F. Stormwater: Potential increase in volume discharged due to increased impervious coverage, reduced groundwater seepage or loss of surface water storage impacting Adopted LOS of 25-year 3-day storm Pre vs. Post Runoff (Storm sewers to convey 5 year- 1 day storm event; Canals to convey 3 year – 1 day storm event)	
Impact	Based on the proposed use, there will be an increase to the volume of discharge as the site will go from vacant to approximately 54% developed. The proposed development will not exceed the land use assumptions of the C-3 zoning and will be limited to a discharge rate of 2"/AC/Day per the requirements of the NSLRWCD. Water quality and quantity will be based on the greater of the SFWMD requirements of the 1" over the site or 2.5 x % impervious, and site storage will be made up on the proposed onsite lake. +
