

Application for Future Land Use Map Amendment

Future Land Use Map Amendment – Large Scale (>10 acres)

Future Land Use Map Amendment – Small Scale (<10 acres)

In accordance with Chapter 163.3187, Florida Statutes, The City of Fort Pierce will consider applications for land use changes on parcels in excess of 10 acres (“Large Scale Amendments”) only twice each calendar year. The City Commission will consider applications for land use changes on parcels less than or equal to 10 acres with a maximum density of 10 units per acres or less at any time during the calendar year. You are encouraged to schedule a pre-application meeting with the planning staff and to submit your application up to three months in advance of the application deadline.

Application submission shall include the following:

● **TRC (*Initial Submission):** One (1) original and (8) paper copies of the application and support documents and provide one (1) electronic copy of the application packet as described below.

● **Planning Board:** One (1) original and (13) paper copies of the application and support documents and provide one (1) electronic copy of the application packet as described below.

● **City Commission:** One (1) original and (11) paper copies of the application and support documents and provide one (1) electronic copy of the application packet as described below.

In addition to a complete application, packets shall include:

- Warranty Deed & Legal Description
- St. Lucie County Property Record Card
- Statement of why there is a need for the proposed future land use map amendment and how the amendment will result in an orderly and logical development pattern; statements how amendment(s) are consistent with Comprehensive Plan; how future land use designation is compatible with future land use designations and existing land uses surrounding the amended lands; identify future land use designations and existing land uses within a ½ mile of the subject property that have the same or greater type of proposed future land use designation; data and analysis to support conclusions.
- Current Survey
- Environmental Study

INTRODUCTION

The 3.86 acre site formerly known as H & S Citrus supports a 23,000 sf structure constructed in 1972, originally built to function as a citrus packing plant. The site is located off Enterprise Road to the west of the Farmers Market in a heavily industrialized/commercial area. Its Future Land Use designation of Industrial (IND-St Lucie County) is not consistent with the property's I-1 Light Industrial zoning district. When the City annexed the property in 2007, the zoning was changed to the city's light industrial category, however, the Future Land Use was mistakenly not changed per policy. Therefore, an application for a small scale land use change to the City of Ft Pierce land use designation of Industrial has been submitted.

The new owner operates a metal recycling facility in Palm Beach County and intends the same use on this site. A zoning confirmation letter issued by Planning staff on June 27, 2018 states, "Per City Code Section 22-22, a metal recycling facility is classified as a Waste-Related Use". In this case, the proposed waste related use will be strictly for metals; consisting of both ferrous and non-ferrous metal such as steel, aluminum and copper. The business does not process used or inoperable vehicles, construction debris or paper goods.

1. Consistency with the Plan

In 2006, when the citrus packing facility was in operation, the City of Ft. Pierce annexed the site from St Lucie County (SLC) into the city. The SLC zoning designation of light industrial was designated as I-1, Light Industrial by the City. The Future Land Use was not changed and therefore, the site retained the SLC FLU category of Industrial (IND). Now the applicant is seeking a conditional use to change the use for a waste-related (metal) recycling facility and must correct the FLU.

2. Zoning and Use

The industrial designation of I-1, Light Industrial is intended for parcels suitable for industrial development that promote employment including light manufacturing and processing facilities. The site meets or exceeds the code regulations in Section 22-34, for the I-1 district. A “waste Related” recycling facility requires a Conditional Use approval.

3. Compatibility with Surrounding Uses

The site is on the west side of the State Farmers Market and surrounded by industrial and service uses, including pipe manufacturing, AT&T, self-service storage facilities and manufacturing & construction related businesses. As previously noted, the SLC future land use was not changed when the annexation took place, thus the site site within the City of Ft. Pierce has a city zoning classification, this application is to remedy the “forgotten” land use change typical when annexation occurs.

The surrounding area is summarized in the aerial and chart below:

Adjacent Land Use & Zoning Summary			
Adjacent Uses	Existing Use	FLU	Zoning
North	Self-storage-outdoor/indoor	I-Industrial	I-1 Light Industrial
South	ATT service yard	I-Industrial	I-1 Light Industrial
East	Contractor yard	I-Industrial	I-1 Light Industrial
West	Vacant industrial	I-Industrial	I-1 Light Industrial

4. Environmental Performance Standards

The proposed recycling facility will not cause smoke, fire, radiation or toxic matter on site. The facility will operate tracked backhoes, bobcats and “grabber” type machinery for loading and unloading of metal from commercial vehicles.

5. Adequate Public Facilities

The existing structure and site was used as a citrus packing facility since 1972 but closed in early 2012 and has remained vacant since then. Water and Sewer capacity for the existing site and uses are comparable in scope to the previously approved use and no new construction will occur on site from the change in use. Drainage for the site is described on the attached Drainage Statement prepared by Jonathan P. Rickitts, Inc. Engineering Consultants. Solid Waste, Parks and Recreation and Fire Rescue will verify that previously approved capacity is consistent with the proposed uses. The applicant will ensure that these agencies are satisfied prior to DRO certification. Traffic generation for the site will remain unchanged and has an insignificant impact on area roadways. Palm Tran has requested a 5' x 15' easement (set aside) for a new bus stop that connects to the Broward Transit System near the corner of 66th and Sandalfoot Blvd. The bus stop is shown on the site plan.

Changed Conditions or Circumstances

There are demonstrated changed conditions or circumstances that necessitate this request as follows:

1. The site was annexed into the City of Ft Pierce in 2007. The zoning was changed from St Lucie County Industrial to the city designation of I-1, Light Industrial; however the SLC future land use designation was not changed. Therefore, this application request is more in the nature of a corrective action to ensure consistency with the city Comprehensive Plan.
2. The citrus packing facility has been closed since 2012 due to the loss of thousands of acres of citrus as well as industry trends that include a downturn in the citrus industry.

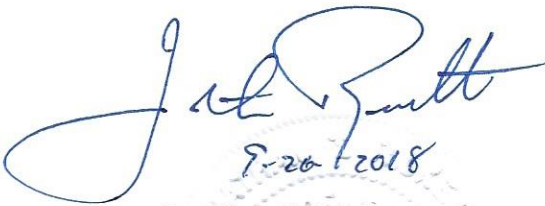

In connection with the above summary and compliance with the Comprehensive Plan, the applicant respectfully requests approval of the Future Land Use Map Amendment from St Lucie County Industrial (IND) to the City of Ft. Pierce category of I-1, Light Industrial.

DRAINAGE STATEMENT

**Prepared for
We Buy Scrap
Located on
A Portion of Lot 28 and 29 of the Plat of
Industrial Subdivision, Plat Book 9, Page 5
St. Lucie County, FL
Section 28, Township 35 South, Range 40 East
September 26, 2018**

This project consists of a change in ownership for the existing warehouse buildings and adjacent asphalt areas for the property located on the above-mentioned property in St. Lucie County. The project consists of two lots whose addresses are 3340 Enterprise Road and 1237 Grose Road, Fort Pierce, Florida. The property presently serves as a packing facility for agricultural produce and was established in 1972. The property is shown on the National Flood Insurance Rate Map, 12111C0189J and has an effective date of 02/16/2012 and is within Zone X or Area of Minimal Flooding.

The proposed use will be for receiving scrap metals for sorting, packaging, and shipping to various metal recyclers. The existing site presently drains east and flows into the existing railroad right-of-way owned by the Florida State Department of Agriculture. No additional increases in buildings or asphalt or other impervious areas are anticipated; therefore, there will be no changes to the existing historic drainage flows or patterns.

Executive Summary

The following summarizes the findings of this assessment. This executive summary must be considered in conjunction with the discussion provided in the body of the report.

Enercon Services, Inc. (ENERCON) was retained by TD Bank, N.A. (hereafter referred to as Client), to perform a Phase I Environmental Site Assessment (ESA) of the property known as We Buy Scrap LLC located at 1237 Grose Road in Fort Pierce, Saint Lucie County, Florida (subject property), as outlined in RIMS Project Number: 18-003704-01-1, authorized by Mr. Christopher Eyre on August 21, 2018. ENERCON performed the ESA in conformance with the Scope of Work and the provisions of the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-13, thereby satisfying United States Environmental Protection Agency's (U. S. EPA) "Standards and Practices for All Appropriate Inquiries (AAI); Final Rule" (40 Code of Federal Regulations Part 312) Federal Register Vol. 78, No. 210, December 30, 2013. Any exceptions to, or deletions from, this practice are described within this report.

Property Description and Observations

The subject property consists of a former citrus processing plant operated by H & S Citrus, which previously provided high end citrus products to fund raising businesses. The subject property is generally located on the northeastern corner of the intersection of Grose Road (to the south) and Enterprise Road (to the west), in Fort Pierce, Saint Lucie County, Florida. The subject property is identified by Saint Lucie County Property Appraiser (SLCPA) under Parcel IDs: 2428-502-0033-000-1 and 2428-502-0035-000-5 and consists of 3.66 acres of commercially developed land. The ownership, address, date of purchase, size, and legal description for each parcel is as follows:

- 2428-502-0033-000-1; H and S Citrus Inc.; 1237 Grose Road; August 9, 1976; 2.42 acres; INDUSTRIAL S/D LOT 28-LESS W 156FT- (2.42 AC) (OR 205-1297: 256-175)
- 2428-502-0035-000-5; George B Brown, Robert E Derry, and Lois S Derry; 3340 Enterprise Road; March 5, 2014; 1.46 acres; INDUSTRIAL S/D SLY 100 FT OF LOT29 (1.46 AC) (OR 712-1970; 3612-657)

The southern parcel of the subject property is developed with a citrus processing plant, originally developed in 1972, comprising a total of 24,217 square feet of building area. The building contains the processing area, as well as office areas, a maintenance area, a cold storage area, and a loading dock area. A 2,100 square foot addition was constructed in 1997. The processing area contains numerous large hydraulically-actuated citrus processing equipment, including large conveyor belts and sorters. The eastern side of the citrus plant is constructed with a large canopy area. The canopy area contains the citrus washing and waxing equipment, including four large (approximately 200 to 300 gallons) polyethylene totes and four 55-gallon polyethylene drums containing various fruit cleaners and detergents, as well as waxing agents. An additional 55-gallon drum was located adjacent to the canopy area and was connected directly to the citrus washing equipment.

Two large (approximately 5,000 gallons each) aboveground storage tanks (ASTs) are located to the northeast of the citrus processing building. The tanks were previously utilized to store the rinse water from the fruit cleaning process. Reportedly, the water was transported off-site via tanker trucks and deposited in a pond located within a citrus grove. The water was then pumped from the pond and sprayed throughout the citrus groves. According to Dr. Deery, the off-site pond underwent assessment and was closed. No hazardous materials were identified in association with the off-site pond. An abandoned tanker trailer was stationed adjacent to the ASTs. The ASTs are also equipped with a concrete containment located at the transfer point of the tanks. No stained soil, dead vegetation, or indications of a release were observed within the vicinity of these ASTs.

