General Information

- **Incomplete application packets will not be accepted.**
- In-take meetings are required for application submittals.
- Site plan approval is valid for one (1) year following City Commission approval. To maintain site plan approval, vertical improvements, permitted by the Building Department must commence prior to the 12-month expiration date.
- Fee Schedule - https://www.cityoffortpierce.com/DocumentCenter/View/2620/Fee-Schedule-
- Public Notice Fees - https://www.cityoffortpierce.com/DocumentCenter/View/8818/Public-Notice-Fees-

Site Plan submittal requirements:

Submit one (1) original & three (3) hard copies and one (1) CD or Flash Drive of the following. Additional copies will be required of subsequent submittals.

- ☑ Complete application
- ☑ Warranty Deed
- ☑ SLC Property Record Card
- ☑ Detailed project description
- ☑ General location map (see Section 125-313)
- ☑ Survey (see Section 125-313)
- ☑ Site Plan (see Section 125-313)
- ☑ Landscaping Plan (see Section 123-37)
- ☑ Conceptual Drainage Plan (see Section 125-313)
- ☑ Environmental Impact Report
- ☑ Beach/Dune System protection plan, if applicable (see Section 125-313)
- ☑ Lighting Plan (see Section 125-313)
- ☑ Design Review submittals (see Design Review application)
- ☑ Traffic Impact Report
- ☑ Concurrency Review submittals (see Concurrency Review application)

Design Review Application Checklist
(City Code of Ordinances 125-314)

Submittal for Administrative Approval

a. A survey (1" = 30' minimum scale) of property lines, existing topography and the location of trees meeting the tree protection regulations of section 123-66, location of bordering streets and, if applicable, wetlands and beaches.
b. A site analysis study to include a discussion of specimen trees and other natural vegetation, access, significant topography, wetlands, buffers, setbacks, views, orientation, the surrounding built environment, and other site features that may influence design elements.
c. A draft written narrative describing the design intent of the project, its goals, and objectives and how it reflects the site analysis study results.
d. Context photographs of neighboring uses and architectural styles.
e. Photographs and/or drawings of architectural buildings or objects that serve as a precedent for the proposed building design. Models should be taken from local exemplary buildings, either existing or demolished. Documentation of such buildings is available in the city's planning department.
f. Photographs of all existing structures located on the property. If existing structures on the property are more than fifty (50) years of age, documentation of these structures with data from the Florida Master Site File form is also required.
g. Conceptual site plan (to scale) showing proposed location of all buildings, structures, parking areas, signs and landscaping.
h. Landscape plan, at the same scale as the site plan. The planning director or designee may request enlarged plans of detailed planting areas. Planting schedule with sizes of proposed plantings must be included.
i. Accurate color rendering of proposed signs showing dimensions, type of lettering, materials and actual color samples that demonstrates cohesiveness with the project design.
j. Exterior elevations showing architectural character, external architectural features, and streetscape of the proposed development, including materials, colors, shadow lines and landscaping. The street elevation shall encompass the entire proposed project and generally identify the major elements of the adjacent two (2) properties on either side of the site. If the adjacent properties are vacant or underutilized, a diagram shall be provided that identifies the mass and form that is allowable under current zoning. If the street elevation must be drawn at such a scale as to render architectural details of the building unreadable, drawings of individual buildings at a larger scale should be provided as well.
k. Design review concurrent with conceptual development plan procedure according to subsection 125-313 is also available.

Submittal for Board Approval

a. A written narrative describing how the project conforms to administrative approval and design review guidelines of this section.
b. A final site plan meeting the requirements of section 125-313.
c. A final site lighting plan that meets the requirements of subsection 125-313(d)(8).
d. A final landscape plan that meets the requirements of articles II and III of chapter 123.
e. Final floor plans and elevation drawings (1/8" = 1'-0" minimum scale), as detailed under administrative approval, showing exterior building materials and colors with architectural sections and details to adequately describe the project.
f. A color board (11"x17" maximum) containing actual color samples of all exterior finishes, keyed to the elevations, and indicating the manufacturer's name and color designation.

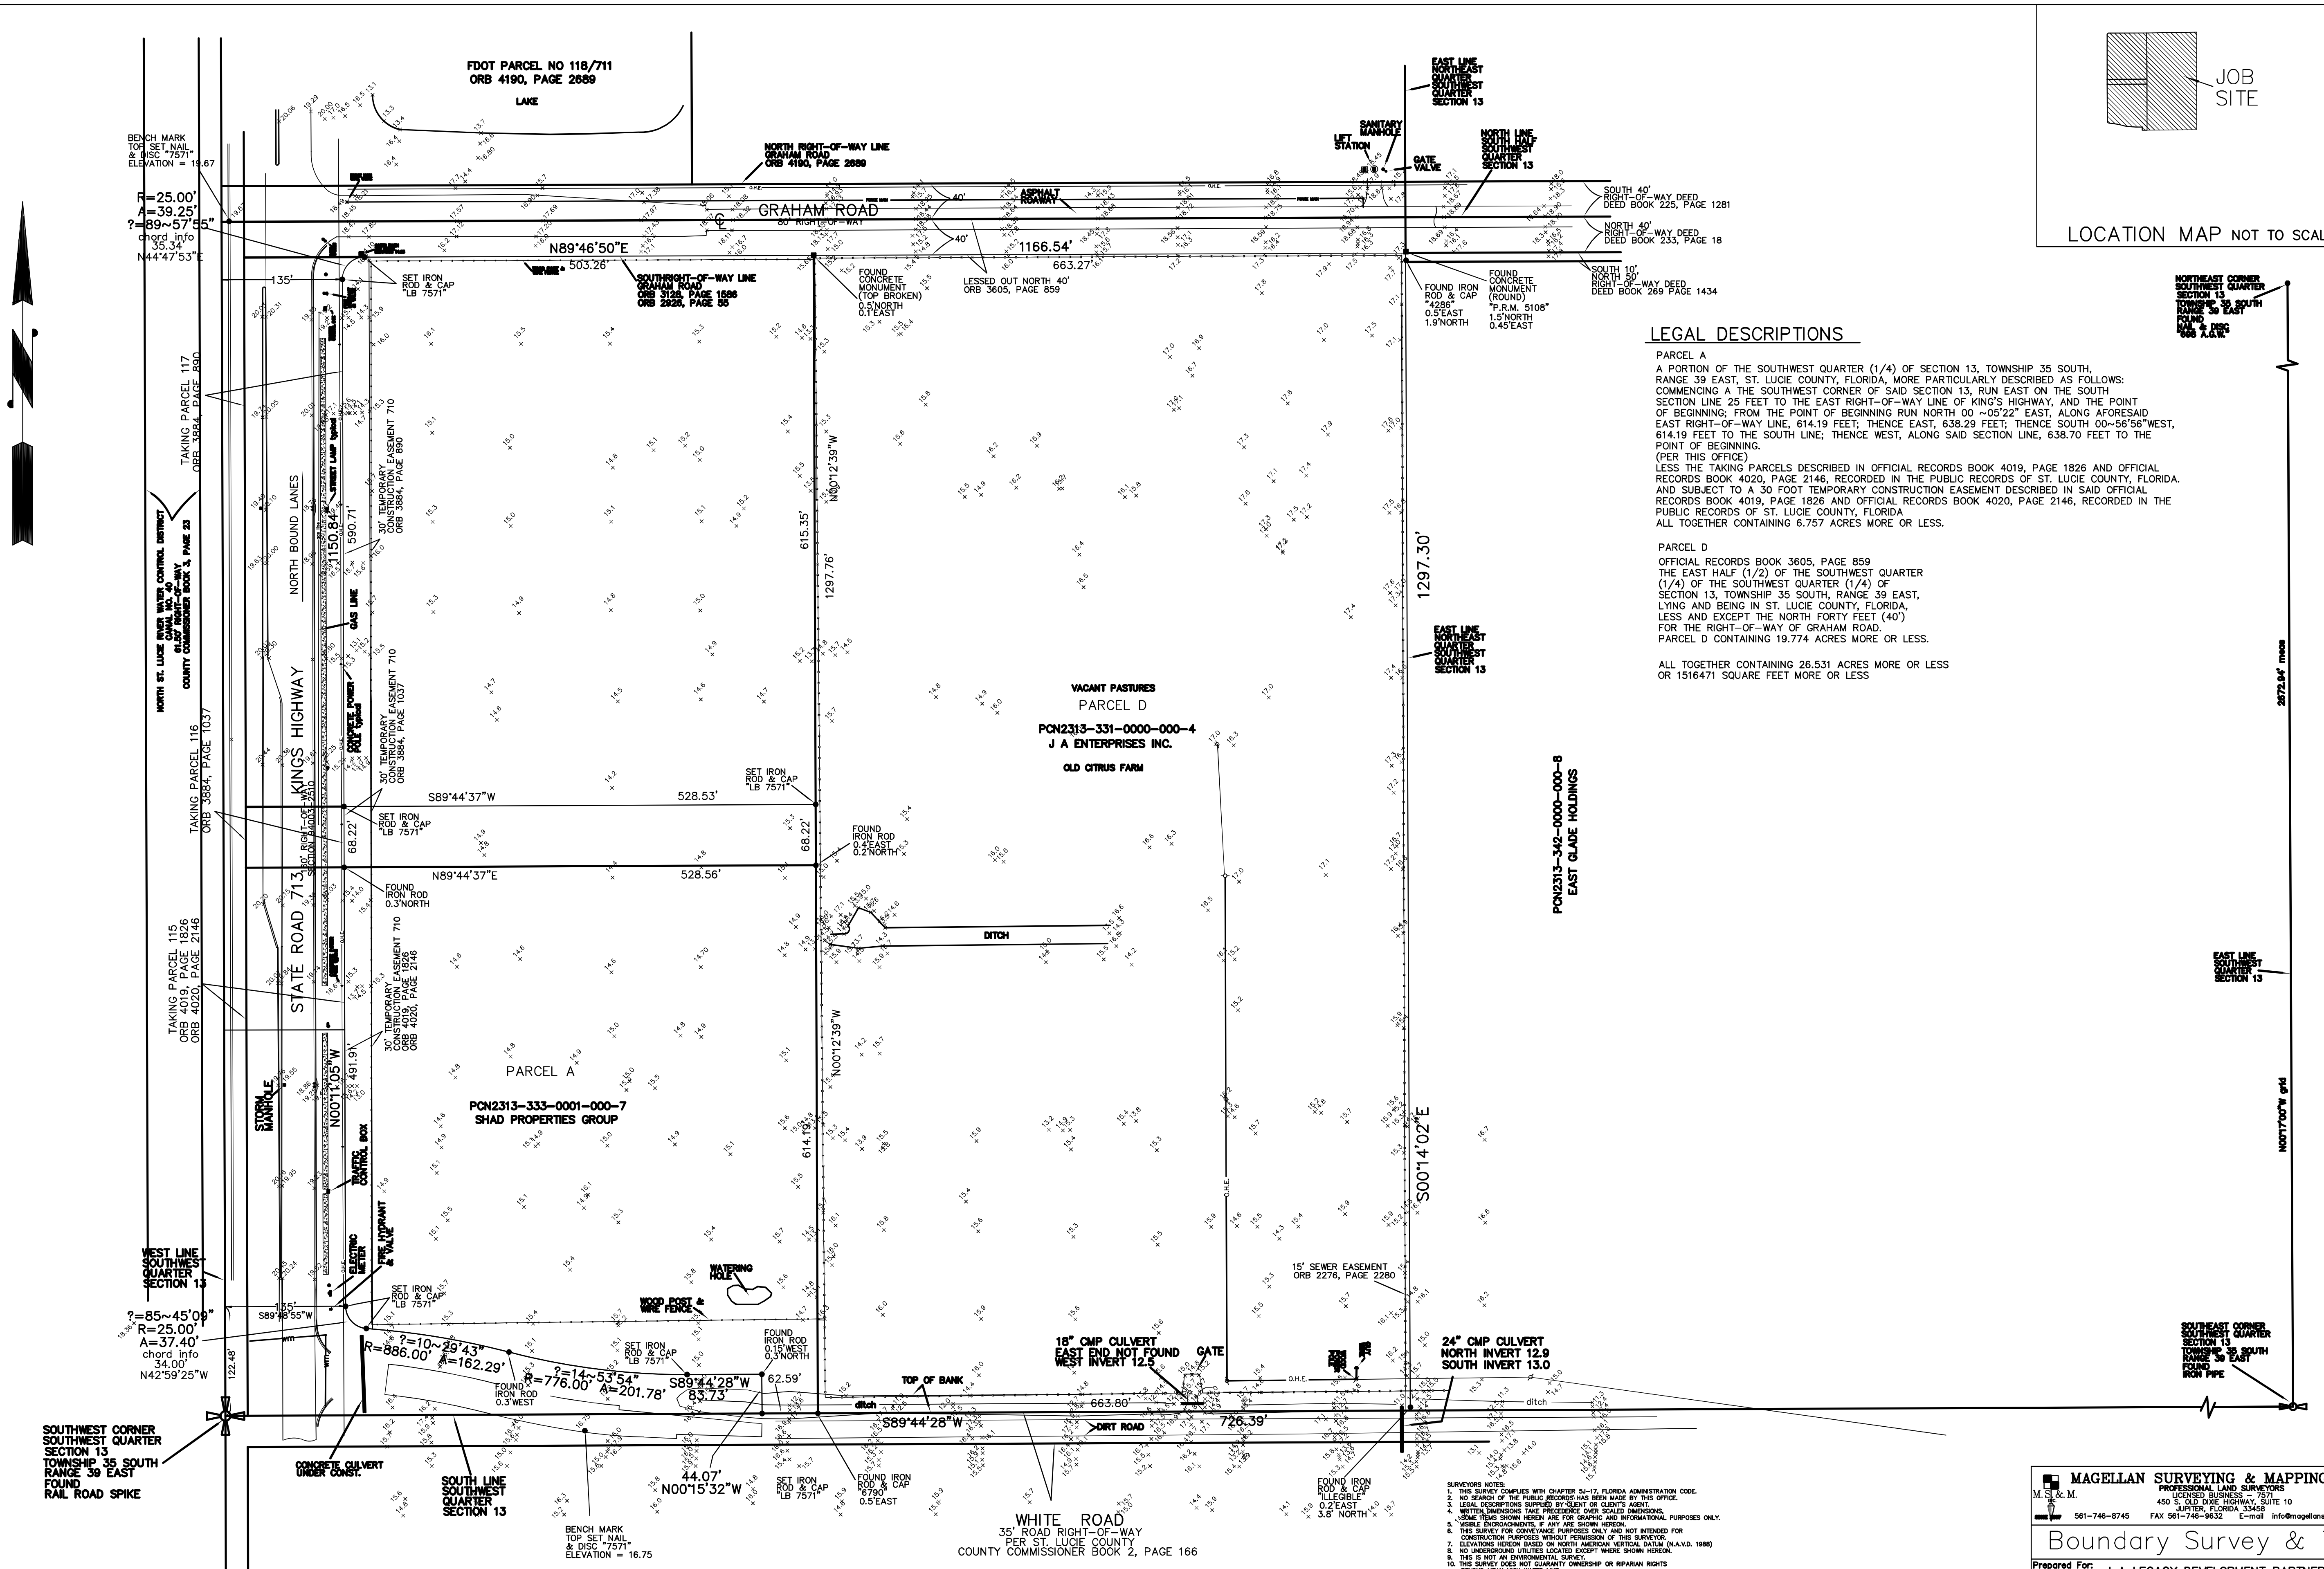
EXHIBIT "A"

PARCEL B:
A portion of the Southwest ¼ of Section 13, Township 35 South, Range 39 East, St. Lucie County, Florida, more particularly described as follows:
Commencing at the Southwest corner of said Section 13, run East on the South Section Line 25 feet to the East right-of-way line of King's Highway, and the Point of Beginning. From the Point of Beginning run N.00°05'22" E., along aforesaid East right-of-way, 614.19 feet; thence East, 638.29 feet; thence S. 00°56'56" W., 614.19 feet to the South Section Line; thence West, along said Section Line, 638.70 feet to the Point of Beginning.
All the above containing 9.00 acres, more or less.

