INVESTMENT MANAGEMENT

SECTION 1

International Equity Investment Summary

The information presented represents how the portfolio management team generally applies their investment processes under normal market conditions.

International Equity Trust

Data as of March 31, 2018

Original Investment (September 1, 1991)	\$2,767,286.72
+ Contributions	3,295,000.00
-Withdrawals	(15,131,563.00)
- Investment Management Fees	(2,412,415.55)
+ Interest Income	268,549.25
+ Dividend Income	7,108,609.02
+ Realized Gain/(Loss)	14,536,419.24
- Other Expenses	(15,286.36)
+/- Market Appreciation/(Depreciation)	4,811,646.85
Market Value	\$14,074,426.54 ¹

1. State Street custodial accounting information reflects time period beginning January 1993. Data not available for client inception of September 1, 1991. Fund Accounting Systems changed effective August 1, 2001. All cumulative numbers past July 31, 2001 should be considered estimates. Our figures represent investments in the Morgan Stanley Investment Management International Equity Trust.

Morgan Stanley

INVESTMENT MANAGEMENT

SECTION 2

Overview, Philosophy and Process

The information presented represents how the portfolio management team generally applies their investment processes under normal market conditions.

International Equity Strategy

We seek to generate long-term outperformance by investing in a combination of high quality compounders and value opportunities, the mix of which adjusts over time based on price and prospects

Hold High Quality Compounders

Exploit Value Opportunities

Key is to avoid fading returns

International Equity Strategy

PHILOSOPHY:

We look to generate superior long-term performance through bottom-up stock picking in two ways:

- Hold high quality companies – “High Quality Compounders”
- Invest in companies with improving fundamentals, cyclical, or where stable fundamentals are not reflected in the price – “Value Opportunities”

Price and prospects are critical:

- Determine the appropriate margin of safety on a company by company basis
- Price and prospects drive the overall mix of High Quality Compounders and Value Opportunities over time

We are genuine long-term investors – years not months

We are benchmark aware but not benchmark driven

OUR GOAL⁽¹⁾:

To outperform the MSCI EAFE Index over a full market cycle while providing:

- Attractive absolute returns in rising markets
- A measure of downside protection in challenging markets
- Lower volatility of returns than the MSCI EAFE Index

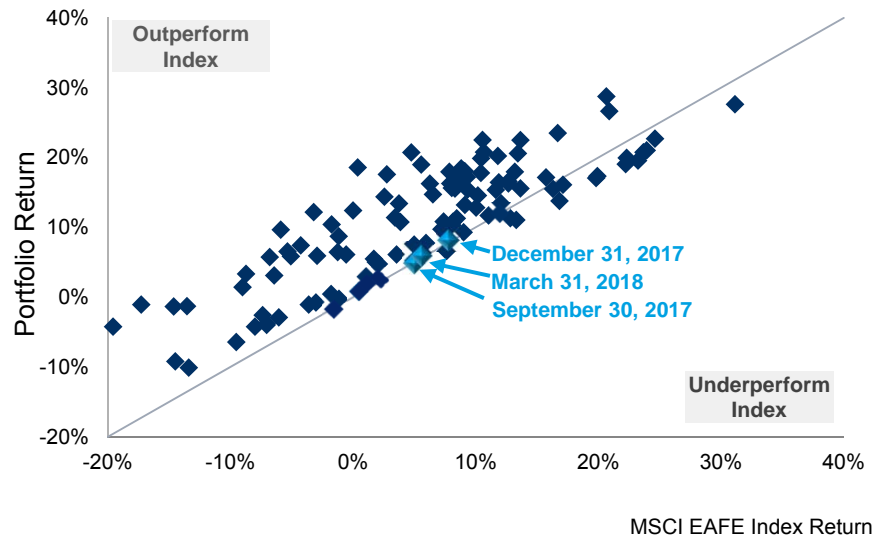

1. This goal is a target only and no guarantee is made that it will be achieved. A full market cycle is generally 3 – 5 years. MSCI EAFE Index is a reporting benchmark. It is not possible to invest directly in any index.

International Equity Strategy

The Overall Return Pattern of the Portfolio Reflects How We Invest

An Asymmetric Return Profile - USD

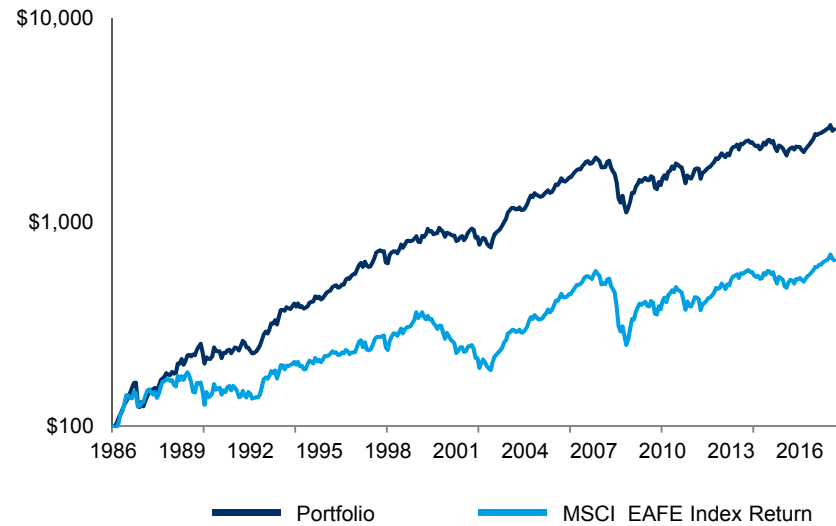

Rolling 3 Year Annualized Returns - Quarterly Data

- A measure of capital preservation in down markets
- Reasonable participation in strong up markets

... Underpins Long-Term Compounding

2x the compound rate has delivered 4x the value

Compound Rate

- Portfolio 11.2%
- EAFE 6.1%

Value Today of \$100

- Portfolio \$2,847
- EAFE \$650

Data since inception date of September 30, 1986 through March 31, 2018

Past performance is no guarantee of future results. For each portfolio may differ due to specific investment restrictions and guidelines. Individual results will vary. Performance returns reflect the average annual rates of return. The Morgan Stanley International Equity Account investment returns are GROSS of custody as well as investment management fees, in USD terms, and assume the reinvestment of all dividends and income. If expenses were deducted returns would have been lower. Investment returns and principal value will fluctuate and an investor's shares, when redeemed, may be worth more or less than their original cost. Performance returns are compared to those of an unmanaged index and are considered to be a relevant comparison to the portfolio. Comparisons of performance assume the reinvestment of all dividends and income.

