied, the discharge of dewatering effluent is not authorized by the Construction General Permit. If the dewatering activity is determined by the RWQCB not to be covered by the Construction General Permit or other NPDES permit, and discharge of groundwater to the storm drain system is planned, then the discharger would be required to prepare a Report of Waste Discharge, and if approved the RWQCB would issue project site-specific Waste Discharge Requirements (WDRs) under NPDES regulations.

Sustainable Groundwater Management Act. The Sustainable Groundwater Management Act (SGMA) of 2014 is a comprehensive three-bill package that Governor Jerry Brown signed into California state law in September 2014. The SGMA provides a framework for sustainable management of groundwater supplies by local authorities, with a limited role for State intervention if necessary to protect the resource. The plan is intended to ensure a reliable groundwater supply for California for years to come.

The SGMA requires governments and water agencies of high- and medium-priority basins to halt overdrafts of groundwater basins. The SGMA provides authority for agencies to develop and implement Groundwater Sustainability Plans (GSP) or alternative plans that demonstrate the basin is being managed sustainably. As previously discussed, the Buildout Area is located within the Coastal Plain of Orange County Groundwater Basin, which is managed by the Orange County Water District (OCWD) and designated as a Medium Priority basin pursuant to the SGMA.[21] On January 1, 2017, the OCWD, City of La Habra, and Irvine Ranch Water District submitted the Basin 8-1 Alternative to the California DWR. Elements to be included in GSPs as described in the California Water Code have been incorporated into the Alternative. Prior to the Alternative, OCWD provided five groundwater management plans. The first was published in 1989 and its last was published in 2015. Like its predecessors, the Basin 8-1 Alternative will be updated every five years per SGMA requirements.

4.10.4.3 Regional Regulations

Water Quality Control Plans (Basin Plans). The Santa Ana RWQCB has adopted a Basin Plan for their region of responsibility that delineates water resource area boundaries based on hydrological features. For the purposes of achieving and maintaining water quality protection, specific beneficial uses have been identified for each of the surface waters and groundwater management zones described in the Basin Plan. Once beneficial uses are designated, appropriate water quality objectives can be established, and programs that maintain or enhance water quality can be implemented to ensure the protection of beneficial uses. There are no beneficial uses listed in the Basin Plan for the downstream surface receiving waters for the Buildout Area. Beneficial uses of the Orange Groundwater Management Zone include municipal and domestic supply (MUN), agricultural supply (AGR), industrial service supply (IND), and industrial process supply (PROC).[22]

Basin Plans also establish implementation programs to achieve water quality objectives to protect beneficial uses and require monitoring to evaluate the effectiveness of the programs. These objectives must comply with the State antidegradation policy (State Board Resolution No. 68-16), which is designed to maintain high-quality waters while allowing some flexibility if beneficial uses are not unreasonably affected.

Basin Plans have established narrative and numeric water quality objectives for inland surface streams, enclosed bays, estuaries and groundwater. If water quality objectives are exceeded, the RWQCBs can use their regulatory authority to require municipalities to reduce pollutant loads to the affected receiving waters. Relevant surface water quality objectives for all inland surface waters, enclosed bays and estuaries, and groundwater under the jurisdiction of the Santa Ana RWQCB that are applicable to the receiving waters for the Buildout Area are shown in **Tables 4.10.A: Surface Water Quality Objectives for Inland Surface Waters, 4.10.B: Water Quality Objectives for Enclosed Bays and Estuaries**, and **4.10.C: Groundwater Quality Objectives for Groundwater Basins**, respectively.[23]

In addition, the site-specific water quality objectives for the Orange Groundwater Management Zone are:

- Total Dissolved Solids: 580 mg/L
- Nitrate as Nitrogen: 3.4 mg/L

There are no site-specific water quality objectives listed in the Basin Plan for the surface receiving waters for the Buildout Area.

---

22 Santa Ana Regional Water Quality Control Board (RWQCB). 1995c. *Water Quality Control Plan (Basin Plan) for the Santa Ana River Basin, Chapter 3: Beneficial Uses*. January 24. Updated June 2019 to include approved amendments.

23 Santa Ana Regional Water Quality Control Board (RWQCB). 1995d. *Water Quality Control Plan (Basin Plan) for the Santa Ana River Basin, Chapter 4: Water Quality Objectives*. January 24. Updated June 2019 to include approved amendments.

Table 4.10.A: Surface Water Quality Objectives for Inland Surface Waters

Constituent	Concentration
Algae	Waste discharges shall not contribute to excessive algal growth in inland surface receiving waters.
Boron	Shall not exceed 0.75 mg/L in inland surface waters of the region as a result of controllable water quality factors.
Chlorine (residual)	Chlorine residual in wastewater discharged to inland surface waters shall not exceed 0.1 mg/L.
Color	Waste discharges shall not result in coloration of the receiving waters that causes a nuisance or adversely affects beneficial uses. The natural color of fish, shellfish, or other surface water resources used for human consumption shall not be impaired.
Floatables	Waste discharges shall not contain floating materials, including solids, liquids, foam, or scum, that cause a nuisance or adversely affect beneficial uses.
Metals	Varies based on hardness.
Oil and Grease	Waste discharges shall not result in deposition of oil, grease, wax, or other materials in concentrations that result in a visible film or in coating objects in the water or which cause a nuisance or adversely affect beneficial uses.
Oxygen (dissolved)	Waste discharges shall not cause the median dissolved oxygen concentration to fall below 85% of saturation or the 95th percentile concentration or fall below 75% of saturation within a 30-day period.
pH	Shall not be raised above 8.5 or depressed below 6.5 as a result of controllable water quality factors.
Solids (suspended and settleable)	Shall not cause nuisance or adversely affect beneficial uses as a result of water quality factors.
Sulfides	Shall not increase as a result of controllable water quality factors.
Surfactants	Waste discharges shall not contain concentrations of surfactants that result in foam in the course of flow or use of the receiving water or that adversely affect aquatic life.
Taste and Odor	Shall not contain taste- or odor-producing substances at concentrations that cause a nuisance or adversely affect beneficial uses. The natural taste and odor of fish, shellfish, or other regional inland surface water resources used for human consumption shall not be impaired.
Toxic Substances	Shall not be discharged at levels that will bioaccumulate in aquatic resources to levels that are harmful to human health. Concentrations of toxic pollutants in the water column, sediments, or biota shall not adversely affect beneficial uses.
Turbidity	Where natural turbidity is between 0 and 50 NTU, increases shall not exceed 20%. Where natural turbidity is between 50 NTU and 100 NTU, increases shall not exceed 10 NTU. Where natural turbidity is greater than 100 NTU, increases shall not exceed 10%.

Source: *Water Quality Control Plan, Santa Ana River Basin* (Santa Ana RWQCB 1995, updated June 2019).
mg/L = milligrams per liter
NTU = nephelometric turbidity units
RWQCB = Regional Water Quality Control Board

Table 4.10.B: Water Quality Objectives for Enclosed Bays and Estuaries

Constituent	Concentration
Algae	Waste discharges shall not contribute to excessive algal growth in receiving waters.
Chlorine, Residual	To protect aquatic life, the chlorine residual in wastewater discharged to enclosed bays and estuaries shall not exceed 0.1 mg/L.
Color	Waste discharges shall not result in coloration of the receiving waters which causes a nuisance or adversely affects beneficial uses. The natural color of fish, shellfish or other bay and estuarine water resources used for human consumption shall not be impaired.
Floatables	Waste discharges shall not contain floating materials, including solids, liquids, foam or scum, which cause a nuisance or adversely affect beneficial uses.
Oil and Grease	Waste discharges shall not result in deposition of oil, grease, wax or other materials in concentrations which result in a visible film or in coating objects in the water, or which cause a nuisance or adversely affect beneficial uses.
Oxygen, Dissolved	The dissolved oxygen content of enclosed bays and estuaries shall not be depressed to levels that adversely affect beneficial uses as a result of controllable water quality factors.
pH	The pH of bay or estuary waters shall not be raised above 8.6 or depressed below 7.0 as a result of controllable water quality factors; ambient pH levels shall not be changed more than 0.2 units.
Radioactivity	Radioactive materials shall not be present in the bay or estuarine waters of the region in concentrations which are deleterious to human, plant or animal life.
Solids, Suspended and Settleable	Enclosed bays and estuaries shall not contain suspended or settleable solids in amounts which cause a nuisance or adversely affect beneficial uses as a result of controllable water quality factors.
Sulfides	The dissolved sulfide content of enclosed bays and estuaries shall not be increased as a result of controllable water quality factors.
Surfactants	Waste discharges shall not contain concentrations of surfactants which result in foam in the course of flow or the use of the receiving water, or which adversely affect aquatic life.
Taste and Odor	The enclosed bays and estuaries of the region shall not contain, as a result of controllable water quality factors, taste- or odor-producing substances at concentrations which cause a nuisance or adversely affect beneficial uses. The natural taste and odor of fish, shellfish or other enclosed bay and estuarine water resources used for human consumption shall not be impaired.
Temperature	All bay and estuary waters shall meet the objective specified in the Thermal Plan.
Toxic Substances	The concentrations of toxic substances in the water column, sediments or biota shall not adversely affect beneficial uses.
Turbidity	All enclosed bay and estuaries of the region shall be free of changes in turbidity which adversely affect beneficial uses.

AGR = agricultural supply
mg/L = milligrams per liter
mL = milliliter
MUN = municipal supply
pCi/L = picocuries per liter
pH = percentage of hydrogen

Table 4.10.C: Groundwater Quality Objectives for Groundwater Basins

Constituent	Concentration
Arsenic	Waters with MUN Beneficial Use Designation: Shall not exceed 0.05 mg/L as a result of controllable water quality factors.
Bacteria, Coliform	Waters with MUN Beneficial Use Designation: Total coliform numbers shall not exceed 2.2 organisms/100 mL median over any 7-day period as a result of controllable water quality factors.
Barium	Waters with MUN Beneficial Use Designation: Shall not exceed 1.0 mg/L as a result of controllable water quality factors.
Boron	Shall not exceed 0.75 mg/L as a result of controllable water quality factors.
Chloride	Waters with MUN Beneficial Use Designation: Shall not exceed 500 mg/L as a result of controllable factors.
Color	Waste discharges shall not result in coloration of the receiving waters that causes a nuisance or adversely affects beneficial uses.
Cyanide	Waters with MUN Beneficial Use Designation: Shall not exceed 0.2 mg/L as a result of controllable water quality factors.
Fluoride	Waters with MUN Beneficial Use Designation: Shall not exceed 1.0 mg/L as a result of controllable water quality factors.
Hardness	Waters with MUN Beneficial Use Designation: Shall not be increased as a result of waste discharges to levels that adversely affect beneficial uses.
Metals	Waters with MUN Beneficial Use Designation: Shall not exceed the following: Cadmium 0.01 mg/L; Chromium 0.05 mg/L; Cobalt 0.2 mg/L; Copper 1.0 mg/L; Iron 0.3 mg/L; Lead 0.05 mg/L; Manganese 0.05 mg/L; Mercury 0.002 mg/L; Selenium 0.01 mg/L; and Silver 0.05 mg/L, as a result of controllable water quality factors.
Methylene Blue-Activated Substances	Waters with MUN Beneficial Use Designation: Shall not exceed 0.05 mg/L as a result of controllable water quality factors.
Oil and Grease	Waste discharges shall not result in deposition of oil, grease, wax, or other materials in concentrations that cause a nuisance or adversely affect beneficial uses.
pH	Shall not be raised above 9 or depressed below 6 as a result of controllable water quality factors.
Radioactivity	Waters with MUN Beneficial Use Designation: Shall not exceed the California Code of Regulations, Title 22, standards of 5 pCi/L for combined radium-226 and radium-228, 15 pCi/L for gross alpha particle activity, 20,000 pCi/L for tritium, 8 pCi/L for strontium-90, 50 pCi/L for gross beta particle activity, and 20 pCi/L for uranium.
Sodium	Waters with AGR Beneficial Use Designation: Shall not exceed a sodium absorption rate of 9.
	Waters with MUN Beneficial Use Designation: Shall not exceed 180 mg/L as a result of controllable water quality factors.
Sulfate	Waters with MUN Beneficial Use Designation: Shall not exceed 500 mg/L as a result of controllable water quality factors.
Taste and Odor	Shall not contain taste- or odor-producing substances in concentrations that adversely affect beneficial uses.
Toxic Substances	All waters shall be maintained free of substances in concentrations that are toxic or that produce detrimental physiological responses in human, plant, animal, or aquatic life.

Orange County National Pollutant Discharge Elimination System Permit. The City is a Permittee of the *Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the Incorporated Cities of Orange County within the Santa Ana Region Areawide Urban Storm Water Runoff Orange County*, Order R8-2009-0030, NPDES No. CAS618030, as amended by Order No. R8-2010-0062 (Orange County MS4 Permit).[24] The Orange County MS4 Permit regulates discharges into the MS4 system in the cities and county areas within Orange County that are in the Santa Ana Region. As discussed further below, the Orange County MS4 Permit requires preparation of a Water Quality Management Plan (WQMP) and implementation of post-construction BMPs for new development and significant redevelopment projects that qualify as Priority Development Projects.

The proposed project is considered a Priority Development Project because it involves redevelopment and the addition or replacement of 5,000 square feet or more of impervious surface area.

Construction Dewatering Permit. The Santa Ana RWQCB requires a permit for discharging waste to surface waters from activities involving groundwater extraction. The *General Waste Discharge Requirements for Discharges to Surface Waters that Pose an Insignificant (De Minimis) Threat to Water Quality*, Order No. R8-2020-0006, NPDES No. CAG998001 (Construction Dewatering Permit)[25] covers general waste discharge requirements for discharges to surface waters that pose an insignificant (*de minimis*) threat to water quality within the Santa Ana Region. Under this order, permittees are required to monitor their discharges of groundwater extraction waste from construction to ensure that effluent limitations for constituents are not exceeded.

Orange County Drainage Area Management Program. The Drainage Area Management Plan (DAMP)[26] was created by the County of Orange, the OCFCD, and incorporated cities (permittees), and includes specific water pollutant requirements of the Orange County Stormwater Program. The DAMP is the principal guidance and compliance document for the countywide implementation of the Stormwater Program. It is the foundation for the permittees to implement model programs designed to prevent pollutants from entering receiving waters to the maximum extent practicable. Section 7 of the DAMP discusses issues relating to new developments and significant redevelopments.

---

[24] Santa Ana Regional Water Quality Control Board (RWQCB). *Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the Incorporated Cities of Orange County within the Santa Ana Region Areawide Urban Storm Water Runoff Orange County, Order R8-2009-0030, NPDES No. CAS618030, as amended by Order No. R8-2010-0062.*

[25] Santa Ana Regional Water Quality Control Board (RWQCB). 2020. The *General Waste Discharge Requirements for Discharges to Surface Waters that Pose an Insignificant (De Minimis) Threat to Water Quality*, *Order No. R8-2020-0006, NPDES No. CAG998001.* June 19.

[26] County of Orange. 2003. *Drainage Area Management Plan (DAMP).* Website: https://ocerws.ocpublicworks.com/service-areas/oc-environmental-resources/oc-watersheds/documents/drainage-area-management-plan-7 (accessed March 2026).

Model Water Quality Management Plan. The *Model Water Quality Management Plan* (Model WQMP)[27] was developed to aid Orange County, the OCFCD, the cities in Orange County (permittees), and developers in Orange County to address post-construction urban runoff and stormwater pollution from new development and significant redevelopment projects that qualify as Priority Development Projects.

As previously discussed, Priority Development Projects are required to develop a WQMP to minimize adverse impacts of development to on-site hydrology, volume and rate of runoff, and pollutants of concern. Project WQMPs include project-specific BMPs to minimize these effects (e.g., LID, site design measures, source control BMPs). The requirements identified in the WQMPs are subject to Section 7 of the DAMP.

Technical Guidance Document. The County of Orange developed the *Technical Guidance Document (TGD) for the Preparation of Conceptual/Preliminary and/or Project Water Quality Management Plans* (Technical Guidance Document)[28] in cooperation with the incorporated cities of Orange County to aid agency staff and project proponents with addressing post-construction urban runoff and stormwater pollution from new development and significant redevelopment projects in Orange County. The Technical Guidance Document serves as the technical guidance to complete the project WQMP.

Orange County Construction Runoff Guidance Manual. The *Construction Runoff Guidance Manual for Contractors, Project Owners, and Developers*[29] presents the requirements related to construction from the DAMP. The goal of this Guidance Manual is to control pollutant discharges from construction sites. As such, it helps applicants with building and grading permits to understand the water quality requirements during the construction phase of development projects.

4.10.4.4 Local Regulations

Local Implementation Plan. The City Local Implementation Plan (LIP) is the principal guidance and compliance document specific to the City's jurisdiction for compliance with the requirements of the Orange County MS4 Permit. The LIP provides the description and details of the City's water quality program implementation activities. The LIP is designed to work in conjunction with the Orange County DAMP. It should be noted that the City's LIP takes precedence over DAMP requirements.

Cypress Town Center and Commons Specific Plan 3.0. The Cypress Town Center and Commons Specific Plan 3.0 contains the following provisions related to hydrology and water quality:

- **Water Plan:** Precise water system requirements will be determined as development projects are proposed within the Specific Plan area as part of the site plan review process and, where applicable, the subdivision map process. Water mains will be dedicated to the water company after construction and acceptance.

---

27 County of Orange. 2011. *Model Water Quality Management Plan (Model WQMP),* Exhibit 7.II. May 19.

28 County of Orange. 2013. *Technical Guidance Document (TGD) for the Preparation of Conceptual/ Preliminary and/or Project Water Quality Management Plans (WQMPs),* Exhibit 7.III. December 20.

29 County of Orange. 2012. *Construction Runoff Guidance Manual for Contractors, Project Owners, and Developers.* December.

- **Wastewater Plan:** New development that occurs within the Specific Plan area will connect to the existing trunk sewer lines. Precise sewer system requirements will be determined as development projects are proposed within the Specific Plan area as part of the site plan review process and, where applicable, the subdivision map process. New collection lines will be offered for dedication to the City after construction.

- **Drainage Plan:** Because of the widely diversified land uses proposed in this Specific Plan, a combination of drainage and treatment systems may be appropriate and will be determined during the project development and design stage. The developer must obtain approval from the City Engineer for the method selected in each instance.

City of Cypress General Plan, Conservation/Open Space/Recreation Element. The Conservation/ Open Space/Recreation Element of the City's General Plan addresses resource protection and preservation issues related to water resources. The following goals and policies would be applicable to the proposed project:

- **COSR-1:** Conserve groundwater and imported water resources
    - **COSR-1.2:** Promote the use of native trees in landscaping to conserve water resources.
    - **COSR-1.3:** Protect ground water resources from depletion and sources of pollution.
    - **COSR-1.4:** Conserve imported water by utilizing water conservation techniques, water conserving appliances, and drought-resistant landscaping.

City of Cypress Municipal Code. Chapter 13, Article IV, Cypress Water Quality, of the City Municipal Code regulates stormwater and surface runoff water quality. The Municipal Code requires compliance with the DAMP and LIP, including preparation of WQMPs for priority development projects. Prior to issuance of a grading permit, building permit, and/or safety permit for any new development or significant redevelopment, the property owner is required to submit to and obtain the approval of the WQMP by the City.

4.10.5 Thresholds of Significance

The thresholds of significance for hydrology and water quality impacts used in this analysis are consistent with Appendix G of the *State CEQA Guidelines* and the City's *Initial Study/Environmental Checklist*.[30] Based on these thresholds, implementation of the proposed project would have a significant adverse impact with respect to hydrology and water quality if it would:

[30] Section 15064(b) of the *State CEQA Guidelines* allows lead agencies to apply their own thresholds of significance, provided those thresholds are supported by substantial evidence and consistent with CEQA's requirements. Pursuant to Section 15064(b) of the *State CEQA Guidelines*, the City has developed additional thresholds of significance for hydrology and water quality impacts, as provided in the City's *Initial Study/Environmental Checklist*. The City's *Initial Study/Environmental Checklist* is provided on the City's website: https://www.cypressca.org/home/showpublisheddocument/756.

Threshold 4.10.1: Violate any water quality standards or waste discharge requirements;

Threshold 4.10.2: Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted);

Threshold 4.10.3: Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of stream or river, in a manner which would result in substantial erosion or siltation on- or off-site;

Threshold 4.10.4: Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;

Threshold 4.10.5: Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff;

Threshold 4.10.6: Otherwise substantially degrade water quality;

Threshold 4.10.7: Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map;

Threshold 4.10.8: Place within a 100-year flood hazard area structures which would impede or redirect flood flows;

Threshold 4.10.9: Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam;

Threshold 4.10.10: Be subject to inundation by seiche, tsunami, or mudflow;

Threshold 4.10.11: Result in an increase in pollutant discharges to receiving waters; consider water quality parameters such as temperature, dissolved oxygen, turbidity and other typical stormwater pollutants (e.g., heavy metals, pathogens, petroleum derivatives, synthetic organics, sediment, nutrients, oxygen-demanding substances, and trash);

Threshold 4.10.12: Result in significant alteration of receiving water quality during or following construction;

Threshold 4.10.13: Result in increased erosion downstream;

Threshold 4.10.14: Result in increased impervious surfaces and associated increased runoff;

Threshold 4.10.15: Create a significant adverse environmental impact to drainage patterns due to changes in runoff flow rates or volumes;

Threshold 4.10.16: Be tributary to an already impaired water body, as listed on the Clean Water Act Section 303(d) list? If so, can it result in an increase in any pollutant for which the water body is already impaired;

Threshold 4.10.17: Be tributary to other environmentally sensitive areas? If so, can it exacerbate already existing sensitive conditions;

Threshold 4.10.18: Have a potentially significant environmental impact on surface water quality to either marine, fresh, or wetland waters;

Threshold 4.10.19: Have a potentially significant adverse impact on groundwater quality;

Threshold 4.10.20: Cause or contribute to an exceeded applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses;

Threshold 4.10.21: Impact aquatic, wetland, or riparian habitat; or

Threshold 4.10.22: Include new or retrofitted stormwater treatment control Best Management Practices (e.g., water quality treatment basin, constructed treatment wetlands), the operation of which could result in significant environmental effects (e.g., increased vectors or odors).

4.10.6 Project Impacts

4.10.6.1 Water Quality Impacts

Threshold 4.10.1: **Would the project violate any water quality standards or waste discharge requirements?**

Threshold 4.10.6: **Would the project otherwise substantially degrade water quality?**

Threshold 4.10.11: **Would the project result in an increase in pollutant discharges to receiving waters? Consider water quality parameters such as temperature, dissolved oxygen, turbidity and other typical stormwater pollutants (e.g., heavy metals, pathogens, petroleum derivatives, synthetic organics, sediment, nutrients, oxygen-demanding substances, and trash).**

Threshold 4.10.12: **Would the project result in significant alteration of receiving water quality during or following construction?**

Threshold 4.10.18: Would the project have a potentially significant environmental impact on surface water quality to either marine, fresh, or wetland waters?

***Less Than Significant Impact*.** As detailed in Chapter 3.0, Project Description, the proposed project consists of the reasonably foreseeable buildout of a portion of the area governed by the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) that includes approximately 134 acres of land (Buildout Area) in the City. The proposed project would include the development of up to 1,791 additional residential units within the Buildout Area, reflecting the remaining allowable units under the Specific Plan, and approximately 440,000 square feet of non-residential development.

Construction. As discussed in Chapter 3.0, Project Description, the proposed project evaluated in this Draft EIR assumes that development of the land uses allowed by the Specific Plan within the Buildout Area would require the demolition and removal of all or a substantial portion of the existing improvements associated with the LARC, including the race track and infield area, grandstand, buildings, barns and structures and three artificial lakes. That phase would be followed by the grading for and construction of specific development projects within discrete portions of the Buildout Area. Development within the Buildout Area would occur on a project-by-project basis and the specific design and sequencing of those projects cannot be determined at this time. However, future development facilitated by the proposed project would generally be required to comply with applicable construction permits and regulations associated with water quality, as detailed in **Regulatory Compliance Measure HYD-1**.

Construction activities could temporarily increase erosion and sedimentation due to ground and soil disturbance, which exposes soils. In addition, construction activities could potentially introduce pollutants into stormwater runoff if disturbed soil and chemicals associated with construction activities are conveyed into the storm drain system and/or receiving waters. Pollutants of concern during construction of future development under the proposed project include sediments, trash, petroleum products, concrete waste (dry and wet), sanitary waste, and chemicals. Each of these pollutants on its own or in combination with other pollutants can have a detrimental effect on water quality. During soil-disturbing construction activities, excavated soil would be exposed, and there would be an increased potential for soil erosion and sedimentation compared to existing conditions. In addition, chemicals, liquid products, petroleum products (e.g., paints, solvents, and fuels), and concrete-related waste may be spilled or leaked and have the potential to be transported via stormwater runoff into receiving waters. Sediment from increased soil erosion and chemicals from spills and leaks also have the potential to be discharged to downstream receiving waters during storm events, which can affect water quality, contribute to TMDL exceedances and impair beneficial uses.

As construction of future development associated with the proposed project is anticipated to disturb greater than 1 acre of soil, future development would be subject to the requirements of the *General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities,* Order No. WQ 2022-0057-DWQ, NPDES No. CAS000002 (Construction General Permit),[31]

[31] State Water Resources Control Board (SWRCB). 2022. *National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (General Permit), Order WQ 2022-0057-DWQ, NPDES No. CAS000002*. Adopted September 8.

as specified in **Regulatory Compliance Measure HYD-1**. As required by the Construction General Permit, the Construction Contractor would be required to prepare a SWPPP and implement construction BMPs detailed in the SWPPP during construction activities. The SWPPP would detail the BMPs to be implemented during construction. Construction BMPs would include, but not be limited to, Erosion Control and Sediment Control BMPs designed to minimize erosion and retain sediment on site, and Good Housekeeping BMPs to prevent spills, leaks, and discharge of construction debris and waste into receiving waters.

If construction of future development associated with the proposed project would disturb less than 1 acre of soil and are not a part of a larger common plan, those projects would be required to comply with Section 4.106 of the 2022 California Green Building Standards Code (CALGreen Code), as specified in **Regulatory Compliance Measure HYD-1**. Section 4.106 of the CALGreen Code requires implementation of BMPs to prevent flooding and erosion and to retain sediment on site. Compliance with the requirements of the Construction General Permit or Section 4.106 of the CALGreen Code, including incorporation of construction BMPs, would ensure that construction impacts related to waste discharge requirements, water quality standards, degradation of water quality, increased pollutant discharge, and alteration of receiving water quality would be less than significant.

According to the Geotechnical Investigation, groundwater within the Buildout Area has a historic groundwater depth of less than 10 feet below ground surface. Based on exploratory borings performed as part of the Geotechnical Investigation, groundwater within the Buildout Area is shallow, ranging from approximately 5 to 12.5 feet below ground surface. Because of the presence of shallow groundwater, it is likely that groundwater dewatering would be required during excavation activities associated with buildout of the proposed project. In addition, removal of the three artificial lakes would require dewatering. Groundwater and water from the three artificial lakes may contain high levels of total dissolved solids, nitrate, salinity, or other constituents, or high or low pH levels that could be introduced to surface waters when dewatered water is discharged to receiving waters. Dewatering activities during excavation and removal of the three artificial lakes would be conducted in accordance with the *General Waste Discharge Requirements for Discharges to Surface Waters that Pose an Insignificant (De Minimis) Threat to Water Quality*, Order No. R8-2020-0006, NPDES No. CAG998001 (Construction Dewatering Permit),[32] as specified in **Regulatory Compliance Measure HYD-2**. This permit requires testing and treatment (as necessary) of water encountered during dewatering prior to release to the storm drain system. As a result, dewatering activities would not introduce pollutants to receiving waters at levels that would violate water quality standards or waste discharge requirements, degrade water quality, increase pollutant discharge, or alter the quality of the receiving water.

The proposed project would be designed and implemented to comply with all applicable federal, state, and local laws, regulations, policies, and plans related to water quality, stormwater management, and hydrology. Compliance with **Regulatory Compliance Measures HYD-1 and HYD-2**, which requires preparation of a SWPPP, implementation of construction BMPs, and testing and

[32] Santa Ana Regional Water Quality Control Board (RWQCB). 2020. The *General Waste Discharge Requirements for Discharges to Surface Waters that Pose an Insignificant (De Minimis) Threat to Water Quality*, *Order No. R8-2020-0006, NPDES No. CAG998001.* June 19.

treatment of water prior to discharge to surface water, would ensure that construction of the proposed project would not result in the violation of water quality standards or waste discharge requirements. In addition, compliance with **Regulatory Compliance Measures HYD-1 and HYD-2** would ensure that construction of the proposed project would not substantially degrade water quality, result in an increase in pollutant discharges to receiving waters, result in significant alteration of receiving water quality, or result in a significant environmental impact on surface water quality to either marine, fresh, or wetland waters. Impacts would be less than significant, and no additional mitigation measures are required.

Operation. The drainage plan for the proposed project is divided into three Drainage Areas (A through C) for hydrology and drainage design and 18 Drainage Management Areas (DMAs A1, A2, B, C, D1, D2, E1, E2, F, G1, G2, H1, H2, and S1 through S5) that correspond to the anticipated location of future water quality BMPs. The proposed Drainage Areas and DMAs are discussed in detail under Thresholds 4.10.4, 4.10.5, and 4.10.15, below.

Implementation of the proposed project would introduce new uses within the Buildout Area and would increase the amount of impervious surface area within the Buildout Area compared to existing conditions, from approximately 59 percent to approximately 70 percent, due to the construction of the proposed project. Expected pollutants of concern from long-term operation of the proposed project include suspended solids, nutrients, heavy metals, pathogens, pesticides, oil and grease, toxic organic compounds, and trash and debris. According to the PWQMP prepared for the proposed project, potential sources of these pollutants include the following:

- **Suspended Solids/Sediment:** Landscaping
- **Nutrients:** Landscaping
- **Heavy Metals and Toxic Organic Compounds:** Parking lots
- **Pathogens (Bacteria/Virus):** Parking lots, food uses, pet waste
- **Pesticides:** Landscaping
- **Oil and Grease:** Parking lots
- **Toxic Organic Compounds:** Parking lots and commercial uses
- **Trash and Debris:** Landscaping activities, human activities, food wastes

The proposed project would be required to comply with the requirements of the Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the Incorporated Cities of Orange County within the Santa Ana Region Areawide Urban Storm Water Runoff Orange County, Order R8-2009-0030, NPDES No. CAS618030, as amended by Order No. R8-2010-0062 (Orange County MS4 Permit).[33] Compliance with the Orange County MS4 Permit is achieved through adherence to Chapter 13-23 of the Cypress Municipal Code. As required by Chapter 13-23 of the Cypress Municipal Code, and specified in **Regulatory Compliance Measure HYD-3**, projects that qualify as new development or significant redevelopment as outlined in the Orange County MS4 Permit must comply with the requirements of the Orange County MS4 Permit, Orange County

[33] Santa Ana Regional Water Quality Control Board (RWQCB). *Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the Incorporated Cities of Orange County within the Santa Ana Region Areawide Urban Storm Water Runoff Orange County, Order R8-2009-0030, NPDES No. CAS618030, as amended by Order No. R8-2010-0062.*

DAMP, and the City of Cypress Local Implementation Plan (LIP), including the preparation of a project-specific WQMP to specify BMPs that would be implemented to capture, treat, and reduce pollutants of concern in stormwater runoff. WQMPs would specify the Source Control, Low Impact Development (LID), and Treatment Control BMPs that would be implemented to capture, treat, and reduce pollutants of concern in stormwater runoff. Source Control BMPs are preventative measures that are implemented to prevent the introduction of pollutants into stormwater. LID BMPs mimic a project site's natural hydrology by using design measures that capture, filter, store, evaporate, detain, and infiltrate runoff rather than allowing runoff to flow directly to piped or impervious storm drains. Treatment Control BMPs are structural BMPs designed to treat and reduce pollutants in stormwater runoff prior to releasing it to receiving waters.

The PWQMP prepared for the proposed project (**Appendix H-2**) specifies the Source Control and LID BMPs proposed for the project (no Treatment Control BMPs are proposed). The BMPs specified in the PWQMP would be implemented and maintained, as specified in **Regulatory Compliance Measure HYD-3**. The proposed BMPs are detailed below.

Proposed Non-Structural Source Control BMPs include education for property owners, tenants and occupants; activity restrictions; common area landscape management; BMP maintenance; spill contingency plan, uniform fire code implementation, common area litter control; employee training; housekeeping of loading docks, common area catch basin inspections; and street sweeping public streets and parking lots. Proposed Structural Source Control BMPs include storm drain system stenciling and signage; trash and waste storage areas designed to reduce pollutant introduction; use of efficient irrigation systems and landscape design, water conservation, smart controllers, and source control; energy dissipation and protection of slopes and channels; vehicle wash areas; hillside landscaping; and wash water control for food preparation areas.

As discussed in the PWQMP, the proposed 18 DMAs all discharge to channels that are not susceptible to hydromodification. Therefore, no hydrologic conditions of concern (HCOCs) are present for these DMAs. Please refer to the PWQMP included in **Appendix H-2** for additional details of the proposed Non-Structural Source Control BMPs, and Structural Source Control BMPs.

Proposed LID BMPs include biotreatment BMPs, including either detention basins and/or proprietary flow-based biofiltration systems (depending on the design considerations of the final buildout condition), to capture and treat stormwater runoff before discharging stormwater to the surrounding storm drain system. The proposed DMAs and water quality BMPs are discussed in detail under Thresholds 4.10.4, 4.10.5, and 4.10.15, below.

The proposed BMPs would target and reduce pollutants of concern from runoff from the Buildout Area in compliance with the Orange County MS4 Permit requirements, Orange County DAMP, and City of Cypress LIP. Compliance with these requirements, including incorporation of operational BMPs to target pollutants of concern (as specified in **Regulatory Compliance Measure HYD-3**), would ensure that water quality impacts, degradation of water quality, increased pollutant discharge, and alteration of receiving water quality during project operation would be less than significant.

Furthermore, future development projects facilitated by the proposed project would be evaluated for site-specific impacts relating to hydrology and water quality and would include appropriate mitigation (as necessary) to address impacts related to violation of water quality standards or waste discharge requirements or degradation of water quality. Therefore, implementation of the proposed project would result in a less than significant impact related to the violation of water quality standards or waste discharge requirements, degradation of water quality, increase pollutant discharges, or alter receiving water quality, and no mitigation is required.

4.10.6.2 Groundwater Supply Impacts

Threshold 4.10.2: **Would the project substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?**

***Less Than Significant Impact*.** As previously discussed, the Buildout Area is located within the Coastal Plain of Orange County Groundwater Basin, which is managed by the OCWD and designated as a Medium Priority basin pursuant to the SGMA.[34] On January 1, 2017, the OCWD, City of La Habra, and Irvine Ranch Water District submitted the Basin 8-1 Alternative to the California DWR, which indicated that the Coastal Plain of Orange County Groundwater Basin has operated within its sustainable yield over a period of at least 10 years without experiencing significant and unreasonable (1) lowering of groundwater levels, (2) reduction in storage, (3) water quality degradation, (4) seawater intrusion, (5) inelastic land subsidence, or (6) depletions of interconnected surface water that have significant and unreasonable adverse impacts on beneficial uses of the surface water, and will continue to be sustainably managed pursuant to the management actions within the Basin 8-1 Alternative, as required by the SGMA.[35]

Construction. According to the Geotechnical Investigation, groundwater within the Buildout Area has a historic groundwater depth of less than 10 feet below ground surface. Based on exploratory borings performed as part of the Geotechnical Investigation, groundwater within the Buildout Area is shallow, ranging from approximately 5 to 12.5 feet below ground surface. Given these shallow conditions, temporary dewatering could be required during excavation activities. However, groundwater dewatering would be localized, short-term, and minimal, and the volume of groundwater removed would not be substantial when compared to the total amount of groundwater stored in the Coastal Plain of the Orange County Groundwater Basin, which has a surface area of 350 square miles and a storage capacity of 38,000,000 acre-feet.[36] In addition, according to the Geotechnical Investigation, the predominate soil type within the Buildout Area is classified as Hydrologic Soil Group C. Group C soils having slow infiltration rates when thoroughly

wetted and have a slow rate of water transmission. Therefore, construction activities would not substantially deplete groundwater supplies or interfere with groundwater recharge in a manner that may impede sustainable groundwater management. Impacts would be less than significant, and no mitigation is required.

Operation. Implementation of the proposed project would increase impervious surface coverage within the Buildout Area compared to existing conditions, from approximately 59 percent to approximately 70 percent, due to the construction of the proposed project. This increase in impervious surface area within the Buildout Area would decrease on-site infiltration. However, because underlying soils already exhibit low infiltration capacity, the project is not expected to substantially alter groundwater recharge compared to existing conditions. The proposed project would also not involve direct groundwater extraction.

As discussed above, the Buildout Area is located within the Coastal Plain of Orange County Groundwater Basin. Operation of the proposed project would not involve direct groundwater extraction. The Golden State Water Company (GSWC) West Orange would supply water to the proposed project. According to the WSA prepared for the proposed project, GSWC West Orange's water supply sources include groundwater pumped from the Orange County Groundwater Basin, treated imported water, a small amount of purchased water from the City of Seal Beach through an intertie, and recycled water from the City of Cerritos. GSWC West Orange owns and operates 13 active groundwater wells located within the Orange County Groundwater Basin, with a total capacity of approximately 11,750 gallons per minute (or about 16.9 million gallons per day). Over the past 20 years, GSWC West Orange's maximum annual total groundwater production was approximately 15,889-acre feet per year during calendar year 2013 (or about 14 million gallons per day).

As discussed in the WSA prepared for the proposed project, GSWC West Orange's primary sources of supply would provide sufficient water supply for GSWC West Orange's projected water demand, including the proposed project, under all conditions, over the next 20 years. Increased water use during operation of the proposed project would also not substantially affect groundwater supplies, because the groundwater basin has been sustainably managed by OCWD over the last 10 years and will continue to be sustainably managed. In addition, OCWD and GSWC West Orange coordinate in order to ensure that groundwater extracted for municipal water supplies would not substantially deplete groundwater supplies. Therefore, operation of the proposed project would not substantially deplete groundwater supplies or interfere with groundwater recharge in a manner that may impede sustainable groundwater management. Impacts would be less than significant, and no mitigation is required.

4.10.6.3 Drainage Patterns and Erosion Impacts

Threshold 4.10.3: **Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?**

Threshold 4.10.13: **Would the proposed project result in increased erosion downstream?**

***Less Than Significant Impact*.** Under existing conditions, the southern portion of the Buildout Area generally drains south towards the Katella Avenue Storm Drain, the northwestern portion of the Buildout Area drains west towards Lexington Drive, and a small portion of the Buildout Area in the north drains north towards Cerritos Avenue. The Drainage Report identifies six Drainage Areas (A through F) for the Buildout Area under existing conditions, as described in Section 4.10.3.2 and depicted in **Figure 4.10-1**. There are no existing streams or rivers in the Buildout Area.

The drainage plan for the proposed project would be divided into three Drainage Areas (A through C) for hydrology and drainage design and 18 Drainage Management Areas (DMAs A1, A2, B, C, D1, D2, E1, E2, F, G1, G2, H1, H2, and S1 through S5) that correspond to the anticipated location of future water quality BMPs.

Construction. During project construction activities, soil would be exposed and disturbed, drainage patterns would be temporarily altered during grading and other construction activities, and there would be an increased potential for soil erosion and siltation compared to existing conditions. Additionally, during a storm event, soil erosion and siltation could occur at an accelerated rate. As discussed above, as construction of future development associated with the proposed project is anticipated to disturb greater than 1 acre of soil, future development projects would be subject to the requirements of the Construction General Permit, which requires preparation of a SWPPP (**Regulatory Compliance Measure HYD-1**). The SWPPP which would detail Erosion Control and Sediment Control BMPs to be implemented during project construction to minimize erosion and retain sediment on site. However, as the specific design and sequencing of future development projects cannot be determined at this time, future projects may disturb less than 1 acre of soils and the Construction General Permit would not be applicable. If construction of future development associated with the proposed project would disturb less than 1 acre of soil and are not a part of a larger common plan, those projects would be required to comply with Section 4.106 of the CALGreen Code (**Regulatory Compliance Measure HYD-1**). Section 4.106 of the CALGreen Code requires implementation of BMPs to prevent flooding and erosion and to retain sediment on site. Therefore, compliance with the requirements of the Construction General Permit or Section 4.106 of the CALGreen Code, including incorporation of construction BMPs, would ensure that construction impacts related to on-site, off-site, or downstream erosion or siltation would be less than significant.

Project construction would not alter the course of a stream or river because there are no rivers and streams in the Buildout Area. As such, impacts related to substantial erosion or siltation due to alterations to existing course of stream or rivers would be less than significant, and no mitigation is required.

Changes to the hydrologic characteristics of a stream caused by development, including increased stormwater runoff volume, high peak flows, and altered flow duration and timing, can lead to downstream erosion. According to the WQMP prepared for the proposed project, all 18 DMAs discharge to channels that are not susceptible to hydromodification. Therefore, no HCOCs are present for these DMAs, and construction of the proposed project would not result in hydromodification impacts to downstream receiving waters, including increased erosion downstream. Impacts would be less than significant, and no mitigation is required.

Operation. According to the PWQMP prepared for the proposed project, implementation of the proposed project would increase the amount of impervious surface area by 11 percent within the Buildout Area from approximately 78.02 acres (59 percent) to approximately 92.39 acres (70 percent). The approximately 92.39 acres of the Buildout Area that would be impervious would not be susceptible to on-site erosion or siltation because no soil would be included in these areas. The remaining 40.29 acres would consist of pervious surface area, which would contain landscaping that would minimize on-site erosion and siltation by stabilizing the soil. Therefore, on-site erosion and siltation impacts would be minimal.

Increases in stormwater runoff can lead to downstream erosion in receiving waters. The Drainage Report also included off-site hydrology analysis for the drainage facilities that the Buildout Area would discharge to, including the Cerritos Avenue Storm Drain, the Katella Avenue Storm Drain, and the Lexington Drive Storm Drain. Under existing conditions, the 25-year storm event peak flow rate for the Cerritos Avenue Storm Drain is approximately 202 cubic feet per second (cfs), at the intersection of Bloomfield Avenue and Cerritos Avenue. Analysis of the hydrology results indicated that the proposed project would not have any impacts on the Cerritos Avenue Storm Drain, as the proposed project's discharge would be less than the existing condition, and it would only occur once the 100-year high confidence peak flows have passed at the discharge location. This reduction is due to the proposed detention basin that would collect, detain, and treat stormwater before discharging stormwater to the Cerritos Avenue Storm Drain. This detention basin is currently proposed to discharge at a rate of 17 cfs, but only upon the subsidence of flows in the Cerritos Avenue Storm Drain.

In addition, under existing conditions, the 25-year storm event peak flowrate for the Katella Avenue Storm Drain is approximately 236 cfs. The hydrology analysis in the Drainage Report found that the proposed project would need to reduce the flows discharged to the Katella Avenue Storm Drain. The proposed project would reduce the stormwater discharge to Katella Avenue Storm Drain in the post-development condition by approximately 72 percent when compared to the existing condition. The proposed project is allowed to discharge directly to the Katella Avenue Storm Drain at a rate of approximately 32.84 cfs, which would significantly improve the existing storm drain system hydraulics and reduce current deficiencies within the system. As such, the proposed project would not have any adverse effects on the downstream receiving waters.

Lastly, under existing conditions, the 25-year high confidence storm event peak flow rate for the Lexington Drive Storm Drain is approximately 76.84 cfs. The Drainage Report indicated that the allowed discharge to the Lexington Drive Storm Drain is 11.33 cfs and that, due to the extensive on-site mitigation from proposed detention basins, the proposed project would not cause adverse effects to the hydraulic conditions of this facility or downstream facilities.

Overall, stormwater runoff would be collected, detained, and treated in the proposed detention basins and/or proprietary flow-based biofiltration systems, which would capture and treat stormwater runoff before discharging stormwater to the surrounding storm drain system (**Regulatory Compliance Measure HYD-3**). The proposed detention basins and proprietary flow-based biofiltration systems would not be susceptible to erosion or siltation and implementation of the proposed detention basins would ensure that the proposed project would not result in increased off-site erosion or siltation. Additionally, according to the PWQMP and as discussed

above, all 18 DMAs discharge to channels that are not susceptible to hydromodification. Therefore, no HCOCs are present for these DMAs and the proposed project would not result in hydromodification impacts to downstream receiving waters, including increased downstream erosion or siltation impacts.

In addition, operation of the proposed project would not alter the course of a stream or river because there are no rivers and streams in the Buildout Area. As such, impacts related to substantial erosion or siltation due to alterations to existing course of stream or rivers would be less than significant, and no mitigation is required. For these reasons, operational impacts related to substantial on-site, off-site, or downstream erosion or siltation would be less than significant, and no mitigation is required.

Threshold 4.10.4: Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

Threshold 4.10.5: Would the project create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Threshold 4.10.15: Would the project create a significant adverse environmental impact to drainage patterns due to changes in runoff flow rates or volumes?

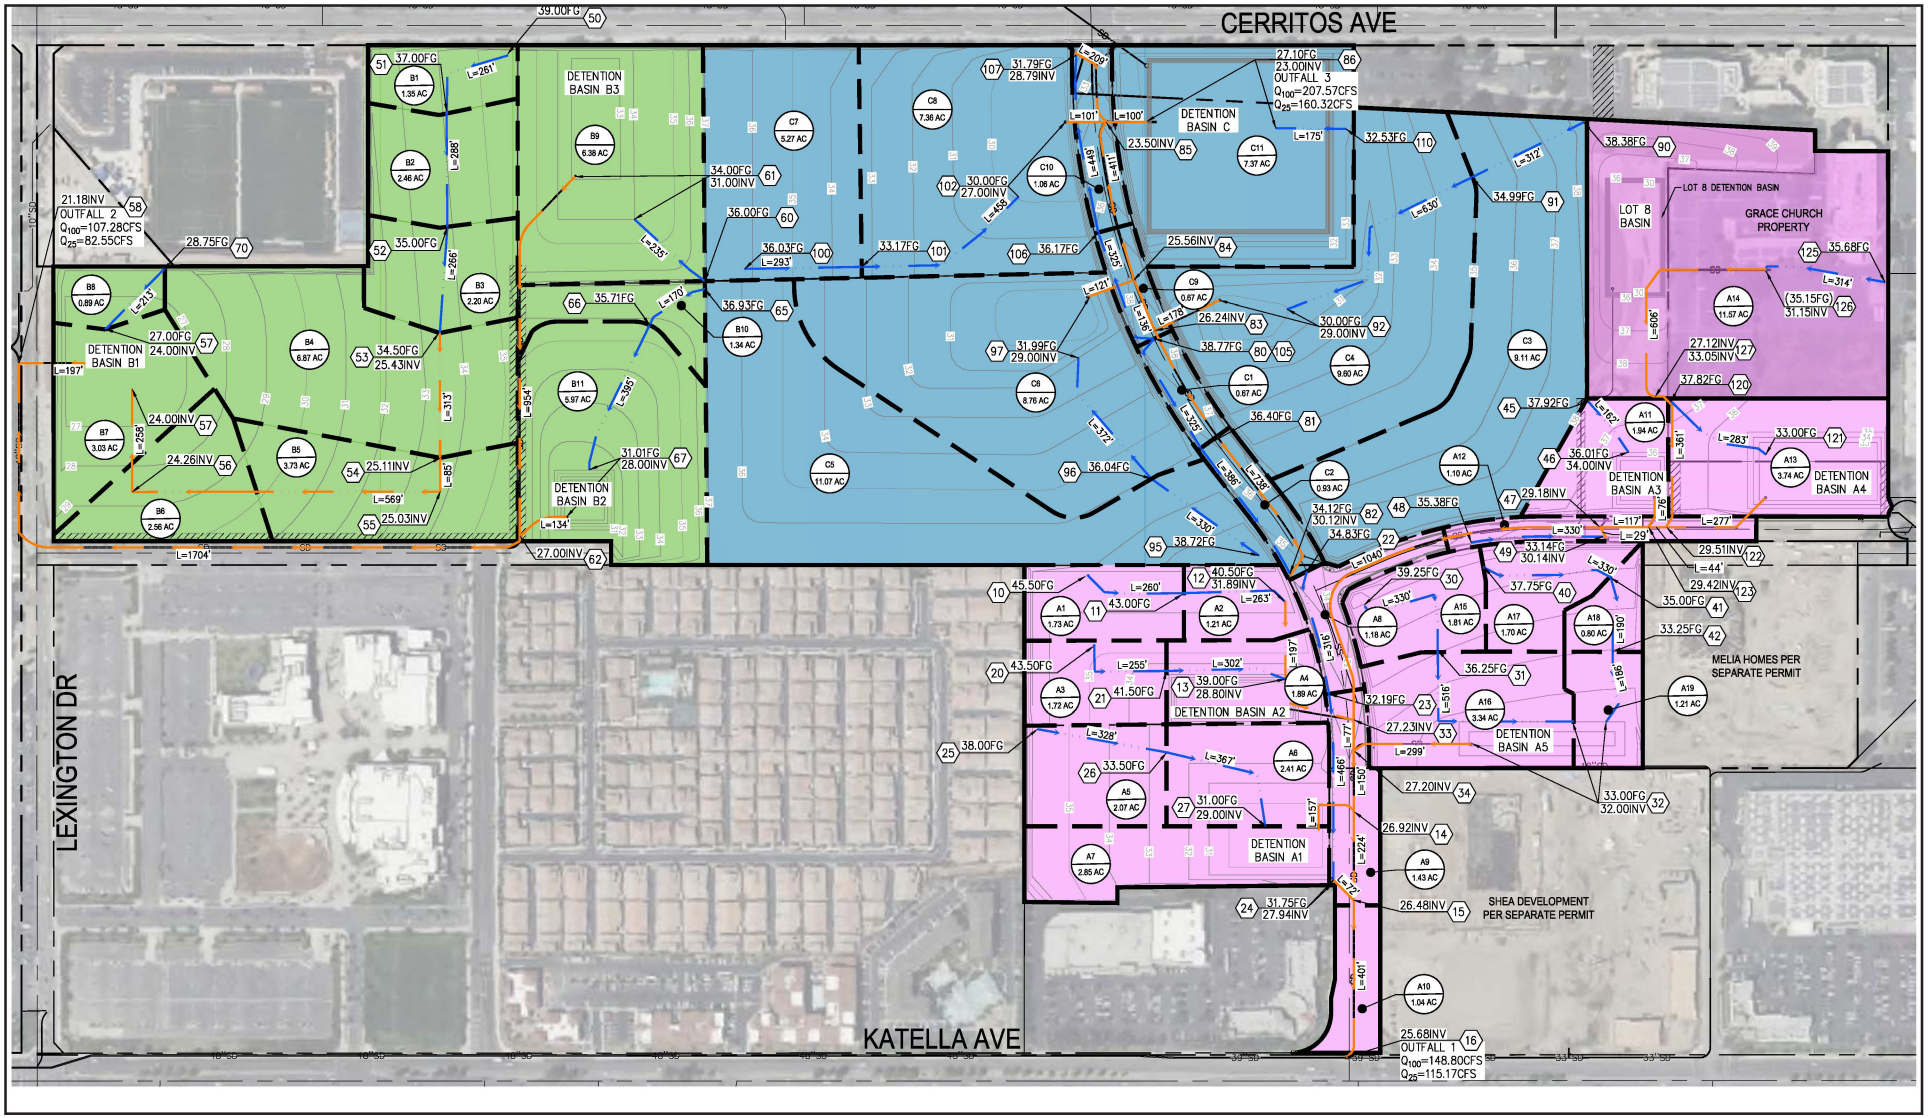
***Less Than Significant Impact*.** As discussed above, under existing conditions, the southern portion of the Buildout Area generally drains south towards the Katella Avenue Storm Drain, the northwestern portion of the Buildout Area drains west towards Lexington Drive, and a small portion of the Buildout Area in the north drains north towards Cerritos Avenue. The Drainage Report identifies six Drainage Areas (A through F) for the Buildout Area under existing conditions, as described above in Section 4.10.3.2, Drainage, and depicted in **Figure 4.10-1**.

During operation of the proposed project, the Buildout Area would be divided into three Drainage Areas (A through C) for hydrology and drainage design and 18 Drainage Management Areas (DMAs A1, A2, B, C, D1, D2, E1, E2, F, G1, G2, H1, H2, and S1 through S5) that correspond to the anticipated location of future water quality BMPs.

Construction. Drainage patterns would be temporarily altered during grading and other construction activities; however, construction of the proposed project would not alter the course of a stream or river. As discussed above and specified in **Regulatory Compliance Measure HYD-1**, project construction would either comply with the requirements of the Construction General Permit, including the preparation and implementation of a SWPPP, or Section 4.106 of the CALGreen Code, which requires implementation of construction BMPs. The SWPPP would include construction BMPs to control and direct on-site surface runoff and would include detention facilities, if required, to ensure that stormwater runoff from the construction site does not exceed the capacity of the stormwater drainage systems.

In addition, any groundwater extracted during groundwater dewatering activities that is discharged to surface waters would be tested and treated (if necessary) to ensure that any discharges meet the water quality limits specified in the applicable NPDES permit, as specified in **Regulatory Compliance Measure HYD-2. Regulatory Compliance Measures HYD-1 and HYD-2** are existing NPDES requirements with which the project is required to comply. These measures would prevent substantial additional sources of polluted runoff being discharged to the storm drain system through implementation of construction BMPs that target pollutants of concern in runoff from the Buildout Area as well as testing and treatment (if required) of groundwater prior to its discharge to surface waters.

With adherence to **Regulatory Compliance Measures HYD-1 and HYD-2** and implementation of BMPs, construction impacts related to substantially altering the drainage pattern of the Buildout Area in a manner that would result in flooding on- or off-site, exceeding the capacity of the adjacent stormwater drainage systems, or providing substantial additional sources of polluted runoff would be less than significant. In addition, with adherence to **Regulatory Compliance Measures HYD-1 and HYD-2,** construction of the proposed project would not create a significant adverse environmental impact to drainage patterns due to changes in runoff flow rates or volumes. Impacts would be less than significant, and no mitigation is required.



Operation. Implementation of the proposed project would require minor modifications to the existing Drainage Areas and would include the installation of Storm Drain Lines A, B, and C, as discussed in more detail below. For example, stormwater would no longer be directed to the existing race track and lakes, which would be removed as part of the proposed project. The Drainage Report identifies three Drainage Areas and 18 DMAs (DMAs A1, A2, B, C, D1, D2, E1, E2, F, G1, G2, H1, H2, and S1 through S5) for the Buildout Area under the proposed condition. The numbering convention of the Drainage Areas does not correspond exactly between the existing and proposed conditions. **Table 4.10.D: Existing and Proposed Drainage Conditions** below is provided for clarification and comparison purposes.

Table 4.10.D: Existing and Proposed Drainage Conditions

Outfall Location	Existing Drainage Area	Proposed Drainage Area
Katella Avenue Storm Drain	A and B	A
Winner's Circle Storm Drain	C	-
Lexington Drive Storm Drain	D	B
Cerritos Avenue Storm Drain	E	C
Existing Race Track Ponds	F	-

Specific Plan 3.0 Buildout Project

Proposed Drainage Management Areas

This page intentionally left blank

- **Drainage Area A** consists of the east and southeast portions of the Buildout Area, southeast of Drainage Area C, and includes approximately 44.76 acres of land. Proposed development within Drainage Area A would include commercial, medium-density residential, and senior housing uses with residential densities of approximately 29.7 and 17.5 dwelling units per acre, respectively. Additionally, the proposed Moody Street Extension south of the proposed Vessels Circle Extension will drain towards Drainage Area A and be captured by proposed catch basins that will discharge to the Katella Avenue Storm Drain. Stormwater within Drainage Area A would generally flow from north to south. Surface flows in this area would be conveyed to new inlet locations which would route the runoff towards a proposed storm drain line in the proposed Moody Street and Vessels Circle extensions (Storm Drain Line A). Storm Drain Line A would begin in Vessels Circle as a 24-inch RCP and would flow east to west towards Moody Street. Along Moody Street this line would increase in size to a 36-inch storm drain system that would connect to the existing 39-inch Katella Avenue Storm Drain. The Moody Street extension would also include the construction of catch basin inlets that will ensure no surface runoff from the proposed street will spill onto Katella Avenue as it would in the existing condition.

  The proposed Drainage Area A consolidated the existing Drainage Area A and Drainage Area B. In the proposed condition, peak runoff was determined to be less than the existing stormwater runoff, which is due to the implementation of proposed detention basins within the proposed Drainage Area A. Five proposed detention basin, Basins A1, A2, A3, A4, and A5, are proposed in Drainage Area A to reduce the peak runoff from the Buildout Area, utilizing the 0.308 cubic feet per second per acre (cfs/acre) maximum discharge rate as required by the City, before ultimately discharging into the Katella Avenue Storm Drain. As discussed, the peak runoff would be greatly reduced when compared to the existing condition, which would improve the downstream system hydraulic conditions. Discharge to Katella Avenue would not exceed the existing condition discharge for the 10-, 25- and 100-year expected value storm event.

  - **DMA-A1** includes approximately 7.33 acres of land, with runoff flows traveling from north to south and discharging to the Katella Avenue Storm Drain. DMA-A1 is proposed to be approximately 85 percent impervious. Stormwater treatment within DMA-A1 would be provided through the use of proprietary flow-based biofiltration systems. Alternatively, Basin A1 may treat stormwater before discharging into the Katella Avenue Storm Drain if the final site plan design allows.

  - **DMA-A2** includes approximately 6.52 acres of land, with runoff flows traveling from north to south and discharging to the Katella Avenue Storm Drain. DMA-A2 is proposed to be approximately 85 percent impervious. Stormwater treatment within DMA-A2 would be provided through the use of proprietary flow-based biofiltration systems. Alternatively, Basin A2 may treat stormwater before discharging into the Katella Avenue Storm Drain if the final site plan design allows.

  - **DMA-B** includes approximately 8.86 acres of land, with runoff flows traveling from north to south. Stormwater runoff within DMA-B would discharge to the proposed storm drain line in the proposed Moody Street extension (Storm Drain Line A), which ultimately discharges to the Katella Avenue Storm Drain. DMA-B is proposed to be approximately 85 percent

impervious. Stormwater treatment within DMA-B would be provided through the use of proprietary flow-based biofiltration systems. Alternatively, Basin A5 may treat stormwater before discharging into the Katella Avenue Storm Drain if the final site plan design allows.

- **DMA-H1** includes approximately 2.00 acres of land, with runoff flows traveling from west to east and discharging to the Katella Avenue Storm Drain. DMA-H1 is proposed to be approximately 85 percent impervious. Stormwater runoff within DMA-H1 would either be treated via a proprietary flow-based biofiltration system or Basin A4.

- **DMA-H2** includes approximately 1.75 acres of land, with runoff flows traveling from west to east and discharging to the Katella Avenue Storm Drain. DMA-H2 is proposed to be approximately 85 percent impervious. Stormwater runoff within DMA-H2 would also either be treated via a proprietary flow-based biofiltration system or Basin A4.

- **DMA-S3** includes approximately 1.06 acres of the proposed Vessels Circle extension and would be approximately 90 percent impervious. Within DMA-S3 runoff flows would converge to a low point near the southwest corner of DMA-C where stormwater would be captured and treated via a proprietary flow-based biofiltration system and discharged to the Katella Avenue Storm Drain.

- **DMA-S5** includes approximately 1.94 acres of the proposed Vessels Circle and Moody Street extensions and would be approximately 90 percent impervious. Within DMA-S5 runoff flows would travel from north to south and would be captured and treated via a proprietary flow-based biofiltration system and discharged to the proposed storm drain line in the proposed Moody Street extension (Storm Drain Line A) and ultimately the Katella Avenue Storm Drain.

- **Drainage Area B** consists of the western portion of the Buildout Area, west of Drainage Area C, and includes approximately 36.78 acres of land. Proposed development within Drainage Area B would include single-family residential, medium-family residential, and senior housing uses. Stormwater within Drainage Area B would generally flow from northeast to southwest. Surface flows in this area would be conveyed through a proposed storm drain line (Storm Drain Line B) to discharge into the existing 48-inch storm drain line that begins at Enterprise Drive and ultimately connects to the existing 48-inch Lexington Drive Storm Drain. Three detention basins, Basins B1, B2, and B3, are proposed in Drainage Area B to reduce the peak runoff from the Buildout Area, utilizing the 0.308 cfs/acre maximum discharge rate as required by the City.

  - **DMA-C** includes approximately 23.08 acres of land, with runoff flows traveling northeast to southwest and discharging to the Lexington Drive Storm Drain, which ultimately discharges to the Katella Avenue Storm Drain. DMA-C is proposed to be approximately 80 percent impervious. Stormwater treatment within DMA-C would be provided through the use of proprietary flow-based biofiltration systems. Alternatively, Basin B1 may treat stormwater before discharging into the Lexington Drive Storm Drain if the final site plan design allows.

  - **DMA-D1** includes approximately 6.38 acres of land, with runoff flows traveling from west to east and discharging to the Lexington Drive Storm Drain, which ultimately discharges to the Katella Avenue Storm Drain. DMA-D1 is proposed to be approximately 80 percent

impervious. Stormwater treatment within DMA-D1 would be provided through the use of proprietary flow-based biofiltration systems. Alternatively, Basin B3 may treat stormwater before discharging into the Lexington Drive Storm Drain if the final site plan design allows.

  - **DMA-E1** includes approximately 7.31 acres of land, with runoff flows traveling from north to south and discharging to the Lexington Drive Storm Drain, which ultimately discharges to the Katella Avenue Storm Drain. DMA-E1 is proposed to be approximately 80 percent impervious. Stormwater treatment within DMA-E1 would be provided via either Basin B2 or through the use of proprietary flow-based biofiltration systems, ultimately discharging into the Lexington Drive Storm Drain, depending on the final site plan design.

- **Drainage Area C** consists of the central portion of the Buildout Area, between Drainage Area A and Drainage Area B, and includes approximately 61.87 acres of land. Proposed development within Drainage Area C would include single-family residential and medium-family residential, with the remaining portion to be developed with park and recreational uses. Drainage Area C is divided by the proposed Moody Street extension, with stormwater runoff generated to the west of the street extension set to flow northeasterly and runoff produced to the east of the street extension to flow northwesterly. All surface runoff from Drainage Area C would be conveyed via a proposed storm drain line (Storm Drain Line C) to the proposed detention basin, Basin C, in the park area. Depending on the final design considerations of the ultimate buildout condition, Basin C would be designed as either an underground detention system and/or a surface detention basin that would collect and store the 100-year high-confidence storm event runoff volume. The stormwater runoff collected in Basin C would be fully retained during the storm event until the flow in the Cerritos Avenue Storm Drain system has fully subsided. Then, the runoff volume stored in Basin C would be pumped out to the Cerritos Avenue Storm Drain at a rate specified by the maximum conveyance capacity of the line.

  - **DMA-D2** includes approximately 12.63 acres of land and is proposed to be approximately 80 percent impervious. Within DMA-D2, stormwater runoff flows would travel west to east and discharge to Basin C in the proposed park area. As discussed above, the stormwater runoff collected in Basin C would be fully retained during the storm event until the flow in the Cerritos Avenue Storm Drain system has fully subsided. Then, the runoff volume stored in Basin C will be pumped out to the Cerritos Avenue Storm Drain at a rate specified by the maximum conveyance capacity of the line. Stormwater treatment within DMA-D2 would be provided thought the use of proprietary flow-based biofiltration systems. Alternatively, Basin C may treat stormwater if the final site plan design allows.

  - **DMA-E2** includes approximately 19.83 acres of land, with runoff being routed to Basin C within the park area, similar to DMA-D2. DMA-E2 is proposed to be approximately 80 percent impervious. As discussed above, the stormwater runoff collected in Basin C would be fully retained during the storm event until the flow in the Cerritos Avenue Storm Drain system has fully subsided. Then, the runoff volume stored in Basin C will be pumped out to the Cerritos Avenue Storm Drain at a rate specified by the maximum conveyance capacity of the line. Stormwater treatment within DMA-E2 would be provided through the use of

proprietary flow-based biofiltration systems. Alternatively, Basin C may treat stormwater if the final site plan design allows..

- **DMA-F** generally consist of the proposed park area and includes approximately 7.37 acres of land. DMA-F would include the proposed Basin C and would be approximately 80 percent impervious. Similar to DMAs-D2 and E2, stormwater runoff flows within DMA-F would discharge to Basin C in the proposed park area and be treated by either Basin C or through the use of proprietary flow-based biofiltration systems, depending on the final site plan design.

- **DMA-G1** includes approximately 18.71 acres of land, with runoff flows draining towards the proposed park area and Basin C. DMA-G1 is proposed to be approximately 80 percent impervious. Stormwater treatment within DMA-G1 would be provided via either Basin C in the proposed park area or through the use of proprietary flow-based biofiltration systems, depending on the final site plan design.

- **DMA-G2** includes approximately 1.94 acres of land, with runoff flows discharging to Basin A3 and ultimately to the Katella Avenue Storm Drain. DMA-G2 is proposed to be approximately 80 percent impervious. Stormwater treatment within DMA-G2 would be provided via either Basin A3 or through the use of proprietary flow-based biofiltration systems depending on the final site plan design.

- **DMA-S1** includes approximately 1.74 acres of the proposed Moody Street extension and would be approximately 90 percent impervious. Within DMA-S1 runoff flows would travel from south to north and would be treated through the use of proprietary flow-based biofiltration systems. Once treated, stormwater would be routed to Basin C for detention and subsequent discharge to the Cerritos Avenue Storm Drain.

- **DMA-S2** includes approximately 1.60 acres of the proposed Moody Street extension and would be approximately 90 percent impervious. Within DMA-S2 runoff flows would travel from south to north and would be treated through the use of proprietary flow-based biofiltration systems. Once treated, stormwater would be routed to Basin C for detention and subsequent discharge to the Cerritos Avenue Storm Drain.

Drainage Area A also includes DMA-S4 and DMA-8. DMA-S4 encompasses approximately 0.23 acre of the proposed Vessels Circle extension and a portion of the land already developed as part of the Melia Homes, Belmont residential project. Within DMA-S4, the existing drainage pattern would be maintained, and runoff flows would be captured and treated via a proprietary flow-based biofiltration system and discharged to the proposed storm drain line in the proposed Vessels Circle extension (Storm Drain Line A) and ultimately the Walker Street Storm Drain.

Approximately 11.57 acres of Drainage Area A is comprised of a portion of the Grace Church property and a portion of the existing race track that will be transferred by LARC to Grace Church as part of the land swap (Lot 8, per separate agreement and as depicted in the Vesting Tentative Tract Map [VTTM]). DMA-8 includes approximately 4.18 acres of Lot 8 that would be owned by Grace Church as part of this land swap deal. This portion of the Grace Church property currently discharges

to the eastern race course lake, pursuant to a Declaration of Drainage Easement recorded on November 12, 2010, as Instrument No. 2010 in the Official Records of Orange County, California. As permitted by this easement agreement, the redevelopment of the LARC property would require an alteration in the design of the Grace Church drainage system. To preserve the existing drainage pattern of the Grace Church property, a proposed surface-level detention basin would be graded in Lot 8 (Lot 8 Basin) that intercepts the flows of the existing double 24-inch RCP line from Grace Church. Stormwater runoff within DMA-8 would either be treated via a proprietary flow-based biofiltration system or the Lot 8 Basin, depending on the final site design. The construction of the Lot 8 Basin would be done concurrently or as close to concurrently as feasible with the redevelopment of any portion of Lot 7 that would eliminate the use of the eastern race course lake. Discharge from the Lot 8 Basin will be pumped to Storm Drain Line A within Vessels Circle, at a controlled rate of 0.308 cfs/acre of its tributary area during the 100-year storm event. All improvements to Lot 8 related to the Grace Church drainage system would be completed by the project Applicant per the Drainage Easement.

Ultimately, all stormwater from the entire Buildout Area would be discharged to the Los Alamitos Channel, consistent with existing conditions. The proposed on-site storm drain system would be adequately sized to accommodate project generated stormwater runoff and prevent on-site flooding.

As previously discussed, operation of the proposed project has the potential to introduce pollutants to the adjacent storm drain system from the proposed on-site uses. However, as specified in **Regulatory Compliance Measure HYD-3**, permanent operational BMPs that target and reduce pollutants of concern in stormwater runoff would be implemented and maintained throughout the life of the proposed project. **Regulatory Compliance Measure HYD-3** is an existing NPDES requirement with which the project is required to comply. **Regulatory Compliance Measure HYD-3** would prevent substantial additional sources of polluted runoff being discharged to the storm drain system through implementation of operational BMPs to target pollutants of concern in runoff from the Buildout Area, as discussed in more detail above under Thresholds 4.10.4, 4.10.5, and 4.10.15.

The Drainage Report (**Appendix H-1**) prepared for the proposed project evaluated the hydrologic and hydraulic conditions of the City-owned drainage facilities, as well as proposed Capital Improvement Projects that improve the existing storm drain system deficiencies. The drainage facilities that the proposed project would discharge to are the Cerritos Avenue Storm Drain, the Katella Avenue Storm Drain, and the Lexington Drive Storm Drain, which are tributary to the Katella Avenue Storm Drain. According to the City's Master Plan of Drainage[37] (City MPD), the existing Cerritos Avenue Storm Drain is severely deficient to convey the flows of the regional watershed. However, the downstream 60-inch Cerritos Avenue Storm Drain line is recommended to be improved to a 6-foot by 4-foot reinforced concrete box (RCB) as part of the City's Capital Improvement Projects. The Drainage Report determined that due to its limited capacity, the proposed project would not be discharged to the Cerritos Avenue Storm Drain during the 25-year high confidence (100-year expected value) storm event. The proposed Basin C within Drainage Area C would hold the 100-year high confidence storm event volume on site and slowly release stormwater via a pump system once the storm event peak flows have passed, similar to the

[37] City of Cypress. 2007. *Master Plan of Drainage*. May.

historical existing condition. Because the Cerritos Avenue Storm Drain line is recommended to be improved as part of the City's Capital Improvement Projects, no other improvements are required as part of the proposed project.

The City MPD did not make any recommendations for improvements to the Katella Avenue Storm Drain, and it did not analyze this storm drain system. However, the Drainage Report determined the storm drain system to be severely deficient, lacking the capacity to convey the existing 25-year high confidence flows. Development within the Buildout Area would need to reduce the flows discharged to the Katella Avenue Storm Drain based on the storm drain's capacity. As discussed above, the proposed basins within Drainage Area A and Drainage Area C would reduce the peak runoff by approximately 72 percent before discharging into the Katella Avenue Storm Drain, which would improve the downstream system hydraulic conditions and reduce current deficiencies within the system. Therefore, implementation of the proposed project would not adversely affect the downstream receiving systems.

According to the City MPD, the Lexington Drive Storm Drain is considered sufficient under its current conditions. With the proposed basins within Drainage Area B, the proposed project would match or reduce the peak discharge to this storm drain line when compared to the existing condition. Therefore, the proposed project would have no adverse effects on the downstream receiving systems.

Based on the results of the Drainage Report, the proposed project would not adversely affect the downstream receiving drainage facilities. The hydrology and hydraulics of all adjacent drainage facilities were analyzed under their existing and proposed conditions, and appropriate design strategies and project design features are proposed to maintain and improve the downstream hydraulic capacity of the storm drain facilities.

With implementation of the proposed storm drain systems and detention system, operational impacts related to a substantial increase in the rate or amount of surface runoff, flow, and volume that would result in flooding would be less than significant. In addition, operational impacts related to creation or contribution of runoff water that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff would be less than significant, and no mitigation is required.

Furthermore, all future physical improvements within the Buildout Area would be required to demonstrate that proposed drainage improvements would be sized appropriately to accommodate any potential increase in flow so that on-site flooding would not occur. Future development projects would also be subject to separate environmental reviews on a project-specific basis, in accordance with the provisions of CEQA.

In addition, future projects facilitated by the proposed project would be evaluated for site-specific impacts to hydrology and water quality and would include appropriate mitigation (as necessary) to address impacts related to violation of water quality standards or waste discharge requirements or degradation of water quality. Furthermore, the Buildout Area is comprised of parcels with existing development or parcels that have been previously graded such that there are no streams or rivers traversing any portion of the Buildout Area. Therefore, implementation of the proposed project

would result in a less than significant impact related to substantially altering the drainage pattern of the Buildout Area in a manner that would result in flooding on- or off-site, exceeding the capacity of the adjacent stormwater drainage systems, or providing substantial additional sources of polluted runoff with adherence to **Regulatory Compliance Measure HYD-3**. In addition, with adherence to **Regulatory Compliance Measure HYD-3**, implementation of the proposed project would not create a significant adverse environmental impact to drainage patterns due to changes in runoff flow rates or volumes. Impacts would be less than significant, and no mitigation is required.

4.10.6.4 Flooding Impacts

Threshold 4.10.7: Would the project place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

Threshold 4.10.8: Would the project place within a 100-year flood hazard area structures which would impede or redirect flood flows?

***No Impact*.** The Buildout Area is not located within a 100-year floodplain. According to FEMA FIRM No. 06059C0116J (December 3, 2009), the Buildout Area is located within Zone X, which comprises areas of 0.2 percent annual chance flood (500-year flood). As the Buildout Area is not located within a 100-year floodplain, the proposed project would not place housing or structures within a 100-year flood hazard area. No impact, during either construction or operation of the proposed project, would occur.

Threshold 4.10.9: Would the project expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?

***Less Than Significant Impact*.** The Buildout Area is not located within the inundation zone of a levee; however, it is within the inundation zone of Prado Dam.[38] The functionality of Prado Dam, which was originally designed in the 1930s, was enhanced by Seven Oaks Dam, which was completed in 1999 and is approximately 40 miles upstream on the Santa Ana River. During a flood, Seven Oaks Dam stores water destined for Prado Dam for as long as the reservoir pool at Prado Dam is rising. When the flood threat at Prado Dam has passed, Seven Oaks Dam begins to release its stored flood water at a rate that does not exceed the downstream channel capacity. Working in tandem, the Prado and Seven Oaks Dams provide increased flood protection to Orange County.

Prado Dam is maintained and inspected to ensure its integrity and to ensure that risks are minimized. The USACE Dam Safety Program re-rated the dam to be a high urgency (DSAC Rating II) and was scheduled to undergo modification to the existing spillway in 2021 to address safety concerns.[39] In addition, construction of the Santa Ana River Mainstem Project was initiated in 1989,

[38] City of Anaheim. 2022. Be Ready Anaheim – Know the Hazards. May 18. Website: https://gis.anaheim.net/portal/apps/experiencebuilder/experience/?id=18a98741d67f49ccb4021813182688be&page=Be-Ready-Anaheim&views=Dam-Inundation (accessed March 2026).

[39] City of Anaheim. 2022. *Local Hazard Mitigation Plan.* May 18.

and is scheduled for completion in 2025.[40] The Santa Ana River Mainstem Project will increase levels of flood protection to more than 3.35 million people in Orange, San Bernardino, and Riverside Counties. Improvements to 23 miles of the Lower Santa Ana River channel, from Prado Dam to the Pacific Ocean, are 95 percent complete, with the remaining bank protection improvements in Yorba Linda currently under construction. Improvements to the Santa Ana River channel include construction of new levees and dikes. In addition, the Santa Ana River Mainstem Project includes improvements to Prado Dam that are currently underway and are estimated to be completed in 2025. The Prado Dam embankment has been raised, and the outlet works have been reconstructed to convey additional discharges. Remaining improvements to Prado Dam include acquisition of additional land for the expansion of the Prado Reservoir, construction of protective dikes, and raising of the spillway.[41] Another project currently underway behind the dam includes the Alcoa Aluminum Plant Dike, which is anticipated to protect several neighboring properties along Rincon Road in the City of Corona from a 190-year flood event. Generally, there is water impounded behind the dam during most of the year, but the reservoir can be empty during drought events.[42]

Although the proposed project would facilitate the construction of new structures in a dam inundation zone, the proposed project would not increase the chance of inundation from failure of Prado Dam. Additionally, the potential for dam failure is remote and the City's emergency evacuation plans would be implemented if the dam were susceptible to rupture during heavy rain or other events. Therefore, proposed project impacts related to the exposure of people and structures to significant risk associated with flooding as a result of dam failure would be less than significant, and no mitigation is required.

Threshold 4.10.10: Would the project be subject to inundation by seiche, tsunami, or mudflow?

***No Impact*.** The Buildout Area is relatively flat and not at risk of mudflow. The Buildout Area is also not located in an area mapped by the California Emergency Management Agency as being potentially inundated by a tsunami.[43] Seiches are waves that are created in an enclosed body of water such as a bay, lake, or harbor and go up and down or oscillate and do not progress forward like standard ocean waves. There are no enclosed bodies of water within 3 miles of the Buildout Area. Due to the distance from the nearest enclosed body of water to the Buildout Area, the Buildout Area is not in a seiche hazard zone. Therefore, no impact from inundation by seiche, tsunami, or mudflow would occur.

4.10.6.5 Impacts from Increased Impervious Surfaces

Threshold 4.10.14: Would the project result in increased impervious surfaces and associated increased runoff?

[40] Santa Ana River Flood Protection Agency (SARFPA). 2023. *SARFPA Executive Committee Meeting Minutes.* September 28.
[41] Ibid.
[42] City of Anaheim. 2022. *Local Hazard Mitigation Plan.* May 18.
[43] California Department of Conservation (DOC). 2022. *Solano County Tsunami Hazard Areas.* Website: https://www.conservation.ca.gov/cgs/tsunami/maps/solano (accessed March 2026).

***Less Than Significant Impact*.** According to the PWQMP prepared for the proposed project, implementation of the proposed project would increase the amount of impervious surface area within the Buildout Area by 11 percent, from approximately 78.02 acres (59 percent) to approximately 92.39 acres (70 percent), which would increase stormwater runoff within the Buildout Area. However, as discussed under Thresholds 4.10.4, 4.10.5, and 4.10.15, the proposed project would include an on-site stormwater system and detention facilities in order to control the increase in runoff within the Buildout Area such that no flooding, on- or off-site, would occur and the capacity of the downstream stormwater facilities would not be exceeded. Therefore, impacts would be less than significant, and no mitigation is required.

4.10.6.6 Impacts on Impaired Water Bodies

Threshold 4.10.16: Would the project be tributary to an already impaired water body, as listed on the Clean Water Act Section 303(d) list? If so, can it result in an increase in any pollutant for which the water body is already impaired?

***Less Than Significant Impact*.** According to the PWQMP, receiving waters for the Buildout Area include the Cerritos Avenue Storm Channel, the Katella Avenue Storm Channel, the Los Alamitos Channel, the Bolsa Chica Channel, the San Gabriel River (Reach 1), the San Gabriel River Estuary, San Pedro Bay (near/off-shore zones), Huntington Harbor, Anaheim Bay, and Alamitos Bay. According to the most recent USEPA approved 302(d) list (2024), the Bolsa Chica Channel is impaired for ammonia, indicator bacteria, and pH, Huntington Harbor is impaired for chlordane, copper, indicator bacteria, lead, PCBs, and toxicity, and Anaheim Bay is impaired for nickel, PCBs, and toxicity. The most recent USEPA approved 203(d) list (2024) does not list any impairments for San Gabriel River (Reach 1), Alamitos Bay, and San Pedro Bay (near/offshore zones).[44]

Construction. As discussed above, construction of the proposed project has the potential to introduce pollutants to the storm drain system from erosion, siltation, and accidental spills. During construction activities, excavated soil would be exposed and there would be an increased potential for soil erosion and sediment to reach downstream receiving waters, which could result in decreases in dissolved oxygen levels. During construction activities, chemicals, liquid products, petroleum products (e.g., paints, solvents, and fuels), and concrete-related waste may be spilled or leaked. Therefore, construction has the potential to contribute to the temperature and pH impairments. Leaks from grading and earthmoving equipment are sources of chemicals, liquid products, and petroleum products if the equipment leaks and could contribute to the metals (nickel and copper) and pH impairments in downstream receiving waters. If concrete-related wastes are spilled or leaked, they could affect the pH of downstream receiving waters. Temporary or portable sanitary facilities provided for construction workers could be a source of sanitary waste and contribute to downstream indicator bacteria impairments. However, sanitary waste generated from temporary or portable sanitary facilities would be disposed of in compliance with all applicable regulations. Project construction would not involve use of dioxin, which was banned in the United States in 1979. Therefore, construction of the proposed project would not contribute to the dioxin impairment.

[44] State Water Resources Control Board (SWRCB). 2024. *2024 California Integrated Report.* Website: https://www.waterboards.ca.gov/water_issues/programs/water_quality_assessment/2024-integrated-report.html (accessed April 2025).

As discussed under Thresholds 4.10.1, 4.10.6, 4.10.11, 4.10.12, and 4.10.18 and required by **Regulatory Compliance Measure HYD-1**, the proposed project would be required to comply with the requirements of the Construction General Permit as construction of future development facilitated by the proposed project is anticipated to disturb greater than 1 acre of soil. However, as the specific design and sequencing of future development projects cannot be determined at this time, future projects may disturb less than 1 acre of soil and the Construction General Permit would not be applicable. If construction of future development associated with the proposed project would disturb less than 1 acre of soil and is not a part of a larger common plan, those projects would be required to comply with Section 4.106 of the CALGreen Code during construction. As specified in **Regulatory Compliance Measure HYD-1**, compliance with the Construction General Permit requires preparation of a SWPPP to identify construction BMPs to be implemented during project construction to reduce impacts to water quality and compliance with Section 4.106 of the CALGreen Code requires implementation of BMPs to prevent flooding and erosion and to retain sediment on site. Construction BMPs would include, but not be limited to, Erosion and Sediment Control BMPs designed to minimize erosion and retain sediment on-site, as well as Good Housekeeping BMPs to prevent spills, leaks, and discharge of construction debris and waste into receiving waters. In addition, during construction period groundwater dewatering, **Regulatory Compliance Measure HYD-2** would ensure that pollutants are not introduced to receiving waters and that water quality standards and waste discharge requirements are met. Therefore, compliance with all applicable federal, state, and local regulations including **Regulatory Compliance Measures HYD-1 and HYD-2**, potential construction impacts related to an increase in pollutants for which the receiving waterbody is already impaired as listed on the CWA Section 303(d) list would be less than significant, and no mitigation is required.

Operation. During operation, expected pollutants of concern include suspended solids, nutrients, heavy metals, pathogens, pesticides, oil and grease, toxic organic compounds, and trash and debris. Pets utilizing the landscaped areas would be a potential source of pathogens (e.g., fecal matter) which could contribute to the indicator bacteria and dissolved oxygen impairment. Vehicles operating within the Buildout Area could be a source of heavy metals (nickel and copper) if not properly maintained. Proper maintenance would minimize the potential for leaks or spills of oils, fuels, and other contaminants. Therefore, while there is the potential for operational pollutants to contribute to the indicator bacteria, nickel, copper, pH, and temperature impairments in receiving waters, project operation would not involve the use of dioxin. All activities would be conducted in accordance with applicable federal, state, and local regulations and the operations would not contribute to the pollutant impairment.

As specified in **Regulatory Compliance Measure HYD-3**, operational water quality BMPs would be implemented and maintained during operation to target and reduce pollutants in stormwater runoff from the Buildout Area prior to discharge to receiving waters. The Source Control and LID BMPs specified in the PWQMP would target and reduce pollutants in stormwater runoff from the Buildout Area, including those contributing to downstream water quality impairments. Therefore, compliance with **Regulatory Compliance Measure HYD-3**, potential operational impacts related to an increase in pollutants for which the receiving waterbody is already impaired as listed on the CWA Section 303(d) list would be less than significant, and no mitigation is required.

4.10.6.7 Impacts on Environmentally Sensitive Areas

Threshold 4.10.17: Would the project be tributary to other environmentally sensitive areas? If so, can it exacerbate already existing sensitive conditions?

***Less Than Significant Impact*.** According to the Orange County MS4 Permit, Environmentally Sensitive Areas are areas such as those designated as Areas of Special Biological Significance (ASBS) or waterbodies listed on the CWA Section 303(d) list of impaired waters. The Buildout Area is not tributary to an ASBS.[45] As discussed above, compliance with **Regulatory Compliance Measures HYD-1, HYD-2, and HYD-3**, the proposed project would not result in an increase in pollutants for which the receiving waterbody is already impaired as listed on the CWA Section 303(d) list. Therefore, the proposed project would not exacerbate already existing sensitive conditions in receiving waters listed on the CWA Section 303(d) list of impaired waters. Impacts would be less than significant, and no mitigation is required.

Threshold 4.10.21: Would the project impact aquatic, wetland, or riparian habitat?

***Less Than Significant with Mitigation Incorporated*.** As discussed in Section 4.4, Biological Resources, no riparian habitat currently exists within the Buildout Area. However, five potential jurisdictional water resources currently exist within the Buildout Area, including three artificial ponds, one drainage feature, and one detention basin. The three artificial ponds are located within the LARC racetrack area and are manmade. As such, the ponds are hydrologically isolated and not subject to regulation by the USACE. However, these ponds still have the potential to be regulated by the Santa Ana RWQCB under the State Porter-Cologne Water Quality Control Act and by the California Department of Fish and Wildlife (CDFW) under Section 1600 of the Fish and Game Code. In addition, the field survey performed as part of the Biological Resources Assessment (BRA) (**Appendix C**) indicated that the ponds contained hydrophytic vegetation along portions of their shoreline, including species that would be considered wetland indicators. Therefore, these portions of the ponds may be classified as wetlands under the Santa Ana RWQCB's jurisdiction.

The existing detention basin is located along the southern Buildout Area boundary, at the northwest corner of the existing residential development located south of the Buildout Area, and the existing drainage feature extends east from this detention basin. The drainage feature originates from a culvert beneath the road just northwest of the existing parking lot. This drainage is an ephemeral, earthen bottom drainage created to carry stormwater. Sparse ruderal vegetation was observed within this drainage area. Therefore, the drainage is expected to be regulated by the Santa Ana RWQCB and CDFW; however, the BRA did not determine if it would be regulated by the USACE. The detention basin is a manmade basin entirely lined with polyethylene created to capture flows and appears to divert accumulated water into the adjacent drainage that terminates into an underground drain system. Similar to the drainage feature, the detention basin is expected to be regulated by the Santa Ana RWQCB and CDFW; however, the BRA did not determine if it would be regulated by the USACE.

[45] State Water Resources Control Board (SWRCB). 2017. California's Areas of Special Biological Significance. Website: https://www.Waterboards.ca.gov/water_issues/programs/ocean/asbs_map.shtml (accessed March 2026).

According to the BRA, if impacts to these features are expected, regulatory permits may be required, including those under Section 404 of the CWA as administered by the USACE, the Water Quality Certification under Section 401 of the CWA or Waste Discharge Requirements under the Porter-Cologne Water Quality Control Act as administered by the Santa Ana RWQCB, or the Streambed Alteration Agreement under Section 1602 of the California Fish and Game Code as administered by CDFW, as detailed in **Mitigation Measure BIO-1 i**n Section 4.4. Therefore, with implementation of **Mitigation Measure BIO-1**, potential impacts on aquatic, wetland, or riparian habitat with implementation of the proposed project would be less than significant.

4.10.6.8 Impacts on Groundwater Quality

Threshold 4.10.19: **Would the project have a potentially significant adverse impact on groundwater quality?**

Threshold 4.10.20: **Would the project cause or contribute to an exceeded applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses?**

***Less Than Significant Impact*.** As discussed above, the Geotechnical Investigation indicated that groundwater within the Buildout Area has a historic groundwater depth of less than 10 feet below ground surface. Based on exploratory borings performed as part of the Geotechnical Investigation, groundwater within the Buildout Area is shallow, ranging from approximately 5 to 12.5 feet below ground surface. Because of the presence of shallow groundwater, it is likely that groundwater dewatering would be required during excavation activities. Although groundwater dewatering would be required, dewatered groundwater would be discharged to the storm drain system rather than back into groundwater and therefore would not introduce pollutants to groundwater. Infiltration of stormwater has the potential to affect groundwater quality in areas of shallow groundwater. However, according to the Geotechnical Investigation prepared for the project, the on-site soils are not favorable for infiltration. Specifically, on-site soils are classified as Soil Group C, which have slow infiltration rates when thoroughly wetted and have a slow rate of water transmission. Therefore, minimal infiltration would occur on site during construction and operation. In addition, dewatering activities during excavation and removal of the three artificial lakes would be conducted in accordance with the Construction Dewatering Permit, which requires testing and treatment (as necessary) of water encountered during dewatering prior to release to the storm drain system. As a result, dewatering activities would not introduce pollutants to receiving waters at levels that would violate water quality standards or waste discharge quality, increase pollutant discharge, or alter the quality of the groundwater. Project construction and operation would also not involve groundwater injection. Therefore, construction and operation of the proposed project would not substantially degrade groundwater quality or result in the exceedance of water quality objectives or degradation of beneficial uses, and impacts would be less than significant, and no mitigation is required.

4.10.6.9 Impacts from Stormwater Treatment Control BMPs.

Threshold 4.10.22: **Would the project include new or retrofitted stormwater treatment control Best Management Practices (e.g., water quality treatment basin,**

constructed treatment wetlands), the operation of which could result in significant environmental effects (e.g., increased vectors or odors)?

***Less Than Significant Impact*.** As discussed above, the project would include implementation of operational BMPs to reduce impacts related to hydrology and water quality. Stormwater treatment in the Buildout Area would be provided using proprietary flow-based biofiltration systems. Alternatively, proposed detention basins may treat stormwater before discharging into the City's surrounding storm drain infrastructure, depending on the final site plan design. These BMPs would not result in additional impacts not already evaluated throughout this Draft EIR. These BMPs would be designed and routinely inspected and maintained to reduce impacts related to vectors and odors. Therefore, impacts related to BMPs would be less than significant, and no mitigation is required.

Furthermore, future development facilitated by the proposed project would be required to demonstrate that new or retrofitted stormwater treatment BMPs would not cause significant environmental impacts occur. Future development projects would also be subject to separate environmental review on a project-specific basis, in accordance with the provisions of CEQA. Additionally, a project-specific WQMP would be required that details operational BMP maintenance and inspection plans which would minimize potential odors and vectors. Therefore, impacts related to BMPs would be less than significant, and no mitigation is required.

4.10.7 Level of Significance Prior to Mitigation

Construction and operational impacts related to hydrology and water quality would be less than significant with adherence to **Regulatory Compliance Measures HYD-1 through HYD-3.**

4.10.8 Regulatory Compliance Measures and Mitigation Measures

4.10.8.1 Regulatory Compliance Measures

The following regulatory compliance measures are existing federal, state, and local regulations applicable to the proposed project and are considered in the analysis of potential impacts related to hydrology and water quality. Because these requirements are established by federal, state, and local law, they do not constitute CEQA mitigation measures.

Regulatory Compliance Measure HYD-1

Construction General Permit. If construction of future projects associated with the proposed project would disturb greater than 1 acre of soil, prior to commencement of construction activities within the proposed Buildout Area, the Construction Contractor shall obtain coverage under the National Pollutant Discharge Elimination System (NPDES) *General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities,* Order WQ 2022-0057-DWQ, NPDES No. CAS000002 (Construction General Permit), or any other subsequent permit. This shall include submission of Permit Registration

Documents, including permit application fees, a Notice of Intent (NOI), a risk assessment, a site plan, a Stormwater Pollution Prevent Plan (SWPPP), a signed certification statement, and any other compliance-related documents required by the permit, to the State Water Resources Control Board via the Stormwater Multiple Application and Report Tracking System (SMARTS). Construction activities shall not commence until a Waste Discharge Identification Number is obtained for the project from the SMARTS and provided to the Director of Public Works for the City of Cypress, or designee, to demonstrate that coverage under the Construction General Permit has been obtained. Project construction shall comply with all applicable requirements specified in the Construction General Permit, including but not limited to, preparation of a SWPPP and implementation of construction site best management practices (BMPs) to address all construction-related activities, equipment, and materials that have the potential to impact water quality for the appropriate risk level identified for the project. The SWPPP shall identify the sources of pollutants that may affect the quality of storm water and shall include BMPs (e.g., Sediment Control, Erosion Control, and Good Housekeeping BMPs) to control the pollutants in storm water runoff. Upon completion of construction activities and stabilization of the Buildout Area, a Notice of Termination (NOT) shall be submitted via SMARTS.

If construction of future projects associated with the proposed project would disturb less than 1 acre of soil, prior to commencement of construction activities within the Buildout Area, the Construction Contractor shall provide evidence that project construction would comply with Section 4.106 of the 2019 California Green Building Standards Code (CALGreen Code). Section 4.106 of the CALGreen Code requires implementation of BMPs to prevent flooding and erosion and to retain sediment on site (e.g., Sediment Control, Erosion Control, and Good Housekeeping BMPs).

Regulatory Compliance Measure HYD-2

Construction Dewatering Permit. If groundwater dewatering is required during excavation activities, the Applicant/City shall obtain coverage under the *General Waste Discharge Requirements for Discharges to Surface Waters that Pose an Insignificant (De Minimis) Threat to Water Quality*, Order No. R8-2020-0006, NPDES No. CAG998001 (Construction Dewatering Permit). This shall include submission of a Notice of Intent (NOI) for coverage under the permit to the Santa Ana Regional Water Quality Control Board (RWQCB) at least 45 days prior to the start of dewatering. Groundwater dewatering activities shall comply with all applicable provisions in the permit, including water sampling, analysis, treatment (if required), and reporting of dewatering-related discharges. Upon completion of groundwater dewatering activities, a Notice of Termination shall be submitted to the Santa Ana RWQCB.

Regulatory Compliance Measure HYD-3

Orange County MS4 Permit/City Municipal Code. Prior to issuance of a grading permit for future projects associated with the proposed project, the future project Applicant shall prepare and submit a final project-specific water quality management plan (WQMP) to specify BMPs that would be implemented to capture, treat, and reduce pollutants of concern in stormwater runoff in compliance with the Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the Incorporated Cities of Orange County within the Santa Ana Region Areawide Urban Storm Water Runoff Orange County, Order R8-2009-0030, NPDES No. CAS618030, as amended by Order No. R8-2010-0062 (Orange County MS4 Permit), Orange County Drainage Area Management Plan (DAMP), and the City of Cypress Local Implementation Plan (LIP). The WQMP shall also incorporate the results of the Final Hydrology and Hydraulic Analyses to demonstrate that the bioretention facilities meet the hydromodification requirements of the Orange County MS4 Permit and Chapter 13-23 of the Cypress Municipal Code. The City Engineer/Public Works Director, or designee, shall ensure that the

BMPs specified in the WQMP are incorporated into the final project design of future projects associated with the proposed project.

4.10.8.2 Mitigation Measures

Future development facilitated under the proposed project would be required to implement the following Mitigation Measures.

Mitigation Measure BIO-1 Jurisdictional Delineation. *(See Section 4.4, Biological Resources)*

4.10.9 Level of Significance after Mitigation

The proposed project would not result in significant impacts related to hydrology and water quality, and no mitigation is required.

4.10.10 Cumulative Impacts

For the cumulative analysis related to hydrology and water quality, the cumulative projects being considered include the related projects within the same watershed as the proposed project (i.e., the San Gabriel River Watershed) and/or discharging to the same storm drain systems as the proposed project. Cumulative development in the San Gabriel River Watershed is a continuation of the existing urban pattern of development that has already resulted in extensive modifications to watercourses in the area. The area's watercourses have been channelized, and drainage systems have been put into place to respond to the past urbanization that has occurred in this area. For the cumulative analysis related to hydrology and water quality, the cumulative projects being considered include the related projects listed in **Table 4.A: Summary of Related Projects** and shown in **Figure 4.1: Related Projects**, in Chapter 4.0, Existing Setting. These related projects are within the same watershed as the proposed project (i.e., the San Gabriel River Watershed) and/or discharge to the same storm drain systems as the proposed project (i.e., the Cerritos Avenue Storm Drain, Katella Avenue Storm Drain, and Lexington Drive Storm Drain).

In addition, projects in the City also require the preparation and approval of a hydrology study would be required to determine the hydrologic control required to minimize increases in runoff from each site, so the projects are consistent with the PWQMP and Drainage Report and do not exceed existing conditions or result in hydromodification impacts. In addition, the City would review all development projects on a case-by-case basis to ensure that sufficient local and regional drainage capacity is available. According to the City's Master Plan of Drainage[46] (City MPD), the existing Cerritos Avenue Storm Drain is severely deficient to convey the flows of the regional watershed. However, the downstream 60-inch Cerritos Avenue Storm Drain line is recommended to be improved to a 6-foot by 4-foot RCB as part of the City's Capital Improvement Projects. In addition, the Drainage Report determined the Katella Avenue Storm Drain system to be severely deficient, lacking the capacity to convey the existing 25-year high confidence flows.

[46] City of Cypress. 2007. *Master Plan of Drainage*. May.

As discussed above and provided in the PWQMP and Drainage Report prepared for the proposed project, the proposed project would include the construction of new stormwater infrastructure to address the stormwater runoff from the Buildout Area with implementation of the proposed project and improve existing deficient conditions. Specifically, the proposed project includes the construction of a proposed storm drain line in the proposed Moody Street and Vessels Circle extensions (Storm Drain Line A), a proposed storm drain line within Drainage Area B (Storm Drain Line B), and a proposed storm drain line within Drainage Area C (Storm Drain Line C). Storm Drain Line A would begin in Vessels Circle as a 24-inch RCP and would flow east to west towards Moody Street. Along Moody Street, Storm Drain Line A would increase in size to a 36-inch storm drain system that would connect to the existing 39-inch Katella Avenue Storm Drain. The Moody Street extension would also include the construction of catch basin inlets that will ensure no surface runoff from the proposed street will spill onto Katella Avenue as it would in the existing condition. In addition, the proposed detention basins would be designed to hold the 100-year high confidence storm event volume on site and slowly release stormwater via a pump system once the storm event peak flows have passed in order to ensure that discharges to the Cerritos Avenue, Katella Avenue, and Lexington Drive Storm Drain systems would not be adversely effected by stormwater from the Buildout Area.

Each related project must also consider impaired receiving waters and TMDLs for receiving waters. The TMDL program is designed to identify all constituents that adversely affect the beneficial uses of water bodies and then identify appropriate reductions in pollutant loads or concentrations from all sources so that the receiving waters can maintain/attain the beneficial uses in the Basin Plan. Thus, by complying with TMDLs, a project's contribution to overall water quality improvement in the San Gabriel River Watershed in the context of the regulatory program is designed to account for cumulative impacts.

Regional programs and BMPs such as TMDL programs and the MS4 Permit Program have been designed under an assumption that the San Gabriel River Watershed would continue its pattern of urbanization. The regional control measures contemplate the cumulative effects of proposed development. The proposed project would be required to comply with the requirements of the Construction General Permit or Section 4.106 of the CALGreen Code and the Orange County MS4 Permit and implement construction and operational BMPs to reduce pollutants in stormwater runoff. Compliance with these regional programs and permits constitutes compliance with programs intended to address cumulative water quality impacts. As stated above, each related project would be required to develop a SWPPP, a WQMP, and a hydrology study, and would be evaluated individually to determine appropriate BMPs and treatment measures to reduce impacts to surface water quality and hydrology.

Many City storm drain systems, including the Katella Avenue Storm Drain, Cerritos Avenue Storm Drain, and Walker Street Storm Drain systems, are deficient. Other related projects that would discharge stormwater to the same storm drain systems as the proposed project would have the potential to result in a cumulative impact related to storm drain capacity and flooding. As discussed above, the proposed project includes new stormwater infrastructure that would address the stormwater runoff from the Buildout Area with implementation of the proposed project and improve existing deficient conditions. Therefore, the proposed project would improve stormwater

infrastructure conditions at the Buildout Area and in the surrounding area. In addition, each individual project would be required to prepare a hydrology study. The hydrology study would be required to demonstrate that the project would reduce stormwater discharge at or below that allowed by the City for the individual project site. The City has established discharge requirements for each property within its jurisdiction. As those properties are developed or redeveloped, the projects are required to reduce stormwater runoff from the property to meet the runoff restriction established by the City. The runoff restriction ensures that as development and redevelopment within the City continues, stormwater discharged to the existing storm drain system will continue to be reduced, lessening the existing storm drain capacity deficit. Because the proposed project includes an on-site detention system that would be adequately sized and designed to reduce flow to the receiving storm drain systems, the project would not contribute to the existing storm drain capacity deficit.

Further, some of the related projects identified in **Table 4.A** have undergone environmental review pursuant to CEQA, which included an analysis of potential impacts related to hydrology and water quality. According to the EIRs prepared for the Shae Properties Mixed Use Development Project (Related Project 1), Melia Homes-Citrus Square Project (Related Project 2), and the Los Alamitos Medical Center Project (Related Project 7), impacts hydrology and water quality would be less than significant with implementation of construction and operational BMPs in compliance with local ordinances and plans adopted to comply with requirements of the various NPDES permits. Further, the EIRs determined that cumulative impacts related to hydrology and water quality would be less than significant. In addition, Goodman Commerce Center Project (Related Project 3) was analyzed in an Initial Study/Mitigated Negative Declaration (IS/MND), which determined that all impacts related to hydrology and water quality would also be less than significant with implementation of construction and operational BMPs and compliance with local ordinances and plans adopted to comply with requirements of the various NPDES permits. The Sycamore Creek Charter School Project (Related Project 6) and 4562 Katella Avenue Project (Related Project 8) were determined to be exempt from CEQA review under Section 15332 of the *State CEQA Guidelines* (for infill development) and Notices of Exemption (NOEs) were prepared. In order for a project to be exempt under Section 15332 of the *State CEQA Guidelines*, the project site must not result in impacts related to hydrology and water quality. As such, development of the related projects in combination with the proposed project would not result in significant impacts related to hydrology and water quality. The LTP Modern Machine Project (Related Project 5) and 8561 Belmont Street Project (Related Project 4) would also be required to undergo environmental review pursuant to CEQA, which would include an analysis of potential impacts related to hydrology and water quality and the identification of any mitigation measures to reduce potential impacts, if necessary, and compliance with existing regulations, including the NPDES program.

Each related project would be required to include construction and operational BMPs to reduce impacts to water quality and hydrology in compliance with local ordinances and plans adopted to comply with requirements of the various NPDES permits, similar to the proposed projects. Specifically, projects that disturb 1 acre or more of soil must comply with the requirements of the Construction General Permit and related projects that disturb less than 1 acre of soil and are not a part of a larger common plan would be required to comply with Section 4.106 of the CALGreen Code. The preparation and approval of a SWPPP (as required by the Construction General Permit)

and incorporation of construction BMPs (as detailed in the SWPPP or required by Section 4.106 of the CALGreen Code) would be required for each related project to determine appropriate BMPs to minimize water quality impacts during construction. Related projects that qualify as priority projects as outlined in the Orange County MS4 Permit would be required to comply with the requirements of the Orange County MS4 Permit, the Orange County DAMP, and the City's LIP, including the preparation of a project-specific water quality management plan (WQMP) to specify BMPs that would be implemented to capture, treat, and reduce pollutants of concern in stormwater runoff.

In summary, because the proposed project and other related projects would comply with applicable NPDES requirements and would include BMPs and drainage facilities to reduce the volume of stormwater runoff and pollutants of concern in stormwater runoff, the cumulative hydrology and water quality impacts of the proposed project and the related projects would be less than significant. Therefore, the proposed project's incremental hydrology and water quality impacts would not be cumulatively considerable.

This page intentionally left blank

4.11 LAND USE AND PLANNING

This section analyzes the potential for the Specific Plan 3.0 Buildout Project (proposed project) to result in impacts related to land use and planning. The analysis in this section evaluates whether the proposed project would physically divide an established community and whether the proposed project would conflict with any land use plans, policies or regulations adopted for the purpose of avoiding or mitigating an environmental effect. This section also evaluates the proposed project's consistency with other applicable planning documents as they relate to specific topical sections within Chapter 4.0, Existing Setting.

4.11.1 Scoping Process

The City of Cypress (City) received six comment letters during the public review period of the Notice of Preparation (NOP). For copies of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). No comment letters included comments related to land use and planning.

4.11.2 Methodology

The determination of whether the proposed project conflicts with any applicable land use plans, policies, or regulations adopted for the purpose of avoiding or mitigating an environmental effect is based upon a review of plans, policies, and regulations that are applicable to the Buildout Area. As required by *State CEQA Guidelines* Section 15125(d), the analysis assesses inconsistency with applicable plans. A conflict between a project and an applicable plan is not necessarily a significant impact under CEQA unless the inconsistency will result in an adverse physical change to the environmental that is a "significant environmental effect" as defined by *State CEQA Guidelines* Section 15382.

This EIR section determines whether or not the proposed project would conflict with any adopted land use policies or programs and whether mitigation is feasible. Under this approach, a conflict is not in and of itself considered a significant environmental impact. An inconsistency between the proposed project and an applicable plan is a legal determination that may or may not indicate the likelihood of an environmental impact. In some cases, an inconsistency may be evidence that an underlying physical impact is significant and adverse.

Neither CEQA nor the *State CEQA Guidelines* set forth formal standards for determining whether or not a project is in conflict with an applicable plan; rather, the final determination that a project is in conflict (or consistent) with an applicable plan is made by the Lead Agency when it acts on the project. The analysis in this Draft EIR discusses the findings of policy review and is meant to provide a guide for decision-makers during policy interpretation.

Under State Planning and Zoning Law (Government Code Section 65000 *et seq.*), strict conformity with all aspects of a plan is not required. Generally, plans reflect a range of competing interests and agencies are given great deference to determine consistency with their own plans. A project should be considered consistent with a general plan or elements of a general plan if it furthers one or more policies and does not obstruct other policies. Office of Planning and Research (OPR), State of California General Plan Guidelines (2017). Given that land use plans reflect a range of competing

interests, a project should be compatible with a plan's overall goals and objectives but need not be in perfect conformity with every plan policy. Put differently, a project is considered consistent if it is not in conflict with the overall intent of the plan and would not preclude the attainment of its primary goals.

4.11.3 Existing Environmental Setting

4.11.3.1 Geographical Setting

The Buildout Area is located in the southern portion of the City of Cypress, which is located in the northwestern portion of the County of Orange, California. The City is bordered on the north by the cities of La Palma and Buena Park, on the east by the cities of Anaheim and Stanton, on the south and west by the city of Los Alamitos, and on the west by the cities of Long Beach, Hawaiian Gardens, and Lakewood. Regional vehicular access to the City is provided via State Route 22 (SR-22), Beach Boulevard (State Route 39 [SR-39]), State Route 91 (SR-91), and Interstates 405 and 605 (I-405 and I-605, respectively).

Incorporated in 1956, the City of Cypress is developed predominantly with residential and commercial land uses as well as community facilities.[1] A period of rapid development followed Cypress' incorporation, which consisted mainly of single-family residential subdivisions. An extensive parks and recreation system and a large employment center in the southern section of the City have also been developed.

4.11.3.2 Existing Land Uses

The Buildout Area is surrounded by a variety of commercial, office, business park, commercial and retail, residential, park and religious uses as shown in **Figure 3-3: Surrounding Land Uses in the Project Description** provided in Chapter 3.0, Project Description, of this Draft EIR. Additionally, the Buildout Area is bounded by W. Cerritos Avenue to the north, several existing commercial and institutional uses along and near Walker Street to the east, Katella Avenue and several existing commercial, retail and residential uses to the south, and Lexington Drive to the west. Immediately northwest of the Buildout Area is Lexington Park, a 9-acre park located at 4600 W. Cerritos Avenue at the southeast corner of the Cerritos Avenue/Lexington Drive intersection. Immediately northeast of the Buildout Area is Grace Church, located at 5100 W. Cerritos Avenue. Southeast of the Buildout Area is the Belmont residential project developed by Melia Homes, which includes only residential uses, and The Square at Cypress developed by Shea Homes, which includes residential, hotel, retail, and service uses, including the Homewood Suites by Hilton located at 5233 Katella Avenue and a Costco Wholesale at 5401 Katella Avenue. Cottonwood Church, located at 4505 Katella Avenue, is located southwest of the Buildout Area, along with the Ovation at Flora Park, a senior housing community, and a commercial center that includes restaurant and commercial services uses, a 24 Hour Fitness, and the Residence Inn Cypress Los Alamitos, at 4931 Katella Avenue. West of Lexington Drive are light industrial, office, and commercial uses.

[1] City of Cypress. 2001. *Introduction to the General Plan*. Website: https://www.cypressca.org/home/showpublisheddocument/662/636123113549170000 (accessed January 22, 2025).

The Specific Plan governs the zoning and land uses allowed within the Buildout Area.[2] The Specific Plan includes six land use districts that permit the development of residential, commercial, retail, restaurant, entertainment and park and recreational uses. As shown on Figure 2-1 (Land Use Plan) of the Specific Plan, the land use districts include a Residential District (46.2 acres), Senior Housing/Medium-Density Residential District (23.1 acres), Mixed-Use (Town Center/HDR) District (24.1 acres), Mixed-Use (Town Center/MDR) (9.5 acres), Medium-Density Residential District (20.7 acres), and Public Park District (20 acres). As shown on Figure 2-2 (Residential Subdistricts) of the Specific Plan, the Residential District has been divided into a Single-Family Detached Subdistrict (19.7 acres) and a Single-Family Attached Subdistrict (27.2 acres); see **Figure 3-4: Specific Plan Land Uses and Allowed Dwelling Units per Acre** in Chapter 3.0, Project Description, of this Draft EIR.

The Specific Plan includes development standards for each land use district that quantify the maximum amount of residential and non-residential development that can occur within a land use district and the overall area governed by the Specific Plan. Within the land use districts that permit residential uses (which includes all of the land use districts other than the Public Park District), the maximum residential densities range from 8 dwelling units/acre (du/ac) to 30 du/ac. The Specific Plan also includes various development restrictions and limitations, infrastructure plans and sustainability guidelines.

The proposed project does not include any proposed amendments or modifications to the adopted Specific Plan. This Draft EIR analyzes programmatically the environmental impacts associated with residential and non-residential development within the Buildout Area based on a reasonably foreseeable buildout scenario, as presented in Chapter 3.0.

4.11.4 Regulatory Setting

The following section describes the federal, State, regional, and local regulatory framework applicable to analyzing potential impacts related to land use and planning from development of the proposed project.

4.11.4.1 Federal Regulations

There are no federal regulations applicable to land use and planning.

4.11.4.2 State Regulations

California State Planning and Zoning Law. This law, which is codified in California Government Code sections 65000-66037, delegates most of the State's local land use and development decisions to cities and counties. The California Government Code establishes specific requirements pertaining to the regulation of land uses by local governments, including general plan requirements, specific plans, subdivisions, and zoning. California Government Code Section 65302 requires that all California cities and counties include the following seven elements in their general plan:

[2] See Chapter 3.0, Project Description, for a description of Buildout Area and the Specific Plan Area.

- Land Use
- Circulation
- Housing
- Conservation
- Open Space
- Noise
- Safety

Cities and counties in the South Coast Air Quality Management District (SCAQMD) must also address air quality in their general plans. Cities and counties that have identified disadvantaged communities must also address environmental justice in their general plans, including air quality.[3]

Sustainable Communities and Climate Protection Act of 2008 (Senate Bill 375). This statute requires California's regional planning agencies to include a Sustainable Communities Strategy (SCS) or Alternative Planning Strategy in their Regional Transportation Plans (RTP). Senate Bill (SB) 375 was enacted to reduce greenhouse gas emissions from automobiles and light trucks through integrated transportation, land use, housing, and environmental planning. Under the law, California's regional planning agencies are required to include an SCS in their RTP. The SCS provides a plan for meeting the regional emissions reduction targets established by the California Air Resources Board (CARB). If the emissions reduction targets cannot be met through the SCS, an Alternative Planning Strategy (APS) may be developed that shows how the targets would be achieved through alternative development patterns, infrastructure, or additional transportation measures of policies. SB 375 also offers local governments regulatory and other incentives to encourage more compact new development and transportation alternatives.

The requirements of SB 375 are reflected in the 2024–2050 Regional Transportation Plan/ Sustainable Communities Strategy (RTP/SCS) (Connect SoCal)[4] adopted by the Southern California Association of Governments (SCAG), which serves as the regional planning agency in the six-county metropolitan region composed of Orange, Los Angeles, Ventura, Riverside, San Bernardino, and Imperial Counties. Connect SoCal is discussed in further detail below in Section 4.11.4.3.

4.11.4.3 Regional Regulations

The City of Cypress is covered by several planning documents and programs that have varying degrees of regulation over uses in the City. The following paragraphs explain regional regulations, plans, and policies applicable to the Buildout Area that is analyzed in this section of the EIR.

Southern California Association of Governments. As discussed above, regional planning in Orange, Los Angeles, Ventura, Riverside, San Bernardino, and Imperial Counties is conducted by SCAG. SCAG

[3] Senate Bill (SB) 1000, adopted in 2016, requires both cities and counties that have disadvantaged communities to incorporate environmental justice (EJ) policies into their general plans, either in a separate EJ element or by integrating related goals, policies, and objectives throughout the other elements. This update, or revision if the local government already has EJ goals, policies, and objectives, must happen "upon the adoption or next revision of two or more elements concurrently on or after January 1, 2018."

[4] Southern California Association of Governments (SCAG). 2024. Connect SoCal 2024: The 2024–2050 Regional Transportation Plan/Sustainable Communities Strategy of the Southern California Association of Governments. Website: https://scag.ca. gov/sites/default/files/2024-05/23-2987-connect-socal-2024-final-complete-040424.pdf (accessed October 2025).

is also the federally designated Metropolitan Planning Organization (MPO) for these six counties. As the designated MPO, SCAG is mandated by the federal government to research and prepare plans for transportation, a growth forecast, hazardous waste, and air quality. The growth forecast serves as the foundation of these plans. Of the various plans adopted by SCAG, the Regional Comprehensive Plan and Connect SoCal are relevant to the project.

2024–2050 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal). On April 4, 2024, SCAG adopted Connect SoCal. Connect SoCal is a long-range visioning plan that builds upon and expands land use and transportation strategies established over several planning cycles to increase mobility options and achieve a more sustainable growth pattern. The overall vision for Connect SoCal is to chart a path toward a more mobile, sustainable and prosperous region by making connections between transportation networks, planning strategies, and the people whose collaboration can improve the quality of life for Southern Californians.

The goals of Connect SoCal fall into four core categories: economy, mobility, environment, and healthy/complete communities. The plan explicitly lays out goals related to housing, transportation technologies, equity, and resilience in order to adequately reflect the increasing importance of these topics in the region, and where possible the goals have been developed to link to potential performance measures and targets. The plan's guiding policies take these goals and focus them, creating a specific direction for plan investments.

The applicable goals of Connect SoCal are outlined in **Table 4.11.C** (provided later in this section).

4.11.4.4 Local Regulations

The City has preeminent decision-making authority regarding allowable land uses in the Buildout Area. As discussed in greater detail below, the City's General Plan and Zoning Code both apply to the project; however, the Specific Plans largely govern the permitted uses on, and development standards for, the Buildout Area.

Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan). As set forth in the Land Use Element of the City's General Plan, Specific Plans implement General Plan goals and policies by designating land uses, densities, development, and design standards in more specific detail. In June 2018, the City's voters approved Measure A, which approved the second iteration of the Specific Plan (Specific Plan 2.0). On November 5, 2024, the voters of the City of Cypress approved the Specific Plan pursuant to "Measure S" as part of the Cypress Housing Element Implementation Project (Housing Implementation Project). The Specific Plan superseded and replaced Specific Plan 2.0.

The Specific Plan establishes a comprehensive master plan and regulatory framework for the use and development of approximately 151.4 acres of land in the City, which includes the Buildout Area. The Buildout Area includes the Los Alamitos Race Course (LARC) Property and is generally bounded by Cerritos Avenue to the north, Katella Avenue to the south, and Lexington Drive to the west. The Specific Plan includes development standards for each land use district that quantify the maximum amount of residential and non-residential development that can occur within a land use district and the overall area governed by the Specific Plan.

The Specific Plan's residential districts are intended to accommodate a range of residential densities. Residential units adjacent to Cerritos Avenue will generally match the densities of the existing neighborhood north of Cerritos Avenue. Further south, smaller-lot, single-family homes are permitted, as well as single-family attached units, including townhomes and condominiums. The Senior Housing/Medium-Density Residential district allows age-restricted housing (with a qualified occupant of 55 or older), as well as multi-family housing, at a variety of densities.

The Specific Plan allows for a variety of non-residential uses aimed at creating a vibrant, mixed-use community hub. Within the Specific Plan area, designated land use districts permit commercial, retail, office, hospitality, and civic or community-serving uses. These non-residential uses are intended to complement residential development by providing services, employment opportunities, and gathering spaces that support daily needs and enhance the quality of life for residents and visitors. The Specific Plan encourages pedestrian-oriented commercial development along key corridors and within central nodes, reinforcing the vision of a connected and active town center. By integrating non-residential uses throughout the planning area, the City of Cypress wants to promote economic vitality, local access to goods and services, and a dynamic public realm consistent with the City's long-range planning goals.

Trails and greenways are envisioned to connect the neighborhoods and provide pedestrian and bike routes to the public parks and town center.

City of Cypress General Plan. The City of Cypress General Plan contains goals, policies, and plans that are intended to guide land use and development decisions. The City of Cypress General Plan was last comprehensively updated by the City Council in September 2001. The General Plan consists of a Land Use Map and the following eight elements, or chapters, which together fulfill the State requirements for a General Plan:

- Land Use Element
- Housing Element
- Circulation Element
- Conservation/Open Space/Recreation Element (satisfies the State's Conservation and Open Space Element requirements)
- Safety Element
- Noise Element
- Air Quality Element (optional element not required by State law)
- Growth Management Element (optional element not required by State law)

At the heart of the General Plan is the Land Use Element (2001). This element presents the City's goals and policies directing the long-term growth, development, and revitalization of the City. The Land Use Element serves as a guide to the allocation of land use in the City and has major impacts on key issues and subject areas examined in the other elements of the General Plan. The Land Use Map, which illustrates land uses within the City, is a primary feature of the Land Use Element. Land

use designations indicate the type and nature of development that is allowed in a given location. The City's General Plan Land Use Element contains the following land use categories:

- Low Density Residential
- Medium Density Residential
- High Density Residential
- Mobile Home Park
- General and Neighborhood Commercial
- Specific Plan
- Light Industrial
- Business Park
- Community Facilities and Services

Each of these categories establishes allowed land uses and corresponding standards of compliant intensity and density. Intensity is typically more concerned with non-residential uses while density, within the context of land use, measures the residential capacity of land in terms of dwelling units per gross acre.

In addition to standards of development within the City, the General Plan Land Use Element also states various goals, along with policies designed to facilitate the achievement of each goal. The goals and policies outlined in Table 4.11.D of the General Plan are relevant to the proposed project.

City of Cypress Zoning Ordinance. The City of Cypress Zoning Ordinance implements the policies of the Cypress General Plan by classifying and regulating the uses of land and structures within the City. The City's Zoning Ordinance has been adopted to promote and protect the public health, safety, and general welfare of residents while preserving and enhancing the City's aesthetic quality. The City is divided into zoning districts that directly correspond to the land use designations outlined in the Land Use Element of its General Plan. The City's Zoning Ordinance classifies, regulates, restricts, and separates the use of land and structures, regulates and limits the bulk, height, and type of structures in the various zoning districts, and regulates areas of yards and other open areas abutting and between structures, and regulates the density of population.

4.11.5 Thresholds of Significance

The thresholds of significance for land use and planning impacts used in this analysis are consistent with Appendix G of the *State CEQA Guidelines.* Based on these thresholds, implementation of the proposed project may be deemed to have a significant impact with respect to land use and planning if it would:

Threshold 4.11.1: Physically divide an established community; or

Threshold 4.11.2: Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

4.11.6 Project Impacts

Potential impacts of the proposed project related to land use and planning are discussed below pursuant to the thresholds established in Section 4.11.5, above.

Threshold 4.11.1: Would the project physically divide an established community?

Less Than Significant Impact. The Buildout Area consists of 134 acres within the boundaries of the Specific Plan. As stated above, the Buildout Area is currently surrounded by a variety of land uses, including commercial, office, business park, retail, park, residential, religious facilities, and mixed-use land uses. The Buildout Area is currently occupied by the Los Alamitos Race Course—a large, single-purpose facility with an expansive footprint, limited access points, and inward-facing operations. The existing operations do not connect the surrounding streets, including Katella Avenue and Cerritos Boulevard as well as Walker Street and Lexington Drive.

This Draft EIR analyzes programmatically the environmental impacts associated with the reasonably foreseeable buildout of the Buildout Area, as presented in **Table 4.11.A: Specific Plan Land Use Plan Summary** below. As described in **Table 4.11.A**, under the proposed project, up to 1,791 residential units and 440,000 square feet of non-residential uses would be developed under the existing Specific Plan.

Table 4.11.A: Specific Plan Land Use Plan Summary

Land Use District	Area (acres)	Maximum FAR[1]	Maximum Residential Units	Maximum Development Capacity (sq ft)
Public Park	18.2[2]	N/A	N/A	N/A
Mixed-Use (Town Center/HDR)	24.1	0.6:1	1,926 (aggregate total for Residential, Senior Housing/Medium-Density Residential, Medium-Density Residential and Mixed-Use Districts)	629,878
Mixed-Use (Town Center/MDR)	9.5	0.6:1		248,292
Residential	46.2	N/A		N/A
Senior Housing/Medium-Density Residential	23.1	N/A		N/A
Medium-Density Residential	20.7	0.6:1		N/A
Roads	9.6	N/A	N/A	N/A
Total Specific Plan 3.0	151.4[4]	--	1,926[3]	879,170

Source: LSA (2025).

[1] This development restriction on floor area ratio (FAR) does not apply to residential development or the residential component of a mixed-use development. The maximum FAR allowed on any development parcel is 1.0:1.

[2] The minimum amount of public park space within the area governed by the Specific Plan is 20 acres. In addition to the 18.2 acres of public park space within the Public Park District, a 2-acre public park has been designated as a land use overlay within the Mixed-Use (Town Center/HDR) District, provided that this additional required public park space may be located (a) in any Land Use District or multiple Land Use Districts, and (b) adjacent to one or both of the Public Park Districts in order to increase the size of the public parks that would be developed there.

[3] The aggregate total of 1,926 residential units includes the 135 residential units previously developed on the Melia Property. Therefore, an additional 1,791 residential units are allowed in these districts within the Buildable Area.

[4] In preparing VTTM 19247, the acreages for the Land Use Districts and roads within the area governed by the Specific Plan were more accurately calculated, resulting in a slightly reduced total land area of approximately 150.1 acres.

HDR= High-Density Residential
MDR= Medium-Density Residential
N/A = not applicable
SFR= Single-Family Residential
sq ft = square feet
VTTM = Vesting Tentative Tract Map

As shown in **Figure 3-5: Vesting Tentative Map No. 19247** (in Chapter 3.0)**,** the proposed Vesting Tentative Tract Map (VTTM) 19247 divides the Buildout Area and other land currently owned by Grace Church into 14 numbered lots and four lettered lots, lettered A through D. The numbered lots would accommodate the development of residential, non-residential and park and recreational uses. The lettered lots include existing Siboney Street (Lot A), land that would be used to expand a portion of Lexington Drive adjacent to Lot 1 and Lexington Park (Lot B), the further extension of Vessels Circle between Lots 7 and 12 (Lot C) and the extension of Moody Street to connect to Siboney Street (Lot D), with Siboney Street becoming part of Moody Street.

In accordance with the approved Specific Plan, the proposed project evaluated in this Draft EIR includes residential development on Lots 2 through 4, 7 and 10 through 14, non-residential development on Lots 10 through 14, and the development of park and recreational improvements on Lots 1, 5 and 6 (as well as two additional acres within the Specific Plan that will be specified in the future).

Development on Lots 1, 5 and 6 is limited to park and recreational uses. The Public Park District includes 18.2 of specifically identified land, which includes the 9 acres of land that the City has previously developed as Lexington Park following its approval as the Cypress Sports Park Project (State Clearinghouse [SCH] No. 2019089093).

The proposed project does not include any development on Lots 8 and 9. Grace Church owns Lot 9 where its existing church facilities are located. It is anticipated that Grace Church would acquire Lot 8 from LARC in exchange for transferring ownership of Lots 5 and 8 to LARC. Following this anticipated land swap, Grace Church would own Lots 8 and 9, which collectively include approximately 17.55 acres of land that are not located within the Buildout Area. Lots 8 and 9 have been included in VTTM 19247 solely in connection with the contemplated land swap and no development is presently contemplated on those lots by Grace Church.

Additionally, the maximum residential buildout and reasonably foreseeable non-residential buildout of the Buildout Area pursuant to the Specific Plan is shown in **Table 4.11.B: Maximum/Reasonably Foreseeable Project Buildout** below. **Table 4.11.B** reflects the land swap described above and therefore includes Lots 5 and 10 and excludes Lots 8 and 9.

In addition, consistent with the approved Specific Plan, the proposed project evaluated in this Draft EIR assumes the extension of Moody Street from Cerritos Avenue to Katella Avenue, as well as the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension. The Moody Street extension would traverse the Buildout Area, passing adjacent to Lots 4, 3, 13, and 14 in VTTM 19247, and create a new central north-south corridor, while the extension of Vessels Circle within Lot C would, among other things, provide access to Lots 10 and 11 in VTTM 19247. The proposed project also includes widening of Lexington Drive within Lot B in VTTM 19247, which is consistent with the Specific Plan. Future development within the Buildout Area may require the construction of private driveways, accessways and/or streets that connect to the Moody Street and Vessels Circle extensions and existing public streets adjacent to the Buildout Area. The precise location and size of these internal roadways would be determined during the design process.

Table 4.11.B: Maximum/Reasonably Foreseeable Project Buildout

Lot Number	Specific Plan Land Use District	Lot Size (ac)	Maximum Number of Dwelling Units / Reasonably Foreseeable Non-Residential Floor Area	Maximum Residential Density (du/ac)	Maximum Effective Residential Density (du/ac)
2	Senior Housing/MDR	23.08	404 du	15-20	17.5[1]
3	Residential	27.15	269 du	10	9.9
4	Residential	19.00	141 du	8	7.4
7	Medium-Density Residential	20.66	309 du	15	14.9
10	Mixed-Use (Town Center/MDR)	2.00	29 du	15	14.5
11	Mixed-Use (Town Center/HDR)	1.75	51 du	30	29.1
12	Mixed-Use (Town Center/HDR)	8.86	265 du	30	29.9
13	Mixed-Use (Town Center/HDR)	6.52	195 du	30	29.9
14	Mixed-Use (Town Center/MDR)	7.33	128 du	15-20	17.5*
10-14	Non-Residential	26.6	440,000 sq ft Non-Residential	N/A	N/A
Total					1,791 additional dwelling units 440,000 square feet of non-residential floor area

Source: LSA (2025).

[1] This number of dwelling units per acre is a midpoint between the maximum density for medium-density residential (15 du/ac) and the maximum density for senior housing (20 du/ac) allowed on this lot pursuant to the Specific Plan.

ac = acres
Specific Plan = Cypress Town Center and Commons Specific Plan 3.0
du = dwelling units
du/ac = dwelling units per acre
HDR = High-Density Residential
MDR = Medium-Density Residential
N/A = not applicable
sq ft = square feet

These roadway extensions would significantly improve internal circulation and enhance connectivity between surrounding neighborhoods, commercial areas, and community amenities, helping to integrate the site into the broader urban fabric.

Given the nature of the proposed project, the future buildout of the Buildout Area would improve existing connectivity in the area with the extension of Moody Street and Vessels Circle and would not divide or separate any existing land uses or neighborhoods. The neighboring residential communities would not be separated by the proposed road extensions or proposed buildout of the project. Project implementation would implement the vision of the Specific Plan. The proposed project would not introduce an inconsistency with the existing uses in the surrounding area and would be consistent with all General Plan and zoning designations. Therefore, the proposed project would not result in the physical division of an established community, and no mitigation is required.

In addition, future development applications contemplated within the Buildout Area would also be required to comply with all applicable regulations and standards related to land use and planning. Any future development or redevelopment projects requiring discretionary actions would also be

subject to environmental review, in accordance with the provisions of CEQA and the *State CEQA Guidelines.*

Threshold 4.11.2: Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

***Less Than Significant Impact*.** A project's inconsistency with a plan or policy is considered significant only if the conflict would result in a significant physical environmental impact (per *State CEQA Guidelines* Section 15382). As such, the consistency analysis in this Draft EIR focuses on the relevant land use plans, policies and regulations that were adopted for the purpose of avoiding adverse environmental impact. This section includes an analysis of the project's consistency with Connect SoCal, the City's General Plan, and the City Zoning Ordinance. Please note that this Draft EIR does not include Specific Plan consistency as the proposed project would facilitate the implementation of the Specific Plan.

Connect SoCal. Table 4.11.C: Connect SoCal Consistency Analysis provides a consistency analysis of goals from Connect SoCal that are relevant to the proposed project. To eliminate repetitive policies and focus on key issues, goals that are not relevant to the proposed project are not included in **Table 4.11.C**. As described in **Table 4.11.C**, the proposed project would be consistent with applicable Connect SoCal goals, and no mitigation is required. Furthermore, the proposed project reinforces the stated goals of Connect SoCal, including Connect SoCal's goals to develop, connect and sustain communities that are livable and thriving and to create a healthy region for the people of today and tomorrow, by providing additional housing opportunities within locations near amenities and already used by the public for commercial, recreational, and/or professional uses. In addition, the proposed project would support the development, connection, and sustainability of communities that are living and thriving by providing necessary housing. The proposed project would deliver a range of residential uses, from single-family to high-density housing. This diversity of housing types would offer options to accommodate varying household needs within the community. Buildout of the proposed project would include commercial uses, would improve circulation from the adjacent roadways and surrounding areas to the north and south, and would provide access to parks.

City of Cypress General Plan. The General Plan is a comprehensive plan intended to guide the physical development of the City and it serves as a blueprint for future growth and development. As a blueprint for the future, the plan contains policies and programs designed to provide decision-makers with a solid basis for decisions related to land use and development.

Although the City's General Plan Land Use Element has not been formally amended to reflect the recent approval of the Cypress Town Center and Commons Specific Plan 3.0, the Buildout Area is designated as Specific Plan in the General Plan Land Use Map. In addition, the City (through Measure S) determined that the Specific Plan is consistent with all eight elements of the General Plan, as required by Government Code Section 65450. Section 6.2 of the Specific Plan provides a comprehensive consistency analysis with the following elements: Land Use, Circulation, Conservation/Open Space/Recreation, Noise, Housing, Safety, Growth Management and Air Quality.

Table 4.11.C: Connect SoCal Consistency Analysis

Goal/Objective/Policy	Would the Project Conflict?
Mobility	
03: Pursue the development of Complete Streets that comprise a safe, multimodal network with flexible use of public rights-of-way for people of all ages and abilities using a variety of modes (e.g., people walking, biking, rolling, driving, taking transit). **04:** Ensure the implementation of Complete Streets that are sensitive to urban, suburban or rural contexts and improve transportation safety for all, but especially for vulnerable road users (e.g., people, especially older adults and children, walking and biking)	**No Conflict.** As discussed in Section 4.17, Transportation, transit service in the vicinity of the Buildout Area is provided by the OCTA along Katella Avenue and Valley View Street. OCTA Route 50, which runs along Katella Avenue, currently has existing bus stops near Lexington Drive, Siboney Street, Winners Circle, and Walker Avenue in the vicinity of the Buildout Area. Existing sidewalks are provided along Katella Avenue, Cerritos Avenue, Walker Street, portions of Lexington Drive between Cerritos Avenue and Katella Avenue, and along the south side of Vessels Circle in the vicinity of the Buildout Area. These facilities provide for pedestrian circulation between the Buildout Area and the surrounding areas. In addition, Katella Avenue and Valley View Street currently accommodate off-street bike paths and on-street (Class II) bicycle lanes are provided on both sides of Cerritos Avenue (between Walker Street and Denni Street) and Bloomfield Street. There is also a Class I bicycle lane on the south side of Cerritos Avenue between Walker Street and Denni Street, and on-street bicycle lanes (Class II) and sidewalks are provided on both sides of Moody Street. In addition, implementation of the proposed project would provide pedestrian sidewalks and pathways throughout the Buildout Area and provide connections to existing pedestrian and bicycle facilities in the surrounding area. Specifically, the proposed project is assumed to include the addition of approximately 1 mile of bicycle facilities, connecting to the existing bicycle network. In addition, pedestrian access via sidewalks to the Buildout Area would be from Katella Avenue, Cerritos Avenue, Lexington Drive, and Vessels Circle, as extended. Further pedestrian circulation improvements would include sidewalk along the extension of Moody Street south of Cerritos Avenue. These pathways, together with the existing pedestrian infrastructure on the surrounding streets, would ensure seamless integration with the broader pedestrian network, effectively linking the Buildout Area with nearby amenities and transit options. All improvements facilitated by the proposed project would be required to adhere to the City's Municipal Code and General Plan policies. As such, improvements associated with the proposed project would provide a safe, multimodal network with flexible use of public rights-of-way for people of all ages and abilities using a variety of modes. No conflict with these goals would occur.
07: Encourage and support the implementation of projects, both physical and digital, that facilitate multimodal connectivity, prioritize transit and shared mobility, and result in improved mobility, accessibility and safety.	**No Conflict.** As discussed above, the proposed project would connect to existing transit, pedestrian, and bicycle facilities in the vicinity of the Buildout Area, resulting in improved mobility, accessibility and safety. No conflict with this goal would occur.

Table 4.11.C: Connect SoCal Consistency Analysis

Goal/Objective/Policy	Would the Project Conflict?
	Communities
35: Encourage housing development in areas with access to important resources and amenities (economic, educational, health, social and similar) to further fair housing access and equity across the region.	**No Conflict.** The proposed project would result in the development of new residential and non-residential uses within the Buildout Area. Proposed non-residential uses may include retail and other service-oriented uses, as well as a limited amount of other types of commercial space, that enhance access to essential goods and services while supporting local employment opportunities. As such, the proposed project would develop new housing in areas with access to important resources and amenities (economic, educational, health, social and similar) to further fair housing access and equity across the region. No conflict with this goal would occur.
42: Promote 15-minute communities as places with a mix of complementary land uses and accessible mobility options that align with and support the diversity of places (or communities) across the region. These are communities where residents can either access their most basic, day-to-day needs within a 15-minute walk, bike ride or roll from their home or as places that result in fewer and shorter trips because of the proximity of complementary land uses.	**No Conflict.** As discussed above, the proposed project would develop new residential and non-residential uses within the Buildout Area, which would provide a mix of complementary land uses and accessible mobility options that align with and support the diversity of places (or communities) across the region. The Specific Plan also includes a Circulation Plan that provides additional connections to the surrounding circulation network. For example, Moody Street and Vessels Circle will be extended. The proposed project also includes pedestrian connections between contemplated residential and commercial/retail components. These project features facilitate better connections to nearby transit and pedestrian and bicycle networks). No conflict with this goal would occur.
	Environment
48: Promote sustainable development and best practices that enhance resource conservation, reduce resource consumption and promote resilience.	**No Conflict.** As discussed throughout this Draft EIR, the proposed project would implement sustainable development and best practices to the extent feasible in order to enhance resource conservation and reduce resource consumption. Please refer to Sections 4.3 Air Quality; 4.4 Biological Resources; 4.5 Cultural Resources; 4.6 Energy; 4., Geology and Soils; 4.8 Greenhouse Gas Emissions; 4.10 Hydrology and Water Quality; and 4.18 Tribal Cultural Resources for a discussion of specific measures related to resource conservation and consumption. No conflict with this goal would occur.
51: Reduce hazardous air pollutants and greenhouse gas emissions and improve air quality throughout the region through planning and implementation efforts.	**No Conflict.** As discussed in Sections 4.3 Air Quality; 4.6 Energy; and 4.8 Greenhouse Gas Emissions, the proposed project would comply with existing regulations, including the energy efficiency standards included in Title 24, in order to reduce hazardous air pollutants and greenhouse gas emissions and improve air quality throughout the region. No conflict with this goal would occur.

Source: Southern California Association of Governments. 2024–2050 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (Connect SoCal).

Table 4.11.D: General Plan Consistency Analysis provides a consistency analysis of the goals and policies from the City's General Plan that are relevant to the proposed project. To eliminate repetitive policies and focus on key issues, policies that are not relevant to the proposed project are not included. As highlighted in the analysis presented in **Table 4.11.D**, the proposed project's updates to the General Plan would ensure consistency between the project and all applicable General Plan goals and policies.

Table 4.11.D: General Plan Consistency Analysis

Goal/Objective/Policy	Would the Project Conflict?
Land Use Element	
Goal LU-1: Create a well balanced land use pattern that accommodates existing and future needs for housing, commercial, industrial and open space/ recreation uses, while providing adequate community services to City residents.	**No Conflict.** The proposed project is the reasonably foreseeable buildout under the Specific Plan, which includes a balanced mix of residential, non-residential, and recreational uses. The Buildout Area is located in an area of the City developed with residential, commercial, retail, business park, and light industrial uses. The new development will be compatible with the existing and approved uses in the surrounding area. For example, the mix of retail, entertainment, commercial and residential uses permitted in the Mixed-Use District is consistent with the existing and approved commercial and retail uses on both sides of Katella Avenue. Further, the proposed project would address the City's housing needs by including 1,791 residential units. Therefore, the proposed project would not conflict with Goal LU-1 of the City's General Plan.
Policy LU-1.2: Allow for multi-family infill in designated areas to satisfy regional housing needs.	**No Conflict.** The proposed project would be an infill development as it contemplates redeveloping the existing race course property into a range of multi-family uses. The Buildout Area is currently surrounded by residential and non-residential development. Buildout of the proposed project would include areas for both medium density and higher-density residential uses. The project will provide infill housing development consistent with the City's regional housing needs. Therefore, the proposed project would not conflict with Policy LU-1.2 of the City's General Plan.
Policy LU-1.4: Locate residential uses within close proximity of commercial centers to encourage pedestrian access, and to provide a consumer base for commercial uses.	**No Conflict.** Buildout of the proposed project would locate local-serving non-residential uses (including commercial) adjacent to new residential uses. In addition, existing commercial hubs are located near the Buildout Area. Therefore, the proposed project would locate residential uses within close proximity of new and existing commercial centers. As such, the proposed project would not conflict with Policy LU-1.4 of the City's General Plan.
Policy LU-1.7: Where feasible, increase the amount and network of public and private open space and recreational facilities for active or passive recreation as well as for visual relief.	**No Conflict.** The proposed project would facilitate development of private and public open space as outlined in the Specific Plan, which includes park uses and additional open space and recreational facilities in the Senior Housing/Medium-Density Residential District, the Single-Family Attached Subdistrict and potentially in the Single-Family Detached Subdistrict, the Medium-Density Residential District, the Mixed-Use (Town Center/MDR) District and the Mixed-Use (Town Center/HDR) District. Further, trails and greenways will connect the residential subdistricts and Senior Housing/Medium-Density Residential District and provide convenient pedestrian and bike

Table 4.11.D: General Plan Consistency Analysis

Goal/Objective/Policy	Would the Project Conflict?
	access to the public parks and town center areas. Therefore, the proposed project would not conflict with Policy LU-1.7 of the City's General Plan.
Goal LU-2: Ensure that new development is compatible with surrounding land uses, the circulation network, availability of public facilities, and existing development constraints**.**	**No Conflict.** The proposed project is the reasonably foreseeable buildout under the Specific Plan, which includes a mix of residential, non-residential, and recreational uses within an existing developed area designated for residential or commercial use. As such, the proposed project would not significantly depart from existing nearby land uses. The proposed project also includes road extensions—Moody Street and Vessels Circle— that would provide additional circulation and connectivity in the Buildout Area and surrounding areas. As discussed in Section 4.8, impacts to public services would be less than significant or mitigated to that level, ensuring consistency with existing infrastructure. Accordingly, the proposed project would not conflict with Goal LU-2 of the City's General Plan.
Policy LU-2.1: Ensure a sensitive transition between commercial or business park uses and residential uses by implementing precise development standards with such techniques as buffering, landscaping, and setbacks.	**No Conflict.** The proposed project would facilitate the development of residential and non-residential uses as approved by voters in the Specific Plan. Future residential uses would be designed in a way that ensures a sensitive transition between commercial, business, and residential uses, as contemplated in the Specific Plan. Specifically, the development standards, regulations and guidelines in the Specific Plan would also ensure sensitive transitions between the various retail, commercial, residential and open-space uses within the Buildout Area, and between those uses and the surrounding residential, commercial, retail and business park uses. As such, the proposed project would not conflict with Policy LU-2.1 of the General Plan to create a sensitive transition between residential and non-residential uses.
Policy LU-2.2: Where residential/commercial mixed use is permitted, ensure compatible integration of adjacent uses to minimize conflicts.	**No Conflict.** All new residential development under the proposed project would occur in areas already designated for residential or commercial use, given that the voters in November 2024 already approved the underlying zoning and land use designations in the Buildout Area through the Specific Plan. These additional residential uses would support mixed-use development without introducing incompatible land uses. The development standards, regulations and guidelines in the Specific Plan will ensure compatible transitions between the various retail, commercial, residential and open-space uses within the Buildout Area, and between those uses and the surrounding residential, commercial, retail and business park uses. As required by the Specific Plan, certain future development projects in the Buildout Area would require site plan review, which would allow the City to ensure consistency with zoning and specific plan requirements once additional details regarding the future projects are known. Given the above, the proposed project would not conflict with Policy LU-2.2 of the City's General Plan.

Table 4.11.D: General Plan Consistency Analysis

Goal/Objective/Policy	Would the Project Conflict?
Policy LU-2.7: Encourage the provision of pedestrian linkages between adjacent commercial uses and commercial and residential uses to encourage pedestrian activity and reduce vehicle trips.	**No Conflict.** Trails and greenways in the Buildout Area would connect the residential subdistricts and Senior Housing/ Medium-Density Residential District and provide convenient pedestrian and bike access to the public parks and town center areas. In addition, the Moody Street extension would traverse the Buildout Area and create a new central north-south corridor for pedestrians. The extension of Vessels Circle within Lot C would also provide access to Lots 10 and 11 in VTTM 19247. Future development within the Buildout Area may require the construction of private driveways, accessways and/or streets that connect to the Moody Street and Vessels Circle extensions and existing public streets adjacent to the Buildout Area. These private driveways, accessways and/or streets may facilitate additional sidewalks to encourage pedestrian activities. As required by the Specific Plan, certain future development projects would require site plan review. This would ensure that future developments would include pedestrian linkages between the proposed commercial and residential components, as contemplated in the Specific Plan. Therefore, the proposed project would not conflict with Policy LU-2.7 of the City's General Plan.
Goal LU-3: Revitalize older commercial and residential uses and properties.	**No Conflict.** The proposed project would implement the goals of the Specific Plan to revitalize the LARC area, by introducing new mixed uses compatible with surrounding development patterns. This goal applies generally to all projects in the City. The City does not (and cannot) require private property owners to adaptively reuse or revitalize every existing commercial or residential uses. While the proposed project would not revitalize any older commercial or residential uses in the Buildout Area, the proposed project would not conflict with the broader implementation of this goal on a citywide basis. As such, the proposed project would not conflict with Goal LU-3 of the City's General Plan.
Policy LU-3.1: Encourage and continue the use of redevelopment activities in the Civic Center Buildout Area, on Lincoln Avenue, and on the Los Alamitos Race Track and Cypress Golf Club.	**No Conflict.** The proposed project is the reasonably foreseeable buildout of the Specific Plan in the Buildout Area. As such, the proposed project would encourage and continue redevelopment of the Los Alamitos Race Track and Cypress Golf Club. Therefore, the proposed project would not conflict with Policy LU-3.1 of the City's General Plan.
Goal LU-4: Improve urban design in Cypress to ensure that development is both architecturally and functionally compatible and to create identifiable neighborhoods, commercial, and business park districts.	**No Conflict.** The proposed project would support improved urban design in Cypress by guiding development to areas already designated for residential and commercial uses, where cohesive community form can be reinforced. The Specific Plan provides development standards that apply to future projects. Certain future projects would be subject to the site plan review process in the Specific Plan, which would ensure architectural and functional compatibility with surrounding development. This process would help establish visually and functionally distinct neighborhoods, commercial areas, and business park districts, consistent with the City's urban design goals. Therefore, implementation of the proposed project would be functionally compatible with the surrounding areas and would

Table 4.11.D: General Plan Consistency Analysis

Goal/Objective/Policy	Would the Project Conflict?
	contribute to creating an identifiable community in the Cypress area. The proposed project would not conflict with Goal LU-4 of the City's General Plan.
Policy LU-4.2: Encourage development projects to utilize high quality design for architecture and site planning through the City's design review process.	**No Conflict.** The proposed project is the reasonably foreseeable buildout of the Specific Plan in the Buildout Area. Any future residential development proposals would be subject to City or applicable Specific Plan guidelines, which reflect strict standards of architecture and other design aspects. Certain developments would also be subject to the site plan review process, as with any development. Therefore, the proposed project would not conflict with Policy LU-4.2 of the City's General Plan.
Policy LU-4.5: Improve the quality of Cypress' multi-family neighborhoods through a) improved buffers between multi-family residences, and commercial, and business park uses; b) provision of usable private and common open space in multi-family projects; c) increased code enforcement; and d) improved site, building, and landscape design.	**No Conflict.** The proposed project would include residential and commercial mixed uses that would help create an identifiable neighborhood in the Buildout Area that is compatible with surrounding land uses. Any future residential development proposals would be subject to City or applicable Specific Plan guidelines, which would include development standards. Certain developments would also be subject to the site plan review process, as with any development. Therefore, the proposed projects would not conflict with Policy LU-4.5 of the City's General Plan.
Goal LU-7: Ensure the compatibility of new multi-family residential infill with existing residential uses.	**No Conflict.** The proposed project would include both medium and high-density residential uses. The area surrounding the Buildout Area boundary includes existing multi-family housing as well as single-family residential uses. Implementation of the proposed project would be consistent with surrounding uses, ensuring compatibility with the surrounding areas and existing residential uses. Therefore, the proposed project would not conflict with Policy LU-7 of the City's General Plan.
Policy LU-7.1: Require new multi-family development to provide adequate buffers (such as decorative walls and landscaped setbacks) along boundaries with single-family residential uses to prevent impacts on residences due to noise, traffic, parking, light and glare, and differences in scale; to ensure privacy; and to provide visual compatibility.	**No Conflict.** Buildout of the proposed project would include both multi-family and single-family land uses Any future residential development proposals would be subject to City or applicable Specific Plan guidelines, which reflect standards of landscaping, setbacks, and aesthetics. Certain developments would also be subject to the site plan review process, as with any development. Therefore, the proposed project would not conflict with Policy LU-7.1 of the City's General Plan.
Policy LU-7.2: Allow small lot single-family development as infill projects and provide adequate development standards to ensure compatibility with surrounding residential uses.	**No Conflict.** As previously mentioned, buildout of the proposed project would include single-family residential uses. Future development of single-family residential areas would be subject to environmental review and the City's existing development standards. The surrounding area is characterized by single-family residential uses and multi-family residential uses. Therefore, the proposed project would be consistent with existing residential uses and would not conflict with Policy LU-7.2 of the City's General Plan.
Goal LU-15: Retain and facilitate the expansion of businesses throughout the City.	**No Conflict.** As previously mentioned, buildout of the proposed project would include both residential and mixed-use uses. Therefore, the proposed project would provide opportunities for businesses to expand throughout the City. Therefore, the proposed project would not conflict with Goal LU-15 of the City's General Plan.