The above described property is not now nor ever has been the homestead of the Grantor.



LEGAL DESCRIPTIONS

PARCEL A

A PORTION OF THE SOUTHWEST QUARTER (1/4) OF SECTION 13, TOWNSHIP 35 SOUTH, RANGE 39 EAST, ST. LUCIE COUNTY, FLORIDA, MORE PARTICULARLY DESCRIBED AS FOLLOWS: COMMENCING A THE SOUTHWEST CORNER OF SAID SECTION 13, RUN EAST ON THE SOUTH SECTION LINE 25 FEET TO THE EAST RIGHT-OF-WAY LINE OF KING'S HIGHWAY, AND THE POINT OF BEGINNING; FROM THE POINT OF BEGINNING RUN NORTH 00 ~05'22" EAST, ALONG AFORESAID EAST RIGHT-OF-WAY LINE, 614.19 FEET; THENCE EAST, 638.29 FEET; THENCE SOUTH 00~56'56"WEST, 614.19 FEET TO THE SOUTH LINE; THENCE WEST, ALONG SAID SECTION LINE, 638.70 FEET TO THE POINT OF BEGINNING.
(PER THIS OFFICE)
LESS THE TAKING PARCELS DESCRIBED IN OFFICIAL RECORDS BOOK 4019, PAGE 1826 AND OFFICIAL RECORDS BOOK 4020, PAGE 2146, RECORDED IN THE PUBLIC RECORDS OF ST. LUCIE COUNTY, FLORIDA. AND SUBJECT TO A 30 FOOT TEMPORARY CONSTRUCTION EASEMENT DESCRIBED IN SAID OFFICIAL RECORDS BOOK 4019, PAGE 1826 AND OFFICIAL RECORDS BOOK 4020, PAGE 2146, RECORDED IN THE PUBLIC RECORDS OF ST. LUCIE COUNTY, FLORIDA
ALL TOGETHER CONTAINING 6.757 ACRES MORE OR LESS.

PARCEL D

OFFICIAL RECORDS BOOK 3605, PAGE 859
THE EAST HALF (1/2) OF THE SOUTHWEST QUARTER (1/4) OF THE SOUTHWEST QUARTER (1/4) OF SECTION 13, TOWNSHIP 35 SOUTH, RANGE 39 EAST, LYING AND BEING IN ST. LUCIE COUNTY, FLORIDA, LESS AND EXCEPT THE NORTH FORTY FEET (40') FOR THE RIGHT-OF-WAY OF GRAHAM ROAD.
PARCEL D CONTAINING 19.774 ACRES MORE OR LESS.

ALL TOGETHER CONTAINING 26.531 ACRES MORE OR LESS OR 1516471 SQUARE FEET MORE OR LESS

Kings Highway Commerce Center
Amended Site Plan Narrative
April 15, 2024

The above project site plan was approved by the city on January 18, 2023 as a 35 acre 442,000 square foot industrial development. The site plan approval is valid until May 14, 2025.

A site plan amendment is being requested to reduce the lot area to 26.52 acres and a reduction in building size to 390,000 square feet. This equates to an overall reduction in site acreage of 8.48 acres and a reduction in building size of 52,000 square feet.

The 2 lots in the southeast corner of Kings Hwy & Graham Road, (Parcels B and C respectively), have been removed from the proposed development. The use of the site remains as industrial, office/warehouse and distribution.

Building access and employee parking areas shall be located in front of the buildings. Loading docks are located at the rear of the building to keep the truck traffic separated from employee vehicular/ pedestrian traffic.

The project shall be constructed in 2 phases. Building-I, which encompasses 188,000 square feet shall be constructed as Phase 1. Building-2, encompassing 202,000 square feet will be considered Phase-II.

The access is provided by one right turn only access from Kings highway, with right turn storage lane, and 2 driveways each onto Graham Road and White Road.

The proposed development includes a lake with fountain, littoral plantings, one bioswale along White Road and 3 additional dry detentions. The proposed open space is 26% which exceeds the required 20%.

Landscape enhancements to the property will include a combination of both native and non native trees and palms as well as 16 relocated native Oak trees and 60 Sabal Palms.

The previously approved 35 ac site, and the original submittal of the 26 ac site had the Building-I loading area on the south side to keep the truck traffic separated from cars/employees' traffic and to provide easy access for the truck which is very important to the proper function of the use.

Per staff comment, the loading area on Building-I was reversed to face north due to White Road being along the south property line frontage. However, this layout causes an access issue for the truck circulation, particularly at the west driveway on White Road. The truck traffic has to make a 90 degree and then a 180-degree movement to access White Road. This causes difficult and undesirable access for trucks in addition to having the truck and other vehicular traffic mixed. Based on our discussion with staff, we would like to offer the previous site plan as an alternative. In order to buffer the loading area from White Road, a 6' wall is provided along the White Road with landscaping on the southside of the wall facing White Road. The 6' wall buffers loading docks from a driver line of sight on White Road. The trees buffer the remainder of the building area.

We appreciate the staff allowing us to offer an alternate site plan.

Kings Highway Commerce Center
Design Review Narrative
April 15, 2024

The design intent for this project is to provide an attractive site design along with aesthetically pleasing, modern, innovative architectural design for the proposed industrial use. While the proposed design is intended to be aesthetically pleasing, it is also intended to provide functionality for its use as an industrial site. This shall be accomplished through the use of site elements, landscape vegetation and architectural features.

Site elements for the subject property shall include features such as a lighted fountain within the lake along Kings highway. Architectural features proposed include vertical and horizontal projections, covered pedestrian walkways, architectural features on the wall to break up the wall areas, roof variation at the building corners and covered entries to the building. Concealed light features shall be utilized at entries to provide both light and architectural interest.

The building façade will be further enhanced through the use of foundation plantings. These plantings will provide variation in heights, textures, and materials to aid in softening the building, as well as to provide an aesthetically pleasing composition. This will be particularly important at the entrances where 'human scale' views will be necessary. Green living walls are utilized to both soften the buildings architecture as well as provide a for the addition of flowering foliage.

Truck circulations are enhanced by use of wide access, large radii and wider interior drives. Access is provided from Kings Hwy and both White and Graham Roads. Truck traffic shall be kept separate from employee traffic by separating the parking and loading areas to the front and rear of the buildings.

Bioswales and littoral planting areas have been provided on the site to improve stormwater filtration, as well as provide a visually appealing element to the design. The Bioswales will also aid in providing habitat diversity in terms of added native plantings for pollinators and wading birds.

The overall plant palette provides a combination of both native and non-native plantings which will provide color and texture variations to further enhance the visual appeal of the site.

The proposed landscape plan further makes use of the existing native Oak trees and Sabal Palms on site. The use of these elements will provide greater height, screening and environmental sustainability by reusing the existing site vegetation to the greatest extent possible. Additional native plantings, such as Slash Pines, Red Maple and Green Buttonwood trees will further enhance the biodiversity of the site.

SHEET 6 OF 7

LANDSCAPE NOTES

ALL PLANT MATERIAL SHALL BE FLORIDA NUMBER 1 OR BETTER AS DEFINED BY THE DIVISION OF PLANT INDUSTRY FLORIDA GRADES AND STANDARDS' LATEST EDITION.

ALL LANDSCAPE SHALL CONFORM TO THE REQUIREMENTS OF THE TOWN OF JUPITER LAND DEVELOPMENT REGULATIONS. THE TOWN OF JUPITER LANDSCAPE CODE (LDRs) SHALL GOVERN IN THE EVENT OF A CONFLICT.

VEGETATION REMOVAL PERMITS ARE REQUIRED PRIOR TO REMOVING, CLEARING OR STRIPPING ANY VEGETATION FROM THE PROPERTY.

AT THE TIME OF BUILDING PERMIT, THE APPLICANT SHALL EXECUTE HOLD HARMLESS AGREEMENTS WITH ALL APPLICABLE UTILITIES FOR LANDSCAPING WITHIN UTILITY EASEMENTS.

THE LANDSCAPE CONTRACTOR SHALL NOT MAKE ANY SUBSTITUTIONS AND/ OR CHANGES WITHOUT THE AUTHORIZATION OF TOWN OF JUPITER, THE OWNER AND THE LANDSCAPE ARCHITECT.

THE LANDSCAPE CONTRACTOR SHALL REVIEW THE PROJECT DRAINAGE AND UTILITY PLANS PRIOR TO CONSTRUCTION AND AVOID ALL CONFLICTS. THE LANDSCAPE CONTRACTOR SHALL VERIFY THE LOCATION OF ALL UNDERGROUND UTILITIES PRIOR TO COMMENCING WORK.

THE LANDSCAPE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL PERMITS.

THE CONTRACTOR SHALL COORDINATE THE PLANTING AND TRIMMING OF STREET TREES TO ENSURE FULL VISIBILITY TO TRAFFIC CONTROL AND SAFETY SIGNAGE

TREES SHALL BE POSITIONED TO AVOID CONFLICTS WITH SIGNAGE AND SITE LIGHTING. LARGER TREES WILL BE PROVIDED AT INTERSECTIONS WHERE DEEMED NECESSARY.

ALL VEGETATION SHALL BE SELECTED AND POSITIONED SO THAT IT DOES NOT PRESENT OBSTRUCTIONS TO THE LINE OF SIGHT AT INTERSECTIONS PURSUANT TO SECTION 27-1262(a)(9)(c) OF THE TOWN OF JUPITER CODE.

ALL ABOVE GROUND UTILITIES I.E. TRANSFORMERS, SWITCH BOXES, AC CONDENSERS AND ALIKE SHALL BE FULLY SCREENED FROM VIEW ON THREE SIDES WITH LANDSCAPING. THE LANDSCAPING SHALL TO THE TALLEST POINT OF SAID EQUIPMENT AT TIME OF PLANTING.

ALL TREES SHALL BE LOCATED WITHIN A MULCH PLANTING BED WITH A MINIMUM OF TWO (2) FEET OF CLEARANCE TO THE EDGE OF THE BED.

SOD AND IRRIGATION SHALL BE INSTALLED IN ANY ADJACENT RIGHT OF WAY BETWEEN THE SIDEWALK AND THE CURB.

ALL SOD SHALL BE STENOTAPHRUM SECONDATUS FLORITAM-PALMETTO (ST. AUGUSTINE SOD).

TREES WITHIN PLANTING ISLANDS LESS THAN FIVE (5) FEET IN WIDTH SHALL BE LOCATED TO AVOID CONFLICTS WITH THE OVERHANG OF VEHICLES.

TYPE D RAISED CONCRETE CURBING SHALL BE PROVIDED AROUND ALL PLANTING ISLANDS WITHIN VEHICULAR USE AREAS.

TREES AT ENTRANCE WAYS AND WITHIN SIGHT TRIANGLES SHALL BE TRIMMED IN SUCH A FASHION TO MINIMIZE SITE VISIBILITY CONFLICTS. CLEAR VISIBILITY SHALL BE MAINTAINED BETWEEN 30 INCHES AND 7 FEET. TEN FOOT BY THIRTY FOOT SIGHT VISIBILITY TRIANGLES SHALL BE PROVIDED AT THE INTERSECTIONS WITH THE PUBLIC RIGHT OF WAY. IN ADDITION ALL LANDSCAPING SHALL CONFORM TO THE REQUIREMENTS OF FDOT INDEX 546.

EARTH BERMS SHALL NOT EXCEED A 3:1 SLOPE 4:1 SLOPES OR GREATER ARE PREFERABLE.

ALL TREES PLANTED UNDER OR ADJACENT TO FPL POWER LINES WILL COMPLY WITH THE FPL RIGHT TREE IN THE RIGHT PLACE GUIDELINES (REV 5/95)

PERIMETER TREES AT THE TIME OF PLANTING SHALL BE SPACED IN A WAY THAT COMPLEMENTS THE SPACING OF ANY EXISTING TREES ON ADJACENT DEVELOPED AREAS.

ALL LANDSCAPE ISLANDS AND BEDS SHALL BE FREE FROM SHELL ROCK AND CONSTRUCTION DEBRIS, EXCAVATED TO A DEPTH OF 30 INCHES OR TO CLEAN NATIVE SOILS AND FILLED WITH THE SPECIFIED BACKFILL MIXTURE.

ALL LANDSCAPE ISLANDS SHALL INCORPORATE THE INSTALLATION OF MOUNDING OF NATIVE SOILS A MINIMUM OF SIX INCHES (6") ABOVE THE TOP OF CURB.

19.5' 'BIO BARRIER' ROOT BARRIER SHALL BE PROVIDED FOR SHADE TREES PLANTED WITHIN SIX (6') FEET OF PUBLIC CURBS, SIDEWALKS OR PUBLIC RIGHT OF WAYS. ALL ROOT BARRIER SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURES RECOMMENDATIONS. THE TOTAL LENGTH OF THE ROOT BARRIERS SHALL BE 20' ADJACENT TO THE SIDEWALK AND 20' ADJACENT TO THE CURB.

ALL AREAS SHALL BE FULLY IRRIGATED IN ACCORDANCE WITH THE REQUIREMENTS OF THE TOWN OF JUPITER. THE IRRIGATION WATER SOURCE SHALL BE WELL WATER FOR COMMON AREAS AND POTABLE WATER AROUND THE BUILDING FOUNDATION.

CATCH BASINS AND DRAINAGE SHALL NOT BE LOCATED WITH IN REQUIRED PERIMETER BUFFERS OR PRESERVE AREAS.

THE IRRIGATION SYSTEM SHALL BE DESIGNED TO PROVIDE 100% OVERLAP COVERAGE TO ALL LANDSCAPE AND SOD AREAS.

THE IRRIGATION SYSTEM SHALL BE EQUIPPED WITH A RAIN SENSOR/CUT OFF SWITCH IN ACCORDANCE WITH STATE AND LOCAL REQUIREMENTS.