How We Are Different From the Market

International Equity Team

- ✓ Sustainably Long-Term
- ✓ Absolute Risk
- ✓ Cash Based
- ✓ Returns Focused
- ✓ Downside-averse

Market

- ✓ Tactically Short-Term
- ✓ Relative Risk
- ✓ Earnings Based
- ✓ Growth Fixated
- ✓ Chasing Upside

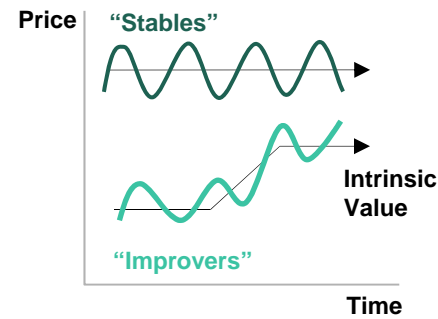

Our genuine long-term view and focus on price & prospects give us the flexibility to exploit both high quality and value opportunities in a time proven process

How We Categorize Businesses

High Quality Compounders

Value Opportunities

Value Traps

QUALITY

- Sustainable high returns on capital due to intangible assets
- Low volatility and cyclicality
- Management dedicated to preserving returns on capital

- Reasonable to improving returns on capital due to management actions or cyclical tailwinds
- Low probability of failure
- Management looking to improve returns on capital (if poor) and preserve returns on capital (if good)

- Deteriorating returns on capital
- Management unable / unwilling to improve returns on capital
- Company fails minimum quality threshold
 - High risk of failure / binary bets
 - No prospect of acceptable returns

PRICE

- Fair value or better

- Enough of a discount to intrinsic value to compensate for absolute risk

- Avoid at any price

OUR OPPORTUNITY

- Longer time horizon than the market

- Disagreement with the market on shape of cycle or size of restructuring opportunity
- Longer time horizon than market

- Not owning can be as important as owning

Source: MSIM.

For illustrative purposes only. There is no guarantee any security within each category will perform as outlined above.

