W I T N E S S E T H :

WHEREAS, the Engineer represents that it is qualified and willing to provide such services;

NOW, THEREFORE, the County and the Engineer, in consideration of the mutual covenants and agreements herein contained, do mutually agree as follows:

I.

CHARACTER OF SERVICES

During the course of this Agreement, the County may give the Engineer written authorizations to perform certain of the following types of engineering services in regard to specific applications specified in said authorizations, and after receipt of each authorization, the Engineer shall perform such of the following types of services in regard to the particular applications as are thereby authorized:

A. REPRESENT COUNTY

- 1) The Engineer will represent County at MPO Technical Committee meetings and meetings with TxDOT in reference to programming of County roadway projects for funding consideration through the Metropolitan Transportation Plan (MTP).

The Engineer will meet with County personnel to coordinate the details of roadway projects of special interest by each individual precinct to ensure optimal progress of the project on the MTP. The Engineer will provide guidance on all matters related to the MPO and TxDOT. The Engineer will also provide guidance/traffic engineering expertise to each individual precinct on general traffic operations matters. The Engineer will respond to traffic engineering operations inquiries and provide the necessary direction as requested.

As a minimum, the warrant study shall include: analysis of existing traffic control (if any), analysis of accident data, analysis of vehicle and pedestrian volumes, and analysis of travel speed.

C. TRAFFIC SIGNAL WARRANT STUDIES

The purpose of a traffic signal warrant study is to determine the necessity for a signal installation at an intersection, of two or more roadways based on safety and time delay benefits which may be derived by motorists and/or pedestrians. As a minimum, the warrant study shall include: analysis of vehicle and pedestrian volumes, analysis of existing traffic control (if any), analysis of the roadway, analysis of accident data and analysis of travel speeds. Analyses shall be performed in accordance with the procedures established in the latest edition of the "Texas Manual on Uniform Traffic Control Devices".

The purpose of a spot speed study is to measure the speed characteristics at a specified location for each direction of flow under the traffic and environmental conditions prevailing at the time of the study. Speed data may be collected manually or by automatic methods and shall be adequate sample size to satisfy statistical considerations.

E. LEFT TURN WARRANT STUDIES

The purpose of a left turn warrant analysis is to determine if a separate left turn lane is needed on an intersection approach. The intention of separating left turn traffic from through traffic is to improve safety and minimize delay due to lengthy queues and/or inefficient controller phasing. The analysis shall include study of vehicle movements at the intersection, analysis of vehicle delay, analysis of existing traffic control and analysis of

vehicle conflicts. Capacity analysis and signal optimization are not required as part of the analysis.

F. SPECIAL STUDIES

Special studies are traffic engineering studies other than those listed in Items A through D. The Engineer shall provide special studies to Hidalgo County on an as needed basis.