An approximate 500-gallon AST previously containing diesel fuel utilized to fuel the tractor trailers that transported the wash water is located adjacent to the wash water ASTs. The diesel fuel tank appeared to be empty; however, ENERCON was unable to confirm if the AST was completely empty. The tank was situated in a concrete secondary containment unit. No staining was observed within the secondary

containment or in the vicinity of the containment structure. A second similarly-sized and constructed AST is located near the wash water tanks. The tank was empty and open. Reportedly, the tank, which previously contained diesel fuel, was emptied and cleaned prior to removal from the concrete secondary containment area and placed in its current location. No stained soil, dead vegetation, or indications of a release were observed within the vicinity of this AST.

Based on a review of available regulatory documentation, no indication of the presence of these ASTs is on file with the Florida Department of Environmental Protection (FDEP). The presence of these ASTs poses a low environmental concern.

The southern parcel is also developed with an unheated single-story storage building, originally constructed in 1992, comprising a total of 2,400 square feet of building space. The storage building contains a large open-air storage area, as well as three enclosed storage areas, accessed via metal roll up doors.

The northern parcel is developed with an office/warehouse building, originally developed in 1967, comprising 2,400 square feet of building area. The building is currently used for storage of files, furniture, and other office equipment.

Additional improvements include a potable water well (not currently used); paved and packed dirt parking areas and drive lanes; and chain link perimeter fencing. The eastern portion of the property is vacant land with native vegetation.

No evidence of Recognized Environmental Conditions (RECs) in connection with the property was identified during the site reconnaissance.

Historical Use

From the historical information reviewed, ENERCON concludes that the subject property was undeveloped land from at least 1950 through the late 1960s, when the subject property was developed with a medium-sized commercial building on the southern portion of the property. The property operated as a citrus processing and packaging facility known as H & S Citrus from 1966 through approximately 2015, when the facility ceased operation due to the quality of citrus being grown in Florida caused by deteriorating growing conditions. The citrus processing plant is presently only utilized for office purposes currently; however, the processing equipment and associated improvements still remain on the subject property.

Based on the information reviewed, it appears that the historical review has not identified evidence of RECs in connection with the subject property's historical use.

Review of Federal and State Record Search

ENERCON's review of the EDR regulatory database report indicates that the subject property is listed on the National Pollutant Discharge Elimination System (NPDES) and Facility Index System (FINDS) researched regulatory databases.

The subject property, identified as H & S Citrus, Inc. Citrus Packing House, is listed on the NPDES database for the issuance of an active industrial wastewater permit under facility identification number FLA014005. The facility is listed as an active, existing, permitted facility for which effluent, reclaimed water, or wastewater residual discharges into the environment and/or monitoring is taking place. The permit was originally issued October 15, 2014 and expires on October 14, 2019. According to the database, the treatment is listed as "screening, settling, tanker truck hauled to sprayfield off-site". According to Dr. Deery, the rinse water from the cleaning and waxing process generates non-hazardous wastewater, is stored in the large on-site ASTs, and then transported off-site via tanker trucks for disposal in an orchard addressed at 4910 Ralls Road in Fort Pierce, which eventually dispersed the wastewater onto the orchard. The subject property is listed on the FINDS database under Registry ID: 110027959760 for the aforementioned NPDES listing. No violations or releases were reported. These listings pose a low environmental concern to the subject property.

Additional properties which appeared on local, state, or federally published lists of sites that use or have had releases of hazardous materials, are of sufficient distance and/or situated cross/down-gradient to the subject property, such that impact to the subject property is not likely.

Conclusions

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527 of the subject property. Any exceptions to, or deletions from, this practice are described in the Deviation section of this report.

This assessment has revealed no evidence of RECs, Historical RECs, Controlled RECs, Vapor Encroachment Conditions or environmental regulatory non-compliance issues in connection with the subject property.

This assessment has revealed evidence of the following Business Environmental Risks in connection with the subject property:

- Hazardous materials are still present on the currently closed citrus processing facility, including a diesel fuel AST and various drums and totes containing citrus washing and waxing chemicals, as well as numerous containers containing petroleum products.
- Based on the construction date of the subject property (late 1960s), the presence of asbestos is likely. Asbestos sampling was not conducted as part of this assessment. ENERCON observed several areas of damaged suspect asbestos-containing building materials during the site reconnaissance. The damaged building materials consist of acoustic ceiling tiles and fireproofing insulation.

This assessment has revealed evidence of the following *de minimis* conditions in connection with the subject property:

- Stained asphalt was observed throughout the subject property.
- Stained concrete flooring in the maintenance area of the citrus processing building.

RECOMMENDATION

ENERCON recommends no additional assessment.

ENERCON recommends the removal and disposal of all hazardous materials on the subject property by a properly certified hazardous waste disposal company, if they are not planned for future use.

Should significant renovation or demolition be planned at the subject property, an asbestos demolition survey should be conducted by a licensed professional in accordance with local, state, and federal regulations.

1.0 Introduction

Enercon Services, Inc. (ENERCON) was retained by TD Bank, N.A. (hereafter referred to as Client), to perform a Phase I Environmental Site Assessment (ESA) of the property known as We Buy Scrap LLC located at 1237 Grose Road in Fort Pierce, Saint Lucie County, Florida (subject property), as outlined in RIMS Project Number: 18-003704-01-1, authorized by Mr. Christopher Eyre on August 21, 2018. ENERCON performed the ESA in conformance with the Scope of Work and the provisions of the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-13, thereby satisfying United States Environmental Protection Agency's (U. S. EPA) "Standards and Practices for All Appropriate Inquiries (AAI); Final Rule" (40 Code of Federal Regulations Part 312) Federal Register Vol. 78, No. 210, December 30, 2013. Any exceptions to, or deletions from, this practice are described within this report.

1.1 Purpose

The purpose of this Phase I ESA is to identify, to the extent feasible pursuant to the ASTM Practice E1527-13 and AAI, Final Rule 40 CFR Part 312, recognized environmental conditions (REC) in connection with the subject property.

The ASTM Standard was created "...in an effort to define good commercial and customary practice in the United States of America for conducting an environmental site assessment...." REC means "*the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.*" The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not subject the subject property to an enforcement action if brought to the attention of appropriate governmental agencies.

A historical REC (HREC) is defined as "*a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., property use restrictions, activity and use limitations [AUL], institutional controls, or engineering controls). Before calling the past release an HREC, the Environmental Professional (EP) must determine whether the past release is a REC at the time the Phase I ESA is conducted (e.g., if there has been a change in the regulatory criteria).*"

A controlled REC (CREC) is defined as "*a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a no further action [NFA] letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, AULs, institutional controls, or engineering controls).*" (ASTM 2013).

This practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner defense to Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability: that is, the practices that constitute "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in 42 USC 9601(35)(B).

ENERCON understands that the subject property is either being bought, sold, or refinanced and that the Phase I ESA is being performed to satisfy the requirement for CERCLA "innocent purchaser" defense or to secure financing.

Pursuant to ASTM E 1527-13, an ESA meeting or exceeding this practice and for which the information was collected or updated within one year prior to the date of acquisition of the property or the date of the

intended transaction may be used provided that the following components of the inquiries were conducted or updated within 180 days of the date of purchase or the date of the intended transaction:

- (i) interviews with owners, operators, and occupants;
- (ii) searches for recorded environmental cleanup liens;
- (iii) reviews of federal, tribal, state, and local government records;
- (iv) visual inspections of the property and of adjoining properties; and
- (v) the declaration by the environmental professional responsible for the assessment or update.

1.2 Scope of Services (Reliance)

To facilitate the understanding of this report, the Scope-of-Services are divided into several tasks; the physical setting data, the historical information review, regulatory records review, site and adjoining property reconnaissance, and findings and conclusions.

Physical setting data are typically consulted when conditions have been identified in which potentially hazardous materials or petroleum related products are likely to migrate to the subject property, from the subject property, or within the subject property into the groundwater or soil. Typical concerns include contaminated soil, groundwater, surface water, and vapor. At a minimum, a current United States Geological Survey (USGS) 7.5 Minute Topographic Map detailing the subject property area is evaluated. As noted by the ASTM standard, other physical setting sources, revealing additional hydrogeologic, hydrologic, and soil conditions, may be included as necessary to meet assessment objectives.

The historical information review portion is performed in order to develop a history of the site and adjoining properties to identify past uses suggesting RECs that may pose an environmental concern to the subject property. In general accordance with ASTM guidelines, obvious uses of the subject property are researched from the present, back to the subject property's first developed use, or back to 1940, whichever is earlier. This task involves discretionary review of as many of the ASTM standard historical sources as necessary and reasonably ascertainable to meet this objective.

Federal and state databases compiled by an environmental database company are reviewed to identify registered or documented facilities which may present an environmental concern to the subject property. Reasonably ascertainable standard regulatory sources are reviewed for the subject property and vicinity within minimum search distances, as detailed in the ASTM standard. At the discretion of the EP, pertinent regulatory files and/or records associated with listings for the subject property and adjoining properties are reviewed.

Additionally, record sources may be reviewed to enhance or supplement the federal and state database information. Reasonably ascertainable and practically reviewable sources may include city and/or county department of health records, local fire department records, local planning and building inspection records, local regional pollution control or environmental agency records, city, county or state water agency files, and local electric utility records.

A site reconnaissance is performed to obtain and record obvious and apparent visual evidence suggesting RECs to the extent not obstructed by bodies of water, adjoining buildings, or other external or interior barriers or obstacles. Site features, such as readily accessible adjoining public thoroughfares and on-site roads and paths and accessible common areas expected to be used by occupants or the public, are identified. Inspections of large tracts of land are performed utilizing grid patterns or systematic approaches, and assessments of developed sites include a visual inspection of a representative sample of occupied spaces. Current site uses are documented, paying particular attention to uses involving the treatment, storage, disposal or generation of hazardous substances or petroleum products. Apparent evidence of past or present underground storage tanks (UST) or aboveground storage tanks (AST), surface stains, distressed vegetation, electrical transformers, land scars, drums, pits, ponds, lagoons, solid waste, waste water, septic systems, wells or obvious evidence of improper use or disposal of toxic or hazardous materials are documented. The reconnaissance includes observations of adjoining properties to identify general land use and apparent potential RECs. These observations are made from public access right-of-ways.

ENERCON personnel makes reasonable attempts to interview owners and occupants of the subject property, past owners to the extent that they have been identified, as well as local government personnel, to obtain information suggesting RECs which may present concerns to the subject property.

In addition to ASTM E1527-13, ENERCON recognizes ASTM Standard Guide for Vapor Encroachment Screening (VES) on Property Involved in Real Estate Transactions (ASTM E2600-15) as an industry-accepted guideline for using Phase I ESA-type information to determine if a Vapor Encroachment Condition (VEC) exists at the subject property. Information compiled through completion of the above describe tasks (current and past property information, chemical use, government records, contaminated plume migration, significant subsurface conduits, groundwater depth and flow direction, and soil, geological, and contaminant characteristics) is used to conduct the VES.

