

10. Parent Arrival, Dismissal, and Internal Circulation

Because of the young age of Agape's students, every parent or authorized caregiver will be required to park, escort the child into the building, and complete the electronic check-in or check-out process through the administrative office. Children will not be dropped off or released from a vehicle standing in a travel lane.

The anticipated primary route is from Okeechobee Road to Crossroads Parkway and then to Peters Road. Once on the property, the proposed internal circulation pattern will direct vehicles around the standalone building through a clearly signed and striped one-way loop.

Parents and authorized caregivers will:

1. Enter the internal drive aisle on the west side of the standalone building.
2. Proceed to the designated short-term parent parking area. See Illustration 2 below.
3. Park and escort the child along the designated pedestrian route to the controlled main entrance.
4. Complete the required electronic check-in or check-out process through the administrative office.
5. Return to the vehicle and continue along the drive aisle east of the building.
6. Exit the site and return to Peters Road without reversing through the principal arrival flow.

The arrival and dismissal procedures will be designed to serve a maximum enrollment of up to 225 children without permitting vehicle queues to extend into Peters Road, Crossroads Parkway, or another public right-of-way. Parents and caregivers will generally be inside the building only for the time necessary to complete the controlled check-in or check-out process.

Agape will implement the following circulation safeguards:

- No child loading, unloading, or vehicle staging within Peters Road, Crossroads Parkway, or another public right-of-way.
- No curbside release of children.
- Clearly marked pedestrian paths from parent parking to the main entrance.
- Staff monitoring of arrival and dismissal during the busiest periods.
- Staggered arrival and dismissal assignments by classroom or age group as enrollment increases.
- Signs and pavement markings directing the one-way circulation pattern.
- Parent orientation and written circulation rules in the family handbook.
- Immediate corrective action for parents who disregard circulation procedures.
- Monitoring of traffic operations during the opening weeks and after significant enrollment increases.
- A written backup plan identifying operational adjustments if internal queuing or congestion occurs.

Agape will coordinate with the property owner and, when required, a qualified traffic professional to demonstrate that parent vehicles can be accommodated internally without affecting Peters Road or the surrounding public roadway system.
