Tuesday, March 06, 2012

This letter is provided for the purpose of facilitating a "sole-source" purchase of the AFIX[®] Tracker[®] automated fingerprint and palm print identification system by AFIX Technologies, Inc. and/or technical support and service for the AFIX[®] Tracker[®] system. Detailed descriptions of the unique features of the AFIX[®] Tracker[®] system appear below. The complete set of features and capabilities provided by AFIX[®] Tracker[®] is not available from any other system or source. Technical support for the AFIX[®] Tracker[®] system is provided solely by AFIX Technologies, Inc. and is not available from any other source.

AFIX[®] Tracker[®]

AFIX[®] Tracker[®], developed and produced by AFIX Technologies, Inc., is a fully-featured automated fingerprint and palm print identification system which is designed to run in Windows XP, Windows Vista and Windows Server operating systems.

AFIX[®] Tracker's[®] capabilities include automatic or manual extraction of minutiae, tenprint to tenprint, tenprint to latent, latent to tenprint, palm print to palm print, palm print to latent, latent to palm print and latent to latent searching, searches using only partial latent images, full 360 degree rotation during search, full center/core independence, interface capability with multiple live scan devices for automated import and processing of tenprint and/or record palm print files, the ability to scale photographs from either conventional or digital sources, and the ability to transmit single images or complete tenprint and/or palm print records to other systems via network or internet using EFTS/NIST file transmission standards.

Many of the features and capabilities of AFIX Tracker are unique and unavailable in other PC-based AFIS/APIS systems, including its ability to:

- Utilize undivided complete palm images or, at the user's option, divide record palm prints into ten segments defining sub-sections of the thenar, hypothenar and interdigital areas.
- Automatic scan for identification of duplicate biographical records. Duplicate records of lesser quality may be deleted outright or merely deactivated so as to not impede search performance (unless explicitly included in a search at the time of submission).
- Initiate searches individually from whole palm images or from any combination of the segments, if palm images are divided.
- Submit tenprint, palm and latent searches to remote AFIX Tracker systems via encrypted internet-based transaction servers, and receive search results automatically.

- Submit latent images with assisted ridge octant counting and automatic penetration management to Federal biometric data repositories, including the FBI's IAFIS and Dod ABIS databases.
- Process searches received from remote AFIX Tracker systems or mobile ID systems in a "lights out" environment and automatically transmit search results to the requesting system.
- Provide multiple-processor client search engine capability to allow scalability of system search and match throughput requirements to meet individual agency needs.
- Provide optional support for multiple database formats including MS-Access and MS-SQL based on database size and customer preference.
- Scan or import tenprint, palm and/or latent images into the system at resolutions of up to 9,600 ppi and search against records of any resolution from 500 ppi to 9,600 ppi without further adjustment or scaling.
- Import and export complete palm print records with biographical data via EFTS file transmission.
- Interface with low-cost workstations (AFIX Tracker LE) to provide the ability to add economical remote workstations that allow the input of known inked fingerprints, known inked palm prints and latent prints into the primary system database to include full biographical data input, classification, minutiae extraction and minutiae editing capability.
- Limit latent search rotation parameters to either +/- 45 degrees or +/- 90 degrees when applicable and preferred.
- Provide stereo comparison of candidates with lines connecting matching minutiae points.
- Automatically extract minutiae from either complete palm images or separate palm sections based on a quality assessment of the entire palm image or each section totally independent of the other sections of the palm based on user preference.
- Launch searches of multiple latent prints against the entire database (to include latent to tenprint, latent to inked palm print and latent to latent searches) simultaneously.
- Automatically convert NCIC classifications to Henry classifications without user intervention.
- Designate latent case files as "closed cases" allowing the latent records to remain in the database, but excluding them from subsequent searches.
- Designate individual latent files as "searchable" or "non-searchable" within a single latent case file.
- Provide built-in online help files with onscreen video/audio demonstrations of system features and operations.
- Allow automated import of large batches of tenprint records which have been scanned and saved in any of the common Windows graphic formats.

- Allow capture/import of multiple photos in each record from either TWAIN-compliant cameras, flatbed scanners or pre-existing digital photos. Multiple mug shots and photos of scars, marks & tattoos may be added to a single record.
- Provide log-in based user access control to limit individual user's ability to delete or modify records.
- The AFIX database provides a single comprehensive dataset with which other AFIX applications, such as AFIX Identifier and AFIX Verifier, may seamlessly interact. The inherent difficulty of establishing and supporting a cross-vendor workflow from investigation to booking and release may be eliminated through the use of a cohesive AFIX single-vendor solution.

The AFIX[®] Tracker[®] system is patented and copyrighted software manufactured, distributed and supported solely by AFIX Technologies, Inc. The AFIX[®] Tracker[®] system is not available from any other source. Technical support for the AFIX[®] Tracker[®] system is provided by AFIX Technologies, Inc. and is not available from any other source.

A handwritten signature in black ink that reads "Scott Howard". The signature is written in a cursive, flowing style with a large, prominent loop at the end of the word "Howard".

HIDALGO COUNTY PURCHASING DEPARTMENT
SOLE SOURCE AFFIDAVIT

THIS IS AN OFFICIAL PURCHASING DOCUMENT-RETAIN WITH PURCHASE ORDER

Before me, the undersigned official, on this day, personally appeared Scott Howard
a person known to me to be the person whose signature appears below, whom after being duly sworn
upon his/her oath deposed and said:

1. My name is Scott Howard. I am over the age of 18, have never been convicted of crime and am competent to make this affidavit.
2. I am an authorized representative of the following company or firm: AFIX Technologies, Inc.
3. The above named company or firm is the sole source for the following item(s), product(s) or service(s):
Technical support services for AFIX Tracker, AFIX Tracker LE and AFIX Verifier
4. Competition in providing the above named item(s), product(s), service(s) is precluded by the existence of a patent, copyright, secret process or monopoly as stated under Section 262.024(a)(7)(A), of the Local Government Code. Also, attached hereto is a sole source letter, which sets forth the reasons why this Vendor is a sole source provider (dated and signed).
5. There is/are no other like item(s) or product(s) available for purchase that would serve the same purpose or function.
6. Note: This Vendor understands that by providing false information on this Sole Source Affidavit, it may be considered a non-responsible Vendor on this and future purchases and may result in discontinuations of any/all business with Hidalgo County.

Signature Scott Howard

SWORN AND SUBSCRIBED TO under oath before me on 6th day of March, 2012