VES consists of reviewing the Phase I ESA-type information combined with the application of professional judgment. ENERCON evaluates regulatory databases to determine if there are known or suspect contaminated sites within a minimum search distance of the target property. Further, ENERCON attempts to determine whether soil and/or groundwater has been impacted within the critical distance. Again, this screen is conducted using information available from the Phase I ESA investigation.

This Phase I ESA was prepared by ENERCON specifically for use by the Client and the Small Business Administration. Use of or reliance upon this information by any other party without express written permission granted by ENERCON and the Client is not authorized and is completely at the risk of the user.

1.3 Deviations (Limitations, Exceptions and Data Gaps)

The intent of this investigation is to reduce uncertainty within reasonable limits of time and cost. No Phase I ESA can completely eliminate uncertainty regarding the potential for RECs in connection with a subject property.

Observations are based upon conditions on the specific date and time of the site reconnaissance. These observations are typically unable to address conditions of subsurface soil, groundwater, vapor, USTs, neighboring properties, and the like, unless specifically mentioned. It is not the purpose of this Phase I ESA to determine the actual presence, or degree or extent of contamination (if any) at the subject property. Unless specifically noted within this report, this Phase I ESA does not include testing, coring, or sampling and laboratory analysis to address groundwater, soil, vapor, or extraneous materials contamination in or on the subject property.

ENERCON makes no warranties or guarantees as to the accuracy or completeness of information obtained from or compiled by others. Information may also exist which was beyond the scope of this investigation, or was not provided to ENERCON, that may have an impact on the conclusions of this Phase I ESA.

This Phase I ESA has been conducted and prepared in accordance with generally accepted practices and procedures exercised by reputable professionals under similar circumstances. ENERCON makes no other warranties or guarantees, either expressed or implied, as to the findings, opinions, or recommendations contained in the report, or as to the existence or non-existence of RECs at the subject property.

ASTM E1527-13 directs that the Phase I ESA identify and comment on significant data gaps that affect the ability of the Environmental Professional to identify RECs. A data gap is defined as a lack of or inability to obtain information required despite good-faith efforts to gather information. Data gaps may result from incompleteness in any of the activities required by this practice. Data failure, or failure to achieve the historical research objectives even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful, is one type of data gap. A data gap is only significant if other information and/or professional experience raises reasonable concerns involving the data gap.

1.3.1 Data Gaps Encountered

During the course of ENERCON's assessment, historical data gaps/data failures were encountered. Data gaps/data failures include a lack of readily available historical sources at five-year intervals to 1940 and ENERCON has not received a response for the request for information from several municipal agencies. Historical aerial photographs, topographic maps, city directories, and municipal records were used to evaluate the subject property's historical use dating to 1944, with a clear history of development and site use. In cases where data gaps/data failures were encountered, professional judgment was used to determine the likelihood of a REC; therefore the data gaps are not considered significant.

2.0 Site Reconnaissance

Mr. Christopher Kling of ENERCON performed a site reconnaissance of the subject property as well as the adjoining properties on September 10, 2018. The reconnaissance consisted of visual observations during a walking tour of the property and on-site improvements. The site reconnaissance tasks included:

- Walking the perimeter and interior portions of the property;
- Walking around on-site improvements; and
- Walking the interior of the buildings.

A site map and photographs are included in the appendix section of this report.

ENERCON was accompanied by, and interviewed, Dr. Robert Deery, President of H & S Citrus, Inc., the current tenant of the property, during the site reconnaissance.

2.1 Property Description and Observations

The subject property consists of a former citrus processing plant operated by H & S Citrus, which previously provided high end citrus products to fund raising businesses. The subject property is generally located on the northeastern corner of the intersection of Grose Road (to the south) and Enterprise Road (to the west), in Fort Pierce, Saint Lucie County, Florida. The subject property is identified by Saint Lucie County Property Appraiser (SLCPA) under Parcel IDs: 2428-502-0033-000-1 and 2428-502-0035-000-5 and consists of 3.66 acres of commercially developed land. The ownership, address, date of purchase, size, and legal description for each parcel is as follows:

- 2428-502-0033-000-1; H and S Citrus Inc.; 1237 Grose Road; August 9, 1976; 2.42 acres; INDUSTRIAL S/D LOT 28-LESS W 156FT- (2.42 AC) (OR 205-1297: 256-175)
- 2428-502-0035-000-5; George B Brown, Robert E Derry, and Lois S Derry; 3340 Enterprise Road; March 5, 2014; 1.46 acres; INDUSTRIAL S/D SLY 100 FT OF LOT29 (1.46 AC) (OR 712-1970; 3612-657)

The subject property's land use code is designated as 4400 and 4100 to describe its commercial use. The latitude and longitude of the subject property is 27.397436 North, -80.324764 West.

The southern parcel of the subject property is developed with a citrus processing plant, originally developed in 1972, comprising a total of 24,217 square feet of building area. The building contains the processing area, as well as office areas, a maintenance area, a cold storage area, and a loading dock area. A 2,100 square foot addition was constructed in 1997. The processing area contains numerous large hydraulically-actuated citrus processing equipment, including large conveyor belts and sorters. The two-story structure is constructed with a concrete slab-on-grade foundation; CMU load bearing walls; a low slope (flat) roof typically covered with standing seam metal roof covering; and painted CMU and corrugated metal panel exterior facades. Interior finishes consist of gypsum board walls; gypsum board ceilings and cellulose based suspended acoustic tile ceilings and open web metal joists in warehouse areas; and tile or concrete floors.

The eastern side of the citrus plant is constructed with a large canopy area. The canopy area contains the citrus washing and waxing equipment, including four large (approximately 200 to 300 gallons) polyethylene totes and four 55-gallon polyethylene drums containing various fruit cleaners and detergents, as well as waxing agents. An additional 55-gallon drum was located adjacent to the canopy area and was connected directly to the citrus washing equipment.

Two large (approximately 5,000 gallons each) aboveground storage tanks (ASTs) are located to the northeast of the citrus processing building. The tanks were previously utilized to store the rinse water from the fruit cleaning process. Reportedly, the water was transported off-site via tanker trucks and deposited in a pond located within a citrus grove. The water was then pumped from the pond and sprayed throughout the citrus groves. According to Dr. Deery, the off-site pond underwent assessment

and was closed. No hazardous materials were identified in association with the off-site pond. An abandoned tanker trailer was stationed adjacent to the ASTs. The ASTs are also equipped with a concrete containment located at the transfer point of the tanks. No stained soil, dead vegetation, or indications of a release were observed within the vicinity of these ASTs.

An approximate 500-gallon AST previously containing diesel fuel utilized to fuel the tractor trailers that transported the wash water is located adjacent to the wash water ASTs. The diesel fuel tank appeared to be empty; however, ENERCON was unable to confirm if the AST was completely empty. The tank was situated in a concrete secondary containment unit. No staining was observed within the secondary containment or in the vicinity of the containment structure. A second similarly-sized and constructed AST is located near the wash water tanks. The tank was empty and open. Reportedly, the tank, which previously contained diesel fuel, was emptied and cleaned prior to removal from the concrete secondary containment area and placed in its current location. No stained soil, dead vegetation, or indications of a release were observed within the vicinity of this AST.

Based on a review of available regulatory documentation, no indication of the presence of these ASTs is on file with the Florida Department of Environmental Protection (FDEP). The presence of these ASTs poses a low environmental concern.

The southern parcel is also developed with an unheated single-story storage building, originally constructed in 1992, comprising a total of 2,400 square feet of building space. The storage building contains a large open-air storage area, as well as three enclosed storage areas, accessed via metal roll up doors. The storage building is constructed with a concrete slab-on-grade foundation; CMU load bearing walls; a low slope (flat) roof covered with a standing seam metal roof covering; and painted CMU exterior facades. Interior finishes consist of unfinished concrete walls and floors and open ceilings.

The northern parcel is developed with an office/warehouse building, originally developed in 1967, comprising 2,400 square feet of building area. The building is currently used for storage of files, furniture, and other office equipment. The storage building is constructed with a raised CMU foundation; steel framing; a low slope (flat) roof covered with a standing seam metal roof covering; and metal panel exterior facades. Interior finishes consist of gypsum board walls; gypsum board ceilings and cellulose based suspended acoustic tile ceilings and open web metal joists in the warehouse area; and carpeted or tile floors.

Additional improvements include a potable water well (not currently used); paved and packed dirt parking areas and drive lanes; and chain link perimeter fencing. The eastern portion of the property is vacant land with native vegetation.

No foundations, ruins, or indications of previous structures were observed. No dry wells, sinkholes, leaching pools, discharge pipes, or lagoons were observed on the subject property at the time of ENERCON's site reconnaissance.

Stained asphalt was observed throughout the subject property. The observed staining is typical of a commercial parking lot and is considered a *de minimis* condition.

The former use of the subject property as a citrus processing plant is identified as a high risk business, as defined by the North American Industry Classification System (NAICS), under 2002 NAICS Code 311991 Perishable Prepared Food Manufacturing.

The subject property is located within a commercially developed area. The subject property is bound to the north by a multi-tenant industrial flex building; to the east by railroad tracks, followed by undeveloped land; to the south by Grose Road, followed by a telecommunications company's maintenance facility; to the southwest by a moving company; and to the west by Enterprise Road, followed by undeveloped land.

No evidence of RECs in connection with the property was identified during the site reconnaissance.

2.1.1 Storage Tanks

ENERCON's site reconnaissance revealed no evidence of past or present USTs, such as fill caps or vent pipes, on the subject property. No unusual ground conditions, which might indicate the presence of USTs, waste oil tanks, hydraulic lifts, or other obvious environmental concerns, were observed on the subject property during ENERCON's site reconnaissance.

Two large (approximately 5,000 gallons each) aboveground storage tanks (ASTs) are located to the northeast of the citrus processing building. The tanks were previously utilized to store the rinse water from the fruit cleaning process. Reportedly, the water was transported off-site via tanker trucks and deposited in a pond located within a citrus grove. The water was then pumped from the pond and sprayed throughout the citrus groves. According to Dr. Deery, the off-site pond underwent assessment and was closed. No hazardous materials were identified in association with the off-site pond. An abandoned tanker trailer was stationed adjacent to the ASTs. The ASTs are also equipped with a concrete containment located at the transfer point of the tanks. No stained soil, dead vegetation, or indications of a release were observed within the vicinity of these ASTs.

An approximate 500-gallon AST previously containing diesel fuel utilized to fuel the tractor trailers that transported the wash water is located adjacent to the wash water ASTs. The diesel fuel tank appeared to be empty; however, ENERCON was unable to confirm if the AST was completely empty. The tank was situated in a concrete secondary containment unit. No staining was observed within the secondary containment or in the vicinity of the containment structure. A second similarly-sized and constructed AST is located near the wash water tanks. The tank was empty and open. Reportedly, the tank, which previously contained diesel fuel, was emptied and cleaned prior to removal from the concrete secondary containment area and placed in its current location. No stained soil, dead vegetation, or indications of a release were observed within the vicinity of this AST.