International Equity Strategy

Price and Prospects Determine the Balance Between the Two Over Time

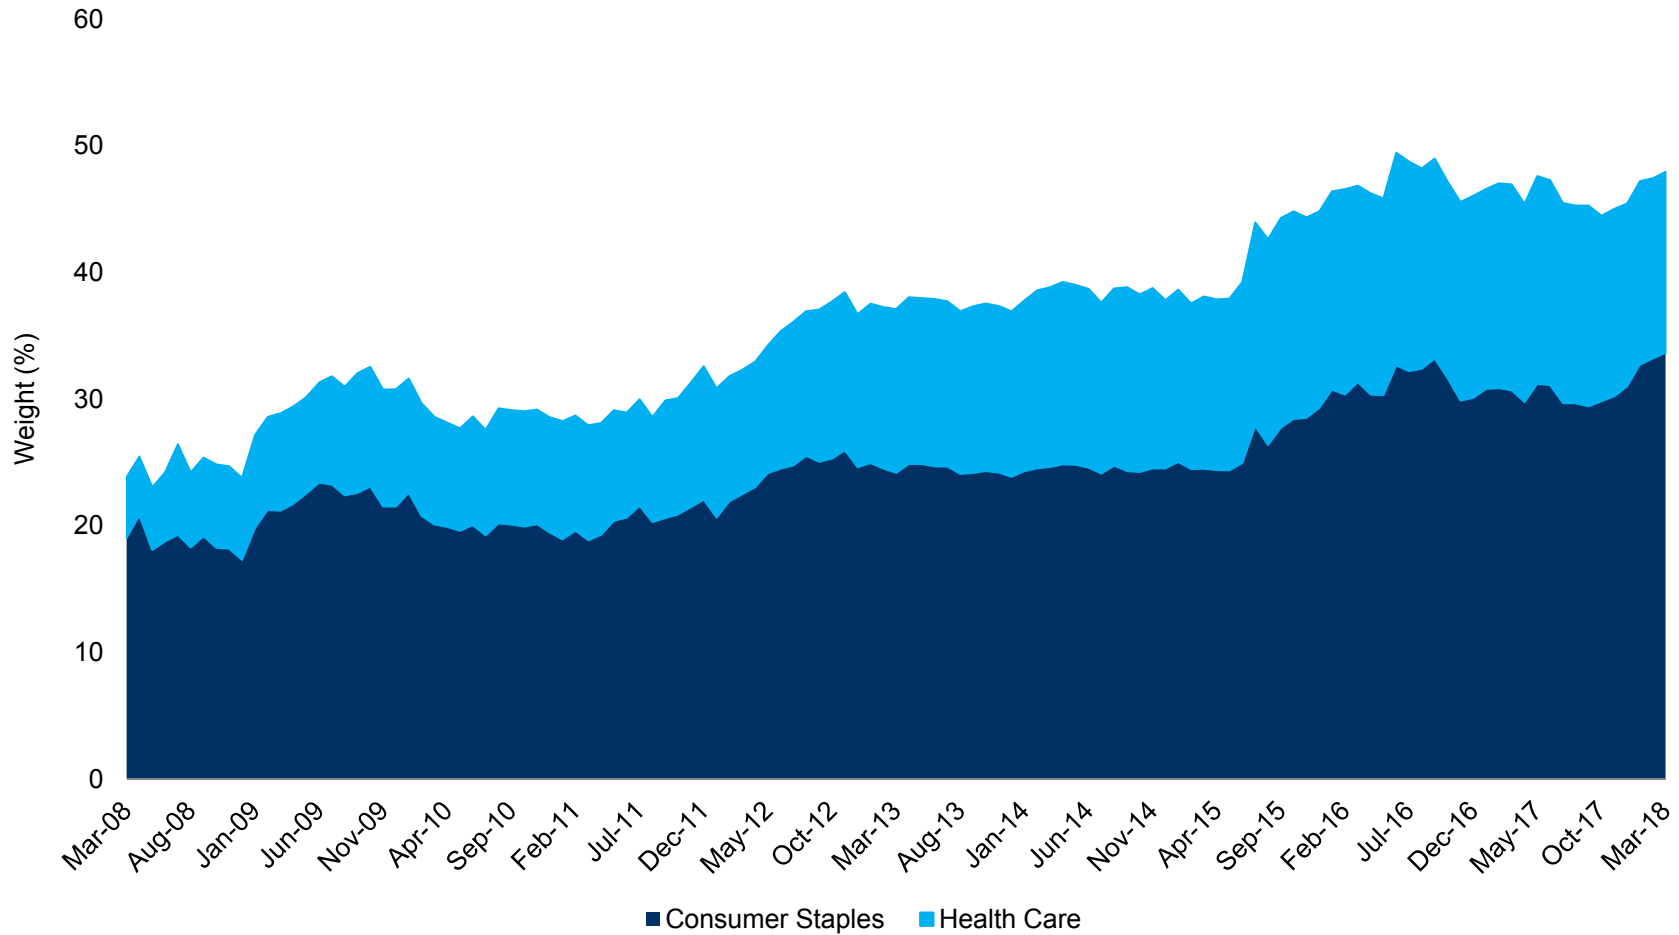

- Overall bias towards High Quality Compounders, providing price is reasonable
 - Typically asymmetric returns
 - Superior underlying long-term compounding
- Mix between High Quality Compounders and Value Opportunities is not a top-down allocation and will vary across the market cycle, but the portfolio will typically maintain an overweight to quality
- Currently at top end of High Quality Compounder weighting as Value Opportunities do not provide the greater margin of safety required given their prices and prospects

- Valuation of High Quality Compounders vs Value Opportunities
- Earnings prospects for more cyclical / lower quality industries

1. Typical ranges
For illustrative purposes only.

The Portfolio is Currently Particularly Defensively Positioned

Source: MSIM
Data as of March 31, 2018

As a Result, the Portfolio has a Substantial Quality Bias

- Quality bias mainly comes through holdings of High Quality Compounds but Value Opportunities are also higher quality than Index.
- Current heavy skew towards High Quality Compounds versus history:
 - Absolute valuation of High Quality Compounds reasonable at roughly intrinsic value
 - Low margin of safety a worry given valuations in lower quality areas for Value Opportunities
 - Given macro, tough to find improving businesses in lower quality sectors

	High Quality Compounds ⁽¹⁾	Value Opportunities ⁽¹⁾	Total Portfolio ⁽¹⁾	MSCI EAFE Index ⁽¹⁾
Portfolio Weight %	54% (58%*) ⁽²⁾	27% (36%*) ⁽²⁾	--	--
ROOCE⁽³⁾ %	46%	17%	27%	15%
Gross Margin %	58%	28%	41%	26%
Capex / Sales %	5%	7%	6%	7%
Net Debt / EBITDA	1.74	0.94	1.37	1.81

Data as of March 31, 2018

1. Excluding Financials, apart from portfolio weight in parenthesis

2. Value Opportunities 27% excluding Financials; 36% including Financials (*Some financials in High Quality Compounds: AIA, Prudential)

3. ROOCE is Earnings Before Interest and Taxes (EBIT) / Property Plant and Equipment (PPE) + trade working capital (excludes goodwill)

For illustrative purposes only. There is no guarantee any security within each category will perform as outlined above.

Investment Process

Bottom-up Stock Selection Based On Fundamental Research

1 SCREENING UNIVERSE (~ 1000 stocks)

Assessment of Starting Point and Liquidity (Free Float >\$2bn)

High Quality Compounders

- Have high returns been sustained?
- Is valuation fair value or better?

Value Opportunities

- Do price or price movements look interesting?
- Do returns look reasonable or unusually depressed?

2 KICKING THE TYRES (~ 300 - 400 stocks)

Assess Potential Stock Candidate – High Quality Compounder, Value Opportunity or Value Trap

- Will Returns on Operating Capital Employed (ROOCE)¹ improve, hold or fade?
- Are there attractive market shares and distinct competitive advantages?
- Is business subject to higher degree of cyclicality or capital intensity?
- Are there potential threats to sustainable returns including industry dynamics, company level developments or material ESG concerns?
- What is management's response to potential threats to the business?
- What is the financial strength of the business?
- Are management incentives appropriate?
- How does management allocate capital?

Determine Intrinsic Value

- Focus on free cash flow (FCF)², not accounting numbers
- Use FCF yield and other measures such as P/E, ROE, P/B and DCF, where relevant

The information presented represents how the portfolio management team applies their investment process under normal market conditions.

1. ROOCE is Earnings Before Interest and Taxes (EBIT)/ Property Plant and Equipment (PPE) + trade working capital ex Financials (excludes goodwill)

2. Free cash flow = operating cash flow minus capital spending, working capital growth, interest and tax.

Investment Process

Continuous Re-evaluation and Maintenance Research

3 PORTFOLIO CONSTRUCTION (~ 55-85 stocks)

Security Selection

- Does new idea offer better risk / reward trade-off?
- Stock weighting influenced by absolute level of risk and team's level of conviction
- No country or sector limits
- 5% max in any one security – Lower absolute risk means compounders tend to have higher position sizes

Sell Discipline

- No sale is automatic
- A stock is typically reduced or liquidated if it meets one or more of the following criteria:
 - Fair value target has been reached (Value Opportunities) or exceeded (High Quality Compounders)
 - Regulatory environment / industry deteriorate
 - Investment case has changed materially for the worse or been proven wrong
 - Another stock idea is more compelling

Meet weekly to review portfolio and stock ideas

The information presented represents how the portfolio management team applies their investment process under normal market conditions.

Risk Management

Seek to Minimize Risk of Permanent Destruction of Capital

- We worry about absolute risk – permanent loss of capital – not relative risk
- We believe that cap-weighted benchmarks are inherently risky

Risks We Worry About

Overpayment

Business risk

- What can go wrong?
- Have we got the competitive landscape right?
- Have we assessed capital intensity correctly?
- Are we right on the cycle?
- Is there long term stakeholder alignment?

Changing regulatory environment / industry dynamics / government threats / material ESG risk

Financial risk

Management actions and motivations

Overall portfolio diversification

Risks We Don't

Tracking error

Missing out on latest investment trend

Short term “noise”

The views and opinions expressed herein are those of the portfolio management team as of the date of the presentation.

Currency Management

Primarily Defensive, Using Short-Term Forward Contracts

- Bottom-up stock selection creates country weightings and currency exposure
- May hedge exposure to overvalued currencies to help protect value of portfolio, particularly where overweight currency relative to the benchmark
- Consider natural hedges as they apply to individual securities
- Valuation of currencies based on purchasing power parity, real interest rates, current account trends, etc.
- Maximum hedge and cross hedge is 25% of portfolio
- We currently have a 7% hedge of yen into the dollar⁽¹⁾

The International Equity Trust has a performance track record of over thirty years. Past performance is no guarantee of future results. Performance returns reflect the average annual rates of return. Returns less than one year are not annualized. The International Equity Trust investment returns are shown gross and net of investment management fees, in USD terms and assume the reinvestment of all dividends and income and would be lower if expenses were deducted. Investment returns and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Performance returns are compared to those of an unmanaged index and are considered to be a relevant comparison to the portfolio. The comparison index is the MSCI EAFE Net Index with Net Dividends reinvested. Investments in foreign markets entail special risks such as currency, political, economic, and market risks. The risks of investing in emerging-market countries are greater than the risks generally associated with foreign investments.