Table 4.11.D: General Plan Consistency Analysis

Goal/Objective/Policy	Would the Project Conflict?
Circulation Element	
Goal CIR-1: Maintain a safe, efficient, economical, and aesthetically pleasing transportation system providing for the movement of people, goods, and services to serve the existing and future needs of the City of Cypress.	**No Conflict.** Pursuant to Senate Bill (SB) 743 and Section 15064.3 of the *State CEQA Guidelines*, the determination of significance for transportation impacts under CEQA is based on vehicle miles traveled (VMT) rather than roadway level of service (LOS). Accordingly, congestion or delay at intersections, including those on the Orange County Congestion Management Plan (CMP) network, is no longer considered a significant environmental impact under CEQA. Although LOS is no longer used for CEQA significance determinations, the City's General Plan Circulation Element and the Orange County CMP continue to identify LOS standards for local policy and regional consistency purposes. Improvements at intersections with non-CEQA project-related effects include Intersections #12 (Cerritos Avenue at Los Alamitos Boulevard), #16 (Cerritos Avenue at Walker Street), #17 (Cerritos Avenue at Valley View Street), and #18 (Vessels Circle at Walker Street). Proposed feasible improvements are recommended for those four intersections to reduce the non-CEQA project effects, notwithstanding that three of them currently operate at acceptable levels of service pursuant to the Cypress and Los Alamitos Circulation Elements. Intersection #17 (Cerritos Avenue at Valley View Street) in the PM peak hour would continue to operate at an unacceptable level of service (LOS) with the proposed feasible improvements. In addition, using the Buildout Year 2038 with Project conditions, future Intersection #31 (Vessels Circle at Moody Street) would satisfy the signal warrants in the morning and the evening peak hours and a traffic signal is recommended to be installed at this future intersection. Based on a left-turn phasing analysis, left-turn phasing in the north-south direction is also recommended. Proposed improvements at Intersection #18 (Vessels Circle at Walker Street) are anticipated to accommodate the added vehicle queues due to the proposed project. In addition, the project features previously identified for Intersection #15 (Cerritos Avenue at Moody Street) are anticipated to accommodate the projected left-turn vehicle queues and prevent an exceedance. However, no feasible improvements can be implemented for the other five intersections to prevent an exceedance. Further, in the Existing Condition with Moody Street and Vessels extensions, Existing with Project, and Buildout Year 2038 with and without the proposed project, all three intersections would operate at LOS D or better in both the AM and PM peak hours, which is acceptable per CMP guidelines. As such, the proposed project includes project features and roadway/intersection improvements in order to maintain a safe, efficient, economical, and aesthetically pleasing transportation system and no conflict with this policy would occur.

Table 4.11.D: General Plan Consistency Analysis

Goal/Objective/Policy	Would the Project Conflict?
Policy CIR-1.3: Encourage development which contributes to a balanced land use, which in turn serves to reduce overall trip lengths (i.e., jobs/housing balance, locate retail in closer proximity to resident/patrons).	**No Conflict.** Because the proposed project would enable particular areas of higher density residential development within close proximity to existing retail locations, it can be reasonably assumed that overall trip lengths may be shortened. This development would also potentially provide residents with employment opportunities within walking distance. In addition, the proposed project includes 440,000 square feet of non-residential floor area which enhances access to essential goods and services while supporting local employment opportunities. This non-residential floor area is considered local-serving retail under the "Guidelines for Evaluating Vehicle Miles Traveled Under CEQA for the County of Orange, dated September 17, 2020" (County Guidelines), because no single retail establishment within the 440,000 square feet of non-residential space will exceed 50,000 square feet. Therefore, the proposed project would not conflict with Policy CIR-1.3 of the City's General Plan.
Policy CIR-1.4: Require new development to conform to the standards and criteria of the City of Cypress and other mandated programs. This includes mitigation of traffic impacts to the surrounding street system.	**No Conflict.** As discussed in Section 4.17, Transportation, and above, the proposed project includes project features and roadway/intersection improvements to ensure that the proposed project conforms to the standards and criteria of the City of Cypress and other mandated programs. Therefore, no conflict with this policy would occur.
Policy CIR-1.6: Encourage the development of aesthetic streetscapes to promote a positive City image and provide visual relief.	**No Conflict.** Proposed street improvements and frontage improvements would include landscaping in order to provide aesthetic streetscapes. Therefore, no conflict with this policy would occur.
Policy CIR 2-1: Encourage development and improvements which incorporate innovative methods of accommodating transportation demands.	**No Conflict.** Implementation of the proposed project would provide sidewalks along the project frontages. In addition, pedestrian sidewalks and pathways would be provided throughout the Buildout Area and provide connections to existing pedestrian and bicycle facilities in the surrounding area. Specifically, the proposed project is assumed to include the addition of approximately 1 mile of bicycle facilities, connecting to the existing bicycle network. Additionally, as discussed further in Threshold 4.17.2 and detailed in **Mitigation Measure TRA-1**, the proposed project would be required to implement feasible TDM strategies to mitigate the proposed project's VMT impact, which include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network and improving the pedestrian network, including the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area. The proposed project would include the extension of Moody Street from Cerritos Avenue to the northern terminus of Siboney Street, as well as the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension, consistent with the Specific Plan. The proposed project also includes, consistent with the Specific Plan, the widening of Lexington Drive within Lot B in proposed VTTM 19247 and seven access driveways, including one at Lexington Drive and two each at Cerritos Avenue, Moody Street, and

Table 4.11.D: General Plan Consistency Analysis

Goal/Objective/Policy	Would the Project Conflict?
	Vessels Circle. Therefore, the proposed project would accommodate all types of transportation demand and no conflict with this policy would occur.
Policy CIR 2-3: Ensure that effective Transportation Demand Management (TDM) measures and programs are being implemented.	**No Conflict.** As discussed further in Threshold 4.17.2 and detailed in **Mitigation Measure TRA-1**, the proposed project would be required to implement feasible TDM strategies to mitigate the proposed project's VMT impact, which include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network and improving the pedestrian network, including the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area. Therefore, no conflict with this policy would occur.
Policy CIR 2-5: Implement adequate sidewalks to meet the required uses and needs, which serves to encourage alternative modes of transportation. Bicycle routes which utilize sidewalks require establishment of a City ordinance, per the Vehicle Code.	**No Conflict.** Implementation of the proposed project would provide sidewalks along the project frontages. In addition, pedestrian sidewalks and pathways would be provided throughout the Buildout Area and provide connections to existing pedestrian and bicycle facilities in the surrounding area. Therefore, no conflict with this policy would occur.
Policy CIR-2.8: Enhance the sidewalk environment to encourage pedestrian activities through streetscape and transit enhancement programs.	**No Conflict.** Trails and greenways in the Buildout Area will connect the residential subdistricts and Senior Housing/ Medium-Density Residential District, and provide convenient pedestrian and bike access to the public parks and town center areas. In addition, the Moody Street extension would traverse the Buildout Area and create a new central north-south corridor for pedestrians. The extension of Vessels Circle within Lot C would also provide access to Lots 10 and 11 in VTTM 19247. Future development within the Buildout Area may require the construction of private driveways, accessways and/or streets that connect to the Moody Street and Vessels Circle extensions and existing public streets adjacent to the Buildout Area. These private driveways, accessways and/or streets may facilitate additional sidewalks to encourage pedestrian activities. Therefore, the proposed project would not conflict with General Plan Circulation Element Policy CIR-2.8.
Conservation/Open Space/Recreation Element	
Goal COSR-3: Conserve energy resources through the use of available technology and conservation practices.	**No Conflict.** As described in Section 4.6, Energy, the proposed project would comply with the energy efficiency standards included in Title 24, which would reduce energy usage associated with the proposed project such that the proposed project would not result in excessive or wasteful use of energy. Therefore, the proposed project would not conflict with General Plan Conservation/Open Space/Recreation Element Goal COSR-3.
Goal COSR-5: Preserve Cypress' archaeologic and palaeontologic resources.	**No Conflict.** As described in Section 4.5, Cultural Resources, no known archaeological resources, including human remains, exist within the Buildout Area, as determined by the record search performed for the Cypress City Center Project, which included the Buildout Area. Nevertheless, the proposed project would be required to comply with **Regulatory Compliance Measures CUL-1** and **CUL-2**, which would ensure that any impacts to unknown archaeological resources and human remains that

Table 4.11.D: General Plan Consistency Analysis

Goal/Objective/Policy	Would the Project Conflict?
	may be present within the Buildout Area would be less than significant. In addition, as described in Section 4.7, Geology and Soils, there are no known paleontological resources in the City and the paleontology collection record search at the National History Museum of Los Angeles County did not identify any existing fossil localities within the Buildout Area. However, the Buildout Area is underlain by Quaternary alluvial deposits, which are often paleontologically sensitive. Therefore, project construction activities that have the potential to disturb native alluvium at a depth below 10 feet would have the potential to have a potentially significant impact on paleontological resources and **Mitigation Measures GEO-2** and **GEO-3**, which make provisions for unknown paleontological resources discovery stop work procedures and worker training procedures, would be required. With implementation of **Mitigation Measures GEO-2** and **GEO-3**, impacts on paleontological resources would be less than significant. Therefore, the proposed project would not conflict with General Plan Conservation/Open Space/Recreation Element Goal COSR-5.
Policy COSR-5.2: Prior to development in previously undeveloped areas, require strict adherence to the CEQA guidelines for environmental documentation and mitigation measures where development will affect archaeological or paleontological resources.	**No Conflict.** Refer to **Regulatory Compliance Measures CUL-1** and **CUL-2** in Section 4.4, Cultural Resources. The proposed project has the potential to affect unknown archaeological resources. The proposed project would adhere to the *State CEQA Guidelines* for environmental documentation and mitigation measures where development could affect these resources. **Regulatory Compliance Measures CUL-1** and **CUL-2** would ensure project compliance with CEQA, the California Code of Regulations, the State Health and Safety Code, and the California Public Resources Code as they relate to archaeological resources. Therefore, the proposed project would not conflict with General Plan Conservation/Open Space/Recreation Element Policy COSR-5.2.
Policy COSR-6.1: Continue to require new developments to provide recreational opportunities for their residents in accordance with the City's park standard, three acres of parkland per 1,000 residents.	**No Conflict.** As discussed in Section 4.16, Recreation, the proposed project's new residents would generate an incremental increase in demand for park facilities; however, this increased demand would be offset by the payment of park fees required by **Regulatory Compliance Measure REC-1.** In addition, the proposed project would include public and private open space/recreational amenities. Therefore, the proposed project would not conflict with General Plan Conservation/Open Space/ Recreation Element Policy COSR-6.1.
Housing Element	
Goal HOU-3: Encourage the provision of a wide range of housing by location, type of unit, and price to meet the existing and future needs of Cypress residents. Establish a balanced approach to meeting housing needs of both renter and owner households.	**No Conflict.** This is a citywide policy that applies to the City generally, and thus is not a project-specific policy. Nonetheless, the proposed project does not conflict with this goal because it delivers range of residential uses, from single-family to high-density housing. This diversity of housing types would offer options to accommodate varying household needs within the community. As such, the project supports the provision of

Table 4.11.D: General Plan Consistency Analysis

Goal/Objective/Policy	Would the Project Conflict?
	varied housing opportunities and would not conflict with Goal HOU-3 of the City's General Plan.
Policy HOU-3.3: Support the provision of affordable housing to accommodate large families.	**No Conflict.** This is a citywide policy that applies to the City generally, and thus is not a project-specific policy. Nonetheless, the proposed project does not conflict with this goal because it delivers a range of residential uses, from single-family to high-density housing. This diversity of housing types would offer options to accommodate varying household needs within the community. As such, the project supports the provision of varied housing opportunities and would not conflict with Goal HOU-3 of the City's General Plan.
Policy HOU-3.4: Facilitate the development of senior housing with supportive services	**No Conflict.** Buildout of the proposed project would include two land use districts that allow senior housing uses. Therefore, the proposed project would not conflict with Policy HOU-3.4 of the City's General Plan.
Policy HOU-3.6: Encourage use of sustainable and green building design in new and existing housing.	**No Conflict.** Any future development that would take place in the Buildout Area would be required to comply with the latest edition of the California Green Building Standards Code, which includes requirements for sustainability features. Therefore, the proposed project would not conflict with Policy HOU-3.6 of the City's General Plan.
Goal HOU-4: Provide adequate housing sites through appropriate land use, zoning, and specific plan designations to accommodate the City's share of regional housing needs.	**No Conflict.** This is a citywide policy that applies to the City generally, and thus is not a project-specific policy. Nonetheless, the proposed project does not conflict with this goal because it delivers a range of residential uses and unit types, from single-family to high-density housing for a total unit count of 1,791 residential units. The proposed project is also part of the City's Housing Element. Therefore, the proposed project would not conflict with Goal HOU-4 of the City's General Plan.
Policy HOU-4.4: Ensure compatibility of new residential development with existing development to enhance the City's residential neighborhoods.	**No Conflict.** The proposed project would include a mix of uses congruent with existing development patterns in the project area. Future development may be subject to the architectural and design standards that are applicable to that part of the City, which would ensure aesthetic compatibility. Therefore, the proposed project would not conflict with Policy HOU-4.4 of the City's General Plan.
Safety Element	
Goal SAF-1: Protect residents, workers, and visitors from flood hazards, including dam inundation.	**No Conflict.** As described in further detail in Section 4.10 Hydrology and Water Quality, the proposed project would not result in significant impacts related to flooding. Additionally, the proposed on-site storm drain system would be adequately sized to accommodate stormwater runoff so that on-site flooding would not occur. Therefore, the proposed project would not conflict with General Plan Safety Element Goal SAF-1.
Goal SAF-2: Protect life and property in Cypress from seismic events and resulting hazards.	**No Conflict.** As discussed in further detail in Section 4.7, Geology and Soils, with the implementation of **Mitigation Measure GEO-1,** which requires compliance with the recommendations in the project Geotechnical Investigation, all impacts related to geological hazards would be less than significant. As such, the proposed project would not conflict with General Plan Safety Element Goal SAF-2.
Goal SAF-5: Protect life and property in Cypress	**No Conflict.** As discussed in further detail in Section 4.15, Public

Table 4.11.D: General Plan Consistency Analysis

Goal/Objective/Policy	Would the Project Conflict?
from urban fires. Maintain the Orange County Fire Authority's high level of service to community businesses and residents.	Services, the proposed project requires the implementation of **Regulatory Compliance Measure PS-1,** which requires the Applicant/Developer to enter into a Secured Fire Protection Agreement with the Orange County Fire Authority. The Secured Fire Protection Agreement would ensure adequate service to the project site. As such, the proposed project would not conflict with General Plan Safety Element Goal SAF-5.
Goal SAF-6: Maintain the police department's high quality of service to the City.	**No Conflict.** As discussed in further detail in Section 4.15, Public Services, the proposed project is expected to be adequately served by existing police facilities. Additionally, the Cypress Police Department would review the site plan during the project approval phase and would impose standard conditions of approval. As such, the proposed project would not conflict with General Plan Safety Element Goal SAF-6.
Goal SAF-8: Protect Cypress residents from air operation accidents.	**No Conflict.** As discussed in further detail in Section 4.9, Hazards and Hazardous Materials, the proposed project would not result in a safety hazard for people in the project area because the proposed project would comply with all appropriate Federal Aviation Administration (FAA) standards and requirements, including compliance with Federal Aviation Regulations [FAR] Part 77 requirements as required by **Regulatory Compliance Measure HAZ-1**. In addition, the Airport Land Use Commission (ALUC) has reviewed and approved the Specific Plan, indicating that implementation of the Specific Plan would not expose residents to air operation accidents. As such, the proposed project would not conflict with General Plan Safety Element Goal SAF-8.
Noise Element	
Goal N-2: Incorporate noise considerations into land use planning decisions.	**No Conflict.** Section 4.13, Noise, of this Draft EIR evaluates the potential short-term and long-term noise impacts from implementation of the proposed project and identifies measures in order to ensure all noise impacts would be less than significant. As such, the proposed project would not conflict with General Plan Noise Element Goal N-2.
Goal N-3: Minimize noise spillover from commercial uses into nearby residential neighborhoods.	**No Conflict.** As discussed in Section 4.13, Noise, implementation of the proposed project would generate various on-site stationary noise sources, including heating, ventilation, and air conditioning (HVAC) and commercial uses activities such as loading and unloading and parking lot activities. However, once final architectural plans and mechanical equipment specifications are available for each future project, preparation of a project-specific acoustical analysis would be required to confirm compliance with the City's exterior and interior noise standards related to land use compatibility, as established in City of Cypress Municipal Code Chapter 8 (Noise), Sections 8-1-4 and 8-1-5, which set forth allowable noise limits by noise zone and authorize the City to require noise measurements or acoustical studies to verify compliance with applicable standards prior to or following project occupancy. Because the proposed project would meet the City's noise standards, the proposed project would minimize noise spillover from commercial uses into nearby residential neighborhoods. As

Table 4.11.D: General Plan Consistency Analysis

Goal/Objective/Policy	Would the Project Conflict?
	such, the proposed project would not conflict with General Plan Noise Element Goal N-3.
Air Quality Element	
Goal AQ-1: Reduce air pollution through proper land use and transportation planning.	**No Conflict.** Objective 3 of the proposed project, which can be found in Chapter 3.0, Project Description, of this Draft EIR, aims to implement sustainable planning and development practices by creating compact new developments and walkable neighborhoods to minimize the City's contribution to greenhouse gas emissions (GHGs) and energy usage. The planning of potential residential sites directly adjacent to business and retail sites would eliminate the need for automobile travel in some cases. The walkable nature of the Buildout Area would contribute to the reduction of air pollution from automobile travel and would not conflict with Goal AQ-1 of the City's General Plan.
Goal AQ-2: Improve air quality by reducing the amount of vehicular emissions in Cypress.	**No Conflict.** The proposed project would facilitate transit use by providing a new dense mixed-use development on an underutilized property near a major arterial street (Katella Avenue), which is already served by existing transit service. As such, the proposed project would not conflict with General Plan Air Quality Element Goal AQ-2.
Growth Management Element	
Goal GM-1: Reduce traffic congestion.	**No Conflict.** Pursuant to SB 743 and Section 15064.3 of the State *CEQA Guidelines*, the determination of significance for transportation impacts under CEQA is based on VMT rather than roadway LOS. Accordingly, congestion or delay at intersections, including those on the Orange County CMP network, is no longer considered a significant environmental impact under CEQA. Although LOS is no longer used for CEQA significance determinations, the City's General Plan Circulation Element and the Orange County CMP continue to identify LOS standards for local policy and regional consistency purposes. Improvements at the intersections with non-CEQA project-related effects further improvements include Intersections #12 (Cerritos Avenue at Los Alamitos Boulevard), #16 (Cerritos Avenue at Walker Street), #17 (Cerritos Avenue at Valley View Street), and #18 (Vessels Circle at Walker Street). Proposed feasible improvements are recommended for those four intersections to reduce the non-CEQA project effects, notwithstanding that three of them currently operate at acceptable levels of service pursuant to the Cypress and Los Alamitos Circulation Elements. Intersection #17 (Cerritos Avenue at Valley View Street) in the PM peak hour would continue to operate at an unacceptable LOS with the proposed feasible improvements. In addition, using the Buildout Year 2038 with Project conditions, future Intersection #31 (Vessels Circle at Moody Street) would satisfy the signal warrants in the morning and the evening peak hours and a traffic signal is recommended to be installed at this future intersection. Based on a left-turn phasing analysis, left-turn phasing in the north-south direction is also recommended. Proposed improvements

Table 4.11.D: General Plan Consistency Analysis

Goal/Objective/Policy	Would the Project Conflict?
	at Intersection #18 (Vessels Circle at Walker Street) are anticipated to accommodate the added vehicle queues due to the proposed project. In addition, the project features previously identified for Intersection #15 (Cerritos Avenue at Moody Street) are anticipated to accommodate the projected left-turn vehicle queues and prevent an exceedance. However, no feasible improvements can be implemented for the other five intersections to prevent an exceedance. Further, in the Existing Condition with Moody Street and Vessels Circle extensions, Existing with Project, and Buildout Year 2038 with and without the proposed project, all three intersections would operate at LOS D or better in both the AM and PM peak hours, which is acceptable per CMP guidelines. As such, the proposed project includes project features and roadway/intersection improvements in order to maintain a safe, efficient, economical, and aesthetically pleasing transportation system and no conflict with this policy would occur.
Policy GM-4.1: To the extent feasible, utilize information on the jobs/housing balance in the City and region as a factor in land use decision-making.	**No Conflict.** As discussed in Section 4.14, Population and Housing, of this Draft EIR, SCAG's Regional Housing Needs Assessment (RHNA) was developed using various data, including the City's projected population, household, and employment growth. Thus, the balance of jobs and housing is a built-in factor of the RHNA housing unit allocation provided by SCAG. The buildout of the proposed project includes 1,791 residential units, which would not conflict with the City's RHNA allocation. Accordingly, the proposed project would not conflict with Policy GM-4.1 of the City's General Plan.

Source: City of Cypress General Plan (2001).

Cypress Town Center and Commons Specific Plan 3.0: The Specific Plan is the regulatory plan that constitutes the Land Use for the Buildout Area. The project does not propose any amendments to the Specific Plan. Therefore, the proposed project is consistent with the Specific Plan. In addition, as provided above, the City (through Measure S) determined that the Specific Plan is consistent with all eight elements of the General Plan, as required by Government Code Section 65450.

City of Cypress Zoning Ordinance. The Specific Plan is the regulatory plan that constitutes the zoning for the Buildout Area. The project does not propose any amendments to the Specific Plan. Therefore, the proposed project is consistent with the City's Zoning Ordinance.

Summary. The proposed project does not include any proposed amendments or modifications to the adopted Specific Plan. The proposed project is the reasonably foreseeable buildout of the Specific Plan in the Buildout Area. As such, the proposed project would not introduce inconsistencies in the applicable City land use and planning policies. Therefore, the proposed project would result in less than significant impacts related to potential conflicts with applicable land use plans, policies, and regulations, and no mitigation is required.

4.11.7 Level of Significance Prior to Mitigation

The proposed project would result in less than significant impacts related to land use and planning.

4.11.8 Regulatory Compliance Measures and Mitigation Measures

No regulatory compliance measures or mitigation measures are applicable to the proposed project pertaining to land use and planning.

4.11.9 Level of Significance after Mitigation

No mitigation is required. The proposed project would not result in potentially significant impacts related to land use and planning.

4.11.10 Cumulative Impacts

As defined in Section 15130 of the *State CEQA Guidelines*, cumulative impacts are impacts created as a result of the combination of an individual project together with other past, current, and probable future projects causing related impacts. An EIR must discuss cumulative impacts of a project when the project's incremental effect is cumulatively considerable. The cumulative impact area for land use and planning is the City of Cypress and this cumulative impact analysis considers development of the proposed project in conjunction with other development projects and planned development within the City. Please refer to **Table 4.A: Summary of Related Projects** and **Figure 4.1**, in Chapter 4.0, Existing Setting, for the descriptions and locations of these related projects.

The City of Cypress is an urbanized area with a wide variety of established land uses. The Buildout Area is surrounded by a variety of commercial, office, business park, commercial and retail, residential, park and religious uses. As previously discussed, the Specific Plan would govern the Land Uses within the Buildout Area. Moreover, the Buildout Area would include land uses that would be compatible with the existing and planned neighborhoods and commercial areas surrounding the project site. Therefore, the proposed project would not contribute to a pattern of development that adversely impacts adjacent land uses or conflicts with existing on site or surrounding land uses.

As discussed under Threshold 4.11.1, the proposed project would not physically divide an established community because development would occur within existing areas of development. Therefore, the project would have a less than cumulatively considerable impact with respect to the physical division of an established community. As discussed under Threshold 4.11.2, the proposed project would not result in a significant impact with respect to consistency with the City's General Plan, Zoning Ordinance, or Specific Plan because future buildout of the proposed project would be consistent with all applicable goals, policies, designations, and regulations.

There are no incompatibilities between the proposed project and planned future projects in the City, which primarily include mixed-use and residential developments. As discussed previously, the proposed project would not divide an established community; conflict with Connect SoCal or any City-adopted plans or policies. Future development applications contemplated within the Buildout Area would be required to comply with all applicable regulations and standards related to land use and planning. As such, any future development or redevelopment projects requiring discretionary

actions would be subject to environmental review, in accordance with the provisions of CEQA and the *State CEQA Guidelines.*

In addition, all identified City-related projects, including the related projects identified in **Table 4.A**, would be reviewed for consistency with adopted land use plans and policies by the City. For this reason, the related projects are anticipated to be consistent with applicable General Plan and zoning requirements, or would be subject to allowable exceptions; further, they would be subject to CEQA, mitigation requirements, and design review. Therefore, the proposed project would not contribute to a significant cumulative land use compatibility impact in the study area, and no mitigation is required.

This page intentionally left blank

4.12 MINERAL RESOURCES

This section evaluates the potential for implementation of the Specific Plan 3.0 Buildout Project (proposed project) to result in impacts to mineral resources. This section also describes the existing setting of mineral resources within and near the Buildout Area and sets forth the relevant regulatory requirements that apply to the project's potential impact on mineral resources. This section is based in part on information provided in the County of Orange General Plan Chapter VI, Resources Element; the City of Cypress General Plan Conservation/Open Space/Recreation Element;[1] California Geological Survey (CGS) data;[2] and the *Environmental Impact Report, Soils and Geology Issues, Proposed Mixed-Use Development, 4961 Katella Avenue and 5100 Cerritos Avenue, Cypress, California* (Geotechnical Investigation)[3] (**Appendix F**) prepared for the proposed project.

4.12.1 Scoping Process

The City of Cypress (City) received six comment letters during the public review period of the Notice of Preparation (NOP). For a copy of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). No comment letters included comments related to mineral resources.

4.12.2 Methodology

Impacts to mineral resources are assessed based on the potential for the proposed project to result in the loss of or reduced availability of known or potential mineral resources or sites. Information on mineral resources was compiled from published literature, maps, and aerial photographs. Geologic units and structural features were obtained from maps published by the CGS. Mineral resource impacts that could result from project-related activities were evaluated qualitatively based on existing conditions in the Buildout Area;[4] expected construction practices; and materials, locations, and duration of construction and operational activities.

Based on guidelines adopted by the CGS, areas known as Mineral Resource Zones (MRZs) are classified according to the presence or absence of significant deposits, as defined below. The following MRZ categories are used by the California State Geologist in classifying the State's lands:

- **MRZ-1:** Areas where adequate geologic information indicates that no significant mineral deposits are present, or where it is judged that little likelihood exists for their presence. This zone is applied where well-developed lines of reasoning, based on economic-geologic principles and adequate data, indicate that the likelihood for occurrence of significant mineral deposits is nil or slight.

2 California Department of Conservation (DOC), California Geological Survey. n.d. *Minerals.* Website: https://www.conservation.ca.gov/cgs/minerals (accessed January 23, 2025).

3 Geotechnologies, Inc. 2024. *Environmental Impact Report, Soils and Geology Issues, Proposed Mixed-Use Development, 4961 Katella Avenue and 5100 Cerritos Avenue, Cypress, California.* May 2. (**Appendix F**)

4 As described in Chapter 3.0 of this Draft EIR, the baseline condition generally consists of the existing conditions in and in the vicinity of the Buildout Area at the time the NOP was published (April 4, 2025).

- **MRZ-2a:** Areas underlain by mineral deposits where geologic data show that significant measured or indicated resources are present. Areas classified as MRZ-2a contain discovered mineral deposits that are either measured or indicated reserves as determined by such evidence as drilling records, sample analysis, surface exposure, and mine information. Land included in the MRZ-2a category is of prime importance because it contains known economic mineral deposits.

- **MRZ-2b:** Areas underlain by mineral deposits where geologic information indicates that significant inferred resources are present. Areas classified as MRZ-2b contain discovered deposits that are either inferred reserves or deposits that are presently subeconomic as determined by limited sample analysis, exposure, and past mining history.

- **MRZ-3a:** Areas containing known mineral deposits that may qualify as mineral resources. MRZ-3a areas are considered to have a moderate potential for the discovery of economic mineral deposits.

- **MRZ-3b:** Areas containing inferred mineral deposits that may qualify as mineral resources. Land classified as MRZ-3b represents areas in geologic settings that appear to be favorable environments for the occurrence of specific mineral deposits.

- **MRZ-4:** Areas where geologic information does not rule out either the presence or absence of mineral resources. The MRZ-4 classification does not imply that there is little likelihood for the presence of mineral resources; rather, there is a lack of knowledge regarding mineral occurrence.

After an area has been classified into an MRZ, the California State Mining and Geology Board (SMGB) determines if the classified MRZ deposit warrants either a "regional" (multi-community) or "statewide economic significance" designation. In contrast to classification, which inventories mineral deposits without regard to existing land use, the purpose of designation is to identify those areas that are of prime importance in meeting the future needs of the study region and that remain available from a land use perspective.[5]

4.12.3 Existing Environmental Setting

The Buildout Area is located in an urbanized area that is currently developed and there are no known mineral resources within its boundaries.

4.12.3.1 Orange County

The primary mineral resource in Orange County is construction aggregate consisting of sand and gravel. Significant sand and gravel resources within Orange County are located in portions of the Santa Ana River, Santiago Creek, San Juan Creek, Arroyo Trabuco, and other areas. The CGS also

[5] California Department of Conservation (DOC). 2000. *SMARA Mineral Land Classification. Division of Mines and Geology*. January. Website: https://www.conservation.ca.gov/smgb/Guidelines/Documents/ClassDesig.pdf (accessed January 23, 2025).

identifies fire clay and industrial sand as having historically been produced in large quantities within Orange County.[6]

4.12.3.2 City of Cypress

According to the California Department of Conservation, the entire City of Cypress is located within MRZ-4.[7] In addition, the City is not within the proximity of any MRZ-2 areas, and is surrounded by an MRZ-1 area, indicating the absence of significant mineral deposits in the area.[8] Furthermore, according to the City's General Plan Conservation/Open Space/Recreation Element, there are no mineral resources as defined by the California Division of Mines and Geology (CDMG; now known as the California Geological Survey or CGS) within the City.[9]

4.12.3.3 Buildout Area

According to the Geotechnical Investigation prepared for the proposed project (**Appendix F**), the Buildout Area contains fill materials that are underlain by native alluvial soils consisting of interlayered mixtures of sandy to silty clay, sandy to clayey silt, silty to clayey sand, and sand. Subsurface excavations within the Buildout Area did not encounter any mineral resources of State or local importance within the Buildout Area.

4.12.4 Regulatory Setting

The following section describes the federal, State, regional, and local regulatory framework applicable to analyzing potential impacts related to mineral resources from development of the proposed project.

4.12.4.1 Federal Regulations

No federal plans, policies, regulations, or laws related to mineral resources are applicable to the Buildout Area because the Buildout Area does not include any federal lands or require federal approvals related to mineral resources.

4.12.4.2 State Regulations

Surface Mining and Reclamation Act of 1975. The State of California recognized that mineral resources are essential to the needs of society and the economic well-being of the State. In 1975, the State Legislature passed the Surface Mining and Reclamation Act (SMARA), Public Resources Code (PRC) Section 2710, et seq. The intent of SMARA is to promote production and conservation of

8 California Department of Conservation (DOC). 2000. *SMARA Mineral Land Classification. Division of Mines and Geology.* January. Website: https://www.conservation.ca.gov/smgb/Guidelines/Documents/ClassDesig.pdf (accessed January 23, 2025).

9 City of Cypress. 2001. *City of Cypress General Plan Conservation, Open Space/Recreation Element*. Website: https://www.cypressca.org/home/showpublisheddocument/686/636123123792970000 (accessed January 23, 2025).

mineral resources, minimize the environmental effects of mining, and ensure mined lands are reclaimed to conditions suitable for alternative uses. Reclaiming land for other uses once mining operations are completed is important for the general health, safety, and welfare of the community. Under SMARA, permits are required for all mining activities commencing operation on or after January 1, 1976.

Under current SMARA statutes (PRC Section 2763), prior to permitting a use that would threaten the potential to extract minerals in an area designated by the SMGB as having mineral resources of regional or statewide significance, the City must prepare a statement specifying its reasons for permitting the proposed use. In it, the City must consider its Mineral Resource Management Policies, balance the mineral values against alternative land uses, and consider the importance of the minerals to their market region as a whole and not just their importance to the City area. This process is designed to ensure that decision-makers weigh the economic and environmental value of non-renewable mineral resources when determining whether or not to protect existing mineral resources.

4.12.4.3 Regional Regulations

There are no regional regulations that apply to the proposed project with respect to mineral resources.

4.12.4.4 Local Regulations

The City of Cypress General Plan and Municipal Code do not contain any applicable goals, policies, or regulations related to mineral resources. The Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) also does not contain any applicable goals, policies, or regulations related to mineral resources.

4.12.5 Thresholds of Significance

The thresholds of significance for mineral resources used in this analysis are consistent with Appendix G of the *State CEQA Guidelines*. Based on these thresholds, implementation of the proposed project would have a significant adverse impact with respect to mineral resources if it would:

Threshold 4.12.1: Result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state; or

Threshold 4.12.2: Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan.

4.12.6 Project Impacts

Potential impacts of the proposed project related to mineral resources are discussed below pursuant to the thresholds established in Section 4.12.5, above.

Threshold 4.12.1: Would the project result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state?

No Impact. There are no known mineral resources in or in the vicinity of the Buildout Area, and there are no other known mineral deposits or resources within the City that are of significant value to the region or the State. Therefore, the proposed project would not result in the loss of availability of a known mineral resource that would be a value to the region and residents of the State. Therefore, no impacts to mineral resources would occur, and no mitigation is required.

Threshold 4.12.2: Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

No Impact. The Buildout Area does not contain a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. As noted above, there are no other known mineral deposits or resources within the City that are of significant value to the region or of local importance according to the City's General Plan. Accordingly, the proposed project would not result in the loss of availability of a locally important mineral resource recovery site. Therefore, no impacts to mineral resources would occur, and no mitigation is required.

4.12.7 Level of Significance Prior to Mitigation

The proposed project would not result in any significant impacts related to mineral resources, and no mitigation is required.

4.12.8 Regulatory Compliance Measures and Mitigation Measures

4.12.8.1 Regulatory Compliance Measures

No mitigation measures or regulatory compliance measures are applicable to the proposed project pertaining to mineral resources.

4.12.8.2 Mitigation Measures

The proposed project would not result in significant impacts related to mineral resources, and no mitigation is required.

4.12.9 Level of Significance after Mitigation

The proposed project would result in no impacts related to mineral resources.

4.12.10 Cumulative Impacts

As defined in Section 15130 of the *State CEQA Guidelines*, cumulative impacts are the incremental effects of an individual project when viewed in connection with the effects of past, current, and probable future projects within the cumulative impact area for mineral resources. The cumulative study area for the proposed project is the City of Cypress and as described in Chapter 4.0, Existing Setting, Environmental Analysis, Impacts, and Mitigation Measures, certain past, current, and future projects. The cumulative project list and map locations are also provided in Chapter 4.0, **Table 4.A: Summary of Related Projects** and **Figure 4-1: Cumulative Projects.**

Cumulative impacts are addressed only for those thresholds that would result in a project-related impact, whether it be less than significant or less than significant with mitigation. If the project would result in no impact with respect to a particular threshold, by definition, it would not contribute to a cumulative impact. Therefore, no analysis would be required.

As detailed in this section, the proposed project would have no impact on mineral resources. Furthermore, there are no known or designated mineral resources within the City's boundaries. Because the proposed project would have no impact on mineral resources, it would not contribute to a cumulatively considerable impact on mineral resources. Therefore, there would be no cumulatively significant impact on mineral resources, and no mitigation is required.

4.13 NOISE

This section evaluates the potential short-term and long-term noise impacts from implementation of the Specific Plan 3.0 Buildout Project (proposed project). This section is based in part on information provided in the Noise Element of the City of Cypress' (City) General Plan, the Specific Plan, the City's Noise Ordinance, as well as the applicable noise requirements in the Airport Environs Land Use Plan for Joint Forces Training Base (JFTB) Los Alamitos. The assumptions used in the noise analysis and the noise modeling results are provided in **Appendix I**.

4.13.1 Scoping Process

The City of Cypress (City) received six comment letters during the public review period of the Notice of Preparation (NOP). For a copy of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). None of the comment letters included comments related to Noise.

4.13.2 Methodology

Evaluation of noise and vibration impacts associated with the proposed project includes the following:

- Determination of the short-term construction noise and vibration impacts.
- Determination of the long-term off-site and on-site traffic noise impacts.
- Determination of the long-term stationary noise and vibration impacts from project operations.
- Determination of the required mitigation measures to reduce short-term construction–related noise and vibration impacts and long-term stationary and mobile source noise impacts.

The evaluation of noise and vibration impacts was prepared in conformance with appropriate standards, utilizing procedures and methodologies in the City of Cypress Noise Element and Municipal Code and Federal Transit Administration (FTA) criteria.

4.13.2.1 Proposed Project Methodology

Establish Noise Baseline: In order to assess the existing noise conditions in the area, long-term (24-hour) noise-level measurements were conducted between March 25 and 26, 2025, using six (6) Larson Davis Spark 706RC Dosimeters at six locations surrounding the project site, representative of the existing ambient noise levels at the nearest off-site sensitive receptors. **Figure 4.13-1, Noise Monitoring Locations,** shows the long-term noise monitoring locations.

The six monitoring sites were selected to: (1) capture noise exposure patterns in all principal directions toward adjacent sensitive receptors; (2) represent the closest residential interfaces and other sensitive uses; (3) capture both direct and partially attenuated noise propagation paths from the Los Alamitos Race Course; and (4) reflect varying proximities to roadway traffic corridors that influence ambient noise levels. Collectively, the selected locations provide a representative characterization of existing off-site ambient noise conditions that sensitive receptors experience under typical operational circumstances.

11/12/2025 2:34 PM

This page intentionally left blank

Noise measurements were conducted during periods when simulcast racing activities were occurring at the Los Alamitos Race Course, as simulcast wagering represents a typical operational condition when the facility is open to patrons. Simulcast racing, in which races from other tracks are broadcast and wagered on at the Los Alamitos Race Course grandstand and outdoor areas, is offered daily with gates opening in the morning for simulcast viewing and wagering activities. Measurements collected during active simulcast operations are representative of routine daytime use of the race course and were used to characterize existing ambient and activity-related noise conditions for the operational noise analysis.[1]

Construction Methodology: Consistent with the Caltrans Technical Noise Supplement[2] and FTA[3] construction noise assessment guidance, construction noise impacts were evaluated using a conservative, worst-case modeling approach. This scenario assumes that grading activities would occur concurrently on five lots—Lots 2, 4, 7, 12, and 13—with full grading of Lots 4, 12, and 13, as well as partial grading of the southern 8 acres of Lot 2 and the northern 11 acres of Lot 7. The purpose of this model run is to capture the potential for overlapping construction schedules and to model the potential worst-case scenario for grading activities. As such, this modeling run focuses solely on grading to represent the most intensive construction activities that would generate peak construction emissions.

The modeled scenario reflects the maximum reasonable construction intensity, assuming the greatest number of noise-generating equipment operating concurrently, and the closest potential proximity of equipment to nearby noise-sensitive receptors. Equipment sound levels and usage assumptions were based on FTA reference construction noise levels, with noise levels calculated as hourly average equivalent sound levels (Leq) at representative receptor locations.

This conservative methodology is consistent with Caltrans and FTA guidance, which recommends evaluating the loudest anticipated construction phase under peak equipment operation conditions to ensure that predicted noise levels reasonably represent worst-case conditions. As such, the results of this analysis provide a robust and protective assessment of potential construction noise impacts associated with the proposed project.

Operational Noise Evaluation Methodology: Potential operational noise impacts associated with the proposed project were evaluated using available project information, including the site plan, proposed land uses, anticipated operational characteristics, and typical noise sources associated with similar commercial and mixed-use developments. The analysis considered to the extent possible on-site stationary noise sources such as heating, ventilation, and air conditioning (HVAC) equipment, as well as intermittent operational activities including parking lot circulation, loading and unloading, refuse collection, and maintenance activities. In the absence of project-specific equipment

specifications at this stage of design, the evaluation relied on standard noise levels for typical equipment and activities and professional judgment to assess compliance with applicable City of Cypress Municipal Code noise standards at nearby noise-sensitive receptors.

4.13.2.2 Characteristics of Sound

Noise is usually defined as "unwanted sound." Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm, or when it has adverse effects on health.

To the human ear, sound has two important characteristics: pitch and loudness. Pitch is generally an annoyance, while loudness can affect the ability to hear. Pitch is the number of complete vibrations, or cycles per second, of a wave resulting in the tone's range from high to low. Loudness is the strength of a sound that describes a noisy or quiet environment and is measured by the amplitude of the sound wave. Loudness is determined by the intensity of the sound waves combined with the reception characteristics of the human ear. Sound intensity is the average rate of sound energy transmitted through a unit area perpendicular to the direction in which the sound waves are traveling. This characteristic of sound can be precisely measured with instruments. In analyzing the potential noise impacts of a proposed project, the existing noise environment in the vicinity of the project site is identified and the potential noise effects of the project are evaluated in terms of sound intensity and the effect on adjacent sensitive land uses.

4.13.2.3 Measurement of Sound

Sound intensity is measured through the A-weighted decibel (dBA) scale to correct for the relative frequency response of the human ear. That is, an A-weighted noise level de-emphasizes low and very high frequencies of sound similar to the human ear's de-emphasis of these frequencies. Decibels (dB), unlike the linear scale (e.g., inches or pounds), is a scale based on powers of 10.

Each interval of 10 dB indicates a sound energy 10 times greater than before. For example, 20 dB is 10 times more intense than 10 dB, 30 dB is 100 times more intense than 10 dB, and 40 dB is 1,000 times more intense than 10 dB. The decibel scale increases as the square of the change, representing the sound pressure energy. The decibel system of measuring sound gives a rough connection between the physical intensity of sound and its perceived loudness to the human ear. A 10 dB increase in sound level is perceived by the human ear as a doubling of the loudness of the sound. Ambient sounds generally range from 30 dB (very quiet) to 100 dB (very loud).

Sound levels are generated from a source, and their decibel level decreases as the distance from that source increases. Sound dissipates exponentially with distance from the noise source. For a single point source, sound levels decrease approximately 6 dB for each doubling of distance from the source. This drop-off rate is applicable to noise generated by stationary equipment. If noise is produced by a line source (which approximates the effect of several point sources), such as highway traffic or railroad operations, the sound decreases 3 dB for each doubling of distance in a hard site environment. Line source sound levels decrease 4.5 dB for each doubling of distance in a relatively flat environment with absorptive vegetation.

There are many ways to rate noise for various time periods, but an appropriate rating of ambient noise affecting humans also account for the annoying effects of sound. The L_{eq} is the total sound

energy of time-varying noise over a sample period. However, the predominant rating scales for communities in the State of California are the L_{eq} and CNEL or the L_{dn} based on A-weighted decibels. CNEL is the time-weighted average noise over a 24-hour period, with a 5 dBA weighting factor applied to the hourly L_{eq} for noises occurring from 7:00 p.m. to 10:00 p.m. (defined as relaxation hours) and a 10 dBA weighting factor applied to noises occurring from 10:00 p.m. to 7:00 a.m. (defined as sleeping hours). L_{dn} is similar to the CNEL scale but without the adjustment for events occurring during the relaxation. CNEL and L_{dn} are within 1 dBA of each other and are normally interchangeable.

Other noise rating scales used when assessing the annoyance factor of noise include the maximum noise level (L_{max}), which is the highest exponential time-averaged sound level that occurs during a stated time period. Short-term noise impacts are specified in terms of maximum levels denoted by L_{max}. L_{max} reflects peak operating conditions and addresses the annoying aspects of intermittent noise. For enforcement purposes, it is often used with another noise scale (or noise standards in terms of percentile noise levels) in noise ordinances. For example, the L_{10} noise level represents the noise level exceeded 10 percent of the time during a stated period. The L_{50} noise level represents the median noise level. Half the time the noise level exceeds this level, and half the time it is less than this level. The L_{90} noise level represents the noise level exceeded 90 percent of the time and is considered the background noise level during a monitoring period.

4.13.2.4 Vibration

According to the United States Department of Transportation (USDOT) FTA's 2018 *Transit Noise and Vibration Impact Assessment Manual* (FTA Manual), vibration is the periodic oscillation of a medium or object. The rumbling sound caused by the vibration of room surfaces is called structure-borne noise. Sources of ground-borne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or anthropogenic causes (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous, such as factory machinery, or transient, such as explosions. As is the case with airborne sound, ground-borne vibrations may be described by amplitude and frequency. Vibration is often described in units of velocity (inches per second) and discussed in decibel units in order to compress the range of numbers required to describe vibration. Vibration impacts are generally associated with activities such as train operations, construction, and heavy truck movements.

Typical sources of ground-borne vibration are construction activities (e.g., blasting, pile-driving, and operating heavy-duty earthmoving equipment), steel-wheeled trains, and occasional traffic on rough roads. Problems with both ground-borne vibration and noise from these sources are usually localized to areas within approximately 100 feet of the vibration source, although there are examples of ground-borne vibration causing interference out to distances greater than 200 feet as detailed in the 2018 FTA Manual. When roadways are smooth, vibration from traffic, even heavy trucks, is rarely perceptible. It is assumed for most projects that the roadway surface will be smooth enough that ground-borne vibration from street traffic will not exceed the impact criteria; however, construction of the project could result in ground-borne vibration that may be perceptible and annoying.

Ground-borne vibration has the potential to disturb people and damage buildings. Although it is very rare for train-induced ground-borne vibration to cause even cosmetic building damage, it is not uncommon for construction processes such as blasting and pile-driving to cause vibration of sufficient amplitudes to damage nearby buildings.[4] Ground-borne vibration is usually measured in terms of vibration velocity, either the root-mean-square (RMS) velocity or peak particle velocity (PPV). The RMS is best for characterizing human response to building vibration, and PPV is used to characterize the potential for damage. Decibel notation acts to compress the range of numbers required to describe vibration. Vibration velocity level in decibels is defined as

$$Lv = 20 \log10 [V/Vref]$$

where "Lv" is the vibration velocity in decibels (VdB), "V" is the vibration amplitude, and "Vref" is the reference velocity amplitude, or 1×10^{-6} inches per second (in/sec) used in the United States.

4.13.3 Regulatory Setting

The following section describes the federal, State, regional, and local regulatory framework applicable to analyzing potential impacts related to noise from development of the proposed project.

4.13.3.1 Federal Regulations

Federal Transit Administration. The USDOT Federal Transit Administration (FTA) identifies guidelines for the maximum acceptable vibration levels for different types of land uses. These guidelines are based on the potential for interference or annoyance from vibration levels in a building and the potential for building damage. According to the FTA, ground vibrations from construction activities generally do not reach levels that can damage structures, but they can achieve the audible and feel-able ranges in buildings very close to the construction site. Exceptions include non-engineered timber and masonry buildings such as residential buildings and old or fragile buildings, where special care must be taken to avoid damage. Construction activity can result in varying degrees of ground-borne vibration, depending on the equipment and methods used, distance to the affected structures, and soil type. Construction vibration is generally associated with pile driving and rock blasting. Other construction equipment, such as air compressors, light trucks, and hydraulic loaders, generates little or no ground vibration.

United States Noise Control Act. In 1972, Congress enacted the United States Noise Control Act. This act authorized the United States Environmental Protection Agency (USEPA) to publish descriptive data on the effects of noise and establish levels of sound "requisite to protect the public welfare with an adequate margin of safety." These levels are separated into health (hearing loss levels) and welfare (annoyance levels). For protection against hearing loss, 96 percent of the population would be protected if sound levels are less than or equal to 70 dBA during a 24-hour period of time. At 55 dBA L_{dn}, 95 percent sentence clarity (intelligibility) may be expected at 11 feet, with no community reaction. However, 1 percent of the population may complain about noise at this level and 17 percent

[4] Federal Transit Administration (FTA). 2018. *Transit Noise and Vibration Impact Assessment Manual*, Report No. FTA-0123. Washington, DC: U.S. Department of Transportation.

may indicate annoyance. The USEPA cautions that these identified levels are guidelines, not standards.

4.13.3.2 State Regulations

Noise Control Act (Health & Saf. Code §§ 46000-46080). The California Noise Control Act states that excessive noise is a serious hazard to public health and welfare and that it is the policy of the State to provide an environment for all Californians that is free from noise that jeopardizes their health or welfare. The goal is to minimize the number of people that would be exposed to excessive noise but not create an environment completely free from any noise.

State of California General Plan Guidelines. The State of California regulates vehicular and freeway noise affecting classrooms, sets standards for sound transmission and occupational noise control, and identifies noise insulation standards and airport noise/land-use compatibility criteria. The State of California OPR's 2017 *General Plan Guidelines* (OPR 2017), also provide guidance for the acceptability of projects within specific Community Noise Equivalent Level (CNEL)/day-night average noise level (L_{dn}) contours. The General Plan Guidelines present adjustment factors that may be used in order to arrive at noise acceptability standards that reflect the noise control goals of the community, the particular community's sensitivity to noise, and the community's assessment of the relative importance of noise pollution.

State of California Code of Regulations (CCR Title 24, Chapter 12, Section 1206.4). Interior noise levels for residential habitable rooms are regulated by Title 24 of the California Code of Regulations (CCR) California Noise Insulation Standards. Title 24, Chapter 12, Section 1206.4, of the 2019 California Building Code requires that interior noise levels attributable to exterior sources not exceed 45 CNEL/L_{dn} in any habitable room. A habitable room is a room used for living, sleeping, eating, or cooking. Bathrooms, closets, hallways, utility spaces, and similar areas are not considered habitable rooms for this regulation.

4.13.3.3 Regional Regulations

There are no regional regulations related to noise that are applicable to the proposed project.

4.13.3.4 Local Regulations

City of Cypress General Plan. The development of effective strategies to reduce impacts of excessive noise is an essential part of the land use planning process. Since 1971, the Noise Element has been one of the seven mandatory elements of a General Plan. The Noise Element requires that noise sources be considered in establishing land use patterns so as to minimize exposure of residents to excessive noise. The Noise Element of the City's General Plan[5] works to achieve and maintain environmental noise levels compatible with land use by establishing goals, policies, and programs to ensure that Cypress residents will be protected from excessive noise. The City's Noise Element serves as a guideline for compliance with the State's noise insulation standards. Applicable Noise Element objectives and policies include the following:

[5] City of Cypress. 2001. *Cypress General Plan Noise Element*. Website: https://www.cypressca. org/home/showpublisheddocument/718/636123119313270000 (accessed June 3, 2023).

- **N-1** Reduce noise impacts from transportation noise sources.
- **N-2** Incorporate noise considerations into land use planning decisions.
- **N-3** Minimize noise spillover from commercial uses into nearby residential neighborhoods.
- **N-4** Minimize the noise impacts associated with the development of residential units above ground floor commercial uses in mixed use developments.
- **N-5** Develop measures to control non-transportation noise impacts.

Additionally, the City's General Plan Noise Element has established interior and exterior noise standards for various land use categories shown in **Table 4.13.A: City of Cypress Interior and Exterior Noise Standards**. As shown in **Table 4.13.A**, the City's exterior and interior noise standards are 50–60 A-weighted decibels (dBA) CNEL and 45–55 dBA CNEL, respectively, for single- and multifamily residences. It should be noted that the City's exterior noise standard only applies to private yards of single-family residences, private patios, or balconies of multifamily residences which are served by a means of exit from inside the dwelling, mobile home parks, park picnic areas, and school playgrounds. Multifamily residences with balconies that are 6 feet deep or less are exempt from the City's exterior noise standard. Although the City's interior noise standard is 45–55 dBA CNEL, the interior noise standard of 45 dBA CNEL was used for a conservative noise analysis.

Table 4.13.A: City of Cypress Interior and Exterior Noise Standards

Land Use Categories		dBA CNEL	
Categories	**Uses**	**Interior[1]**	**Exterior[2]**
Residential	Single Family Duplex, Multiple Family	45[3]–55	50–60
	Mobile Home	45	65[4]
Commercial Industrial	Hotel, Motel, Transient Lodging	45	--
	Commercial Retail, Bank, Restaurant	55	--
	Office Building, Research and Development, Professional Offices, City Office Building	50	--
	Amphitheater, Concert Hall Auditorium, Meeting Hall	45	--
	Gymnasium (Multipurpose)	50	--

	Manufacturing, Warehousing, Wholesale, Utilities	65	--
	Movie Theaters	45	--
Institutional	Hospital, Schools' Classrooms	45	65
	Church, Library	45	--
Open Space	Parks	--	65

Source: *City of Cypress General Plan Noise Element*, Table N-3.

[1] Indoor environmental including: bedrooms, living areas, bathrooms, toilets, closets, corridors.

[2] Outdoor environments limited to: private yards of single-family residences, private patios, or balconies of multifamily residences which are served by a means of exit from inside the dwelling (balconies 6 ft deep or less are exempt), mobile home parks, park picnic areas, and school playgrounds.

[3] Noise level requirement with closed windows. Mechanical ventilation system or other means of natural ventilation shall be provided as of Chapter 12, Section 1205 of the Uniform Building Code.

[4] Exterior noise levels should be such that interior noise levels will not exceed 45 dBA CNEL.

CNEL = Community Noise Equivalent Level

dBA = A-weighted decibels

Although the City has not adopted exterior noise standards for hotels, movie theaters, and commercial uses, the City has established an interior noise standard of 45 dBA CNEL for hotels and movie theaters and an interior noise standard of 55 dBA CNEL for commercial retail and restaurant uses.

City of Cypress Municipal Code.

Construction Noise Standards. Section 13-70(e) of the City's Municipal Code states that "noise sources associated with construction, repair, remodeling or grading of any real property, provided said activities do not take place between the hours of 8:00 p.m. and 7:00 a.m. on weekdays, and before 9:00 a.m. and after 8:00 p.m. on Saturdays, or at any time on Sundays or a federal holiday."

Operational Noise Standards. Sections 13-68 and 13-69 of the City's Municipal Code has established exterior and interior noise standards for residential uses from stationary noise sources. The exterior and interior stationary source noise standards are shown in **Table 4.13.B: Exterior Noise Level Standards** and **Table 4.13.C: Interior Noise Level Standards**, respectively. Based on the City's Municipal Code, residential land uses adjacent to the project site in the City of Cypress are designated as Noise Zone 2 because they are zoned as Planned Business Park.

Table 4.13.B: Exterior Noise Level Standards

Noise Zone	Noise Level (dBA L_{eq})	Time Period
1	55	7:00 a.m. – 10:00 p.m.
	50	10:00 p.m. – 7:00 a.m.
2	60	7:00 a.m. – 10:00 p.m.
	55	10:00 p.m. – 7:00 a.m.

dBA = A-weighted decibels
L_{eq} = Average Hourly Noise Level

Table 4.13.C: Interior Noise Level Standards

Noise Zone	Noise Level (dBA L_{eq})	Time Period
1 and 2	55	7:00 a.m. – 10:00 p.m.
	45	10:00 p.m. – 7:00 a.m.

Source: *City of Cypress Municipal Code* (2025).
dBA = A-weighted decibels
L_{eq} = Average Hourly Noise Level

Section 13-69(a), as shown in **Table 4.13.C**, presents the interior noise level standards for all residential zones.

Vibration Standards. The City does not have vibration standards in the City's General Plan or Municipal Code, so the vibration standards included in the 2018 FTA Manual are used in this analysis for ground-borne vibration impacts on human annoyance and building damage. The criteria for environmental impact from ground-borne vibration are based on the maximum levels for a single

event. **Table 4.13.D: Interpretation of Vibration Criteria for Detailed Analysis** provides the criteria for assessing the potential for interference or annoyance from vibration levels in a building.

Table 4.13.D: Interpretation of Vibration Criteria for Detailed Analysis

Land Use	Max L_v (VdB)[1]	Description of Use
Workshop	90	Vibration that is distinctly felt. Appropriate for workshops and similar areas not as sensitive to vibration.
Office	84	Vibration that can be felt. Appropriate for offices and similar areas not as sensitive to vibration.
Residential Day	78	Vibration that is barely felt. Adequate for computer equipment and low-power optical microscopes (up to 20×).
Residential Night and Operating Rooms	72	Vibration is not felt, but ground-borne noise may be audible inside quiet rooms. Suitable for medium-power microscopes (100×) and other equipment of low sensitivity.

Source: *Transit Noise and Vibration Impact Assessment Manual* (FTA 2018).
[1] As measured in 1/3-Octave bands of frequency over the frequency range 8 to 80 Hertz.
FTA = Federal Transit Administration
Max = maximum
L_V = velocity in decibels
VdB = vibration velocity decibels

Table 4.13.E: Construction Vibration Damage Criteria lists the potential vibration damage criteria associated with construction activities, as suggested in the FTA Manual. The FTA Manual guidelines show that a vibration level of up to 0.5 inch per second (in/sec) in peak particle velocity (PPV) is considered safe for buildings consisting of reinforced concrete, steel, or timber (no plaster), and would not result in any construction vibration damage. For a nonengineered timber and masonry building, the construction vibration damage criterion is 0.2 in/sec in PPV.

Table 4.13.E: Construction Vibration Damage Criteria

Building Category	PPV (in/sec)
Reinforced concrete, steel, or timber (no plaster)	0.50
Engineered concrete and masonry (no plaster)	0.30
Nonengineered timber and masonry buildings	0.20
Buildings extremely susceptible to vibration damage	0.12

Source: *Transit Noise and Vibration Impact Assessment Manual*, Table 12-3 (FTA 2018).
[1] RMS vibration velocity in decibels (VdB) re 1 micro-inch/second.
FTA = Federal Transit Administration
in/sec = inches per second
L_V = velocity in decibels
PPV = peak particle velocity
RMS = root-mean-square
VdB = vibration velocity in decibels

4.13.4 Existing Environmental Setting

4.13.4.1 Overview of the Existing Noise Environment

The primary existing noise sources in the vicinity of the Buildout Area comes from surrounding roadways. Traffic on Katella Avenue, Lexington Drive, and West Cerritos Avenue are a steady source of ambient noise. Other sources of noise in the vicinity of the Buildout Area include aircraft noise from JFTB Los Alamitos, commercial activity, and day to day residential activity.

Additionally, within the Buildout Area sources of ambient noise include the existing commercial activity and event noise at the Los Alamitos Race Course. Noise generated from commercial activity includes parking lot activities, rooftop heating ventilation air conditioning (HVAC) equipment, trash pick-up, and truck delivery and truck unloading activities. Noise generated from events held at the Los Alamitos Race Course includes parking lot activities, crowd noise, and the public announcement system.

The Los Alamitos Race Course conducts year-round live Quarter Horse racing on Fridays through Sundays, with post times beginning at 7:00 p.m. on Fridays, 6:00 p.m. on Saturdays, and 5:00 p.m. on Sundays, and concluding by approximately 11:00 p.m. In addition, the facility hosts up to three Thoroughbred racing events each year. Outside of live racing events, the race course operates daily simulcast racing, during which races from other tracks are broadcast for on-site viewing and wagering during daytime hours. Simulcast operations represent a typical operational condition when the facility is open to patrons and contribute to routine daytime activity levels at the site.

4.13.4.2 Existing Sensitive Land Uses in the Project Vicinity

Noise-sensitive land uses are generally considered to include those uses where noise exposure could result in health-related risks to individuals, as well as places where quiet is an essential element of their intended purpose. Noise-sensitive land uses include residences, hospitals, school classrooms, churches, libraries, and parks. The closest noise-sensitive uses are the Melia Homes located south of Lot 11 and east of Lot 12 and the residential uses located south of Lot 3 and west of Lot 13. Other sensitive uses, including receptors located across Cerritos Avenue, are situated at a far enough distance from the project site and therefore would not experience noise levels associated with project construction or operation. **Table 4.13.F: Off-Site Sensitive Receptors** lists the sensitive receptors surrounding the Buildout Area.

Table 4.13.F: Off-Site Sensitive Receptors

Receptor	Direction	Distance (ft)
Single-family Residential uses opposite Cerritos Avenue	North of Lot 4	100
SeaCoast Grace Church	Northeast of Lot 7	500
Single-family Residential uses	East of Lot 12	10
Single-family Residential uses	South of Lot 3 and West of Lot 13	10
Los Alamitos Seventh-day Adventist Church	South of Lot 13	50

Source: LSA (2025).
ft = foot/feet

4.13.4.3 Existing Noise Levels

Table 4.13.G: Existing Noise Level Measurements provides a summary of the measured hourly noise levels and calculated CNEL level from the long-term noise level measurements as well as a brief description of the locations where the measurements were collected. As shown the calculated CNEL levels range from 53.7 dBA CNEL to 59.7 dBA CNEL. Hourly noise levels at surrounding noise-sensitive uses are as low as 39.9 dBA equivalent continuous sound level (L_{eq}) during nighttime hours and 48.2 dBA L_{eq} during daytime hours.

Table 4.13.G: Existing Noise Level Measurements

Location	Description	Daytime Noise Levels[1] (dBA L_{eq})	Evening Noise Levels[2] (dBA L_{eq})	Nighttime Noise Levels[3] (dBA L_{eq})	Daily Noise Level (dBA CNEL)
LT-1	At the south end of Ethel Circle, on a light pole, approximately 135 feet north of the Cerritos Avenue centerline.	50.9-59.8	48.6-57.9	39.9-50.8	56.0
LT-2	Cottonwood Church, 4505 Katella Avenue, Los Alamitos. In the parking lot on the north side of the property, approximately 55 feet north of the building and 1,170 feet north of the Katella centerline.	50.9-57.0	47.8-50.1	42.1-51.8	55.3
LT-3	Residence Inn, 4931 Katella Avenue, Los Alamitos. In a tree on the northeast corner of the property. Approximately 500 feet north of the Katella Avenue centerline.	49.0-53.6	49.6-52.7	41.9-48.2	53.7
LT-4	Acadia Apartments, 5155 Katella Avenue, Cypress. Near the northwest corner of the building, on a tree. Approximately 735 feet north of the Katella Avenue centerline.	53.5-58.3	51.7-55.3	41.9-52.9	58.0
LT-5	Near 10331 Triple Crown Lane, Cypress. Above the gate on the west edge of the property line. Approximately 1,050 feet north of the Katella Avenue centerline.	48.2-58.9	50.2-52.3	41.1-46.5	54.5
LT-6	SeaCoast Grace Church, 5100 West Cerritos Avenue. On a light pole in the parking lot. Approximately 435 feet south of the Cerritos Avenue centerline.	49.0-62.7	58.6-62.4	39.9-47.1	59.7

Source: LSA (2025).
Note: Noise measurements were conducted from March 25 to March 26, 2025, starting at 12:00 p.m.
[1] Daytime Noise Levels = noise levels during the hours of 7:00 a.m. to 7:00 p.m.
[2] Evening Noise Levels = noise levels during the hours from 7:00 p.m. to 10:00 p.m.
[3] Nighttime Noise Levels = noise levels during the hours of 10:00 p.m. to 7:00 a.m.
CNEL = Community Noise Equivalent Level
dBA = A-weighted decibel
ft = foot/feet
L_{eq} = the average noise level during a specific hour
LT = long-term measurement

It should be noted that these measured levels include existing walls and shielding from existing structures.[6] Based on the modeled traffic noise levels (see **Table 4.13.G**), the existing noise levels along Cerritos Avenue Between Lexington Drive and Walker Street is 69.1 dBA CNEL at 50 ft from the center of nearest lane.

4.13.4.4 Existing Aircraft Noise Levels

JFTB Los Alamitos is located approximately 0.6 mile south of the Buildout Area. According to the *Airport Environs Land Use Plan for JFTB Los Alamitos* and Exhibit SAF-8 in the Safety Element of the City's General Plan, the Buildout Area is within the 60 dBA CNEL noise contour, but outside of the 65 dBA CNEL noise contour for JFTB Los Alamitos. Although the Buildout Area is located within Noise Impact Zone 2 (moderate noise impact), it is outside of Noise Impact Zone 1 (high noise impact) defined by the Airport Environs Land Use Plan.

The second closest airport is the Long Beach Municipal Airport, located approximately 5.3 miles west of the Buildout Area. According to the Los Angeles County Airport Land Use Plan, the Buildout Area is located outside of the 65 dBA CNEL noise contour for Long Beach Municipal Airport. Therefore, aircraft noise generated from the two closest airports does not currently expose people residing or working on the Buildout Area to excessive noise levels due to the proximity of a public airport.

4.13.5 Thresholds of Significance

The thresholds of significance for noise impacts used in this analysis are consistent with Appendix G of the *State CEQA Guidelines*. Based on these thresholds, implementation of the proposed project would have a significant adverse impact with respect to noise if it would:

Threshold 4.13.1: Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;

Threshold 4.13.2: Generation of excessive groundborne vibration or groundborne noise levels; or

Threshold 4.13.3: For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.

[6] LT-1 was taken at the cul-de-sac on Ethel Circle. The existing residences and 6-foot wall along Cerritos Avenue reduced the noise level, as shown in **Table 4.13.G.**

For Threshold 4.13.1, the following noise level increases were used to determine whether the project would result in a significant noise impact:

- For off-site transportation noise—used to assess operational impacts—an increase of more than 3 dBA CNEL compared to the without-project condition would constitute a potentially significant impact.

- For non-transportation-related stationary sources (e.g., HVAC equipment), which are evaluated as part of operational noise impacts, noise levels should not exceed 55 dBA L_{eq} during daytime hours (7:00 a.m. to 10:00 p.m.) or 45 dBA Leq during nighttime hours (10:00 p.m. to 7:00 a.m.).

- For construction-related impacts compliance with the City's Municipal Code and exceedance of the FTA standards listed above and in **Table 4.13.D**. Specifically, to provide a comprehensive and conservative analysis, the operational noise level limits were used to evaluate noise generated from project construction. The anytime maximum daytime exterior noise level of 80 dBA L_{max} for residential uses in the City of Cypress was used as the acceptable threshold for determining impacts at noise-sensitive land uses from project construction. This threshold is considered a reasonable threshold of significance for potential construction noise impacts because the City of Cypress has established maximum exterior noise standards to control operational noise levels. This is a conservative threshold because Section 13-70(e) of the City's Municipal Code states that "noise sources associated with construction, repair, remodeling or grading of any real property, provided said activities do not take place between the hours of 8:00 p.m. and 7:00 a.m. on weekdays, and before 9:00 a.m. and after 8:00 p.m. on Saturdays, or at any time on Sundays or a federal holiday."

4.13.6 Project Impacts

Threshold 4.13.1: **Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?**

Less Than Significant Impact.

Construction Noise Impacts. Short-term noise impacts would be associated with demolition of the existing structures, excavation, grading, and construction of the proposed buildings. Construction noise associated with the proposed project would be temporary and would vary depending on the nature of the construction activities. Construction of individual improvements within the Buildout Area would occur in phases over time as specific development components are implemented and as tenants move in. Accordingly, construction-related noise would not occur simultaneously across the entire site, but rather intermittently and in localized areas corresponding to active work zones. Because construction activities are temporary, mobile, and phased, impact evaluations focus on peak construction scenarios representing the loudest equipment mix and closest receptor distance during each anticipated phase of development.

However, to provide a conservative assessment, the scenario used to calculate potential construction noise assumed concurrent grading on five lots—Lots 2, 4, 7, 12, and 13—with full grading of Lots 4, 12, and 13, as well as partial grading of the southern 8 acres of Lot 2 and the northern 11 acres of Lot 7. The purpose of this model run is to capture the potential for overlapping construction schedules and to model the potential worst-case scenario for grading activities. As such, this modeling run would represent the most intensive construction activities that would generate peak construction emissions.

Noise generated would primarily be associated with the operation of off-road equipment for on-site construction activities as well as construction vehicle traffic on surrounding roadways. Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g., land clearing, grading, excavation, paving). Other primary sources of acoustic disturbance would be random incidents, such as dropping large pieces of equipment or the hydraulic movement of machinery lifts. During construction, exterior noise levels could negatively affect residences and the church in the vicinity of the construction site. Construction-related short-term noise levels would be higher than existing ambient noise levels in the vicinity of the Buildout Area at the present time but would no longer occur once construction of the proposed project is completed.

Two types of short-term noise impacts could occur during construction within the Buildout Area: (1) construction traffic, and (2) construction equipment.

Construction Traffic. Construction crew commutes and the transport of construction equipment and materials to the Buildout Area would incrementally increase noise levels on access roads leading to the site. Construction would occur in phases over time, rather than as a single, continuous operation, such that construction-related vehicle trips would be distributed temporally and would not occur at peak intensity across the entire Buildout Area at once.

However, certain construction activities—such as concrete foundation pours or utility installation—typically require concentrated truck activity over a short duration. During a concrete pour, ready-mix trucks may arrive at regular intervals over several hours to maintain proper curing and placement of the material. These deliveries are temporary and episodic, generally occurring over one or several days for a given building pad. Similarly, hauling activities associated with site preparation, export of soil, or delivery of structural materials may result in periods of elevated heavy-truck traffic during discrete phases of construction. These construction-related trucks would utilize established arterial and collector roadways that currently accommodate commercial and industrial traffic associated with the surrounding land uses and the Los Alamitos Race Course. Heavy vehicles would access the site from designated truck routes and regional transportation corridors, and would depart along the same roadway network toward material suppliers, batch plants, disposal facilities, or regional freeways. As such, construction vehicle traffic would be dispersed along the existing roadway system rather than concentrated on local residential streets.

While individual heavy trucks can generate intermittent, short-duration single-event noise levels that are perceptible to nearby receptors, these events would not substantially affect longer-term (hourly or daily) ambient traffic noise levels because: (1) construction truck volumes represent a small fraction of total daily traffic on primary access routes; (2) the loudest vehicle usage are brief in duration; and (3) construction-related traffic would be temporary and phased rather than continuous over the life of the project. Accordingly, although short-term increases in heavy-truck activity may be noticeable

during specific activities such as concrete pours or material hauling, these increases would not result in a substantial temporary or permanent increase in roadway noise levels.

Existing average daily traffic (ADT) volumes along primary access routes are relatively high, with approximately 21,860 vehicles per day on Cerritos Avenue and 36,120 vehicles per day on Katella Avenue.[7] As a general rule, traffic volumes on a roadway would typically need to double in order to result in an increase in traffic noise levels of approximately 3 dBA, which is the minimum change generally considered perceptible to the human ear in an outdoor environment. Construction-related vehicle trips, including worker commutes and equipment delivery trips, would be substantially lower than existing traffic volumes and would not approach a doubling of traffic on these roadways.

Because construction-related vehicle trips would not approach existing daily traffic volumes on nearby roads, any increase in traffic noise would be less than 3 dBA and therefore would not be perceptible. It should also be noted that removal of the existing improvements associated with the Los Alamitos Race Course would result in cessation of race track operations during demolition and subsequent construction activities. With the track no longer operating, the existing traffic generated by patrons, employees, vendors, and event-related activities would be substantially reduced or eliminated. As such, construction-related vehicle trips would, in part, replace rather than add to existing operational traffic volumes, thereby offsetting potential roadway noise increases. Accordingly, short-term construction-related noise impacts associated with worker commutes and equipment transport to the Buildout Area would be less than significant.

Construction Equipment. The second category of short-term noise impacts relates to noise generated by construction activities. As development within the Buildout Area would occur on a project-by-project basis and the specific design and sequencing of those projects cannot be determined at this time, LSA evaluated a conservative construction noise scenario. This scenario represents the maximum potential noise exposure that could reasonably occur during project implementation and therefore provides a robust basis for impact assessment.

For purposes of noise modeling, the analysis assumes the simultaneous construction of five selected lots (Lots 2, 4, 5, 12, and 13), including demolition and removal of the existing improvements associated with Los Alamitos Race Course and the simultaneous construction of five projects in the Buildout Area. This condition represents the greatest potential disturbance as it involves the highest concentration of construction activity, the greatest number of pieces of heavy equipment operating at the same time and overlapping demolition and earthwork activities that generate the loudest construction noise levels.

The modeled peak condition reflects the construction phase expected to generate the highest noise levels at adjacent off-site sensitive receptors, including the nearby residential uses located east of Lot 12. By assuming overlap of multiple development projects and associated construction activities and equipment usage, the analysis applies a conservative approach. While the simultaneous construction of five projects is not anticipated, it provides a worst-case analysis of actual construction noise levels, ensuring analysis of the reasonable worst-case impacts.

[7] Kimley-Horn and Associates, Inc. 2025. *Cypress Specific Plan 3.0 Buildout Project*. July.

In addition to the reference maximum noise level[8], the usage factor provided in **Table 4.13.H: Typical Maximum Construction Equipment Noise Levels (L_{max})** is utilized to calculate the hourly noise level impact for each piece of equipment based on the following equation:

$$L_{eq}(equip) = E.L. + 10\log(U.F.) - 20\log\left(\frac{D}{50}\right)$$

$$L_{eq}(equip) = E.L. + 10\log(U.F.) - 20\log\left(\frac{D}{50}\right)$$

$$L_{eq}(equip) = E.L. + 10\log(U.F.) - 20\log\left(\frac{D}{50}\right)$$

where: $L_{eq}(equip)$ = L_{eq} at a receiver resulting from the operation of a single piece of equipment over a specified time period

E.L. (Emission Level) = noise emission level of the particular piece of equipment at a reference distance of 50 feet

U.F. (Usage Factor) = usage factor that accounts for the fraction of time that the equipment is in use over the specified period of time (Usage Factor)

D (Distance) = distance from the receiver to the piece of equipment

Table 4.13.H: Typical Maximum Construction Equipment Noise Levels (L_{max})

Type of Equipment	Acoustical Usage Factor	Maximum Sound Levels for Analysis (dBA L_{max} at 50 ft)
Air Compressor	40	80
Backhoe	40	80
Cement Mixer	50	80
Concrete/Industrial Saw	20	90
Crane	16	85
Excavator	40	85
Forklift	40	85
Generator	50	82
Grader	40	85
Loader	40	80
Pile Driver	20	101
Paver	50	85
Roller	20	85
Rubber Tire Dozer	40	85
Scraper	40	85
Tractor	40	84
Truck	40	84
Welder	40	73

Source: Federal Highway Administration. *Highway Construction Noise Handbook* (FHWA 2006).
dBA = A-weighted decibel(s)
ft = foot/feet
L_{max} = maximum instantaneous noise level

[8] The reference maximum noise level represents the loudest single momentary noise event recorded during a measurement period.

Each piece of construction equipment operates as an individual point source. Utilizing the following equation, a composite noise level can be calculated when multiple sources of noise operate simultaneously:

$$Leq\ (composite) = 10 * \log_{10}\left(\sum_{1}^{n} 10^{\frac{Ln}{10}}\right)$$ $Leq\ (composite) = 10 * \log_{10}\left(\sum_{1}^{n} 10^{\frac{Ln}{10}}\right)$

Once composite noise levels are calculated, reference noise levels can then be adjusted for distance using the following equation:

$$Leq\ (at\ distance\ X) = Leq\ (at\ 50\ feet) - 20 * \log_{10}\left(\frac{X}{50}\right) Leq\ (at\ distance\ X)$$
$$= Leq\ (at\ 50\ feet) - 20 * \log_{10}\left(\frac{X}{50}\right)$$

In general, this equation shows that doubling the distance would decrease noise levels by 6 dBA, while halving the distance would increase noise levels by 6 dBA.

Using the equations from the methodology above, the reference information in **Table 4.13.H**, and the construction equipment list provided, the composite noise level was calculated. Based on the construction scenarios analyzed the following conclusions can be drawn:

- Project construction composite noise levels at a distance of 50 feet would be up to 90 dBA L_{eq}, with the highest noise levels occurring during the demolition and grading phases;
- At the nearest sensitive receptor at a distance of 165 feet, which represents the distance from the center of construction activity to the nearest noise-sensitive residential uses south of Lot 11 and east of Lot 12, the combined noise level during construction would reach up to 79 dBA L_{eq};
- At a distance of 410 feet, which represents the distance from the center of construction activity to the nearest noise-sensitive residential uses to the south of Lot 3 and west of Lot 13 construction noise levels would reach up to 72 dBA L_{eq}.

As shown in **Table 4.13.G**, the calculated CNEL levels range from 53.7 dBA CNEL to 59.7 dBA CNEL. Hourly noise levels at surrounding noise-sensitive uses are as low as 39.9 dBA equivalent continuous sound level (L_{eq}) during nighttime hours and 48.2 dBA L_{eq} during daytime hours. The predicted noise levels assume all construction equipment is operating simultaneously during demolition followed by grading; therefore, the noise levels are conservative in nature.

Construction activities would comply with the City of Cypress Noise Ordinance, which expressly permits construction during specified daytime hours. Construction would occur outside of the nighttime hours and only occur during the permitted construction hours from 7:00 a.m. to 8:00 p.m. on weekdays and 9:00 a.m. to 8:00 p.m. on Saturdays. Construction would not be permitted outside of these hours or on Sundays or federal holidays. The City's construction-hour restrictions were established to minimize disruption to nearby sensitive receptors by prohibiting construction activities during nighttime and other low-ambient-noise periods when residents are more likely to be sleeping or otherwise sensitive to noise. Compliance with these established time limitations would ensure that

construction noise occurs only during periods deemed acceptable by the City to avoid substantial disturbance to surrounding residential and other noise-sensitive land uses. There is potential that during certain construction activities, like mat foundation pours or utility installation, work may need to occur on a 24-hour rotation. In those situations, a temporary use permit may be obtained from the City's Community Development Director. The application would have to detail why compliance with standard construction hours cannot be achieved and the duration of the scheduled event. The City requires at least 10 days to process a request for a temporary use permit.

Construction activities within the Buildout Area would generate temporary increases in noise levels at nearby sensitive receptors, including residential uses and other noise-sensitive land uses. Short-term exposure to elevated construction noise may result in temporary annoyance, speech interference, or sleep disturbance if occurring during early morning or nighttime hours. However, health guidance indicates that long-term adverse health effects—such as cardiovascular outcomes, chronic stress responses, or hearing impairment—are generally associated with prolonged, chronic exposure at elevated noise levels, rather than intermittent and temporary construction noise. The World Health Organization has concluded that adverse health effects are primarily linked to sustained environmental noise exposure over extended periods, particularly nighttime exposure affecting sleep.[9] Similarly, the U.S. Environmental Protection Agency identifies much higher continuous exposure levels (e.g., long-term average levels approaching or exceeding 85 dBA) as associated with measurable health risks.[10] Because construction activities would be temporary, phased, and restricted to daytime hours in accordance with City standards, and because receptors would not be exposed to sustained high noise levels over long durations, the potential for long-term adverse health impacts would be minimal.

Although construction noise levels would temporarily exceed existing ambient noise levels in the vicinity of the Buildout Area, such increases would be short term and limited to the duration of active construction. Project construction would be conducted in accordance with the City of Cypress Noise Ordinance, including compliance with permitted construction hours and operational requirements designed to protect nearby sensitive receptors. Because construction activities would comply with the City's established regulatory framework, construction-related noise impacts would be temporary and would not result in a substantial adverse effect. Therefore, impacts would be less than significant.

Operational Traffic Noise Impacts. The Federal Highway Administration (FHWA) Highway Traffic Noise Prediction Model (FHWA RD-77-108) was used to evaluate traffic-related noise conditions in the vicinity of the Buildout Area. This model requires various parameters, including traffic volumes, vehicle mix, vehicle speed, and roadway geometry to compute typical equivalent noise levels during daytime, evening, and nighttime hours. The resultant noise levels are weighted and summed over 24-hour periods to determine the Community Noise Equivalent Level (CNEL) values.

---

9 World Health Organization (WHO). 2018. *Environmental Noise Guidelines for the European Region.* Copenhagen: WHO Regional Office for Europe.

10 United States Environmental Protection Agency (USEPA). 1974. *Information on Levels of Environmental Noise Requisite to Protect Public Health and Welfare with an Adequate Margin of Safety*. Washington, DC: U.S. Environmental Protection Agency, Office of Noise Abatement and Control.

The existing and existing plus project traffic volumes in the vicinity of the Buildout Area were obtained from the Traffic Analysis prepared for the proposed project (Kimley Horn 2025). **Table 4.13.I: Traffic Noise Levels Without and With Proposed Project** lists the existing, existing plus project, buildout Year 2038, and buildout year 2038 plus project traffic noise levels adjacent to roadway segments in the Buildout Area vicinity. These noise levels represent worst-case scenarios, which assume that no shielding is provided between the traffic and the location where the noise contours are drawn.

The results indicate that the increase in noise associated with project-related traffic, comparing existing without project traffic volumes to existing plus project traffic volumes, would be up to 0.3 dBA CNEL along the analyzed road segments. A noise level increase of less than 3 dBA would not be perceptible to the human ear in an outdoor environment. Because project-related traffic would not result in a perceptible increase (i.e., 3 dBA or greater) in ambient roadway noise levels, off-site traffic noise impacts would be less than significant. No mitigation is required.

Operational Stationary Noise Impacts. Implementation of the proposed project would generate various on-site stationary noise sources, including heating, ventilation, and air conditioning (HVAC) and commercial uses activities such as loading and unloading and parking lot activities. Emergency generators would operate only during periodic testing and maintenance events or in the event of a power outage, and therefore would not represent continuous operational noise sources.

The Cypress Municipal Code limits non-construction noise experienced at surrounding noise-sensitive uses to 55 dBA or less per the hourly daytime noise level standards for Noise Zone 1. Once final architectural plans and mechanical equipment specifications are available for each future project, preparation of a project-specific acoustical analysis would be required to confirm compliance with the City's exterior and interior noise standards related to land use compatibility, as established in City of Cypress Municipal Code Article VII (Noise Control), Sections 13-68, which set forth allowable noise limits by noise zone and authorize the City to require noise measurements or acoustical studies to verify compliance with applicable standards prior to or following project occupancy. As the proposed project would meet the City's noise standards, impacts would be less than significant.

Threshold 4.13.2: Would the project result in generation of excessive ground-borne vibration or ground-borne noise levels?

Less Than Significant Impact. Typical sources of ground-borne vibration are construction activities (e.g., pavement breaking and operating heavy-duty earthmoving equipment), rail activity, and occasional traffic on rough roads. In general, ground-borne vibration from standard construction practices is only a potential issue when within 25 feet of vibration-sensitive uses such as residential uses, hospitals, historical buildings, and non-engineered timber and masonry buildings. Ground-borne vibration levels from construction activities very rarely reach levels that can damage structures; however, these levels are perceptible near the active construction site. With the exception of older buildings built prior to the 1950s or buildings of historic significance, potential structural damage from heavy construction activities rarely occurs. When roadways are smooth, vibration from traffic (even heavy trucks) is rarely perceptible.

Table 4.13.I: Traffic Noise Levels Without and With Proposed Project

Roadway Segment	Existing Without Project		Existing With Project			Buildout Year 2038 Without Project		Buildout Year 2038 With Project		
	ADT	CNEL (dBA) 50 feet from Centerline of Nearest Lane	ADT	CNEL (dBA) 50 feet from Centerline of Nearest Lane	Increase from Existing Conditions	ADT	CNEL (dBA) 50 feet from Centerline of Nearest Lane	ADT	CNEL (dBA) 50 feet from Centerline of Nearest Lane	Increase from Buildout Conditions Without Project

Source: Compiled by LSA (November 2025).
Note: Traffic noise within 50 feet of the roadway centerline should be evaluated with site-specific information.
Shaded cells indicate roadway segments adjacent to the Buildout Area.
ADT = average daily traffic
CNEL= Community Noise Equivalent Level
dBA = A-weighted decibels

Operational Vibration Impacts. Given the anticipated uses in the Buildout Area, project-related traffic would be the only source of potential vibration impacts to surrounding uses during operation. With respect to potential ground-borne vibration from existing roadway conditions, the roadways surrounding the Buildout Area, including Katella Avenue, Cerritos Avenue, and the existing site driveways, are paved and maintained in generally smooth condition and are therefore unlikely to generate substantial vibration. Typical on-road vehicles, including passenger cars, trucks, and buses, operate on rubber tires and utilize suspension systems that dampen roadway irregularities, making it uncommon for standard vehicular traffic on paved roadways to result in perceptible ground-borne vibration or vibration-related noise at off-site receptors. Accordingly, existing traffic conditions on surrounding roadways are not anticipated to generate significant vibration levels, and a detailed vibration impact analysis for on-road vehicle operations is not warranted

Construction Vibration Impacts. Construction of the proposed project could result in the generation of ground-borne vibration. This construction vibration impact analysis discusses the potential for building damage using vibration levels in PPV (in/sec) because vibration level in PPV is best used to characterize potential for damage. The 2018 FTA Manual guidelines indicate that a vibration level up to 0.5 in/sec in PPV is considered safe for buildings consisting of reinforced concrete, steel, or timber (no plaster), and would not result in any construction vibration damage. For a non-engineered timber and masonry building, the construction vibration damage criterion is 0.2 in/sec in PPV.

Table 4.13.J: Vibration Source Amplitudes for Construction Equipment shows the PPV values at 25 feet from a construction vibration source. As shown in this table, bulldozers and other heavy-tracked construction equipment (except for pile drivers and vibratory rollers) generate approximately 0.089 in/sec PPV of ground-borne vibration when measured at 25 feet, based on the 2018 FTA Manual.

The greatest levels of vibration are anticipated to occur during the foundation preparation phase. All other phases are expected to result in lower vibration levels.

Table 4.13.J: Vibration Source Amplitudes for Construction Equipment

Equipment	Reference PPV (in/sec) at 25 ft
Deep Dynamic Compaction (10 ton, 60 ft Drop)	0.970[1]
Pile Driver (Impact), Typical	0.644
Pile Driver (Sonic), Typical	0.170
Vibratory Roller	0.210
Hoe Ram	0.089
Large Bulldozer	0.089
Caisson Drilling	0.089
Loaded Trucks	0.076
Jackhammer	0.035
Small Bulldozer	0.003

Sources: *Transit Noise and Vibration Impact Assessment Manual* (FTA 2018), Measured DDC data from G3SoilWorks Inc.
[1] PPV vibration data for deep dynamic compaction activities is at a reference distance of 50 ft.
ft = foot/feet
FTA = Federal Transit Administration
in/sec = inches per second
PPV = peak particle velocity

The distance to the nearest buildings for the vibration impact analysis is measured between the nearest off-site buildings and the boundary of a particular construction site (assuming the construction equipment would be used at or near the boundary of the construction site) because vibration impacts occur normally within buildings. The formula for vibration transmission is provided below.

$$PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$$

During the foundation preparation phase, the equipment with the highest vibration generation potential is the large bulldozer, which would generate 0.089 PPV in/sec at 25 feet. The closest surrounding buildings to the Buildout Area construction boundary include existing residential buildings located approximately 10 feet west of the edge of Lot 13 and south of Lot 3. Assuming heavy construction equipment would not operate within 5 feet of existing property line walls,[11] at a distance of approximately 15 feet from typical construction activities, vibration levels would approach 0.191 in/sec PPV and would be below the FTA criteria of 0.2 in/sec PPV, that applies to non-engineered timber and masonry buildings and therefore impacts would be less than significant, including at the closest surrounding buildings which would be at least 15 feet from construction activities. No mitigation is required.

In addition to potential building damage considerations, construction-generated ground-borne vibration may result in human annoyance at nearby vibration-sensitive receptors. The FTA Manual establishes impact criteria based on the maximum vibration level (Lv) for a single event, expressed in vibration velocity decibels (VdB), measured in one-third octave bands over the frequency range of 8 to 80 Hertz. **Table 4.13.D** summarizes the FTA criteria for assessing potential interference or annoyance from vibration within buildings. For residential land uses, the applicable impact criteria are 78 VdB during daytime hours and 72 VdB during nighttime hours, representing vibration levels that are barely perceptible (daytime) or not perceptible but potentially associated with audible ground-borne noise (nighttime).

During the foundation preparation phase for future development within the Buildout Area, the large bulldozer represents the equipment with the highest[12] vibration generation potential. At a distance of 165 feet from the center of construction activities to the nearest sensitive receptor, vibration levels are expected to approach 62 VdB and would not exceed the annoyance thresholds. Because the FTA criteria are based on the root mean square vibration level (Lv), expressed in VdB, vibration levels would need to exceed the applicable residential thresholds to result in a potentially significant impact related to human annoyance. As discussed above, the maximum predicted vibration level of 62 VdB is well below the applicable daytime and nighttime thresholds; therefore, no significant vibration impact related to human annoyance would occur.

[11] This assumption is consistent with typical construction techniques where heavy construction equipment (e.g. bulldozers, etc.) is not typically used within 5 feet of existing walls and other structures due to the physical constraints of operating safely within close quarters.

[12] The center of expected construction activities is appropriate for determining potential annoyance to surrounding uses due to the applicable standard being a root-mean-square or average criteria.

Threshold 4.13.3: **For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?**

***Less Than Significant Impact*.** The closest airport to the Buildout Area is JFTB Los Alamitos, located approximately 0.6 mile south of the Buildout Area. According to the *Airport Environs Land Use Plan for JFTB Los Alamitos* and Exhibit SAF-8 in the Safety Element of the City's General Plan, the Buildout Area is within the 60 dBA CNEL noise contour, but outside of the 65 dBA CNEL noise contour for JFTB Los Alamitos. Although the Buildout Area is located within Noise Impact Zone 2 (moderate noise impact), it is outside of Noise Impact Zone 1 (high noise impact) defined by the Airport Environs Land Use Plan.

The second closest airport is the Long Beach Municipal Airport, located approximately 5.4 miles west of the Buildout Area. According to the Los Angeles County Airport Land Use Plan, the Buildout Area is located outside of the 65 dBA CNEL noise contour for Long Beach Municipal Airport. Therefore, aircraft noise generated from the two closest airports would not expose people residing or working on the Buildout Area to excessive noise levels due to the proximity of a public airport.

Given that the proposed project does not contain outdoor sensitive receptors and the City defined levels between 60 and 65 dBA CNEL as conditionally acceptable with the incorporation of an HVAC system allowing a windows- closed condition and standard building construction, the noise impacts related to airport noise would be less than significant, and no mitigation is required.

4.13.7 Level of Significance Prior to Mitigation

Construction and operational impacts related to noise and vibration would be less than significant with adherence to **Regulatory Compliance Measures NOI-1** and **NOI-2.**

4.13.8 Regulatory Compliance Measures and Mitigation Measures

4.13.8.1 Regulatory Compliance Measures

The following regulatory compliance measures are applicable to the proposed project.

Regulatory Compliance Measure NOI-1 The construction contractor shall limit all construction-related activities to between the hours 7:00 a.m. and 8:00 p.m. on weekdays and between the hours of 9:00 a.m. and 8:00 p.m. on Saturdays. No construction shall be permitted outside of these hours or on Sundays or a federal holiday with the exception of certain construction activities that are time sensitive and require a 24-hour rotation. In those situations, a temporary use permit can be obtained from the City of Cypress' Community Development Director.

Regulatory Compliance Measure NOI-2 Mechanical equipment, including air conditioning units in residential and non-residential zoning districts, shall be enclosed within a structure or completely screened from view from surrounding properties by the use of a fence or wall consistent with Section 3.11.100(b) of the City of Cypress Municipal Code. Additionally, prior to the issuance of building permits, a future applicant/developer shall demonstrate, to the satisfaction of the City Director of Community Development, or designee, that on-site stationary noise sources, such as air conditioners, shall not exceed City noise standards as stated within the City's Municipal Code Sections 13-68 and 13-69.

4.13.8.2 Mitigation Measures

No mitigation measures are applicable to the proposed project pertaining to noise and vibration.

4.13.9 Level of Significance after Mitigation

No mitigation is required. The proposed project would not result in potentially significant impacts related to noise and vibration.

4.13.10 Cumulative Impacts

As defined in the *State CEQA Guidelines*, cumulative impacts are the incremental effects of an individual project when viewed in connection with the effects of past, current, and reasonably foreseeable probable future projects. A cumulative noise or vibration impact would occur if multiple sources of noise and vibration combine to create impacts in close proximity to a sensitive receptor. Therefore, the cumulative area for noise and vibration impacts is the Buildout Area and any sensitive receptors in the immediately surrounding area.

For the cumulative analysis related to noise, the cumulative projects being considered include the related projects listed in **Table 4.A: Summary of Related Projects** and shown in **Figure 4.1: Related Projects**, in Chapter 4.0, Existing Setting that are within the immediate vicinity of the Buildout Area, including the Shea Properties Mixed Use Development Project (Related Project 1), LTP Modern Machine Project (Related Project 5), Sycamore Creek Charter School Project (Related Project 6), and the 4562 Katella Avenue Project (Related Project 8).

Construction Noise. Construction activities associated with the proposed project and other reasonably foreseeable development projects in the vicinity could occur during overlapping time periods. However, construction schedules are independently controlled and are unlikely to be fully concurrent across all phases of development. While limited temporal overlap between projects may occur, it would not necessarily involve the most vibration- or noise-intensive phases (e.g., grading, foundation preparation, or heavy equipment operation) occurring simultaneously at locations closest to the same sensitive receptors. Construction activities are inherently phased and localized, and the loudest equipment is typically used for short durations within discrete portions of a site. Therefore, although some degree of overlapping construction noise could occur in the surrounding area, the

potential for multiple projects to generate peak construction noise at the same time and at the same receptor location would be limited and temporary. In addition, construction noise for the proposed project was determined to be less than significant. Cumulative development in the vicinity of the Buildout Area site could result in elevated construction noise levels at sensitive receptors in the area surrounding the Buildout Area. However, each project would be required to comply with the applicable city's Municipal Code limitations on construction.

Moreover, the related projects in the vicinity of the Buildout Area that could contribute to a cumulative construction noise impact, have undergone environmental review pursuant to CEQA, which included an analysis of potential construction noise impacts. It was found, that similar to the project, these projects would result in less than significant impacts as they relate to construction noise.

Development of the related projects in the immediate vicinity of the Buildout Area, in combination with the proposed project, would not result in significant impacts related to construction noise. Therefore, cumulative construction noise impacts would be less than significant.

Operational Traffic Source Noise Impacts. According to the USEPA, cumulative noise impacts represent the combined and incremental effects of human activities that accumulate over time. While the incremental impacts may be insignificant by themselves, the combined effect may result in a significant impact. Conversely, although there may be a significant noise increase due to the proposed project in combination with other related projects (combined effects), it must also be demonstrated that the project has an incremental effect. In other words, a substantial portion of the noise increase must be due to the proposed project.

As previously shown in **Table 4.13.G** above, project-related traffic for the Buildout Year With Project 2038, as compared to 2038 without project traffic conditions, would result in noise level increases up to 0.9 dBA CNEL along roadway segments in the vicinity of the Buildout Area. These levels are below the significance criteria for off-site traffic noise. Therefore, none of the roadway segments in the vicinity of the Buildout Area would experience a substantial noise level increase greater than the applicable noise thresholds, and the proposed project would not have a cumulatively significant traffic noise impact.

Operational Stationary Source Noise. Long-term stationary noise sources associated with the development within the Buildout Area, combined with other cumulative projects, could cause local noise level increases. Noise levels associated with the proposed project and related projects together could result in higher noise levels than considered separately. As previously described, on-site noise sources associated with the proposed project would not exceed any applicable noise standards. Once final architectural plans and mechanical equipment specifications are available for each future project, preparation of a project-specific acoustical analysis would be required to confirm compliance with the City's exterior and interior noise standards related to land use compatibility, as established in City of Cypress Municipal Code Article VII (Noise Control), Section 13-68, which sets forth allowable noise limits by noise zone and authorize the City to require noise measurements or acoustical studies to verify compliance with applicable standards prior to or following project occupancy. Therefore, cumulative noise impacts from stationary noise sources would be less than significant.

4.14 POPULATION AND HOUSING

This section describes the existing population and housing characteristics in both the City of Cypress (City) and Orange County (County) and evaluates the potential impacts of the Specific Plan 3.0 Buildout (proposed project) on population and housing growth. This section is based in part on sources of demographic information provided by various agencies, including the Southern California Association of Governments (SCAG), the Cypress General Plan Housing Element (2021–2029), the California Department of Finance, and the United States Census Bureau.

4.14.1 Scoping Process

The City of Cypress received six comment letters during the public review period of the Notice of Preparation (NOP). For copies of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). One of the comment letters, from SCAG, included comments related to population and housing.

SCAG recommended that the Draft EIR evaluate the proposed project's consistency with the Connect SoCal 2024 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (Connect SoCal), which outlines goals to reduce greenhouse gas emissions, improve regional air quality, and support an integrated multimodal transportation network. In addition, the comment letter emphasizes the use of SCAG's growth forecasts for population, housing, and employment in assessing potential impacts of the proposed project and planning infrastructure accordingly. These comments are addressed in this section.

4.14.2 Methodology

City and County demographic information was used to describe the existing population and housing characteristics in the City and County. SCAG projections for these topics were identified for the existing conditions and project buildout. City goals and policies regarding population and housing were used to evaluate potential impacts that could result from implementation of the proposed project.

4.14.3 Existing Environmental Setting

4.14.3.1 Population and Housing Trends in the City and County

SCAG is a federally designated Metropolitan Planning Organization (MPO)[1] encompassing six counties (i.e., Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura Counties) and 197 local jurisdictions. In 2024, the SCAG Regional Council adopted the Connect SoCal Growth Forecast Technical Report[2] to predict the most likely growth scenario for the Southern California

[1] An MPO is a federally mandated and federally funded transportation policymaking organization that is made up of representatives from local government and governmental transportation authorities. In 1962, the United States Congress passed legislation that required the formation of an MPO for any urbanized area with a population greater than 50,000.

[2] Southern California Association of Governments (SCAG). 2024a. 2024–2050 RTP/SCS Demographics & Growth Forecast Technical Report. Website: https://scag.ca.gov/sites/main/files/file-attachments/23-2987-tr-demographics-growth-forecast-final-040424.pdf?1712261839 (accessed May 6, 2025).

region in the future. The Connect SoCal growth forecast is meant to provide a common foundation for regional and local planning, policymaking, and infrastructure provisions within the SCAG region.

The growth forecast for Orange County and City of Cypress in the Connect SoCal Growth Forecast Technical Report is provided in **Table 4.14.A**: **Connect SoCal Population and Housing Forecasts (2019–2050).** These projections are used as a reference point for discussing population and housing growth throughout this section.

Table 4.14.A: Connect SoCal Population and Housing Forecasts (2019–2050)

	2019 (Actual)	2035 (Estimate)	2050 (Estimate)	2019 to 2050 Increase	Percent Change
Total Population					
City of Cypress	50,200	51,400	56,200	6,000	12%
Orange County	3,191,000	3,299,000	3,439,000	248,000	7.8%
Total Households					
City of Cypress	16,400	18,400	20,300	3,900	23.7%
Orange County	1,069,000	1,196,000	1,253,000	184,000	17.2%
Total Employment					
City of Cypress	26,100	27,700	28,100	2,000	7.2%
Orange County	1,805,000	1,942,000	2,019,000	214,000	11.9%

RTP/SCS = Regional Transportation Plan/Sustainable Communities Strategy
SCAG = Southern California Association of Governments

4.14.3.2 Population

As shown in **Table 4.14.A,** according to the Connect SoCal Growth Forecast Technical Report,[3] Cypress's population is anticipated to grow by approximately 12 percent between 2019 and 2050 from approximately 50,200 people to 56,200 people. Orange County's population is expected to grow by 7.8 percent between 2019 and 2050 from 3,191,000 people to 3,439,000 people.[4]

4.14.3.3 Age Characteristics. A city's age distribution often shapes its housing demand, because different age groups prefer different types of housing. **Table 4.14.B: City of Cypress and Orange County Age Characteristics (2022)** below, provides a comparison of the populations by age group in the City and County using data from the 2022 American Community Survey (ACS) 5-year estimate. According to the ACS data,

Table 4.14.B: City of Cypress and Orange County Age Characteristics (2022)

Age Group	Cypress		Orange County	
	Persons	Percentage	Persons	Percentage
Under 18 Years	11,604	23.2%	680,041	21.4%
18 to 24 Years	4,068	8.1%	297,509	9.4%
25 to 44 Years	11,845	23.7%	864,977	27.2%
45 to 64 Years	14,392	28.8%	844,341	26.6%
65 and Over	8,046	16.1%	488,359	15.4%
Total	**49,955**	**100.0%**	**3,175,227**	**100.0%**
Median Age	41.5		38.7	

Source: *American 2024 2022 5-Year Estimate,* Table S0101 (United States Census Bureau 2022).

the City's median age is 41.2 years, which is slightly higher than the County's median age (38.5 years) based on the same data set.[5]

As shown in **Table 4.14.B**, the City has a higher percentage of residents under the age of 18 (23.2 percent, compared to 21.4 percent for the County), and a lower percentage of residents between 18 and 24 years (8.1 percent, compared to 9.4 percent for the County), than the County. The City also has a lower percentage of residents between 25 and 44 years (23.7 percent, compared to 27.2 percent for the County), and a higher percentage of residents between 45 and 64 years (16.1 percent, compared to 15.4 percent for the County), than the County. The City and County have similar proportions of residents over the age of 65 (16.1 percent and 15.4 percent, respectively).

HouseholdsAs shown in **Table 4.14.A**, the total number of households in the City is anticipated to increase by 23.7 percent between 2019 and 2050, while the total number of households in the County is expected to grow by approximately 17.2 percent between 2019 and 2050. By forecasting a greater percentage of household growth than population growth, the Connect SoCal Demographics and Growth Forecast[6] projects a decrease in the average household size in both the City and the County in coming years.

Employment. As shown in **Table 4.14.A**, according to the Connect SoCal Growth Forecast Technical Report, employment in Cypress is anticipated to grow by approximately 7.2 percent between 2019 and 2050. Employment in Orange County is expected to grow by 11.9 percent between 2019 and

[5] United States Census Bureau. 2022. American Community Survey 2022 5-Year Estimates, Table S0101 Website: https://data.census.gov/table/ACSST5Y2022.S0101?q=cypress,%20california%20%20and%20orange%20county,%20california%20population%20by%20age%20group&g=160XX00US0617750 (accessed February 6, 2025).

[6] The Southern California Association of Governments forecasts "households" rather than housing units. As defined by the United States Census Bureau, "households" are equivalent to occupied housing units.

2050. These growth projections suggest that employment is expected to grow steadily from 2019 to 2050 in both Cypress and Orange County.

According to the Employment Development Department (EDD), as of December 2024, Cypress had a labor force of 24,800 and Orange County had a labor force of 1,587,700, with approximately 1,000 and 60,000 people unemployed, respectively.[7] The December 2024 unemployment rate was 3.9 percent for Cypress and 3.8 percent for Orange County.

Jobs/Housing Balance. Jobs/housing balance is a regional concept that encourages the designation and zoning of sufficient vacant land for residential uses with appropriate standards to ensure that adequate housing is available to serve the needs derived from the local employment base. The jobs-to-housing ratio can be used as the general measure of balance between a community's employment opportunities and the housing needs of its residents. Theoretically, a city's jobs/employment ratio (jobs to employed residents) would be 1:1 if the number of jobs in the city equaled the number of employed residents. However, assuming a simple ratio of one job to one household is inappropriate in modern economies that have many households with more than one person in the workforce. According to SCAG's The New Economy and Jobs/Housing Balance in Southern California,[8] a balance between jobs and housing in a metropolitan region can more appropriately be defined as a provision of an adequate supply of housing to house workers employed in a defined area (i.e., subregion or community).

SCAG applies the jobs-to-housing ratio at the regional and subregional level as a tool for analyzing the fit between jobs, housing, and infrastructure. The American Planning Association (APA) is an authoritative resource for community-planning best practices, including recommendations for assessing jobs-to-housing ratios. The APA recognizes that an ideal jobs-to-housing ratio will vary from jurisdiction to jurisdiction. In general, the recommended target for an appropriate jobs-to-housing ratio is 1.5, with a recommended range of 1.3 to 1.7.[9]

Cypress is currently within the jobs-to-housing ratio range recommended by the APA. According to the Connect SoCal Growth Forecast Technical Report, Cypress had a jobs-to-housing ratio of 1.6 in 2019 and is projected to have a jobs-to-housing ratio of 1.4 in 2050. The decrease in the jobs-to-housing ratio suggests that the job growth expected in the region will be less than the expected growth in housing.

4.14.4 Regulatory Setting

4.14.4.1 Federal Regulations

There are no federal regulations related to population and housing that are applicable to the proposed project.

4.14.4.2 State Regulations

Senate Bill 330 (SB 330). SB 330 restricts California cities and counties from implementing new development policies, standards or conditions that may restrict housing developments, including any initiatives or referenda voted into law by the general populace. Under this law, among other things, cities and counties are restricted from implementing any new development policies, standards, or conditions that have any of the following effects:

- A change to the general plan land use designation, specific plan land use designation, or zoning that results in a less intensive use. Less intensive use means, for example: (i) reductions in height, density, or floor area ratio, (ii) new or increased open space or lot size requirements, (iii) new or increased setback requirements, minimum footage requirements, or maximum lot coverage limitations, and (iv) anything that would lessen the intensity of housing.

- A reduction of the intensity of land use within an existing general plan land use designation, specific plan land use designation, or zoning below what was allowed under the applicable land use designation and zoning ordinance in effect as of January 1, 2018.

California Housing Element Requirements (Government Code §§ 65580 to 65589). State law recognizes the vital role local governments play in the supply and affordability of housing. Local governments are required to adopt a comprehensive, long-term general plan for the development of the jurisdiction, including a Housing Element meeting the existing and projected housing needs. To that end, California Government Code requires that housing elements achieve legislative goals to:

- Identify adequate sites to facilitate and encourage the development, maintenance, and improvement of housing for households of all economic levels, including for persons with disabilities.

- Remove, as legally feasible and appropriate, governmental constraints to the production, maintenance, and improvement of housing for persons of all incomes, including those with disabilities.

- Assist in the development of adequate housing to meet the needs of low and moderate income households.

- Conserve and improve the condition of housing and neighborhoods, including existing affordable housing. Promote housing opportunities for all persons regardless of race, religion, sex, marital status, ancestry, national origin, color, familial status, or disability.

- Preserve for lower income households the publicly assisted multifamily housing developments in each community.

State of California housing element laws (California Government Code §§ 65580 to 65589) require that each city and county identify and analyze existing and projected housing needs within its jurisdiction and prepare goals, policies, and programs to further the development, improvement, and preservation of housing for all economic segments of the community, commensurate with local housing needs. The Housing Elements of each city or county are required to be updated every eight years.

Regional Housing Needs Assessment. State law (Government Code Section 65580 et seq.) requires cities and counties to plan for their fair share of projected housing construction needs in their region as part of the periodic process of updating local housing elements of the general plan. Regional housing goals are set by the State Department of Housing and Community Development and allocated to cities throughout regional planning agencies such as SCAG. This is called the Regional Housing Needs Assessment (RHNA). Future housing need refers to the proportion of the region's future housing needs allocated to a community during the specific planning period. Each jurisdiction's future housing need is calculated in terms of four factors: (1) the number of units needed to accommodate forecasted household growth; (2) the number of units needed to replace attrition in the housing stock (i.e., fire damage, obsolescence, redevelopment, and conversion to non-housing uses); (3) maintenance of an ideal vacancy rate for a well-functioning housing market; and (4) an adjustment to avoid an overconcentration of lower-income households in any one jurisdiction.

The RHNA prepared by SCAG defines the housing unit construction goals for the region. The City's fair share for the planning period between 2021 and 2029 (the last adopted RHNA period) was established by SCAG at 3,936 units. The RHNA target number was based on projected household growth and the resulting need for construction of additional housing units allocated over the 6th Cycle planning period from 2021–2029.

4.14.4.3 Regional Regulations

Southern California Association of Governments. As the designated MPO for the six-county subregion that includes Orange County, SCAG prepares several plans to address regional growth, including Connect SoCal. SCAG is mandated by federal and State law to research and draw up plans for transportation, growth management, hazardous waste management, and a regional growth forecast that is the foundation for these plans and regional air quality plans developed by the South Coast Air Quality Management District (SCAQMD). SCAG prepares several plans to address regional growth, including the Regional Comprehensive Plan and Guide, Regional Housing Needs Assessment (RHNA), the Regional Transportation Plan (RTP), the Regional Transportation Improvement Program (RTIP), and the annual State of the Region reports to measure progress toward achieving regional planning goals and policies.

4.14.4.4 Local Regulations

City of Cypress Housing Element. The Housing Element is required by California State law to be a component of every city's General Plan because housing needs are recognized as a statewide

concern. As such, the Housing Element of a jurisdiction's General Plan is the only element that is subject to approval by the State. Pursuant to State law, the Housing Element must identify the City's housing needs, the sites that can accommodate these needs, and the policies and programs to assure that the housing units necessary to meet these needs can be provided. The primary goal of the Housing Element is to provide a range of housing opportunities for all income groups.

The 2021–2029 Housing Element was adopted in June 2022 as a guide for housing within the City of Cypress. The Housing Element provides an indication of the need for housing in the community in terms of housing affordability, availability, adequacy, and accessibility. The Housing Element also provides a strategy to address housing needs and identifies a series of specific housing programs to meet community needs.[10]

The Housing Element calls for the continuation of existing policies and programs to enable the City to meet future housing demands for all economic segments of the community that address housing quality and quantity, housing affordability and access, equal housing opportunities and natural resources, and energy efficiency and conservation, and identifies new programs in conformance with recent housing legislation for implementation during the 2021–2029 Housing Element cycle.

The goals of the Housing Element are to promote housing that helps to create safe, livable, and sustainable neighborhoods, facilitate the construction and provision of quality housing to meet the City's diverse needs, create opportunities for affordable housing, particularly in vulnerable areas and in areas of opportunity, and promote equitable and accessible housing options and resources.

The City of Cypress's 2021–2029 Housing Element outlines plans to accommodate 3,936 new housing units over the 8-year planning period, as mandated by the SCAG RHNA. To ensure compliance and provide a buffer for potential development challenges, the City included in the Housing Element an additional 323 housing units, bringing the total planned units to 4,259. These housing units are distributed across various areas of the City, with a significant number permitted within the area subject to the Specific Plan. Specifically, the Buildout Area is planned to accommodate 1,791 housing units, which includes 676 additional housing units approved through Measure S in 2024.

4.14.5 Thresholds of Significance

The thresholds of significance for population and housing impacts used in this analysis are consistent with Appendix G of the *State CEQA Guidelines*. Based on these thresholds, implementation of the proposed project would have a significant impact with respect to population and housing if it would:

Threshold 4.14.1: Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure); or

Threshold 4.14.2: Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere.

[10] City of Cypress. 2022. *Cypress General Plan 2021–2029 Housing Element Update.* Website: https://www.cypressca.org/home/showpublisheddocument/12491/638507649724670000 (accessed May 6, 2025).

4.14.6 Project Impacts

Threshold 4.14.1: Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less Than Significant Impact. The proposed project consists of the reasonably foreseeable buildout of a portion of the area governed by the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) and would include the development of up to 1,791 residential units. According to the U.S. Census Bureau, the average number of people per household from 2019–2023 in Cypress was approximately 3.08 people.[11] Assuming a ratio of 3.08 people per household, the proposed project would result in a net increase of approximately 5,516 persons at full buildout.[12]

As outlined in the SCAG 6th Cycle Final RHNA Allocation Plan, the City's housing need allocation for the planning period between 2021 and 2029 is 3,936 units.[13] In addition, the Housing Element and Specific Plan 3.0 allowed for a maximum of 1,926 residential units within the Specific Plan Area. This total includes the 135 residential units developed by Melia Homes as part of the Belmont residential project on the 7-acre Melia Property. The remaining capacity under the Specific Plan allows for the development of up to 1,791 additional residential units within the Buildout Area. As such, the proposed project would not result in unplanned growth.

According to the Connect SoCal population projections for the City, the population of the City in 2050 is expected to be 56,200 persons, up from 48,782 in 2023.[14] After reaching a peak population of 50,266 in 2020, Cypress has seen a slight decline over the last few years, with a decrease of approximately 1,484 residents (about 2.95 percent). Considering the expected population increase of the City is 7,418 people, the proposed project population increase is within the planned growth for the region as it also encompasses a large planned growth area.

The proposed project includes the construction of roads, water and wastewater infrastructure, power lines and other utilities, as envisioned in the Specific Plan. The Buildout Area is in an urbanized setting with a full range of public services and would utilize existing public utilities infrastructure. The proposed project would include the extension of Moody Street from Cerritos Avenue to Katella Avenue, as well as the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension, consistent with the Specific Plan. The proposed project also includes, consistent with the Specific Plan, the widening of Lexington Drive within Lot B in Vesting Tentative Tract Map (VTTM) 19247 and seven access driveways, including

one at Lexington Drive and two each at Cerritos Avenue, Moody Street, and Vessels Circle. These proposed extensions would provide access to the proposed development within the Buildout Area and surroundings.

Although the proposed project would facilitate the development of new housing in the City, the new housing would not induce substantial unplanned population growth, as the City has already planned for the reasonably foreseeable development of housing within the Buildout Area as a way of meeting the City's RHNA obligations. In addition, the proposed project is consistent with planned regional housing growth and planned population growth of the City as evaluated in the SCAG RHNA and Housing Element. Therefore, the proposed project would not cause indirect substantial unplanned population growth through the extension of roads and other infrastructure. Impacts associated with unplanned population growth, directly or indirectly, would be less than significant, and no mitigation would be necessary.

Threshold 4.14.2: Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No Impact. The proposed project consists of the future development of up to 1,791 residential units and 440,000 square feet of non-residential space within the Buildout Area. There are no residential uses currently located in the Buildout Area that would be subject to demolition or require the removal or relocation of existing residents. In addition, as discussed above, the proposed project would be consistent with the housing allocation needs specified by the SCAG RHNA and Housing Element. Therefore, the proposed project would result in no impact related to the displacement of people or housing necessitating the construction of replacement housing elsewhere, and no mitigation is required.

4.14.7 Level of Significance Prior to Mitigation

The proposed project would result in less than significant impacts related to population and housing.

4.14.8 Regulatory Compliance Measures and Mitigation Measures

No regulatory compliance measures are applicable to the proposed project pertaining to population and housing and no mitigation measures are required.

4.14.9 Level of Significance after Mitigation

The proposed project would result in less than significant impacts related to population and housing.

4.14.10 Cumulative Impacts

The purpose of this section is to evaluate any additional incremental impact that the proposed project is likely to cause above and beyond the combined impacts of recently approved and proposed projects in the City of Cypress. The impact area used to assess potential cumulative population and housing impacts is the City because the proposed project would affect population and housing within the City.

As described in Chapter 3.0, Project Description, the proposed project includes the reasonably foreseeable buildout of approximately 134 acres governed by the Specific Plan, as adopted by the City Council and approved by voters under Measure S in November 2024. The proposed project would accommodate up to 1,791 residential units within the Buildout Area, supporting the City's efforts to meet regional housing needs outlined in the Housing Element and RHNA. The RHNA process identified that the City is in need of 3,936 units, and the proposed project could, at a maximum, accommodate 1,791 of those units. Utilizing the average number of people per household as identified by the U.S. Census Bureau (3.08), the proposed project would include population growth by an additional 5,516 people. Although the proposed project would facilitate the development of new housing in the city, the new housing would not induce substantial unplanned population growth, as the proposed project is designed to meet the City's housing need allocation for the planning period between 2021 and 2029 of 3,936 units as determined by the SCAG RHNA.

Additionally, **Table 4.A: Summary of Related Projects**, in Chapter 4.0, Existing Setting, of this Draft EIR indicates that the City expects build out of approximately 357 units from the previously approved Melia Homes – Citrus Square Project (Related Project 2) (98 units), 8561 Belmont Street Project (Related Project 4) (8 units), and the Shea Properties Mixed Use Development Project (Related Project 1) (251 units). After reaching a peak population of 50,266 in 2020, the City has seen a decline over the past few years, with a decrease of approximately 1,484 residents (about 2.95 percent), with a current population of 48,782. As such, implementation of the proposed project in conjunction with the build out of the households under the baseline build-out scenario could result in cumulatively significant population increases. However, future development allowed under the proposed project has been accounted for and planned in the City's Housing Element and regional housing growth included in the SCAG RHNA. In addition, future projects implemented in accordance with the proposed project, as well as the remaining development associated with the build-out assumptions, would be required to adhere to the General Plan, provide required development impact fees, and comply with applicable development regulations. Therefore, the impacts from the proposed project are not considered to be cumulatively considerable.

4.15 PUBLIC SERVICES

This section identifies the existing public services providers within the jurisdiction of the Buildout Area and evaluates the potential impacts of the Specific Plan 3.0 Buildout Project (proposed project) on those public services. This section addresses the following public services (service providers are noted in parentheses):

- Fire Protection—Orange County Fire Authority (OCFA)
- Police Protection—Cypress Police Department (CPD)
- Parks—City of Cypress Recreation and Community Services Department
- Public Libraries—Orange County Public Libraries (OCPL)
- Schools—Cypress School District (CSD), Los Alamitos Unified School District (LAUSD), and Anaheim Union High School District (AUHSD)

4.15.1 Scoping

The City of Cypress (City) received six comment letters during the public review period of the Notice of Preparation (NOP). For copies of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). No comment letters included comments related to public services.

4.15.2 Methodology

This section evaluates impacts to public facilities to the extent project demand for police and fire protection, school services, parks, and other public facilities would require new or expanded facilities to support the project, the construction of which would result in an adverse physical impact to the environment. Information regarding public services was obtained from a variety of sources, agency websites, the City of Cypress 2001 General Plan,[1] the California Department of Education, and the City of Cypress Parks and Recreation Department.

In addition, during preparation of the EIR for the 2021–2029 Cypress Housing Element Implementation Project, OCFA and CPD were sent questionnaires requesting information on current fire and police protection service provided to the opportunity sites and possible constraints or impacts to this service associated with build out envisioned by the 2021–2029 Cypress Housing Element (which is anticipated to occur in 2045). Because the 2021–2029 Cypress Housing Element assumed development of residential uses within the Buildout Area in order to accommodate the City's Regional Housing Needs Allocation (RHNA), the possible constraints or impacts to fire and police protection service associated with build out of the 2021–2029 Cypress Housing Element would be applicable to implementation of the proposed project. As such, the responses to the questionnaires sent to OCFA and CPD have been incorporated into this section. Correspondence with public service providers is included in **Appendix J**.

[1] City of Cypress. 2001. *Cypress General Plan*.

4.15.3 Existing Environmental Setting

4.15.3.1 Fire Protection

The OCFA is a Joint Powers Authority that serves the City and is responsible for reducing loss of lives and property from fire, medical, and environmental emergencies. OCFA provides fire protection, emergency medical and rescue services, hazardous materials inspection and response, and public education activities to its service area of approximately 1,984,758 residents throughout 23 cities and unincorporated Orange County. As of 2026, OCFA had a total of 78 stations, including one station in the City. OCFA Reserve Firefighters work 10 stations throughout Orange County.[2]

OCFA is divided into six primary departments: Business Services, Communications and Public Affairs, Community Risk Reduction, Human Resources, Operations, and Support Services. The Operations Department comprises seven divisions and eleven battalions that provide regional emergency response to all fires, rescues, hazardous materials incidents, wildland fires, aircraft fire and rescue services to John Wayne Airport, and other miscellaneous emergencies.[3] In addition to being the main provider of fire suppression efforts including wildland firefighting, technical rescue, and airport firefighting services, the OCFA provides a variety of public services including, but not limited to, the following:

- Receiving and dispatching emergency calls;
- Providing public education programs to schools, businesses, community associations, childcare providers and other members of the community;
- Adopting and enforcing codes and ordinances relative to fire and life safety issues associated with commercial, industrial, and residential development;
- Coordinating the inspection of commercial buildings, investigating all fires, and enforcing fire code hazardous materials regulations;
- Working with developers and jurisdictional planning departments on development projects impacting fire protection services, from conception through planning process approval;
- Conducting California Fire Code Inspections and assisting with reducing risks associated with the use of hazardous materials in the community; and
- Interacting with developers, architects, and engineers to meet the fire protection requirements for buildings and developments by reviewing architectural blue prints, development plans, and proposals submitted in OCFA's jurisdiction.

[2] Orange County Fire Authority (OCFA). n.d.-d. Member Cities, OCFA Coverage. Website: https://www.ocfa.org/about-us/member-cities/ (accessed February 2026).

[3] Orange County Fire Authority (OCFA). 2020. *Operations.* Website: https://www.ocfa.org/AboutUs/Departments/Operations.aspx (accessed May 7, 2025).

The City is in Operations Division 7, which serves the cities of Buena Park, Cypress, La Palma, and Stanton along with portions of several unincorporated communities.[4]

The nearest station to the Buildout Area is OCFA Fire Station No. 17, located at 4991 Cerritos Avenue in Cypress, which is immediately north of the Buildout Area (approximately 75 feet) and would be designated as the "first-in" station that would be the first to serve the project in the event of an emergency. Fire Station No. 17 is staffed daily by two fire captains, two fire apparatus engineers, with a total of 24 staffed firefighters and is equipped with a medic engine, truck engine, and paramedic engine. Fire Station No. 17 was substantially rebuilt and expanded in 2011 with added capacity to accommodate the existing and future fire protection and paramedic needs in the service area. In 2023, the city generated a total of 3,761 incident calls.[5]

"Second call" stations are fire stations that support the "first-in" station. Fire Station Nos. 2 and 84 would be designated as the "second call" stations to support Fire Station No. 17. Fire Station No. 2, located at 3642 Green Avenue in Los Alamitos, is approximately 1 mile southwest of the Buildout Area and is staffed daily by one fire captain, one fire apparatus engineer, and two firefighters, and has a total staffing of twelve firefighters.[6] Fire Station No. 84, located at 12191 Valley Street in Garden Grove, is approximately 1.6 miles southeast of the Buildout Area and is staffed daily by one captain, one fire apparatus engineer, and two firefighters, and has a total staffing of twelve firefighters. Fire Station No. 2 is also equipped with a medic engine and engine. Fire Station No. 84 is equipped with a medic engine and an engine.[7]

Incident information for Fire Station Nos. 17, 46, and 84 from 2022 is provided in **Table 4.15.A: Incident Information for Fire Station Nos. 17, 46, and 84 (2022)**, below.

Table 4.15.A: Incident Information for Fire Station Nos. 17, 46, and 84 (2022)

Call Type	Fire Station No. 17	Fire Station No. 46	Fire Station No. 84
Fires	26	105	16
EMS	1,617	3,000	1,407
Ruptures	0	6	2
Hazardous Conditions	12	24	12
Service Call	116	173	169
Good Intent	231	423	142
False Alarms	122	73	43
Miscellaneous	0	2	0
TOTAL	**2,178**	**3,806**	**1,791**

According to the City's General Plan Safety Element, it is the OCFA's goal to have the first responding company for a fire call to reach emergency scene within 8 minutes and paramedics to reach the scene within 5 minutes at least 90 percent of the time. Over the last 9 years, the average response time for emergency calls remained relatively constant until Fiscal Year 2020–2021, in which average response time decreased due to reduced traffic from the COVID-19 pandemic. For Fiscal Year 2025/2026, OCFA has budgeted for 1,642 uniformed and civilian personnel.[8] In the previous decade, OCFA's average response time[9] for emergency calls remained relatively constant at less than 7 minutes per call. The ratio of firefighters to residents has remained steady over the last 3 years, ranging from 5.86 to 5.94 per 10,000 residents. According to OCFA, there are currently no plans for expanded services or facilities near the Buildout Area.

4.15.3.2 Police Protection

The City operates its own police department (CPD) for police protection services. The CPD would serve the Buildout Area. Management and supervision of the CPD is provided by 1 chief, 2 captains, 2 lieutenants, 10 sergeants, and a civilian supervisor. Of the CPD's 55 sworn personnel, 41 are dedicated to the delivery of patrol services. In addition to the 55 officers, the department is supported by 23 civilian employees and numerous volunteers.[10] The officer-to-resident ratio in 2023 was 1.1 CPD officer per 1,000 residents. According to the City's General Plan Safety Element, it is the CPD's goal to maintain a response time of three minutes to emergency calls and six minutes for non-emergency calls.

The services provided by the department include a detective bureau, canine teams, a narcotics team, vice and intelligence, motorcycle officers, Personnel & Training, Positive Actions through Character Education (P.A.C.E.) program, S.W.A.T. and a Lead Patrol Officer program. In addition, the CPD has established Community Policing, or Cypress Policing, as the philosophy for providing public safety services.[11]

Police dispatch services for the City are provided by the West Cities Police Communications Center, also known as West-Comm. West-Comm is a consolidated police dispatch center, formed by a joint powers authority between the cities of Cypress, Los Alamitos, and Seal Beach. Located at the Seal

8 Orange County Fire Authority (OCFA). 2025. Fiscal Year 2025-2026 Adopted Budget. Website: https://storageocfaprod001.blob.core.windows.net/blobocfaprod01/2025/08/OCFA-2025-2026-Adopted-Budget.pdf (accessed February 13, 2026).

9 OCFA defines response time as the time interval between Dispatch Notification and Arrival on Scene. It includes Dispatch time, Turnout time, and Travel time. Response time goals are established through OCFA policy. Response time performance is generally measured for the first unit on scene (Distribution) and for an Effective Response Force (Concentration). Incident response times are impacted by many variables, including availability of first due units, travel distance, traffic, geography, weather, and street networks.

10 City of Cypress. 2017. *Cypress Police Department Overview*. Website: https://www.cypressca.org/departments/police/the-community-we-serve (accessed April 30, 2025).

11 Ibid.

Beach Police Department, West-Comm serves a combined population of approximately 90,000 and handles approximately 100,000 calls for service each year.[12]

4.15.3.3 Parks

There are currently a total of 20 developed public parks within the city,[13] the closest being Lexington Park adjacent to the northwest of the Buildout Area. The City's Municipal Code states a goal of providing 4.5 acres of land per 1,000 residents for park and recreational purposes, including 1.5 acres of land per 1,000 residents for purposes that are made available at K–12 schools through a cooperative arrangement between the City, local school districts, and local park and recreation districts. According to the Conservation/Open Space/Recreation Element of the City's General Plan (2001), the City had 82 acres of parkland available for its residents. Since the adoption of the City's General Plan, the City completed construction of the 2.9-acre Mackay Park at the former Mackay School site[14] and added 9 acres of park space at the corner of Lexington Drive and Cerritos Avenue with the development of Lexington Park.[15] Therefore, the City currently has 93.9 acres of park space. As of July 2024, the City's population was 48,782,[16] resulting in a parkland-to-resident ratio to 1.92 acres of parkland per 1,000 residents.

4.15.3.4 Public Libraries

The OCPL system provides library services to the County, including the City. OCPL operates 32 library branches across the County, including an outlet in the Orangewood Children's Home.[17] OCPL's Mobile Library also provides library services to County residents who are unable to visit libraries due to transportation issues, lack of childcare, disabilities, and language or cultural barriers. In addition, OCPL offers free Books-by-Mail service.[18] The closest library to the proposed project is the Cypress Library at 5331 Orange Avenue, approximately 1 mile north of the Buildout Area. The Cypress Library consists of a 15,000-square-foot facility with numerous resources and services available to the public including an Advanced Workstation in Education (AWE) station,[19] book clubs, bookstore, internet hotspots, laptop and charger kiosk, children's play area, computers, wi-fi, wireless printing,

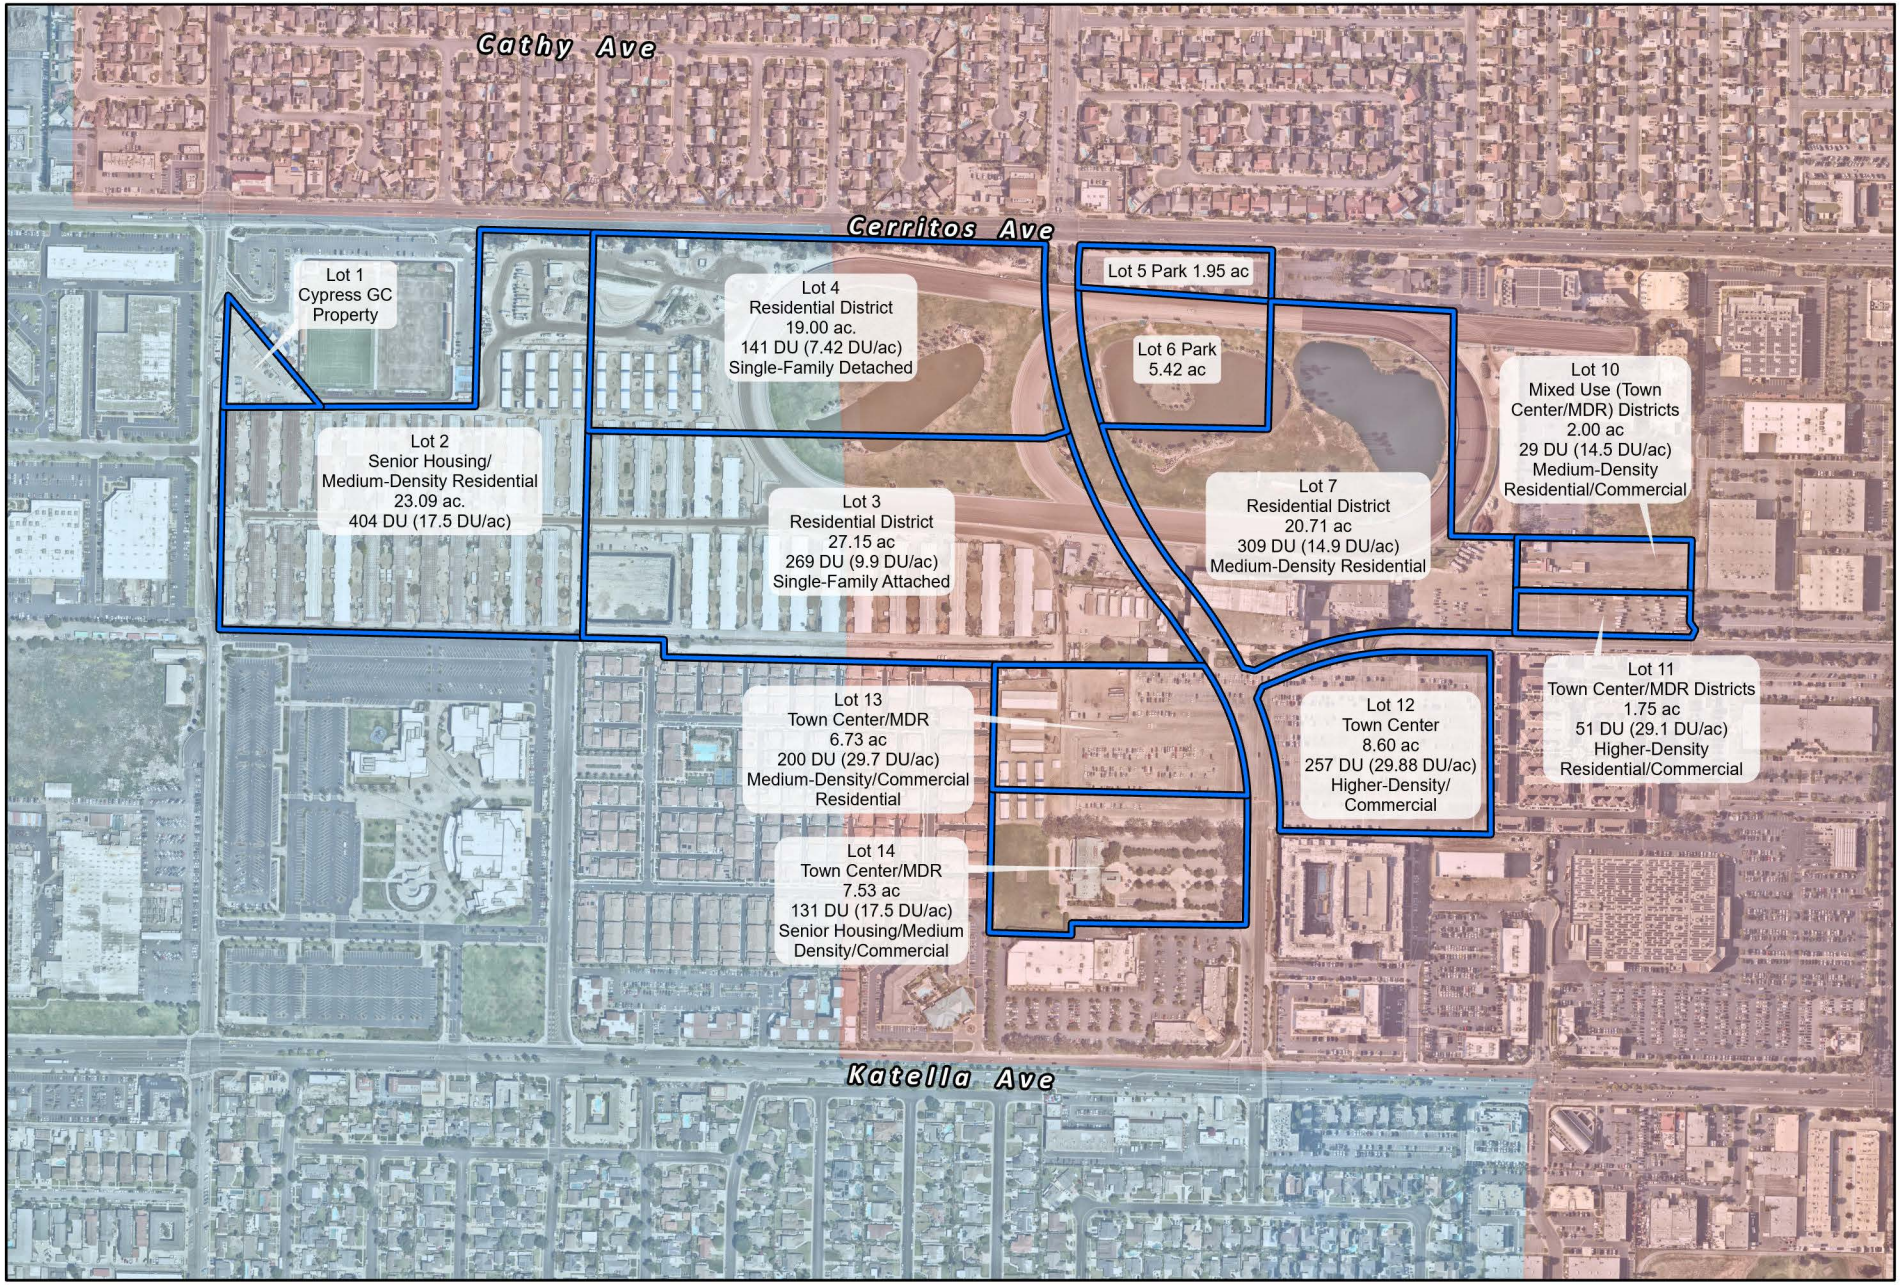
19 The AWE station provides a computer for children ages 2–8 years that is equipped with a variety of education games in English and Spanish.

volunteer opportunities, world language collections, and special collections of sheet music, local history, and board games.[20] The branch is open Saturday through Thursday and is closed on Fridays.

According to the Public Services and Facilities Element of the Orange County General Plan (2012), the County's standard for library service is 0.2 square feet of library space per capita. According to that service standard, the Cypress Branch Library has the capacity to accommodate a population of 75,000 persons. The Cypress Branch Library currently exceeds the County's standards for size since the City's population estimate as of July 2023 is 48,782. It should also be noted that, according to the Public Services and Facilities Element of the Orange County General Plan, the 0.2 square feet of library space per capita standard has been accepted by the Orange County Board of Supervisors as a planning guide for the purpose of projecting the number and location of new libraries needed.

According to OCPL's annual report for 2022–2023, OCPL has been working to improve library branches across the County through upgrades to heating, ventilation, and air conditioning systems; roofs; alarm systems; building automation systems; accessibility; electrical and cabling infrastructure updates; and lighting to meet Title 24 requirements. These upgrades would work to increase efficiencies and contribute to a positive patron experience; however, it should be noted that the completed and proposed upgrades do not include the expansion of any library facilities.

4.15.3.5 Public Schools



The Buildout Area is currently served by three public school districts: the Cypress Elementary School District (CSD), the Los Alamitos Unified School District (LAUSD), and the Anaheim Union High School District (AUHSD), as shown on **Figure 4.15-1: School District Boundaries and Potential Residential Growth**. However, the Buildout Area is primarily within the boundaries of the CSD, consisting of seven public elementary schools (serving kindergarten through sixth grade), and the AUHSD, consisting of the City's junior high and high school districts (grades 7 through 12). The CSD's 2024 enrollment was 3,319 students,[21] the AUHSD's 2024 enrollment was 27,748 students,[22] and the LAUSD's 2024 enrollment was 8,931 students.[23] The CSD currently operates seven elementary schools; six are in Cypress and one is in La Palma. The AUHSD encompasses 46 square miles and has schools in Anaheim, Cypress, Buena Park, La Palma, and Stanton. Additionally, the LAUSD serves kindergarten through twelfth-grade students and currently operates six elementary schools, one middle school, and one high school.

4.15.4 Regulatory Setting

The following section describes the federal, State, regional, and local regulatory framework applicable to analyzing potential impacts related to public services from development of the proposed project.

4.15.4.1 Federal Regulations

There are no federal policies or regulations related to public services applicable to the proposed project.

4.15.4.2 State Regulations

Assembly Bills 2926, 1600, and 2751. To assist in providing facilities to serve students generated from new development projects, the state passed Assembly Bill (AB) 2926 in 1986, which allows school districts to collect impact fees from developers of new residential, commercial, and industrial developments. Development impact fees are also referenced in the 1987 Leroy Greene Lease-Purchase Act, which requires school districts to contribute a matching share of the costs for the construction, modernization, or reconstruction of school facilities. Subsequent legislation has modified the fee structure and general guidelines. In 1987, the provisions of AB 2926 have been expanded and revised by AB 1600, which limits the ability of a school district to levy school fees unless (i) there is a need for the school fee revenues generated, and (ii) there is a nexus or relationship between the need for school fee revenues and the type of development project on which the school fee is imposed. (The requirements of AB 1600 were clarified with the passage in 2006 of AB 2751, which codifies the findings of *Shapell Industries vs. Milpitas Unified School District*.)

California Fire Code. The California Fire Code includes regulations for emergency planning, fire service features, fire protection systems, hazardous materials, fire flow requirements, and fire hydrant locations and distribution. Several fire safety requirements include installation of sprinklers in all high-rise buildings; the establishment of fire resistance standards for fire doors, building materials, and particular types of construction; and the clearance of debris and vegetation within a prescribed distance from occupied structures in wildfire hazard areas.

Office of Emergency Services. The State of California passed legislation authorizing the Office of Emergency Services to prepare a Standard Emergency Management System (SEMS) program, which sets forth measures by which a jurisdiction should handle emergency disasters. Non-compliance with SEMS could result in the State withholding disaster relief from the non-complying jurisdiction in the event of an emergency disaster.

Senate Bill 50 and California Education Code Section 17620. Senate Bill 50 and California Education Code Section 17620. Senate Bill (SB) 50, the Leroy F. Greene School Facilities Act of 1998, was signed into law on August 27, 1998. It is a program for funding school facilities largely based on matching funds. The approval of Proposition 1A authorized funds for SB 50 in the amount of $9.2 billion, including grants for construction of new schools and modernization of existing schools. The new construction grant provides funding on a 50/50 State and local match basis. The modernization grant provides funding on a 60/40 State and local match basis. Districts that are unable to provide some or all of the local match requirements and are able to meet financial hardship provisions may

be eligible for additional State funding.[24] SB 50 (codified as California Education Code Section 17620) allows school districts to levy a fee, charge, dedication, or other requirement against any development project within its boundaries for the purpose of funding the construction or reconstruction of school facilities. The maximum fee amount that school districts can assess is limited by statutes provided in California Government Code Section 65995. All three school districts in the Buildout Area have designated school impact fees based on their respective nexus studies prepared pursuant to SB 50. While these impact fees apply to enclosed space in both residential and commercial development, impact fees that apply to commercial development are substantially lower than those for residential development.

Quimby Act of 1975. The Quimby Act (California Government Code Section 66477) allows the legislative body of a city or county to require by ordinance the dedication of land, the payment of an in-lieu park fee, or a combination thereof, for the approval for a final tract or parcel map. In cases where such dedication or park fee is not obtained through a map, they may be imposed when building permits are issued. The following conditions must be met to comply with the Quimby Act:

- The city or county ordinance must include definitive standards for determining the proportion of a subdivision to be dedicated and the amount of any fee to be paid in lieu thereof.

The legislative body must adopt a general plan containing a recreation element, and any proposed park or recreational facility must be consistent with the principles and standards established in the element.

4.15.4.3 Regional Regulations

There are no regional policies or regulations related to public services applicable to the proposed project.

4.15.4.4 Local Regulations

Cypress Town Center and Commons Specific Plan 3.0. The Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) does not contain any provisions related to public services.

City of Cypress General Plan, Safety Element. The Safety Element of the City's General Plan is an official guide for the City Council, government agencies, and individuals to identify and understand potential hazards confronting the City. The following goals and policies would be applicable to the proposed project:

- **SAF-5:** Protect life and property in Cypress from urban fires. Maintain the Orange County Fire Authority's high level of service to community businesses and residents.
    - **SAF-5.1:** Maintain a response time of eight minutes for the first responder engine and provide paramedic service within five minutes.

[24] State of California. 2007. *Office of Public School Construction, School Facility Program Handbook*. State Allocation Board. April.

- **SAF-5.2:** Evaluate the effects of new development on the Orange County Fire Authority's response time. Ensure through the development review process that new development will not result in reduced emergency service levels.

- **SAF-6:** Maintain the police department's high quality of service to the City.
  - **SAF-6.1:** Assess the impacts of incremental increases in development density and the resulting traffic congestion on emergency response time. Ensure through the development review process that new development will not result in reduced emergency service levels.
  - **SAF-6.2:** Maintain a response time of approximately three minutes for emergency calls and six minutes for non-emergency calls.

- **SAF-7:** Use good design as a means to promote human safety.
  - **SAF-7.1** Provide design criteria in the Zoning Ordinance or design guidelines relating to the prevention of crime prevention through appropriate physical design solutions.
  - **SAF-7.3:** Provide exterior lighting that enhances safety and night use in public spaces, but minimizes impacts on surrounding land uses.
  - **SAF-7.4:** Promote the use of defensible space (e.g., site and building lighting, visual observation of open spaces, secured areas) in project design to enhance public safety.

City of Cypress Municipal Code. The Cypress Municipal Code includes the following requirement that would apply to the proposed project related to the provision of public services:

- **Section 5-3 (California Fire Code, adoption, amendments)** adopts the 2019 CFC, with some amendments and modifications. Generally, the intent of the CFC is to prescribe regulations for the safeguarding of life and property from the hazard of fire and explosion.

4.15.5 Thresholds of Significance

The thresholds of significance for public services impacts used in this analysis are consistent with Appendix G of the *State CEQA Guidelines*. Based on these thresholds, implementation of the proposed project would have a significant impact with respect to public services if it would:

Threshold 4.15.1(i): Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection;

Threshold 4.15.1(ii): Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of

which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for police protection;

Threshold 4.15.1(iii): Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for schools;

Threshold 4.15.1(iv): Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for parks; or

Threshold 4.15.1(v): Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for other public facilities.