Based on a review of available regulatory documentation, no indication of the presence of these ASTs is on file with the Florida Department of Environmental Protection (FDEP). The presence of these ASTs poses a low environmental concern.

According to 40 C.F.R Part 112, Subpart A, any facility maintaining an above ground storage capacity of hazardous liquid greater than 1,320 U.S. gallons requires a Spill Prevention, Control and Countermeasure (SPCC) Plan. Due to the lack of storage of liquid hazardous materials greater than this amount, the subject property is not governed by SPCC regulations.

2.1.2 Drums and Containers

The eastern side of the citrus plant is constructed with a large canopy area. The canopy area contains the citrus washing and waxing equipment, including four large (approximately 200 to 300 gallons) polyethylene totes and four 55-gallon polyethylene drums containing various fruit cleaners and detergents, as well as waxing agents. An additional 55-gallon drum was located adjacent to the canopy area and was connected directly to the citrus washing equipment.

The maintenance area located within the citrus processing plant, utilized for maintenance of the citrus processing equipment, contains various cleaners, oils, lubricants, and solvents, generally in containers of one gallon or less. The products are typically stored in manufacturers original containers. The area also contains approximately eight 5-gallon plastic pails and one 55-gallon polyethylene drum containing new hydraulic oils, used in the citrus processing equipment. A minor amount of staining was located on the concrete floor in the maintenance area. No seams in the concrete or drains were observed in the maintenance area. This staining is considered to be a *de minimis* condition. Additionally, several 5-gallon pails and one-gallon containers containing hydraulic fluids, cleaners, and detergents in manufacturers containers were observed in the storage area within the enclosed locked areas. No leaks or staining were observed in the vicinity of the containers. When used, stored, and disposed of in the manner for which they are intended, small quantities of petroleum-based maintenance products and other types of cleaners and detergents such as those observed on the subject property, do not ordinarily represent a significant environmental concern.

No other hazardous substance or petroleum product containers were observed on the subject property at the time of ENERCON's site reconnaissance.

No other drums were observed on the subject property at the time of ENERCON's site reconnaissance.

No unidentified substance containers were observed on the subject property at the time of ENERCON's site reconnaissance.

2.1.3 Wastestream Generation, Storage, and Disposal

The subject property is no longer utilized for citrus processing; therefore, no waste is currently generated or disposed of on the subject property.

No significant quantity of solid waste or evidence of landfills was observed during ENERCON's site reconnaissance. However, ENERCON observed the presence of one abandoned steel AST located on the northeastern side of the subject property, as well as numerous plastic citrus crates discarded throughout the subject property.

2.1.4 Stains or Corrosion/Pools of Liquid

Stained asphalt was observed throughout the subject property. The observed staining is typical of a commercial parking lot and is considered a *de minimis* condition.

A minor amount of staining was located on the concrete floor in the maintenance area. No drains or seams in the concrete were observed in the maintenance area. This staining is considered to be a *de minimis* condition.

No corrosion, stained soil, or pools of liquid were observed on the subject property at the time of ENERCON's site reconnaissance.

2.1.5 Odors

No unusual odors were noted during ENERCON's site reconnaissance.

2.1.6 Polychlorinated Biphenyl

Electrical transformers are a potential source of environmental concern due to the possible presence of polychlorinated biphenyl (PCB)-containing cooling oils used in some units. Equipment containing hydraulic oil may also be PCB-containing. No transformers were observed on the subject property. Pole-mounted electrical transformers are located in the southern adjoining Department of Transportation (DOT) Right-Of-Way (ROW). The transformers appear to be in good condition, with no visual signs of leaking or staining.

The citrus processing plant building contains numerous large hydraulically-actuated machines used in the processing of the citrus. Some machines are assumed to be the original equipment installed when the citrus processing plant was originally developed in 1972, prior to the ban on PCBs in 1979. No significant leaks or releases were observed or reported.

No other potential sources of PCB-containing equipment (i.e. hydraulic equipment such as automotive lifts, trash compactors, or elevators) were observed on the subject property at the time of ENERCON's site reconnaissance.

2.1.7 Heating and Cooling

Heating, ventilation and air-conditioning (HVAC) service to the office area and cold storage area of the citrus processing building, and the office area of the warehouse building, is provided by electrically powered, split system HVAC units with pad-mounted condenser units. No HVAC system services the storage building.

No evidence of prior use of fuel oil for heating purposes was observed during the site visit.

2.1.8 Waste and Storm Water

No drains or sumps were observed on the subject property at the time of ENERCON's site reconnaissance.

The subject property is no longer utilized for citrus processing; therefore, no waste water is generated.

Surface water runoff is generally expected to follow the engineered grades on the subject property and flow in the southern and western directions toward the adjoining streets.

2.1.9 Pits, Ponds, or Lagoons

No pits, ponds, lagoons, or other surface waters were observed on the subject property.

2.1.10 Stressed Vegetation

No stressed vegetation was observed on the subject property.

2.1.11 Wells

A previous potable water well is located along the northern elevation of the citrus processing building. Construction details, i.e. well depth, screening interval, etc. was not provided. According to Dr. Deery, potable water service to the property was switched to the municipal domestic water system over 15 years ago.

No other wells (potable water, irrigation, or dry wells) were observed during ENERCON's site reconnaissance. No monitoring or injection wells or indications of remedial activities were observed on the subject property at the time of the site visit.

2.1.12 Oil and Gas Wells and Mine Shafts

No evidence of oil wells, gas wells, mine shafts or related activities was noted on the subject property.

2.1.13 Railroad Spurs/Electrical Towers

Railroad tracks are located adjoining to the east. No electrical towers were observed during ENERCON's site reconnaissance.

2.1.14 Pesticide/Herbicide Application

No evidence of misuse or misapplication of pesticides, herbicides, or fertilizers was observed.

2.1.15 Septic Systems

No evidence of septic systems was observed or reported during ENERCON's site reconnaissance. The subject property is reportedly connected to the municipal sanitary waste system.

2.1.16 Utility Providers

Sanitary Sewer	Fort Pierce Utilities Authority
Domestic Water	Fort Pierce Utilities Authority
Electric Service	Fort Pierce Utilities Authority
Natural Gas	Not supplied to the subject property

No alternatively fueled power generators are present.

2.2 Surrounding Properties

ENERCON performed an area reconnaissance to identify obvious visual indications of present or past activities that have or could have contaminated the subject property. The area reconnaissance was conducted by automobile, and/or on foot, unless otherwise noted. The general area consists primarily of commercial use.

The following adjoining properties were observed:

Direction From Site	Occupant	Use	Comments
North	Multi-tenant industrial flex building	Commercial/Industrial	Multi-tenant light industrial flex building addressed at 3338 Enterprise Road
East	Undeveloped	Undeveloped	Railroad tracks, followed by undeveloped, unaddressed land
South	BellSouth	Commercial	Grose Road, followed by a maintenance facility for a telecommunications company addressed at 3402 Enterprise Road
Southwest	Interstate Moving and Storage	Commercial	Moving company addressed at 1270 Grose Road
West	Undeveloped land	Undeveloped	Enterprise Road, followed by undeveloped, unaddressed land

Environmentally sensitive businesses identified on the adjoining properties are discussed in Section 5.1 Review of Agency Records Search.

3.0 Physical Setting

ENERCON reviews available sources of information in regard to the geology and hydrology of the subject property and surrounding area. The purpose of this review is to evaluate the sensitivity of the hydrogeology to potential contamination from sources either on or near the property. This section discusses the topography, regional geology, soil conditions, and hydrologic conditions of the subject property.

3.1 Topography

The subject property's physical setting is researched using a USGS 7.5 Minute Topographic Quadrangle Map relevant to the subject property. The USGS 7.5 Minute Quadrangle Map has an approximate scale of one inch equals 2000 feet, and shows physical features such as wetlands, roadways, mines, and buildings. The USGS 7.5 Minute Quadrangle Map is used as the Standard Physical Setting Source, and is sufficient as a single reference. An excerpt of this map is included as the Site Location Map.

On the 5656797 Fort Pierce, Florida Quadrangle Map, the subject property and surrounding properties are illustrated as undeveloped land. The subject property and adjoining properties are not located within 100- or 500-year flood zones. No wetlands, mines, or wells are illustrated on the subject property or adjoining properties. The elevation of the subject property is approximately 14 feet above mean sea level with a slightly sloping gradient toward the east-northeast. (USGS 2012).

3.2 Geology

According to the 1999 geologic map of the State of Florida, the subject property is underlain by the Cenozoic Era, Quaternary System, Pleistocene Series, Anastasia Formation (Qa). The site is part of the Atlantic Coastal Ridge that is underlain by the Anastasia Formation from St. John's County southward to Palm Beach County. The Anastasia Formation generally is recognized near the coast but does extend inland as much as a few miles in the St. Lucie and Martin Counties. The Anastasia Formation is composed of interbedded sands and coquina limestones. The most recognized facies of the Anastasia sediments is an organish-brown, unindurated to moderately indurated, coquina (whole or fragmented) mollusk shells with a matrix of sand cemented by sparry calcite. The sediments are light gray to tan and orangish-brown, unconsolidated to moderately indurated, unfossiliferous to very fossiliferous beds. The Anastasia Formation forms a part of the surficial aquifer system.

3.3 Soil Conditions

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) is responsible for collecting and maintaining soil survey information for privately owned lands throughout the United States. Environmental Data Resources, Inc. (EDR) extracts pertinent information from this database and provides a Physical Source Summary (PSS) of the subject property. According to the site-specific summary report, the major soil component underlying the subject property is defined as Waveland fine sand.

Waveland fine sand is a Class B/D, poorly drained soil. The soil has a high corrosion potential and is not hydric. The depth to the water table is greater than 31 inches. The soils are fine sands from 0 to 3 inches below land surface (bls); sand from 3 to 31 inches bls; loamy sand from 31 to 53 inches bls; and sand from 53 to 79 inches bls.

3.4 Hydrologic Conditions

Local groundwater flow direction can be influenced by several factors and may not conform to the reported regional pattern. Surface topography, hydrology, characteristics of the local soil, and nearby wells may all influence local groundwater flow direction and velocity. Since the subject property has had no previously reported contamination problems, no site-specific data was available. Therefore, the resources and information reviewed by ENERCON did not specifically address measured groundwater

gradient or groundwater flow direction for the subject property. However, based on the topography of the subject property, groundwater is anticipated to flow toward the east-northeast.