1. Portfolio weight is an average for the period January 1, 1999 through December 31, 2017. Index MSCI EAFE Index. **Past performance is no guarantee of future results.** Attribution total return may differ from reported total return due to differing methodologies. Returns are Gross of fees, quoted in USD terms, and include the reinvestment of all dividends and income. Had fees been included, returns would be lower and results may differ. Subject to change daily. Provided for informational purposes only and should not be deemed as a recommendation to buy or sell the securities in the sectors shown above.
 2. The "Cash" line in the attribution includes cash balances as well as other cash instruments.
 3. MSCI moved Real Estate out of the MSCI Financials sector effective September 1, 2016 and promoted it to a standalone sector. Therefore, performance shown for Real Estate is for the period September 1, 2016 through December 31, 2017 only.
 4. Performance shown for the Financials sector includes Real Estate from January 1, 1999 through August 31, 2016.
- To obtain the methodology of the return attribution analysis, a list showing every holding's contribution to the overall performance during the measurement periods, and/or if you have any questions, please contact your Morgan Stanley representative. The holdings identified do not represent all of the securities purchased, sold, or recommended for advisory clients. Holdings attribution is calculated gross of fees. Had fees been included, returns would have been lower.

Data as of March 31, 2018. Subject to change daily. All companies held in the portfolio for the sector are listed.

Provided for informational purposes only and should not be deemed as a recommendation to buy or sell the securities mentioned or securities in the industries shown above.

1. The overall weight of Unilever which is held in the portfolio (4.9%) is split owing to the diversity of their business: Food Products 50%, Personal Products 35% and Household 15%.
2. The overall weight of Henkel which is held in the portfolio (2.0%) is split owing to the diversity of their business: Household 30% and Personal Products 20%. Whilst the stock is categorized by MSCI as a Consumer Staple, the remaining 50% of their business is in Adhesives (1.0%) and therefore cannot be included in the above industry sub-sectors.
3. Includes Henkel's Adhesive business (1.0%)

Consumer Staples Winners and Losers in the eCommerce game

Defensible sub-sector

- Tobacco
- Spirits
- Personal care

Winning Strategy/Positioning

- Leading (#1 or #2 brand)
- Well invested brand equity – A&P, Innovation
- Route to market not challenged
- Management who gets it

At Risk sub-sectors

- Food
- Home Care

Challenged Strategy/Position

- Everyone else
- Push versus Pull models
- Over-indexed to the centre of the store
- Centralised decision making

Financials and Real Estate Underweight Dissected

- Remain heavily underweight banks. Our strategy remains choosy and opportunistic. Few bank franchises can beat their cost of capital – de-levering and forced alterations to the business model require a heavy discount to account for the considerable risks
- Strongly overweight insurers given their limited solvency, liquidity and regulatory risks. Wary of exposure to vulnerable sovereigns and low long-run interest rates

Portfolio Characteristics⁽¹⁾

- Portfolio's premium on Forward Earnings vs market is likely to be lower than shown, as market's forward earnings estimates are unreliable, often overstated.
- Market has higher gap between reported (GAAP/IFRS) and adjusted or "greed" earnings than the portfolio.
- High quality companies are better at converting earnings to cash. Free Cash Flow is a better indicator of valuation.

Quality Ratios – Historical ^{(3) (4)}

Outlook

- 1Q saw a welcome return to more normal levels of volatility after a sustained period of unnatural calm
- Political risks are rising, be they from monetary policy becoming more normal... or trade policy becoming a lot less normal
- There is evidence of a cyclical revival, particularly in Europe, but it is unclear that this can deliver general reflation
- Demographics and debt remain two significant global headwinds
- A lot of optimism still seems to be baked into markets, even after the recent wobbles

As of March 31, 2018. The information reflects the views of the Portfolio Management Team at the time of this writing. These views may change in response to changing economic and market conditions.

2018 Strategy

- Both earnings growth expectations and valuations still look uncomfortably high, even after the recent pull-back
- Consumer Staples and Health Care look relatively reasonably priced, with Consumer Staples trading broadly in line with the MSCI World Index on a FCF basis
- Cyclical sectors look fully priced, with the possible exception of Financials
- Pricing power remains crucial... and under threat in several areas, notably Industrials
- We believe global, high quality, steady compounders with rock solid balance sheets and sustainable dividends still offer the best potential risk/reward trade-off

As of March 31, 2018. The information reflects the views of the Portfolio Management Team at the time of this writing. These views may change in response to changing economic and market conditions.

Important Disclosures

Morgan Stanley Investment Management International Equity Trust (the "Trust") is a privately offered unregistered fund whose units are offered for investment only to qualified employee benefit plans and certain governmental plans pursuant to a confidential offering memorandum. The Trust is not currently registered, and does not propose in the future to be, registered as an investment company under the U.S. Investment Company Act of 1940, as amended. Morgan Stanley Investment Management Inc. is the sponsor of the Trust and Morgan Stanley Investment Management Limited is the investment manager of the Trust; both of which are registered with the U.S. Securities and Exchange Commission as investment advisers under the U.S. Investment Advisers Act of 1940, as amended.

Past performance is no guarantee of future results. Returns are gross of fees and assume the reinvestment of all dividends and income. Periods less than one year are not annualized. Returns are compared to an unmanaged market index and assumes the reinvestment of dividends and income. The index shown is not meant to depict the performance of any specific investment, should not be considered an investment, and does not include any expenses, fees or sales charges, which would lower performance. An investor can not invest directly in an index.

Any views and opinions herein are those of the team only as of March 31, 2018 are not necessarily those of Morgan Stanley, and are subject to change at any time due to market or economic conditions. All information provided is for informational purposes only. Any forecasts or estimates herein are not necessarily those of Morgan Stanley, and may not actually come to pass.