EXISTING TREES AND VEGETATION TO REMAIN SHALL BE STAKED AND BARRICADED PRIOR TO ANY LAND CLEARING. TREES TO BE RELOCATED SHALL BE ROOT PRUNED AND PROTECTED DURING CONSTRUCTION.

ALL TREES PROPOSED TO BE PRESERVED ON SITE SHALL BE PROTECTED IN ACCORDANCE WITH THE PROCEDURES OUTLINED IN DIVISION IV. VEGETATION REMOVAL REQUIREMENTS IN THE TOWN OF JUPITER CODE PRIOR TO THE ISSUANCE OF A C.O.

ANY AREA DESIGNATED WITH EXISTING VEGETATION TO REMAIN THAT IS DISTURBED DURING CONSTRUCTION WILL BE RESTORED WITH NATIVE PLANTINGS.

EXISTING TREES PRESERVED OR RELOCATED ON SITE SHALL BE PRUNED ACCORDING TO ANSI A300 STANDARDS OR BY AN ISA CERTIFIED ARBORIST.

ALL EXISTING LANDSCAPING AND TREES TO REMAIN SHALL BE BARRICADED WITH ORANGE CONSTRUCTION BARRICADE. THE BARRICADE SHALL BE INSTALLED AT THE DRIP LINE OF THE TREE/PALM OR AT THE EDGE OF THE SHRUB MASS. BARRICADES SHALL REMAIN IN PLACE THROUGHOUT THE DURATION OF CONSTRUCTION.

EXISTING, SUITABLE NATIVE VEGETATION LOCATED WITHIN THE PROPOSED DEVELOPMENT AREAS SHALL BE RELOCATED TO SUPPLEMENT THE LANDSCAPING. NATIVE VEGETATION SHALL BE RELOCATED BY TREE SPADE OR CRANE. PRIOR TO THE CLEARING OF THE SITE THE APPLICANT SHALL IDENTIFY ALL NATIVE VEGETATION TO BE RELOCATED.

RELOCATION METHODOLOGY: EXISTING NATIVE VEGETATION DETERMINED TO BE SUITABLE FOR RELOCATION SHALL BE RELOCATED TO TARGET AREAS USING HYDROLOGIC TREE SPADES. THE SIZE OF SPADE SHALL VARY FROM 90" TO 45" DEPENDING ON THE SIZE AND TYPE OF VEGETATION TO BE MOVED. THE APPLICANT SHALL IDENTIFY PRIOR TO THE CLEARING OF THE SITE ALL EXISTING NATIVE VEGETATION TO BE RELOCATED. FOLLOWING RELOCATION, VEGETATION SHALL BE WATERED DAILY FOR A PERIOD NOT LESS THAN 90 DAYS AFTER WHICH IT SHALL BE WATERED ON AN AS NEED BASIS TO INSURE SURVIVAL. AT A MINIMUM THE APPLICANT SHALL INSURE 60% SURVIVAL FOR ALL RELOCATED PLANT MATERIAL.

LANDSCAPE SPECIFICATIONS

1. GENERAL LANDSCAPE REQUIREMENTS

LANDSCAPE CONTRACT WORK INCLUDES, BUT IS NOT LIMITED TO, SOIL PREPARATION, FINE OR FINISH GRADING, FURNISHING AND INSTALLING PLANT MATERIAL, WATERING, STAKING, GUYING AND MULCHING.

PLANT SIZE AND QUALITY

TREES, PALMS, SHRUBS, GROUNDCOVERS:
PLANT SPECIES AND SIZES SHALL CONFORM TO THOSE INDICATED ON THE DRAWINGS, NOMENCLATURE SHALL CONFORM TO STANDARD PLANT NAMES, 1942 EDITION. ALL NURSERY STOCK SHALL BE IN ACCORDANCE WITH GRADES AND STANDARDS FOR NURSERY PLANTS PARTS I & II, LATEST EDITION PUBLISHED BY THE FLORIDA DEPARTMENT OF AGRICULTURE AND CONSUMER SERVICES, UNLESS SPECIFIED OTHERWISE. ALL PLANTS SHALL BE FLORIDA GRADE NUMBER 1 OR BETTER AS DETERMINED BY THE FLORIDA DIVISION OF PLANT INDUSTRY.

ALL CONTAINER GROWN MATERIAL SHALL BE HEALTHY, VIGOROUS, WELL-ROOTED PLANTS AND ESTABLISHED IN THE CONTAINER IN WHICH THEY ARE SOLD. THE PLANTS SHALL HAVE TOPS OF GOOD QUALITY AND BE IN A HEALTHY GROWING CONDITION.

AN ESTABLISHED CONTAINER GROWN PLANT SHALL BE TRANSPLANTED INTO A CONTAINER AND GROWN IN THAT CONTAINER SUFFICIENTLY LONG ENOUGH FOR THE NEW FIBROUS ROOTS TO HAVE DEVELOPED SO THAT THE ROOT MASS WILL RETAIN ITS SHAPE AND HOLD TOGETHER WHEN REMOVED FROM THE CONTAINER.

STANDARD PLANTING MIXTURE SHALL BE ONE (1) PART RECYCLED ORGANIC MATERIAL ADDED TO THREE (3) PARTS EXISTING NATIVE SOIL.

REPLACEMENT SOIL SHALL BE USED AS SPECIFIED TO REPLACE EXISTING SOILS THAT ARE DETERMINED BY THE LANDSCAPE ARCHITEC TO BE UNSUITABLE FOR PLANTING, IE, ROAD BASE, PAVEMENT, ETC. REPLACEMENT SOIL MIX SHALL CONTAIN 60% SAND AND 40% MUCK. SAND SHALL BE 100% CLEAN NATIVE SAND SCREENED TO 1/4" AND MUCK SHALL BE 100% CLEAN ORGANIC NATIVE MUCK SCREENED TO 1/2". ALL SOIL SHALL BE MIXED PRIOR TO DELIVERY ON SITE.

MULCH SHALL BE SHREDDED MELALEUCA, EUCALYPTUS OR GRADE "A" RECYCLED, ALL MULCH IS TO BE APPLIED TO A DEPTH OF 3", EXCEPT AS OTHERWISE NOTED.

FERTILIZER IN BACKFILL MIXTURE FOR ALL PLANTS SHALL CONSIST OF MILORGANITE ACTIVATED SLUDGE MIXED WITH THE BACKFILL AT A RATE OF NOT LESS THAN 50 LBS. PER CUBIC YARD.

FERTILIZER FOR TREES AND SHRUBS MAY BE TABLET FORM OR GRANULAR. GRANULAR FERTILIZER SHALL BE UNIFORM IN COMPOSITION, DRY AND FREE-FLOWING. THIS FERTILIZER SHALL BE DELIVERED TO THE SITE IN THE ORIGINAL UNOPENED BAGS, EACH BEARING THE MANUFACTURER'S STATEMENT OF ANALYSIS, AND SHALL MEET THE FOLLOWING REQUIREMENTS: 16% NITROGEN, 7% PHOSPHORUS, 12% POTASSIUM, PLUS IRON. TABLET FERTILIZER (AGRIFORM OR EQUAL) IN 21 GRAM SIZE SHALL MEET THE FOLLOWING REQUIREMENTS: 20% NITROGEN, 10% PHOSPHORUS AND 5% POTASSIUM.

FERTILIZER WILL BE APPLIED AT THE FOLLOWING RATES:

PLANT SIZE	16-7-12	AGRIFORM TABLETS (21 GRAM)
1 GAL.	1/4 LB.	1
3 GAL.	1/3 LB.	3
7-15 GAL.	1/2 LB.	6
1"-6" CALIPER	2 LBS./1" CALIPER	2 PER 1" CALIPER
6" AND LARGER	3 LBS./1" CALIPER	2 PER 1" CALIPER

"FLORIDA EAST COAST PALM SPECIAL" SHALL BE APPLIED TO ALL PALMS AT INSTALLATION AT A RATE OF ½ LB. PER INCH OF TRUNK UNLESS OTHERWISE SPECIFIED.

FIELD GROWN TREES AND PALMS PREVIOUSLY ROOT PRUNED SHALL OBTAIN A ROOT BALL WITH SUFFICIENT ROOTS FOR CONTINUED GROWTH WITHOUT RESULTING SHOCK.

CONTRACTOR SHALL NOT MARK OR SCAR TRUNK IN ANY FASHION.

PLANTS SHALL BE WATERED AS NECESSARY OR WITHIN 24 HOURS AFTER NOTIFICATION BY THE LANDSCAPE ARCHITECT.

THE LOCATIONS OF PLANTS, AS SHOWN IN THESE PLANS, ARE APPROXIMATE. THE FINAL LOCATIONS MAY BE ADJUSTED TO ACCOMMODATE UNFORESEEN FIELD CONDITIONS. MAJOR ADJUSTMENTS TO THE LAYOUT ARE TO BE APPROVED BY THE LANDSCAPE ARCHITECT.

ALL PLASTIC FABRIC SHALL BE REMOVED FROM PLANT MATERIAL AT TIME OF INSTALLATION.

ALL TREES MUST BE STAKED AS SHOWN ON THE PLANTING DETAILS WITHIN 24 HOURS OF PLANTING. STAKES TO REMAIN FOR A MINIMUM OF 9 MONTHS, BUT NO LONGER THAN 18 MONTHS. CONTRACTOR IS RESPONSIBLE FOR MAINTENANCE AND REMOVAL OF THE STAKES.

ALL TREES MUST BE PRUNED AS PER LANDSCAPE ARCHITECT'S DIRECTION. SABAL PALMS MAY BE HURRICANE CUT.

ALL SHRUBS, TREES AND GROUND COVER WILL HAVE IMPROVED SOIL AS PER PLANTING SOIL NOTES. THE SOILS SHALL BE PLACED IN THE HOLE DURING PLANTING. TOP DRESSING ONLY IS NOT ACCEPTABLE.

DO NOT ALLOW AIR POCKETS TO FORM WHEN BACKFILLING. ALL TREES SHALL BE SPIKED IN UTILIZING WATER AND A TREE BAR.

THE LANDSCAPE CONTRACTOR SHALL WATER, MULCH, WEED, PRUNE, AND OTHERWISE MAINTAIN ALL PLANTS, INCLUDING SOD, UNTIL COMPLETION OF CONTRACT OR ACCEPTANCE BY LANDSCAPE ARCHITECT. AT THE TIME OF CONDITIONAL ACCEPTANCE, THE SIX (6) MONTH PERIOD SHALL COMMENCE. ANY MATERIALS WHICH HAVE DIED OR DECLINED TO THE POINT WHERE THEY NO LONGER MEET FLORIDA #1 CONDITION DURING THIS PERIOD SHALL BE PROMPTLY REPLACED WITH SPECIMENS THAT MEET THE MINIMUM REQUIREMENTS CALLED FOR ON THE DRAWINGS. THE LANDSCAPE CONTRACTOR SHALL NOT BE HELD RESPONSIBLE FOR THE DEATH OR DAMAGE RESULTING FROM ACTS OF GOD SUCH AS LIGHTNING, VANDALISM, AND AUTOMOBILES OR FROM NEGLIGENCE BY THE OWNER. CONTRACTOR SHALL BE RESPONSIBLE FOR WATERING AND OTHERWISE MAINTAINING PLANTS UP TO THE CONDITIONAL ACCEPTANCE PERIOD, UNLESS A WRITTEN AGREEMENT WITH THE LANDSCAPE ARCHITECT PROVIDES FOR A DIFFERENT ARRANGEMENT.

UPON COMPLETION OF THE WORK, THE LANDSCAPE CONTRACTOR SHALL NOTIFY THE LANDSCAPE ARCHITECT AND REQUEST A FINAL INSPECTION. ANY ITEMS THAT ARE JUDGED INCOMPLETE OR UNACCEPTABLE BY THE LANDSCAPE ARCHITECT OR OWNER'S REPRESENTATIVE SHALL BE CORRECTED BY THE LANDSCAPE CONTRACTOR WITHIN 14 DAYS.

ALL LABOR AND MATERIAL FOR SOIL AMENDMENTS AND FERTILIZER THAT IS REQUIRED TO INSURE THE SUCCESSFUL ESTABLISHMENT AND SURVIVAL OF THE PROPOSED VEGETATION, AS WELL AS ALL THE COST FOR THE REMOVAL OF UNSUITABLE OR EXCESS BACKFILL MATERIAL, SHALL BE INCLUDED IN THE CONTRACTOR'S BID TO PERFORM THE WORK REPRESENTED IN THIS PLAN SET.

2. PLANTING TREES

EXCAVATE PIT AS PER PLANTING DETAILS.

BACKFILL AROUND BALL WITH STANDARD PLANTING MIXTURE AND SLIGHTLY COMPACT, WATER THOROUGHLY AS LAYERS ARE PLACED TO ELIMINATE VOIDS AND AIR POCKETS. BUILD A 6" HIGH BERM OF STANDARD PLANTING MIXTURE BEYOND EDGE OF EXCAVATION. APPLY 3" (AFTER SETTLEMENT) OF MULCH EXCEPT WITHIN 6" OF TRUNK.

PRUNE TREE TO REMOVE DAMAGED BRANCHES, IMPROVE NATURAL SHAPE AND THIN OUT STRUCTURE. DO NOT REMOVE MORE THAN 15% OF BRANCHES. DO NOT PRUNE BACK TERMINAL LEADER.

GUY AND STAKE TREE IN ACCORDANCE WIT THE STAKING DETAILS IMMEDIATELY AFTER PLANTING.

3. PLANTING SHRUBS

LAYOUT SHRUBS TO CREATE A CONTINUOUS SMOOTH FRONT LINE AND FILL IN BEHIND.

EXCAVATE PIT OR TRENCH TO 1-1/2 TIMES THE DIAMETER OF THE BALLS OR CONTAINERS OR 1'-0" WIDER THAN THE SPREAD OF ROOTS FOR POSITIONING AT PROPER HEIGHT. BACKFILL AROUND PLANTS WITH STANDARD PLANTING MIXTURE, COMPACTED TO ELIMINATE VOIDS AND AIR POCKETS. FORM GRADE SLIGHTLY DISHED AND BERMED AT EDGES OF EXCAVATION. APPLY 3" OF MULCH EXCEPT WITHIN 3" OF STEMS.

PRUNE SHRUBS TO REMOVE DAMAGED BRANCHES, IMPROVE NATURAL SHAPE AND THIN OUT STRUCTURE. DO NOT REMOVE MORE THAN 15% OF BRANCHES.

4. PLANTING GROUND COVER

LOOSEN SUBGRADE TO DEPTH OF 4" IN AREAS WHERE TOPSOIL HAS BEEN STRIPPED AND SPREAD SMOOTH.

