BUILDING SAFETY

FEE GENERAL NOTES

Building Plan Review Fees

Plan review fees pay for the evaluation of plans to determine compliance with adopted codes and ordinances. These fees are based on a percentage of the calculated building permit fee with a minimum charge for each application. Payment of the plan review fee is in addition to the building permit fee and is non-refundable after plans are accepted and the review is started.

Building Permit Fees

Building inspections are financed by building permit fees. Permit fees for new buildings, additions, and pools are based on the valuation (total construction costs) of the buildings or structure. The determination of the value or valuation will be made on the basis of the Building Valuation Data published in the International Code Council Building Safety Journal and by other valuation criteria approved by the Building Official. Other types of permits have fees based on the amount of time estimated to inspect the project until completion.

In addition to the basic level of inspection services offered, additional inspection services are available through prior arrangement with the Building Safety Department and with payment of the appropriate fee. These services include after-hours, weekend or holiday inspections, re-inspections, optional (not required) inspections and requests for time-specific inspections.

Miscellaneous Fees

Miscellaneous fees are those fees that do not fall under the plan review or inspection areas. These fees are generally based on an hourly rate but may be set on standard administrative costs for providing service.
