GENERAL NOTES

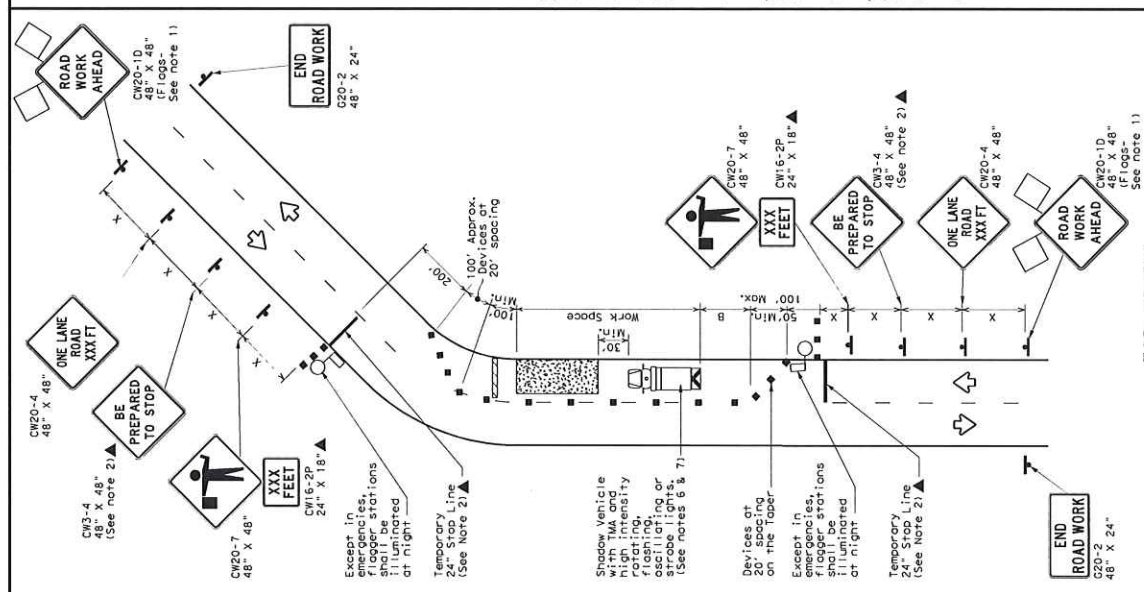

- Flags attached to signs where shown, are REQUIRED.
- All traffic control devices illuminated are REQUIRED, except those denoted with the triangle symbol when stored elsewhere in the plant, or for routine maintenance work, when approved by the Engineer.
- The CW3-4 "BE PREPARED TO STOP" sign may be installed after the CW2-4 "ONE LANE ROAD XXX FEET" sign, but proper sign spacing shall be maintained.
- Flippers should use two-way radios or other methods of communication.
- A shadow vehicle with a TMA should be used anytime it can be positioned 30 to 100 feet in advance of the area of crew exposure without adversely affecting the performance or quality of the work. If workers are no longer present but road or work conditions require the traffic control to remain in place, Type 3 Barricades or other channelizing devices may be substituted for the Shadow Vehicle.
- Additional Shadow Vehicles with TMAs may be positioned off the paved surface, next to those shown in order to protect a wider work space.

TCP (2-2a)

- The R1-2 "YIELD" sign traffic control may be used on projects with approaches that have adequate sight distances. For projects in urban areas, work space should be no longer than one half city block. In rural areas, roadways with less than 2000 ADT, work space should be no longer than 400 feet.
- The R1-2a "YIELD TO ONCOMING TRAFFIC" sign shall be placed on a support at a 1 foot minimum mounting height.

TCP (2-2b)

- Channelizing devices on the center line may be omitted when a pilot car is leading traffic and approved by the Engineer.
- If the work space is located near a horizontal or vertical curve, the buffer distances should be increased in order to maintain stopping sight distance to the flagger and a queue of stopped vehicles. (See table above).
- Flippers should use 24" STOP/SLOW paddles to control traffic. Flags should be limited to emergency situations.