SPACE PLANTS AS OTHERWISE INDICATED. DIG HOLES LARGE ENOUGH TO ALLOW SPREADING OF ROOTS. COMPACT BACKFILLTO ELIMINATE VOIDS AND LEAVE GRADE SLIGHTLY DISHED AT EACH PLANT. WATER THOROUGHLY. APPLY 3" OF MULCH OVER ENTIRE PLANTING BED, LIFTING PLANT FOLIAGE ABOVE MULCH.

DURING PERIODS OF HOT SUN AND/OR WIND AT TIME OF PLANTING, PROVIDE PROTECTIVE COVER FOR SEVERAL DAYS OR AS NEEDED.

5. PLANTING LAWNS

SODDING: SOD TYPE SPECIFIED ON PLANT LIST SHALL BE MACHINE STRIPPED NOT MORE THAN 24 HOURS PRIOR TO LAYING.

LOOSEN SUBGRADE TO DEPTH OF 4" AND GRADE WITH TOPSOIL EITHER PROVIDED ON SITE OR IMPORTED STANDARD PLANTING MIX TO FINISH DESIGN ELEVATIONS. ROLL PREPARED LAWN SURFACE. WATER THOROUGHLY, BUT DO NOT CREATE MUDDY SOIL CONDITION.

FERTILIZE SOIL AT THE RATE OF APPROXIMATELY 10 LBS, PER 1,000 S.F. SPREAD FERTILIZER OVER THE AREA TO RECEIVE GRASS BY USING AN APPROVED DISTRIBUTION DEVICE CALIBRATED TO DISTRIBUTE THE APPROPRIATE QUANTITY. DO NOT FERTILIZE WHEN WIND VELOCITY EXCEEDS 15 M.P.H. THOROUGHLY MIX FERTILIZER INTO THE TOP 2" OF TOPSOIL.

LAY SOD STRIPS WITH TIGHT JOINTS, DO NOT OVERLAP. STAGGER STRIPS TO OFFSET JOINTS IN ADJACENT COURSES. WORK WITH STANDARD PLANTING MIXTURE INTO MINOR CRACKS BETWEEN PIECES OF SOD AND REMOVE EXCESS SOIL DEPOSITS FROM SODDED AREAS. SOD ON SLOPES GREATER THAN 3:1 SHALL BE STAKED IN PLACE. ROLL OR STAMP LIGHTLY AND WATER THOROUGHLY WITH A FINE SPRAY IMMEDIATELY AFTERPLANTING.

6. MISCELLANEOUS LANDSCAPE WORK

LANDSCAPE MAINTENANCE

MAINTAIN LANDSCAPE WORK UNTIL FINAL ACCEPTANCE IS ISSUED BY THE OWNER'S REPRESENTATIVE. INCLUDE WATERING, WEEDING, CULTIVATING, RESTORATION OF GRADE, MOWING AND TRIMMING GRASS, PRUNING TREES AND SHRUBS, PROTECTION FROM INSECTS AND DISEASES, FERTILIZING AND SIMILAR OPERATIONS AS NEEDED TO INSURE NORMAL GROWTH AND GOOD HEALTH FOR LIVE PLANT MATERIAL.

PLANT MATERIAL SUBSTITUTION

NO SUBSTITUTION OF PLANT MATERIAL TYPE OR SIZES WILL BE PERMITTED WITHOUT AUTHORIZATION FROM THE LANDSCAPE ARCHITECT.

PLANTING BED PREPARATION

ALL PLANTING BEDS SHALL BE PROPERLY PREPARED PRIOR TO THE COMMENCEMENT OF ANY PLANTING. PLANTING AREAS, INCLUDING LAWNS SHALL BE FREE OF ALL WEEDS AND NUISANCE VEGETATION. IF TORPEDO GRASS (PANICUM REPENS) IS PRESENT OR ENCOUNTERED DURING PLANTING, THE LANDSCAPE CONTRACTOR SHALL STOP ALL PLANTING UNTIL IT CAN BE DEMONSTRATED THAT IT HAS BEEN COMPLETELY REMOVED OR ERADICATED. THERE SHALL BE NO EXCEPTIONS TO THIS PROVISION.

ALL LANDSCAPE ISLANDS AND BEDS WILL BE FREE OF SHELL ROCK AND CONSTRUCTION DEBRIS AND WILL BE EXCAVATED TO A DEPTH OF 30 INCHES OR TO CLEAN, NATIVE SOIL AND FILLED WITH THE SPECIFIED REPLACEMENT SOIL.

LANDSCAPE WARRANTY

THE LANDSCAPE CONTRACTOR SHALL GUARANTEE ALL PLANT MATERIAL FOR A PERIOD OF SIX (6) MONTHS FROM THE DATE OF CONDITIONAL ACCEPTANCE IN WRITING FROM THE LANDSCAPE ARCHITECT. AT THE TIME OF CONDITIONAL ACCEPTANCE, THE SIX (6) MONTH PERIOD SHALL COMMENCE. ANY MATERIALS WHICH HAVE DIED OR DECLINED TO THE POINT WHERE THEY NO LONGER MEET FLORIDA #1 CONDITION DURING THIS PERIOD SHALL BE PROMPTLY REPLACED WITH SPECIMENS THAT MEET THE MINIMUM REQUIREMENTS CALLED FOR ON THE DRAWINGS. THE LANDSCAPE CONTRACTOR SHALL NOT BE HELD RESPONSIBLE FOR THE DEATH OR DAMAGE RESULTING FROM ACTS OF GOD SUCH AS LIGHTNING, VANDALISM, AND AUTOMOBILES OR FROM NEGLIGENCE BY THE OWNER. CONTRACTOR SHALL BE RESPONSIBLE FOR WATERING AND OTHERWISE MAINTAINING PLANTS UP TO THE CONDITIONAL ACCEPTANCE PERIOD, UNLESS A WRITTEN AGREEMENT WITH THE LANDSCAPE ARCHITECT PROVIDES FOR A DIFFERENT ARRANGEMENT.

Contents

I. Introduction

The site is located on the north side of White Road 0.1 mile east of Kings Hwy and approximately 1 mile north of Okeechobee Rd (SR-70) and consists of 26.53 ac of land. 0.1 ac is to be dedicated to St. Lucie County for the sidewalk on White Road.
See Exhibit-A.

An industrial development including warehouse, distribution, and related offices with ultimate buildout of 390 ksf of buildings and supporting infrastructure is proposed.

The site historical discharge is to North St. Lucie River Water Control District (NSLRWCD) Canal C-40 along the west side of Kings Hwy via 1-24" RCP and then into the Ten Mile Creek and ultimately into the St. Lucie River North Fork which is considered impaired.

The proposed master drainage system consists of a 1.76 ac wet retention/detention and 5 dry detentions totaling 2.44 ac.

The dry detention area shall provide the pre-treatment requirements.

Discharge to C-40 is through a control structure CS-1 located on the NWC of the Lake-1.

The construction of this project shall be split into two phases:

Phase-I includes the master drainage system, the main drive, & access to Kings Hwy along w/ 2 driveways onto White Rd.

Phase-II includes Building-II along w/ 2 driveways onto Graham Road.

Off-site improvements include a right turn lane on Kings Hwy for the main access.

Section 13, Township 35S, Range 39E, City of Fort Pierce, St. Lucie County, Florida

Impervious w/o lakes	19.77	11.27	8.51

*Includes Dry Detentions

S = 6.8" (Depressional) x (1-0.815) x 0.75 = 0.94 in
CN = 91.4

III. Off-site Discharge

There is off-site discharge. This project has Kings Hwy to the west, Graham Road to the north, Peter's Road to the east & White Rd to the south. There is an agricultural parcel to the east that discharges to a ditch along White Road and to C-37 on the east side of Peters Rd.

IV. Wetlands

There are no wetlands on this property**.** As per an aerial photograph of the site, the entire site was utilized for agricultural use.

V. Water Table

Per soil report, the average water table in 09/02/2022 was 10.9 FT, NAVD.
The control elevation in the NSLRWCD C-40 is 8.5 FT, NAVD in wet season & 11.5 in dry season.
HWT of 12.0 FT, NAVD is assumed for this project.

VI. Design Criteria

Water Quality
Bleeder el is set @ 13.0 to provide 1' of wet retention in the lakes.
Weir el is set @ 14.7 to provide 1.7' of wet detention.
Impaired outfall waters require add'l 50% water quality.
Required water quality is the greater of below in wet detention x 1.5:

a. 2.5" wet detention over impervious area.
b. 1.25" wet retention over impervious area.
c. 1" wet detention over the entire project area.

V req wet det =2.5"A/12(A-lake-Bldg-pervious area)/(A-lake-Bldg)
(2.5"x26.43)(26.43-1.76-8.95-5.0)/(26.43-1.76-8.95))/12 = 3.75 A-F
1"(26.43-1.76-2.44) /12 = 1.85 A-F
3.75 x 1.5 = **5.63 A-F**
V prop wet det =1.7' (lake area (@ 13.0 + @ 14.7)/2 = 1.7'(1.87+1.95)/2= **3.1 A-F**

V prop wet ret = 1' (lake area (@ 12.0 + @ 13)/2 =1'(1.76+1.87)/2= **1.82 A-F**

V req pre-treat = (26.43-1.76-2.44) x 0.5"/12 = **0.93 A-F**
Dry detention will be utilized.
1' of dry detention is proposed at all dry detention areas.
V dry det= 1'(A@ 13.0 bottom+ A@ 14 weir)/2=1'(0.79+1.3)/2= **1.05 A-F>0.93**

Req'd dry detention volume would be 75% of wet detention.
Req'd retention volume would be 50% of wet detention.

Water quality prop/req'd = 3.1/5.63 + 1.05/(0.75 x 5.63) + 1.82/(0.5 x 5.63) = 1**36%**

Nutrient treatment
Wet retention shall be utilized.
Prop retention = 1.82a-f x 12/(26.43-1.76 lake-2.44 dry det) = 0.98" ~ 1"

Design Elevations
Min Pavt EL
10yr-24hr storm peak stage 15.88 FT, NAVD
Min Pavt EL 16.00 FT

Perimeter Berm EL

25yr-72 hr storm peak stage	16.78 FT, NAVD	(City of Ft. Pierce)
10yr-72hr storm peak stage	16.57 FT	(NSLRWCD)
Min perim berm EL	16.80 FT	

Min Fin Floor EL
100yr-72hr storm peak stage 17.4 FT, NAVD
Min F.F. EL 17.50 FT

VII. Allowable Discharge

NSLRWCD allowable discharge is 2" per day for a 10yr-72hr storm. This is a volume-based limitation. There is no limitation on the peak discharge rate.
V allowable (10yr-72hr) = 26.43 ac x 2"/12 = 4.41 A-F /day
V max prop (10yr-72hr) = 4.3 A-F /day < 4.41 66.0-hr to 90.0 hr (see 10yr-72hr storm routing).

VIII. Bleeder Design

(SFWMD) Bleeder is to discharge 1/2" in 24 hr.
Q SFWMD = 26.43 ac x 1/2" x 43,560/(12 x 3600 x 24) = 0.56 cfs

$Q = 4.8 \times A \times (H)^{0.5}$
H avg = 0.85'
$0.56 = 4.8 \times A \times 0.85^{0.5}$
A = 0.125 sf = 18 sq in
Use 4.7 in circular bleeder

IX. Utilities

Fort Pierce Utility Authority would be providing water & wastewater services to the proposed development.

X. Maintenance Entity

The applicant shall be the maintenance entity.

XI. Irrigation

The lake surface water shall be utilized for irrigation purposes. A water use permit shall be obtained from SFWMD.

XII. ICPR Flood Routing

See ICPR Node diagram & basin map.
The retention volumes are not included in flood routing calculations to be conservative and due to low soil hydraulic conductivity.

Grading assumption for ICPR Input:
1. Surface el's 16.0-17.5
2. F.F. el 17.5 min

XIII. Nutrient Removal

St. Lucie River is considered impaired so post development nutrient loading rates, nitrogen (TN) & phosphorus (TP), need to match pre-development.

"Evaluation of Current **S**tormwater **D**esign **C**riteria within **S**tate of **F**lorida "final report (**FSDC**) dated June 2007 is utilized in this section. The referenced portions of FSDC are attached under Appendix. The 2012 South Florida Environmental Report Appendix 10-1 (**SFER**) for land use categories in the St. Lucie River Watershed will be used for the nutrient concentrations. SFWMD Vol IV Manual 2012 reference is shown as **SFWMD.**

The project is in Zone-2 per FSDC Fig 4-3

Per FSDC Fig 6.1, BOD removal in excess of 95% shall be achieved if removal efficiency is provided for both nitrogen & phosphorus.

The proposed development is considered industrial. FSDC 4.1.5.
The site was previously developed as citrus groves from 1968 to mid-1990's & now is used as a pasture. Therefore, unimproved pasture, as defined in Florida Fish & Wildlife "Florida Land Use Classification…, December 2012, is assumed for the pre-development land use.
Existing soil is assumed to be depressional.

Pre Dev-Nutrient Loading Basin 26.43 ac
Post Dev Nutrient Loading Basin = 26.43-1.76 lake-2.44 dry det = **22.23 ac**

Pre-Development
Type D soil
Pasture in good condition,
NDCIA CN = 80 SCS TR 55 (SCS) Table 2-2c

Post Development
Open Space in good condition
Pervious area CN = 80 SCS Table 2-2a
NDCIA Imp = 0
NDCIA Total = 2.56 ac Perv w/o dry det Sec II

NDCIA CN = 80
DCIA = 19.77 ac Imp w/o lake Sec II
DCIA % = (19.77/(22.23) = **88.9%**

Pre Dev Mean Annual C = 0.111 FSDC Appendix C Zone-2
Post Dev Mean Annual C = 0.732

XIII. Nutrient Removal cont'd

Post-dev vs Pre dev loading
TN 1.27 mg/l vs 1.19 mg/l SFER
Req % removal = ((1.27x0.732x22.23) - (1.19x0.111x26.43)) / (1.27x0.732x22.23) = 83.1%
TP 0.37 mg/l vs 0.25 mg/l SFER
Req % removal = ((0.37x0.732x22.23) - (0.25x0.111x26.43)) / (0.37x0.732x22.23) = 87.8%

Annual rainfall = 53.5" FSDC Appendix A-3
Mean annual runoff = 0.732 x 53.5 = 39.16"
V_{runoff} = 39.16"(22.23ac)/(12x365) = 0.198 A-F /day
$V_{perm\ pool}$ = 16.3 a-f
$T_{wet\ det\ residence}$ = 16.3/0.198 = 83 days

Removal Efficiency (RE)
1" of retention shall be provided
It is proposed to provide 1" of retention & wet detention w/ 83 days residency.

