Fiscal Year End September 30th*

TREASURY YIELD CURVE: RATES HAVE TRENDED HIGHER

- Portfolio is equally weighted across the yield curve.
- We are currently neutral duration to the index.

Source: Bloomberg

CORPORATE BOND ALLOCATION (DURATION CONTRIBUTION)

As of March 31, 2024

- We are disciplined and opportunistic in our approach to overweighting risk in the corporate sector.
- Volatility provided opportunities in 2023 and continue in 2024. As spreads narrow we reduce exposure and as they widen we add exposure.

RICHMOND CAPITAL STRATEGY SUMMARY FOR 2024

- » We believe the investment grade bond market offers opportunity. Yields are significantly higher than they've been over the prior decade, and volatility favors security selection opportunities that arise from tenders, new issues, and various technical factors.
- » Volatility in the corporate bond market has allowed us to buy low and sell high to some degree. We pay careful attention to the spread reward the corporate sector provides. When it is generous, we increase our overweight. When the reward shrinks, we reduce our overweight. Volatility has also allowed us to opportunistically add to our MBS holdings as well.
- » We mitigate the risk of all our spread product investments through diversification and a bias to the higher end of the investment grade ratings spectrum. In corporates, we favor A-rated and high BBB-rated companies. All of our mortgage holdings are AA+ rated. Our asset-backed holdings are all AAA.
- » Lastly, with regard to the overall interest rate sensitivity of our portfolios, we are content to remain neutral duration relative to the benchmark. We think the path of the Federal Reserve rate cuts is still uncertain and other active strategies are much more interesting in 2024. Those strategies include the aforementioned risk/reward attractiveness of “spread” sectors and the security selection opportunities that continue to come our way during these high volatility times.