The major source of groundwater in Florida is the Floridan Aquifer System. The Floridan aquifer is one of the highest producing aquifers in the world. It is found throughout Florida and extends into the southern portions of Alabama, Georgia, and South Carolina. This aquifer system is comprised of a sequence of limestone and dolomite, which thickens from about 250 feet in Georgia to about 3000 feet in south Florida. The Floridan aquifer system has been divided into an upper and lower aquifer separated by a unit of lower permeability. The upper Floridan aquifer is the principal source of water supply in most of north and central Florida. In the southern portion of the state, where it is deeper and contains brackish water, the aquifer has been used for the injection of sewage and industrial waste. Groundwater flow is generally from highs near the center of the state towards the coast.

4.0 Historical Review Information

The objective of the site historical review is to develop an understanding of the history of the previous uses of the site and surrounding area, in an effort to help identify the likelihood of past uses or activities resulting in RECs in connection with the site. As defined by the ASTM Standard, a Standard Historical Source is considered complete if the information contained within the source provides the required information back to 1940, or to the first developed use (including agricultural). Ideally, the information should be available in either 5-year intervals or site milestone events (such as initial construction activities, demolition activities, etc.). However, available public and private historical sources do not always fulfill this goal, in which case the closest approximation is made based upon the sources readily available at the time of historical review. The historical review consisted of a search of various public and private Standard Historical Sources, as detailed in the sections below.

Aerial photographs are photographs taken from an airplane or helicopter. When taken from a low enough altitude, they allow the identification of development and activities in the area of a property on a particular date. Historic topographic maps show physical features and land use such as structures, wetlands, roadways, and mines over time.

City Directories have been published for major cities and towns across the United States since the 19th century. City Directories published in the 20th century included a street index for each street address during a given year. City Directories are a valuable source of historical information with regard to site tenancy and use.

Fire insurance maps are detailed drawings that show the location and use of structures on a given property during specific years. These maps were originally utilized by insurance companies to assess fire risk, but are now utilized as a valuable source of historical and environmental-risk information. Fire insurance maps typically exist for cities with populations of 2,000 or more, the coverage dependent on the location of the property.

Land title records and building department records may include information concerning a specific parcel, property development, previous use, and activity use limitations (AUL).

4.1 Historical Use

From the historical information reviewed, ENERCON concludes that the subject property was undeveloped land from at least 1950 through the late 1960s, when the subject property was developed with a medium-sized commercial building on the southern portion of the property. The property operated as a citrus processing and packaging facility known as H & S Citrus from 1966 through approximately 2015, when the facility ceased operation due to the quality of citrus being grown in Florida caused by deteriorating growing conditions. The citrus processing plant is presently only utilized for office purposes currently; however, the processing equipment and associated improvements still remain on the subject property.

Based on the information reviewed, it appears that the historical review has not identified evidence of RECs in connection with the subject property's historical use.

4.1.1 Summary of Historical Use

ENERCON reviewed readily available/reasonably ascertainable historical sources to determine past uses of the subject and adjoining properties. Historical sources reviewed may have included a combination of aerial photographs, topographic maps, fire insurance maps, city directories, building department records, recorded land title records, and other historical sources. An attempt to obtain fire insurance maps was made, but none were available. A "no coverage letter" was obtained and is included in the Appendices section of this report. The following table is summary of the historical research.

Historical Summary

Date	Source	Subject Property	Adjoining Property
1950	Aerial Photographs	The subject property is depicted as undeveloped land.	The adjoining properties are depicted as undeveloped land.
1958	Aerial Photographs	The subject property is depicted as undeveloped land.	The adjoining properties are depicted as undeveloped land.
1965	City Directories	No listings	No listings
1969	Aerial Photographs	The subject property is depicted as developed with a medium-sized commercial building on the southern portion of the property.	North: Undeveloped land East: Undeveloped land South: Undeveloped land Southwest: Commercial building West: Undeveloped land
1969	City Directories	No listings	No listings
1970	Aerial Photographs	The subject property is depicted as developed with a medium-sized commercial building on the southern portion of the property.	North: Undeveloped land East: Undeveloped land South: Undeveloped land Southwest: Commercial building West: Undeveloped land
1974	City Directories	H & Citrus, Inc. citrus packers; Vacant	Southwest: Grose's Interstate Moving and Storage No other listings
1979	City Directories	H & Citrus, Inc. citrus packers; Vacant	Southwest: Grose's Interstate Moving and Storage No other listings
1980	Aerial Photographs	The subject property is depicted as developed with the current citrus processing plant and associated improvements. (The current storage building has not yet been developed)	North: Commercial/industrial building East: Undeveloped land South: Undeveloped land Southwest: Commercial building West: Undeveloped land

1987	City Directories	H & Citrus, Inc.	No listings
1992	City Directories	H & Citrus, Inc.; D & J Brokers, Inc.	North: Residential listing South: Southern Bell Southwest: Interstate Moving and Storage No other listings
1992	Aerial Photographs	The subject property is depicted as developed with the current citrus processing plant and associated improvements. (The current storage building has not yet been developed)	North: Commercial/industrial building East: Undeveloped land South: Maintenance facility Southwest: Commercial building West: Undeveloped land
1995	City Directories	H & Citrus, Inc.	South: BellSouth Corporation Southwest: Interstate Moving and Storage No other listings

Date	Source	Subject Property	Adjoining Property
1999	Aerial Photographs	The subject property is depicted as developed with the current citrus processing plant and associated improvements. Numerous vehicles were parked throughout the property.	North: Commercial/industrial building East: Undeveloped land South: Maintenance facility Southwest: Commercial building West: Undeveloped land
2000	City Directories	H & Citrus, Inc.	South: BellSouth Telecommunication Southwest: Interstate Moving and Storage No other listings
2005	City Directories	H & Citrus, Inc.	North: S & S Boat Builders South: BellSouth Telecommunication Southwest: Interstate Moving and Storage No other listings
2007	Aerial Photographs	The subject property is depicted as developed with the current citrus processing plant and associated improvements.	North: Commercial/industrial building East: Undeveloped land South: Maintenance facility Southwest: Commercial building West: Undeveloped land
2010	City Directories	H & Citrus, Inc.	North: Laws Electrical Service South: BellSouth Telecom Southwest: Interstate Moving and Storage No other listings
2010	Aerial Photographs	The subject property is depicted as developed with the current citrus processing plant and associated improvements.	North: Commercial/industrial building East: Undeveloped land South: Maintenance facility Southwest: Commercial building West: Undeveloped land
2014	City Directories	H & Citrus, Inc.	South: BellSouth Telecom Southwest: Interstate Moving and Storage No other listings
2017	Aerial Photographs	The subject property is depicted as developed with the current citrus processing plant and associated improvements.	North: Commercial/industrial building East: Undeveloped land South: Maintenance facility Southwest: Commercial building West: Undeveloped land

Environmentally sensitive businesses identified on the subject property and adjoining properties are discussed in Section 5.1 Review of Agency Records Search.

4.2 Interviews

On September 10, 2018 ENERCON interviewed Dr. Robert Deery, President of H and S Citrus. the current owner of the subject property, who has been associated with the property for over 20 years. Dr. Deery reported that the subject property has been operated as a citrus processing and packaging plant since the late 1960s or early 1970s. He stated that he thought that the property was undeveloped land prior to the original development as a citrus plant. Dr. Deery was unaware of any environmental concerns, complaints, permits, violations, or former or existing USTs, or significant quantities of hazardous materials associated with the subject property. Information obtained during the interview

regarding current site conditions are contained in the Site Reconnaissance section of this report as appropriate.

4.3 User's Responsibilities

As provided in the ASTM Standard and AAI Rule, it is the "user's" (party seeking to use Practice E 1527/AAI to complete the ESA [i.e. potential purchaser, potential tenant, owner]) responsibility to:

- Search for recorded environmental clean up liens and/or AULs;
- Provide "specialized knowledge" of the subject property and adjoining properties;
- And provide consideration of the relationship of the purchase price to the value of the property, if not contaminated.

Land title records include information concerning a specific parcel or real property and its leases, land contracts, and AULs or restrictive covenants used to eliminate potential exposure scenarios. Land titles can include information concerning land use controls or institutional controls for a specific property. According to ASTM E 1527-13, reasonably ascertainable recorded land title records and lien records filed under federal, tribal, state, or local law should be reviewed to identify environmental liens or AULs. Recorded environmental cleanup liens are encumbrances on property for the recovery of incurred cleanup costs on the part of a state, tribal or federal government agency or other third party. Recorded environmental cleanup liens often provide an indication that environmental conditions either currently exist or previously existed on a property that may include the release or threatened release of a hazardous substance. The existence of an environmental cleanup lien should be viewed as an indicator of potential environmental concerns and as a basis for further investigation into the potential existence of on-going or continued releases or threatened releases of hazardous substances on, at, in, or to the subject property.

The investigation must include a search for recorded environmental cleanup liens. If information is collected by the user, ASTM allows for, but does not require, the information to be provided to the environmental professional. If the user is aware of any specialized knowledge or experience material to RECs in connection with the property, it is the user's responsibility to communicate any information based on such specialized knowledge or experience to the environmental professional.

- The user did not provide ENERCON information resulting from the search of recorded environmental clean up liens and/or AULs.
- The user did not communicate to ENERCON any specialized knowledge or experience material to RECs.

The User Questionnaire was not provided by the Client for this project and therefore not included in this report.

4.4 Previous Environmental Documentation

No previous environmental reports prepared for the subject property were supplied for ENERCON's review.

5.0 Agency Records Review

In an effort to determine whether the property or nearby sites have reported USTs, hazardous waste generation, or hazardous material releases, regulatory information from the federal and state agencies as required by ASTM were reviewed. Several agencies have published documents that list businesses or properties that have handled hazardous materials or waste or may have experienced site contamination. The federal and state database review was provided by Environmental Data Resources (EDR) of Shelton, Connecticut and is reportedly the most recent database information available from each agency (EDR 2018). The number of sites which appear on reviewed databases are listed in the table below. If a database does not include any findings, it is not included on the table below, but can be viewed in the table included in the appended copy of the EDR report. All databases searched and their search range criteria are included in the appendix. ENERCON did not verify the locations and distances of every property listed by EDR. ENERCON verified the location and distances of the properties ENERCON deemed as having the potential to pose an environmental impact to the subject property. The actual location of the listed properties may differ from the EDR listing. The actual distances of the listed properties are based on observations during ENERCON's site reconnaissance.

Map Findings Summary

Database	Target Property	Search Distance (Miles)	< 1/8	1/8 - 1/4	1/4 - 1/2	1/2 - 1	> 1	Total Plotted
RCRA-CESQG		0.25	4	2	NR	NR	NR	6

5.1 Review of Agency Records Search

ENERCON's review of the EDR regulatory database report indicates that the subject property is listed on the National Pollutant Discharge Elimination System (NPDES) and Facility Index System (FINDS) researched regulatory databases.