1" retention has 71.48% RE FSDC Appendix-D
detention w/ 83 days residency has 72.45% RE TP FSDC Fig 5-9
41.56% RE TN FSDC Fig 5-10
Overall Removal Efficiency (ORE)
ORE TN = 0.715 + (1-0.715) (0.416) = **83.4% > 83.1%** FSDC 6.1.2 Eq-1
ORE TP = 0.715 + (1-0.715) (0.725) = 92.2**% > 87.8%**

Appendix

The next step is to compute the project-specific S-value to use for determining the runoff volume which will be discharged from the site. The depth to the water table will be 3 feet (17.0 - 14.0 = 3.0), consequently the total amount of water which can be stored under pervious surfaces will be 4.95 inches. If 15% of the project will be in lakes and 35% will be covered by impervious surfaces, then the remainder, or 50% will be pervious areas and the appropriate weighted S-value will be:

$$4.95" \times (1 - (.15+.35)) = 2.48" = S$$

Figure E-1 is a graphical representation of the cumulative water storage capabilities of the soil profile for the developed and undisturbed conditions versus the depth to the average wet season water table for the typical sandy soils found within the South Florida Water Management District boundaries.

In about April, 1993, the US SCS furnished the District test data for Immokalee and Riviera soils which show less soil storage than the typical soils described above. The following table shows the average values as compared to the typical values (Coastal). Although the lesser storage values result in higher SCS runoff curve numbers, the depressional and flatwoods soils typically are in flat and depressed areas with standing water, thus the areas have low runoff potential.

SOIL STORAGE

Depth to W.T.	Coastal (1) Stor. (In.)	CN	Flatwoods (2) Stor. (In.)	CN	Depressional (3) Stor. (In.)	CN
1'	0.6	94	0.6	94	0.6	94
2'	2.5	80	2.5	80	2.1	83
3'	6.6	60	5.4	65	4.4	69
4'	10.9	48	9.0	53	6.8	60

(1) Sandy soils 0 - 40" thick with water tables dropping below 40" - St. Lucie series is representative

(2) Water tables 15" - 40" - Immokalee series is representative

(3) Water tables above ground - 15" - Riviera and Pompano series are representative

Figure E-1 is also a graphical comparison of the cumulative water storage capabilities of the soil profile for flatwoods and depressional storage.

Table 2-2a Runoff curve numbers for urban areas [1/]

Cover description		Curve numbers for hydrologic soil group			
Cover type and hydrologic condition	Average percent impervious area [2/]	A	B	C	D
Fully developed urban areas (vegetation established)					
Open space (lawns, parks, golf courses, cemeteries, etc.) [3/]:					
Poor condition (grass cover < 50%)		68	79	86	89
Fair condition (grass cover 50% to 75%)		49	69	79	84
Good condition (grass cover > 75%)		39	61	74	80
Impervious areas:					
Paved parking lots, roofs, driveways, etc. (excluding right-of-way)		98	98	98	98
Streets and roads:					
Paved; curbs and storm sewers (excluding right-of-way)		98	98	98	98
Paved; open ditches (including right-of-way)		83	89	92	93
Gravel (including right-of-way)		76	85	89	91
Dirt (including right-of-way)		72	82	87	89
Western desert urban areas:					
Natural desert landscaping (pervious areas only) [4/]		63	77	85	88
Artificial desert landscaping (impervious weed barrier, desert shrub with 1- to 2-inch sand or gravel mulch and basin borders)		96	96	96	96
Urban districts:					
Commercial and business	85	89	92	94	95
Industrial	72	81	88	91	93
Residential districts by average lot size:					
1/8 acre or less (town houses)	65	77	85	90	92
1/4 acre	38	61	75	83	87
1/3 acre	30	57	72	81	86
1/2 acre	25	54	70	80	85
1 acre	20	51	68	79	84
2 acres	12	46	65	77	82
Developing urban areas					
Newly graded areas (pervious areas only, no vegetation) [5/]		77	86	91	94
Idle lands (CN's are determined using cover types similar to those in table 2-2c).					

1 Average runoff condition, and $I_a = 0.2S$.

2 The average percent impervious area shown was used to develop the composite CN's. Other assumptions are as follows: impervious areas are directly connected to the drainage system, impervious areas have a CN of 98, and pervious areas are considered equivalent to open space in good hydrologic condition. CN's for other combinations of conditions may be computed using figure 2-3 or 2-4.

3 CN's shown are equivalent to those of pasture. Composite CN's may be computed for other combinations of open space cover type.

4 Composite CN's for natural desert landscaping should be computed using figures 2-3 or 2-4 based on the impervious area percentage (CN = 98) and the pervious area CN. The pervious area CN's are assumed equivalent to desert shrub in poor hydrologic condition.

5 Composite CN's to use for the design of temporary measures during grading and construction should be computed using figure 2-3 or 2-4 based on the degree of development (impervious area percentage) and the CN's for the newly graded pervious areas.

Table 2-2b Runoff curve numbers for cultivated agricultural lands [1/]

Cover description			Curve numbers for hydrologic soil group			
Cover type	Treatment [2/]	Hydrologic condition [3/]	A	B	C	D

	C&T+ CR	Poor	60	71	78	81
		Good	58	69	77	80
Close-seeded or broadcast legumes or rotation meadow	SR	Poor	66	77	85	89
		Good	58	72	81	85
	C	Poor	64	75	83	85
		Good	55	69	78	83
	C&T	Poor	63	73	80	83
		Good	51	67	76	80

[1] Average runoff condition, and I_a=0.2S

[2] Crop residue cover applies only if residue is on at least 5% of the surface throughout the year.

[3] Hydraulic condition is based on combination factors that affect infiltration and runoff, including (a) density and canopy of vegetative areas, (b) amount of year-round cover, (c) amount of grass or close-seeded legumes, (d) percent of residue cover on the land surface (good ≥ 20%), and (e) degree of surface roughness.

Poor: Factors impair infiltration and tend to increase runoff.

Good: Factors encourage average and better than average infiltration and tend to decrease runoff.

Table 2-2c Runoff curve numbers for other agricultural lands [1/]

Cover description		Curve numbers for hydrologic soil group			
Cover type	Hydrologic condition	A	B	C	D
Pasture, grassland, or range—continuous forage for grazing. [2/]	Poor	68	79	86	89
	Fair	49	69	79	84
	Good	39	61	74	80
Meadow—continuous grass, protected from grazing and generally mowed for hay.	—	30	58	71	78
Brush—brush-weed-grass mixture with brush the major element. [3/]	Poor	48	67	77	83
	Fair	35	56	70	77
	Good	30 [4/]	48	65	73
Woods—grass combination (orchard or tree farm). [5/]	Poor	57	73	82	86
	Fair	43	65	76	82
	Good	32	58	72	79
Woods. [6/]	Poor	45	66	77	83
	Fair	36	60	73	79
	Good	30 [4/]	55	70	77
Farmsteads—buildings, lanes, driveways, and surrounding lots.	—	59	74	82	86

1 Average runoff condition, and $I_a = 0.2S$.

2 *Poor:* <50%) ground cover or heavily grazed with no mulch.
Fair: 50 to 75% ground cover and not heavily grazed.
Good: > 75% ground cover and lightly or only occasionally grazed.

3 *Poor*: <50% ground cover.
Fair: 50 to 75% ground cover.
Good: >75% ground cover.

4 Actual curve number is less than 30; use CN = 30 for runoff computations.

5 CN's shown were computed for areas with 50% woods and 50% grass (pasture) cover. Other combinations of conditions may be computed from the CN's for woods and pasture.

6 *Poor:* Forest litter, small trees, and brush are destroyed by heavy grazing or regular burning.
Fair: Woods are grazed but not burned, and some forest litter covers the soil.
Good: Woods are protected from grazing, and litter and brush adequately cover the soil.

Evaluation of Current Stormwater Design Criteria within the State of Florida

Final Report

Prepared for:

FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION

FDEP Contract No. SO108

June 2007

Prepared By:

Harvey H. Harper, Ph.D., P.E.

Orlando, FL 32812

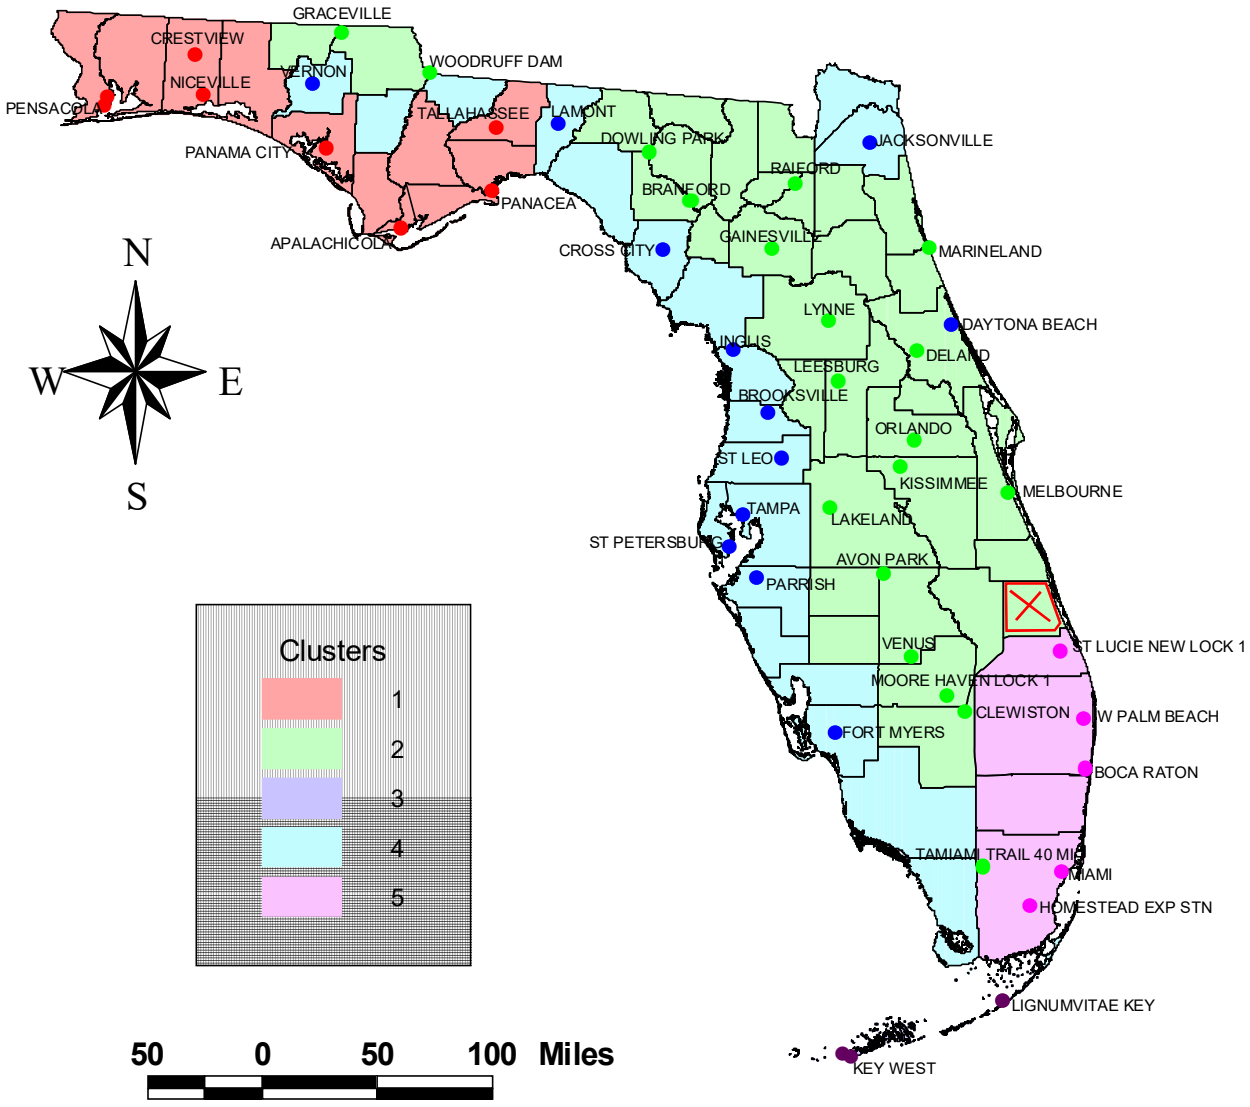

Figure 4-3. Meteorological Zones Identified Using Cluster Analysis.

Unfortunately, not all counties in Florida have long-term meteorological monitoring sites with hourly data. For purposes of designating meteorological zones, counties without a monitoring site were grouped according to the meteorological characteristics of adjacent counties with monitoring sites. The resulting zones appear to be relatively intuitive with respect to meteorological processes. The cluster groupings only have two apparent outliers, Daytona Beach and Tamiami Trail, which appear out of place. However, in a data set containing 45 points, an analysis conducted at a 95% probability level would be expected to have approximately 2-3 outlier values. A listing of counties included in each meteorological zone is given in Table 4-23.

A summary of mean runoff coefficients for each cluster as a function of land use and hydrologic soil group is given in Table 4-24. The values summarized in this table reflect the mean runoff coefficients for each land use and hydrologic soil group and each meteorological monitoring site included in each of the five clusters. The values summarized in Table 4-24 reflect differences in runoff coefficients as a result of frequency distributions of common rain events only. This analysis does not include variability in rainfall depth throughout the State which must be multiplied times the mean runoff coefficients to obtain an estimate of annual runoff volume.

$$BOD_i = BOD_o \times exp(-K \times t)$$

where:

BOD_t = BOD at time, t (mg/l)

BOD_o = initial BOD (mg/l)

t = time (days)

K = decomposition constant ($time^{-1}$)

BOD decomposition constants (K) in surface waters are temperature-dependent but are typically on the order of 0.1/day. A graphical representation of the theoretical removal of BOD as a function of time, based upon a decomposition constant of 0.1/day, is given in Figure 6-1. This relationship can be used to estimate the time required to achieve a certain BOD removal efficiency within a wet detention pond. A removal efficiency of approximately 80% is achieved for BOD after a residence time of approximately 15 days, with removal efficiencies in excess of 95% after approximately 30-35 days. As a result, the removal of BOD in aquatic systems occurs at a much more rapid rate than removal of total nitrogen or total phosphorus, as indicated in Figures 5-10 and 5-11. Therefore, if a stormwater management system provides the required removal efficiency for both total nitrogen and total phosphorus, the system will also easily provide the same pollutant removal efficiency for BOD.