This material has been prepared solely for informational purposes and is not an offer, or a solicitation of an offer, to buy or sell any security or instrument or to participate in any trading strategy. Sector and Country allocation data was generated from Morgan Stanley Investment Management's internal accounting records and is preliminary. The Trust has fair valuation policies and procedures to value foreign equity securities held by the Trust that become stale as a result of events that occur after the foreign markets close but before the Trust calculates its net asset value. These fair value adjustments are reflected in the net asset value of the Trust but are not reflected in MSIM's internal accounting records. The values of securities used to calculate the net asset value of the Trust could therefore differ from the information contained in this report. Using security values that do not reflect such fair value adjustments increases the comparability of the information to the stated benchmark.

Risk Factors

Equity Securities. In general, prices of equity securities are more volatile than those of fixed income securities. **Risks of International Investing.** Any investment in foreign equity securities may involve a greater degree of risk than an investment in domestic equity securities. Among other things, foreign securities investments may carry the risks of less publicly available information, more volatile markets, less strict securities regulation, less favorable tax provisions, and a greater likelihood of war and expropriation of personal property than investments in domestic securities. **Liquidity.** A withdrawing subscriber may, at the discretion of MSIM, receive securities owned by the Trust in lieu of cash. The risk of loss and delay in liquidating these securities will be borne by the subscriber, with the result that such subscriber may receive less cash than it would have received on the date of withdrawal. **ERISA Issues.** MSIM anticipates that most or all of the subscribers will be entities subject to the Employee Retirement Income Security Act of 1974, as amended ("ERISA"), and their participation will require special consideration of certain factors that are described in more detail in the Memorandum. **Federal Income Taxation.** The Trust has received a determination letter from the Internal Revenue Service as to the tax-exempt status of the Trust. MSIM, and the Trustee intend to comply with the provisions of ERISA and the Internal Revenue Code at all times. However, if for any reason the Trust should lose its tax-exempt status as a group trust, it would terminate pursuant to the terms of the Agreement of Trust.

INVESTMENT MANAGEMENT

SECTION 5

Appendix A

ESG and Sustainability

- Our investment process focuses on the **sustainability and direction of future returns** because we believe companies with sustained good, and/or improving long term returns, are expected to outperform
- ESG is an integral part of risk management and the assessment of long term sustainability of returns
 - **Environmental** can impact government/regulatory risks
 - **Social** can affect reputational risk with customers and/or governments
 - **Governance** in our opinion is the cornerstone of sustainable returns – without it, all else fails
- We believe that this is so important that the team has **engaged directly with companies on issues of sustainability and governance for over 20 years** rather than outsourcing the process
- Our bottom up stock picking approach including the use of Sustainalytics and access to management enable us to **review material ESG issues at the company level and engage** where relevant
- We believe our approach **focuses on issues that could threaten company fundamentals** and/or the sustainability of returns, rather than making moral judgements

Any portfolio risk management processes discussed include an effort to monitor and manage risk, but should not be confused with and do not imply low risk or the ability to control risk. References to investment objectives or other goals the strategy seeks to achieve are inspirational only and should not be considered a guarantee that such results will be achieved.

1. Data as of March 31, 2018. **Past performance is no guarantee of future results.** To obtain the methodology of the return attribution analysis, a list showing every holding's contribution to the overall performance during the measurement periods, and/or if you have any questions, please contact your Morgan Stanley representative. The holdings identified do not represent all of the securities purchased, sold, or recommended for advisory clients. Holdings attribution is calculated GROSS of fees. Had fees been included, returns would have been lower. MSCI EAFE is an unmanaged index and it is not possible to invest directly in an index. Index data is not meant to depict the performance of a particular investment. Companies listed in italics are no longer held in the portfolio.

2. ARM Holdings was purchased by Softbank in September 2016 and we do not own Softbank.

Performance over last five years been roughly in line with the Index

- Strong markets – up 72% in local currency – not best environment given defensive skew.
 - Sector allocation negative over period mainly due to drag from 2-3% residual cash holding.
- Consumer Staples and Information Technology have been high-spots over last 5 years.
 - Heartening that newer members of team have scored successes with likes of Tencent, Shiseido and Keyence.
- Performance hit by underperformance in Energy, and the knock-on effect on other sectors (particularly Industrials).
 - Underestimated relative sensitivity of energy holdings to falling oil prices.
 - Aggravated by impact outside the Energy sector (Vallourec, WorleyParsons, Weir Group).
 - Coverage refreshed in Energy and Industrials with decent early signs.

Combining Compounders and Value Opportunities Should Deliver Outperformance Over the Long Term

- EAFE Index does not care about quality or price
- Both investment approaches, used separately, should give higher returns than the EAFE index in the long term
- Combining the two approaches, subject to price and prospects, should give asymmetric profile and long term outperformance

	HOLD HIGH QUALITY COMPOUNDERS	EXPLOIT VALUE OPPORTUNITIES
RISK / REWARD	<ul style="list-style-type: none"> • Lower Absolute Risk of Companies = Lower Margin of Safety Required • Lower volatility • Smaller universe of potential candidates 	<ul style="list-style-type: none"> • Higher Absolute Risk of Companies = Price and Prospects Critical to Determine Margin of Safety Required • Higher volatility but can be offset by price • Larger universe of potential candidates
BUY DECISION	<ul style="list-style-type: none"> • If bought at a discount to fair value, initial close-up of discount gives good upside • If bought at fair value, underlying compounding drives intrinsic value past fair value over time 	<ul style="list-style-type: none"> • Close-up of discount to fair value or overshoot gives substantial upside • Need constant source of new value opportunities as investment ideas mature
SELL DECISION	<ul style="list-style-type: none"> • Sustained High Returns = Superior Long Term Compounding • Hold unless price gets too expensive 	<ul style="list-style-type: none"> • Initial buying of changed path of returns gives accelerated returns • Normalised Mediocre Returns = Mediocre Long-Term Compounding • Sell when returns normalise and price adjusts to reflect this • Move on to next opportunity