4.15.6 Project Impacts

As described in Section 4.14, Population and Housing, the proposed project would include up to 1,791 future residential units and 440,000 square feet of non-residential development within the Buildout Area. Upon full buildout of the Buildout Area, approximately 5,516 residents would be added to the City's population.[25]

In accordance with the City of Cypress Municipal Code, new developments are mandated to pay impact fees to mitigate the effects of increased demand on public services, including police and fire protection. These fees are assessed at the time of building permit issuance and are calculated based on factors such as the square footage of the development. The collected fees are allocated to fund the necessary public infrastructure and services that support the additional population and usage generated by new developments. The City's discretionary permit process incorporates the applicable required improvements and/or impact fees (approved by City resolution), as conditions of approval, on a project-by-project basis.[26]

[25] 1,791 households x 3.08 persons per household (the average household size according to 2023 American Community Survey data for the City of Cypress) = 5,516 persons

[26] City of Cypress. 2022. *Cypress General Plan 2021–2029 Housing Element Update*. Website: https://www.cypressca.org/departments/community-development/information-on-notable-projects/housing-element-update (accessed May 9, 2025).

Threshold 4.15.1(i): **Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection?**

Less Than Significant Impact. Construction activities, including proposed roadway improvements associated with the extension of Moody Street from Cerritos Avenue to Katella Avenue and Vessels Circle from its current western terminus to intersect with the Moody Street extension, have the potential to affect fire protection services, including emergency vehicle response times, by temporarily requiring partial lane closures, reducing roadway capacity, or increasing congestion. However, as discussed in Section, 4.17, Transportation, the construction contractor would be required to implement a Transportation Construction Plan (TCP) that complies with applicable engineering standards outlined in the C*alifornia Manual of Uniform Traffic Control Devices*, ensuring that construction activities which may temporarily restrict vehicular traffic would be required to implement adequate and appropriate measures to facilitate the passage of persons and vehicles through/around any required road closures. Traffic management personnel (flag persons), required as part of the construction worksite traffic control plan would be trained to assist in emergency response by restricting or controlling the movement of traffic that could interfere with emergency vehicle access. If partial lane closures are required, notice would be provided to the OCFA, and flag persons would be used to facilitate the traffic flow until construction is complete. Therefore, potential impacts related to emergency access during construction of the proposed project would not be impeded and response times would not be substantially affected.

In addition, any future projects implemented in accordance with the proposed project would be required to adhere to all OCFA requirements, including providing adequate fire flow/structure protection to the properties, hydrants spaced to meet the minimums identified in the fire code, and providing adequate access for emergency vehicles. Future development projects allowed within the Buildout Area pursuant to the previously approved Specific Plan would be required to conform with applicable City standards and criteria, including consistency with the City's General Plan and Zoning Code. Further, any future development or redevelopment projects requiring discretionary actions would be subject to environmental review, in accordance with the provisions of CEQA and the *State CEQA Guidelines*.

OCFA's ratio of firefighters to residents has remained steady over the last 3 years, ranging from 5.86 to 5.94 per 10,000 residents. As discussed in Section 4.14, Population and Housing, and based on the average persons per household for the City of 3.08,[27] the proposed project would result in an increase of approximately 5,516 new residents. With the assumption that there would be no increase in fire personnel, the firefighter-to-resident ratio would drop from 5.86–5.94 to approximately 5.29 per 10,000 residents, thus resulting in the need to hire approximately four firefighters to maintain OCFA's current firefighter-to-resident ratio. Annual reports show regular additions to staffing, with recent years noting the creation of new positions to meet growing service

[27] United States Census Bureau. 2024. *Cypress City, California* QuickFacts. Website: https://www.census.gov/quickfacts/fact/table/cypresscitycalifornia/PST045224 (accessed January 28, 2025).

demands.[28] In addition, it is the OCFA's goal to have the first responding company for a fire call to reach the emergency scene within 8 minutes and paramedics to reach the scene within 5 minutes at least 90 percent of the time. Based on the Buildout Area's proximity to Fire Station No. 17 (approximately 75 feet), the OCFA is expected to be able to respond to emergencies within the Buildout Area within the stated response time goal.

At this time, OCFA has not identified any new fire station or related facilities construction in the area impacted by the proposed project. If OCFA determines that new facilities are necessary at some point in the future, such facilities: (1) would occur where allowed under the designated land use; (2) would be located on parcels that are infill opportunities on lots that are likely between 0.5 and one acre in size; and (3) would very likely qualify for a Categorical Exemption under CEQA Guidelines Section 15301 or 15332 and, if not, a Negative Declaration or a Mitigated Negative Declaration, and, therefore would not be expected to result in significant impacts.

Based on the above, the proposed project's impacts on fire protection services and the associated need to construct new fire facilities that would cause significant environmental impacts would not be cumulatively considerable, and cumulative impacts would be less than significant.

Regardless, future development would comply with **Regulatory Compliance Measure PS-1**, which requires coordination with OCFA to determine if any development impact fees will be required for the project related to OCCFA staffing and service. Considering current hiring practices, implementation of a TCP, and adherence to **Regulatory Compliance Measure PS-1,** project impacts would be less than significant. No mitigation is required.

Threshold 4.15.1(ii): **Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for police protection?**

Less Than Significant Impact. Construction activities, including proposed roadway improvements associated with the extension of Moody Street from Cerritos Avenue to Katella Avenue and Vessels Circle from its current western terminus to intersect with the Moody Street extension, have the potential to affect police protection services, including emergency vehicle response times, by temporarily requiring partial lane closures, reducing roadway capacity, or increasing congestion. However, as discussed in Section, 4.17, Transportation, the construction contractor would be required to implement a TCP that complies with applicable engineering standards outlined in the California Manual of Uniform Traffic Control Devices, ensuring that construction activities which may temporarily restrict vehicular traffic would be required to implement adequate and appropriate measures to facilitate the passage of persons and vehicles through/around any required road closures. Traffic management personnel (flag persons), required as part of the construction worksite traffic control plan would be trained to assist in emergency response by restricting or controlling the

[28] Orange County Fire Authority (OCFA). 2023. *2023 Statistical Annual Report*. Website: https://ocfa.org/Uploads/Transparency/OCFA%20Annual%20Report%202023.pdf (accessed May 9, 2025).

movement of traffic that could interfere with emergency vehicle access. If partial lane closures are required, notice would be provided to the CPD, and flag persons would be used to facilitate the traffic flow until construction is complete. Therefore, potential impacts related to emergency access during construction of the proposed project would not be impeded and response times would not be substantially affected.

Future development projects allowed within the Buildout Area pursuant to the approved Specific Plan would be required to conform with applicable City standards and criteria, including consistency with the City's General Plan and Zoning Code. In addition, the proposed project would incorporate feasible Crime Prevention Through Environmental Design (CPTED) principals, including adequate lighting in public and semi-public areas such as walkways, parking lots, and open spaces; clearly defined property boundaries and access control through landscaping and fencing; building designs that promote natural surveillance (e.g., windows overlooking parking areas and pedestrian paths); and the installation of security cameras in parking structures, commercial areas, and community gathering spaces. In addition, the proposed project would coordinate with the CPD during the site design phase for review of circulation, lighting, and security plans. Further, any future development or redevelopment projects requiring discretionary actions would be subject to environmental review, in accordance with the provisions of CEQA and the *State CEQA Guidelines*.

As of the most recent data, the CPD staffs approximately 57 sworn officers for a population of around 49,243 residents, resulting in a ratio of about 1.12 officers per 1,000 residents. With an anticipated population increase of 5,516 residents, the ratio would drop to approximately 1.00 officer per 1,000 residents if staffing remains constant. According to CPD's response letter to the questionnaire sent for the proposed project, CPD has not identified any new police station or related facilities construction in the area impacted by the proposed project and the CPD does not have any current plans to expand existing facilities. However, the CPD continuously evaluates staffing levels and service delivery models as the population in the city grows. In addition, as provided in CPD's response, the projected population increase associated with the proposed project may warrant the addition of approximately five or six new officers to maintain existing service levels and response time goals; however, the CPD also indicated that it anticipates being able to provide adequate service to the proposed project using existing resources in the short term, provided that the City continues to monitor the proposed project's phasing and occupancy stages and evaluate staffing levels as development progresses. In addition, although the CPD would also require additional associated equipment and vehicles and the additional officers may strain locker room capacity and workspace at the existing facility, CPD has indicated that they would not need to construct a new facility in order to serve the proposed project.

If CPD determines that new facilities are necessary at some point in the future, such facilities: (1) would occur where allowed under the designated land use; (2) would be located on parcels that are infill opportunities on lots that are likely between 0.5 and one acre in size; and (3) would very likely qualify for a Categorical Exemption under CEQA Guidelines Section 15301 or 15332 and, if not, a Negative Declaration or a Mitigated Negative Declaration, and, therefore would not be expected to result in significant impacts.

In addition, it is the CPD's goal to maintain a response time of three minutes to emergency calls and six minutes for non-emergency calls. Based on the Buildout Area's proximity to the nearest police

station (approximately 1 mile away), the CPD would be able to respond to calls within the Buildout Area within the stated response time goal.

All future housing projects implemented in accordance with the proposed project would be required to adhere to all applicable policies and codes related to the provision of police services. Any future development projects would be required to obtain City approval of building plans prior to issuance of building permits and would be required to demonstrate during the development review process that law enforcement providers would be able to provide adequate police protection services. In addition, through the City budgetary process a portion of development impact fees would be directed to the CPD, as deemed necessary. The impact development fees have been adopted by the City and are updated periodically following the preparation of a nexus study to confirm that the impact fees are in alignment with the costs required to complete new capital improvements to serve the new development. Considering current hiring practices and discretionary review conditions of approval and with implementation of a TCP, project impacts would be less than significant. No mitigation is required.

Threshold 4.8.1(iii): **Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for schools?**

Less Than Significant Impact. The California Office of Public-School Construction published general student yield factors for elementary, secondary (middle/high school), and unified school districts in California (May 2009). The student generation rate for elementary schools is 0.5 student per dwelling unit and the student generation rate for middle/high school students is 0.2 student per dwelling unit. These student generation rates were used to estimate the number of students that could be generated within the boundaries of the LAUSD and AUHSD as a result of project implementation.

According to the Residential and Commercial/Industrial Development School Fee Justification Study completed for the CSD by Cooperative Strategies and dated April 30, 2020, the student generation rate from elementary schools within the CSD was 0.256.[29] These student generation rates were used to estimate the number of students that could be generated within the boundaries of the CSD.

[29] Cooperative Strategies. 2020. *Residential and Commercial/Industrial Development School Fee Justification Study, Cypress School District*. April 30.

As shown in **Table 4.15.B: Residential Lot Acreage and Residential Dwelling Units Distribution by School District**, approximately 47 acres of potential residential development fall within the LAUSD district and 69 acres are located within the AUHSD and CSD districts, respectively. The Project would include up to 1,791 additional residential units within the Buildout Area under the Specific Plan. However, under the proposed development scenario, as detailed in **Figure 4.15-1: School District Boundaries and Potential Residential Growth** and **Table 4.15.B,** below, the additional residential units would be distributed across each school district as follows: 1,176 residential units within CSD, 1,176 residential units within AUHSD, and approximately 413 residential units within LAUSD. It should also be noted that Lot 2 within the Buildout Area is designated to accommodate future development of senior housing and medium-density residential uses under the Specific Plan, with a capacity of up to 404 dwelling units (refer to **Figure 3-5: Vesting Tentative Map No. 19247** in Chapter 3.0, Project Description). In order to account for potential senior housing within the Senior Housing/Medium-Density Residential District, which does not typically generate a school-age population, a portion of these dwelling units (approximately 50 percent or 202 residential units) are assumed to not contribute to student generation. Therefore, it was assumed that a portion of the Buildout Area located within LAUSD boundaries would not result in the generation of school-age students.

Table 4.15.B: Residential Lot Acreage and Residential Dwelling Units Distribution by School District

Lot Number	Specific Plan Land Use District	Lot Size (ac)	Projected Residential dwelling Units within Buildout Area	Acreage of School Districts Within Lots		Project Residential Dwelling Units within School Districts	
				LAUSD	AUHSD/ CSD[1]	LAUSD	AUHSD/ CSD
2	Senior Housing/MDR	23.08	404 du	23.09	--	202 du[2]	
3	Residential	27.15	269 du	13	14	129 du	140 du
4	Residential	19.00	141 du	11	8	82 du	59 du
7	Medium-Density Residential	20.66	309 du	--	20.66	--	309 du
10	Mixed-Use (Town Center/MDR)	2.00	29 du	--	2.00	--	29 du
11	Mixed-Use (Town Center/HDR)	1.75	51 du	--	1.75	--	51 du
12	Mixed-Use (Town Center/HDR)	8.86	265 du	--	8.86	--	265 du
13	Mixed-Use (Town Center/HDR)	6.52	195 du	--	6.52	--	195 du
14	Mixed-Use (Town Center/MDR)	7.33	128 du	--	7.33	--	128 du
Total Acreage of School Districts Within the Residential portions of Buildout Area				47.09	69.12		
Total Residential Units Within School Districts						413	1,176

[1] The AUHSD and CSD districts overlap within the Buildout Area.

[2] The total number of potential residential units in Lot 2 of LAUSD district is projected to be 404 units. However, given that senior housing typically does not generate school-age students, the number of units contributing to student generation has been adjusted. As such, it assumed that approximately 50 percent of the units planned, are planned for senior housing and are excluded from the student generation calculation.

Additionally, approximately 13 acres of Lot 3 (48 percent) and 11 acres of Lot 4 (58 percent) fall within the boundaries of the LAUSD, while approximately 14 acres of Lot 3 (52 percent) and 8 acres of Lot 4 (42 percent) are located within the CSD. For the purposes of this analysis, the residential units in Lots 3 and 4 were allocated based on the percentage of lot area within each district. Accordingly, the 269 units proposed for Lot 3 are estimated to include approximately 129 units within LAUSD[30] and 140 units within CSD,[31] and the 141 units in Lot 4 are estimated to include approximately 82 units within LAUSD[32] and 59 units within CSD.[33] As such, the proposed project would generate approximately 237 additional students in the CSD, 235 additional students in the AUHSD, and 288 additional students in the LAUSD (206 elementary school students and 82 middle/high school students) (refer to **Table 4.15.C: Student Generation Factor**).

Table 4.15.C: Student Generation Factor

Grade Levels	Student Generation Factor	Projected Residential dwelling Units	Projected Enrollment Increase (Students)
Cypress School District (CSD) (Elementary Schools)	0.2011 student/unit	1,176	237
Anaheim Union High School District (AUHSD) (Middle/High School)	0.2 student/unit	1,176	235
Los Alamitos Unified School District (LAUSD) (Elementary School)	0.5 student/unit	413	206
Los Alamitos Unified School District (LAUSD) (Middle/High School)	0.2 student/unit	413	82
Total	--		**760**

Sources: State of California, Office of Public School Construction (2019); Cooperative Strategies (2020, 2022).

CSD

According to the Residential and Commercial/Industrial Development School Fee Justification Study completed for the CSD by Cooperative Strategies and dated March 28, 2024, the CSD had a facilities capacity of 4,400 students in the 2023–2024 school year.[34] As previously discussed, CSD's enrollment was 3,319 students in the 2023–2024 school year.[35] As such, the CSD operates under capacity and has an additional 1,081 seats available for new students. As shown in **Table 4.15.C**, above, the residential units that could be developed within the portion of the Buildout Area that is in the CSD are estimated to generate 237 new elementary level students, at full occupation. This

30 269 (total residential units in Lot 3) × 0.48 (percentage of Lot 3 acreage within LAUSD) = 129 (estimated number of units within the LAUSD portion of Lot 3)

31 269 (total residential units in Lot 3) × 0.52 (percentage of Lot 3 acreage within CSD) = 140 (estimated number of units within the CSD portion of Lot 3)

32 141 (total residential units in Lot 4) × 0.58 (percentage of Lot 4 acreage within LAUSD) = 82 (estimated number of units within the LAUSD portion of Lot 4)

33 141 (total residential units in Lot 4) × 0.42 (percentage of Lot 4 acreage within CSD) = 59 (estimated number of units within the CSD portion of Lot 4)

34 Cooperative Strategies. 2024. *Residential and Commercial/Industrial Development School Fee Justification Study, Cypress School District*. March 28.

35 Ibid.

represents a 7.0 percent increase to CSD's student enrollment population.[36] However, this increase in elementary level students can be accommodated by the CSD's available capacity of 1,081 seats available. In addition, with implementation of **Regulatory Compliance Measure PS-2** as described below, it is expected that CSD would have sufficient capacity to accommodate new elementary level students generated by the housing units in the Buildout Area pursuant to the Specific Plan.

AUHSD

AUHSD's enrollment was 27,748 students in the 2023–2024 school year. As shown in **Table 4.15.C** above, development of residential units in the Buildout Area pursuant to the Specific Plan is estimated to generate 235 new middle and high school level students. This represents a 0.84 percent increase to AUHSD's student enrollment population.[37] According to the AUHSD Facilities Master Plan Update,[38] the AUHSD is experiencing an overall decline in enrollment of approximately 3,200 students through the 2025–2026 school year in the cities of Anaheim, Buena Park, Cypress, La Palma, and Stanton.[39]

Pursuant to California Education Code Section 17620(a)(1), the governing board of any school district is authorized to levy a fee, charge, dedication, or other requirement against any construction within the boundaries of the district for the purpose of funding the construction or reconstruction of school facilities. The applicant/developer of future residential and commercial development projects in the Buildout Area pursuant to the Specific Plan would be required to pay such fees to reduce any impacts of new residential or commercial development on school services as provided in Section 65995 of the California Government Code (refer to **Regulatory Compliance Measure PS-2)**. With the AUHSD's projected decline in enrollment, and with payment of development impact fees on a project-by-project basis, it is expected that AUHSD would have sufficient capacity to accommodate new middle and high school level students generated with implementation of the proposed project.

LAUSD

LAUSD has been experiencing a decline in enrollment since the 2016–2017 school year.[40] As shown in **Table 4.15.B** above, the residential units that could be developed within the portion of the Buildout Area that is in the LAUSD are estimated to generate 206 new elementary level students and 82 new middle/high school level students, for a total of 288 new students. This represents a 3.2 percent increase to LAUSD's student enrollment population; however, this increase in students can be accommodated by the LAUSD because LAUSD has sufficient capacity due to decreasing enrollment.[41] In addition, an applicant/developer of future residential and commercial development

36 (237 new students/3,389 current enrollment CSD) × 100 = 7.0 percent increase for CSD

37 (235 new students/27,748 current enrollment AUHSD) ×100= 0.84 percent increase for AUHSD

38 Anaheim Union High School District (AUHSD). 2022. *Facilities Master Plan Update, 3.2 Planning Considerations; Enrollment Projections and Demographics.* February 16. Website: https://www.auhsd.us/District/Department/14195-FACILITIES/88521-New-2022-Facilities-Master-Plan.html (accessed May 8, 2025).

39 Ibid.

40 California Department of Education. 2023. DataQuest, Enrollment Multi-Year Summary by Grade, Los Alamitos Unified Report (30-73924). Website: https://dq.cde.ca.gov/dataquest/dqcensus/EnrGrdYears.aspx?cds=3073924&agglevel=district&year=2022-23&ro=y (accessed July 28, 2023).

41 (288 new students/8,931current enrollment LAUSD) x 100 = 3.2 percent increase LAUSD

projects in the Buildout Area pursuant to the Specific Plan may be required to pay such fees to reduce any impacts of new residential development on school services as provided in **Regulatory Compliance Measure PS-2**.

With the LAUSD's continued pattern of decline in enrollment, and with payment of development impact fees on a project-by-project basis, it is expected that LAUSD would have sufficient capacity to accommodate new students generated with implementation of the proposed project. Pursuant to the provisions of Government Code Section 65996, a project's impact on school facilities is fully mitigated through payment of the requisite school facility development fees current at the time a building permit is issued. Therefore, with payment of the required fees, as outlined in **Regulatory Compliance Measure PS-2**, potential impacts to school services and facilities associated with implementation of the proposed project would be less than significant. No mitigation is required.

Threshold 4.15.1(iv): **Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for parks?**

Less Than Significant Impact. According to the Conservation/Open Space/ Recreation Element of the City's General Plan, the City aims to provide a total of 4.5 acres of parkland per 1,000 residents and currently has a total supply of approximately 93.9 acres of park and recreational facilities. Given the approximate population of 48,782 residents, the current parkland ratio is 1.92 acres per 1,000 residents, which does not meet the City's parkland objective of 4.5 acres per 1,000 residents. The City would need a total of 146.35 acres of park space (including public school facilities) to meet its current goal of providing 4.5 acres per 1,000 persons. Therefore, the City currently has a deficiency of approximately 52.45 acres.

As discussed in Section 4.16, Recreation, the proposed project could result in the development of up to 1,791 residential units and 440,000 square feet of non-residential development within the Buildout Area, which could add approximately 5,516 residents to the City's population.[42] The additional 5,516 residents would change this ratio to 1.73 acres of parkland per 1,000 residents, which is also below the City's goal.[43] As specified in Article VI of the City's Municipal Code, the City requires land to be dedicated as parks for subdivisions that include new residential construction that qualify as dwelling units as defined by section 6.31.020(D) of the City's Zoning Ordinance and section 205(D) of the 2001 California Building Code as they currently exist.[44] Per Section 25-45 of the Municipal Code, the amount of required land dedication is 130.68 square feet multiplied by the number of anticipated residents (dwelling units multiplied by average household size). Based on this

[42] 1,791 households x 3.08 persons per household = 5,516 persons

[43] 93.9 acres ÷ 54,289 (total population including the additional 5,516 residents) = 1.73 acres per 1,000 residents

[44] City of Cypress. 2024. *Cypress Municipal Code*. Article VI Park and Recreation Facilities. Website: https://ecode360.com/43174531?highlight=park,recreational&searchId=27310103989275668#43174532 (accessed May 6, 2025).

calculation, the amount of land required to be dedicated in conjunction with the additional 1,791 residential units is approximately 720,830 square feet or 16.5 acres.[45] The Municipal Code also allows payment of park fees or a credit for private open space in lieu of the land dedication.

The Specific Plan establishes the development of standards for land uses proposed as part of the project. As established in the Specific Plan, 18.2 acres of land shall be set aside exclusively for two public parks within the Public Park District. This area was considered to be large enough to provide passive and active recreational uses. An additional 2 acres of public park will be, or have been, provided in one or more of the other Land Use Districts, for a total of approximately 20 acres of public parks. Lexington Park, which is approximately 9 acres and is located outside the Buildout Area has already been developed adjacent to Lots 1 and 2 of Vesting Tentative Tract Map (VTTM) 19247, and counts toward the 20-acre park requirement included in the Specific Plan. The proposed project would include approximately 11 acres of land on which park and recreational uses would be developed.

The specific amenities and improvements that would be developed in the Specific Plan's Public Park District and the additional 2 acres of public park space would be determined in connection with future development projects as they are proposed within the Buildout Area. The proposed project would also include additional open space areas as an amenity for future residents. The amount of open space, improvements, and amenities in the final buildout is not known or defined at this programmatic stage of the proposed project but would be consistent with requirements in the Specific Plan.

In addition, as noted above, the City requires that every subdivider comply with Article VI of the Municipal Code by dedicating land, paying a park fee, obtaining a private open space credit or some combination, for the purposes of providing park and recreational facilities (see **Regulatory Compliance Measure PS-3** provided below). As such, all future projects within the Buildout Area would comply with the Specific Plan as well as the City's General Plan and Municipal Code, as applicable. The proposed project would include approximately 11 acres of land in the Buildout Area on which park and recreational uses would be developed and accessible to the public. With the dedication of this land, the City's parkland to resident ratio would be 1.93 acres per 1,000 residents, which does not meet the City's parkland goal but is slightly greater than the City's existing parkland ratio.[46] As such, implementation of the proposed project would improve the City's existing parkland to resident ratio from existing conditions. In addition, consistent with Article VI, a future applicant/developer in the Buildout Area would be required to pay applicable park fees, obtain a private open space credit, or some combination, as specified in **Regulatory Compliance Measure PS-3**. Therefore, potential impacts to parks associated with implementation of the proposed project would be less than significant. No mitigation is required.

[45] 5,516 residents X 130.68 square feet = 720,830 square feet or 16.5 acres

[46] 104.9 acres (total parkland including the 11 acres of parkland) ÷ 54,289 (total population including the additional 5,516 residents) = 1.93 acres per 1,000 residents

Threshold 4.15.1(v): **Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for other public facilities?**

Less Than Significant Impact. The OCPL system provides library services within the jurisdictions of many of the County's cities as well as unincorporated areas. The City is served by OCPL's Cypress Branch, which is located within the Cypress Civic Center at 5331 Orange Avenue, approximately 1 mile north of the Buildout Area. The Cypress Branch is the only library branch serving the City providing library materials, computer access meeting room space, and study areas to its approximately 48,782 residents. According to the City's Conservation/Open Space/Recreation Element, the Cypress branch contains approximately 112,566 volumes and sponsors programs including Pre-School Storytime and the Fun Club for Children.

Although OCPL has not formally adopted a library demand ratio, demand for library services is typically determined based on the size of the resident population. As previously stated, buildout of the proposed project may result in approximately 5,516 new residents. According to the County's service standards of 0.2 sf of library space per capita and 1.5 books per capita, the Cypress Branch Library has the capacity to accommodate a population of 75,000 and enough books to serve a population of 58,667. The City currently exceeds the County's standards for size and number of books since the City's most current population estimate is 48,782. Accordingly, the Cypress Branch Library has sufficient capacity to accommodate the additional population growth associated with the proposed project.

For the reasons discussed above, the proposed project would not result in additional physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts in order to maintain acceptable service ratios, response times, or other performance measures. The proposed project's impacts would be less than significant; no mitigation is required.

4.15.7 Level of Significance Prior to Mitigation

Impacts related to public services would be less than significant, and no mitigation is required.

4.15.8 Regulatory Compliance Measures and Mitigation Measures

4.15.8.1 Regulatory Compliance Measures

The proposed project would comply with the following standards, the implementation of which is intended to reduce impacts related to public services.

Regulatory Compliance Measure PS-1 Any future projects implemented within the Buildout Area in accordance with the City of Cypress (City) Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) would be required to

	coordinate with the Orange County Fire Authority (OCFA) to determine the appropriate development impact fees required to offset potential impact to OCFA staffing and service ability. Prior to the approval of such projects, the designated site developer shall enter into a Secured Fire Protection Agreement with OCFA that details the agreed-upon development impact fees required for the project.
Regulatory Compliance Measure PS-2	**Payment of School Fees.** Prior to issuance of any building permits within the Buildout Area in accordance with the Specific Plan, the applicant/ developer of future development projects facilitated by the proposed project shall provide proof to the Director of the City of Cypress Community Development Department, or designee, that payment of all applicable school fees has been made to the appropriate school district(s) in compliance with Section 65995 of the California Government Code.
Regulatory Compliance Measure PS-3	**Dedication of Parkland and/or Payment of Park Fees.** Prior to issuance of any building permits within the Buildout Area in accordance with the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan), a future applicant/developer shall provide proof of compliance with the applicable provisions of Chapter 25 (Subdivisions), Article VI, Park and Recreational Facilities, of the City of Cypress Municipal Code.

4.15.8.2 Mitigation Measures

No mitigation measures are required.

4.15.9 Level of Significance after Mitigation

The proposed project would not result in any significant impacts to public services. No mitigation is required.

4.15.10 Cumulative Impacts

As defined in Section 15130 of the *State CEQA Guidelines*, cumulative impacts are impacts created as a result of the combination of an individual project together with other past, current, and probable future projects causing related impacts. An EIR must discuss cumulative impacts of a project when the project's incremental effect is cumulatively considerable. The cumulative study area for public services is the City of Cypress.

As shown in **Table 4.A: Summary of Related Projects**, in Chapter 4.0, Existing Setting, of this Draft EIR, eight projects in proximity to the Buildout Area are approved or under construction within the City. Each of these projects, as well as all proposed projects in the City, are required to comply with applicable State and local regulations governing public services.

In addition, some of the related projects identified in **Table 4.A** have undergone environmental review pursuant to CEQA, which included an analysis of potential impacts on public services. According to the EIRs prepared for the Shae Properties Mixed Use Development Project (Related Project 1), Melia Homes-Citrus Square Project (Related Project 2), and the Los Alamitos Medical Center Project (Related Project 7), impacts on public services would be less than significant with implementation of the projects. Further, the EIRs determined that cumulative impacts related to public services would be less than significant. In addition, Goodman Commerce Center Project (Related Project 3) was analyzed in an Initial Study/Mitigated Negative Declaration (IS/MND), which determined that all impacts on public services would also be less than significant. In addition, the environmental documents for these projects required adherence to measures similar to **Regulatory Compliance Measures PS-1** through **PS-3.** The Sycamore Creek Charter School Project (Related Project 6) and 4562 Katella Avenue Project (Related Project 8) were determined to be exempt from CEQA review under Section 15332 of the *State CEQA Guidelines* (for infill development) and Notices of Exemption (NOEs) were prepared. In order for a project to be exempt under Section 15332 of the *State CEQA Guidelines*, the project site must be adequately served by all required utilities and public services. As such, development of the related projects in combination with the proposed project would not result in significant impacts on public services. The LTP Modern Machine Project (Related Project 5) and 8561 Belmont Street Project (Related Project 4) would also be required to undergo environmental review pursuant to CEQA, which would include an analysis of potential impacts on public services and the identification of any mitigation measures to reduce potential impacts, if necessary.

As detailed in this section, the proposed project would have a less than significant impact on public services including fire protection, police protection, schools, parks, and other public facilities and would adhere to all applicable policies and codes related to the provision of firefighting and police services including OCFA requirements related to providing adequate fire flow/structure protection to the Buildout Area and provide adequate access for emergency vehicles. In addition, OCFA and CPD would be able to respond to emergencies within the Buildout Area within the stated, respective response times. Further, future development projects in the Buildout Area would be required to adhere to **Regulatory Compliance Measures PS-1** through **PS-3**, which require the payment of development impact fees for fire protection, school services, and parks, respectively.

Future development of the Buildout Area would not result in population growth that would exceed the 2019 to 2050 growth forecast for the City. According to the SCAG, the City's population in 2050 is expected to be 56,200 persons,[47] increasing by 6,000 persons from the actual 2019 population of

[47] Southern California Association of Governments (SCAG). 2024. Connect Socal 2024. *Demographics and Growth Forecast Technical Report*. Website: https://sustain.scag.ca.gov/sites/default/files/2024-05/23-2987-tr-demographics-growth-forecast-final-040424.pdf (accessed May 13, 2025).

50,200 persons.[48] Although implementation of the proposed project would facilitate an increase in demand for school facilities, this increase in demand is consistent with the increase in the City's population. In addition, developers of future residential development projects in the Buildout Area pursuant to the Specific Plan would be required to pay their fair share of school impact fees. Any population growth associated with the project that would lead to potential strains on public services would not be substantial because it would be located within an area capable of supporting it. Additionally, since all projects within the cumulative study area would be required to implement measures similar to **Regulatory Compliance Measures PS-1** through **PS-3**, to reduce or eliminate project-specific impacts to public resources, implementation of the proposed project, when evaluated in combination with the development of projects listed in **Table 4.A**, would not contribute to a cumulatively considerable impact on public resources. Therefore, there would be no cumulatively significant impact on public resources, and no mitigation is required.

4.16 RECREATION

This section describes the parks and other recreational facilities near the Buildout Area and evaluates the potential impacts of the Specific Plan 3.0 Buildout Project (proposed project) on those facilities. This section also discusses the existing setting of recreational facilities within and near the City of Cypress (City) and sets forth the relevant regulatory requirements that apply to the analysis of the proposed project's impact on recreation facilities. This section is based, in part, on information provided in the Conservation/Open Space/Recreation Element of the City's General Plan and applicable provisions of the City's Municipal Code.

4.16.1 Scoping

The City received six comment letters during the public review period of the Notice of Preparation (NOP). For a copy of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). No comment letters included comments related to recreation.

4.16.2 Methodology

Impacts on recreation facilities were assessed based on the potential for the proposed project to generate increased demand on recreational facilities that could result in the deterioration of, or contribute toward substantial accelerated deterioration of, those facilities or require the construction of new facilities or expansion of existing facilities that could have an adverse physical effect on the environment. For the purposes of this analysis, "recreational facilities" are defined as parks and designated public areas used for active or passive recreation, including schools and community facilities.

The Conservation/Open Space/Recreation Element of the City's General Plan defines recreational resources to include parks, schools, community facilities, and privately owned recreational facilities. The City's Municipal Code and the Conservation/Open Space/Recreation Element contain requirements for the dedication of land, or the payment of park fees, or both, for recreational purposes in connection with residential development purposes, and an additional 1.5 acres of land per 1,000 residents for such purposes that are made available at K-12 schools through a cooperative arrangement between the City, local school districts, and local park and recreation districts. This results in a total of 4.5 acres of land per 1,000 residents.

4.16.3 Existing Environmental Setting

The Buildout Area does not contain any parks or recreation resources. The Buildout Area contains several properties, including the Los Alamitos Race Course (LARC) Property, the Cypress Golf Course property, and the Grace Church Property. The LARC Property includes a variety of existing structures and facilities that support horse racing, training, and community activities. The Cypress GC Property includes a portion of the former Cypress Golf Club, which is no longer operating. LARC currently uses approximately 1 acre of the Cypress GC Property (designated as Lot 1 in Vesting Tentative Tract Map (VTTM) 19247) as a maintenance yard, while the clubhouse for the former Cypress Golf Club is presently being used as a church. Lastly, the land owned by Grace Church within the Buildout Area, designated as Lots 5 and 10 in VTTM 19247, is part of a larger church property that is currently used for religious services and events and includes a small school, open space, and parking areas.

As previously mentioned in Chapter 3.0, Project Description, the Specific Plan includes two discrete portions of land that are not part of the Buildout Area. This includes 9 acres of land on which the City has previously developed Lexington Park, located adjacent to Lots 1 and 2 in VTTM 19247.

4.16.3.1 Existing Recreational Facilities

There are currently a total of 20 developed public parks within the City, which range in size from the approximately 0.17-acre Laurel Park to the 22-acre Oak Knoll Park.[1] According to the Conservation/ Open Space/Recreation Element of the City's General Plan,[2] the City had approximately 82 acres of park and recreational facilities in 2001.[3] Subsequently, the City added 2.9 acres of park space at the former Mackay School site, which increased its park space to 84.9 acres. Additionally, the City recently constructed Lexington Park, a new 9-acre sports park at the southeastern corner of Lexington Drive and Cerritos Avenue (immediately west of the Buildout Area).

The City classifies parks as community, neighborhood, or mini-facilities based on size. In addition to the City's parks, Cypress residents have access to recreational facilities at 11 K–12 schools, which add approximately 100 additional acres to the City's recreational facilities,[4] and 9 acres of open space and recreational facilities at Cypress Community College. Fees are charged by Cypress Community College for use of its facilities other than its track and tennis courts.

Community Parks. Arnold Cypress Park (14.5 acres) and Oak Knoll Park (22 acres) are the two major community parks located in the City.[5] Community parks serve neighborhoods and offer recreational opportunities for large groups. These parks are generally over 10 acres in size and include a variety of facilities, such as active recreational facilities (i.e., athletic fields and group picnic areas). In addition, these large parks often include community centers.

Neighborhood Parks. Neighborhood parks are smaller in size than community parks and typically range in size from 3 to 5 acres. Within the City, the 15 neighborhood parks encompass approximately 48 acres. Neighborhood parks are often located adjacent to elementary schools and normally include tot lots, picnic facilities, and a multi-use court.

Mini Parks. Mini-parks are less than 1 acre in size and are usually located near schools or residential developments. The City's three mini-parks serve as playgrounds for children or as a place for people to relax in an urban environment. There are 1.26 acres of mini-parks within the City.[6]

As shown in **Table 4.16.A: City of Cypress Parks and Recreational Facilities in the Vicinity of the Buildout Area** below, four City parks and recreational facilities are within 1.5 mile of the Buildout Area.

Table 4.16.A: City of Cypress Parks and Recreational Facilities in the Vicinity of the Buildout Area

Name and Address	Distance from Buildout Area (miles)	Type	Size (acres)	Amenities
Lexington Park 4600 West Cerritos Avenue	70 feet west	Community	9	Children's playground equipment, multi-use court, multi-use play field (natural and synthetic turf), picnic pavilions, walking path, electric vehicle parking, restroom
Damron Park - 5400 Myra Avenue	0.3 mile north	Public	0.5	Children's playground, turf field
Veterans Park 4554 Avenida Granada	0.5 mile north	Community	6.4	Children's playground equipment, skatepark, volleyball court, basketball court, turf field, walking path parking, restroom
Nature Park 4201 Ball Road	0.7 mile north	Private	6	Seasonally open park. Walking trails

Regional Parks. Currently, there are no regional parks within the City; however, seven regional park facilities are located in surrounding communities:

- The City of Long Beach operates El Dorado Regional Park approximately 3.3 miles west of the Buildout Area. El Dorado Regional Park incorporates approximately 450 acres total. Recreational amenities within the park include an archery range, barbeque and picnic areas, 5 miles of bike paths, a campground, a 100-acre nature center, two stocked fishing lakes, a physical fitness course, and playgrounds for children.

- The County of Orange (County) operates Ralph B. Clark Regional Park, which is located approximately 9.2 miles northeast of the Buildout Area, in the City of Buena Park. Ralph B. Clark Regional Park incorporates approximately 104 total acres. Recreational amenities within the park include picnic areas, hiking and biking trails, playgrounds for children, sports fields, baseball and softball diamonds, volleyball courts, tennis courts, an amphitheater, and a lake.

- Heartwell Park is approximately 5.5 miles northwest of the Buildout Area, in the City of Long Beach. The park incorporates approximately 123 total acres. Recreational facilities within the park include a stocked fishing pond, bike paths, a physical fitness course, picnic areas, baseball diamonds, athletic fields, tennis courts, basketball courts, and volleyball courts.

- Cerritos Regional Park is approximately 5 miles northwest of the Buildout Area, in the City of Cerritos. The park incorporates approximately 84 total acres. Recreational amenities within the park include a swimming pool, a stocked fishing pond, baseball diamonds, a gymnasium, a multipurpose room, and picnic areas.

- Rynerson Park is approximately 5.5 miles northwest of the Buildout Area, in the City of Lakewood. The park incorporates approximately 40 total acres. Recreational facilities within the

park include bike paths, baseball diamonds, a wildflower meadow, picnic acres, a physical fitness circuit, a 1.5-mile fitness trail, and an amphitheater.

- El Rancho Verde Park and Bicycle Path is approximately 4.2 miles northwest of the Buildout Area, in the Cities of La Palma and Buena Park. The park incorporates approximately 5.25 total acres. Recreational facilities within the park include a botanical garden, exercise stations, playgrounds for children, and a 12-mile bike path.

- The Bolsa Chica Wetlands are approximately 8.6 miles south of the Buildout Area, in the City of Huntington Beach. The wetlands consist of an approximately 1,400-acre nature reserve. Recreational amenities surrounding the wetlands include walking trails, guided tours, educational programs, and volunteer programs.

Community Facilities. The City has a number of community facilities that host many of its recreation and cultural programs. These facilities include the Cypress Community Center, the Cypress Civic Center and the Cypress Senior Center. These facilities provide a multitude of uses to help meet the recreational needs of the City's residents.

Other Public Facilities. A portion of one public golf course, the Navy Golf Course, is located within the City approximately 1 mile southeast of the Buildout Area. This 220-acre, 27-hole golf complex is owned by the United States Department of the Navy. Additionally, four other public golf courses are located within 5 miles of the proposed project:

- The El Dorado Park Golf Course is approximately 4 miles west of the Buildout Area in the City of Long Beach. This golf course includes an 18-hole golf course, occupying approximately 275 total acres. The El Dorado Park Golf Course is open to the public and includes an event center.[7]

- The Heartwell Golf Course is approximately 5.5 miles northwest of the Buildout Area in the City of Long Beach. This golf course includes an 18-hole golf course, occupying approximately 37 total acres. The Heartwell Golf Course is open to the public and includes a restaurant.

- The Recreation Park Golf Course is approximately 7 miles southwest of the Buildout Area in the City of Long Beach. This golf course includes an 18-hole golf course, occupying approximately 170 total acres. The Recreation Park Golf Course is open to the public and includes a clubhouse, banquet facility, and garden gazebo.

- The Dad Miller Golf Course is approximately 6.2 miles northeast of the Buildout Area, in the City of Anaheim. This golf course includes an 18-hole golf course, occupying approximately 60 total acres. The Dad Miller Golf Course is open to the public and includes a clubhouse and a banquet hall.

[7] City of Cypress. 2001. *Cypress General Plan Conservation/Open Space/Recreation Element.*

4.16.4 Regulatory Setting

The following section describes the federal, State, regional, and local regulatory framework applicable to analyzing potential impacts related to recreation from development of the proposed project.

4.16.4.1 Federal Regulations

There are no federal policies or regulations related to recreation applicable to the proposed project.

4.16.4.2 State Regulations

Quimby Act of 1975. The State Quimby Act (California Government Code Section 66477) allows the legislative body of a city or county to require by ordinance the dedication of land, the payment of an in-lieu park fee, or a combination thereof, for the approval for a final tract or parcel map. In cases where such dedication or park fee is not obtained through a map, compliance with local Quimby requirements may be imposed when building permits are issued. The following conditions must be met to comply with the Quimby Act:

- The city or county ordinance must include definitive standards for determining the proportion of a subdivision to be dedicated and the amount of any fee to be paid in lieu thereof.

- The legislative body must adopt a general plan containing a recreation element, and any proposed park or recreational facility must be consistent with the principles and standards established in the element

4.16.4.3 Regional Regulations

There are no regional regulations applicable to the proposed project.

4.16.4.4 Local Regulations

Cypress Town Center and Commons Specific Plan 3.0. The Specific Plan establishes the development of standards for land uses proposed as part of the proposed project. As established in the Specific Plan, 18.2 acres of land shall be set aside exclusively for two public parks within the Public Park District. This area was considered to be large enough to provide passive and active recreational uses. An additional 2 acres of public park will be, or have been, provided in one or more of the other Land Use Districts, for a total of approximately 20 acres of public parks.

City of Cypress Conservation/Open Space/Recreation Element. The Conservation/Open Space/ Recreation Element of the City's General Plan describes existing park and recreational facilities within the City, compares the existing acreage of facilities to the standard set forth in the City's Municipal Code (described above) and identifies goals and policies for the provision of parks and recreational facilities.

The following policy in the Conservation/Open Space/Recreation Element applies to the proposed project:

- **COSR-6.1**: Continue to require new developments to provide recreational opportunities for their residents in accordance with the City's park standard, three acres of parkland per 1,000 residents.

City of Cypress Municipal Code. The City of Cypress Municipal Code Chapter 25, Article 6, Section 25-41, Provision of Park and Recreational Facilities, states that "every subdivider who subdivides land shall dedicate a portion of such land, pay a fee, or do both as set forth in this article for the purpose of providing park and recreational facilities, including recreational community gardening facilities, to help serve the future residents of such subdivision."

Section 25-43 of the Municipal Code establishes a standard of 3.0 acres of land per 1,000 residents for park and recreational purposes, and an additional 1.5 acres of land per 1,000 residents for such purposes that are made available at K-12 schools. This code standard is also consistent with the Conservation/Open Space/Recreation Element Policy COSR-6.1, as discussed below.

4.16.5 Thresholds of Significance

The thresholds of significance for recreation impacts used in this analysis are consistent with Appendix G of the *State CEQA Guidelines*. Based on these thresholds, implementation of the proposed project would have a significant impact with respect to recreation if it would:

Threshold 4.16.1: Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated; or

Threshold 4.15.2: Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

4.16.6 Project Impacts

Threshold 4.16.1: Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Less Than Significant Impact. The proposed project would include up to 1,791 residential units and 440,000 square feet of non-residential development within the Buildout Area. As described in Section 4.14, Population and Housing, and based on the average persons per household for the City of 3.08,[8] full buildout of the Buildout Area is expected to result in approximately 5,516 new residents.[9] The City's Municipal Code states a goal of providing 4.5 acres of land per 1,000 residents for park and recreational purposes, including 1.5 acres of land per 1,000 residents for purposes that are made available at K-12 schools through a cooperative arrangement between the City, local school districts, and local park and recreation districts.

[8] United States Census Bureau. 2024. *Cypress City, California* QuickFacts. Website: https://www.census.gov/quickfacts/fact/table/cypresscitycalifornia/PST045224 (accessed January 28, 2025).

[9] 1,791 households x 3.08 persons per household =5,516 persons

The City currently has 93.9 acres of parkland available for its 48,782 residents, and it currently provides approximately 1.92 acres of parkland per 1,000 residents, which does not meet the City's parkland objective of 4.5 acres per 1,000 residents. The additional 5,516 residents would change this ratio to 1.73 acres of parkland per 1,000 residents, prior to construction of any recreational resources proposed by the project.[10] As specified in Article VI of the City's Municipal Code, the City requires land to be dedicated as parks for subdivisions that include new residential construction that qualify as dwelling units as defined by section 6.31.020(D) of the City's Zoning Ordinance and section 205(D) of the 2001 California Building Code as they currently exist.[11] Per Section 25-45 of the Municipal Code, the amount of required land dedication is 130.68 square feet multiplied by the number of anticipated residents (dwelling units multiplied by population density). Based on this calculation, the amount of land required to be dedicated is approximately 720,830 square feet or 16.5 acres.[12] The Municipal Code also allows payment of park fees or a credit for private open space in lieu of the land dedication.

The Buildout Area would include approximately 11 acres of land on which park and recreational uses would be developed, which does not include the already developed, 9-acre Lexington Park, adjacent to Lots 1 and 2 of VTTM 19247. Project implementation would include an additional 11 acres of park space, provided in the Public Park District and one or more of the other Land Use Districts. With the dedication of this land, the City's parkland to resident ratio would be 1.93 acres per 1,000 residents, which is an improvement over existing ratios. However, even with project implementation, the City would not meet the overall stated goals.[13] The specific amenities and improvements that would be developed in the Public Park District and additional 2 acres of public park space would be determined in connection with future development projects that are proposed within the Buildout Area. The proposed project would also include additional open space areas as an amenity for future residents. The amount of open space, improvements, and amenities in the final buildout is not known or defined at this programmatic stage of the proposed project but would be consistent with requirements in the Specific Plan.

As such, implementation of the proposed project would not worsen the City's existing parkland to resident ratio from existing conditions. In addition, consistent with Article VI, a future applicant/ developer in the Buildout Area would be allowed to pay applicable park fees, obtain a private open space credit, or some combination, as specified in **Regulatory Compliance Measure PS-3,** detailed in Section 4.15, Public Services and provided below. Therefore, the proposed project's impact to parks and recreational facilities would be less than significant, and no mitigation is required.

---

10 93.9 acres ÷ 54,289 (total population including the additional 5,516 residents) = 1.73 acres per 1,000 residents

11 City of Cypress. *Cypress Municipal Code.* Article VI Park and Recreation Facilities. Website: https://ecode360.com/43174531?highlight=park,recreational&searchId=27310103989275668#43174532 (accessed May 6, 2025).

12 5,516 residents X 130.68 square feet = 720,830 square feet or 16.5 acres

13 104.9 acres (total parkland including the 11 acres of parkland) ÷ 54,289 (total population including the additional 5,516 residents) = 1.93 acres per 1,000 residents

Threshold 4.16.2: Would the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

***Less Than Significant Impact*.** The Draft EIR evaluates potential impacts to parks and recreational facilities at a programmatic level, based on the overall buildout scenario proposed under the proposed project. This includes a general assessment of whether the proposed project would result in the need for new or physically altered recreational facilities or otherwise degrade the quality of existing recreational resources in the City. Any construction or operational impacts associated with the proposed project are addressed in this program-level analysis. The proposed project would include approximately 11 acres of land on which park and recreational uses would be developed. The specific amenities and improvements that would be developed in the 9 acres of Public Park District and the additional 2 acres of public park space would be determined in connection with future development projects as they are proposed within the Buildout Area. Future individual development projects implemented within the Buildout Area pursuant to the previously approved Specific Plan would be subject to further project-specific evaluation to determine whether they are consistent with the assumptions in Draft EIR. If a future project exceeds the scope of this analysis or results in site-specific impacts not previously addressed, additional environmental review under CEQA may be required to evaluate impacts to recreation and ensure compliance with applicable policies, standards, and mitigation measures.

Although the proposed project is anticipated to add approximately 5,516 new residents to the City, as described in Threshold 4.16.1 previously, it is not expected to result in the need for new or expanded recreational facilities. The Buildout Area is well-served by a range of existing parks and recreational resources, both locally within the City and regionally through access to nearby county and open space amenities. In addition, as previously discussed, project implementation would include an additional 11 acres of park space, provided in one or more of the other Land Use Districts. With the addition of this land, the City's parkland to resident ratio would be 1.93 acres per 1,000 residents, which is an improvement over existing ratios.

Given the availability and distribution of these facilities, as well as the City's existing park planning framework and service standards, the increase in population would not result in the physical deterioration of existing recreational resources or necessitate the construction of new parks or recreational infrastructure. As such, potential impacts would be less than significant, and no mitigation is required.

4.16.7 Level of Significance Prior to Mitigation

The proposed project would not result in any significant impacts to parks and recreation resources, and no mitigation is required.

4.16.8 Mitigation Measures

With adherence to **Regulatory Compliance Measure PS-3,** the proposed project would result in less than significant impacts related to recreation, and no mitigation measures are required.

4.16.9 Regulatory Compliance Measures

The proposed project would comply with the following standards, the implementation of which is intended to reduce impacts related to parks and recreational facilities.

Regulatory Compliance Measure PS-3 **Dedication of Parkland and/or Payment of Park Fees.** Prior to issuance of any building permits within the Buildout Area in accordance with the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan), a future applicant/developer shall provide proof of compliance with the applicable provisions of Chapter 25 (Subdivisions), Article VI, Park and Recreational Facilities, of the City of Cypress Municipal Code.

4.16.10 Level of Significance after Mitigation

The proposed project would not result in any significant impacts to parks and recreation resources, and no mitigation measures are required.

4.16.11 Cumulative Impacts

As defined in Section 15130 of the *State CEQA Guideline*s, cumulative impacts are impacts created as a result of the combination of an individual project together with other past, current, and probable future projects causing related impacts. An EIR must discuss cumulative impacts of a project when the project's incremental effect is cumulatively considerable. The Buildout Area is located within the City of Cypress and is subject to the City's Municipal Code requirements for dedicating land, paying a park fee, obtaining a private open space credit or some combination. For the purposes of this cumulative analysis, the geographic scope includes the City of Cypress, as the potential impacts on recreational facilities would occur within the City through increased demand for parkland and recreational amenities.

Future residents of the proposed project would utilize the proposed parkland and recreational facilities associated with the proposed project due to proximity to their residents. The proposed project, in combination with other related past, present, and reasonably foreseeable future projects identified in **Table 4.A: Summary of Related Projects,** in Chapter 4.0, Existing Setting, of this Draft EIR, would incrementally increase the City's population, thereby increasing demand for park and recreational facilities. However, the proposed project and related projects in the City would be required to comply with Article VI of the Municipal Code, as specified in **Regulatory Compliance Measure PS-3.** Article VI requires the dedication of land, payment of a park fee, a private open space credit, or some combination for the purposes of providing park and recreational facilities.

In addition, some of the related projects identified in **Table 4.A** have undergone environmental review pursuant to CEQA, which included an analysis of potential impacts related to recreation. According to the EIRs prepared for the Shea Properties Mixed Use Development Project (Related Project 1), Melia Homes-Citrus Square Project (Related Project 2), and the Los Alamitos Medical Center Project (Related Project 7), impacts related to recreation would be less than significant with implementation of the projects. Further, the EIRs determined that cumulative impacts related to

recreation would be less than significant. In addition, Goodman Commerce Center Project (Related Project 3) was analyzed in an Initial Study/Mitigated Negative Declaration (IS/MND), which determined that all impacts related to recreation would also be less than significant. In addition, the environmental documents for these projects required adherence to measures similar to **Regulatory Compliance Measure PS-3.** The Sycamore Creek Charter School Project (Related Project 6) and 4562 Katella Avenue Project (Related Project 8) were determined to be exempt from CEQA review under Section 15332 of the *State CEQA Guidelines* (for infill development) and Notices of Exemption (NOEs) were prepared. In order for a project to be exempt under Section 15332 of the *State CEQA Guidelines*, the project site must be adequately served by all required utilities and public services, including recreation. As such, development of the related projects in combination with the proposed project would not result in significant impacts related to recreation. The LTP Modern Machine Project (Related Project 5) and 8561 Belmont Street Project (Related Project 4) would also be required to undergo environmental review pursuant to CEQA, which would include an analysis of potential impacts related to recreation and the identification of any mitigation measures to reduce potential impacts, if necessary.

Additionally, the Buildout Area would include approximately 11 acres of land on which park and recreational uses would be developed. The specific amenities and improvements that would be developed in the Public Park District and the additional two acres of public park space would be determined in connection with future development projects as they are proposed within the Buildout Area.

Therefore, through compliance with Article VI of the City's Municipal Code, the cumulative impact of the proposed project and other related development would be less than significant. Additionally, the proposed project's contribution to a potentially significant cumulative impact on park and recreational facilities would not be cumulatively considerable.

4.17 TRANSPORTATION

This section describes the existing and planned transportation and circulation conditions for the Buildout Area and the surrounding area and identifies potential transportation-related impacts that may result from implementation of the Specific Plan 3.0 Buildout Project (proposed project). The analysis contained in this section is based in part on the *Vehicle Miles Traveled (VMT) Analysis for Specific Plan 3.0 Buildout Project* (VMT Memo)[1] included as **Appendix K** to this Draft Environmental Impact Report (Draft EIR) that was prepared for the proposed project.

4.17.1 Scoping Process

The City of Cypress (City) received four comment letters during the public review period of the Notice of Preparation (NOP). For a copy of the NOP comment letters, refer to **Appendix A** to this Draft EIR. Two of the comment letters, from the California Department of Transportation (Caltrans) and the Southern California Association of Governments (SCAG), included comments related to transportation.

SCAG recommended that this Draft EIR evaluate the proposed project's alignment with the Connect SoCal 2024 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (Connect SoCal 2024), which outlines goals to reduce greenhouse gas emissions, improve regional air quality, and support an integrated multimodal transportation network. Although SCAG does not implement or approve projects, it advised the City to consult the Connect SoCal 2024 Program Environmental Impact Report (PEIR) for guidance on identifying appropriate CEQA mitigation strategies. These may include measures to minimize emissions, reduce vehicle miles traveled, and enhance transportation efficiency. SCAG also highlighted that achieving regional sustainability goals depends on local agency action and encourages the use of a side-by-side consistency analysis comparing project features with Connect SoCal 2024 goals. These comments are addressed in this section.

Caltrans requested that this Draft EIR discuss transit service and include a discussion of the City's multimodal mobility strategies and opportunities and safety hazards. Caltrans also suggested that the proposed project encourage the use of transit; incorporate Complete Streets; and include bike and electric vehicle parking, visibility crosswalks and Americans with Disabilities Act (ADA) curb ramps, and well-lit loading docks and parking spaces. In addition, Caltrans requested that this Draft EIR ensure that appropriate detours and safety measures are in place during construction, consider the creation of an emergency plans, analyze short term and long term VMT impacts, and include an analysis and discussion of the 95 percent vehicle queue. Lastly, Caltrans noted that, if any future development occurs within Caltrans right-of-way, a required discretionary review and approval by Caltrans and an encroachment permit will be required for any work within the Caltrans right-of-way prior to construction.

[1] Kimley-Horn and Associates, Inc. 2025b. *Vehicle Miles Traveled (VMT) Analysis for Specific Plan 3.0 Buildout Project.* May.

4.17.2 Methodology

4.17.2.1 Vehicle Miles Traveled Analysis

On December 28, 2018, the California Office of Administrative Law cleared revised *State CEQA Guidelines* for use. Among the changes to the *State CEQA Guidelines* was the removal of vehicle delay and Level of Service (LOS) from consideration under CEQA. Under the revised *State CEQA Guidelines*, transportation impacts are to be evaluated based on a project's effect on VMT. The City utilizes the methodology and significance threshold criteria identified in the Guidelines For Evaluating Vehicle Miles Traveled Under CEQA for Orange County (County Guidelines).[2]

A VMT screening was conducted to evaluate the proposed project based on the pre-established criteria outlined in the County Guidelines for presuming a less than significant impact. These criteria assess whether a project or its location has specific characteristics that justify such a presumption. The County Guidelines provide the following screening criteria:

1. **Project in High Quality Transit Area (HQTA)** – A project located within 0.5 mile from an existing major transit stop[3] or within 0.5 mile from an existing stop along a high-quality transit corridor[4] is considered an HQTA project and is presumed to result in a less than significant VMT impact.

2. **Neighborhood Retail Project** – A project involving local-serving retail space of less than 50,000 square feet is presumed to result in a less than significant VMT impact.

3. **Affordable Housing Project** – A project that is 100 percent affordable-housing units is presumed to result in a less than significant VMT impact.

4. **Low VMT Area** – A project located in an area with low VMT is generally presumed to result in a less than significant VMT impact.

5. **Small Project** – A project that generates 500 or fewer average daily trips (ADT) is presumed to result in a less than significant VMT impact.

6. **Public Facilities** – The development of institutional/government and public service uses that support community health, safety or welfare are also screened from subsequent CEQA VMT analysis.

Of the County's screening criteria provided above, the VMT analysis prepared for the proposed project only included discussion of the screening criteria that could be applicable to the proposed

---

2 County of Orange. 2020. *Guidelines For Evaluating Vehicle Miles Traveled Under CEQA for Orange County*. September 17.

3 Under the amended Public Resources Code § 21064.3 – "'Major transit stop' means a site containing an existing rail or bus rapid transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 20 minutes or less during the morning and afternoon peak commute periods."

4 Public Resources Code § 21155 - For purposes of this section, a "'high-quality transit corridor' means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours."

project, including Criterion 1 being located in an HQTA, Criterion 2 being a neighborhood retail project, and Criterion 4 being within a low VMT area.

A VMT analysis was conducted for both the residential and non-residential components of the proposed project using the most recent version of the Orange County Transportation Analysis Model (OCTAM), Version 5.1. OCTAM is a trip-based travel demand model that simulates travel behavior based on socioeconomic data, including household, population, and employment characteristics, to estimate trip generation and mode choice.

To accurately reflect the proposed project within the model, updates were made to the socioeconomic data for the Traffic Analysis Zone (TAZ) encompassing the Buildout Area—TAZ 440. This included adjustments to both residential households and employment estimates associated with retail and other commercial uses.

The OCTAM model uses 2019 as its base year and 2050 as its horizon year. Accordingly, the VMT analysis was conducted under the following scenarios:

- **Existing Conditions:** Reflecting the 2019 model base year.
- **Existing Plus Project Conditions:** Reflecting 2019 conditions with the proposed project incorporated.
- **Cumulative Plus Project Conditions:** Reflecting 2050 conditions with the proposed project incorporated.

To model the full proposed project accurately, the land use program described in the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) was converted into terms compatible with OCTAM. As the detailed VMT impact determinations focus on the full land use mix, both residential and non-residential land uses were integrated into the model to ensure accurate representation of internal trip-making behavior (e.g., residents accessing on-site retail and other commercial uses or jobs).

In OCTAM, non-residential land uses are modeled using employment estimates categorized as retail, service, or basic employment. Therefore, the retail square footage assumed for the proposed project was converted to employment estimates based on trip generation-based assumptions. Specifically, employment was calculated using rates from the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 11th Edition. Retail employment was estimated at a rate of approximately two employees per 1,000 square feet. Based on the anticipated land use mix, 90 percent of non-residential employment was assigned to the retail category and 10 percent to service, consistent with expected project uses such as general merchandise, food services, personal care, and small-scale office.

These estimates were added to the baseline household and employment values within TAZ 440 for use in both the existing plus project and cumulative plus project model runs. Employment associated with the existing Los Alamitos Race Course was not included, as the continued operation

of the racetrack is not part of the proposed project. As such, 95 race-course-related jobs were excluded from the adjusted baseline.

The residential component of the proposed project was evaluated using a measurement called Home-Based VMT per Capita. This metric estimates the average amount of driving generated by each project resident. The calculation is based on the Production-Attraction (PA) method from the OCTAM model, a tool used to analyze travel behavior. The City's threshold of significance for a project's VMT impact with respect to residential uses, based on the County Guidelines, is 13.21 VMT per capita (15 percent below the existing regional average).

4.17.2.2 Consistency with Plans, Programs, Ordinances, or Policies

As described below, the CEQA Guidelines Transportation Threshold (a) has been updated to require an analysis of a project's potential to conflict with plans, programs, ordinances, or policies that address the circulation system including transit, roadway, bicycle and pedestrian facilities. Therefore, the impact analysis below evaluates the proposed project's potential to conflict with the applicable plans, programs, ordinances, and policies discussed below. A project that generally conforms with and does not obstruct the City's development policies and standards will generally be considered to be consistent. Specifically, an impact would not occur merely for an inconsistency with or a failure to implement an adopted plan, program, ordinance, or policy. Rather, it is the intention of the threshold test to ensure that the proposed development does not conflict with nor preclude the City from implementing adopted plans, programs, ordinances, or policies.

Furthermore, under CEQA, a project is considered consistent with an applicable plan if it is consistent with the overall intent of the plan and would not preclude the attainment of its primary goals. A project does not need to be in perfect conformity with each and every policy. Finally, any inconsistency with an applicable policy, plan, or regulation is only a significant impact under CEQA if the policy, plan, or regulation was adopted for the purpose of avoiding or mitigating an environmental effect and if the inconsistency itself would result in a direct physical impact on the environment.

4.17.3 Existing Environmental Setting

The Buildout Area is generally bounded by West Cerritos Avenue to the north, several existing commercial and institutional uses along and near Walker Street to the east, Katella Avenue and several existing commercial, retail and residential uses to the south, and Lexington Drive to the west. Immediately northwest of most of the Buildout Area is Lexington Park, a nine-acre park located at 4600 West Cerritos Avenue at the southeast corner of the Cerritos Avenue/Lexington Drive intersection. Immediately east and north of the Buildout Area is Grace Church, located at 5100 West Cerritos Avenue. Southeast of the Buildout Area is the Belmont residential project developed by Melia Homes, which includes only residential uses, and The Square at Cypress developed by Shea Homes, which includes residential, hotel, retail, and service uses, including the Homewood Suites by Hilton located at 5233 Katella Avenue. Farther east, a retail center at 5401 Katella Avenue contains a Costco Wholesale warehouse and gas station, as well as other commercial uses. Cottonwood Church, located at 4505 Katella Avenue, is located southwest of the Buildout Area, along with the Ovation at Flora Park, a senior housing community, and a commercial center that includes

restaurant, retail, service uses, a 24-Hour Fitness, and the Residence Inn Cypress Los Alamitos, at 4931 Katella Avenue. West of Lexington Drive are light industrial, office, and commercial uses.

Regional vehicular access to the Buildout Area is provided by Interstates 605 and 405 (I-605 and I-405), which are approximately 1.5 miles to the west and 3.5 miles to the south, respectively; Beach Boulevard (State Route 39 [SR-39]), approximately 2.7 miles to the east; and State Route 22 (SR-22), approximately 3.5 miles to the south. Local access to the project vicinity is provided by several arterial and commuter roadways, including Cerritos Avenue, Katella Avenue, Los Alamitos Boulevard, Bloomfield Street, Denni Street/Lexington Drive, Moody Street, Walker Street, and Valley View Street.

4.17.3.1 Existing Circulation System

Existing Roadway Network. The City's existing circulation system in the vicinity of the Buildout Area includes the following key roadways:

- **Cerritos Avenue** is classified as an east-west Primary Roadway in both the City of Cypress and the City of Los Alamitos Circulation Elements. Cerritos Avenue provides access from the City of Long Beach in the west, where it is named Spring Street, and to the City of Anaheim in the east, where it terminates at Walnut Street, near Disneyland. Cerritos Avenue has a partial interchange with I-605 approximately 1.5 miles west of the Buildout Area. This roadway provides two travel lanes in each direction, separated by a painted median. On-street parking is prohibited, and the speed limit varies between 40 and 45 miles per hour (mph).

- **Katella Avenue** is a six-lane roadway through the Cities of Cypress and Los Alamitos, with a center median and turn lanes at major intersections. Katella Avenue is designated as a Smart Street through the Cities of Cypress and Los Alamitos and is designated on the Orange County Congestion Management Plan (CMP) as a CMP facility. The posted speed limit varies between 35 and 45 mph through the traffic study area.

- **Los Alamitos Boulevard** varies from a four- to six-lane divided roadway, traversing the City of Los Alamitos in a north-south direction. The posted speed limit on Los Alamitos Boulevard is 35 mph north of Katella Avenue and 40 mph south of Katella Avenue. On-street parking is permitted along some segments of the roadway. The street name changes to Norwalk Boulevard to the north of Los Alamitos, and to Seal Beach Boulevard to the south.

- **Bloomfield Street** is a four-lane roadway with a center two-way turn lane divider along some segments of the roadway. The posted speed limit on Bloomfield Street is 40 mph north of Cerritos Avenue and 35 mph south of Cerritos Avenue. On-street parking is generally permitted along Bloomfield Street.

- **Denni Street/Lexington Drive** is a north-south roadway. Denni Street/Lexington Drive begins at Lincoln Avenue in Cypress and ends at the Joint Forces Training Base in Los Alamitos. The name changes from Denni Street to Lexington Drive at Cerritos Avenue. For most of its length, Denni Street is a four-lane undivided roadway with a posted speed limit varying between 35 and 40 mph. Lexington Drive is generally a two-lane undivided roadway. On-street parking is mostly

prohibited. Along some segments, Class II bike lanes are provided, while other segments are designated Class III bike routes.

- **Moody Street** is a north-south Primary Roadway stretching from Cerritos Avenue on the south, northward through the Cities of La Palma, Cerritos, and others. Moody Street changes name to Carmenita Road north of State Route 91 (SR-91). Moody Street is a four-lane roadway with Class II bike lanes on both sides, divided by a painted median. On-street parking is prohibited on both sides, and the posted speed limit is 40 mph.

- **Walker Street** is a north-south Secondary Roadway which begins at Katella Avenue and ends at Interstate 5 (I-5). Walker Street is a four-lane roadway divided by a painted median. For a short segment south of Cerritos Avenue, Walker Street has three northbound lanes. Class II bike lanes are generally provided on Walker Street throughout the project vicinity. The posted speed limit is 45 mph.

- **Valley View Street** is a north-south Major Roadway providing regional access between several cities in Orange and Los Angeles Counties. Valley View Street is a six-lane roadway, divided by a raised landscaped median, with Class II bike lanes on both sides. On-street parking is prohibited for its entire length and the posted speed limit is 45 mph. Valley View Street is designated in the Orange County CMP as a CMP facility.

Pedestrian Circulation. Sidewalks currently exist on both sides of Katella Avenue, Cerritos Avenue, Walker Street, and Moody Street, and one side of Lexington Drive, in the vicinity of the Buildout Area. There are pedestrian crosswalks at all signalized intersections in the vicinity of the Buildout Area. These facilities provide for pedestrian circulation between the Buildout Area and the surrounding areas.

Bicycle Circulation. Katella Avenue and Valley View Street currently accommodate off-street bike paths. On-street (Class II) bicycle lanes are provided on both sides of Cerritos Avenue (between Walker Street and Denni Street) and Bloomfield Street. There is a Class I bike path on the south side of Cerritos Avenue between Walker Street and Denni Street. On-street bicycle lanes (Class II) are provided on both sides of Moody Street and Walker Street. On Cerritos Avenue, west of Denni Street/Lexington Drive and east of Walker Street there is a Class III bike facility. Denni Street has an existing Class III bike facility.

Transit Services. Bus service is currently provided by the Orange County Transportation Authority (OCTA) along Katella Avenue and Valley View Street. OCTA Route 50 runs along Katella Avenue and currently has existing bus stops near Lexington Drive, Siboney Street, Winners Circle, and Walker Street in the vicinity of the Buildout Area. Route 50 provides transportation to/from the Cities of Orange and Long Beach via Katella Avenue. OCTA Route 123 runs along Valley View Street. OCTA Route 123 provides transportation to/from the Cities of Buena Park and Huntington Beach via Valley View Street. OCTA buses stop approximately every hour (60 minutes) during the morning and evening commute hours (operational between 4:00 AM and 10:00 PM).

4.17.4 Regulatory Setting

The following section describes the federal, State, regional, and local regulatory framework applicable to analyzing potential impacts related to transportation from development of the proposed project.

4.17.4.1 Federal Regulations

Americans with Disabilities Act of 1990: Titles I, II, III, and V of the Americans with Disabilities Act (ADA) have been codified in Title 42 of the United States Code (USC), beginning at Section 12101. Title III prohibits discrimination based on disability in "places of public accommodation" (businesses and nonprofit agencies that serve the public) and "commercial facilities" (other businesses). The regulation includes Appendix A through Part 36 (Standards for Accessible Design), establishing minimum standards for ensuring accessibility when designing and constructing a new facility or altering an existing facility. Examples of key guidelines include detectable warnings for pedestrians entering traffic where there is no curb, a clear zone of 48 inches for the pedestrian travel way, and a vibration-free zone for pedestrians.

4.17.4.2 State Regulations

Senate Bill 743. On September 27, 2013, Governor Jerry Brown signed Senate Bill (SB) 743 into law and started a process that changes the methodology used to prepare a transportation impact analysis as part of CEQA requirements. SB 743 directed the California Office of Planning and Research (OPR), which has since been renamed as the Office of Land Use and Climate Innovation (LCI), to establish new CEQA guidance for jurisdictions that removes the LOS method, which focuses on automobile vehicle delay and other similar measures of vehicular capacity or traffic congestion, from CEQA transportation analysis. Rather, VMT, or other measures that promote "the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses," are now used as the basis for determining significant transportation impacts in the State.

***State CEQA Guidelines* Section 15064.3, Subdivision (b).** In January 2018, OPR submitted a proposal for comprehensive updates to the *State CEQA Guidelines* to the California Natural Resources Agency. The submittal included proposed updates related to the analysis of greenhouse gas (GHG) emissions, energy, transportation impacts pursuant to SB 743, and wildfires, as well as revisions to Section 15126.2(a) in response to the California Supreme Court's decision in *California Building Industry Association v. Bay Area Air Quality Management District* (2015) 62 Cal. 4th 369. On December 28, 2018, the updated *State CEQA Guidelines* went into effect.

As part of the update to the *State CEQA Guidelines*, Section 15064.3 was added and codifies that project-related transportation impacts are typically best measured by evaluating the project's VMT. Specifically, subdivision (b) focuses on specific criteria related to transportation analysis and is divided into four subdivisions: (1) land use projects, (2) transportation projects, (3), qualitative analysis, and (4) methodology. Subdivision (b)(1) provides guidance on determining the significance of transportation impacts of land use projects using VMT; projects located within 0.5 mile of high quality transit should be considered to have a less than significant impact. Subdivision (b)(2) addresses VMT associated with transportation projects and states that projects that reduce VMT,

such as pedestrian, bicycle, and transit projects, should be presumed to have a less than significant impact. Subdivision (b)(3) acknowledges that lead agencies may not be able to quantitatively estimate VMT for every project type; in these cases, a qualitative analysis may be used. Subdivision (b)(4) stipulates that lead agencies have the discretion to formulate a methodology that would appropriately analyze a project's VMT.

California Complete Streets Act of 2008 (Assembly Bill [AB] 1358), signed into law on September 30, 2008, requires cities and counties to plan for the needs of all roadway users—motorists, bicyclists, pedestrians, children, seniors, and transit riders—when updating the circulation element of their general plans. Specifically, Government Code Section 65302(b)(2)(A) requires that upon any substantial revision of the circulation element, the general plan must "plan for a balanced, multimodal transportation network that meets the needs of all users of streets, roads, and highways for safe and convenient travel." The act aims to ensure that transportation planning in California supports sustainable communities by promoting active transportation modes and reducing greenhouse gas emissions. It directs local jurisdictions to incorporate Complete Streets principles—such as multimodal connectivity, context-sensitive design, and pedestrian safety—into transportation planning, design, and construction. The California Department of Transportation (Caltrans) issued its Deputy Directive 64-R2 to implement Complete Streets principles in all transportation projects on the State Highway System, ensuring that facilities accommodate bicyclists, pedestrians, transit riders, and motorists of all ages and abilities. The City's General Plan has not yet been updated to address the requirements of AB 1358.

4.17.4.3 Regional Regulations

Southern California Association of Governments 2024–2050 Regional Transportation Plan/ Sustainable Communities Strategy (Connect SoCal 2024). SCAG serves as the Metropolitan Planning Organization (MPO) for the region, and under state law it is designated as both a Regional Transportation Planning Agency and a Council of Governments.

The SCAG region encompasses six counties—Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura—and 191 cities within an area covering more than 38,000 square miles. SCAG develops long-range regional transportation plans, including sustainable communities strategy and growth forecast components, regional transportation improvement programs, and regional housing needs allocations. SCAG also provides support to the various air quality management districts within its jurisdiction, including the South Coast Air Quality Management District, which addresses air quality issues within the City, in preparing air quality management plans.

In compliance with Senate Bill 375, the SCAG Regional Council adopted Connect SoCal 2024, the 2024–2050 RTP/SCS, on April 4, 2024. This long-range visioning plan integrates land use and transportation strategies to enhance mobility options, achieve a more sustainable growth pattern, and meet greenhouse gas (GHG) reduction targets set by the California Air Resources Board (CARB).

Connect SoCal 2024 establishes goals that address mobility, communities, environment, and the economy. If fully implemented, it is projected to reduce traffic congestion, improve air quality, and enhance the region's long-term economic viability through over $751 billion in transportation investments and by fostering a more sustainable development pattern. Connect SoCal 2024 also

provides baseline socioeconomic projections used as the basis for SCAG's transportation planning and service provision across the six-county region.

As part of Connect SoCal 2024, SCAG developed a set of Regional Planning Policies that guide regional decision-making in alignment with Connect SoCal 2024's long-term vision and goals. These policies advance priorities refined over multiple planning cycles to promote a multimodal transportation system and sustainable land use practices. They address Priority Development Areas (PDAs), housing provision, equitable engagement and decision-making, sustainable development, air quality, clean transportation, preservation of natural and agricultural lands, and climate resilience.

SCAG identifies development within PDAs, provision of adequate housing opportunities, creation of 15-minute communities, and equitable decision-making as key strategies for implementing these regional planning priorities. PDAs are defined as areas where future growth can be located to support Connect SoCal 2024's goals, typically where residents have access to multiple travel modes or where trip origins and destinations are in close proximity, resulting in shorter trips. PDAs function as a technical tool used in growth visioning, performance measurement, and funding applications. Development within overlapping PDAs generally indicates a greater degree of alignment with Connect SoCal 2024's objectives.

PDAs include Neighborhood Mobility Areas (NMAs), Livable Corridors, and Transit Priority Areas (TPAs). SCAG also recognizes that many Livable Corridors are High-Quality Transit Corridors (HQTCs) that provide frequent bus service and strong multimodal connectivity.

Orange County Congestion Management Program. Established in 1991, OCTA consolidated seven separate agencies into a single multimodal transportation agency. State law requires that a CMP be developed, adopted, and updated biennially for every county that includes an urbanized area, and requires that it include every city and the county government within that county. As the Congestion Management Agency for Orange County, OCTA is responsible for implementing the Orange County CMP. OCTA adopted the CMP in 1991 to reduce traffic congestion and to provide a mechanism for coordinating land use and development decisions in Orange County. Compliance with the CMP requirements ensures a city's eligibility to compete for State gas tax funds for local transportation projects. The CMP Highway System includes two arterials within the Cities of Cypress and Los Alamitos: Valley View Street and Katella Avenue.

County of Orange Master Plan of Arterial Highways (MPAH). The County of Orange Master Plan of Arterial Highways (MPAH) defines the arterial system in the Circulation Element of the Orange County General Plan. This system, which is the planned future roadway system in the County, incorporates several specific arterial roadway classifications. The Circulation Elements of cities within the County are expected to be consistent with the MPAH in order to be eligible for funding improvements on MPAH roadways.

County of Orange Measure M Growth Management Program. Measure M, approved in 1990 by the voters in the County, authorized the collection of a one-half percent sales tax to fund needed transportation improvements in the County. In order to be eligible to receive funds, cities must satisfy a number of requirements, including adopting a Circulation Element that is consistent with

the County's MPAH, adopting a Growth Management Plan, and adopting a seven-year capital improvement program to include transportation projects funded by Measure M.

4.17.4.4 Local Regulations

Cypress Town Center and Commons Specific Plan 3.0. The Cypress Town Center and Commons Specific Plan 3.0 contains the following provisions in Section 2.2 (Circulation Plan) thereof related to transportation:

- **Circulation Plan:** Primary access to the Buildout Area will be from Katella Avenue, which is designated as a Major Arterial in the Circulation Element of the General Plan, Cerritos Avenue, which is designated as a Primary Arterial in the Circulation Element, and the extension of Vessels Circle. Additional access to the site will be provided from Lexington Drive and Enterprise Drive.

  The backbone circulation for the Buildout Area has been designed to accommodate the contemplated development under the Specific Plan and is depicted on Figure 2-3 in the Specific Plan. The backbone circulation improvements include the extension of Moody Street south of Cerritos Avenue to Siboney Street, the extension of Vessels Circle to the west to intersect with the Moody Street extension, and the required future widening of Lexington Drive adjacent to the Buildout Area.

City of Cypress General Plan. The Cypress General Plan[5] is the primary source of long-range planning and policy direction that guides growth and preserves the quality of life within the community. The General Plan contains goals, policies, and plans that are intended to guide land use and development decisions. The General Plan, last comprehensively updated by the City Council in September 2001, includes a Land Use Map and the following eight elements, or chapters, which together fulfill the State requirements for a General Plan:

- Land Use Element
- Housing Element
- Circulation Element
- Conservation/Open Space/Recreation Element (satisfies the State's Conservation and Open Space Element requirements)
- Safety Element
- Noise Element
- Air Quality Element (optional element not required by State law)
- Growth Management Element (optional element not required by State law).

City of Cypress General Plan Circulation Element. The Circulation Element[6] is a general guide for the planning, development, and enhancement of the City's public roadways, based on existing and

[5] City of Cypress. 2001. *Cypress General Plan*.
[6] City of Cypress. 2001. *Cypress General Plan Circulation Element.*

anticipated land uses. Most transportation-related plans and programs are established with the goal of maintaining acceptable operating LOS on the City's transportation system. The City of Cypress has adopted LOS D or better as the desired citywide operating standard for most City streets. However, given the influence of regional traffic on Valley View Street, Lincoln Avenue, and Katella Avenue, which are beyond the control of the City of Cypress, LOS E or better has been adopted as the minimum operating LOS for street segments and intersections on these arterials. The Circulation Element goals and policies define the City's vision for a balanced, efficient circulation system which incorporate many modes of travel and which allows for the safe movement of people and goods in and around the City. Based on the Circulation Element, the local and regional street network is built out in the City. Similarly, the City's bikeway system is generally built out, although a bike lane is planned on Walker Street south of Cerritos Avenue in the vicinity of the Buildout Area. This proposed bike lane would connect to the existing bike lane on Walker Street north of Cerritos Avenue. Applicable goals and policies provided in the Circulation Element include:

- **CIR-1:** Maintain a safe, efficient, economical, and aesthetically pleasing transportation system providing for the movement of people, goods, and services to serve the existing and future needs of the City of Cypress.
    - **CIR-1.1:** Respond to transportation problem areas with efforts to implement both interim and long-term solutions.
    - **CIR-1.2:** Participate in transportation planning efforts which involve other governmental agencies, mandated programs, and regulations in order to minimize environmental impacts related to transportation and to enhance transportation systems.
    - **CIR-1.3:** Encourage development which contributes to a balanced land use, which in turn serves to reduce overall trip lengths (i.e., jobs/housing balance, locate retail in closer proximity to resident/patrons).
    - **CIR-1.4:** Require new development to conform to the standards and criteria of the City of Cypress and other mandated programs. This includes mitigation of traffic impacts to the surrounding street system.
    - **CIR-1.5:** The City of Cypress will continue involvement in plans and programs related to the Circulation Element. This involvement is anticipated to result in traffic studies to be undertaken by City staff, to identify specific circulation programs and improvements to be implemented, in order to satisfy the various related programs.
    - **CIR-1.6:** Encourage the development of aesthetic streetscapes to promote a positive City image and provide visual relief.
    - **CIR-1.7:** Maintain consistency between the City Circulation Element and the Orange County Master Plan of Arterial Highways (MPAH).
- **CIR-2:** To facilitate alternative modes of transportation, including public transportation, bicycles, ridesharing, and pedestrians, to support the land use plans and related transportation needs.

- **CIR-2.1:** Encourage development and improvements which incorporate innovative methods of accommodating transportation demands.
- **CIR-2.2:** Give high priority to the establishment of a high-quality public transit system that minimizes dependency on the automobile.
- **CIR-2.3:** Ensure that effective Transportation Demand Management (TDM) measures and programs are being implemented.
- **CIR-2.4:** Encourage development and site design which facilitate implementation of high quality, desirable bicycle routes which meet or exceed established standards.
- **CIR-2.5:** Implement adequate sidewalks to meet the required uses and needs, which serves to encourage alternative modes of transportation. Bicycle routes which utilize sidewalks require establishment of a City ordinance, per the Vehicle Code.
- **CIR-2.6:** Respond to increases in demand for additional bus service through interaction with OCTA and other available resources.
- **CIR-2.7:** Implement plan to install handicap access ramps to improve disabled access to transportation facilities.
- **CIR-2.8:** Enhance the sidewalk environment to encourage pedestrian activities through streetscape and transit enhancement programs.
- **CIR-2.9:** Enhance transit environment by improving passenger loading sites by providing bus benches, safety lighting and other projects to enhance bus stops.

4.17.5 Thresholds of Significance

The thresholds of significance for transportation impacts used in this analysis are consistent with Appendix G of the *State CEQA Guidelines*. Based on these thresholds, implementation of the proposed project would have a significant adverse impact with respect to transportation if it would:

Threshold 4.17.1: Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities;

Threshold 4.17.2: Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b);

Threshold 4.17.3: Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment); or

Threshold 4.17.4: Result in inadequate emergency access.

4.17.6 Project Impacts

Threshold 4.17.1: Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

***Less Than Significant Impact*.** The proposed project consists of the reasonably foreseeable buildout of the Buildout Area in the City. The proposed project would include the development of up to 1,791 additional residential units and approximately 440,000 square feet of non-residential development within the Buildout Area.

Consistent with the Circulation Plan shown on Figure 2-3 in the Specific Plan, the proposed project would include the extension of Moody Street from Cerritos Avenue to Katella Avenue, as well as the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension. The Moody Street extension would traverse the Buildout Area, passing adjacent to Lots 3, 4, 5, 6, 7, 12, 13, and 14 in proposed VTTM 19247, and create a central north-south corridor, while the extension of Vessels Circle within Lot C would, among other things, provide access to Lots 10 and 11 in proposed VTTM 19247. The proposed project also includes, consistent with the Specific Plan, the widening of Lexington Drive within Lot B in proposed VTTM 19247. In addition, the proposed project would include seven access driveways, including one at Lexington Drive and two each at Cerritos Avenue, Moody Street, and Vessels Circle. Future development within the Buildout Area may require the construction of private driveways, accessways and/or streets that connect to the Moody Street and Vessels Circle extensions and existing public streets adjacent to the Buildout Area, but their specific locations and sizes would be determined during the design process for specific development projects. As the proposed project would include the extension of Moody Street south of Cerritos Avenue to Siboney Street, the extension of Vessels Circle to the west to intersect with the Moody Street extension, and the required future widening of Lexington Drive, consistent with the Circulation Plan contained in the Specific Plan, implementation of the proposed project would not conflict with the Specific Plan with respect to transportation.

The following evaluates the proposed project's consistency with other programs, plans, ordinances, and/or policies addressing the circulation system, including those relating to transit, roadway, bicycle, and pedestrian facilities.

Circulation System: In the City, the circulation system is primarily regulated by the City's General Plan Circulation Element. In addition, the City's General Plan Growth Management Element contains a goal to reduce traffic congestion. **Table 4.11.D: General Plan Consistency Analysis** in Section 4.11 Land Use and Planning provides a consistency analysis of the goals and policies from the City's General Plan pertaining to the circulation system that are relevant to the proposed project. As provided in **Table 4.11.D**, the proposed project would not conflict with any of the goals and policies contained in the City's General Plan related to the circulation system.

The regional circulation system is also regulated through Connect SoCal 2024, which is the long-range visioning plan for the Southern California region that details land use and transportation strategies to increase mobility options and achieve a more sustainable growth pattern. As discussed in Section 4.11, the proposed project would be consistent with applicable Connect SoCal 2024 goals,

and no mitigation is required. Furthermore, the proposed project reinforces the stated goals of Connect SoCal 2024, including Connect SoCal 2024's goals to develop, connect and sustain communities that are livable and thriving and to create a healthy region for the people of today and tomorrow, by providing additional housing opportunities within locations near amenities and already used by the public for commercial, recreational, and/or professional uses. In addition, the proposed project would support the development, connection, and sustainability of communities that are livable and thriving by providing necessary housing for all income levels in a bustling economic corridor. **Table 4.11.C** in Section 4.11 provides a full consistency analysis of the proposed project and the specific goals and policies contained in Connect SoCal 2024.

Transit. As previously discussed, transit service in the vicinity of the Buildout Area is provided by the OCTA along Katella Avenue and Valley View Street. OCTA Route 50 runs along Katella Avenue, with existing bus stops located near Lexington Drive, Siboney Street, Winners Circle, and Walker Street in the vicinity of the Buildout Area. OCTA Route 123 runs along Valley View Street. The proposed project is anticipated to generate approximately 21,041 net daily vehicle trips, combining residential and nonresidential land uses and accounting for existing trips.[7] Based on the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 11th Edition and the project's mixed-use composition, the residential component would account for roughly 60 percent of total daily trips, while the non-residential component contributes the remaining 40 percent. Applying a 1.0 percent bus transit mode share derived from the United States Census Bureau's American Community Survey (ACS) 2018–2022 5-Year Estimates for Cypress and Orange County,[8] the project is expected to generate approximately 210 daily transit trips. When converted to total bus boardings (assuming two boardings per round trip), this equates to 420 OC Bus boardings.

Based on the transit trip estimate provided above, the proposed project's residential uses would account for approximately 126 daily bus trips, while the non-residential uses would account for 84 daily bus trips. The City's General Plan Circulation Element contains Policy CIR-2.6, which requires the City to respond to increases in demand for additional bus service through interaction with OCTA and other available resources. As such, the City is continually assessing ridership demand and coordinates with OCTA in order to address any deficiencies in service. OCTA has also recently completed the 2024 Orange County Transit Vision Master Plan,[9] which aims to integrate, enhance, and expand multimodal transportation services throughout the County and is currently developing the Directions 2050 plan[10] to update OCTA's Long-Range Transportation Plan (LRTP). Directions 2050

8 United States Census Bureau. 2022. *American Community Survey 2018-2022 5-Year Estimates:* Table B08301, "Means of Transportation to Work". National Archive: https://www.census.gov/programs-surveys/acs/technical-documentation/table-and-geography-changes/2022/5-year.html (accessed March 2026). While there is a more recent survey (2019-2023), the data does not provide an updated transit mode share percentage for work commuters via transit.

9 Orange County Transportation Authority (OCTA). 2025a. *2024 Orange County Transit Vision Master Plan*. May.

10 Orange County Transportation Authority (OCTA). 2025c. OCTA Seeks Public Input to Help Shape Orange County's Transportation Future. October 3. Website: https://www.octa.net/news/news-releases/octa-seeks-public-input (accessed October 2025).

will look ahead to 2050 and outline strategies to ensure that the County's transportation system remains efficient, safe, balanced, and sustainable, and addresses the provision of transit services. OCTA's Fiscal Year (FY) 2025-2026 budget also highlights increased transit service, including adding more bus service to meet rising demand, and investments in transit infrastructure.[11] Implementation of the proposed project would not interfere with implementation of these transit planning documents, including the specific actions to address the growing need for expanded transit service. Therefore, the proposed project would not conflict with any adopted transit system plans, guidelines, policies, or standards and impacts to transit facilities would be less than significant.

Bicycle and Pedestrian Facilities. Under existing conditions, sidewalks are located along Katella Avenue, Cerritos Avenue, Walker Street, Moody Street, and Lexington Drive in the vicinity of the Buildout Area. There are pedestrian crosswalks at all signalized intersections in the vicinity of the Buildout Area. These facilities provide for pedestrian circulation between the Buildout Area and the surrounding areas. In addition, Katella Avenue and Valley View Street currently accommodate off-street bike paths and on-street (Class II) bicycle lanes are provided on both sides of Cerritos Avenue (between Walker Street and Denni Street) and Bloomfield Street. There is a Class I bike path on the south side of Cerritos Avenue between Walker Street and Denni Street and on-street bicycle lanes (Class II) are provided on both sides of Moody Street and Walker Street.

Implementation of the proposed project would provide sidewalks along the project frontages. In addition, pedestrian sidewalks and pathways would be provided throughout the Buildout Area and provide connections to existing pedestrian and bicycle facilities in the surrounding area. Specifically, the proposed project is assumed to include the addition of approximately 1 mile of bicycle facilities, connecting to the existing bicycle network. In addition, pedestrian access via sidewalks to the Buildout Area would be from Katella Avenue, Cerritos Avenue, Lexington Drive, and Vessels Circle, as extended. Further pedestrian circulation improvements include sidewalks along the extension of Moody Street south of Cerritos Avenue. These pathways, together with the existing pedestrian infrastructure on the surrounding streets, would ensure seamless integration with the broader pedestrian network, effectively linking the Buildout Area with nearby amenities and transit options.

Additionally, as discussed further in Threshold 4.17.2 and detailed in **Mitigation Measure TRA-1**, the proposed project would be required to implement feasible Transportation Demand Management (TDM) strategies to mitigate the proposed project's VMT impact, which include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network and improving the pedestrian network, including the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area. All future development facilitated by the proposed project would be required to comply with City policies regarding bicycle parking and other infrastructure. In addition, the proposed project would not include features that would disrupt existing or planned bicycle or pedestrian facilities. Therefore, the proposed project would not conflict with any adopted bicycle or pedestrian system plans, guidelines, policies, or standards and impacts to bicycle and pedestrian facilities would be less than significant.

[11] Orange County Transportation Authority (OCTA). 2025b. OCTA Approves $1.74 Billion Balanced Budget for FY 2025-26. June 6. Website: https://www.octa.net/news/news-releases/octa-approves-174-billion-balanced-budget-for-fy-2025-26 (accessed October 2025).

Roadway System. The proposed project would include the extension of Moody Street from Cerritos Avenue to the northern terminus of Siboney Street, as well as the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension, consistent with the Specific Plan. The proposed project also includes, consistent with the Specific Plan, the widening of Lexington Drive within Lot B in proposed VTTM 19247 and seven access driveways, including one at Lexington Drive and two each at Cerritos Avenue, Moody Street, and Vessels Circle.

It is anticipated that construction would commence in 2026 and be completed in 2038. Large construction equipment such as bulldozers, loaders, scrapers, backhoes, water trucks, and pavers would be required during various construction phases and would be delivered to the Buildout Area as needed.

The proposed project would be constructed over an extended period and the phasing of specific development projects cannot be precisely determined at this time. Haul routes for construction traffic would be along the designated truck routes, including Katella Avenue, Cerritos Avenue, Walker Street and Valley View Street, in the Cities of Cypress, Los Alamitos and Garden Grove to I-605, SR-22 or I-405. Use of the Moody Street extension after it is built and/or Lexington Drive may be needed for grading activities in some portions of the Buildout Area to access the noted designated truck routes. As each specific development project is identified, specific haul routes can be determined.

During construction, temporary delays in traffic may occur due to oversized vehicles traveling at lower speeds on the surrounding roadways turning into the Buildout Area. In addition, construction activities may require temporary road or lane closures in the vicinity of the Buildout Area. Temporary road or lane closures during construction would be a potential significant impact to roadways and safety . The traffic generated by construction activity would be limited in duration and would not materially impact the LOS at any study intersections or freeway mainline segments. In addition, a transportation construction plan (TCP) for construction activities associated with each development project withing the Buildout Area would be submitted to the City of Cypress Public Works Department for review and approval.

For the reasons set forth above, construction traffic impacts associated with conflict with a program, plan, ordinance, or policy addressing the roadway system during construction would be less than significant.

Operation: The project would not conflict with adopted programs, plans, ordinances, or policies addressing the circulation system in the City of Cypress. The project would be consistent with the City of Cypress General Plan circulation framework, which emphasizes safe and efficient movement for vehicles, transit, bicycles, and pedestrians, as well as the Circulation Plan contained in the Specific Plan. The project would not cause physical deterioration of roadway facilities, interfere with transit operations, or preclude the implementation of existing or planned bicycle and pedestrian facilities. Project access, internal circulation, and connections to the surrounding transportation network would comply with City standards and applicable design requirements.

Congestion Management Plan Analysis. Pursuant to SB 743 and Section 15064.3 of the *State CEQA Guidelines*, the determination of significance for transportation impacts under CEQA is based on

VMT rather than roadway LOS. Accordingly, congestion or delay at intersections, including those on the Orange County CMP network, is no longer considered a significant environmental impact under CEQA. Although LOS is no longer used for CEQA significance determinations, the City's General Plan Circulation Element and the Orange County CMP continue to identify LOS standards for local policy and regional consistency purposes. Therefore, the CMP analysis in this document is provided for informational purposes only and does not influence the environmental significance determinations related to transportation impacts, pursuant to CEQA. This discussion is provided to demonstrate consistency with the City's circulation policies and the performance requirements of OCTA, which administers the countywide CMP pursuant to Government Code § 65088 et seq.

CMP requirements state that a Traffic Impact Analysis (TIA) is required for CMP purposes for any proposed development generating 2,400 or more daily trips, except that for developments which will directly access a CMP Highway System roadway segment, the threshold for requiring a TIA is reduced to 1,600 or more trips per day. Given that the proposed project is estimated to generate a total of 21,041 daily trips, and would include access directly from Katella Avenue, which is a CMP facility, a TIA for the proposed project has been prepared and is available from the City upon request. The CMP requires that the traffic study area for the proposed project extend far enough to cover any CMP roadway segment on which the project traffic would represent 3 percent or more of the roadway segment LOS E capacity. Within the cities of Cypress and Los Alamitos, the CMP Highway System includes two arterials: Valley View Street and Katella Avenue. Currently, Katella Avenue and Valley View Street operate at LOS E. The proposed project's daily traffic volumes would exceed the 3 percent threshold for relatively short distances on Katella Avenue east and west of the Buildout Area and along Valley View Street to the north and south.

For Katella Avenue, the proposed project's daily traffic volumes would be below the 3 percent threshold at the Katella Avenue at I-605 Southbound Ramps CMP intersection to the west; and the Beach Boulevard and Katella Avenue intersection, which is the next CMP intersection to the east. In regard to Valley View Street, the proposed project's daily traffic volumes would be below the 3 percent threshold along Valley View Street before reaching the next CMP intersection to the north, which is the SR-91 Eastbound Ramp and Valley View Street intersection in the city of Buena Park, and the next CMP intersection to the south, which is Bolsa Chica Road at I-405 Southbound Ramps. Therefore, the CMP traffic analysis has been carried out sufficiently far enough to satisfy CMP requirements and no further analysis is required.

Conclusion: Based on the above analysis, and because the proposed project would be required to adhere to the Specific Plan and the General Plan, the proposed project would generally be consistent with all programs, plans, ordinances, and policies addressing the circulation system, including those regulating transit, roadway, bicycle, and pedestrian facilities. Therefore, impacts would be less than significant, and no mitigation is required.

Threshold 4.17.2: Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

***Significant and Unavoidable Impact*.** As previously discussed, a VMT screening was conducted as part of the VMT Memo (**Appendix K**) to evaluate the proposed project based on the pre-established criteria outlined in the County Guidelines for presuming a less than significant impact. Specifically,

the following applicable screening criteria in the County Guidelines were considered for the proposed project.

Project in High Quality Transit Area (HQTA). A project located within 0.5 mile from an existing major transit stop[12] or within 0.5 mile from an existing stop along a high-quality transit corridor[13] is considered an HQTA project and is presumed to result in a less than significant VMT impact. The VMT Memo determined that while the Buildout Area is served by OCTA Route 50, none of the stops have bus routes operating with a frequency of 20 minutes interval and therefore cannot be considered a major transit stop. Therefore, the proposed project does not meet this criterion.

Neighborhood Retail Project. The County Guidelines include a 50,000-square-foot screening threshold for the totality of local-serving retail on a project site. However, this threshold departs from how the LCI applies this threshold in its *Technical Advisory on Evaluating Transportation Impacts In CEQA* (LCI Technical Advisory),[14] which states that retail development including stores larger than 50,000 square feet might be considered regional-serving, and so lead agencies should undertake an analysis to determine whether the project might increase or decrease VMT. This language is commonly understood to mean that the threshold applies on a per-store basis. The intent is to identify larger, individual retail tenants, such as big-box stores, that are more likely to attract regional trips and therefore increase VMT. In contrast, smaller stores below this threshold are generally presumed to be local-serving, with the potential to reduce trip lengths by serving nearby residents.

The proposed project assumes approximately 440,000 square feet of retail and other commercial space pursuant to the Specific Plan that is intended to provide retail and other service-oriented uses, as well as a limited amount of other types of commercial space, that enhance access to essential goods and services while supporting local employment opportunities. The proposed 440,000 square feet of non-residential area would be distributed on multiple sites within the Buildout Area in a manner that maintains a local-serving character appropriate for the surrounding community. Because the proposed project is a conceptual buildout under the Specific Plan, specific non-residential tenants have not yet been identified. However, Section 3.3.1 of the Specific Plan outlines the range of permitted retail and other commercial uses, which include, for example, general merchandise stores, financial services, hardware stores, florists, barber/beauty shops, and family entertainment centers with party facilities.

Further, it is anticipated that no single retail establishment developed as part of the proposed would exceed 50,000 square feet in size. Accordingly, even though the total non-residential space would

[12] Under the amended Public Resources Code § 21064.3 – "'Major transit stop' means a site containing an existing rail or bus rapid transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 20 minutes or less during the morning and afternoon peak commute periods."

[13] Public Resources Code § 21155 - For purposes of this section, a "'high-quality transit corridor' means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours."

[14] Governor's Office of Land Use and Climate Innovation (LCI) (previously the Governor's Office of Planning and Research [OPR]). 2018. T*echnical Advisory on Evaluating Transportation Impact In CEQA.* April.

exceed 50,000 square feet, each individual retail tenant is anticipated to fall below the LCI's screening threshold for regional-serving retail uses. In this way, the proposed project remains consistent with the intended function of the 50,000-square-foot threshold as construed in the LCI Technical Advisory, supporting the presumption that typical small-format, local-serving retail establishments are unlikely to result in a significant VMT impact.

Applying this approach, the proposed project's retail component comprised of a collection of smaller, neighborhood-oriented stores would not trigger additional VMT analysis under the LCI framework. Although the County Guidelines take a more conservative position by aggregating total project area, the underlying purpose of the threshold is still met because the proposed project would primarily serve local demand without inducing substantial new regional vehicle trips. Therefore, the development of the proposed project's non-residential uses are presumed to result in a less than significant VMT impact.

Nevertheless, in recognition of the more conservative approach in the County Guidelines to apply the 50,000-square-foot threshold to total project retail area, a quantitative analysis was performed as part of the VMT Memo in accordance with the County Guidelines. The results of this analysis show that, even when applying the County's more stringent methodology, the proposed project's non-residential component would have a less than significant VMT impact, further substantiating the conclusion that the proposed project's neighborhood-serving retail and other commercial uses would not generate substantial new regional vehicle travel. Specifically, the non-residential component of the proposed project would result in net decrease in total Countywide VMT under both existing and cumulative scenarios with the addition of the proposed project. This reduction occurs because integrating retail uses into the Buildout Area would enable more trips to occur internally or over shorter distances, reducing the need for residents to travel off-site for essential services and goods.

Low VMT Area Project. Projects located in areas with low VMT are generally presumed to have a less than significant VMT impact. The Buildout Area is within a region where residential uses generate less than 85 percent of the regional average VMT per capita. However, according to the County Guidelines, this screening criterion does not apply to large projects generating 1,000 or more daily vehicle trips. As the proposed project is expected to generate over 1,000 daily vehicle trips, a quantitative VMT analysis is required to accurately assess its impacts, and the proposed project cannot be screened out based on this criterion.

The results of the VMT screening determined that the proposed project does not meet the HQTA or Low VMT Area screening criteria, but does qualify as a neighborhood-serving retail development under the LCI Technical Advisory. A supplemental quantitative analysis conducted in accordance with the County Guidelines confirmed that the proposed project's non-residential uses result in a less-than-significant VMT impact, supporting the conclusion that the proposed project satisfies both the intent and technical requirements for VMT screening.

However, the residential component of the proposed project does not meet any of the applicable project-type screening criteria and, therefore, cannot be presumed to have a less than significant VMT impact. Consequently, a full VMT analysis was conducted for the proposed residential uses in accordance with the County Guidelines, as detailed below.

To calculate VMT for the proposed project, OCTAM was run for both existing plus project (2019) and cumulative plus project (2050) scenarios, and calculations from the relevant OCTAM output files were completed to estimate the anticipated Home-Based VMT for the project's TAZ. The City's threshold of significance for a project's VMT impact with respect to residential uses, based on the County Guidelines, is 13.21 VMT per capita (15 percent below the existing regional average). As provided in the VMT Memo and shown in **Table 4.17.A: Project Residential VMT Impacts**, the Home-Based VMT per Capita for the proposed project would be higher than the County's residential VMT significance thresholds under both existing and cumulative plus project conditions, resulting in a Home-Based VMT per Capita that would exceed the significance threshold by 11.6 percent.

Table 4.17.A: Project Residential VMT Impacts

Analysis Scenario	Home-Based VMT/Capita
Significance Threshold (15% Below Existing regional average)	13.21
Existing Plus Project (2019)	14.29
Cumulative Plus Project (2050)	14.96
VMT in Excess of Significance Threshold	1.73
VMT % In Excess of Threshold	11.6%

Source: *Vehicle Miles Traveled (VMT) Analysis for Specific Plan 3.0 Buildout Project.* (Kimley-Horn and Associates, Inc., May 2025b).

Because the proposed project would exceed this residential significance threshold, the proposed project's residential component is considered to have a potentially significant VMT impact under CEQA. As such, future residential development in the Buildout Area would be required to comply with **Mitigation Measure TRA-1**.

Mitigation Measure TRA-1

Transportation Demand Management Strategies. The Development Agreement between the City of Cypress and the Project Applicant regarding the proposed project shall include a provision requiring that any future project applicants for subsequent residential development projects within the Buildout Area demonstrate the project's consistency with the measures set forth in Items 1 and 2 below that are applicable to such project prior to its approval to the satisfaction of the City of Cypress Planning Director.

1. **Construct or Improve Bike Facility (California Air Pollution Control Officers Association [CAPCOA] Handbook Strategy T-19-A):** This transportation demand management strategy requires the project to include a new bicycle facility or facilities or improve an existing facility that would connect the project to the existing regional bicycle network. The construction/ improvement of bicycle facilities would provide residents with the opportunity to bike to their destination rather than drive,

reducing the number of vehicle trips and overall project-generated vehicle miles traveled (VMT).

2. **Provide Pedestrian Network Improvement (CAPCOA Handbook Strategy T-18):** This transportation demand management strategy requires the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area.

Implementation of **Mitigation Measure TRA-1** would require the proposed project to reduce overall VMT in order to contribute to achieving the overall VMT reduction target established in this Draft EIR of 11.6 percent.

The bike facility improvement in Item 1 of **Mitigation Measure TRA-1** is estimated to achieve a 0.1 percent reduction in VMT by enhancing active transportation options, increasing network connectivity, and encouraging a shift away from single-occupancy vehicle trips.

The construction of the pedestrian facilities in Item 2 of **Mitigation Measure TRA-1** would provide residents with the opportunity to walk to their destination rather than drive, reducing the number of vehicle trips and overall project-generated VMT. The project would add approximately 1.7 miles of new sidewalks along the Moody Street and Vessels Circle extensions, which will be public streets. From the CAPCOA Guidelines, the recommended study area of 0.6 mile from the project perimeter was used to determine the length of existing off-site sidewalks, within that radius, which is 7.7 miles. The project would increase the existing study area sidewalk length from 7.7 miles to 9.4 miles, which would reduce VMT by 1.1 percent according to the formula provided in the County Guidelines. This estimate assumes moderate improvements to pedestrian infrastructure, such as creating new connections to Moody Street and Vessels Circle, as well as typical safety and accessibility upgrades.

Therefore, while the implementation of **Mitigation Measure TRA-1** would reduce the residential VMT impact, that impact would remain above the established threshold for residential VMT and the residential VMT impact would be significant and unavoidable.

Threshold 4.17.3: Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

***Less Than Significant Impact*.** For purposes of CEQA, transportation-related hazards refer to engineering aspects of a project (e.g., speed, turning movements, complex designs, substantial distance between street crossings, sight lines) that may cause a greater risk of collisions that result in serious or fatal physical injury than a typical project. This analysis focuses on hazards that could reasonably stem from the proposed project, beyond collisions that may result due to unsafe drivers or collisions that could not be prevented by design of the circulation system.

The proposed project assumes the extension of Moody Street from Cerritos Avenue to Katella Avenue, as well as the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension, consistent with the Specific Plan. The Moody Street extension would

traverse the Buildout Area, passing adjacent to Lots 3, 4, 5, 6, 7, 12, 13, and 14 in proposed VTTM 19247, and create a central north-south corridor, while the extension of Vessels Circle within Lot C would, among other things, provide access to Lots 10 and 11 in proposed VTTM 19247. The proposed project also includes, consistent with the Specific Plan, the widening of Lexington Drive within Lot B in proposed VTTM 19247. In addition, the proposed project would include seven access driveways, including one at Lexington Drive and two each at Cerritos Avenue, Moody Street, and Vessels Circle. Future development within the Buildout Area may require the construction of private driveways, accessways and/or streets that connect to the Moody Street and Vessels Circle extensions and existing public streets adjacent to the Buildout Area, but their specific locations and sizes would be determined during the design process.

Except as otherwise provided in the Specific Plan, all roadway improvements in and around the Buildout Area shall be designed and constructed in accordance with Chapter 25, Article 5, Public Improvements, of the CMC and applicable Public Works Design Standards, which establish minimum requirements for street widths, curb return radii, intersection design, and driveway access. Except as otherwise provided in the Specific Plan, driveway design and access control shall also comply with CMC Appendix I (Zoning), Chapter 3.14 – Off-Street Parking and Loading, which regulates driveway width, location, and spacing to prevent hazardous conflicts between vehicular and pedestrian movements (CMC § 3.14.050). In addition, except as otherwise provided in the Specific Plan, all final site and roadway improvement plans shall conform to the City's Public Works Design Criteria Manual, which incorporates *California Manual on Uniform Traffic Control Devices* (CA MUTCD) standards for intersection control, sight distance, and geometric design.

All final improvement and site access plans shall be subject to review and approval by the City's Public Works and Fire Departments prior to issuance of building permits. Compliance with these requirements and design standards would ensure that new roadway and driveway improvements avoid sharp curves, unsafe intersection geometry, and visual obstructions, thereby maintaining safe and efficient circulation within and adjacent to the Buildout Area.

For these reasons, the proposed project's impact related to a substantial increase in hazards due to a design feature or incompatible use would be less than significant.

Threshold 4.15.4: Would the project result in inadequate emergency access?

***Less Than Significant Impact*.** As previously discussed, all roadway improvements in and around the Buildout Area would be designed and constructed to satisfy all City requirements for street widths, corner radii, and intersection control, as well as incorporate design standards tailored specifically to site access requirements. The proposed project and internal circulation system would be designed, constructed, and maintained to provide adequate emergency access and evacuation to all future on-site structures.

During construction of future development facilitated by the proposed project, the construction contractor would be required to implement a TCP that complies with applicable engineering standards outlined in the CA MUTCD. The proposed seven access driveways, including one at Lexington Drive and two each at Cerritos Avenue, Moody Street, and Vessels Circle, would also act as fire access roads and would be designed to adequately accommodate fire apparatus and other

emergency response vehicles. Final site plans would be subject to review and approval by the Orange County Fire Authority (OCFA) and the City's Police Department to ensure adequate emergency vehicle access to and within the Buildout Area prior to the issuance of building permits. Adherence to the emergency access measures required by the City would ensure impacts related to inadequate emergency access would be less than significant.

4.17.7 Level of Significance Prior to Mitigation

Implementation of the proposed project would result in potentially significant impacts related to transportation.

4.17.8 Regulatory Compliance Measures and Mitigation Measures

4.17.8.1 Regulatory Compliance Measures

No regulatory compliance measures are applicable to the proposed project pertaining to transportation.

4.17.8.2 Mitigation Measures

Future development facilitated under the proposed project would be required to implement the following Mitigation Measure.

Mitigation Measure TRA-1 **Transportation Demand Management Strategies.** The Development Agreement between the City of Cypress and the Project Applicant regarding the proposed project shall include a provision requiring that any future project applicants for subsequent residential development projects within the Buildout Area demonstrate the project's consistency with the measures set forth in Items 1 and 2 below that are applicable to such project prior to its approval to the satisfaction of the City of Cypress Planning Director.

1. **Construct or Improve Bike Facility (California Air Pollution Control Officers Association [CAPCOA] Handbook Strategy T-19-A):** This transportation demand management strategy requires the project to include a new bicycle facility or facilities or improve an existing facility that would connect the project to the existing regional bicycle network. The construction/ improvement of bicycle facilities would provide residents with the opportunity to bike to their destination rather than drive, reducing the number of vehicle trips and overall project-generated vehicle miles traveled (VMT).

2. **Provide Pedestrian Network Improvement (CAPCOA Handbook Strategy T-18):** This transportation demand management strategy requires the construction of off-site sidewalks to

improve sidewalk coverage and pedestrian access to the surrounding area.

4.17.8.3 Level of Significance after Mitigation

Even with implementation of **Mitigation Measure TRA-1**, the proposed project would result in a significant and unavoidable impact related to residential VMT. No other feasible mitigation measures have been identified to reduce these impacts to less than significant.

4.17.9 Cumulative Impacts

The purpose of this section is to evaluate any additional incremental impact that the proposed project is likely to cause over and above the combined impacts of recently approved and proposed projects in the City. The impact area used to assess potential cumulative transportation impacts is the City and immediately surrounding area because the proposed project would affect transportation facilities within the City as well as immediately adjacent areas. Please refer to **Table 4.A: Summary of Related Projects** and **Figure 4.1: Related Projects**, in Chapter 4.0, Existing Setting, for the descriptions and locations of these related projects.

Each development proposal received by the City is required to undergo individual environmental review pursuant to CEQA. Some of the related projects identified in **Table 4.A** have undergone environmental review pursuant to CEQA, which included an analysis of potential impacts related to transportation. According to the EIRs prepared for the Shea Properties Mixed Use Development Project (Related Project 1) and Melia Homes -Citrus Square Project (Related Project 2), transportation and VMT impacts would be less than significant and no mitigation was required. In addition, the EIR prepared for the Los Alamitos Medical Center Project (Related Project 7) determined that transportation and VMT impacts would be reduced to less than significant with implementation of mitigation. Further, the EIRs determined that cumulative impacts related to transportation and VMT would be less than significant. The environmental documents prepared for the Goodman Commerce Center Project (Related Project 3) determined that all transportation and VMT impacts would also be less than significant with implementation of mitigation that requires a truck signage and striping plan. The Sycamore Creek Charter School Project (Related Project 6) and 4562 Katella Avenue Project (Related Project 8) were determined to be exempt from CEQA review under Section 15332 of the *State CEQA Guidelines* (for infill development) and Notices of Exemption (NOEs) were prepared. In order for a project to be exempt under Section 15332 of the *State CEQA Guidelines*, the project must not result in significant traffic impacts. The LTP Modern Machine Project (Related Project 5) and 8561 Belmont Street Project (Related Project 4) would also be required to undergo environmental review pursuant to CEQA, which would include an analysis of potential impacts on transportation and the identification of any mitigation measures to reduce potential impacts, if necessary.

Future development associated with the related projects would be required to comply with existing regulations, including the CMC and General Plan policies that have been adopted to minimize impacts related to transportation and circulation, as well as any applicable Federal, State and regional regulations. The City would also implement the General Plan policies that require the City to annually update the Capital Improvement Program to reflect City and community priorities for physical projects related to transportation for all travel modes. The project, together with

cumulative development, would not cause physical deterioration of roadway facilities, interfere with planned or existing transit services, or preclude the implementation of adopted bicycle and pedestrian facilities. The project therefore would not result in a cumulative conflict with circulation system plans or policies, and the impact related to circulation system consistency would be less than significant.

Cumulative land use development and transportation projects would generally promote accessibility for people walking to and through the Buildout Area by conforming to General Plan policies and the CMC, and by adhering to planning principles that emphasize providing convenient connections and safe routes for people walking, bicycling, driving, and taking transit. As with current practice, related projects would be designed and reviewed in accordance with the City's Public Works Department requirements and the Department would provide oversight engineering review to ensure that the project is constructed according to City specifications. As a result, the related projects would not generate activities that would increase hazards due to a design feature or incompatible use. As discussed above, because the proposed project would also comply with requirements and design standards to ensure that new roadway and driveway improvements avoid sharp curves, unsafe intersection geometry, and visual obstructions, the proposed project's impacts related to a substantial increase in hazards due to a design feature or incompatible use would be less than significant. For these reasons, the proposed project, in combination with cumulative projects, would have a less than significant cumulative impact with respect to design features or incompatible uses. Future development as part of the City's project approval process would also be required to comply with existing regulations, including General Plan policies and the CMC that have been prepared to minimize impacts related to emergency access.

The City would implement the General Plan programs that require the City's continued coordination with the City's Police Department and the OCFA to establish circulation standards, adopt an emergency response route map, and equip all new traffic signals with preemptive traffic signal devices for emergency services. Furthermore, the implementation of the zoning regulations contained in Article 3, Section 11, Property Development and Use Standards, of the CMC related to adequate site and building access would help to minimize traffic congestion that could impact emergency access. As discussed above, implementation of the proposed project would have a less than significant impact related to emergency access with adherence to existing regulations and City standards. For these reasons, the proposed project, in combination with cumulative projects, would have a less than significant cumulative impact with respect to emergency access.

Detailed VMT analysis was conducted for the proposed project, including for both existing plus project (2019) and cumulative plus project (2050) scenarios. The cumulative plus project (2050) scenario reflects 2050 conditions with the proposed project incorporated. As discussed above, even with implementation of **Mitigation Measure TRA-1**, which requires inclusion of pedestrian sidewalks and bicycle lanes, the proposed project would result in a significant and unavoidable impact related to residential VMT. Pursuant to the *Technical Advisory On Evaluating Transportation Impacts In CEQA* prepared by the OPR (now the LCI),[15] if a project individually has a significant VMT impact,

[15] Governor's Office of Land Use and Climate Innovation (LCI) (previously the Governor's Office of Planning and Research [OPR]). 2018. *Technical Advisory on Evaluating Transportation Impact In CEQA*. April.

then it also has a significant cumulative VMT impact, and vice-versa.[16] Therefore, the proposed project would have a significant and unavoidable cumulative residential VMT impact, while the cumulative impact related to non-residential VMT impact would be less than significant.

Based on the analysis above, implementation of the proposed project, in addition to other recently completed, planned, and reasonably foreseeable projects within the City, could result in cumulative transportation impacts. Therefore, the proposed project's cumulative impact with respect to residential VMT would be considered significant and unavoidable, while the other cumulative transportation impacts associated with the proposed project would be less than significant.

[16] This similar treatment of project and cumulative VMT impacts is also summarized in Figure 5 of the Transportation Implementation Manual for the County of Orange (page 21), updated September 2021.

4.18 TRIBAL CULTURAL RESOURCES

This section provides a discussion of the existing tribal cultural resource environment and evaluates the potential impacts on tribal cultural resources from implementation of the Specific Plan 3.0 Buildout Project (proposed project). According to California Public Resources Code (PRC) Section 21080.3.1 and Chapter 532, Statutes 2014 (i.e., Assembly Bill [AB] 52), "tribal cultural resources" are defined as the following:

1. Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either: (A) included or determined to be eligible for inclusion in the California Register of Historical Resources; or (B) included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.

2. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1.

This section summarizes information obtained from AB 52 Native American consultation efforts completed in support of the proposed project. The record of these consultation efforts is contained in **Appendix L**.

4.18.1 Scoping Process

The City of Cypress (City) received six comment letters during the public review period of the Notice of Preparation (NOP). For copies of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). One comment letter, from the Native American Heritage Commission (NAHC), included comments related to tribal cultural resources.

The comment letter from the NAHC outlines the City's tribal consultation requirements under AB 52.

4.18.2 Methodology

4.18.2.1 Records Searches

In January 2020, a cultural resource record search was completed as part of the environmental review process for the proposed mixed-use Cypress City Center Project, located directly south of the Buildout Area. The record search was conducted at the South Central Coastal Information Center (SCCIC) of the California Historical Resources Information System (CHRIS) at California State University, Fullerton, and included a review of all prehistoric and historic archaeological sites within a 0.25-mile radius of the Cypress City Center Project. As such, the records search performed as part of the Cypress City Center Project included the Buildout Area, as well as a review of known cultural resource survey and excavation reports in the surrounding area. The California State Historic Resources Inventory (HRI), National Register of Historic Places (National Register), California Historical Landmarks (SHL), California Points of Historical Interest (SPHI), and various local historical registers were examined. No archaeological resources had been previously recorded within the

Cypress City Center Project site, and none were discovered as a result of the record search.[1] The Cypress City Center Project was constructed between 2021 and 2025, and no tribal cultural resources were identified during grading or construction activities. Because the records search for the Cypress City Center Project included the Buildout Area, this record search can be reasonably applied to the proposed project's Buildout Area. As a result of the conditions discussed above, a new cultural resource records search under the proposed project was determined to be unnecessary by the City.

4.18.2.2 Assembly Bill 52

AB 52 requires that Lead Agencies evaluate a project's potential to impact "tribal cultural resources." Such resources include sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are eligible for inclusion in the California Register of Historical Resources or included in a local register of historical resources (PRC Section 21074). AB 52 also gives Lead Agencies the discretion to determine, supported by substantial evidence, whether a resource falling outside the definition stated above nonetheless qualifies as a "tribal cultural resource." Also, per AB 52, as Lead Agency, the City must consult California Native American tribes that are traditionally and culturally affiliated with the geographic area of the project site and have previously requested that the Lead Agency provide the tribe with notice of such projects (PRC Section 21080.3.1).

A request form describing the proposed project and map depicting the Buildout Area was sent to the NAHC in West Sacramento on August 28, 2024, requesting a search of the Sacred Lands File (SLF) and a list of tribes eligible to consult with the City, pursuant to Public Resources Code Section 21080.3.1. On September 5, 2024, the NAHC responded in a letter indicating that the search of the SLF was negative. The NAHC also provided a list of 20 tribal contacts associated with the following tribes:

- Cahuilla Band of Indians
- Gabrieleño Band of Mission Indians - Kizh Nation
- Gabrieleño/Tongva San Gabriel Band of Mission Indians
- Gabrielino Tongva Indians of California Tribal Council
- Gabrielino/Tongva Nation
- Juaneno Band of Mission Indians Acjachemen Nation – Belardes
- Juaneno Band of Mission Indians Acjachemen Nation 84A
- Pala Band of Mission Indians
- Santa Rosa Band of Cahuilla Indians
- Soboba Band of Luiseno Indians

The City sent notification letters to these tribes on May 6, 2025, notifying them of the proposed project and providing the opportunity to consult with the City for the proposed project. Additional information is provided below in Section 4.18.6, Project Impacts, below.

[1] City of Cypress. 2020. *Cypress City Center Project Draft Environmental Report, SCH #2019110458*. Section 4.16-4. Website: https://files.ceqanet.opr.ca.gov/257330-3/attachment/pPtqudn4yD91UlsUP_CKNqJ72MJ0kYlHFzJsGzBHYFnlgWkhiTD33EKMOE--4IQOdoGX3ne3ABNyI6Km0 (accessed December 2025).

4.18.3 Existing Environmental Setting

The area that is now the City of Cypress was prehistorically occupied by several different Native American tribes with unique oral histories, societal structures, and ways of life. To date, no federally recognized tribes claim to have occupied the land that is now considered the City of Cypress.

4.18.3.1 City of Cypress Ethnohistory

According to the City's General Plan,[2] the level of Gabrielino culture that was encountered by the Spanish in the 18th century was a continuation of a culture formation originating as far back as 1200 AD. Prior to Spanish colonization, the Gabrielino population was estimated at more than 5,000 people. Various Spanish explorers had been in the region earlier, but in 1769, the Spanish under Gaspar de Portola began their colonization of the region. The people were given the name "Gabrielino" by the Franciscan Priests for their association with the Mission San Gabriel Arcangel, which was constructed by 1771 in San Gabriel, approximately 20 miles northwest of the Buildout Area. As a result of their induction into the mission, the Gabrielino population was decimated through disease.

The majority of the information on Gabrielino culture has been obtained from the remains of their material culture; however, much of it was perishable and therefore not available for research purposes. What is known is that they had abundant marine resources, terrestrial animals, and a heavy reliance on acorns. They also engaged in trade networks that included the exchange of resources from the Channel Islands, the mainland, and inland to Arizona, with more than 89 percent of the Gabrielino's physical environment within the extremely rich Sonoran life zone.

4.18.3.2 Existing Buildout Area Conditions

As outlined in the *Environmental Impact Report, Soils and Geology Issues, Proposed Mixed-Use Development, 4961 Katella Avenue and 5100 Cerritos Avenue, Cypress, California* (Geotechnical Investigation),[3] the Buildout Area is underlain by 3–5 feet of fill material on top of native alluvial soils. Undisturbed native alluvial soils may contain previously unknown archaeological resources, including tribal cultural resources. There is no information regarding specific known tribal cultural resources in or around the Buildout Area, as determined by the record search performed for the Cypress City Center Project, which included the Buildout Area. Therefore, there are no known tribal cultural resources within the Buildout Area and no tribal cultural resources listed or eligible for listing in the California Register of Historical Resources (California Register) or in a local register existing within the Buildout Area.

4.18.4 Regulatory Setting

The following section describes the federal, State, regional, and local regulatory framework applicable to analyzing potential impacts related to tribal cultural resources from development of the proposed project.

---

2 City of Cypress. 2001. *Cypress General Plan Conservation/Open Space/Recreation Element.* September 10, 2001.

3 Geotechnologies, Inc. 2024. *Environmental Impact Report, Soils and Geology Issues, Proposed Mixed-Use Development, 4961 Katella Avenue and 5100 Cerritos Avenue, Cypress, California.* May 2. (**Appendix F**)

4.18.4.1 Federal Regulations

Archaeological Resources Protection Act. The Archaeological Resources Protection Act was enacted in 1979 with the purpose of securing the protection of archaeological resources and sites on public lands and Native American lands, and to foster increased cooperation and exchange of information between governmental authorities, the professional archaeological community, and private individuals.

Native American Graves Protection and Repatriation Act (NAGPRA). The NAGPRA was passed in 1990 with the purpose of outlining a process for museums and federal agencies to return certain Native American cultural items (e.g., human remains, funerary objects, sacred objects, or objects of cultural patrimony) to lineal descendants, and culturally affiliated Indian tribes. NAGPRA also establishes procedures for the inadvertent discovery or planned excavation of Native American cultural items on federal or tribal lands. While these provisions do not apply to discovery or excavations on private or State lands, the collection portions of NAGPRA may apply to cultural items if they are under the control of an institution that receives federal funding. NAGPRA also makes it a criminal offense to traffic in Native American human remains without right of possession or in cultural items obtained in violation of NAGPRA.

4.18.4.2 State Regulations

Native American Heritage Commission (NAHC). In 1976, the California State Government passed AB 4239, creating the NAHC. The NAHC is responsible for identifying and categorizing Native American cultural resources as well as preventing damage to designated sacred sites and associated artifacts and remains. Legislation passed in 1982 authorized the NAHC to identify a Most Likely Descendant (MLD) when Native American remains are found outside the boundaries of a designated cemetery. An MLD has the authority to make recommendations in regard to the treatment and disposition of the discovered remains.

California Public Resources Code (PRC) Sections 5097.9–5097.991. California PRC Sections 5097.9–5097.991 provide protection to Native American historical and cultural resources (including sanctified cemeteries, places of worship, religious sites, or sacred shrines) and sacred sites and gives the NAHC enforcement authority.

Specifically, PRC Section 5097.98 outlines procedures that must be followed in the event that human remains are discovered. The County Coroner shall make a determination within 2 working days from the time the person responsible for the excavation, or designee, notifies the County Coroner of the discovery or recognition of the human remains. If the County Coroner identifies the remains to be of Native American origin or has reason to believe that the remains are those of Native American origin, the County Coroner must contact the California NAHC within 24 hours. The NAHC representative will then alert a Native American MLD to conduct an inspection of the site and to determine the following course of treatment and action. Additionally, *State CEQA Guidelines* Section 15064.5 sets forth a procedure if human remains are found on land outside of federal jurisdiction.

Health and Safety Code Section 7050.5. Section 7050.5 of the California Health and Safety Code protects Native American burials, remains, and associated grave artifacts in the event they are discovered in any location other than a designated cemetery. The Health and Safety Code mandates

the immediate stop of excavation on the site as well as any adjacent or overlying area where the remains or associated items are found and provides for the sensitive disposition of those remains. Should remains be discovered, the County Coroner must determine that the remains are not subject to the provisions of Section 27491 of the Government Code or any other related provisions of law concerning investigation of the circumstances, manner, and cause of any death, and the recommendations concerning the treatment and disposition of the human remains have been made to the person responsible for the excavation, or designee, in the manner provided in PRC Section 5097.98.

Assembly Bill 52. AB 52 requires that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource, as defined, is a project that may have a significant effect on the environment. The bill requires a lead agency to begin consultation with each California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project, if the tribe requested to the lead agency, in writing, to be informed by the lead agency of proposed projects in that geographic area and the tribe requests consultation, prior to determining whether a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report is required for a project. The bill specifies examples of mitigation measures that may be considered to avoid or minimize impacts on tribal cultural resources. The bill makes the above provisions applicable to projects that have a Notice of Preparation or a notice of Negative Declaration or Mitigated Negative Declaration filed on or after July 1, 2015. By requiring the lead agency to consider these effects relative to tribal cultural resources and to conduct consultation with California Native American tribes, this bill imposes a State-mandated local program.

Penal Code Section 622.5. Section 622.5 of the Penal Code makes it a misdemeanor to willfully damage, deface, or destroy any object of archaeological or historical interest or value and applies to any archaeological or historical object whether situated on private land or within any public park or place.

Penal Code Section 623. Section 623 of the Penal Code provides for the protection of natural and archaeological materials in caves, including: damaging or defacing natural cave formations (e.g., stalactites, stalagmites); disturbing or altering archaeological evidence of prior human occupation in a cave; removing or harming plant or animal life in a cave; removing any “material” from a cave, where “material” includes archaeological, paleontological, historical, biological items; and tampering with cave entrances (gates, locks, doors) without permission.

4.18.4.3 Regional Regulations

There are no regional regulations that are applicable to tribal cultural resources relevant to the proposed project.

4.18.4.4 Local Regulations

There are no local regulations that are applicable to tribal cultural resources relevant to the proposed project.

4.18.5 Thresholds of Significance

The thresholds of significance for tribal cultural resources impacts used in this analysis are consistent with Appendix G of the *State CEQA Guidelines*. Based on these thresholds, implementation of the proposed project would have a significant adverse impact with respect to tribal cultural resources if it would:

Threshold 4.18.1: Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k); or

ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

4.18.6 Project Impacts

Threshold 4.18.1: **Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:**

i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k); or

ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

Less Than Significant with Mitigation Incorporated. The City consulted with tribal representatives traditionally or culturally affiliated with the Buildout Area pursuant to the requirements outlined in AB 52. On May 6, 2025, the City sent outreach letters to the tribal contacts provided by the NAHC and formally invited each representative to consult with the City on the proposed project. The

record of these consultation efforts is contained in **Appendix L**. The following responses were received:

- On May 7, 2025, the Pala Band of Mission Indians responded, stating that the proposed project is not located within the boundaries of the recognized Pala Indian Reservation. The Pala Band of Mission Indians also indicated that the proposed project is beyond the boundaries of the territory that the tribe considers its Traditional Use Area (TUA). Therefore, the Pala Band of Mission Indians declined AB 52 consultation and deferred to the wishes of tribes in closer proximity to the project area.

- On May 7, 2025, the Santa Rosa Band of Cahuilla Indians responded, stating that they defer any comments to the Soboba Band of Luiseno Indians.

- On May 22, 2025, the Gabrielino Tongva Indians of California Tribal Council responded, stating they have no comment on the proposed project.

- On May 8, 2025, the Gabrieleño Band of Mission Indians - Kizh Nation responded and requested consultation with the City regarding the proposed project. On May 27, 2025, the City provided suggested mitigation measures relating to the protection of tribal cultural resources to the Gabrieleño Band of Mission Indians - Kizh Nation, as detailed in **Mitigation Measures TCR-1** through **TCR-4**. These measures include required tribal cultural resources training and ALERT sheet posting, on-site tribal monitoring during ground disturbance of native sediment, and provisions in the event that previously unknown tribal cultural resources (including human remains and funerary objects) are discovered during construction activities.

  On July 14, 2025, the Gabrieleño Band of Mission Indians - Kizh Nation responded, requesting tribal monitors on-site during all phases of ground disturbance, including in areas classified as previously disturbed or containing fill materials. On August 4, 2025, the City responded, summarizing the previous cultural records searches performed that include the Buildout Area, which indicate that no cultural resources are present within the Buildout Area. The City also indicated that the SLF search was negative, and that the Geotechnical Investigation prepared for the proposed project confirms the Buildout Area is underlain by 3 to 5 feet of fill material, with native alluvial soils beneath. The City also indicated that the area surrounding the Buildout Area has undergone significant development since 2014, including Lexington Park, Ovation at Flora Park, Belmont, and Cypress City Center projects, totaling approximately 62 acres of ground disturbance. Several of these projects included monitoring by Gabrieleño Band of Mission Indians - Kizh Nation representatives, and none resulted in the discovery of cultural resources. As such, the City maintained that on-site tribal monitoring during all phases of ground disturbance into native alluvial soils would be sufficient to address potential impacts on previously unknown tribal cultural resources. In September 2025, the City considered tribal consultation with the Gabrieleño Band of Mission Indians - Kizh Nation completed.

No information regarding specific known tribal cultural resources within the Buildout Area was provided by the Gabrieleño Band of Mission Indians - Kizh Nation. Therefore, no tribal cultural resources listed or eligible for listing in the California Register of Historical Resources (California

Register) or in a local register exist within the Buildout Area, and there are no known tribal cultural resources within the Buildout Area.

Although no cultural or tribal cultural resources have been identified within the Buildout Area, future construction facilitated by the proposed project would include ground- disturbing activities including grading and excavation. Ground disturbing activities within the Buildout Area could result in a potentially significant impact to tribal cultural resources if previously undiscovered tribal cultural resources are unearthed during ground-disturbing activity, including human remains of Native American origin. However, as discussed in Section 4.5, Cultural Resources, future development facilitated under the proposed project would be required to adhere to **Regulatory Compliance Measures CUL-1** and **CUL-2**, which detail provisions in the event that previously unknown cultural resources, including human remains, are discovered during ground-disturbing construction activities, consistent with the California Code of Regulations (CCR) Section 15064.5(e) and State Health and Safety Code Section 7050.5. In addition, future development facilitated under the proposed project would also be required to implement **Mitigation Measures TCR-1** through **TCR-4.**

Mitigation Measure TCR-1

Tribal Cultural Resources Training and ALERT Sheet Posting. Prior to the start of any ground-disturbing activities, a qualified archaeologist meeting the Secretary of the Interior standards, in consultation with a representative from a traditionally and culturally affiliated Native American Tribe, under the direction of the City of Cypress Planning Division, shall prepare a Cultural Resources Sensitivity Summary. This summary shall include a brief description of the types of archaeological and tribal cultural resources that may be encountered, visual examples (if available), reporting procedures in the event of a discovery, and appropriate contact information.

The summary shall be printed and posted in a visible location at the construction site for the duration of all ground-disturbing activities.

An initial worker environmental training shall be provided by a qualified archaeologist in collaboration with a tribal representative prior to the start of construction, under the direction of the City of Cypress Planning Division. The training shall include a review of applicable laws, procedures to follow if resources are discovered, and cultural sensitivity guidance. A sign-in sheet shall be maintained to document attendance. As construction progresses, the construction manager shall be responsible for ensuring that all new personnel receive the same information through on-site orientation and review of the posted materials. Documentation of ongoing training shall be maintained and made available to the City upon request.

Mitigation Measure TCR-2

Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities. Prior to the issuance of any grading permits for projects within the Buildout Area that would require "ground-disturbing activity," where such disturbance activity would occur in undisturbed native sediment, a future project applicant/City shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching on both on-site and any off-site locations that are included in the Project Description/ definition and/or required in connection with the projects, such as public improvement work.

A copy of the executed monitoring agreement shall be submitted to the Director of the City of Cypress Community Development Department, or their designee, prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity. The tribal monitor shall also provide appropriate insurance certificates.

The monitor shall complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs shall identify and describe any discovered tribal cultural resources (TCRs), including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, "TCRs"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs shall be provided to the future project applicant/City upon written request to the Tribe.

On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Tribe from a designated point of contact for the future project applicant/City that all ground-disturbing activities and phases that may involve ground-disturbing activities in native (previously undisturbed) soil has occurred (i.e., no tribal monitoring shall be required for landscaping activities occurring after completion of project grading and trenching, as this soil will have been previously monitored) or in connection with the project are complete; or (2) a determination and written notification by the Tribe to the future project applicant/City that no

future, planned construction activity and/or development/ construction phase associated with the project possesses the potential to impact TCRs.

Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Tribe's monitor and/or archaeologist. The Tribe will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural, and/or historic purposes.

Mitigation Measure TCR-3

Unanticipated Discovery of Human Remains and Associated Funerary Objects. Native American human remains are defined in Public Resources Code (PRC) Section 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in PRC Section 5097.98, are also to be treated according to this statute.

If Native American human remains and/or grave goods are discovered or recognized during ground-disturbing activities associated with projects within the Buildout Area, then all construction activities shall immediately cease within 50 feet of the find. Health and Safety Code Section 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and all ground-disturbing activities shall immediately halt and shall remain halted until the Coroner has determined the nature of the remains. If the Coroner recognizes the human remains to be those of a Native American or has reason to believe they are Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission (NAHC), and PRC Section 5097.98 shall be followed.

Human remains and grave/burial goods shall be treated alike per PRC Section 5097.98(d)(1) and (2).

If Native American human remains are discovered or recognized on any construction sites within the Buildout Area during ground-disturbing activities and the NAHC subsequently identifies the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe) to be the Most Likely Descendant (MLD), construction activities may resume in other parts of the construction site at a minimum of 200 feet away from discovered human remains and/or burial goods, if the

Tribe determines in its sole discretion that resuming construction activities at that distance is acceptable and provides the project manager express consent of that determination (along with any other mitigation measures the Tribe's monitor and/or archaeologist deems necessary). (*State CEQA Guidelines* Section 15064.5(f).)

Preservation in place (i.e., avoidance) is the Tribe's preferred manner of treatment for discovered human remains and/or burial goods.

Any discovery of human remains/burial goods shall be kept confidential to the extent feasible to prevent further disturbance.

Mitigation Measure TCR-4

Procedures for Burials and Funerary Remains. If Native American human remains are discovered or recognized on any construction sites within the Buildout Area during ground-disturbing activities and the Native American Heritage Commission subsequently identifies the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe) to be the Most Likely Descendant ("MLD"), the Koo-nas-gna Burial Policy, as described below, shall be implemented. To the Tribe, the term "human remains" encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the preparation of the soil for burial, the burial of funerary objects with the deceased, and the ceremonial burning of human remains.

If the discovery of human remains includes four or more burials, the discovery location shall be treated as a cemetery and a separate treatment plan shall be created.

The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered as associated funerary objects. Cremations will either be removed in bulk or by means as necessary to ensure complete recovery of all sacred materials.

In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make

every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that burials will be removed.

In the event preservation in place is not possible despite good faith efforts by the future project applicant/City and/or landowner, before ground-disturbing activities may resume on the project site, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects.

Each occurrence of human remains and associated funerary objects will be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within 6 months of recovery. The site of reburial/repatriation shall be on the project site but at a location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.

The Tribe will work closely with the project's qualified archaeologist to ensure that the excavation is treated carefully, ethically and respectfully. If data recovery is approved by the Tribe, documentation shall be prepared and shall include (at a minimum) detailed descriptive notes and sketches. All data recovery data recovery-related forms of documentation shall be approved in advance by the Tribe. If any data recovery is performed, once complete, a final report shall be submitted to the Tribe and the NAHC. The Tribe does not authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.

The mitigation measures include required tribal cultural resources training and ALERT sheet posting, on-site tribal monitoring during ground disturbance of native sediment, and provisions in the event that previously unknown tribal cultural resources (including human remains and funerary objects) are discovered during ground-disturbing construction activities. With implementation of **Mitigation Measures TCR-1 through TCR-4**, the potential impacts to known and unknown tribal cultural resources would be less than significant with mitigation incorporated.

4.18.7 Level of Significance Prior to Mitigation

Impacts on known or unknown tribal cultural resources with implementation of the proposed project would be potentially significant.

4.18.8 Regulatory Compliance Measures and Mitigation Measures

4.18.8.1 Regulatory Compliance Measures

The following regulatory compliance measures are existing regulations that are applicable to the proposed project and are considered in the analysis of potential impacts related to tribal cultural resources. The City considers these requirements to be mandatory; therefore, they are not mitigation measures.

Regulatory Compliance Measure CUL-1

Unknown Archaeological Resources. In the event that archaeological resources are discovered during excavation, grading, or construction activities, work shall cease within 50 feet of the find until a qualified archaeologist from the Orange County List of Qualified Archaeologists has evaluated the find in accordance with federal, State, and local guidelines to determine whether the find constitutes a "unique archaeological resource," as defined in Section 21083.2(g) of the California Public Resources Code (PRC). A future project applicant and its construction contractor shall not collect or move any archaeological materials and associated materials. Construction activity may continue unimpeded on other portions of the project site. Any found deposits shall be treated in accordance with federal, State and local guidelines, including those set forth in PRC Section 21083.2. Prior to commencement of grading activities, the Director of the City of Cypress (City) Community Development Department, or designee, shall verify that all project grading and construction plans include specific requirements regarding California PRC (Section 21083.2[g]) and the treatment of archaeological resources as specified above.

Regulatory Compliance Measure CUL-2

Human Remains. In the event that human remains are encountered on the project site, work within 50 feet of the discovery shall be redirected and the County Coroner notified immediately consistent with the requirements of California Code of Regulations (CCR) Section 15064.5(e). State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. If the remains are determined to be Native American, the County Coroner shall notify the Native American Heritage Commission (NAHC), which

shall determine and notify a Most Likely Descendant (MLD). With the permission of the property owner, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. The MLD may recommend scientific removal and non-destructive analysis of human remains and items associated with Native American burials. Consistent with CCR Section 15064.5(d), if the remains are determined to be Native American and an MLD is notified, the City of Cypress shall consult with the MLD as identified by the NAHC to develop an agreement for treatment and disposition of the remains. Prior to the issuance of grading permits, the Director of the City of Cypress Community Development Department, or designee, shall verify that all grading plans specify the requirements of CCR Section 15064.5(e), State Health and Safety Code Section 7050.5, and PRC Section 5097.98, as stated above.

4.18.8.2 Mitigation Measures

Future development facilitated under the proposed project would be required to implement the following mitigation measures.

Mitigation Measure TCR-1

Tribal Cultural Resources Training and ALERT Sheet Posting. Prior to the start of any ground-disturbing activities, a qualified archaeologist meeting the Secretary of the Interior standards, in consultation with a representative from a traditionally and culturally affiliated Native American Tribe, under the direction of the City of Cypress Planning Division, shall prepare a Cultural Resources Sensitivity Summary. This summary shall include a brief description of the types of archaeological and tribal cultural resources that may be encountered, visual examples (if available), reporting procedures in the event of a discovery, and appropriate contact information.

The summary shall be printed and posted in a visible location at the construction site for the duration of all ground-disturbing activities.

An initial worker environmental training shall be provided by a qualified archaeologist in collaboration with a tribal representative prior to the start of construction, under the direction of the City of Cypress Planning Division. The training shall include a review of applicable laws, procedures to follow if resources are discovered, and cultural sensitivity guidance. A sign-in sheet shall be maintained to document attendance. As construction progresses, the

construction manager shall be responsible for ensuring that all new personnel receive the same information through on-site orientation and review of the posted materials. Documentation of ongoing training shall be maintained and made available to the City upon request.

Mitigation Measure TCR-2

Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities. Prior to the issuance of any grading permits for projects within the Buildout Area that would require "ground-disturbing activity," where such disturbance activity would occur in undisturbed native sediment, a future project applicant/City shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching on both on-site and any off-site locations that are included in the Project Description/ definition and/or required in connection with the projects, such as public improvement work.

A copy of the executed monitoring agreement shall be submitted to the Director of the City of Cypress Community Development Department, or their designee, prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity. The tribal monitor shall also provide appropriate insurance certificates.

The monitor shall complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs shall identify and describe any discovered tribal cultural resources (TCRs), including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, "TCRs"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs shall be provided to the future project applicant/City upon written request to the Tribe.

On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Tribe from a designated point of contact for the future project applicant/City that all ground-disturbing activities and phases that may involve ground-disturbing activities in native (previously undisturbed) soil has occurred (i.e.,

no tribal monitoring shall be required for landscaping activities occurring after completion of project grading and trenching, as this soil will have been previously monitored) or in connection with the project are complete; or (2) a determination and written notification by the Tribe to the future project applicant/City that no future, planned construction activity and/or development/ construction phase associated with the project possesses the potential to impact TCRs.

Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Tribe's monitor and/or archaeologist. The Tribe will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural, and/or historic purposes.

Mitigation Measure TCR-3 **Unanticipated Discovery of Human Remains and Associated Funerary Objects.** Native American human remains are defined in Public Resources Code (PRC) Section 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in PRC Section 5097.98, are also to be treated according to this statute.

If Native American human remains and/or grave goods are discovered or recognized during ground-disturbing activities associated with projects within the Buildout Area, then all construction activities within shall immediately cease within 50 feet of the find. Health and Safety Code Section 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and all ground-disturbing activities shall immediately halt and shall remain halted until the Coroner has determined the nature of the remains. If the Coroner recognizes the human remains to be those of a Native American or has reason to believe they are Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission (NAHC), and PRC Section 5097.98 shall be followed.

Human remains and grave/burial goods shall be treated alike per PRC Section 5097.98(d)(1) and (2).

If Native American human remains are discovered or recognized on any construction sites within the Buildout Area during ground-

disturbing activities and the NAHC subsequently identifies the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe) to be the Most Likely Descendant (MLD), construction activities may resume in other parts of the construction site at a minimum of 200 feet away from discovered human remains and/or burial goods, if the Tribe determines in its sole discretion that resuming construction activities at that distance is acceptable and provides the project manager express consent of that determination (along with any other mitigation measures the Tribe's monitor and/or archaeologist deems necessary). (*State CEQA Guidelines* Section 15064.5(f).)

Preservation in place (i.e., avoidance) is the Tribe's preferred manner of treatment for discovered human remains and/or burial goods.

Any discovery of human remains/burial goods shall be kept confidential to the extent feasible to prevent further disturbance.

Mitigation Measure TCR-4

Procedures for Burials and Funerary Remains. If Native American human remains are discovered or recognized on any construction sites within the Buildout Area during ground-disturbing activities and the Native American Heritage Commission subsequently identifies the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe) to be the Most Likely Descendant ("MLD"), the Koo-nas-gna Burial Policy, as described below, shall be implemented. To the Tribe, the term "human remains" encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the preparation of the soil for burial, the burial of funerary objects with the deceased, and the ceremonial burning of human remains.

If the discovery of human remains includes four or more burials, the discovery location shall be treated as a cemetery and a separate treatment plan shall be created.

The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered as associated funerary objects. Cremations will either be removed in bulk or by means as necessary to ensure complete recovery of all sacred materials.

In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that burials will be removed.

In the event preservation in place is not possible despite good faith efforts by the future project applicant/City and/or landowner, before ground-disturbing activities may resume on the project site, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects.