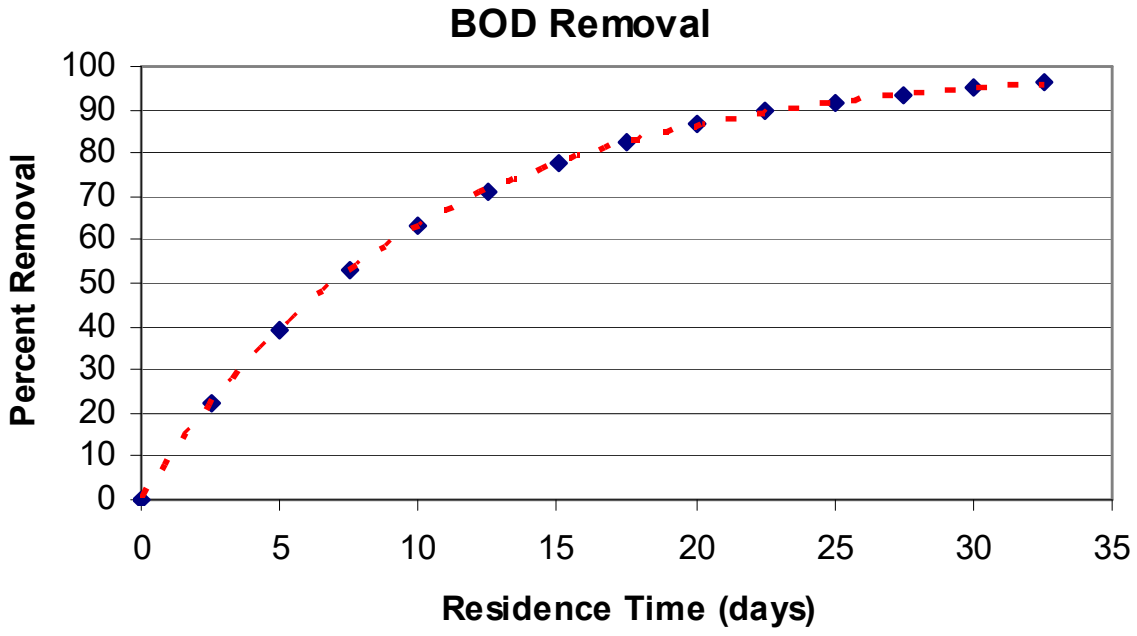

Figure 6-1. Theoretical Removal of BOD as a Function of Residence Time in a Wet Detention Pond.

4.1.5 Low-Intensity Commercial Areas

For the purposes of this evaluation, the term intensity refers to the level of use of the commercial area rather than an indication of the type of business or density of development. Low-intensity commercial areas are defined as areas which receive only a moderate amount of traffic volume and where cars may be parked during the day for extended periods of time. Since most commercial activities themselves generate relatively little pollutant loading, the majority of pollutant deposition occurs as a result of automobiles and trucks operating within the commercial area. Low-intensity commercial areas include schools, churches, professional office sites, and small shopping centers. High-intensity commercial areas include downtown business districts and large regional shopping areas.

A summary of hydrologic characteristics from low-intensity commercial stormwater characterization studies is given in Table B.3. Nine separate studies were identified in the available literature, with watershed areas ranging from 2.17-50.70 acres. Percentage imperviousness for the commercial sites range from 60% to approximately 100%. Eight of the nine studies utilize curb and gutter stormsewer systems, with swales utilized for drainage conveyance at the Florida Aquarium site.

A summary of mean stormwater emc values from low-intensity commercial stormwater studies is given in Table 4-7. Characterization data for total nitrogen, total phosphorus, and TSS are provided for each of the nine studies, with eight of the nine studies providing characterization data for BOD. As observed in previous land use categories, characterization data for heavy metals is somewhat limited. In general, low-intensity commercial areas are characterized by relatively low levels of total nitrogen, total phosphorus, and BOD, although TSS concentrations are somewhat elevated. Runoff characteristics reported by Harper and Herr (1993) are not included in calculation of the mean value since the runoff in this study received pre-treatment in a vegetated swale prior to collection.

5.2.2.1 SJRWMD Design Criteria

Wet detention ponds designed according to St. Johns River Water Management District (SJRWMD) criteria are characterized by relatively short residence times, ranging from approximately 14-21 days under wet season conditions. Virtually all existing research studies on wet detention systems, as summarized in Table 5-2, have been performed on shallow ponds with relatively short residence times. Six of the eight studies summarized in Table 5-2 are located in the St. Johns River Water Management District, although designs for some of the earlier studies may be different from current design criteria.

A summary of estimated performance efficiencies of wet detention ponds designed according to SJRWMD criteria is given in Table 5-8. The values summarized in this table reflect the overall mean treatment efficiencies for wet detention systems summarized in Table 5-2. The values summarized in Table 5-8 correspond closely to performance efficiencies measured by Harper and Herr (1993) for a wet detention pond constructed according to SJRWMD criteria. Based upon the estimated performance efficiency summarized in Table 5-8, with the possible exception of TSS, wet detention ponds designed according to SJRWMD criteria fail to meet the 80% removal criteria outlined in Chapter 62-40.

5.2.2.2 SFWMD Design Criteria

As discussed in a previous section, wet detention systems designed within the South Florida Water Management District (SFWMD) are often excavated to water depths of 20 ft or more. The SFWMD does not have any specific limitation on pond depth, and developers often dig deep wet detention ponds to provide additional fill for low areas within a development. This technique can result in ponds with substantially extended detention times, often in excess of 200 days.

Each of the four water management districts mentioned previously provides calculations for a treatment volume associated with the wet detention system. This treatment volume is often referred to as the "water quality volume" since the criteria are similar to the water quality treatment criteria for dry retention or dry detention. However, research on wet detention ponds clearly indicates that the most significant factor impacting the performance efficiency of a wet detention pond is the residence time within the system - specifically, the volume of the permanent pool with respect to the volume of runoff entering the pond (Toet, et al., 1990; Harper and Herr, 1993; Rushton, et al., 1995; and DB Environmental, 2005). Since the specified treatment volumes are negligible in comparison to the permanent pool volume contained within the wet detention pond, the treatment volume criteria primarily regulates the drawdown characteristics of the wet detention pond and has little impact on the overall water quality performance efficiency of the system.

Residence time within a wet detention pond is determined by the relationship between the permanent pool volume and the annual runoff inputs, as follows:

$$Detention\ \ Time,\ t_d\ (days) = \frac{PPV}{RO} \times \frac{365\ days}{year}$$

where:

PPV = permanent pool volume (ac-ft)

RO = annual runoff inputs (ac-ft/yr)

For purposes of this calculation, the permanent pool volume is considered to include the total volume of water within the pond below the control elevation.

Criteria related to residence time and pond depth are not included in specific design criteria outlined by the Suwannee River or Southwest Florida Water Management Districts. Wet detention ponds designed in these districts could conceivably have a wide range of detention times and associated performance efficiencies, with some ponds approaching design criteria similar to that used in the St. Johns River Water Management District and other ponds approaching design criteria utilized in the South Florida Water Management District. As a result, estimates of the anticipated performance efficiency of wet detention systems designed in the St. Johns River and South Florida Water Management Districts will be presented in this section, with the anticipated efficiency of wet detention systems designed in the Suwannee River and Southwest Florida Water Management Districts likely to fall somewhere in between.

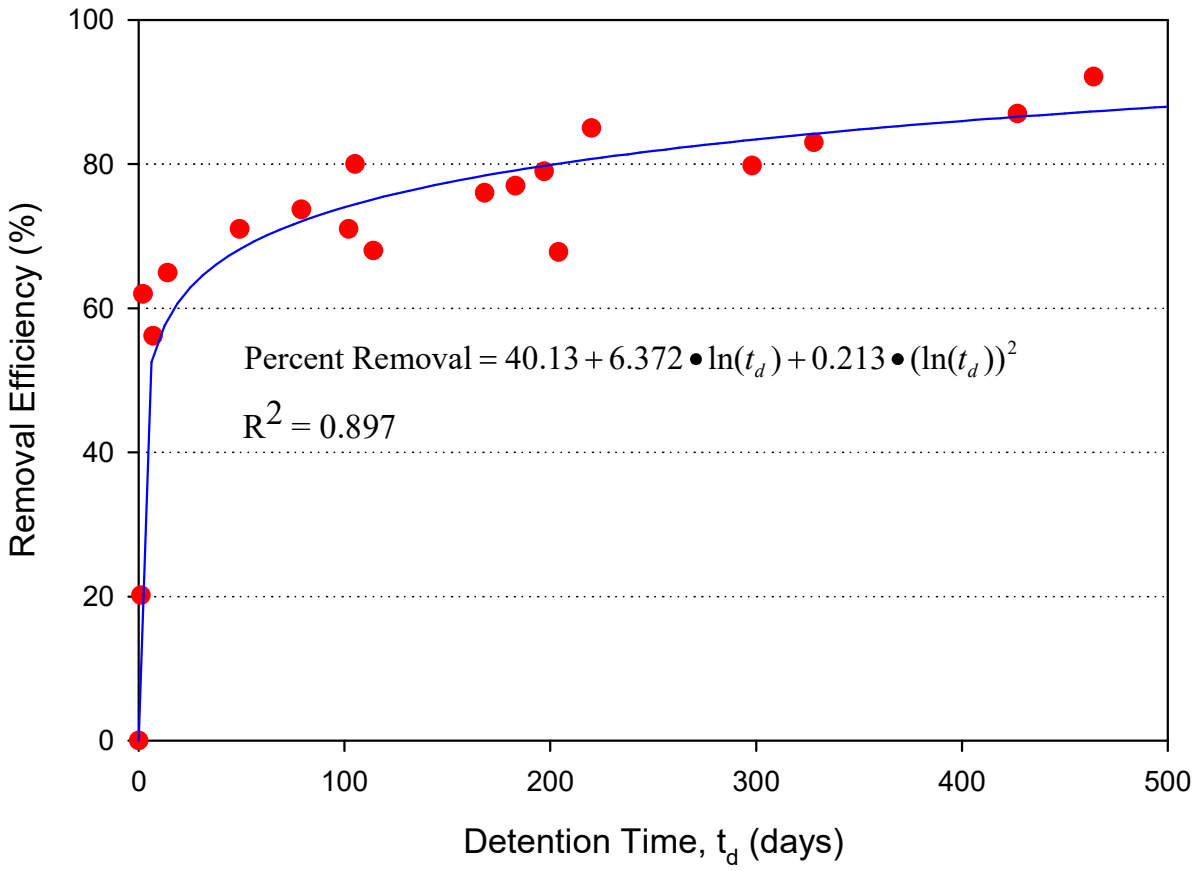

Figure 5-9. Removal Efficiency of Total Phosphorus in Wet Detention Ponds as a Function of Residence Time.

The relationship indicated on Figure 5-9 suggests that removal of phosphorus in wet detention ponds continues to occur, although at a progressively slower rate, with increases in residence time within the system. A removal efficiency of 80% can be achieved at a detention time of about 200 days. The upper limit for removal efficiencies in wet detention ponds appears to be approximately 90%, although removal efficiencies in excess of 90% were achieved at extended detention times in three of the 20 studies. At this point, total phosphorus concentrations within wet detention ponds appear to approach irreducible concentrations which reflect natural background phosphorus levels in surface waterbodies.

Relationships between detention time and removal efficiencies for total nitrogen in wet detention ponds are illustrated on Figure 5-10. The data points presented on this figure are based upon the referenced studies summarized in Table 5-9. The annual mass removal efficiency of 63% reported by Rushton, et al. (1995) for a wet pond with a detention time of 14 days and the removal efficiency of 33% for a 2-day detention time were eliminated from the data set as outliers due to elevated values for the Student T and Cook's D parameters.

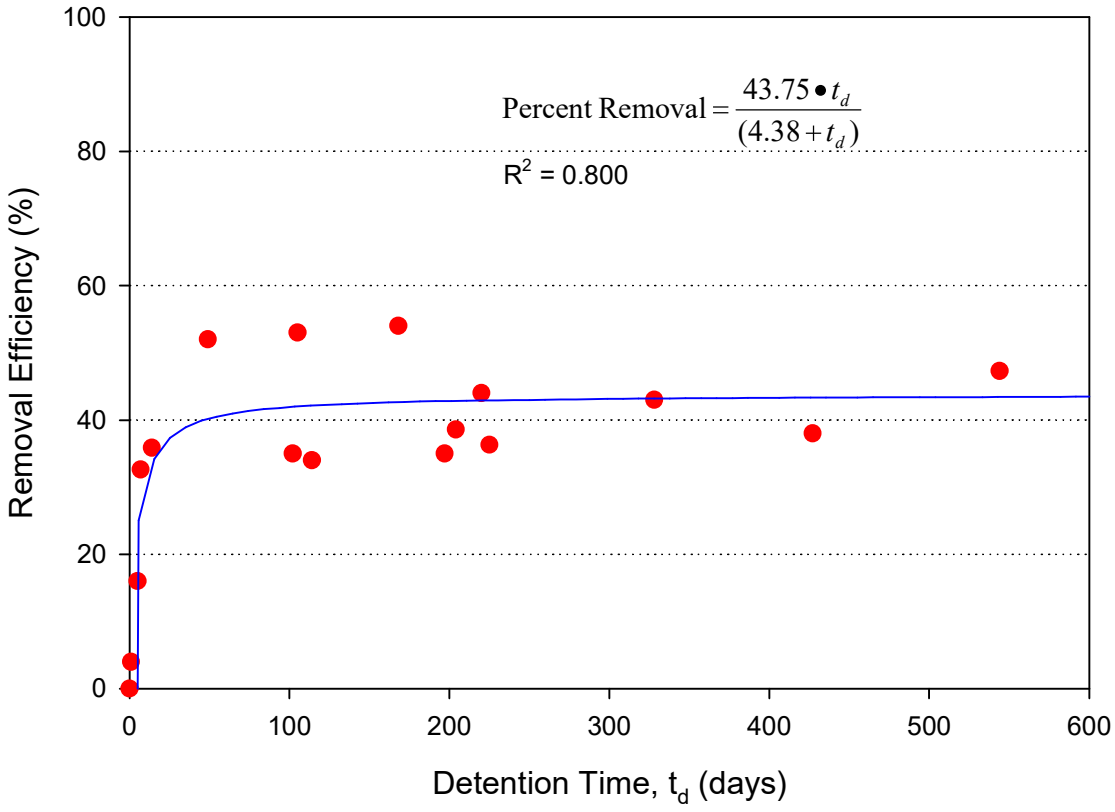

Figure 5-10. Removal Efficiency of Total Nitrogen in Wet Detention Ponds as a Function of Residence Time.

The best-fit for the relationship between removal efficiency and detention time for total nitrogen was obtained using a hyperbolic equation. The final version of this equation is summarized on Figure 5-10. The R^2 value of 0.800 suggests that detention time explains approximately 80% of the observed variability in removal efficiencies for total nitrogen in wet detention ponds. The remaining variability in removal efficiencies for total nitrogen is likely due to variability in methods of analysis between the listed studies as well as variability in the dominant nitrogen form present in the stormwater inflows. In general, inorganic forms of nitrogen (ammonia and NO_x) and particulate nitrogen are removed relatively rapidly in wet detention ponds. The initial rapid removal of nitrogen within the first 10-20 days, indicated on Figure 5-10, is probably a result of the rapid uptake of inorganic nitrogen and the settling of particulate species. Other forms of nitrogen, such as organic nitrogen, are removed at a substantially slower rate and are likely responsible for the dramatic slowdown in removal efficiency observed for total nitrogen after approximately 20-30 days.

The hyperbolic relationship summarized on Figure 5-10 indicates that a removal efficiency of approximately 40% can be achieved for total nitrogen in 50 days, with a maximum efficiency of approximately 45% at extended detention periods. The lack of additional removal efficiencies for total nitrogen observed at extended detention times is probably a reflection of either phosphorus limitation or that irreducible concentrations of total nitrogen have been achieved within the pond.

