CITY COUNCIL ACTION REPORT

SUBJECT: Camelback Road Corridor Assessment Report

STAFF PRESENTER(S): Hugh Bigalk, P.E., Tony Humphrey, P.E.

OTHER PRESENTER(S):

Summary: Council to receive an update on the Camelback Road Corridor Assessment Report.

Recommendation: This presentation is to obtain feedback from Council on the future roadway design.

Fiscal Impact: There is no direct budget impact from this informational item. Future project expenditures will be provided during the CIP approval process.

Background and Previous Actions

The purpose of this work session is to provide an overview of the Camelback Road Access Management Plan (AMP) and answer any question council may have.

The city of Goodyear retained design services from Stanley Consultants through its General Engineering On-Call. The scope of their work included developing an AMP for Camelback Road between the SR 303 and 152nd Avenue, 30% design level plans, and preliminary construction estimates. The AMP and initial design will provide guidance for future development along Camelback Road. Additionally, the AMP provides guidelines for driveway locations, median opening spacing, and traffic signal locations along the corridor to provide safe vehicular travel as future development occurs and meets the city of Goodyear's traffic standards.

Staff Analysis

Data collection and analysis all concur with standard engineering (traffic and civil) practices. Also, the AMP and initial 30% design meets city of Goodyear standards. Staff concurs with the initial findings.