Historically Attractive Risk Return Profile

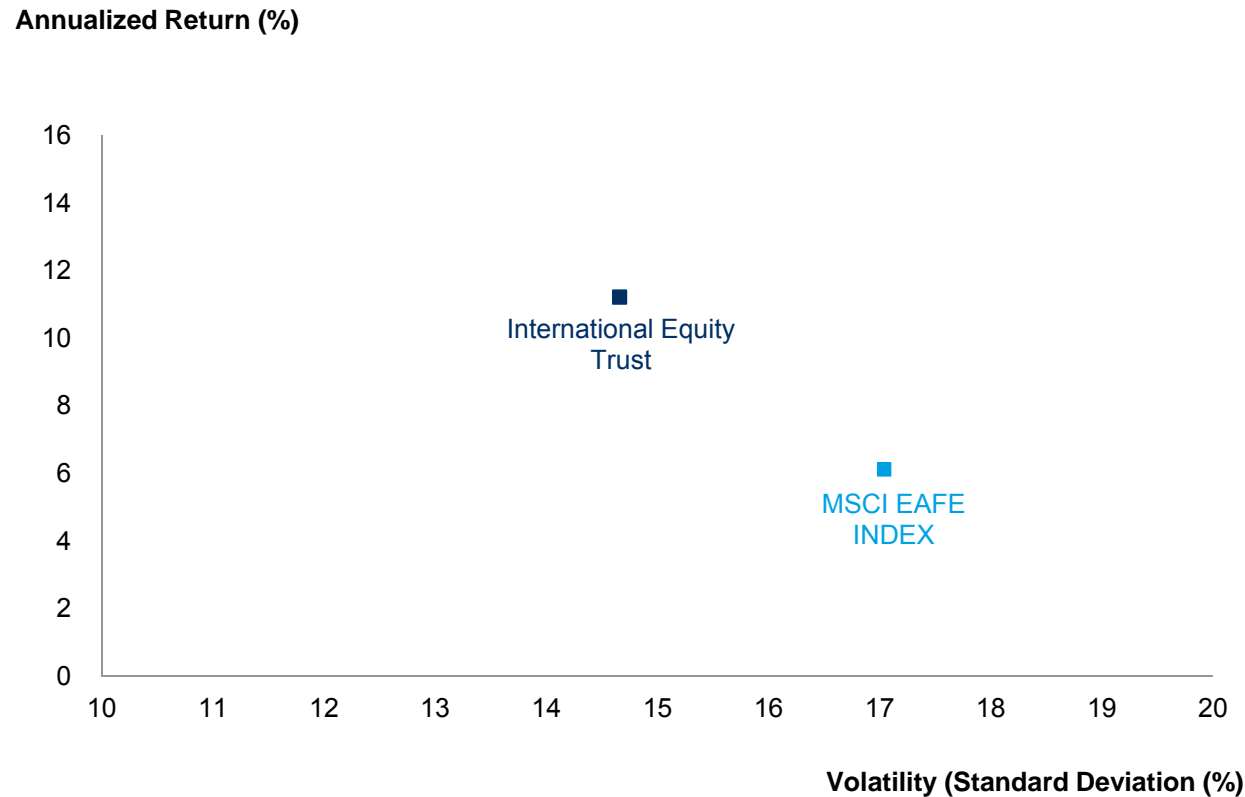

Long-term investment record:

- International Equity, 30 Years

Performance History:

- Attractive upside capture
- Strong downside protection
- Lower volatility

Volatility vs. Return - Since Inception through March 31, 2018⁽¹⁾ - USD

Source: Morgan Stanley Investment Management

1. Chart data is shown from September 30, 1986 to March 31, 2018 and includes the comparison index MSCI EAFE Index. Data updated quarterly. **Past performance is no guarantee of future results.** Performance returns reflect the average annual rates of return. Returns are shown GROSS of investment advisory/management fees, are quoted in USD and include the reinvestment of dividends and income. Had fees been included, returns would have been lower. Each portfolio may differ due to specific investment restrictions and guidelines. Individual results will vary.

Risk Characteristics

Periods Ending March 31, 2018

The Inception Date of the Morgan Stanley International Equity Trust is September 30, 1986

	SINCE INCEPTION		10 YEARS		5 YEARS	
	PORTFOLIO	MSCI EAFE INDEX	PORTFOLIO	MSCI EAFE INDEX	PORTFOLIO	MSCI EAFE INDEX
Annualized Return (%)	11.22	6.12	4.33	2.74	6.42	6.50
Standard Deviation (%)	14.66	17.04	16.32	18.38	11.40	11.91
Beta (x)	0.77	-	0.86	-	0.90	-
Information Ratio	0.66	-	0.34	-	-0.02	-

Tracking Error	7.69	-	4.69	-	4.12	-

Past performance is no guarantee of future results. The International Equity Trust investment returns are GROSS of custody as well as investment Management fees, in USD, and include the reinvestment of all dividends and income. If expenses were deducted, returns would have been lower. Investment returns and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Performance returns are compared to those of an unmanaged index and are considered to be a relevant comparison to the portfolio. The comparison index is the MSCI EAFE Index with Net Dividends reinvested.

Asymmetric Return Profile

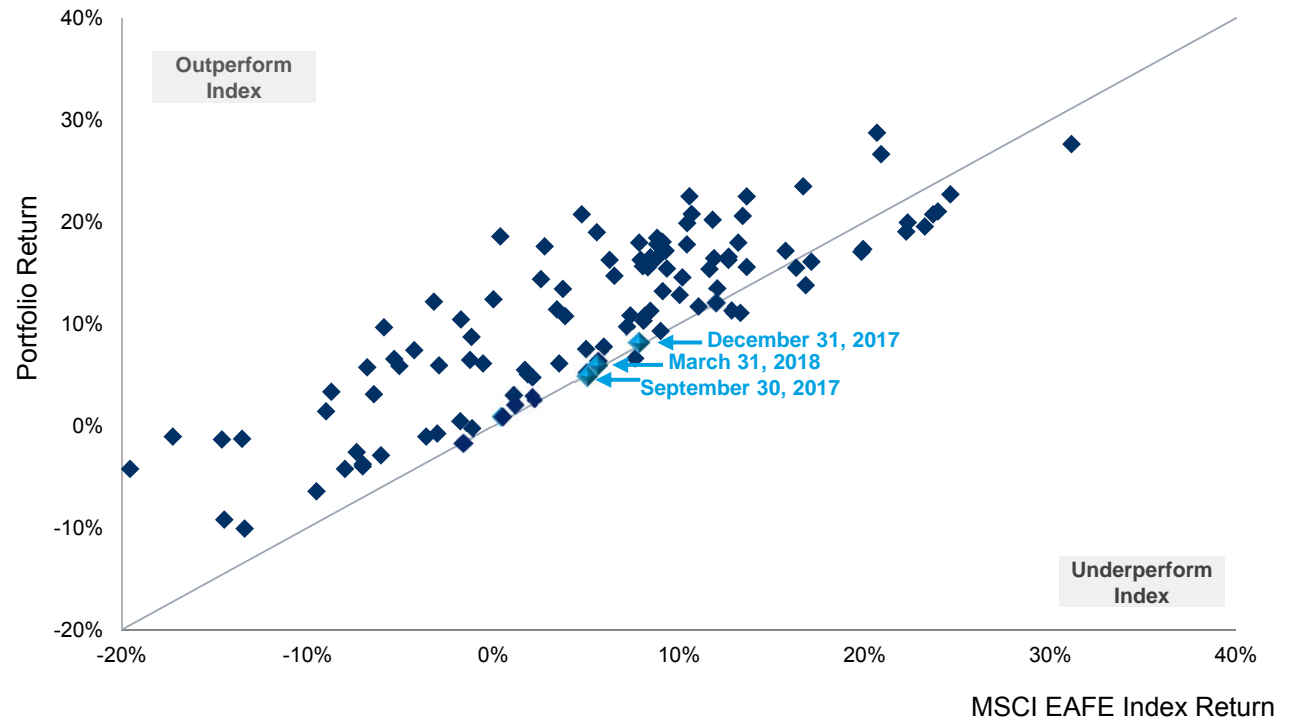

International Equity Representative Account

This strategy has exhibited:

- Asymmetrical performance
- Strong capital preservation characteristics
- Strongest outperformance in down periods
- Weakest relative performance in concentrated, momentum-driven “up” markets

Rolling 3 Year Periods Since Inception through March 31, 2018 – Quarterly Data-USD

The inception date of the International Equity Representative Account is September 30, 1986

Past performance is no guarantee of future results. Performance returns reflect the average annual rates of return. The International Equity Representative Account investment returns are GROSS of custody as well as investment management fees, in USD terms, and assume the reinvestment of all dividends and income. If expenses were deducted returns would have been lower. Investment returns and principal value will fluctuate and an investor’s shares, when redeemed, may be worth more or less than their original cost. Performance returns are compared to those of an unmanaged index and are considered to be a relevant comparison to the portfolio. Comparisons of performance assume the reinvestment of all dividends and income.

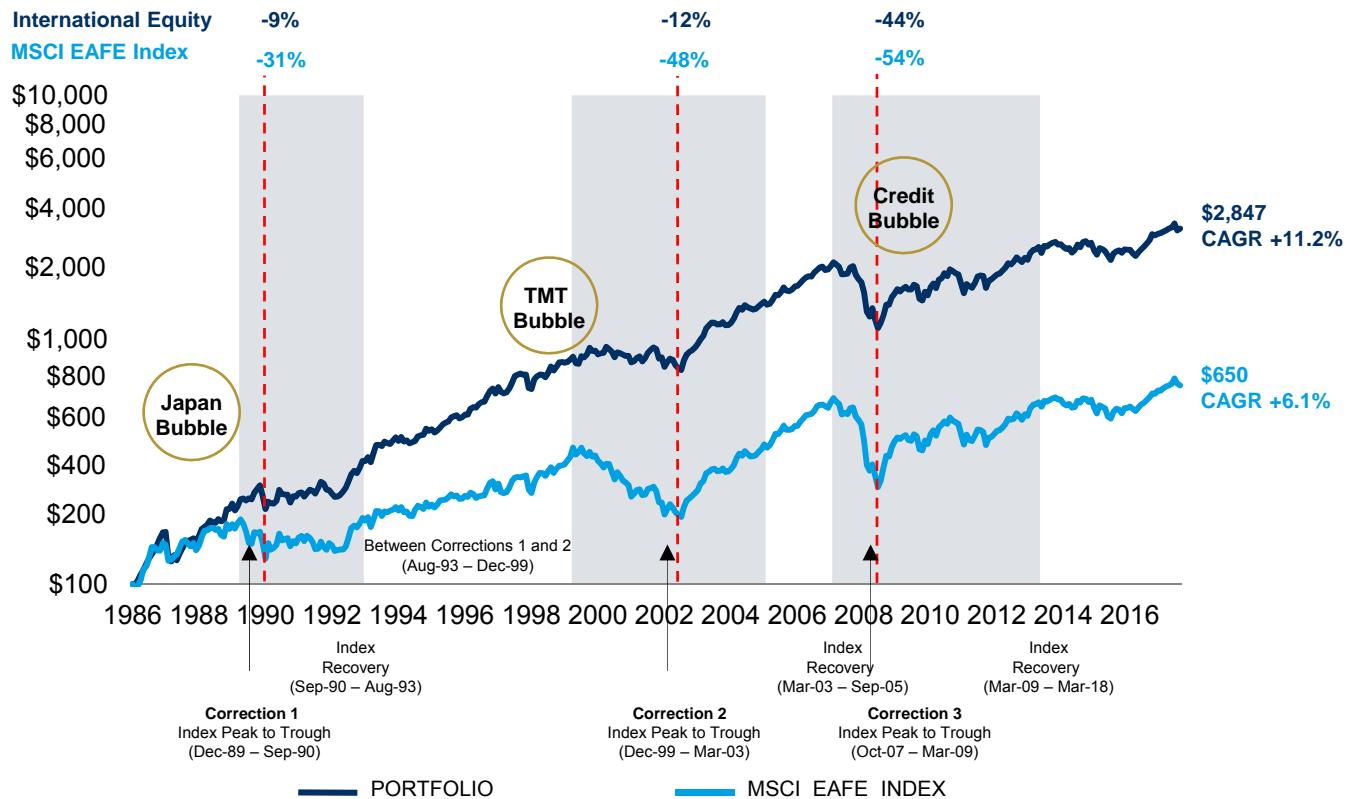

The Power Of Compounding

International Equity Representative Account

- \$100 invested in the portfolio worth \$2,847 vs. \$650 invested in the index as of March 31, 2018
- Our investment discipline has identified and helped avoid the 3 great asset bubbles of the last 26 years

Since Inception through March 31, 2018 – Quarterly Data - USD

The Inception Date of the International Equity Representative Account Is September 30, 1986

Source: MSCI, Morgan Stanley Investment Management; Data as of March 31, 2018. **Past performance is no guarantee of future results.** The returns represent the International Equity Representative Account and are presented GROSS of custody as well as investment management fees. Had fees been included, returns would be lower and results may be less favorable. Returns are quoted in USD terms and include the reinvestment of all dividends and income. The inception date of the International Equity Representative Account is September 30, 1986.

Sean is a portfolio specialist for the International Equity products managed from London and works with North American-based clients. He joined Morgan Stanley in 2012 and has 14 years of investment experience. Prior to joining the firm, Sean was a Vice President and Relationship Manager at Cohen & Steers Capital Management. Previously, he was a client service and sales associate at Robeco Investment Management and a legal assistant at Office of the Corporation Counsel. Sean received a B.A. from the College of the Holy Cross.

Team members may change from time to time.