As indicated previously, wet detention systems must be utilized as part of a treatment train to achieve the required 80% removal efficiency specified under the Water Resource Implementation Rule (Chapter 62-40). When treatment systems are used in series as part of a treatment train, the efficiency of the overall treatment train can be calculated using the following equation:

$$\textit{Overall Treatment Train Efficiency (decimal)} = Eff_1 + (1 - Eff_1) \times Eff_2 \qquad \textit{(Eq. 1)}$$

where:

Eff_1 = efficiency of initial treatment system (decimal)

Eff_2 = efficiency of second treatment system (decimal)

After treatment in the initial system, a load reduction has occurred which is a function of the type of treatment provided. After migrating through the initial treatment system, the remaining load consists of mass which was not removed in the initial system. This mass is then acted upon by the second treatment system with an efficiency associated with the particular type of system used. The overall efficiency can then be calculated according to the above equation.

To achieve an overall annual mass load reduction of 80% using wet detention, a pre-treatment system must first be used to provide a significant portion of the desired pollutant removal effectiveness. For example, assume that a wet detention pond is designed with a detention period of approximately 50 days which is sufficient to achieve a removal efficiency of approximately 40% for total nitrogen. Utilizing the relationship summarized as Eq. 1, and assuming that the efficiency of the wet detention system for total nitrogen (40%) is represented by Eff_2, the efficiency of the initial treatment system (Eff_1) would need to be 67% to achieve an overall treatment efficiency of 80%.

Depending upon the characteristics of the development and the meteorological region, achieving an initial 67% annual mass load reduction using retention will require between 0.25-0.75 inch of dry retention as pre-treatment. When pre-treatment is provided and the remaining stormwater is discharged into the wet detention pond, the overall treatment system will achieve a mass removal efficiency of 80% for total nitrogen. The mass removal efficiency for total phosphorus and other significant pollutants will be substantially in excess of 80%.

Re: Kings Highway Commerce Center

Dear Mr. Morin:

O'Rourke Engineering & Planning has completed the analysis of the proposed development located east of Kings Highway and north of White Road in Ft. Pierce, St. Lucie County, Florida. The steps in the analysis and the ensuing results are presented herein.

It has been a pleasure working with you. If you have any questions or comments, please give me a call.

Respectfully submitted,

O'Rourke Engineering & Planning

Susan E. O'Rourke, P.E.
Registered Civil Engineer

Concurrency Report – Kings Highway and White Road 10.17.2022

APPENDICES

INTRODUCTION

O'Rourke Engineering & Planning was retained to prepare a traffic analysis for the proposed 390,000 square feet development consisting of warehousing and office located east of Kings Highway and north of White Road in Ft. Pierce, St. Lucie County, Florida. The purpose of this report is to determine the projects impact on the surrounding roadway system.

In order to make the determination that the project complies with County Concurrency Guidelines, the following analytical steps were taken:

- summary of the project
- summary of existing lane geometries
- summary of the existing traffic volumes
- assessment of project traffic
- determination of impact area
- summary of buildout cumulative traffic volumes
- summary of levels of service with the project traffic added

Each of these steps is outlined herein.

PROJECT DESCRIPTION

The proposed development located east of Kings Highway and north of White Road in Ft. Pierce, St. Lucie County, Florida, will consist of 368,000 square feet of warehouse and 22,000 square feet of office. The site is currently vacant. The project location is shown in **Figure 1**. The traffic study is based on the current site plan.

Appendix A includes the project site plan.

Kings Highway Commerce Center

EXISTING CONDITIONS

The study area is defined as the roadways upon which the project has an impact of 3% of the level of service capacity of the roadway and 1% on the adjacent link. Once the project traffic was assigned, the study area was refined based on the impact percentages.

The study area roadways were defined in terms of existing lane geometrics and existing traffic volumes.

Existing/Proposed Lane Geometrics and Traffic Control

The study area was reviewed to determine the existing number and type of lanes, and the traffic control along the roadway. Each roadway is described below.

- Peters Road is a two-lane local road with a general north/south alignment.
- S. Jenkins Road is a two-lane arterial with a north/south alignment.
- Graham Road is a two-lane local roadway with an east/west alignment.
- Okeechobee Road is a multi-lane divided arterial roadway with an east/west alignment. It is four-lane divided west of Kings Highway and east of Virginia Avenue. It is six-lane divided from Rolyat Street to Virginia Avenue and from Kings Highway to I-95. There is an eight-lane divided section from east of I-95 to Rolyat Street. There are numerous extended turn lanes and freeway auxiliary lanes.
- Orange Avenue is a four-lane divided arterial with an east/ west alignment.
- Kings Highway is a two-lane arterial with a north/south alignment and is under construction in portions and included in the 5-year TIP to be widened to a four-lane divided roadway.

Existing Traffic Volumes/ Service Volume

Traffic volumes were obtained from the St. Lucie County TPO and FDOT. The count data along with the number of lanes and the associated peak hour/peak direction service volumes will be summarized in the upcoming sections of the report. The service volumes were developed based on the functional classification contained in the County Comprehensive Plan and the St. Lucie County Traffic Counts and Level of Service Report. The 2023 FDOT Quality Level of Service and St. Lucie TPO 2023 Level of Service Report were used to establish capacity. These documents are included in **Appendix B.**

PROJECT TRAFFIC

To estimate future traffic generated by the development, the ITE Trip Generation, 11th Edition trip rates for Warehouse (Land Use Code 150) and Office (Land Use Code 710) were applied to estimate the trips generated by the proposed development as it is currently site planned. These calculations are shown in **Tables 1a, 1b, and 1c**.

As shown, the project will generate 931 new daily trips. There will be 109 AM peak hour trips with 89 entering the project and 20 trips exiting the project. The project will generate 113 new PM peak hour trips. There will be 26 trips entering the project and 87 trips exiting the project in the PM peak hour.

PROJECT DISTRIBUTION/ ASSIGNMENT/IMPACT

The project traffic was distributed by general geographic direction and then assigned to the roadway network.

Distribution/ Assignment – This general distribution led to an assignment of trips based on the anticipated ultimate destinations and the roadway paths used to reach those destinations. The project assignment is shown in **Figure 2.**

Impact – Tables 2a and 2b summarize the project impact as a percent of service volume capacity. Significant is defined as 1% or more on an adjacent link and 3% or more on all other links. As shown, the project is significant on several links.

OTHER PROJECT TRAFFIC/GROWTH RATE

Other project data includes committed traffic from Creekside, Bent Creek, Celebration Pointe, Whispering Oaks, St. Lucie Commerce Center, Walsh Crossroads, Project Hurricane, Project Hunt, Wawa Kingsgate, Stonemont, Ferrell Communities, Sunnyland, Drawdy Angle Road, KRE, Orange 95, Hillpointe Residential, 7/11 Angle Road, Jenkins Waypoint, and Kings Highway Warehouse. These projects plus a growth rate of 1.5% were added to estimate background traffic. A 4-year, area wide historical growth rate of -0.72% was calculated, but the higher rate of 1.5% was applied.

Details of the background traffic and growth rate are included in **Appendix C**.

LINK ANALYSIS / REVIEW

The project is significant on several links, these links were analyzed further to ensure they will meet concurrency. **Table 3a and 3b** summarizes the results of the link analysis. As shown, all roadways will operate at acceptable levels of service at project buildout.

INTERSECTION ANALYSIS - Kings Highway and White Road

The intersection of White Road at Kings Highway was analyzed for the AM and PM peak hours using HCS for signalized intersections. As part of the Kings Highway widening project, Research Center Road and White Road will be aligned. The FDOT has approved a signal when warranted through Kings Highway Commerce Park. The intersection will operate at a level of service C in the AM and PM peak hours at project build out as a signalized intersection.

The intersection data are included in **Appendix D.** The LOS results are included in the next section of the report.

DRIVEWAY VOLUMES – Kings Highway and Graham Road Analysis

The project will have a total of 5 driveways. Driveway 1 is a full access driveway located on Graham Road, Driveway 2 will be a full access driveway on Graham Road, Driveway 3 will be a right-in/right-out on Kings Highway and Driveways 4 and 5 will be full access driveways located on White Road. **Figure 3** shows the driveway volumes for the AM and PM peak hours. A northbound right turn lane is proposed at Driveway 3 on Kings Highway. Turn lanes are not proposed on White Road or Graham Road.

Graham Road at Kings Highway was analyzed as an unsignalized intersection to determine queue lengths and level of service. Both the AM and PM peak hours will operate at acceptable levels of service. The queue westbound will not exceed one vehicle length. The location of Driveway 3 is outside the functional area of the intersection.

CONCLUSION

With 109 net new AM peak hour trips and 113 net new PM peak hour trips, all links and intersections operate at acceptable levels of service with the existing roadway network. Therefore, the project meets the requirements for concurrency.

2 Lane	*	1,700	1,850	**
3 Lane	*	2,620	2,730	**

	B	C	D	E
2 Lane	*	1,760	2,020	**
4 Lane	*	3,090	3,360	**
6 Lane	*	4,760	4,960	**

	B	C	D	E
2 Lane	*	19,600	22,400	**
4 Lane	*	34,300	37,300	**
6 Lane	*	52,900	55,100	**

Adjustment Factors

The peak hour directional service volumes should be adjust by multiplying by 1.2 for one-way facilities
The AADT service volumes should be adjusted by multiplying 0.6 for one way facilities 2 Lane Divided Roadway with an Exclusive Left Turn Lane(s): Multiply by 1.05
2 lane Undivided Roadway with No Exclusive Left Turn Lane(s): Multiply by 0.80
Exclusive right turn lane(s): Multiply by 1.05
Multilane Undivided Roadway with an Exclusive Left Turn Lane(s): Multiply by 0.95
Multilane Roadway with No Exclusive Left Turn Lane(s): Multiply by 0.75
Non-State Signalized Roadway: Multiply by 0.90

This table does not constitute a standard and should be used only for general planning applications. The table should not be used for corridor or intersection design, where more refined techniques exist.
* Cannot be achieved using table input value defaults.
** Not applicable for that level of service letter grade. For the automobile mode, volumes greater than level of service D become F because intersection capacities have been reached.

APPENDIX C

OTHER PROJECT DATA/GROWTH RATE

Historical Growth Rate Calculation

Segment	From	To	2018 AADT	2022 AADT	4 Year Historical Growth Rate
Okeechobee Blvd	I-95	McNeil Rd	31,000	38,000	5.22%

GENERAL NOTES:
1. MAJOR STREET IS KINGS HWY
MINOR STREET IS WHITE RD
2. MOVEMENT 2 AND 6 TO FLASH YELLOW AND ALL OTHERS TO FLASH RED DURING FLASHING OPERATION.
3. SIGNAL TIMINGS TO BE PROVIDED BY ST. LUCIE COUNTY TRAFFIC
4. SPEED LIMIT IS 50 MPH ON KINGS HWY
5. THE SPARE CONDUIT RUN IN EACH DIRECTIONAL BORE TO BE TERMINATED IN A SPARE PULL BOX AND PLACED AT THE BASE OF EACH MAST ARM POLE
6. THE VIDEO DETECTION ZONE WILL BE SET 60 FEET FROM THE STOP BAR.

City of Fort Pierce
Planning Department
100 North U.S 1
Fort Pierce, FL 34950

Attn: Vennis Gilmore

Re: Kings Highway Commerce Center
JHI Project No. 1402

Dear Vennis,

We are in receipt of your latest comments dated February 15, 2024, for the above noted project. Please consider the followings

Fort Pierce Planning Department

1. A completion certification by a landscape architect, cost estimate and landscape bond pursuant to City Code 123-6 shall be required before the Final Certificate of Occupancy is approved for the site.
   Response: Acknowledged.

2. Prior to the issuance of any site clearing permits, the applicant shall provide a Tree Mitigation Survey and coordinate with the City of Ft. Pierce Arborist for the required mitigation of the City regulated trees proposed to be removed as a result of this site's development/construction activity.
   Response: Acknowledged, a Vegetation disposition plan and Vegetation Assessment report shall be provided prior to the issuance of any site clearing permits.

3. A Unity of Title with the St. Lucie County Clerk of Courts and a Parcel Combination with the St. Lucie County Property Appraiser shall be conducted before the issuance of a Building Permit.
   Response: Acknowledged.

4. After completion of the Unity of Title and Lot Combination, please submit a General Address Request Form for the newly created Parcel ID and for each proposed building.
   Response: Acknowledged.

5. There appears to a few discrepancies in your Site Data:
   i) Parcel ID: 2313-333-0001-000-7 is approximately 294,117 sq ft and Parcel ID: 2313-331- 0000-000-4 is approximately 840,272.4 sq ft. The total square footage is 1,134,389.4 sq ft. The listed impervious area is 1,015,250 sq ft. City Code Section 125-207. (c) Open Space Standards – Commercial Parkway Zone (CP-1) requires:
   (1)A minimum of 20 percent of the gross area of land to be devoted to a commercial parkway development must be reserved for use as parks, recreation areas, marinas, open space, planting, or other public purposes other than rights-of-way, utility easements, and parking areas. At the request of the developer and subject to the approval of the city commission, use of recreational facilities may be offered to the general public. Areas that are natural or manmade floodways, lakes, and stormwater retention areas may be also be used to satisfy the total open space requirement.

   (2) All land dedicated for open space shall be under the legal control of the developer.
   ii) Per City Code Section 125-207. (2) Yards. – Commercial Parkway Zone (CP-1) states the
   following:

   a. The minimum depth of the front yard shall be 25 feet.

   b. The minimum depth of the rear yard shall be 20 feet.

   c. The minimum depth of the side yard shall be ten feet, except on corner lots the minimum side yard depth on a street side will be 20 feet.

   iii) The Site Data lists “Lakes”, however there is one (1) “Lake”.
   iv) The Site Data lists four (4) Parcel ID(s), however there are two (2) Parcel ID(s).
   v) Please review the site data and resubmit with valid corrections.
   vi) The Location Map depicts the original site plan location.
   Response: Please see revised site data on MSP-2;
   (i) Site data has been revised w/ open space @ 26%.
   (ii) The minimum setbacks have been revised.
   (iii) Site data now shows “Lake”.
   (iv) Parcel IDs have been revised.
   (v) Site data has been revised.
   (vi) Location map has been revised to show the current site plan.

6. Per City Code Section 125-317. – Sidewalks. Please provide labeled sidewalks and sidewalk linkages along the Graham Road and White Road Frontages.
   Response: Please see the revised site plan set with shading and callouts showing the sidewalks Sidewalk including the walks on the adjacent roads.

7. Per City Code Section 125-317. – Provide labeled sidewalk linkages to Kings Highway.
   Response: Please see the revised site plan set with shading and callouts showing the sidewalk connection to Kings Hwy.