The subject property, identified as H & S Citrus, Inc. Citrus Packing House, is listed on the NPDES database for the issuance of an active industrial wastewater permit under facility identification number FLA014005. The facility is listed as an active, existing, permitted facility for which effluent, reclaimed water, or wastewater residual discharges into the environment and/or monitoring is taking place. The permit was originally issued October 15, 2014 and expires on October 14, 2019. According to the database, the treatment is listed as "screening, settling, tanker truck hauled to sprayfield off-site". According to Dr. Deery, the rinse water from the cleaning and waxing process generates non-hazardous wastewater, is stored in the large on-site ASTs, and then transported off-site via tanker trucks for disposal in an orchard addressed at 4910 Ralls Road in Fort Pierce, which eventually dispersed the wastewater onto the orchard. The subject property is listed on the FINDS database under Registry ID: 110027959760 for the aforementioned NPDES listing. No violations or releases were reported. These listings pose a low environmental concern to the subject property.

VEC is defined as the presence or likely presence of chemicals of concern in the vapor phase in the sub-surface of the subject property caused by the release of vapors from contaminated soil or groundwater either on or near the subject property. Based on the lack of evidence indicating a current

release on the subject property or adjoining properties, the threat of vapor intrusion on the subject property is minimal.

The following table is a summary of sites identified in the EDR regulatory database deemed to have a potential to pose an environmental impact to the subject property. Properties not discussed below, which appeared on local, state, or federally published lists of sites that use or have had releases of hazardous materials, are of sufficient distance and/or situated cross/down-gradient to the subject property, such that impact to the subject property is not likely.

Detail Summary

Site Name:	SOUTHERN BELL-FT PIERCE SOC, a.k.a. BELLSOUTH TELECOMMUNICATIONS, a.k.a. BELLSOUTH TELECOMMUNICATIONS INC, a.k.a. SOUTHERN BELL
Databases:	UST, RESP PARTY, FINDS, RCRA-CESQG, ECHO
Address:	3402 ENTERPRISE RD
Distance in feet:	247 (adjoining)
Direction:	South
Topographic Gradient:	Cross-gradient
Comments:	The adjoining property to the south is listed on the UST database for the previous presence of one 1,000-gallon waste oil UST and one 500-gallon new/lube oil UST. Both USTs were removed in September 1992. According to a letter dated August 23, 2001 from the St. Lucie County Health Department, the agency granted closure due to a lack of contamination reported. No further assessment was required during closure. Due a closed remedial status of the previous USTs, as well as the distance and cross-gradient location of the site, this facility poses a low environmental concern to the subject property.

5.2 Orphan Properties

The orphan or unmapped site list consists of listed properties that have inadequate address information. However, if street addresses are available, the site locations are checked against the known location of the subject property to determine their relative location from the subject property.

Based on available address information, business listings, and area reconnaissance, none of the orphan sites are located within the search radius of the subject property.

5.3 Local Agency Records Search

Following is a discussion of record searches performed at local government agencies or personal/telephone contacts made which provided information relevant to the subject property.

Property Appraiser

ENERCON accessed the SLCPA website on September 10, 2018 for the purpose of conducting a records search of past or current environmental concerns associated with the subject property. No environmentally sensitive issues were reported. The available information obtained from the website is included with this report as an Additional Information document in the Appendices portion of the report.

Fire Department

ENERCON contacted the Saint Lucie County Fire District via a Freedom of Information Act (FOIA) request letter on September 10, 2018 for the purpose of conducting a records search of past or current environmental concerns associated with the subject property. A response from the agency has not been received as of the release of this report. Any pertinent information, when received, will be forwarded.

Health Department

ENERCON contacted the Florida Department of Environmental Health via FOIA request letter on September 10, 2018 for the purpose of conducting a records search of past or current environmental

concerns associated with the subject property. A response from the agency has not been received as of the release of this report. Any pertinent information, when received, will be forwarded.

State Environmental Agency

ENERCON researched the Florida Department of Environmental Protection (FDEP) OCULUS database for the purpose of conducting a records search of past or current environmental concerns associated with the subject property. The available documentation is discussed in Section 5.1: Review of Agency Records Search, of this report.

6.0 Additional Services

Certain conditions are beyond the scope of ASTM Phase I ESA and are therefore outside the scope of this assessment, unless specifically addressed in this report. Those conditions include but are not limited to:

- Corrosive Drywall (Chinese Drywall)
- Lead in Drinking Water
- Wetlands
- Regulatory Compliance
- Cultural and Historic Resources
- Industrial Hygiene
- Health and Safety
- Ecological Resources
- Endangered Species
- Indoor Air Quality
- High Voltage Powerlines and Electromagnetic Fields (EMF)
- Environmental Permitting Issues
- Radioactive Materials whether or not under the Jurisdiction of the Nuclear Regulatory Commission

Asbestos-Containing Materials

Asbestos is an incombustible, chemical-resistant, carcinogenic, fibrous mineral. Asbestos containing materials (ACM) have been used extensively in fireproofing, electrical insulation, building materials, brake linings, and chemical filters.

ENERCON's scope of work concerning ACM on the property was designed solely to identify the potential for contamination from the most obvious and common suspect ACMs. The determination of exact quantities and locations of all ACMs was beyond the scope of this ESA. Only readily accessible building materials were observed. Inaccessible areas are not included in our observations since they are normally investigated prior to building renovation or demolition work. Inaccessible areas include, but are not limited to, roofs, pipe chases behind solid walls and ceilings, concealed floor coverings, the interior of machinery and equipment, and the water and sewer system.

A material is considered to be asbestos-containing if it contains greater than one percent asbestos as analyzed by polarized light microscopy (PLM) coupled with dispersion staining techniques. Friable ACM, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure. Non-friable ACM can be crumbled, pulverized, or reduced to powder during machining, cutting, drilling, or other abrasive procedures. Friable ACM is more likely to release fibers when disturbed or damaged than non-friable ACM.

Based on the construction date of the subject property (late 1960s), the presence of asbestos is likely. Asbestos sampling was not conducted as part of this assessment. ENERCON observed several areas of damaged suspect asbestos-containing building materials during the site reconnaissance. The damaged building materials consist of acoustic ceiling tiles and fireproofing insulation.

Should significant renovation or demolition be planned at the subject property, an asbestos demolition survey should be conducted by a licensed professional in accordance with local, state, and federal regulations.

Radon

Radon is a colorless, odorless, naturally-occurring, radioactive gas originating from the breakdown of uranium in the subsurface. Radon is a known carcinogen implicated as a cause of lung cancer. The US EPA has published a Map of Radon Zones in the United States, which indicates the property is in a Zone 3 potential for radon gas. Zone 3 has a predicted average indoor radon screening level of less than 2.0

PicoCuries per liter (pCi/L). The US EPA recommends additional testing and investigation when radon levels are greater than 4.0 pCi/L.

Due to the non-residential use of the subject property, radon is considered a low environmental concern.

Lead-Based Paint

Paints manufactured before 1960 were heavily leaded. Lead content was tapered off until 1978 when lead was banned from use in household paint. Lead is toxic to humans, especially children because of their size and weight. High concentrations of lead are believed by some medical authorities to cause mental retardation, seizures, coma, and death in children. Adults may suffer severe nervous disorders, but are less likely to die from acute lead exposure. Lead-based paint (LBP) in good condition is not usually a problem except in places where painted surfaces rub against each other and create dust, such as the friction surfaces of a painted window.

The US EPA does not publish a guideline or threshold limit specifically for lead in paint for private housing; however, the LBP Poisoning Prevention Act requires public housing projects to be inspected for LBP. Under the statute, LBP is defined as paint containing at least 0.5% lead by weight. Lead concentrations above this limit must be managed with an Operations and Maintenance (O&M) Program, or be abated if in poor condition. The 0.5% threshold is equivalent to 5,000 mg/kg (parts per million) of lead.

Based on the subject building's date of construction (late 1960s), the presence of LBP is likely; however, given the commercial use of the subject property, LBP is considered a low environmental concern. Painted surfaces appeared to be in relatively good condition.

Water Intrusion

Molds can be found almost anywhere, and will grow on virtually any organic substance as long as moisture and oxygen are present. There are molds that grow on wood, paper, carpet, foods, and insulation. When excessive moisture accumulates in buildings or on building materials, mold growth will often occur, particularly if the moisture source remains undiscovered, untreated, or ignored. It is impossible to eliminate all molds and mold spores in the indoor environment; however, mold growth can be controlled indoors in most cases by controlling the amount of moisture available. Moisture issues can result from many causes, including uncontrolled humidity, leaking roofs, plumbing or piping issues, condensation on water lines, etcetera. Delayed or insufficient maintenance practices are usually associated with moisture problems in commercial-use and multi-family residential buildings. Molds reproduce by propagating spores that usually cannot be seen without magnification. Mold spores continuously travel through the air and, after landing on a damp surface, begin to grow. Mold growth occurs through digestion of the parent material, which is destroyed as a result of this process.

Water damaged acoustic ceiling tiles were noted in the warehouse building. No active leaks were observed. No evidence of mold or other areas of water infiltration were observed either by visual or olfactory means during the site assessment. This does not preclude or rule out the possibility of mold-related issues. According to Dr. Deery, no complaints regarding health problems, musty odors, or water leaks pertaining to mold have been filed. Outward and obvious signs of mold that could affect indoor air quality or deteriorate concealed, structural building materials were not observed.

There were no reported issues from the contacted regulatory agencies that mold had either been a past concern or is a current concern at the subject property. ENERCON was not provided with information concerning any water intrusion events or response plans or mold remediation plans; in addition, ENERCON was not provided with any site personnel mold/water intrusion training plans. Therefore, no assessment or recommendations or opinions are provided as to the actual or potential presence or severity of water intrusion or mold events at the site or as to the adequacy of any mold/water intrusion training or maintenance or response plans.

7.0 Findings

The following summarizes the findings of this assessment.

7.1 Property Description and Observations

The subject property consists of a former citrus processing plant operated by H & S Citrus, which previously provided high end citrus products to fund raising businesses. The subject property is generally located on the northeastern corner of the intersection of Grose Road (to the south) and Enterprise Road (to the west), in Fort Pierce, Saint Lucie County, Florida. The subject property is identified by SLCPA under Parcel IDs: 2428-502-0033-000-1 and 2428-502-0035-000-5 and consists of 3.66 acres of commercially developed land. The ownership, address, date of purchase, size, and legal description for each parcel is as follows:

- 2428-502-0033-000-1; H and S Citrus Inc.; 1237 Grose Road; August 9, 1976; 2.42 acres; INDUSTRIAL S/D LOT 28-LESS W 156FT- (2.42 AC) (OR 205-1297: 256-175)
- 2428-502-0035-000-5; George B Brown, Robert E Derry, and Lois S Derry; 3340 Enterprise Road; March 5, 2014; 1.46 acres; INDUSTRIAL S/D SLY 100 FT OF LOT29 (1.46 AC) (OR 712-1970; 3612-657)

The southern parcel of the subject property is developed with a citrus processing plant, originally developed in 1972, comprising a total of 24,217 square feet of building area. The building contains the processing area, as well as office areas, a maintenance area, a cold storage area, and a loading dock area. A 2,100 square foot addition was constructed in 1997. The processing area contains numerous large hydraulically-actuated citrus processing equipment, including large conveyor belts and sorters. The eastern side of the citrus plant is constructed with a large canopy area. The canopy area contains the citrus washing and waxing equipment, including four large (approximately 200 to 300 gallons) polyethylene totes and four 55-gallon polyethylene drums containing various fruit cleaners and detergents, as well as waxing agents. An additional 55-gallon drum was located adjacent to the canopy area and was connected directly to the citrus washing equipment.