Each occurrence of human remains and associated funerary objects will be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within 6 months of recovery. The site of reburial/repatriation shall be on the project site but at a location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.

The Tribe will work closely with the project's qualified archaeologist to ensure that the excavation is treated carefully, ethically and respectfully. If data recovery is approved by the Tribe, documentation shall be prepared and shall include (at a minimum) detailed descriptive notes and sketches. All data recovery data recovery-related forms of documentation shall be approved in advance by the Tribe. If any data recovery is performed, once complete, a final report shall be submitted to the Tribe and the NAHC. The Tribe does not authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.

4.18.9 Level of Significance after Mitigation

Impacts to known and unknown tribal cultural resources would be less than significant with implementation of **Mitigation Measures TCR-1 through TCR-4**.

4.18.10 Cumulative Impacts

Defined in Section 15130 of the *State CEQA Guidelines*, cumulative impacts are the incremental effects of an individual project when viewed in connection with the effects of past, current, and reasonably foreseeable projects in an area of interest. The cumulative impact area for tribal cultural resources is the South Orange County region, including the City of Cypress. As previously discussed, no tribal cultural resources are known to exist within the Buildout Area. As such, implementation of the proposed project would have no impact on known tribal cultural resources and would therefore not contribute to a significant cumulative impact on known tribal cultural resources.

Potential impacts of the proposed project to unknown tribal cultural resources, when combined with other past, current, and reasonably foreseeable projects in the city and on land traditionally used by culturally affiliated tribes, including the related projects identified in **Table 4.A: Summary of Related Projects** and **Figure 4.1**, in Chapter 4.0, Existing Setting, could contribute to a cumulatively significant impact due to the overall loss of tribal cultural resources in the region. However, each development proposal received by the City is required to undergo individual environmental review pursuant to CEQA, including AB 52 outreach. Furthermore, impacts of other projects on tribal cultural resources are generally site-specific because they result from ground-disturbing activities that would require a site-specific impact analysis to determine the nature and extent of the resources and identify appropriate mitigation measures that would reduce or avoid significant impacts.

Ground disturbance associated with future development facilitated by the proposed project could result in a potentially significant impact to tribal cultural resources if previously undiscovered tribal cultural resources are unearthed during ground-disturbing activity, including human remains of Native American origin. However, future development facilitated under the proposed project would be required to adhere to **Regulatory Compliance Measures CUL-1 and CUL-2** and implement **Mitigation Measures TCR-1 through TCR-4**, which include required tribal cultural resources training and ALERT sheet posting, on-site tribal monitoring during ground disturbance of native sediment, and provisions in the event that previously unknown tribal cultural resources (including human remains and funerary objects) are discovered during ground-disturbing construction activities. Adherence to and implementation of these measures would ensure less than significant impacts on tribal cultural resources.

Similar to the proposed project, ground disturbance associated with related projects could result in potentially significant impacts on previously unidentified archaeological sites and associated human remains that may be unearthed. However, when the City considers future development proposals, both within the Buildout Area and citywide, these proposals would undergo environmental review pursuant to CEQA and when necessary, mitigation measures would be adopted as appropriate. In most cases, this environmental review and compliance with project conditions of approval and relevant policies of the General Plan would ensure that significant impacts on tribal cultural resources would be avoided or otherwise mitigated to less than significant levels. Further, discretionary projects would be required to engage in tribal consultation in order to identify and mitigate site-specific impacts on tribal cultural resources.

Some of the related projects identified in **Table 4.A** have undergone environmental review pursuant to CEQA, which included an analysis of potential impacts on tribal cultural resources. According to the EIRs prepared for the Shea Properties Mixed Use Development Project (Related Project 1), Melia Homes-Citrus Square Project (Related Project 2), and the Los Alamitos Medical Center Project (Related Project 7), impacts on tribal cultural resources with implementation of the projects would be less than significant with implementation of measures similar to **Mitigation Measures TCR-1 through TCR-4.** Further, the EIRs determined that cumulative impacts on tribal cultural resources would be less than significant. In addition, Goodman Commerce Center and the 5665 Plaza Drive Projects (Related Project 3) were analyzed in an Initial Study/Mitigated Negative Declaration in 2023 and an EIR in 2024, respectively, which determined that all impacts on tribal cultural resources would also be less than significant with implementation of measures similar to **Mitigation Measures TCR-1 through TCR-4**. The Sycamore Creek Charter School Project (Related Project 6) and 4562 Katella Avenue Project (Related Project 8) were determined to be exempt from CEQA review under Section 15332 of the *State CEQA Guidelines* (for infill development) and Notices of Exemption (NOEs) were prepared. In order for a project to be exempt under Section 15332 of the *State CEQA Guidelines*, the project must not result in significant impacts due to unusual circumstances, such as being located on a site sensitive for tribal cultural resources. As such, development of the related projects in combination with the proposed project would not result in significant impacts on tribal cultural resources. The LTP Modern Machine Project (Related Project 5) and 8561 Belmont Street Project (Related Project 4) would also be required to undergo environmental review pursuant to CEQA, which would include an analysis of potential impacts on tribal cultural resources, the identification of any mitigation measures to reduce potential impacts, if necessary, and tribal consultation.

In addition, in January 2020, a cultural resource record search was completed as part of the environmental review process for the proposed mixed-use Cypress City Center Project, located directly across Katella Avenue south of the Buildout Area. The record search was conducted at the South Central Coastal Information Center (SCCIC) of the California Historical Resources Information System (CHRIS) at California State University, Fullerton, and included a review of all prehistoric and historic archaeological sites within a 0.25-mile radius of the Cypress City Center Project, which includes the Buildout Area, as well as a review of known cultural resource survey and excavation reports in that area. The California State Historic Resources Inventory (HRI), National Register of Historic Places (National Register), California Historical Landmarks (SHL), California Points of Historical Interest (SPHI), and various local historical registers were examined. No tribal archaeological resources had been previously recorded within the Cypress City Center Project site, and none were discovered as a result of the record search. The Cypress City Center Project was constructed between 2021 and 2025, and no tribal cultural resources were identified during grading or construction activities.

Thus, there is no potential for the proposed project to contribute to a significant cumulative impact associated with the significance of a tribal cultural resource pursuant to California Code of Regulations (CCR) Section 15064.5. Collectively, recent past, approved, and probable future projects that may occur in the vicinity, including the proposed project, would not result in a cumulative increase in impacts on tribal cultural resources or human remains, because these resources would be avoided or otherwise removed, analyzed, and reported (i.e., by a qualified archaeologist). In

addition, through required tribal consultation, additional mitigation measures for ensuring that tribal cultural resources are not significantly impacted would also be developed and prescribed on a project-specific basis.

Based on the information in this section (Section 4.18, Tribal Cultural Resources), and in Section 4.5 Cultural Resources, and for the reasons summarized above, the proposed project would not contribute to significant adverse cumulative impacts related to tribal cultural resources when considered together with other cumulative development. Therefore, the cumulative impact on tribal cultural resources would not be cumulatively considerable.

This page intentionally left blank

4.19 UTILITIES AND SERVICE SYSTEMS

This section describes the utility providers within whose jurisdiction the Buildout Area is located and evaluates the potential impacts on utilities and service systems as a result of physical improvements that may be necessary to accommodate the Specific Plan 3.0 Buildout Project (proposed project). This section is based on multiple data sources, including the *Sewer Capacity Study for Specific Plan 3.0 Buildout Project* (Sewer Capacity Study)[1] (**Appendix M**), the *Water Supply Assessment, Specific Plan 3.0 Buildout Project, Cypress, California* (WSA)[2] (**Appendix N**), the *Master Plan of Drainage for Specific Plan 3.0 Buildout Project, 4961 Katella Avenue, Cypress, CA* (Drainage Report)[3] **(Appendix H-1),** the California Emissions Estimator Model (CalEEMod) outputs generated for the proposed project **(Appendix B),** and written correspondence and coordination with utility providers (**Appendix O**)**.** This section addresses the following utilities and service systems.

- Electricity—Southern California Edison (SCE)
- Natural Gas—Southern California Gas Company (SoCalGas)
- Solid Waste—Valley Vista Services; Orange County Waste and Recycling (OCWR)
- Wastewater—Orange County Sanitation District (OC San)
- Potable Domestic Water—Golden State Water Company (GSWC)
- Storm Drainage—Orange County Flood Control District (OCFCD)
- Telecommunications – AT&T

4.19.1 Scoping Process

The City of Cypress (City) received four comment letters during the public review period of the Notice of Preparation (NOP). For a copy of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). None of the comment letters included comments related to utilities and service systems.

4.19.2 Methodology

This section evaluates impacts to utilities and service systems to the extent that project demand for potable water and wastewater, electricity, natural gas, telecommunications facilities, and landfill capacity would require new or expanded facilities to support the proposed project, the construction of which would result in an adverse physical impact to the environment. Information regarding utilities and service systems was obtained from a variety of sources, including technical studies **(Appendices M, N, and H-1)** prepared for the proposed project, agency websites, and adopted planning documents of the service and utility providers.

This analysis also includes CalEEMod outputs generated for the proposed project, which are included in **Appendix B** of this Draft EIR. The proposed project's energy usage, including electricity

3 TAIT & Associates, Inc. 2025a. *Master Plan of Drainage for Specific Plan 3.0 Buildout Project, 4961 Katella Avenue, Cypress, CA.* September 16. (**Appendix H-1**)

and natural gas, as well as the proposed project's anticipated water demand and estimates for wastewater and solid waste generation were calculated using CalEEMod version 2022.1. In addition, will serve letters were provided by SCE, SoCalGas, OC San, GSWC, and AT&T on June 19, 2025, June 30, 2025, July 3, 2024, August 15, 2023, and June 17, 2025 (**Appendix O**).

4.19.3 Existing Environmental Setting

4.19.3.1 Electricity

In 2023, California's electricity was generated primarily by natural gas (36.6 percent), coal (1.8 percent), large hydroelectric (11.7 percent), nuclear (9.3 percent), and solar (17 percent). Total electric generation in California in 2023 was 281,140 gigawatt-hours (GWh).[4]

The Buildout Area is within the service territory of SCE, which provides services through a grid of transmission lines and related facilities. SCE provides electricity to more than 15 million people in a 50,000-square-mile area of Central, Coastal, and Southern California.[5] According to the California Energy Commission (CEC), total electricity consumption in the SCE service area in 2023 was 77,409 GWh[6] and total electricity consumption in Orange County in 2023 was 18,853 GWh (6,846 GWh for the residential sector and 11,990 GWh for the non-residential sector).[7]

4.19.3.2 Natural Gas

Natural gas consumed in California is used for electricity generation (45 percent), residential uses (21 percent), industrial uses (25 percent), and commercial uses (9 percent). California continues to depend upon out-of-state imports for nearly 90 percent of its natural gas supply.[8] SoCalGas, the service provider for the City, serves approximately 21.1 million customers in a 24,000-square-mile service territory.[9] SoCalGas has four storage fields—Aliso Canyon, Honor Rancho, La Goleta, and Playa del Rey—and has a combined storage capacity of 74 billion cubic feet.[10]

10 United States Energy Information Administration (EIA). 2019. Today in Energy. Website: https://www.eia.gov/todayinenergy/detail.php?id=36416 (accessed May 23, 2025).

According to the CEC, total natural gas consumption in the SoCalGas service area in 2023 was 5,233 million therms[11] and total natural gas consumption in Orange County in 2023 was 607.6 million therms (378.9 million therms for the residential sector and 228.7 million therms for the non-residential sector).[12]

4.19.3.3 Solid Waste

The City currently contracts with Valley Vista Services of Orange County, a private solid waste hauler, to collect and dispose of the solid waste/refuse generated in the City. Solid waste/refuse collected in the City by Valley Vista is transported to one of the Class III landfills operated and maintained by OCWR. Class III landfills only accept non-hazardous municipal solid waste for disposal; no hazardous or liquid waste is accepted. County residents are able to dispose of their household hazardous waste items at any of OCWR's four household hazardous waste collection centers. Currently, OCWR maintains and operates three Class III sanitary landfills, identified below in **Table 4.19.A: Orange County Class III Landfills.**

Table 4.19.A: Orange County Class III Landfills

Landfill	Location	Service
Frank R. Bowerman	11002 Bee Canyon Access Road Irvine, CA 92602	Commercial dumping No public dumping
Olinda Alpha	1942 North Valencia Avenue Brea, CA 92823	Commercial dumping Public dumping allowed
Prima Deshecha	32250 La Pata Avenue San Juan Capistrano, CA 92675	Commercial dumping Public dumping allowed

Source: Landfill Information (Orange County Waste and Recycling n.d.).

The Frank R. Bowerman Landfill is projected to serve residents and businesses until approximately 2053. The landfill is currently permitted by the California Department of Resources, Recycling, and Recovery (CalRecycle) to receive a maximum of 11,500 tons per day (tpd) of waste, with a currently annual average of 8,500 tpd.[13] Therefore, the Frank R. Bowerman Landfill currently operates at approximately 73.0 percent of its daily capacity. As of 2023, the Frank R. Bowerman Landfill had an estimated remaining disposal capacity of 160,896,082 cubic yards.[14]

The Olinda Alpha Landfill is scheduled to close in approximately 2036, at which time it will be landscaped to become a County Regional Park.[15] The Olinda Alpha Landfill is currently permitted by CalRecycle to receive a maximum of 8,000 tpd of waste, but currently receives an average of approximately 7,000 tpd.[16] Therefore, the Olinda Alpha Landfill currently operates at approximately 87.5 percent of its daily capacity. As of October 2020, the Olinda Alpha Landfill had an estimated remaining disposal capacity of 17,500,000 cubic yards.[17]

The Prima Deshecha Landfill is projected to serve residents and business until approximately 2102 and features several environmental protection measures, including odor control systems, 5.7 acres of wetland, 175 acres of coastal sage scrub, and 11 acres of riparian mitigation.[18] The landfill is currently permitted by CalRecycle to receive 4,000 tpd and as of 2023, had a remaining capacity of 128,800,000 cubic yards.[19]

4.19.3.4 Wastewater

The OC San is responsible for safely collecting, treating, and disposing of the wastewater in central and northwest Orange County, including in the City of Cypress. The OC San provides wastewater collection, treatment, and recycling for approximately 2.6 million people living within its 479 square-mile service area.[20] The OC San's facilities include 396 miles of sewer pipes and 15 pump stations located throughout the county. The OC San treats approximately 188 million gallons of wastewater from residential, commercial, and industrial sources per day that is sent to two treatment plants: Reclamation Plant No. 1, located at 10844 Ellis Avenue in Fountain Valley, and Treatment Plant No. 2, located at 22212 Brookhurst Street in Huntington Beach.[21]

OC San is responsible for the provision of wastewater treatment facilities that serve the Buildout Area. Sewage from the City of Cypress is diverted to either Reclamation Plant No. 1 or Treatment Plant No. 2. Excess wastewater from any of six trunk sewers tributary to Reclamation Plant No. 1 is diverted to Treatment Plant No. 2 to not overload the capacity of Reclamation Plant No. 1 and to provide for maintenance or construction activities.[22] Reclamation Plant No. 1 has a primary

treatment capacity of 208 million gallons per day (mgd),[23] and is running under capacity at approximately 124 mgd.[24] Treatment Plant No. 2 has a primary treatment capacity of 168 mgd[25] and currently receives 68 mgd.[26] Additionally, through its Capital Improvement Program, the OC San strives to continue maintaining its facilities at optimal levels by planning, designing, and preparing for future demand by developing Facilities and Biosolids Master Plans that address 20-year planning horizons.

In the vicinity of the Buildout Area, there are two main existing sewer lines, including (1) a 30-inch vitrified clay pipe (VCP) sewer trunk line owned and maintained by OC San that flows north to south along Lexington Drive to Katella Avenue, and (2) a VCP sewer main owned and maintained by the City that flows east to west along Katella Avenue increasing in diameter from 18-inches to 21-inches. There is also an 8-inch reach that picks up flows from southeast of the Buildout Area. This line runs in a 15-foot easement to the City of Cypress from north of Vessels Circle south toward Winners Circle and then ties into the City's 18-inch line. The existing 21-inch VCP City sewer main connects to the existing 30-inch VCP OC San sewer trunk line at an OC San manhole located at the Lexington Drive and Katella Avenue intersection. The existing 30-inch VCP OC San trunk line continues west along Katella Avenue in the City of Los Alamitos and turns south at Los Alamitos Boulevard. The trunk line increases in size as it goes south and then west to the OC San Westside Pump Station. From the OC San Westside Pump Station, the trunk line eventually drains to OC San Treatment Plant No. 1 in Fountain Valley.

In addition, the existing private sewer line within the Buildout Area flows west towards Lexington Drive where it connects to the 30-inch VCP OC San sewer trunk line. It collects sewage flows from the main racetrack building, support buildings, and from the horse stables. Additionally, there are other existing sewer lines within the Buildout Area, which were not studied in the Sewer Capacity Study, but are tributary to the main sewer lines described above.

4.19.3.5 Potable Domestic Water Service

Domestic water service to the Buildout Area is provided by GSWC. The City is within the Los Alamitos West Orange Service Area. GSWC's Los Alamitos West Orange Service Area includes Cypress, Los Alamitos, and Stanton; additionally, small portions of Buena Park, Garden Grove, La Palma, Seal Beach, and the unincorporated community of Rossmoor are included. There are approximately 30,100 customers within GSWC's Los Alamitos West Orange Service Area.[27]

The Los Alamitos West Orange Service Area 2020 Urban Water Management Plan (UWMP) demonstrates that GSWC has adequate domestic water supply for future water demands in normal, single dry years, and five consecutive dry year conditions through 2045. The entire GSWC West

Orange system is considered potable and is supplied from two primary sources: local groundwater and imported water purchased from the Metropolitan Water District of Southern California (MWD) through Municipal Water District of Orange County (MWDOC). A small portion of water is also supplied by recycled water from the City of Cerritos and through a contract with the City of Seal Beach. GSWC owns and operates 14 active wells with a combined capacity of 11,850 gallons per minute, which pump local groundwater from the Coastal Plain of Orange County Groundwater Basin. The UWMP includes a water supply and demand assessment that demonstrates that adequate water supply, including both imported groundwater and groundwater from GSWC-owned wells, will be available to GSWC through 2045.[28] The projected water demands for customers served by GSWC in the Los Alamitos West Orange Service Area is shown in **Table 4.19.B: Projected Water Demands by Use Through 2045 (AFY).**

Table 4.19.B: Projected Water Demands by Use Through 2045 (AFY)

Category	Water Demand

[28] Golden State Water Company (GSWC). 2020. *2020 Urban Water Management Plan, West Orange*.

The GSWC Los Alamitos West Orange Service Area only accesses enough water to meet its need in any given year. Accordingly, although some of the supplies available to GSWC Los Alamitos West Orange Service Area are shared among three GSWC service areas, GSWC Los Alamitos West Orange Service Area would not acquire the additional supplies unless they are needed as part of GSWC's regional water management among the three service areas. As such, the GSWC Los Alamitos West Orange Service Area would acquire the total projected supplies as shown in **Table 4.19.C**, above.

According to the WSA prepared for the proposed project, the historical water use at the Buildout Area over the past several years (for two meters providing service to the Los Alamitos Race Course (LARC) has averaged approximately 73 acre feet per year (afy).

4.19.3.6 Storm Drain

As discussed in Section 4.10, Hydrology and Water Quality, under existing conditions, the southern portion of the Buildout Area generally drains south towards the Katella Avenue Storm Drain, the northwestern portion of the Buildout Area drains west towards Lexington Drive, and a small portion of the Buildout Area in the north drains north towards Cerritos Avenue. The Drainage Report (**Appendix H-1**) identifies six Drainage Areas (A through F) for the Buildout Area under existing conditions, as depicted in **Figure 4.10-1** in Section 4.10. Ultimately, all existing stormwater from the Buildout Area discharges to the Los Alamitos Channel. The Los Alamitos Channel is an engineered channel that flows through the County-operated Rossmoor Detention Basin and discharges to the San Gabriel River. The San Gabriel River outlets to the Pacific Ocean at Seal Beach.

4.19.3.7 Telecommunications Facilities

Telephone, television, and internet services are offered by a variety of providers in the City of Cypress, including AT&T, Frontier Communications, Spectrum, HughesNet, and ViaSat. Non-satellite providers include Frontier and Spectrum Cable. Satellite internet providers include ViaSat, DishTV, and DirectTV. These services are privately operated and offered to each location in the City for a fee defined by the provider.

4.19.4 Regulatory Setting

The following section describes the federal, State, regional, and local regulatory framework applicable to analyzing potential impacts related to utilities and service systems from development of the proposed project.

4.19.4.1 Federal Regulations

There are no federal policies or regulations applicable to the proposed project.

4.19.4.2 State Regulations

Water Supply Assessment. California Public Resources Code (PRC) Section 21151.9 requires that any proposed "project," as defined in Section 10912 of the Water Code, prepare a Water Supply Assessment in compliance with Water Code Section 10910, et seq. Water Code Section 10910 et seq. outlines the necessary information and analysis that must be included in an EIR to ensure that a

proposed land development has a sufficient water supply to meet existing and planned water demand over a 20-year horizon.

According to the Water Supply Assessment requirements, a "project" is defined as any of the following:

- A residential development of more than 500 dwelling units;
- A shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet (sf) of floor space;
- A commercial office building employing more than 1,000 persons or having more than 250,000 sf of floor space;
- A hotel or motel, or both, having more than 500 rooms;
- An industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 sf of floor area;
- A mixed-use project that includes one or more of the projects specified above; and
- A project that would demand an amount of water equivalent to, or greater than, the amount of water required by a 500-dwelling-unit project.

If a public water system has fewer than 5,000 service connections, a "project" means any proposed residential, business, commercial, hotel or motel, or industrial development that would account for an increase of 10 percent or more in the number of the public water system's existing service connections, or a mixed-use project that would demand an amount of water equivalent to, or greater than, the amount of water required by residential development that would represent an increase of 10 percent or more in the number of the public water system's existing service connections.

The proposed project includes the reasonably foreseeable buildout of the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan), which would include a maximum buildout of 1,791 dwelling units and 440,000 square feet of non-residential space. A Water Supply Assessment was prepared by Stetson Engineers, Inc. for the proposed project in March 2025 (**Appendix N**). Additionally, all future development facilitated by the proposed project would be required to undergo project specific environmental review and prepare site-specific water supply assessments if applicable.

Assembly Bill 341. Assembly Bill (AB) 341 extends the waste diversion requirements established under the California Integrated Waste Management Act of 1989 to the year 2020. In 1989, the California Legislature adopted the California Integrated Waste Management Act of 1989, which is administered by CalRecycle (formerly known as the California Integrated Waste Management Board) and requires each city, county, and regional agency to develop a source reduction and recycling

element of an integrated waste management plan. Each adopted source reduction and recycling element was required to demonstrate the diversion of 50 percent of all solid waste from landfill disposal or transformation by January 1, 2000. Annual progress reports were required to be filed with the State Legislature that included specified information regarding the act. AB 341 further establishes the policy goal of the State that not less than 75 percent of solid waste generated be source-reduced, recycled, or composted by the year 2020. AB 341 requires CalRecycle, by January 1, 2014, to provide a report to the Legislature that provides strategies to achieve that policy goal and also includes other specified information and recommendations in addition to the annual progress report.

Title 24, California Building Code. Energy consumption by new buildings in California is regulated by the Building Energy Efficiency Standards, embodied in Title 24 of the California Code of Regulations (CCR), known as the California Building Code (CBC). The CEC first adopted the Building Energy Efficiency Standards for Residential and Nonresidential Buildings in 1978 in response to a legislative mandate to reduce energy consumption in the State. The CBC is updated every 3 years. The 2022 Building Energy Efficiency Standards became effective on January 1, 2023. The efficiency standards apply to both new construction and rehabilitation of both residential and non-residential buildings, and regulate energy consumed for heating, cooling, ventilation, water heating, and lighting. The building efficiency standards are enforced through the local building permit process. Local government agencies may adopt and enforce energy standards for new buildings, provided these standards meet or exceed those provided in CCR Title 24.

4.19.4.3 Regional Regulations

Metropolitan Water District of Southern California 2020 Urban Water Management Plan. Metropolitan Water District of Southern California's (MWD) 2020 Urban Water Management Plan (UWMP) lists and describes the various uses, demand, supplies, target reductions, and compliance measures for 26 member agencies. These include 14 cities, 11 municipal water districts, and one county water authority serving approximately 5,200 square miles including portions of Los Angeles, Orange, Riverside, San Bernardino, San Diego, and Ventura Counties. The 2020 Regional UWMP found that under the current supply demands for a multiple-dry-year scenario (i.e., drought conditions), MWD would have sufficient supply to meet the projected growing demand for water from 2025 to 2045. MWD is currently working to develop programs to increase its water supply and create a large surplus during multiple-dry-year scenarios to ensure that water demands will still be addressed during emergency drought situations.

Municipal Water District of Orange County 2020 Urban Water Management Plan. The region served by the Municipal Water District of Orange County (MWDOC) is located in Orange County, California, and includes 28 cities (including the City of Cypress) and water districts, referred to as MWDOC member agencies. MWDOC's 2020 UWMP documents information on all sources of water supplies for the region—imported water, groundwater, surface water, recycled water, and wastewater—as a summary of information for regional planning. The plan concludes that the MWDOC service area will have sufficient existing and planned supplies to meet full service demands under every water-year hydrologic scenario from 2020 through 2025. The plan also evaluates each source of water in the region. The resource mix for meeting total demand includes local groundwater, recycled water, surface water, and imported water from MWD. The plan documents

MWDOC's cooperative efforts with its member agencies in developing local supplies and finds that in the region the percentage of its supply from each source will remain approximately the same for the next 25 years, with 30 percent of its supplies from imported water and 70 percent of its supplies from local sources in 2040, even with projected growth occurring.

4.19.4.4 Local Regulations

Golden State Water Company 2020 Urban Water Management Plan (West Orange). GSWC published its 2020 UWMP for the GSWC Los Alamitos West Orange Service Area, which outlines how GSWC will provide customers with a reliable supply of drinking water for the next 30 years. The 2020 UWMP provides the California Department of Water Resources with information regarding present and future water resources and demands and provides an assessment of GSWC's water resource needs. The 2020 UWMP utilizes factors that were evaluated in ensuring supply reliability in the MWDOC's 2020 UWMP and the MWD's 2020 UWMP.

The UWMP conducts a supply assessment to meet the projected growing demand in its Los Alamitos West Orange Service Area. The UWMP analyzes water supply during multiple-dry-year scenarios to ensure that water demands will still be addressed during emergency drought situations. The UWMP includes these multiple-dry-year scenarios in its analysis of future water demand.

Cypress Town Center and Commons Specific Plan 3.0. The Cypress Town Center and Commons Specific Plan 3.0 does not contain any provisions related to utilities and service systems.

City of Cypress Municipal Code. The Cypress Municipal Code includes the following requirements that would apply to the proposed project related to the provision of utilities:

- **Section 12-31 (Required Diversion Rates)** of the City's Municipal Code requires that the applicant for a covered project shall divert, at a minimum, the percentage of construction and demolition debris as specified by the California Green Building Standards.

- **Section 5-1 (California Building Codes—Adopted)** adopts the 2022 California Green Building Standards Code, 2022 Edition (Title 24). Generally, the intent of Title 24 is to provide efficiency standards for new construction and the rehabilitation of both residential and nonresidential buildings, including building energy consumption, water conservation, and operational efficiencies. Title 24 regulates building energy consumption for heating, cooling, ventilation, water heating, and lighting with regard to both electricity and natural gas, while also regulating water consumption through the installation of efficient plumbing fixtures.

4.19.5 Thresholds of Significance

The thresholds of significance for utilities and service system impacts used in this analysis are consistent with Appendix G of the *State CEQA Guidelines*. Based on these thresholds, implementation of the proposed project would have a significant adverse impact with respect to utilities and service systems if it would:

Threshold 4.19.1: Require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects;

Threshold 4.19.2: Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years;

Threshold 4.19.3: Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments;

Threshold 4.19.4: Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals; or

Threshold 4.19.5: Comply with federal, state, and local management and reduction statutes and regulations related to solid waste.

4.19.6 Project Impacts

Threshold 4.19.1: **Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?**

***Less Than Significant Impact*.** The Specific Plan 3.0 Buildout includes development of a maximum of 1,791 residential units and 440,000 square feet of non-residential development within the Buildout Area. Upon full buildout of the Buildout Area, approximately 5,516 residents would be added to the City's population. In addition, the proposed project would support the City's efforts to meet regional housing needs outlined in the Housing Element and Regional Housing Needs Assessment (RHNA).

4.19.6.1 Water

Construction. During construction, short-term demand for water may occur during project demolition and grading activities, primarily for dust mitigation purposes. Water from the existing potable water lines in the vicinity of the Buildout Area would be used. Overall, short-term construction activities would require minimal water and are not expected to have any adverse impacts on the existing water system or available water supplies. Therefore, construction of the proposed project would not require the construction of new or expanded water conveyance facilities. In addition, as discussed in Section 4.17, Transportation, the proposed project would be required to prepare and implement a Transportation Construction Plan (TCP) during construction activities, which would ensure that if the installation of utility connections and improvements would require temporary road or lane closures, there would be no significant transportation impact during construction. Impacts would be less than significant, and no mitigation is required.

Operation. As previously discussed, water service for the proposed project would be provided by the GSWC. There are existing water lines within Lexington Drive, Cerritos Avenue, and Katella Avenue, as depicted on Figure 2-4 (Water Plan) in the Specific Plan, that currently serve, and would continue to serve, the Buildout Area during operation of the proposed project. Future development under the proposed project would connect to these existing water lines through new water lines constructed within the proposed Moody Street extension.

The GSWC Los Alamitos West Orange Service Area 2020 UWMP states that annual water use in its service area is expected to be 15,759 acre-feet by 2045. In addition, the 2020 UWMP states that total water supplies available for the service area in 2045 would be 23,645 acre-feet. According to the WSA (**Appendix N**) prepared for the proposed project, the historical water use at the Buildout Area over the past several years (for two meters providing service to the LARC) has averaged approximately 73 afy and future development facilitated by the proposed project would result in an additional approximately 620 afy of total water use. This accounts for approximately 3.8 percent of the estimated water demand and 2.6 percent of the total available water supplies in the service area for 2045. This represents a minimal increase in water demand within the GSWC Los Alamitos West Orange Service Area. In addition, according to the CalEEMod projections, future development facilitated by the proposed project would result in approximately 185,501,462 gallons per year (gpy) (570 afy) of total water use, including approximately 99,912,926 gpy (307 afy) of indoor water use and approximately 85,588,536 gpy (263 afy) of outdoor water use, which would account for approximately 3.6 percent of the estimated water demand and 2.4 percent of the total available water supplies in the service area for 2045. Further, the WSA prepared for the proposed project indicated that sufficient water supplies exist to meet the existing and future water demands within the GSWC Los Alamitos West Orange Service Area, including the proposed project.

Additionally, some of the 1,791 housing units that would be facilitated under the proposed project would replace existing urban uses that currently use water. Any future projects implemented in accordance with the proposed project would be required to adhere to applicable development regulations pertaining to water, as discussed in Section 4.19.4, Regulatory Setting, and provide required development impact fees. As a part of the development review process, all future projects would be required to demonstrate that existing public utilities would be sufficient to serve the future projects' needs.

As the new water infrastructure improvements are proposed as part of the project, the environmental impacts associated with construction of the improvements have been discussed and analyzed throughout this Draft EIR. In addition, the GSWC has indicated in a will serve letter that existing water infrastructure in the surrounding area has the capacity to serve the proposed project and sufficient water supplies exist to serve the proposed project. Therefore, operation of the proposed project would not require or result in the relocation or construction of new or expanded water facilities or infrastructure, beyond those proposed as part of the project, the construction or relocation of which could cause significant environmental effects. Impacts would be less than significant, and no mitigation is required.

4.19.6.2 Wastewater

Construction. No significant increase in wastewater flows is anticipated as a result of construction activities within the Buildout Area as sanitary services during construction would be provided by portable toilet facilities, which transport waste off-site for treatment and disposal. Therefore, construction of the proposed project would not require the construction of new or expanded wastewater conveyance facilities. In addition, as previously discussed, the proposed project would be required to prepare and implement a TCP during construction activities, which would ensure that if the installation of utility connections and improvements would require temporary road or lane closures, there would be no significant transportation impact during construction. Impacts would be less than significant, and no mitigation would be required.

Operation. Wastewater services for the proposed project would be provided by the City of Cypress and the OC San. The proposed project would include the installation of two new sewer connections to existing sewer main lines, including (1) a new 10-inch sewer lateral extending from Lot 2 and connecting to the existing 30-inch sewer trunk line owned and maintained by OC San within Lexington Drive (Sewer Connection A), and (2) a new 8-inch sewer main line that would run north to south along the proposed Moody Street extension (Sewer Connection B), collecting sewer lateral flows from the adjacent lots before connecting to the existing 18-inch VCP City sewer main at the intersection of Moody Street and Katella Avenue. This proposed sewer line would be an 8-inch line where it commences and would gradually increase in size to a 15-inch line at Sewer Connection B. In addition, as recommended by the Sewer Capacity Study, Lots 10 and 11 located on the north side of Vessels Circle would connect to the existing 8-inch City sewer line located southeast of Lot 11.

The Sewer Capacity Study analyzed the hydraulic pipe capacity for the proposed sewer lateral connecting on Lexington Drive, three different locations along the proposed Moody Street Extension sewer main, and for the proposed Vessels Circle Extension sewer lateral that would connect to Moody Street Extension. The results of this analysis demonstrate that the proposed sewer lines would have adequate capacity to serve the proposed project. In addition, the Sewer Capacity Study found that the existing 18-inch pipe at proposed Sewer Connection B and the existing 21-inch pipe at the existing connection to the 30-inch OC San sewer trunk line would be adequate to serve the proposed project and no replacement facilities with increased capacity would be necessary.

As indicated above, the OC San has a capacity to treat 188 million gallons of wastewater per day from residential, commercial, and industrial sources at two plants: Reclamation Plant No. 1 in Fountain Valley and Treatment Plant No. 2 in Huntington Beach. Reclamation Plant No. 1 has a primary treatment capacity of 208 mgd,[29] and is running under capacity at approximately 120 mgd.[30] Treatment Plant No. 2 has a primary treatment capacity of 168 mgd and currently receives 59 mgd.[31] The future residential and non-residential development facilitated by the proposed project is anticipated to generate approximately 276 acre-feet of wastewater annually, or approximately

[29] Orange County Sanitation District (OC San). 2019. *Budget Update Fiscal Year 2019-2020*. Website: https://www.ocsd.com/Home/ShowDocument?id=28411 (accessed March 2026).

[30] Ibid.

[31] Orange County Sanitation District (OC San). n.d.-b. *Facts and Key Statistics Webpage*. Website: https://www.ocsd.com/services/regional-sewer-service (accessed March 2026).

246,398 gallons of wastewater per day.[32] This accounts for approximately 0.1 percent of OC San's daily capacity, the current capacity of Reclamation Plant No. 1, and the current capacity of Reclamation Plant No. 2. In addition, as provided in the Sewer Capacity Study, OC San has provided a Will Serve letter stating that OC San facilities can accommodate the full development of the Buildout Area under the proposed project.

Additionally, some of the 1,791 housing units that would be facilitated under the proposed project would replace existing urban uses that currently generate wastewater and are assumed in OC San's wastewater generation projections. Any future projects implemented in accordance with the proposed project would be required to adhere to the Specific Plan and comply with applicable development regulations pertaining to wastewater treatment. As a part of the development review process, all future projects would be required to demonstrate that existing public utilities would be sufficient to serve the future projects' needs.

As the proposed new wastewater infrastructure improvements are proposed as part of the project, the environmental impacts associated with construction of the improvements have been discussed and analyzed throughout this Draft EIR. In addition, OC San has indicated in a will serve letter that existing wastewater infrastructure in the surrounding area has the capacity to serve the proposed project and sufficient capacity at Reclamation Plant No. 1 and No. 2 exists to serve the proposed project. Therefore, operation of the proposed project would not require the relocation or construction of new or expanded wastewater facilities or infrastructure, beyond those proposed as part of the project, the construction or relocation of which could cause significant environmental effects. Impacts would be less than significant, and no mitigation is required.

4.19.6.3 Stormwater/Drainage

Construction. Drainage patterns would be temporarily altered during grading and other construction activities. Specifically, the removal of vegetation can eliminate natural interception of stormwater runoff, resulting in increased flow rate, and grading activities can reshape the ground surface, which would direct stormwater runoff differently than existing conditions. As specified in Section 4.10, Hydrology and Water Quality, if construction of future development associated with the proposed project would disturb greater than 1 acre of soil, those projects would be subject to the requirements of the Construction General Permit, as specified in **Regulatory Compliance Measure HYD-1**. As required by the Construction General Permit, the Construction Contractor would be required to prepare a Storm Water Pollution Prevention Plan (SWPPP) and implement construction Best Management Practices (BMPs) detailed in the SWPPP during construction activities. The SWPPP would detail the BMPs to be implemented during construction. Construction BMPs would include, but not be limited to, Erosion Control and Sediment Control BMPs designed to minimize erosion and retain sediment on site, and Good Housekeeping BMPs to prevent spills, leaks, and discharge of construction debris and waste into receiving waters. If construction of future development associated with the proposed project would disturb less than 1 acre of soil and are not a part of a larger common plan, those projects would be required to comply with Section 4.106 of the 2022 California Green Building Standards Code (CALGreen Code), as specified in **Regulatory**

[32] In the absence of an official wastewater generation rate, wastewater can be reasonably assumed to be 90 percent of the indoor water use (i.e., 307 afy).

Compliance Measure HYD-1. Section 4.106 of the CALGreen Code requires implementation of BMPs to prevent flooding and erosion and to retain sediment on site. Compliance with the requirements of the Construction General Permit or Section 4.106 of the CALGreen Code, including incorporation of construction BMPs, would ensure that construction impacts related to waste discharge requirements, water quality standards, degradation of water quality, increased pollutant discharge, and alteration of receiving water quality would be less than significant.

In addition, any groundwater extracted during groundwater dewatering activities that is discharged to surface waters would be tested and treated (if necessary) to ensure that any discharges meet the water quality limits specified in the applicable National Pollutant Discharge Elimination System (NPDES) permit, as also specified in in Section 4.10 Hydrology and Water Quality, **Regulatory Compliance Measure HYD-2. Regulatory Compliance Measures HYD-1 and HYD-2** are existing NPDES requirements with which the project is required to comply. These measures would prevent substantial additional sources of polluted runoff being discharged to the storm drain system through implementation of construction BMPs that target pollutants of concern in runoff from the Buildout Area as well as testing and treatment (if required) of groundwater prior to its discharge to surface waters.

With implementation of BMPs, construction of the proposed project would not result in a substantial increase in the rate or amount of surface runoff, flow, and volume that would exceed the capacity of the adjacent stormwater drainage systems. Therefore, construction of the proposed project would not require or result in the relocation or construction of new or expanded stormwater drainage facilities, the construction or relocation of which could cause significant environmental effects. In addition, the proposed project would be required to prepare and implement a TCP during construction activities, which would ensure that if the installation of utility connections and improvements would require temporary road or lane closures, there would be no significant transportation impact during construction. Impacts would be less than significant, and no mitigation is required.

Operation. The Drainage Report identifies six Drainage Areas (A through F) for the Buildout Area under existing conditions, as described in Section 4.10, Hydrology and Water Quality, and depicted in **Figure 4.10-1** in Section 4.10. Under existing conditions, the southern portion of the Buildout Area drains south towards the Katella Avenue Storm Drain, the northwestern portion of the Buildout Area drains west towards Lexington Drive, and a small portion of the Buildout Area in the north drains north towards Cerritos Avenue. In addition, under existing conditions, stormwater runoff within Drainage Areas E and F discharge to the artificial lakes located within the race course.

Implementation of the proposed project would require modifications to the existing Drainage Areas and the Buildout Area and would include the installation of Storm Drain Lines A, B, and C, as discussed in more detail below. Stormwater would no longer be directed to the existing race track and golf course lakes, which would be removed as part of the proposed project. As such, the number of Drainage Areas would be reduced to three proposed outfalls or Drainage Areas (i.e., Drainage Areas A through C) for hydrology and drainage design, which would meet the City's discharge requirement of 0.308 cubic feet per second per acre (cfs/acre).

There are also 18 proposed Drainage Management Areas (DMAs A1, A2, B, C, D1, D2, E1, E2, F, G1, G2, H1, H2, and S1 through S5) that correspond to the anticipated location of future water quality BMPs. The numbering convention of the Drainage Areas does not correspond exactly between the existing and proposed conditions. **Table 4.19.D: Existing and Proposed Drainage Conditions** below is provided for clarification and comparison purposes.

Table 4.19.D: Existing and Proposed Drainage Conditions

Outfall Location	Existing Drainage Area	Proposed Drainage Area
Katella Avenue Storm Drain	A and B	A
Winner's Circle Storm Drain	C	-
Lexington Drive Storm Drain	D	B
Cerritos Avenue Storm Drain	E	C
Existing Race Track Ponds	F	-

Source: *Master Plan of Drainage for Specific Plan 3.0 Buildout Project, 4961 Katella Avenue, Cypress, CA* (TAIT & Associates, Inc., September 16, 2025) (**Appendix H-1**)

The three proposed Drainage Areas are described below and depicted in **Figure 4.10-2** in Section 4.10, Hydrology and Water Quality, and the 18 proposed DMAs are described further in Section 4.10 and depicted in **Figure 4.10-3** in that section.

- **Drainage Area A** consists of the east and southeast portions of the Buildout Area, southeast of Drainage Area C, and includes approximately 44.76 acres of land. Proposed development within Drainage Area A would include commercial, medium-density residential, and senior housing uses with residential densities of approximately 29.7 and 17.5 dwelling units per acre, respectively. Additionally, the proposed Moody Street Extension south of the proposed Vessels Circle Extension would drain towards Drainage Area A and be captured by proposed catch basins that would discharge to the Katella Avenue Storm Drain. Stormwater within Drainage Area A would generally flow from north to south. Surface flows in this area would be conveyed to new inlet locations which would route the runoff towards a proposed storm drain line in the proposed Moody Street and Vessels Circle extensions (Storm Drain Line A). Storm Drain Line A would begin in Vessels Circle as a 24-inch reinforced concrete pipe (RCP) and would flow east to west towards Moody Street. Along Moody Street, this line would increase in size to a 36-inch storm drain system that would connect to the existing 39-inch Katella Avenue Storm Drain. The Moody Street extension would also include the construction of catch basin inlets that would ensure no surface runoff from the proposed street would spill onto Katella Avenue as it would in the existing condition.

  The proposed Drainage Area A consolidated the existing Drainage Area A and Drainage Area B. In the proposed condition, peak runoff was determined to be less than the existing stormwater runoff, which is due to the implementation of proposed detention basins within the proposed Drainage Area A. Five proposed detention basins, Basins A1, A2, A3, A4, and A5, are proposed in Drainage Area A to reduce the peak runoff from the project site, utilizing the 0.308 cfs/acre maximum discharge rate as required by the City, before ultimately discharging into the Katella Avenue Storm Drain. As discussed, the peak runoff would be greatly reduced when compared to

the existing condition, which would improve the downstream system hydraulic conditions. Discharge to Katella Avenue would not exceed the existing condition discharge for the 10-, 25- and 100-year expected value storm event.

- **Drainage Area B** consists of the western portion of the Buildout Area, west of Drainage Area C, and includes approximately 36.78 acres of land. Proposed development within Drainage Area B would include single-family residential, medium-family residential, and senior housing uses. Stormwater within Drainage Area B would generally flow from northeast to southwest. Surface flows in this area would be conveyed through a proposed storm drain line (Storm Drain Line B) to discharge into the existing 48-inch storm drain line that begins at Enterprise Drive and ultimately connects to the existing 48-inch Lexington Drive Storm Drain. Three detention basins, Basins, Basins B1, B2, and B3, are proposed in Drainage Area B to reduce the peak runoff from the project site, utilizing the 0.308 cfs/acre maximum discharge rate as required by the City.

- **Drainage Area C** consists of the central portion of the Buildout Area, between Drainage Area A and Drainage Area B, and includes approximately 61.87 acres of land. Proposed development within Drainage Area C would include single-family residential and medium-family residential, with the remaining portion to be developed with park and recreational uses. Drainage Area C is divided by the proposed Moody Street extension, with stormwater runoff generated to the west of the street extension set to flow northeasterly and runoff produced to the east of the street extension to flow northwesterly. All surface runoff from Drainage Area C would be conveyed via a proposed storm drain line (Storm Drain Line C) to the proposed detention basin, Basin C in the park area. Depending on the final design considerations of the ultimate buildout condition, Basin C would be designed as either an underground detention system and/or a surface detention basin that would collect and store the 100-year high-confidence storm event runoff volume. The stormwater runoff collected in Basin C would be fully retained during the storm event until the flow in the Cerritos Avenue Storm Drain system has fully subsided. Then, the runoff volume stored in Basin C would be pumped out to the Cerritos Avenue Storm Drain at a rate specified by the maximum conveyance capacity of the line.

As discussed above, the proposed project would include on and off-site upgrades to stormwater infrastructure, including the installation of a proposed storm drain line in the proposed Moody Street and Vessels Circle extensions (Storm Drain Line A), a proposed storm drain line in Drainage Area B that connects to the existing 48-inch storm drain line that begins at Enterprise Drive and ultimately connects to the existing 48-inch Lexington Drive Storm Drain (Storm Drain Line B), and a proposed storm drain line that would convey stormwater runoff from Drainage Area A to the proposed Basin C in the park area (Storm Drain Line C).

Drainage Area A also includes DMA-S4 and DMA-8. DMA-S4 includes approximately 0.23 acre of the proposed Vessels Circle extension and is already developed with the Melia Homes, Belmont residential project. Within DMA-S4, the existing drainage pattern would be maintained, and runoff flows would be captured and treated via a proprietary flow-based biofiltration system and discharged to the proposed storm drain line in the proposed Vessels Circle extension (Storm Drain Line A) and ultimately the Walker Street Storm Drain.

Approximately 11.57 acres of Drainage Area A is comprised of a portion of the Grace Church property and a portion of the existing race track that will be transferred by LARC to Grace Church as part of the land swap (Lot 8, per separate agreement and as depicted in the Vesting Tentative Tract Map [VTTM]). DMA-8 includes approximately 4.18 acres of Lot 8 that would be owned by Grace Church as part of this land swap deal. This portion of the Grace Church property currently discharges to the eastern Race Course Pond pursuant to a Declaration of Drainage Easement recorded on November 12, 2010, as Instrument No. 2010 in the Official Records of Orange County, California. As permitted by this easement agreement, the redevelopment of the LARC property would require an alteration in the design of the Grace Church drainage system. To preserve the existing drainage pattern of the Grace Church property, a proposed surface-level detention basin would be graded in Lot 8 (Lot 8 Basin) that intercepts the flows of the existing double 24-inch RCP line from Grace Church. Stormwater runoff within DMA-8 would either be treated via a proprietary flow-based biofiltration system or the Lot 8 Basin, depending on the final site design. The construction of the Lot 8 Basin will be done concurrently with the redevelopment of any portion of Lot 7 that would eliminate the use of the eastern Race Course Pond. Discharge from the Lot 8 Basin would be pumped to Storm Drain Line A within Vessels Circle, at a controlled rate of 0.308 cfs/acre of its tributary area during the 100-year storm event. All improvements to Lot 8 related to the Grace Church drainage system would be completed by the project Applicant per the Drainage Easement.

Ultimately, all stormwater from the Buildout Area would discharge to the Los Alamitos Channel, similar to the existing conditions. The proposed on-site storm drain system would be adequately sized to accommodate stormwater runoff so that on-site flooding would not occur.

With implementation of the proposed storm drain systems and detention system, as specified in **Regulatory Compliance Measure HYD-3**, operation of the proposed project would not result in a substantial increase in the rate or amount of surface runoff, flow, and volume that would exceed the capacity of the adjacent stormwater drainage systems. As the proposed stormwater infrastructure improvements are proposed as part of the project, the environmental impacts associated with construction of the improvements have been discussed and analyzed throughout this Draft EIR. In addition, the proposed stormwater infrastructure would be appropriately sized in order to ensure that stormwater runoff from the Buildout Area would be adequately accommodated by the existing stormwater infrastructure in the area. Therefore, operation of the proposed project would not require or result in the relocation or construction of new or expanded stormwater drainage facilities, beyond those proposed as part of the project, the construction or relocation of which could cause significant environmental effects. Impacts would be less than significant, and no mitigation is required.

Additionally, all future projects implemented in accordance with the proposed project would be required to adhere to the Specific Plan, provide required development impact fees, and comply with applicable development regulations pertaining to stormwater drainage. As a part of the development review process, all future projects would be required to demonstrate that existing public utilities would be sufficient to serve the future projects' needs. As such, the proposed project would not require the relocation or construction of new or expanded stormwater facilities or infrastructure and impacts would be less than significant. No mitigation is required.

4.19.6.4 Electric Power

Construction. Short-term construction activities associated with demolition of on-site structures would be limited to providing power to the staging area and portable construction equipment and would not substantially increase demand for electricity. The heavy equipment used for demolition and or construction is primarily powered by diesel fuel. Temporary electric power would be provided via existing utility boxes and lines within the Buildout Area. Given the limited nature of potential demand for electricity during construction and the availability of existing power lines on the site, there would not be a need to construct new or alter existing electric transmission facilities. In addition, the proposed project would be required to prepare and implement a TCP during construction activities, which would ensure that if the installation of utility connections and improvements would require temporary road or lane closures, there would be no significant transportation impact during construction. Impacts would be less than significant, and no mitigation is required.

Operation. The Buildout Area is within the service territory of SCE, which provides services through a grid of transmission lines and related facilities. As discussed previously, according to the CEC, total electricity consumption in the SCE service area in 2023 was 77,409 GWh[33] and total electricity consumption in Orange County in 2023 was 18,853 GWh (6,846 GWh for the residential sector and 11,990 GWh for the non-residential sector).[34] Based on the CalEEMod results for the proposed project, the estimated electricity demand associated with the operation of the proposed project is approximately 11,888,842 kilowatt-hours (kWh) per year. Therefore, operation of the future development facilitated by the proposed project would increase annual electricity consumption in the SEC service area and Orange County by approximately 0.01 and 0.06 percent, respectively. Consequently, anticipated electricity consumption by the proposed project is negligible (less than 0.1 percent) compared to the total consumption of the SCE service area and Orange County.

Additionally, any future projects implemented in accordance with the proposed project would be required to adhere to the Specific Plan and comply with applicable development regulations pertaining to electric power. As a part of the development review process, all future projects would be required to demonstrate that existing public utilities would be sufficient to serve the future projects' needs. In addition, SCE provided a will serve letter on June 19, 2025, indicating that they have the ability to serve the proposed project.

As such, the proposed project would not require the relocation or construction of new or expanded electrical facilities or infrastructure, and impacts would be less than significant. No mitigation is required.

---

34 California Energy Commission (CEC). n.d.-a. *Electricity Consumption by County*. Website: http://www.ecdms.energy.ca.gov/elecbycounty.aspx (accessed November 11, 2025).

4.19.6.5 Natural Gas

Construction. Project construction would not result in demand for natural gas since construction activities/equipment would not require natural gas or connect existing adjacent natural gas facilities. Therefore, construction activities would not impact natural gas services and the proposed project would not require new or physically altered gas transmission facilities. In addition, the proposed project would be required to prepare and implement a TCP during construction activities, which would ensure that if the installation of utility connections and improvements would require temporary road or lane closures, there would be no significant transportation impact during construction. Impacts would be less than significant, and no mitigation is required.

Operation. As discussed above, natural gas would continue to be provided to the Buildout Area by SoCalGas. Future development under the proposed project would include connections to existing natural gas infrastructure in the surrounding area. SoCalGas, the service provider for the City, serves approximately 21.1 million customers in a 24,000-square-mile service territory.[35] According to the CEC, total natural gas consumption in the SoCalGas service area in 2023 was 5,233 million therms [36] and total natural gas consumption in Orange County in 2023 was 607.6 million therms (378.9 million therms for the residential sector and 228.7 million therms for the non-residential sector).[37] CalEEMod was used to calculate the approximate annual natural gas associated with future development under the proposed project. Based on the CalEEMod results for the proposed project, the estimated potential increase in natural gas demand in the Buildout Area is anticipated to be approximately 38,243,251 thousand British thermal units (kBTU) per year, or approximately 382,524 therms per year. Therefore, operation of the new residential development allowed under the proposed project would increase annual consumption in the SoCalGas service area and Orange County by approximately 0.008 and 0.07 percent, respectively. Consequently, the anticipated natural gas consumption by the proposed project would be negligible (less than 0.1 percent) compared to the total consumption of the SoCalGas service area and Orange County. The proposed project would not require the construction of any physical improvements related to the provision of natural gas service that would result in significant environmental impact.

Additionally, any future projects implemented in accordance with the proposed project would be required to adhere to the Specific Plan, provide required development impact fees, and comply with applicable development regulations pertaining to natural gas. As a part of the development review process, all future projects would be required to demonstrate that existing public utilities would be sufficient to serve the future projects' needs. In addition, SoCalGas provided a will serve letter on June 30, 2025, indicating that they have the ability to serve the proposed project.

As such, the proposed project would not require the relocation or construction of new or expanded natural gas facilities or infrastructure, and impacts would be less than significant. No mitigation is required.

4.19.6.6 Telecommunication Facilities

Telephone, television, and internet services are offered by a variety of providers in the City. Any future development facilitated by the proposed project would be responsible for constructing adequate tele-communication facility extensions on their respective project sites. The construction and expansion of these facilities would occur on site during the site preparation and earthwork phase and are not expected to impact any telephone, cable, or internet services offsite that serve the surrounding areas. Additionally, telecommunication facilities are generally installed concurrently with utility expansions and impacts associated with the expansion of telecommunications facilities are already considered in the air quality, noise, and construction traffic analysis. In addition, as previously discussed, the proposed project would be required to prepare and implement a TCP during construction activities, which would ensure that if the installation of utility connections and improvements would require temporary road or lane closures, there would be no significant transportation impact during construction. Therefore, the project impacts associated with the relocation or construction of new or expanded telecommunication facilities and impacts would be less than significant. No mitigation is required.

Threshold 4.19.2: Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

***Less Than Significant Impact*.** As discussed above, although the proposed project would not directly result in physical development, the proposed project could result in the development of up to 1,791 residential units and 440,000 square feet of non-residential development within the Buildout Area, which could add approximately 5,516 residents to the City's population.[38]

According to the 2020 UWMP, GSWC's available water supply would meet the future projected demand for normal year demands from 2025 through 2045. GSWC's Los Alamitos West Orange Service Area has a diverse water supply portfolio that allows GSWC to conjunctively use surface and groundwater assets. Water supply reliability is a result of the projected reliability of MWDOC, a member agency of MWD, which expects to provide reliable imported water supplies, OCWD management of the Orange County Groundwater Basin to ensure reliability, and conservation derived supply. Groundwater imported water from MWDOC, and the small amount of recycled water delivered within the service area by the City of Cerritos and the City of Seal Beach are all resilient during dry conditions and GSWC Los Alamitos West Orange Service Area is therefore not faced with shortages during normal or dry years.

As discussed above and according to the WSA (**Appendix N**) prepared for the proposed project, the historical water use at the Buildout Area over the past several years (for two meters providing service to the LARC) has averaged approximately 73 afy, and future development facilitated by the proposed project would result in an additional approximately 620 afy of total water use. This accounts for approximately 3.8 percent of the estimated water demand and 2.6 percent of the total available water supplies in the service area for 2045. This represents a minimal increase in water demand within the GSWC Los Alamitos West Orange Service Area. In addition, according to the

[38] 1,791 households x 3.08 persons per household = 5,516 persons

CalEEMod estimates, future development facilitated by the proposed project would result in approximately 185,501,462 gpy (570 afy) of total water use, including approximately 99,912,926 gpy (307 afy) of indoor water use and approximately 85,588,536 gpy (263 afy) of outdoor water use, which accounts for approximately 3.6 percent of the estimated water demand and 2.4 percent of the total available water supplies in the service area for 2045. Further, as discussed above, the WSA prepared for the proposed project indicated that sufficient water supplies exist to meet the existing and future water demands within the GSWC Los Alamitos West Orange Service Area, including the proposed project. Therefore, the proposed project would not result in insufficient water supplies during normal, dry, and multiple dry years, and adequate water supply would be available to accommodate the future development in the Buildout Area facilitated by the proposed project. The proposed project would increase demand for water supplies; however, the GSWC would have sufficient water supplies to serve the proposed project. Therefore, the proposed project would result in less than significant impacts related to water supplies. No mitigation is required.

Threshold 4.11.3: Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

***Less Than Significant Impact*.** As discussed above, sewage from the City is diverted to either Reclamation Plant No. 1 in Fountain Valley or Treatment Plant No. 2 in Huntington Beach. Reclamation Plant No. 1 has a primary treatment capacity of 208 million gallons per day (mgd),[39] and is running under capacity at approximately 120 mgd.[40] Treatment Plant No. 2 has a primary treatment capacity of 168[41] mgd and currently receives 59 mgd.[42]

Construction. During construction, wastewater would be generated by construction workers, and sanitary services would be provided by portable toilet facilities, which would transport waste off-site for treatment and disposal at either Reclamation Plant No. 1 in Fountain Valley or Treatment Plant No. 2 in Huntington Beach. As construction activities would be temporary, the wastewater treatment provider is anticipated to have adequate capacity to serve the projected wastewater demand in addition to the provider's existing commitments. Impacts would be less than significant, and no mitigation is required.

Operation. As discussed above, the future residential and non-residential development facilitated by the proposed project is anticipated to generate approximately 276 acre-feet of wastewater annually, or approximately 246,398 gallons of wastewater per day.[43] This accounts for

[39] Orange County Sanitation District (OC San). 2019. *Budget Update Fiscal Year 2019-2020*. Website: https://www.ocsan.gov/wp-content/uploads/2024/06/Adopted-Budget-Update-FY-2019.pdf (accessed May 23, 2025).

[40] Ibid.

[41] Ibid.

[42] Orange County Sanitation District (OC San). n.d.-b. *Facts and Key Statistics*. Website: https://www.ocsd.com/services/regional-sewer-service (accessed May 23, 2025).

[43] In the absence of an official wastewater generate rate, wastewater can be reasonably assumed to be 90 percent of the indoor water use.

approximately 0.1 percent of OC San's daily capacity, the current capacity of Reclamation Plant No. 1, and the current capacity of Reclamation Plant No. 2. In addition, as provided in the Sewer Capacity Study, OC San has provided a Will Serve letter stating that OC San facilities can accommodate the full development of the Buildout Area under the proposed project. Additionally, through its Capital Improvement Program, the OC San strives to continue maintaining its facilities at optimal levels by planning, designing, and preparing for future demand by developing Facilities and Biosolids Master Plans that address 20-year planning horizons.[44] Through these long-range planning activities, the OC San would be able to accommodate the growth in demand for wastewater treatment generated by the proposed project and other projects in its service area. Therefore, the proposed project would not result in a significant contribution to demands on the treatment capacity of Reclamation Plant No. 1 or Treatment Plant No. 2. Additionally, fees required by the OC San would sufficiently offset potential impacts generated by the proposed project. Furthermore, some of the 1,791 housing units that would be facilitated under the proposed project would replace existing urban uses that currently generate wastewater.

Therefore, the proposed project would result in less than significant impacts related to the wastewater treatment capacity and no mitigation is required.

Threshold 4.11.4: Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less Than Significant Impact. As previously discussed, the City currently contracts with Valley Vista Services of Orange County, a private solid waste hauler, to collect and dispose of the solid waste/refuse generated in the City. Solid waste/refuse collected in the City by Valley Vista is transported to one of the Class III landfills operated and maintained by OCWR. Class III landfills only accept non-hazardous municipal solid waste for disposal; no hazardous or liquid waste is accepted. County residents are able to dispose of their household hazardous waste items at any of OCWR's four household hazardous waste collection centers. Currently, OCWR maintains and operates three Class III sanitary landfills: Frank R. Bowerman Landfill, Prima Deshecha Landfill, and Olinda Alpha Landfill.

Construction. The demolition of the existing structures within the Buildout Area and the future construction of the proposed project would generate typical construction debris, including wood, paper, glass, metals, cardboard, and green wastes. Construction of the proposed project would be required to comply with the City's Construction and Demolition Ordinance, as detailed in **Regulatory Compliance Measure UTIL-1**, which requires that the applicants for future development submit a Materials Questionnaire should the contractor haul away their own demolition waste. As stipulated by City Ordinance No. 1166 and the California Green Building Standards Code, the proposed project would be required to divert a minimum of 65 percent of construction and demolition debris in order to obtain building permits.[45] Additionally, Valley Vista Services certifies 75 percent diversion for all

[44] In the absence of an official wastewater generation rate, wastewater can be reasonably assumed to be 90 percent of the indoor water use.

[45] City of Cypress. 2021. C&D Recycling Requirement. Website: C&D Recycling Requirement, City of Cypress (cypressca.org) (accessed June 3, 2025).

construction and demolition material, which would contribute to an increased waste diversion rate within the City.[46] Therefore, adherence to **Regulatory Compliance Measure UTIL-1,** City Ordinance No. 1166, and the California Green Building Standards Code would ensure that construction impacts related to solid waste generation from any future projects developed in accordance with the proposed project would remain less than significant. No mitigation is required.

Operation. Solid waste from future development allowed under the proposed project would be required to comply with State and local solid waste reduction, diversion, and recycling policies and regulations. According to CalEEMod calculations, the future development facilitated by the proposed project would generate approximately 1,811 tons of solid waste per year. Currently, OCWR maintains and operates three Class III sanitary landfills including the Frank R. Bowerman Landfill, Olinda Alpha Landfill, and Prima Deshecha Landfill.

The Frank R. Bowerman Landfill is currently permitted by the California Department of Resources, Recycling, and Recovery (CalRecycle) to receive a maximum of 11,500 tons per day (tpd) of waste, with a current annual average of 8,500 tpd. The Olinda Alpha Landfill is currently permitted by CalRecycle to receive a maximum of 8,000 tpd of waste but currently receives an average of approximately 7,000 tpd. The Prima Deshecha Landfill is currently permitted by CalRecycle to receive 4,000 tpd. The additional solid waste generation of 1,811 tons of solid waste per year, or approximately 5 tpd, facilitated by the proposed project represents 0.04 percent, 0.06 percent, and 0.1 percent of the daily permitted tonnage of the Frank R. Bowerman Landfill, Olinda Alpha Landfill, and Prima Deshecha Landfill, respectively. Consequently, anticipated solid waste generation by the proposed project is negligible (substantially less than 0.1 percent) compared to the total amount of solid waste received by the three landfills. The proposed project would not require the construction of any physical improvements related to the provision of solid waste disposal that would result in significant environmental impacts and the OCWR solid waste disposal system would have adequate capacity to serve the proposed project. Furthermore, some of the future development that would be facilitated by the proposed project would replace existing urban uses, most of which currently generate solid waste.

Threshold 4.19.5: Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Solid waste from future development facilitated by the proposed project would be required to comply with State and local solid waste reduction, diversion, and recycling policies and regulations. According to CalEEMod calculations, the future development facilitated by the proposed project would generate approximately 1,811 tons of solid waste per year. As discussed above, the additional solid waste generated by the proposed project represents 0.04 percent, 0.06 percent, and 0.1 percent of the daily permitted tonnage of the Frank R. Bowerman Landfill, Olinda Alpha Landfill, and Prima Deshecha Landfill, respectively. Consequently, anticipated solid waste generation by the proposed project is negligible (substantially less than 0.1 percent) compared to the total amount of solid waste received by the three landfills. The proposed project would not require the construction of any physical improvements related to the provision of solid waste disposal that would result in

[46] City of Cypress. 2021. C&D Recycling Requirement. Website: C&D Recycling Requirement, City of Cypress (cypressca.org) (accessed June 3, 2025).

significant environmental impacts and the OCWR solid waste disposal system would have adequate capacity to serve the proposed project. Furthermore, some of the 1,791 housing units that would be facilitated under the proposed project would replace existing urban uses, most of which currently generate solid waste.

Construction and operation of the proposed project would comply with federal, State, and local statutes and regulations related to solid waste, including AB 1327 (wood waste disposal), Chapter 18 of the California Solid Waste Reuse and Recycling Access Act of 1991 (requires adequate, permanent space for recycling and solid waste collection at new developments), AB 939 (CalRecycle), AB 75 (solid waste diversion), AB 1826 (organic waste recycling), and SB 1383 (organic waste collection services).

Therefore, impacts related to solid waste generation from any future projects developed in accordance with the proposed project would be less than significant. No mitigation is required.

4.19.7 Level of Significance Prior to Mitigation

The proposed project would result in less than significant impacts related to utilities and service systems.

4.19.8 Regulatory Compliance Measures and Mitigation Measures

4.19.8.1 Regulatory Compliance Measures

The following regulatory compliance measures pertaining to utilities and service systems are applicable to the proposed project.

Regulatory Compliance Measure UTIL-1	**Construction and Demolition Ordinance**. The construction contractor shall comply with the provisions of the City of Cypress Ordinance No. 1166 and the 2022 California Green Building Standards Code, which would reduce construction and demolition waste. Ordinance No. 1166 is codified in Article VIII, Materials Questionnaire for Certain Construction and Demolition Projects within the City of Cypress, in the Cypress Municipal Code.

4.19.8.2 Mitigation Measures

No mitigation measures are applicable to the proposed project.

4.19.9 Level of Significance after Mitigation

The proposed project would not result in any significant impacts to utilities or service systems. No mitigation is required.

4.19.10 Cumulative Impacts

As defined in Section 15130 of the *State CEQA Guidelines*, cumulative impacts refer to the incremental effects of an individual project when viewed in connection with the effects of past, current, and probable future projects within the cumulative impact area for public services. The cumulative study area for utilities and service systems is the City of Cypress. The cumulative project list is provided in **Table 4.A: Summary of Related Projects**, and a map of the cumulative project locations is provided in **Figure 4-1: Related Projects,** in Chapter 4.0, Existing Setting, of this Draft EIR.

As discussed in Section 4.14, Population and Housing, the proposed project would accommodate up to 1,791 residential units within the Buildout Area, supporting the City's efforts to meet regional housing needs outlined in the Housing Element and RHNA. The RHNA process identified that the City is in need of 3,936 units, and the proposed project could, at a maximum, accommodate 1,791 of those units. Utilizing the average number of people per household as identified by the U.S. Census Bureau (3.08), the proposed project would include population growth by an additional 5,516 people. Although the proposed project would facilitate the development of new housing in the City, the new housing would not induce substantial unplanned population growth, as the proposed project is designed to meet the City's housing need allocation for the planning period between 2021 and 2029 of 3,936 units as determined by the Southern California Association of Governments (SCAG) RHNA. As such, population growth generated by the proposed project in conjunction with related projects has already been accounted for in the City's planning efforts. Because this population increase is consistent with the population growth for the City and region, increased utility demands associated with the residential component of the proposed project is also consistent with growth in the City and region.

Any future projects implemented in accordance with the proposed project would be required to adhere to the Specific Plan, provide applicable development impact fees, and comply with applicable development regulations pertaining to water, wastewater treatment, stormwater drainage, electric power, natural gas, or telecommunications facilities. Although the proposed project includes the construction of new utility infrastructure, including water, wastewater, stormwater drainage, electricity, and natural gas connections and improvements both on- and off-site (i.e., the Grace Church property), the environmental impacts associated with construction of these improvements have been discussed and analyzed throughout this Draft EIR. In addition, as discussed in Section 4.17, Transportation, the proposed project would be required to prepare and implement a TCP during construction activities, which would ensure that if the installation of utility connections and improvements would require temporary road or lane closures, there would be no significant transportation impact during construction.

Additionally, adequate water supply is available to accommodate the future development facilitated by the proposed project. Solid waste and wastewater generated by the new development facilitated by the proposed project could be accommodated with existing infrastructure and would not lead to a significant increase that would alter the capacity of the existing solid waste and wastewater infrastructure set in place. Any future projects would be required to comply with existing and future statutes and regulations, including waste diversion programs mandated by City, State, and federal law.

In addition, some of the related projects identified in **Table 4.A** have undergone environmental review pursuant to CEQA, which included an analysis of potential impacts on utilities and service systems. According to the EIRs prepared for the Shea Properties Mixed Use Development Project (Related Project 1), Melia Homes-Citrus Square Project (Related Project 2), and the Los Alamitos Medical Center Project (Related Project 7), these projects including new on-site infrastructure and connections to existing infrastructure in the surrounding area and impacts on utilities and service systems would be less than significant with implementation of the projects. Further, the EIRs determined that cumulative impacts related to utilities and service systems would be less than significant. In addition, Goodman Commerce Center and the 5665 Plaza Drive Projects (Related Project 3) were analyzed in an Initial Study/Mitigated Negative Declaration (IS/MND) in 2023 and an EIR in 2024, respectively. The Goodman Commerce Center and the 5665 Plaza Drive Projects included the construction of new on-site water and wastewater lines which would connect to existing water lines and sewer mains within Plaza Drive and new connections to the existing electricity infrastructure, and the 2023 IS/MND and 2025 EIR determined that all impacts on utilities and service systems would be less than significant. In addition, the environmental documents for these projects required adherence to measures similar to **Regulatory Compliance Measure UTIL-1.** While the construction of utility improvements associated with the proposed project and the related projects may be constructed currently, based on the distance between the Buildout Area and the related project sites, construction of the utility improvements and connections to existing infrastructure are not expected to result in cumulative environmental impacts.

The Sycamore Creek Charter School Project (Related Project 6) and 4562 Katella Avenue Project (Related Project 8) were determined to be exempt from CEQA review under Section 15332 of the *State CEQA Guidelines* (for infill development) and Notices of Exemption (NOEs) were prepared. In order for a project to be exempt under Section 15332 of the *State CEQA Guidelines*, the project site must be adequately served by all required utilities and public services. As such, development of the related projects in combination with the proposed project would not result in significant impacts on utilities and service systems. The LTP Modern Machine Project (Related Project 5) and 8561 Belmont Street Project (Related Project 4) would also be required to undergo environmental review pursuant to CEQA, which would include an analysis of potential impacts on utilities and service systems and the identification of any mitigation measures to reduce potential impacts, if necessary.

Implementation of the proposed project, in conjunction with reasonably foreseeable development in the surrounding area, may result in cumulative impacts to utility infrastructure and service capacity. However, developers of future development projects facilitated by the proposed project, as well any projects associated with the City's buildout assumptions, would be required to analyze potential impacts to utilities systems, ensure that utility providers would have adequate capacity and supply to serve the projects as well as existing conditions, and would be required to comply with existing and future statutes and regulations, including waste diversion programs mandated by City, State, and federal law. Therefore, the impacts from the proposed project would not be considered cumulatively considerable.

This page intentionally left blank

4.20 WILDFIRE

This section evaluates the potential for implementation of the Specific Plan 3.0 Buildout Project (proposed project) to result in wildfire-related impacts. This section also describes the existing setting within and near the Buildout Area and sets forth the relevant regulatory requirements that apply to the proposed project's potential impacts on wildfire. This section incorporates data from the Safety Element of the Cypress General Plan,[1] the Orange County Local Hazard Mitigation Plan,[2] and a review of existing resources, technical data, and applicable laws, regulations, and guidelines.

4.20.1 Scoping Process

The City of Cypress (City) received six comment letters during the public review period of the Notice of Preparation (NOP). For copies of the NOP comment letters, refer to **Appendix A** of this Draft Environmental Impact Report (Draft EIR). No comment letters included comments related to wildfire.

4.20.2 Methodology

The potential wildfire-related impacts from project-related activities were evaluated qualitatively based on information provided in documents and maps obtained from the City's General Plan, the Orange County Fire Authority's (OCFA) Local Hazard Mitigation Plan, and the California Department of Forestry and Fire Protection (CAL FIRE).

4.20.3 Existing Environmental Setting

Fire environments are dynamic systems and include many types of environmental factors and site characteristics. Fires can occur in any environment where conditions are conducive to ignition and fire movement. Areas of naturally vegetated open space typically provide conditions that may be favorable to wildfire spread. The three major components of the fire environment are topography, climate, and vegetation (fuels). The state of each of these components and their interactions with each other determines the potential characteristics and behavior of a fire at any given moment.

A wildfire is a nonstructural fire that occurs in vegetative fuels. Wildfire generally does not include prescribed or controlled fires set by firefighters to manage fuel loads in fire-prone landscapes. Wildfire ignition sources may include lightning, improperly managed campfires, cigarettes, arson, sparks from automobiles, lawnmowers, and maintenance equipment, and other sources. It is important to note that wildland fire may transition to urban fire if structures are receptive to ignition. Structure ignition depends on a variety of factors and can be prevented through a layered system of protective features including fire-resistive landscapes adjacent to structure(s), application of known ignition-resistive materials and methods, and suitable infrastructure for firefighting purposes. Understanding the existing wildland vegetation and urban fuel conditions on and adjacent to the site is necessary to understand the potential for fire within and around the Buildout Area.

---

1 City of Cypress. 2001. *Cypress General Plan Safety Element. S*eptember.

2 County of Orange & Orange County Fire Authority. 2015. *Local Hazard Mitigation Plan*. Website: https://www.smwd.com/DocumentCenter/View/2193/APPENDIX-H_OC-HMP-Final (accessed August 2025).

CAL FIRE has classified lands within State Responsibility Areas (SRAs) into Fire Hazard Severity Zones (FHSZs). FHSZs include the following classifications: Moderate, High, and Very High. FHSZs have been developed using a model that assigns a hazard score based on the factors that influence fire likelihood and fire behavior including fire history, existing and potential fuel (natural vegetation), predicted flame length, blowing embers, terrain, and typical fire weather for the area. As part of this mapping system, lands where CAL FIRE is responsible for wildland fire protection are generally located in unincorporated areas and are classified as SRAs. Where local fire protection agencies (e.g., OCFA) are responsible for wildfire protection, the lands are classified as Local Responsibility Areas (LRAs). CAL FIRE currently identifies the Buildout Area as an LRA.[3]

In addition, according to CAL FIRE, the Buildout Area is not in a Very High Fire Hazard Severity Zone (VHFHSZ). The nearest VHFHSZs are located approximately 6.8 miles northeast of the Buildout Area in the West Coyote Hills area of Fullerton (northern Orange County).

The following sections discuss the characteristics of the Buildout Area, as well as the site characteristics, local climate, and fire history within and immediately surrounding the site. The intent of evaluating conditions at this macro-scale is to provide a better understanding of the regional fire environment, which is not constrained by property boundary delineations.

4.20.3.1 Climate and Topography

The City is located on relatively flat terrain in northwestern Orange County with City elevations ranging from 20 to 75 feet above mean sea level. According to the *Environmental Impact Report, Soils and Geology Issues, Proposed Mixed-Use Development, 4961 Katella Avenue and 5100 Cerritos Avenue, Cypress, California* (Geotechnical Investigation) in **Appendix F,** prepared by Geotechnologies, Inc. in 2024,[4] the Buildout Area is relatively flat with no pronounced elevation changes.[5]

The City is situated within an area typified by a Mediterranean climate, which is characterized by mild winters and dry, warm summers with an average July maximum temperature of 79 degrees Fahrenheit and an average January maximum daily temperature of 64 degrees Fahrenheit. The record high and low temperatures have been 108 and 28 degrees Fahrenheit, respectively.[6]

Fires are most common during the summer and fall, before the rainy period, especially during dry Santa Ana wind events. The City and Buildout Area are subject to periodic high winds including Santa Ana winds. Although Santa Ana wind events can occur at any time of the year, they generally occur during the autumn months, although the last few years have resulted in spring and summer events as well. Santa Ana winds may gust up to 75 miles per hour (mph) or higher. This phenomenon

[3] California Department of Forestry and Fire Protection (CAL FIRE). 2025a. Fire Hazard Severity Zones. March 24. Website: https://osfm.fire.ca.gov/what-we-do/community-wildfire-preparedness-and-mitigation/fire-hazard-severity-zones (accessed August 2025).

[4] Geotechnologies, Inc. 2024. *Environmental Impact Report, Soils and Geology Issues, Proposed Mixed-Use Development, 4961 Katella Avenue and 5100 Cerritos Avenue, Cypress, California.* May 2. (**Appendix F**)

[5] Ibid.

[6] City of Cypress. 2001. *Cypress General Plan.* September. Website: https://www.cypressca.org/home/showpublisheddocument/11369/638061699910600000 (February 6, 2025).

markedly increases the wildfire danger and intensity by drying out and preheating vegetation (fuel moisture of less than 5 percent for 1-hour fuels is possible) as well as accelerating oxygen supply, and thereby making possible the burning of fuels that otherwise might not burn under cooler, moister conditions.

4.20.3.2 Fuels Vegetation

The Buildout Area and surrounding areas are primarily developed and disturbed with some landscaped areas that support non-native/ornamental plant species.

4.20.3.3 Fire History

Fire history is an important component in analyzing wildfire susceptibility. Fire history data provide valuable information regarding fire spread, fire frequency, most vulnerable areas, and significant ignition sources, among others. In turn, this understanding of why fires occur in an area and how they typically spread can then be used for pre-planning and designing defensible communities.

Fire history within the Buildout Area and surrounding area was determined by referencing the Fire and Resources Assessment Program (FRAP) database. The FRAP summarizes fire perimeter data dating to the late 1800s; the FRAP maps used for this analysis focus on 1950–2023. These data provide a summary of recorded fires and can be used to show whether large fires have occurred in the Buildout Area, which is one indication of the likelihood of fires occurring at the Buildout Area in the future. These data suggest that the City has not experienced wildfires from 1970 to 2020. Further, according to CAL FIRE, no wildfire incidents were recorded within the City between 2020 and 2025.[7] Additionally, there have been no recorded fires that have burned onto any portion of the Buildout Area. As such, the FRAP map indicates that the Buildout Area is not within an area historically prone to wildland fires.[8]

4.20.4 Regulatory Setting

Federal, State, and local regulations and programs related to wildfire that are applicable to the proposed project are described below.

4.20.4.1 Federal Regulations

National Fire Protection Association (NFPA) Code 1710. Code 1710 of the NFPA provides the minimum requirements for the organization and deployment of fire suppression operations, emergency medical operations, and special operations to the public by career fire departments.

National Incident Management System (NIMS). The NIMS provides a systematic, proactive approach to guide government agencies, nongovernmental organizations, and the private sector to work together to prevent, report, recover from, and mitigate the effects of fire incidents, regardless

[7] California Department of Forestry and Fire Protection (CAL FIRE). 2025b. Incidents. Website: https://www.fire.ca.gov/incidents (accessed August 2025).

[8] California Department of Forestry and Fire Protection (CAL FIRE). 2022. *Fire and Resource Assessment Program. California Fire Perimeters 2022.* Website: https://www.fire.ca.gov/what-we-do/fire-resource-assessment-program/fire-perimeters (accessed February 6, 2025).

of cause, size, location, or complexity, to reduce the loss of life and property harm to the environment. The City participates in NIMS, which improves its ability to prepare for and respond to potential incidents and hazard scenarios.

4.20.4.2 State Regulations

CAL FIRE and Resources Assessment Program. CAL FIRE publishes maps that predict the threat of fire for each county within the State. LRAs, SRAs, and Federal Responsibility Areas (FRAs) are classified as either VHFHSZ or non-VHFHSZ based on factors including fuel availability, topography, fire history, and climate. The 2024 Strategic Fire Plan for California was generated by CAL FIRE to provide guidelines and objectives to account for associated fire impacts.

California Fire Code (CFC). The CFC includes regulations for emergency planning, fire service features, fire protection systems, hazardous materials, fire flow requirements, and fire hydrant locations, distribution, and spacing. Several fire safety requirements include installation of sprinklers in all high-rise buildings; the establishment of fire resistance standards for fire doors, building materials, and particular types of construction; and the clearance of debris and vegetation within a prescribed distance from occupied structures in wildlife hazard areas.

California Strategic Fire Plan. This statewide plan is a strategic document that guides fire policy for much of California. The plan is aimed at reducing wildfire risk through pre-fire mitigation efforts tailored to local areas through assessments of fuels, hazards, and risks.

California State Hazard Mitigation Plan (SHMP). The purpose of the SHMP is to significantly reduce deaths, injuries, and other losses attributed to natural and human-caused hazards in California. The SHMP provides guidance for hazard mitigation activities emphasizing partnerships among local, State, and federal agencies as well as the private sector.

California Government Code. California Government Code Section 51175 defines VHFHSZs and designates lands considered by the State to be a very high fire hazard. California Government Code Section 51189 directs the Office of the State Fire Marshal to create building standards for wildland fire resistance. The Government Code includes measures that increase the likelihood of a structure withstanding intrusion by fire (e.g., building design and construction requirements that use fire-resistant building materials) and provides protection of structure projections (e.g., porches, decks, balconies, and eaves) and structure openings (e.g., attics, eave vents, and windows).

California Public Resources Code (PRC). The State's Fire Safe Regulations are set forth in PRC Section 4290, which include the establishment of SRAs. PRC Section 4291 sets forth defensible space requirements, which are applicable to anyone that "… owns, leases, controls, operates, or maintains a building or structure in, upon, or adjoining a mountainous area, forest-covered lands, brush covered lands, grass-covered lands, or land that is covered with flammable material" (PRC §4291(a)).

Assembly Bill 337. Per Assembly Bill (AB) 337, local fire prevention authorities and CAL FIRE are required to identify VHFHSZs in LRAs. Standards related to brush clearance and the use of fire-resistant materials in FHSZs are also established.

California Code of Regulations (CCR), Title 8 (Industrial Relations). In accordance with CCR Title 8 Sections 1270 and 6773 (Fire Prevention, and Fire Protection and Fire Equipment), the California Occupational Safety and Health Administration (Cal/OSHA) establishes fire suppression service standards. The standards range from fire hose size requirements to the design of emergency access roads.

California Code of Regulations, Title 14 (Natural Resources). Division 1.5 (Department of Forestry and Fire Protection), Title 14 of the CCR establishes a variety of wildfire preparedness, prevention, and response regulations.

California Code of Regulations, Title 19 (Public Safety). Title 19 of the CCR establishes a variety of emergency fire response, fire prevention, and construction and construction materials standards.

California Code of Regulations, Title 24 (California Building Standards Code). The CFC is set forth in Part 9 of the Building Standards Code. The CFC, which is pre-assembled with the International Fire Code (IFC) by the International Code Council (ICC), contains fire-safety building standards referenced in other parts of Title 24.

California Health and Safety Code Section 13000 et seq. and California Building Code (CBC). State fire regulations are set forth in §13000 et seq. of the California Health and Safety Code, which is divided into "Fires and Fire Protection" and "Buildings Used by the Public." The regulations provide for the enforcement of the CBC and mandate the abatement of fire hazards. The California Health and Safety Code establishes broadly applicable regulations, such as standards for buildings and fire protection devices, in addition to regulations for specific land uses, such as childcare facilities and high-rise structures.

California Health and Safety Code Division 12.5 (Buildings Used by the Public). Division 12.5 establishes requirements for buildings used by the public, including essential services buildings, earthquake hazard mitigation technologies, school buildings, and post-secondary buildings.

California Residential Code Section R337. Section R337 establishes minimum standards for the protection of life and property by increasing the ability of a building located in any FHSZ within an SRA or any Wildland Urban Interface (WUI) Fire Area to resist the intrusion of flame or burning embers projected by a vegetation fire and contributes to a systematic reduction in conflagration losses. This section regulates materials and construction methods for exteriors susceptible to wildfire exposure.

California Building Code (CBC), Chapter 7A. Chapter 7A applies to building materials, systems, and/or assemblies used in the exterior design and construction of new buildings located within a WUI Fire Area. This section of the CBC establishes minimum standards for features such as fire retardant-treated wood and wood shingles, surface treatment protection, ignition-resistant construction, roof coverings and gutters, vents, exterior walls and coverings, exterior porch ceilings, underfloor protection, exterior windows, skylights, and doors, decking, and accessory structures.

Executive Order N-04-19. On January 9, 2019, Governor Newsom announced Executive Order (EO) N-04-19, which requires State agencies to identify innovative and sustainable solutions to address the State's wildfire crisis, such as upgraded fire detection technology.

Executive Order N-05-19. On January 9, 2019, Governor Newsom also announced EO N-05-19, which requires CAL FIRE and other State agencies to compile policy and regulatory recommendations concerning wildfire mitigation, emphasizing environmental sustainability and public health. EO N-05-19 requires the incorporation of socioeconomic analysis when conducting risk management of wildfires and mandates that agencies identify geographic areas with populations that are more vulnerable to the impacts of wildfires.

Executive Order N-18-25. In February 2025, Governor Newsom issued EO N-18-25, which is intended to strengthen wildfire resilience in urban and suburban areas by enhancing "Zone 0" defensible space and improving hazard mapping and preparedness systems. EO N-18-25 also initiated the development of a comprehensive, statewide wildfire resilience framework through an interagency, stakeholder-led process. Specifically, EO N-18-25 directs the State Board of Forestry and Fire Protection, in consultation with the State Fire Marshal, to finalize formal regulations establishing an ember-resistant zone within 5 feet of structures and instructs the Office of the State Fire Marshal to release updated FHSZ maps for areas within an LRA, which was completed in early 2025.

4.20.4.3 Regional Regulations

OCFA Fire Master Plans for Commercial & Residential Development, Guideline B-09. Guideline B-09 of the 2023 Fire Master Plans for Commercial & Residential Development establishes general guidelines pertaining to the installation and maintenance of fire department access roadways, access walkways to and around buildings, and hydrant quantity and placement as required by the 2022 CFC and CBC, and as amended by local ordinance. The proper installation and maintenance of fire access roadways, the proper siting of hydrants, adequate water supply, and proper access to structures are essential in enabling effective emergency response and firefighting operations.

County of Orange and OCFA Local Hazard Mitigation Plan (2021). This plan identifies risks and vulnerabilities, establishes hazard mitigation strategies, describes emergency organization, task assignments, and general procedures, and provides for coordination of response in the event of an emergency. This plan does not identify specific emergency response or evacuation routes.

4.20.4.4 Local Regulations

City of Cypress Municipal Code. Building and construction in the City are subject to the regulations of the City of Cypress Municipal Code. California Code of Regulations (CCR), Title 24, Part 2, the California Building Code (CBC) (2022), provides minimum standards for building design in the State. Local codes are permitted to be more restrictive than Title 24, but not less restrictive. The procedures and limitations for the design of structures are based on site characteristics, occupancy type, configuration, structural system height, and fire hazard severity. New buildings located in any FHSZ, or any WUI Fire Area designated by the enforcing agency constructed after the application date, and additions to and remodel of buildings constructed before 2012 located in areas currently designated as such, are required to comply with the provisions of this chapter. The provisions also

apply to additions, remodels, and accessory structures located within 100 feet of a fuel modification zone, vegetation management area, or similar area containing hazardous combustible vegetation, regardless of whether the property is currently located in a designated FHSZ or WUI Fire Area, when materials and/or construction methods for exterior wildfire exposure were previously required at the property by the Building or Fire Code Official. In addition, the proposed project would adhere to the regulatory standards described in the City's Building Code, which adopt the CBC with amendments and modifications.

City of Cypress General Plan Safety Element. The Safety Element of the Cypress General Plan identifies the following goals, policies, and actions related to wildfire and fire protection services:

> **Goal SAF-5 Fire Protection:** Protect life and property in Cypress from urban fires. Maintain the Orange County Fire Authority's high level of service to community businesses and residents.
>
> > **Policy SAF-5.2:** Evaluate the effects of new development on the Orange County Fire Authority's response time. Ensure through the development review process that new development will not result in reduced emergency service levels.
> >
> > **Policy SAF-5.6:** Provide adequate fire equipment access to structures within the community.
> >
> > **Policy SAF-5.7:** Maintain an ongoing fire inspection program to reduce fire hazards associated with older buildings, critical facilities, public assembly facilities, and industrial and commercial buildings.
> >
> > **Policy SAF-5.8:** Promote the utilization of fire-safe building materials and enforce the City's fire sprinkler ordinance.

Cypress Town Center and Commons Specific Plan 3.0. The Cypress Town Center and Commons Specific Plan 3.0 does not include goals or policies related to wildfire and fire protection services.

4.20.5 Thresholds of Significance

The thresholds of significance for wildfire impacts used in this analysis are consistent with Appendix G of the *State CEQA Guidelines*. Based on these thresholds, implementation of the proposed project would have a significant impact with respect to wildfires if it were located in or near state responsibility areas or lands classified as a very high fire hazard severity zone and would:

Threshold 4.20.1: Substantially impair an adopted emergency response plan or emergency evacuation plan;

Threshold 4.20.2: Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire;

Threshold 4.20.3: Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that

may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment; or

Threshold 4.20.4: Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes.

4.20.6 Project Impacts

Potential impacts of the proposed project related to wildfire are discussed below pursuant to the thresholds established in Section 4.20.5, above. The thresholds of significance in Appendix G of the *State CEQA Guidelines* focus on wildfire impacts from projects located in or near SRAs or lands classified as VHFHSZs. According to the CAL FIRE VHFHSZ Maps for the Orange County region, the entire City is designated as a non-VHFHSZ, and the City does not include an SRA. The nearest VHFHSZ to the Buildout Area is approximately 6.8 miles northeast in Coyote Hills on the western side of Fullerton. The nearest SRA is in Puente Hills, approximately 12 miles northeast of the Buildout Area. As such, the proposed project is not located in or near any SRAs or lands classified as VHFHSZs. Therefore, there would be no impact related to wildfires from implementation of the proposed project. The following analysis is for informational purposes only regarding the additional topics raised in the four specific thresholds of significance in Appendix G of the *State CEQA Guidelines*.

Threshold 4.20.1: If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project substantially impair an adopted emergency response plan or emergency evacuation plan?

No Impact. According to the CAL FIRE Very High Fire Hazard Severity Zone, VHFHSZ Maps for the Orange County region, the entire City is designated as a non-VHFHSZ, and the City does not include an SRA. The nearest VHFHSZ to the Buildout Area is approximately 6.8 miles northeast in Coyote Hills on the western side of Fullerton. The nearest SRA is in Puente Hills, approximately 12 miles northeast of the Buildout Area. As such, the proposed project would not be a project located in or near an SRA or VHFHSZ and substantially impair an adopted emergency response plan or emergency evacuation plan. Accordingly, the proposed project would have no impacts related to this threshold. Regardless, the following analysis is provided for informational purposes.

The City's emergency evacuation routes are shown on Exhibit SAF-5 in the Safety Element of the City's General Plan. All emergency evacuation activities are coordinated by the City's Police Chief. In the unlikely event of a large-scale emergency evacuation, the Police Chief would issue evacuation orders based on information gathered from emergency experts. Evacuation operations would be conducted by law enforcement agencies, highway/road/street departments, and public and private transportation providers.[9] The Buildout Area is bounded by Katella Avenue to the south and located

[9] City of Cypress. 2001. *Cypress General Plan Environmental Impact Report.* Geology and Seismic Hazards, Page 4.6-7.

near Valley View Street to the east, both of which are identified as emergency evacuation routes by the City.[10]

Construction. The proposed project does not include any emergency facilities, nor would it serve as an emergency evacuation route. The proposed project assumes the extension of Moody Street from Cerritos Avenue to Katella Avenue, as well as the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension, consistent with the Specific Plan. The proposed project also includes, consistent with the Specific Plan, the widening of Lexington Drive within Lot B in Vesting Tentative Tract Map (VTTM) 19247. The proposed project would also include connections to existing utility infrastructure in the surrounding area, which would occur within public roadways. Construction of these roadway and utility improvements may require road closures or detours in the immediate vicinity of the Buildout Area. However, during future construction activities the contractor would be required to implement a construction worksite traffic control plan that complies with applicable engineering standards outlined in the California Manual of Uniform Traffic Control Devices,[11] ensuring that construction activities, which may temporarily restrict vehicular traffic, would be required to implement adequate and appropriate measures to facilitate the passage of persons and vehicles through/around any required road closures. Overall, all large construction vehicles entering and exiting the site would be guided by the use of personnel using signs and flags to direct traffic. Therefore, construction activities would not impact vehicle flow.

Because the proposed project would not include the construction of any emergency facilities, the Buildout Area does not serve as an emergency evacuation route, and construction activities would not impact the use of roadways near the Buildout Area, the proposed project would not physically impair or interfere with emergency response or evacuation in the project vicinity. Therefore, construction of the proposed project would have a less than significant impact associated with the substantial impairment of an adopted emergency response plan or emergency evacuation plan, and no mitigation is required.

Operation. The Buildout Area is not within the vicinity of a VHFHSZ or an SRA, as defined by CAL FIRE. The development scenario evaluated in this Draft EIR includes the maximum potential buildout of 1,791 residential units and 440,000 square feet of non-residential uses within the Buildout Area, as allowed under the existing Specific Plan.

The proposed project includes the completion of several key roadways within the Buildout Area, including the extension of Moody Street from Cerritos Avenue to Katella Avenue and an extension of Vessels Circle. Emergency access to and from the Buildout Area would be provided via these streets as well as other streets surrounding the Buildout Area, including Enterprise Way, Cerritos Avenue, Katella Avenue, and Lexington Drive. Additionally, all proposed structures and internal circulation paths within the Buildout Area would be developed in accordance with the City and OCFA

[10] City of Cypress. 2001. *Cypress General Plan Safety Element.* Emergency Evacuation Routes Map (Exhibit SAF-5), October 2, 2001.

[11] California Department of Transportation (Caltrans). 2014. *California Manual of Uniform Traffic Control Devices,* Federal Highway Administration's MUTCD 2009 Edition, including Revision 1, 2, & 3 as amended for use in California, 14th Editions, Revision 9.

emergency access standards. The proposed project would also be required to comply with all applicable codes and ordinances for emergency vehicle access, which would ensure that emergency vehicles have adequate access to, from, and within the Buildout Area.

The proposed project does not include any modifications to Katella Avenue or Valley View Street and would not introduce any new driveways or other vehicular access points to either street.

Because the Buildout Area is not located in a VHFHSZ or in or near an SRA, does not serve as an emergency evacuation route, and would not impair the evacuation of surrounding areas in the event of an emergency, operation of the proposed project would have a less than significant impact associated with impairment of an adopted emergency response plan or emergency evacuation plan, and no mitigation is required.

Threshold 4.20.2: If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

No Impact. As stated previously, the Buildout Area is not located in a VHFHSZ or in an SRA. The nearest VHFHSZ is 6.8 miles northeast of the Buildout Area. The Buildout Area is located in a developed portion of the City. As such, since the proposed project is not located in or near an SRA or VHFHSZ, it would not exacerbate wildfire risks due to slope, prevailing winds, and other factors, and thereby would not expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire. Accordingly, the proposed project would have no impacts related to this threshold. Regardless, the following analysis is provided for informational purposes.

Topography influences the movement of air, thereby directing a fire course. For example, if the percentage of uphill slope doubles, the rate of spread in a wildland fire will likely double.[12] Wind events magnify the risks of wildfire and have the potential to expose inhabitants of the City to elevated pollutant concentrations.

The development scenario evaluated in this Draft EIR assumes the existing land uses within the Buildout Area would be replaced with new development allowed under the Specific Plan. Neither the Buildout Area nor the immediate project vicinity is prone to wildfires. The Buildout Area is relatively flat with no steep slopes, and there are no significant slopes within the vicinity of the Buildout Area.[13] Therefore, there is an extremely low likelihood that wildfires would spread to the Buildout Area.

[12] County of Orange & Orange County Fire Authority. 2015. *Local Hazard Mitigation Plan.* Website: https://www.smwd.com/DocumentCenter/View/2193/APPENDIX-H_OC-HMP-Final (accessed February 6, 2025).

[13] Geotechnologies, Inc. 2024. *Environmental Impact Report, Soils and Geology Issues. Proposed Mixed-Use Development. 4961 Katella Avenue and 5100 Cerritos Avenue, Cypress, California.* May. (**Appendix F**)

Future development within the Buildout Area would also adhere to applicable building and fire codes, which would further reduce the risk of wildfire. As the Buildout Area is not located within the vicinity of a VHFHSZ or in an SRA, the uncontrolled spread of wildfire in the vicinity of the Buildout Area is unlikely due to existing development, and impacts from downwind pollutant concentrations from a wildfire to occupants as a result of the proposed project would be negligible. Therefore, due to slope, prevailing winds, location, and other factors, the proposed project would not exacerbate wildfire risks. Impacts would be less than significant, and no mitigation is required**.**

Threshold 4.20.3: If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

No Impact. As described above, the Buildout Area is not located in a VHFHSZ or in an SRA. As such, the proposed project would not exacerbate fire risk through the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities), which may result in temporary or ongoing impacts to the environment. Accordingly, the proposed project would have no impacts related to this threshold. Regardless, the following analysis is provided for informational purposes.

In the absence of any significant potential for on-site or adjacent wildfire hazards, future development within the Buildout Area would not need to incorporate fire protection infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other non-existing utilities) that may themselves exacerbate fire risk.

The proposed project includes the construction of roads, water resources, power lines, and other utilities. The proposed project would include the extension of Moody Street from Cerritos Avenue to Katella Avenue, and the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension, consistent with the Specific Plan. The proposed project also includes, consistent with the Specific Plan, the widening of Lexington Drive within Lot B in VTTM 19247. Future development within the Buildout Area would also include various utility and infrastructure improvements identified in the Specific Plan and described in Chapter 3.0, Project Description. These improvements include the installation of new sewer connections and the installation of an additional drainage outfall.

Specifically, wastewater improvements for the proposed project would include the installation of a new 8-inch line on Lot 2, which would connect to the existing 30-inch sewer trunk line owned and maintained by the Orange County Sanitation District (OC San) within Lexington Drive, a new 8-inch sewer line that would gradually increase to 15 inches at the existing main line connection on Lots 3 to 7 and Lots 10 to 14, running north to south along the proposed extension of Moody Street, and an additional sewer connection that would connect to the existing 18-inch and 21-inch sewer main lines owned and maintained by the City in Katella Avenue. In addition to these improvements, it is also anticipated that the existing 18-inch and 21-inch sewer main lines within Katella Avenue would need to be upsized to a 24-inch main line.

Additionally, in order to accommodate the existing drainage patterns of the Buildout Area, the proposed project would include an additional outfall that would be installed at the existing Vessels Circle storm drain, and the installation of a tributary line to the Walker Street storm drain. Electricity would be provided by existing utility lines, and no natural gas would be utilized.

Although the proposed project would include extensions of Moody Street and Vessels Circle, as described in the Specific Plan, the proposed project would not include any changes to public or private roadways that would exacerbate fire risk or that would result in impacts to the environment. Utilities, including water facilities, sewer facilities, storm drain lines, and power lines would be modified and/or extended throughout the Buildout Area; however, these improvements would be underground and would not exacerbate fire risk. All utility lines, pipes, utility junction boxes, and transformers would be located underground. The design and implementation of utility improvements would be reviewed and approved by the City's Public Works Department to ensure that it would be sized to accommodate future development allowed under the approved Specific Plan and comply with all applicable fire codes, design standards, and regulations.

Because the installation of all project-related utility improvements would be implemented in an urbanized setting in accordance with the current California Building Code, California Fire Code, and applicable local ordinances, impacts related to the installation or maintenance of infrastructure that may exacerbate fire risk or result in temporary or ongoing impacts to the environment would be less than significant, and no mitigation is required.

Threshold 4.20.4: If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

No Impact. As described above, the Buildout Area is not located in a VHFHSZ or in an SRA. As such, the proposed project would not expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes. Accordingly, the proposed project would have no impacts related to this threshold. Regardless, the following analysis is provided for informational purposes.

Landslides. Landslides, including mudflows, debris flows, and soil slips, occur as soil moves downslope under the influence of gravity. Landslides are frequently triggered by intense rainfall or seismic shaking but can also occur as a result of erosion and downslope runoff caused by rain following a fire. According to the Geotechnical Investigation completed for the proposed project,[14] the probability of seismically induced landslides occurring on the Buildout Area is considered to be negligible due to the level topography observed across and adjacent to the Buildout Area. Additionally, the Buildout Area does not lie within a designated Landslide Hazard Zone. Further, as stated previously, the Buildout Area is not located in a VHFHSZ, or in or near an SRA. In the extremely unlikely event that a wildfire should spread to the Buildout Area, it would not expose any on-site slopes to erosion and potential failure because the Buildout Area does not contain any steep

[14] Geotechnologies, Inc. 2024. *Environmental Impact Report, Soils and Geology Issues Proposed Mixed-Use Development 4961 Katella Avenue and 5100 Cerritos Avenue, Cypress, California.* May. (**Appendix F**)

slopes that are prone to landslides. The proposed project would not expose people or structures to significant risks, including downslope landslides, as a result of runoff, post-fire slope instability, or drainage changes. There would be no impact to project occupants or nearby residents or workers related to post-wildfire landslide risks, and no mitigation is required.

Flooding. According to the Federal Emergency Management Agency (FEMA) Federal Insurance Rate Map (FIRM) No. 06059C0116J (December 3, 2009), the Buildout Area is located within Zone X, which comprises areas of 0.2 percent annual chance flood (500-year flood). This means that there is a very low likelihood of flooding within the Buildout Area.[15] According to the City's General Plan Safety Element,[16] the Buildout Area is located within the inundation zone of the Prado Dam and the Carbon Canyon Dam. There are no large open bodies of water in the vicinity of the Buildout Area, and the project is therefore not located within an inundation zone of a seiche. The Buildout Area is located approximately 6 miles northeast of the Pacific Ocean and is not located within the tsunami inundation zone. The levee inundation zone of Coyote Creek/Carbon Creek is located to the west of the Buildout Area; however, the Buildout Area is not located within this inundation area.[17]

Therefore, downslope or downstream flooding as a result of runoff, post-fire slope instability, or drainage changes would not expose people or structures to significant risks. Impacts to people or structures related to post-wildfire flooding risks would be less than significant, and no mitigation is required.

4.20.7 Level of Significance Prior to Mitigation

The proposed project would result in no impacts related to wildfire.

4.20.8 Regulatory Compliance Measures and Mitigation Measures

No regulatory compliance measures are applicable to the proposed project relating to wildfire, and no mitigation measures are required.

4.20.9 Level of Significance after Mitigation

The proposed project would result in no impacts related to wildfire.

4.20.10 Cumulative Impacts

As defined in Section 15130 of the *State CEQA Guidelines*, cumulative impacts are the incremental effects of an individual project when viewed in connection with the effects of past, current, and probable future projects within the cumulative impact area for wildfire. The cumulative study area for wildfire is the City of Cypress as described in Chapter 4.0, Existing Setting. The cumulative project

list is provided in Chapter 4.0, **Table 4.A: Summary of Related Projects**, and a map of the cumulative project locations is provided in Chapter 4.0, **Figure 4-1: Related Projects**.

As detailed in this section, the proposed project would result in less than significant impacts related to wildfire. As stated previously, the Buildout Area is not located in a VHFHSZ or in an SRA. The nearest VHFHSZ is 6.8 miles northeast of the Buildout Area. The Buildout Area is located in a developed portion of the City.

Additionally, all discretionary private development and public works projects within the cumulative study area would be required to comply with CEQA. In this way, potential impacts related to wildfire would be evaluated and mitigated by each individual project. Some of the related projects identified in **Table 4.A** have undergone environmental review pursuant to CEQA, which included an analysis of potential impacts relating to wildfire. The EIRs prepared for the Shea Properties Mixed Use Development Project (Related Project 1), Melia Homes -Citrus Square Project (Related Project 2), and the Los Alamitos Medical Center Project (Related Project 7) concluded that no impacts relating to wildfire would occur with implementation of the projects. Further, the EIRs determined that cumulative impacts related to wildfire would be less than significant. In addition, Goodman Commerce Center Project (Related Project 3) was analyzed in an Initial Study/Mitigated Negative Declaration (IS/MND), which also determined that no impacts relating to wildfire would occur. The Sycamore Creek Charter School Project (Related Project 6) and 4562 Katella Avenue Project (Related Project 8) were determined to be exempt from CEQA review under Section 15332 of the *State CEQA Guidelines* (for infill development) and Notices of Exemptions (NOEs) were prepared. In order for a project to be exempt under Section 15332 of the *State CEQA Guidelines*, the project must not result in any significant effects due to unusual circumstances, which includes being located within a fire hazard zone. As such, development of the related projects in combination with the proposed project would not result in significant impacts relating to wildfire. The LTP Modern Machine Project (Related Project 5) and 8561 Belmont Street Project (Related Project 4) would also be required to undergo environmental review pursuant to CEQA, which would include an analysis of potential impacts relating to wildfire and the identification of any mitigation measures to reduce potential impacts, if necessary.

Additionally, all discretionary private development and public works projects within the cumulative study area would be required to adhere to City, County, State, and federal regulations designed to reduce and/or avoid impacts related to wildfire including flooding hazards and landslides after a wildfire event. Since all projects within the cumulative study area would be required to implement appropriate mitigation measures and adhere to applicable regulations, implementation of the proposed project, when evaluated in combination with the development of projects listed in **Table 4.A**, would not contribute to a cumulatively considerable impact related to wildfire. Therefore, there would be no cumulatively significant impact related to wildfire, and no mitigation is required.

5.0 ALTERNATIVES

5.1 INTRODUCTION

The *State CEQA Guidelines* require that an Environmental Impact Report (EIR) include a discussion of reasonable project alternatives that would "feasibly attain most of the basic objectives of the project, but would avoid or substantially lessen any significant impacts of the project, and evaluate the comparative merits of the alternatives" (*State CEQA Guidelines*, Section 15126.6). This chapter identifies potential alternatives to the Specific Plan 3.0 Buildout Project (proposed project), evaluates the potential impacts of each alternative, and compares the potential impacts of each alternative against the proposed project's impacts, as required by CEQA.

Section 15126.6 of the *State CEQA Guidelines* sets forth the intent and requirements for the alternatives analysis in an EIR, including the following provisions:

- The discussion of alternatives shall focus on alternatives to the project or its location that are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives or would be more costly (15126.6[b]).The range of potential alternatives to the proposed project shall include those that could feasibly accomplish most of the basic objectives of the project and could avoid or substantially lessen one or more of the significant effects. The EIR should briefly describe the rationale for selecting the alternatives to be discussed. The EIR should also identify any alternatives that were considered by the lead agency but were rejected as infeasible during the scoping process and briefly explain the reasons underlying the lead agency's determination. Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are: (1) failure to meet most of the basic project objectives, (2) infeasibility, or (3) inability to avoid significant environmental impacts (15126.6[c]).

- The EIR shall include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project (15126.6[d]).

- The specific alternative of 'no project' shall also be evaluated along with its impact (15126.6[e][1]). The 'no project' analysis shall discuss the existing conditions at the time the Notice of Preparation is published, and at the time the environmental analysis is commenced, as well as what would reasonably be expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services. If the environmentally superior alternative is the 'no project' alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives (15126.6[e][2]).

- The range of alternatives required in an EIR is governed by the 'rule of reason' that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project. The range of

feasible alternatives shall be selected and discussed in a manner to foster meaningful public participation and informed decision-making. Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries, and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent) (15126.6[f]).

- For alternative locations, only locations that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR (15126.6[f][2][A]). If the lead agency concludes that no feasible alternative locations exist, it must disclose the reasons for this conclusion, and should include the reasons in the EIR. For example, in some cases there may be no feasible alternative locations for a geothermal plant or mining project which must be in close proximity to natural resources at a given location (15126.6[f][2][B]).

- An EIR need not consider an alternative whose effect cannot be reasonably ascertained and whose implementation is remote and speculative (15126.6[f][3]).

Pursuant to the guidelines stated above, a range of alternatives to the proposed project is considered and evaluated in this Draft EIR. These alternatives were developed in the course of project planning and environmental review. The discussion in this section provides:

1. A description and analysis of impacts for each of the alternatives considered;

2. Comparative analysis of each alternative that focuses on the potentially significant unavoidable environmental impacts of the proposed project (the purpose of this analysis is to determine whether alternatives are capable of eliminating or reducing the significant environmental impacts of the project to a less than significant level); and

3. Conclusions regarding the alternative's: (1) ability to avoid or substantially lessen the significant unavoidable impacts of the project; (2) ability to attain the project objectives (as stated below); and (3) merits compared to the merits of the proposed project.

5.2 PROPOSED PROJECT

The project analyzed in this Draft EIR is the reasonably foreseeable buildout of the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan), which City of Cypress voters approved on November 5, 2024, pursuant to "Measure S" as part of the Housing Element Implementation Project.

5.2.1 Project Characteristics

The proposed project consists of the reasonably foreseeable buildout of a portion of the area governed by Specific Plan that includes approximately 134 acres of land (Buildout Area) in the City of Cypress (City). The proposed project includes consideration of Vesting Tentative Tract Map No. 19247 (VTTM 19274). VTTM 19247 includes lots with a total land area of approximately 151.6 acres. The land subject to VTTM 19247 is greater than the Buildout Area as VTTM 19247 includes Lots 8 and 9 (17.55 acres), which are part of the existing Grace Church property, which is located outside

the area governed by the Specific Plan. The environmental analyses in this Draft EIR do not consider future development on Lots 8 and 9 of VTTM 19247.

The proposed project also does not include two other areas subject to the Specific Plan, which include (1) the seven acres of land (Melia Property) that Melia Homes previously developed as the Belmont residential project (SCH No. 2020099025), and (2) the nine acres of land the City developed as Lexington Park.

The proposed project evaluated in this Draft EIR includes 1,791 residential units and 440,000 square feet of non-residential uses that could occur within the Buildout Area, as described below.

Residential Development: As summarized in **Table 3.A: Specific Plan Land Use Plan Summary** in Chapter 3.0, Project Description, the Specific Plan allows for a maximum of 1,926 residential units, including the already-constructed units at the Melia Property. Melia Homes previously developed the Belmont residential project with 135 units on the Melia Property. Therefore, an additional 1,791 residential units (1,926 - 135 = 1,791) may be developed within the Buildout Area.

Non-Residential Development: As shown in **Table 3.A**, the Specific Plan permits a maximum of 879,170 square feet of non-residential floor area within the Buildout Area. However, it is anticipated that, based on current and reasonably foreseeable future market conditions, the buildout of the Buildout Area will include substantially less than 879,170 square feet of non-residential development. Therefore, the environmental analyses in this Draft EIR are based on the assumption that only 440,000 square feet of non-residential development will be built within the Buildout Area. This represents approximately 50 percent of the maximum amount of non-residential development permitted in the Specific Plan. If buildout exceeds 440,000 square feet of non-residential development, each future applicant for a project that would cause the overall non-residential floor area within the Buildout Area to exceed, or further exceed, 440,000 square feet, will be required to prepare and submit additional environmental review in accordance with the provisions of CEQA and the *State CEQA Guidelines* may be required if such non-residential development requires any discretionary action by the City.

Street Extension: The proposed project also includes the extension of Moody Street from Cerritos Avenue to Katella Avenue, as well as the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension, consistent with Figure 2-1 of the Specific Plan. The Moody Street extension would traverse vertically through the Buildout Area, adjacent to Lots 4, 3, 13, and 14 in VTTM 19247, and create a new central north-south corridor, while the extension of Vessels Circle within Lot C would, among other things, provide access to Lots 10 and 11 in VTTM 19247. The proposed project also includes, consistent with the Specific Plan, the widening of Lexington Drive within Lot B in VTTM 19247. Future development within the Buildout Area may require the construction of private driveways, accessways and/or streets that connect to the Moody Street and Vessels Circle extensions and existing public streets adjacent to the Buildout Area, but their specific locations and sizes would be determined during the design process.

Open Space and Landscaping: The proposed project also includes approximately 11 acres of land on which park and recreational uses would be developed, including the land in Lots 1, 5 and 6 and the two additional acres of public park space that may be located in one or more of the land use districts

established in the Specific Plan. The specific amenities and improvements that would be developed in the Public Park District and the additional two acres of public park space would be determined in connection with future development projects that are proposed within the Buildout Area. The Buildout Area would also include landscaped areas as required by the Specific Plan and the City of Cypress Municipal Code (Municipal Code), as applicable. The exact location and amount of landscaped areas have not been designed yet and would be determined in connection with the future development of specific development projects.

5.2.2 Project Purpose and Objectives

Each project alternative is analyzed to determine whether it achieves the objectives of the proposed project. The underlying purpose of the proposed project is to redevelop the Buildout Area in accordance with the voter-approved Specific Plan. As stated in Section 3.0, Project Description, the following project objectives have been established for the proposed project.

1. Provide a significant number of new residential units in the Buildout Area to help meet the unmet demand for housing in the City and the project vicinity, consistent with the City's Housing Element and the Cypress Town Center and Commons Specific Plan 3.0 approved by the voters of the City of Cypress.

2. Establish a mixed-use town center that is intended to be the City's "main street" and a gathering place for the community with a vibrant mix of entertainment, retail, restaurant, commercial and residential uses.

3. Revitalize a large urban area in the City that is currently significantly underutilized.

4. Diversify the City's existing housing stock by providing various housing product types and densities to meet a range of housing needs of Cypress and area residents.

5. Provide a mix of residential, commercial, retail and park and recreational uses that encourages project residents to walk or bike to and from the commercial areas and attractions and parks within the Buildout Area and provides an enhanced consumer and employee base for the new commercial uses.

6. Develop a project that will invigorate the local economy by providing new employment and business opportunities

7. Provide residential and commercial/retail improvement that generate new sources of revenue for the City through increased property values and retail sales.

8. Extend existing City streets through all or a portion of the Buildout Area to improve overall traffic circulation in the project vicinity and provide necessary vehicular and pedestrian access for project residents, tenants, visitors and patrons.

9. Develop new residential and senior housing communities with sufficient housing units to support the size, scale and operation of planned public parks and other amenities and common areas included in the proposed project.

5.2.3 Significant Adverse Unavoidable Impacts of the Proposed Project

5.2.3.1 Air Quality

Operational Emissions. As discussed in Section 4.3, Air Quality, operational emissions associated with the proposed project would exceed the South Coast Air Quality Management District's (SCAQMD) thresholds and it is assumed that construction and operational emissions combined would exceed the significance threshold established by the SCAQMD for daily project emissions. **Mitigation Measure AIR-1,** which requires the implementation of all feasible measures to reduce operational impacts associated with buildout envisioned under the proposed project, and **Mitigation Measure TRA-1,** which requires the implementation of Transportation Demand Management (TDM) strategies to lower project VMT for the proposed project's residential component, would further reduce impacts. With implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1**, NO_x emissions would be reduced to below the SCAQMD's significance criteria. However, VOC emissions would still exceed the SCAQMD's significance criteria. As there are no additional feasible mitigation measures that would reduce project operational-source VOC emissions to a less-than-significant level, operation of the proposed project would result in a **significant and unavoidable** impact related to a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard.

Conflict with Air Quality Plan. Although the proposed project would be consistent with Indicator 2 of SCAQMD's 2022 Air Quality Management Plan (AQMP) as the proposed project would not exceed the growth assumptions in the SCAG's 2024–2050 RTP/SCS (Connect SoCal 2024) or the 2022 AQMP, the proposed project would have the potential to conflict or obstruct implementation of applicable air quality plans under Indicator 1 of the 2022 AQMP because buildout of the proposed project would result in significant and unavoidable long-term operational pollutant emissions. Although there is no feasible mitigation to reduce operational pollutant emissions to a less than significant level, **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1** would incorporate design features that would contribute to reducing criteria air pollutant emissions generated during operational activities associated with the proposed project. Nevertheless, because the proposed project would conflict with Indicator 1, impacts related to conflict with the applicable air quality plan would be **significant and unavoidable**.

In addition, proposed project emissions of ozone precursors (VOC) can contribute to regional exceedances of air quality standards and that such exceedances are associated with increased respiratory and cardiovascular symptoms in sensitive populations. Accordingly, this impact would also be **significant and unavoidable**, even with implementation of all feasible mitigation measures to minimize emissions during operation.

5.2.3.2 Cultural Resources

Historical Resources. Proposed project implementation would include the demolition of character-defining features of the LARC Property and as such would result in a substantial adverse change to a historic architectural resource under CEQA, as outlined in Section 4.5, Cultural Resources, of this Draft EIR, which is a potentially significant impact.

The proposed project would be required to implement **Mitigation Measures CUL-1** through **CUL-3** which require documentation, interpretation, and archival preservation of the Los Alamitos Race Course's historic significance prior to demolition or redevelopment. Measures include (1) the donation of historic photographs and memorabilia to a local library or Orange County–based historical society for exhibit or archival purposes; (2) incorporation of on-site interpretive features such as a publicly accessible historical marker and/or design elements referencing Frank Vessels, Sr., the Vessels family, racing history, and notable Quarter Horses; and (3) preparation of HABS-like documentation, consistent with the Secretary of the Interior's Standards, by a qualified historian prior to demolition of any character-defining features. The documentation would include photographic recordation, a detailed historical narrative, and archival research, with materials donated to appropriate local and regional archival repositories. However, impacts to built-environment historic resources as defined in *State CEQA Guidelines* Section 15064.5 would remain **significant and unavoidable.**

5.2.3.3 Transportation

Vehicle Miles Traveled. As discussed in Section 4.17, Transportation, the residential component of the proposed project would result in a higher VMT per capita than the County's residential VMT significance thresholds under both existing and cumulative plus project conditions by 11.6 percent, and thus would result in a potentially significant impact. As such, the proposed project would be required to implement feasible TDM strategies to mitigate the proposed project's VMT impact, as detailed in **Mitigation Measure TRA-1**.

These VMT reduction measures include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network and improving the pedestrian network, including the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area. However, the implementation of these measures would only reduce the proposed project's residential VMT impact by 1.2 percent. As such, even with implementation of the identified TDM strategies, the proposed project's residential VMT impact would remain significant, with a residential VMT impact of 10.4 percent over the significance threshold. Therefore, the proposed project's VMT impact would be **significant and unavoidable**.

5.3 ALTERNATIVES INITIALLY CONSIDERED BUT REJECTED FROM FURTHER CONSIDERATION

Section 15126.6(c) of the *State CEQA Guidelines* suggests that EIRs identify any alternatives that were considered by the Lead Agency but were rejected during the scoping process and briefly explain the reasons underlying the Lead Agency's determination. In evaluating an appropriate range of alternatives to the proposed project, a Residential-Only Development Alternative was considered and rejected by the City.

The following is a discussion of alternatives considered during the environmental review process and the reasons they were not selected for detailed analysis in this Draft EIR.

5.3.1 Residential-Only Development Alternative

The Residential-Only Development Alternative would eliminate the commercial and/or community-serving components of the proposed project and retain only the residential component. Similar to the proposed project, the Residential-Only Development Alternative would result in the future development of 1,791 residential units within the Buildout Area, consistent with the Specific Plan.

However, implementation of this alternative would not meet the underlying purpose of the proposed project to redevelop the Buildout Area in accordance with the voter-approved Specific Plan. Specifically, implementation of the Residential-Only Development Alternative would not establish a mixed-use town center that is intended to be the City's "main street" and a gathering place for the community with a vibrant mix of entertainment, retail, restaurant, commercial and residential uses; provide a mix of residential, commercial, retail and park and recreational uses that encourages project residents to walk or bike to and from the commercial areas and attractions and parks within the Buildout Area and provide an enhanced consumer and employee base for the new commercial uses; invigorate the local economy by providing new employment and business opportunities; or provide commercial/retail improvements that generate new sources of revenue for the City through increased property values and retail sales. Therefore, the Residential-Only Development Alternative was not forwarded for further analysis.

5.3.2 Off-Site Alternative

An off-site alternative was considered but rejected because the Buildout Area is a unique, contiguous property comprising approximately 134 acres with existing infrastructure, long-established access, and a site context that is not readily replicable elsewhere within the City or surrounding area. The applicant already owns the vast majority of the Buildout Area and it is particularly suitable for the proposed project because Cypress voters have approved a Specific Plan that applies to the land within the Buildout Area allow for a comprehensive, master-planned redevelopment that can accommodate a coordinated mix of uses, internal circulation, open space, and infrastructure improvements in a manner that smaller or fragmented off-site parcels could not reasonably achieve.

In addition, development on an alternative off-site location would not meet the underlying purpose of the proposed project to redevelop the Buildout Area in accordance with the voter-approved Specific Plan. Moreover, an off-site alternative would not meet the core purpose of the proposed project, which is to redevelop the Buildout Area in accordance with the voter-approved Specific Plan. Identifying and assembling a comparable off-site property of similar scale and characteristics would be speculative, could introduce additional environmental impacts, and would not reduce impacts relative to the proposed project. Therefore, the off-site alternative was determined to be infeasible and was not carried forward for further analysis.

5.4 ALTERNATIVES UNDER CONSIDERATION

Section 21100 of the Public Resources Code (PRC) and Section 15126 of the *State CEQA Guidelines* require an EIR to identify and discuss a No Project Alternative and a reasonable range of alternatives to the proposed project that would feasibly attain most of the basic objectives of the project and would avoid or substantially lessen any of the significant environmental impacts. Based on the

criteria listed above, the following three alternatives have been determined to represent a reasonable range of alternatives that could feasibly attain most of the basic objectives of the proposed project but that may avoid or substantially lessen any of the significant impacts of the proposed project. Therefore, the alternatives considered in this Draft EIR include the following:

- **No Project Alternative.** Under the No Project Alternative, the Buildout Area would not be developed with new residential or non-residential uses. The Buildout Area would remain as it is in its current condition, with no demolition of existing structures, grading, or new construction occurring within the Buildout Area. Specifically, the Buildout Area would remain developed with the existing structures and facilities that support horse racing, training, and community activities, including the race track, grandstand structure, three artificial lakes inside the race track, one-story clubhouse and restaurant structures, lighting structures, approximately 41 permanent one-story barns and several temporary structures and barn; and parking structures. In addition, the roadway improvements and extensions envisioned under the proposed project would not occur.

- **Historic Preservation Alternative.** The Historic Preservation Alternative would develop new residential and non-residential uses within the Buildout Area; however, the character-defining features at LARC would be retained and converted into a performance venue for future concerts, plays, and other entertainment performances. Lots 5 through 8 and portions of Lots 3 and 4 would be used as a park/recreational use that is open to the public when the performance venue is not in use. Overall, the Historic Preservation Alternative would result in development of approximately 1,400 residential units and 440,000 square feet of non-residential development. The existing LARC character-defining features that would be retained include the original pre-1970 track, the 1954 quarter-mile chute, the infield and ponds, and a portion of the grandstand, as outlined in Section 5.5.2 below. All non-historic features of the race course, including the race-track extensions, barns, temporary buildings, clubhouse building, and annex would be demolished. Siboney Street would only be extended to the intersection of Vessels Circle and would not extend to Moody Street. Existing restaurants, food service, and the three existing lakes within the original race track would be retained.

- **Reduced Development Alternative (30% Reduction).** Under the Reduced Development Alternative, the overall intensity of the proposed project, including residential and commercial development, would be reduced by 30 percent. As such, the Reduced Development Alternative would facilitate the future development of 1,253 residential units and approximately 308,000 square feet of non-residential uses.

5.5 ALTERNATIVES ANALYSIS

5.5.1 No Project Alternative

5.5.1.1 Description

As previously described, under the No Project Alternative, the Buildout Area would not be developed with new residential or non-residential uses. The Buildout Area would remain as it is in its current condition, with no demolition of existing structures, grading, or new construction occurring within the Buildout Area. Specifically, the Buildout Area would remain developed with the existing

structures and facilities that support horse racing, training, and community activities, including the race track, grandstand structure, three artificial lakes inside the race track, one-story clubhouse and restaurant structures, lighting structures, approximately 41 permanent one-story barns and several temporary structures and barns; and parking structures. In addition, the roadway improvements and extensions envisioned under the proposed project would not occur.

Under the No Project Alternative, it is assumed the Los Alamitos Race Course would continue to operate under its existing conditions and entitlements. No new development, redevelopment, or expansion would occur beyond what is currently allowed, and ongoing activities at the site—including horse racing events, simulcast operations, associated parking, lighting, and supporting facilities—would remain generally consistent with present-day operations. As a result, there would be no change to existing land use patterns, intensity of use, or operational characteristics at LARC, and environmental conditions would remain substantially similar to baseline conditions, aside from normal fluctuations associated with routine operations and maintenance.

5.5.1.2 Comparison of Environmental Impacts

Aesthetics. Under the No Project Alternative, the existing visual character and quality of the Buildout Area and its surroundings would not be altered and would remain as it is in its existing condition. As such, implementation of the No Project Alternative would not result in any change in the aesthetic character of the Buildout Area and would not result in any new sources of light or glare. Therefore, compared to the less than significant impacts of the proposed project, the No Project Alternative would have no impact related to aesthetics.

Agriculture and Forestry Resources. The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and the Buildout Area would remain as it is in its existing condition. Therefore, implementation of the No Project Alternative would have no impact related to agriculture and forestry resources, similar to the proposed project.

Air Quality. The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and no demolition or construction activity would occur within the Buildout Area. Existing operational conditions, including vehicle trips, would remain the same. As such, implementation of the No Project Alternative would not result in any construction-related increase in pollutant concentrations and dust, exhaust, and organic emissions. Similarly, this alternative would not result in new exposure of residents to substantial pollutant concentrations, including toxic air contaminants (TACs). Implementation of the No Project Alternative would also not result in an increase in operational vehicle trips in the City, and, because the No Project Alternative would not facilitate any development within the Buildout Area, no other emissions (such as those leading to odor) would be generated. Because the No Project Alternative would not facilitate any development within the Buildout Area, **Regulatory Compliance Measures AIR-1** through **AIR-4, Mitigation Measure AIR-1, Mitigation Measure AIR-2,** and **Mitigation Measure TRA-1** would not be applicable**.** Therefore, compared to the significant and unavoidable air quality impacts associated with the proposed project, the No Project Alternative would have no impact on air quality.

Biological Resources. The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and the Buildout Area would remain as it

is in its existing condition. No demolition or construction activity would occur within the Buildout Area. As such, implementation of the No Project Alternative would not result in any impacts on biological resources, including special status species, riparian habitat or other sensitive natural communities, or wetlands. In addition, implementation of the No Project Alternative would not interfere with the movement of any wildlife species, impede the use of wildlife nursery sites, conflict with any local policies or ordinances protecting biological resources, or conflict with an adopted Habitat Conservation Plan (HCP). Because the No Project Alternative would not facilitate any development within the Buildout Area, **Regulatory Compliance Measures BIO-1** and **BIO-2** and **Mitigation Measure BIO-1** would not be applicable**.** Therefore, compared to the less than significant impacts with the incorporation of mitigation associated with the proposed project, the No Project Alternative would have no impact on biological resources.

Cultural Resources. The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and the Buildout Area would remain as it is in its existing condition. No demolition or construction activity would occur within the Buildout Area. Therefore, the existing character-defining features of the LARC Property, including the grandstand, 1954 quarter-mile chute, and the pre-1970 track, which are considered historic resources as defined in *State CEQA Guidelines* Section 15064.5, would not be demolished and **Mitigation Measures CUL-1** through **CUL-3** would not be required. Therefore, compared to the significant and unavoidable impacts of the proposed project, the No Project Alternative would have no impact on built-environment historic resources as defined in *State CEQA Guidelines* Section 15064.5.

In addition, implementation of the No Project Alternative would not include construction or other ground disturbance activities that could result in the accidental discovery of archeological and/or cultural resources, including human remains. As such, **Regulatory Compliance Measures CUL-1** and **CUL-2** would not be applicable or required. Therefore, compared to the less than significant impacts of the proposed project, the No Project Alternative would have no impact on archaeological resources, including human remains.

Overall, implementation of the No Project Alternative would avoid the significant and unavoidable impacts of the proposed project associated with cultural resources.

Energy. The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and no demolition or construction activity would occur within the Buildout Area as the Buildout Area would remain the same as it is under existing conditions. As such, implementation of the No Project Alternative would not result in construction-related energy demand. Similarly, the No Project Alternative would not result in an increase in VMT, daily vehicle trips, or utility use (i.e., electricity and natural gas) within the Buildout Area compared to existing conditions. Therefore, the No Project Alternative would not result in impacts related to operational-period energy usage. Accordingly, compared to the less than significant energy impacts associated with the proposed project, the No Project Alternative would have no impact related to energy.

Geology and Soils. The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and the Buildout Area would remain as it is in its existing condition. No demolition, grading, or construction activity would occur within the Buildout

Area. As such, implementation of the No Project Alternative would not cause potential substantial adverse effects, including the risk of loss, injury, or death involving the rupture of a known earthquake fault, strong seismic ground shaking, seismic-related ground failure (including liquefaction), and landslides. In addition, as no development would occur, implementation of the No Project Alternative would not result in substantial soil erosion or the loss of topsoil, be located on an unstable geologic unit or expansive/unstable soil, or result in any impacts related to alternative wastewater disposal systems. As such, **Regulatory Compliance Measure GEO-1** and **Mitigation Measure GEO-1** would not be applicable or required for the No Project Alternative.

In addition, implementation of the No Project Alternative would not include construction or other ground disturbance activities that could result in the accidental discovery of paleontology resources. Therefore, implementation of the No Project Alternative would not destroy a unique paleontological resource or site, either directly or indirectly and **Mitigation Measures GEO-2** and **GEO-3** would not be applicable or required for the No Project Alternative.

Therefore, compared to the less than significant impacts of the proposed project with the incorporation of mitigation, the No Project Alternative would have no impact related to geology and soils.**Greenhouse Gas Emissions.** The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and no demolition or construction activity would occur within the Buildout Area as the Buildout Area would remain the same as it is under existing conditions. As such, implementation of the No Project Alternative would not result in the generation of construction-period GHG emissions. Similarly, the No Project Alternative would not result in an increase in VMT, daily vehicle trips, or utility use (i.e., electricity, natural gas, water, and wastewater) within the Buildout Area compared to existing conditions. Therefore, the No Project Alternative would not result in any GHG impacts related to project operations. Because the No Project Alternative would not facilitate any development within the Buildout Area, **Mitigation Measure AIR-1, Mitigation Measure GHG-1,** and **Mitigation Measure TRA-1** would not be applicable. Therefore, compared to the less than significant GHG impacts with the incorporation of mitigation associated with the proposed project, the No Project Alternative would have no impact related to GHG.

Hazards and Hazardous Materials. The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and the Buildout Area would remain as it is in its existing condition. No demolition, grading, or construction activity would occur within the Buildout Area. As such, implementation of the No Project Alternative would not involve the routine transport, use, or disposal of hazardous materials; emit or handle hazardous materials within 0.25-mile of a school; or create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. In addition, as no development would occur, implementation of the No Project Alternative would not create a significant hazard to the public or the environment due to it being on a hazardous materials site identified pursuant to Government Code Section 65962.5; result in a safety hazard or excessive noise for people residing or working in the project area; impaired implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan; or expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires. As such, **Regulatory Compliance Measure HAZ-1** and

Mitigation Measure HAZ-1 would not be applicable or required for the No Project Alternative. Therefore, compared to the less than significant impacts of the proposed project with the incorporation of mitigation, the No Project Alternative would have no impact related to hazards and hazardous materials.**Hydrology and Water Quality.**The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and the Buildout Area would remain as it is in its existing condition. No demolition, grading, or construction activity would occur within the Buildout Area. As no construction activities would occur and the Buildout Area would remain the same as existing conditions, implementation of the No Project Alternative would not increase the potential for pollutants of concern from construction activities and vehicle traffic (e.g., fuels and lubricants, tire wear particulates, brake dust, and fallout from exhaust emissions) to be generated within the Buildout Area and conveyed in runoff during storm events when compared to existing conditions. Therefore, the No Project Alternative would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality and **Regulatory Compliance Measures HYD-1** and **HYD-2**, would not be required. In addition, because the No Project Alternative would not result in the development of the Buildout Area, require additional water supply, or result in increased impervious surface area within the Buildout Area, implementation of the No Project Alternative would not substantially decrease groundwater supplies, interfere substantially with groundwater recharge, or substantially alter the existing drainage pattern of the site, and **Regulatory Compliance Measure HYD-3** would not be required. Implementation of the No Project Alternative would also not increase the risk of release of pollutants due to inundation beyond existing conditions and would also not conflict with applicable water quality control or sustainable groundwater management plans. Therefore, compared to the less than significant impacts of the proposed project, the No Project Alternative would have no impact on hydrology and water quality.

Land Use and Planning. The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and the Buildout Area would remain as it is in its existing condition, despite the fact that the previously approved Specific Plan would still apply to the land within the Buildout Area. The Buildout Area would continue to be developed with its existing uses and structures, including the race track, grandstand structure, three artificial lakes inside the race track, one-story clubhouse and restaurant structures, lighting structures, approximately 41 permanent one-story barns and several temporary structures and barns; and parking structures. Therefore, compared to the less than significant impacts of the proposed project, the No Project Alternative would have no impact related to land use and planning. However, it should be noted that implementation of the No Project Alternative, because it does not include the construction of any residential units, would not provide any housing to meet the significant unmet housing demand in the City, which is in conflict with the stated goals of the Specific Plan.

Mineral Resources. The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and the Buildout Area would remain as it is in its existing condition. Therefore, implementation of the No Project Alternative would have no impact related to mineral resources, similar to the proposed project.

Noise. The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and the Buildout Area would remain as it is in its existing

condition. No demolition, grading, or construction activity would occur within the Buildout Area. As no construction activities would occur, implementation of the No Project Alternative would not expose surrounding land uses to short-term construction-related noise or vibration. Noise at the Buildout Area would not increase above that already occurring on the site and no increase in traffic noise would occur. Because the No Project Alternative would not facilitate any development within the Buildout Area, **Regulatory Compliance Measures NOI-1** and **NOI-2** would not be applicable**.** Therefore, compared to the less than significant noise impacts associated with the proposed project, the No Project Alternative would have no impact related to noise.

Population and Housing. The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and the Buildout Area would remain as it is in its existing condition. As no new residential or non-residential uses would be constructed at the Buildout Area, implementation of the No Project Alternative would not result in any population increase in the city. Therefore, compared to the less than significant impacts of the proposed project, the No Project Alternative would have no impact related to population and housing. However, it should be noted that implementation of the No Project Alternative, because it does not include the construction of any residential units, would not provide any housing to meet the significant unmet housing demand in the City, which is in conflict with the stated goals of the Specific Plan.

Public Services. The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and the Buildout Area would remain as it is in its existing condition. As no new residential or non-residential uses would be constructed within the Buildout Area, implementation of the No Project Alternative would not result in any population increase in the city or increase in demand for public services, including on fire and police protection services, schools, parks, and other public services, as compared to existing conditions. In addition, **Regulatory Compliance Measures PS-1, PS-2,** and **PS-3,** and the payment of applicable development impact fees would not be applicable or required with implementation of the No Project Alternative. Therefore, compared to the less than significant impacts of the proposed project, the No Project Alternative would have no impact on public services.

Recreation. The No Project Alternative would not result in the development of the Buildout Area with new residential, non-residential uses, or parks and the Buildout Area would remain as it is in its existing condition. As no new residential or non-residential uses would be constructed within the Buildout Area, implementation of the No Project Alternative would not result in any population increase in the city or increase in demand on parks and recreation facilities, as compared to existing conditions. In addition, as discussed above, **Regulatory Compliance Measure PS-3** would not be applicable or required with implementation of the No Project Alternative. Therefore, compared to the less than significant impacts of the proposed project, the No Project Alternative would have no impact on parks and recreation.

Transportation. The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and the Buildout Area would remain as it is in its existing condition. No construction activity would occur within the Buildout Area. As no construction activities or development would occur, implementation of the No Project Alternative would not result in any increases in automobile, transit, bicycle, or pedestrian travel to or from the Buildout

Area. As such, a Transportation Construction Plan (TCP), which includes measures for traffic coordination during construction to lower impacts to roadway systems, would not be applicable or required. In addition, because no development would occur, implementation of the No Project Alternative would not increase hazards due to a geometric design feature or incompatible uses or result in inadequate emergency access.

Implementation of the No Project Alternative would also not result in any increase related to VMT as no increase in daily trips to and from the Buildout Area would occur. As such, **Mitigation Measure TRA-1** would not be applicable or required with implementation of the No Project Alternative. Therefore, compared to the significant and unavoidable impacts of the proposed project, the No Project Alternative would have no impact related to VMT.

Tribal Cultural Resources. The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and the Buildout Area would remain as it is in its existing condition. No demolition or ground-disturbing activities from construction would occur within the Buildout Area. As such, implementation of the No Project Alternative would not result in the accidental discovery of tribal cultural resources and **Regulatory Compliance Measures CUL-1** and **CUL-2** and **Mitigation Measures TCR-1** through **TCR-4** would not be applicable or required. Therefore, compared to the less than significant impacts of the proposed project with the incorporation of mitigation, the No Project Alternative would have no impact related to tribal cultural resources.

Utilities and Service Systems. The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and the Buildout Area would remain as it is in its existing condition. As no new residential or non-residential uses would be constructed within the Buildout Area, implementation of the No Project Alternative would not result in any population increase in the city or increase in demand on utilities, including water, wastewater, stormwater drainage, electric power, natural gas, and telecommunications, as compared to existing conditions. In addition, **Regulatory Compliance Measure UTIL-1** would not be applicable or required with implementation of the No Project Alternative. Therefore, compared to the less than significant impacts of the proposed project, the No Project Alternative would have no impact on utilities and service systems.

Wildfire. The No Project Alternative would not result in the development of the Buildout Area with new residential or non-residential uses and the Buildout Area would remain as it is in its existing condition. As such, implementation of the No Project Alternative would not impair an adopted emergency response plan or emergency evacuation plan; exacerbate wildfire risks; require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk; or expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes. Therefore, implementation of the No Project Alternative would have no impact related to wildfire, similar to the proposed project.

5.5.1.3 Attainment of Project Objectives

The No Project Alternative would not meet the underlying purpose of the proposed project or any of the project objectives. The attainment of project objectives is discussed further below.

1. Provide a significant number of new residential units in the Buildout Area to help meet the unmet demand for housing in the City and the project vicinity, consistent with the City's Housing Element and the Cypress Town Center and Commons Specific Plan 3.0 approved by the voters of the City of Cypress.

   The No Project Alternative would not result in any new residential uses within the Buildout Area. Therefore, implementation of the No Project Alternative would not help meet the significant unmet demand for housing in the City and the project vicinity. As such, the No Project Alternative would not meet this project objective.

2. Establish a mixed-use town center that is intended to be the City's "main street" and a gathering place for the community with a vibrant mix of entertainment, retail, restaurant, commercial and residential uses.

   The No Project Alternative would not result in any new residential or non-residential uses within the Buildout Area. Therefore, implementation of the No Project Alternative would not establish a mixed-use town center or gathering place for the community as no mix of entertainment, retail, restaurant, commercial and residential uses would be developed. As such, the No Project Alternative would not meet this project objective.

3. Revitalize a large urban area in the City that is currently significantly underutilized.

   The No Project Alternative would not result in any new residential or non-residential uses within the Buildout Area. Therefore, implementation of the No Project Alternative would not revitalize the Buildout Area, which is currently significantly underutilized. As such, the No Project Alternative would not meet this project objective.

4. Diversify the City's existing housing stock by providing various housing product types and densities to meet a range of housing needs of Cypress and area residents.

   As discussed above, the No Project Alternative would not result in any new residential uses within the Buildout Area. Therefore, implementation of the No Project Alternative would not diversify the City's existing housing stock by providing various housing product types and densities to meet a range of housing needs of Cypress and area residents. As such, the No Project Alternative would not meet this project objective.

5. Provide a mix of residential, commercial, retail and park and recreational uses that encourages project residents to walk or bike to and from the commercial areas and attractions and parks within the Buildout Area and provides an enhanced consumer and employee base for the new commercial uses.

As discussed above, the No Project Alternative would not result in any new residential or non-residential uses within the Buildout Area. Therefore, implementation of the No Project Alternative would not provide a mix of residential, commercial, retail and park and recreational uses that encourages project residents to walk or bike to and from the commercial areas and attractions and parks within the Buildout Area and provides an enhanced consumer and employee base for the new commercial uses. As such, the No Project Alternative would not meet this project objective.

6. Develop a project that will invigorate the local economy by providing new employment and business opportunities.

   As discussed above, the No Project Alternative would not result in any new non-residential uses within the Buildout Area. Therefore, implementation of the No Project Alternative would not invigorate the local economy by providing new employment and business opportunities. As such, the No Project Alternative would not meet this project objective.

7. Provide residential and commercial/retail improvement that generate new sources of revenue for the City through increased property values and retail sales.

   As discussed above, the No Project Alternative would not result in any new residential or non-residential uses within the Buildout Area. Therefore, implementation of the No Project Alternative would not provide residential and commercial/retail improvements that generate new sources of revenue for the City through increased property values and retail sales. As such, the No Project Alternative would not meet this project objective.

8. Extend existing City streets through all or a portion of the Buildout Area to improve overall traffic circulation in the project vicinity and provide necessary vehicular and pedestrian access for project residents, tenants, visitors and patrons.

   The No Project Alternative would not include the extension of Moody Street from Cerritos Avenue to Katella Avenue and the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension as no development within the Buildout Area would occur. Therefore, the Not Project Alternative would not improve overall traffic circulation in the vicinity of the Buildout Area. As such, the No Project Alternative would not meet this project objective.

9. Develop new residential and senior housing communities with sufficient housing units to support the size, scale and operation of planned public parks and other amenities and common areas included in the proposed project.

   As discussed above, the No Project Alternative would not result in any new residential or non-residential uses within the Buildout Area. As such, the No Project Alternative would not meet this project objective.

5.5.2 Historic Preservation Alternative

5.5.2.1 Description

The Historic Preservation Alternative would develop new residential and non-residential uses within the Buildout Area and would retain the existing character-defining features at LARC that contribute to the LARC's eligibility for listing in the National Register and California Register, as shown in **Figure 5-1**. The character-defining features, including the original pre-1970 track, the 1954 quarter-mile chute, the infield and ponds, and a portion of the grandstand, would be converted into a performance venue for future concerts, plays, and other entertainment performances. When not being used as a performance venue, Lots 5 through 8 and portions of Lots 3 and 4 would be open to the public as a park or recreational use. All non-historic features of the race course, including the race-track extensions, barns, temporary buildings, clubhouse building, and annex would be demolished. Existing restaurants, food service, and the three existing lakes within the original race track would be retained. The Historic Preservation Alternative also includes a six-level above-ground parking structure with 1,600 parking spaces (1 space for every 3 seats) to accommodate the performance venue and account for the loss of parking at the race course, as shown in **Figure 5-1**.

Implementation of the Historic Preservation Alternative would require a Specific Plan amendment, which would have to be voter approved, to allow the performance venue use within the Medium-Density Residential District and Single-Family Attached Subdistrict. In addition, the Historic Preservation Alternative would require approval of a VTTM, similar to the proposed project. The proposed lots in the VTTM would be different than the proposed project and would include a lot for the race course improvements being retained and to accommodate the event venue use and related modifications of other lots.

Residential and Commercial Development. Under the Historic Preservation Alternative, development on Lots 2, 10, 11, 12, and 14 would be the same as the proposed project. In addition, similar to the proposed project, Lots 5 and 6 would be limited to parks and recreational uses. **Table 5.A: Comparison of Project Buildout for the Proposed Project and Historic Preservation Alternative** provides a comparison of the development proposed on each lot for the proposed project and the Historic Preservation Alternative.

As part of the Historic Preservation Alternative, Lot 7 would be limited to parks and recreational uses, as opposed to the residential uses proposed under the project. In addition, portions of Lots 3 and 4 would also include parks and recreational uses and the development area within Lot 13 would be reduced as compared to the proposed project.

Further, the Historic Preservation Alternative would only transfer ownership of an approximately 1-acre portion of Lot 8 to Grace Church and would develop the remaining 3-acres of Lot 8 with parks and recreational uses, similar to Lots 5, 6, 7, and portions of Lots 3 and 4. Similar to the proposed project, no development is proposed on Lot 9 and the ownership of Lot 5 would be transferred from Grace Church to LARC.

14	Mixed-Use	128 du	Mixed- Mixed-Use	128 du
10-14	Non-Residential	440,000 sq ft	Non-Residential	440,000 sq ft
			Total	1,400 residential units 440,000 square feet of non-residential floor area

Source:

1. Includes the clamshell stage, permanent infield seating, and temporary infield seating.
2. Ownership of approximately 1-acre of Lot 8 would be transferred to Grace Church.

Overall, the Historic Preservation Alternative would result in development of 1,400 residential units and 440,000 square feet of non-residential development, in addition to the events venue. As such, implementation of the Historic Preservation Alternative would result in an approximately 22 percent reduction in residential units, or 391 fewer residential units, as compared to the proposed project and the same amount of non-residential floor area as the proposed project.

The Historic Preservation Alternative would also include the extension of Vessels Circle like the proposed project, and the extension of Siboney Street to connect to the intersection of the Vessels Circle extension. Under the Historic Preservation Alternative, Moody Street would not be extended to Katella Avenue to create a new north-south connection between Cerritos Avenue and Katella Avenue.