Risk Considerations

There is no assurance that a portfolio will achieve its investment objective. Portfolios are subject to market risk, which is the possibility that the market values of securities owned by the portfolio will decline. Accordingly, you can lose money investing in this portfolio. Please be aware that this portfolio may be subject to certain additional risks. In general, **equity securities'** values also fluctuate in response to activities specific to a company. Stocks of **small- and medium-capitalization companies** entail special risks, such as limited product lines, markets and financial resources, and greater market volatility than securities of larger, more established companies. Investments in **foreign markets** entail special risks such as currency, political, economic, and market risks. The risks of investing in **emerging market** countries are greater than the risks generally associated with investments in foreign developed countries. **Derivative instruments** may disproportionately increase losses and have a significant impact on performance. They also may be subject to counterparty, liquidity, valuation, correlation and market risks.

There is no guarantee that any investment strategy will work under all market conditions, and each investor should evaluate their ability to invest for the long-term, especially during periods of downturn in the market. In addition, there are important differences in how a strategy is carried out in each of the investment vehicles.

Separate accounts managed according to the Strategy include a number of securities and will not necessarily track the performance of any index. A separately managed account may not be suitable for all investors. Please consider the investment objectives, risks and fees of the strategy carefully before investing. A minimum asset level is required. For important information about the investment manager, please refer to Form ADV Part 2.

Morgan Stanley Investment Management is the asset management division of Morgan Stanley. Morgan Stanley is a full-service securities firm engaged in a wide range of financial services including, for example, securities trading and brokerage activities, investment banking, research and analysis, financing and financial advisory services.

Indices

The **MSCI World Consumer Staples Index** is designed to capture the large and mid-cap segments across 23 Developed Markets (DM) countries around the world. All securities in the indices are classified in the Consumer Staples sectors, respectively, as per the Global Industry Classification Standard (GICS®).

The **MSCI World Index** is a free float adjusted market capitalization weighted index that is designed to measure the global equity market performance of developed markets. The term "free float" represents the portion of shares outstanding that are deemed to be available for purchase in the public equity markets by investors. The performance of the Index is listed in U.S. dollars and assumes reinvestment of net dividends.

The **MSCI EAFE Index (Europe, Australasia, Far East)** is a free float-adjusted market capitalization index that is designed to measure the international equity market performance of developed markets, excluding the US & Canada. The term "free float" represents the portion of shares outstanding that are deemed to be available for purchase in the public equity markets by investors. The MSCI EAFE Index currently consists of 21 developed market country indices. The performance of the Index is listed in U.S. dollars and assumes reinvestment of net dividends.

The **MSCI All Country World Index (ACWI)** is a free float-adjusted market capitalization weighted index designed to measure the equity market performance of developed and emerging markets. The term "free float" represents the portion of shares outstanding that are deemed to be available for purchase in the public equity markets by investors. The performance of the Index is listed in U.S. dollars and assumes reinvestment of net dividends.

The **S&P 500® Index** measures the performance of the large cap segment of the U.S. equities market, covering approximately 75% of the U.S. equities market. The Index includes 500 leading companies in leading industries of the U.S. economy.

Upside is the forecasted dollar amount or percentage increase in the price of an investment. A higher upside means that the stock has more value than is currently reflected in the stock price.

The **Volatility Index (VIX)** is the ticker symbol for the Chicago Board Options Exchange Market Volatility Index, a popular measure of the implied volatility of the S&P 500 index options. It represents one measure of the market's expectation of stock market volatility over the next 30-day period. The VIX is quoted in percentage points and translates, roughly, to the expected movement in the S&P 500 Index over the next 30-day period, which is then annualized.

Glossary

Compound Annual Growth Rate (CAGR) is the year-over-year growth rate of an investment over a specified period.

Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) is essentially net income with interest, taxes, depreciation, and amortization added back to it, and can be used to analyze and compare profitability between companies and industries because it eliminates the effects of financing and accounting decisions.

Free cash flow (FCF) is operating cash flows (net income plus amortization and depreciation) minus capital expenditures and dividends.

Return On Operating Capital Employed (ROOCE) is a ratio indicating the efficiency and profitability of a company's trade working capital. Calculated as: earnings before interest and taxes/property, plant and equipment plus trade working capital (ex-financials and excluding goodwill).

Capital expenditure, or **Capex**, are funds used by a company to acquire, upgrade, and maintain physical assets such as property, industrial buildings, or equipment. Capex is often used to undertake new projects or investments by the firm. This type of financial outlay is also made by companies to maintain or increase the scope of their operations.

Dividend Yield is the ratio between how much a company pays out in dividends each year relative to its share price.

Downside is the negative movement in the price of a security, sector or market. Downside can also refer to economic conditions and it describes periods when an economy has either stopped growing or is shrinking.

Enterprise value measures the market value of a company. It is calculated as market cap plus debt, minority interest and preferred shares, minus total cash and cash equivalents. **Enterprise value to sales (EV/Sales)** compares the enterprise value of a company to the company's sales.

Gross Domestic Product (GDP) is the monetary value of all the finished goods and services produced within a country's borders in a specific time period. It includes all private and public consumption, government outlays, investments and net exports.

Mergers and acquisitions (M&A) is a general term that refers to the consolidation of companies or assets.

Price-Earnings (P/E) is the price of a stock divided by its earnings per share for the past 12 months. Sometimes called the multiple, P/E gives investors an idea of how much they are paying for a company's earning power. The higher the P/E, the more investors are paying, and therefore the more earnings growth they are expecting.

Quantitative easing (QE) is a form of monetary policy in which a central bank purchases government securities or other securities from the market in order to lower interest rates and increase the money supply.

Shiller P/E is a cyclically adjusted price-to-earnings ratio, a valuation measure usually applied to the U.S. S&P 500 equity market. It is defined as price divided by the average of ten years of earnings (moving average), adjusted for inflation. As such, it is principally used to assess likely future returns from equities over timescales of 10 to 20 years, with higher than average Shiller P/E values implying lower than average long-term annual average returns.

Turnover is based on the fund's current prospectus.

Important Information

This communication has been prepared solely for informational purposes and does not constitute an offer or a recommendation to buy or sell any particular security or to adopt any specific investment strategy.

Past performance is no guarantee of future results. Returns may increase or decrease as a result of currency fluctuations. The value of the investments and the income from them can go down as well as up and an investor may not get back the amount invested.

A separately managed account may not be suitable for all investors. Separate accounts managed according to the Strategy include a number of securities and will not necessarily track the performance of any index. Please consider the investment objectives, risks and fees of the Strategy carefully before investing. A minimum asset level is required. For important information about the investment manager, please refer to Form ADV Part 2.