Two large (approximately 5,000 gallons each) ASTs are located to the northeast of the citrus processing building. The tanks were previously utilized to store the rinse water from the fruit cleaning process. Reportedly, the water was transported off-site via tanker trucks and deposited in a pond located within a citrus grove. The water was then pumped from the pond and sprayed throughout the citrus groves. According to Dr. Deery, the off-site pond underwent assessment and was closed. No hazardous materials were identified in association with the off-site pond. An abandoned tanker trailer was stationed adjacent to the ASTs. The ASTs are also equipped with a concrete containment located at the transfer point of the tanks. No stained soil, dead vegetation, or indications of a release were observed within the vicinity of these ASTs.

An approximate 500-gallon AST previously containing diesel fuel utilized to fuel the tractor trailers that transported the wash water is located adjacent to the wash water ASTs. The diesel fuel tank appeared to be empty; however, ENERCON was unable to confirm if the AST was completely empty. The tank was situated in a concrete secondary containment unit. No staining was observed within the secondary containment or in the vicinity of the containment structure. A second similarly-sized and constructed AST is located near the wash water tanks. The tank was empty and open. Reportedly, the tank, which previously contained diesel fuel, was emptied and cleaned prior to removal from the concrete secondary containment area and placed in its current location. No stained soil, dead vegetation, or indications of a release were observed within the vicinity of this AST.

Based on a review of available regulatory documentation, no indication of the presence of these ASTs is on file with the FDEP. The presence of these ASTs poses a low environmental concern.

The southern parcel is also developed with an unheated single-story storage building, originally constructed in 1992, comprising a total of 2,400 square feet of building space. The storage building contains a large open-air storage area, as well as three enclosed storage areas, accessed via metal roll up doors.

The northern parcel is developed with an office/warehouse building, originally developed in 1967, comprising 2,400 square feet of building area. The building is currently used for storage of files, furniture, and other office equipment.

Additional improvements include a potable water well (not currently used); paved and packed dirt parking areas and drive lanes; and chain link perimeter fencing. The eastern portion of the property is vacant land with native vegetation.

No evidence of RECs in connection with the property was identified during the site reconnaissance.

7.2 Historical Use

From the historical information reviewed, ENERCON concludes that the subject property was undeveloped land from at least 1950 through the late 1960s, when the subject property was developed with a medium-sized commercial building on the southern portion of the property. The property operated as a citrus processing and packaging facility known as H & S Citrus from 1966 through approximately 2015, when the facility ceased operation due to the quality of citrus being grown in Florida caused by deteriorating growing conditions. The citrus processing plant is presently only utilized for office purposes currently; however, the processing equipment and associated improvements still remain on the subject property.

Based on the information reviewed, it appears that the historical review has not identified evidence of RECs in connection with the subject property's historical use.

7.3 Review of Federal and State Record Search

ENERCON's review of the EDR regulatory database report indicates that the subject property is listed on the NPDES and FINDS researched regulatory databases.

The subject property, identified as H & S Citrus, Inc. Citrus Packing House, is listed on the NPDES database for the issuance of an active industrial wastewater permit under facility identification number FLA014005. The facility is listed as an active, existing, permitted facility for which effluent, reclaimed water, or wastewater residual discharges into the environment and/or monitoring is taking place. The permit was originally issued October 15, 2014 and expires on October 14, 2019. According to the database, the treatment is listed as "screening, settling, tanker truck hauled to sprayfield off-site". According to Dr. Deery, the rinse water from the cleaning and waxing process generates non-hazardous wastewater, is stored in the large on-site ASTs, and then transported off-site via tanker trucks for disposal in an orchard addressed at 4910 Ralls Road in Fort Pierce, which eventually dispersed the wastewater onto the orchard. The subject property is listed on the FINDS database under Registry ID: 110027959760 for the aforementioned NPDES listing. No violations or releases were reported. These listings pose a low environmental concern to the subject property.

Additional properties which appeared on local, state, or federally published lists of sites that use or have had releases of hazardous materials, are of sufficient distance and/or situated cross/down-gradient to the subject property, such that impact to the subject property is not likely.

8.0 Conclusions

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527 of the subject property. Any exceptions to, or deletions from, this practice are described in the Deviation section of this report.

This assessment has revealed no evidence of RECs, HRECs, CRECs, VECs or environmental regulatory non-compliance issues in connection with the subject property.

This assessment has revealed evidence of the following Business Environmental Risks in connection with the subject property:

- Hazardous materials are still present on the currently closed citrus processing facility, including a diesel fuel AST and various drums and totes containing citrus washing and waxing chemicals, as well as numerous containers containing petroleum products.
- Based on the construction date of the subject property (late 1960s), the presence of asbestos is likely. Asbestos sampling was not conducted as part of this assessment. ENERCON observed several areas of damaged suspect asbestos-containing building materials during the site reconnaissance. The damaged building materials consist of acoustic ceiling tiles and fireproofing insulation.

This assessment has revealed evidence of the following *de minimis* conditions in connection with the subject property:

- Stained asphalt was observed throughout the subject property.
- Stained concrete flooring in the maintenance area of the citrus processing building.

RECOMMENDATION

ENERCON recommends no additional assessment.

ENERCON recommends the removal and disposal of all hazardous materials on the subject property by a properly certified hazardous waste disposal company, if they are not planned for future use.

Should significant renovation or demolition be planned at the subject property, an asbestos demolition survey should be conducted by a licensed professional in accordance with local, state, and federal regulations.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Fort Pierce, FL 34982
EDR Inquiry # 5404436.3

Client Name:

Enercon Services
12906 Tampa Oaks Blvd
Temple Terrace, FL 33637-0000
Contact: Christopher Kling, FCEA, LEP

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Enercon Services were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 7295-475F-BBE4
PO # NA
Project TDBANK00605

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 7295-475F-BBE4

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Enercon Services (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA)

EXECUTIVE SUMMARY

of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 6 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Protection's Facility Directory (Solid Waste Facilities).

A review of the SWF/LF list, as provided by EDR, has revealed that there are 2 SWF/LF sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. Shortly after the September 11 event, the DEP was instructed to remove the detail about some of the storage tank facilities in the state from their reports. Federal-owned facilities and bulk storage facilities are included in that set.

A review of the UST list, as provided by EDR, has revealed that there are 6 UST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past

EXECUTIVE SUMMARY

sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

FINDS:

Registry ID: 110007416652

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 05/13/2018	Source: EPA
Date Data Arrived at EDR: 05/30/2018	Telephone: N/A
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 08/09/2018
Number of Days to Update: 23	Next Scheduled EDR Contact: 10/15/2018
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/13/2018	Source: EPA
Date Data Arrived at EDR: 05/30/2018	Telephone: N/A
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 08/09/2018
Number of Days to Update: 23	Next Scheduled EDR Contact: 10/15/2018
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 05/13/2018

Next Scheduled EDR Contact: 10/15/2018
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 05/18/2018

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 05/18/2018	Source: EPA
Date Data Arrived at EDR: 05/30/2018	Telephone: 800-424-9346

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (404) 562-8651
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 06/28/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 10/08/2018

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (404) 562-8651
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 06/28/2018

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (404) 562-8651
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 06/28/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 10/08/2018
	Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (404) 562-8651
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 06/28/2018

Federal institutional controls / engineering controls registries

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/14/2018	Source: Department of the Navy
Date Data Arrived at EDR: 05/18/2018	Telephone: 843-820-7326
Date Made Active in Reports: 07/20/2018	Last EDR Contact: 07/16/2018
Number of Days to Update: 63	Next Scheduled EDR Contact: 11/26/2018
	Data Release Frequency: Varies

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 02/13/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/27/2018	Telephone: 703-603-0695
Date Made Active in Reports: 05/11/2018	Last EDR Contact: 05/29/2018
Number of Days to Update: 73	Next Scheduled EDR Contact: 09/10/2018
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 02/13/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/27/2018	Telephone: 703-603-0695

State- and tribal - equivalent CERCLIS

SHWS: Florida's State-Funded Action Sites

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

State and tribal institutional control / engineering control registries

ENG CONTROLS: Institutional Controls Registry

The registry is a database of all contaminated sites in the state of Florida which are subject to engineering controls. Engineering Controls encompass a variety of engineered remedies to contain and/or reduce contamination, and/or physical barriers intended to limit access to property. ECs include fences, signs, guards, landfill caps, provision of potable water, slurry walls, sheet pile (vertical caps), pumping and treatment of groundwater, monitoring wells, and vapor extraction systems.

State and tribal Brownfields sites

BROWNFIELDS AREAS: Brownfields Areas Database

A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

BSRA: Brownfield Site Rehabilitation Agreements Listing

The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans. It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

FL Cattle Dip. Vats: Cattle Dipping Vats

From the 1910's through the 1950's, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides, such as DDT, were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

DADE_IW5: Industrial Waste Type 5 Sites

Generally these facilities fall under the category of "conditionally exempt small quantity generator" or "small quantity generator".

Date of Government Version: 05/29/2018	Source: Department of Environmental Resources Management
Date Data Arrived at EDR: 05/30/2018	Telephone: 305-372-6700
Date Made Active in Reports: 07/16/2018	Last EDR Contact: 05/30/2018
Number of Days to Update: 47	Next Scheduled EDR Contact: 09/10/2018
	Data Release Frequency: Semi-Annually

DADE_IW6: Industrial Waste Type 6

Permits issued to those non-residential land uses located within the major drinking water wellfield protection areas that are not served by sanitary sewers. These facilities do not handle hazardous materials but are regulated because of the env. sensitivity of the areas where they are located.