Event Space. A new approximately 3,500-square foot clamshell stage would be constructed within Lot 7, facing south towards the existing grandstands and away from Cerritos Avenue. In addition, permanent infield seating for approximately 500 guests and temporary seating on the track for approximately 500 guests would also be provided facing the stage. Including the 3,694 seats

associated with the existing grandstand, which would be retained, the Historic Preservation Alternative would result in a total of 4,694 seats for the performance venue. The oval track, chute, and infield would be utilized as a public park when the performance venue is not in use and the track and chute would be used for walking, cycling and running paths with the infield available for passive park activities, including picnic areas, playgrounds, and/or gardens. In addition, the two existing ponds would be retained and would contain paddle boats and/or canoes available for rent.

Food and beverage services, similar to existing facilities within the grandstand, would be available during performances and may also be available during non-performance hours for visitors to the public park amenities. The existing restaurant would be retained. The lower two floors of the grandstand would be utilized for equipment storage, offices, dressing rooms, and rehearsal space. In addition to the preserved LARC facilities, a 6-level parking structure containing approximately 1,600 parking spaces would be constructed west of the grandstand to provide parking for future events hosted at the performance venue, consistent with Section 2.06.050 of the City's Municipal Code.

5.5.2.2 Comparison of Environmental Impacts

Aesthetics. The following provides a comparison of potential aesthetic impacts between the proposed project and the Historic Preservation Alternative.

Scenic Vistas and Scenic Resources. The City is almost entirely developed and no public vantage point provides substantial views of any water bodies, mountains, hills, or any other significant visual resources. Similar to the proposed project, given that no scenic vista is currently viewable from any public vantage point in proximity to the Buildout Area, the development of the Historic Preservation Alternative would not alter an existing scenic vista or block views of any scenic vistas. Therefore, the Historic Preservation Alternative would not have a substantial adverse effect on a scenic vista. In addition, due to distance and intervening land uses, no portion of the Buildout Area is visible from the officially designated segment of SR-91 or the eligible segment of Pacific Coast Highway. Therefore, the Historic Preservation Alternative would have no impact related to the substantial damage of scenic resources within a State Scenic Highway, similar to the proposed project.

Visual Character and Public Views. The aesthetic character of the Buildout Area would change with implementation of the Historic Preservation Alternative during both construction and operation. Construction of the proposed project would introduce the use of machinery such as excavators and bulldozers, and the presence of the construction equipment, as well as the construction activities, would temporarily alter the visual character of the project site. In addition, the Historic Preservation Alternative would develop the Buildout Area with similar uses as the proposed project, including residential and non-residential uses; while retaining the existing LARC character-defining features that contribute to the LARC's eligibility for listing in the National Register and California Register. The Historic Preservation Alternative would also result in an approximately 22 percent reduction in residential units, or 391 fewer residential units, as compared to the proposed project and the same amount of non-residential floor area as the proposed project. The character-defining features, including the original pre-1970 track, the 1954 quarter-mile chute, the infield and ponds, and a portion of the grandstand, would be converted into a performance venue for future concerts, plays, and other entertainment performances. The Historic Preservation Alternative also includes a six-level above-ground parking structure with 1,600 parking spaces to accommodate the performance

venue and account for the loss of parking at the race course, which would introduce a new large structure at the Buildout Area that would alter the visual character of the Buildout Area.

However, construction would be temporary and, due to the phased nature of construction activities, would be staggered across the project site. Therefore, the visual character of the Buildout Area would not be significantly impacted during construction activities. In addition, although the Historic Preservation Alternative includes the construction of a six-level above-ground parking structure which would introduce a new large structure at the Buildout Area that would alter the visual character of the Buildout Area, because the Historic Preservation Alternative would retain the original pre-1970 track, the 1954 quarter-mile chute, the infield and ponds, and a portion of the grandstands, which are prominent aesthetic features of the Buildout Area, implementation of the Historic Preservation Alternative would alter the aesthetic character of the Buildout Area to a lesser degree when compared to the proposed project. All development pursuant to the Specific Plan would be required to consider and comply with, as applicable, relevant sustainable design guidelines stated or referenced in the Specific Plan. Similar to the proposed project, development would also be subject to applicable Zoning Ordinance design regulations related to scenic quality, including the objective design standards in Section 3.17.110 of the Zoning Ordinance for multi-family development. Therefore, the Historic Preservation Alternative would have a less than significant impact related to conflict with applicable zoning and other regulations governing scenic quality, similar to the proposed project.

Light and Glare. As the Buildout Area is in an urbanized area, lighting is produced in the vicinity of the Buildout Area by surrounding commercial and residential development, street lighting, and vehicles on adjacent roadways, including Katella Avenue, West Cerritos Avenue, Lexington Drive, and Walker Street. In addition, existing uses within the Buildout Area, such as the race track, include outdoor lighting features. Similar to the proposed project, all development within the Buildout Area would be required to comply with all applicable requirements related to light and glare, including applicable regulations of the 2022 State Building Energy Efficiency Standards (Title 24), all applicable sustainable design strategies related to lighting in the Specific Plan, and all applicable development standards related to lighting in the Zoning Ordinance. Consistent with these requirements and similar to the proposed project, all lighting associated with the Historic Preservation Alternative would be shielded such that it would minimize light spillage onto adjacent properties. Similar to the proposed project, building exteriors of future development facilitated by the Historic Preservation Alternative would generally be covered by non-reflective materials, which would minimize glare, and glass windows would be incorporated into each building design in accordance with development standards established in the Specific Plan and the City's Municipal Code.

The Historic Preservation Alternative would include a performance venue that would likely require stadium-style lighting during events. While the proposed project would include lighting typical of residential and commercial uses, the Historic Preservation Alternative would introduce additional lighting and would result in greater lighting impacts relative to the proposed project.

Similar to the proposed project, new lighting associated with the Historic Preservation Alternative would be required to meet all applicable lighting standards in the City's Zoning Ordinance as outlined in the Section 4.1, Aesthetics, of this Draft EIR: Section 3.11.060.A (Exterior Features); Section 3.11.060.B (Intensity); Section 3.11.060.C (Security Lighting); Section 3.11.060.D (Shielding

of Light Source); Section 3.14.050.C.4 (Required Improvements for Off-Street Parking Areas); and Section 3.15.110 (Standards for Specific Types of Signs). Proposed lighting would also be required to comply with Section 4.6: Lighting, of the Specific Plan.

Overall, although the Historic Preservation Alternative would result in greater, more substantial sources of lighting than the proposed project, aesthetic impacts would remain less than significant with adherence to existing development standards established in the Specific Plan and the City's Municipal Code.

Agriculture and Forestry Resources. The Historic Preservation Alternative would develop the same area of the city (i.e., Buildout Area) with similar uses as the proposed project, including residential and non-residential uses. As discussed in Section 4.2, Agriculture and Forestry Resources, the entire Buildout Area and surrounding area is designated as "Urban and Built-Up Land" by the California Department of Conservation's California Important Farmland Finder. In addition, the Buildout Area is not used for agricultural or forestry production and is not protected by, or eligible for, a Williamson Act contract. Therefore, the Historic Preservation Alternative would have no impact related to agriculture and forestry resources, similar to the proposed project.

Air Quality. The following provides a comparison of potential air quality impacts between the proposed project and the Historic Preservation Alternative.

Construction. Although the Historic Preservation Alternative would include less demolition compared to the proposed project due to the retention of the LARC character-defining features, construction activities, such as site preparation, grading, construction of structures, and architectural coating of structures, would be similar to the proposed project and is anticipated to result in similar air quality emissions. As such, similar to the proposed project, construction emissions associated with full buildout of the Historic Preservation Alternative would not exceed the SCAQMD thresholds for VOCs, NO_x, CO, SO_X, $PM_{2.5,}$ or PM_{10} emissions. Therefore, with compliance with regulatory requirements (as specified in **Regulatory Compliance Measures AIR-1** through **AIR-4**), construction impacts related to the cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under applicable federal or State ambient air quality standard would be less than significant, similar to the proposed project.

***Operation*.** As discussed in Section 4.3, Air Quality, operation of the proposed project would result in VOC emissions that would exceed the SCAQMD's significance criteria even with implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1**. As there are no additional feasible mitigation measures that would reduce project operational-source VOC emissions to a less-than-significant level, operation of the proposed project would result in a significant and unavoidable impact related to a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard. The Historic Preservation Alternative would reduce operational emissions associated with the residential development due to the 22 percent reduction in residential units; however, due to the inclusion of the performance venue, which would result in an increase in vehicle trips to and from the project site as compared to the proposed project, and 6-story parking garage, implementation of the Historic Preservation Alternative may not reduce the overall emissions associated with operation of the alternative. In addition, the air quality emissions under the Historic Preservation

Alternative have not been quantified. Accordingly, this Draft EIR includes a qualitative, comparative discussion of this alternative based on available information and professional judgement, and it is therefore assumed that implementation of the Historic Preservation Alternative would also result in significant and unavoidable impact related to a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard, even with implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1**.

***Health Risk Assessment*.** Construction of development envisioned under the Historic Preservation Alternative may expose nearby sensitive receptors to airborne particulates and pollutants from construction equipment (i.e., usually diesel-fueled vehicles and equipment). Therefore, **Mitigation Measure AIR-2**, which requires the use of U.S. EPA Tier 4 Final or cleaner construction equipment if and to the extent commercially available, or the cleanest available technology that is commercially available and feasible or the preparation of project-specific construction HRA in certain circumstances, would be applicable to the Historic Preservation Alternative. Therefore, this impact would be less than significant with mitigation incorporated, similar to the proposed project. In addition, similar to the proposed project, the Historic Preservation Alternative would not include the development of any uses identified by CARB as being substantial source of TACs that would require specific siting distances based on CARB recommendations. In addition, the industrial uses near the Buildout Area on the western and eastern boundaries are further than 500 feet, so any new sensitive receptors, such as proposed residential uses, will be consistent with CARB's siting recommendations. Therefore, impacts related to TACs would be less than significant, similar to the proposed project.

Conflict with Applicable Air Quality Plans. As discussed in Section 4.3, Air Quality, the proposed project would be consistent with Indicator 2 of the 2022 Air Quality Management Plan (AQMP) as the proposed project would not exceed the growth assumptions in Connect SoCal 2024 or the 2022 AQMP; however, the proposed project would have the potential to conflict or obstruct implementation of applicable air quality plans under Indicator 1 of the 2022 AQMP because buildout of the proposed project would result in significant and unavoidable long-term operational pollutant emissions. Although there is no feasible mitigation to reduce operational pollutant emissions to a less than significant level, **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1** would incorporate design features that would contribute to reducing criteria air pollutant emissions generated during operational activities associated with the proposed project. Overall, even with implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1,** the proposed project would result in a significant and unavoidable impact associated with conflict with applicable air quality management plans. Although the Historic Preservation Alternative would reduce operational emissions associated with the residential development due to a 22 percent reduction in residential units, with the inclusion of the performance venue and parking garage, and because the air quality emissions under the Historic Preservation Alternative have not been quantified, implementation of the Historic Preservation Alternative would also result in a significant and unavoidable impact associated with conflict with applicable air quality management plans.

Odors. Construction of the Historic Preservation Alternative would generate similar odors as construction of the proposed project. Similar to the proposed project, these odors would be

temporary and limited to the construction period. The Historic Preservation Alternative would also not include any activities or operations that would generate objectionable odors and once operational, development envisioned under the Historic Preservation Alternative would not be a source of odors. Therefore, the Historic Preservation Alternative would not result in other emissions (such as those leading to odors) affecting a substantial number of people, similar to the proposed project.

Overall, implementation of the Historic Preservation Alternative would have a significant and unavoidable air quality impact, even with implementation of **Mitigation Measures AIR-1** and **AIR-2,** and **Mitigation Measure TRA-1** and adherence to **Regulatory Compliance Measures AIR-1** through **AIR-4**, similar to the proposed project.

Biological Resources. The Historic Preservation Alternative would develop the same area of the city (i.e., Buildout Area) with similar uses as the proposed project, including residential and non-residential uses. The following provides a comparison of potential impacts to biological resources between the proposed project and the Historic Preservation Alternative.

Habitats and Vegetation Communities. As discussed in Section 4.4, Biological Resources, the Buildout Area primarily consists of developed land cover. The dominant vegetation within this vegetation community includes ornamental landscaping and ruderal grassland with patches of herbaceous invasive species. Other vegetation communities within the Buildout Area include ornamental landscaping and artificial ponds. In addition, no portion of the Buildout Area contains designated or proposed critical habitat for any federally listed plant or animal species. Further, there is a high level of existing disturbance within the Buildout Area, and native wildlife habitat is largely absent within the Buildout Area and in the vicinity. The development surrounding the Buildout Area and the lack of ground cover and suitable foraging habitat make the site undesirable for many native wildlife species. Therefore, implementation of the Historic Preservation Alternative would have no impact on any native habitats or vegetation communities, similar to the proposed project.

Special-Status Plant Species. As discussed in Section 4.4, Biological Resources, no special-status plants were observed within the Buildout Area during the reconnaissance survey; and none of the 30 special-status plant species from the records searches are expected to occur within the Buildout Area due to the lack of suitable habitat and/or conditions. Therefore, implementation of the Historic Preservation Alternative would have no impact on any special-status plant species, similar to the proposed project.

Special-Status Wildlife Species and Migratory/Nesting Birds. As discussed in Section 4.4, Biological Resources, no special-status wildlife species were observed during the field survey, and suitable habitat for such species is absent from the Buildout Area due to the high level of development. In addition, no nesting birds or their nests were observed at the time of the field survey. However, based on a review of resource databases, 6 special-status wildlife species have the potential to occur on or near the Buildout Area, including monarch butterfly (*Danaus plexippus plexippus*), Ferruginous hawk (*Buteo regalis*), Swainson's hawk (*Buteo swainsoni*), western mastiff bat (*Eumops perotis californicus*), western yellow bat (*Lasiurus xanthinus*), and pocketed free-tailed bat (*Nyctinomops femorosaccus*). In addition, although no sign of roosting bats was observed during the September 2024 field survey, suitable day and night roosting habitat could be present at several of the building

structures throughout the Buildout Area and within the ornamental palm trees located around the Buildout Area. Additionally, other ornamental tree species within the Buildout Area could provide habitat to native bats in the form of foliage, bark, or cavity roosts.

Implementation of the Historic Preservation Alternative would develop the Buildout Area with similar uses as the proposed project and anticipated construction activities, including site preparation and grading activities, would be similar. In addition, potential direct and/or indirect impacts (e.g., noise during construction) could potentially disrupt or otherwise adversely affect bird nesting activities in and/or adjacent to the Buildout Area if construction activities would occur within the nesting bird season (between February 1 and August 31). Because construction of the Historic Preservation Alternative would be similar as compared to the proposed project, impacts on special-status species, including bats, and nesting birds would be similar with implementation of the Historic Preservation Alternative as the proposed project. Therefore, the Historic Preservation Alternative would also be required to adhere to **Regulatory Compliance Measure BIO-1**, requiring pre-construction bay surveys, and **Regulatory Compliance Measure BIO-2**, requiring pre-construction nesting bird surveys and active nest avoidance buffers during construction, and impacts would be less than significant.

Riparian Habitat and Sensitive Natural Communities. As discussed in Section 4.4, Biological Resources, the Buildout Area currently contains one existing drainage feature, one existing detention basin, and three existing artificial ponds. All of these aquatic features were constructed in previously graded or developed areas and do not represent natural stream channels, wetlands, or riparian systems. Their primary functions are aesthetic or related to stormwater conveyance and retention. As such, no riparian habitat is present within the Buildout Area. Therefore, similar to the proposed project, no impacts to riparian habitat would result from implementation of the Historic Preservation Alternative.

Jurisdictional Waters. As previously discussed, there is one drainage feature, one detention basin, and three ponds within the Buildout Area. The three ponds and the detention basin are not expected to be regulated by USACE, RWQCB, or CDFW. In addition, implementation of the Historic Preservation Alternative would not include the removal of the three ponds. However, the single drainage feature located on Lot 3 contains ruderal vegetation and may connect to Coyote Creek, which is tributary to the San Gabriel River and ultimately flows into the Pacific Ocean. Therefore, the removal of this drainage may be subject to regulation by the RWQCB and CDFW. Therefore, similar to the proposed project, the Historic Preservation Alternative would be required to implement **Mitigation Measure BIO-1**, which requires a jurisdictional delineation be conducted prior to construction. In addition, similar to the proposed project, the Historic Preservation Alternative would be required to adhere to **Regulatory Compliance Measures HYD-1** through **HYD-3** during construction and operation to address erosion-related impacts through implementation of construction site BMPs and operational-period biotreatment BMPs to avoid erosion and sedimentation impacts to downstream aquatic areas and water quality. With implementation of **Mitigation Measure BIO-1** and adherence to **Regulatory Compliance Measures HYD-1** through **HYD-3**, implementation of the Historic Preservation Alternative would result in less than significant impacts on jurisdictional waters, similar to the proposed project.

Wildlife Movement and Nursery Sites. As discussed in Section 4.4, Biological Resources, the Buildout Area does not function as a wildlife movement corridor. In addition, as discussed above, the Historic Preservation Alternative would comply with **Regulatory Compliance Measure BIO-1**, requiring pre-construction bay surveys, and **Regulatory Compliance Measure BIO-2**, requiring pre-construction nesting bird surveys and active nest avoidance buffers during construction. Therefore, similar to the proposed project, implementation of the Historic Preservation Alternative would have a less than significant impact related to wildlife movement and nursey sites.

Local Policies and Ordinances. Similar to the proposed project, construction of Historic Preservation Alternative would involve tree removal activities. As required by Article 3, Performance and Development Standards, Section 13 (3.13.070(c)), of the Municipal Code, existing trees would be preserved when feasible. In addition, all tree removal activities would be consistent with Section 3.9 of the Specific Plan, which supersedes the City's Landmark Tree Ordinance, as codified in Sections 17-17 through 17-27 of the City Municipal Code, and details the tree replacement development standards for development within the Buildout Area. Consistent with Specific Plan requirements, all tree removal required for future development would be described during site plan review and all removed trees would be replaced with an equivalent number of specimen trees. With adherence to the tree replacement development standards detailed in the Specific Plan, the Historic Preservation Alternative would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance, similar to the proposed project, and impacts would be less than significant.

Overall, implementation of the Historic Preservation Alternative would have a less than significant impact related to biological resources with adherence to **Regulatory Compliance Measures BIO-1** and **BIO-2** and implementation of **Mitigation Measure BIO-1**, similar to the proposed project.

Cultural Resources. The following provides a comparison of potential impacts to cultural resources between the proposed project and the Historic Preservation Alternative.

***Historical Resources*.** The Historic Preservation Alternative would develop the same area of the city (i.e., Buildout Area) with similar uses as the proposed project, including residential and non-residential uses; however, the existing character-defining features at LARC that contribute to LARC's eligibility for listing in the National Register and California Register would be retained for use as a performance venue for future concerts, plays, and other entertainment performances. The existing LARC character-defining features that would be retained include the original pre-1970 track, the 1954 quarter-mile chute, the infield and ponds, and a portion of the grandstand.

All improvements to the existing LARC character-defining features under the Historic Preservation Alternative, would be completed in compliance with the *Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings* or the *Secretary of the Interior's Standards for Rehabilitation and*

Guidelines for Rehabilitating Historic Buildings[1] (Secretary's Standards). The Secretary's Standards provide guidance for working with historic properties (and historical resources under CEQA) and are used by federal agencies and local governments to evaluate proposed rehabilitation, restoration, preservation, and reconstruction work on historical resources; they are applied to a wide variety of resource types, including buildings, sites, structures, objects, and districts.

The Secretary's Standards comprise four sets of standards to guide the treatment of historic properties and historical resources: Preservation, Rehabilitation, Restoration, and Reconstruction. Typically, one set of standards is chosen for a project based on the project scope. These four distinct treatments are defined as follows:

- **Preservation:** The Standards for Preservation "... require retention of the greatest amount of historic fabric, along with the building's historic form, features, and detailing as they have evolved over time."

- **Rehabilitation:** The Standards for Rehabilitation "... acknowledge the need to alter or add to a historic building to meet continuing new uses while retaining the building's historic character."

- **Restoration:** The Standards for Restoration "... allow for the depiction of a building at a particular time in its history by preserving materials from the period of significance and removing materials from other periods."

- **Reconstruction:** The Standards for Reconstruction "... establish a limited framework for re-creating a vanished or non-surviving building with new materials, primarily for interpretive purposes." [2]

Typically, one set of standards is chosen for a project based on the project scope. In terms of the Secretary's Standards, only one treatment standard, Rehabilitation, addresses potential impacts to the setting by new construction. Therefore, the Historic Preservation Alternative would be required conforms to the Secretary's Standards for Rehabilitation. Of the 10 Standards for Rehabilitation issued, only two, Standards 9 and 10, most directly address new construction and would be applicable to the Historic Preservation Alternative. Rehabilitation Standards 9 and 10 are quoted below.

- **Standard 9:** New additions, exterior alterations, or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be compatible with the massing, size, scale, and architectural features to protect the historic integrity of the property and its environment.

---

1 Weeks, Kay D., and Anne Grimmer. 2017. *The Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring & Reconstructing Historic Buildings*. U.S. Department of the Interior, National Park Service, Technical Preservation Services, Washington, D.C.

2 Ibid. Pages 2-3.

- **Standard 10:** New additions and adjacent or related new construction shall be undertaken in such a manner that if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.

Because it would retain the existing character-defining features, including the pre-1970 track, the 1954 quarter-mile chute, the infield and ponds, and a portion of the grandstand, implementation of the Historic Preservation Alternative would not result in a material impairment of the LARC as a historical resource and **Mitigation Measures CUL-1** through **CUL-3,** which requires documentation of the historic resource in accordance with the Historic American Building Survey (HABS) standards, would not be applicable or required and implementation of the Historic Preservation Alternative would avoid the significant and unavoidable impact to built-environment historic resources as defined in *State CEQA Guidelines* Section 15064.5 associated with the proposed project. Other non-character defining features of LARC would be demolished under the Historic Preservation Alternative; however, because these structures do not contribute to the LARC's eligibility for listing in the National Register and California Register, demolition of these structures would not result in a significant impact related to built historical resources.

Archaeological Resources. In addition, construction of the Historic Preservation Alternative has the potential to significantly impact unidentified archaeological resources during ground-disturbing activities. Therefore, similar to the proposed project, the Historic Preservation Alternative would be required to adhere to **Regulatory Compliance Measure CUL-1**, which detail provisions in the event that previously unknown cultural resources, including human remains, are discovered during ground-disturbing construction activities, consistent with the California Code of Regulations (CCR) Section 15064.5(e) and State Health and Safety Code Section 7050.5. Further, similar to the proposed project, the Historic Preservation Alternative would also be required to adhere to **Regulatory Compliance Measure CUL-2** for the treatment of human remains in order to ensure that descendant communities have significant input in the treatment and final disposition of human remains, if encountered at the project site during future development activities. With adherence to **Regulatory Compliance Measures CUL-1** and **CUL-2,** implementation of the Historic Preservation Alternative would result in less than significant impacts related to archaeological resources and human remains.

Overall, implementation of the Historic Preservation Alternative would have a less than significant impact related to cultural resources with adherence to **Regulatory Compliance Measures CUL-1** and **CUL-2** and would avoid the significant and unavoidable impact to built-environment historic resources as defined in *State CEQA Guidelines* Section 15064.5 associated with the proposed project.

Energy. Implementation of the Historic Preservation Alternative would result in 391 fewer residential units as compared to the proposed project and the same amount of commercial uses as the proposed project. This would result in a corresponding reduction in energy use associated with the residential development during construction and operation, as compared to the proposed project. However, construction and operation of the performance venue, which would host future concerts, plays, and other entertainment performances, and construction and operation of the 6-story parking garage and 500-seat clamshell would result in new energy use and demand.

***Construction*.** Although the Historic Preservation Alternative would include less demolition compared to the proposed project due to the retention of the LARC character-defining features, construction activities, such as site preparation, grading, construction of structures, and architectural coating of structures, would be similar to the proposed project and are anticipated to result in similar energy use. As such, similar to the proposed project, construction energy use would not cause or result in the need for additional energy facilities or an additional or expanded delivery system and fuel consumption during construction would not be more inefficient, wasteful, or unnecessary than other similar development projects of this nature, and impacts would be less than significant, similar to the proposed project.

***Electricity and Natural Gas*.** Based on the total electricity and natural gas demand in Orange County, operational activities associated with buildout of the Historic Preservation Alternative would increase the annual electricity consumption in Orange County by a negligible percent. Future development envisioned under the Historic Preservation Alternative would be constructed to meet sustainability in accordance with: Appliance Efficiency Regulations (Title 20, CCR Sections 1601 through 1608), the CALGreen Code, Title 24 energy efficiency requirements, and AB 1881 water efficient landscape requirements.

Similar to the proposed project, the expected energy consumption during construction and operation associated with future buildout envisioned under the Historic Preservation Alternative would be consistent with typical usage rates for residential and commercial uses; however, energy consumption is largely a function of personal choice and the physical structure and layout of buildings. As such, electrical and natural gas demand associated with operation of the Historic Preservation Alternative would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region. Therefore, impacts would be less than significant, similar to the proposed project.

Fuel Usage. Operation of the Historic Preservation Alternative would also result in energy usage associated with gasoline and diesel fuel consumed by vehicle trips. While vehicle trips would be similar for commercial uses and lower for residential uses, due to the reduction in units, new trips would be generated associated with future concerts, plays, and other entertainment performances hosted at the proposed performance venue. Even though the Historic Preservation Alternative would result in more vehicle trips than the proposed project, based on fuel consumption from vehicle trips in Orange County, the increase in vehicle trips associated with buildout of the Historic Preservation Alternative is expected to increase annual fuel consumption in Orange County by a negligible percent, similar to the proposed project.

Lastly, implementation of the Historic Preservation Alternative would not conflict with or obstruct compliance with State or local plans for renewable energy or energy efficiency, similar to the proposed project as energy impacts of the Historic Preservation Alternative at the regional level would be negligible. Because California's energy conservation planning actions are conducted at a regional level, and because the Historic Preservation Alternative's total impact on regional energy supplies would be minor, buildout of the Historic Preservation Alternative would not conflict with or obstruct California's energy conservation plans as described in the CEC's Integrated Energy Policy Report.

Therefore, the Historic Preservation Alternative would have a less than significant impact related to energy, similar to the proposed project.

Geology and Soils. As discussed in Section 4.7, Geology and Soils, although the Buildout Area is subject to strong ground motion resulting from earthquakes on nearby faults, there are no known faults crossing the Buildout Area. In addition, landslides have not been recorded within the City boundaries and are not anticipated based on the lack of any significant topographic features. However, the entire city, including the Buildout Area, is designated as a liquefaction zone. Similar to the proposed project, new development within the Buildout Area facilitated by the Historic Preservation Alternative would be subject to the seismic design criteria of the 2022 California Building Standards Code requirements that aim to prevent building collapse and reduce the impacts of seismic ground shaking, as specified in **Regulatory Compliance Measure GEO-1**. In addition, future construction contractors would be required to comply with the recommendations in the Geotechnical Investigation, as detailed in **Mitigation Measure GEO-1**, to ensure liquefaction impacts are reduced to a less than significant level. **Mitigation Measure GEO-1** would require that the upper soils of the Buildout Area be stabilized with ground improvement techniques beneath any structure intended for human occupancy. The ground improvements may consist of Rammed Aggregate Piers, Vibrated Aggregate Piers, or similar techniques, and would be required to be designed by a qualified ground improvement contractor in an interactive process with the geotechnical engineer and structural engineer.

Construction of the Historic Preservation Alternative would be required to comply with existing NPDES permit requirements, including the Construction General Permit, and Section 4.106 of the CALGreen Code to ensure impacts related to erosion during construction would be less than significant (**Regulatory Compliance Measure HYD-1**). Further, the Historic Preservation Alternative would also be required to implement stormwater management and treatment BMPs, such as detention basins and/or proprietary flow-based biofiltration systems, to address erosion impacts during operation (**Regulatory Compliance Measure HYD-3**).

Similar to the proposed project, construction of the Historic Preservation Alternative has the potential to disturb native alluvium at a depth that could have an impact on paleontological resources. Therefore, the Historic Preservation Alternative would also have to implement **Mitigation Measures GEO-2** and **GEO-3,** which include provisions for unknown paleontological resources discovery stop work procedures and worker training procedures, similar to the proposed project, in order to reduce potential impacts to less than significant.

Lastly, future development within the Buildout Area under the Historic Preservation Alternative would be served by the City of Cypress and the Orange County Sanitation District and would not include the development of or use of any septic tanks or alternative wastewater disposal systems.

Therefore, the Historic Preservation Alternative would have a less than significant impact related to geology and soils with adherence to **Regulatory Compliance Measure GEO-1** and implementation of **Mitigation Measure GEO-1** through **GEO-3**, similar to the proposed project.

Greenhouse Gas Emissions. As implementation of the Historic Preservation Alternative would result in 391 fewer residential units as compared to the proposed project and the same amount of

commercial uses as the proposed project, a corresponding reduction in GHG emissions during construction and operation compared to the proposed project would result. However, construction and operation of the performance venue, which would host future concerts, plays, and other entertainment performances, and the 6-story parking garage would result in new GHG emissions.

Similar to the proposed project, because the Historic Preservation Alternative would implement **Mitigation Measure AIR-1,** the Historic Preservation Alternative would be consistent with the 2022 Scoping Plan key project attribute related to EV charging requirements. However, future development under the Historic Preservation Alternative could be all-electric or could use natural gas. Therefore, **Mitigation Measure GHG-1,** which requires that future development either be all-electric or incorporate additional emission reduction measures if all-electric development is not feasible, would be applicable to the Historic Preservation Alternative. In addition, the Historic Preservation Alternative would also be required to implement **Mitigation Measure TRA-1,** which requires the implementation of TDM strategies, similar to the proposed project. Therefore, the Historic Preservation Alternative would be consistent with the identified measures and goals from Connect SoCal 2024 and, similar to the proposed project, the Historic Preservation Alternative would result in less than significant impacts related to GHG emissions based on consistency with the 2022 Scoping Plan, as described above.

In addition, as the Historic Preservation Alternative would result in less than significant impacts related to GHG emissions based on consistency with the 2022 Scoping Plan, as described above, the Historic Preservation Alternative would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs and impacts would be less than significant with implementation of **Mitigation Measure GHG-1, Mitigation Measure AIR-1,** and **Mitigation Measure TRA-1**, similar to the proposed project.

Overall, implementation of the Historic Preservation Alternative would have less than significant GHG impacts with implementation of **Mitigation Measure GHG-1, Mitigation Measure AIR-1,** and **Mitigation Measure TRA-1**, similar to the proposed project.

Hazards and Hazardous Materials. Similar to the proposed project, the Historic Preservation Alternative would be required to comply with existing regulations pertaining to the transport and use of hazardous materials during construction and operation, including those listed in Section 4.9, Hazards and Hazardous Materials. In addition, long-term operations activities typical uses envisioned under the Historic Preservation Alternative would be typical of residential and commercial uses. These types of activities do not involve the use of a large or substantial amount of hazardous materials. Further, such materials would be contained, stored, and used in accordance with manufacturers' instructions and handled in compliance with applicable federal, State, and local regulations. In addition, operation of future residential and non-residential development associated with the Historic Preservation Alternative would not store, transport, generate, or dispose of large quantities of hazardous substances, similar to the proposed project. Therefore, implementation of the Historic Preservation Alternative would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials or emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.

As discussed in Section 4.9, Hazards and Hazardous Materials, a controlled recognized environmental conditional (CREC), historic recognized environmental conditional (HREC), and business environmental risk (BER) were identified within the Buildout Area. As such, the Phase I ESA recommended preparation and implementation of an Operations and Maintenance (O&M) Plan to safely manage the suspect ACMs and LBP associated with the existing buildings within the Buildout Area and the notification of the OCHCA as required in the case closure summary from 1996 for the CREC. No additional subsurface investigations were recommended. Because implementation of the Historic Preservation Alternative would occur within the same area as the proposed project and would be subject to the same hazardous conditions present within the Buildout Area, future development facilitated by the Historic Preservation Alternative would be required to implement these recommendations, similar to the proposed project and as detailed in **Mitigation Measure HAZ-1**. In addition, a comprehensive asbestos survey would be required prior to demolition of the non-historic structures under the Historic Preservation Alternative, consistent with SCAQMD Rule 1403 and similar to the proposed project. Therefore, impacts associated with the release of hazardous materials into the environment through reasonably foreseeable upset and accident conditions would be less than significant with adherence to existing regulatory requirements, including SCAQMD Rule 1403, and implementation of **Mitigation Measure HAZ-1,** requiring implementation of the recommendations provided in the Phase I ESA, similar to the proposed project.

In addition, as discussed in Section 4.9, database searches of the Buildout Area, including a GeoTracker search and a search of Superfund sites, determined that the Buildout Area is not included on a list of hazardous materials sites that could create a significant hazard to the public or the environment, is not included on the Cortese List compiled pursuant to Government Code Section 65962.5, and is not a recorded Superfund site.

Similar to the proposed project, implementation of the Historic Preservation Alternative would also not result in a safety hazard or excessive noise for people residing or working in the Buildout Area because any future development within the Buildout Area would be required to comply with all appropriate FAA standards and requirements, including **Regulatory Compliance Measure HAZ-1**, which requires that the FAA be notified of any proposed structure(s) that would penetrate the 100 to 1 imaginary surface that surrounds the runway at JFTB Los Alamitos.

Future development projects within the Buildout Area under the Historic Preservation Alternative would be required to conform with the adopted emergency response or evacuation plan established by the City and would be required to conform with applicable City standards and criteria that specify general fire safety provisions consistent with the California Fire Code, such as automatic, on-site fire protection systems, such as sprinklers in multi-occupancy buildings; and maintenance of certain vegetation that pose a fire hazard risk. Therefore, implementation of the Historic Preservation Alternative would not impair implementation of or physically interfere with the adopted emergency response plan or emergency evacuation plan or result in impacts related to the exposure of people or structures to a significant risk of loss, injury or death involving wildland fires.

Therefore, the Historic Preservation Alternative would have a less than significant impact related to hazards and hazardous materials with adherence to **Regulatory Compliance Measure HAZ-1** and implementation of **Mitigation Measure HAZ-1**, similar to the proposed project.

Hydrology and Water Quality. As the Historic Preservation Alternative would be located at the same location as the proposed project, the Historic Preservation Alternative would be subject to the same hydrologic conditions as the proposed project.

Construction. Similar to the proposed project, future development under the Historic Preservation Alternative would be required to comply with applicable construction permits and regulations associated with water quality. Specifically, if construction of future development associated with the Historic Preservation Alternative would disturb more than one acre of soil, those projects would be subject to the requirements of the *General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities,* Order WQ 2022-0057-DWQ, NPDES No. CAS000002 (Construction General Permit)[3], as specified in **Regulatory Compliance Measure HYD-1**. As required by the Construction General Permit, the Construction Contractor would be required to prepare a SWPPP and implement construction BMPs detailed in the SWPPP during construction activities. The SWPPP would detail the BMPs to be implemented during construction. Construction BMPs would include, but not be limited to, Erosion Control and Sediment Control BMPs designed to minimize erosion and retain sediment on site, and Good Housekeeping BMPs to prevent spills, leaks, and discharge of construction debris and waste into receiving waters. If construction of future development associated with the Historic Preservation Alternative would disturb less than one acre of soil and are not a part of a larger common plan, those projects would be required to comply with Section 4.106 of the 2022 California Green Building Standards Code (CALGreen Code), as specified in **Regulatory Compliance Measure HYD-1**. Section 4.106 of the CALGreen Code requires implementation of BMPs to prevent flooding and erosion and to retain sediment on site. Compliance with the requirements of the Construction General Permit or Section 4.106 of the CALGreen Code, including incorporation of construction BMPs, would ensure that construction impacts related to waste discharge requirements, water quality standards, degradation of water quality, increased pollutant discharge, and alteration of receiving water quality would be less than significant, similar to the proposed project.

In addition, similar to the proposed project, it is likely that groundwater dewatering would be required during excavation activities associated with buildout of the Historic Preservation Alternative. Groundwater dewatering activities during excavation would be conducted in accordance with the *General Waste Discharge Requirements for Discharges to Surface Waters that Pose an Insignificant (De Minimis) Threat to Water Quality*, Order No. R8-2020-0006, NPDES No. CAG998001 (Groundwater Dewatering Permit)[4], as specified in **Regulatory Compliance Measure HYD-2**. This permit requires testing and treatment (as necessary) of groundwater encountered during groundwater dewatering prior to release to the storm drain system. As a result, groundwater dewatering would not introduce pollutants to receiving waters at levels that would violate water quality standards or waste discharge requirements, degrade water quality, increase pollutant discharge, or alter the quality of the receiving water. With implementation of **Regulatory**

[3] SWRCB. 2022. *National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (General Permit), Order WQ 2022-0057-DWQ, NPDES No. CAS000002*. Adopted September 8.

[4] Santa Ana RWQCB. 2020. The *General Waste Discharge Requirements for Discharges to Surface Waters that Pose an Insignificant (De Minimis) Threat to Water Quality*, *Order No. R8-2020-0006, NPDES No. CAG998001.* June 19.

Compliance Measures HYD-1 and **HYD-2**, impacts associated with the violation of water quality standards or waste discharge requirements during construction of the Historic Preservation Alternative would be less than significant, similar to the proposed project. Implementation of **Regulatory Compliance Measures HYD-1** and **HYD-2** would also ensure that construction impacts related to on-site, off-site, or downstream erosion or siltation; exceeding the capacity of the adjacent stormwater drainage systems; providing substantial additional sources of polluted runoff; resulting in an increase in any pollutant for which the receiving water body is already impaired; and causing or contributing to an exceeded applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses would be less than significant, similar to the proposed project.

Operation. Implementation of the Historic Preservation Alternative would increase the amount of impervious surface area within the Buildout Area due to the development of the residential and non-residential uses, performance venue, and parking garage. However, because implementation of the Historic Preservation Alternative would retain the existing infield and ponds within the race course and would result in 391 fewer residential units as compared to the proposed project, implementation of the Historic Preservation Alternative is expected to result in less impervious surface area within the Buildout Area. During operation, the Historic Preservation Alternative would be required to comply with the requirements of the *Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the Incorporated Cities of Orange County within the Santa Ana Region Areawide Urban Storm Water Runoff Orange County*, Order R8-2009-0030, NPDES No. CAS618030, as amended by Order No. R8-2010-0062 (Orange County MS4 Permit),[5] similar to the proposed project. Compliance with the Orange County MS4 Permit is achieved through adherence to Chapter 13-23 of the Cypress Municipal Code. As required by Chapter 13-23 of the Cypress Municipal Code, and specified in **Regulatory Compliance Measure HYD-3**, the Historic Preservation Alternative would be required to prepare a project-specific WQMP to specify BMPs that would be implemented to capture, treat, and reduce pollutants of concern in stormwater runoff. With implementation of **Regulatory Compliance Measure HYD-3**, impacts associated with the violation of water quality standards or waste discharge requirements; providing substantial additional sources of polluted runoff; and resulting in an increase in any pollutant for which the receiving water body is already impaired during operation of the Historic Preservation Alternative would be less than significant, similar to the proposed project.

All stormwater from the Buildout Area under the Historic Preservation Alternative would also discharge to the Cerritos Avenue Storm Drain, Katella Avenue Storm Drain, Lexington Drive Storm Drain, and Walker Street Storm Drain and ultimately the Los Alamitos Channel, similar to the existing conditions and the proposed project. Because implementation of the Historic Preservation Alternative would result in less impervious surface area within the Buildout Area, implementation of the Historic Preservation Alternative would result in less stormwater runoff into the surrounding storm drain infrastructure as compared to the proposed project. In addition, the Historic Preservation Alternative would also be required to implement similar storm drain infrastructure

[5] Santa Ana RWQCB. *Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the Incorporated Cities of Orange County within the Santa Ana Region Areawide Urban Storm Water Runoff Orange County, Order R8-2009-0030, NPDES No. CAS618030, as amended by Order No. R8-2010-0062.*

improvements as the proposed project, including upsizing the existing 18-inch storm drain line in Vessels Circle to a 30-inch line to provide sufficient capacity for the 25-year high confidence storm event flowrate. Therefore, because the Drainage Report prepared for the proposed project concluded that implementation of the proposed project would not adversely affect the downstream receiving drainage facilities and the Historic Preservation Alternative would implement similar improvements to the storm drain infrastructure, implementation of the Historic Preservation Alternative would not exceed the capacity of the adjacent stormwater drainage systems, similar to the proposed project.

Similar to the proposed project, implementation of the Historic Preservation Alternative would not substantially change infiltration within the Buildout Area because the Buildout Area has low infiltration potential. In addition, even though GSWC West Orange's water supply sources include groundwater pumped from the Orange County Groundwater Basin, increased water use during operation of the Historic Preservation Alternative would not substantially affect groundwater supplies, because the groundwater basin has been sustainably managed by OCWD over the last 10 years and is expected to continue to be sustainably managed. In addition, OCWD and GSWC West Orange coordinate in order to ensure that groundwater extracted for municipal water supplies would not substantially deplete groundwater supplies. Therefore, operational impacts related to a decrease in groundwater supplies or interference with groundwater recharge with implementation of the Historic Preservation Alternative would be less than significant, similar to the proposed project.

Because the Historic Preservation Alternative is located at the same location as the proposed project, it would be subject to the same conditions related to flooding, dam failure, seiche, tsunami, and mudflow. As discussed in Section 4.10, Hydrology and Water Quality, the Buildout Area is not located within a 100-year floodplain, an inundation zone of a levee, or an area mapped by the California Emergency Management Agency as being potentially inundated by a tsunami. In addition, the Buildout Area is relatively flat and not at risk of mudflow and, due to the distance from the nearest enclosed body of water to the Buildout Area, the Buildout Area is not in a seiche hazard zone. Therefore, no impact related to these hydrologic hazards would occur with implementation of the Historic Preservation Alternative, similar to the proposed project. However, the Buildout Area is located within the inundation zone of Prado Dam and the Carbon Canyon Dam. Although the Historic Preservation Alternative would facilitate the construction of new structures in a dam inundation zone, similar to the proposed project, the Historic Preservation Alternative would not increase the chance of inundation from failure of Carbon Canyon Dam or Prado Dam. Further, the potential for dam failure is remote and the City's emergency evacuation plans would be implemented if these dams were susceptible to rupture during heavy rains or other events. Therefore, impacts related to the exposure of people and structures to significant risk associated with flooding as a result of dam failure with implementation of the Historic Preservation Alternative would be less than significant, similar to the proposed project.

No riparian habitat currently exists within the Buildout Area. However, four potential jurisdictional water resources currently exist within the Buildout Area, including three artificial ponds located within the LARC racetrack area, one drainage feature, and one detention basin. The three artificial ponds are located within the interior of the track and would be retained under the Historic

Preservation Alternative. The existing detention basin is located along the southern Buildout Area boundary, at the northwest corner of the existing residential development located south of the Buildout Area, and the existing drainage feature extends east from this detention basin. The drainage feature and the detention basin are expected to be regulated by the Santa Ana RWQCB and CDFW. Similar to the proposed project, if the Historic Preservation Alternative would impact the drainage feature or the detention basin, regulatory permits may be required, including those under Section 404 of the CWA as administered by the USACE, the Water Quality Certification under Section 401 of the CWA or Waste Discharge Requirements under the Porter-Cologne Water Quality Control Act as administered by the Santa Ana RWQCB, or the Streambed Alteration Agreement under Section 1602 of the California Fish and Game code as administered by CDFW, as detailed in **Mitigation Measure BIO-3**. Therefore, with implementation of **Mitigation Measure BIO-3**, potential impacts on aquatic, wetland, or riparian habitat with implementation of the Historic Preservation Alternative would be less than significant, similar to the proposed project.

Therefore, the Historic Preservation Alternative would have a less than significant impact related to hydrology and water quality, similar to the proposed project.

Land Use and Planning. Similar to the proposed project, given the nature of the uses envisioned under the Historic Preservation Alternative, the future buildout of the Buildout Area would improve existing connectivity in the area with the extension of Vessels Circle and would not divide or separate any existing land uses or neighborhoods. The neighboring residential communities would not be separated by the proposed road extensions or proposed buildout of the Historic Preservation Alternative. Implementation of the Historic Preservation Alternative, if approved by voters, would carry out the vision of the Specific Plan and would remain consistent with surrounding uses. In addition, the Historic Preservation Alternative would be consistent with all General Plan and zoning designations. Therefore, the Historic Preservation Alternative would not result in the physical division of an established community, similar to the proposed project.

In addition, as the Historic Preservation Alternative would develop the Buildout Area with similar uses as the proposed project, the Historic Preservation Alternative would not be inconsistent with Connect SoCal, the City's General Plan, or City's Zoning Ordinance. However, in contrast to the proposed project, the Historic Preservation Alternative, as proposed, would be inconsistent with the existing uses permitted in the Specific Plan and would require amendments to the adopted Specific Plan to allow for the performance venue. These amendments require voter approval, so the likelihood of the amendments being approved by voters is not known. If the amendments to the Specific Plan were adopted, the Historic Preservation Alternative would not conflict with the Specific Plan. As such, the Historic Preservation Alternative would potentially introduce inconsistencies in the applicable City land use and planning policies. In addition, because implementation of the Historic Preservation Alternative would include 1,400 residential units (391 fewer residential units within the Buildout Area compared to the proposed project), the Historic Preservation Alternative would not be consistent with the amount of housing identified in the Specific Plan and the City's Housing Element for the Buildout Area. Further, future development applications contemplated within the Buildout Area would also be required to comply with all applicable regulations and standards related to land use and planning. Any future development or redevelopment projects requiring discretionary actions would also be subject to environmental review, in accordance with

the provisions of CEQA and the *State CEQA Guidelines.* Therefore, the Historic Preservation Alternative would have a less than significant impact related to land use and planning, similar to the proposed project.

Mineral Resources. As discussed in Section 4.12, Mineral Resources, there are no known mineral resources in or in the vicinity of the Buildout Area, and there are no other known mineral deposits or resources within the City that are of significant value to the region or the State. In addition, the Buildout Area does not contain a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan. Therefore, the Historic Preservation Alternative would have no impact related to mineral resources, similar to the proposed project.

Noise. The Historic Preservation Alternative would develop the same area of the city (i.e., Buildout Area) with similar uses as the proposed project, including residential and non-residential uses; however, the existing LARC character-defining features that contribute to the LARC's eligibility for listing in the National Register and California Register would be retained for use as a performance venue for future concerts, plays, and other entertainment performances. Overall, the Historic Preservation Alternative would result in development of 1,400 residential units and 440,000 square feet of non-residential development. As such, implementation of the Historic Preservation Alternative would result in 391 fewer residential units as compared to the proposed project and the same amount of non-residential uses as the proposed project. This would result in a corresponding reduction in operation noise associated with the residential development during operation, as compared to the proposed project. However, construction and operation of the performance venue and the 6-story parking garage would include new stationary noise sources associated with future concerts, plays, and other entertainment performances at the Buildout Area. In addition, because operation of the performance venue would increase the number of vehicle trips to and from the Buildout Area during a performance event, operation of the performance venue would also generate additional transportation noise.

Construction. Development under the Historic Preservation Alternative would generate noise and vibration associated with construction activities on a similar scale to the proposed project. Similar to the proposed project, compliance with the allowed construction hours in the City's Noise Ordinance would ensure that construction noise does not disturb residents during typical sleeping hours or during hours when ambient noise levels are likely to be lower (i.e., at night). Therefore, and the Historic Preservation Alternative's construction noise impacts would be less than significant, similar to the proposed project.

As discussed in Section 4.13, Noise, the nearest existing residential building at the edge of Lot 13 and south of Lot 3 would experience vibration levels below the FTA threshold for building damage. As the Historic Preservation Alternative would also include construction activities within Lot 13, it would result in a similar less than significant impact related to vibration damage..

In addition, construction-generated ground-borne vibration associated with the Historic Preservation Alternative would not exceed FTA thresholds related to human annoyance at nearby sensitive receptors, similar to the proposed project. Therefore, similar to the proposed project, the Historic Preservation Alternative would result in less than significant impacts related to potential vibration-related human annoyance.

***Operation*.** As the Historic Preservation Alternative would generate more vehicle trips to and from the Buildout Area when compared to the proposed project due to the addition of the performance venue, traffic noise impacts could be greater than the proposed project. However, the level of transportation noise increase is still expected to be less than 3 dBA and would not be perceptible to the human ear in an outdoor environment. Therefore, off-site traffic noise impacts would be less than significant, similar to the proposed project.

Similar to the proposed project, development under the Historic Preservation Alternative would generate various on-site stationary noise sources, including heating, ventilation, and air conditioning (HVAC) and commercial uses activities such as loading and unloading and parking lot activities. In addition, concerts, plays, and other entertainment performances at the performance venue would generate a substantial amount of noise. The Cypress Municipal Code limits non-construction noise experienced at surrounding noise-sensitive uses to 55 dBA or less per the hourly daytime noise level standards for Noise Zone 1 and 60 dBA or less for Noise Zone 2. Similar to the proposed project, preparation of a specific acoustical analysis would be required to confirm compliance with the City's exterior and interior noise standards related to land use compatibility, as established in City of Cypress Municipal Code Chapter 8 (Noise), Sections 8-1-4 and 8-1-5, which set forth allowable noise limits by noise zone and authorize the City to require noise measurements or acoustical studies to verify compliance with applicable standards prior to or following project occupancy. In addition, City of Cypress Municipal Code Chapter 9 details provisions for live entertainment permits that are relevant for businesses or venues hosting performances, including requiring a plan for control of noise affecting nearby premises, specifically to prevent nuisance noise to nearby residents/businesses. Chapter 9 also states that noise from live entertainment must not exceed the City's noise standards detailed in the City of Cypress Municipal Code, meaning operators hosting concerts or performances must comply with standard noise limits and include mitigation strategies in their permit applications. Therefore, the Historic Preservation Alternative would be anticipated to meet the City's noise standards and impacts would be less than significant, similar to the proposed project.

In addition, as the Historic Preservation Alternative would be located in the same area as the proposed project, the Historic Preservation Alternative would also be located within the 60 dBA CNEL noise contour, but outside of the 65 dBA CNEL noise contour for JFTB Los Alamitos. The Buildout Area is also located within Noise Impact Zone 2 (moderate noise impact) and is outside of Noise Impact Zone 1 (high noise impact) defined by the Airport Environs Land Use Plan. However, similar to the proposed project, given that the Historic Preservation Alternative does not contain outdoor sensitive receptors and the City defined levels between 60 and 65 dBA CNEL as conditionally acceptable with the incorporation of an HVAC system allowing a windows- closed condition and standard building construction, impacts related to exposing people residing or working in the area to excessive noise levels due to airport operations would be less than significant, similar to the proposed project.

Overall, under the Historic Preservation Alternative, operational noise impacts would be greater than the proposed project due to the development of the performance venue. Nevertheless, implementation of the Historic Preservation Alternative would have a less than significant noise impact with implementation of **Mitigation Measure NOI-1**, similar to the proposed project.

Population and Housing. The Historic Preservation Alternative would result in development of 1,400 residential uses and 440,000 square feet of non-residential development. This represents 391 fewer residential units as compared to the proposed project and the same amount of non-residential uses as the proposed project.

Due to the reduction of 391 residential units in comparison to the proposed project, implementation of the Historic Preservation Alternative would result in fewer future residents within the Buildout Area when compared to the proposed project. Assuming a ratio of 3.08 people per household, the Historic Preservation Alternative would result in a net increase of approximately 4,312 persons at full buildout.[6] This represents a reduction of 1,204 new residents within the Buildout Area with full buildout of the alternative compared to the proposed project.

Similar to the proposed project, the Specific Plan allows for the construction of the residential uses facilitated by the Historic Preservation Alternative and the reduced population increase associated with the Historic Preservation Alternative is within the planned growth for the region. As such, the Historic Preservation Alternative would not result in unplanned growth as the City has already planned for the reasonably foreseeable development of housing within the Buildout Area as a way of meeting the City's RHNA obligations. However, because implementation of the Historic Preservation Alternative would include 1,400 residential units (391 fewer residential units within the Buildout Area compared to the proposed project), the Historic Preservation Alternative would not be consistent with the amount of housing identified in the Specific Plan and City's Housing Element for the Buildout Area. In addition, as the Buildout Area does not contain any habitable or occupied structures, implementation of this alternative would not require the demolition of existing housing and would not displace an existing population residing within the Buildout Area.

Therefore, the Historic Preservation Alternative would have a less than significant impact related to population and housing, similar to the proposed project.

Public Services. The Historic Preservation Alternative would result in 391 fewer residential units as compared to the proposed project; the Historic Preservation Alternative would result in 1,204 fewer new residents at the project site that would be added to the City's population. This would result in a corresponding reduction in demand for public services, including on fire and police protection services, schools, parks, and other public services, as compared to the proposed project. However, the performance venue, which would host future concerts, plays, and other entertainment performances, would increase demand on fire and police protection services during those events compared to the proposed project.

As discussed in Section 4.15, Public Servies, implementation of the proposed project would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire and police protection services, schools, or parks with adherence to **Regulatory Compliance Measures PS-1, PS-2,** and **PS-3,** and the payment of applicable development impact fees.. The Historic Preservation

[6] 1,253 households x 3.08 persons per household = 3,860 persons

Alternative would also be required to adhere to **Regulatory Compliance Measures PS-1, PS-2,** and **PS-3,** and the payment of applicable development impact fees. Therefore, although implementation of the Historic Preservation Alternative would result in an increased demand on these services as compared to the proposed project due to the performance venue, implementation of the Historic Preservation Alternative is also expected result in less than significant impacts on these services due to the payment of fees and coordination with the OCFA required by **Regulatory Compliance Measures PS-1, PS-2,** and **PS-3.**

In addition, implementation of the Historic Preservation Alternative would generate additional funding for the City and County through additional property tax revenue, similar to the proposed project. These funds could be used for the development of new or expanded library facilities or new library equipment if required. Therefore, implementation of the Historic Preservation Alternative would also result in less than significant impacts on other public services, including the Orange County Public Library (OCPL) system.

Therefore, the Historic Preservation Alternative would have a less than significant impact related to public services with adherence to **Regulatory Compliance Measures PS-1, PS-2,** and **PS-3,** and the payment of applicable development impact fees, similar to the proposed project.

Recreation. The Historic Preservation Alternative would result in 391 fewer residential units as compared to the proposed project; the Historic Preservation Alternative would result in 1,204 fewer new residents at the project site that would be added to the City's population. This would result in a corresponding reduction in demand on parks and recreation facilities.

As discussed in Section 4.16, Recreation, the City currently has 93.9 acres of parkland available for its 48,782 residents, and it currently provides approximately 1.92 acres of parkland per 1,000 residents, which does not meet the City's parkland objective of 4.5 acres per 1,000 residents. The additional residents with implementation of the Historic Preservation Alternative would change this ratio. Implementation of the Historic Preservation Alternative would include more land on which park and recreational uses would be developed when compared to the proposed project. The existing Lexington Park, which is approximately nine acres and has already been developed adjacent to Lots 1 and 2 of VTTM 19247, is counted as part of the existing parkland acreage in the City. The specific amenities and improvements that would be developed in the public park space would be determined in connection with future development projects that are proposed within the Buildout Area. The Historic Preservation Alternative would also include additional open space areas as an amenity for future residents.

As specified in Article VI of the City's Municipal Code, the City requires land to be dedicated as parks for subdivisions that include new residential construction that qualify as dwelling units as defined by section 6.31.020(D) of the City's Zoning Ordinance and section 205(D) of the 2001 California Building Code as they currently exist. The Municipal Code also allows payment of park fees or a credit for private open space in lieu of the land dedication. Similar to the proposed project, the Historic Preservation Alternative would be required to adhere to **Regulatory Compliance Measure PS-3**, which requires compliance with Article VI of the City's Municipal Code. Therefore, the Historic Preservation Alternative would have a less than significant impact on parks and recreation, similar to the proposed project.

Transportation. The Historic Preservation Alternative would result in 391 fewer residential units as compared to the proposed project and the same amount of non-residential uses as the proposed project. The Historic Preservation Alternative would also include the extension of Vessels Circle, similar to the proposed project, and the extension of Siboney Street to connect to the intersection of the Vessels Circle extension. However, under the Historic Preservation Alternative, Moody Street would not be extended. The extensions would be constructed consistent with City standards and regulations.

As the Historic Preservation Alternative would include the same amount of non-residential uses as the proposed project, the non-residential uses under the Historic Preservation Alternative would generate the same number of vehicle trips to and from the Buildout Area during operation. However, due to the reduction in residential units under the Historic Preservation Alternative compared to the proposed project, the residential uses under the Historic Preservation Alternative would generate fewer vehicle trips to and from the Buildout Area. In addition, based on the total number of seats associated with the performance venue (i.e., 4,694 seats), the performance venue would generate a substantial number of vehicle trips during future concerts, plays, and other entertainment performances hosted at the Buildout Area.

Similar to the proposed project, the Historic Preservation Alternative would not conflict with any of the goals and policies contained in the City's General Plan related to the circulation system. In addition, the Historic Preservation Alternative would be consistent with, and reinforce, applicable Connect SoCal 2024 goals, including Connect SoCal 2024's goals to develop, connect and sustain communities that are livable and thriving and to create a healthy region for the people of today and tomorrow, by providing additional housing opportunities within locations near amenities and already used by the public for commercial, recreational, and/or professional uses. In addition, the proposed project would support the development, connection, and sustainability of communities that are livable and thriving by providing necessary housing for all income levels in a bustling economic corridor. In addition, the Historic Preservation Alternative would not conflict with any adopted transit system plans, guidelines, policies, or standards as implementation would not interfere with implementation of applicable transit planning documents, including the specific actions to address the growing need for expanded transit service contained in the City's General Plan Circulation Element, 2024 Orange County Transit Vision Master Plan,[7] and the County's Directions 2050 plan,[8] which would update OCTA's Long-Range Transportation Plan (LRTP). Further, implementation of the Historic Preservation Alternative would provide sidewalks along the frontages and pedestrian sidewalks and pathways would be provided throughout the Buildout Area and provide connections to existing pedestrian and bicycle facilities in the surrounding area, similar to the proposed project. Additionally, as discussed further below and detailed in **Mitigation Measure TRA-1**, the Historic Preservation Alternative would be required to implement feasible Transportation Demand Management (TDM) strategies to mitigate the alternative's VMT impact, which include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network and improving the pedestrian network, including the

[7] Orange County Transportation Authority (OCTA). 2025. *2024 Orange County Transit Vision Master Plan*. May.

[8] OCTA. 2025. OCTA Seeks Public Input to Help Shape Orange County's Transportation Future. October 3. Website: https://www.octa.net/news/news-releases/octa-seeks-public-input (accessed October 2025).

construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area. Therefore, the Historic Preservation Alternative would not conflict with any adopted bicycle or pedestrian system plans, guidelines, policies, or standards, similar to the proposed project.

Similar to the proposed project, the Historic Preservation Alternative would also be required to prepare and implement a Transportation Construction Plan (TCP) during construction activities, as detailed in the development agreement, that would be submitted to the City of Cypress Public Works Department for review and approval, in order to reduce impacts to roadway systems during construction. In addition, similar to the proposed project, although the Historic Preservation Alternative would also result in a significant and unavoidable VMT impact, the VMT impact does not, by itself, indicate inconsistency with circulation system policies or a failure to accommodate multimodal transportation. Therefore, based on the above analysis, and because the Historic Preservation Alternative would be required to adhere to the Specific Plan and the General Plan, similar to the proposed project, the Historic Preservation Alternative would generally be consistent with all programs, plans, ordinances, and policies addressing the circulation system, including those regulating transit, roadway, bicycle, and pedestrian facilities. Impacts would be less than significant, similar to the proposed project.

Because the Historic Preservation Alternative would include the same amount and type of new non-residential uses as the proposed project, the non-residential uses under the Historic Preservation Alternative would result in a less than significant VMT impact, similar to the proposed project. While the Historic Preservation Alternative would result in fewer residential units as compared to the proposed project and the VMT impacts are expected to be reduced, without quantification of the VMT associated with the residential uses under the Historic Preservation Alternative or alternative-specific VMT analysis, it cannot be determined if the reduction in residential development would result in VMT impacts below applicable levels of significance (i.e., 13.21 VMT per capita, 15 percent below the existing regional average). In addition, the performance venue proposed under the Historic Preservation Alternative is expected to generate a significant amount of VMT as the performance venue would be a regional-serving use and attract visitors from outside the County during performance and events. As such, the Historic Preservation Alternative would also be required to implement the VMT reduction measures detailed in **Mitigation Measure TRA-1**. Implementation of **Mitigation Measure TRA-1** would require the Historic Preservation Alternative to reduce overall VMT; however, even with implementation of **Mitigation Measure TRA-1**, the VMT rates under the Historic Preservation Alternative are expected to remain above the established thresholds and impacts would be significant and unavoidable, similar to the proposed project.

Lastly, the Historic Preservation Alternative would not substantially increase hazards due to a geometric design feature or result in inadequate emergency access as all roadway improvements in and around the Buildout Area would be designed and constructed in accordance with Chapter 25, Article 5, Public Improvements, of the City's Municipal Code and applicable Public Works Design Standards, similar to the proposed project. In addition, except as otherwise provided in the Specific Plan, all final site and roadway improvement plans shall conform to the City's Public Works Design Criteria Manual, which incorporates California Manual on Uniform Traffic Control Devices (CA MUTCD) standards for intersection control, sight distance, and geometric design, and all final

improvement and site access plans shall be subject to review and approval by the City's Public Works Department and the Orange County Fire Authority prior to issuance of building permits.

Overall, implementation of the Historic Preservation Alternative would have a significant and unavoidable transportation impact related to VMT, even with implementation of **Mitigation Measure TRA-1**, similar to the proposed project.

Tribal Cultural Resources. The Historic Preservation Alternative would develop the same area of the city (i.e., Buildout Area) with similar uses as the proposed project, including residential and non-residential uses; however, the existing LARC character-defining features that contribute to the LARC's eligibility for listing in the National Register and California Register would be retained for use as a performance venue for future concerts, plays, and other entertainment performances. Although the Historic Preservation Alternative would include less demolition compared to the proposed project due to the retention of the LARC character-defining features, ground-disturbing construction activities associated with implementation of this alternative, such as site preparation and grading activities has the potential to significantly impact unidentified tribal cultural resources during ground-disturbing activities, similar to the proposed project. Therefore, consistent with the proposed project, the Historic Preservation Alternative would be required to adhere to **Regulatory Compliance Measures CUL-1** and **CUL-2**, which detail provisions in the event that previously unknown cultural resources, including human remains, are discovered during ground-disturbing construction activities, consistent with the California Code of Regulations (CCR) Section 15064.5(e) and State Health and Safety Code Section 7050.5. In addition, because the Historic Preservation Alternative would be located at the same location as the proposed project, the alternative would also be required to implement **Mitigation Measures TCR-1** through **TCR-4**, which include required tribal cultural resources training and ALERT sheet posting, on-site tribal monitoring during ground disturbance of native sediment, and provisions in the event that previously unknown tribal cultural resources (including human remains and funerary objects) are discovered during ground-disturbing construction activities.

With adherence to **Regulatory Compliance Measures CUL-1** and **CUL-2** and implementation of **Mitigation Measures TCR-1** through **TCR-4**, the potential impacts to known and unknown tribal cultural resources would be less than significant with mitigation incorporated, similar to the proposed project.

Utilities and Service Systems. The Historic Preservation Alternative would result in 391 fewer residential units as compared to the proposed project; the Historic Preservation Alternative would result in 1,204 fewer new residents at the project site that would be added to the City's population. This would result in a corresponding reduction in demand on utilities, including water, wastewater, stormwater, electricity, natural gas, and telecommunications, as compared to the proposed project. However, the performance venue, which would host future concerts, plays, and other entertainment performances, would increase demand on utilities during those events. Similar to the proposed project, the Historic Preservation Alternative would connect to existing utility infrastructure in the vicinity of the Buildout Area and would be required to install the required infrastructure and utility improvements to achieve these connections.

Similar to the proposed project, implementation of the Historic Preservation Alternative would not require the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities or infrastructure, beyond those required for the proposed project. In addition, based on the water supply and demand estimates in the GSWC Los Alamitos West Orange Service Area 2020 Urban Water Management Plan (UWMP) and the remaining wastewater treatment capacity for OC San's Reclamation Plant No. 1 in Fountain Valley and Treatment Plant No. 2, the water and wastewater service provides could adequately accommodate the development under the Historic Preservation Alternative. Further, the stormwater drainage system under Historic Preservation Alternative, as required by **Regulatory Compliance Measure HYD-3,** would be designed to ensure that operation of the Historic Preservation Alternative would not result in a substantial increase in the rate or amount of surface runoff, flow, and volume that would exceed the capacity of the adjacent stormwater drainage systems, and no new additional infrastructure would be required. Lastly, SCE and SoCalGas are anticipated to be able to adequately serve the Historic Preservation Alternative because the Historic Preservation Alternative would result in reduced demand for electricity and natural gas in comparison to the proposed project.

Additionally, similar to the proposed project, all future projects implemented in accordance with the Historic Preservation Alternative would be required to adhere to the Specific Plan, provide required development impact fees, and comply with applicable development regulations pertaining to utility improvements and connections. As a part of the development review process, all future projects would be required to demonstrate that existing public utilities would be sufficient to serve the future projects' needs, through the issuance of a will serve letter. As such, the Historic Preservation Alternative would not require the relocation or construction of new or expanded utilities and impacts would be less than significant.

In addition, similar to the proposed project, impacts related to solid waste with implementation of the Historic Preservation Alternative would be less than significant with adherence to **Regulatory Compliance Measure UTIL-1** requiring compliance with the City's Construction and Demolition Ordinance. Further, solid waste from future development facilitated by the Historic Preservation Alternative would be required to comply with State and local solid waste reduction, diversion, and recycling policies and regulations, including AB 1327 (wood waste disposal), Chapter 18 of the California Solid Waste Reuse and Recycling Access Act of 1991 (requires adequate, permanent space for recycling and solid waste collection at new developments), AB 939 (California Department of Resources Recycling and Recovery [CalRecycle]), AB 75 (solid waste diversion), AB 1826 (organic waste recycling), and SB 1383 (organic waste collection services). With adherence to these existing regulatory requirements and based on the remaining capacity of the Frank R. Bowerman Landfill, Olinda Alpha Landfill, and Prima Deshecha Landfill, the Historic Preservation Alternative would result in less than significant impacts related to solid waste.

Therefore, the Historic Preservation Alternative would have a less than significant impact related to utilities and service systems with adherence to **Regulatory Compliance Measure UTIL-1**, similar to the proposed project.

Wildfire. As discussed in Section 4.20, Wildfire, according to the California Department of Forestry and Fire Protection (CAL FIRE) Very High Fire Hazard Severity Zones (VHFHSZ) for the Orange County

region, the entire city is designated as a non-VHFHSZ,[9] and the city does not include a State Responsibility Area (SRA). The nearest VHFHSZ to the Buildout Area is approximately 6.8 miles northeast in Coyote Hills on the western side of Fullerton.[10] The nearest SRA is in Puente Hills, approximately 12 miles northeast of the Buildout Area. As such, the Buildout Area is not located in or near any SRAs or lands classified as VHFHSZs. Therefore, the Historic Preservation Alternative would have no impact related to wildfire, similar to the proposed project.

5.5.2.3 Attainment of Project Objectives

The Historic Preservation Alternative would not meet the project objectives to the same extent as the proposed project, as discussed further below.

1. Provide a significant number of new residential units in the Buildout Area to help meet the unmet demand for housing in the City and the project vicinity, consistent with the City's Housing Element and the Cypress Town Center and Commons Specific Plan 3.0 approved by the voters of the City of Cypress.

   While the Historic Preservation Alternative would facilitate development of 1,400 residential units within the Buildout Area, which would help meet the significant unmet demand for housing in the City and the project vicinity, the Historic Preservation Alternative would result in 391 fewer residential units than the proposed project. In addition, this alternative would require amendments to the Specific Plan to allow for the performance venue. As such, the Historic Preservation Alternative would be inconsistent with the Specific Plan as approved by the voters. Therefore, the Historic Preservation Alternative would not satisfy this objective to the same extent as the proposed project.

2. Establish a mixed-use town center that is intended to be the City's "main street" and a gathering place for the community with a vibrant mix of entertainment, retail, restaurant, commercial and residential uses.

   The Historic Preservation Alternative would facilitate development of new residential and non-residential uses, including a mix of entertainment, retail, restaurant, and commercial uses, within the Buildout Area, which would establish the Buildout Area as a mixed-use town center. Although implementation of the Historic Preservation Alternative would result in the same amount of non-residential uses as the proposed project, the Historic Preservation Alternative would result in 391 fewer residential units as compared to the proposed project. Nevertheless, the Historic Preservation Alternative would be similar to the proposed project in meeting this project objective. However, the Historic Preservation Alternative would not meet the residential component of this objective to the same extent as the proposed project.

3. Revitalize a large urban area in the City that is currently significantly underutilized.

---

9 California Department of Forestry and Fire Protection (CAL FIRE). 2011. Very High Fire Hazard Severity Zones in LRA. Website: https://osfm.fire.ca.gov/media/6739/fhszl_map30.pdf (accessed February 6, 2025).

10 Ibid.

Similar to the proposed project, the Historic Preservation Alternative would facilitate the development of the Buildout Area with new residential and non-residential uses. Therefore, the Historic Preservation Alternative would revitalize a large urban area in the City that is currently significantly underutilized and the Historic Preservation Alternative would be similar to the proposed project in meeting this project objective.

4. Diversify the City's existing housing stock by providing various housing product types and densities to meet a range of housing needs of Cypress and area residents.

   As discussed above, while the Historic Preservation Alternative would facilitate development of 1,400 residential units within the Buildout Area, which would include a variety of housing product types and densities to meet a range of housing needs of Cypress and area residents, the Historic Preservation Alternative would result in 391 fewer residential units than the proposed project. Although the Historic Preservation Alternative would develop fewer residential units within the Buildout Area, the housing product types are expected to be similar to those under the proposed project. As such, the Historic Preservation Alternative would be similar to the proposed project in meeting this project objective.

5. Provide a mix of residential, commercial, retail and park and recreational uses that encourages project residents to walk or bike to and from the commercial areas and attractions and parks within the Buildout Area and provides an enhanced consumer and employee base for the new commercial uses.

   As discussed above and similar to the proposed project, the Historic Preservation Alternative would facilitate the development of the Buildout Area with new residential, non-residential, and park uses, consistent with the Specific Plan. Therefore, like the proposed project, the Historic Preservation Alternative would provide a mix of residential, commercial, retail, and park and recreational uses that encourages project residents to walk or bike to and from the commercial areas and attractions and parks within the Buildout Area and provides an enhanced consumer and employee base for the new commercial uses. However, the Historic Preservation Alternative would not meet the residential component of this objective to the same extent as the proposed project.

6. Develop a project that will invigorate the local economy by providing new employment and business opportunities.

   The Historic Preservation Alternative would facilitate development of approximately 440,000 square feet of non-residential (commercial) uses within the Buildout Area, the same as the proposed project, which would invigorate the local economy by providing new employment and business opportunities. Moreover, the Historic Preservation Alternative would provide a performance venue that would attract visitors from throughout the region to the City, which would create increased opportunities for patronage at local businesses, particularly those specializing in retail and hospitality. Therefore, the Historic Preservation Alternative would meet this objective to a greater extent than the proposed project.

7. Provide residential and commercial/retail improvement that generate new sources of revenue for the City through increased property values and retail sales.

   As discussed above, while the Historic Preservation Alternative would facilitate development of new residential and non-residential uses, which would provide residential and commercial/retail improvements that generate new sources of revenue for the City through increased property values and retail sales, the Historic Preservation Alternative would result in 391 fewer residential units as compared to the proposed project. Although the reduced number of new residents created by the Historic Preservation Alternative would likely be partially offset by the increased opportunities for patronage at local retail outlets generated by the additional regional performance venue included in this alternative, the Historic Preservation Alternative is not likely to result in the same net increase in property values and retail sales as the proposed project. As such, the Historic Preservation Alternative would not meet this objective to the same extent as the proposed project.

8. Extend existing City streets through all or a portion of the Buildout Area to improve overall traffic circulation in the project vicinity and provide necessary vehicular and pedestrian access for project residents, tenants, visitors and patrons.

   The Historic Preservation Alternative would include the extension of Vessels Circle, similar to the proposed project, and the extension of Siboney Street to connect to the intersection of the Vessels Circle extension. The proposed street extensions would provide some vehicular and pedestrian access for project residents, tenants, visitors and patrons. However, under the Historic Preservation Alternative, Moody Street would not be extended, which would likely result in increased vehicle traffic on other arterial streets surrounding the Buildout Area to access the area, which may not improve overall traffic circulation in the project vicinity to the same degree as the proposed project. Nevertheless, the proposed street extensions would provide necessary vehicular and pedestrian access for project residents, tenants, visitors and patrons. Therefore, the Historic Preservation Alternative would be inferior to the proposed project in meeting this project objective.

9. Develop new residential and senior housing communities with sufficient housing units to support the size, scale and operation of planned public parks and other amenities and common areas included in the proposed project.

   The Historic Preservation Alternative would facilitate the development of 1,400 residential units within the Buildout Area and, similar to the proposed project and consistent with the Specific Plan, would include senior housing communities. However, the Historic Preservation Alternative would result in 391 fewer residential units compared to the proposed project. Therefore, the Historic Preservation Alternative would be inferior in developing residential uses with sufficient housing units to support the size, scale and operation of planned public parks and other amenities and common areas included within the Buildout Area. As such, the Historic Preservation Alternative would not meet this objective to the same extent as the proposed project.

Overall, the Historic Preservation Alternative would not satisfy, or fully satisfy, a number of the key project objectives related to the number of residential units provided and build out of the already-approved Specific Plan. Therefore, this alternative would not satisfy the project objectives to the same extent as the proposed project. In addition, the Historic Preservation Alternative would not meet the underlying purpose of the proposed project to redevelop the Buildout Area in accordance with the voted-approved Specific Plan, as the Historic Preservation Alternative would require amendments to the Specific Plan that must be voted on and adopted by voters.

5.5.3 Reduced Development Alternative (30% Reduction)

5.5.3.1 Description

As previously described, under the Reduced Development Alternative, the overall intensity of the proposed project, including residential and commercial development, would be reduced by 30 percent. As such, the Reduced Development Alternative would facilitate the future development of 1,253 residential units and approximately 308,000 square feet of non-residential uses. This represents a decrease of 538 residential units and approximately 132,000 square feet of non-residential uses as compared to the proposed project. Under this alternative, the demolition and removal of all or a substantial portion of the existing improvements associated with the LARC property, including the race track and infield area, grandstand, buildings, barns and structures and three artificial lakes, would still occur, similar to the proposed project. In addition, the extension of Moody Street from Cerritos Avenue to Katella Avenue and the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension would still occur, consistent with the Specific Plan. In addition, the approximately 11 acres of land on which park and recreational uses would be developed, including the land in Lots 1, 5 and 6, and the two additional acres of public park space that may be located in one or more of the land use districts established in the Specific Plan associated with the proposed project would be included in the Reduced Development Alternative

5.5.3.2 Comparison of Environmental Impacts

Aesthetics. The follow provides a comparison of potential aesthetic impacts between the proposed project and the Reduced Development Alternative.

Scenic Vistas and Scenic Resources. The City is almost entirely developed and no public vantage point provides substantial views of any water bodies, mountains, hills, or any other significant visual resources. Similar to the proposed project, given that no scenic vista is currently viewable from any public vantage point in proximity to the Buildout Area, the development of the Reduced Development Alternative would not alter an existing scenic vista or block views of any scenic vistas. Therefore, the Reduced Development Alternative would not have a substantial adverse effect on a scenic vista. In addition, due to distance and intervening land uses, no portion of the Buildout Area is visible from the officially designated segment of SR-91 or the eligible segment of Pacific Coast Highway. Therefore, the Reduced Development Alternative would have no impact related to the substantial damage of scenic resources within a State Scenic Highway, similar to the proposed project.

Visual Character and Public Views. The proposed project would include higher density development within the Buildout Area than currently exists, though at a lower density than the proposed project. Similar to the proposed project, the aesthetic character of the Buildout Area would change with implementation of the Reduced Development Alternative during both construction and operation. Construction of the proposed project would introduce the use of machinery such as excavators and bulldozers, and the presence of the construction equipment, as well as the construction activities, would temporarily alter the visual character of the project site. However, construction would be temporary and, due to the phased nature of construction activities, would be staggered across the project site. Therefore, the visual character of the Buildout Area would not be significantly impacted during construction activities.

All development pursuant to the Specific Plan would be required to consider and comply with, as applicable, all relevant sustainable design strategies stated or referenced in the Specific Plan. In addition, all development within the Buildout Area would be required to comply with the design regulations in the Zoning Ordinance that relate to scenic quality, including the objective design standards in Section 3.17.110 of the Zoning Ordinance with respect to multi-family development. The development would also be consistent with the mass and scale of existing development near the Buildout Area, which are primarily commercial and residential uses. Therefore, the Reduced Development Alternative would have a less than significant impact related to conflict with applicable zoning and other regulations governing scenic quality, similar to the proposed project.

Light and Glare. As the Buildout Area is in an urbanized area, lighting is produced in the vicinity of the Buildout Area by surrounding commercial and residential development, street lighting, and vehicles on adjacent roadways, including Katella Avenue, West Cerritos Avenue, Lexington Drive, and Walker Street. In addition, existing uses within the Buildout Area, such as the race track, include outdoor lighting features. Similar to the proposed project, all new housing or non-residential development within the Buildout Area would be required to comply with all applicable requirements related to light and glare, including applicable regulations of the 2022 State Building Energy Efficiency Standards (Title 24), all applicable sustainable design strategies related to lighting in the Specific Plan, and all applicable development standards related to lighting in the Zoning Ordinance. Consistent with these requirements and similar to the proposed project, all lighting associated with the Reduced Development Alternative would be shielded such that it would minimize light spillage onto adjacent properties. In addition, building exteriors of future development facilitated by the Reduced Development Alternative would generally be covered by non-reflective materials, which would minimize glare, and glass windows would be incorporated into each building design in accordance with development standards established in the Specific Plan and the City's Municipal Code.

As such, even though the Reduced Development Alternative would develop the Buildout Area at a reduced scale, the development facilitated by the Reduced Development Alternative would be similar in nature to the development facilitated by the proposed project. Therefore, the Reduced Development Alternative would have a less than significant impact related to aesthetics, similar to the proposed project.

Agriculture and Forestry Resources. The Reduced Development Alternative would develop the same area of the city (i.e., Buildout Area) with similar uses as the proposed project, including

residential and non-residential uses. As discussed in Section 4.2, Agriculture and Forestry Resources, the entire Buildout Area and surrounding area is designated as "Urban and Built-Up Land" by the California Department of Conservation's California Important Farmland Finder. In addition, the Buildout Area is not used for agricultural or forestry production and is not protected by, or eligible for, a Williamson Act contract. Therefore, the Reduced Development Alternative would have no impact related to agriculture and forestry resources, similar to the proposed project.

Air Quality. The following provides a comparison of potential air quality impacts between the proposed project and the Reduced Development Alternative. The Reduced Development Alternative would result in 538 fewer residential units and a reduction of approximately 132,000 square feet of non-residential uses as compared to the proposed project. This would result in a corresponding reduction in air quality emissions during construction and operation, as compared to the proposed project.

Construction. Due to the reduction in development, which would reduce construction timelines, construction of the Reduced Development Alternative would result in fewer air quality emissions as compared to the proposed project. As such, similar to the proposed project, construction emissions associated with full buildout of the Reduced Development Alternative would not exceed the SCAQMD thresholds for VOCs, NO_x, CO, SO_X, $PM_{2.5,}$ or PM_{10} emissions. Therefore, with compliance with regulatory requirements (as specified in **Regulatory Compliance Measures AIR-1** through **AIR-4**), construction impacts related to the cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under applicable federal or State ambient air quality standard would be less than significant, similar to the proposed project.

***Operation*.** As discussed in Section 4.3, Air Quality, operation of the proposed project would result in VOC emissions that would exceed the SCAQMD's significance criteria even with implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1**. As there are no additional feasible mitigation measures that would reduce project operational-source VOC emissions to a less-than-significant level, operation of the proposed project would result in a significant and unavoidable impact related to a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard. The Reduced Development Alternative would reduce operational emissions due to the reduction in residential units and non-residential uses. However, because the air quality emissions under the Reduced Development Alternative have not been quantified, it is unknown if implementation of the Reduced Development Alternative would result in VOC emissions below SCAQMD's significance criteria. Accordingly, this Draft EIR includes a qualitative, comparative discussion of this alternative based on available information and professional judgement, and it is therefore assumed that implementation of the Reduced Development Alternative would also result in significant and unavoidable impact related to a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard, albeit less than the proposed project.

***Health Risk Assessment*.** Construction of development envisioned under the Reduced Development Alternative may expose these nearby sensitive receptors to airborne particulates and pollutants from construction equipment (i.e., usually diesel-fueled vehicles and equipment). Therefore, **Mitigation Measure AIR-2**, which requires the use of U.S. EPA Tier 4 Final or cleaner construction

equipment if and to the extent commercially available, or the cleanest available technology that is commercially available and feasible or the preparation of project-specific construction HRA in certain circumstances, would also apply to the Reduced Development Alternative. Therefore, this impact would be less than significant with mitigation incorporated, similar to the proposed project. In addition, similar to the proposed project, the Reduced Development Alternative would not include the development of any uses identified by CARB as being substantial source of TACs that would require specific siting distances based on CARB recommendations. In addition, the industrial uses near the Buildout Area on the western and eastern boundaries are further than 500 feet, so any new sensitive receptors, such as proposed residential uses, will be consistent with CARB's siting recommendations. Therefore, impacts related to TACs would be less than significant, similar to the proposed project.

Conflict with Applicable Air Quality Plans. As discussed in Section 4.3, Air Quality, the proposed project would be consistent with Indicator 2 of the 2022 AQMP as the proposed project would not exceed the growth assumptions in Connect SoCal 2024 or the 2022 AQMP; however, the proposed project would have the potential to conflict or obstruct implementation of applicable air quality plans under Indicator 1 of the 2022 AQMP because buildout of the proposed project would result in significant and unavoidable long-term operational pollutant emissions. Although there is no feasible mitigation to reduce operational pollutant emissions to a less than significant level, **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1** would incorporate design features that would contribute to reducing criteria air pollutant emissions generated during operational activities associated with the proposed project. Overall, even with implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1,** the proposed project would result in a significant and unavoidable impact associated with conflict with applicable air quality management plans. Although the Reduced Development Alternative would reduce operational emissions due to the 30 percent reduction in residential units and non-residential uses, because the air quality emissions under the Reduced Development Alternative have not been quantified, it is unknown if implementation of the Reduced Development Alternative would result in long-term operational pollutant emissions that would be below applicable thresholds. Therefore, implementation of the Reduced Development Alternative would also result in significant and unavoidable impact associated with conflict with applicable air quality management plans.

Odors. Construction of the Reduced Development Alternative would generate similar odors as construction of the proposed project. Similar to the proposed project, these odors would be temporary and limited to the construction period. The Reduced Development Alternative would also not include any activities or operations that would generate objectionable odors and once operational, development envisioned under the Reduced Development Alternative would not be a source of odors. Therefore, the Reduced Development Alternative would not result in other emissions (such as those leading to odors) affecting a substantial number of people, similar to the proposed project.

Overall, although the Reduced Development Alternative would generate less air quality emissions when compared to the proposed project, because the air quality emissions under the Reduced Development Alternative have not been quantified, it is unknown if implementation of the Reduced Development Alternative would reduce the proposed project's air quality impacts to less than

significant levels. Therefore, implementation of the Reduced Development Alternative would have a significant and unavoidable air quality impact, even with implementation of **Mitigation Measure AIR-1, Mitigation Measure AIR-2,** and **Mitigation Measure TRA-1** and adherence to **Regulatory Compliance Measures AIR-1** through **AIR-4**, similar to the proposed project.

Biological Resources. The Reduced Development Alternative would develop the same area of the city (i.e., Buildout Area) with similar uses as the proposed project, including residential and non-residential uses, but at a reduced scale. The following provides a comparison of potential impacts to biological resources between the proposed project and the Reduced Development Alternative.

Habitats and Vegetation Communities. As discussed in Section 4.4, Biological Resources, the Buildout Area primarily consists of developed land cover. The dominant vegetation within this vegetation community includes ornamental landscaping and ruderal grassland with patches of herbaceous invasive species. Other vegetation communities within the Buildout Area include ornamental landscaping and artificial ponds. In addition, no portion of the Buildout Area contains designated or proposed critical habitat for any federally listed plant or animal species. Further, there is a high level of existing disturbance within the Buildout Area, and native wildlife habitat is largely absent within the Buildout Area and in the vicinity. The development surrounding the Buildout Area and the lack of ground cover and suitable foraging habitat make the site undesirable for many native wildlife species. Therefore, implementation of the Reduced Development Alternative would have no impact on any native habitats or vegetation communities, similar to the proposed project.

Special-Status Plant Species. As discussed in Section 4.4, Biological Resources, no special-status plants were observed within the Buildout Area during the reconnaissance survey; and none of the 30 special-status plant species from the records searches are expected to occur within the Buildout Area due to the lack of suitable habitat and/or conditions. Therefore, implementation of the Reduced Development Alternative would have no impact on any special-status plant species, similar to the proposed project.

Special-Status Wildlife Species and Migratory/Nesting Birds. As discussed in Section 4.4, Biological Resources, no special-status wildlife species were observed during the field survey, and suitable habitat for such species is absent from the Buildout Area due to the high level of development. In addition, no nesting birds or their nests were observed at the time of the field survey. However, based on a review of resource databases, 6 special-status wildlife species have the potential to occur on or near the Buildout Area, including monarch butterfly (*Danaus plexippus plexippus*), Ferruginous hawk (*Buteo regalis*), Swainson's hawk (*Buteo swainsoni*), western mastiff bat (*Eumops perotis californicus*), western yellow bat (*Lasiurus xanthinus*), and pocketed free-tailed bat (*Nyctinomops femorosaccus*). In addition, although no sign of roosting bats was observed during the September 2024 field survey, suitable day and night roosting habitat could be present at several of the building structures throughout the Buildout Area and within the ornamental palm trees located around the Buildout Area. Additionally, other ornamental tree species within the Buildout Area could provide habitat to native bats in the form of foliage, bark, or cavity roosts.

Implementation of the Reduced Development Alternative would develop the Buildout Area with similar uses as the proposed project, but at a reduced scale. As such, anticipated construction activities, including site preparation and grading activities, would be similar, although reduced. In

addition, potential direct and/or indirect impacts (e.g., noise during construction) could potentially disrupt or otherwise adversely affect bird nesting activities in and/or adjacent to the Buildout Area if construction activities would occur within the nesting bird season (between February 1 and August 31). Because construction of the Reduced Development Alternative would be similar, or slightly reduced, as compared to the proposed project, impacts on special-status species, including bats, and nesting birds would be similar with implementation of the Reduced Development Alternative as the proposed project. Therefore, the Reduced Development Alternative would also be required to adhere to **Regulatory Compliance Measure BIO-1**, requiring pre-construction bay surveys, and **Regulatory Compliance Measure BIO-2**, requiring pre-construction nesting bird surveys and active nest avoidance buffers during construction, and impacts would be less than significant.

Riparian Habitat and Sensitive Natural Communities. As discussed in Section 4.4, Biological Resources, the Buildout Area currently contains one existing drainage feature, one existing detention basin, and three existing artificial ponds. All of these aquatic features were constructed in previously graded or developed areas and do not represent natural stream channels, wetlands, or riparian systems. Their primary functions are aesthetic or related to stormwater conveyance and retention. As such, no riparian habitat is present within the Buildout Area. Therefore, similar to the proposed project, no impacts to riparian habitat would result from implementation of the Reduced Development Alternative.

Jurisdictional Waters. As previously discussed, there is one drainage feature, one detention basin, and three ponds within the Buildout Area. The three ponds and the detention basin are not expected to be regulated by USACE, RWQCB, or CDFW. However, the single drainage feature located on Lot 3 contains ruderal vegetation and may connect to Coyote Creek, which is tributary to the San Gabriel River and ultimately flows into the Pacific Ocean. Therefore, the removal of this drainage may be subject to regulation by the RWQCB and CDFW. Therefore, similar to the proposed project, the Reduced Development Alternative would be required to implement **Mitigation Measure BIO-1**, which requires a jurisdictional delineation be conducted prior to construction. In addition, similar to the proposed project, the Reduced Development Alternative would be required to adhere to **Regulatory Compliance Measures HYD-1** through **HYD-3** during construction and operation to address erosion-related impacts through implementation of construction site BMPs and operational-period biotreatment BMPs to avoid erosion and sedimentation impacts to downstream aquatic areas and water quality. With implementation of **Mitigation Measure BIO-1** and adherence to **Regulatory Compliance Measures HYD-1** through **HYD-3**, implementation of the Reduced Development Alternative would result in less than significant impacts on jurisdictional waters, similar to the proposed project.

Wildlife Movement and Nursery Sites. As discussed in Section 4.4, Biological Resources, the Buildout Area does not function as a wildlife movement corridor. In addition, as discussed above, the Reduced Development Alternative would comply with **Regulatory Compliance Measure BIO-1**, requiring pre-construction bay surveys, and **Regulatory Compliance Measure BIO-2**, requiring pre-construction nesting bird surveys and active nest avoidance buffers during construction. Therefore, similar to the proposed project, implementation of the Reduced Development Alternative would have a less than significant impact related to wildlife movement and nursey sites.

Local Policies and Ordinances. Similar to the proposed project, construction of Reduced Development Alternative would involve tree removal activities. As required by Article 3, Performance and Development Standards, Section 13 (3.13.070(c)), of the Municipal Code, existing trees would be preserved when feasible. In addition, all tree removal activities would be consistent with Section 3.9 of the Specific Plan, which supersedes the City's Landmark Tree Ordinance, as codified in Sections 17-17 through 17-27 of the City Municipal Code, and details the tree replacement development standards for development within the Buildout Area. Consistent with Specific Plan requirements, all tree removal required for future development would be described during site plan review and all removed trees would be replaced with an equivalent number of specimen trees. With adherence to the tree replacement development standards detailed in the Specific Plan, the Reduced Development Alternative would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance, similar to the proposed project, and impacts would be less than significant.

Overall, implementation of the Reduced Development Alternative would have a less than significant impact related to biological resources with adherence to **Regulatory Compliance Measures BIO-1** and **BIO-2** and implementation of **Mitigation Measure BIO-1**, similar to the proposed project.

Cultural Resources. The following provides a comparison of potential impacts to cultural resources between the proposed project and the Reduced Development Alternative.

***Historical Resources*.** Implementation of the Reduced Development Alternative would include the demolition and removal of all or a substantial portion of the existing improvements associated with the LARC property, including the race track and infield area, grandstand, buildings, barns and structures and three artificial lakes, similar to the proposed project. As the pre-1970 track, the 1954 quarter-mile chute, and the grandstand are character-defining features that contribute to the LARC's eligibility for listing in the National Register and California Register, the demolition of the grandstand, chute, and track would be a potentially significant impact.

Demolition of a historic resource is considered a material impairment of the historical resource, and other than avoiding demolition, no feasible mitigation measures are available to fully mitigate the demolition of the historical resource to a less-than-significant level. However, similar to the proposed project, implementation of mitigation measures could reduce significant adverse impacts to some degree. If the historical significance of the character-defining features are thoroughly documented, well photographed, and publicly available, the demolition of the character-defining features would have a reduced impact on the historical significance of the character-defining features. As such, the Reduced Development Alternative would be required to implement **Mitigation Measures CUL-1** through **CUL-3**, similar to the proposed project, which requires documentation of the historic resource in accordance with the Historic American Building Survey (HABS) standards. Implementation of **Mitigation Measures CUL-1** through **CUL-3** would reduce, but not avoid, adverse impacts to the historical resource.

Because implementation of the Reduced Development Alternative would demolish the character-defining features of LARC Property, implementation of the Reduced Development Alternative would result in a substantial adverse change to a historic architectural resource under CEQA and impacts to

built-environment historic resources as defined in *State CEQA Guidelines* Section 15064.5 would be significant and unavoidable, similar to the proposed project.

Archaeological Resources. In addition, consistent with the proposed project, construction of the Reduced Development Alternative has the potential to significantly impact unidentified archaeological resources during ground-disturbing activities. Therefore, similar to the proposed project, the Reduced Development Alternative would be required to adhere to **Regulatory Compliance Measure CUL-1**, which detail provisions in the event that previously unknown cultural resources, including human remains, are discovered during ground-disturbing construction activities, consistent with the California Code of Regulations (CCR) Section 15064.5(e) and State Health and Safety Code Section 7050.5. Further, similar to the proposed project, the Reduced Development Alternative would also be required to adhere to **Regulatory Compliance Measure CUL-2** for the treatment of human remains in order to ensure that descendant communities have significant input in the treatment and final disposition of human remains, if encountered at the project site during future development activities. With adherence to **Regulatory Compliance Measures CUL-1** and **CUL-2,** implementation of the Reduced Development Alternative would result in less than significant impacts related to archaeological resources and human remains.

Overall, implementation of the Reduced Development Alternative would continue to result in a significant and unavoidable impact related to cultural (historical) resources, even with implementation of **Mitigation Measures CUL-1** through **CUL-3**, similar to the proposed project.

Energy. The Reduced Development Alternative would result in 538 fewer residential units and a reduction of approximately 132,000 square feet of non-residential uses as compared to the proposed project. This would result in a corresponding reduction in energy use associated with the residential development during construction and operation, as compared to the proposed project.

***Construction*.** Due to the reduction in development, the length of construction is estimated to be shorter than the proposed project and would result in less energy use as compared to the proposed project. As such, similar to the proposed project, construction energy use would not cause or result in the need for additional energy facilities or an additional or expanded delivery system and fuel consumption during construction would not be any more inefficient, wasteful, or unnecessary than other similar development projects of this nature, and impacts would be less than significant, similar to the proposed project.

***Electricity and Natural Gas*.** As discussed in Section 4.6, Energy, operational activities associated with buildout of the proposed project would increase the annual electricity consumption in Orange County by a negligible percent. Due to the reduction in development, operational activities associated with buildout of the Reduced Development Alternative would also increase the annual electricity consumption in Orange County by a negligible percent. Furthermore, similar to the proposed project, future development envisioned under the Reduced Development Alternative would be constructed using energy efficient modern building materials and construction practices, and would use new modern appliances and equipment, in accordance with the Appliance Efficiency Regulations (Title 20, CCR Sections 1601 through 1608). Future development would also be designed to meet sustainability goals, including the CALGreen Code, Title 24 energy efficiency requirements, and AB 1881 water efficient landscape requirements. CALGreen Code and Title 24 building energy

efficiency standards establish minimum efficiency standards related to various building features, including appliances, water and space heating and cooling equipment, building insulation and roofing, and lighting, which would reduce energy usage. Similar to the proposed project, the expected energy consumption during construction and operation associated with future buildout envisioned under the Reduced Development Alternative would be consistent with typical usage rates for residential and commercial uses; however, energy consumption is largely a function of personal choice and the physical structure and layout of buildings. As such, electrical and natural gas demand associated with operation of the Reduced Development Alternative would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region. Therefore, impacts would be less than significant, similar to the proposed project.

Fuel Usage. Similar to the proposed project, operation of the Reduced Development Alternative would also result in energy usage associated with gasoline and diesel fuel consumed by vehicle trips. As the Reduced Development Alternative would result in a 30 percent decrease in residential units and non-residential floor area, the Reduced Development Alternative would generate fewer vehicle trips to and from the Buildout Area. As discussed in Section 4.6, Energy, vehicle trips associated with buildout of the proposed project is expected to increase annual fuel consumption in Orange County by a negligible percent. As such, the Reduced Development Alternative would also increase annual fuel consumption in Orange County by a negligible percent. In addition, vehicles associated with trips to and from the Buildout Area would be subject to fuel economy and efficiency standards, which are applicable throughout the State. As such, the fuel efficiency of vehicles associated with future operation of the Reduced Development Alternative would increase throughout the life of the project, similar to the proposed project.

Lastly, similar to the proposed project, implementation of the Reduced Development Alternative would not conflict with or obstruct compliance with a State or local plan for renewable energy or energy efficiency, as energy impacts of the Reduced Development Alternative at the regional level would be negligible. Because California's energy conservation planning actions are conducted at a regional level, and because the Reduced Development Alternative's total impact on regional energy supplies would be minor, buildout of the Reduced Development Alternative would not conflict with or obstruct California's energy conservation plans as described in the CEC's Integrated Energy Policy Report.

Therefore, the Reduced Development Alternative would have a less than significant impact related to energy, similar to the proposed project.

Geology and Soils. As discussed in Section 4,7, Geology and Soils, although the Buildout Area is subject to strong ground motion resulting from earthquakes on nearby faults, no known faults cross the Buildout Area. In addition, landslides have not been recorded within the City boundaries and are not anticipated based on the lack of any significant topographic features. However, the entire city, including the Buildout Area, is designated as a liquefaction zone. Similar to the proposed project, new development within the Buildout Area facilitated by the Reduced Development Alternative would be subject to the seismic design criteria of the 2022 California Building Standards Code requirements that aim to prevent building collapse and reduce the impacts of seismic ground shaking, as specified in **Regulatory Compliance Measure GEO-1**. In addition, future construction contractors would be required to comply with the recommendations in the Geotechnical

Investigation, as detailed in **Mitigation Measure GEO-1**, to ensure liquefaction impacts are reduced to a less than significant level. **Mitigation Measure GEO-1** would require that the upper soils of the Buildout Area be stabilized with ground improvement techniques beneath any structure intended for human occupancy. The ground improvements may consist of Rammed Aggregate Piers, Vibrated Aggregate Piers, or similar techniques, and would be required to be designed by a qualified ground improvement contractor in an interactive process with the geotechnical engineer and structural engineer.

The Reduced Development Alternative would be required to comply with existing NPDES permit requirements, including the Construction General Permit, and Section 4.106 of the CALGreen Code during construction in order to ensure impacts related to erosion during construction would be less than significant (**Regulatory Compliance Measure HYD-1**). Further, the Reduced Development Alternative would also be required to implement stormwater management and treatment BMPS, such as detention basins and/or proprietary flow-based biofiltration systems, to address erosion impacts during operation (**Regulatory Compliance Measure HYD-3**).

Similar to the proposed project, construction of the Reduced Development Alternative has the potential to disturb native alluvium at a depth that could have an impact on paleontological resources. Therefore, the Reduced Development Alternative would also have to implement **Mitigation Measures GEO-2** and **GEO-3,** which make provisions for unknown paleontological resources discovery stop work procedures and worker training procedures, similar to the proposed project, in order to reduce potential impacts to less than significant.

Lastly, future development within the Buildout Area under the Reduced Development Alternative would be served by the City of Cypress and the Orange County Sanitation District and would not include the development of or use of any septic tanks or alternative wastewater disposal systems.

Therefore, the Reduced Development Alternative would have a less than significant impact related to geology and soils with adherence to **Regulatory Compliance Measure GEO-1** and implementation of **Mitigation Measure GEO-1** through **GEO-3**, similar to the proposed project.

Greenhouse Gas Emissions. The Reduced Development Alternative would result in 538 fewer residential units and a reduction of approximately 132,000 square feet of non-residential uses as compared to the proposed project. This would result in a corresponding reduction in GHG emissions during construction and operation compared to the proposed project due to the reduction in development and subsequent reduction in energy demand and trip generation.

Similar to the proposed project, because the Reduced Development Alternative would implement **Mitigation Measure AIR-1,** the Reduced Development Alternative would be consistent with the 2022 Scoping Plan key project attribute related to EV charging requirements. However, future development under the Reduced Development Alternative could be all-electric or could use natural gas. Therefore, **Mitigation Measure GHG-1,** which requires that future development either be all-electric or incorporate additional emission reduction measures if all-electric development is not feasible, would be applicable to the Reduced Development Alternative. In addition, the Reduced Development Alternative would also be required to implement **Mitigation Measure TRA-1,** which requires the implementation of TDM strategies, similar to the proposed project. Therefore, the

Reduced Development Alternative would be consistent with the identified measures and goals from Connect SoCal 2024 and, similar to the proposed project, the Reduced Development Alternative would result in less than significant impacts related to GHG emissions based on consistency with the 2022 Scoping Plan, as described above.

In addition, as the Reduced Development Alternative would result in less than significant impacts related to GHG emissions based on consistency with the 2022 Scoping Plan, as described above, the Reduced Development Alternative would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs and impacts would be less than significant with implementation of **Mitigation Measure GHG-1, Mitigation Measure AIR-1,** and **Mitigation Measure TRA-1**, similar to the proposed project.

Overall, under the Reduced Development Alternative, construction and operational GHG emissions would be less than the proposed project due to the reduction in development and vehicle trips to and from the Buildout Area. However, implementation of the Reduced Development Alternative would still result in less than significant impacts with incorporation of **Mitigation Measure GHG-1, Mitigation Measure AIR-1,** and **Mitigation Measure TRA-1**, similar to the proposed project.

Hazards and Hazardous Materials. Similar to the proposed project, the Reduced Development Alternative would be required to comply with existing regulations pertaining to the transport and use of hazardous materials during construction and operation, including those listed in Section 4.9, Hazards and Hazardous Materials. In addition, long-term operations activities typical of residential and the non-residential uses envisioned under the Reduced Development Alternative involve the use and storage of small quantities of potentially hazardous materials in the form of cleaning solvents, fertilizers, and pesticides. For example, maintenance activities related to landscaping include the use of fertilizers and light equipment (e.g., lawn mowers and edgers) that may require fuel. These types of activities do not involve the use of a large or substantial amount of hazardous materials. Further, such materials would be contained, stored, and used in accordance with manufacturers' instructions and handled in compliance with applicable federal, State, and local regulations. In addition, operation of future residential and non-residential development associated with the Reduced Development Alternative would not store, transport, generate, or dispose of large quantities of hazardous substances, similar to the proposed project. Therefore, implementation of the Reduced Development Alternative would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials or emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.

As discussed in Section 4.9, Hazards and Hazardous Materials, a CREC, HREC, and BER were identified within the Buildout Area. As such, the Phase I ESA recommended preparation and implementation of an Operations and Maintenance (O&M) Plan to safely manage the suspect ACMs and LBP associated with the existing buildings within the Buildout Area and the notification of the OCHCA as required in the case closure summary from 1996 for the CREC. No additional subsurface investigations were recommended. Because implementation of the Reduced Development Alternative would occur within the same area as the proposed project and would be subject to the same hazardous conditions present within the Buildout Area, future development facilitated by the Reduced Development Alternative would be required to implement these recommendations, similar

to the proposed project and as detailed in **Mitigation Measure HAZ-1**. In addition, a comprehensive asbestos survey would be required prior to demolition under the Reduced Development Alternative, consistent with SCAQMD Rule 1403 and similar to the proposed project. Therefore, impacts associated with the release of hazardous materials into the environment through reasonably foreseeable upset and accident conditions would be less than significant with adherence to existing regulatory requirements, including SCAQMD Rule 1403, and implementation of **Mitigation Measure HAZ-1,** requiring implementation of the recommendations provided in the Phase I ESA, similar to the proposed project.

In addition, as discussed in Section 4.9, database searches of the Buildout Area, including a GeoTracker search and a search of Superfund sites, determined that the Buildout Area is not included on a list of hazardous materials sites that could create a significant hazard to the public or the environment, is not included on the Cortese List compiled pursuant to Government Code Section 65962.5, and is not a recorded Superfund site.

Similar to the proposed project, implementation of the Reduced Development Alternative would also not result in a safety hazard or excessive noise for people residing or working in the Buildout Area because any future development within the Buildout Area would be required to comply with all appropriate FAA standards and requirements, including **Regulatory Compliance Measure HAZ-1**, which requires that the FAA be notified of any proposed structure(s) that would penetrate the 100 to 1 imaginary surface that surrounds the runway at JFTB Los Alamitos.

Future development projects within the Buildout Area under the Reduced Development Alternative would be required to conform with the adopted emergency response or evacuation plan established by the City and would be required to conform with applicable City standards and criteria that specify general fire safety provisions consistent with the California Fire Code, such as automatic, on-site fire protection systems, such as sprinklers in multi-occupancy buildings; and maintenance of certain vegetation that pose a fire hazard risk. Therefore, implementation of the Reduced Development Alternative would not impair implementation of or physically interfere with the adopted emergency response plan or emergency evacuation plan or result in impacts related to the exposure of people or structures to a significant risk of loss, injury or death involving wildland fires.

Therefore, the Reduced Development Alternative would have a less than significant impact related to hazards and hazardous materials with adherence to **Regulatory Compliance Measure HAZ-1** and implementation of **Mitigation Measure HAZ-1**, similar to the proposed project.

Hydrology and Water Quality.. As the Reduced Development Alternative would be located at the same location as the proposed project, the Reduced Development Alternative would be subject to the same hydrologic conditions as the proposed project.

Construction. Similar to the proposed project, future development under the Reduced Development Alternative would be required to comply with applicable construction permits and regulations associated with water quality. Specifically, construction of future development associated with the Reduced Development Alternative would disturb more than one acre of soil, those projects would

be subject to the requirements of the Construction General Permit[11], as specified in **Regulatory Compliance Measure HYD-1**. As required by the Construction General Permit, the Construction Contractor would be required to prepare a SWPPP and implement construction BMPs detailed in the SWPPP during construction activities. The SWPPP would detail the BMPs to be implemented during construction. Construction BMPs would include, but not be limited to, Erosion Control and Sediment Control BMPs designed to minimize erosion and retain sediment on site, and Good Housekeeping BMPs to prevent spills, leaks, and discharge of construction debris and waste into receiving waters. If construction of future development associated with the Reduced Development Alternative would disturb less than one acre of soil and are not a part of a larger common plan, those projects would be required to comply with Section 4.106 of the 2022 California Green Building Standards Code (CALGreen Code), as specified in **Regulatory Compliance Measure HYD-1**. Section 4.106 of the CALGreen Code requires implementation of BMPs to prevent flooding and erosion and to retain sediment on site. Compliance with the requirements of the Construction General Permit or Section 4.106 of the CALGreen Code, including incorporation of construction BMPs, would ensure that construction impacts related to waste discharge requirements, water quality standards, degradation of water quality, increased pollutant discharge, and alteration of receiving water quality would be less than significant, similar to the proposed project.

Similar to the proposed project, it is likely that groundwater dewatering would be required during excavation activities associated with buildout of the Reduced Development Alternative. Groundwater dewatering activities during excavation would be conducted in accordance with the Groundwater Dewatering Permit[12], as specified in **Regulatory Compliance Measure HYD-2**. This permit requires testing and treatment (as necessary) of groundwater encountered during groundwater dewatering prior to release to the storm drain system. As a result, groundwater dewatering would not introduce pollutants to receiving waters at levels that would violate water quality standards or waste discharge requirements, degrade water quality, increase pollutant discharge, or alter the quality of the receiving water. With implementation of **Regulatory Compliance Measures HYD-1** and **HYD-2**, impacts associated with the violation of water quality standards or waste discharge requirements during construction of the Reduced Development Alternative would be less than significant, similar to the proposed project. Implementation of **Regulatory Compliance Measures HYD-1** and **HYD-2** would also ensure that construction impacts related to on-site, off-site, or downstream erosion or siltation; exceeding the capacity of the adjacent stormwater drainage systems; providing substantial additional sources of polluted runoff; resulting in an increase in any pollutant for which the receiving water body is already impaired; and causing or contributing to an exceeded applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses would be less than significant, similar to the proposed project.

---

11 SWRCB. 2022. *National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (General Permit), Order WQ 2022-0057-DWQ, NPDES No. CAS000002*. Adopted September 8.

12 Santa Ana RWQCB. 2020. The *General Waste Discharge Requirements for Discharges to Surface Waters that Pose an Insignificant (De Minimis) Threat to Water Quality*, *Order No. R8-2020-0006, NPDES No. CAG998001.* June 19.

Operation. Implementation of the Reduced Development Alternative would increase the amount of impervious surface area within the Buildout Area due to the development of the residential and non-residential uses within the Buildout Area. However, because implementation of the Reduced Development Alternative would result in 538 fewer residential units and a reduction of approximately 132,000 square feet of non-residential uses as compared to the proposed project, it is assumed that implementation of the Reduced Development Alternative would result in less impervious surface area than the proposed project. During operation, the Reduced Development Alternative would be required to comply with the requirements of the Orange County MS4 Permit,[13] similar to the proposed project. Compliance with the Orange County MS4 Permit is achieved through adherence to Chapter 13-23 of the Cypress Municipal Code. As required by Chapter 13-23 of the Cypress Municipal Code, and specified in **Regulatory Compliance Measure HYD-3**, the Reduced Development Alternative would be required to prepare of a project-specific WQMP to specify BMPs that would be implemented to capture, treat, and reduce pollutants of concern in stormwater runoff. With implementation of **Regulatory Compliance Measure HYD-3**, impacts associated with the violation of water quality standards or waste discharge requirements; providing substantial additional sources of polluted runoff; and resulting in an increase in any pollutant for which the receiving water body is already impaired during operation of the Reduced Development Alternative would be less than significant, similar to the proposed project.

All stormwater from the Buildout Area under the Reduced Development Alternative would also discharge to the Cerritos Avenue Storm Drain, Katella Avenue Storm Drain, Lexington Drive Storm Drain, and Walker Street Storm Drain and ultimately the Los Alamitos Channel, similar to the existing conditions and the proposed project. Because implementation of the Reduced Development Alternative would result in less overall development than the proposed project, it is assumed that the Reduced Development Alternative would have less impervious surface area within the Buildout Area and would result in less stormwater runoff into the surrounding storm drain infrastructure as compared to the proposed project. In addition, the Reduced Development Alternative would also be required to implement similar storm drain infrastructure improvements as the proposed project, including upsizing the existing 18-inch storm drain line in Vessels Circle to a 30-inch to provide sufficient capacity for the 25-year high confidence storm event flowrate. Therefore, because the Drainage Report prepared for the proposed project concluded that implementation of the proposed project would not adversely affect the downstream receiving drainage facilities and the Reduced Development Alternative would implement similar improvements to the storm drain infrastructure, implementation of the Reduced Development Alternative would not exceed the capacity of the adjacent stormwater drainage systems, similar to the proposed project.

Similar to the proposed project, implementation of the Reduced Development Alternative would not substantially change infiltration within the Buildout Area because the Buildout Area has low infiltration potential. In addition, even though GSWC West Orange's water supply sources include groundwater pumped from the Orange County Groundwater Basin, increased water use during operation of the Reduced Development Alternative would not substantially affect groundwater

[13] Santa Ana RWQCB. *Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the Incorporated Cities of Orange County within the Santa Ana Region Areawide Urban Storm Water Runoff Orange County, Order R8-2009-0030, NPDES No. CAS618030, as amended by Order No. R8-2010-0062.*

supplies, because the groundwater basin has been sustainably managed by OCWD over the last 10 years and will continue to be sustainably managed. In addition, OCWD and GSWC West Orange coordinate in order to ensure that groundwater extracted for municipal water supplies would not substantially deplete groundwater supplies. Therefore, operational impacts related to a decrease in groundwater supplies or interference with groundwater recharge with implementation of the Reduced Development Alternative would be less than significant, similar to the proposed project.

Because the Reduced Development Alternative would be located at the same location as the proposed project, it would be subject to the same conditions related to flooding, dam failure, seiche, tsunami, and mudflow. As discussed in Section 4.10, Hydrology and Water Quality, the Buildout Area is not located within a 100-year floodplain, an inundation zone of a levee, or an area mapped by the California Emergency Management Agency as being potentially inundated by a tsunami. In addition, the Buildout Area is relatively flat and not at risk of mudflow and, due to the distance from the nearest enclosed body of water to the Buildout Area, the Buildout Area is not in a seiche hazard zone. Therefore, no impact related to these hydrologic hazards would occur with implementation of the Reduced Development Alternative, similar to the proposed project. However, the Buildout Area is located within the inundation zone of Prado Dam and the Carbon Canyon Dam. Although the Reduced Development Alternative would facilitate the construction of new structures in a dam inundation zone, similar to the proposed project, the Reduced Development Alternative would not increase the chance of inundation from failure of Carbon Canyon Dam or Prado Dam. Further, the potential for dam failure is remote and the City's emergency evacuation plans would be implemented if these dams were susceptible to rupture during heavy rains or other events. Therefore, impacts related to the exposure of people and structures to significant risk associated with flooding as a result of dam failure with implementation of the Reduced Development Alternative would be less than significant, similar to the proposed project.

No riparian habitat currently exists within the Buildout Area. However, four potential jurisdictional water resources currently exist within the Buildout Area, including three artificial ponds located within the LARC racetrack area, one drainage feature, and one detention basin. Similar to the proposed project, if the Reduced Development Alternative would impact these existing features feature or the detention basin, regulatory permits may be required, including those under Section 404 of the CWA as administered by the USACE, the Water Quality Certification under Section 401 of the CWA or Waste Discharge Requirements under the Porter-Cologne Water Quality Control Act as administered by the Santa Ana RWQCB, or the Streambed Alteration Agreement under Section 1602 of the California Fish and Game code as administered by CDFW, as detailed in **Mitigation Measure BIO-3**. Therefore, with implementation of **Mitigation Measure BIO-3**, potential impacts on aquatic, wetland, or riparian habitat with implementation of the Reduced Development Alternative would be less than significant, similar to the proposed project.

Therefore, the Reduced Development Alternative would have a less than significant impact related to hydrology and water quality, similar to the proposed project.

Land Use and Planning. Given the nature of the uses envisioned under the Reduced Development Alternative, the future buildout of the Buildout Area would improve existing connectivity in the area with the extension of Moody Street and Vessels Circle and would not divide or separate any existing land uses or neighborhoods. The neighboring residential communities would not be separated by

the proposed road extensions or proposed buildout of the Reduced Development Alternative. Implementation of the Reduced Development Alternative would implement the vision of the Specific Plan and would not introduce an inconsistency with the existing uses in the surrounding area and would be consistent with all General Plan and zoning designations. Therefore, the Reduced Development Alternative would not result in the physical division of an established community, similar to the proposed project. Like the proposed project, the Reduced Development Alternative would create more opportunities for connection due to the Moody Street and Vessels Circle extensions that create new north-south and east-west connections in the Buildout Area.

In addition, as the Reduced Development Alternative would develop the Buildout Area with similar uses as the proposed project, the Reduced Development Alternative would not be inconsistent with Connect SoCal, the City's General Plan, City's Zoning Ordinance, or the Specific Plan. Similar to the proposed project, the Reduced Development Alternative does not include any proposed amendments or modifications to the adopted Specific Plan. However, the Reduced Development Alternative would not result in as many residential units as contemplated in the Specific Plan and would further reduce the square footage of the town center area. As such, the Reduced Development Alternative would not introduce inconsistencies in the applicable City land use and planning policies.

Further, future development applications contemplated within the Buildout Area would also be required to comply with all applicable regulations and standards related to land use and planning. Any future development or redevelopment projects requiring discretionary actions would also be subject to environmental review, in accordance with the provisions of CEQA and the *State CEQA Guidelines.* Therefore, the Reduced Development Alternative would have a less than significant impact related to land use and planning, similar to the proposed project.

Mineral Resources. The Reduced Development Alternative would develop the same area of the city (i.e., Buildout Area) with similar uses as the proposed project and would be subject to the same conditions related to mineral resources as the proposed project. As discussed in Section 4.12, Mineral Resources, there are no known mineral resources in or in the vicinity of the Buildout Area, and there are no other known mineral deposits or resources within the City that are of significant value to the region or the State. In addition, the Buildout Area does not contain a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan. Therefore, the Reduced Development Alternative would have no impact related to mineral resources, similar to the proposed project.

Noise. The Reduced Development Alternative would develop the same area of the city (i.e., Buildout Area) with similar uses as the proposed project; however, the overall intensity of the proposed project, including residential and commercial development, would be reduced by 30 percent. As such, the Reduced Development Alternative would facilitate the future development of 1,253 residential units and approximately 308,000 square feet of non-residential uses. This represents a decrease of 538 residential units and approximately 132,000 square feet of non-residential uses as compared to the proposed project and would result in a corresponding reduction in operation noise associated with the residential development during operation, as compared to the proposed project.

Construction. Although the development under the Reduced Development Alternative would be less intense than the proposed project, noise- and vibration-generating construction activities for both projects would be similar because construction would require the same types of construction activities and equipment. Similar to the proposed project, compliance with the allowed construction hours in the City's Noise Ordinance would ensure that construction noise does not disturb residents during typical sleeping hours or during hours when ambient noise levels are likely to be lower (i.e., at night). Therefore, the Reduced Development Alternative's construction noise impacts would be less than significant, similar to the proposed project.

As discussed in Section 4.13, Noise, the nearest existing residential building at the edge of Lot 13 and south of Lot 3 would experience vibration levels below the FTA threshold for building damage. As the Reduced Development Alternative would also include construction activities in this area, it would result in a similar less than significant impact related to vibration damage.

In addition, construction-generated ground-borne vibration associated with the Reduced Development Alternative would not exceed FTA thresholds related to human annoyance at nearby sensitive receptors, similar to the proposed project. Therefore, similar to the proposed project, the Reduced Development Alternative would result in less than significant impacts related to potential vibration-related human annoyance.

Operation. As the Reduced Development Alternative would result in fewer vehicle trips to and from the Buildout Area due to the reduced development. As such, traffic noise impacts would be less than the proposed project (i.e., less than 0.9 dBA along the analyzed road segments). A noise level increase of less than 3 dBA would not be perceptible to the human ear in an outdoor environment. Therefore, off-site traffic noise impacts would be less than significant, similar to the proposed project.

Similar to the proposed project, development under the Reduced Development Alternative would generate various on-site stationary noise sources, including heating, ventilation, and air conditioning (HVAC) and commercial uses activities such as loading and unloading and parking lot activities, but at a reduced scale. The Cypress Municipal Code limits non-construction noise experienced at surrounding noise-sensitive uses to 55 dBA or less per the hourly daytime noise level standards for Noise Zone 1 and 60 dBA or less for Noise Zone 2. Similar to the proposed project, preparation of a specific acoustical analysis would be required to confirm compliance with the City's exterior and interior noise standards related to land use compatibility, as established in City of Cypress Municipal Code Chapter 8 (Noise), Sections 8-1-4 and 8-1-5, which set forth allowable noise limits by noise zone and authorize the City to require noise measurements or acoustical studies to verify compliance with applicable standards prior to or following project occupancy. Therefore, as the Reduced Development Alternative would meet the City's noise standards, impacts would be less than significant, similar to the proposed project.

In addition, as the Reduced Development Alternative would be located in the same area as the proposed project, the Reduced Development Alternative would also be located within the 60 dBA CNEL noise contour, but outside of the 65 dBA CNEL noise contour for JFTB Los Alamitos. The Buildout Area is also located within Noise Impact Zone 2 (moderate noise impact) and is outside of Noise Impact Zone 1 (high noise impact) defined by the Airport Environs Land Use Plan. However,

similar to the proposed project, given that the Reduced Development Alternative does not contain outdoor sensitive receptors and the City defined levels between 60 and 65 dBA CNEL as conditionally acceptable with the incorporation of an HVAC system allowing a windows- closed condition and standard building construction, impacts related to exposing people residing or working in the area to excessive noise levels due to airport operations would be less than significant, similar to the proposed project.

Overall, under the Reduced Development Alternative, operational noise impacts would be less than the proposed project due to the reduction in the number of vehicle trips to and from the Buildout Area and implementation of the Reduced Development Alternative would have a less than significant noise impact with implementation of **Mitigation Measure NOI-1**, similar to the proposed project.

Population and Housing. Because of the reduced scale, implementation of the Reduced Development Alternative would result in fewer future residents and less long-term employment opportunities within the Buildout Area compared to the proposed project. Assuming a ratio of 3.08 people per household, the Reduced Development Alternative would result in a net increase of approximately 3,860 persons at full buildout, which was assumed to take place over 12 years, for an average of 322 people per year.[14] This represents a reduction of 1,656 residents at the Buildout Area with full buildout of the alternative compared to the proposed project.

Similar to the proposed project, the Specific Plan allows for the construction of the residential uses facilitated by the Reduced Development Alternative and the Reduced Development Alternative population increase is within the planned growth for the region. As such, the Reduced Development Alternative would not result in unplanned growth as the City has already planned for the reasonably foreseeable development of housing within the Buildout Area as a way of meeting the City's RHNA obligations. However, because implementation of the Reduced Development Alternative would include 1,253 residential units (538 fewer residential units within the Buildout Area compared to the proposed project), the Reduced Development Alternative would not be consistent with the amount of housing identified in the Specific Plan and City's Housing Element for the Buildout Area. In addition, as the Buildout Area does not contain any habitable or occupied structures, implementation of this alternative would not require the demolition of existing housing and would not displace an existing population residing within the Buildout Area.

Therefore, the Reduced Development Alternative would have a less than significant impact related to population and housing, similar to the proposed project.

Public Services. The Reduced Development Alternative would result in 1,656 fewer residents in the Buildout Area that would be added to the City's population. This would result in a corresponding reduction in demand for public services, including on fire and police protection services, schools, parks, and other public services, as compared to the proposed project.

As discussed in Section 4.15, Public Servies, implementation of the proposed project would not result in substantial adverse physical impacts associated with the provision of new or physically

[14] 1,253 households x 3.08 persons per household = 3,860 persons

altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire and police protection services, schools, or parks with adherence to **Regulatory Compliance Measure PS-1, Regulatory Compliance Measure PS-2, Regulatory Compliance Measure PS-3,** and the payment of applicable development impact fees. As implementation of the Reduced Development Alternative would result in a decreased demand on these services as compared to the proposed project, implementation of the Reduced Development Alternative would also result in less than significant impacts on these services. The Reduced Development Alternative would also be required to adhere to **Regulatory Compliance Measure PS-1, Regulatory Compliance Measure PS-2, Regulatory Compliance Measure PS-3,** and the payment of applicable development impact fees.

In addition, implementation of the Reduced Development Alternative would generate additional funding for the City and County through the additional property tax revenue, similar to the proposed project. These funds could be used for the development of new or expanded library facilities or new library equipment if required. Therefore, implementation of the Reduced Development Alternative would also result in less than significant impacts on other public services, including the Orange County Public Library (OCPL) system.

Therefore, the Reduced Development Alternative would have a less than significant impact related to public services with adherence to **Regulatory Compliance Measure PS-1, Regulatory Compliance Measure PS-2, Regulatory Compliance Measure PS-3,** and the payment of applicable development impact fees, similar to the proposed project.

Recreation. The Reduced Development Alternative would result in a corresponding reduction in demand on parks and recreation facilities due to fewer residential units and less nonresidential development, compared to the proposed project.

As discussed in Section 4.16, Recreation, the City currently has 93.9 acres of parkland available for its 48,782 residents, and it currently provides approximately 1.92 acres of parkland per 1,000 residents, which does not meet the City's parkland objective of 4.5 acres per 1,000 residents. The additional residents with implementation of the Reduced Development Alternative would change this ratio. Similar to the proposed project, implementation of the Reduced Development Alternative would include approximately 11 acres of land on which park and recreational uses would be developed. The existing Lexington Park, which is approximately nine acres and has already been developed adjacent to Lots 1 and 2 of VTTM 19247, is counted as part of the existing parkland acreage in the City. The specific amenities and improvements that would be developed in the additional two acres of public park space would be determined in connection with future development projects that are proposed within the Buildout Area. The Reduced Development Alternative would also include additional open space areas as an amenity for future residents.

In addition, as specified in Article VI of the City's Municipal Code, the City requires land to be dedicated as parks for subdivisions that include new residential construction that qualify as dwelling units as defined by Section 6.31.020(D) of the City's Zoning Ordinance and Section 205(D) of the 2001 California Building Code as they currently exist. The Municipal Code also allows payment of park fees or a credit for private open space in lieu of the land dedication. Similar to the proposed

project, the Reduced Development Alternative would be required to adhere to **Regulatory Compliance Measure PS-3**, which requires compliance with Article VI of the City's Municipal Code. Therefore, the Reduced Development Alternative would have a less than significant impact on parks and recreation, similar to the proposed project.

Transportation. Under this alternative, the extension of Moody Street from Cerritos Avenue to Katella Avenue and the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension would still occur, consistent with the Specific Plan and proposed project, and would be constructed consistent with City standards and regulations.

Similar to the proposed project, the Reduced Development Alternative would not conflict with any of the goals and policies contained in the City's General Plan related to the circulation system. The Reduced Development Alternative would also be consistent with, and reinforce, applicable Connect SoCal 2024 goals, including Connect SoCal 2024's goals to develop, connect and sustain communities that are livable and thriving and to create a healthy region for the people of today and tomorrow, by providing additional housing opportunities within locations near amenities and already used by the public for commercial, recreational, and/or professional uses. In addition, the proposed project would support the development, connection, and sustainability of communities that are livable and thriving by providing necessary housing for all income levels in a bustling economic corridor.

In addition, the Reduced Development Alternative would not conflict with any adopted transit system plans, guidelines, policies, or standards as implementation would not interfere with implementation of applicable transit planning documents, including the specific actions to address the growing need for expanded transit service contained in the City's General Plan Circulation Element, 2024 Orange County Transit Vision Master Plan,[15] and the County's Directions 2050 plan,[16] which would update OCTA's Long-Range Transportation Plan (LRTP). Further, implementation of the Reduced Development Alternative would provide sidewalks along the frontages and pedestrian sidewalks and pathways would be provided throughout the Buildout Area and provide connections to existing pedestrian and bicycle facilities in the surrounding area, similar to the proposed project. Additionally, as discussed further below and detailed in **Mitigation Measure TRA-1**, the Reduced Development Alternative would be required to implement feasible TDM strategies to mitigate the alternative's VMT impact, which include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network and improving the pedestrian network, including the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area. Therefore, the Reduced Development Alternative would not conflict with any adopted bicycle or pedestrian system plans, guidelines, policies, or standards.

Similar to the proposed project, the Reduced Development Alternative would also be required to prepare and implement a TCP during construction activities, as detailed in development agreement for the proposed project, that would be submitted to the City of Cypress Public Works Department for review and approval, in order to reduce impacts to roadway systems during construction. In

15 Orange County Transportation Authority (OCTA). 2025. *2024 Orange County Transit Vision Master Plan*. May.

16 OCTA. 2025. OCTA Seeks Public Input to Help Shape Orange County's Transportation Future. October 3. Website: https://www.octa.net/news/news-releases/octa-seeks-public-input (accessed October 2025).

addition, similar to the proposed project, although the Reduced Development Alternative would also result in a significant and unavoidable VMT impact, the VMT impact does not, by itself, indicate inconsistency with circulation system policies or a failure to accommodate multimodal transportation. Therefore, based on the above analysis, and because the Reduced Development Alternative would be required to adhere to the Specific Plan and the General Plan, similar to the proposed project, the Reduced Development Alternative would generally be consistent with all programs, plans, ordinances, and policies addressing the circulation system, including those regulating transit, roadway, bicycle, and pedestrian facilities. Impacts would be less than significant, similar to the proposed project.

As the Reduced Development Alternative would result in fewer residential units and a reduction in non-residential uses as compared to the proposed project, the Reduced Development Alternative would generate fewer vehicle trips to and from the Buildout Area and a reduction in VMT during operation. However, without quantification of VMT or alternative-specific VMT analysis, it cannot be determined if the reduction in proposed development and vehicle trips to and from the project site would reduce VMT impacts to below applicable significance thresholds. As such, the Reduced Development Alternative would also be required to implement the VMT reduction measures detailed in **Mitigation Measure TRA-1**. Implementation of **Mitigation Measure TRA-1** would require the Reduced Development Alternative to reduce overall VMT; however, even with implementation of **Mitigation Measure TRA-1**, without quantification of VMT or alternative-specific VMT analysis, VMT impacts under the Reduced Development Alternative would be **significant and unavoidable**, similar to the proposed project.

Lastly, the Reduced Development Alternative would not substantially increase hazards due to a geometric design feature or result in inadequate emergency access as all roadway improvements in and around the Buildout Area shall be designed and constructed in accordance with Chapter 25, Article 5, Public Improvements, of the City's Municipal Code and applicable Public Works Design Standards, similar to the proposed project. In addition, except as otherwise provided in the Specific Plan, all final site and roadway improvement plans shall conform to the City's Public Works Design Criteria Manual, which incorporates California Manual on Uniform Traffic Control Devices (CA MUTCD) standards for intersection control, sight distance, and geometric design, and all final improvement and site access plans shall be subject to review and approval by the City's Public Works Department and the Orange County Fire Authority prior to issuance of building permits.

Overall, implementation of the Reduced Development Alternative would have a significant and unavoidable transportation impact related to VMT, even with implementation of **Mitigation Measure TRA-1**, similar to the proposed project.

Tribal Cultural Resources. The Reduced Development Alternative would develop the same area of the city (i.e., Buildout Area) with similar uses as the proposed project, including residential and non-residential uses, at a reduced scale. Similar to the proposed project, construction of this alternative has the potential to significantly impact unidentified tribal cultural resources during ground-disturbing activities, similar to the proposed project. Therefore, consistent with the proposed project, the Reduced Development Alternative would be required to adhere to **Regulatory Compliance Measures CUL-1** and **CUL-2**, which detail provisions in the event that previously unknown cultural resources, including human remains, are discovered during ground-disturbing

construction activities, consistent with the California Code of Regulations (CCR) Section 15064.5(e) and State Health and Safety Code Section 7050.5. In addition, because the Reduced Development Alternative would be located at the same location as the proposed project, the alternative would also be required to implement **Mitigation Measures TCR-1** through **TCR-4**, which require tribal cultural resources training and ALERT sheet posting, on-site tribal monitoring during ground disturbance of native sediment, and provisions in the event that previously unknown tribal cultural resources (including human remains and funerary objects) are discovered during ground-disturbing construction activities.

With adherence to **Regulatory Compliance Measures CUL-1** and **CUL-2** and implementation of **Mitigation Measures TCR-1** through **TCR-4**, the potential impacts to known and unknown tribal cultural resources would be less than significant with mitigation incorporated, similar to the proposed project.

Utilities and Service Systems. The Reduced Development Alternative would result in a reduction in demand on utilities, including water, wastewater, stormwater, electricity, natural gas, and telecommunications, as compared to the proposed project. Similar to the proposed project, the Reduced Development Alternative would connect to existing utility infrastructure in the vicinity of the Buildout Area and would include the installation of the same or similar utility improvements as the proposed project.

Similar to the proposed project, implementation of the Reduced Development Alternative would not require the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities or infrastructure, beyond those associated with the alternative detailed above. Because the Reduced Development Alternative would result in less demand on utilities and Section 4.19, Utilities and Service Systems determined that GSWC and OC San could adequately serve the development under the proposed project, these water and wastewater service provides could adequately accommodate the development under the Reduced Development Alternative. Further, the stormwater drainage system under Reduced Development Alternative, as required by **Regulatory Compliance Measure HYD-3,** would be designed to ensure that operation of the Reduced Development Alternative would not result in a substantial increase in the rate or amount of surface runoff, flow, and volume that would exceed the capacity of the adjacent stormwater drainage systems, and no new additional infrastructure would be required. Lastly, SCE and SoCalGas would be able to adequately serve the Reduced Development Alternative, similar to the proposed project.

Additionally, similar to the proposed project, all future projects implemented in accordance with the proposed project would be required to adhere to the Specific Plan, provide required development impact fees, and comply with applicable development regulations pertaining to utility improvements and connections. As a part of the development review process, all future projects would be required to demonstrate that existing public utilities would be sufficient to serve the future projects' needs, through the issuance of a will serve letter. As such, the Reduced Development Alternative would not require the relocation or construction of new or expanded utilities and impacts would be less than significant.

In addition, similar to the proposed project, impacts related to solid waste with implementation of the Reduced Development Alternative would be less than significant with adherence to **Regulatory Compliance Measure UTIL-1** requiring compliance with the City's Construction and Demolition Ordinance. Further, solid waste from future development facilitated by the Reduced Development Alternative would be required to comply with State and local solid waste reduction, diversion, and recycling policies and regulations, including AB 1327 (wood waste disposal), Chapter 18 of the California Solid Waste Reuse and Recycling Access Act of 1991 (requires adequate, permanent space for recycling and solid waste collection at new developments), AB 939 (California Department of Resources Recycling and Recovery [CalRecycle]), AB 75 (solid waste diversion), AB 1826 (organic waste recycling), and SB 1383 (organic waste collection services). With adherence to these existing regulatory requirements and because the Reduced Development Alternative would generate less solid waste as compared to the proposed project, the Historic Preservation Alternative would also result in less than significant impacts related to solid waste.

Therefore, the Reduced Development Alternative would have a less than significant impact related to utilities and service systems with adherence to **Regulatory Compliance Measure UTIL-1**, similar to the proposed project.

Wildfire. As discussed in Section 4.20, Wildfire, according to the CAL FIRE VHFHSZ for the Orange County region, the entire city is designated as a non-VHFHSZ,[17] and the city does not include a SRA. The nearest VHFHSZ to the Buildout Area is approximately 6.8 miles northeast in Coyote Hills on the western side of Fullerton.[18] The nearest SRA is in Puente Hills, approximately 12 miles northeast of the Buildout Area. As such, the Buildout Area is not located in or near any SRAs or lands classified as VHFHSZs. Therefore, the Reduced Development Alternative would have no impact related to wildfire, similar to the proposed project.

5.5.3.3 Attainment of Project Objectives

The Reduced Development Alternative would not meet the project objectives to the same extent as the proposed project, as discussed further below.

1. Provide a significant number of new residential units in the Buildout Area to help meet the unmet demand for housing in the City and the project vicinity, consistent with the City's Housing Element and the Cypress Town Center and Commons Specific Plan 3.0 approved by the voters of the City of Cypress.

   While the Reduced Development Alternative would facilitate development of 1,253 residential units within the Buildout Area, which would help meet the significant unmet demand for housing in the City and the project vicinity, the Reduced Development Alternative would result in 538 fewer residential units than the proposed project. As such, the Reduced Development Alternative would no satisfy this objective to the same extent as the proposed project.

[17] California Department of Forestry and Fire Protection (CAL FIRE). 2011. Very High Fire Hazard Severity Zones in LRA. Website: https://osfm.fire.ca.gov/media/6739/fhszl_map30.pdf (accessed February 6, 2025).

[18] Ibid.

2. Establish a mixed-use town center that is intended to be the City's "main street" and a gathering place for the community with a vibrant mix of entertainment, retail, restaurant, commercial and residential uses.

   While the Reduced Development Alternative would facilitate development of new residential and non-residential uses, including a mix of entertainment, retail, restaurant, and commercial uses, within the Buildout Area, which would establish the Buildout Area as a mixed-use town center, the Reduced Development Alternative would result in 538 fewer residential units and a reduction of approximately 132,000 square feet of non-residential uses as compared to the proposed project. As such, the Reduced Development Alternative would not meet this objective to the same extent as the proposed project.

3. Revitalize a large urban area in the City that is currently significantly underutilized.

   Similar to the proposed project, the Reduced Development Alternative would facilitate the development of the Buildout Area with new residential and non-residential uses, consistent with the Specific Plan. Therefore, the Reduced Development Alternative would revitalize a large urban area in the City that is currently significantly underutilized. However, the Reduced Development Alternative does not include the same residential or nonresidential density as the proposed project, as permitted in the Specific Plan. As such, the Reduced Development Alternative would not meet this objective to the same extent as the proposed project.

4. Diversify the City's existing housing stock by providing various housing product types and densities to meet a range of housing needs of Cypress and area residents.

   As discussed above, while the Reduced Development Alternative would facilitate development of 1,253 residential units within the Buildout Area, which would include a variety of housing product types and densities to meet a range of housing needs of Cypress and area residents, the Reduced Development Alternative would result in 538 fewer residential units than the proposed project. As such, the Reduced Development Alternative would not meet this objective to the same extent as the proposed project.

5. Provide a mix of residential, commercial, retail and park and recreational uses that encourages project residents to walk or bike to and from the commercial areas and attractions and parks within the Buildout Area and provides an enhanced consumer and employee base for the new commercial uses.

   As discussed above and similar to the proposed project, the Reduced Development Alternative would facilitate the development of the Buildout Area with new residential, non-residential, and park uses, consistent with the Specific Plan. Therefore, like the proposed project, the Reduced Development Alternative would provide a mix of residential, commercial, retail, and park and recreational uses that encourages project residents to walk or bike to and from the commercial areas and attractions and parks within the Buildout Area and provides an enhanced consumer and employee base for the new commercial uses. The Reduced Development Alternative would be similar to the proposed project in meeting this project objective. However, the Reduced Development Alternative does not include the same residential or nonresidential density as the

proposed project, as permitted in the Specific Plan. As such, the Reduced Development Alternative would not meet this objective to the same extent as the proposed project.

6. Develop a project that will invigorate the local economy by providing new employment and business opportunities.

   As discussed above, while the Reduced Development Alternative would facilitate development of approximately 308,000 square feet of non-residential (commercial) uses within the Buildout Area, which would invigorate the local economy by providing new employment and business opportunities, the Reduced Development Alternative would result in a reduction of approximately 132,000 square feet of non-residential uses as compared to the proposed project. As such, the Reduced Development Alternative would not meet this objective to the same extent as the proposed project.

7. Provide residential and commercial/retail improvements that generate new sources of revenue for the City through increased property values and retail sales.

   As discussed above, while the Reduced Development Alternative would facilitate development of new residential and non-residential uses, which would provide residential and commercial/retail improvements that generate new sources of revenue for the City through increased property values and retail sales, the Reduced Development Alternative would result in 538 fewer residential units and a reduction of approximately 132,000 square feet of non-residential uses as compared to the proposed project. As such, the Reduced Development Alternative would not meet this objective to the same extent as the proposed project.

8. Extend existing City streets through all or a portion of the Buildout Area to improve overall traffic circulation in the project vicinity and provide necessary vehicular and pedestrian access for project residents, tenants, visitors and patrons.

   Similar to the proposed project, the Reduced Development Alternative would include the extension of Moody Street from Cerritos Avenue to Katella Avenue and the extension of Vessels Circle from its current western terminus to intersect with the Moody Street extension would still occur, consistent with the Specific Plan. However, the Reduced Development Alternative's decreased vehicle traffic would mean that these new street connections may effectively improve overall traffic circulation in the project vicinity in comparison to the proposed project. Therefore, the Reduced Development Alternative would be superior to the proposed project in meeting this project objective.

9. Develop new residential and senior housing communities with sufficient housing units to support the size, scale and operation of planned public parks and other amenities and common areas included in the proposed project.

   The Reduced Development Alternative would facilitate the development of 1,253 residential units within the Buildout Area and, similar to the proposed project and consistent with the Specific Plan, would include senior housing communities. However, the Reduced Development Alternative would result in 538 fewer residential units compared to the proposed project.

Therefore, the Reduced Development Alternative would be inferior in developing residential uses with sufficient housing units to support the size, scale and operation of planned public parks and other amenities and common areas included within the Buildout Area. As such, the Reduced Development Alternative would not meet this objective to the same extent as the proposed project.

Overall, the Reduced Development Alternative would not fully satisfy a number of the key project objectives relating to the already-approved Specific Plan and number of residential units. Therefore, this alternative would not satisfy the project objectives to the same extent as the proposed project.

5.6 COMPARISON OF ALTERNATIVES AND IDENTIFICATION OF ENVIRONMENTALLY SUPERIOR ALTERNATIVE

5.6.1 Alternatives Summary Comparison of Impacts and Ability to Meet Project Objectives

Table 5.B: Proposed Project and Project Alternatives Impact Comparison below, identifies the level of impact for the proposed project and each alternative (e.g., no impact, less than significant impact, less than significant impact with mitigation, significant and unavoidable impact, or significant and unavoidable impact with mitigation) and whether the impact of the alternative would be the same as, less than, or greater than the proposed project impacts. In some cases, the proposed project and alternative would result in the same significance determination, but the degree of that impact with the alternative might be less than or greater than the proposed project.