8. Please consider EV Charging spaces within the Site Plan.
   Response: Please note that EV charging spaces will be considered by owner w/ building permit applications.

9. Please provide a color rendering of the landscape plan if possible.
   Response: A colored rendering of the landscape plan will be submitted prior to Public Presentation of the project.

10. Provide a detailed narrative description for the amended site plan application.
    Response: Please see attached narrative description.

11. Provide a detailed design review narrative description for the amended site plan application.
    Response: Please see attached design review narrative description.

12. Please adhere to City Code Section 125-314 (Design Review) and review the Design Review Checklist submitted for your review.
    Response: Thank you.

13. Per City Code Section 125-314 (Design Review) - Reverse the architectural elevations of the structures to ensure that the ramp bays are not as visible from the street view.
    Response: Please see attached revised site plan with Building-I orientation reversed. This orientation creates access difficulty for the truck access. Please see truck circulation TC-1.
    It is essential for this project marketability and function that the truck access bean easy and the shortest possible from the road, not have mixed circulation with employees and other vehicles.
    The original design w/ loading facing the White Road provides the best access for the trucks.
    Therefore, we have revised the original site plan w/loading facing White Road by providing a 6' wall along south Property line and placing landscaping on the outside of the wall facing the road. This provides an attractive view from the road which buffers the building rear elevation while maintaining a functional circulation for the trucks.

14. Per City Code Section 125-314 (Design Review) – Provide more detail and articulation on the elevations located where the ramp bays exist.
    Response: Please see attached rear building elevation.

15. Please adhere to City Code Section 123-37 (General Landscaping Requirements) and review the Checklist submitted for your review.
    Response: The landscape plans have been reviewed along with Article 123-37 for compliance. Specifications related to trees have been revised to reflect a min. 2.5" caliper per this section. The provided checklist has also been reviewed for compliance relative to the use of compatible scale materials, (24'ht Oaks and relocated large existing Oaks), as well as varied heights to provide interest and visual appeal to the landscape. All perimeter landscaping has been designed to provide appropriate visual screening, while providing access for maintenance of the site.

16. Per City Code Section 123-37 (General Landscaping Requirements) – A Dry Retention area cannot be calculated as part of the required landscape buffer.
    Response: Please note that a bioswale is located along White Road.
    There is also a 10' landscape buffer between the bioswale and south property line.

17. Incorporate the green walls shown on the elevation into the landscape plan.
    Response: The Landscape plans have been updated to reflect the green walls as shown on the elevation drawing.

18. There must be coordination between what's presented on the landscape plan and on the site plan.
    Response: Please see attached revised landscape plan.

19. Please specify the location of the refuse collection area and any trash receptacles.
    Response: The refuse collection shall be by compactor inside the building.

20. Include a buffer which includes fencing and planted material so as to provide a visual and noise buffer between the St. Lucie County Agricultural Residential Zone to the east of the property.
    Response: Please note that there are no residential buildings to our east, only tree groves and farms.

Engineering Comments:

1. Provide a minimum 15' setback as measured from the White Road ultimate R/W line and the proposed top of banks for detention area 4 and 5 as per the requirements specified in the City of Fort Pierce Code of Ordinances Section 119-9(c).
   Response: Please note that the there is a bioswale along White Road located 10' From the right-of-way. This bioswale location was previously approved by City Commission on Jan 17th, 2023 with the 35 ac version of this site plan.

2. The match lines on plan sheets SP-3 & SP-4 and SP-5 & SP-6 do not correspond with one another. Please provide updated plans.
   Response: Please see revised plans.

Advisory Comments:

1. An updated environmental assessment is required at DPCR.
   Response: An updated environmental assessment shall be submitted at DPCR

2. Please coordinate with St. Lucie County for work with Right of Way of White Road and Graham Road. Please coordinate with FDOT for work within Kings Highway Right of Way
   Response: The location of the driveways on both White & Graham Road was previously approved by St. Lucie County with the approved 35 ac version of this site plan.

3. NSLRWCD/SFWMD permits will be required prior to DPCR approval.
   Response: NSLRWCD/SFWMD permits shall be submitted prior to DPCR approval.

4. A Unity of Title is needed for the two parcels prior to DPCR approval.
   Response: A Unity of Title shall be submitted prior to DPCR approval.

5. Drainage was only conceptually reviewed; a full drainage review will be completed at DPCR submittal. Please specify that City Code Chapter 119-3 (e)(7) values were used for design elevations:

   Rainfall quantities to be used for stormwater management design and calculations shall be as follows:

   - *Ten-year-one-day storm = 6.00 inches (for minimum roadway/parking lot elevation)*
   - *Ten-year one – hour storm = 3.20 inches (for exfiltration trench design).*
   - *Twenty-five-year-three-day storm = 9.50 inches (for off-site discharge & min. perimeter elevation)*
   - *One-hundred-year-three-day storm = 12.23 inches (for minimum floor elevation).*

   Response: The above rainfall values are utilized in the stormwater management Report.

FPUA W/WW Engineering:

FPUA has both water and sewer available to serve this site. Please submit three complete sets of utility construction plans, along with a completed plan review application and a complete commercial service application, to the Water and Wastewater Engineering Department for review. The department is located at 1701 S 37th Street, Fort Pierce, Florida. For further information or inquiries, please contact John Biggs at 772-466-1600, extension 3474
Response: Thank you.

St. Lucie County Public Works Department:

Corrections:

1. South Kings Highway is an FDOT Right-of-Way. Please coordinate with FDOT for permitting improvements within the Right-of-Way or any required Right-of-Way dedications.
   Response: We have coordinated w/ FDOT and have obtained the pre-application letter as attached.

2. Graham road is identified on the County's Right -of-Way protection plan. A Right-of-Way dedication of 10 feet may be required.
   Response: Per our conversation at TRC, additional R/W would not be required.

3. A right-in turn lane may be required on Graham Road because of its proximity to the intersection.
   Response: The westerly driveway on Graham Road @ 595' from kings Hwy ultimate R/W exceeds FDOT requirement of 200' as indicated on pre-application letter.

4. A 6 FT sidewalk is required along adjacent road Right-of-Ways. The Board of County Commissioners may authorize the applicant to pay a Fee-in-Lieu of construction of the sidewalk.
   Response: 6' sidewalks are provided on both adjacent county roads along the project frontage.

5. Dimension the driveway width, radius of return, and setback from side property lines and adjacent driveways. Section 7.05.06 of the Land Development Code includes minimum setback requirements for driveways.
   Response: Please see revised site plan w/ width and setback shown. Both driveways exceed the 5' min setback from side P/L.

6. Provide a truck circulation plan depicting how the dumpster collection, fire department, and delivery trucks will safely maneuver onsite.
   Response: Please see WB-67 truck circulation. The site is designed for Tractor trailers which are longer and require wider turning radii than both fire and garbage trucks. The trash is compacted internally and hauled off to landfill.

7. Provide typical pavement sections for all vehicular use areas. Vehicular use or storage areas are required to be paved with asphalt or concrete.
   Response: Please see typical pavement sections are shown on civil plans sheet C-19.

8. The TIR will be reviewed by a third party. Written acceptance to reimburse the County for associated fees is required to initiate the review. If you are in a position to move forward as such, please provide written notice.
   Response: Please note that this project has been reviewed and approved. The new traffic study is updated to match the reduced square footages. An additional formal review should not be required. Rather a confirmation that indeed the new study reflects lower trips than the approved study.

Conditions:

9. A Site Development Permit is required prior to performing site improvement activities.
   Response: Acknowledged & agreed.

10. A Road Improvement Agreement and appropriate bond will be required for all permanent improvements within the Right-of-Way on White Road.
    Response: White Road improvements are to be completed by Kings Highway Commerce Park. Any white Road improvements from Kings Highway up to and including this project frontage shall be done by this project if required and bonded.

St Lucie County Fire

1. Please submit a completed application for Development/Site Plan Review (St. Lucie County Fire District Development & Site Plan Review Application). This form is available on-line at https://www.slcfd.com.
   Response: A completed application for Development/Site Plan Review (St. Lucie County Fire District Development & Site Plan Review Application) upon approval of the site plan.

2. Fire District review fees are due at the time of submittal. An abbreviated fee schedule is included on the application form.
   Response: Acknowledged

3. Please provide an electronic revised copy of the site plan (pdf format).
   Response: An electronic revised copy of the site plan is attached.

4. Please provide written acknowledgement of the conditions/revisions provided.
5. **Response: Please see written acknowledgement of the conditions/revisions provided.**

6. A separate review and permit is required for Underground Fire Mains connected to standpipes or sprinkler systems.
   Response: Acknowledged.

7. Fire department access roads provided in accordance with 18.2.3 shall be provided at the start of a project and shall be maintained throughout construction. (NFPA 1 16.1.4). Surface. Fire department access roads shall be designed and maintained to support the imposed loads of fire apparatus and shall be provided with an all weather driving surface. (NFPA 1.18.2.3.5.2).
   Response: All vehicular access areas in this project meets NFPA requirements for dimensions and loads.

8. Security gates must either be manned 24 hour/day or provide an access control key switch on the control panel to allow for Fire Department entry in an emergency. Security gates must maintain a clear width of 12 feet when open and provide a means to open the gates manually upon loss of power.
   Response: N/A

9. Per the St. Lucie County Fire District Fire Prevention Code Resolution 740-23. At Least 13 feet 6 inches nominal vertical clearance shall be provided and maintained over the full width of all means of access. Including, but not limited to trees, canopies, etc.
   Response: Acknowledged

10. The Fire District reserves the right for future comments at the site plan & building construction phase.
    Response: Acknowledged

11. FD access roads (shall be) are provided such that any portion of an un-sprinklered facility or exterior wall is located not more than 150’ from FD access roads as measured by an approved route around the exterior of the building or facility. (450’ for NFPA 13, 13D, 13R sprinklered protected buildings).
    Response: Both buildings are sprinkled.

12. Be advised: Dimensions of largest vehicle are as follows: 38 tons or 77,000 lbs, 47.5
    Response: Acknowledged

13. Minimum roadway pavement width (two-way traffic) shall be twenty (20) ft.
    Response: Minimum road widths exceed 20’

14. Minimum roadway pavement width (one-way traffic) shall be twelve (12) ft.
    Response: N/A

15. Dead end roadways serving commercial or residential occupancies must include a cul-de-sac when the roadway length exceeds one hundred-fifty (150) feet. "Y" or "T" type turnaround arrangements are permitted. The minimum length must be equal to the length of the longest fire apparatus.
    Response: N/A

16. 18.2.3.3 Multiple Access Roads. More than one fire department access road shall be provided when it is determined by the AHJ that access by a single road could be impaired by vehicle congestion, condition of terrain, climatic conditions, or other factors that could limit access.
    Response: Multiple Access Roads are provided

17. Fire hydrants (shall be) are provided for buildings other than detached one-and two-family dwellings IAW both of the following 1) The maximum distance to a fire hydrant from the closest point in the building shall not exceed 400 feet. 2) The maximum distance between fire hydrants shall not exceed 500 feet. NFPA 1:18.5.3. Please provide fire flow calculations for hydrants.
    Response: The proposed water/fire protection system meets/exceeds above requirements. Please see attached fire flow calculations.

18. An approved water supply capable of supplying the required fire flow for fire. protection (shall be) is identified to all premises upon which facilities, buildings, or portions of buildings which are to be constructed or moved into the jurisdiction. The approved water supply shall be in accordance with NFPA 1:18.4. See “Needed NFPA Fire Flow Calculator Spreadsheet”.
    Response: Acknowledged

19. Prior to the final occupancy of any building, the permitted water supply for fire protection, including fire hydrants and fire suppression systems, shall be installed, tested, and acceptable to the AHJ (SLCFD). NFPA 1141 Chapter 10.1.3.
    Response: Acknowledged.

20. Fire department connections shall be located on the street side of buildings and shall be located and arranged so that hose lines can be readily attached to the inlets without interference from any nearby objects, including buildings, fences, landscaping, or other fire department connections. The locations of connections shall be based upon the access requirements of the fire department.
    Response: The proposed fire protection system meets above requirements.

21. The distance allowed between the fire department connection and a fire hydrant shall be no more than one hundred fifty (150) feet as a vehicle travels.
    Response: The distance allowed between the fire department connection and a fire hydrant are less than one hundred fifty (150').

22. Minimum Size of Water Mains
    The minimum size of water mains for supplying water for firefighting purposes. shall be six (6) inches. b. The minimum size of water mains supplying hydrants on a dead end main shall be eight (8) inches. c. The maximum number of hydrants located on a dead end main shall be one (1). d. Grid or Tee systems shall be supplied. by a minimum of an eight (8) inch looped main. Exceptions may be granted based on the capacity of the water distribution system but in no case shall the main size be less than six (6) inches. e. The minimum size water main(s) shall be determined by the needed fire flow as established by the Fire Marshal and based on the current Insurance Service Office (ISO) requirements.
    Response: The proposed water/fire protection system meets/exceeds above requirements.

23. Two-Way Radio Enhancement Systems/BDAS shall be installed, inspected and operationally tested in accordance with the manufacturer's published requirements, by the local fire department, and comply with the most current edition of the Florida Fire Prevention Code and its incorporated standards and codes. Pre-surveys of radio signal strength shall be submitted to the Fire Marshal in the form of heat signature mapping, or a certification document of radio signal strength provided by a licensed engineer.
    Response: Acknowledged.

24. Hydrants shall be located no more than 12ft. from the curb of roadways or from the edge of payment. Clearances of three feet (3 ft.) shall be maintained around the circumference of hydrants. A clear space of not less than five feet (5ft.) shall be provided in front of each hydrant connection having a diameter greater than 2 ½ inches. The center of hose outlet shall be not less than 18 inches above final grade. (SLCFD Fire Prevention Code Resolution 740-23).
    Response: The proposed fire protection system meets/exceeds above requirements.

St Lucie County Transportation Planning Organization

- Traffic Analysis: A reduced growth rate of 1.5 percent was used. However, the St. Lucie TPO has adopted the BEBR high growth rate for the historical growth rate which reflects the actual annual growth rate in the County since 1995. Therefore, The Traffic Analysis should be revised to include a growth rate of 2.5 percent.
  Please feel free to contact me should you have any questions.
  Response: The traffic study uses 1.5% "plus" committed traffic. The resultant growth in traffic is over the 2.5% that the TPO has referenced. In fact short term growth on Kings Highway is over 50% per year when considering committed traffic.

- Sidewalks/Pedestrian and Bicyclist Connectivity: The proposed development does not appear to include sidewalks or bicycle facilities connecting Kings Highway to the driveway at Graham Road along the north side, respectively, of the proposed development. Sidewalk, bicycle lane and pedestrian connectivity should be provided from King's highway to the driveway at Graham Road for pedestrian and bicyclist safety.
  Response: The connection between Kings Highway and this project is along the frontage of the parcel to the west, which is not part of this development, and would be responsible for its construction.

Thank you,

J H Iravani

Jeff H. Iravani, P.E.
President