Date of Government Version: 05/29/2018	Source: Department of Environmental Resources Management
Date Data Arrived at EDR: 05/30/2018	Telephone: 305-372-6700

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 01/03/2018
Date Data Arrived at EDR: 02/14/2018

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

WE BUY SCRAP, LLC
1237 GROSE ROAD
FORT PIERCE, FL 34982

TARGET PROPERTY COORDINATES

Latitude (North):	27.400406 - 27° 24' 1.46"
Longitude (West):	80.336631 - 80° 20' 11.87"
Universal Tranverse Mercator:	Zone 17
UTM X (Meters):	565583.6
UTM Y (Meters):	3030790.8
Elevation:	14 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5656797 FORT PIERCE, FL
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
FORT PIERCE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Waveland

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	3 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Fine Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 14	Max: 5.5 Min: 3.6
2	3 inches	31 inches	sand	Granular materials (35 pct. or less passing No. 200), Fine Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 14	Max: 5.5 Min: 3.6
3	31 inches	40 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Fine Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 14	Max: 5.5 Min: 3.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

3	31 inches	40 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Fine Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 14	Max: 5.5 Min: 3.6
4	40 inches	53 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Fine Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 14	Max: 5.5 Min: 3.6
5	53 inches	66 inches	sand	Granular materials (35 pct. or less passing No. 200), Fine Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 14	Max: 5.5 Min: 3.6
6	66 inches	79 inches	sand	Granular materials (35 pct. or less passing No. 200), Fine Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 14	Max: 5.5 Min: 3.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

WELL SEARCH DISTANCE INFORMATION

<u>DATABASE</u>	<u>SEARCH DISTANCE (miles)</u>
Federal USGS	1.000
Federal FRDS PWS	Nearest PWS within 1 mile
State Database	1.000

FEDERAL USGS WELL INFORMATION

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

Telephone: 850-245-8238

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

RE: Pollutant Storage Tank Closure Assessment

Dear Mr. Black

This pollutant storage tank closure assessment for the facility reference below was received on July 13, 2001.

~~Facility ID# 569201428 Southern Bell Ft Pierce SOC~~
~~3402 Enterprise Rd, Ft Pierce, FL~~

Enclosed are the results of the review.

If you have any questions, please contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Victor Faconti".

DEPARTMENT OF ENVIRONMENTAL PROTECTION Tank Closure Assessment Report Review Form

1. DEP Facility ID Number 9201428
2. Date August 23, 2001
3. Facility Name: Southern Bell Ft Pierce SOC
4. Facility Owner: Southern Bell Ft Pierce SOC
5. Facility Address: 3402 Enterprise Rd, Ft Pierce, FL
6. Mailing Address: 3402 Enterprise Rd, Ft Pierce, FL
7. Telephone Number:
8. Facility Operator
9. Are the storage tank(s): (Circle One or Both) A. Aboveground B. Underground
10. Were the Tank(s): A. Replaced B. Removed C. Closed in Place D. Upgraded
11. Was free product present? Yes If yes, is the responsible party eligible for limited scope free product recovery? _____

XXXX Closure meets Chapter 62-761/762, F.A.C. Requirements, No contamination reported - No further assessment required.

_____ Site Closure meets Chapter 62-761/762, F.A.C. Requirements, groundwater or soil contamination reported - Cleanup required.

Closure Approved XXX

This review form indicates that the Department or its agent concurs with the reported closure results as compared to standards specified in Chapter 62-761/762, Florida Administrative Code (F.A.C.). This review does not imply that any criteria has been met to qualify for a No Further Action (NFA) or a Site Rehabilitation Completion Order (SRCO) as specified in Chapter 62-770 F.A.C. The above determination is based on the information provided in the closure assessment and does not suggest that contamination could not exist or be discovered in the future at this facility. Additionally, it does not exempt the facility from cleanup actions, should evidence of petroleum contamination be discovered in the future.

Closure Disapproved _____ Deficiencies/Comments:

Qualifications

Chrissy R. Sherman

Experience Summary

- Geosciences and Remediation Lead in the Kennesaw, Georgia office
- Over ten years of environmental and due diligence consulting experience
- Over nine years of experience in performing environmental assessments and remediation projects at various hazardous waste and petroleum impacted sites

Experience Description

Mrs. Sherman provides a variety of functions at ENERCON which includes performing and managing Phase I and Phase II Environmental Site Assessments, completing Underground Storage Tank (UST) related assessments and remediation, Hazardous Site Response Act (HSRA) assessments and remediation, and asbestos inspection and sampling. For over seven years, Mrs. Sherman has also prepared and managed environmental assessments for projects submitted to the Georgia Department of Community Affairs for clients seeking funding through the HOME Rental Housing Loan and Housing Tax Credit programs.

Mrs. Sherman has worked extensively in the environmental arena on a wide array of projects for over nine years. She has also worked in many areas of the Underground Storage Tank and Hazardous Waste Management fields and has gained extensive knowledge of systems and related site conditions that may influence assessment and remediation effectiveness. She has designed, installed, maintained, and monitored numerous remediation systems with varying degrees of contamination. Her project management experience includes soil and groundwater characterization studies, all phases of Environmental Site Assessments, remediation, permitting, hazardous waste management, and a multitude of field activities for commercial and government clients. Responsibilities have included staff oversight and management, preparation and review of technical reports, project cost and scheduling, regulatory compliance oversight, client management, and client development.

Education and Professional Recognition

Bachelor of Science, Chemical Engineering, Montana State University

Training/Special Skills

OSHA 40-Hour Health and Safety Hazardous Waste Operations Training
8-Hour OSHA Training
EPA/AHERA – Asbestos in Buildings: Inspection and Assessment
EPA Lead-based Paint Inspector: Target Housing and Child Occupied Facilities
Mold Assessment and Remediation in Buildings Program

Christopher Kling, CFEA, LEP

Experience Summary

- Over 22 years of experience in the engineering and environmental consulting fields
- Extensive experience with Phase I due diligence, environmental compliance, and health and safety.
- Additional experience includes commercial risk control, liability auditing, risk management and reporting, and routine health and safety training as well as OSHA compliance and reporting.
- Working knowledge of hazardous materials facility management, including emergency response coordination, environmental permitting oversight, and governmental agency interaction.
- Commercial facility auditing.

Experience Description

Mr. Kling has performed over 150 Phase I Environmental Site Assessments, which include identification of environmental hazards through historical research and on-site investigations for materials which may environmentally impact the property, including asbestos, lead-based paint, radon, and other hazardous materials. Typical property types investigated include retail centers, low-, medium-, and high-rise office buildings, multi-family residences, hotels, vacant land, self-storage facilities, and commercial and industrial properties.

Mr. Kling has performed over 150 Property Condition Assessments, which evaluate structural and engineering components of commercial buildings. Systems evaluated include HVAC, plumbing, roofing, electrical, exterior cladding, framing, and interior elements. These assessments are performed for due diligence reporting of estimated reserve and replacement values of the systems, as well as immediate hazards and issues on the property. Typical property types investigated include retail centers, low-, medium-, and high-rise office buildings, multi-family residences, hotels, vacant land, self-storage facilities, and commercial and industrial properties. Investigations include research of building department files, review of building codes, and interaction with various governmental agencies to determine applicable code compliance.

Some of Mr. Kling's experience is listed below:

Regional Manager, Forwarding Centers

- Responsible for managing overall operational activities at two Forwarding Centers on the West Coast so that each facility meets and exceeds the customer's requirements.
- Responsible for development and implementation of OSHA, EPA, and DOT trainings and training schedules. Performed initial and refresher training for all Forwarding Center employees so that operational activities complied with regulatory requirements.
- Worked with federal, state, and local agencies to obtain the necessary operating permits and licenses that were required for handling and transporting hazardous materials, including hazardous wastes. Applied for, tracked, and updated DOT Transportation Exemptions.
- Reviewed all incident and accident reports and helped resolve problem areas to avoid recurrence.

- Analyzed and interpreted federal, state, and local regulations and advised employees of regulatory issues and changes.
- Lead and assisted in the daily transporting and handling of hazardous waste packages so that service and productivity were maintained.

Risk Control Consultant

- Conducted environmental and fleet liability assessment audits to determine risks, liabilities, and exposures associated with the client's operations. Duties included conducting extensive audits of client's environmental, health and safety, vehicle, and/or driver programs, submittal of detailed reports to insurance underwriters, and follow-up and assistance to clients with audit recommendations.
- Performed health and safety, environmental, and risk management training to existing environmental service industry clients. Duties included assessment of client training needs, preparation of training material, and presentation of trainings.
- Performed driver training to existing transportation clients. Duties included assessment of driver training needs, review of client's vehicle maintenance and file records, preparation of training materials, and presentation of various driver training programs.
- Reviewed corporate health and safety loss prevention programs and procedures. Duties included assessment of contractual agreements, risk control and loss prevention training programs, accident reporting and investigation protocols, and insurance requirements.

Field Services Manager

- Managed the business unit for the Huntington Beach, CA office. Duties included tracking and reporting financials, coordinating transportation of hazardous materials through a 10-day permitted transfer facility, purchasing all operational supplies, and maintaining compliance for a fleet of vehicles.
- Managed an operations team covering the Orange and San Diego counties. Duties included personnel training, hiring and firing of employees, and auditing job sites to assure compliance with corporate policies and federal and state regulations.
- Managed numerous projects for aerospace and pharmaceutical industries, in addition to universities, laboratories, and a variety of heavy and light industries. Duties included client liaison, managing site activities, scheduling manpower, coordinating waste disposal with the appropriate facility, and billing.

Team Leader

- Responsible for direct oversight of field operations throughout Southern Orange County and San Diego County, CA. Duties included managing a team of Project Managers, Field Supervisors, and Environmental Specialists in day to day operations; working with the sales force and outside customers to identify hazardous waste management needs and schedule field services accordingly; conducting pre-service job walks and preparing quotes for service; conducting audits of filed service operations; training field personnel; coordinating operations with subcontractors; and managing the permitted storage facility.

Project Manager/Reactive Chemical Supervisor

- Responsible for management of hazardous waste at various industrial facilities, including customers in the petrochemical industry, biomedical industry, and manufacturing industry.

Duties included supervision of a team of specialists trained in the deactivation, neutralization, or stabilization of highly reactive or explosive hazardous wastes; supervision of field analysts and environmental specialists during routine field operations; preparation of hazardous waste manifests and associated paperwork; and transportation of hazardous wastes.

Senior Field Supervisor

- Responsible for management of hazardous waste at various industrial facilities, including customers in the petrochemical industry, biomedical industry, and manufacturing industry. Duties included supervision of environmental specialists during routine field operations; preparation of hazardous waste manifests and associated paperwork; and transportation of hazardous wastes.

Atomic Absorption Spectrophotometer Analyst

- Performed analysis of various lab samples using an atomic absorption spectrophotometer, as well as various wet chemical testing techniques.

Education and Professional Recognition

B. S., Chemical Engineering, Lafayette College, Easton, PA, 1984

M.S., Environmental Science, Ana Maria College, Paxton, MA (previous candidate 1991-1992)

ASTM Property Condition Assessment Certificate

State of Texas Certified Field Safety Representative

State of Arkansas Certified Field Safety Representative

Certified Florida Environmental Assessor (#434)

Licensed Environmental Professional (#227)

California State Contractors License #679945 "A" - General Engineering (currently inactive)

California Asbestos Building Inspector

California Hazardous Substances Removal and Remedial Actions Certification (currently inactive)

40-Hour Hazardous Waste Operations Certification (with recertification)

Certified Engineer in Training

Member of Florida Environmental Assessors Association

Member of International Society of Technical and Environmental Professionals