Table 5.B: Proposed Project and Project Alternatives Impact Comparison

Environmental Impacts	Proposed Project	No Project Alternative	Historic Preservation Alternative	Reduced Development Alternative
4.1: Aesthetics				
Threshold 4.1.1: Would the project have a substantial adverse effect on a scenic vista?	NI	NI =	NI =	NI =
Threshold 4.1.2: Would the project substantially damage scenic resources, including, but not limited to trees, rock outcroppings, and historic buildings within a State scenic highway?	NI	NI =	NI =	NI =
Threshold 4.1.3: In nonurbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	LTS	NI <	LTS <	LTS =
Threshold 4.1.4: Would the project create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?	LTS	NI <	LTS >	LTS <
4.2: Agriculture and Forestry Resources				
Threshold 4.2.1: Would the project convert Prime Farmland, Unique Farmland or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	NI	NI =	NI =	NI =
Threshold 4.2.2: Would the project conflict with existing zoning for agricultural use or a Williamson Act contract?	NI	NI =	NI =	NI =

Table 5.B: Proposed Project and Project Alternatives Impact Comparison

Environmental Impacts	Proposed Project	No Project Alternative	Historic Preservation Alternative	Reduced Development Alternative
Threshold 4.2.3: Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	NI	NI =	NI =	NI =
Threshold 4.2.4: Would the project result in the loss of forest land or conversion of forest land to non-forest use?	NI	NI =	NI =	NI =
Threshold 4.2.5: Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?	NI	NI =	NI =	NI =
4.3: Air Quality				
Threshold 4.3.1: Would the proposed project conflict with or obstruct implementation of the applicable air quality plan?	SU	NI <	SU =	SU =
Threshold 4.3.2: Would the proposed project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or State ambient air quality standard?	SU	NI <	SU =	SU <
Threshold 4.3.3: Would the proposed project expose sensitive receptors to substantial pollutant concentrations?	SU	NI <	SU =	SU <
Threshold 4.3.4: Would the proposed project create objectionable odors affecting a substantial number of people?	LTS	NI <	LTS =	LTS =
4.4: Biological Resources				
Threshold 4.4.1: Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service?	LTS	NI <	LTS =	LTS =
Threshold 4.4.2: Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service?	NI	NI =	NI =	NI =
Threshold 4.4.3: Would the project have a substantial adverse effect on federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	LTSM	NI <	LTSM =	LTSM =
Threshold 4.4.4: Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	LTS	NI <	LTS =	LTS =
Threshold 4.4.5: Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	LTS	NI <	LTS =	LTS =
Threshold 4.4.6: Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	NI	NI =	NI =	NI =
4.5: Cultural Resources				
Threshold 4.5.1: Would the project cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	SU	NI <	LTSM <	SU =

Table 5.B: Proposed Project and Project Alternatives Impact Comparison

Environmental Impacts	Proposed Project	No Project Alternative	Historic Preservation Alternative	Reduced Development Alternative
Threshold 4.5.2: Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	LTS	NI <	LTS =	LTS =
Threshold 4.5.3: Would the project disturb any human remains, including those interred outside of dedicated cemeteries?	LTS	NI <	LTS =	LTS =
4.6: Energy				
Threshold 4.6.1: Would the project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	LTS	NI <	LTS =	LTS <
Threshold 4.6.2: Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	LTS	NI <	LTS =	LTS <
4.7: Geology and Soils				
Threshold 4.7.1: Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: (i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of known fault? (Refer to Division of Mines and Geology Special Publication 42) (ii) Strong seismic ground shaking? (iii) Seismic-related ground failure, including liquefaction? (iv) Landslides?	LTSM	NI <	LTSM =	LTSM =
Threshold 4.7.2: Would the project result in substantial soil erosion or the loss of topsoil?	LTS	NI <	LTS =	LTS =
Threshold 4.7.3: Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on-site or off-site landslides, lateral spreading, subsidence, liquefaction, or collapse?	LTSM	NI <	LTSM =	LTSM =
Threshold 4.7.4: Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating direct or indirect substantial risks to life or property?	NI	NI <	NI =	NI =
Threshold 4.7.5: Would the project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	NI	NI <	NI =	NI =
Threshold 4.7.6: Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	LTSM	NI <	LTSM =	LTSM =
4.8: Greenhouse Gas Emissions				
Threshold 4.8.1: Would the project generate GHG emissions either directly or indirectly that may have a significant impact on the environment?	SU	NI <	SU =	SU <
Threshold 4.8.2: Would the project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs?	SU	NI <	SU =	SU =
4.9: Hazards and Hazardous Materials				
Threshold 4.9.1: Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	LTS	NI <	LTS =	LTS =
Threshold 4.9.2: Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	LTSM	NI <	LTSM =	LTSM =

Table 5.B: Proposed Project and Project Alternatives Impact Comparison

Environmental Impacts	Proposed Project	No Project Alternative	Historic Preservation Alternative	Reduced Development Alternative
Threshold 4.9.3: Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	LTS	NI <	LTS =	LTS =
Threshold 4.9.4: Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	LTSM	NI <	LTSM =	LTSM =
Threshold 4.9.5: Would the project for a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	LTS	NI <	LTS =	LTS =
Threshold 4.9.6: Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	NI	NI <	NI =	NI =
Threshold 4.9.7: Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	NI	NI <	NI =	NI =
4.10: Hydrology and Water Quality				
Threshold 4.10.1: Would the project violate any water quality standards or waste discharge requirements?	LTS	NI <	LTS =	LTS =
Threshold 4.10.2: Would the project substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	LTS	NI <	LTS =	LTS =
Threshold 4.10.3: Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?	LTS	NI <	LTS =	LTS =
Threshold 4.10.4: Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?	LTS	NI <	LTS =	LTS =
Threshold 4.10.5: Would the project create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	LTS	NI <	LTS =	LTS =
Threshold 4.10.6: Would the project otherwise substantially degrade water quality?	LTS	NI <	LTS =	LTS =
Threshold 4.10.7: Would the project place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	NI	NI <	NI =	NI =
Threshold 4.10.8: Would the project place within a 100-year flood hazard area structures which would impede or redirect flood flows?	NI	NI <	NI =	NI =
Threshold 4.11.9: Would the project expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	LTS	NI <	LTS =	LTS =

Table 5.B: Proposed Project and Project Alternatives Impact Comparison

Environmental Impacts	Proposed Project	No Project Alternative	Historic Preservation Alternative	Reduced Development Alternative
Threshold 4.10.10: Would the project be subject to inundation by seiche, tsunami, or mudflow?	NI	NI <	NI =	NI =
Threshold 4.10.11: Would the project result in an increase in pollutant discharges to receiving waters? Consider water quality parameters such as temperature, dissolved oxygen, turbidity and other typical stormwater pollutants (e.g., heavy metals, pathogens, petroleum derivatives, synthetic organics, sediment, nutrients, oxygen-demanding substances, and trash)	LTS	NI <	LTS =	LTS =
Threshold 4.10.12: Would the project result in significant alteration of receiving water quality during or following construction?	LTS	NI <	LTS =	LTS =
Threshold 4.10.13: Would the proposed project result in increased erosion downstream?	LTS	NI <	LTS =	LTS =
Threshold 4.10.14: Would the project result in increased impervious surfaces and associated increased runoff?	LTS	NI <	LTS =	LTS =
Threshold 4.10.15: Would the project create a significant adverse environmental impact to drainage patterns due to changes in runoff flow rates or volumes?	LTS	NI <	LTS =	LTS =
Threshold 4.10.16: Would the project be tributary to an already impaired water body, as listed on the Clean Water Act Section 303(d) list? If so, can it result in an increase in any pollutant for which the water body is already impaired?	LTS	NI <	LTS =	LTS =
Threshold 4.10.17: Would the project be tributary to other environmentally sensitive areas? If so, can it exacerbate already existing sensitive conditions?	LTS	NI <	LTS =	LTS =
Threshold 4.10.18: Would the project have a potentially significant environmental impact on surface water quality to either marine, fresh, or wetland waters?	LTS	NI <	LTS =	LTS =
Threshold 4.10.19: Would the project have a potentially significant adverse impact on groundwater quality?	LTS	NI <	LTS =	LTS =
Threshold 4.10.20: Would the project cause or contribute to an exceeded applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses?	LTS	NI <	LTS =	LTS =
Threshold 4.11.21: Would the project impact aquatic, wetland, or riparian habitat?	LTSM	NI <	LTSM <	LTSM =
4.11: Land Use and Planning				
Threshold 4.11.1: Would the project physically divide an established community?	LTS	NI <	LTS =	LTS =
Threshold 4.11.2: Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	LTS	NI <	LTS =	LTS =
4.12: Mineral Resources				
Threshold 4.12.1: Would the project result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the State?	NI	NI <	NI =	NI =
Threshold 4.12.2: Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	NI	NI <	NI =	NI =

Table 5.B: Proposed Project and Project Alternatives Impact Comparison

Environmental Impacts	Proposed Project	No Project Alternative	Historic Preservation Alternative	Reduced Development Alternative
4.13: Noise and Vibration				
Threshold 4.13.1: Would the project result in the generation of a substantial temporary or permanent increase (defined as an increase of 3 dBA or more) in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	LTS	NI <	LTS =	LTS <
Threshold 4.13.2: Would the project result in the generation of excessive groundborne vibration or groundborne noise levels?	LTSM	NI <	LTSM =	LTSM =
Threshold 4.13.3: For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, would the project result in the exposure of people residing or working in the project area to excessive noise levels?	LTS	NI <	LTS =	LTS =
4.14: Population and Housing				
Threshold 4.14.1: Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	LTS	NI <	LTS <	LTS <
Threshold 4.14.2: Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	NI	NI	NI =	NI =
4.15: Public Services				
Threshold 4.15.1: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection?	LTS	NI <	LTS >	LTS <
Threshold 4.15.2: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for police protection?	LTS	NI <	LTS >	LTS <
Threshold 4.15.3: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for schools?	LTS	NI <	LTS <	LTS <
Threshold 4.15.4: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for parks?	LTS	NI <	LTS <	LTS <
Threshold 4.15.5: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to	LTS	NI <	LTS <	LTS <

Threshold 4.17.1: Would the project conflict with a program, plan, ordinance or policy addressing the circulation system including transit, roadway, bicycle and pedestrian facilities?	SU	NI <	SU <	SU <
Threshold 4.17.2: Would the project conflict or be inconsistent with *CEQA Guidelines* section 15064.3, subdivision (b)?	SU	NI <	SU <	SU <
Threshold 4.17.3: Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	LTS	NI <	LTS =	LTS =
Threshold 4.17.4: Would the project result in inadequate emergency access?	LTSM	NI <	LTSM =	LTSM =
4.18: Tribal Cultural Resources				
Threshold 4.18.1: Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: (1) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k); or (2) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?	LTSM	NI <	LTSM =	LTSM =
4.19: Utilities and Service Systems				
Threshold 4.19.1: Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	LTS	NI <	LTS =	LTS <
Threshold 4.19.2: Would the project have insufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	LTS	NI <	LTS =	LTS <
Threshold 4.19.3: Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	LTS	NI <	LTS =	LTS <

Table 5.B: Proposed Project and Project Alternatives Impact Comparison

Environmental Impacts	Proposed Project	No Project Alternative	Historic Preservation Alternative	Reduced Development Alternative
Threshold 4.19.4: Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	LTS	NI <	LTS =	LTS <
Threshold 4.19.5: Would the project conflict with federal, state, and local management and reduction statutes and regulations related to solid waste?	LTS	NI <	LTS =	LTS <
4.20: Wildfire				
Threshold 4.20.1: Would the project substantially impair an adopted emergency response plan or emergency evacuation plan?	NI	NI =	NI =	NI =
Threshold 4.20.2: Due to slope, prevailing winds, and other factors, would the project exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	NI	NI =	NI =	NI =
Threshold 4.20.3: Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	NI	NI =	NI =	NI =
Threshold 4.20.4: Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	NI	NI =	NI =	NI =

LTS = Less than Significant
NI = No Impact

SU = Significant and Unavoidable
LTSM = Less Than Significant with Mitigation
< (less than proposed project)
> (greater than proposed project)
= (equal to proposed project)

A comparison of each alternative and its ability to meet the project objectives compared to the proposed project is summarized below in **Table 5.C: Summary of Ability of the Proposed Project and Alternatives to Address Project Objectives** and evaluated in more detail in the subsequent discussion.

Table 5.C: Summary of Ability of the Proposed Project and Alternatives to Address Project Objectives

Project Objective	Proposed Project	No Project Alternative	Historic Preservation Alternative	Reduced Development Alternative
1. Provide a significant number of new residential units in the Buildout Area to help meet the unmet demand for housing in the City and the project vicinity, consistent with the City's Housing Element and the Cypress Town Center and Commons Specific Plan 3.0 approved by the voters of the City of Cypress.	Yes	No	Yes <	Yes <
2. Establish a mixed-use town center that is intended to be the City's "main street" and a gathering place for the community with a vibrant mix of entertainment, retail, restaurant, commercial and residential uses.	Yes	No	Yes <	Yes <
3. Revitalize a large urban area in the City that is currently significantly underutilized.	Yes	No	Yes =	Yes
4. Diversify the City's existing housing stock by providing various housing product types and densities to meet a range of housing needs of Cypress and area residents.	Yes	No	Yes =	Yes <
5. Provide a mix of residential, commercial, retail and park and recreational uses that encourages project residents to walk or bike to and from the commercial areas and attractions and parks within the Buildout Area and provides an enhanced consumer and employee base for the new commercial uses.	Yes	No	Yes <	Yes
6. Develop a project that will invigorate the local economy by providing new employment and business opportunities.	Yes	No	Yes >	Yes <
7. Provide residential and commercial/retail improvement that will generate new sources of revenue for the City through increased property values and retail sales.	Yes	No	Yes <	Yes <
8. Extend existing City streets through all or a portion of the Buildout Area to improve overall traffic circulation in the project vicinity and provide necessary vehicular and pedestrian access for project residents, tenants, visitors and patrons.	Yes	No	Yes	Yes
9. Develop new residential and senior housing communities with sufficient housing units to support the size, scale and operation of planned public parks and other amenities and common areas included in the proposed project.	Yes	No	Yes <	Yes <

< (less than)
> (greater than)

5.6.1.1 No Project Alternative

Based on the above analysis, the No Project Alternative would have the fewest environmental impacts and would be the environmentally superior alternative. However, under CEQA, if the No Project Alternative is the environmentally superior alternative, the EIR must identify an environmentally superior alternative from among the other alternatives (*State CEQA Guidelines* Section 15126.6(e)(2)). While the No Project Alternative would be environmentally superior in the technical sense in that contribution to the aforementioned impacts would not occur, it would also fail to achieve the underlying purpose of the project and would not meet any of the project's objectives.

5.6.1.2 Historic Preservation Alternative

Because the alternative would retain the existing character-defining features, including the pre-1970 track, the 1954 quarter-mile chute, the infield and ponds, and a portion of the grandstand, implementation of the Historic Preservation Alternative would avoid the significant and unavoidable impact to built-environment historic resources as defined in *State CEQA Guidelines* Section 15064.5 associated with the proposed project.

Because development within the Buildout Area under the Historic Preservation Alternative would occur on a project-by-project basis and the specific design and sequence of those projects cannot be determined at this time, it is not yet known if future development projects would result in construction-related health risks that would be below the SCAQMD's significance thresholds. Therefore, the Historic Preservation Alternative would not avoid the proposed project's significant and unavoidable related to conflict with the applicable air quality plan. In addition, although the Historic Preservation Alternative would reduce operational emissions associated with the residential development due to the 22 percent reduction in residential units, due to the inclusion of the performance venue, which would result in an increase in vehicle trips to and from the project site as compared to the proposed project, and 6-story parking garage, and because the air quality emissions under the Historic Preservation Alternative have not been quantified, the Historic Preservation Alternative would also not avoid the proposed project significant and unavoidable impact related to a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard.

In addition, while the Historic Preservation Alternative would result in fewer residential units as compared to the proposed project and the VMT impacts are expected to be reduced, without quantification of the VMT associated with the residential uses under the Historic Preservation Alternative or alternative-specific VMT analysis, it cannot be determined if the reduction in residential development would result in VMT impacts below applicable levels of significance (i.e., 13.21 VMT per capita, 15 percent below the existing regional average). In addition, the performance venue proposed under the Historic Preservation Alternative is expected to generate a significant amount of VMT as the performance venue and would attract visitors from outside the county during performance and events. Therefore, the Historic Preservation Alternative would not avoid the proposed project's significant and unavoidable VMT impact.

As indicated in **Table 5.C**, above, the Historic Preservation Alternative would meet the objectives of the project to a lesser extent than the proposed project due to the reduced number of residential units. In addition, the Historic Preservation Alternative would not meet the underlying purpose of the proposed project to redevelop the Buildout Area in accordance with the voted-approved Specific Plan, as the Historic Preservation Alternative requires amendments to the Specific Plan that must be voted on and adopted by voters.

5.6.1.3 Reduced Development Alternative

The Reduced Development Alternative would not avoid the significant and unavoidable impact to historical resources as defined in *State CEQA Guidelines* Section 15064.5 as implementation of the alternative would include the demolition and removal of all or a substantial portion of the existing

improvements associated with the LARC property, including the race track and infield area, grandstand, buildings, barns and structures and three artificial lakes, similar to the proposed project.

Further, because development within the Buildout Area under the Reduced Development Alternative would occur on a project-by-project basis and the specific design and sequence of those projects cannot be determined at this time, it is not yet known if future development projects would result in construction-related health risks that would be below the SCAQMD's significance thresholds. Therefore, the Reduced Development Alternative would not avoid the proposed project's significant and unavoidable related to conflict with the applicable air quality plan. In addition, although the Reduced Development Alternative would reduce operational emissions associated with the residential development due to the reduction in residential units, because the air quality emissions under the Reduced Development Alternative have not been quantified, the Reduced Development Alternative would also not avoid the proposed project significant and unavoidable impact related to a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard.

In addition, while the Reduced Development Alternative would generate fewer vehicle trips to and from the project site and result in a reduction in VMT, without quantification of VMT or alternative-specific VMT analysis, it cannot be determined if the reduction in proposed development and vehicle trips to and from the project site would reduce VMT impacts to below applicable significance thresholds. Therefore, implementation of the Reduced Development Alternative would continue to result in significant and unavoidable impacts related to VMT.

As indicated in **Table 5.C**, above, the Reduced Development Alternative would generally meet the objectives of the project to a lesser extent than the proposed project due to the reduced number of residential units and non-residential space compared to the proposed project.

5.6.2 Environmentally Superior Alternative

Because the Historic Preservation Alternative would avoid the significant and unavoidable impact to historical resources as defined in *State CEQA Guidelines* Section 15064.5 associated with the proposed project, the Historic Preservation Alternative is considered the Environmentally Superior Alternative. As discussed above, the Reduced Development Alternative would not avoid the significant and unavoidable impact on historical resources as it would include the demolition and removal of the character-defining features that contribute to the LARC's eligibility for listing in the National Register and California Register. None of the selected alternatives would avoid the significant and unavoidable impacts associated with VMT or air quality.

Accordingly, the Historic Preservation Alternative is considered the Environmentally Superior Alternative.

This page intentionally left blank

6.0 OTHER CEQA CONSIDERATIONS

Section 15126.2(c) of the *State CEQA Guidelines* requires that an Environmental Impact Report (EIR) describe any significant impacts that cannot be avoided in all phases of a project, including: planning, acquisition, development, and operation. This chapter discusses these CEQA considerations associated with the implementation of the proposed Specific Plan 3.0 Buildout Project (proposed project). Specifically, Section 15126.2(c) states that an EIR shall:

> "Describe any significant impacts, including those which can be mitigated but not reduced to a level of insignificance. Where there are impacts that cannot be alleviated without imposing an alternative design, their implications and the reasons why the project is being proposed, notwithstanding their effect, should be described."

According to Section 15126 of the *State CEQA Guidelines*, an EIR must include the following as part of its analysis, as addressed in this chapter:

1. Significant short- and long-term environmental effects associated with project implementation (Section 6.1, Short-and Long-Term Implications);

2. Significant environmental effects due to wasteful, inefficient, or unnecessary consumption use of energy, or wasteful use of energy resources (Section 6.2, Energy Impacts);

3. Significant environmental effects that cannot be avoided if the proposed project is implemented (Section 6.3, Summary of Significant Unavoidable Impacts);

4. Significant irreversible environmental changes that would result from implementation of the proposed project (Section 6.4, Significant Irreversible Environmental Changes); and

5. Growth-inducing impacts resulting from implementation of the proposed project (Section 6.5, Growth-Inducing Impacts).

6.1 SHORT-AND LONG-TERM IMPLICATIONS

Section 15126.2(a) of the *State CEQA Guidelines* requires that an EIR identify and focus on the significant effects of the proposed project on the environment. Specifically, Section 15126.2(a) states:

> "Direct and indirect significant effects of the project on the environment shall be clearly identified and described, giving due consideration to both the short-term and long-term effects. The discussion should include relevant specifics of the area, the resources involved, physical changes, alterations to ecological systems, and changes induced in population distribution, population concentration, the human use of the land (including commercial and residential development), health and safety problems caused by the physical changes, and other aspects of the resource base such as water, historical resources, scenic quality, and public services. The EIR shall

> also analyze any significant environmental effects the project might cause or risk exacerbating by bringing development and people into the area affected."

The proposed project involves the reasonably foreseeable buildout allowed under the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan), which City of Cypress voters approved as part of the Housing Element Implementation project. The reasonably foreseeable buildout under the Specific Plan includes an additional 1,791 residential units and 440,000 square feet of non-residential development.

The proposed project includes the requested approval of VTTM 19274, which includes approximately 151.6 acres split into 14 lots, of which approximately 134 acres are located within the Buildout Area. In accordance with the approved Specific Plan, the proposed project includes residential development in the Buildout Area on Lots 2 through 4 and 7, residential and non-residential development on Lots 10 through 14, and the development of park and recreational improvements on Lots 1, 5 and 6.

As discussed in Section 4.4, Biological Resources, the Buildout Area is located within an urban, built-out area in Cypress and is currently disturbed and developed with existing uses. Existing vegetation communities and land covers within the Buildout Area consist mostly of ornamental and ruderal grassland, and no habitat for Special-Status Natural Communities exists in the Buildout Area. While 73 species-status plant and animal species are known to occur within the project site vicinity, no special-status species were observed within the Buildout Area during the reconnaissance survey. In addition, compliance with **Regulatory Compliance Measures BIO-1** and **BIO-2** and implementation of **Mitigation Measure BIO-1** would ensure that any potential impacts to special-status species, communities, or jurisdictional waters would be less than significant. Therefore, future development associated with the proposed project would not alter existing ecological systems in the Buildout Area.

Future construction facilitated by the proposed project would not result in health and safety issues, as all future development within the Buildout Area requiring discretionary actions would be required to adhere to all applicable health and safety regulations, as specified in Section 4.9, Hazards and Hazardous Materials, during construction and operation. In addition, demolition activities associated with the proposed project would not commence without a demolition permit and compliance with **Mitigation Measure HAZ-1**. **Mitigation Measure HAZ-1** requires an asbestos survey be completed prior to demolition, ensuring no impacts to health and safety would occur during future demolition. Therefore, the future development facilitated by the proposed project would not cause any health and safety issues.

As discussed in Section 4.10, Hydrology and Water Quality, the proposed project would be required to include construction and operational Best Management Practices (BMPs) to reduce impacts to water quality and hydrology in compliance with local ordinances and plans adopted to comply with requirements of the various applicable NPDES permits. Specifically, if construction of a future development project associated with the proposed project would disturb greater than one acre of

soil, that project would be subject to the requirements of the Construction General Permit[1], as specified in **Regulatory Compliance Measure HYD-1**. The construction contractor would be required to prepare a SWPPP and implement construction BMPs detailed in the SWPPP during construction activities. The SWPPP would detail the BMPs to be implemented during construction. Construction BMPs would include, but not be limited to, Erosion Control and Sediment Control BMPs designed to minimize erosion and retain sediment onsite, and Good Housekeeping BMPs to prevent spills, leaks, and discharge of construction debris and waste into receiving waters.

If construction of a future development project associated with the proposed project would disturb less than one acre of soil and are not a part of a larger common plan, that project would be required to comply with Section 4.106 of the 2022 California Green Building Standards Code (CALGreen Code), as specified in **Regulatory Compliance Measure HYD-1**. Section 4.106 of the CALGreen Code requires implementation of BMPs to prevent flooding and erosion and to retain sediment onsite. In addition, groundwater dewatering activities during excavation would be conducted in accordance with the Groundwater Dewatering Permit[2], as specified in **Regulatory Compliance Measure HYD-2**, which requires testing and treatment (as necessary) of groundwater encountered during groundwater dewatering prior to release to the storm drain system. As a result, groundwater dewatering would not introduce pollutants to receiving waters at levels that would violate water quality standards or waste discharge requirements, degrade water quality, increase pollutant discharge, or alter the quality of the receiving waters.

The proposed project would be required to comply with the requirements of the Orange County MS4 Permit[3], as required by Chapter 13-23 of the Cypress Municipal Code and specified in **Regulatory Compliance Measure HYD-3.** Consistent with the Orange County MS4 Permit, the proposed project would implement Source Control and LID BMPs, including biotreatment BMPs (either detention basins and/or proprietary flow-based biofiltration systems, depending on the design considerations of the final buildout condition), to capture and treat stormwater runoff before discharging stormwater to the surrounding storm drain system. The proposed BMPs would target and reduce pollutants of concern from runoff from the Buildout Area in compliance with the Orange County MS4 Permit requirements, Orange County DAMP, and City of Cypress LIP. Overall, compliance with the above requirements, including incorporation of construction and operational BMPs to target pollutants of concern, would ensure that water quality impacts, degradation of water quality, increased pollutant discharge, and alteration of receiving water quality during project construction and operation would be less than significant.

---

1 SWRCB. 2022. *National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (General Permit), Order WQ 2022-0057-DWQ, NPDES No. CAS000002*. Adopted September 8.

2 Santa Ana RWQCB. 2020. The *General Waste Discharge Requirements for Discharges to Surface Waters that Pose an Insignificant (De Minimis) Threat to Water Quality*, *Order No. R8-2020-0006, NPDES No. CAG998001.* June 19.

3 Santa Ana RWQCB. *Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the Incorporated Cities of Orange County within the Santa Ana Region Areawide Urban Storm Water Runoff Orange County, Order R8-2009-0030, NPDES No. CAS618030, as amended by Order No. R8-2010-0062.*

As described in Section 4.1, Aesthetics, development facilitated by the proposed project would be consistent with the approved Specific Plan and would not result in any impacts to aesthetic resources. In addition, the Buildout Area is in an urban area with surrounding and existing development. Therefore, the proposed project would not result in any impacts related to scenic quality.

Public services providers within the jurisdiction of the Buildout Area include the Orange County Fire Authority (OCFA), the Cypress Police Department (CPD), the City of Cypress Recreation and Community Services Department, the Orange County Public Library (OCPL), the Cypress School District (CSD), the Los Alamitos Unified School District (LAUSD), and the Anaheim Union High School District (AUHSD). As discussed in Section 4.15, Public Services, future development facilitated by the proposed project would not result in any substantial adverse physical impacts associated with the provision of public services. All indirect and direct population, housing, and employment growth associated with the proposed project would be consistent with SCAG growth projections for the City and region. In addition, future development facilitated by the proposed project would be required to pay fire, school, and park development fees to ensure adequate provision of public services under buildout conditions. Therefore, the proposed project would not result in any adverse impacts related to the provision of public services.

As discussed in Section 4.5, Cultural Resources, the grandstand, 1954 quarter-mile chute, and pre-1970 track are considered character-defining features of the LARC Property and collectively constitute a "historic resource" for the purposes of CEQA. Implementation of the proposed project and development of the land uses allowed by the Specific Plan within the Buildout Area would require the demolition and removal of all or a substantial portion of the existing improvements associated with the LARC Property, including the historic elements described above, as well as the post-1970 extension of the race track non-historic buildings, barns and structures and three artificial lakes. Based on *State CEQA Guidelines* Section 15064.5(b), the proposed project would have a significant impact on historical resources if it would cause a substantial adverse change in the significance of a historical resource. Demolition is considered a material impairment of the historical resource and, other than avoiding demolition, no feasible mitigation measures are available to fully mitigate the demolition of the historical resource to a less than significant level. Implementation of **Mitigation Measures CUL-1** through **CUL-3**, which requires documentation of the historic resource in accordance with the Historic American Building Survey (HABS) standards, would reduce the impacts on the historical resource but would not reduce it to a level of insignificance. Because implementation of the proposed project would demolish the identified historical resource, implementation of the proposed project would result in a substantial adverse change to a historic resource under CEQA. Therefore, the impact on built-environment historic resources as defined in *State CEQA Guidelines* Section 15064.5 would be significant and unavoidable.

Implementation of the proposed project would result in less than significant impacts related to biological resources, population and housing, hazards and hazardous materials (including health and safety impacts), water quality, aesthetics, and public services with adherence to applicable regulatory requirements and implementation of identified mitigation measures.

6.2 ENERGY IMPACTS

According to Section 15126.2(b) of the *State CEQA Guidelines*, "[i]f analysis of the project's energy use reveals that the project may result in significant environmental effects due to wasteful, inefficient, or unnecessary consumption use of energy, or wasteful use of energy resources, the EIR shall mitigate that energy use."

As described in Section 4.3, Energy, the proposed project would result in less than significant impacts related to energy use.

Construction associated with the Buildout Area pursuant to the Specific Plan is estimated to consume approximately 5,892,834.6 gallons of gasoline and approximately 2,352,156.6 gallons of diesel fuel. When averaged over the 12-year construction schedule, the proposed project is estimated to consume approximately 491,069.5 gallons of gasoline per year and 196,013.0 gallons of diesel fuel per year during construction. When compared to gasoline and diesel consumption in Orange County, construction associated with buildout of the proposed project is estimated to increase the annual fuel consumption from vehicle trips in Orange County by approximately 0.6 percent for gasoline fuel usage and approximately 1.4 percent for diesel fuel usage. Due to the minimal increase in annual fuel consumption in Orange County, project construction activities would have a negligible effect on local and regional energy supplies.

Furthermore, no unusual project characteristics would necessitate the use of construction equipment that would be less energy efficient than at comparable construction sites in the region or the State. In addition, construction activities are not anticipated to result in inefficient use of energy as gasoline and diesel fuel would be supplied by construction contractors who would conserve the use of their supplies to minimize their costs on the project. The proposed project would also utilize construction equipment that meets Tier 2 emissions standards or higher, which would ensure fuel efficiency. For these reasons, the proposed project would not cause wasteful, inefficient, or unnecessary consumption of energy resources during construction, and impacts would be less than significant.

Operational activities associated with the buildout of the proposed project would result in energy demand associated with natural gas use, electricity consumption, and fuel used for vehicle trips. Operation of the proposed project is estimated to negligibly increase the annual natural gas consumption in Orange County by approximately 0.03 percent. Further, operation of the proposed project is estimated to negligibly increase the annual electricity consumption in Orange County by 0.06 percent. Electrical and natural gas demand associated with project operations would not be considered inefficient, wasteful, or unnecessary. Furthermore, the proposed project would be constructed using energy-efficient modern building materials and construction practices, and would use new modern appliances and equipment, in accordance with the Appliance Efficiency Regulations (Title 20, CCR Sections 1601 through 1608). Future development would also be designed to meet sustainability goals, including the CALGreen Code and Title 24 energy efficiency requirements. CALGreen Code and Title 24 building energy efficiency standards establish minimum efficiency standards related to various building features, including appliances, water and space heating and cooling equipment, building insulation and roofing, and lighting, which would reduce energy usage.

As described in Section 4.6, Greenhouse Gas Emissions, **Mitigation Measure GHG-1** requires that individual development projects in the Buildout Area either be all-electric or incorporate additional emission reduction measures if all-electric development is not feasible, which would further reduce energy usage. Although energy consumption is largely a function of personal choice and the physical structure and layout of buildings, the expected energy consumption during operation of the proposed project would be consistent with typical usage rates for residential and non-residential uses. As such, electrical and natural gas demand associated with project operations would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region.

Vehicle trips associated with the proposed project are estimated to increase the annual fuel use in Orange County by approximately 0.03 percent for gasoline fuel usage and approximately 0.02 percent for diesel fuel usage. In addition, as discussed further in Section 4.17, Transportation, future development under the proposed project would be required to implement **Mitigation Measure TRA-1**, which requires the implementation of feasible TDM strategies to mitigate the proposed project's VMT impact. The TDM strategies include constructing or improving bicycle facilities that would connect the proposed project to the existing regional bicycle network and improving the pedestrian network, including the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area. As such, implementation of **Mitigation Measure TRA-1** would help to reduce project-generated vehicle trips and VMT and encourage travel by other modes. Therefore, fuel consumption associated with vehicle trips generated by project operations would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region.

As demonstrated above, because the proposed project would not result in the wasteful, inefficient, or unnecessary consumption of energy, potential impacts related to conflict with or obstruction of a State or local plan for renewable energy or energy efficiency would also be less than significant. Therefore, impacts to energy would be less than significant, and no mitigation is required.

6.3 SUMMARY OF SIGNIFICANT UNAVOIDABLE IMPACTS

The Executive Summary of this document (Chapter 1.0) contains a detailed summary that identifies the proposed project's environmental impacts as compared to existing conditions, recommended feasible mitigation measures, and the level of significance of impacts after mitigation. The following is a summary of impacts considered significant, adverse, and unavoidable with all feasible mitigation. These impacts are also described in detail in Chapter 4.0, Existing Environmental Setting, Environmental Analysis, Impacts, and Mitigation Measures.

6.3.1 Air Quality

6.3.1.1 Operational Air Quality Emissions

As discussed in Section 4.3, Air Quality, operation of the proposed project would result in VOC emissions that would exceed the SCAQMD's significance criteria even with implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1**. As there are no additional feasible mitigation measures that would reduce project operational-source VOC emissions to a less than significant level, operation of the proposed project would result in a significant and unavoidable

impact related to a cumulatively considerable net increase of a criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard.

6.3.1.2 Conflict with Applicable Air Quality Plans

As discussed in Section 4.3, Air Quality, the proposed project would not exceed the growth assumptions in the SCAG's 2024–2050 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (Connect SoCal 2024) or the 2022 AQMP; however, the proposed project would have the potential to conflict or obstruct implementation of applicable air quality plans as the buildout of the proposed project would result in significant and unavoidable long-term operational pollutant emissions. Although there is no feasible mitigation to reduce operational pollutant emissions to a less than significant level, **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1** would incorporate design features that would contribute to reducing criteria air pollutant emissions generated during operational activities associated with the proposed project. Overall, even with implementation of **Mitigation Measure AIR-1** and **Mitigation Measure TRA-1,** the proposed project would result in a significant and unavoidable impact associated with conflict with applicable air quality management plans.

6.3.2 Cultural Resources

6.3.2.1 Historical Resources

As discussed in Section 4.5, Cultural Resources, the grandstand, 1954 quarter-mile chute, and pre-1970 track are considered character-defining features of the LARC Property and collectively constitute a "historical resource" for the purposes of CEQA. Implementation of the proposed project and development of the land uses allowed by the Specific Plan within the Buildout Area would require the demolition and removal of all or a substantial portion of the existing improvements associated with the LARC Property, including the historic elements described above, as well as the post-1970 extension of the race track, non-historic buildings, barns and structures and two artificial lakes. Based on *State CEQA Guidelines* Section 15064.5(b), the proposed project would have a significant impact on historical resources if it would cause a substantial adverse change in the significance of a historical resource. Demolition is considered a material impairment of the historical resource and no feasible mitigation measures are available to mitigate the demolition of the historical resource to a less than significant level. Implementation of **Mitigation Measures CUL-1** through **CUL-3**, which require documentation of the historic resource in accordance with the Historic American Building Survey (HABS) standards, would reduce the impact on the historical resource, but would not reduce it to a less than significant level.

Because implementation of the proposed project would result in the demolition of the identified historic resource, implementation of the proposed project would result in a substantial adverse change to a historic architectural resource under CEQA. Therefore, the impacts on the historic resource (as defined in *State CEQA Guidelines* Section 15064.5) would be significant and unavoidable..

6.3.3 Transportation

6.3.3.1 Vehicle Miles Traveled (VMT)

As discussed in Section 4.17, Transportation, the Home-Based VMT per Capita for the proposed project would be higher than the County's residential VMT significance thresholds under both existing and cumulative plus project conditions, resulting in a Home-Based VMT per Capita that would exceed the significance threshold by 11.6 percent. Implementation of **Mitigation Measure TRA-1** would require the proposed project to implement TDM measures to reduce overall VMT in order to contribute to achieving the overall VMT reduction target of 11.6 percent. However, even with implementation of **Mitigation Measure TRA-1**, the proposed project's residential VMT impact would remain above the established thresholds and the impact would be significant and unavoidable.

6.4 SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL CHANGES

Section 15126.2 (d) of the *State CEQA Guidelines* requires that an EIR consider and discuss significant irreversible changes that would be caused by implementation of the proposed project. Specifically, Section 15126.2 (d) states:

> "Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly, secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also irreversible damage can result from environmental accidents associated with the project. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified."

Generally, a project would result in significant irreversible environmental changes if the proposed consumption of resources is not justified, if the project would involve a large commitment of nonrenewable resources, or if the project would involve uses in which irreversible damage could result from any potential environmental accidents associated with the project.

As previously mentioned, the proposed project consists of the reasonably foreseeable buildout under the approved Specific Plan, including the construction of up to 1,791 residential units and 440,000 square feet of non-residential space. The commitment of limited, slowly renewable, and nonrenewable resources required for construction and operation of future development would limit the availability of these resources for future generations or for other uses during the life of the project. However, the proposed project would utilize minimal limited, slowly renewable, or nonrenewable resources during project construction and operation, including natural gas. In addition, as discussed above, the proposed project would not result in significant individual or cumulative impacts associated with the use of natural gas. Therefore, the proposed project would not result in a commitment of limited, slowly renewable, and nonrenewable resources, and thus, would not result in significant irreversible changes.

6.5 GROWTH-INDUCING IMPACTS

Sections 15126(d) and 15126.2(e) of the *State CEQA Guidelines* require that an EIR analyze growth-inducing impacts and discuss the ways in which a proposed project could foster economic or population growth or construction of additional housing, either directly or indirectly, in the surrounding environment. This section examines ways in which the proposed project could foster economic or population growth, or the construction of additional housing either directly or indirectly in the surrounding environment. *State CEQA Guidelines* Section 15126.2(d) also requires a discussion of the characteristics of projects that may encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively. To address these issues, potential growth-inducing effects were examined through analysis of the following questions:

- Would the project remove obstacles to, or otherwise foster, population growth (e.g., through the construction or extension of major infrastructure facilities that do not presently exist in the project area, or through changes in existing regulations pertaining to land development)?

- Would the project foster economic growth?

- Would approval of the project involve some characteristic that may encourage and facilitate other activities that could significantly affect the environment?

Growth-inducing effects are not to be construed as necessarily beneficial, detrimental, or of little significance to the environment (*State CEQA Guidelines*, Section 15126.2(e)). This issue is presented to provide additional information on ways in which the proposed project could contribute to significant changes in the environment beyond the direct consequences of developing the proposed land uses as described in earlier sections of this Draft EIR.

6.5.1 Removal of Obstacles to, or Otherwise Foster, Population Growth

The proposed project includes the reasonably foreseeable buildout of the Specific Plan, including the construction of up to 1,791 residential units and 440,000 square feet of non-residential space within the Buildout Area. In addition, buildout of the proposed project would include the expansion or extension of three existing roadways to serve the Buildout Area, including expanding a portion of Lexington Drive, the extension of Vessels Circle and the extension of Moody Street to connect to Siboney Street to serve the Buildout Area, consistent with the Circulation Plan included in the approved Specific Plan. As discussed in Section 4.14, Population and Housing, future development facilitated by the proposed project would result in a net increase of approximately 5,516 persons at full buildout. However, according to the Connect SoCal 2024 population projections, this population increase is within the expected population growth of 7,418 people estimated for the City of Cypress. Therefore, the increase in housing and population associated with buildout of the proposed project would be limited to fostering expected growth in the region and project vicinity.

As such, the proposed project is consistent with planned regional housing growth and planned population growth of the City. Although the proposed project would facilitate the development of new housing in the City, the new housing would not induce substantial unplanned population growth, as the proposed project is designed to meet the City's housing need. Therefore, the

proposed project would not cause indirect substantial unplanned population growth through the extension of roads and other infrastructure. Impacts associated with unplanned population growth, directly or indirectly, would be less than significant and no mitigation would be necessary.

6.5.2 Foster Economic Growth

The proposed project consists of the reasonably foreseeable buildout of the Buildout Area with up to 1,791 residential units and 440,000 square feet of non-residential floor area, including opportunities for commercial uses. Therefore, buildout under the Specific Plan would represent a response to the City's economic growth and encourage economic growth.

Economic growth could be expected from buildout of the proposed project because it would allow for residential occupation within walking distance of commercial retail establishments. Buildout under the Specific Plan would encourage walkability within the area and could therefore provide retail establishments with an expanded consumer base and potentially increase commercial activity in the project vicinity. However, this increased commercial activity would be consistent with the City's economic development goals for the Buildout Area established in the previously approved Specific Plan. As a result, the proposed project is not considered to foster economic growth, and therefore, the proposed project would not result in any economic growth-inducing impacts.

6.5.3 Other Characteristics

Approval of the proposed project would not involve any characteristics that may encourage and facilitate other activities that could significantly affect the environment.

7.0 LIST OF PREPARERS AND PERSONS CONSULTED

7.1 CITY OF CYPRESS

The following individuals from the City of Cypress (City) were involved in the preparation of this Draft Environmental Impact Report (Draft EIR):

- Alicia Velasco, Planning Director

7.2 DRAFT EIR PREPARERS

The following individuals were involved in the preparation of this Draft EIR. The nature of their involvement is summarized below.

7.2.1 LSA Associates, Inc.

The following individuals were involved in the preparation of this Draft EIR:

- Ryan Bensley, AICP, Principal in Charge/Project Manager
- Brianna Shaw, Senior Environmental Planner
- Lynnea Palecki, Environmental Planner
- Lauren Peachey, Environmental Planner
- Jaelyn Law, Assistant Environmental Planner
- Pam Reading, Principal Environmental Planner
- JT Stephens, Executive Vice President
- Mohammed Abushanab, Mechanical Noise Engineer
- Jason Thomas, Graphics and GIS Specialist
- Amy Fischer, President/COO
- Jessica Coria, Air Quality Principal
- Cara Cunningham, Associate/Senior Air Quality Specialist
- Bianca Martinez, Air Quality Specialist
- Lauren Johnson, Senior Technical Editor
- Chantik Virgil, Senior Word Processor

7.3 TECHNICAL REPORT PREPARERS

The following individuals were involved in the preparation of the technical reports in support of this Draft EIR. The nature of their involvement is summarized below.

7.3.1 LSA Associates, Inc.

The following individuals were involved in the preparation of the *Biological Resources Assessment, Specific Plan 3.0 Buildout Project, Cypress, Orange County, California* (February 2026):

- Carla Cervantes, Senior Biologist
- Amber Heredia, Principal
- Jeremy Rosenthal, Biologist

- Jessica Quigley, GIS Specialist
- Carie Wingert, Associate
- Christiana Kent, Biologist

The following individual was involved in the preparation of the *Historic Resources Assessment Addendum to the Housing Element Implementation Project to support Specific Plan 3.0 Implementation Project, Cypress* (November 2025):

- Casey Tibbet, Associate

7.3.2 Geotechnologies, Inc.

The following individual was involved in the preparation of the *Environmental Impact Report Soils and Geology Issues, Proposed Mixed-Use Development, 4961 Katella Avenue and 5100 Cerritos Avenue, Cypress, California* (May 2024):

- Gregorio Varela, RCE

7.3.3 Partner Engineering and Science, Inc.

The following individuals were involved in the preparation of the *Phase I Environmental Site Assessment Report Update, Los Alamitos Race Course Redevelopment, 4961 Katella Avenue, Cypress, California 90720* (July 2025):

- Brooklyn Marcus, Environmental Scientist
- Richard Kim, Environmental Professional

7.3.4 TAIT & Associates, Inc.

The following individual was involved in the preparation of the *Master Plan of Drainage for Specific Plan 3.0 Buildout Project, 4961 Katella Avenue, Cypress, CA* (September 2025) and the *Preliminary Water Quality Management Plan, Specific Plan 2.0 Buildout Project* (October 2025):

- Daniela Malott, PE

The following individual was involved in the preparation of the *Sewer Capacity Study for Specific Plan 2.0 Buildout Project, 4961 Katella Avenue Cypress, CA 90720* (September 2025):

- Jacob Vandervis, PE

7.4 PERSONS CONSULTED

The following agencies and individuals were consulted during the preparation of this Draft EIR:

- Cypress Police Department (CPD)
  - Captain Scott Ausmus
- Orange County Fire Authority
  - Fire Prevention Department
- Gabrieleno Band of Mission Indians – Kizh Nation
  - Andrew Salas, Chairperson
- Golden State Water Company, Los Alamitos Service Area
- Orange County Sanitation District
  - Adrian Siew, P.E.
- AT&T
  - Steve Ciolek
- Southern California Edison (SCE)
  - Jim Parkin
- Southern California Gas Company (SoCalGas)
- Charter Communications
  - Aurelio Martinez

ORDINANCE NO. ____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF CYPRESS, CALIFORNIA, APPROVING A DEVELOPMENT AGREEMENT BY AND BETWEEN THE CITY OF CYPRESS AND LOS ALAMITOS RACE COURSE, and CYPRESS GC, LLC, FOR THE DEVELOPMENT OF THE LOS ALAMITOS RACE COURSE PROPERTY AND ADOPTING FINDINGS IN SUPPORT THEREOF.

WHEREAS, Government Code §§ 65864 *et seq*. (the "Development Agreement Statute") authorizes the City to enter into a binding Development Agreement ("DA" or "Development Agreement") with any person having a legal or equitable interest in real property for the development of such property and establishing certain development rights therein, all for the purpose of strengthening the public planning process, encouraging private participation and comprehensive planning and identifying the economic costs of such development; and

WHEREAS, pursuant to the Development Agreement Statute, City has adopted procedures and requirements for the consideration of development agreements, which are set forth in City of Cypress Municipal Code ("Municipal Code"), Appendix I (Zoning), Section 4.21.40 ("City Development Agreement Procedures"); and this DA has been prepared, processed, considered and adopted in accordance with such procedures and the Development Agreement Statute; and

WHEREAS, LOS ALAMITOS RACE COURSE, a California general partnership, and CYPRESS GC, LLC, a California limited liability (collectively, "Property Owner") (including its Transferee(s) as that term is defined in the DA) proposes to subdivide approximately 151 acres of the Los Alamitos Race Course property, of which 130 acres is subject to this DA, to facilitate the reasonable buildout of the Cypress Town Center and Commons 3.0 Specific Plan including up to 1,791 residential units and up to 440,000 square feet of commercial space (collectively, the "Project"); and

WHEREAS, City and Property Owner propose to enter into the DA that is attached hereto as Exhibit A; and

WHEREAS, as set forth in more detail in the DA, City has determined that redevelopment of the Site with the Project will facilitate achievement of numerous goals and policies and is consistent with the actions, goals, objectives and policies of the City's General Plan, the Cypress Town Center and Commons 3.0 Specific Plan ("Specific Plan"), as amended, and the Municipal Code; is in the best interests of the City of Cypress; and is in conformity with and will promote the public convenience, health, interest, safety, general welfare, and good land use practices; and

WHEREAS, the discretionary entitlement process for the Project is subject to compliance with the California Environmental Quality Act (CEQA); and to satisfy requirements under CEQA, City, as the lead agency, has caused a Final Environmental

Impact Report (EIR) (as that term is defined in the DA) to be prepared, and then processed the EIR in accordance with the applicable requirements of CEQA; and

WHEREAS, the City Council of the City of Cypress did, on July 14, 2026, hold a duly noticed public hearing to consider the EIR, the Vesting Tentative Tract Map No. 19247, and the Development Agreement. Following receipt of public testimony and consideration of all evidence and documentation in the record, the City Council closed the public hearing, deliberated, certified the Final EIR as reflecting the City's independent judgment and analysis and as having been completed in compliance with CEQA, approved the Vesting Tentative Tract Map No. 19247, and introduced this Ordinance for first reading; and

WHEREAS, all actions required to be taken by City precedent to the adoption of this Ordinance have been regularly and duly taken.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF CYPRESS, CALIFORNIA, DOES HEREBY ORDAIN AS FOLLOWS:

Section 1. Findings. The City Council hereby finds and determines as follows:

(a) Approval of the DA is in the best interests of the City; and
(b) The DA is consistent with the actions, goals, objectives, and policies of the General Plan, the Specific Plan, and the City's zoning ordinance; and
(c) The DA will promote the public convenience, health, interest, safety, and welfare of the City.

Section 2. Approval. The City Council hereby approves and adopts the DA in the form presented to the City Council concurrent with the approval and adoption of this Ordinance, which form is attached hereto as Exhibit A. The City Council authorizes and directs the Mayor to execute the DA on behalf of the City, and the City Clerk to record the DA in the Official Records of Orange County in accordance with applicable law.

Section 3. Environmental. The City has caused to be prepared the EIR, which analyzed the Project's potential environmental impacts and therefore considered the Project including, among others, the DA. The City certified the EIR on July 14, 2026.

Section 4. Effective Date. This Ordinance shall be in full force and effect thirty (30) days after its adoption.

Section 5. Posting. The City Clerk shall certify the passage and adoption of this Ordinance, and shall cause the same to be posted in at least three public places designated by resolution of the City Council, and shall cause this Ordinance and its certification, together with proof of posting, to be entered into the Book of Ordinances of this City.

FIRST READ at a regular meeting of the City Council of said City held on the 14th day of July, 2026 and finally adopted and order posted at a regular meeting held on the 25th day of August, 2026.

PASSED, APPROVED and ADOPTED this 25th day of August, 2026.

_____

MAYOR OF THE CITY OF CYPRESS

ATTEST:

_____

CITY CLERK OF THE CITY OF CYPRESS

DEVELOPMENT AGREEMENT

(Specific Plan 3.0 Buildout Project)

This Development Agreement ("**Agreement**"), dated for reference purposes as of July ___, 2026, is executed by and between the CITY OF CYPRESS, a municipal corporation of the State of California (the "**City**"), on the one hand, and LOS ALAMITOS RACE COURSE, a California general partnership, and CYPRESS GC, LLC, a California limited liability (collectively, "**Property Owner**"), on the other hand, with respect to the following facts and circumstances:

RECITALS

A. On November 5, 2024, the voters of the City approved the Cypress Town Center and Commons Specific Plan 3.0 (the "**Specific Plan**") pursuant to "Measure S." The Specific Plan establishes a comprehensive master plan and regulatory framework for the use and development of approximately 151.4 acres of land in the City of Cypress, County of Orange, State of California (the "**Specific Plan Area**").

B. Property Owner owns fee title to and otherwise has a legal or equitable interest in approximately 134 acres of the land and improvements thereon within the Specific Plan Area, which land is more particularly described on **Exhibit A** and depicted on **Exhibit B**, each attached hereto and incorporated herein by this reference (the "**Property**").

C. Property Owner applied to the City for approval of Vesting Tentative Map No. 19247 ("**VTTM 19247**"), which (i) divides land that includes the Property, together with other land currently owned by Grace Community Church of Cypress dba Seacoast Grace Church ("**Grace Church**"), into 14 numbered lots and 4 lettered lots that include existing and planned roadways, (ii) is consistent with the land use districts in the Specific Plan, and (iii) facilitates the development of up to 1,791 residential units and up to 440,000 square feet of non-residential uses on the Property pursuant to the Specific Plan (the "**Project**"). It is anticipated that Property Owner will sell all or portions of the Property to one or more third parties to carry out the development of the Property in accordance with the Specific Plan.

D. To obtain approval of a vesting tentative map, Cypress Municipal Code ("**Municipal Code**") Chapter 25, Article IX contains comprehensive submittal requirements that must be satisfied before a vesting tentative map may be accepted as or deemed complete; provided, however, that the City's Director of Public Works/City Engineer has the authority to waive said submittal requirements if (i) the submittal requirements are deemed unnecessary, duplicative, or inapplicable to a particular development proposal, (ii) a finding is made that the public health, safety, or welfare will not be placed in jeopardy or danger, and (iii) a finding is made that prudent public policy and decision-making will not be hampered by the waiving of submittal requirements. Through this Agreement Property Owner seeks to provide assurances to the City sufficient to make the findings set forth in the preceding sentence.

E. The planning and zoning approvals for the development of the Project on the Property obtained prior to the Effective Date (as defined in Section 1.1, below) of this Agreement (collectively, the "**Development Approvals**") include, but are not limited to, the following:

(a) The Specific Plan;

(b) VTTM 19247;

(c) Final Environmental Impact Report, State Clearinghouse Number 2025040377 (the "**Final EIR**"); and

(d) Mitigation Monitoring and Reporting Program (the "**MMRP**") attached hereto as **Exhibit C**.

F. To strengthen the public planning process, encourage private participation in comprehensive planning and reduce the economic risk of development, the Legislature of the State of California adopted the Development Agreement Law (as defined in Section 1.1, below) which authorizes any city to enter into binding development agreements establishing certain development rights in real property with Persons having legal or equitable interests in such property. Section 65864 of the Government Code, which is part of the Development Agreement Law, provides in part as follows:

The Legislature finds and declares that:

(a) The lack of certainty in the approval of development projects can result in a waste of resources, escalate the cost of housing and other development to the consumer, and discourage investment in and commitment to comprehensive planning which would make maximum efficient utilization of resources at the least economic cost to the public.

(b) Assurance to the applicant for a development project that upon approval of the project, the applicant may proceed with the project in accordance with existing policies, rules and regulations, and subject to conditions of approval, will strengthen the public planning process, encourage private participation in comprehensive planning, and reduce the economic costs of development.

G. Sections 65865.2 and 65866 of the Government Code, which are part of the Development Agreement Law, specify the required, allowed, and prohibited contents of a development agreement as follows:

(a) A development agreement shall specify the duration of the agreement, the permitted uses of the property, the density or intensity of use, the maximum height and size of proposed buildings, and provisions for reservation or dedication of land for public purposes.

(b) The development agreement may include conditions, terms, restrictions, and requirements for subsequent discretionary actions, provided that such conditions, terms, restrictions, and requirements for subsequent discretionary actions shall not prevent development of the land for the uses and to the density or intensity of development set forth in the agreement.

(c) The agreement may provide that construction shall be commenced within a specified time and that the project or any phase thereof be completed within a specified time.

(d) The agreement may also include terms and conditions relating to applicant financing of necessary public facilities and subsequent reimbursement over time.

(e) Unless otherwise provided by the development agreement, rules, regulations, and official policies governing permitted uses of the land, governing density, and governing design, improvement, and construction standards and specifications, applicable to development of the property subject to a development agreement, shall be those rules, regulations, and official policies in force at the time of execution of the agreement.

(f) A development agreement shall not prevent a city, in subsequent actions applicable to the property, from applying new rules, regulations, and policies which do not conflict with the rules, regulations and official policies described in the preceding sub-paragraph, nor shall a development agreement prevent a city, from denying or conditionally approving any subsequent development project application on the basis of these existing or new rules, regulations, and policies.

The foregoing provisions are also set forth Appendix I, Article 4, Section 21 (Development Agreements) of the Municipal Code, which implements the Development Agreement Law and further authorizes the execution of this Agreement.

H. Property Owner and City have agreed to enter into this Agreement pursuant to the Development Agreement Law and Appendix I, Article 4, Section 21 of the Municipal Code to memorialize and secure the respective expectations of City and Property Owner such that Property Owner may proceed with the Project in accordance with the Vested Regulations (as defined in Section 1.1, below), subject to the provisions of this Agreement.

I. The City and Property Owner recognize that the development of the Property will create significant opportunities for housing and economic growth in the City.

J. Property Owner wishes to obtain reasonable assurances that the Project may develop in accordance with the Vested Regulations, including without limitation the Specific Plan and VTTM 19247, subject to the terms of this Agreement.

K. Property Owner and/or one or more Transferees (as defined in Section 1.1, below) will provide public benefits above and beyond the otherwise allowable conditions of approval and Mitigation Measures (as defined in Section 1.1, below) for the Project.

L. By entering into this Agreement, the City is encouraging the development of the Project as set forth in this Agreement in accordance with the goals and objectives of the City, while reserving to the City the legislative powers necessary to remain responsible and accountable to its residents.

M. The City Council of the City of Cypress ("**City Council**") has specifically considered the advantages and impacts of the Project and found that this Agreement is in the best public interest of City and its residents. Adopting this Agreement constitutes a present exercise of City's police power, and reflects the findings by the City that (i) this Agreement is in the best interests of the City, (ii) this Agreement is consistent with the actions, goals, objectives, and policies of the City of Cypress General Plan (the "**General Plan**"), the Specific Plan, and Appendix I of the Municipal Code, (iii) this Agreement will promote the public convenience, health, interest, safety, or welfare of the City, (iv) the Project is consistent with the General Plan and the Specific Plan, (v) this Agreement and the Project provide for the orderly Development (as defined in Section 1.1, below) of the Property, and (vi) this Agreement provides a clear and substantial public benefit to City and/or its residents. Prior to its approval of this Agreement, the City considered the environmental impacts of the Project and completed its environmental review of the Project pursuant to CEQA (as defined in Section 1.1, below)

N. On July _____ 2026, the City Council certified the Final EIR, approved the MMRP and approved VTTM 19247.

O. Also on July ___, 2026, in accordance with the requirements of the Development Agreement Law, the City Council held a public hearing on the Property Owner's application for this Agreement, made certain findings and determinations with respect thereto, and introduced Ordinance No. _____ approving this Agreement. On July ___, 2026, the City Council adopted Ordinance No. _____, which takes effect on _____, 2026.

AGREEMENT

NOW, THEREFORE, pursuant to the authority contained in the Development Agreement Law, Appendix I, Article 4, Section 21 of the Municipal Code, and Chapter 25, Article IX of the Municipal Code , and in consideration of the above recitals and of the mutual covenants hereinafter contained and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties (as defined in Section 1.1, below) agree as follows:

1. DEFINITIONS AND EXHIBITS.

1.1. **Definitions**. This Agreement uses terms having specific meanings, as defined below. These specially defined terms are distinguished by having the initial letter capitalized, or all letters capitalized, when used in this Agreement. The defined terms include the following:

1.1.1 "**Agreement**" has the meaning set forth in the introductory paragraph of this Agreement.

1.1.2 "**Agreement Execution**" means the attestation of this Agreement by the City Clerk of the City after execution by Property Owner and the Mayor of the City.

1.1.3 "**Additional Vested Regulations**" means, as applicable to the Development of the Property, to the extent not a part of the Statutorily Vested Regulations, and to the extent in force on the Effective Date:

(a) The Development Approvals.

(b) Rules, regulations, ordinances, and official policies of the City govern the density or intensity of use of the Property, subdivision requirements, the maximum height and size of proposed buildings, parking requirements, setbacks, development standards, and the provisions for reservation or dedication of land for public purposes.

1.1.4 "**Applicable Law**" means all (a) federal and State laws, regulations and official policies applicable to the Project as of the Effective Date and as they may be amended from time to time, (b) the Vested Regulations, and (c) as of the Effective Date and as they may be amended from time to time, those local laws, regulations, and official policies that are not Vested Regulations and do not conflict with Vested Regulations.

1.1.5 "**Assessment District**" means a financing mechanism under California Law which enables the City to, with the approval of a majority of the landowners within a specified geographic area, collect special assessments to finance improvements or services within or for the benefit of that area.

1.1.6 "**B-Maps**" has the meaning set forth in Section 6.3.1, below.

1.1.7 "**B-Map Covenant Instrument**" and "**B-Map Covenant Instruments**" have the meanings set forth in Section 6.3.1, below.

1.1.8 "**B-Map Covenant Maintenance Duties**" has the meaning set forth in Section 6.3.1, below.

1.1.9 "**Building Codes**" means the building, fire, mechanical, plumbing, electrical and other technical codes and regulations now or hereafter adopted by the City, including without limitation all provisions of the California Building Codes now or hereafter adopted by the City, subject to the City's amendments, additions, and deletions.

1.1.10 "**CD Director**" means the Director of Community Development for the City.

1.1.11 "**CEQA**" means the California Environmental Quality Act (Public Res. Code §§21000 et seq.) and the State CEQA Guidelines (14 Cal. Code Regs., §§15000 et seq.).

1.1.12 "**Certificate**" has the meaning set forth in Section 4.3, below.

1.1.13 "**City**" has the meaning set forth in the introductory paragraph of this Agreement.

1.1.14 "**City Agency**" means each and every agency, department, board, commission, authority, employee, attorney, and/or official acting under the authority of the City, including, without limitation, the City Council and the Planning Commission.

1.1.15 "**City Council**" has the meaning set forth in Recital M, above.

1.1.16 "**Claim**" means any claim, loss, cost, damage, expense, liability, lien, action, cause of action (whether in tort, contract, under statute, at law, in equity or otherwise), charge, award, assessment, fine or penalty of any kind (including consultant and expert fees, Legal Costs, and expenses and investigation costs of whatever kind or nature), including without limitation any claim that results or arises in any way from Applicable Law.

1.1.17 "**Costs**" means quantifiable expenses of any kind, including without limitation the allocated value of staff time, amounts expended for consultants and/or Legal Costs, acquisition expenses, and allocated overhead.

1.1.18 "**Default**" means the failure to perform any material duty or obligation set forth in this Agreement or to comply in good faith with the terms of this Agreement.

1.1.19 "**Deferred Amount**" has the meaning set forth in Section 5.2, below.

1.1.20 "**Deferred Obligation**" has the meaning set forth in Section 5.2, below.

1.1.21 "**Development**" means the demolition of existing improvements on the Property and the construction of new structures, improvements and facilities on the Property as part of the Project, including, but not limited to: grading; the construction of infrastructure and public facilities related to the Project whether located within or outside the Property; the construction of buildings and structures; and the installation of landscaping and improvements.

1.1.22 "**Development Approvals**" has the meaning set forth in Recital E, above.

1.1.23 "**Development Agreement Law**" means Government Code sections 65864 et seq., which governs the terms, procedures, and requirements for entering into statutory development agreements, including this Agreement.

1.1.24 "**Development Impact Fees**" means the monetary consideration charged by City in connection with development projects for the purpose of defraying all or a portion of the cost of mitigating or addressing the impacts of those projects, including providing funds for the development of public facilities. The currently applicable schedule of Development Impact Fees is set forth in **Exhibit E** attached hereto; provided, however, that the categories of Development Impact Fees, and the amount of Development Impact Fees owed in connection with the Development of the Project, shall be those applicable when building permits are issued.

1.1.25 "**Development Requirement**" means any requirement imposed by the City in connection with or pursuant to any Development Approval or Subsequent Development Approval for the dedication of land, the construction or improvement of public facilities, the payment of fees (including Development Impact Fees) or assessments in order to lessen, offset, mitigate or compensate for the impacts of Development on the environment, or the advancement of the public interest.

1.1.26 "**Discretionary Action**" means an action which requires the exercise of judgment, deliberation or a decision on the part of the City and/or any City Agency in the process of approving or disapproving a particular activity, as distinguished from Ministerial Permits and Approvals and any other activity which merely requires the City and/or any City Agency to determine whether there has been compliance with applicable statutes, ordinances and regulations.

1.1.27 "**Easement Termination**" has the meaning set forth in Section 6.6, below.

1.1.28 "**Effective Date**" means the date of Agreement Execution.

1.1.29 "**Final EIR**" has the meaning set forth in Recital E, above.

1.1.30 "**Floating Park Space**" has the meaning set forth in Section 6.9, below.

1.1.31 "**Force Majeure Delay**" means a delay in performance of this Agreement caused by strikes; acts of God; a declaration of emergency as a result of acts of God; pandemics; enemy actions; civil disturbances; wars; insurrections; terrorist acts; fires; floods; earthquakes; unavoidable casualties; referenda; or mediation, arbitration, litigation or other timely commenced administrative or judicial proceeding commenced by a third party to challenge the effectiveness of this Agreement or any Development Approvals.

1.1.32 "**General Plan**" has the meaning set forth in Recital M, above.

1.1.33 "**Grace Church**" has the meaning set forth in Recital C, above.

1.1.34 "**Legal Costs**" means for any Person, all actual and reasonable costs, and expenses such Person incurs in any legal proceeding (or other matter for which such Person is entitled to be reimbursed for its Legal Costs). All references to Legal Costs shall include the salaries, benefits and costs of in-house or contract general counsel of City or Property Owner, respectively, and the lawyers employed in the office of such general counsel who provide legal services regarding a particular matter, adjusted to or billed at an hourly rate and multiplied by the time spent on such matter rounded to increments of one-tenth (1/10th) of an hour, in addition to Legal Costs of outside counsel retained by City or Property Owner, respectively, for such matter.

1.1.35 "**Lot**" means any lot or condominium unit within the Property legally created as a result of any approved final subdivision parcel or tract map pursuant to the Map Act or recordation of a condominium plan pursuant to Civil Code section 4000 et seq..

1.1.36 "**Lots 5/6 Detention Basin**" has the meaning set forth in Section 6.1, below.

1.1.37 "**Lots 5/6 Park**" has the meaning set forth in Section 6.4, below.

1.1.38 "**Map Act**" means the California Subdivision Map Act (Gov. Code, §§ 66410 et seq.)

1.1.39 "**Master Covenant Instrument**" and "**Master Covenant Instruments**" have the meanings set forth in Section 6.3, below.

1.1.40 "**Master Covenant Maintenance Duties**" has the meaning set forth in Section 6.3, below.

1.1.41 "**Master Plan of Drainage**" means that certain Master Plan of Drainage for Specific Plan 3.0 Buildout Project dated March 11, 2026, prepared by Tait & Associates, Inc., and approved by the City.

1.1.42 "**Ministerial Permits and Approvals**" means the permits, approvals, plans, inspections, certificates, documents, licenses, and all other actions required to be taken by the City for the Development of the Project, including without limitation building permits, foundation permits, public works permits, grading permits, stockpile permits, encroachment permits, and other similar permits and approvals that are required by Applicable Law and project plans and other actions required by the Development Approvals and Subsequent Development Approvals to implement the Project. Ministerial Permits and Approvals shall not include any Discretionary Actions.

1.1.43 "**Mortgage**" has the meaning set forth in Section 9.1, below.

1.1.44 "**Mortgagee**" has the meaning set forth in Section 9.2, below.

1.1.45 "**Mitigation Measures**" means those requirements imposed on the Project contained in the MMRP.

1.1.46 "**MMRP**" has the meaning set forth in Recital E, above.

1.1.47 "**Municipal Code**" has the meaning set forth in Recital D, above.

1.1.48 "**Notice**" has the meaning set forth in Section 10.8, below.

1.1.49 "**Official Records**" means the Official Records of Orange County, California.

1.1.50 "**Party**" and "**Parties**" mean and refer to City, Property Owner and their respective duly authorized successors and assigns, including Transferees of Property Owner.

1.1.51 "**Person**" means any association, corporation, governmental entity, individual, joint venture, joint-stock company, limited liability company, partnership, trust, unincorporated organization, or other entity of any kind.

1.1.52 "**Proceeding**" has the meaning set forth in Section 8.1, below.

1.1.53 "**Processing Fees**" means all processing fees and charges required by the City or any City Agency to cover the estimated actual Costs to City of processing applications for Subsequent Development Approvals and/or Ministerial Permits and Approvals, or for monitoring compliance with any Development Approvals, Subsequent Development Approvals, and/or Ministerial Permits and Approvals granted or issued, together with the obligation to fund a deposit account with the City for the payment of such fees and charges. Without limiting the foregoing, Processing Fees include the City's normal fees for processing land use applications, project permits, environmental assessment/review, applications for grading permits and building permits (plumbing, mechanical, electrical, building), including plan check review, inspections and similar fees that are necessary to accomplish the intent and purpose of this Agreement. The amount of the Processing Fees to be applied in connection with the Development of the Project shall be the amount which is in effect for all or a substantial portion of the properties within the City (except to the City's current fee that applies solely to site plan review for projects within the Specific Plan Area) at the time an application for the City action is made, unless an alternative amount is established by the City in a subsequent agreement with Property Owner or a Transferee. For the avoidance of doubt, Development Impact Fees are not Processing Fees.

1.1.54 "**Project**" has the meaning set forth in Recital C, above.

1.1.55 "**Property**" has the meaning set forth in Recital B, above.

1.1.56 "**Property Owner**" has the meaning set forth in the introductory paragraph of this Agreement.

1.1.57 "**Property Owner Affiliate**" means any Person controlling, controlled by, or under common control with Property Owner.

1.1.58 "**Public Buildings**" has the meaning set forth in Section 6.3.1, below.

1.1.59 "**Public Property**" has the meaning set forth in Section 6.3, below.

1.1.60 "**Pump Station**" has the meaning set forth in Section 6.1, below.

1.1.61 "**Pump Station Assessment District**" has the meaning set forth in Section 6.1, below.

1.1.62 "**Required Improvements**" means the improvements to be developed as part of the Project set forth in **Exhibit D**.

1.1.63 "**Reserved Rights**" means the rights and authority excepted from the Vested Regulations, including:

(a) The right and authority to apply to the Project rules, regulations, and policies adopted after Agreement Execution which do not conflict with the Vested Regulations.

(b) The right and authority to deny or conditionally approve any application for a Subsequent Project Approval on the basis of rules, regulations, and policies adopted after Agreement Execution which do not conflict with the Vested Regulations.

(c) The right and authority to take future Discretionary Actions, including without limitation the approval of new regulations, after the approval of the Development Approvals that may conflict with the Vested Regulations, but are reasonably necessary to protect the public health, safety, and welfare.

(d) The right and authority to take future Discretionary Actions, including without limitation the approval of new regulations, after the approval of the Development Approvals that may conflict with the Vested Regulations, but are necessary to comply with State or federal laws and regulations.

(e) The right and authority to take future Discretionary Actions, including without limitation the approval of new regulations, after the approval of the Development Approvals that may conflict with the Vested Regulations, but amend existing Processing Fees or Development Impact Fees or create new Processing Fees or Development Impact Fees.

(f) The right and authority to take future Discretionary Actions, including without limitation the approval of new regulations, after the approval of the Development Approvals that may conflict with the Vested Regulations but concern the enactment, amendment and/or application of the Building Codes and/or local modifications to the Building Codes.

(g) The right and authority to establish or amend procedural regulations relating to hearing bodies, petitions, applications, notices, findings, records, hearing, reports, recommendations, appeals and any other matter of procedure, provided that such procedural regulations are not inconsistent with the Development Approvals.

(h) The right and authority to adopt and apply rules, regulations, and policies regarding the conduct of businesses, professions, and occupations.

(i) The right and authority to adopt and apply rules, regulations, and policies regarding taxes and/or assessments.

(j) The right and authority to adopt and apply rules, regulations, and policies regarding the control and abatement of nuisances.

(k) The right and authority to adopt and apply rules, regulations, and policies regarding the granting of encroachment permits and the conveyance of rights and interests which provide for the use of or the entry upon public property.

(l) The right and authority to adopt and apply rules, regulations, and policies regarding the exercise of the power of eminent domain.

(m) Rules, regulations, and policies which conflict with the Vested Regulations, provided Property Owner and/or a Transferee, as applicable, has given written consent in its or their sole discretion to the application of such rules, regulations, and policies to the Development of the portion of the Property owned by the consenting Property Owner or Transferee.

1.1.64 "**Specific Plan**" has the meaning set forth in Recital A, above.

1.1.65 "**Specific Plan Area**" has the meaning set forth in Recital A, above.

1.1.66 "**Subsequent Development Approvals**" means all further Discretionary Actions for the Development of the Project that are required of or requested by Property Owner and Transferees after the Effective Date.

1.1.67 "**Statutorily Vested Regulations**" means, as applicable to the Development of the Property, the rules, regulations, and official policies of the City governing (i) permitted uses of the land, (ii) density and (iii) design, improvement, and construction standards and specifications in force at the time of Agreement Execution.

1.1.68 "**Term**" means the period of time for which this Agreement shall be effective in accordance with Section 2.3.1, below.

1.1.69 "**Threshold Date**" has the meaning set forth in Section 6.3, below.

1.1.70 "**Traffic Study**" means the Traffic Study for the Project dated January 2026, prepared by Kimley-Horn and Associates, Inc., and approved by the City.

1.1.71 "**Transfer**" means sell, assign, transfer, or grant.

1.1.72 "**Transferee**" means a duly authorized successor in interest, assignee or transferee of all or any portion of the Property or Property Owner's rights and obligations under this Agreement pursuant to Section 2.2, below.

1.1.73 "**Vested Regulations**" means, collectively, the Statutorily Vested Regulations and the Additional Vested Regulations, but excluding and subject to the Reserved Rights.

1.1.74 "**VTTM 19247**" has the meaning set forth in Recital C, above.

1.2. **Exhibits**. The following documents are attached to, and by this reference made a part of, this Agreement:

Exhibit A Legal Description of Property.

Exhibit B Map Showing Property and Its Location.

Exhibit C Mitigation Monitoring and Reporting Program.

Exhibit D Required Improvements and Other Public Benefits.

Exhibit E Current Development Impact Fee Schedule.

Exhibit F Deferred Park Fee Repayment Schedule.

Exhibit G Form of Certificate of Compliance.

Exhibit H Form of Easement Termination.

2. **GENERAL PROVISIONS.**

2.1. **Binding Effect of Agreement**. From and following the Effective Date, the Development of the Project and City actions on applications for Subsequent Development Approvals shall be subject to the terms and provisions of this Agreement.

2.2. **Transfer and Assignment**. Any Transfer of the rights and obligations of Property Owner under this Agreement shall be subject to the satisfaction of all of the following requirements:

2.2.1 **Concurrent Transfer of Property Ownership**. No Transfer of any rights or obligations under this Agreement shall occur without the concurrent Transfer of fee title to the portion of the Property that corresponds with such rights or interests.

2.2.2 **Permitted Transfers**. Property Owner shall have the right to Transfer its rights and obligations under this Agreement to a Property Owner Affiliate in connection with a Transfer of all or any portion of Property Owner's interest in the Property to such Property Owner Affiliate. In the event of any such Transfer, (i) the Property Owner Affiliate shall be liable for performance of the obligations of Property Owner under this Agreement after the date of Transfer with respect to the portion of the Property so transferred and (ii) following written notice to the City, the transferring Property Owner shall be relieved of its legal duty to perform those transferred obligations set forth in this Agreement that are applicable solely to the portion of the Property so transferred. Notwithstanding the foregoing sentences, the transferring Property Owner shall remain responsible for all obligations that do not relate solely to the portion of the Property being Transferred.

2.2.2.1 **Notice of Assignment**. Within ten (10) business days prior to completing a permitted Transfer under Section 2.2.2, above, Property Owner shall deliver written notice to the City of the Transfer, which notice shall include a complete disclosure of the identity of the Transferee.

2.2.3 **Assignment with City Consent**. Subject to the City's consent, which consent shall not be unreasonably withheld, conditioned or delayed, Property Owner shall have the right to Transfer its rights and obligations under this Agreement in connection with a Transfer of all or any portion of Property Owner's interest in the Property to a non-affiliated party. In the event of any such Transfer, Transferee shall be liable for performance of the obligations of Property Owner after the date of Transfer with respect to the portion of the Property so Transferred.

Except to the extent Property Owner is in default under this Agreement prior to the Transfer, upon the written consent of the City to the partial or complete Transfer of this Agreement and the express written assumption in a form approved by the City of such transferred obligations of Property Owner under this Agreement by the Transferee, the Property Owner shall be relieved of its legal duty to perform the transferred obligations set forth in this Agreement, other than the obligations that do not relate solely to the portion of the Property being Transferred.

2.2.4 **Transferee Subject to Terms of Agreement.** Following a Transfer of any of the rights and interests of Property Owner in accordance with Section 2.2.2 or 2.2.3, above, the Transferee's exercise, use, and enjoyment of the Property shall be subject to the terms of this Agreement to the same extent as if the Transferee was Property Owner.

2.2.5 **Condition of Assignment or Transfer.** All Transfers under this Section 2.2 shall be undertaken in conjunction with corresponding assignments or transfers of other agreements related to the portion of the Property and the corresponding obligations under this Agreement that are transferred.

2.2.6 **Liability Following Transfer**. The failure of a Transferee to perform obligations transferred in accordance with Section 2.2.2 or 2.2.3, above, may result, at the City's option, in a declaration that this Agreement has been breached and the City may, but shall not be obligated to, exercise its rights and remedies under this Agreement. Any partial termination of this Agreement as it relates to that Transferee's holding is severable from the entire Agreement and shall not affect the remaining entirety of this Agreement.

2.3. **Term**.

2.3.1 **Term**. The term of this Agreement shall commence on the Effective Date and shall expire fifteen (15) years after the Effective Date, unless this Agreement is terminated, modified, or extended by circumstances that are expressly set forth in the following sentence or by the mutual written consent of the Parties. The Term of this Agreement shall automatically be extended for the period of time of any actual delay resulting from (a) a Force Majeure Delay or (b) a legal action or appeal challenging the City's approval of this Agreement and/or the Development Approvals that is filed within ninety (90) days following the City Council's adoption of Ordinance No. _____; provided, however, that no extension under this sentence shall exceed a period of one (1) year.

2.3.2 **Term of VTTM 19247**. The City acknowledges that the Development of the Project may be subject to unavoidable delays due to factors outside Property Owner's control. Pursuant to Government Code section 66452.6(a)(1), and other applicable provisions of the Map Act, the duration of VTTM 19247 shall automatically be extended for the Term of this Agreement.

2.3.3 **Termination Upon Sale Of Individual Lots To Public**. Notwithstanding anything to the contrary in this Agreement, the provisions of this Agreement shall terminate with respect to any individual Lot, and such Lot shall be released from and shall no longer be subject to this Agreement (without the execution or recordation of any further document or the taking of any further action), upon occurrence of both of the following conditions: (a) the Lot has been sold, leased (for a period longer than one (1) year as evidenced by a lease) or otherwise conveyed to a

member of the public or any other ultimate purchaser or user that is not Property Owner or a Transferee; and (b) a certificate of occupancy has been issued for the building on the Lot or a final inspection of the building(s) has been approved by the City authorizing occupancy. The City shall cooperate with Property Owner or its duly authorized successor in interest, at no cost to the City, in executing in recordable form any document that Property Owner or a Transferee may submit to confirm the termination of this Agreement as to any such Lot.

3. DEVELOPMENT OF THE PROPERTY.

3.1. **Vested Right to Develop**. Subject to the terms of this Agreement, Property Owner and each Transferee shall have a vested right to develop the Project consistent with the Development Approvals and Subsequent Development Approvals, subject to compliance with the Mitigation Measures, satisfaction of all applicable conditions of approval, completion of the Required Improvements and compliance with Applicable Law.

3.1.1 **Remodeling, Renovating, Rehabilitating, Rebuilding and Replacing**. Property Owner's and Transferees' vested rights under this Agreement shall include, without limitation, the right to remodel, renovate, rehabilitate, rebuild or replace the Project or any portion thereof throughout the applicable Term for any reason, including, without limitation, in the event of damage, destruction or obsolescence of the Project or any portion thereof, subject to the Development Approvals, the Subsequent Development Approvals, compliance with the Mitigation Measures, satisfaction of all applicable conditions of approval, completion of the Required Improvements, and compliance with Applicable Law.

3.1.2 **Non-Application of Changes in Applicable Law**. Any change in, or addition to, the Vested Regulations adopted or becoming effective after the Effective Date, including, without limitation, any such change by means of ordinance, including but not limited to adoption of an amendment of the Specific Plan, initiative, referendum, resolution, motion, policy, order or moratorium, initiated or instituted for any reason whatsoever and adopted by the City Council or any other City Agency, or any officer or employee thereof, or by the electorate, as the case may be, which would, absent this Agreement, otherwise be applicable to the Property and/or the Project and which would conflict with the Vested Regulations, shall not be applied to the Property or the Project.

3.1.3 **Modification or Suspension by State or Federal Law**. In the event that State or Federal laws or regulations, enacted after the Effective Date of this Agreement, prevent or preclude compliance with one or more of the provisions of this Agreement, such provisions of this Agreement shall be modified or suspended as may be necessary to comply with such State or federal laws or regulations, and this Agreement shall remain in full force and effect to the extent it is not inconsistent with such laws or regulations and to the extent such laws or regulations do not render such remaining provisions impractical to enforce.

3.1.3.1 **Notification of Changes Necessary to Comply With Federal or State Law**. Where the City believes a change to a City law, regulation, or policy is necessary to comply with State or federal laws or regulations pursuant to the Reserved Rights, the City shall provide Property Owner and Transferees with a copy of such State or federal law or regulation and

a statement of the nature of its conflict with the Vested Regulations and the required changes the City believes is required to comply with such State or federal law or regulation.

3.1.4 **Subsequent Development Approvals**. The City shall not require Property Owner or a Transferee to obtain any Subsequent Development Approvals or Ministerial Permits and Approvals for the Development of the Project in accordance with this Agreement other than those required by the Development Approvals or Applicable Law. In addition, no new requirement to obtain a Subsequent Development Approval that was not required as of the Effective Date shall apply to the Project or any portion thereof until the fifth (5th) anniversary of the Effective Date unless such Subsequent Development Approval process is required by State or federal law or is necessary to protect the public health, safety and welfare.

3.1.4.1 **Modifications to Specific Plan**. The City shall have no obligation to approve an application for a Subsequent Development Approval that is not required under the Vested Regulations and other Applicable Law, provided that any proposed adjustment with respect to the Specific Plan shall be considered by the City in accordance with Section 5.6.2 of the Specific Plan.

3.1.4.2 **CEQA Review**. This Agreement does not modify, alter, or change the City's obligations pursuant to CEQA and acknowledge that proposed Subsequent Development Approvals may require additional environmental review pursuant to CEQA. In the event, but only in the event, that additional environmental review is required pursuant to CEQA, the City agrees to consult in good faith with Property Owner or Transferees and determine in good faith the appropriate level of environmental review in accordance with CEQA.

3.1.5 **Permitted Use**. The City agrees that Property Owner may use the Property during the term of this Agreement for any use that is otherwise permitted by Applicable Law (subject to obtaining any Subsequent Discretionary Approval required for such use).

3.1.6 **Moratoria or Interim Control Ordinances**. Notwithstanding anything to the contrary in this Agreement, if an ordinance, resolution, policy, moratorium or other measure is enacted, whether by action of the City, by initiative, or otherwise, that conflicts with the Vested Regulations and are not an exercise of the Reserved Rights, the City agrees that such ordinance, resolution, moratorium or other measure shall not apply to the Project, the Property or this Agreement.

3.2. **Timing of Development**. The Parties acknowledge that Property Owner cannot at this time predict when or the rate or in what sequence the Property will be developed. Such decisions depend upon numerous factors that are not within the control of Property Owner, such as market orientation and demand, interest rates, absorption, completion, and other similar factors. Since the California Supreme Court held in *Pardee Construction Co. v. City of Camarillo* (1984) 37 Cal.3d 465, that the failure of the parties therein to provide for the timing of development resulted in a later-adopted initiative restricting the timing of development to prevail over such parties' agreement, the Parties do hereby acknowledge and agree that Property Owner shall have the right to develop the Property in such order and at such rate and at such times as Property Owner deems appropriate within the exercise of its subjective business judgment. Nothing in this Section

is intended to extend the standard durational limits of any current or subsequent permits issued to Property Owner or Transferee(s).

3.3. **Development of Project**. Property Owner and the City agree that the Development of the Project shall be in accordance with Applicable Law, and that the Applicable Law specifies, as applicable to the Project, the permitted uses of the Property, the density or intensity of use, the maximum height and size of proposed buildings, and provisions for reservation or dedication of land for public purposes. If and to the extent Property Owner and/or Transferees pursue Development of the Project, they shall complete all of the applicable Required Improvements, perform all other applicable lawfully imposed conditions of approval in the Development Approvals and Subsequent Development Approvals, and satisfy all of the applicable Mitigation Measures.

3.3.1 **Agreements and Improvement Securities**. Unless the Parties mutually agree otherwise, Property Owner and any Transferees shall provide agreements and improvement securities in the manner required by Chapter 25, Article V, Section 25-40 of the Municipal Code for all of the Required Improvements, conditions of approval, and Mitigation Measures that are not completed prior to the recordation of the final map/partial final map for VTTM 19247. The Parties acknowledge and agree that the application of this requirement to the Required Improvements, conditions of approval, and Mitigation Measures, is necessary to support the findings required by Chapter 25, Article IX, Section 25-57(e) of the Municipal Code.

3.4. **Processing Fees**. Property Owner and Transferees shall pay all Processing Fees for Subsequent Development Approvals and for Ministerial Permits and Approvals in the amount in effect when such Subsequent Development Approvals or Ministerial Permit and Approvals are sought.

3.5. **Taxes and Assessments and Fees; Reservation of Rights**. This Agreement shall not prevent the City from enacting, levying, or imposing any new or increased tax or assessment or fee that applies to the Property. Property Owner shall timely pay all applicable fees, charges, assessments, and special and general taxes validly imposed in accordance with the Constitution and laws of the State of California. Notwithstanding the foregoing, nothing set forth herein is intended or shall be construed to limit or restrict whatever right Property Owner or any Transferee(s) have to challenge any fee, charge, tax, or assessment adopted by City after the Effective Date.

3.6. **Regulation by Other Public Agencies**. It is acknowledged by the Parties that other public agencies not subject to control by City possess authority to regulate aspects of the Development of the Project on the Property, and this Agreement does not limit the authority of such other public agencies. Property Owner and Transferees may apply for such other permits and approvals as may be required for the Development of the Project from other governmental or quasi-governmental agencies having jurisdiction over the Property. The City shall reasonably cooperate with Property Owner and Transferees in their endeavors to obtain such permits and approvals, provided that Property Owner and Transferee(s) shall pay the City's Costs of such cooperation. Each Party shall take all reasonable actions, and execute, with acknowledgment or affidavit, if

required, any and all documents and writings that may be reasonably necessary or proper to achieve the purposes and objectives of this Agreement.

3.7. **Compliance with Government Code Section 66473.7**. Any tentative map prepared for the subdivision(s) included within the Project will comply with Government Code section 66473.7 unless exempt.

4. ANNUAL AND SPECIAL REVIEW.

4.1. **Annual Review**. During the Term, the CD Director shall review this Agreement annually during June of each year following the Effective Date of this Agreement, in order to ascertain the good-faith compliance by Property Owner and/or any Transferee(s) with the terms of the Agreement. The burden of proof shall be on the Property Owner and/or any Transferees to demonstrate compliance with this Agreement to the full satisfaction of, and in a manner prescribed by the CD Director; provided that Property Owner and/or Transferees shall have the burden of demonstrating such good-faith compliance relating solely to each such party's portion of the Property and any Development located thereon.

4.1.1 **Annual Review Procedure**. As part of the annual review, by May 1 of each year, Property Owner and each Transferee, to the extent applicable, shall submit an annual monitoring review statement describing its actions in compliance with this Agreement, in a form acceptable to the CD Director. The statement shall be accompanied by an annual review and administration fee sufficient to defray the estimated Costs of review of the statement and of Property Owner's and each Transferee's compliance with the Agreement. The amount of the annual review fee shall be set by resolution of the City Council. Each Property Owner and Transferee shall have no further obligation to provide an annual statement of compliance and to pay the annual review fee at such time as it no longer holds fee title to any portion of the Property or has received all of the certificates of occupancy required for its development of the portion of the Property for which it holds fee title. If any Property Owner or Transferee fails to provide the statement of compliance in a timely manner, the City will notify Property Owner and Transferee(s) of the annual review obligations in writing at least thirty (30) days prior to completing the CD Director's annual review.

4.1.2 **Evaluation and Determination**. Based on the statement of compliance and such other evidence as may be presented by Property Owner and each Transferee, the CD Director shall determine, based on substantial evidence, whether each Property Owner and Transferee, to the extent applicable, has complied in good faith with the terms of this Agreement.

4.2. **Special Review**. The CD Director may order a special review of compliance with this Agreement at any time upon receipt of reasonable evidence of material noncompliance with the terms of this Agreement. The burden of proof for a special review shall be the same as the burden of proof for an annual review.

4.2.1 **Special Review Costs**. The City's Costs of a special review shall be borne by the City, unless such a special review demonstrates to the satisfaction of the CD Director that Property Owner and/or Transferees, as applicable, have not complied in good faith with the

provisions of this Agreement, in which case the noncompliant party(ies) shall reimburse the City for all Costs incurred in conjunction with such special review. Property Owner's and any Transferee's costs of a special review shall be borne by Property Owner and the Transferee, as applicable.

4.2.2 **Special Review Procedure**. In connection with any special review, the CD Director shall give Property Owner and all Transferees written notice that any such review has been commenced, and shall give Property Owner and all Transferees at least thirty (30) days after receipt of such notice to provide to the CD Director with such information as Property Owner and any Transferee deems relevant to such review. In addition, upon the written request of the CD Director, Property Owner and/or any applicable Transferee(s) shall furnish such documents or other information as reasonably requested by the CD Director. Property Owner and/or any applicable Transferee(s) shall have a reasonable opportunity to contest any claim by the City that such party has not complied in good faith with any terms of this Agreement.

4.2.3 **Evaluation and Determination**. Based on such evidence as may be presented by Property Owner and each Transferee and such other evidence as is obtained by or made available to the CD Director, the CD Director shall determine, based on substantial evidence, whether each Property Owner and Transferee is in good-faith compliance with the terms of this Agreement.

4.3. **Results of Annual or Special Review**. If, following an annual or special review pursuant to this Section 4, the CD Director or the City Council, as the case may be, finds good-faith compliance by Property Owner and/or Transferee(s) with this Agreement, the City shall, upon request by Property Owner and/or any Transferee, issue a certificate of compliance ("**Certificate**") to Property Owner(s), in substantially the form provided as **Exhibit G** attached hereto and incorporated herein by this reference. Property Owner and/or such Transferee shall have the right to record any issued Certificate in the Official Records. If, following an annual or special review pursuant to this Section 4, the CD Director concludes that Property Owner and/or any Transferee(s) are not in good-faith compliance with the terms of this Agreement, then the CD Director may recommend to the City Council that it order, after a noticed public hearing in compliance with Appendix I, Article 5, Section 26 of the Municipal Code, that this Agreement be terminated. At such hearing, the Property Owner and/or Transferee(s) shall be entitled to address all of the issues considered by the CD Director in making their determination. Information presented by Property Owner and/or Transferees at such hearing may be presented orally and/or in writing. If, after receiving any written response of Property Owner and/or Transferees to the CD Director's determination, and after considering all of the information presented at such hearing, the City Council finds and determines that Property Owner and/or Transferees have not in good faith complied with the terms and conditions of this Agreement, then the City Council shall specify in writing to Property Owner and/or Transferees the respects in which Property Owner and/or any Transferees have failed to so comply, and shall also specify a reasonable time for Property Owner and/or Transferees to remedy such noncompliance, which time shall be not less than sixty (60) days after Property Owner's and/or the Transferees' receipt of such notice, provided that if such noncompliance is not susceptible to remedy within such sixty (60)-day period, Property Owner and/or the applicable Transferee(s) shall promptly commence the remedy and complete the remedy within such time as is established by the City in its reasonable good-faith discretion. A

determination by the City Council of non-compliance shall be in writing delivered in accordance with Section 10.8, below, and shall specify in detail the grounds therefor, so that Property Owner and/or the applicable Transferee(s) shall have the opportunity to implement any measures necessary to cure such noncompliance. If the noncompliance so specified by the City Council is not cured within the time so specified, then the City may pursue the remedies provided in Section 7, below.

4.4. **City's Rights and Remedies Against Property Owner**. The City's rights under this Section 4 relating to Property Owner's compliance with this Agreement shall be limited to Property Owner's obligations under this Agreement that have not been assigned to, and assumed by, Transferees pursuant to Section 2.2, above.

5. FEES, REQUIRED IMPROVEMENTS, AND BENEFITS.

5.1. **Development Impact Fees**. Property Owner and Transferee(s) shall pay Development Impact Fees in connection with the issuance of building permits for the Project, and in the amount applicable at the time of issuance of building permits.

5.2. **Deferred Park Fees**. Property Owner acknowledges and agrees that, under that certain Agreement for Reduction and Deferral of Portion of Required Park In-Lieu Fee and Repayment of Same for Melia Homes Project" dated as of April 26, 2021, by and among Property Owner and the City, Property Owner is obliged to repay the City the sum of $1,001,835 (the "**Deferred Amount**"), which is to be prorated and included in the calculation of the park in-lieu fee otherwise required and payable for the remaining residential units approved by the City and for which building permits are issued by the City (the "**Deferred Obligation**"). To satisfy the Deferred Obligation, Property Owner shall do one of the following:

(a) Pay each amount specified in **Exhibit F** attached hereto and incorporated herein by this reference as a condition to the recordation of a final map for each corresponding Lot in VTTM 19247 shown in **Exhibit F**; provided, however, that nothing in this section prohibits Property Owner from paying all or a portion of the Deferred Amount at any time prior to the times specified in **Exhibit F**; or

(b) Enter into a written agreement acceptable to the City, in its sole and absolute discretion, to discharge all or a portion of the Deferred Obligation in exchange for the conveyance of fee title to the approximately 1.22-acre parcel designated as Lot 1 on VTTM 19247 to the City.

5.3. **Required Improvements and Public Benefits**. Property Owner and/or Transferees shall construct the Required Improvements and satisfy the other requirements relating to the Project in the time and manner described in **Exhibit D** attached hereto and incorporated herein by this reference, even though the cost of complying with some of those requirements may exceed the Development Requirements the City could otherwise lawfully impose on the Project.

6. MAINTENANCE AND OPERATION COSTS AND OTHER COMMITMENTS.

6.1. **Pump Station Assessment District; Covenant Regarding Assessment District**. City may request that Property Owner agree to form an Assessment District (a "**Pump Station Assessment District**") that includes Lots 3, 4 and 7 in VTTM 19247 (the "**Assessment Property**") for the purpose of funding the maintenance and operations costs for the stormwater pump station (the "**Pump Station**") to be installed on Lot 5 and 6 of VTTM 19247 in connection with the operation of the stormwater detention basin, and any associated water quality basins or devices, contemplated on Lots 5 and 6 (the "**Lots 5/6 Detention Basin**") in accordance with the Master Plan of Drainage. Property Owner hereby irrevocably consents to formation of a Pump Station Assessment District and the inclusion of the Assessment Property therein and waives any and all right of protest or objection with respect to such formation. Property Owner agrees to cooperate with City and take all necessary action to accomplish the formation of a Pump Station Assessment District and the inclusion of the Assessment Property therein, for the purposes of funding the maintenance and operation of the Pump Station, and Property Owner further agrees to pay all actual and reasonable costs associated with the formation of a Pump Station Assessment District. Property Owner agrees to cooperate in the imposition of assessments related to a Pump Station Assessment District, including without limitation, if required by City, the submission of a ballot to the City by Property Owner (or its successors in interest) in favor of the formation a Pump Station Assessment District and the levying of such assessments. Nothing herein shall be construed as a commitment by City to form a Pump Station Assessment District or as a limitation on City's legislative discretion with respect thereto. Property Owner has agreed to the financing provisions set forth in this Section and to perform the obligations hereunder in exchange for the consideration and benefits provided to Property Owner by City under this Agreement. For avoidance of doubt, the Parties agree that this Agreement includes and constitutes a covenant not to contest the formation of a Pump Station Assessment District that includes the Assessment Property. The covenant shall be binding upon successive owners of the Assessment Property.

6.2. **Other Assessment Districts**. At the request of Property Owner, the City shall reasonably consider and cooperate in the formation of one or more Assessment Districts, including community facilities districts (Gov. Code, §§ 53311 et seq.), tax-exempt and taxable financing mechanisms, or other funding mechanisms related to slope stabilization and infrastructure work and improvements (including, without limitation, design, acquisition and construction costs). The City shall reasonably consider and cooperate in the prompt and commercially reasonable sale of bonds to be issued and secured by such assessments or special taxes. Property Owner shall pay all Costs incurred by the City pursuant to this Section.

6.3. **Maintenance Covenants**. Prior to the two applicable Threshold Dates (as defined below), Property Owner and/or the applicable Transferee(s) shall deliver to the City for its review and approval a declaration of covenants, conditions and restrictions, a reciprocal easement agreement and/or similar instrument in recordable form to establish as covenants running with the land (each a "**Master Covenant Instrument**" and, collectively, the "**Master Covenant Instruments**") the obligation of Property Owner, the applicable Transferee(s), a homeowners association, a property owners association, or another entity reasonably approved by the City to (1) maintain and repair (a) the Lots 5/6 Park, (b) landscaping, irrigation, and water quality best management practices devices and improvements, within public rights-of-way (including medians

and parkways) on the Property, which will include the segments of Moody Street and Vessels Circle located within the Property, (c) green trails and bike paths; (d) utilities metered to the publicly owned portions of the Property ("**Public Property**"); and (e) signs on the Public Property; and (2) ensure trash collection and removal related to the Public Property (collectively, the "**Master Covenant Maintenance Duties**"). The Master Covenant Instrument(s) shall be recorded against the Property (or applicable portions thereof) and shall, among other things, authorize the levy of assessments or substantially similar cost-sharing obligations against the Property (or applicable portions thereof) in order to fund the Master Covenant Maintenance Duties. One Master Covenant Instrument shall address the Master Covenant Maintenance Duties as applicable to the Lots 5/6 Detention Basin and shall be recorded against Lots 3, 4, and 7; the "**Threshold Date**" as applicable to such Master Covenant Instrument shall mean the intended date of issuance of the first construction permit for any Project improvements located on Lots 3, 4 and 7; provided, however, that no certificate of occupancy for any Project improvement within Lots 3, 4, and 7 shall be issued unless and until the Master Covenant Instrument for the Lots 5/6 Detention Basin shall have been approved by the City and recorded against Lots 3, 4, and 7. The other Master Covenant Instrument shall address all of the remaining Master Covenant Maintenance Duties and shall be recorded against all of the Property; the Threshold Date as applicable to such Master Covenant Instrument shall mean the intended date of issuance of the first construction permit for any Project improvement within the Property (other than Lot 14); provided however that no certificate of occupancy for any Project improvement within the Property shall be issued unless and until such Master Covenant Instrument is approved by the City and recorded against the Property. Any covenant instrument similar in nature to the Master Covenant Instruments that is subsequently recorded against a portion of the Property with respect to the development of specific development projects on such portion of the Property in accordance with the Specific Plan shall be subordinate to and consistent with the corresponding Master Covenant Instrument as it relates to such portion of the Property, and shall require City review and approval to determine consistency with such Master Covenant Instrument prior to recordation.

6.3.1 **Maintenance Conditions on Subsequent Map Approvals**. Property Owner and Transferees agree that the City may condition subsequent subdivision maps and/or condominium approvals applied for in connection with the development of the Property ("**B-Maps**") with site-specific maintenance obligations in addition to those maintenance obligations set forth in Section 6.3, above. Property Owner and Transferees agree and acknowledge that such condition will require that by a reasonable date established by the City, Property Owner and/or the applicable Transferee(s) shall deliver to the City for its review and approval a declaration of covenants, conditions and restrictions, a reciprocal easement agreement and/or similar instrument in recordable form to establish as covenants running with the land (each a "**B-Map Covenant Instrument**" and, collectively, the "**B-Map Covenant Instruments**") within the boundaries of each B-Map the obligation of Property Owner, the applicable Transferee(s), a homeowners association, a property owners association, or another entity reasonably approved by the City to (1) maintain and repair (a) any Public Property; private roads within and adjacent to the boundaries of the B-Map, including without limitation streets, sidewalks, curbs, gutters; any publicly or privately owned parks (including, without limitation, including, without limitation, 2 acres of publicly or privately owned floating park in the development, and the privately owned and maintained, but publicly accessible Lots 5/6 Park); landscaping, irrigation, and water quality best management practices devices and improvements; (b) green trails and bike paths, if any, within

the boundaries of the B-Map; (c) gas, water and waste pipes, sewers, ducts, chutes, conduits, wires and utility installations which are located within any of the buildings, if any, within the boundaries of the B-Map ("**Public Buildings**") or in the exterior walls, ceilings, foundations or foundation slabs within any of the Public Buildings; (d) the water system for the Public Buildings to the back of each individual water meter within the boundaries of the B-Map; (e) utilities metered to Public Property within the boundaries of the B-Map; (f) signs on the Public Property within the boundaries of the B-Map; (2) paint and otherwise maintain the exterior surfaces of the exterior walls of the Public Buildings within the boundaries of the B-Map; (3) ensure trash collection and removal related to the Public Property within the boundaries of the B-Map; (4) ensure necessary janitorial, custodial, or security lock-up services for maintaining the Public Property within the boundaries of the B-Map; and (5) reimburse to the City for municipal police services, security, and other services benefiting the Public Property within the boundaries of the B-Map (collectively, the "**B-Map Maintenance Duties**"). The B-Map Covenant Instrument(s) shall be recorded against the Property (or applicable portions thereof) and shall, among other things, authorize the levy of assessments or substantially similar cost-sharing obligations against the Property (or applicable portions thereof) in order to fund the B-Map Maintenance Duties. Any covenant instrument similar in nature to the B-Map Covenant Instruments that is subsequently recorded against a portion of the Property with respect to the development of specific development projects on such Property in accordance with the Specific Plan shall be subordinate to and consistent with the corresponding B-Map Covenant Instrument as it relates to such portion of the Property, and shall require City review and approval to determine consistency with such B-Map Covenant Instrument prior to recordation. Recordation of each B-Map Covenant Instrument shall occur prior to issuance of the first certificate of occupancy for any Project improvement within the boundaries of the Property against which the B-Map Covenant Instrument will be recorded.

6.4. **Lot 5/6 Park and Stormwater Detention**. The Specific Plan contemplates the construction of a park on Lots 5 and 6 in VTTM 19247 (the "**Lots 5/6 Park**"). The development of the Lots 5/6 Park shall be consistent with the Specific Plan and any reasonable City standards for neighborhood parks that are not inconsistent with the Specific Plan, except as provided below. The City acknowledges that the design and development of the Lots 5/6 Park may be undertaken by a Transferee in connection with the development of one or more of the other Lots or portions thereof in VTTM 19247, so that the design and development of the Lots 5/6 Park may be part of an application that includes both the Lots 5/6 Park and commercial and/or residential development of another portion or portions of the Property. Therefore, the process for the development of the Lots 5/6 Park may occur independently or as part of a larger project undertaken by Property Owner and/or one or more Transferees, but the development process for the Lots 5/6 Park shall occur under the direction of the City's Public Works and Recreation and Community Services Departments. The City further acknowledges that VTTM 19247 contemplates the construction of the Lots 5/6 Detention Basin on Lots 5 and 6, which will require the dual use of Lots 5 and 6 for a park and stormwater detention basin, which may require relief from the City's typical park standards. The City will work with Property Owner or a Transferee in good faith to accomplish and implement this dual use. Property Owner and Transferee(s) acknowledge and agree that the City may exercise its reasonable discretion in approving the design and plans for the Lots 5/6 Park to ensure that it has a quality substantially equivalent to the City's most recently approved parks (excluding Lexington Park). The design and development process for the Lots 5/6 Park shall generally include the following:

(a) ***Task 1 – Project Initiation***. Property Owner or the applicable Transferee shall meet with City staff to confirm project goals, schedule, communication protocols and the integration of the park and detention basin.

(b) ***Task 2 – Community Outreach and Conceptual Design***. Property Owner or the applicable Transferee shall conduct public outreach and present concepts to City staff, the Recreation and Community Services Commission and the City Council to gather feedback and direction. Property Owner or the applicable Transferee shall prepare conceptual park/detention basin designs reflecting site conditions and community input and refine to a single preferred concept for City review and approval.

(c) ***Task 3 – Park Master Plan***. Property Owner or the applicable Transferee shall prepare a detailed park/detention basin master plan based on the approved concept, including layout, amenities, grading, landscape, irrigation, and sustainable design features, which will be considered for approval by the City Council on a stand-alone basis or as part of the approval process for a larger project of which the Lots 5/6 Park is a part.

(d) ***Task 4 – Final Design and Construction Documents***. Property Owner and/or the applicable Transferee(s) shall prepare and obtain City approval of complete final design and construction documents for the approved park/detention basin improvements, including demolition, grading, drainage, utilities, landscape, irrigation, and all other relevant disciplines, and obtain the necessary building permits.

(e) ***Task 5 – Construction, Inspection and Project Closeout***. Property Owner and/or the applicable Transferee(s) shall coordinate with the City and all applicable regulatory agencies to obtain all required permits, inspections, and approvals and shall thereafter construct the park/detention basin improvements in accordance with the approved plans and specifications. Property Owner and/or the applicable Transferee(s) shall complete all punch list items, submit record drawings, and achieve final acceptance by the City.

All Costs associated with the development of the Lots 5/6 Park shall be borne by Property Owner and/or the applicable Transferees.

6.5. **Acceptance of Public Streets and Utilities**. The City shall not accept, operate, or maintain any public streets or utilities unless and until such streets or utilities are built to City standards and accepted by the City in writing. All streets, landscaping, and utilities identified on future subdivision maps within the Property (*i.e.*, B-Maps) shall be privately owned and maintained.

6.6. **Easement Termination.** Within ninety (90) days following the full closure and demolition of the Los Alamitos Race Course, or such other time as is mutually agreed upon between the Parties in writing, Property Owner shall provide to City, in the form attached as **Exhibit H**, a termination of that certain Easement Agreement dated as of May 23, 2018, by and

between Cypress Recreation & Park District and Property Owner, and recorded on May 31, 2018 as Instrument No. 2018000198493 in the Official Records (the "**Easement Termination**").

6.7. **Merger of Lots 5 and 6**. Subject to any required City approval, prior to the issuance of any permits for the construction of Project improvements on Lots 5 and 6 of VTTM 19247, Property Owner or a Transferee shall record documentation sufficient to cause the merger of Lots 5 and 6 in VTTM 19247.

6.8. **Merger or Lot Tie for Lots 8 and 9**. Subject to any required City approval, within one hundred eighty (180) days after the recordation of the final map for VTTM 19247 (or the portion thereof that is applicable to Lots 8 and 9 in VTTM 19247), Property Owner or a Transferee shall cause Grace Church to record documentation sufficient to either: (i) cause the merger of Lots 8 and 9 in VTTM 19247; or (ii) create a lot tie for Lots 8 and 9 in VTTM 19247.

6.9. **Two-Acre Public Park Overlay**. The Specific Plan includes a two-acre public park overlay that allows a total of two acres of public park space to be developed within the Specific Plan Area (the "Floating Park Space"). The location of the Floating Park Space shall be identified prior to the issuance of any building permit for private improvements in any of Lots 2, 3, 4, 7, and 13 of VTTM 19247. The park created on the Floating Park Space may be a publicly owned park, or a privately owned park with public access pursuant to an easement or other instrument reasonably approved by the City. Development of the Floating Park Space shall follow the same design, review, approval, and development process set forth in Section 6.4, above, for the Lots 5/6 Park. The City will negotiate the ownership of the Floating Park Space with the Person that develops the VTTM 19247 lot upon which the Floating Park Space is located.

6.10. **Bicycle and Pedestrian Accessibility**. All bicycle paths throughout the Specific Plan Area shall be publicly accessible, pursuant to a public access easement or other instrument reasonably approved by the City. Trails, walkways, and greenspaces located within the privately owned development areas of Lots 2, 3, 4, 7, 10, 11, and 12 of VTTM 19247 may be privately owned and may be restricted for use by residents, tenants, owners, and invitees within the Specific Plan Area, but shall not be restricted solely to the residents, tenants, owners, or invitees of the lot on which such trails, walkways, or greenspaces are located. Reciprocal access easements shall be established for the benefit of the property owners within Lots 2, 3, 4, 7, 10, 11, 12, 13, and 14 of VTTM 19247, in a form acceptable to the City, to ensure appropriate bicycle and pedestrian connectivity within the Specific Plan Area.

7. DEFAULT AND REMEDIES.

7.1. **Specific Performance Available**. The Parties acknowledge that money damages and remedies at law generally are inadequate and specific performance is a particularly appropriate remedy for the enforcement of this Agreement and should be available to Property Owner, Transferees and the City because the size, nature and scope of the Project, make it impractical or impossible to restore the Property to its natural condition once implementation of this Agreement has begun. After such implementation, Property Owner, Transferees, and/or the City may be foreclosed from other choices they may have had to utilize or condition the uses of the Property or portions thereof. Property Owner, Transferees, and the City have invested significant time and

resources in performing extensive planning and processing for the Project and in negotiating and agreeing to the terms of this Agreement and will be investing even more significant time and resources in implementing the Project in reliance upon the terms of this Agreement, such that it would be extremely difficult to determine the sum of money which would adequately compensate Property Owner and/or City for such efforts. The Parties therefore agree that specific performance and the termination of this Agreement shall be the sole remedies available for a breach of this Agreement.

7.2. **Money Damages Unavailable**. It is acknowledged by the Parties that neither the City nor Property Owner would have entered into this Agreement if it were liable in monetary damages under or with respect to this Agreement or the application thereof. The Parties agree and recognize that, as a practical matter, it may not be possible to determine an amount of monetary damages that would adequately compensate Property Owner and Transferees for their investment of time and financial resources in planning to arrive at the kind, location, intensity of use, and improvements for the Project, nor to calculate the consideration the City would require to enter into this Agreement to justify the exposure. Therefore, the Parties agree that no party shall be entitled to any monetary damages from the other Party for the breach of any provision of this Agreement; provided, however, that an action to enforce the obligation to pay a Processing Fee, Development Impact Fee, or other fee, Cost, tax or assessment under this Agreement shall be deemed a demand for "specific performance" and not a demand for "money damages."

7.3. **Termination of Agreement.**

7.3.1 **Termination of Agreement for Default By Property Owner and/or Transferee(s)**. If the City believes that a Default by Property Owner or any applicable Transferee(s) has occurred with respect to its or their obligations under this Agreement applicable to its or their portions of the Property (as specified in the applicable Transfer agreement pursuant to Section 2.2, above), the City in its discretion may terminate this Agreement, but only with respect to the portion(s) of the Property owned by Property Owner and/or the applicable Transferee(s); provided, however, that the City may only terminate this Agreement pursuant to this Section after following the procedures set forth in Section 4, above (regardless of whether or not the Default is alleged in the context of an annual or special review pursuant to Section 4, above) without resolution of the alleged Default. Prior to termination, the City and Property Owner and/or any applicable Transferee(s) may mutually agree, in their respective sole and absolute discretion, to pursue an alternative dispute resolution process.

7.3.2 **Termination of Agreement for Default By City**. If Property Owner and/or any Transferee(s) believes that a Default by the City has occurred with respect to the obligations of the City under this Agreement applicable to Property Owner's and/or the applicable Transferee(s)' portions of the Property (as specified in the applicable Transfer agreement pursuant to Section 2.2, above), then Property Owner and/or the applicable Transferee(s) in its or their discretion, as applicable, may terminate this Agreement, but only with respect to the portion(s) of the Property owned by Property Owner and/or the applicable Transferee(s); provided, however, that Property Owner and/or the applicable Transferee(s) shall first deliver written notice of the alleged Default to the City setting forth the nature of the Default and the actions required by the City to cure such Default. Upon receipt of such notice, the City shall promptly commence to cure

the identified Default and shall take such actions and cure such Default not later than sixty (60) days after receipt of such notice, or such longer period as is reasonably necessary to remedy such Default, provided that the City commences such remedy within such sixty (60)-day period and diligently and continuously proceeds to complete such actions and cure the Default. If the City fails to remedy the Default in accordance with the preceding sentence, Property Owner and/or the applicable Transferee(s) may then proceed to terminate this Agreement only with respect to the portion(s) of the Property owned by Property Owner and/or the applicable Transferee(s). Prior to termination, the City and Property Owner and/or any applicable Transferee(s) may mutually agree, in their respective sole and absolute discretion, to pursue an alternative dispute resolution process.

8. INDEMNIFICATION.

8.1. **Indemnity Obligations**. Property Owner hereby agrees to defend, indemnify, and hold harmless the City and any City Agency, from any third-party action or proceeding ("**Proceeding**") against the City or any City Agency involving a Claim (a) to set aside, void, or annul, all or any part of this Agreement or (b) for any damages for property damage, personal injury or death that may arise, directly or indirectly, from Property Owner, Property Owner's contractors, subcontractors, agents or employees operations in connection with the construction of the Project, whether operations be by Property Owner or any of Property Owner's contractors, subcontractors, by any one or more Persons directly or indirectly employed by, or acting as agent for Property Owner or any of Property Owner's contractors or subcontractors. In the event that the City, upon being served with a lawsuit or other legal process to set aside, void or annul all or part of any Project Approval, fails to promptly notify Property Owner in writing of the Proceeding, Property Owner shall thereafter be relieved of the obligations imposed in this Section 8.1. However, if Property Owner has actual written notice of the Proceeding, it shall not be relieved of the obligations imposed hereunder, notwithstanding the failure of the City to provide prompt written notice of the Proceeding. The City shall be considered to have failed to give prompt written notification of a Proceeding if the City, after being served with a lawsuit or other legal process challenging the Approvals, unreasonably delays in providing written notice thereof to Property Owner. As used herein, "unreasonably delay" shall mean any delay of more than thirty (30) days that materially adversely impacts Property Owner's ability to defend the Proceeding. The obligations imposed in this Section 8.1 shall apply notwithstanding any allegation or determination in the Proceedings that the City acted contrary to Applicable Law. Nothing in this Section 8.1 shall be construed to mean that Property Owner or any of its affiliates shall indemnify, hold the City harmless and/or defend it from any Claims arising from, or alleged to arise from, the City's intentional misconduct or gross negligence in the performance of this Agreement. To the extent that the Transfer of all or a portion of the Property to any Transferee(s) has occurred prior to a Proceeding, the provisions of this Section 8.1 shall apply to such Transferee(s) in place of, or in addition to, Property Owner, as applicable.

8.2. **Prevailing Wage Indemnity and Notice to Property Owner of Labor Code Section 1781**. In connection with, but without limiting, the indemnification obligations set forth in Section 8.1, Property Owner hereby expressly acknowledges and agrees that the City is not by this Agreement affirmatively representing, and has not previously affirmatively represented, to the Property Owner or any contractor(s) of Property Owner for any construction on or Development on or adjacent to the Property, in writing or otherwise, in a call for bids or any agreement or

otherwise, that any work to be undertaken on the Property, as may be referred to in this Agreement or construed under this Agreement, is not a "public work," as defined in Labor Code section 1720, or under any similar existing or hereinafter enacted law or regulation. The Parties agree that, in connection with the Property Owners' or Transferee's Development and construction (as defined by Applicable Law) of the Project, including, without limitation, any and all public works (as defined by Applicable Law), Property Owner or Transferee shall bear all risks of payment or non-payment of prevailing wages under California law and/or federal law and/or the implementation of Labor Code section 1781, as the same may be amended from time to time, and/or any other similar law. With respect to the foregoing, Property Owner or Transferee shall be solely responsible, with regard to work performed by or under the direction of Property Owner or Transferee, expressly or impliedly and legally and financially, for determining and effectuating compliance with all applicable federal, state and local public works requirements, prevailing wage laws, and labor laws and standards, and City makes no representation, either legally and/or financially, as to the applicability or non-applicability of any federal, state and local laws to the Property Owners' or Transferee's construction of the Project as it may be amended pursuant hereto or otherwise.

Without limiting the foregoing, Property Owner shall indemnify, protect, defend and hold harmless the City and any City Agency, with counsel reasonably acceptable to City, from and against "increased costs" as defined in Labor Code section 1781 (including City's reasonable attorneys' fees, court and litigation costs, and fees of expert witnesses) in connection with the Development or construction (as defined by Applicable Law) of or on the Property, that results or arises in any way from (1) non-compliance by Property Owner of the requirement, if and to the extent applicable, to pay federal or state prevailing wages and hire apprentices, or (2) failure by Property Owner to provide any required disclosure or identification as required by Labor Code sections 1720 et seq. including without limitation specifically Labor Code section 1781, as the same may be amended from time to time. The foregoing indemnity shall survive the expiration or earlier termination of this Agreement. To the extent that the Transfer of all or a portion of the Property to any Transferee(s) has occurred prior to a Proceeding, the provisions of this Section 8.2 shall apply to such Transferee(s) in place of, or in addition to, Property Owner, as applicable.

8.3. **Cooperation**. The City shall reasonably cooperate with Property Owner in the defense of the Proceeding, provided that Property Owner reimburses the City for its Costs for such cooperation. Such obligation of the City to cooperate in its defense shall not require the City to (a) assert a position in its defense of the Proceeding which it has determined, in its sole discretion, has no substantial merit, (b) advocate in its defense of the Proceeding legal theories which it has determined, in its sole discretion, lack substantial merit, or (c) advocate in its defense of the Proceeding legal theories which it has determined, in its sole discretion, are contrary to its best interests, or to public policy. Nothing contained in this Section 8 shall require Property Owner to refrain from asserting in its defense of the Proceeding positions or legal theories that do not satisfy the foregoing requirements. The indemnity obligations in this Section 8 shall not apply to any Claim for which Property Owner has provided a separate indemnity to the City by way of a separate instrument executed by the Parties. To the extent that the Transfer of all or a portion of the Property to any Transferee(s) has occurred prior to a Proceeding, the provisions of this Section 8.2 shall apply to such Transferee(s) in place of, or in addition to, Property Owner, as applicable.

8.4. **Insurance Proceeds**. Property Owner's or any Transferee's obligations shall be reduced by net insurance proceeds the City actually receives for the matter giving rise to indemnification, and the City shall tender any Claim that is subject to this Section 8 to its applicable insurer(s).

8.5. **Challenge to Enforceability of Specific Obligations**. The Parties have determined in good faith that each of the provisions of this Agreement is valid and enforceable. Notwithstanding, if a court of competent jurisdiction finds invalid or unenforceable any provision of this Agreement purporting to supersede or otherwise render ineffectual any Applicable Law, Property Owner and/or the City shall perform its obligations hereunder as specifically directed by such court of competent jurisdiction.

9. MORTGAGEE PROTECTION.

9.1. **Encumbrances on the Property**. The Parties agree that this Agreement shall not prevent or limit Property Owner from encumbering the Property or any estate or interest therein, portion thereof, or any improvement thereon, in any manner whatsoever by one or more mortgages, deeds of trust, sale and leaseback, or other form of secured financing (each, a "**Mortgage**") with respect to the Development, use or operation of the Project and portions thereof. The City acknowledges that the lender(s) providing such Mortgages may require certain Agreement interpretations and modifications and agrees, upon request, from time to time, to meet with Property Owner and representatives of such lender(s) to negotiate in good faith any such request for interpretation or modification. The City shall not unreasonably withhold its consent to any such requested interpretation or modification provided City determines such interpretation or modification is consistent with the intent and purposes of this Agreement. If the City agrees to such interpretation or modification, the City agrees to execute and deliver (and to acknowledge, if necessary, for recording purposes) any agreement necessary to effectuate such interpretation or modification; provided, however, that any such interpretation or modification shall not in any way materially adversely affect any rights of either Party under this Agreement. If there is any conflict between this Section 9 and any other provisions contained in this Agreement, this Section 9 shall control.

9.2. **Mortgagee Protection**. To the extent legally permissible, this Agreement shall be superior and senior to any lien placed upon the Property, or any portion thereof, including the lien of any Mortgage. Notwithstanding the foregoing, no breach of this Agreement shall defeat, render invalid, diminish, or impair the lien of any Mortgage made in good faith and for value. Any acquisition or acceptance of title or any right or interest in or with respect to the Property or any portion thereof by the holder of the beneficial interest under a Mortgage (a "**Mortgagee**"), pursuant to foreclosure, trustee's sale, deed in lieu of foreclosure, lease or sublease termination or otherwise, shall be subject to all of the terms and conditions of this Agreement, provided that any such Mortgagee, including its affiliate, that takes title to the Property or the applicable portion thereof shall be entitled to the portion of the benefits arising under this Agreement that apply to the portion of the Property that was the subject of the foreclosure, trustee's sale, deed in lieu of foreclosure, lease or sublease termination or other exercise of rights by Mortgagee.

9.3. **Mortgagee Not Obligated**. Notwithstanding any contrary provision in this Agreement, no Mortgagee shall have any obligation or duty pursuant to this Agreement to perform the obligations of Property Owner or other affirmative covenants of Property Owner hereunder, or to guarantee such performance, except that Mortgagee and any successor shall have no vested right under this Agreement to develop the Project or applicable portion thereof without fully complying with the terms of this Agreement and executing and delivering to the City, in a form and with terms reasonably acceptable to the City, an assumption agreement of Property Owner's obligations hereunder with respect to the applicable portion of the Property.

9.4. **Request for Notice to Mortgagee.** Any Mortgagee that has submitted a request in writing to the City in the manner specified herein for giving notices shall be entitled to receive reasonably prompt written notification from the City of any notice of noncompliance given to Property Owner with respect to the performance of Property Owner's obligations under this Agreement.

9.5. **Mortgagee's Time to Cure.** If the City timely receives a written request from a Mortgagee requesting a copy of any notice of noncompliance given to Property Owner under the terms of this Agreement, the City shall provide a copy of such notice to Mortgagee within ten (10) days of sending such notice to Property Owner. Mortgagee shall have the right, but not the obligation, to cure the non-compliance for a period of sixty (60) days after Mortgagee receives written notice of noncompliance, or any longer period as is reasonably necessary, not to exceed one hundred twenty (120) days to remedy such items of noncompliance, provided that Mortgagee shall continuously and diligently pursue the remedy at all times until the item of noncompliance is cured.

9.6. **Bankruptcy**. If any Mortgagee is prohibited from commencing or prosecuting foreclosure or other appropriate proceedings in the nature of foreclosure by any process or injunction issued by any court or by reason of any action by any court having jurisdiction of any bankruptcy or insolvency proceedings involving Property Owner, the times specified in Section 9.5, above, shall be extended for the period of the prohibition but not to exceed one (1) year, except that any such extension shall not extend the Term of this Agreement.

9.7. **Disaffirmation**. If this Agreement is terminated by reason of (a) any default or (b) as a result of a bankruptcy proceeding, this Agreement is disaffirmed by a receiver, liquidator, or trustee for Property Owner or its property, the City, if requested by any Mortgagee, shall negotiate in good faith with such Mortgagee for a new development agreement for the Project as to such portion of the Property with the most senior Mortgagee requesting such new agreement. This Agreement does not require any Mortgagee or the City to enter into a new development agreement pursuant to this Section 9.7.

9.8. **Estoppel Certificate.** The City shall, at any time and within thirty (30) days following the written request of a Mortgagee, certify in writing to such Mortgagee that (a) this Agreement is in full force and effect and a binding obligations of the parties hereto, (b) this Agreement has not been amended or modified or, if so amended or modified, identifying the amendments and modifications, and (c) Property Owner is not in Default in the performance of its obligations under this Agreement or, if in Default, to describe therein the nature and extent of any

such default. Any such estoppel certificate shall be administratively issued by the Director of Planning/Community Development or his/her representative or designee.

10. MISCELLANEOUS PROVISIONS.

10.1. **Property Owner Challenge to Agreement**. In no event shall Property Owner bring or cause to bring a lawsuit in any court against City to invalidate any provision in this Agreement that would result in the ability of Property Owner to keep the Development Approvals without having to comply with the terms and conditions of this Agreement, provided that the foregoing shall not limit or otherwise affect Property Owner's rights and remedies under Section 7, above.

10.2. **Recordation of Agreement**. As provided in Government Code section 65868.5, this Agreement shall be recorded in the Official Records within ten (10) days following its execution by all Parties. Amendments of this Agreement approved by the City and executed by Property Owner and/or any Transferee(s), and any full or partial termination of this Agreement, shall be similarly recorded.

10.3. **Entire Agreement**. This Agreement sets forth and contains the entire understanding and agreement of the Parties, and there are no oral or written representations, understandings or ancillary covenants, undertakings or agreements which are not contained or expressly referred to herein. No testimony or evidence of any such representations, understandings or covenants shall be admissible in any proceeding of any kind or nature to interpret or determine the terms or conditions of this Agreement.

10.4. **Estoppel Certificate**. The City shall, at any time and within thirty (30) days following the written request of Property Owner or a Transferee, certify in writing to Property Owner and/or such Transferee that (a) this Agreement is in full force and effect and a binding obligations of the parties hereto, (b) this Agreement has not been amended or modified or, if so amended or modified, identifying the amendments and modifications, and (c) Property Owner is not in Default in the performance of its obligations under this Agreement or, if in default, to describe therein the nature and extent of any such Default. Any such estoppel certificate shall be administratively issued by the CD Director or his or her representative or designee. Any third party shall be entitled to rely on such estoppel certificate.

10.5. **Severability**. If any provisions, conditions, or covenants of this Agreement, or the application thereof to any circumstances of either Party, shall be held invalid or unenforceable, the remainder of this Agreement or the application of such provision, condition or covenant to Persons or circumstances other than those as to whom or which it is held invalid or unenforceable shall not be affected thereby and shall be valid and enforceable to the fullest extent permitted by law.

10.6. **Governing Law**. This Agreement shall be governed by and construed in accordance with the laws of the State of California. The Parties agree that all legal actions (including, without limitation, proceedings at law or in equity) arising out of this Agreement, shall be commenced and maintained only in Orange County Superior Court, in any other appropriate court in the County of Orange, or in the United States District Court for the Central District of California, Southern Division. Each Party hereby agrees to submit to the jurisdiction of any and

all such courts and further agree that venue shall be proper only in such courts. This Section shall survive the termination of this Agreement.

10.7. **Equitable Servitudes and Covenants Running with the Land**. All provisions of this Agreement shall be enforceable as equitable servitudes and constitute covenants running with the land. Each covenant to do, or refrain from doing, some act with regard to the Development or sale of the Property: (a) is for the benefit of and is a burden upon the Property or a portion thereof, as applicable; (b) runs with the Property and each portion thereof or a portion thereof, as applicable; and (c) is binding upon each Party and each Transferee of the Property or any portion thereof. Nothing herein, however, shall waive or limit the provisions of Section 2.2, above, and no Transferee of the Property, any portion of it, or any interest in it shall have any rights except those validly assigned to such Transferee in writing pursuant to Section 2.2, above. In any event, no owner or tenant of an individual completed residential unit or non-residential space within the Project shall have any rights under this Agreement.

10.8. **Notices**. All notices and other communications required or permitted to be given under this Agreement (a "**Notice**") shall be in writing and shall be (a) personally delivered by courier or overnight delivery service or mailed, certified or registered mail, return receipt requested, or (b) sent by electronic mail where expressly provided in this Agreement, but only if either (i) the recipient of the Notice acknowledges receipt of such transmission by email or (ii) a confirming copy of the Notice is sent by one of the methods set forth in clause (a), above, not later than the first business day following transmission. Any Notice shall be sent, transmitted, or delivered, as applicable, to the applicable Party at the following addresses:

If to City:	City of Cypress 5275 Orange Avenue Cypress, California 90730 Attention: City Manager Email: SDeLong@Cypressca.org
with a copy to:	Aleshire & Wynder, LLP 1 Park Plaza, Suite 1000 Irvine, CA 92614 Attention: William Wynder, Esq. Email:wwynder@awattorneys.com
If to Property Owner:	Los Alamitos Race Course 4961 Katella Avenue Los Alamitos, California 90720 Attention: Mr. Frank Sherren Email: fsherren@losalamitos.com
with a copy to:	Sheppard, Mullin, Richter & Hampton LLP 350 S. Grand Avenue, 40th Floor Los Angeles, California 90071-3640

Attention: Jack H. Rubens, Esq.
Lauren K. Chang, Esq.
Emails: jrubens@sheppard.com
lchang@sheppard.com.

Personally and courier delivered notices shall be deemed given upon actual personal delivery to the designated address of the intended recipient. Mailed notices shall be deemed given upon the date of actual receipt as evidenced by the return receipt. Electronically mailed notices shall be deemed given upon the date the email is transmitted if transmitted without indication of delivery failure prior to 5:00 p.m. local time for the recipient (and if transmitted without indication of delivery failure after 5:00 p.m. local time for the recipient, then delivery will be deemed duly given at 9:00 a.m. local time for the recipient on the subsequent business day). Any address for notice, including the address for a Transferee may be changed or added from time to time by written notice to the other Party and any Transferee(s) that has assumed any rights and obligations under this Agreement.

10.9. **Constructive Notice and Acceptance**. Every Person that now or hereafter owns or acquires any right, title, interest in or to any portion of the Property, is and shall be conclusively deemed to have consented and agreed to every provision contained herein, whether or not any reference to this Agreement is contained in the instrument by which such Person acquired such interest in the Property.

10.10. **Operating Memoranda**. The provisions of this Agreement require a close degree of cooperation between the City, Property Owner, and any Transferee(s). During the Term of this Agreement, clarifications to this Agreement and the Applicable Law may be appropriate with respect to the details of performance of the City, Property Owner, and any Transferee(s). If and when, from time to time, during the term of this Agreement, the City and Property Owner and/or any Transferee(s) agree that such clarifications are necessary or appropriate, they may effectuate such clarification through operating memoranda approved in writing by the City and Property Owner and/or any Transferee(s), which, after execution, must be attached hereto and become part of this Agreement and the same may be further clarified from time to time as necessary with future written approval by the City and Property Owner. Operating memoranda are not intended to and cannot constitute an amendment to this Agreement but are mere ministerial clarifications; therefore, public notices and hearings shall not be required. The City Manager shall determine whether a clarification may be accomplished through an operating memorandum or whether an amendment to this Agreement is required. The City Manager, or his or her designee, is authorized to execute such operating memoranda without further City Council action.

10.11. **Interpretation**. This Agreement shall be read and construed to fully effectuate, and to be consistent with, the language of the Municipal Code, Appendix I, Article 4, the Development Agreement Law, and this Agreement. The provisions of this Agreement shall be construed as a whole according to their fair meaning to achieve the objectives and purposes of the Parties, and the rule of construction to the effect that ambiguities are to be resolved against the drafting Party or in favor of City shall not be employed in interpreting this Agreement. Each of the Parties having been represented by counsel in the negotiation and preparation hereof.

10.12. **Attorneys' Fees**. In the event of any action between the City, Property Owner and/or any Transferee for enforcement or interpretation of any of the terms or conditions of this Agreement, the prevailing party in such action shall be entitled to recover its reasonable costs and expenses, including without limitation court costs and attorneys' fees actually and reasonably incurred, as awarded by a court of competent jurisdiction; provided, however, that the hourly rate used to calculate "reasonable fees actually and reasonably incurred" shall not exceed the hourly rate for attorney's fees paid by the City. This Section shall survive the termination of this Agreement.

10.13. **Section Headings**. All section headings and subheadings are inserted for convenience only and shall not affect any construction or interpretation of this Agreement.

10.14. **Singular and Plural**. As used herein, the singular of any word includes the plural where applicable.

10.15. **Time of Essence**. Time is of the essence in the performance of the provisions of this Agreement as to which time is an element.

10.16. **Waiver**. No waiver of any provision of this Agreement shall be effective unless in writing and signed by a duly authorized representative of the Party against whom enforcement of a waiver is sought and refers expressly to this Section. No waiver of any right or remedy with respect to any occurrence or event shall be deemed a waiver of any right or remedy with respect to any other occurrence or event.

10.17. **No Third Party Beneficiaries**. This Agreement is made and entered into for the sole protection and benefit for the Parties and their successors and assigns, including Transferees. No other Person shall have any right of action based upon any provision of this Agreement.

10.18. **Force Majeure**. Subject to the limitations set forth below, the Term of this Agreement and the time within which any Party shall be required to perform any act under this Agreement shall be extended by a period of time equal to the number of days during which performance of such act is rendered impossible by a Force Majeure Delay that is beyond the reasonable control of the Party seeking the extension. An extension of time shall be for the period of the Force Majeure Delay and shall commence to run from the time of the commencement of the cause, if written notice by the Party claiming such extension is sent to the other Party within thirty (30) days of the commencement of the cause. If written notice is sent after such thirty (30)-day period, then the extension shall commence to run upon the receipt of such notice. The cumulative extensions of time for Force Majeure Delays for individual performance obligations hereunder shall not exceed six (6) months, and the cumulative extensions of the expiration of this Agreement as a result of Force Majeure Delays shall not exceed one (1) year, unless otherwise agreed to in writing in accordance with Section 10.10 and Section 10.25.

10.19. **Extension of Time Limits**. The time limits set forth in this Agreement may be extended by mutual consent in writing of the Parties without amendment to this Agreement. Except as otherwise specified in this Agreement, each Party may agree or refuse to agree to any extension of time in its sole and absolute discretion.

10.20. **Successors in Interest**. As provided in Government Code section 65868.5, the provisions contained in this Agreement shall be binding upon, and inure to the benefit of, City and Property Owner, Transferees of Property Owner and their respective successors and assigns.

10.21. **Counterparts**. This Agreement may be executed by the Parties in counterparts, which counterparts shall be construed together and have the same effect as if each of the Parties had executed the same instrument.

10.22. **Project as a Private Undertaking**. It is specifically understood and agreed by and between the Parties hereto that the Development of the Project is a private undertaking, that no Party is acting as the agent of the other in any respect hereunder, and that each Party is an independent contracting entity with respect to the provisions contained in this Agreement. No partnership, joint venture or other association of any kind is formed by this Agreement. The only relationship between City and Property Owner is that of a government entity regulating the Development of private property and the owner of such property.

10.23. **Further Actions and Instruments**. Each of the Parties shall cooperate with and provide reasonable assistance to the other to the extent contemplated hereunder in the performance of all obligations under this Agreement and the satisfaction of the conditions of this Agreement. Upon the request of any Party at any time, the other Party shall promptly execute, with acknowledgment or affidavit if reasonably required, and file or record such required instruments and writings and take any actions as may be reasonably necessary under the terms of this Agreement to carry out the intent and to fulfill the provisions of this Agreement or to evidence or consummate the transactions contemplated by this Agreement.

10.24. **Eminent Domain**. No provision of this Agreement shall be construed to limit or restrict the exercise by City of its power of eminent domain.

10.25. **Amendments**. This Agreement may be amended from time to time only by written consent of both Parties (or in lieu of and/or in addition to Property Owner, as applicable, any Transferee(s) of the Property or any portion thereof) in accordance with Government Code section 65868, except as otherwise provided in Section 10.10, above, and Section 10.27 below.

10.26. **Authority to Execute**. Property Owner and the City each represents and warrants that the Person(s) executing this Agreement on their behalf have the authority to execute this Agreement and bind that Party to the performance of its obligations hereunder.

10.27. **Amendment of Legal Description and Depiction**. It is anticipated that following the recordation of this Agreement, Property Owner and Grace Church will effect a land swap pursuant to which Grace Church will own Lot 8 in VTTM 19247 and Property Owner will own Lots 5 and 10 in VTTM 19247. Therefore, following the recordation of the "A" final map that corresponds to VTTM 19247 and such land swap, **Exhibit A** and **Exhibit B** to this Agreement shall be amended to reflect that the Property includes Lots 1, 2, 3, 4, 5, 6, 7, 10, 11, 12, 13 and 14 and the lettered lots in such final map, and such amendment shall be considered a mere ministerial clarification, so that no public notice, hearing or City Council approval shall be required.

IN WITNESS WHEREOF, the Parties have executed this Agreement as of the day and year first set forth above.

EXHIBIT A

Legal Description of the Property

All that certain real property located in the City of Cypress, County of Orange, State of California, and described as follows:

LARC/CYPRESS GC PROPERTY

Parcel A: (APNs: 241-081-02, 241-081-23, 241-091-21, 241-221-22, 241-221-25, 241-221-26, 241-221-27, 241-221-28, 241-221-30 and 241-091-50 and 241-091-51)

Being all of Parcel 1 of Lot Line Adjustment No. 2019-01, recorded January 23, 2020, as Instrument No. 2020000030639 of Official Records in the Office of the County Recorder of said County.

Excepting therefrom, all minerals and all mineral rights of every kind and character now known to exist or hereafter discovered underlying the property, including, without limiting the generality of the foregoing, oil and gas and rights thereto, together with the sole, exclusive and perpetual right to explore for, remove and dispose of said minerals by any means or methods suitable to grantor, its successors and assigns, but without entering upon or using the surface of the property, and in such manner as not to damage the surface of the property, or to interfere with the use thereof by grantee, its successors or assigns, by Quitclaim Deed recorded August 6, 2001, as Instrument No. 20010534711 of Official Records.

Parcel B: (APNs: 241-091-37 and 241-232-37)

Parcel 2 of Lot Line Adjustment No. 2017-01, recorded May 9, 2018, as Instrument No. 2018000168853 of
Official Records in the Office of the County Recorder of said County.
Also excepting from a portion thereof, all minerals and all mineral rights of every kind and character now known to exist or hereafter discovered underlying the property, including, without limiting the generality of the foregoing, oil gas and rights thereto, together with the sole, exclusive and perpetual right to explore for, remove and dispose of said minerals by any means or methods suitable to grantor, its successors and assigns, but without entering upon or using the surface of the property, and such manner as not to damage the surface of the property, or interfere with the use thereof by grantee, its successors and assigns, provided however, that grantor, its successors and assigns, without the prior written permission of the grantee, its successors or assigns, shall not conduct any mining activities of whatsoever nature above a plane 500 feet below the surface of the property, as reserved by Union Pacific Railroad Company, a Delaware corporation recorded December 31, 2003, as Instrument No. 2003001534651 of Official Records.

Parcel C:

A non-exclusive easement for vehicular, equestrian and pedestrian ingress and egress as described in Easement Agreement recorded May 31, 2018, as Instrument No. 2018000198493 of Official Records and more particularly described as follows:

That portion of Parcel 1 of Parcel Map No. 90-241, in the City of Cypress, County of Orange, State of California, per map filed in Book 259, Pages 1 through 12, inclusive, of Parcel Maps, in the Office of the County Recorder of said County, described as follows:

Commencing at the southwest corner of said Parcel 1;
thence along the Westerly line of said Parcel 1 North 00°03'32" West, 347.00 feet;

thence leaving said Westerly line South 41°07'10" East, 459.77 feet, to a point on the Southerly line of said Parcel 1, distant thereon North 89°52'46" East, 302.00 feet, from the Southwest corner thereof, said point being the true point of beginning;
thence along said Southerly line of Parcel 1 North 89°52'46" West, 485.30 feet;
thence parallel with said Westerly line of Parcel 1 North 00°03'32" West, 24.00 feet, to a line parallel with and 24.00 feet Northerly of said Southerly line of Parcel 1;
thence along said last parallel line South 89°52'46" West, 506.19 feet, to the hereinabove described course bearing "South 41°07'10" East";
thence along said last course South 41°07'10" East, 31.80 feet, to the true point of beginning.

GRACE CHURCH PROPERTY

PARCEL A:

PARCEL 1, AS SHOWN ON LOT LINE ADJUSTMENT NO. LL 2009-02, AS EVIDENCE BY DOCUMENT RECORDED JANUARY 21, 2010, AS INSTRUMENT NO. 201000031686 OF OFFICIAL RECORDS, BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

PARCEL 1 OF LOT LINE ADJUSTMENT 95-3, IN THE CITY OF CYPRESS, COUNTY OF ORANGE, STATE OF CALIFORNIA, RECORDED JUNE 30, 1997, AS INSTRUMENT NO. 19970303502, OF OFFICIAL RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

TOGETHER WITH THAT PORTION OF PARCEL 1 OF LOT LINE ADJUSTMENT 98-3, IN THE CITY OF CYPRESS, COUNTY OF ORANGE, STATE OF CALIFORNIA, RECORDED JANUARY 12, 1999, AS INSTRUMENT NO. 19990020764, OF OFFICIAL RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS:

PARCEL B:

A NON-EXCLUSIVE PERPETUAL EASEMENT, AS SAID EASEMENT IS SET FORTH IN THAT CERTAIN ACCESS AND UTILITY EASEMENT AGREEMENT RECORDED JULY 19, 1991, AS INSTRUMENT NO. 91-377517 AND AMENDED BY THAT CERTAIN FIRST AMENDMENT TO EASEMENT AGREEMENT RECORDED FEBRUARY 13, 2003, AS INSTRUMENT NO. 2003000165238, BOTH OF OFFICIAL RECORDS OF ORANGE COUNTY, CALIFORNIA, FOR THE PURPOSE OF PEDESTRIAN AND VEHICULAR ACCESS OVER THOSE PORTIONS OF PARCELS 1 AND 4 OF PARCEL MAP NO. 2000-193, AS SHOWN ON A MAP FILED IN BOOK 321, PAGES 13 AND 14 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID ORANGE COUNTY, CALIFORNIA, INCLUDED WITHIN THAT CERTAIN STRIP OF LAND DELINEATED THEREON AS "B - INDICATES AN EASEMENT FOR ACCESS PURPOSES, INGRESS AND EGRESS, RESERVED HEREON FOR FUTURE CONVEYANCE".

APN 241-081-08 (Affects a portion of the land);
241-081-12 (Affects a portion of the land); and
241-081-22 (Affects a portion of the land)

Notwithstanding the foregoing, the Property does not include Lots 8 and 9 in VTTM 19247.

EXHIBIT B

Map Showing Property and Its Location

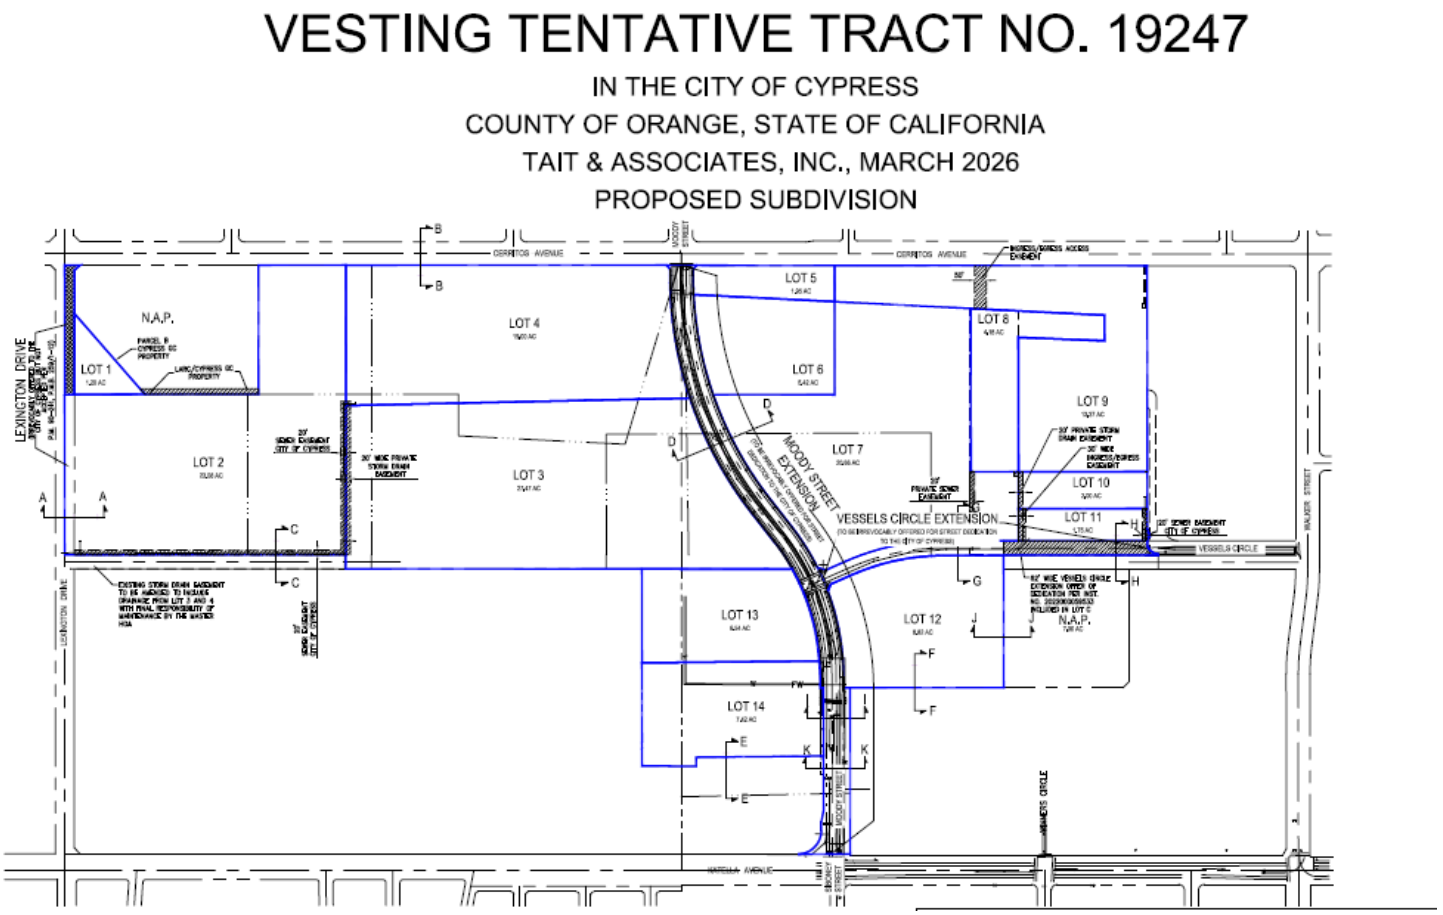

EXHIBIT C

Mitigation Monitoring and Reporting Program

MITIGATION MONITORING AND REPORTING PROGRAM

MITIGATION MONITORING REQUIREMENTS

California Public Resources Code (PRC) Section 21081.6, which is part of the California Environmental Quality Act (CEQA) statute, mandates that the following requirements shall apply to all reporting or mitigation monitoring programs:

- The public agency shall adopt a reporting or monitoring program for the changes made to the project or conditions of project approval in order to mitigate or avoid significant effects on the environment. The reporting or monitoring program shall be designed to ensure compliance during project implementation. For those changes that have been required or incorporated into the project at the request of a responsible agency or a public agency having jurisdiction by law over natural resources affected by the project, that agency shall, if so requested by the lead agency or a responsible agency, prepare and submit a proposed reporting or monitoring program.

- The lead agency shall specify the location and custodian of the documents or other materials that constitute the record of proceedings upon which its decision is based.

- The lead agency shall provide measures to mitigate or avoid potentially significant effects on the environment that are fully enforceable through permit conditions, agreements, or other measures. Conditions of project approval may be set forth in referenced documents that address required mitigation measures or, in the case of the adoption of a plan, policy, regulation, or other project, by incorporating the mitigation measures into the plan, policy, regulation, or project design.

- Prior to the close of the public review period for a draft environmental impact report, a responsible agency, or a public agency having jurisdiction over natural resources affected by the project, shall either (1) submit to the lead agency complete and detailed performance objectives for mitigation measures that would address the significant effects on the environment identified by the responsible agency or agency having jurisdiction over natural resources affected by the project, or (2) refer the lead agency to appropriate, readily available guidelines or reference documents. Any mitigation measures submitted to a lead agency by a responsible agency or an agency having jurisdiction over natural resources affected by the project shall be limited to measures that mitigate impacts to resources that are subject to the statutory authority of, and definitions applicable to, that agency. Compliance or noncompliance with that requirement by a responsible agency or agency having jurisdiction over natural resources affected by a project shall not limit the authority of the responsible agency or agency having jurisdiction over natural resources affected by a project, or the authority of the lead agency, to approve, condition, or deny projects as provided by this division or any other provision of law.

MITIGATION MONITORING PROCEDURES

The mitigation monitoring and reporting program for the proposed Specific Plan 3.0 Buildout Project (proposed project) has been prepared in compliance with PRC Section 21081.6. It describes the requirements and procedures to be followed by the City of Cypress (City), as the Lead Agency, to ensure that all mitigation measures adopted as part of the proposed project will be carried out as described in the Final Environmental Impact Report (EIR).

Table A: Mitigation Monitoring and Reporting Program sets forth the proposed mitigation monitoring and reporting program. It lists each of the mitigation measures specified in Chapter 4.0 of the Draft EIR and identifies the party or parties responsible for implementation and monitoring of each measure.

REGULATORY COMPLIANCE MONITORING PROCEDURES

Table B: Regulatory Compliance Measures lists all regulatory compliance measures associated with the proposed project as specified in in Chapter 4.0 of the Draft EIR and describes the requirements and procedures to be followed by the City to ensure that all standard conditions will be carried out as described in the Draft EIR.

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
4.3: Air Quality					
Mitigation Measure AIR-1: Prior to issuance of grading permits for development projects in the Buildout Area, a future project applicant in collaboration with the City of Cypress Planning Division shall identify project design details and specifications, where feasible, to document implementation and compliance with emission reduction measures. The City of Cypress Planning Division shall verify compliance through: (1) review and approval of construction drawings and building permit submittals demonstrating incorporation of the emission-reduction measures; (2) documentation or reporting from the contractor or a future project applicant, as deemed necessary by the City of Cypress Planning Division, demonstrating adherence to approved measures. The measures below shall be implemented and updated as necessary as they are considered feasible and effective in reducing criteria pollutant emissions generated by the project. These measures shall be reviewed and updated in accordance with the most recent emission-reduction and emission-minimization guidance available, including, at a minimum, the California Air Pollution Control Officers Association (CAPCOA) 2024 guidance. A future project applicant shall incorporate all feasible and updated measures into the final construction drawings, building plans, and contractor specifications for City review, including, but not limited to, the following: ● Provide building access and paths which are physically separated from street parking lot traffic and that eliminate physical barriers such as walls, berms, landscaping and slopes that impede the use of pedestrians, bicycle facilities, or public transportation vehicles. ● Provide continuous sidewalks separated from the roadway by landscaping and on street parking. ● Provide a parking lot design that includes clearly marked and shaded pedestrian pathways between transit facilities and building entrances.	Prior to issuance of grading permits for development projects in the Buildout Area	City of Cypress / Future Project Applicant(s)			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
• Provide preferential parking spaces near the entrance of buildings for those who carpool/vanpool/rideshare and provide signage. • Install electric vehicle charging capabilities that meet the requirements of the latest version of the California Green Building Standards Code (CALGreen Code) Tier 2 Voluntary Standards. • Install ENERGY STAR certified heating, cooling, and lighting devices, and appliances or equivalent. • Install only electric fireplaces. • Install low-flow water fixtures. • Utilize energy-efficient design features, including appropriate site orientation, use of lighter color roofing and building materials, and use of deciduous shade trees and windbreak trees to reduce fuel consumption for heating and cooling. • Use light-colored paving and roofing materials. • Use low-volatile organic compound (VOC) paints with 10 grams per liter or less. • Require the use of all-electric landscaping equipment. • Maximizing the planting of trees in landscaping and parking lots.					
Mitigation Measure AIR-2: All construction activities in the Buildout Area shall utilize U.S. EPA Tier 4 Final diesel construction equipment for equipment rated at greater than 50 brake horsepower (bhp) if and to the extent commercially available, or the cleanest available equipment and technology that is commercially available and feasible at the time of construction (e.g., zero-emission or equivalent low-emission equipment), to minimize diesel particulate matter (DPM) emissions. If Tier 4 Final equipment is not commercially available for a majority of the construction equipment and an individual development project would be larger than 20 acres, the City shall require preparation of a construction Health Risk Assessment (HRA) for such development project.	Prior to and during construction activities	City of Cypress / Construction Contractor			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
If a construction HRA is required, it shall be prepared in accordance with current OEHHA methodology and applicable SCAQMD CEQA and health risk assessment guidance. Additional feasible risk-reduction measures identified through the HRA process shall be implemented as determined necessary by the City.					
4.4: Biological Resources					
Mitigation Measure BIO-1: Jurisdictional Delineation. Prior to commencing construction activities that would impact any of the identified aquatic resources in Lots 2, 3, 4, 6 and 7 of Vesting Tentative Tract Map (VTTM) 19247, a jurisdictional delineation shall be conducted, as follows: ● Regional Water Quality Control Board (RWQCB) Jurisdiction (Waters of the State): Delineation shall follow the State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State (State Water Resources Control Board [SWRCB] 2019). ● California Department of Fish and Wildlife (CDFW) Jurisdiction (Streambed Alteration Program): The extent of CDFW jurisdiction shall be identified consistent with California Fish and Game Code §§ 1600–1616, including the outer limits of the bed, bank, and channel and the extent of any associated riparian vegetation. ● US Army Corps of Engineers (USACE) Jurisdiction (Waters of the United States [WOTUS]): The determination that no federal WOTUS occur onsite shall be documented consistent with 33 CFR § 328.3, the USACE 1987 Wetland Delineation Manual, and the appropriate Regional Supplement (USACE 2008). If impacts to RWQCB and/or CDFW jurisdictional waters are expected to occur, appropriate permits or authorization (e.g., Water Quality Certification/Waste Discharge Requirements, CDFW Lake and Streambed Alteration Agreement) shall be obtained prior to construction.	Prior to commencement of construction activities that would impact any of the identified aquatic resources in Lots 2, 3, 4, 6, and 7 of VTTM 19247	Future Project Applicant(s) / Qualified Delineator			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
4.5: Cultural Resources					
Mitigation Measure CUL-1: Prior to demolition activities of any character-defining features, the owner of Los Alamitos Race Course, or subsequent project proponents, shall make photographs and memorabilia, including brochures, promotional flyers, marketing materials, special events announcements and the like (or copies of the same) available to a local library or an Orange County-based historical society: a. For use in an exhibit(s) about horse racing, quarter horses, Frank Vessels, Sr. the Vessels family, pari-mutuel betting and/or the history of Cypress; and/or b. To be part of a permanent archive for research purposes.	Prior to demolition activities of any LARC character-defining features	Owner of LARC or Future Project Applicant(s)			
Mitigation Measure CUL-2: Require future development on portions of the Los Alamitos Race Course property to incorporate one or more of the following: a. A historical marker that provides information about Frank Vessels, Sr. and Los Alamitos Race Course. The marker should be clearly visible and accessible to the public. b. The Vessels' name, the track logo, racing terminology, and/or the names or likenesses (e.g., statuary, wall or garden art, and photographs) of noteworthy Quarter Horses (such as Clabber, Go Man Go, or Moonist).	Prior to project occupancy	Future Project Applicant(s)			
Mitigation Measure CUL-3: Prior to, or in conjunction with, approval of any demolition or development permits that involves the destruction of any portion of the Los Alamitos Race Course property, the Project Applicant should be required to commission documentation of the property in the form of Historic American Building Survey (HABS)-like documentation that complies with the *Secretary of the Interior's Standards for Architectural and Engineering Documentation* (NPS 1990), if any of the character-defining features as identified are still present. The documentation should generally follow the HABS Level III requirements and include digital photographic recordation of the complex, a detailed historic narrative report, and compilation of historic research. Photographic documentation should include:	Prior to, or in conjunction with, approval of any demolition or development permits that involves the destruction of any portion of the LARC property	Future Project Applicant(s) / Qualified Architectural Historian			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
• General views of the site and landscape as a whole • Photographs of the 550-yard chute, track, and winner's circle • Photographs of each exterior elevation of all buildings and structures in the complex • Photographs of the interior of the Grandstand. The documentation should be completed by a qualified architectural historian or historian who meets the Secretary of the Interior's Professional Qualification Standards for History and/or Architectural History (NPS 1983). The original archival-quality documentation shall be offered as donated material to the following entities: South Central Coastal Information Center at CSU Fullerton, Preserve Orange County, the Orange County Historical Society and other repositories to be determined such as local libraries and the American Quarter Horse Association Hall of Fame.					
4.7: Geology and Soils					
Mitigation Measure GEO-1: Implementation of Geotechnical Investigation Recommendations. Future development projects within the Buildout Area shall implement the recommendations of the Geotechnical Investigation prepared for the proposed project, to the satisfaction of the City of Cypress' (City) Building Official, including, but not limited to: **Ground Improvement Techniques.** Ground improvement techniques shall be implemented in the Buildout Area beneath any structure intended for human occupancy. Ground improvements may consist of rammed aggregate piers, vibrated aggregate piers, or similar techniques. The ground improvements must be designed by a qualified ground improvement contractor through coordination with a geotechnical engineer and/or structural engineer to ensure liquefaction in the upper soils. **Building Foundation Techniques.** Subsequent to the installation of any proposed ground improvements, proposed structures, mat or mat-type foundation systems will be used. Conventional foundations may be utilized for support of the lighter at-grade structure if the ground improvements reduce the total and	Prior to the issuance of any grading or building permit	City of Cypress / Future Project Applicant(s)			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
differential settlement to a threshold confirmed by the geotechnical engineer, the structural engineer, and the construction contractor. **Additional site testing and final design evaluation(s)** shall be conducted by a geotechnical consultant to refine and/or enhance these requirements during buildout of the project on an as-needed basis. A future project applicant(s) shall require the geotechnical consultant to assess whether the recommendations in the Geotechnical Investigation need to be modified or refined to address any changes in the project features prior to start of grading. If the geotechnical consultant identifies modifications or refinements to the recommendations, the future project applicant(s) shall make modifications to the final project design and specifications. Examples of additional measures could include: a moisture or vapor retarding system below foundations, additional ground stabilization techniques like cement treatment or aggregate, or removal and replacement of existing soil to eliminate any unsuitable materials or undocumented fill. Design, grading, and construction shall be performed in accordance with applicable requirements in the Municipal Code, the California Building Code, local grading regulations, and any additional measures recommended by the geotechnical consultant in the subsequent geotechnical evaluation(s).					
Mitigation Measure GEO-2: Procedures for Unexpected Paleontological Resources Discoveries. If paleontological resources are discovered during ground-disturbing activities associated with the proposed project, construction personnel shall immediately halt work within 50 feet of the discovery, and a future project applicant/developer or construction supervisor shall contact a qualified paleontologist to assess the discovery for scientific importance. A qualified paleontologist is defined as a person with an M.S. or Ph.D. in geology or paleontology and who meets the standards set forth by the Society of Vertebrate Paleontology. The paleontologist shall make recommendations regarding the collection, treatment, and disposition of the discovery. Scientifically important resources shall be prepared to	During ground-disturbing activities	Construction Contractor / Qualified Paleontologist			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
the point of identification, identified to the lowest taxonomic level possible, cataloged, and curated into the permanent collections of a museum repository. If paleontological resources are discovered, regardless of their scientific importance, paleontological monitoring shall be required for subsequent ground-disturbing activities at a frequency, depth, and/or interval determined by the paleontologist. Paleontological monitoring shall be conducted by a qualified paleontological monitor as set forth in the Society of Vertebrate Paleontology standards. At the conclusion of monitoring, a final monitoring report shall be prepared by the paleontologist to document the results of monitoring and project compliance with all regulations and project requirements. If scientifically important paleontological resources are recovered, this report shall also document those paleontological resources with a catalog, descriptions, and photographs as determined appropriate by the paleontologist. The final monitoring report shall be submitted to the City of Cypress Director of Community Development Department or designee for review and approval. A copy of this final report shall also accompany the fossil material to the museum repository.					
Mitigation Measure GEO-3: Worker Sensitivity Training: Prior to issuance of grading permits, applicants for projects that would include ground-disturbing activities below 10 feet in undisturbed native sediments ranked as having a moderate or high paleontological sensitivity shall be required to retain a qualified paleontologist meeting the requirements set forth by the Society of Vertebrate Paleontology. Prior to and during initial ground-disturbing activities, the qualified paleontologist (or their designee) shall provide worker environmental awareness training to construction personnel. Training shall include recognition of potential fossil materials, appropriate worker response protocols, and contact information for the paleontologist.	Prior to issuance of grading permits	Future Project Applicant(s) / Qualified Paleontologist			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
4.8: Greenhouse Gas Emissions					
Mitigation Measure GHG-1: Prior to issuance of building permits, project applicants for future development within the Buildout Area shall demonstrate to the satisfaction of the City of Cypress (City) Planning Division that the proposed buildings incorporate feasible greenhouse gas (GHG) reduction strategies consistent with current State and local decarbonization goals. Compliance shall be demonstrated through building plans, energy modeling, California Green Building Standards Code (CALGreen Code) checklists, or similar documentation submitted during the plan check process, as deemed necessary by the City. Future project applicants shall comply with either the All-Electric Design Path or the Efficient Mixed-Fuel Design Path, as described below: **Preferred Compliance Path: All Electric Design** - Future development shall be designed and constructed without natural gas infrastructure or natural gas appliances. All space heating, water heating, cooking, and clothes drying systems shall be fully electric. Electrical service panels shall be sized to accommodate expected loads and future electrification needs. **Alternative Compliance Path: Efficient Mixed-Fuel Design** - If a project proposes to install natural gas infrastructure or natural gas appliances, future project applicants shall implement a combination of GHG reduction measures sufficient to minimize GHG emissions from natural gas usage to the maximum extent feasible. Measures may include, but are not limited to, the following: • Exceed Title 24, Part 6 (Building Energy Efficiency Standards) performance requirements by 10–20 percent, where feasible, as demonstrated through energy modeling or prescriptive compliance documentation. • Install on-site solar photovoltaic (PV) systems to the maximum feasible extent, including on rooftops and parking canopy structures, where structurally and technically feasible.	Prior to issuance of building permits	City of Cypress / Future Project Applicant(s)			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
• Provide electric-ready infrastructure, including service panel capacity, conduit, wiring, and dedicated circuits, to allow future conversion to all-electric appliances and systems. • Design buildings to achieve, at minimum, Leadership in Energy and Environmental Design (LEED) Silver certification or an equivalent third-party green building rating. • Install programmable thermostats, advanced metering infrastructure, and smart home energy management systems. • Provide heating, ventilation, and air conditioning (HVAC) commissioning consistent with CALGreen Sections 5.410.2–5.410.4, including a commissioning plan, functional performance testing, and a commissioning report. • Install cool roof materials meeting an aged solar reflectance of ≥ 0.30, or the most current CALGreen Code requirement, whichever is more stringent. • Provide infrastructure to accommodate up to 50 percent recycled water use for landscape irrigation, where recycled water supply is available. • Use water-efficient irrigation systems, minimize turf, and incorporate native, low-water, or drought-tolerant plant species. • Install rainwater harvesting systems, where feasible. • Prohibit or restrict the use of potable water for cleaning non-vegetated outdoor surfaces and prohibit systems that apply water to hardscape surfaces. • Implement and maintain robust solid waste diversion programs, including recycling and organic waste collection consistent with Senate Bill (SB) 1383 requirements. All selected GHG reduction measures shall be clearly identified on improvement plans and construction drawings. Compliance with this measure shall be verified by City staff during plan check and confirmed through building inspection prior to final occupancy.					

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
4.9: Hazards and Hazardous Materials					
Mitigation Measure HAZ-1: Prior to the issuance of a building permit, a future project applicant/developer shall demonstrate the recommendations provided in the Phase I Environmental Site Assessment (Phase I ESA) prepared for the Buildout Area have been, or will be, implemented. Recommendations provided in the Phase I ESA include the following: ● Preparation and implementation of an Operations and Maintenance (O&M) Program in order to safely manage the suspect asbestos-containing materials (ACMs) and/or lead-based paint (LBP) associated with the existing structures located within the Buildout Area; and ● Providing a copy of this Draft Environmental Impact Report (EIR) and the Notice of Completion (NOC) to the Orange County Health Care Agency (OCHCA) in order to notify them of the proposed change in land use facilitated under the proposed project.	Prior to issuance of a building permit	Future Project Applicant(s)			
4.17: Transportation					
Mitigation Measure TRA-1: Transportation Demand Management Strategies. The Development Agreement between the City and the Project Applicant regarding the proposed project shall include a provision requiring that any future project applicants for subsequent residential development projects within the Buildout Area demonstrate the project's consistency with the measures set forth in Items 1 and 2 below that are applicable to such project prior to its approval to the satisfaction of the City of Cypress Planning Director. 1. **Construct or Improve Bike Facility (California Air Pollution Control Officers Association [CAPCOA] Handbook Strategy T-19-A):** This transportation demand management strategy requires the project to include a new bicycle facility or facilities or improve an existing facility that would connect the project to the existing regional bicycle network. The construction/improvement of bicycle facilities would provide residents with the opportunity to bike to their destination	During preparation of the Development Agreement	City of Cypress / Future Project Applicant(s)			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
rather than drive, reducing the number of vehicle trips and overall project-generated vehicle miles traveled (VMT). 2. **Provide Pedestrian Network Improvement (CAPCOA Handbook Strategy T-18):** This transportation demand management strategy requires the construction of off-site sidewalks to improve sidewalk coverage and pedestrian access to the surrounding area.					
4.18: Tribal Cultural Resources					
Mitigation Measure TCR-1: Tribal Cultural Resources Training and ALERT Sheet Posting. Prior to the start of any ground-disturbing activities, a qualified archaeologist meeting the Secretary of the Interior standards, in consultation with a representative from a traditionally and culturally affiliated Native American Tribe, under the direction of the City of Cypress Planning Division, shall prepare a Cultural Resources Sensitivity Summary. This summary shall include a brief description of the types of archaeological and tribal cultural resources that may be encountered, visual examples (if available), reporting procedures in the event of a discovery, and appropriate contact information. The summary shall be printed and posted in a visible location at the construction site for the duration of all ground-disturbing activities. An initial worker environmental training shall be provided by a qualified archaeologist in collaboration with a tribal representative prior to the start of construction, under the direction of the City of Cypress Planning Division. The training shall include a review of applicable laws, procedures to follow if resources are discovered, and cultural sensitivity guidance. A sign-in sheet shall be maintained to document attendance. As construction progresses, the construction manager shall be responsible for ensuring that all new personnel receive the same information through on-site orientation and review of the posted materials. Documentation of ongoing training shall be maintained and made available to the City upon request.	Prior to the start of any ground-disturbing activities	Future Project Applicant(s) / Qualified Archaeologist			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
Mitigation Measure TCR-2: Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities. Prior to the issuance of any grading permits for projects within the Buildout Area that would require "ground-disturbing activity," where such disturbance activity would occur in undisturbed native sediment, a future project applicant/City shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching on both on-site and any off-site locations that are included in the Project Description/ definition and/or required in connection with the projects, such as public improvement work. A copy of the executed monitoring agreement shall be submitted to the Director of the City of Cypress Community Development Department, or their designee, prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity. The tribal monitor shall also provide appropriate insurance certificates. The monitor shall complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs shall identify and describe any discovered tribal cultural resources (TCRs), including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, "TCRs"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs shall be provided to the future project applicant/City upon written request to the Tribe. On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Tribe from a designated	Prior to the issuance of any grading permits	Future Project Applicant(s) / Native American Monitor			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
point of contact for the future project applicant/City that all ground-disturbing activities and phases that may involve ground-disturbing activities in native (previously undisturbed) soil has occurred (i.e., no tribal monitoring shall be required for landscaping activities occurring after completion of project grading and trenching, as this soil will have been previously monitored) or in connection with the project are complete; or (2) a determination and written notification by the Tribe to the future project applicant/City that no future, planned construction activity and/or development/construction phase associated with the project possesses the potential to impact TCRs. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Tribe's monitor and/or archaeologist. The Tribe will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural, and/or historic purposes.					
Mitigation Measure TCR-3: Unanticipated Discovery of Human Remains and Associated Funerary Objects. Native American human remains are defined in Public Resources Code (PRC) Section 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in PRC Section 5097.98, are also to be treated according to this statute. If Native American human remains and/or grave goods are discovered or recognized during ground-disturbing activities associated with projects within the Buildout Area, then all construction activities shall immediately cease within 50 feet of the find. Health and Safety Code Section 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and all ground-disturbing activities shall immediately halt and shall remain halted until the Coroner	During ground-disturbing activities	Construction Contractor / County Coroner / Most Likely Descendant			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
has determined the nature of the remains. If the Coroner recognizes the human remains to be those of a Native American or has reason to believe they are Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission (NAHC), and PRC Section 5097.98 shall be followed. Human remains and grave/burial goods shall be treated alike per PRC Section 5097.98(d)(1) and (2). If Native American human remains are discovered or recognized on any construction sites within the Buildout Area during ground-disturbing activities and the NAHC subsequently identifies the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe) to be the Most Likely Descendant (MLD), construction activities may resume in other parts of the construction site at a minimum of 200 feet away from discovered human remains and/or burial goods, if the Tribe determines in its sole discretion that resuming construction activities at that distance is acceptable and provides the project manager express consent of that determination (along with any other mitigation measures the Tribe's monitor and/or archaeologist deems necessary). (*State CEQA Guidelines* Section 15064.5(f).) Preservation in place (i.e., avoidance) is the Tribe's preferred manner of treatment for discovered human remains and/or burial goods. Any discovery of human remains/burial goods shall be kept confidential to the extent feasible to prevent further disturbance.					
Mitigation Measure TCR-4: Procedures for Burials and Funerary Remains. If Native American human remains are discovered or recognized on any construction sites within the Buildout Area during ground-disturbing activities and the Native American Heritage Commission subsequently identifies the Gabrieleño Band of Mission Indians – Kizh Nation (Tribe) to be the Most Likely Descendant ("MLD"), the Koo-nas-gna Burial Policy, as described below, shall be implemented. To the Tribe, the term "human	During ground-disturbing activities	Construction Contractor / Most Likely Descendant			

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
remains" encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the preparation of the soil for burial, the burial of funerary objects with the deceased, and the ceremonial burning of human remains. If the discovery of human remains includes four or more burials, the discovery location shall be treated as a cemetery and a separate treatment plan shall be created. The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered as associated funerary objects. Cremations will either be removed in bulk or by means as necessary to ensure complete recovery of all sacred materials. In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that burials will be removed. In the event preservation in place is not possible despite good faith efforts by the future project applicant/City and/or landowner, before ground-disturbing activities may resume on the project site, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects. Each occurrence of human remains and associated funerary					

Table A: Mitigation Monitoring and Reporting Program

Mitigation Measures	Monitoring Milestone	Responsible Party	Verification of Compliance		
			Initials	Date	Remarks
objects will be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within 6 months of recovery. The site of reburial/repatriation shall be on the project site but at a location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered. The Tribe will work closely with the project's qualified archaeologist to ensure that the excavation is treated carefully, ethically and respectfully. If data recovery is approved by the Tribe, documentation shall be prepared and shall include (at a minimum) detailed descriptive notes and sketches. All data recovery data recovery-related forms of documentation shall be approved in advance by the Tribe. If any data recovery is performed, once complete, a final report shall be submitted to the Tribe and the NAHC. The Tribe does not authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.					

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
4.3: Air Quality					
Regulatory Compliance Measure AIR-1: During clearing, grading, earth moving, or excavation operations, excessive fugitive dust emissions shall be controlled by regular watering or other dust preventative measures by using the following procedures, in compliance with South Coast Air Quality Management District (SCAQMD) Rule 403 during construction. The applicable Rule 403 measures are as follows: ● Apply nontoxic chemical soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas inactive for 10 days or more). ● Water active sites at least twice daily (locations where grading is to occur shall be thoroughly watered prior to earthmoving). ● Cover all trucks hauling dirt, sand, soil, or other loose materials, or maintain at least 2 feet (0.6 meter) of freeboard (vertical space between the top of the load and the top of the trailer) in accordance with the requirements of California Vehicle Code Section 23114. ● Pave construction access roads at least 100 feet (30 meters) onto the site from the main road. ● Reduce traffic speeds on all unpaved roads to 15 miles per hour or less.	During clearing, grading, earth moving, or excavation operations	Construction Contractor			
Regulatory Compliance Measure AIR-2: All trucks that are to haul excavated or graded material shall comply with State Vehicle Code Section 23114, with special attention to Sections 23114(b)(F), (e)(2), and (e)(4) as amended, regarding the prevention of such material spilling onto public streets and roads.	During construction activities	Construction Contractor			
Regulatory Compliance Measure AIR-3: Prior to approval of future project plans and specifications, the City of Cypress shall confirm that the construction bid packages specify: ● Contractors shall use high-volume low-pressure paint applicators with a minimum transfer efficiency of at least 50 percent; ● Coatings and solvents that will be utilized have a volatile organic	Prior to approval of future project plans and specifications	City of Cypress / Future Project Applicant(s)			

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
compound content lower than required under SCAQMD Rule 1113; and ● To the extent feasible, construction/building materials shall be composed of pre-painted materials.					
Regulatory Compliance Measure AIR-4: Future projects shall comply with SCAQMD Rule 402. Rule 402 prohibits the discharge of air contaminants or other material from any type of operations, which can cause nuisance or annoyance to any considerable number of people or to the public or which endangers the comfort or repose of any such persons, or the public.	During operation of future projects	Future Project Operators			
4.4: Biological Resources					
Regulatory Compliance Measure BIO-1: Preconstruction Bat Surveys. If construction activities for a specific development project within the Buildout Area, including structure demolition and tree removal, will occur during the bat maternity season (April 1 to August 31), then the City, or designee, shall confirm that the applicable developer has retained a qualified biologist who shall conduct a nighttime bat survey of potential maternity roost habitat no more than 30 days prior to the removal of potential habitat. These surveys shall be initiated no later than 30 minutes before sunset and continue for no less than 1 hour after sunset. If maternity roosts are found and the project would result in impacts to roosting bats, the biologist shall coordinate with CDFW to establish appropriate avoidance buffers around all maternity roost sites, and no construction work shall occur within the buffers until the completion of the maternity season. If deemed necessary through coordination with CDFW, additional measures could include two-step removal of any trees containing maternity roosts (outside of the maternity season), preparation of a Bat Habitat Mitigation and Monitoring Plan (BHMMP), and humane bat eviction/exclusion.	30 days prior to the initiation of construction activities if construction will occur during the bat maternity season (April 1 to August 31)	Future Project Applicant(s) / Qualified Biologist			
Regulatory Compliance Measure BIO-2: Preconstruction Nesting Bird Surveys and Active Nest Avoidance Buffers. If potential bird nesting habitat is to be removed from a portion of the Buildout Area in connection with a specific development project during the avian nesting season (January 1 through August 31), including structures, trees, shrubs and suitable ground-nesting areas, a qualified biologist	Within 3 days prior to the potential removal of suitable nesting habitat, if	Future Project Applicant(s) / Qualified Biologist			

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
shall conduct a nesting bird survey in such portion of the Buildout Area within 3 days prior to the commencement of structure demolition, vegetation removal, or other construction activities that could remove suitable nesting habitat. If no nesting birds are identified, no additional survey is required. If at any time an active nest is identified, the biologist shall establish suitable buffers around the nests that consider the ecology of the species present and the location of construction activities to ensure that disruption of nesting does not occur. The buffer areas shall be avoided until the nests are no longer occupied and the juvenile birds can survive independently from the nests.	construction will occur during the avian nesting season (January 1 through August 31)				
4.5: Cultural Resources					
Regulatory Compliance Measure CUL-1: Unknown Archaeological Resources. In the event that archaeological resources are discovered during excavation, grading, or construction activities, work shall cease within 50 feet of the find until a qualified archaeologist from the Orange County List of Qualified Archaeologists has evaluated the find in accordance with federal, State, and local guidelines to determine whether the find constitutes a "unique archaeological resource," as defined in Section 21083.2(g) of the California Public Resources Code (PRC). A future project applicant and its construction contractor shall not collect or move any archaeological materials and associated materials. Construction activity may continue unimpeded on other portions of the project site. Any found deposits shall be treated in accordance with federal, State and local guidelines, including those set forth in PRC Section 21083.2. Prior to commencement of grading activities, the Director of the City of Cypress (City) Community Development Department, or designee, shall verify that all project grading and construction plans include specific requirements regarding California PRC (Section 21083.2[g]) and the treatment of archaeological resources as specified above.	During excavation, grading, or construction activities	Construction Contractor / Qualified Archaeologist from the Orange County List of Qualified Archaeologists			

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
Regulatory Compliance Measure CUL-2: Human Remains. In the event that human remains are encountered on the project site, work within 50 feet of the discovery shall be redirected and the County Coroner notified immediately consistent with the requirements of California Code of Regulations (CCR) Section 15064.5(e). State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. If the remains are determined to be Native American, the County Coroner shall notify the Native American Heritage Commission (NAHC), which shall determine and notify a Most Likely Descendant (MLD). With the permission of the property owner, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. The MLD may recommend scientific removal and non-destructive analysis of human remains and items associated with Native American burials. Consistent with CCR Section 15064.5(d), if the remains are determined to be Native American and an MLD is notified, the City of Cypress shall consult with the MLD as identified by the NAHC to develop an agreement for treatment and disposition of the remains. Prior to the issuance of grading permits, the Director of the City of Cypress Community Development Department, or designee, shall verify that all grading plans specify the requirements of CCR Section 15064.5(e), State Health and Safety Code Section 7050.5, and PRC Section 5097.98, as stated above.	During construction activities	Construction Contractor / County Coroner / Most Likely Descendant			
4.6: Energy					
The proposed project would not require any regulatory compliance measures related to energy.					
4.7: Geology and Soils					
The proposed project would not require any regulatory compliance measures related to geology and soils.					
4.8: Greenhouse Gas Emissions					
The proposed project would not require any regulatory compliance measures related to greenhouse gas emissions.					

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
4.9: Hazards and Hazardous Materials					
Regulatory Compliance Measure HAZ-1: Federal Aviation Regulation Title 14 Part 77. A future project applicant/developer shall notify the Federal Aviation Administration (FAA) of any proposed structure(s) that would penetrate the 100 to 1 imaginary surface that surrounds the runway at Joint Forces Training Base Los Alamitos at least 45 days prior to beginning construction.	At least 45 days prior to beginning construction of a structure that would penetrate the 100 to 1 imaginary surface that surrounds the runway at Joint Forces Training Base Los Alamitos	Future Project Applicant(s) / Developer			
4.10: Hydrology and Water Quality					
Regulatory Compliance Measure HYD-1: Construction General Permit. If construction of future projects associated with the proposed project would disturb greater than 1 acre of soil, prior to commencement of construction activities within the proposed Buildout Area, the Construction Contractor shall obtain coverage under the National Pollutant Discharge Elimination System (NPDES) *General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities*, Order WQ 2022-0057-DWQ, NPDES No. CAS000002 (Construction General Permit), or any other subsequent permit. This shall include submission of Permit Registration Documents, including permit application fees, a Notice of Intent (NOI), a risk assessment, a site plan, a Stormwater Pollution Prevent Plan (SWPPP), a signed certification statement, and any other compliance-related documents required by the permit, to the State Water Resources Control Board via the Stormwater Multiple Application and Report Tracking System (SMARTS). Construction activities shall not commence until a Waste Discharge Identification Number is obtained for the project from the SMARTS and provided to the Director of Public Works for the City of Cypress, or designee, to	Prior to commencement of construction activities	Construction Contractor			

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
demonstrate that coverage under the Construction General Permit has been obtained. Project construction shall comply with all applicable requirements specified in the Construction General Permit, including but not limited to, preparation of a SWPPP and implementation of construction site best management practices (BMPs) to address all construction-related activities, equipment, and materials that have the potential to impact water quality for the appropriate risk level identified for the project. The SWPPP shall identify the sources of pollutants that may affect the quality of storm water and shall include BMPs (e.g., Sediment Control, Erosion Control, and Good Housekeeping BMPs) to control the pollutants in storm water runoff. Upon completion of construction activities and stabilization of the Buildout Area, a Notice of Termination (NOT) shall be submitted via SMARTS. If construction of future projects associated with the proposed project would disturb less than 1 acre of soil, prior to commencement of construction activities within the Buildout Area, the Construction Contractor shall provide evidence that project construction would comply with Section 4.106 of the 2019 California Green Building Standards Code (CALGreen Code). Section 4.106 of the CALGreen Code requires implementation of BMPs to prevent flooding and erosion and to retain sediment on site (e.g., Sediment Control, Erosion Control, and Good Housekeeping BMPs).					
Regulatory Compliance Measure HYD-2: Construction Dewatering Permit. If groundwater dewatering is required during excavation activities, the Applicant/City shall obtain coverage under the *General Waste Discharge Requirements for Discharges to Surface Waters that Pose an Insignificant (De Minimis) Threat to Water Quality*, Order No. R8-2020-0006, NPDES No. CAG998001 (Construction Dewatering Permit). This shall include submission of a Notice of Intent (NOI) for coverage under the permit to the Santa Ana Regional Water Quality Control Board (RWQCB) at least 45 days prior to the start of dewatering. Groundwater dewatering activities shall comply with all applicable provisions in the permit, including water sampling, analysis,	During excavation activities	Construction Contractor			

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
treatment (if required), and reporting of dewatering-related discharges. Upon completion of groundwater dewatering activities, a Notice of Termination shall be submitted to the Santa Ana RWQCB.					
Regulatory Compliance Measure HYD-3: Orange County MS4 Permit/City Municipal Code. Prior to issuance of a grading permit for future projects associated with the proposed project, the future project Applicant shall prepare and submit a final project-specific water quality management plan (WQMP) to specify BMPs that would be implemented to capture, treat, and reduce pollutants of concern in stormwater runoff in compliance with the Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the Incorporated Cities of Orange County within the Santa Ana Region Areawide Urban Storm Water Runoff Orange County, Order R8-2009-0030, NPDES No. CAS618030, as amended by Order No. R8-2010-0062 (Orange County MS4 Permit), Orange County Drainage Area Management Plan (DAMP), and the City of Cypress Local Implementation Plan (LIP). The WQMP shall also incorporate the results of the Final Hydrology and Hydraulic Analyses to demonstrate that the bioretention facilities meet the hydromodification requirements of the Orange County MS4 Permit and Chapter 13-23 of the Cypress Municipal Code. The City Engineer/Public Works Director, or designee, shall ensure that the BMPs specified in the WQMP are incorporated into the final project design of future projects associated with the proposed project.	Prior to issuance of a grading permit for future projects	Future Project Applicant(s)			
4.11: Land Use and Planning					
The proposed project would not require any regulatory compliance measures related to land use and planning.					
4.12: Mineral Resources					
The proposed project would not require any regulatory compliance measures related to mineral resources.					
4.13: Noise					
Regulatory Compliance Measure NOI-1: The construction contractor shall limit all construction-related activities to between the hours 7:00 a.m. and 8:00 p.m. on weekdays and between the hours of 9:00 a.m. and 8:00 p.m. on Saturdays. No construction shall be permitted outside of these hours or on Sundays or a federal holiday with the exception of certain construction activities that are time sensitive and	During construction activities	Construction Contractor			

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
require a 24-hour rotation. In those situations, a temporary use permit can be obtained from the City of Cypress' Community Development Director.					
Regulatory Compliance Measure NOI-2: Mechanical equipment, including air conditioning units in residential and non-residential zoning districts, shall be enclosed within a structure or completely screened from view from surrounding properties by the use of a fence or wall consistent with Section 3.11.100(b) of the City of Cypress Municipal Code. Additionally, prior to the issuance of building permits, a future applicant/developer shall demonstrate, to the satisfaction of the City Director of Community Development, or designee, that on-site stationary noise sources, such as air conditioners, shall not exceed City noise standards as stated within the City's Municipal Code Sections 13-68 and 13-69.	Prior to the issuance of any building permit	City of Cypress / Future Project Applicant(s)			
4.14: Population and Housing					
The proposed project would not require any regulatory compliance measures related to population and housing.					
4.15: Public Services					
Regulatory Compliance Measure PS-1: Any future projects implemented within the Buildout Area in accordance with the City of Cypress (City) Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) would be required to coordinate with the Orange County Fire Authority (OCFA) to determine the appropriate development impact fees required to offset potential impact to OCFA staffing and service ability. Prior to the approval of such projects, the designated site developer shall enter into a Secured Fire Protection Agreement with OCFA that details the agreed-upon development impact fees required for the project.	Prior to the approval of any future project	Future Project Applicant(s)			
Regulatory Compliance Measure PS-2: Payment of School Fees. Prior to issuance of any building permits within the Buildout Area in accordance with the Specific Plan, the applicant/developer of future development projects facilitated by the proposed project shall provide proof to the Director of the City of Cypress Community Development Department, or designee, that payment of school fees to the appropriate school districts have been made in compliance with Section 65995 of the California Government Code.	Prior to issuance of any building permits	Future Project Applicant(s) / Developer			

Table B: Regulatory Compliance Measures

Regulatory Compliance Measures	Monitoring Milestone	Responsible Party Responsible for Monitoring	Verification of Compliance		
			Initials	Date	Remarks
Regulatory Compliance Measure PS-3: Dedication of Parkland and/or Payment of Park Fees. Prior to issuance of any building permits within the Buildout Area in accordance with the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan), a future applicant/developer shall provide proof of compliance with the applicable provisions of Chapter 25 (Subdivisions), Article VI, Park and Recreational Facilities, of the City of Cypress Municipal Code.	Prior to issuance of any building permits	Future Project Applicant(s)			
4.17: Transportation					
The proposed project would not require any regulatory compliance measures related to transportation.					
4.18: Tribal Cultural Resources					
The proposed project would not require regulatory compliance measures unique to tribal cultural resources. Please see RCMs CUL-1 and CUL-2 for relevant measures in Section 4.5 above.					
4.19: Utilities and Service Systems					
Regulatory Compliance Measure UTIL-1: Construction and Demolition Ordinance. The construction contractor shall comply with the provisions of City of Cypress Ordinance No. 1166 and the 2022 California Green Building Standards Code, which would reduce construction and demolition waste. Ordinance No. 1166 is codified in Article VIII, Materials Questionnaire for Certain Construction and Demolition Projects within the City of Cypress in the Cypress Municipal Code.	During construction activities	Construction Contractor			
4.20: Wildfire					
The proposed project would not require any regulatory compliance measures related to wildfire.

EXHIBIT D

Required Improvements and Other Public Benefits[1],[2],[3]

	Improvements	Responsible Party	Timing
1.	Ball Road at Moody Street (in accordance with City standards and the Traffic Study): • Add additional mast arm indications for the northbound and southbound approaches.	Property Owner or a Transferee	Complete improvements prior to the issuance of any certificate of occupancy (excluding Lot 14).
2.	Ball Road at Walker Street (in accordance with City standards and the Traffic Study): • Restripe the EB/WB approaches to provide one left-turn lane, two through lanes, and one dedicated right-turn lane. • Shift the westbound exit lanes north.	Property Owner or a Transferee	Complete improvements prior to the issuance of any certificate of occupancy for Project improvements (excluding Lot 14).
3.	Cerritos Avenue at Moody Street (in accordance with City Standards and the Traffic Study): • Widen and restripe EB approach to provide one exclusive right-turn lane. • Restripe SB approach to provide 2 lefts, 1 through, and 1 shared through/right lane.	Property Owner or a Transferee	Submit construction plans prior to issuance of any building permits for Project improvements (excluding Lots 2 and 14) and complete improvements prior to the issuance of any certificate of occupancy for Project. improvements (excluding Lots 2 and 14).

[1] Prior to the commencement of construction of any specific development project within the Project, the developer of that project, whether Property Owner or a Transferee, shall prepare and submit a transportation construction plan (TCP) to the City's Public Works Department for review and approval. The TCP shall be prepared, signed, and stamped by a California-registered civil or traffic engineer and shall be consistent with all applicable engineering standards and safety procedures, including those set forth in the California Manual on Uniform Traffic Control Devices (CA MUTCD) and the Caltrans Standard Specifications (Section 12 – Temporary Traffic Control).

[2] Any improvements not complete at time of Final Map recordation shall require agreements and improvement securities (e.g. subdivision improvement agreements) in accordance with Section 3.3.1 to ensure such improvements are completed prior to the issuance of any certificate of occupancy (excluding Lot 14).

[3] For the purposes of this Exhibit D, the term "Property Owner or a Transferee" shall mean Property Owner and/or any Transferee(s) with rights/obligations over the specific portion of Property or improvements indicated, as applicable.

	Improvements	Responsible Party	Timing
	• NB approach to provide 2 lefts, 1 through, and 1 shared/through right lane. • Modify traffic signal to provide protected phasing for the NB/SB approaches. • Construct a crosswalk on the east leg of the intersection. • Construct bike lanes on Moody Street.		
4.	Cerritos Avenue at Valley View Street (in accordance with City standards and the Traffic Study): • Modify traffic signal to provide NB right-turn and SB right-turn overlap phasing. • Modify striping to extend EB left-turn pocket storage.	Property Owner or a Transferee	Complete improvements prior to the issuance of any certificate of occupancy for Project improvements (excluding Lot 14).
5.	Vessels Circle at Walker Street (in accordance with City Standards and the Traffic Study): • Add EB right-turn overlap phasing. • Modify striping to extend NB and EB left-turn pocket storage. • Widen Vessels Circle by 10 feet on the south side. • Widen the westbound receiving lane • Modify traffic signal in conjunction with Vessels Circle widening.	Property Owner or a Transferee	Submit construction plans prior to issuance of any building permits for Project improvements (excluding Lots 2 and 14) and complete improvements prior to issuance of any certificate of occupancy for Project improvements (excluding Lots 2 and 14).
6.	Vessels Circle at Moody Street (in accordance with City standards and the Traffic Study): • Install traffic signal. • Modify NB approach to provide 1 left, 2 throughs, 1 right.	Property Owner or a Transferee	Submit construction plans prior to issuance of any building permits for Project improvements (excluding Lots 2 and 14) and complete improvements prior to issuance of any certificate of occupancy for Project

	Improvements	Responsible Party	Timing
	• Modify SB approach to provide 1 left, 1 through, 1 through/right. • Modify WB approach to provide 1 left, 1 through, 1 right. • Modify EB approach to provide 1 left, 1 through/right. • Provide bike facilities on both Moody Street and Vessels Circle.		improvements (excluding Lots 2 and 14)
7.	Complete and render operational stormwater detention basin and pump station consistent with the Master Plan of Drainage and City standards on Lot 8 or at another location approved by the City.	Property Owner or a Transferee	Prior to the demolition of storm drainage features and improvements on the Property that currently accommodate drainage from Lot 9 of VTTM 19247.
8.	Design, prepare and obtain approval for construction plans and thereafter construct and render operational the Lots 5/6 Detention Basin and the Pump Station consistent with the Master Plan of Drainage and City standards for public facilities. The Lots 5/6 Detention Basin shall be privately owned, operated and maintained. The Pump Station shall be City owned, maintained and operated. The Pump Station Assessment District will fund the maintenance, operation, repair and future replacements of the Pump Station. Grant easement(s) to the City for the use, access, operation and maintenance of the Pump Station.	Property Owner or a Transferee	Prior to issuance of any certificate of occupancy for any Project improvements on Lots 3, 4 or 7 or the extended portion of Moody Street, provided that the completion of this work prior to the completion of the Moody Street extension shall not be required if the City approves, and Property Owner or a Transferee constructs, a temporary detention basin in accordance with City standards and approved by the City that prevents flooding of the Moody Street extension.
9.	Complete Moody Street and Vessels Circle street improvements in accordance with and consistent with VTTM	Property Owner and/or a Transferee	Prior to issuance of any certificate of occupancy for Project improvements (excluding Lots 2 and 14).

	Improvements	Responsible Party	Timing
	19247, the Traffic Study, and City standards: • Pavement, sidewalk, curb and gutter. • Widen Vessels Circle to the 62-foot-wide right-of-way. • Sewer and storm drain. • Striping, signage, bike facilities and traffic control devices. • Landscaped parkway, medians, street trees, irrigation. • Street lighting. • Water quality treatment devices.		
10.	Complete Lexington Drive Street widening per City standards (from Cerritos Ave to south property line of Lot 2): • Pavement, sidewalk, curb and gutter. • Landscaped parkway, street trees and irrigation. • Storm drain. • Street lighting. • Striping, signage and traffic control devices. • Utility relocations (by others). • Obtain any and all necessary permits from the City of Los Alamitos – see Item 20.	Property Owner or a Transferee	Prior to issuance of any certificate of occupancy for Project improvements on Lot 2.

	Improvements	Responsible Party	Timing
11.	Design and construct trails/greenways and or walkways connecting Lots 2, 3, and 4 to provide pedestrian and bicycle access to the Moody Street extension. Reciprocal access agreements, or other instrument acceptable to the City, shall provide and maintain public access for bike paths/facilities.	Property Owner or a Transferee	Plans for the trails/greenways and or walkways shall be included with the site plan review submittals for Lots 2, 3 and 4 or portions thereof. Construction of the improvements shall be completed with respect to each such Lot or portion thereof prior to issuance of any certificate of occupancy for Project improvements on such Lot. Property Owner and/or Transferee(s) of Lots 2, 3 and 4 or portions thereof shall coordinate, to the extent feasible, the design, alignment, and construction of the trails/walkways and greenways to ensure continuous, functional connections across lot boundaries, to the satisfaction of the City.
12.	Construct park improvements for Lots 5/6 Park and receive final acceptance from the City pursuant to Section 6.4 of this Agreement.	Property Owner or a Transferee	Prior to issuance of any certificate of occupancy for any Project improvements on Lots 3, 4 or 7.

Other Action Items

	Action	Responsible Party	Timing
13.	Provide, in a form acceptable to the City, irrevocable offers to dedicate Moody Street and Vessels Circle extensions,	Property Owner	With respect to the portion of Moody Street that will be extended in connection with the development of Lot 14, include an offer to

	Action	Responsible Party	Timing
	and land for widening of Lexington Drive.		dedicate with the final map that corresponds with Tentative Tract Map No. 19413 ("**TTM 19413**"). With respect to the balance of this requirement, include offers to dedicate in the "A" final map for VTTM 19247.
14.	With respect only to the proposed project on Lot 14, grant easements, in a form acceptable to the City, for sewer and storm drain utilities on Moody Street prior to acceptance of street dedications. Property Owner or the applicable Transferee shall maintain and operate all public utilities until improvements are accepted by the City and the easements have been recorded.	Property Owner or a Transferee	Prior to issuance of any certificate of occupancy for Project improvements on Lot 14.
15.	Establish a new maintenance agreement, amend the existing maintenance agreement, or otherwise provide documentation acceptable to the City confirming that the existing maintenance obligations under the Grant of Easements and Maintenance Agreement recorded on March 10, 2022 as Instrument No. 2022000094489 in the Official Records will remain in effect for the maintenance of the Moody Street frontage along 5155 and 5233 Katella Avenue and ensuring the continuing maintenance obligation with Shea after the	Property Owner	Within 90 days after recordation of the final map and prior to City's acceptance of the Moody Street dedication.

	Action	Responsible Party	Timing
	City's acceptance of the public roadway dedication.		
16.	Establish Maintenance Covenant(s) in accordance with Section 6.3 of this Agreement.	Property Owner or a Transferee	See Section 6.3 of this Agreement.
17.	Apply for the formation of a Pump Station Assessment District to fund the maintenance, operation, repair and future replacements of the Pump Station on Lots 5/6 in VTTM 19247.	Property Owner	Within 90 days after recordation of the final map.
18.	Provide the Easement Termination to the City in accordance with Section 6.6 of this Agreement.	Property Owner	Within 90 days, or as other mutually agreed upon timeframe, after the full closure of Los Alamitos Race Course.
19.	Property Owner and Cottonwood Christian Center, Inc. or its successor in interest shall execute and record an amendment to that certain Easement Agreement recorded on January 7, 2007 as Instrument No. 2007000031992 in the Official Records, to clarify that the "Easement" granted therein by Cottonwood in favor of Property Owner includes the right to discharge stormwater from Lots 3 and 4 of VTTM 19247 into the private "Improvements" on Cottonwood's property (*i.e.*, a 48" private storm drain), in a form acceptable to the City.	Property Owner	Prior to the issuance of any construction permits for any Project improvements on Lot 3 or 4.
20.	Obtain approval from the City of Los Alamitos for the proposed storm drain connection at Lexington Drive for Lot 2.	Property Owner or a Transferee	Prior to the earlier of (a) the issuance of any permits for Project improvements on or for Lot 2 or (b) the

	Action	Responsible Party	Timing
			recordation of a "B" final map for Lot 2.
21.	For Lot 14, provide an irrevocable offer to dedicate Moody Street frontage, 14' wide, in a form acceptable to the City.	Property Owner or a Transferee	At the time of recordation of a "B" final map for Lot 14 with respect to TTM 19413.
22.	Comply with Final EIR Mitigation Measures	Property Owner or a Transferee	As described in the MMRP.
23.	Provide to the City an inventory of the existing trees on the Property (other than on Lot 14) that will be replaced at a 1:1 ratio in accordance with the Specific Plan, it being understood that the replacement trees may be located anywhere on the Property.	Property Owner	Prior to demolition of the LARC improvements (other than improvements on Lot 14).
24.	Property Owner and Grace Church shall execute and record an amendment to that certain Declaration of Drainage Easement recorded on November 12, 2010 as Instrument No. 2010000604617 in the Official Records, to clarify that (1) the stormwater drainage for Lots 8 and 9 of VTTM 19247 will no longer flow to the Property, (2) Property Owner or a Transferee will construct a new detention basin/pump station for that purpose on Lot 8 or another location approved by the City and (3) Grace Church shall be responsible for the operation and maintenance of such drainage improvements.	Property Owner	Prior to the demolition of storm drainage features and improvements on the Property that currently accommodate drainage from Lot 9 of VTTM 19247 to the Property, and issuance of any permits for the construction of the new detention basin/pump station.

	Action	Responsible Party	Timing
25.	Either (a) pay the Deferred Amount to the City with respect Lots 2, 3, 4, 7, 10, 11, 12, 13 and 14 or (b) transfer fee title to Lot 1 in VTTM 19247 to the City in accordance with Section 5.2 of this Agreement.	Property Owner	See Section 5.2 of this Agreement.
26.	Identify the location of the Floating Park Space.	Property Owner or a Transferee	Pursuant to Section 6.9 of this Agreement.
27.	Complete merger of Lots 5/6 of VTTM 19247.	Property Owner or a Transferee	Pursuant to Section 6.7 of this Agreement.
28.	Complete merger or lot tie of Lots 8 and 9.	Property Owner or a Transferee	Pursuant to Section 6.8 of this Agreement.

CERTIFICATE OF COMPLIANCE OF
DEVELOPMENT AGREEMENT OBLIGATIONS

This Certificate Of Compliance of Development Agreement Obligations ("**Certificate**"), dated as of _____, is executed by the CITY OF CYPRESS, a charter city and municipal corporation ("**City**"), in favor of _____, a _____ ("/////**Property Owner**/////**Developer**/////"), a current party to that certain Development Agreement dated as of July ___, 2026, by and among City, on the one hand, and LOS ALAMITOS RACE COURSE, a California general partnership ("LARC"), and CYPRESS GC, LLC, a California limited liability (collectively, "Property Owner"), on the other hand, and recorded on _____, 2026 as Instrument No. _____ in the Official Records of Orange County, California (as the same may have been amended or supplemented from time to time, the "**Development Agreement**"), with reference to the following facts and circumstances:

RECITALS

A. The Development Agreement relates to the property described in Exhibit A thereto and depicted on Exhibit B thereto (the "**Development Agreement Property**"). This Certificate relates to a portion or portions of the Development Agreement Property legally described in Attachment 1 attached hereto and incorporated herein by this reference. Capitalized terms used herein without definition shall have the meanings ascribed to them in the Development Agreement.

B. Pursuant to Section 4.3 of the Development Agreement, City is required to furnish to Property Owner and/or any applicable Transferee(s), in a form suitable for recordation, a certificate of compliance, substantially in the form of this Certificate, upon completion of an annual or special review pursuant to Section 4 of the Development Agreement if the applicable City decision-making body has determined that the Property Owner and/or any applicable Transferee(s) is in good-faith compliance with the applicable provisions of the Development Agreement.

C. /////Property Owner/////Developer///// has requested that the City execute and acknowledge this Certificate with respect to a _____ review that the _____ completed on _____ (the "**Review**").

NOW, THEREFORE, City hereby certifies that, based on the Review, as follows:

1. /////Property Owner/////Developer///// is in good-faith compliance with the provisions of the Development Agreement.

2. The Development Agreement remains in full force and effect.

3. Nothing contained in this Certificate shall be deemed or construed to modify any provisions of the Development Agreement.

IN WITNESS WHEREOF, City has executed and issued this Certificate as of the date first above written.

TERMINATION OF EASEMENT AGREEMENT

This Termination of Easement Agreement ("Agreement"), dated as of _____, 20__, is executed by and between the CYPRESS RECREATION & PARK DISTRICT, a California special district (the "District"), on the one hand, and LOS ALAMITOS RACE COURSE, a California general partnership, and CYPRESS GC, LLC, a California limited liability company (collectively, "Property Owner"), on the other hand, with reference to the following facts:

RECITALS

A. The District and Property Owner are parties to that certain Easement Agreement (the "Easement Agreement") dated as of May 23, 2018, and recorded on March 31, 2018 as Document No. 2018000198493 in the Official Records of Orange County, California"), pursuant to which the District granted to Property Owner a non-exclusive easement for pedestrian, equestrian and vehicular ingress and egress over a portion of its property that was subsequently improved with Lexington Park.

B. The District and Property Owner desire to terminate the Easement Agreement on the terms set forth below.

NOW, THEREFORE, the District and Property Owner hereby agree as follows:

AGREEMENT

1. Termination of Agreement. The Easement Agreement is hereby terminated and has no further force or effect.

2. Further Assurances. The District and Property Owner shall each execute and deliver to the other all documents, and shall take all actions, reasonably required by any other party hereto from time to time to confirm or effect the matters set forth herein or otherwise to carry out the purposes of this Agreement.

3. Binding on Successors. This Agreement shall be binding on and inure to the benefit of the successors in interest and assigns of the parties hereto.

4. Governing Law. This Agreement shall be governed by, interpreted under, and construed and enforceable in accordance with, the laws of the State of California.

5. Counterparts. This Agreement may be executed in one or more counterparts, all of which, when taken together, shall constitute a single instrument.

IN WITNESS WHEREOF, the parties hereto have duly executed this Agreement as of the date first above written.

TRAFFIC STUDY
FOR PROPOSED
CYPRESS SPECIFIC PLAN 3.0 BUILDOUT PROJECT
IN THE CITY OF CYPRESS

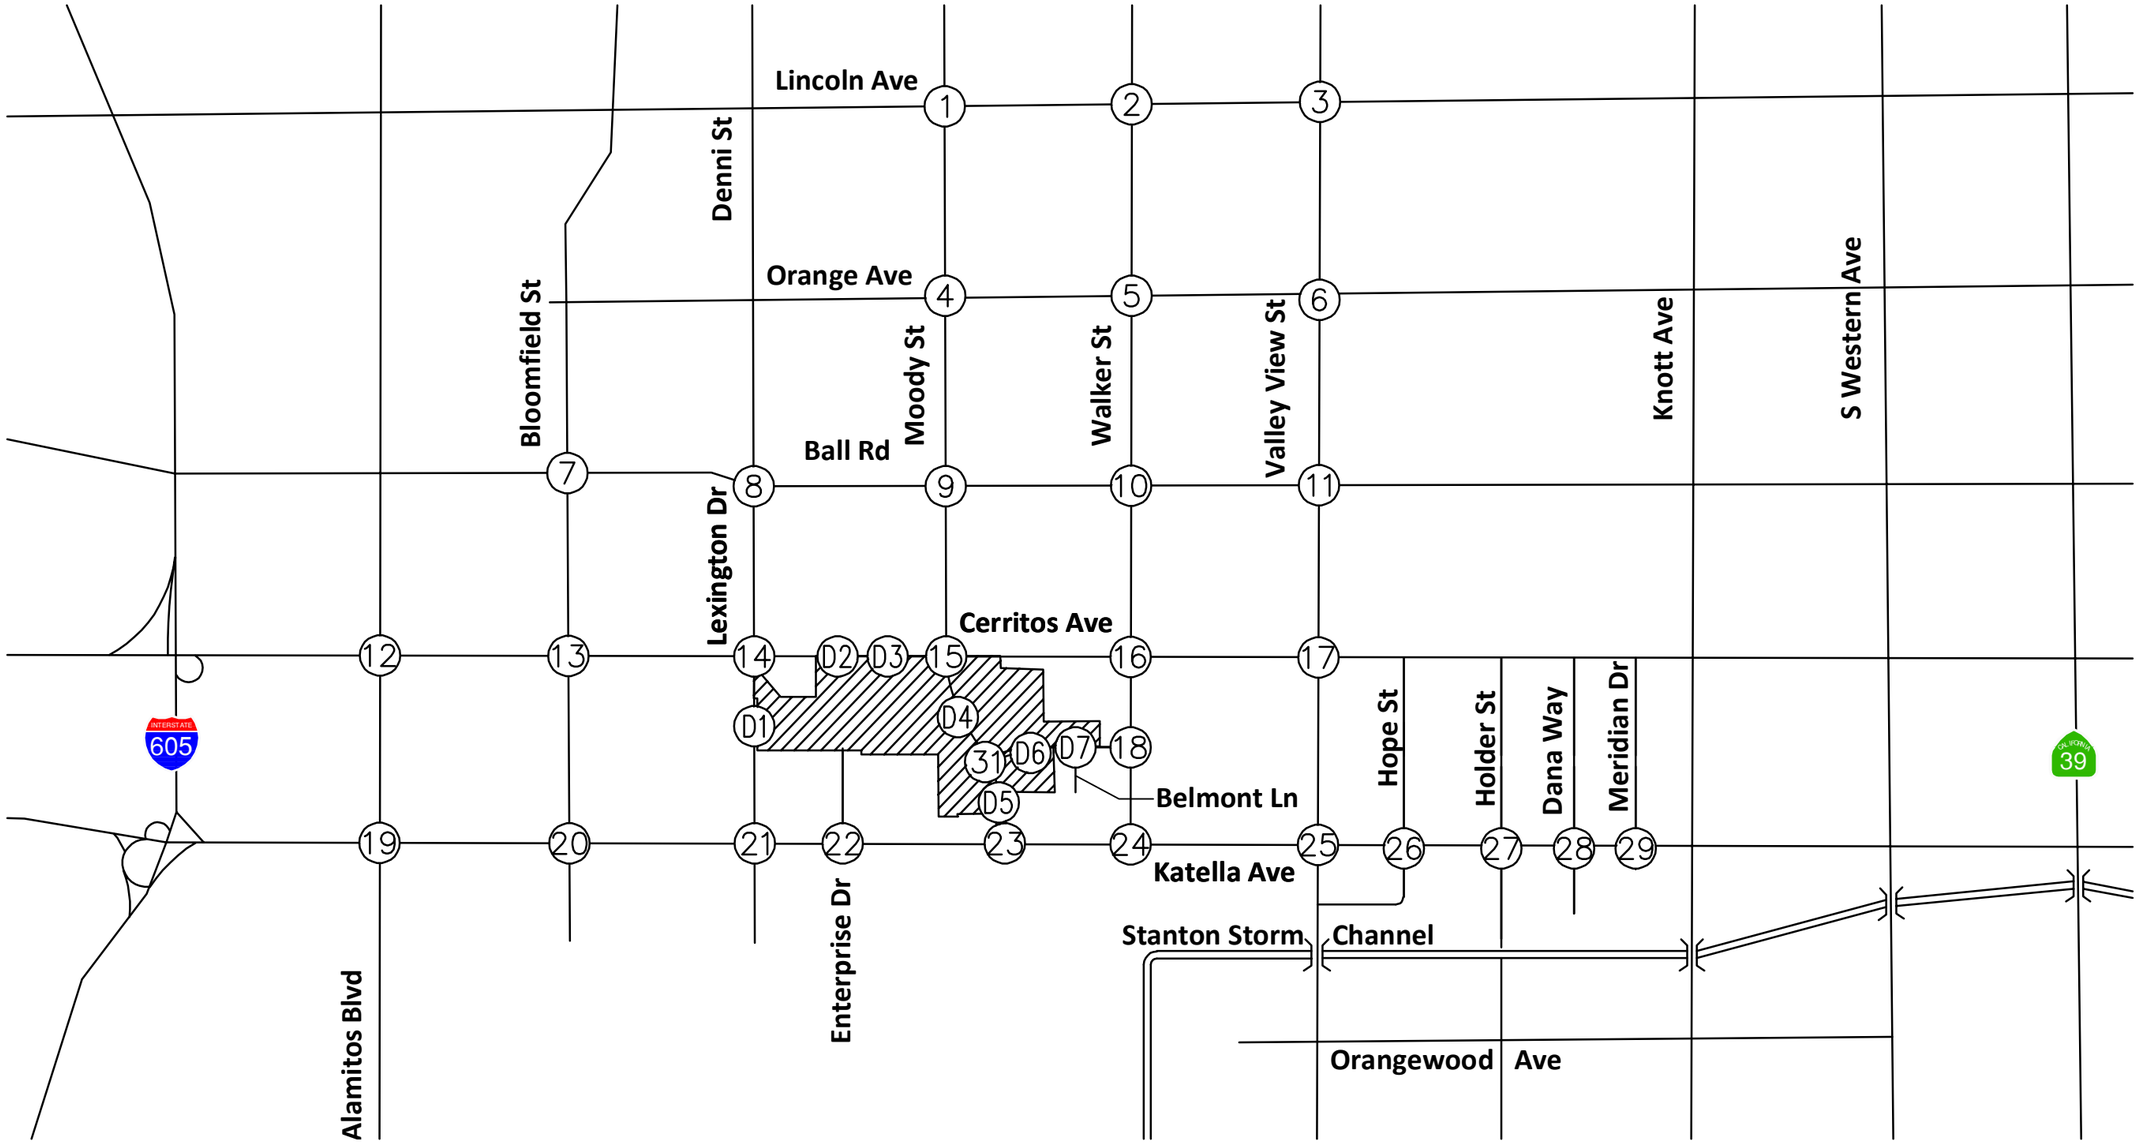
INTRODUCTION

This traffic study has been prepared to address the non-CEQA traffic-related issues associated with the proposed Cypress Specific Plan 3.0 Buildout Project (Project), consisting of a variety of residential and non-residential uses. The project site is located in the City of Cypress (City).

This report satisfies the traffic impact study requirements established by the City of Cypress Transportation Operational Assessment Guidelines dated April 2023 (Cypress Transportation Guidelines), the Circulation Element of the City of Cypress General Plan (Cypress Circulation Element), the Mobility and Circulation Element of the City of Los Alamitos General Plan (Los Alamitos Circulation Element), and the County of Orange Congestion Management Program (CMP).

PROJECT DESCRIPTION

The project site includes approximately 134 acres of land (Buildout Area) that is governed by the Cypress Town Center and Commons Specific Plan 3.0 (Specific Plan) approved by City voters in November 2024. The Buildout Area is shown in its regional setting on **Figure 1**.



The Specific Plan permits the development of a maximum of 1,791 residential units within the Buildout Area. With respect to non-residential development, the Specific Plan permits an aggregate maximum of approximately 874,354 square feet of non-residential floor area within the Buildout Area. However, based on current and reasonably foreseeable future market conditions, the applicant expects that a substantial portion of the non-residential development allowed under the Specific Plan will not be developed. Therefore, this study assesses anticipated traffic for only 440,000 square feet of non-residential floor area, which is approximately 50% of the maximum non-residential floor area permitted under the Specific Plan. Supplemental traffic analyses for individual development projects will be prepared and submitted to the City for approval if and to the extent non-residential development that exceeds 440,000 square feet is proposed within the Buildout Area. The City's acceptance of this traffic study does not constitute a determination in regard to (1) level-of service or other transportation deficiencies caused by the development of non-residential floor area permitted by the Specific Plan in the Buildout Area that exceeds 440,000 square feet or (2) any potential additional transportation improvements that may potentially be required as a result of non-residential development in excess of 440,000 square feet.

The proposed residential and non-residential development includes:

- Single-Family Attached Housing – 269 Dwelling Units
- Single-Family Detached Housing – 141 Dwelling Units
- Senior/Multi-Family Housing (Low-Rise) – 532 Dwelling Units
- Multi-Family Housing (Low-Rise) – 338 Dwelling Units
- Multi-Family Housing (Mid-Rise) – 511 Dwelling Units
- 440,000 square feet of non-residential floor area (commercial/retail land uses).

The Buildout Area is shown on **Figure 2**.

Proposed Onsite Traffic Improvements and Project Access

As shown on **Figure 2**, the Project includes the following traffic improvements to the public street system to provide access to the Buildout Area:

- Moody Street would be extended southward from Cerritos Avenue and connect to the existing Siboney Street. This is referred to herein as the "Moody Street extension."

- The western terminus of Vessels Circle would be extended to intersect with the Moody extension. This is referred to herein as the "Vessels Circle extension."

The Project is anticipated to have one driveway access point along Lexington Drive, two driveway access points along Cerritos Avenue, two driveway access points along the Moody Street extension and two driveway access points along Vessels Circle. These driveways will be unsignalized, and will allow all movements. The spacing between the proposed driveways along Cerritos Avenue, as required by the City, will be 300 feet or greater from each other and from the existing intersections. The preliminary locations of the proposed driveway access points are identified in **Figure 2**. The final locations of the project driveway access points will be subject to approval by the City if substantially inconsistent with the preliminary locations.

The signalized intersection of Moody Street at Cerritos Avenue and the future intersection of Moody Street at Vessels Circle will also facilitate project traffic to and from the Buildout Area, including on-site circulation, and are design features of the Project. Within the Buildout Area, the Moody Street extension has been evaluated with two travel lanes in each direction and the Vessels Circle extension with one travel lane in each direction and a two-way left-turn lane.

ANALYSIS SCENARIOS AND METHODOLOGY

Analysis Scenarios

This traffic analysis evaluates weekday morning and evening peak hour operations for the following scenarios:

- Existing Conditions
- Existing Plus Project Conditions
- Buildout Year 2038 without Project
- Buildout Year 2038 with Project

Analysis Methodology

The analysis focuses on the Project's off-site traffic-related impacts and addresses the Project's peak-hour impacts at 30 existing study intersections, one new unsignalized intersection, and seven project driveway intersections. The following performance criteria and analysis methodologies were used to assess the traffic operations of the study intersections according to each Agency's adopted traffic analysis guidelines.

Performance Criteria

As set forth in the Cypress Circulation Element, the City of Cypress Level of Service standard for acceptable intersection operation is Level of Service D, except at intersections along Valley View Street, Lincoln Avenue, and Katella Avenue. These arterials carry a significant amount of regional through traffic and, as such, the Circulation Element has adopted Level of Service E as the acceptable standard for intersections along these three arterials.

The Los Alamitos Circulation Element, Policy 1.4 (Level of Service), states the following:

> Maintain a Level of Service (LOS) "D" or better along all City arterials and at intersections during peak hours, with the following exceptions:
>
> A. There is a desire to prioritize pedestrians and/or bicyclists over vehicles
> B. Insufficient ROW exists
> C. The intersection or roadway is considered built out.
>
> The following intersections and roadways are exempt from the LOS D standard:
>
> - Katella Avenue and Los Alamitos Boulevard intersection
> - Katella Avenue and Walnut Street/Wallingsford Road intersection
> - Bloomfield Street and Cerritos Avenue intersection
> - Katella Avenue (between Interstate 605 and Walker Street)
> - Cerritos Avenue (between Interstate 605 and Los Alamitos Boulevard).

Signalized Intersections Analysis – Intersection Capacity Utilization (ICU) Methodology

In accordance with the requirements of the Cities of Cypress and Los Alamitos and the County of Orange Congestion Management Plan (CMP), signalized intersection operation is evaluated using the Intersection Capacity Utilization (ICU) methodology, which provides a comparison of the theoretical hourly vehicular capacity of an intersection to the number of vehicles actually passing through that intersection during a given hour.

- For City of Cypress signalized intersections, the ICU calculations assume a per-lane capacity of 1,700 vehicles per hour (vph) and 2,880 vph of green for dual-turning lanes, with a clearance interval of 0.05.
- For City of Los Alamitos signalized intersections, the ICU calculations assume a per-lane capacity of 1,700 vph for all left turn lanes, through lanes and right turn lanes, except for exclusive right turn lanes that allow right turn on red, for which the rate is 1,955 vph per lane[1], consistent with the CMP.

The results of the evaluation are reported in terms of Level of Service, which is represented by letter grades "A" (uncongested, free-flow conditions) through "F" (congested, over-capacity conditions). A summary description of each Level of Service and the corresponding volume/capacity (v/c) ratio for signalized intersections is provided on the following page.

Intersections Analysis – Highway Capacity Manual (HCM) Methodology

Consistent with the requirements in the Cypress Transportation Guidelines, peak-hour intersection operations for both signalized and unsignalized intersections within the City of Cypress were evaluated using the LOS methodology outlined in the Highway Capacity Manual (HCM) 7th Edition. Unsignalized intersections in the City of Los Alamitos are also evaluated using the HCM LOS methodology. Per the HCM methodology, LOS for signalized intersections is defined in terms of average vehicle delay. Specifically, LOS criteria are stated in terms of the average control delay per vehicle during the peak hours. The average control delay includes initial deceleration delay, queue move-up time, and final acceleration time in addition to the stop delay.

The procedure for unsignalized intersection analysis determines the average total delay, expressed in seconds of delay per vehicle, for left-turns from the major street and from the stop-controlled minor street traffic stream. Delay values are calculated based on the relationship between traffic on the major street and the availability of acceptable "gaps" in this stream through which conflicting traffic movements can be made.

The following charts describe the operating characteristics of each Level of Service for signalized intersections under to the ICU methodology and average seconds of delay for signalized and unsignalized intersections with regard to the HCM methodology.

[1] Source: Pursuant to the *2023 Orange County Congestion Management Program Report* (OCTA, November 2023, Pages 12 and 13), right-turn lanes with right-turn overlap, free right-turns, and de-facto lanes with right-turn on red can increase the saturation flow-rate by 15%, from 1,700 to 1,955 vehicles per hour per lane.

LEVEL OF SERVICE DESCRIPTIONS SIGNALIZED INTERSECTIONS (ICU METHODOLOGY)		
Level of Service	**ICU Value**	**Description**
A	0.00 - 0.60	EXCELLENT – No vehicle waits longer than one red light and no approach phase is fully used.
B	0.60 - 0.70	VERY GOOD – An occasional approach phase is fully utilized; drivers may begin to feel somewhat restricted within groups of vehicles.
C	0.70 - 0.80	GOOD – Occasionally drivers may have to wait through more than one red light; back-ups may develop behind turning vehicles
D	0.80 - 0.90	FAIR – Delays may be substantial during portions of the rush hours, but enough lower volume periods occur to permit clearing of developing lines, preventing excessive back-ups.
E	0.90 - 1.00	POOR – Represents the most vehicles that the intersection approaches can accommodate; may be long lines of waiting vehicles through several signal cycles.
F	> 1.00	FAILURE – Back-ups from nearby locations or on cross streets may restrict or prevent movement of vehicles out of the intersection approaches. Delays occur, with increasing queue lengths.

LEVEL OF SERVICE CRITERIA FOR SIGNALIZED AND UNSIGNALIZED INTERSECTIONS (HCM METHODOLOGY)			
Level of Service	**Signalized Intersection (Average delay per vehicle, in seconds)** [1]	**Unsignalized Intersections (Average delay per vehicle, in seconds)** [2]	**Description**
A	≤ 10	0 – 10	Little or no delay
B	> 10 – 20	> 10 – 15	Short traffic delays
C	> 20 – 35	> 15 – 25	Average traffic delays
D	> 35 – 55	> 25 – 35	Long traffic delays
E	> 55 – 80	> 35 – 50	Very long traffic delays
F	> 80	> 50	Severe congestion

S = Signalized U = Unsignalized
HCM = Highway Capacity Manual
ICU = Intersection Capacity Utilization
LOS = Level of Service

Thresholds of Deficiency

City of Cypress

In accordance with the Cypress Transportation Guidelines, a project traffic effect would be considered to be deficient if it causes an increase in HCM average delay per vehicle at a signalized intersection per the following table:

With Project Level of Service	Project-Related Increase in Delay (in seconds)
C or better	> 6 seconds
D	> 4 seconds
E, F	> 2 seconds

To determine whether a project's added traffic would result in a deficiency at a study area unsignalized intersection in accordance with the HCM methodology, the following criteria are applied:

- Worsens the level of service at an unsignalized intersection from LOS D or better to LOS E or F; or
- Causes an increase in the delay equal to or more than three (3.0) seconds at an unsignalized intersection that operates at LOS E or F with project.

In addition to HCM, as determined through the ICU analysis, a traffic operations deficiency at a signalized study intersection is determined pursuant to the Cypress Transportation Guidelines in accordance with the following:

- Worsens the level of service at an intersection from LOS D or better to LOS E or F; or
- At an intersection operating at LOS E or F without the project, causes an increase in the Volume/Capacity (V/C) Ratio equal to or more than 0.03 to the peak hour ICU with the addition of the project.

City of Los Alamitos

Consistent with recent approved traffic studies in the City of Los Alamitos, utilizing the ICU methodology, a project traffic effect would be considered to be deficient at a signalized intersection if:

- At an intersection operating at LOS E or F without the project, causes an increase in the Volume/Capacity (V/C) Ratio equal to or more than 0.01 to any peak hour ICU with the addition of the project.

For unsignalized intersections, in the City of Los Alamitos, an operational project traffic deficiency occurs if:

- The worst approach delay, based on HCM methodology, is 35.01 seconds or greater (LOS E of F), and the project related increase in traffic under "with project" conditions is one percent (1%) or more.

EXISTING CONDITIONS

Existing Roadway System

Regional access to the Buildout Area is provided by the I-605, I-405, SR-22 and SR-91 freeways. The I-605 Freeway is located approximately 1.5 miles west of the Buildout Area, while the I-405 and SR-22 Freeways are located approximately 3.5 miles to the south. The SR-91 Freeway is located approximately five miles north of the Buildout Area and provides access to the Inland Empire.

Local access to the project vicinity is provided by several arterial and commuter roadways.

Cerritos Avenue is classified as an east-west Primary Roadway in both the City of Cypress and the City of Los Alamitos Circulation Elements. Cerritos Avenue provides access from the City of Long Beach in the west, where it is named Spring Street, and to the City of Anaheim in the east, where it terminates at Walnut Street, near Disneyland. Cerritos Avenue has a partial interchange with the I-605 freeway approximately 1.5 miles west of the Buildout Area. This roadway provides two travel lanes in each direction, separated by a painted median. On-street parking is prohibited, and the speed limit varies between 40 and 45 miles per hour (mph).

Katella Avenue is a six-lane roadway through the Cities of Cypress and Los Alamitos, with a center median and turn lanes at major intersections. Katella Avenue is designated as a Smart Street through the Cities of Cypress and Los Alamitos. It is also designated on the Orange County Congestion Management Program (CMP) as a CMP facility. The posted speed limit varies between 35 and 45 mph through the study area.

Los Alamitos Boulevard varies from a four- to six-lane divided roadway, traversing the City of Los Alamitos in a north-south direction. The posted speed limit on Los Alamitos Boulevard is 35 mph north of Katella Avenue and 40 mph south of Katella Avenue. On-street parking is permitted along some segments of the roadway. The street name changes to Norwalk Boulevard to the north of the City, and to Seal Beach Boulevard to the south.

Bloomfield Street is a four-lane roadway with a center two-way turn lane divider along some segments of the roadway. The posted speed limit on Bloomfield Street is 40 mph north of Cerritos Avenue and 35 mph south of Cerritos Avenue. On-street parking is generally permitted along Bloomfield Street.

Denni Street/Lexington Drive is a north-south roadway. Denni Street/Lexington Drive begins at Lincoln Avenue in Cypress and ends at the Joint Forces Training Base in Los Alamitos. The name changes from Denni Street to Lexington Drive at Cerritos Avenue. For most of its length, Denni Street is a four-lane undivided roadway with a posted speed limit varying between 35 and 40 mph. Lexington Drive is generally a two-lane undivided roadway. On-street parking is mostly prohibited. Along some segments, Class II bike lanes are provided, while other segments are designated Class III bike routes.

Moody Street is a north-south Primary Roadway stretching from Cerritos Avenue on the south, northward through the Cities of La Palma, Cerritos, and others. Moody Street changes name to Carmenita Road north of the SR-91 Freeway. Moody Street is a four-lane roadway with Class II bike lanes on both sides, divided by a painted median. On-street parking is prohibited on both sides, and the posted speed limit is 40 mph.

Walker Street is a north-south Secondary Roadway which begins at Katella Avenue and ends at the I-5 freeway. Walker Street is a four-lane roadway divided by a painted median. For a short segment south of Cerritos Avenue, Walker Street has three northbound lanes. Class II bike lanes are generally provided on Walker Street throughout the project vicinity. The posted speed limit is 45 mph.

Valley View Street is a north-south Major Roadway providing regional access between several cities in Orange and Los Angeles Counties. Valley View Street is a six-lane roadway, divided by a raised landscape median, with Class II bike lanes on both sides. On-street parking is prohibited for its entire length, and the posted speed limit is 45 mph.

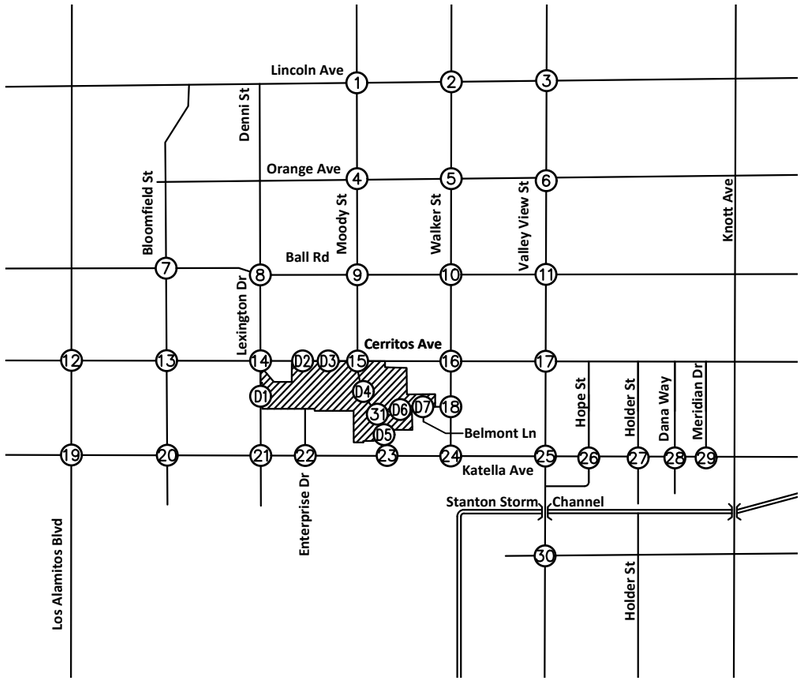
Existing Peak Hour Traffic Volumes

Existing peak hour turning movement counts were collected on a typical (non-holiday) weekday in May 2024 at the 30 existing study intersections. Existing lane configurations and traffic control at each of the study intersections are shown on **Figures 3A** and **3B**. Existing morning and evening peak hour traffic turning movement volumes for the study intersections are shown on **Figures 4A** and **4B**. Copies of the traffic count data forms are provided in ***Appendix A*** hereto.

Existing Peak Hour Traffic Volumes with Moody Street Extension

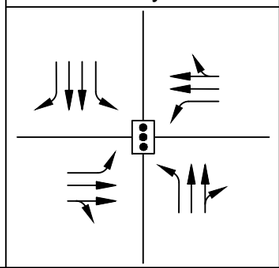
Moody Street is proposed to be extended southward from its intersection at Cerritos Avenue and connect to existing Siboney Street in accordance with the Specific Plan. Existing traffic to and from the existing Grace Church parking lot, representing traffic from the south leg of the Cerritos Avenue and Moody Street intersection, was redistributed to the church's driveway on Cerritos Avenue, east of the intersection, as the church parking lot will not have direct access to Moody Street when it is extended. In addition, Vessels Circle would extend further to the west to intersect with Moody Street. As a result, existing traffic on study intersections was redistributed to account for current drivers that would likely use the Moody Street and Vessels Circle extensions to travel to their destinations.

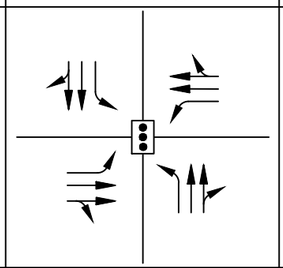
To understand how traffic would redistribute with the completion of the Moody Street and Vessels extensions, the Orange County Transportation Analysis Model version 5.1 (OCTAM model) was run with the street extensions coded into the model. Moody Street was coded as a 4-lane, 40 mile-per-hour (mph) roadway. Vessels Circle was coded as a 2-lane, 25 mph roadway. The intersections of Moody Street and Vessels Circle (with the Vessels Circle extension connecting Walker Street to Moody Street) was also coded into the model. A selectzone analysis for the project scenario was conducted to help determine the trip distribution with the Moody Street and Vessels Circle extensions. Project traffic was manually removed based on this trip distribution to develop no project scenario with the roadway modifications.

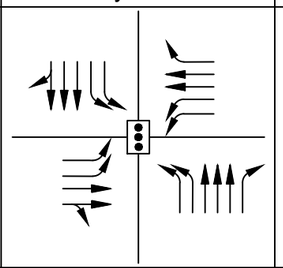


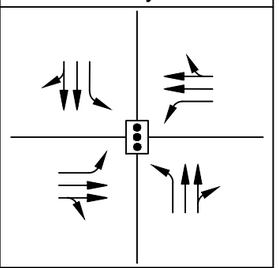
The link volumes obtained from the OCTAM model output were post-processed using the B-Turns methodology developed by the Federal Highway Administration (FHWA) to determine intersection turn movement volumes. The OCTAM Model plots and B-Turns worksheets are provided in ***Appendix C*** hereto. The resulting redistributed traffic volumes for Existing Conditions are shown on **Figures 5A** and **5B**.

Existing Peak Hour Traffic Conditions

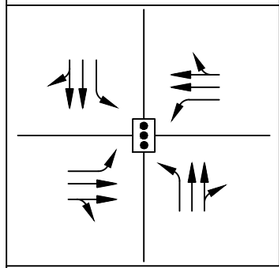


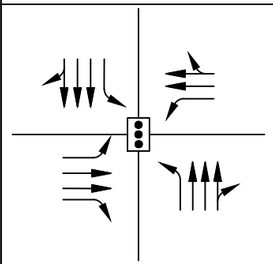


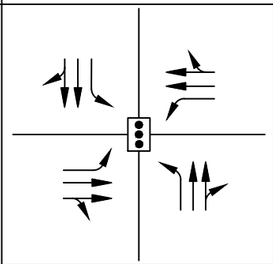


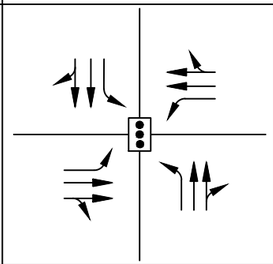


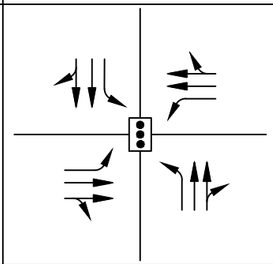
Existing peak hour operations were evaluated using the Intersection Capacity Utilization (ICU) and Highway Capacity Manual (HCM) delay methodologies for signalized study intersections (except that the HCM methodology was not used to analyze the signalized intersections located solely in the City of Los Alamitos because the City of Los Alamitos does not require such analysis), and the Highway Capacity Manual (HCM) delay methodology for unsignalized intersections. The results of the analysis are summarized on **Tables 1A** and **1B.** Intersection analysis worksheets are provided in ***Appendix B*** hereto. Those tables show that all the study intersections currently operate acceptably pursuant to the Cypress and Los Alamitos Circulation Elements.

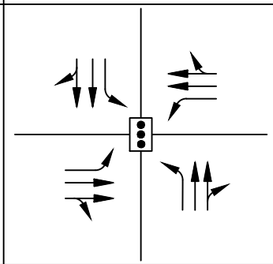


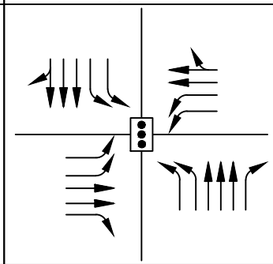


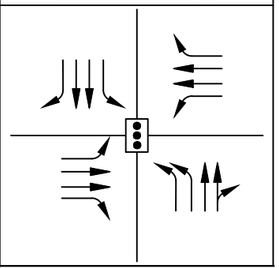




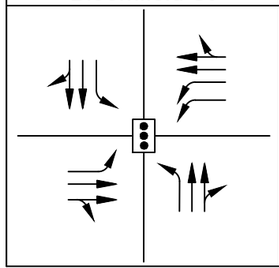


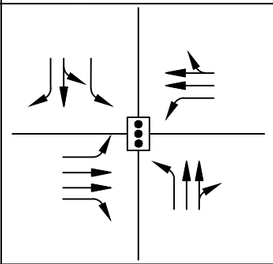


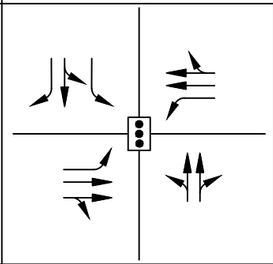


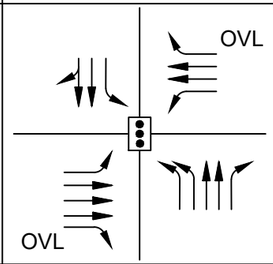


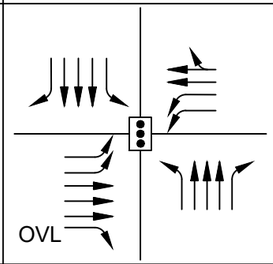
Existing Peak Hour Analysis (With Moody Avenue Extension)

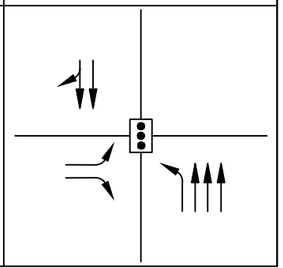












The results of the analysis are summarized on **Tables 2A** and **2B.** Those tables show that all study intersections operate at acceptable LOS pursuant to the Cypress and Los Alamitos Circulation Elements. Intersection analysis worksheets are provided in ***Appendix B*** hereto. The intersection of Vessels Circle at Moody Street is assumed to be signalized in this scenario and is further described as a project feature in the Existing plus Project Conditions section.

PROJECT TRAFFIC

Project Trip Generation

Daily and peak hour trip generation estimates have been prepared for the Project. Trip generation estimates are based on the Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition) trip rates for:

- Single-Family Detached Housing (Land Use 210)
- Single-Family Attached Housing (Land Use 215)
- Multifamily Housing (Low-Rise) (Land Use 220)
- Multifamily Housing (Mid-Rise) (Land Use 221)
- Shopping Center (Land Use 820).

The trip generation estimates for the Project were developed by adding together the trips generated by the residential and commercial/retail uses. A characteristic of mixed-use developments is the potential for interaction among the uses in terms of internal trips or vehicular trips between land uses. For example, the Project will include pedestrian connections between the contemplated residential and commercial/retail components. Residents may make trips to the restaurant and shops by walking there from their homes. As a result, the total inbound and outbound vehicular trips to and from the Buildout Area may be reduced. The resulting reduction in off-site vehicular trips is known as internal capture.

In addition, it is recognized that not all trips into and out of a project will be "new" trips on the roadway system serving a project site. Some trips to the commercial/retail uses will consist of "pass-by" trips -- motorists who are already traveling on the surrounding roadways from one place to another. Common pass-by trips for a commercial center would be individuals who stop to eat, shop, or run errands on their way to or from work or school.

The trip generation estimates for the project include trip adjustments for internal trip capture between the site uses, and pass-by trips for the commercial/retail uses, based on the ITE Trip Generation Manual Vol. 1: User's Guide and Handbook. The trip rates and the resulting project trip generation estimates are shown on **Table 3**. The Project would generate approximately 21,041 vehicle trips on a daily basis, with 1,019 trips in the morning peak hour and 1,418 trips in the evening peak hour.

[1] Source: Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition and Trip Generation Manual, 11th Edition-Errata.

DU = Dwelling Unit

KSF = Thousand Square Feet

[2] Note: Trip Generation data provided by Applicant.

[3] Note: Using approximately 50% of maximum non-residential floor area permitted by the Specific Plan.

[4] Note: See Attachment E for Internal Capture Worksheets.

[5] Note: The ITE Trip Generation Manual does not provide internal capture or pass-by percentage reductions for daily trip generation. The typical industry practice is to average the AM and PM trip reduction percentages to determine the daily internal capture and pass-by reduction.

Project Trip Distribution and Assignment

Trip distribution assumptions for the Project were developed based on the likely origins and destinations of residents, patrons, and employees. Patrons of the commercial/retail uses are assumed to come primarily from nearby residential neighborhoods. Trip distribution assumptions during the morning and afternoon peak hours for the residential and commercial/retail portions of the project are shown on **Figure 6A** and **6B**, respectively. In addition, a breakdown of trip distribution assumptions at the project driveways for the residential and commercial/retail portions for the individual land use districts within the Buildout Area are provided in ***Appendix D***.

Based on these trip distribution assumptions, the project trips that would be added to the street system were calculated and are shown on **Figures 7A** and **7B**. Traffic volumes for internal capture and pass-by are reflected on **Figures 8** and **9**. The internal capture worksheet is provided in ***Appendix E***.

EXISTING PLUS PROJECT CONDITIONS

This section addresses the traffic-related impacts associated with adding project-related trips to Existing Conditions traffic volumes. The Existing Plus Project scenario is a hypothetical scenario that could not actually occur. It assumes that the Project would be fully operational at the present time, with no other changes to area traffic volumes or to the street network serving the Buildout Area. This analysis assumes full development of the project, full operation of Moody Street between Cerritos Avenue and Katella Avenue, and full absorption of project traffic on the circulation system at the present time. The analysis also assumes the project features to be in place at the following intersections, the conceptual layouts of which are shown on **Figures 10** and **11**:

- Intersection #15 – Cerritos Avenue at Moody Street
  - Eastbound approach – Stripe exclusive right-turn lane.
  - Southbound approach – Provide two left-turn lanes, one through lane, and one shared through/right-turn lane.
  - Northbound approach – Provide two left-turn lanes, one through lane, and one shared through/right-turn lane.
- Intersection #31 – Vessels Circle at Moody Street
  - Install traffic signal.
  - Northbound approach – Provide one left-turn lane, two through lanes, one right-turn lane.
  - Southbound approach – Provide one left-turn lane, one through lanes, one shared through/right-turn lane.
  - Westbound approach – Provide one left-turn lane, one through lane, and one right-turn lane.
  - Eastbound approach (driveway access to Lot 13) – Provide one left-turn lane and one shared through/right-turn lane.

The project driveways are included in this scenario and are all analyzed as unsignalized two-way stop-controlled intersections.

Existing Plus Project Peak Hour Analysis (With Moody Street Extension)

Project-related trips were added to existing traffic volumes to forecast Existing Plus Project Conditions. Morning and evening peak hour traffic volumes for this scenario are shown on **Figures 12A** and **12B**. A summary of the resulting intersection Level of Service is provided on **Tables 4A** and **4B**. Intersection analysis worksheets are provided in ***Appendix B*** hereto. These Tables show that, during the noted peak hour, no study intersections in both the City of Cypress and City of Los Alamitos would operate unacceptably with the addition of project traffic pursuant to the Cypress or Los Alamitos Circulation Element, as applicable.

However, pursuant to the Cypress Transportation Guidelines, a project-related traffic effect is considered deficient under the HCM methodology if the increase in delay exceeds the City's applicable threshold of deficiency. While the following intersections operate acceptably pursuant to the Cypress Circulation Element, the addition of project traffic at those intersections increases the intersection delay, during the noted peak hours, beyond the relevant thresholds of deficiency and are considered to have project-related effects, as shown on **Table 4A**:

- HCM Methodology:
  - #16 – Cerritos Avenue at Walker Street: PM Peak
  - #17 – Cerritos Avenue at Valley View Street: PM Peak
  - #18 – Vessels Circle at Walker Street: PM Peak
  - #23 – Katella Avenue at Siboney Street: PM Peak
  - #25 – Katella Avenue at Valley View: PM Peak.

With respect to the ICU analysis for Existing Plus Project, all study intersections would operate acceptably pursuant to both the Cypress Circulation Element and Los Alamitos Circulation Element. Therefore, the Project would not have a project-related effect under the ICU methodology at any of the study intersections.

FUTURE CONDITIONS

Future traffic forecasts have been developed to evaluate Buildout Year 2038 (Cumulative Conditions) for the anticipated project Buildout Year, which is estimated to occur in 2038. Buildout Year 2038 traffic forecast volumes were developed using the following approach.

Buildout Year 2038 Traffic Forecasts

Ambient Growth

The cumulative forecasts for Buildout Year 2038 were developed using the "build-up" process, starting with adding a background, or ambient, growth factor to existing peak hour volumes at the study intersections. While the ambient growth rate for the Cypress and Los Alamitos areas typically has been assumed to be one-half percent per year (due to the relatively limited amount of development in the surrounding area), for purposes of this study, an ambient growth rate of 1 percent per year (compounded) was applied to conservatively account for growth in surrounding areas.

Cumulative Projects

In addition to ambient growth, Cumulative Project traffic volumes from reasonably foreseeable projects in the vicinity of the Buildout Area were included in the Buildout Year 2038 baseline traffic volumes. Reasonably foreseeable projects consist of projects that are approved but not yet built, as well as projects that are in various stages of the application and approval process but have not yet been approved.

Information regarding Cumulative Projects was obtained from the Cities of Cypress and Los Alamitos. The Cumulative Projects located in the project vicinity were considered in the Cumulative Conditions analysis, including projects in Cypress and Los Alamitos. The location of each of the Cumulative Projects relative to the Buildout Area is shown on **Figure 13**.

Project trip generation estimates for each of the Cumulative Projects were derived from approved traffic studies, to the extent available, or from calculations based on the ITE Trip Generation rates where approved studies were unavailable. A summary of the estimated Cumulative Projects trip generation is provided on **Table 5**. The distribution of Cumulative Project trips at the study intersections was based on approved traffic studies, to the extent available, or was estimated by Kimley-Horn where approved studies were unavailable. Cumulative Project trips at the study intersections are shown on **Figures 14A** and **14B**.

FIGURE 14B
CUMULATIVE PROJECTS PEAK HOUR TRAFFIC VOLUMES

Buildout Year 2038 without Project Conditions

The ambient growth and the project-related traffic volumes from the Cumulative Projects were added to the existing peak hour volumes, to develop Buildout Year 2038 Without Project peak hour forecasts. The resulting peak hour volumes are shown on **Figures 15A** and **15B.** The intersection of Vessels Circle at Moody Street is assumed to be signalized in this scenario, and this intersection has previously been described as a project feature in the Existing plus Project Conditions section.

The results of the Buildout Year 2038 Without Project intersection analysis are summarized on **Tables 6A** and **6B**. These tables show that, with the addition of ambient growth and the traffic from Cumulative Projects, each of the study intersections would operate within their respective target Levels of Service.

Buildout Year 2038 with Project Conditions

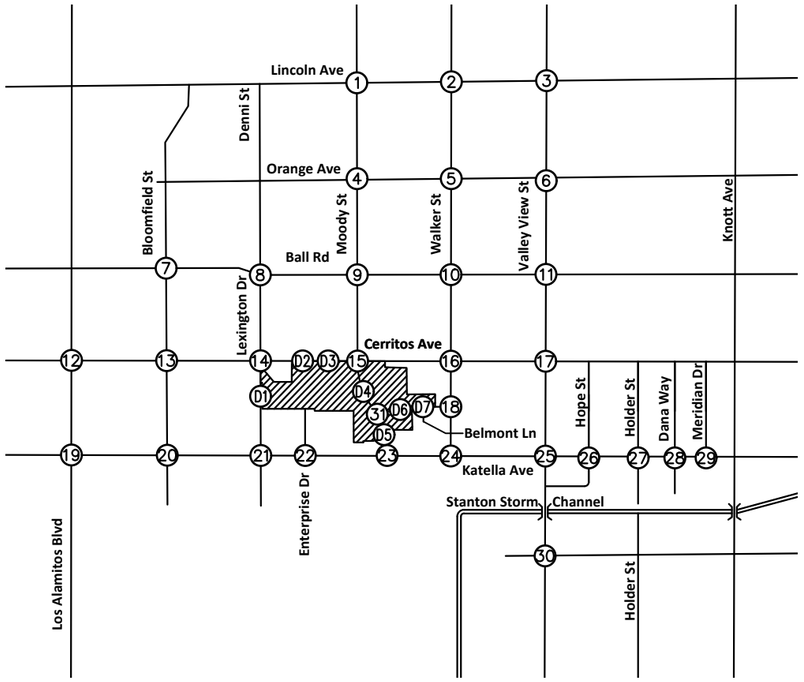
Project-related peak hour traffic volumes for the Project were added to the Buildout Year 2038 Without Project traffic volumes to develop Buildout Year 2038 With Project traffic forecast volumes. The resulting peak hour traffic volumes are shown on **Figures 16A** and **16B**.

The future lane configurations and traffic control analyzed in the Buildout Year 2038 are shown on **Figures 17A** and **17B,** including the approaches at the project driveways. The project driveways are analyzed as unsignalized two-way stop-controlled intersections.

The intersection analysis was conducted with the addition of project trips, and the results are summarized on **Tables 7A** and **7B**. These tables show that intersections in the City of Los Alamitos and project driveway locations operate acceptably pursuant to Los Alamitos Circulation Element, and only the following study intersections in the City of Cypress would operate unacceptably with the addition of project traffic during the noted peak hours pursuant to that Cypress Circulation Element:

- HCM Methodology:
  - #9 – Ball Road at Moody Street: AM Peak (LOS E)
  - #10 – Ball Road at Walker Street: PM Peak (LOS E)
  - #17 – Cerritos Avenue at Valley View Street: PM Peak (LOS F).

However, pursuant to the Cypress Transportation Guidelines, a project-related traffic effect is considered deficient if the increase in delay per the HCM methodology or volume/capacity ratio per the ICU methodology exceeds the City's applicable threshold of deficiency. While the following intersections in the City of Cypress operate acceptably pursuant to the Cypress Circulation Element, the addition of project traffic increases at those intersections either the intersection delay or volume/capacity ratio, during the noted peak hour, beyond the City's relevant threshold of deficiency and are considered to have project-related effects, as shown on **Figures 7A** and **7B**:



- HCM Methodology:

- #1 – Lincoln Avenue at Moody Street: AM/PM Peak
- #2 – Lincoln Avenue at Walker Street: PM Peak
- #3 – Lincoln Avenue at Valley View Street: PM Peak
- #9 – Ball Road at Moody Street: AM Peak
- #10 – Ball Road at Walker Street: PM Peak
- #11 – Ball Road at Valley View Street: AM/PM Peak
- #16 – Cerritos Avenue at Walker Street: PM Peak
- #17 – Cerritos Avenue at Valley View Street: AM/PM Peak
- #18 – Vessels Circle at Walker Street: PM Peak
- #23 – Katella Avenue at Siboney Street: PM Peak
- #25 – Katella Avenue at Valley View Street: PM Peak
- #30 – Orangewood Avenue at Valley View Street: PM Peak.

- ICU Methodology:
  - #17 - Cerritos Avenue at Valley View Street: PM Peak.

With respect to the ICU analysis, the following study intersection operates acceptably pursuant to the Los Alamitos Circulation Element. However, the addition of project traffic increases the Volume/Capacity (V/C) Ratio at that intersection, during the noted peak hour, by more than 0.01 and is therefore considered to be deficient and have a project-related effect, consistent with recent approved traffic analysis studies in the City of Los Alamitos:

- ICU Methodology:
  - #12 - Cerritos Avenue at Los Alamitos Boulevard: PM Peak.

Notes:
- S = Signalized- U = Unsignalized
- ICU = Intersection Capacity Utilization
- LOS = Level of Service
- Intersection operation is expressed in terms of volume-to-capacity (V/C) ratio using the ICU methodology.
- * Exempt from City of Los Alamitos LOS D standard per Mobility and Circulation Element, Policy 1.4 (Level of Service)

PROPOSED IMPROVEMENTS

As previously shown in Tables 4A and 4B, in the Existing Plus Project with Extensions, the following intersections were identified to have a deficient project-related effect due to the addition of project traffic that increases the intersection delay beyond the HCM thresholds of deficiency established by the City of Cypress, notwithstanding that all of them operate at acceptable levels of service pursuant to their Circulation Elements.

- #16 – Cerritos Avenue at Walker Street
- #17 – Cerritos Avenue at Valley View Street
- #18 – Vessels Circle at Walker Street
- #23 – Katella Avenue at Siboney Street
- #25 – Katella Avenue at Valley View Street.

As previously shown in Tables 7A and 7B, in the Buildout Year 2038 with Project, the following intersections were identified to have a deficient project-related effect due to the addition of project traffic that increases the intersection delay or V/C ratio beyond the thresholds of deficiency established by the Cities of Cypress and Los Alamitos, notwithstanding that most of them operate at acceptable levels of service pursuant to the Cypress Circulation Element.

- #1 – Lincoln Avenue at Moody Street
- #2 – Lincoln Avenue at Walker Street
- #3 – Lincoln Avenue at Valley View Street
- #9 – Ball Road at Moody Street
- #10 – Ball Road at Walker Street
- #11 – Ball Road at Valley View Street
- #12 – Cerritos at Los Alamitos Boulevard
- #16 – Cerritos Avenue at Walker Street
- #17 – Cerritos Avenue at Valley View Street
- #18 – Vessels Circle at Walker Street
- #23 – Katella Avenue at Siboney Street
- #25 – Katella Avenue at Valley View Street
- #30 – Orangewood Avenue at Valley View Street.

While the intersections listed above are considered to have a deficient project-related effect pursuant to the Cypress Transportation Guidelines or consistent with recent approved traffic analysis studies in the City of Los Alamitos, as applicable, all of them will operate at acceptable LOS pursuant to the Cypress and Los Alamitos Circulation Elements, with exception to intersections #9, #10, and #17. The remaining intersections in the above list will be addressed through the City's Traffic Mitigation Fee Program, with fees being collected at the time of building permit issuance for projects within the Specific Plan Buildout Area.

Of the identified intersections with project-related effects, further improvements are only feasible for Intersections #9 – Ball Road at Moody Street, #10 – Ball Road at Walker Street, #16 – Cerritos Avenue at Walker Street, #17 – Cerritos Avenue at Valley View Street, #18 – Vessels Circle at Walker Street, and #23 – Katella Avenue at Siboney Street. Proposed feasible improvements are recommended at these six intersections, as described below, to reduce their project effects, notwithstanding that three of them will operate at acceptable levels of service pursuant to the Cypress Circulation Element. Intersection #17 – Cerritos Avenue at Valley View Street in the PM Peak will continue to operate at an unacceptable LOS with the implementation of the proposed feasible improvements.

A description of the proposed improvements is shown on **Table 8.** The proposed modifications for Intersections #15 – Cerritos Avenue at Moody Street and #31 – Vessels Circle at Moody Street are project-specific features but are listed below and in Table 8 for informational purposes. Concept plans for these two intersections are shown in Figures 10 and 11. Concept plans for the other proposed improvements are shown in **Figures 18** to **23**.

In addition to the proposed intersection improvements at Intersection #18 – Vessels Circle at Walker Street, the proposed improvements include the widening of the south side of Vessels Circle by 10 feet from the intersection of Vessels Circle and Walker Street approximately 650 feet to the west to tie-in to the existing street width there.

- #9 – Ball Road at Moody Street (see **Figure 18**)
  - Add additional mast arm indications for the northbound and southbound approaches.

- #10 – Ball Road at Walker Street (see **Figure 19**)
  - Restripe the EB/WB approaches to provide one left-turn lane, two through lanes, and one dedicated right-turn lane.
  - Shift the westbound exit lanes north.

- #15 – Cerritos Avenue at Moody Street (see **Figure 10**)
  - Restripe EB approach to provide one exclusive right-turn lane.
  - Restripe SB approach to provide 2 lefts, 1 through, and 1 shared through/right lane.
  - NB approach to provide 2 lefts, 1 through, and 1 shared/through right lane.
  - Modify traffic signal to provide protected phasing for the NB/SB approaches.
  - Provide a crosswalk on the east leg of the intersection.
  - Provide bike lanes on Moody Street.

- #16 – Cerritos Avenue at Walker Street (see **Figure 20**)
  - Add NB right-turn overlap phasing.

- #17 – Cerritos Avenue at Valley View Street (see **Figure 21**)
  - Provide NB right-turn and SB right-turn overlap phasing.

- Modify striping to extend EB left-turn pocket storage.

- #18 – Vessels Circle at Walker Street (see **Figure 22**)
  - Add EB right-turn overlap phasing.
  - Modify striping to extend NB and EB left-turn pocket storage.
  - Widen Vessels Circle by 10 feet on the south side.
  - Widen the westbound receiving lane by 3 feet.
  - Modify traffic signal in conjunction with Vessels Circle widening.

- #23 – Katella Avenue at Siboney Street (see **Figure 23**)
  - Add WB right-turn overlap phasing.

- #31 – Vessels Circle at Moody Street (see **Figure 11**)
  - Install traffic signal.
  - NB approach to provide 1 left, 2 throughs, 1 right.
  - SB approach to provide 1 left, 1 through, 1 through/right.
  - WB approach to provide 1 left, 1 through, 1 right.
  - EB approach to provide 1 left, 1 through/right.
  - Provide bike facilities on both Moody Street and Vessels Circle.

SIGNAL WARRANT ANALYSIS

Traffic signal warrant analyses were conducted for the following unsignalized intersections:

- #22 – Katella Avenue at Enterprise Drive
- #31 – Vessels Circle at Moody Street (future intersection).

Signal warrants were based on the 2014 California Manual on Uniform Traffic Control Devices (CA MUTCD). The warrants were conducted using Warrant 3 (Peak Hour Warrant) for the following conditions:

- Existing (With Extension)
- Existing Plus Project
- Buildout Year 2038 Cumulative
- Buildout Year 2038 Cumulative Plus Project.

Traffic signal warrant analysis worksheets are provided in ***Appendix F***. Based on the signal warrant analyses, Signal Warrant 3 was not met at Intersection #22 – Katella Avenue at Enterprise Drive under any of the analysis conditions. Signal Warrant 3 was met at Intersection #31 – Vessels Circle at Moody Street under all analysis conditions. Below is a summary table of the signal warrant analysis.

Summary of Signal Warrant Analysis		
Scenario	Intersection #22: Katella Ave at Enterprise Drive	Intersection #31: Vessels Circle at Moody Street
Existing (With Extension)	NO	YES
Existing Plus Project Conditions	NO	YES
Buildout Year 2038 Cumulative	NO	YES
Buildout Year 2038 Cumulative Plus Project	NO	YES
Source: 2014 California Manual on Uniform Traffic Control Devices (MUTCD)		

Since the signal warrant was not met at Intersection #22 – Katella Avenue at Enterprise Drive, the installation of a traffic signal is not recommended at this location.

The CA MUTCD states that "[t]he satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal." The reference document goes on to state a number of other factors to take into account when considering a signal for a specific location, including whether or not a signal would improve the overall safety of the intersection, whether it would benefit or disrupt progressive traffic flow, and consideration of site-specific characteristics such as queuing, signal spacing, and overall delay to the main street through movements. The decision to install a traffic signal should be based on engineering judgement, and not solely upon satisfying a single peak hour warrant.

Based on the unacceptable LOS and meeting Signal Warrant 3, it is recommended to install a new traffic signal at the intersection of #31 - Vessels Circle at Moody Street as part of the Project.

LEFT-TURN PHASING ANALYSIS

To determine if left-turn phasing is needed for the recommended traffic signal at future Intersection #31 – Vessels Circle at Moody Street, a left-turn phasing analysis was conducted per the CA MUTCD, Section 4D.19, which provides general guidelines for evaluating left-turn phasing at a signalized intersection.

The CA MUTCD states that "[s]ince separate signal phases for protected left turns will reduce the green time available for other phases, alternate means of handling left-turn conflicts should be considered first." The most likely alternative possibilities are:

1. Prohibition of left turns.
2. Geometric changes to eliminate the left turn (through) a complete separation or a complete or partial "clover leaf" at grade…"
3. Provide protected-permissive or permissive-protected left-turn operation.

In this regard, the CA MUTCD states:

"Protected left-turn phases should be considered where such alternatives (stated above) cannot be utilized, and one or more of the following conditions exist:

1. *Collisions* – Five or more left-turn collisions for a particular left-turn movement during a recent 12-month period.

2. *Delay* – Left-turn delay of one or more vehicles which were waiting at the beginning of the green interval and are still remaining in the left-turn lane after at least 80% of the total number of cycles for one hour.

3. *Volume* – At new intersections where only estimated volumes are available, the following criteria may be used. For a pre-timed signal, left-turn volume of more than two vehicles per approach per cycle for a peak hour; or for a traffic-actuated signal, 50 or more left-turning vehicles per hour in one direction with the product of the turning and conflicting through traffic during the peak hour of 100,000 or more.

4. *Miscellaneous*. Other factors that might be considered are: impaired sight distance due to horizontal or vertical curvature, or where there are a large percentage of buses and trucks."

Since Intersection #31 - Vessels Circle at Moody Street will be a new intersection, the "Volume" guidance above was used. Intersection #15 - Cerritos Avenue at Moody Street was also evaluated since the south leg of the intersection will be modified due to the Moody Street extension.

The 100,000 Rule of Thumb

The CA MUTCD specifies that left-turn phasing should be considered where there are 50 or more left-turning vehicles in one direction, and where the product of the number of vehicles on a left-turn movement and its conflicting through movement exceeds 100,000 vehicles. Although these guidelines specify the 100,000 criterion is to be applied at new intersections where only estimated volumes are available, this criterion is often used as a gauge for existing intersections, to identify locations where further attention should be focused.

Peak-hour through and conflicting left-turn volumes for each approach of the intersection were evaluated using the 100,000 methodology. The results are summarized on the following tables. The product of the eastbound left-turn movement and the conflicting westbound through movement volumes exceeded the 100,000 threshold in both peak periods.

Reviewing the Buildout 2038 with Project scenario, at the future Vessels Circle and Moody Street intersection, the morning southbound left vs. northbound through volumes yielded a product of 59,535, and the afternoon volumes yielded a product of 138,720.

SUMMARY OF LEFT-TURN VS. THROUGH MOVEMENT CONFLICTS AT INTERSECTION 31: VESSELS CIRCLE & MOODY ST		
Movement	Peak Hour Conflicting Volumes	
	AM Peak	PM Peak
BUILDOUT 2038 WITH PROJECT		
SBL	405	408
x NBT	x 147	x 340
Total	59,535	138,720
BUILDOUT 2038		
SBL	371	262
x NBT	x 129	x 274
Total	47,859	71,788
EXISTING WITH EXTENSION WITH PROJECT		
SBL	357	374
x NBT	x 130	x 304
Total	46,410	113,696
EXISTING WITH EXTENSION		
SBL	323	228
x NBT	x 112	x 238
Total	36,176	54,264

At the Cerritos Avenue and Moody Street intersection, the highest north-south combination is noted, which is the southbound left versus the northbound through. The morning southbound left vs. northbound through volumes yielded a product of 84,987, and the afternoon volumes yielded a product of 151,316. Based on the 100,000-criterion left-turn phasing should be provided at Vessels Circle and Moody Street. At Cerritos Avenue and Moody Street protected left-turn phasing is already provided in the east-west direction, but based on the 100,000 criterion, it should also be provided in the north-south direction.

SUMMARY OF LEFT-TURN VS. THROUGH MOVEMENT CONFLICTS AT INTERSECTION 15: CERRITOS AVE & MOODY ST		
Movement	Peak Hour Conflicting Volumes	
	AM Peak	PM Peak
BUILDOUT 2038 WITH PROJECT		
SBL x NBT Total	497 x 171 84,987	362 x 418 151,316
BUILDOUT 2038		
SBL x NBT Total	497 x 90 44,730	362 x 343 124,166
EXISTING WITH EXTENSION WITH PROJECT		
SBL x NBT Total	426 x 159 67,734	312 x 373 116,376
EXISTING WITH EXTENSION		
SBL x NBT Total	426 x 78 33,228	312 x 298 92,976

The 100,000 criterion is intended to provide advance indication, when actual traffic volumes and observations are not available, of those locations where left-turn phasing may be warranted. Where the 100,000 threshold is met, evaluating the intersection delay and level of service is utilized to determine whether the left-turn phase is protected or protected-permissive.

Based on the LOS analysis, the northbound and southbound left-turn movements will be protected lefts at both Intersection #15 – Cerritos Avenue and Moody Street and Intersection #31 – Vessels Circle and Moody Street.

LEFT-TURN QUEUING ANALYSIS

In accordance with the Cypress Transportation Guidelines, a left-turn queuing analysis is required for any study intersection where a project is anticipated to contribute 25 or more net new trips during the AM or PM peak hour. A left-turn queuing analysis, based on the Highway Capacity Manual (HCM) methodology, has therefore been conducted for the 38 study intersections during the AM and PM peak hours, including the project driveway intersections. The HCM methodology determines the 95th percentile queue length, which means 95% of the time, during the peak hours, that the vehicle queue length will be equal or less than the queue length identified. The 95th percentile queue has been reviewed versus the left-turn lane storage capacities for the Buildout Year 2038 (Cumulative Conditions) without and with project conditions.

Table 9 shows the summary of the left-turn storage capacities and anticipated 95th percentile queue lengths at each of the study intersections and project driveways. Table 9 also identifies the change in vehicle queue for each left-turn pocket with the Project added and notes if that change is less than 1 vehicle length (25' typical). Where 95th percentile vehicle queues were reported to exceed the existing left-turn storage capacity, Table 9 also notes one of the following for those particular approach and left-turn movements:

- Additional queuing capacity beyond the end of the turn pocket due to existing two-way left-turn lane.
- Additional queuing can be accommodated by restriping.
- The increase in the queue length due to the Project is less than one car length (25 feet).
- Queue would be overcapacity by less than one car length (25 feet). This assumes the vehicle queue would be accommodated in the pocket opening.

The following intersections with the noted turn pocket approaches would experience left-turn queues exceeding the existing turn lane capacities in Buildout Year 2038 (Cumulative Conditions) without the Project:

- #1 - Lincoln Avenue at Moody Street – All approaches
- #2 – Lincoln Avenue at Walker Street – All approaches
- #3 – Lincoln Avenue at Valley View Street – SBL, WBL
- #4 – Orange Avenue at Moody Street – EBL
- #5 – Orange Avenue at Walker Street – NBL, SBL, EBL
- #6 – Orange Avenue at Valley View Street – NBL, EBL, WBL
- #7 – Ball Road at Bloomfield Street – NBL
- #8 – Ball Road at Denni Street – NBL, SBL
- #9 – Ball Road at Moody Street – WBL (AM Peak)
- #10 – Ball Road at Walker Street – SBL, EBL
- #11 – Ball Road at Valley View Street – NBL, EBL, WBL
- #14 – Cerritos Avenue at Lexington Drive/Denni Street – SBL
- #16 – Cerritos Avenue at Walker Street – SBL, WBL (PM Peak)

- #17 – Cerritos Avenue at Valley View Street – All approaches
- #18 – Vessels Circle at Walker Street – NBL, EBL
- #21 – Katella Avenue at Lexington Drive – NBL
- #23 – Katella Avenue at Siboney Street – WBL
- #24 – Katella Avenue at Walker Street – NBL, SBL (PM Peak), EBL
- #25 – Katella Avenue at Valley View Street – All approaches
- #26 – Katella Avenue at Hope Street- SBL
- #27 – Katella Avenue at Holder Street – SBL
- #30 – Orangewood Avenue at Valley View Street – SBL, EBL, WBL.

The addition of Project traffic in Buildout Year 2038 (Cumulative Conditions) would cause the vehicle queues to exceed the left-turn storage capacity for the following movements, intersections and peak hours identified:

- #9 – Ball Road at Moody Street – WBL (PM Peak)
- #10 – Ball Road at Walker Street – WBL (AM/PM Peak)
- #14 – Cerritos Avenue at Lexington Drive/Denni Street – NBL (AM Peak)
- #15 – Cerritos Avenue at Moody Street – NBL (PM Peak), WBL (AM Peak) – with inclusion of project feature
- #16 – Cerritos Avenue at Walker Street – WBL (AM Peak)
- #24 – Katella Avenue at Walker Street – SBL (AM Peak)

Proposed improvements at Intersection #18 – Vessels Circle at Walker Street are anticipated to accommodate the added vehicle queues due to the Project. In addition, the project features previously identified in this study for #15 – Cerritos Avenue at Moody Street are anticipated to accommodate the projected left-turn vehicle queues and prevent an exceedance.

TABLE 9
SUMMARY OF LEFT-TURN QUEUING ANALYSIS

Intersection Number	Intersection	Movement	Storage Capacity (ft/ln)	Peak Hour	Queue Length (ft/ln)			
					Buildout 2038 Without Project	Buildout 2038 Plus Project	Change	Notes
					95th Percentile	95th Percentile	95th Percentile

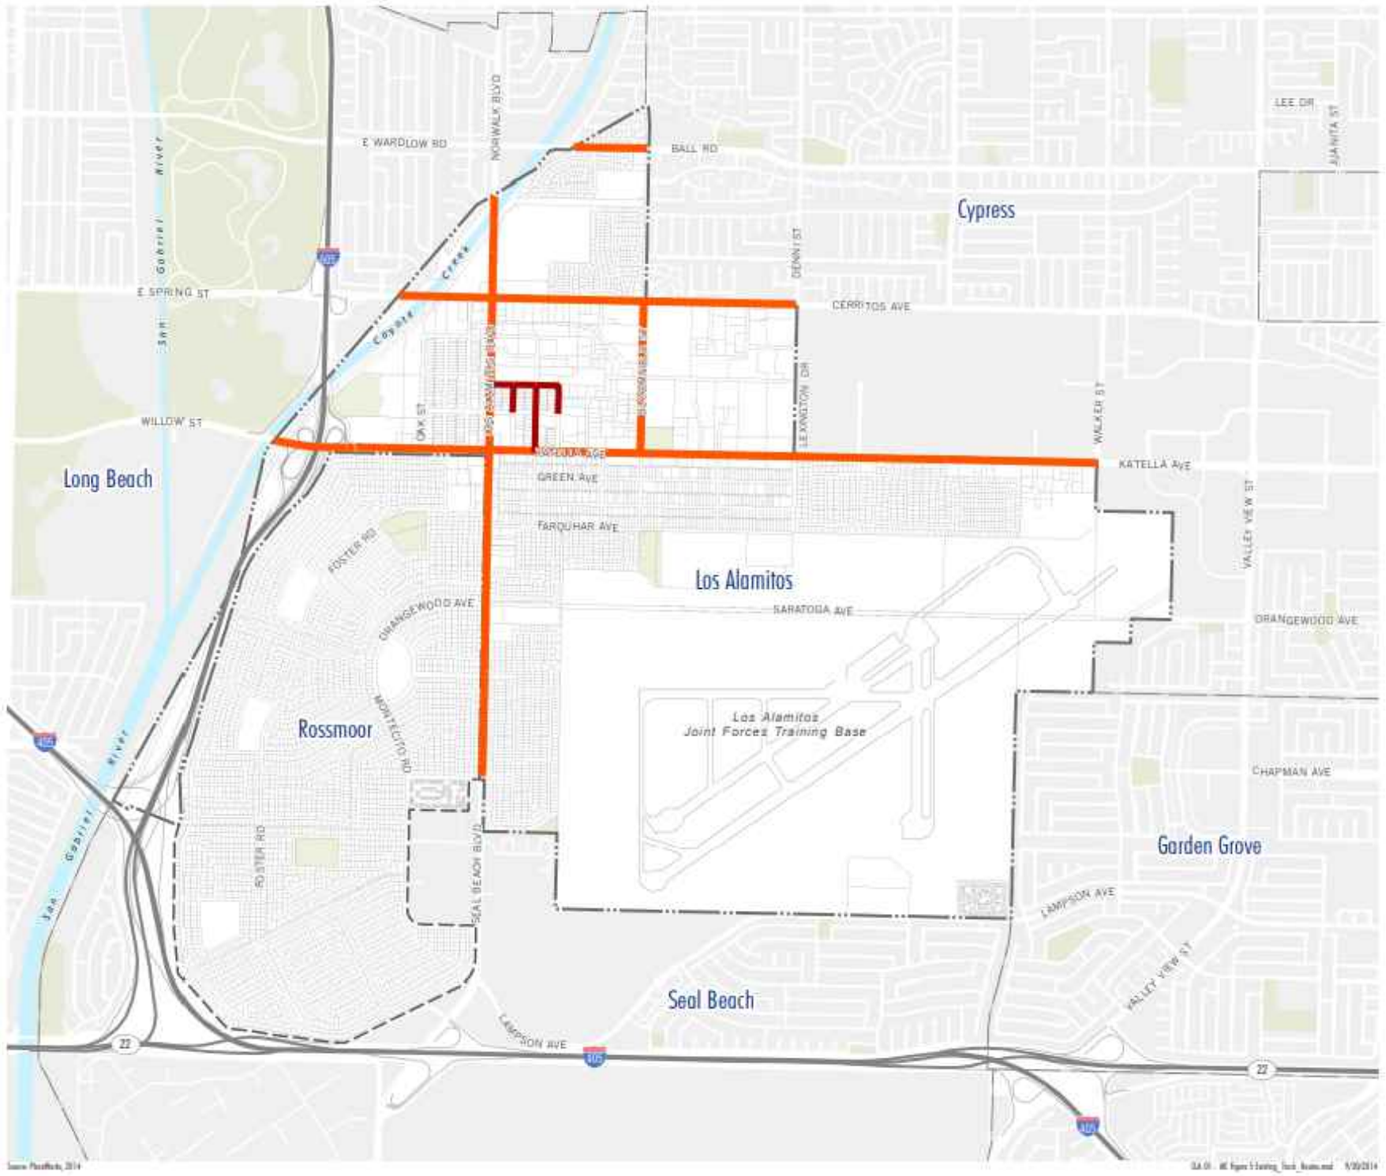
CONSTRUCTION TRAFFIC

The Cities of Cypress, Los Alamitos and Garden Grove have designated truck routes within each City. The City of Cypress has designated Cerritos Avenue, Katella Avenue, Valley View Street, and Walker Street between Cerritos Avenue and Katella Avenue as truck routes within City limits. The City of Los Alamitos has designated Los Alamitos Boulevard, Bloomfield Street, Cerritos Avenue and Katella Avenue within City limits as truck routes. The City of Garden Grove has designated Valley View Street within City limits as a truck route. The truck routes for each city are shown on **Figures 24, 25** and **26**.



It should be noted that the Project will be constructed over an extended period, and the phasing of specific development projects is largely unknown and cannot be determined at this time. It is anticipated that for development in the Buildout Area, haul routes for construction traffic will be almost entirely along the designated truck routes (Katella Avenue, Cerritos Avenue, Walker Street and Valley View Street) to the I-605, SR-22 or I-405 Freeways. Use of the Moody Street extension (after it is built) and/or Lexington Drive may be needed for grading activities in some portions of the Buildout Area to access the noted designated truck routes. As each specific development project is identified, specific haul routes can be determined.

Temporary delays in traffic may occur due to oversized construction vehicles traveling at lower speeds on Katella Avenue, Cerritos Avenue or Walker Street turning into the Buildout Area. Such delays, however, will be occasional and of short duration. The traffic generated by construction activity will be limited in duration and will not materially impact the Level of Service at any of the study intersections.

ORANGE COUNTY CONGESTION MANAGEMENT PROGRAM (CMP)

The Orange County Congestion Management Program (CMP) was established in 1991 to reduce traffic congestion and to provide a mechanism for coordinating land use and development decisions. Compliance with the CMP requirements ensures a city's eligibility to compete for State gas tax funds for local transportation projects.

The Orange County CMP Highway System is shown on **Figure 27**. Within the Cities of Cypress and Los Alamitos, the CMP Highway System includes two arterials: Valley View Street and Katella Avenue. Three CMP intersections have been analyzed in or near the study area: Valley View Street at SR-22 Westbound Ramps; Valley View Street/Bolsa Chica Road at Garden Grove Boulevard; and Katella Avenue at Valley View Street.

Based on CMP requirements, a Traffic Impact Analysis (TIA) is required for CMP purposes for any proposed development generating 2,400 or more daily trips, except that for developments which will directly access a CMP Highway System roadway segment, the threshold for requiring a TIA is reduced to 1,600 or more trips per day. The Project is estimated to generate a total of 21,041 daily trips, and would take access directly from Katella Avenue, which is a CMP facility. As such, a TIA is required for CMP purposes.

Based on CMP requirements, the extent of the study area for a TIA is determined by comparing the project's daily trips on a CMP roadway segment to the daily LOS E capacity of that segment. The CMP requires that the study area for the project extend far enough to cover any CMP roadway segment on which the project traffic would represent 3 percent or more of the roadway segment LOS E capacity.

This section of the traffic study has been prepared to demonstrate that the analysis for the Project in the preceding sections of this report also satisfies the CMP study area requirements. The LOS E capacities of Katella Avenue and Valley View Street, the two CMP roadways in the project vicinity, and the forecasted daily project traffic volumes on those segments, are shown on **Figure 28**[2]**.** This figure demonstrates that the project daily traffic volumes will exceed the 3 percent threshold for relatively short distances on Katella Avenue east and west of the Buildout Area and along Valley View Street to the north and south. As shown on **Figure 28**, it is anticipated or shown that the project daily traffic volumes will dissipate below the 3 percent threshold on Katella Avenue to the east and west of the marked points and on Valley View Street to the north and south of the marked points**.**

The intersections of Valley View Street at SR-22 Westbound Ramps, Valley View Street/Bolsa Chica Road at Garden Grove Boulevard, and Katella Avenue at Valley View Street have therefore been included in the peak hour analysis reflected in **Figure 28** to satisfy the CMP study requirements because project daily traffic volumes would be above the 3 percent threshold approaching those intersections, but (1) with respect to Katella Avenue, would dissipate to below the 3 percent

[2] Pursuant to the *Guidance for Administration of the Orange County Master Plan of Arterial Highways* (OCTA, October 2012), the LOS E capacity for 6-lane major roadways (Katella Avenue and Valley View Street) is 56,300 vehicles per day.

threshold (a) at the next CMP intersection to the west, which is the Katella Avenue at I-605 Southbound Ramps, and (b) before reaching the next CMP intersection to the east, which is the Beach Boulevard and Katella intersection, and (2) with respect to Valley View Street, would dissipate below the 3 percent threshold along Valley View Street before reaching the next CMP intersection to the north, which is the SR-91 Eastbound Ramp and Valley View Street intersection in the City of Buena Park, and before reaching the next CMP intersection to the south, which is Bolsa Chica Road at I-405 Southbound Ramps. Therefore, the CMP traffic analysis has been carried out sufficiently far enough to satisfy CMP requirements.

It should be noted that the CMP traffic analysis for Intersection #32 – Valley View Street at SR-22 Westbound Ramps and Intersection #33 – Valley View Street/Bolsa Chica Road at Garden Grove Boulevard, utilizes historical counts from 2017 and 2015, respectively. These historical traffic volumes were grown utilizing an ambient annual growth rate of 1% per year, up to Existing Year 2024 conditions and Buildout Year 2038 Conditions. No adjustments to the traffic counts for Intersection #25 – Katella Avenue at Valley View Street were applied for Existing Year 2024 Conditions as the traffic counts for this intersection were collected in May 2024. The traffic volumes for this intersection were grown at an ambient annual growth rate of 1% per year to Buildout Year 2038 Conditions.

Table 10 shows the results of the CMP analysis. As shown in **Table 10**, in the Existing Condition with Moody Street Extension, Existing with Project, and Buildout Year 2038 with and without project, the CMP intersections of Valley View Street at SR-22 Westbound Ramps, Valley View Street/Bolsa Chica Road at Garden Grove Boulevard, and Katella Avenue and Valley View Street would operate at LOS D or better in both the AM and PM peak hours, which is acceptable per CMP requirements as shown below. Intersection peak hour traffic volumes analyzed for the Valley View Street at SR-22 Westbound Ramps and Valley View Street/Bolsa Chica Road at Garden Grove Boulevard intersections are presented in **Figure 29** (the peak hour traffic volumes for Katella Avenue at Valley View Street intersection have been presented earlier in this study).

MELIA HOMES PROJECT TRAFFIC ANALYSIS

Melia Homes has proposed a project (Melia Project) in a portion of the Buildout Area that is Lot 14 on proposed Vesting Tentative Tract Map No. 19247 (VTTM 19247) and includes approximately 7.33 acres of land (Melia Site), all as shown on **Figure 2**. The Melia Project includes the subdivision of proposed Lot 14 into 8 lots (Lots 1-6, A and B) for condominium purposes for the construction and sale of 112 attached townhomes, with common areas for landscaping, recreation center, parking, drive aisles and easements. The Melia Site is located in the Mixed-Use (Town Center/MDR) District established in the Specific Plan.

Analysis Scenarios

This traffic analysis for the Melia Project evaluates weekday morning and evening peak hour operations for the following scenarios:

- Existing (2025) Conditions
- Existing (2025) Plus Project Conditions.

Analysis Methodology

This traffic analysis focuses on the Melia Project's off-site traffic-related impacts and peak-hour impacts at the following study intersection, which provides the only access to and from the Melia Site to the City's roadway network:

- Katella Avenue and Siboney Street.

As set forth in the Cypress Circulation Element, the City's Level of Service standard for acceptable intersection operation is Level of Service D, except at intersections along Valley View Street, Lincoln Avenue, and Katella Avenue. As the study intersection is on Katella Avenue, the acceptable level of service is LOS E.

Existing Peak Hour Traffic Volumes

Existing peak hour turning movement counts were collected on a typical (non-holiday) weekday in May 2024 at the study intersection. These traffic volumes were grown to Existing (2025) volumes by utilizing a conservative ambient growth rate of 1 percent per year. The resulting Existing (2025) peak hour volumes are shown on **Figure 30**. Intersection analysis worksheets are provided in ***Appendix G*** hereto. The results of the Existing (2025) intersection analysis are summarized on **Table 11**. This table shows that the study intersection currently operates at an acceptable Level of Service.

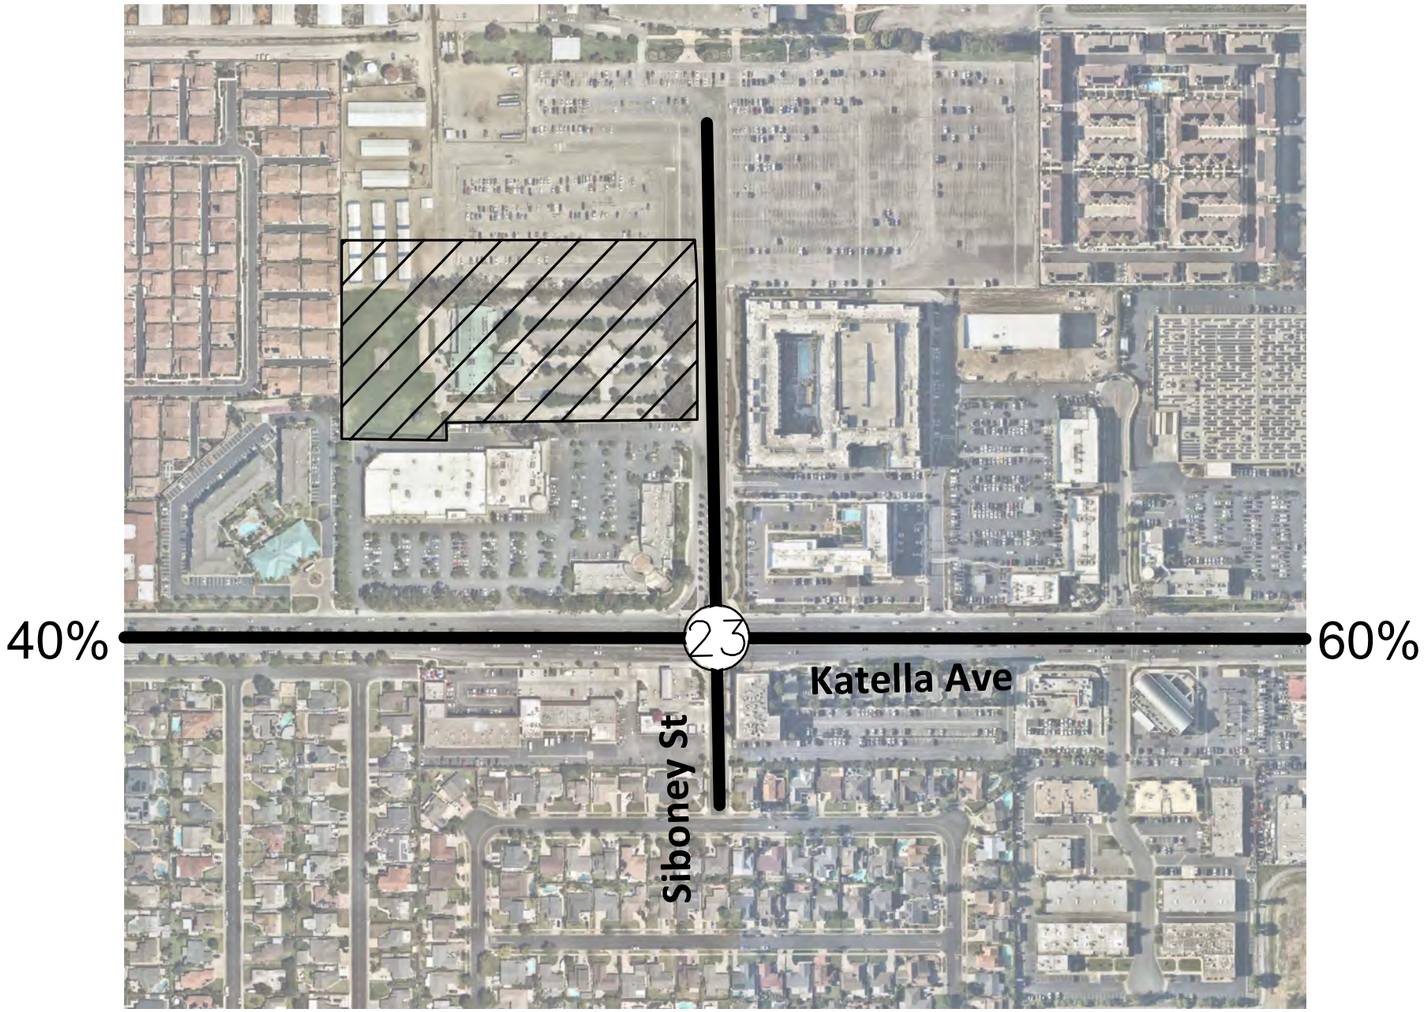
Project Trip Generation

Daily and peak hour trip generation estimates have been prepared for the Melia Project. Trip generation estimates are based on the Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition) trip rates for:

- Multifamily Housing (Low-Rise) (Land Use 220)

The trip rate and the resulting project trip generation estimate is shown on **Table 12**. The Melia Project would generate approximately 755 vehicle trips on a daily basis, with 45 trips (11 inbound and 34 outbound) in the morning peak hour and 57 trips (36 inbound and 21 outbound) in the evening peak hour.

It should be noted that the Cypress Specific Plan 3.0 Buildout Project is based on the assumption that a maximum of 131 dwelling units would be developed on the Melia Site (*i.e.*, proposed Lot 14 in VTTM 19247). As the Melia Project includes only 112 dwelling units, the trip generation estimates are less than what has been analyzed in this report.

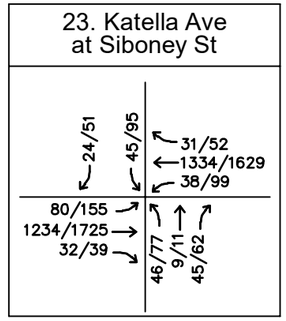


Project Trip Distribution and Assignment

Trip distribution assumptions for the Project were developed based on the likely origins and destinations of residents. Trip distribution assumptions during the morning and afternoon peak hours for the project are shown on **Figure 30** and follow the same distribution patterns as the residential use distribution utilized in this report for the entire Buildout Area.

Existing (2025) Plus Project Peak Hour Analysis

Project-related trips were added to Existing (2025) traffic volumes to forecast Existing (2025) Plus Project Conditions. Morning and evening peak hour traffic volumes for this scenario are shown on **Figure 30**. A summary of the resulting intersection Level of Service is provided on **Table 11**. Intersection analysis worksheets are provided in ***Appendix G***. **Table 11** shows that during peak hours, the study intersection would operate acceptably with the addition of project traffic pursuant to the Cypress Circulation Element.



Pursuant to the Cypress Transportation Guidelines, a project-related traffic effect is considered deficient under the HCM methodology if the increase in delay exceeds the City's applicable threshold of deficiency. The addition of project traffic at the intersection does not increase the intersection delay beyond the relevant thresholds of deficiency. Therefore, the Melia Project would not have any project-related effect.

DU = Dwelling Unit

SUMMARY OF FINDINGS AND CONCLUSIONS

- The Project is based on reasonably foreseeable buildout under the Specific Plan, which includes 141 detached single-family homes, 269 attached single-family homes, 1,381 multi-family residential units, and 440,000 square feet of commercial/retail floor area.

- The Project is anticipated to have one driveway access point along Lexington Drive, two driveway access points along Cerritos Avenue, two driveway access points along the Moody Street extension and two driveway access points along Vessels Circle. These driveways will be unsignalized, and will allow all movements. The spacing between the proposed driveways along Cerritos Avenue, as required by the City, will be 300 feet or greater from each other and from the existing intersections. The final location of the project driveway access points will be subject to review and approval by the City.

- Morning and evening peak hour operating conditions were evaluated at 31 intersections and 7 project driveway locations, totaling 38 study intersections, for the following study scenarios:
    - Existing Conditions
    - Existing Plus Project
    - Buildout Year 2038 Without Project
    - Buildout Year 2038 With Project.

- Under Existing Conditions, all study intersections currently operate at acceptable levels of service.

- At project buildout, the Project would generate approximately 21,041 weekday vehicle trips on a daily basis, with 1,019 trips during the morning peak hour and 1,418 trips during the evening peak hour.

- The extension of Moody Street to Katella Avenue and Vessels Circle to the extended Moody Street, including the intersection of Moody Street and Vessels Circle, were coded into the OCTAM model version 5.1. A selectzone analysis for the project scenario was conducted to help determine the trip distribution with the Moody Street and Vessels Circle extensions. Project traffic was manually removed based on this trip distribution to develop no project scenario with the roadway modifications. The link volumes obtained from the OCTAM model output were post-processed using the B-Turns methodology developed by the Federal Highway Administration (FHWA) to determine intersection turn movement volumes for the Existing Conditions with Extensions. All study intersections are projected to operate at acceptable levels of service under existing conditions.

- Project traffic was added to Existing Conditions with Extensions to establish Existing Plus Project forecasts. Project features are proposed at Intersection #15 – Cerritos Avenue at Moody Street and at Intersection #31 – Vessels Circle at Moody Street. Under Existing Plus

Project Conditions, all study intersections in both the City of Cypress and City of Los Alamitos would operate acceptably with the addition of project traffic pursuant to their Circulation Elements.

However, pursuant to the Cypress Transportation Guidelines, a project-related traffic effect is considered deficient under the HCM methodology if the increase in delay exceeds the City's applicable threshold of deficiency. While the following intersections in the City of Cypress operate acceptably pursuant to the Cypress Circulation Element, the addition of project traffic at those intersections increases the intersection delay, during the noted peak hours, beyond the relevant thresholds of deficiency and are considered to have project-related effects:

HCM Methodology:

- #16 – Cerritos Avenue at Walker Street: PM Peak
- #17 – Cerritos Avenue at Valley View Street: PM Peak
- #18 – Vessels Circle at Walker Street: PM Peak
- #23 – Katella Avenue at Siboney Street: PM Peak
- #25 – Katella Avenue at Valley View Street: PM Peak.

With respect to the ICU analysis for Existing Plus Project, all the study intersections would operate acceptably pursuant to both the Cypress Circulation Element and Los Alamitos Circulation Element, and the Project would not have a project-related effect on any of them.

- Ambient traffic growth at a conservative rate of 1.0 percent per year and traffic from Cumulative Projects were added to Existing Conditions to establish Buildout Year 2038 Without Project cumulative conditions.

- Under Buildout Year 2038 Without Project Conditions, each of the study intersections would operate within their respective target Levels of Service.

- Project traffic was added to Buildout Year 2038 Without Project Conditions to establish Buildout Year 2038 With Project forecasts.

- Under Buildout Year 2038 With Project Conditions, study intersections in the City of Los Alamitos and project driveways would operate acceptably pursuant to the Los Alamitos Circulation Element and only the following study intersections in the City of Cypress would operate unacceptably with the addition of project traffic during the noted peak hours pursuant to the Cypress Circulation Element and are therefore considered to have project-related effects:

  HCM Methodology:
  - #9 – Ball Road at Moody Street – AM Peak (LOS E)
  - #10 – Ball Road at Walker Street – PM Peak (LOS E)
  - #17 – Cerritos Avenue at Valley View Street: PM Peak (LOS F).

However, pursuant to the Cypress Transportation Guidelines, a project-related traffic effect is considered deficient if the increase in delay per the HCM methodology or volume/capacity ratio per the ICU methodology exceeds the City's applicable threshold of deficiency. While the following intersections in the City of Cypress operate acceptably pursuant to the Cypress Circulation Element, the addition of project traffic increases at those intersections either the intersection delay or volume/capacity ratio, during the noted peak hour, beyond the City's relevant threshold of deficiency and are considered to have project-related effects.

HCM Methodology:

- #1 – Lincoln Avenue at Moody Street: AM/PM Peak
- #2 – Lincoln Avenue at Walker Street: PM Peak
- #3 – Lincoln Avenue at Valley View Street: PM Peak
- #11 – Ball Road at Valley View Street: AM/PM Peak
- #16 – Cerritos Avenue at Walker Street: PM Peak
- #17 – Cerritos Avenue at Valley View Street: AM Peak
- #18 – Vessels Circle at Walker Street: PM Peak
- #23 – Katella Avenue at Siboney Street: PM Peak
- #25 – Katella Avenue at Valley View Street: PM Peak
- #30 – Orangewood Avenue at Valley View Street: PM Peak.

With respect to the ICU analysis, the following study intersection operates acceptably pursuant to the Los Alamitos Circulation Element. However, the addition of project traffic increases the Volume/Capacity (V/C) Ratio at that intersection, during the noted peak hour, by more than 0.01 and is therefore considered to be deficient and have a project-related effect, consistent with recent approved traffic analysis studies in the City of Los Alamitos:

ICU Methodology:

- #12 - Cerritos Avenue at Los Alamitos Boulevard: PM Peak.

- Of the identified intersections with project-related effects, proposed improvements are identified for Intersections #9 – Ball Road at Moody Street, #10 – Ball Road at Walker Street, #16 – Cerritos Avenue at Walker Street, #17 – Cerritos Avenue at Valley View Street, #18 – Vessels Circle at Walker Street, and #23 – Katella Avenue at Siboney Street. Proposed feasible improvements are recommended at these six intersections, as described below, to reduce their project effects, notwithstanding that three of them will operate at acceptable levels of service pursuant to the Cypress Circulation Element. Intersection #17 – Cerritos Avenue at Valley View Street in the PM Peak will continue to operate at an unacceptable LOS with the proposed feasible improvements.

- #9 – Ball Road at Moody Street
  - Add additional mast arm indications for the northbound and southbound approaches.

- #10 – Ball Road at Walker Street
  - Restripe the EB/WB approaches to provide one left-turn lane, two through lanes, and one dedicated right-turn lane.
  - Shift the westbound exit lanes north.

- #15 – Cerritos Avenue at Moody Street
  - Restripe EB approach to provide one exclusive right-turn lane.
  - Restripe SB approach to provide 2 lefts, 1 through, and 1 shared through/right lane.
  - NB approach to provide 2 lefts, 1 through, and 1 shared/through right lane.
  - Modify traffic signals to provide protected phasing for the NB/SB approaches.
  - Provide a crosswalk on the east leg of the intersection.
  - Provide bike lanes on Moody Street.

- #16 – Cerritos Avenue at Walker Street
  - Add NB right-turn overlap phasing.

- #17 – Cerritos Avenue at Valley View Street
  - Provide NB right-turn and SB right-turn overlap phasing.
  - Modify striping to extend EB left-turn pocket storage.

- #18 – Vessels Circle at Walker Street
  - Add EB right-turn overlap phasing.
  - Modify striping to extend NB and EB left-turn pocket storage.
  - Widen Vessels Circle by 10 feet on the south side.
  - Widen the westbound receiving lane by 3 feet.
  - Modify traffic signal in conjunction with Vessels Circle widening.

- #23 – Katella Avenue at Siboney Street
  - Add WB right-turn overlap phasing.

- #31 – Vessels Circle at Moody Street
  - Install traffic signal.
  - NB approach to provide 1 left, 2 throughs, 1 right.
  - SB approach to provide 1 left, 1 through, 1 through/right.
  - WB approach to provide 1 left, 1 through, 1 right.
  - EB approach to provide 1 left, 1 through/right.
  - Provide bike facilities on both Moody Street and Vessels Circle.

- Signal warrant analysis was conducted for the following intersections:
    - #22 – Katella Avenue at Enterprise Drive
    - #31 – Vessels Circle at Moody Street (future intersection).

  Using the Buildout Year 2038 with Project conditions, future Intersection #31 - Vessels Circle at Moody Street would satisfy the signal warrants in the morning and the evening peak hours. It is therefore recommended that a traffic signal be installed at this future intersection. Based on a left-turn phasing analysis, left-turn phasing in the north-south direction is recommended.

  The traffic signal warrant was not met at Intersection #22 – Katella Avenue at Enterprise Drive. Installation of a traffic signal at that intersection is therefore not recommended at this time.

- 95th percentile left-turn vehicle queues were evaluated at each study intersection where a minimum of 25 peak hour project trips in any peak hour were distributed. Where 95th percentile vehicle queues were reported to exceed the existing left-turn storage capacity, one of the following was noted for each approach and left-turn movement:

    - Additional queuing capacity beyond the end of the turn pocket due to existing two-way left-turn lane.
    - Additional queuing can be accommodated by restriping.
    - The increase in the queue length due to the project is less than one car length (25 feet).
    - Queue would be overcapacity by less than one car length (25 feet). This assumes the vehicle queue would be accommodated in the pocket opening.

  The following intersections with the noted turn pocket approaches would experience left-turn queues exceeding the existing turn lane capacities in Buildout Year 2038 (Cumulative Conditions) without the Project:

    - #1 - Lincoln Avenue at Moody Street – All approaches
    - #2 – Lincoln Avenue at Walker Street – All approaches
    - #3 – Lincoln Avenue at Valley View Street – SBL, WBL
    - #4 – Orange Avenue at Moody Street – EBL
    - #5 – Orange Avenue at Walker Street – NBL, SBL, EBL
    - #6 – Orange Avenue at Valley View Street – NBL, EBL, WBL
    - #7 – Ball Road at Bloomfield Street – NBL
    - #8 – Ball Road at Denni Street – NBL, SBL
    - #9 – Ball Road at Moody Street – WBL (AM Peak)
    - #10 – Ball Road at Walker Street – SBL, EBL
    - #11 – Ball Road at Valley View Street – NBL, EBL, WBL
    - #14 – Cerritos Avenue at Lexington Drive/Denni Street – SBL

- #16 – Cerritos Avenue at Walker Street – SBL, WBL (PM Peak)
- #17 – Cerritos Avenue at Valley View Street – All approaches
- #18 – Vessels Circle at Walker Street – NBL, EBL
- #21 – Katella Avenue at Lexington Drive – NBL
- #23 – Katella Avenue at Siboney Street – WBL
- #24 – Katella Avenue at Walker Street – NBL, SBL (PM Peak), EBL
- #25 – Katella Avenue at Valley View Street – All approaches
- #26 – Katella Avenue at Hope Street- SBL
- #27 – Katella Avenue at Holder Street – SBL
- #30 – Orangewood Avenue at Valley View Street – SBL, EBL, WBL.

The addition of Project traffic in Buildout Year 2038 (Cumulative Conditions) would cause the vehicle queues to exceed the left-turn storage capacity for the following movements, intersections and peak hours identified:

- #9 – Ball Road at Moody Street – WBL (PM Peak)
- #10 – Ball Road at Walker Street – WBL (AM/PM Peak)
- #14 – Cerritos Avenue at Lexington Drive/Denni Street – NBL (AM Peak)
- #15 – Cerritos Avenue at Moody Street – NBL (PM Peak), WBL (AM Peak) – with inclusion of project feature
- #16 – Cerritos Avenue at Walker Street – WBL (AM Peak)
- #24 – Katella Avenue at Walker Street – SBL (AM Peak).

Proposed improvements at Intersection #18 – Vessels Circle at Walker Street are anticipated to accommodate the added vehicle queues due to the Project. In addition, the project features previously identified in this study for Intersection #15 – Cerritos Avenue at Moody Street, are anticipated to accommodate the projected left-turn vehicle queues and prevent an exceedance.

- Traffic generated by construction activity would be limited in duration and would not materially impact the level of service at any of the study intersections. The Project will be constructed over an extended period, and the phasing of specific development projects is largely unknown and cannot be determined at this time. Haul routes for construction traffic would be along the designated truck routes (Katella Avenue, Cerritos Avenue, Walker Street and Valley View Street) in the Cities of Cypress, Los Alamitos, and Garden Grove to the I-605, SR-22 or I-405 Freeways. Use of the Moody Street extension after it is built and/or Lexington Drive may be needed for grading activities in some portions of the Buildout Area to access the noted designated truck routes. As each specific development project is identified, specific haul routes can be determined.

- The intersections of Valley View Street at SR-22 Westbound Ramps, Valley View Street/Bolsa Chica Road at Garden Grove Boulevard, and Katella Avenue and Valley View Street are CMP

intersections. In the Existing Condition with Moody Street and Vessels extensions, Existing with Project, and Buildout Year 2038 with and without project, all three intersections would operate at LOS D or better in both the AM and PM peak hours, which is acceptable per CMP guidelines.

- Traffic analysis was conducted at the intersection of Katella Avenue and Siboney Street to analyze the potential project-related effect of the Melia Project, which includes 112 townhome units on the Melia Site (*i.e.*, proposed Lot 14 of VTTM 19247), which includes 7.33 acres of land. The Melia Site is located in the Mixed-Use (Town Center/MDR) District established in the Specific Plan. The intersection of Katella Avenue at Siboney Street was analyzed under Existing (2025) and Existing (2025) Plus Project Conditions. Under both conditions, the study intersection would operate at an acceptable LOS in both the AM and PM peak hours in accordance with the Cypress Circulation Element. Pursuant to the Cypress Transportation Guidelines, the addition of project traffic at the intersection does not increase the intersection delay beyond the relevant thresholds of deficiency. Therefore, the Melia Project would not cause a project-related effect.

CITY OF CYPRESS

CITY COUNCIL REPORT

City Council Regular **12.**

FROM: William Wynder, City Attorney

DATE: 07/14/2026

SUBJECT: **First Reading of an Ordinance Correcting and Amending Section 17-53 and 17-54 of the Municipal Code Related to Penalties for Violation and Civil Remedies for the Illegal Discharge of Fireworks**

RECOMMENDATION

Introduce for first reading an ordinance correcting and amending Section 17-53 and 17-54 of the Cypress Municipal Code related to penalties for violation and civil remedies for the illegal discharge of fireworks.

SUMMARY

During the City Council meeting of June 23, 2026, the Mayor *Pro Tem* noted, during his discussion of the proposed ordinance establishing fines for violation of the City's long-standing prohibition on fireworks in the City, that an additional two corrections were warranted to Section 17-53 (Penalty for Violation) and 17-54 (Civil Remedies) of the Municipal Code. The proposed ordinance makes these two corrections.

DISCUSSION

As originally codified, Sections 17-53 and 17-54 of the Municipal Code make reference to Section 17-51 of the Municipal Code rather than Section 17-52 of the Municipal code. Upon review of this codification error, it is apparent these two sections of the Municipal Code require correction. The proposed ordinance will delete references to Section 17-51, in Sections 17-53 (Penalty for Violation) and 17-54 (Civil Remedies). The same sections will be corrected to refer to Section 17-52 (Fireworks Sale, Distribution and Discharge Thereof Prohibited).

These two corrections will add additional tools for enforcing the City's prohibition on the illegal discharge of fireworks that are separate from and in addition to Ordinance No. 1234 that is located for second reading and adoption on the consent calendar of tonight's agenda. If approved, these changes will require a second reading at the August 25, 2026, City Council meeting.

BUDGET IMPACT

There is no direct budget impact associated with the recommendation.

LEGAL REVIEW

The attached Ordinance was drafted and approved by the City Attorney's office.

APPROVED BY: Shannon DeLong, City Manager

Ordinance

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF CYPRESS, CALIFORNIA, AMENDING SECTIONS 17-53 (PENALTY FOR VIOLATION), AND 17-54 (CIVIL REMEDIES) OF CHAPTER 17 (OFFENSES) AS APPLIED TO ENFORCEMENT OF SECTION 17-52 (FIREWORKS SALE, DISTRIBUTION, AND DISCHARGE THEREOF PROHIBITED) OF THE CYPRESS MUNICIPAL CODE

R E C I T A L S

WHEREAS, the City of Cypress ("City") is a California charter city with plenary authority over all “municipal affairs,” and the broad “police powers” vested by California's Constitution, pursuant to which it may make and enforce laws necessary to protect and preserve the health, safety, and welfare of residents; and

WHEREAS, consistent with that authority and the City's police powers set forth under the California Constitution Article XI, Section 7 and Health & Safety Code § 12541, the City has authority to prohibit the sale, distribution and discharge of fireworks within the City; and

WHEREAS, Chapter 17 (Offenses) and Section 17-52 (firework; sale, distribution, and discharge thereof prohibited) of the Cypress Municipal Code ("CMC"), prohibits the sale, distribution, and discharge of fireworks within the City.

WHEREAS, the Council of the City of Cypress ("City Council") finds it necessary and appropriate to amend Sections 17-53 and 17-54 of Chapter 17 to correct errors in the same. These two sections reference fireworks but fail to apply the same to Section 17-52 and, instead, refer to Section 17-51. These errors require correction to Chapter 17 of the CMC to protect and preserve the public peace, health, and safety of the community.

O R D I N A N C E

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF CYPRESS DOES HEREBY ORDAIN AS FOLLOWS**:**

SECTION 1. The facts set forth in the Recitals are true and correct, and incorporated into this Ordinance as substantive findings.

SECTION 2. Section 17-53 ("Penalty for Violation") is hereby amended to read in its entirety as follows (deleted text in ~~strikethrough~~; new text in ***bold italics***):

"§ 17-53 Penalty for violation of section ~~17-51~~ ***17-52***.

Any person, firm, partnership, or corporation violating any provision of section ~~17-51~~ ***17-52*** shall be deemed guilty of a misdemeanor and shall be subject to the penalties set forth in section 1-7(a) and (b) of this Code. Each such person, or persons, firm, partnership, or corporation shall be deemed guilty of a separate offense for each and every firework discharged, for each and every firework sold, and for each and every day or portion thereof during which any violation of section ~~17-51~~ ***17-52*** is committed, continued or permitted by such person, persons, firm, partnership, or corporation, and shall be deemed punishable therefor as provided in section 1-7(a) and (b) of this Code"

SECTION 3. Section 17-54 ("Civil Remedies") is hereby amended to read in its entirety as follows (deleted text in ~~strikethrough~~; new text in ***bold italics***)::

"17-54 Civil remedies available re section ~~17-51~~ ***17-52***.

The violation of any of the provisions of section ~~17-51~~ ***17-52*** shall constitute a nuisance and may be abated by the city through civil process by means of restraining order, preliminary or permanent injunction, or in any other manner provided by law for abatement of nuisances."

SECTION 4. CEQA. Adoption of this Ordinance is not a project within the meaning of Section 15378 of the CEQA Guidelines in that it (a) is an ordinance of general policy and procedure and does not constitute a project within the meaning of CEQA and (b) has no potential for resulting in either a direct or a reasonably foreseeable indirect physical change in the environment.

SECTION 5. Severability. The City Council declares that, should any provision, section, paragraph, sentence or word of this Ordinance be rendered or declared invalid by any final court action in a court of competent jurisdiction, or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences and words of this Ordinance shall remain in full force and effect.

SECTION 6. This Ordinance shall take effect 30 days after its passage and adoption pursuant to Government Code § 36937.

SECTION 7. The City Clerk shall certify to the passage of the Ordinance and shall cause the same to be posted in the manner required by law.

PASSED, APPROVED AND ADOPTED by the City Council of the City of Cypress at a regular meeting held on this __ day of ____, 2026.

_____
Leo Medrano, Mayor

ATTEST:

_____
Lisa A. Berglund, CMC, City Clerk

STATE OF CALIFORNIA)
COUNTY OF ORANGE) SS

I, LISA BERGLUND, City Clerk of the City of Cypress, DO HEREBY CERTIFY THAT THE FOREGOING Ordinance was duly adopted by said City Council at a regular meeting held on the ___ day of ____, 2026, by the following electronic vote:

AYES: COUNCIL MEMBERS: Chang, Burke, Medrano, Peat, Strong Carnahan
NOES: COUNCIL MEMBERS:

CITY OF CYPRESS

CITY COUNCIL REPORT

City Council Regular **13.**

FROM: Nick Mangkalakiri, Director of Public Works

DATE: 07/14/2026

SUBJECT: **Solid Waste Franchise Agreement Performance Review and Amendment**

RECOMMENDATION

1. Receive and file the Solid Waste Franchise Agreement Performance Review; and

2. Approve the Fifth Amendment to the Solid Waste Franchise Agreement between the City of Cypress and Valley Vista Services, Inc.

DISCUSSION

Franchise Compliance Review

Last November, as part of its Strategic Plan objectives, the City Council awarded a contract to CityGreen Consulting (CityGreen) to perform a comprehensive review of the Solid Waste Franchise Agreement (Agreement) between the City of Cypress and Valley Vista Services (VVS). The review covered the period from January 2022 through December 2024 and evaluated compliance with the Agreement in three primary areas: financial performance, compliance programs and waste diversion, and operations. The purpose of the review was to ensure accountability, evaluate the effectiveness of services provided to the community, and identify opportunities for operational or administrative improvements.

The Financial Review evaluated 21 items, including rate calculations, franchise fee payments, billing audits, insurance requirements, and recordkeeping. Nineteen items were found compliant. The report noted VVS's above-average financial commitment to the franchise, including absorbing one full year of disposal fee increases rather than passing those costs on to Cypress ratepayers.

The Compliance Programs & Waste Diversion Review evaluated 13 items related to State-mandated diversion programs, SB 1383 compliance, organic waste processing

capacity, and waste characterization requirements. Twelve items were found to be compliant, including several areas receiving “Exceptional” ratings. The report highlighted the Grand Central Recycling facility’s designation as Southern California’s first High Diversion Organic Waste Processing Facility, achieved one year ahead of the franchise agreement schedule.

The Operations Review evaluated 10 items related to customer service, fleet standards, collection performance, public education, and reporting. Nine items were found to be compliant. The report noted VVS’s strong operational performance, including a 99.65% on-time collection rate and a missed pickup rate significantly below industry averages.

Overall, CityGreen evaluated 44 specific compliance items and found 40 items (91%) to be fully compliant, with the four non-compliant findings considered addressable through financial reconciliation, corrective action, or ongoing program improvements. Overall, VVS’s performance was rated as “Good to Very Good” relative to California franchise standards.

Franchise Amendment

The City entered into the Agreement with VVS in 2014 following a competitive public bidding process. The original 10-year term was extended by two years in 2017, and in 2021 the Agreement term was further extended to 2037 to support implementation of State-mandated organics recycling programs and amortize associated startup costs.

Now approximately halfway through the Agreement term and following approval of the Waste Infrastructure System Enterprise (WISE) Agreement with the County of Orange, staff initiated discussions with VVS to update specific terms of the Agreement. These discussions primarily focused on clarifying language and provisions to better align with current operations and the WISE Agreement. VVS also proposed revisiting collection and supplemental services, including bulky item pickups, curbside events, and community cleanup support. Accordingly, the proposed Fifth Amendment includes administrative and operational updates to maintain service levels, improve efficiency, and better reflect current community needs and practices. Notable updates include:

Description	Current Agreement Provisions	Proposed Fifth Amendment	Purpose/Impact
Bulky-Item Pickups	Up to two items per year for single-family residences and multi-family premises.	Up to four pickups annually for all residential customers, with limits of 10 items per pickup for single-family residences and 4 items per pickup for multi-family units.	Expands bulky item collection to four pickups per year for all residential customers and extends eligibility to multi-family units on a per-unit basis. Improves access to disposal services, supports proper waste management, and may help reduce illegal dumping.

Curbside Collection Events	None. Was offered during the pandemic and has been offered annually as a courtesy.	Two curbside collection events per calendar year. Residents may place unlimited amounts for collection.	Increases citywide curbside collection events from one to two per year to better meet high community demand and memorializes a service that was previously provided as a courtesy and not required under the Agreement.
Household Hazardous Waste Events	Two household hazardous waste events per year.	One household hazardous waste event per year.	Reduces City HHW events from two to one per year due to operational inefficiencies and long wait times, while maintaining resident access to County HHW facilities with unlimited free drop-off service. Reallocates service value to additional bulky item pickups with no cost impact.
Local Office	Requires VVS to have a local office in Cypress.	Requires VVS to have a local office within 15 miles of Cypress.	Revises the local office requirement to reflect reduced in-person demand due to online and phone service options, while maintaining reasonable local accessibility.
Disposal Fee	References the Waste Disposal Agreement.	References the Waste Infrastructure System Enterprise (WISE) Agreement.	Updates agreement language to reference the recently adopted WISE Agreement with the County of Orange in place of the prior Waste Disposal Agreement.
Bulky Item Collection Events	Provides for two collection events.	Provides for up to four collection events.	Expands collection events to four for resident disposal of bulky items. Combined with curbside events and on-call pickups, this enhances disposal opportunities and helps reduce illegal dumping.
Residential Cart Cleaning	None.	Authorizes customers to request bin cleaning services for a fixed fee.	Provides residents with an optional, on-demand bin cleaning service not previously available, improving customer service without affecting existing rates.

BUDGET IMPACT

There are no fiscal impacts associated with receiving and filing the Performance Review or the proposed Amendment. However, the review identified $11,611.91 in fees that were not charged, collected, and remitted by VVS to the City. To resolve this finding, VVS will remit $11,611.91 to the City for the compliance and monitoring fee.

LEGAL REVIEW

The City Attorney has reviewed this staff report and approved the amendment as to form.

Table of Contents

Executive Summary 3

Section 1 – Franchise Agreement Compliance Review 7
Section 2 – Financial Review 8
Section 3 – Compliance Programs & Waste Diversion 30
Section 4 – Operations Review 39
Section 5 – Findings & Recommendations 49

Executive Summary

Our review process began in February and concluded in May with the submission of our final draft report for City review and finalization. Section 10.1 and 10.2 of the Agreement requires Valley Vista Services (VVS) to compile and maintain accurate, detailed records that provide complete financial and operational information. We can herein confirm their compliance in that regard and find them to be using systems and software that effectively execute these required activities. Throughout the process we found VVS to be cooperative and helpful, both in their production of requested records and in their availability for numerous virtual and in-person meetings. Without exception they were available to review the items provided in response to our initial requests for records, and generated additional data to help us conclude this compliance review.

This report organizes our review into compliance categories, which include: 1) Financial, 2) Compliance Programs & Waste Diversion, and 3) Operations. CityGreen Consulting reviewed 44 specific franchise compliance items across three categories over the period January 2022 through December 2024. The table below summarizes compliance and performance ratings by review category:

SUMMARY OF COMPLIANCE AND PERFORMANCE RATINGS				
Review Category	**Items Reviewed**	**Compliant**	**Non- Compliant**	**Overall Rating**
Financial Review	21	**19**	**2**	Above Average
Compliance Programs & Waste Diversion	13	**12**	**1**	Exceptional
Operations Review	10	**9**	**1**	Above Average
TOTAL	**44**	**40**	**4**	**Good to Very Good**

Of the 44 items reviewed, 40 (91%) were found to be fully Compliant.

The four Non-Compliant findings are summarized below, each of which is either curable through payment or remediation, or was substantially corrected during the review period:

SUMMARY OF NON-COMPLIANT FINDINGS			
#	**Item**	**Finding**	**Category**
1	Universal Waste Recordkeeping (Sec. 4.06.2)	Collections were performed but no records maintained to substantiate compliance. VVS immediately instituted a collection log upon notification and agreed to include universal waste data in annual reports going forward.	Financial
2	City Compliance & Monitoring Fee – 1.5% (Sec. 9.04)	$11,611.91 in under-billed fees identified over the 3-year review period ($4,944 in 2022; $5,390 in 2023; $1,278 in 2024). Under-billing declined each year. City is entitled to	Financial

SUMMARY OF NON-COMPLIANT FINDINGS			
#	Item	Finding	Category
		audit cost reimbursement and a 10% annual penalty per Sec. 8.09.	
3	C&D Diversion Rate (Sec. 5.09)	VVS achieved 73.6–74.1% diversion in each year, just below the franchise-required 75% minimum. Diversion exceeds the State's 65% standard. VVS should work with Grand Central Recycling to close the gap.	Compliance
4	NPDES / Stormwater Pollution Prevention (Sec. 6.08.9)	Two prohibited discharge incidents in 2023 occurred without a Stormwater Pollution Prevention Plan or formal staff training in place. VVS subsequently developed and implemented a SWPPP, confirmed with OC Sanitation. No further incidents occurred.	Operations

Financial Review Area

The Financial Review covered 21 items, including rate calculations, required payments to the City, billing audits, insurance, and recordkeeping. Nineteen of 21 items were found to be Compliant. VVS demonstrated an above-average financial commitment to the franchise, most notably by consistently absorbing one full year of disposal fee increases rather than passing them through to Cypress ratepayers — an accommodation not seen in comparable franchise agreements and one that reduced ratepayer costs by approximately $300,000 per year.

Our review of VVS internal financial records established Earnings Before Interest, Taxes, Depreciation, and Amortization (EBITDA) of approximately 17–19% during the review period, modestly below the California industry benchmark of 20–30%. When adjusted for the disposal fee revenue shortfall described above, their effective EBITDA rises to approximately 22%. CityGreen considers VVS financially capable of sustaining all required operations and Agreement compliance for the remainder of the franchise term.

Compliance Programs & Waste Diversion Review Area

The Compliance Review covered 13 items, including State-mandated diversion programs, SB 1383 compliance, organic waste capacity, and waste characterization. Twelve of 13 items were Compliant, with three earning an Exceptional rating — the highest in our review framework. VVS's most significant competitive advantage for the City is the Grand Central Recycling facility, which achieved Southern California's first High Diversion Organic Waste Processing Facility designation, one year ahead of the Agreement schedule.

The table below shows VVS commercial route processing and diversion performance across the review period. The 83% average rate of commercial waste sent to processing (rather than direct-hauled to landfill) is exceptional by California industry standards:

Year	Total Commercial Collections (tons)	% Sent to Processing	Tons Diverted from Processing	Processing Diversion Rate
CY 2022	20,026	67.8%	5,437	40.0%
CY 2023	19,823	90.1%	6,676	37.4%

Year	Total Commercial Collections (tons)	% Sent to Processing	Tons Diverted from Processing	Processing Diversion Rate
CY 2024	19,131	90.7%	9,059	52.2%
Review Period	**58,981**	**82.7%**	**21,172**	**43.4%**

Construction and demolition diversion was the one Non-Compliant finding in this category. VVS achieved 73.6–74.1% diversion in each year, just below the 75% franchise requirement, though well above the State's 65% standard:

Year	C&D Tons Collected	Tons Disposed	Tons Diverted	Achieved Diversion	Required (Agreement)
CY 2022	2,348	608	1,740	**74.1%**	*75.0%*
CY 2023	3,682	962	2,720	**73.9%**	*75.0%*
CY 2024	2,892	764	2,128	**73.6%**	*75.0%*

SB 1383 and AB 939 collection program compliance by customer type is shown below. VVS reached and reported what they believed was 100% compliance across all residential and commercial business accounts in 2023. However, our review determined five multi-family properties listed with waivers, were in error. VVS immediately provided recycling containers to all five accounts, bringing them into compliance. The City was confirmed compliant with CalRecycle's 50% diversion mandate in each year of the review period:

Year	Customer Type	Customers	SB 1383 Compliant	% Compliant	AB 939 Compliant (50% Diversion)
2022	Residential	12,666	12,666	**100%**	**Yes**
	Commercial Business	416	383	**92.1%**	**Yes**
	Multi-Family	131	121	**92.4%**	**Yes**
2023	Residential	12,666	12,666	**100%**	**Yes**
	Commercial Business	416	416	**100%**	**Yes**
	Multi-Family	131	126	**96.2%**	**Yes**
2024	Residential	12,666	12,666	**100%**	**Yes**
	Commercial Business	416	416	**100%**	**Yes**

Year	Customer Type	Customers	SB 1383 Compliant	% Compliant	AB 939 Compliant (50% Diversion)
	Multi-Family	131	126	**96.2%**	**Yes**

Operations Review Area

The Operations Review covered 10 items including customer service, fleet standards, collection performance, public education, and reporting. Nine of 10 items were Compliant. VVS's collection metrics are a standout result of this review: a 99.65% on-time collection rate and a missed pick-up rate of 0.0227% — approximately half the industry average of 0.05% — place VVS among the top performers reviewed by this firm across multiple states.

The table below summarizes customer service call center performance across the review period. Out of approximately 2,000,000 container collections per year, the 454 missed pick-ups recorded in 2024 represent a rate considered excellent by any industry standard:

Year	Total Calls	Missed Pick-ups	% of Calls	Other Complaints	Total Complaints % of Calls
CY 2022	*N/A*	816	*N/A*	52	868 / N/A
CY 2023	7,432	586	7.9%	30	616 / 8.3%
CY 2024	6,143	454	7.4%	38	492 / 8.0%

The California Highway Patrol assessment placed VVS vehicle maintenance in the top 10% of the industry, with no drug or alcohol violations and an insurance modification factor of 0.99% (industry standard: 1.00%). Fleet condition, container standards, and quarterly reporting were all rated Above Average. The one Non-Compliant finding — the absence of a Stormwater Pollution Prevention Plan prior to two discharge incidents in 2023 — was remediated during the review period, with no further incidents recorded.

Overall Assessment

CityGreen Consulting rates VVS's overall performance as **Good to Very Good** relative to California franchise standards. The four non-compliant findings are addressable: one requires financial resolution (1.5% fee remittance), one requires ongoing diversion improvement (C&D), and the other two were resolved through corrective action.

The 11 Recommendations presented in Section 5 of this report provide a roadmap for the City to obtain full resolution and to strengthen monitoring practices for the remainder of the franchise term.

Section 1 – Franchise Agreement Compliance Review

The City of Cypress (City) entered into an exclusive solid-waste franchise agreement (Agreement) with Valley Vista Services of Orange County (VVS) on the 22nd of September 2014. Through that franchise agreement, and four (4) subsequent amendments, the City established various standards and requirements which are to be reviewed for compliance periodically. As stated in Section 10 of the Agreement, VVS is to maintain records related to its performance necessary to allow the City to determine their compliance. Amendment 2 added the stipulation that the City can independently audit and reconcile payments due from VVS. It was further established that VVS would be responsible for audit costs if underpayments were greater than 0.5%.

Our review of the City's Agreement and various amendments helped us established a preliminary list of Agreement items for review, which were provided to VVS in late January 2026. All requested items were reviewed, and virtual and onsite meetings were held to discuss our process, and discuss documentation required.

From that point we developed a spreadsheet containing all specific Agreement items incorporated and presented them in our three (3) review categories, which was then shared with VVS to ensure a complete production of records.

The three (3) categories of review are listed below, along with the number of Agreement compliance items allocated to each:

> Financial: 21 specific areas of review related to required payments, free service provision, rates/review process and accuracy, financial reporting, the provision of bonds and insurance coverages, and other Agreement sections that provide economic value or impact.
>
> Compliance Programs & Waste Diversion: 13 areas of review related to State mandated waste diversion programs, related regulatory compliance support measures, disposal and waste processing performance (including diversion measurements and compliance metrics, waste capacity guarantees and new facility development), and regulated education and outreach to achieve collection/diversion program requirements.
>
> Operational Compliance: 10 areas of review, with most containing multiple Agreement sections related to the general provision of service, best management practices in service delivery, vehicle and equipment standards, customer service, and additional Agreement compliance areas that do not apply to other categories.

We then reviewed compliance with each Agreement requirement selected for review, compiling our findings within the three (3) review categories presented in the following sections of this report.

Section 2 – Financial Review

Through onsite reviews, virtual meetings and various phone and email communications, we reviewed the systems and practices employed by VVS, that fell under our Financial Review area, and found 19 of 21 to meet or exceed industry standards. Overall, their system capabilities, as well as management and staff efforts to assist in this area of review were excellent and show a high level of commitment to the City of Cypress. Provided below is detail on each financial review item.

1) Rate Adjustment Process

Sec. 2.9 (2nd Amend.) & 9.02 (4th Amend.)

Franchise rate adjustment process. A new exhibit table, for use in adjusting rates was adopted in the 2nd Amendment to the Agreement. We see this as a necessary administrative exercise which accompanied increased residential rates and commercial rates, to address new requirements upon VVS to meet State-mandated recycling and organic waste recycling mandates. The 2nd Amendment did not change the underlying rate adjustment methodology nor the referenced indexes or component allocations, established in the original Agreement. However, the 4th Amendment ultimately changed the rate adjustment methodology in Section 9.02 as follows:

Residential Rates:

> Rate component allocation for Residential collection changed from 75% of the total rate down to 46%, keeping the same CPI table and increase cap (3.5% = 85% of any CPI increase).
>
> Rate component for Residential disposal increased to 37% from the 20% level used previously. Increase is still based upon Orange County landfill rate, per the disposal agreement between the City and County.
>
> Rate component for Residential green waste increased to 17% from 5%. This component also changed to the CPI basis used for the collection component. However, a 5% increase is allowable before use of the 85% limiting factor. Use of the Grand Central facility gate rate was eliminated.
>
> Commercial and Roll-Off Service rates kept the same component allocations and schedules.

We reviewed rate adjustment requests during the review period and performed our own allocations, to determine if they were accurate, as shown below:

July 2022 Rate Adjustment					
	Service Component				
Sector	CPI Increase	Amount > 3.5%	Allowable %	Review %	% Used
Residential	7.40%	3.90%	3.32%	6.82%	6.81%
Commercial	7.40%	3.90%	3.32%	6.82%	6.81%
	Disposal Component				
Sector	Preivious $	Requested $	Allowable %	Review %	% Used
Both	$ 35.67	$ 36.09	1.18%	1.18%	1.18%
	Green Waste Component				
Sector	CPI Increase		Allowable %	Review %	% Used
Residential	7.40%		7.40%	7.40%	7.40%

Reading left to right in the table above, for the service component of rates we establish the percentage increase above 3.5% (3.90% in this case) and then apply the 85% factor to arrive at the allowable 3.315% (rounded to 3.32 above), which is then added to 3.5% to determine the percentage increase our "review" calculated as accurate (3.5% + 3.315% = 6.815%). The 6.81% "used" for this component increase in July 2022 was rounded down, thus requested percentage increase did not exceed the amounts authorized by the Agreement.

As shown for the disposal component of rates, the percentage increase used the previous years' percentage adjustment (1.18%). We confirmed that VVS decided to have their disposal adjustments lag the County of Orange increase by one-year, since the Agreement required their rate adjustment proposal be submitted before the County published their new landfill rates. This is an accommodation we do not see other haulers provide as it requires VVS to pay more at the landfill each year, than their rate revenue provides. In this case $2.25 per-ton more (actual July 2022 rate was $38.34).

Finally, for residential green waste the full CPI amount was used, which is allowable.

July 2023 Rate Adjustment					
	Service Component				
Sector	CPI Increase	Amount > 3.5%	Allowable %	Review %	% Used
Residential	5.10%	1.60%	1.36%	4.86%	4.86%
Commercial	5.10%	1.60%	1.36%	4.86%	4.86%
	Disposal Component				
Sector	Preivious $	Requested $	Allowable %	Review %	% Used
Both	$ 36.09	$ 38.34	6.23%	6.23%	6.23%
	Green Waste Component				
Sector	CPI Increase		Allowable %	Review %	% Used
Residential	5.10%		5.10%	5.10%	5.08%

For both 2022 and 2023 increases, our review of percentage increases and rate component allocations and found the residential, commercial, and roll-off service increase percentages requested and granted were accurate, with disposal cost reimbursements lagging by one year, thus providing a significant cost reduction to ratepayers. The tables shown our full review exercise for the CY 2024 increase:

July 2024 Rate Adjustment					
	Service Component				
Sector	CPI Increase	Amount > 3.5%	Allowable %	Review %	% Used
Residential	3.36%	0.00%	0.00%	3.36%	3.36%
Commercial	3.36%	0.00%	0.00%	3.36%	3.36%
	Disposal Component				
Sector	Preivious $	Requested $	Allowable %	Review %	% Used
Both	$ 38.34	$ 41.31	7.75%	7.75%	7.75%
	Green Waste Component				
Sector	CPI Increase		Allowable %	Review %	% Used
Residential	3.36%		3.36%	3.36%	5.08%
Residential Components					
	% Change	Component %		Review %	% Used
Collection	3.36%	46%		1.55%	1.54%
Disposal	7.75%	37%		2.87%	2.87%
Green Waste	3.36%	17%		0.57%	0.57%
				4.98%	**4.98%**
Commercial Components					
	% Change	Component %		Review %	% Used
Collection	3.36%	80%		2.69%	2.69%
Disposal	7.75%	20%		1.55%	1.55%
				4.24%	**4.24%**
Roll-Off Service used the correct increase percentage of 100% of 3.36%					

Review Determination: Compliant Increase percentages and their application were accurate.

Rating – Above Average. Our review showed the proper percentage increase calculations were used, with slight differences ($0.01) attributable to rounding. As discussed, VVS must submit rate adjustments to the City by March 15 each year. Thus, they chose to take less of an increase than the actual impact of July 1st landfill rate increases warranted in each year of our review period. For example, on July 1, 2024, the Orange County landfill rate increased to $42.65. The $41.31 figure VVS used for the 2024 rate adjustment was the landfill rate for the July 1, 2023, through June 30th 2024, period. We are not aware of another hauler who make this accommodation.

2) Free Service at City Facilities

Sec. 4.02.4 – Original Agreement

This Agreement item requires no charge for collections at all city facilities, including parks, sidewalks, and bus stops. We reviewed electronic records from VVS' accounting system and reports from scale house activity and confirmed the following city facilities are in the VVS accounting system and were not charged in any manner for service:

CUST#	CUSTOMER NAME	SERVICE NAME	SERVICE ADDR
100054	CITY OF CYPRESS	CITY OF CYPRESS	5172 ORANGE AVE
101856	CYPRESS YARD	CYPRESS YARD	8863 WATSON ST
102723	VALLEY VISTA SERVICES CLEAN UP	CYPRESS XMAS TREE PICK UP	17445 RAILROAD ST
402589	VVSOC BULKY TRANSPORT	VVSOC BULKY TRANSPORT	8863 WATSON ST
454392	CITY OF CYPRESS	CITY OF CYPRESS-MAINT. YARD	5285 CYPRESS ST
454393	CITY OF CYPRESS	CITY OF CYPRESS	9600 GRAHAM ST
454394	CITY OF CYPRESS	CYPRESS PARKS & RECREATION	5700 ORANGE AVE
454395	CITY OF CYPRESS	CITY OF CYPRESS(ARNOLD P)	8611 WATSON ST
454396	CITY OF CYPRESS	CITY OF CYPRESS	5172 ORANGE AVE
454397	CITY OF CYPRESS	CITY OF CYPRESS SENIOR CENTER	9031 GRINDLAY ST
454398	CITY OF CYPRESS	CITY OF CYPRESS	5331 ORANGE AVE
454399	CITY OF CYPRESS	CEDAR GLEN PARK	10201 MOODY
454400	CITY OF CYPRESS	NATURE PARK	4201 BALL
454402	CITY OF CYPRESS	CITY OF CYPRESS	5275 ORANGE AVE
454403	CITY OF CYPRESS	CIVIC CENTER	5275 ORANGE AVE
454404	CITY OF CYPRESS	OAK KNOLL PARK	9600 GRAHAM ST
454405	CITY OF CYPRESS	CYPRESS CIVIC CENTER PARKING L	5275 ORANGE AVE
454406	CITY OF CYPRESS	CITY OF CYPRESS LIBRARY	5331 ORANGE AVE
454407	CITY OF CYPRESS	LEXINGTON PARK	4600 W CERRITOS ST
455695	CITY OF CYPRESS	CYPRESS CITY COLLEGE	9200 VALLEY VIEW ST
457118	CITY OF CYPRESS	CYPRESS YARD E-WASTE	8891 WATSON ST
457208	CITY OF CYPRESS	CYPRESS - XMAS TREE REMOVAL	8891 WATSON ST
457270	ABANDONED ITEM SWEEP CYPRESS	ABANDONED ITEM SWEEP CYPRESS	8863 WATSON ST

Additional facilities and bus stop services are not listed in their accounting system. However, they are included in route sheets and provided no cost weekly service at the locations and schedule discussed under Section 4.08.3 below. In combination with the list above, VVS is compliant with the free service provisions of the Agreement.

Review Determination: Compliant

Rating: Above average. Bus stop, Cypress College, and abandoned item sweeps make for an above average amount of no-cost service to benefit the City.

3) Multi-Family Recycling Carts

Sec. 4.03.4 – Original Agreement

This Agreement item requires VVS to provide one 96-gallon cart for the collection of recyclables to Multi-Family Premises at no additional charge. It further requires, at minimum, one recycling cart per Multi-Family Premises and requires one such cart be provided for every 9 cubic-yards of weekly trash service.

We reviewed containers-in-service and accounting records covering all multi-family properties to determine if free recycling carts were provided and to confirm if the required number of recycling containers provided matched the level of service factor established by the Agreement. Our review established the following data for multi-family properties (including those listed as HOAs) in the VVS accounting system:

Recycle Cart Data at Multi-Family Properties	Free Recycle Cart	No-Cost Mixed Processing	Discounted Recycle Bin	Non-Compliant (Under Review)
Total Properties Identified: 131	10	106	10	**5**
% of Total Properties	*7.6%*	*81.0%*	*7.6%*	*3.8%*

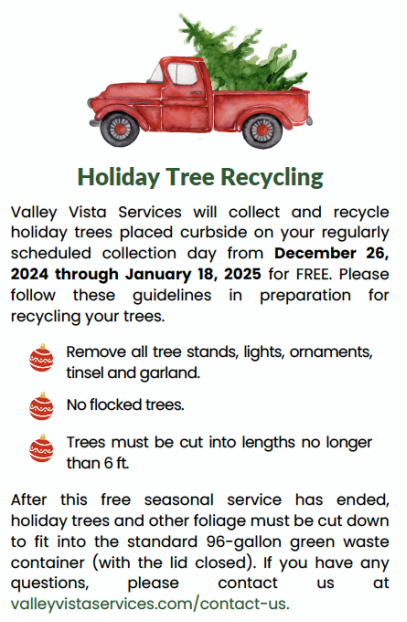
As shown above, most multi-family properties opted for the convenience of mixed waste processing, which is now SB 1383 compliant due to the High Diversion Organic Waste Processing Facility designation achieved by Grand Central Recycling used by VVS (first such designation in Southern California). There is no charge for mixed waste processing above the standard trash rate. This is effectively meeting the free recycling provision as there is no extra charge for this dual-purpose cart.

Currently only 10 multi-family properties are receiving and using a free recycling cart. We also found 10 accounts that utilize a larger container (3-cubic-yards vs. 96-gallons) for their recycling program. In each instance VVS is providing a discount to franchise pricing, for these containers, that credits the 96-gallon recycle-cart rate. This is materially complying with 4.03.4 in the reviewer's opinion.

We found five (5) of the 131 multi-family accounts that were potentially out-of-compliance. VVS investigated these locations and in April provided free 96-gallon recycle carts to each location.

We found VVS to be compliant with regards to the adequacy of recycling, providing more than the required 96-gallons of recycling capacity for every 9-cubic-yards of trash service metric.

Review Determination: Compliant



Rating – Exceptional. In addition to free recycling for multi-family residents VVS is the only firm in Southern California that is legally able to provide the convenience of a 2-container program to multi-family residents. 106 of 131 multi-family properties (81%) are benefitting from 2-container service.

4) Holiday Tree & Bulky Item Collections

Sec. 4.04.3 (Original) & 4.05.1 (2nd Amend.)

Free collection of Holiday Trees (12/26 thru 3rd Saturday in January) and two (2) bulky items per-year are required.

The schedule for Holiday Tree collections was advertised in the fall/winter residential newsletter each year, with 2022 (12/26/2022 thru 1/14/2023), 2023 (12/26/2023 thru 1/6/2024) and 2024 (12/26/2024 thru 1/18/2025) collections occurring. While VVS did comply with the tree size and collection of Holiday Trees requirement, the full timeframe required for those collections (through the third Saturday of January) was only met in 2024 (see newsletter article on right).

Holiday Tree Recycling

Valley Vista Services will collect and recycle holiday trees placed curbside on your regularly scheduled collection day from **December 26, 2024 through January 18, 2025** for FREE. Please follow these guidelines in preparation for recycling your trees.

- Remove all tree stands, lights, ornaments, tinsel and garland.
- No flocked trees.
- Trees must be cut into lengths no longer than 6 ft.

After this free seasonal service has ended, holiday trees and other foliage must be cut down to fit into the standard 96-gallon green waste container (with the lid closed). If you have any questions, please contact us at valleyvistaservices.com/contact-us.

In 2022/23 collections ended on the second Saturday (1/14/2023) and in 2023/24 they ended on the first Saturday (1/6/2024) of January. However, the same closing paragraph was included each year, so collections of trees (in the organics cart) was offered after the advertised collection period, thus collection was provided through the required period each year.

The Second Amendment to the Agreement reduced the number of free bulky items residents can have collected by VVS, at no charge, to two (not including free bulky items collected during designated "clean-up" collection days). These two (2) items can be collected either on one day or spread out over two separate days.

We reviewed work order records for each calendar year and selected calendar year 2022 for a detailed review of all 4,510 work orders for bulky item collections, and to examine who received the $11,976.53 in charges shown. This review of individual customer records confirmed that charges were exclusively levied at commercial properties (e.g. Cadigan Peppertree LLC – 9091 Holder Street – 61 bulky items), properties that had gone over the two-item limit (e.g. Cypress Mobile Home Park – 4861 Lincoln Avenue – 3 items), and 2 instances of scheduled items not being placed out for collection on multiple occasions.

We chose calendar year 2022 for our item-by-item review as it contained the highest level of charges in the records provided (calendar year 2023 had 4,077 work orders with only $2,502.24 in charges), and calendar year 2024 records were provided in Excel format without charge information.

Review Determination: Compliant We believe a reasonable level of compliance was achieved for Holiday Tree Collections. Furthermore, VVS has committed to keeping the 3-week "loose tree" collections they provided in the winter of 2024/25 in place. With regards to free bulky item collections for residential customers, VVS met this requirement in the sample period we reviewed (CY 2022). However, this type of deep dive into thousands of records cannot easily be performed. Our separate review of "chargeable" bulky item collections did find 40 of 80 accounts listed as residential service recipients in 2024. Going forward, we recommend that VVS be required to produce a bulky item collection report for all residential accounts (remove commercial records) and substantiate that 2 items were collected at no charge for any residential account that were charged for bulky item

collection. This report should be included in the annual report provided to the City each year on VVS' franchise activities.

Rating – Industry Standard. Area franchise agreements typically provide at least two collections per-year of two bulky items each (4 total), so we consider the Cypress Agreement substandard in this regard. However, VVS is meeting all Agreement terms and instituted multiple free bulky item collection days, as a replacement for the one-day drop-off event, so overall they are meeting industry standard.

5) Household Hazardous Waste (HHW) Events

Sec. 4.06.1 – Original Agreement

VVS is required to provide two HHW collection events per-year at no charge. This requirement was not met in 2022 due to permitting difficulties (see paragraph below). In 2023, HHW events occurred on October 21st and December 2nd. In 2024 the second event (first event was in December) did not occur until January 11, 2025, due to City scheduling conflicts.

In 2022 VVS was unable to obtain the necessary permits required to hold HHW Events. VVS performed extra city-wide curbside bulky item collection event that year as a negotiated offset with City staff. This city-wide curbside bulky item collection event has continued on an annual basis since 2022.

Review Determination: Compliant Mitigation measures provided additional benefits to compensate for permitting difficulties that were unrelated to VVS. Full compliance in the other two years.

Rating – Above Average. The number of HHW events (2) and VVS agreeing to continue providing a city-wide curbside bulky item collection event going forward warrants an above average grade.

6) Universal Waste Collection

Sec. 4.06.2 – Original Agreement

VVS is required to provide weekly Universal Waste collection from commercial premises and City facilities. VVS provides on-call collections of Universal Waste from the City and states they perform commercial Universal Waste collections if their customers leave the items adjacent to their collection containers on their service days. Since these collections are not work-order based, VVS could provide no records to substantiate their compliance.

Review Determination: Non-Compliant VVS did not keep records to substantiate their compliance with Agreement terms. However, customer service call records show VVS did perform Universal Waste collections. Upon being advised of this deficiency, VVS immediately instituted a collection log procedure and agreed to report the customers served and the number and type of items collected as part of their annual report to the City going forward.

Rating – Above Average. This type of required collection is not typical. In addition, VVS's immediate response to cure the record keeping deficiency was superior.

7) SHARPs Medical Waste Collection

Sec. 4.07 – Original Agreement

VVS is required to provide free SHARPs (medical needles) collection to single and multi-family residential customers. In 2022 VVS fulfilled 166 resident requests for free SHARPs containers with postage pre-paid to the facility that accepts and safely processes this medical waste. In 2023 (85) and 2024 (92) resident requests were received, and all were fulfilled.

Review Determination: Compliant

Rating – Industry Standard.

8) Community Event Support

Sec. 4.08 – Original Agreement

VVS is required to provide free waste/recycling collection service and provide a community education booth at six (6) named events and two (2) additional events, as designated by the City, each year. We reviewed records provided and confirmed the following:

In 2022, the eight (8) events listed in VVS records included the Cypress Community Festival, two (2) Organics Workshops, the Christmas Sing Event, the Spring Egg Hunt, the Cypress 5K Run, the 4th of July event, and the Cypress Annual Clean-up, with five (5) collection days occurring in September and October.

In 2023, only seven (7) events were attended as only one additional event was requested by the City. These included the Cypress Community Festival, two (2) HHW collection events, the Spring Egg Hunt, the 5K Run, the Salute to America on the 4th of July, and the Annual Clean-up event. The Annual Clean-up included three (3) collection days, all in November.

In 2024 VVS nine (9) events were technically attended (HHW event was delayed due to City scheduling conflicts). These events included the Community Festival, 5K Run, National Night Out, Library Reading Event, Annual Clean-up, two (2) HHW events, Easter Egg Hunt, and the Salute to America on July 4th.

VVS is an event sponsor for the Community Festival, the Cypress 5K Run, and the 4th of July Event. VVS also provides additional support to the National Night Out (gift basket and displays mini-truck), Cypress Egg Hunt (candy and promotional items), and Library Reading Event (participated in educational programming, reads recycling-themed books, provides promo items, and brings their mini truck).

VVS staffs an outreach/event booth at every event but the Library Reading Event, where they are active participants.

VVS provides fencing, portable restrooms, hand wash stations, and hot water cooking stations (OC Health Department approved) at the Community Festival. VVS also provides free waste and recycling services for every event.

Review Determination: Compliant VVS is a good event partner to the City, providing financial support and additional items that go above and beyond Agreement requirements.

Rating – Above Average. While all franchises require this type of support, VVS financial support and employee involvement is better than average in exceeding Agreement requirements.

9) Financial Support – Community Festival

Sec. 4.08.2 – Original Agreement

Financial support for City-sponsored events, detailed as 30 portable toilets, five (5) hand-wash stations, and 2,100 linear feet 6' high temporary fencing. Our review of records shows this level of financial support is provided for the Cypress Community Festival each year, with the addition of hot water cooking stations. These items and services are provided by Diamond Services and paid for by VVS.

Review Determination: Compliant

Rating – Industry Standard.

10) Bus Stops, Sidewalks & Citywide Disposal Events

Sec. 4.08.3, 4.08.4, 4.08.5 – Original Agreement

The Agreement requires VVS to provide free bus stop and sidewalk container service and plastic container liners, two free Citywide disposal events, and free removal of bulky abandoned items at designated areas of the City.

With regards to free services at bus stops, this information is included in routing documents and no master account or specific accounts for these locations is in the VVS accounting system. This is also true for service to City parks where collections at individual receptacles (not hauler collection containers) occur. VVS states this is because that type of park service is on the same route as the bus stop service and individual receptacles owned by the City at other locations. All 22 parks, 27 bus stops, and 12 city-owned containers are collected at least twice per-week, with collections occurring Monday through Friday weekly.

The following table shows all sites receiving this free service:

Parks	Bus Stops	City Cans
Baroldi Sycamore Park	10501 Knott Ave(Paul's Place)	Sorrento Dr and Avenida Granda
Cedar Glen Park	10985 Meridian Dr (Wienerschnitzel)	Sorrento Dr and Ambruzzi Dr
Civic Center	11245 Knott Ave	Sorrento Dr and Tuscani Dr
Damron Park	3996 Ball Rd	Sorrento Dr and Linaro Dr
Darrell Essex Park	4970 Ball Rd	Sorrento Dr and Trentino Dr
Eucalyptus Park	4991 Lincoln Ave (IHOP)	Sorrento Dr and Moody St
Evergreen Park	5241 Lincoln Ave (Pace Academy)	Sorrento Dr and Ball Rd
Laurel Park	5480 Lincoln Ave	Sorrento Dr #1
Laurel Park	5496 Lincoln Ave (Ortho Mattress)	Sorrento Dr #2
Mackay Park	5511 Lincoln Ave (The Camp)	Sorrento Dr #3

Willow Park	9517 Valley View	
	Ball and Juanita St	
	Ball and Valley View (Gas Station)	
	Ball and Valley View (Take 5 Oil Change)	
	In front of Valley View High School	
	Valley View and Lakeshore (College Side)	

Our review of records found the alley south of Lime Avenue (E & W of Valley View), the alley east of Walker (from Denny Ave. to St. Anne Ave.), and Sumner Place (from Merten Ave to Crescent Ave.) are all listed as abandoned bulky item accounts which are visited daily and also provided on-call service when notified by the City. All service provided is at no-charge.

During the Covid pandemic the City Disposal Events were replaced by citywide free curbside bulky item collections. Due to the popularity of this free curbside service, the current Cypress Clean-up Days were all transitioned to curbside collections in 2022, 2023 and 2024. As discussed in our review of Section 4.08.4 above, due to HHW event permitted difficulties, VVS agreed to provide a city-wide curbside bulky item collection event that year (held in October on three separate days) and has continued to provide this service on an annual basis since 2022.

Review Determination: Compliant

Rating – Above Average. Designated area sweeps, daily abandoned item collections, and hand-stop service to containers are not a typical franchise requirement.

11) Customer Rate Increase Notifications

Sec. 6.01.1 – 3rd Amendment

60-days prior to each rate adjustment VVS is required to provide notice to each customer. Shown below are the notices VVS sent to customers during the review period.

For the 2022 rate adjustment notice, VVS used their Summer newsletter (excerpt shown).

Rate Adjustment Notice

At Valley Vista Services, we consider it one of our responsibilities to be as cost efficient as possible. We have always worked to provide our customers with the best in service at the lowest cost. Unfortunately, costs for labor, equipment, maintenance, landfill fees, fuel and other related expenses continue to increase. Therefore to help offset some of this cost, which is out of our control, a CPI rate adjustment authorized by the City of Cypress franchise agreement will take effect July 1, 2022. As always, we promise to continue our efforts to provide you with the very best in service and value.
Sincerely,
Valley Vista Services

Valley Vista Services of Orange County

RESIDENTIAL SERVICE RATES

Valley Vista Services of Orange County
Subscription Order - Effective July 1, 2024
City of Cypress
RESIDENTIAL SERVICE RATES

A specific rate increase notice was provided to customers in both 2023 and 2024 to inform ratepayers of upcoming adjustments.

Our review confirmed the holiday collection schedule, and detail on recycling programs was provided through quarterly newsletters. The summary of required and optional services was also provided on the rate increase notice in both 2023 and 2024, as shown above.

Review Determination: Compliant

Rating – Industry Standard.

12) Billing Cost Reimbursement & Franchise Fees

Sec. 6.01.1, 8.02, 8.03, 8.04

The Agreement requires VVS to reimburse the City for residential service billing costs (6.01 & 8.03) and pay a franchise fee (8.02). This process is handled by Golden State Water in cooperation with the City Finance Department, with Golden State Water providing residential service billings to these accounts and the City Finance Department deducting required VVS fees before making payments to VVS. This process ensures VVS compliance.

We examined City records for each year and confirmed that residential billings were split in the period covering January 2022 through November 2022, so residential customers were billed every other month. As shown in the table below, starting in December 2022 (highlighted in yellow) the City began billing customers monthly.

Billing Cost Deductions from City Payments to VVS	Units Billed (monthly)	Billing Rate (per unit)	Annual Total
CY 2022	6,333 (Jan–Nov) / 12,666 (Dec)	$0.42–$0.43	**$35,021.49**
CY 2023	12,666	$0.43–$0.45	**$66,876.48**

Billing Cost Deductions from City Payments to VVS	Units Billed (monthly)	Billing Rate (per unit)	Annual Total
CY 2024	12,666	$0.43–$0.47	**$68,396.40**
3-Year Total			**$170,294.37**

In calendar years 2023 and 2024 monthly billing of all 12,666 customers continued. Every July, as prescribed, billing costs were adjusted by CPI. In each year (2022 through 2024) City billing costs were withheld from VVS payments, thus full reimbursement occurred.

The City's transition to monthly billing did result in additional cost deductions to VVS payments. However, this change in billing frequency was done by Golden State Water, thus under the Agreement, the City was entitled to this additional deduction from VVS payments.

Review Determination: Compliant

Rating – Above Average. While allowable (undefined frequency of billing in Agreement), this change was an impact to VVS revenue.

13) Commercial & Multi-Family Billing Audits

Sec. 6.01.1 – Original Agreement

Section 6.01.1 requires VVS to conduct three (3) billing audits, for their recurring Multi-Family and Commercial Business customers, over the first 9-years of the franchise agreement. VVS was found to have incorporated the billing audit process into their standard operating procedures monthly.

The first step of their monthly process consists of an internal and running review of commercial rates for each year of the Agreement. VVS provided the audit document that covered the first nine-years of the Agreement (2015 through 2023). This showed that the VVS accounting system incorporated City-approved commercial rates for each period.

The second part of the process, which VVS also utilizes on an ongoing basis, is to apply a price comparison step to all recurring commercial billings to confirm bills produced match current rates.

Any service billed amount that does not match the approved rate is then flagged for investigation to determine if the rate variance is acceptable. For example, a customer may be receiving a discounted rate, which is permissible since the Agreement only establishes the maximum rate for each service, container size, and frequency of collection. Any charges above allowable amounts (if found) are then changed to the approved rate level. Per VVS the report and process utilized are overwritten each billing period so supporting documentation is not available for the audit period. As an alternative we went through their monthly process as part of this review. The screen captures below shows a portion of the report generated by the "VVS Price Comparison" tool in Tower system and sample of actual pricing discrepancies identified are shown below:

As verified by reviewing all 48 charges that were captured (partially shown above), all rate differences were discounts below the maximum rates, therefore permissible. Our review found that the process employed effectively audits VVS billings monthly.

Review Determination: Compliant

Rating – Above Average. VVS performs billing audits monthly, which is above average and significantly exceeds the Agreement's requirements.

14) City Compliance & Monitoring Fee (1.5%)

Sec. 9.04 – 4th Amendment

VVS must charge, collect, and remit a City Compliance and Monitoring Fee equal to 1.5% of the total service charge for each customer, and remit this fee payment to the City on a quarterly basis.

The Compliance Monitoring Fee established in the Fourth Amendment provides funding to the City to address increased monitoring responsibilities promulgated by SB 1383 regulations (an unfunded mandate upon the City). This fee is a separate line-item charge that VVS is required to bill and collect from all customers they are responsible for billing.

VVS began placing this charge on invoices, so that it became effective in the 2nd Quarter of 2022. This is considered reasonable by the reviewer as the 4th Amendment states in Item 2.7 "Effective Date" that the

amendment would not become "effective and operative" until after a Proposition 218 Public Hearing confirmed the amendment (and rates therein). The amendment itself was not signed by VVS until March 16, 2022, and they then needed to place these charges on invoices that are billed in advance for the following month's service. Therefore, April 1, 2022, is considered a reasonable start-date for the billing and collection of this fee.

On an annual basis VVS reports their gross billings and gross receipts to the City as part of their required annual report. However, the reviewer found the presentation of this data falls short of the Financial Reports requirements of Section 10.05.2 (discussed below). Specifically, we believe the reporting of billings in "Commercial", "Roll-Off", and "Residential" groupings, while providing receipts data as either "Commercial" or "Residential" does not allow the City to reconcile this data. In addition, the practice of commingling City billings (Residential services billed by GSW), which are not subject to the 1.5% fee (established by 9.04), with billings to residential customers performed by VVS (e.g. temporary clean-up bin) further complicates the process of determining if all fee revenue is being paid by VVS.

To determine if payments to the City for this required fee were accurate, we established both gross billing and Fee billings for each year of the review period, from VVS billing records. Shown below is a summary of this process for Calendar Year 2022:

1.5% of VVS Charge to Customers Calculation

Calendar Year 2022	AUDITED				
Period	Total VVS Billing	VVS Fee Billing	VVS Service Billing	VVS Service X 1.5%	Under-Billed Amount
March - June 2022	$ 1,623,720.75	$ 22,213.92	$ 1,601,506.83	$ 24,022.60	$ 1,808.68
3rd Quarter 2022	$ 1,359,665.71	$ 18,483.51	$ 1,341,182.20	$ 20,117.73	$ 1,634.22
4th Quarter 2022	$ 1,334,596.95	$ 18,244.19	$ 1,316,352.76	$ 19,745.29	$ 1,501.10
					$ 4,944.01

Reading from left to right we present our audited gross billing figure next to the corresponding period. As shown, VVS did bill this fee in March 2022. We then totaled the "1.5% fee" amount line-item total for the same period and deducted that amount from gross billings to arrive at the "VVS Service Billing" amount. We then multiplied that remainder figure by 1.5% to arrive at the prescribed billing amount we believe is required by the Agreement.

Section 9.04 requires VVS to charge, collect, and remit a fee that is equal to 1.5% of their total service charge for each customer. Since there is no definition of or listed exclusion from what would constitute a service charge, we believe it should include all amounts invoiced, less the 1.5% line item fee VVS charged. Thus, we believe our methodology (in table above) accurately establishes the under-billed and thus under-paid amount shown above ($4,944.01 for calendar year 2022).

Shown below is our review for Calendar Year 2023:

Calendar Year 2023	AUDITED				
Period	Total VVS Billing	VVS Fee Billing	VVS Service Billing	VVS Service X 1.5%	Under-Billed Amount
1st Quarter 2023	$ 1,345,405.56	$ 18,381.11	$ 1,327,024.45	$ 19,905.37	$ 1,524.26
2nd Quarter 2023	$ 1,403,921.17	$ 19,015.21	$ 1,384,905.96	$ 20,773.59	$ 1,758.38
3rd Quarter 2023	$ 1,485,693.12	$ 20,854.70	$ 1,464,838.42	$ 21,972.58	$ 1,117.88
4th Quarter 2023	$ 1,431,270.79	$ 20,176.75	$ 1,411,094.04	$ 21,166.41	$ 989.66
					$ 5,390.17

As shown, an under-billing of the 1.5% fee also occurred in 2023, resulting in less than prescribed payments to the City.

Calendar Year 2024	AUDITED				
Period	Total VVS Billing	1.5% of Billing	VVS Service Billing	VVS Service X 1.5%	Under-Billed Amount
1st Quarter 2024	$ 1,356,834.18	$ 19,473.95	$ 1,337,360.23	$ 20,060.40	$ 586.45
2nd Quarter 2024	$ 1,394,077.56	$ 20,504.54	$ 1,373,573.02	$ 20,603.60	$ 99.06
3rd Quarter 2024	$ 1,480,171.73	$ 21,772.26	$ 1,458,399.47	$ 21,875.99	$ 103.73
4th Quarter 2024	$ 1,418,445.05	$ 20,480.97	$ 1,397,964.08	$ 20,969.46	$ 488.49
					$ 1,277.73

In 2024, under-billing of the 1.5% was significantly reduced, but still occurred. Over the 3-year review period we identified $11,611.91 ($4,944.01 + $5,390.17 + $1,277.73) in "1.5% Fee" that were not charged, collected, and remitted by VVS to the City.

Review Determination: Non-Compliant VVS owes the City $11,611.91 in fees to resolve this finding. In addition, 1.5% fee amounts should be reviewed for calendar year 2025 and 2026 year-to-date to identify any under-billing and payments. VVS billings should then be reconstituted so this fee is 100% of each invoiced charge to a customer.

Rating – Industry Standard. In virtually all our fee payment audits (well over 50 in California, Nevada, Texas, Georgia, and Florida) we find underpayments. The amount of this finding is considered typical.

15) Records Retention Requirements

Sec. 10.02.5 – Original Agreement

Requires VVS to maintain, full, complete, and separate financial, statistical and accounting records, pertaining to cash, billing, and provisions of all collection services. Billing, gross receipts, rebate and disposal records must be maintained and preserved for not less than five (5) years following the close of each of VVS's fiscal years.

Prior to November 2023, VVS used the Tower system to record billing records. From November 2023 forward they used a Softpak system. Our review process found all financial, statistical, and accounting records were dedicated to the City of Cypress franchise, as prescribed, and that these records exceeded the 5-year retention requirement.

Review Determination: Compliant

Rating – Industry Standard.

16) Annual Financial Reporting

Sec. 10.05.2

Requires annual financial reporting on prior year's operations. At minimum, the Financial Report shall include the number of residential and commercial customers provided with collection services, including any additional services, and the collector's gross billing and amount collected from each type of customer.

We examined the financial reports provided by VVS to the City and herein provide a detailed review of this information as presented in their 2022 annual report. Therein they show the number of residential customers (12,890), the number of commercial business customers (466), and the number multi-family commercial customers (153), as required. They also broke this information out to show the number of customers (both residential and commercial) subscribing to each type of service offering. Finally, they provided a complete list of all customers, service addresses, and service information from their internal record keeping system.

With regards to billing and payment amounts, the "financial review" did provide both gross billing and gross receipts (collections) as prescribed. However, the two presentation tables (see below) do not use the same presentation format and commingle VVS residential billings with billings made by the City through GSW:

CITY OF CYPRESS ANNUAL REVIEW 2022			
BILLINGS			
	COMMERCIAL	$	3,789,454
	ROLLOFF	$	1,285,294
	RESIDENTIAL	$	2,186,902
		$	7,261,650
RECEIPTS			
	COMMERICAL	$	4,891,104
	RESIDENTIAL	$	2,482,364
		$	7,373,468

While technically this meets the Agreement standard, we believe this report should show billings and receipts that mirror each other. To that end we suggest "ROLLOFF" billing/receipts be from "commercial" when presenting receipts. Secondly, for residential billings/receipts, VVS should segregate amounts they bill to residential customers from the residential billing payments they receive from City billings.

We believe this would be a cleaner presentation of this financial information. Our audit of CY 2022 financial records found this information can be segregated and reported, as shown below:

	Column Labels												
	2022/01	2022/02	2022/03	2022/04	2022/05	2022/06	2022/07	2022/08	2022/09	2022/10	2022/11	2022/12	
Sum of payme	$ 295,293	$ 10,474	$ 150,265	$ 150,265	$ 150,265	$ 150,265	$ 211,630	$ 211,630	$ 221,883	$ 277,494	$ 221,883	$ 221,883	$ 2,273,230

													$ 2,482,789
SiteID	NON CITY OF CYPRESS RESIDENTIAL												

Our review of CY 2022 (see below) found originally reported commercial account receipts matched current accounting system records exactly. The slight difference in "residential" receipts, $425 in additional receipts not originally reported, is considered inconsequential (0.017%) as the City does not have fees that are based upon gross receipts.

Our review of CY 2023 and CY 2024 found annual review tables to be compliant.

CITY OF CYPRESS ANNUAL REVIEW 2023		
BILLINGS		
	COMMERCIAL	$ 4,066,101
	ROLLOFF	$ 1,472,717
	RESIDENTIAL	$ 2,538,072
		$ 8,076,890
RECEIPTS		
	COMMERICAL	$ 5,715,551
	RESIDENTIAL	$ 2,251,335
		$ 7,966,886

CITY OF CYPRESS ANNUAL REVIEW 2024		
BILLINGS		
	COMMERICAL	$ 4,333,748
	ROLLOFF	$ 1,188,529
	RESIDENTIAL	$ 2,791,877
		$ 8,314,154
RECEIPTS		
	COMMERICAL	$ 6,025,593
	RESIDENTIAL	$ 2,860,041
		$ 8,885,634

Our audit of financial records found commercial and residential receipts to have more significant allocations issues in CY 2023 due to the 4th Quarter transition to new system (Softpak). Overall, gross receipts established by our audit ($8,124,695) were 1.98% higher than the $7,966,886 included in the annual report. In CY 2024 both residential and commercial distribution, and the total gross receipts we found ($8,779,553) were closer (1.19%) to the figures used in the annual report. For the three-year period total audited gross receipts ($24,278,120) were $52,132 (0.22%) higher than the reported amount ($24,225,988).

Review Determination: Compliant Required information is reported annually. We believe the discrepancies encountered in gross receipts are partly attributable to extraction of data from two different accounting systems. As mentioned, since there are no gross receipts-based fees in the

> Agreement, we consider this an inconsequential finding that has likely been remedied during the first full year of new accounting system usage.

Rating – Industry Standard.

17) Insurance Coverage & Performance Bond

Sec. 11.01 (Original) & 12.04

Section 11.01 requires maintenance of insurance coverage at required limits and Section 12.04 requires a performance bond in the amount of $1 million be furnished and kept current. We requested and received insurance coverage certificates and confirmed the City of Cypress as the listed certificate holder.

For coverage through February 1, 2023, we confirmed coverage that meets the $10,000,000 combined single limit per occurrence and $20,000,000 umbrella requirement of the Agreement (11.02). We also confirmed Workers' Compensation coverage at $1,000,000, which meets the Section 11.02 as well.

For all other periods we found coverage amounts to meet requirements, as summarized below:

Insurance Coverages with Cypress as Certificate Holder

Coverage through 2/1/2023 & 10/1/2023 (Workers' Comp)

#	Insurer	Coverage Type	Per- Occurrence	Aggregate
A	Greenwich Ins. Co.	Comm. General Liability	$ 1,000,000.00	$ 2,000,000.00
B	XL Insurance America	Automobile Liability	$ 1,000,000.00	
C	XL Specialty Ins. Co.	Umbrella Liability	$ 4,000,000.00	$ 4,000,000.00
D	Navigators Specialty Ins. Col	Excess Liability 2nd Layer		$ 5,000,000.00
E	Homesite Insurance Co.	Excess Liability 3rd Layer		$ 5,000,000.00
	Alaska National Ins. Co.	Workers' Comp	$ 1,000,000.00

F	Alaska National Ins. Co.	Workers' Comp	$ 1,000,000.00	

Insurance coverages have met Agreement requirements throughout the review period.

With regards to the performance bond of $1,000,000 VVS submitted documentation confirming this coverage amount was in place through Bond No, CMS0330350 from the RLI Insurance Company, for the 3-year review period from VVS.

Review Determination: Compliant

Rating – Industry Standard.

18) Edible Food Recovery Contributions

Sec. 18.03 – 4th Amendment

Requires an annual contribution of $5,000 to a non-profit food recovery organization providing services to aid the City in this mandated SB 1383 program.

VVS provided a 4-color hand-out they provide to edible food generators, listing the edible food recovery organizations they have teamed with. We were provided payment records showing their financial contributions to these organizations during the review period. In calendar year 2022 Check #435087 for $3,700.00 was given to Second Harvest, who provides edible food collection and distribution services throughout Orange County and is part of the national Feeding America organization. For calendar year 2023 (Check #436389 for $6,300.00) and 2024 (Check #436389 for $5,000.00) donations were given to Food Finders. Food Finders is also an edible food collection and distribution organization, based in the neighboring city of Los Alamitos. Both organizations meet the criteria and the total of $15,000 over the 3-year period is also compliant with Section 18.03.

Review Determination: Compliant

Rating – Above Average. Required donations to edible food recovery organizations are becoming more prevalent but is not a typical requirement.

19) SB 1383 Mandatory Procurement Notification

Sec. 18.04 – 4th Amendment

VVS is required to notify and provide the City with documentation if they purchase items that qualify for SB 1383 mandatory procurement credits. During the review period no such purchases were made. Therefore, they are technically in compliance. Mandatory procurement is a large financial obligation that SB 1383 placed upon the City. We suggest a meeting with VVS to determine if qualifying procurement opportunities can be developed.

Review Determination: Compliant

Rating – Substandard. Most exclusive franchise agreements, that have been updated to include SB 1383 requirements include stipulations for no-cost City-procurement assistance with defined amounts. Most also include discounted cost options for additional procurement credits.

20) Audit Cost Reimbursement & Penalties for Underpayments

Sec. 8.04

Section 8.04 requires audit cost reimbursement to be deducted from residential service payments. Section 8.09 (2nd Amendment) subjects all VVS payments to the city to independent audit, requires reimbursement if a finding greater than 0.5% occurs, and adds a 10% annual rate as a penalty. Our current

review has an area of findings that exceeds the 0.5% threshold, thus the City is entitled to audit cost reimbursement. In addition, you are entitled to a penalty at a 10% annual rate on the audit finding amount of $11,611.91.

Specifically, our audit of the 1.5% City Compliance and Monitoring Fee payments found an underpayment of $11,611.91 ($4,944.01 + $5,390.17 + $1,277.73) of this fee over the three-year review period. VVS billed and remitted $219,601.11 to the City to cover this required fee revenue, when our audit found $231,213.02 was the actual amount due. Therefore, this underpayment represents an error factor of 5.29%, as shown in detail below:

1.5% of VVS Charge to Customers Calculation

Calendar Year 2022		AUDITED			
Period	Total VVS Billing	VVS Fee Billing	VVS Service Billing	VVS Service X 1.5%	Under-Billed Amount
March - June 2022	$ 1,623,720.75	$ 22,213.92	$ 1,601,506.83	$ 24,022.60	$ 1,808.68
3rd Quarter 2022	$ 1,359,665.71	$ 18,483.51	$ 1,341,182.20	$ 20,117.73	$ 1,634.22
4th Quarter 2022	$ 1,334,596.95	$ 18,244.19	$ 1,316,352.76	$ 19,745.29	$ 1,501.10
		$ 58,941.62	**$ 4,259,041.79**		$ 4,944.01

Calendar Year 2023		AUDITED			
Period	Total VVS Billing	VVS Fee Billing	VVS Service Billing	VVS Service X 1.5%	Under-Billed Amount
1st Quarter 2023	$ 1,345,405.56	$ 18,381.11	$ 1,327,024.45	$ 19,905.37	$ 1,524.26
2nd Quarter 2023	$ 1,403,921.17	$ 19,015.21	$ 1,384,905.96	$ 20,773.59	$ 1,758.38
3rd Quarter 2023	$ 1,485,693.12	$ 20,854.70	$ 1,464,838.42	$ 21,972.58	$ 1,117.88
4th Quarter 2023	$ 1,431,270.79	$ 20,176.75	$ 1,411,094.04	$ 21,166.41	$ 989.66
		$ 78,427.77	**$ 5,587,862.87**	$ 83,817.94	$ 5,390.17

Calendar Year 2024		AUDITED			
Period	Total VVS Billing	1.5% of Billing	VVS Service Billing	VVS Service X 1.5%	Under-Billed Amount
1st Quarter 2024	$ 1,356,834.18	$ 19,473.95	$ 1,337,360.23	$ 20,060.40	$ 586.45
2nd Quarter 2024	$ 1,394,077.56	$ 20,504.54	$ 1,373,573.02	$ 20,603.60	$ 99.06
3rd Quarter 2024	$ 1,480,171.73	$ 21,772.26	$ 1,458,399.47	$ 21,875.99	$ 103.73
4th Quarter 2024	$ 1,418,445.05	$ 20,480.97	$ 1,397,964.08	$ 20,969.46	$ 488.49
		$ 82,231.72	**$ 5,567,296.80**	$ 83,509.45	$ 1,277.73
		$ 219,601.11	**$ 15,414,201.46**		$ 11,611.91
	5%	$ 11,611.91	1.50%		
		$ 231,213.02	$ 231,213.02		

As discussed under Item 13 above, the City's decision to change residential billing to monthly for all customers, resulted in $2,723.19 in increased in deductions from VVS residential service revenue in December 2022 and each month thereafter (increased by CPI in July 2023 and July 2024 during the review period and thereafter). The approximate $34,000 per-year increase VVS has absorbed, could be considered to reduce or eliminate the 10% penalty on this finding.

Review Determination: Compliant. Contingent upon 10% annual penalty at the City-determined amount. VVS has already agreed to reimburse the City for this third-party Performance Review, therefore, the deduction of audit costs is not necessary.

Rating – Industry Standard.

21) Financial Ability to Perform

Unrelated to a specific Agreement item, but a required determination of this audit process, was a review of VVS financial information to the level necessary to establish an opinion on their financial ability to meet all requirements of the Agreement. We performed our review process, establishing gross income, expenses, interest, taxes, depreciation, and amortization amounts for the review period from the internal accounting records of this privately held company. Our goal being to establish a dollar value for Earnings Before Interest, Taxes, Depreciation, and Amortization (EBITDA), as we believe this is the best measurement tool to isolate operational profitability. In addition, the owners of Valley Vista Services also own and control the waste processing and transfer facilities used for City of Cypress franchised waste collections, thus providing an operational cost "buffer" to the hauling company's financial health.

For the review period, our EBITDA findings are as follows:

Calendar Year	Total Revenue	EBITDA	% of Revenue
2022	$7,871,794	$1,736,093	22.1%
2023	$9,050,940	$1,546,525	17.1%
2024	$9,077,486	$1,574,280	17.3%
3-Year Average	**$8,666,740**	**$1,618,966**	**18.7%**

EBITDA range for the California market is generally in the 20%- 30% range, and VVS ran slightly below the bottom range of this benchmark for the review period. However, this is partly due to VVS consistently running one-year behind on passing through County disposal fee increases due to the submission deadline (March 15th) for annual rate increases. With disposal fees averaging 30.30% of total revenue for the review period, VVS received approximately $300,000 per-year less in revenue than the Agreement prescribed. If we add missed revenue as an increase to the average EBITDA, VVS' level rises to 22.14%.

Given the 45% residential and 55% commercial revenue mix, the actual EBITDA benchmark is 27.4%, due to commercial accounts generating higher margins (30%- 35% EBITDA). Therefore, even with disposal fee pass through expenses catching up, VVS is running at 5% less profitability than considered ideal.

We believe there are other contributing factors, not related to VVS performance, but rather certain Agreement compliance requirements that are above average. Specifically, vehicle age limitations and repainting/refurbishing standards (every 5 years) are more stringent than typical. In addition, the level and type of complimentary services provided are also above average, as noted in our review. In particular,

free multi-family recycling through mixed waste processing is decreasing revenues while increasing VVS operational expenses.

Overall, we would consider the VVS franchise operation in Cypress to be profitable at a level that can sustain required operations and Agreement compliance throughout the remaining franchise term. Their EBITDA level being at 5% less than the benchmark indicates that net-to-hauler revenue is slightly below average when compared to industry standard.

Review Determination: Compliant VVS operates profitably and is financially capable of sustaining all franchise obligations through the remainder of the agreement term.

Rating – Industry Standard.

Section 3 – Compliance Programs & Waste Diversion

VVS is required to perform various compliance and waste diversion programs to assist the City in fulfilling State mandates. Herein we review related Agreement sections, reported diversion data and facility usage, as well as take verification steps to confirm the accuracy of reported figures.

The following items summarize our findings for each applicable Agreement section.

1) Commercial A/B Route Processing

Sec. 4.03.4 – Original Agreement

There is an additional provision in this Section, not covered by our Financial Review, for A/B routing (wet waste and dry waste collected separately) for commercial waste. It requires the dry route (Route A) to constitute 30% of refuse collection from commercial accounts, and that this refuse material be transported to Grand Central Recycling and Transfer (Grand Central) for processing. A minimum of 30% of this material is to be diverted from landfill disposal by Grand Central.

During the review period VVS provided mixed waste collection to a number of commercial accounts. Each of these accounts would constitute compliance with Section 4.03.4. In addition, VVS increased the percentage of commercial waste collections that were processed at Grand Central Recycling, also helping to meet 4.03.4 requirements. The table below shows the percentage of commercial collections processed and the diversion rates achieved each year:

Year	Total Commercial Collections (tons)	% Sent to Processing (vs. Landfill)	Tons Diverted	Processing Diversion Rate
CY 2022	20,026	67.8%	5,437	40.0%
CY 2023	19,823	90.1%	6,676	37.4%
CY 2024	19,131	90.7%	9,059	52.2%
Review Period	**58,981**	**82.7% avg.**	**21,172**	**43.4% avg.**

Review Determination: Compliant Nearly 83% of commercial collections were processed and not taken directly to landfill during the review period. This processing percentage increased each year, reaching nearly 91% (with 52% diverted) in calendar year 2024.

Rating – Exceptional. The level of commercial waste processing provided is exceptional when compared to industry standard. Virtually all SB 1383 updated franchise agreements now allow all trash containers to go directly to landfill, which is operationally much cheaper for the hauler. Very few agreements have hauler-specific diversion requirements.

2) Residential & Multi-Family Recycling Programs

Sec. 4.03 – Original Agreement

Several "Recycling Collection" provisions within the original Agreement, while still operative, have been supplanted by SB 1383 regulations and, in some cases required alternative action by VVS to achieve true compliance. For example, 4.03.1 "residential single-stream recycling", 4.03.2 "multi-family single stream recycling", and 4.03.5 "Compliance with AB 341" are now incorporated in SB 1383 program requirements in the new Section 18 of the Agreement. Those new provisions are in Section 18.01 "Collection and Recycling", which includes the requirement that collection programs are SB 1383 compliant. The compliance progression through the three-year review period, for each of these collection program requirements, is summarized in the table below:

		Compliant w/Regulations			
Customer Type	Customers	AB 341	AB 1826	SB 1383	% SB 1383 Compliant
Residential	12,666	N/A	N/A	12,666	100%
Com-Business	416	416	383	383	92%
Com-Multi-Family	131	121	126	121	92%
Residential	12,666	N/A	N/A	12,666	100%
Com-Business	416	416	416	416	100%
Com-Multi-Family	131	126	131	126	96%
Residential	12,666	N/A	N/A	12,666	100%
Com-Business	416	416	416	416	100%
Com-Multi-Family	131	126	131	126	96%

VVS is currently in 100% compliance with all State mandated collection program requirements. By early 2023 their compliance tracking records showed 100% compliance was reached. However, our review of individual multi-family account records found five mistakenly listed as having space constraint waivers (SB 1383 designation which excludes that property from mandatory programs) which were not City approved. VVS investigated these five (5) accounts immediately upon being made aware of this issue and provided all five properties with required recycling containers. They are now in full compliance.

Review Determination: Compliant Record keeping error. Resolved during review.

Rating – Industry Standard. Most jurisdictions struggled to meet full compliance during the review period, with about 20% still having less than 100% compliance in 2026. Many commercial generators have State-compliant 2-container programs, which is a convenient means of achieving compliance, that is unique to Cypress amongst all Southern California jurisdictions.

3) 50% Waste Diversion Rate Compliance

Sec. 5.05 – Original Agreement

Requires VVS to divert sufficient waste from landfilling to ensure the City's annual reports to CalRecycle show a greater that 50% diversion rate. For several years before, and during each year of the review period, CalRecycle's methodology for establishing a 50% diversion rate measurement was a maximum pounds-per-person-per-day formula within the annual report. If the City's reported landfill disposal for that year was below that pounds-per-person figure, then the State considers you to be exceeding the 50% diversion from landfill requirement.

VVS diversion, including identified 3rd party recycling, was 72.71% in 2022, 52.50% in 2023, and 59.22% in 2024. The drop in diversion from 2022 is due to third-party recycling reductions, primarily from the Los Alamitos Racetrack. VVS exceeded the 50% diversion rate each year. We reviewed the 2022, 2023, and 2024 annual reports submitted to CalRecycle and list diversion compliance numbers found in the table below:

Annual Report - Diversion Rate Compliance				
Year		Target Pounds = 50% Diversion	Annual Disposal Amount	AB 939 Compliant
2022	Population	9.0	3.7	Yes
	Employment	20.5	8.1	Yes
2023	Population	9.0	4.1	Yes
	Employment	20.5	8.8	Yes
2024	Population	9.0	4.8	Yes
	Employment	20.5	10.4	Yes

Review Determination: Compliant For each year of the review period CalRecycle's AB 939 (50% diversion from landfill) formula found the City of Cypress to be in compliance.

Rating – Above Average. VVS diversion from their own collections (43%) and efforts to quantify an additional 16,491.24 tons of diversion by private recyclers and internal business programs are both above average when compared to industry standard (35% diversion and no 3rd Party diversion quantification). CalRecycle measurements establish the equivalent of a 70%+ diversion rate.

4) Construction & Demolition Diversion

Sec. 5.09 – Original Agreement

Requires all construction and demolition material collected to be transported to Grand Central Transfer & Recycling and that a minimum of 75% of this material be diverted from landfill disposal.

The table below shows construction and demolition amounts, hauled, disposed, and diverted for each year of the review period. It also calculates a diversion rate achieved for each year:

Construction & Demolition Waste Hauling				
Year	C&D Tons Collected	Tons Disposed	Tons Diverted	Diversion Rate
2022	2,347.64	607.81	1,739.83	74.11%
2023	3,681.87	961.69	2,720.18	73.88%
2024	2,891.63	763.79	2,127.84	73.59%

Review Determination: Non-Compliant For each year of the review period, VVS fell just short of the required 75% diversion rate. Note: State requirement is 65% diversion.

Rating – Industry Standard. VVS diversion is slightly higher than construction waste diversion rates in other jurisdictions (around 70%).

5) Organic Waste Recycling Program (AB 1826 / SB 1383)

Sec. 5.10, 18.01.1, 18.01.2, 18.05.1

Requires development of a compliant AB 1826 (5.10) and subsequently a SB 1383 compliant (18.01.1) organic waste recycling program. Section 18.01.2 requires capacity for all franchise program waste is provided by VVS.

As shown in Item 2 of this report section, VVS had developed both AB 1826 and SB 1383 compliant programs. VVS, through guarantees and indemnification in Section 18.01.2 and statements within 18.05.1 (Capacity Guarantee), agrees to provide all needed organic waste capacity.

Review Determination: Compliant VVS facility records show they are providing all needed capacity for the City and have committed to retaining and providing all capacity needed by the City of Cypress.

Rating – Exceptional. VVS guarantees and provides all needed capacity for all organic waste, through their high diversion organic waste processing facility and long-term agreements with anaerobic digester and composting operations. Their facility is the only kind of its type in Southern California, allowing the processing of mixed organics and mixed recyclables.

6) Waste Characterization Studies

Sec. 6.04 – Original Agreement

Requires VVS to perform waste generation and disposal characterization studies periodically to comply with the requirements of state law. It further requires VVS to participate and cooperate with the City to accomplish studies and data collection and prepare reports as needed and directed by City.

Throughout the process of qualifying for a high diversion organic waste processing facility designation, and periodically to retain such designation, VVS is performing these studies.

Review Determination: Compliant

Rating – Industry Standard. VVS is performing these studies.

Note: We believe the City should request VVS perform studies to characterize organic waste generation to potentially reduce the City's SB 1383 procurement requirements. If these studies can demonstrate the City generates less than 0.8 tons of organic waste per-resident, per-year, then the City can reduce their financial obligation to the actual generation rate (some jurisdictions have reduced their obligation by over 50%).

7) Kitchen Caddie Distribution

Sec. 18.01.3 – 4th Amendment

Distribute "Kitchen Caddies" to all single-family residential units, and all multi-family premises (through the owner/manager) to assist them in source separating food waste for recycling.

VVS confirmed distribution to all single and multi-family residences that had organics cart service during the 1st Quarter of 2022. In addition, kitchen caddie containers were also distributed at the May 19th and May 20th food waste recycling workshops. The notice and mailer used are shown.

Valley Vista Services
Waste Disposal and Recycling Division

FOOD WASTE RECYCLING BEGINNING MONDAY, APRIL 4, 2022

This notice is to inform you of rollout dates for the new Residential Organics Recycling Program beginning **Monday, April 4, 2022**. Valley Vista Services will begin delivering food pails to residents on their regular service days from **Monday, March 7 through Friday, April 1**. Included with your food pail will be an informational brochure as well as a starter roll of compostable bags. (Liner bags will not be supplied after initial roll is provided.)
This is in accordance with **California State Law SB 1383**, which requires the recycling of all residential and commercial food waste. Residents are being requested to separate all food scraps from their regular garbage, and consolidate it into their green waste. *Please see instructions for how to separate below.*

Step 1: Place pail in a convenient place (on kitchen counter or under kitchen sink)
Step 2: Line pail with a compostable or plastic bag; place ALL food scraps inside
Step 3: Remove tied bag of food scraps from food pail and place into your green waste cart

Use smartphone to scan QR code for additional resources:

Food waste *includes*:
Meat and bones, fish and poultry, bread, grains, cereals, pasta, cheese & dairy products, eggs & eggshells, fruits and veggies (pits & peels), coffee grounds & filters, tea bags, leftover scraps and spoiled food.

Please prepare to begin placing bagged food scraps into the green waste cart starting **Monday, April 4, 2022**. If you have any questions, please contact our Customer Service Department at customerservice@myvvs.com or (800) 442-6454.

Valley Vista Services
Waste Disposal and Recycling Division

FOOD WASTE RECYCLING COMMUNITY WORKSHOPS

Valley Vista Services would like to invite you to two (2) upcoming workshops where we will be educating residents living in the City of Cypress about the new **California State Law SB 1383** and household participation in our Residential Organics Recycling Program.

Senate Bill 1383 mandates the recycling of all residential and commercial food waste, also known as organics. **To assist with this transition, all residents living in the City of Cypress are encouraged to attend one of these two (2) upcoming community workshops:**

Thursday, May 19
6 p.m. - 7:30 p.m.
Cypress Community Center
5700 Orange Ave.

Friday, May 20
10:30 a.m. - 12 p.m.
Cypress Senior Center
9031 Grindlay St.

Participation in the Organic Waste Recycling program is mandatory as outlined by the State of California. If you have any questions, please contact our Customer Service Department at customerservice@myvvs.com or (800) 442-6454.

Review Determination: Compliant

Rating – Industry Standard. Distribution completed and additional caddies available for purchase, as prescribed.

8) Organic Waste Program Reporting

Sec. 18.02.1 – 4th Amendment

Collect, preserve, and report information regarding its Organic Waste Recycling program. On a quarterly basis VVS reports program collection data, contamination minimization efforts, facility usage, waivers, types of programs provided, and provides copies and distribution counts for all education and outreach materials. All this is done through the City's online reporting portal and VVS was very accommodating during the introduction of this new system and on an ongoing basis. They also include summary data in their annual report to the City.

Review Determination: Compliant

Rating – Above Average. Most haulers wish to use their own reports and formats, a few have refused to voluntarily use this new system until the City had to send a demand letter (among the 11 cities using the same software program). VVS made the change without issue or complaint.

9) Annual Facility Usage Reporting

Sec. 18.02.2 – 4th Amendment

On an annual basis VVS is to provide a list of facilities which they will use to process, transfer, and dispose of all waste collected under the franchise. This process started in 2022, and this facility information is provided in quarterly reporting and summarized and presented in the annual report to the City. All tonnage information reported to the City includes allocations to each facility utilized.

Shown below is a table presenting calendar year 2024 facility utilization and tonnages delivered, disposed, and diverted by each:

CY 2024			
Facilities	**Tons Delivered**	**Tons Disposed**	**Tons Diverted**
Landfills			
Antelope Valley Landfill	763.53	763.53	-
El Sobrante Landfill	175.65	175.65	-
Bowerman Landfill	19.09	19.09	-
Mid-Valley Landfill	11.72	11.72	-
Olinda-Alpha Landfill	21,926.85	21,926.85	-
Transfer & Processing Facilities			
Grand Central Recycling	11,751.25	-	11,751.25
Puente Hills MRF	153.25	-	153.25
Beneficial Ag Service - Circle Green	1,526.83	-	1,526.83
Sun Valley Recycling Park	890.27	-	890.27
Environmental Logistics	2.65	-	2.65
e-Recycling of California	19.43	-	19.43
Southern Cal Landscape Supply	3,489.67		3,489.67
CY 2024 Totals	**40,730.19**	**22,896.84**	**17,833.35**

We reviewed CalRecycle's RDRS System to verify disposal reporting accuracy through the State's new tracking system. For Antelope Valley LF, the RDRS figure was 1,431.00 tons (667.47 higher). For El Sobrante LF the figure was nearly identical at 174.95 tons. For Bowerman Landfill, the RDRS figure was much higher (1,594.93) and the transfer facility was CR&R Stanton. For Mid-Valley Landfill, the RDRS figure was lower (8.36 tons). Finally, for Olinda-Alpha LF the RDRD System showed 18,163.03 tons transferred from Grand Central Recycling and 784.75 tons from CR&R Transfer in Stanton (18,947.78 total tons landfilled from transfer stations). An additional 6,258.34 tons were reported as direct-hauled to Olinda Alpha LF (grand total of 25,206.12 tons), which is higher (both direct-haul and transfer) than the figures reported by VVS.

We reviewed VVS tonnage records and found their reported figures to be accurate. Significant variances in RDRS tonnage reporting and actual figures are not unusual. We have performed a number of tonnage modification studies for local jurisdictions where RDRS tons have exceeded franchise hauler totals by as much as 33,000 tons. This is due to the RDRS System accepting facility tonnage reporting, without audit and via new and confusing reporting procedures that use delivered tonnage percentages rather than specifically assigned disposal ton amounts. In addition, the RDRS has landfill facilities proportionately assign "Orphaned Waste" (tonnage without a specific originating jurisdiction recorded) to all jurisdictions

from which it accepts waste, on a pro-rata share. Finally, reported facility tonnage figures in public reports include all haulers from a jurisdiction, not just the franchisee, so additional tonnage is expected.

Since the City of Cypress was determined to be under the maximum waste disposal amount, to be considered compliant with the 50% diversion mandate of CalRecycle, we see no reason to undertake a disposal modification process. However, we can confirm that disposal amounts allocated to your jurisdiction are significantly higher than actual and should be challenged in future years if CalRecycle ever finds the City to be out-of-compliance with the 50% waste diversion calculation in your Annual Report.

Our records review showed VVS is accurately tracking all collections from Cypress, through processing, to the facility where collected material is disposed. In Calendar Year 2024, we confirmed their tonnage reporting was accurate.

Review Determination: Compliant

Rating – Industry Standard. Most haulers employ similar scale house record keeping and compile facility usage reports.

10) New Organics Processing Facility

Sec. 18.05.02 – 4th Amendment

By no later than January 1, 2023, VVS will provide City with detailed plans, drawings, specifications, schedule for completion, completion of pre-construction engineering and design, and start and completion dates for construction of a new organics processing facility. VVS will provide written updates. New facility shall be completed and fully operational by December 31, 2026.

Plans and other required documents were provided after the deadline in 2023, but without issue and upon request. From that point forward the City was kept apprised and new facility completion and certification as Southern California's first High Diversion Organic Waste Processing Facility designation was achieved in 202X well ahead of schedule.

Review Determination: Compliant

Rating – Exceptional. The Grand Central Recycling Facility became Southern California's only High Diversion Organic Waste Processing Facility one year ahead of schedule.

11) Route Reviews & Waste Evaluations

Sec. 18.07.1 – 4th Amendment

Requires, if directed by the Contract Officer, that route reviews and/or waste evaluations be performed at the frequency and levels required for SB 1383 compliance. This equates to a review or evaluation covering a representative sample of each collection route, once per-calendar-year.

In calendar year 2022 no specific route reviews were performed, though informal contamination inspections were performed, and 5 commercial businesses were issued contamination notices. Since program roll-outs occurred this year, full route reviews were not possible until the 4th Quarter.

In 2023, VVS prepared and provided the City with a Route Review Guide, detailing the measures that constituted their contamination minimization program. Both commercial and residential container inspections occurred, with pictures and evaluations provided. However, the level of these route reviews did not include a representative sample of each route.

In 2024, VVS again fell short of performing the required number of route reviews and/or waste characterizations, though they utilized both methodologies to determine which would be most effective. For residential routes, waste evaluations were utilized on two collection vehicles for each of the three collection programs provided. This number of evaluations did not cover each residential route. For commercial routes, all trash routes were reviewed through a sampling of 18 containers, with some routes only consisting of 1 container inspection. For recycling routes, 15 containers were inspected, with all but one being from Route 35. We did see Route 30 and 34 referenced for one container. Food waste containers received the greatest number of container inspections, with 38 for Route 3.

In 2025, the City's consultant requested VVS to prepare its contamination monitoring procedures, to include a random sampling of all routes, as this would ensure SB 1383 compliance. VVS responding by producing a route review manual, detailing their procedures and establishing 3% of the containers on this route to constitute the sample size. This plan was approved and instituted during calendar year 2025, after the review period.

Review Determination: Compliant SB 1383 sets no container inspection quantity and treated the 2022 through 2024 period as "education only". Therefore, even though VVS contamination inspections did not cover each route, each year, we consider their efforts to be compliant with Agreement terms. It was not until 2025 that the City's consultant, acting for the Contract Officer, requested a written plan containing a minimum number or percentage of containers to be inspected per-route, per-year. This plan was prepared and submitted, and the compliant program instituted in 2025.

Rating – Industry Standard. Only 50% of haulers are performing all required route reviews, based upon our experience with 16 local jurisdictions.

12) SB 1383 Violation Tracking & Notices

Sec. 18.07.2 – 4th Amendment

Requires VVS to assist the City in reporting and tracking SB 1383 violations, delivery of notices, and delivering education material where contamination is found.

VVS is reporting and tracking violations and providing notices. They have produced evidence of their compliance in their annual reports to the City and various reports and documentation they submit as part of their quarterly reporting. We find their record keeping to be at or above industry standard with regards to SB 1383 violation monitoring, including the required provision of individual records noting when a container was not collected due to contamination.

Review Determination: Compliant

Rating – Industry Standard. VVS is compliant with violation tracking and notices. Their reporting of all containers not collected due to contamination is a SB 1383 requirement that most haulers miss in their reporting.

13) SB 1383 Exemption Evaluations

Sec. 18.07.3 – 4th Amendment

VVS is required to assist the City in evaluating requests for exemptions to SB 1383 collection program requirements.

The reviewer has coordinated with VVS staff on SB 1383 waivers (exemptions from services) on an annual basis since 2022. They have provided detailed customer records, opinions on waiver applicability, and incorporated City waiver determinations into their customer records in a cooperative and proficient manner.

Review Determination: Compliant

Rating – Above Average. VVS was and remains very helpful with this process.

Section 4 – Operations Review

This area of review covers Agreement items that establish standards for franchise service areas that directly impact ratepayers. Customer service, vehicles and equipment, public education & outreach, safe operations, and reporting issues to the City were all components of this review.

1) Customer Service & Local Office Standards

Sec. 6.02 & 7.04.1 – Original Agreement

This Section establishes certain customer and franchise servicing standards. It requires a local office to serve as a call center and administrative office, performing listed functions related to customer service and collection service dispatching. This Local office shall be open 8am to 5pm, Monday through Friday, and 8am to Noon on Saturday (also Section 7.04.1). This Section also establishes protocols for complaints, response times, local and listed emergency telephone number, and an after-hours direct line to the Operations Manager. Elsewhere therein complaint documentation requirements are established, resolution of compliant requirements, English/Spanish language requirements, and requirements for receiving and logging all customer calls. This Section also requires both an Agreement Liaison and a Service Liaison, and requires customer and program service evaluations and surveys in Year 5 and Year 10 of the Agreement.

VVS is maintaining a local office in the City of Cypress at 8891 Watson Street that is open Monday through Friday from 8am to 5pm. This facility is no longer open on Saturdays due to little or no weekend usage by customers during the first five years of the Agreement. The local phone line for resident requests is forwarded to the VVS Call Center in the City of Industry, with Saturday assistance provided from 8am to 1pm. One full-time employee works at the Cypress office, to provide in-person customer assistance and the Operations Director (Tomas Solis) works out of this office at various times during the week. Prior to the review period, exact date uncertain (prior to 2022), VVS consolidated all telephone and email customer requests/complaints to be serviced by their corporate call center in Industry. At that time the local number (714-380-5450) was also transitioned.

VVS utilizes a Cisco Webex Contact Center as its customer service platform to monitor inbound call activity and track performance metrics. They monitor call volume trends and identify service demands like missed pickups, bulky item requests, and billing inquiries. System accessibility is measured through average hold time, with the target being less than 2 minutes. Call abandonment rates are tracked to ensure reasonable response times are maintained. Call handling, initial contract through resolution, has a target time of no more than 5 minutes. Wait time and response time metric monitoring ensures staffing levels (currently 30) meet customer demand.

Management performs quality assurance reviews monthly, evaluating accuracy, professionalism, proper documentation, and proper call resolution. Complaints and service concerns are tracked, as well as resulting work orders and coordination with operations. Their SoftPak system tracks all resulting service requests and work orders, providing an audit trail.

We were able to confirm all calls are captured by recordkeeping, bilingual staff accommodates Cypress inquiries as required, and management is familiar with Agreement requirements and company service standards are constantly monitoring VVS' provision of customer service.

We found VVS customer service metrics to be above industry standard, as shown in following table:

Call Center Statistics

Period	Total Calls Received	Missed Pick-up	% of Calls	Other Complaints	% of Calls	Total Complaints	% of Calls
CY 2022	N/A	816	Unknown	52	Unknown	868	Unknown
CY 2023	7432	586	7.88%	30	0.40%	616	8.29%
CY 2024	6143	454	7.39%	38	0.62%	492	8.01%

For missed pick-ups (the most common customer issue nationwide), all 2022 figures and the first 9 months of 2023 included customer set-out issues (i.e. not placed at the curb for collection on time, overloaded container, or contaminated container). Improvements in VVS data tracking now exclude them, so only true missed collections are shown. Out of the approximately 2,000,000 container collections VVS makes from franchised customers each year (residential and commercial), the 454 missed pick-ups in 2024 are only 0.0227%. We would rate this level of collection as excellent. While there is no published industry standard, our compliance reviews in multiple States have found about one (1) missed collection out of every 2,000 scheduled stops (0.05%).

A review of customer service records showed missed collections were all resolved on either same day or following business-day, as required.

Other types of complaint calls were at acceptable levels (38 to 52 per-year), and their frequency is considered industry standard. There are no published records setting a standard. However, our compliance reviews show a range of 20 to 75 complaints. Since VVS includes cart related calls, and containers have been in service for 12 years, their “complaint” is not considered problematic.

With regards to call response times, we were only able to review complete-year records for calendar year 2025. This review showed average wait times averaged less than one minute for both residential and commercial customers. Since this is measured as the actual time on hold, total call time until answered runs 15 to 30 seconds longer, thus on average VVS is clearly meeting the 2-minute wait time goal, that is also the industry standard. We would give them a good to very good rating and consider their current count of 30 customer service reps to be adequate.

The primary issues encountered in our review of customer service were; 1) the rolling 12-month performance data tracking limit, combined with the hard-copy print-out of all annual customer service interactions, makes it difficult and time consuming to assess specific review period performance, and 2) customer use of the 800 number prevents Cypress-specific tracking. All calls using the local Cypress number are consolidated, tracked, and reported under the franchise’s annual report. However, calls to the 800 are grouped with other jurisdictions and thus too difficult to segregate and apply performance measurements specific to Cypress.

With regards to the 10-year survey requirement, this was performed with customers attending events, with hard-copy survey forms provided with instructions on how to return them. Responses were very positive. However, only 30 surveys were returned. VVS now uses QR codes on hand-outs, so customers can more easily provide responses. While compliant with Section 6.08.2, we find the methodology used to be limited in its effectiveness. We believe a billing insert, utilizing a QR code, should be used in any future surveys.

Review Determination: Compliant

Rating – Industry Standard. VVS is meeting industry standard. However, we believe annual summaries of all complaint categories and a better ability to glean Cypress specific data from 800 number calls is needed to be considered above average.

2) Public Education & Outreach

Sec. 6.03 (Original) & 18.06 (4th Amend.)

Section 6.03 established Public Education and Outreach Service requirements and Section 18.06 updated them to meet SB 1383 requirements. Currently this requires VVS to provide instructional "how-to" packets covering all programs, container labeling and stamps, an annual newsletter, corrective action notices, a separate section of its website on organics recycling, a mobile application, and a collector representative. In addition, education on service requests, contact information, service or billing questions, bulky item collection scheduling, HHW education and drop-off/collection options (only at start of service) be provided to customers.

This section also details community involvement through a collector representative to participate in demonstrations, promote and explain programs, and routinely visit organizations and commercial customers. Finally, this Section requires participation and promotion at community events and local activities, providing without cost Collection and education.

Specific to calendar year 2022, Section 18.06.2 requires expanded outreach to include telephone contact with every multi-family and commercial business not yet receiving separate organics collection. 18.06.3 requires multi-lingual messaging in English and Spanish. We confirmed with VVS management that all calls were made, and that bi-lingual staff was used as applicable. The pace at which compliance in establishing these programs was achieved demonstrates these calls were effective.

VVS provides a full range of print and electronic media, which includes 4 newsletters (one each quarter, exceeding the annual requirement) that cover all program education, promotes additional services like bulky items, advertises events, provides the holiday service schedule, etc. We found "How-To" packets and container labeling to be SB 1383 compliant and effective. The VVS website was found to effectively educate customers and is easy to navigate.

Review Determination: Compliant

Rating – Industry Standard. Educational material is well designed and effective in its presentation. The industry sets a high standard in this regard and VVS is meeting it.

3) Media Inquiry & Press Release Procedures

Sec. 6.07 – Original Agreement

Establishes notification and approval by Contract Officer prior to VVS responding to any news media inquiry, releasing material to print media or trade journal articles, and requires the provision of any media interviews, news releases, or articles within 5-days of publication. Our review of records found no violations.

Review Determination: Compliant

Rating – Industry Standard. We could find no issues.

4) NPDES Best Practices & Spillage Standards

Sec. 6.08.9, 7.03.13, 7.03.14

Section 6.08.9 requires VVS to follow National Pollution and Discharge Elimination System (NPDES) Best Management Practices in conformance with the Drainage Area Management Plan (DAMP) governing the County of Orange and all incorporated cities therein. Section 7.03.13 governs "Spillage and Litter" requirements, with Section 7.03.14 requiring vehicles to be equipped with sufficient quantities of petroleum absorbent materials, broom and shovel.

Instances of spillage were identified during each year of the review period, but at a frequency that is at or below industry standard of two or three incidents per-year. In 2022 one incident of hydraulic fuel leakage occurred, which damaged asphalt pavement on Sycamore Lane. Extensive emails, photographs, and internal records that document how VVS addressed and resolved this incident were provided.

In calendar year 2023, Public Works investigated two prohibited discharge incidents, discovered while responding to resident complaints. Both incidents (4/20/2023 and 5/11/2023) involved a VVS collection vehicle stopped and leaking "foul smelling" liquid into a storm drain inlet near the corner of Myra Street and Ethel Street. Public Works staff delivered both violation notices to VVS at their local service yard (8891 Watson) on 5/18/2023. Inspections of the Watson Street offices and the truck storage yard were scheduled and made on 6/12/2023. VVS' then area manager was interviewed about the incident. The VVS manager stated the truck at issue (456) was retired from service and replaced (confirmed). The driver involved in both incidents was reassigned from green waste pick-up to solid waste pick-up. Finally, VVS was in the process of developing a formal compliance plan and training program for staff to ensure no future incidents occur (confirmed that VVS now has a Storm Water Pollution Prevention Plan)

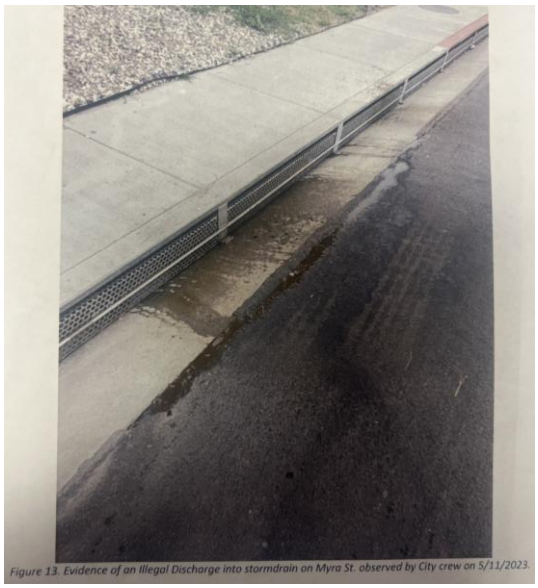

Figure 13. Evidence of an Illegal Discharge into stormdrain on Myra St. observed by City crew on 5/11/2023.

VVS provided a copy of their Storm Water Pollution Prevention Plan, as well as confirmation from Orange County Sanitation District that the plan brings them into compliance. We also learned the area where the incident occurred was where that driver normally took his required break while completing his route, so the spill was not intentional.

In 2024 there was an incident where a collection vehicle splashed oil on the property and vehicle of a customer on Sambar Circle. We also found photographs and extensive communication between VVS and the property owner. VVS performed multiple power washer cleaning on the affected area, using liquid capture and recovery methods to properly resolve the street impact. With regards to the customer's vehicle, VVS paid to have mobile detail service professionally clean the car.

Review Determination: Non-Compliant Though the number of incidents and VVS efforts to ultimately resolve each issue were very good, driver negligence, and no company plan or staff training were non-compliant with the Agreement.

Rating – Substandard. Failure to have a Stormwater Pollution Prevention Plan and related training in place, prior to the two prohibited discharge incidents, were contributory factors in the driver negligence. While VVS subsequently took steps to improve management, developed a SWPPP plan and instituted training, and has avoided such incidents since that time, for the review period they failed to meet industry standards.

5) Hours of Operation

Sec. 7.01 – Original Agreement

Establishes hours of operation as 5am to 6pm from commercial premises and 7am to 6pm for residential premises. Our review of records found no violations.

Review Determination: Compliant

Rating – Industry Standard. No violations found.

6) Route Change Approval Requirements

Sec. 7.02 – Original Agreement

Establishes routing approval requirements and that any changes be submitted with writing 60-days prior.

VVS used Route Smart software to improve route efficiencies in 2023. However, these changes did not result in a collection-day change for any customer, thus were not considered "changes" that would necessitate City notification. The reviewer agrees with this determination.

Review Determination: Compliant

Rating – Industry Standard.

7) Collection Service Standards

Sec. 7.03 – Original Agreement

Establishes all service standards for franchise collections. Our review found all new services (including start of service within 5 business days) to have been rolled-out to customers with proper education provided, and technical assistance by VVS staff available when requested. Our review established a high level of competence with regards to collection of containers. The table in Item 1 of this review area quantifies missed collections for each year of the review period. As discussed, the 2022 figure (816), and the first nine-months of 2023 (586 for the year) include set-out issues and overloaded containers, therefore these numbers are inflated. Out of the approximately 2,000,000 container collections VVS makes from franchised customers each year (residential and commercial), the 454 missed pick-ups in

2024 (0.0227%) are considered to meet industry standards. While there is no published rate for missed containers, our experience in performing these reviews found missed container collection running at closer to 600 missed collections per 2,000,000 (0.03%).

In each instance, missed pick-ups were either resolved by VVS on the collection day or the following day. We also found that common issues like vehicle breakdowns or drivers out with illness did not prevent all collections from being made upon the scheduled service day, excepting isolated missed pick-ups that were resolved as required when VVS was notified.

Section 7.03.6 requires no-commingling of source separated material collections without prior written approval of the City, which was an issue during a 4 to 6-month period during calendar year 2023. In early 2023, due to a complaint call, the City learned that collections in the Ovation at Floral Park gated residential community had commingled collection of source-separated recyclables and trash. The resulting investigation determined that this commingled collection did occur for a four to six-month period. It was also found that VVS was asked by community management to perform these commingled collections to reduce truck traffic impacts on community-maintained roads. In addition, VVS made no effort to hide this activity and cooperated fully with the City's investigation.

Ultimately it was determined the City had the right to impose a liquidated damages penalty of $6,000 for VVS performing commingled collection without prior written approval of the City, regardless of the reason. However, the City Manager resolved that the penalty would be held in abeyance since it was done in response to a customer request and VVS still maintained a citywide 65% diversion rate. VVS also committed to purchasing a special collection vehicle that can co-collect and keep separate both source-separated recyclables and trash collections in the same vehicle, performing a single collection pass through the Ovation at Floral Park community. This new vehicle was purchased and put into service during the 4th Quarter of 2023 (Truck # 497 – shown in a table in Area 8 below).

There were a few instances of non-collection of containers tracked and reported by VVS. All were found to be due to customers not complying with program instructions and were compliant with Agreement terms. VVS developed and utilized non-collection notices that were also found to be compliant.

We chose to examine collection details covering all of calendar year 2024 in our review. The table below summarizes this review process:

CLASSIFICATION CUTOFF	Overweight Threshold (tons):	12.5			
OVERALL SUMMARY					
METRIC	**VALUE**				
Unique Loads	4710				
Total Tons (all records)	33,643.27				
LOAD BIN SUMMARY (unique tickets, summed units)					
LOAD BIN	**LOAD COUNT**	**% LOADS**	**TOTAL TONS**	**AVG TONS**	**MAX TONS**
Under 12.5	4421	***93.86%***	29754.70	6.73	12.49
Overweight (12.5+)	289	***6.14%***	3888.57	13.46	18.19
TOTAL	**4710**	***100.00%***	**33643.27**	**7.14**	**18.19**

Collection weights for 2024 (7.14 ton average) and the 6.14% overweight load occurrence (289 loads out of 4,710) were within industry standards. Overweight loads averaged less than one-ton over the limit, with individual route outliers (heaviest weights) in the 14 to 15 ton range. The occurrence of overweight loads is typical and is a result of route efficiency efforts to save resources (fuel and labor). While use of

route efficiency software also attempts to minimize overweight loads, weight variances due to rainy days or when container set-outs and/or container weights are above average cannot be fully resolved and still provide efficient routes. Again, the data falls within Industry Standards and is typical.

Where VVS is well above average is with their on-time collection rates. Their 99.65% performance rate is considered exceptional, as is their record of completing all collections on the service day, regardless of vehicle issues or driver absences.

Review Determination: Compliant Resolved commingling issue in 2023 by purchasing new vehicle. Collection metrics are above industry standards for on-time collection and completion of routes on scheduled service day. They meet industry standards with regards to load weights/overweight loads.

Rating – Above Average.

8) Fleet Standards, Maintenance & Safety

Sec. 7.05 – Original Agreement

Section 7.05 establishes various collection fleet and reporting requirements, including that specific vehicle age, maintenance, and emission standards. Section 7.05.1 requires "as-new" vehicles, with none over 10-years of age unless it is a rebuilt vehicle. Vehicles must also be CNG and meet noise standards and VVS must provide an annual vehicle inventory (7.05.3). All vehicles must display required information and signage (7.05.2).

VVS was found to have provided the City with a listing of its service fleet annually (7.05.3), as part of its annual report. All vehicles are washed weekly (at minimum) to comply with Section 7.05.4 of the Agreement.

Vehicle compliance with 7.05.1 and other requirements are shown in the table below:

ROUTE	TRUCK	YEAR	MAKE	MODEL	FUEL	PAINT DATE	BODY TYPE	COMMODITY	DAYS OF SERVICE
CY01	4003	2022	CRANE	LOW ENTRY	CNG	N/A	ASL	TRASH	EVERYDAY
CY02	4000	2022	CRANE	LOW ENTRY	CNG	N/A	ASL	TRASH	EVERYDAY
CY03	498	2022	CRANE	LOW ENTRY	CNG	N/A	ASL	TRASH	EVERYDAY
CY4/10	497	2022	CRANE	LOW ENTRY	CNG	N/A	MSL SB	TRSH AND RECY	MON & THUR
CY08	4002	2022	CRANE	LOW ENTRY	CNG	N/A	ASL	RECYCLE	EVERYDAY
CY09	452	2016	PTRBL	320	CNG	4/5/20	ASL	RECYCLE	EVERYDAY
CY11	451	2016	PTRBL	320	CNG	6/5/20	ASL	RECYCLE	EVERYDAY
CY12	4001	2022	CRANE	LOW ENTRY	CNG	N/A	ASL	GREEN WASTE	EVERYDAY
CY13	499	2023	CRANE	LOW ENTRY	CNG	N/A	ASL	GREEN WASTE	TUES - FRI
CY20	242	2019	PTRBL	520	CNG	3/2/23	FEL	BULKY	WEDNESDAY
C030	238	2019	PTRBL	520	CNG	6/2/23	FEL	TRASH	EVERYDAY
C031/C035	234	2016	PTRBL	320	CNG	9/3/19	FEL	C031-TRSH/C035-RECY	RECY TUE &THUR
C032	242	2019	PTRBL	520	CNG	8/29/25	FEL	TRASH	EVERYDAY
C034	232	2016	PTRBL	320	CNG	11/2/19	FEL	TRASH	MONDAY ONLY
CYPRKS	1003	2018	ISUZU	W4500	DIESEL	6/8/22	BIN DEL	PARKS	EVERYDAY
OR03	269	2018	PTRBL	320	CNG	3/1/23	FEL	ORGANICS	EVERYDAY

As shown, a total of seven (7) new vehicles were put into service in 2022 and 2023, replacing vehicles before they exceeded the 10-year maximum-age limitation. This included the split-container collection vehicle (497) purchased to service the Ovation at Floral Park community. VVS provided documentation showing these vehicles all meet noise emission standards.

Section 7.05.6 requires vehicles to be repainted every 5-years or within 30-days of the City's determination that appearance warrants re-painting. Compliance with vehicle painting is noted in the table above, and pictures of each collection vehicle were provided along with this report. In general, we find the VVS fleet to be in excellent condition, with vehicle appearance to be excellent without qualifier.

Section 7.05.7 requires safe vehicle operation that meets all Federal, State, and local laws, including no loading of vehicles above Federal, State, and local limitations or weight restrictions. Collection vehicles must be certified (7.05.8), inspected (7.05.9), and notify the City if any vehicle fails and inspection (7.05.10). 7.05.10 also requires VVS to submit a safety and compliance report upon request by the City.

VVS presented the full suite of maintenance logs, check-out/check-in procedures, terminal inspections, and driver training records, which show they meet all industry standards.

Our review included California Highway Patrol assessments which found VVS to have no instances of unsafe driving, vehicle maintenance to be in the top 10% of the industry, no drug and alcohol testing violations, and a high degree of driver fitness (less than 5 instances of driver inspections with violations). In addition, the service terminal operated by VVS meets or exceeds all operational standards and is in compliance with all statutes and regulations. Our review found California Air Resources Board (CARB) documentation showing all vehicles meet clean-air emission standards.

Collections considered "overweight" become a safety issue when they are 2 or 3 tons over the manufacturer's certification. Most collection vehicles used in the Cypress franchise are tandem axle, which increases the manufacturer's "certification" up to 17 tons (single axle vehicles are 10 tons, with 80,000 pounds as the maximum gross vehicle weight. We found no instances of collections resulting in unsafe conditions. However, as noted in Item 7 above, overweight loads (with respect to regulations, not vehicle capabilities) did occur at a 6.14% rate, so VVS was non-compliant in part of Section 7.05.7 of the Agreement. We do consider overweight loads to be typical and we do not consider them problematic if they occur less than 10% of the time. Anything below 5% we consider excellent.

Accidents

An examination of records further established that two vehicles and one property accident occurred in 2022. One vehicle accident was found to be the fault of the other vehicle (vehicle attempted to pass collection vehicle who maneuvered to avoid a container in the right-of-way). The other was the VVS driver's fault, as a parked vehicle was scraped while the collection vehicle was backing up. Similarly, property damage occurred when a collection vehicle scraped the top of a building.

In 2023, two vehicle related accidents occurred. One was VVS' fault (collection truck reversing hit a vehicle behind them), while the other was a vehicle crashing into a stopped collection vehicle. A single property related incident occurred when a VVS container, placed in the public right-of-way by a customer, was struck by a moving vehicle. VVS was not on the scene at the time.

In 2024, there were four vehicle related accidents, with two being VVS's fault. Both included minor collisions with parked vehicles during turns. Three property related incidents all involved the moving of collection containers striking nearby objects.

Regarding accidents, we find their frequency and type to be in line with industry standards. For calendar year 2025 (immediately after the review period) VVS had an insurance modification factor for "accidents" of 0.99%, with 1.00% being industry standard.

Review Determination: Compliant Overall VVS collection fleet is well above industry standard in terms of age, condition, and performance. All VVS vehicles are equipped with state-of-the-art technology, which includes SoftPak software, MobilPak tablets, and 3rd Eye technology to evaluate driver and route performance. RouteSmart software is employed to optimize collection efficiency. We should note that non-compliance with overweight loads was found. However, their occurrence was seen as industry standard and a byproduct of route efficiency software. With regards to performance and safety, we found VVS' 100 stops per-hour for residential collections and 13 stops per-hour for commercial collections to be well within industry standards and their 99.65% on-time collection metric well above average. Safety impacts of overweight loads were negligible as loads did not exceed manufacturer specifications. Maintenance and safety protocols were very good, as was VVS policy of completing all routes on the scheduled service day. Insurance risk rating was maintained at industry standard, so driver safety is also meeting this standard.

Rating – Above Average Despite overweight load non-compliance, performance metrics and fleet condition bring our overall rating above industry standard.

9) Container Standards & SB 1383 Compliance

Sec. 7.06, 18.01, 18.06.1(b)

These sections establish container requirements, which were expanded by SB 1383, with new requirements and covered under the 4th Amendment. 18.01 added the provision of "kitchen caddies" to all single-family residential customers, to aid in food waste recycling (covered previously in this report). 18.06.1(b) added the stipulation that container signage would be SB 1383 compliant.

Cart and size designations (96-gallon-standard, with 32 and 64 gallons optional) were established in 7.06.1 and VVS is complying. Colors, labeling, and the replacement of carts is also covered in this Section. Section 18.06.1 (b) added the requirements that signage be SB 1383 compliant.

Container colors currently meet 2036 requirements and are well ahead of the industry standard.

Containers have hot-stamped lids that provide SB 1383 required information as well.

A random survey of containers found them to be in good condition, with color-coded lids and adhesive signage that meets SB 1383 requirements.

Many franchise service containers are now approaching their replacement date, as 12 to 15 years is the typical service life for plastic carts. Metal containers do experience rust issues, but more often fading paint or peeling signage lead to requests for their repair/replacement on a more frequent basis. Our

review of records show 495 containers were replaced in 2022, 124 in 2023, and 724 in 2024. A deeper dive into calendar year 2024 records found 63 commercial containers, split between 32 carts and 31 bins. An additional 10 recurring roll-off containers were replaced due to wear or damage. The remaining 651 instances were residential cart replacements primarily due to excessive wear (cracks, lid or wheel issues). This spike in replacements at the 11-year mark shows VVS is responding to resident requests well, and they are keeping on top of the expected attrition rate of carts. Bin and roll-off replacements show they are rotating and refreshing these containers at or above industry standard levels.

Review Determination: Compliant Our review found all recurring collection containers to compliant with SB 1383, kept in good working condition and appearance, and repaired/replaced on a schedule commensurate with industry standards.

Rating – Above Average Container compliance and rotation/replacement is above industry standard.

10) Annual & Quarterly Reporting

Sec. 10.05 – Original Agreement

VVS is required to submit annual reports detailing all areas of franchise activity. They are also required to submit quarterly reports on their collection programs, facilities used, tonnage diverted and disposed, route reviews for contamination, and other program information as directed by the City.

We have assisted the City in receiving and reviewing all VVS quarterly reports since 2022, including all such reporting during the 2022-2024 review period. We have found them to be extremely accommodating in this regard, first by providing all requested reports on a new Excel form in 2022, then transitioning reporting to an online format with multiple forms and additional data uploading requirements. All requests have been met with cooperation and proficiency, so we would rate VVS quarterly reporting as excellent.

Annual reporting was found to be compliant with Agreement terms. However, as discussed elsewhere herein, we believe the City should require additional and/or revised reports to incorporate our more in-depth review process into annual reports.

Review Determination: Compliant

Rating – Above Average Reports meet industry standard. VVS willingness to expand reporting and incorporate use of new formats and tools is well above average.

Section 5 – Findings & Recommendations

Our three-year franchise performance review (calendar years 2022 through 2024) of VVS evaluated 44 specific areas of required compliance across three review categories: Financial, Compliance Programs & Waste Diversion, and Operations. Of those 44 items, 40 were found to be fully Compliant and four were found to be non-compliant. Presented below is a summary of findings by review category, followed by specific recommendations for the City's consideration.

Financial Review

Of the 21 items reviewed under the Financial category, 19 were found to be Compliant and two were found to be non-compliant. The overall financial picture for VVS in Cypress is positive: rate calculations were accurate, billing systems are well-managed, required payments to the City were largely made in full, and VVS maintains insurance, bonding, and record-keeping that meets or exceeds Agreement requirements. Notably, VVS demonstrated an above-average level of financial commitment to the franchise through voluntary cost-absorptions (including a one-year lag in passing through disposal fee increases to ratepayers) and an exceptional multi-family recycling program that is unique in Southern California.

Non-Compliant findings in this category were:

6) Universal Waste Collection – Non-Compliant | Above Average - VVS performed collections but maintained no records to substantiate compliance. Upon notification VVS immediately instituted a collection log and agreed to report annually.

14) City Compliance & Monitoring Fee (1.5%) – Non-Compliant | Industry Standard - An under-billing of $11,611.91 was identified over the three-year review period ($4,944.01 in 2022; $5,390.17 in 2023; $1,277.73 in 2024). The error rate declined significantly each year. VVS owes the City the identified amount, and the City may assess a 10% annual penalty per Section 8.09.

Notable above-average and exceptional financial findings included:

1) Rate Adjustment Process – Compliant | Above Average - VVS consistently absorbed one year of disposal fee increases rather than pass them through to ratepayers, a practice not seen in comparable franchise agreements.

3) Multi-Family Recycling Carts – Compliant | Exceptional - VVS is the only hauler in Southern California legally able to provide a 2-container mixed waste program to multi-family residents. 106 of 131 properties (81%) benefit from this service at no additional charge.

13) Commercial & Multi-Family Billing Audits – Compliant | Above Average - VVS performs billing audits monthly, substantially exceeding the Agreement's requirement of three audits over nine years.

With respect to VVS's financial ability to perform, our review of internal financial records established EBITDA in the range of 17-19% during the review period, slightly below the California industry benchmark of 20-30%. However, when adjusted for the approximately $300,000 per year in disposal cost revenue VVS foregoes due to their one-year lag in rate adjustments, their effective EBITDA rises to approximately 22%. We consider VVS financially able to sustain all required operations and Agreement compliance for the remainder of the franchise term.

Compliance Programs & Waste Diversion Review

Of the 13 items reviewed under this category, 12 were found to be Compliant and one was found to be non-compliant. VVS's compliance with State-mandated diversion programs is a significant strength of this franchise. The City of Cypress benefits from a hauler that operates the only High Diversion Organic Waste

Processing Facility designation in Southern California, which is a competitive advantage that gives the City full SB 1383 organic waste capacity and supports above-average diversion rates across all program types. Three items in this category earned an Exceptional rating, the highest available in our review framework.

Non-Compliant findings in this category:

4) Construction & Demolition Diversion – Non-Compliant | Industry Standard - VVS fell short of the franchise-required 75% C&D diversion rate in each year of the review period. Achieved rates were approximately 71–73%, which exceeds the State's 65% standard but does not meet the more stringent Agreement requirement. VVS should work with Grand Central Recycling to identify processing improvements that can close this gap.

Exceptional findings in this category:

1) Commercial A/B Route Processing – Compliant | Exceptional - An average of 83% of commercial waste collections were processed rather than direct-hauled to landfill, reaching 91% (with 52% diverted) in 2024. This level of commercial processing is exceptional; most updated agreements now permit all trash to go directly to landfill.

5) Organic Waste Recycling Program – Compliant | Exceptional - VVS provides full SB 1383-compliant organic waste capacity through their Grand Central facility. 100% program compliance was achieved for commercial generators by 2023.

10) New Organics Processing Facility – Compliant | Exceptional - Grand Central Recycling achieved Southern California's first High Diversion Organic Waste Processing Facility designation, completing the milestone one year ahead of the Agreement schedule.

CalRecycle's AB 939 compliance measurement formula found the City of Cypress to be compliant with the 50% diversion mandate in each year of the review period. VVS achieved combined diversion (including verified third-party recycling) of 72.71% (2022), 52.50% (2023), and 59.22% (2024), with the 2022-to-2023 decrease attributable to a reduction in third-party recycling volumes primarily from the Los Alamitos Racetrack, and were not due to a reduction in VVS program performance.

Operations Review

Of the 10 items reviewed under the Operations category, nine were found to be compliant and one was found to be non-compliant. VVS demonstrates a well-managed and professional operation. Collection performance metrics, including a 99.65% on-time collection rate and a missed pick-up rate of 0.0227% (approximately one-third better than the industry standard of 0.03%) are standout results. Fleet condition, maintenance protocols, and safety records all reflect a hauler that takes operational excellence seriously. Customer service metrics are at or above industry standard, and VVS has been an accommodating partner in transitioning to expanded quarterly reporting formats.

Non-Compliant findings in this category:

4) NPDES Best Practices & Spillage Standards – Non-Compliant | Substandard - Two prohibited discharge incidents occurred in 2023 involving leakage from a collection vehicle into a storm drain inlet. VVS did not have a Stormwater Pollution Prevention Plan or formal staff training program in place at the time. Following the incidents, VVS developed and implemented a SWPPP, confirmed with Orange County Sanitation District, and reassigned the driver involved. No further incidents occurred during the review period. The non-compliance was attributable to the absence of a preventive program rather than willful violation.

Above-average findings in Operations included:

7) Collection Service Standards – Compliant | Above Average -99.65% on-time collection rate; all missed pick-ups resolved same day or next business day; routes completed on scheduled service day regardless of vehicle or staffing issues.

8) Fleet Standards, Maintenance & Safety – Compliant | Above Average - CHP assessment placed VVS vehicle maintenance in the top 10% of the industry. Fleet equipped with SoftPak, MobilPak, and 3rd Eye technology. No drug/alcohol violations. Insurance modification factor held at 0.99% (industry standard: 1.00%).

9) Container Standards & SB 1383 Compliance – Compliant | Above Average - Containers meet 2036 SB 1383 color requirements well ahead of schedule. Replacement rate (724 containers in 2024) reflects proactive management of aging stock.

Recommendations

Based upon our review findings, CityGreen Consulting offers the following recommendations for the City's consideration:

1. Resolve 1.5% Fee Underpayment. Direct VVS to remit the identified $11,611.91 in underpaid City Compliance and Monitoring Fees. Consistent with Section 8.09, the City may also assess a 10% annual penalty on the finding. The City may wish to weigh VVS's approximately $34,000 per year in absorbed billing cost increases (resulting from the City's December 2022 transition to monthly customer billing) as a mitigating factor when determining the penalty amount.

2. Strengthen Universal Waste Recordkeeping. Confirm that VVS has fully implemented the collection log procedure agreed upon during this review. Require that Universal Waste collection data be included in the annual report going forward, including collection dates, customer types, and item counts.

3. Address C&D Diversion Gap. Engage VVS and Grand Central Recycling in a discussion aimed at improving construction and demolition diversion from the current 71–73% range to the franchise-required 75% minimum. Consider whether a cure period or compliance plan is appropriate.

4. Confirm SWPPP Implementation and Ongoing Compliance. Verify that VVS's Stormwater Pollution Prevention Plan remains active and that all drivers receive annual training. Request the City's Contract Officer be provided a copy of the current SWPPP and training logs as part of the next annual report.

5. Improve Annual Financial Reporting Format. Require VVS to restructure their annual financial report to segregate City-billed residential revenue (via Golden State Water) from VVS-billed residential revenue, and to align billing and receipts presentations in consistent categories (Commercial, Roll-Off, Residential). This will enable routine reconciliation of gross receipts and franchise fees without requiring a full audit.

6. Mandate Annual Bulky Item Collection Report. Require VVS to include in each annual report a residential-only bulky item collection log, confirming that no residential accounts were charged for collections within their two-item annual allowance. This will eliminate the need for a record-by-record audit of individual work orders in future reviews.

7. Clarify Community Event Requirements. Formally clarify with VVS whether community clean-up curbside events now qualify under the Section 4.08 community event provision. Establish a tentative annual events list by no later than February 1 each year to ensure VVS can staff and schedule booths appropriately.

8. Explore SB 1383 Mandatory Procurement Opportunities. Schedule a meeting with VVS to identify qualifying SB 1383 mandatory procurement purchases that would provide credit toward the City's

procurement obligations. The City should engage in discussions with VVS regarding hauler-assisted procurement credits, as is now standard in most updated California franchise agreements.

9. Commission Organic Waste Generation Study. Direct VVS to perform a waste characterization study focused on organic waste generation per resident. If the City generates below 0.8 tons per resident per year, it may qualify for a reduced SB 1383 procurement obligation – a reduction that some California jurisdictions have achieved by more than 50%.

10. Improve Customer Survey Methodology. For the Year 10 customer satisfaction survey (and any subsequent surveys), require VVS to use a billing insert with QR code to maximize response rates, rather than relying on event-attendance distribution. A statistically meaningful sample will provide more defensible data for future contract negotiations.

11. Establish Annual VVS Reporting Session. Consistent with the level of detail compiled in this review, the City should schedule an annual meeting with VVS to review the prior year's performance metrics, confirm delivery of all required reports, and address any emerging compliance questions before they become issues requiring formal findings.

Overall Assessment

CityGreen Consulting rates the overall performance of Valley Vista Services as **Good to Very Good** when measured against California industry standards for franchise hauler compliance. Of the 44 items reviewed, 91% were fully compliant, and the four non-compliant findings were either curable through payment or remediation (Universal Waste recordkeeping, 1.5% Fee under-billing), subject to ongoing monitoring (C&D diversion), or already substantially resolved through corrective action taken during the review period (NPDES/SWPPP).

VVS's most significant strengths are their waste diversion infrastructure, collection performance, and their approach to above-and-beyond service. The City of Cypress benefits from a hauler whose Grand Central Recycling facility is the most advanced organic waste processor in Southern California, and whose collection metrics rank in the top tier of comparable jurisdictions reviewed by this firm. The above-average ratings assigned across Financial, Compliance, and Operations categories - and the three Exceptional ratings earned in the Compliance section reflect a hauler that takes its franchise obligations seriously and consistently performs at a level that provides real value to Cypress ratepayers.

The areas identified for improvement are addressable. The recommendations above are intended to help the City obtain full resolution of outstanding financial findings, strengthen reporting and monitoring practices for the remaining franchise term, and identify opportunities where the Agreement could be updated to better reflect current industry standards, particularly with respect to SB 1383 procurement assistance and community event coordination.

AMENDMENT NO. 5
TO EXCLUSIVE FRANCHISE AGREEMENT FOR THE PROVISION OF SOLID WASTE & RECYCLING SERVICES

THIS AMENDMENT NO. 5 ("**Amendment No. 5**") by and between the **CITY OF CYPRESS**, a California municipal corporation and charter city ("**City**") and **VALLEY VISTA SERVICES, INC**., a California corporation, doing business as Valley Vista Services of Orange County ("**Collector**") is effective as of July 14, 2026 ("**Effective Date**").

RECITALS

A. City granted to Collector an exclusive solid waste and recycling franchise by entering into that certain Exclusive Franchise Agreement for the Provision of Solid Waste & Recycling Services dated September 22, 2014 ("**Agreement**"), wherein Collector agreed to provide solid waste and recycling collection services to City residents and businesses.

B. The original term of the Agreement was from July 1, 2015, to June 30, 2025. The Agreement has been previously amended four times, including Amendment No. 2 dated August 28, 2017; Amendment No. 3 dated July 12, 2021; and Amendment No. 4 dated November 22, 2021. Amendment No. 2 extended the term of the Agreement to June 30, 2027, and Amendment No. 4 ultimately extended the term of the Agreement to June 30, 2036.

D. City and Collector wish to further amend the Agreement, as amended, to update language to reflect the new Waste Infrastructure System Enterprise ("WISE") Agreement between the City of Cypress and Orange County Waste & Recycling and to revise the terms and scope of services provided to residents.

TERMS

1. Recitals. The recitals set forth above are incorporated herein by this reference.

2. Contract Changes. The Agreement is amended as follows:

2.1 Revisions to Article 4. Article 4, entitled "Collection Services," shall be modified as follows (~~**bold strikethrough**~~ represents deleted language while ***bold underlined italics*** represents added language):

ARTICLE 4. COLLECTION SERVICES

"4.05.1 Residential and Multi-Family Premises On-Call Bulky Waste & E-Waste Collection

The Collector shall provide Bulky Waste and Electronic Waste Collection Service to all Customers at Residential and Multi-Family Premises in the Service Area whose Bulky Waste have been placed within three (3) feet of the curb, swale, paved surface of the public roadway, closest accessible

roadway, or other such location agreed to by the Collector and Customer, that will provide safe and efficient accessibility to the Collector's Collection crew and vehicle.

Single-Family Residential Customers will be instructed to provide Collector with a minimum of forty-eight (48) hours' notice of the need for Bulky Waste Collection Service, which shall take place on the Customer's regular Collection day.

Customers at ***Single-Family*** Residential ~~**and Multi-Family**~~ Premises are entitled to ***four (4) pickups per calendar year and limited to up to ten (10) bulky items per pickup.*** ~~**set out a total of two (2) items per year in any combination of collection days and number of items per year per Premises at no additional charge. For example, Customers may set out two (2) items for a single collection, or one (1) item on two (2) separate collection days.**~~

Multi-Family Premises shall be entitled to a maximum of four (4) bulky item collection events per calendar year for the Premises as a whole. For each scheduled collection event, each unit within the Premises may dispose of up to four (4) bulky items. The property owner, property manager, and/or authorized representative for the Premises shall coordinate directly with Collector for the scheduling of collection events and shall contact Collector at least fourteen (14) calendar days prior to the desired collection date. Collector shall not be required to provide more than four (4) collection events annually to any individual Multi-Family Premises. The date, time, and location of each collection event shall be mutually agreed upon between Collector and the property owner, manager, or authorized representative.

For calendar year 2026, following the effective date of this Amendment, Single Family Residential Premises and Multi-Family Premises shall be entitled to a maximum of two (2) bulky item pickups following the effective date of this Amendment. Beginning January 1, 2027, customers shall be entitled to four (4) pickups per calendar year.

For any collection of Bulky Waste beyond the ***services provided in this Agreement,*** ~~**minimum of two (2) items per year,**~~ Collector shall provide Bulky Waste Pickup service to Customers at Residential and Multi-Family Premises in accordance with rates set forth in Exhibit 1 or as may be adjusted under the terms of this Agreement.

4.06.1 Household Hazardous Waste Collection from Residential and Multi-Family Premises

Collector will provide, either directly, or through a City-approved subcontractor, ***one (1)*** ~~two (2),~~ annual citywide Household Hazardous Waste Collection Events at no additional charge. Electronic Waste will be accepted at each annual citywide Household Hazardous Waste Collection events at no additional charge. ~~**The dates and locations of the Events will be coordinated with Cypress City Staff.**~~ Customers from Residential and Multi-Family Premises will be allowed to drop off unlimited items at the ~~**two**~~ event~~**s**~~ and the acceptable times will include, at a minimum the items listed on the following page. ***The City and Collector shall endeavor to mutually agree upon the date and location for the Household Hazardous Waste event no later than the end of February of each year.***

4.08.4 Citywide Free Disposal Day Events

Collector shall provide two (2) Citywide Curbside Cleanup Events per calendar year for all residential customers within the City. Customers shall be permitted to place unlimited bulky items curbside for collection and disposal or recycling by Collector. Collector may phase collections by regular collection service days to facilitate the efficient and orderly completion of the event, upon approval of the City.

On four (4) **separate** ~~**Two**~~ days annually, ***at the discretion of the City,*** Collector shall provide Cypress residents with the opportunity to deliver any and all Solid Waste for the purpose of disposal or recycling. This will involve the staging of no less than four (4), 40 cubic yard open top roll-offs to collect the unwanted materials. The dates and locations of the Events will be coordinated with Cypress City Staff.

The City and Collector shall endeavor to mutually agree upon the date and location for the Citywide Free Disposal Day events for the remainder of the calendar year by the end of February of each year."

2.2 Revisions to Article 6. Article 6, entitled "Other Services," shall be modified as follows (~~**bold strikethrough**~~ represents deleted language while ***bold underlined italics*** represents added language):

ARTICLE 6. OTHER SERVICES

"6.03.1 Implementation and Ongoing Education Services

- **Annual Newsletter –** ***For calendar year 2026, and within 60 days of the effective date of this Amendment, Collector shall prepare and distribute to each Customer a brochure or newsletter describing new or modified services established by Amendment No. 5. The newsletter shall***

be subject to City review and approval prior to distribution and shall be provided at no additional cost to the City."

2.3 Revisions to Article 7. Article 7, entitled "Requirements for Operations, Equipment and Personnel," shall be modified as follows (**~~bold strikethrough~~** represents deleted language while ***bold underlined italics*** represents added language):

ARTICLE 7. REQUIREMENTS FOR OPERATIONS, EQUIPMENT AND PERSONNEL

"7.04.1 Local Office

Collector shall establish a local office within ***a fifteen (15) mile radius of the*** City boundaries to provide customer services such as, but not limited to: bill payment; scheduling of services including on -call bulky waste collection, extra pick -ups and temporary bin service; service initiations, changes or cancellations; and, the documentation and resolution of complaints.

The Collector's local office shall be open from 8: 00 a. m. to 5:00 p.m., Monday through Friday, and Saturdays from 8: 00 a. m. to noon."

2.4 Revisions to Article 9. Article 9, entitled "Charges and Rates," shall be modified as follows (**~~bold strikethrough~~** represents deleted language while ***bold underlined italics*** represents added language):

ARTICLE 9. CHARGES AND RATES

"9.02.1 Cost Component and Rate Adjustment Indexes

The approved rates consist of the following cost components, followed by the initial weightings of each component. Each cost component may be adjusted by the change in the corresponding index as provided below. See Section 9.02.2 for detailed rate adjustment procedures.

		% of Costs (1)			Rate Adjustment Index	Starting Index
	Cost Component	Residential	Commercial	Roll-Offs		

A.	Collection	46%	80%	100%	Consumer Price Index - All Urban Consumers, All items – Los Angeles – Riverside – Orange County, CA capped at 3.5% plus 85% of any increase in CPI above 3.5%.(2)	The CPI index is ~~**281.347**~~ ***348.361***.
B.	Disposal	37%	20%	100%	Actual change at Orange County Landfills as per ~~**waste disposal agreement**~~ ***Waste Infrastructure System Enterprise (WISE) Agreement*** with City of Cypress.	The index is ~~**$35.67**~~ ***$67.00***.
C.	Green Waste	17%	20%	n/a	Consumer Price Index – All Urban Consumers, All items – Los Angeles – Riverside – Orange County, CA capped at 5% plus 85% of any increase in CPI above 5%.(3)	The CPI index is ~~**281.347**~~ ***348.361***.
D.	Other Service (including MRF Service)	n/a	n/a	100%	Consumer Price Index - All Urban Consumers, All items – Los Angeles – Riverside – Orange County, CA capped at 3.5% plus 85% of any increase in CPI above 3.5%.(2)	The CPI index is ~~**281.347**~~ ***348.361***.

(1) Weightings may be adjusted for the rate adjustment following, and based upon results from each audit per Section 8.04.1.

(2) For example, if the published annual CPI for the region is 6.2%, Collector could request the full 3.5% and 85% of the difference, as shown in the following table:

Published Regional CPI	6.2%
Franchise Cap	3.5%
Difference (6.2% - 3.5%)	2.7%
85% of Difference	2.295%
TOTAL CPI (3.5% + 2.295%)	5.795%

(3) For example, if the published annual CPI for the region is 6.2%, Collector could request the full 5% and 85% of the difference, as shown in the following table:

Published Regional CPI	6.2%
Franchise Cap	5%
Difference (6.2% - 5%)	1.2%
85% of Difference	1.02%
TOTAL CPI (5% + 1.02%)	6.02%

9.02.2 Rate Adjustment for Residential Services and Commercial Refuse Services

Residential Cart rates and Commercial Bin and Cart rates will be adjusted using the same method, but will be calculated separately due to the differences in the weightings of the Collection and Disposal components for each Customer type, as listed in Section 9.02.1.

Step One – Calculate the percentage increase or decrease in Collection, Disposal, and Green Waste Component indices listed in Section 9.02.1. The increase or decrease in the Collection Component index and Green Waste Component index will be based on the twelve (12) month period ending February prior to the July 1 when the rate change will take effect.

The Disposal index will be based on the actual percentage change in the gate rates at Orange County Landfills as per the ~~**then-existing waste disposal agreement**~~ ***Waste Infrastructure System Enterprise (WISE) Agreement*** with the City of Cypress for the twelve (12) month period ending June 30 prior to the July 1 when the rate change will take effect.

The percentage increase for the Collection Component Index shall not exceed 3.5% plus 85% of any increase in CPI above 3.5% for any Rate Year (see chart in Section 9.02.1). The percentage increase for the Green Waste Component index shall not exceed 5% plus 85% of any increase in CPI above 5% for any Rate Year (see chart in Section 9.02.1).

Step Two –Cost components are weighted as listed in Section 9.02.1. For subsequent rate adjustments, the relative weightings of the Collection and Disposal cost components will be determined by the most recent audit conducted per Section 8.04.1.

Multiply the percentage changes for the Collection and Disposal cost components, as determined in Step One, by that component's weighting as a percentage of total cost.

Step Three – Multiply the weighted permitted percent change from Step Two by the existing maximum Residential Cart, Commercial Bin and Carts Services rates to determine the increase or decrease in maximum rates. Then add (subtract) the change in rates to (from) the existing maximum rates to determine the new maximum rates. See Exhibits 2A and 2B for examples of rate adjustments procedures.

9.02.3 Rate Adjustment for Roll-Off Box & Other Services

Roll-off box rates and Other Services rate adjustments will be calculated separately for the Collection (Pull), Disposal, and MRF Service Component, as listed in Section 9.02.1.

Step One – Calculate the percentage increase or decrease in Collection and Disposal Component indices listed in Section 9.02.1. The increase or decrease in the Collection and MRF Service Component index will be based on the twelve (12) month period ending February prior to the July 1 when the rate change will take effect.

The Disposal index will be based on the actual percentage change in the gate rates at Orange County Landfills as per the ~~**then-existing waste disposal agreement**~~ ***Waste Infrastructure System Enterprise (WISE) Agreement*** with the City of Cypress for the twelve (12) month period ending June 30 prior to the July 1 when the rate change will take effect. The percentage increase for the Collection and MRF Service Component Indices shall not exceed 3.5% plus 85% of any increase in CPI above 3.5% for any Rate Year (see chart in Section 9.02.1).

Step Two –Cost components are weighted as listed in Section 9.02.1. For subsequent rate adjustments, the relative weightings of the Collection and Disposal cost components will be determined by the most recent audit conducted per Section 8.04.1.

Multiply the percentage changes for the Collection, MRF Service and Disposal cost components, as determined in Step One, by that component's weighting as a percentage of total cost.

Step Three – Multiply the weighted permitted percent change from Step Two by the existing maximum roll-off pull rate, roll-off per ton disposal, roll-off per ton C&D Processing, and other rates. Then add (subtract) the change in rates to (from) the existing maximum rates to determine the new maximum rates. See Exhibits 2C for examples of rate adjustments procedures."

2.5 Revisions to Exhibit 1. Exhibit 1 shall be modified as follows (~~**bold strikethrough**~~ represents deleted language while ***bold underlined italics*** represents added language):

RESIDENTIAL SECTOR SERVICES

SERVICE CATEGORIES & FEES	MAXIMUM RATES	
RESIDENTIAL CART SERVICE – One each of 96-gallon capacity: refuse, recycling, and green waste carts – weekly collection; billing provided by City billing Agent.	31.05	Per Month
Additional Refuse Cart(s) – Each.	9.16	Per Month
Addiutional Green Waste Cart(s) – Each after first 2.	45.86	Per Month
First Additional Green Waste Cart and All Additional Recycling Carts will be free of charge.	No Charge	
Cart Delivery (addition, removal or exchange) beyond two (2) per type of customer.	45.86	Per Trip
Cart Replacement Due to Customer Damage.	91.67	Per Event
On-Call Bulky Waste / E-Waste (Up to ~~**two (2) items per year**~~ ***four (4) pickups per year, up to ten (10) items per pickup***)	No Charge	
On-Call Bulky Waste / E-Waste (beyond ~~**two (2) per year**~~ ***four (4) pickups per year, up to ten (10) items per pickup***.)	91.67	Per item
Annual Holiday Tree Collection	No Charge	
Cart Roll-Out Service – Incremental Charge (in addition to base charge in line A).	No Charge	
Cart Washing Service per cart per occurrence (Residential Carts only)	***$25.00***	***Per Cart***

ANCILLARY SERVICES & MISCELLANEOUS FEES

SERVICE CATEGORIES & FEES	MAXIMUM RATES
On-Call Bulky Waste – Commercial Premises	82.35 Per Item
On-Call Bulky Waste / E-Waste – Multi-Family Premises (Up to ~~**two (2) items per year**~~ ***four (4) pickups per year, up to four (4) items per unit per pickup***.)	No Charge
On-Call Bulky Waste / E-Waste – Multi-Family Premises (Beyond ~~**two (2) items per year**~~ ***four (4) pickups per year, up to four (4) items per unit per pickup***.)	82.35 Per Item
On-Call E-Waste & U-Waste Collection & Recycling – Commercial & Multi-Family Premises	82.35 Per Item
Household Hazardous Waste Collection – Multi-Family Premises	82.35 Per Item

Emergency Service	82.45 Per Hour
Maximum Late Fee	7.89% Per Annum
Bin Washing Service beyond Once a Year	No Charge

2.6 Effective Date. This Amendment No. 5 shall not be effective and operative until approved by the City Council.

3. Continuing Effect of Agreement. Except as amended by this Amendment No. 5, all provisions of the Agreement, as amended, shall remain unchanged and in full force and effect. From and after the date of this Amendment No. 5, whenever the term "Agreement" appears in the Agreement, it shall mean the Agreement, as amended by this Amendment No. 5.

4. Affirmation of Agreement; Warranty Re Absence of Defaults. City and Collector each ratify and reaffirm each and every one of the respective rights and obligations arising under the Agreement, as amended. Each party represents and warrants to the other that there have been no written or oral modifications to the Agreement, as amended, other than as provided herein. Each party represents and warrants to the other that the Agreement, as amended, is currently an effective, valid, and binding obligation.

Collector represents and warrants to City that, as of the date of this Amendment No. 5, City is not in default of any material term of the Agreement, as amended, and that there have been no events that, with the passing of time or the giving of notice, or both, would constitute a material default under the Agreement, as amended.

City represents and warrants to Collector that, as of the date of this Amendment No. 5, Collector is not in default of any material term of the Agreement, as amended, and that there have been no events that, with the passing of time or the giving of notice, or both, would constitute a material default under the Agreement, as amended.

5. Adequate Consideration. The parties hereto irrevocably stipulate and agree that they have each received adequate and independent consideration for the performance of the obligations they have undertaken pursuant to this Amendment No. 5.

6. Authority. The persons executing this Amendment No. 5 on behalf of the parties hereto warrant that (i) such party is duly organized and existing, (ii) they are duly authorized to execute and deliver this Amendment No. 5 on behalf of said party, (iii) by so executing this Amendment, such party is formally bound to the provisions of this Amendment No. 5, and (iv) entering into this Amendment No. 5 does not violate any provision of any other agreement to which said party is bound.

[SIGNATURES ON FOLLOWING PAGE]

IN WITNESS WHEREOF, the parties hereto have executed this Amendment No. 5 on the date and year first-above written.

CITY:
