

FINAL REPORT

***UPDATE OF
PAVEMENT MANAGEMENT PROGRAM
(Citywide)***

2023-2030

Submitted to:

City of La Habra, CA

April 13, 2023

April 13, 2023

Mr. Tony An, P.E.
Principal Engineer
City of La Habra
110 E. La Habra Boulevard
La Habra, CA 90631

Subject: Final Report - Update of the Pavement Management Program

Dear Tony:

As part of the 2023 Update of the Pavement Management Program for the City of La Habra, *Bucknam Infrastructure Group, Inc.* is pleased to submit the Final Report for the City's pavement network.

The information contained in this report was used to develop the recommended improvement program for the pavement network. The report covers the following categories:

1. Executive Summary (Section I)

2. Pavement Management Program Development and Reporting (Section II)

3. Pavement Conditions For Each Segment in the Network (PCI Report – Section III)

- The Pavement Condition Index report shows the present condition of each street in the pavement network. In addition, the report shows the basic geometry of each street segment.

4. Forecast Maintenance & Rehabilitation (FMR) Reports (Section IV)

- **Recommended Maintenance and Repair Strategies**

The recommended maintenance and repair strategies were used to generate the Forecast Maintenance & Rehabilitation (FMR) Report and were based on our 2023 inspections. Additionally, we have assessed and incorporated unit cost and maintenance application practices/types with our strategies.

3548 Seagate Way, Suite 230
Oceanside, CA 92056
T: (760) 216-6529
www.bucknam-inc.com

- **Projected Projects based on M&R Strategies**

The Forecast Maintenance Report projects the street maintenance activities required for the next seven years, broken down to show maintenance levels for Arterials, Collectors, Local and Alley streets. The report included in this section is broken down by fiscal year.

5. OCTA Renewed Measure M Compliance Reporting (Section V)

- We have included the necessary OCTA Renewed Measure M compliance reporting, mapping and budget forecasting that is required for La Habra's 2023 Pavement Management Program (includes Appendix A – PMP Agency Submittal Checklist)

Our thorough analysis of previous and current La Habra PMP strategies enabled our staff to make proactive recommendations to the City's pavement CIP. All comments received from the City have been incorporated in the reports that follow. All of the City's issues and needs that were brought to our attention are included in the report. It has been a pleasure working with you and the City on updating your Pavement Management Program. We look forward to the continued success of this project and future teamwork with City staff.

Sincerely,

Bucknam Infrastructure Group, Inc.

Peter J. Bucknam
Project Manager
Infrastructure Management – GIS Services

TABLE OF CONTENTS

- I. Executive Summary**
 - A. 2023 Update of Pavement Management Program
 - B. City's Pavement Network
 - C. Current Citywide Conditions (Arterials, Locals, Alleys)
 - D. Maintenance Strategy Development
 - E. Annual Budget Projections
 - F. Quality Control Efforts
 - G. Findings and Recommendations

- II. Pavement Management Program-Capital Improvement Program**
 - A. Strategy Assignment Table
 - B. Multi-Year Annual Work Program Projections
 - i. Annual \$3 Million Annual Budget Scenario
 - ii. Increase PCI Budget
 - C. Condition Distribution Report
 - D. Calculation of PCI
 - E. Section II – Appendix IIA – La Habra Alley Network

- III. Pavement Condition Index (PCI) Reports**
 - A. 2023 Citywide PCI Maps
 - B. Name Order (A-Z)
 - C. PCI Order (0-100)

- IV. Forecast Maintenance Report**
 - A. Recommended Budget, Seven Year Plan (2023-2030)

- V. OCTA – La Habra Pavement Management Compliance Report 2023**
 - A. For OCTA Submittal – Seven Year Plan (2023-2030)

Section V can be copied / removed and sent to OCTA for compliance

SECTION I

EXECUTIVE SUMMARY

2023 UPDATE OF PAVEMENT MANAGEMENT PROGRAM (PMP)

As the City of La Habra continues to show growth with its population, demographics, infrastructure, and maintenance needs, the street network has been running parallel as new developments/annexations increase the size of La Habra's pavement infrastructure. As growth continues within the City and regionally, wear and tear on the infrastructure will occur at an ever increasing rate. Pavement aging through annual weathering and increased usage, compounded with the increased cost of performing maintenance add to the yearly operational maintenance of the pavement network. System sustainability can only be achieved through proactive scheduling and the implementation of cost-efficient pavement applications.

In the upcoming years as the City continues to build upon this study through future inspections and maintenance efforts, La Habra pavement data will continue to provide reliable data to enhance the PMP through detailed Orange County Transportation Authority (OCTA) Measure M2 funding analysis, City specific budgetary reporting and level of service reporting.

The La Habra PMP has been developed to assist City personnel by providing current data on the City's street network and to develop cost-effective maintenance strategies to maintain a desirable level of pavement performance on a network scale, while optimizing the expenditure of limited fiscal resources. The project consisted of analyzing the City's 2021 dataset for quality and usability. In doing this, we were tasked to generate an updated Capital Improvement Program report that identified recommendations and deficiencies in the current operating and maintenance efforts put forth by the City.

We surveyed all defined Master Plan of Arterial Highways (MPAH) routes (Arterials/Collectors) this past winter/spring to assist the City in being consistent with OCTA Measure M2 guidelines; additionally, we surveyed all local and alley streets that required inspection. We updated the City's unique Pavement Management – GIS layer that will continue to assist the City in analyzing pavement conditions and other attribute information through the use of the City's MyRoads® and GIS Enterprise.

Bucknam Infrastructure Group (Bucknam) reviewed the City's previous CIP/maintenance efforts and the current 2023-2030 proposed street improvements for pertinent pavement information in order to generate a CIP report that identified recommendations and opportunities for improvement in the current operating and maintenance efforts put forth by the City. The result of these work efforts is this report.

Specifically, our findings and recommendations provide Public Works administrators, managers and field personnel with:

- *PMP report consistent with OCTA Measure M2 guidelines*
- *the present condition status of the pavement network (arterial, collector, residential and industrial streets), as a whole and of any grouping or individual component within the City;*
- *a ranked list of all streets, or segments of streets, by condition within the network;*

- *rehabilitation/maintenance needs of each street segment by year;*
- *an optimized priority maintenance and rehabilitation program based on cost/benefit analysis and various levels of funding;*
- *optimum annual pavement expenditure levels for pavement maintenance for the next seven (7) years;*
- *prediction of the life-cycle performance of the City's pavement network and each individual street section; and*
- *pavement condition data and analysis presented in GIS through ESRI ArcMap and uploaded into the City's GIS Enterprise*

Pavement is a dynamic structure where deterioration is constantly occurring; thus the pavement management system needs to be updated on a regular basis to reflect these changes in pavement conditions, pavement maintenance histories, and maintenance strategies based upon budgetary constraints. In our approach to develop the City's forecast maintenance recommendations we worked with La Habra staff in identifying unit costs for all maintenance practices used on an annual basis (these not only included the material costs but contingency costs for design and ADA improvements).

Currently, based upon the City's maintenance practices and their associated unit costs, the total replacement value of the La Habra pavement network is \$287,938,700. This value clearly indicates that the City's pavement network is the most valuable and essential asset to La Habra. The City's use of slurry seal, AC Overlay and R&R practices are typically applied every seven years depending on the street conditions. These frequencies are typical but the City may see increases in deterioration rates due to environmental, load and high average daily traffic (ADT) volumes. For example, high ADT volumes along one of La Habra's arterial streets will increase deterioration rates for a previously applied AC Overlay compared to a small local street. These deterioration rates are monitored through frequent inspections and functional class deterioration analysis within the City's PMP database.

This report reflects our findings and recommendations for the PMP and the current state of the City's pavement network. Furthermore, we have recommended detailed funding and maintenance strategies for the arterial/collector and residential networks for next seven (7) years.

CITY'S PAVEMENT NETWORK

Within the La Habra pavement management network there are approximately 16.3 section miles of Arterial/Collector streets consisting of approximately 4,993,660 SF of pavement and 68 pavement sections. The Local network consists of approx. 91.6 section miles consisting of 16,368,468 SF of pavement which consists of 735 pavement sections. The Alley network consists of approx. 582,079 SF of pavement that includes 102 sections totaling 6.4 section miles. Combined, the entire network consists of 114.3 section miles of streets, 21,944,207 SF and 905 total pavement sections.

The City's pavement network is broken down into manageable groups that have similar characteristics, such as pavement street classification, surface type and logical segmentation. Pavement segments are identified by their branch and section numbers. Pavement "branches" that have a common usage, such as La Habra Blvd, defines a "branch" within MicroPAVER. Pavement "sections" are pavement segments within the defined branch that have consistent pavement street classifications,

construction/maintenance histories and use. Representative inspection samples are then selected and visually surveyed to locate distress data. This data is used to calculate the pavement sections Pavement Condition Index (PCI) which includes distress type, extent of the distress and its severity.

The PCI is a condition rating that ranges from 100 (a new pavement section or recently overlaid or reconstructed) to 0 for a section that has structurally failed and deteriorated dramatically. Weighted average PCI of a given area/zone equals the pavement section PCI multiplied by its own area then divided by the total square footage of the given area/zone. Table 1 summarizes the section conditions found within the City of La Habra pavement network by street classification.

Figure 1

- **The weighted average PCI for the City of La Habra Arterial/Collector network is 83.9**
- **The weighted average PCI for the City of La Habra Local network is 83.8**

The weighted PCI value associated with the Arterial/Collector and Local routes shown through our survey analysis is timely in that it is showing that a reasonable amount of preventive, slurry seal, and overlay work will continue to be needed over the next several years to proactively sustain the current PCI level. The reduction in PCI value can be explained by the network-wide natural deterioration of pavement conditions due to age, load and weather. If pavement sections are properly addressed with necessary maintenance/rehabilitation over the next seven years the City will continue to see its weighted average PCI range between 82 and 85.

Rank	Mileage	SF	2023 PCI	2021 PCI	2019 PCI	2017 PCI	2015 PCI	2013 PCI	2011 PCI	2009 PCI	2006 PCI	2003 PCI
Arterial	16.3	5,004,355	83.9	83.3	83.2	78.5	74.0	75.5	75.0	74.6	74.6	74.6
Locals	92.9	16,562,693	83.8	81.9	82.3	88.4	88.9	83.5	79.2	66.7	66.7	66.7
Alleys	6.4	582,079	73.5	69.5	64.8	50.7	47.5	43.4	46.2	40.6	40.6	40.6
Citywide	115.6	22,149,127	83.6	81.9	82.1	85.6	84.0	80.1	76.4	69.3	69.3	69.3

City's weighted average PCI w/o Alleys is 83.9

Table 1 – Past and Present PCI Results and Comparisons (FY 2003-2023)

Figure 2 – Historical PCI Findings (FY 2003-2023)

CURRENT CITYWIDE CONDITIONS (ARTERIALS, LOCALS, ALLEYS)

The overall condition of the City’s pavement network is “Good” with a weighted average PCI of 83.9 based on the surface area of each segment. The distribution of the City’s overall pavement network is shown in Section III of this report (Condition Distribution).

Condition	PCI Range	MPAH	Local	Alleys	Total Section Mi.	% of Network
Very Good	86-100	8.2	44.5	3.3	56.0	48.5%
Good	75-85	5.9	31.6	0.9	38.5	33.3%
Fair	60-74	1.4	13.8	0.4	15.6	13.5%
Poor	41-59	0.8	2.2	0.5	3.6	3.1%
Very Poor	0-40	0.0	0.7	1.2	1.9	1.7%
		16.3	92.9	6.4	115.6	

Table 2 – Condition Distribution by Mileage for All Streets

As shown above, a large majority of segments are evenly distributed through Very Good to Good condition categories. For a network to be in a “preventive condition status” you would typically see Very Good section percentage totals at the 50% to 60% range, this is true for La Habra. These findings indicate that the proper overlay rehabilitation and slurry seal maintenance has been applied to the network over the past several years. The condition ranges shown above are defined by the OCTA PMP Guidelines.

With approximately 18.3% of the City’s pavement sections within a condition level of “Fair to Very Poor” (approximately 21.2 miles), a proactive/continued slurry seal maintenance program needs to be sustained

and funded; this will allow the City's PMP to provide high quality conditions the citywide network while reducing deferred maintenance costs in fiscal years 2023 and beyond.

- Local conditions show that 35% (32.6 miles) of the pavement network will potentially require slurry seal maintenance within the next seven years while 6% (5.2 miles) of the network requires overlay rehabilitation or reconstruction. These results show positive improvement through the reduced amount of Local overlay rehabilitations compared to the 2021 PMP results.
- Arterial/Collector conditions show that 42% (6.8 miles) of the pavement network will potentially require slurry seal maintenance within the next seven years (the City does not currently utilize slurry seal on Arterial sections); while 5% (0.8 miles) of the network requires overlay rehabilitation .

Through our assessment of the City's annual pavement maintenance budget allocations the current available CIP funds will allow the City's current citywide weighted PCI to moderately increase over the next seven years. **The general goal of any pavement management program should be to achieve a citywide PCI between 82 to 84 and sustain that value for the long-term.**

Furthermore, as large overlay and rehabilitation projects are considered for funding, the City should also consider using sub-grade R - Values, structural design, distress severities and extents as parameters for determining whether a pavement section that lies within the Fair to Very Poor condition range should be overlaid or reconstructed. PCI conditions reflect "surface" conditions; additional sub-surface data such as coring data, R-Values and asphalt depths will provide City to with a better approach to the maintenance that should be applied.

Figure 3 – PCI Condition Distribution by Section Mileage (All Streets)

MAINTENANCE STRATEGY DEVELOPMENT

Based on the results of the condition survey and input from the City, pavement maintenance/rehabilitation strategies were developed. At the outset, the City and Bucknam staff identified a distribution of City maintenance funds that would be applied to the network over the next seven years. This was based upon the desire to prevent the decrease in street conditions and not allow an increase in the maintenance backlog funds over the seven-year program.

With this approach, Bucknam has recommended a “minimal level of service” which creates a major dividing line in determining between preventive maintenance and major pavement rehabilitation. Generally within pavement management programs, a PCI range between 55 to 70 determines the threshold of when preventive maintenance or major overlay rehabilitation is activated. Based on the City’s weighted average PCI, condition distribution, maintenance practices, our team has identified a PCI of “65” as the minimum level of service. This means that any pavement section with a PCI greater than 65 will be recommended for preventive maintenance (i.e. slurry seal). This recommendation is indicated in Table 6, Section II, page 15.

Bucknam developed two multi-year Capital Improvement Programs for the City based on the pavement records, yearly capital expenditures, available funding and the most recent 2023 inspections. These recommendations and results are shown in Section II of this report.

As shown in Figure 3 (page 5), 81% of the City’s streets are in Very Good to Good condition. These sections will be targeted for “preventive” maintenance within our Capital Improvement Program (CIP) recommendations. The reasoning in doing this is to extend the life cycles of those “good” pavement sections which accrues capital saving to aggressively rehabilitate those pavement sections that are below the “minimal level of service”.

In order to achieve the most effective and optimum program for the City, certain strategies have been selected and/or analyzed. Below is a listing of the maintenance activities utilized in strategy development. Each activity is representative of the types of work that have been programmed as part of the long-term maintenance requirements of the City’s street network.

General Repairs-Stop Gap (Localized Maintenance*)

For this maintenance type, small localized surface treatments are utilized as “holding action” solutions (stop gaps) to delay the need for pavement structural strengthening. They typically include activities such as crack sealing, AC deep patching, AC skin patching, PCC slab replacement, grinding and leveling.

The City of La Habra may consider an Asphalt Zipper to apply proactive localized surface patch repairs. In doing this, they prevent portions of pavement sections (high severity distress locations) from deteriorating at a continuously fast rate.

Slurry Seals (Global Maintenance*); PCI range – 60 to 85

Surface treatments applied to pavements with minimal surface distress to provide new wearing surfaces and extend pavement life. Generally consists of a mixture of conventional or latex-modified emulsified asphalt, well-graded fine aggregate, mineral filler and water placed over an existing AC surface; Slurry seal application life-cycles are averaging 4 to 5 years. Type II Slurry is recommended for Local streets.

Overlays (Major Rehabilitation*); PCI range – 20 to 60

AC Overlay – Placement of a layer of hot-mixed asphalt concrete over the existing pavement surface (may include pavement fabric). Grinding (milling) is performed prior to the overlay to reduce the total height of asphalt and assure alignment with existing gutter lines. This also includes “dig-outs” and crack sealing prior to the application of an overlay. This treatment provides a new wearing surface and increased structural strength to the pavement section. A conventional overlay should be designed for a ten-year life.

Asphalt Rubber Hot-Mix Overlay - The ASTM definition is: Asphalt-Rubber is a blend of asphalt cement, reclaimed tire rubber and certain additives in which the rubber component is at least 15% by weight of the total blend and has reacted in the hot asphalt cement sufficiently to cause swelling of the rubber particles. Specifically, using crumb rubber modified binders in pavement application benefit local agencies in that cities find:

- Pavement resists cracking by being more flexible;
- Cost savings come from a longer life cycle (from Bucknam’s experience typically 20% longer), decreased maintenance and the use of less material
- Improvement in skid resistance;
- Decreased noise; and
- It provides long-lasting color contrast for marking and striping
- Life cycles are averaging 8 to 12 years

Reconstruction (Major Rehabilitation*); PCI range – 0 to 20

Reconstruction of an existing pavement section includes demolition and removal of the asphalt to a prescribed depth, grading, sub-base compaction, application of a binder/surface course followed by the placement of a conventional flexible pavement section using a structural AC Hot Mix, ARHM or a full depth asphalt. Each classification of road has a typical design cross-section based on anticipated traffic loading. Reconstruction resets a roadway section PCI to 100 and restarts the life-cycle deterioration curve of the section.

*Localized, Global and Major maintenance activities are default terms used within the MicroPAVER pavement software. Specific pavement repair applications are placed within each maintenance activity in order to develop multi-year maintenance forecast recommendations.

ANNUAL BUDGET PROJECTIONS

The budgeting process was approached with the following in mind; generate two unique work programs for the next seven (7) years based upon actual road pavement conditions in order to:

1. Demonstrate how the “actual” citywide pavement budget (\$21,000,000 available over seven years) performs against the existing 2023 conditions
2. Identify the required annual citywide budget to “increase” the current 2023 PCI level of 83.9 to 84.9 after seven years

Based on current and future pavement maintenance needs, two annual work programs have been prepared and summarized below. Table 3 demonstrates the how today’s conditions react to the City’s annual pavement funding budget (\$21,000,000 available over seven years). Table 4 demonstrates the required budget that is needed to increase the citywide weighted average PCI to a level of 84.9 after seven years (each scenario addresses arterial, local and alley streets). The revenues shown below only account for the cost of pavement maintenance, rehabilitation and reconstruction.

Plan Year	PCI Result	Slurry / Cape	Overlay / Recon	Total \$	Deferred Backlog
2023-24	84.5	\$1,585,800	\$1,428,300	\$3,014,100	\$7,271,600
2024-25	85.4	\$1,415,500	\$1,582,500	\$2,998,000	\$5,256,000
2025-26	85.9	\$1,397,100	\$1,603,600	\$3,000,700	\$3,789,600
2026-27	86.2	\$1,478,300	\$1,523,500	\$3,001,800	\$1,798,100
2027-28	85.9	\$1,411,500	\$1,568,100	\$2,979,600	\$0
2028-29	85.1	\$1,395,400	\$1,609,100	\$3,004,500	\$1,566,400
2029-30	84.1	\$1,320,900	\$1,680,200	\$3,001,100	\$0
		\$10,004,500	\$10,995,300	\$20,999,800	

Table 3 – Citywide Projection Utilizing \$21 Million Seven-Yr Budget

The City has planned for / allocated \$21 million in pavement maintenance & rehabilitation over the next seven years. Utilizing this projected budget, Bucknam is showing that a seven-year budget ranging from \$20 million to \$21 million is needed to sustain the conditions found within La Habra today. Moving forward, City staff should utilize the results found in Tables 3 & 4 to audit how annual funding is performing to future PCI inspection results (i.e. FY 2025 PMP, FY 2027 PMP studies).

Plan Year	PCI Result	Slurry / Cape	Overlay / Recon	Total \$	Deferred Backlog
2023-24	84.5	\$1,585,800	\$1,428,300	\$3,014,100	\$7,271,600
2024-25	85.4	\$1,415,500	\$1,582,500	\$2,998,000	\$5,256,000
2025-26	86.0	\$1,505,400	\$1,603,600	\$3,109,000	\$3,571,500
2026-27	86.1	\$1,522,600	\$1,523,500	\$3,046,100	\$1,646,200
2027-28	86.0	\$1,494,000	\$1,611,000	\$3,105,000	\$0
2028-29	85.5	\$1,487,900	\$1,641,300	\$3,129,200	\$1,336,700
2029-30	84.9	\$1,451,300	\$1,705,100	\$3,156,400	\$0
		\$10,462,500	\$11,095,300	\$21,557,800	

Table 4 – Necessary Annual Funding to Increase PCI to 84.9

Additional detail and breakdown of budget projections are demonstrated in Section IV of this report.
All work program budgets generated are presented in terms of current 2023 dollars. All repair activities were based on distresses observed at the time of the field survey.

These are recommendations and are to be used as “the best case scenario” for improving the City of La Habra street network.

QUALITY CONTROL EFFORTS

As indicated in our scope of work, we performed numerous quality control checks in the field during survey efforts. Field check efforts were performed at the end of each week of survey as well as a final effort once all required inspections were complete. 10% of the pavement inspection set was resurveyed by a second team to ensure the quantities and distress types were collected properly (approx. 12 miles).

During the project, Bucknam staff reviewed and assessed the existing MicroPAVER database, City centerline file, previous PMP – GIS map link and the previous street segmentation for La Habra. Typical segmentation updates were made to ensure that all sections across the network contain similar pavement type, age, and condition.

During in-house and field operations, we came across minor changes and some typical updates that needed to be made to the previous database. These changes included minor length and width corrections from field operations; Bucknam performed the necessary changes within the La Habra PMP database.

While working with City staff, it was indicated that two mobile home parks, Park La Habra and View Park Mobile Estates, had been accepted by the City and needed to be added to the PMP database. These two additional sections added a total of 1.4 miles and approximately 181,000 SF to the La Habra street network.

FINDINGS AND RECOMMENDATIONS

Through our assessment of historical maintenance performed within the City and through our discussions with City staff the conditional data found across the network clearly shows that the City has applied strong, preventative maintenance strategies over the past decade. We continue to see an annual conditional “sustaining” within the Arterial and Local street programs; this is a positive result for on-going, continuous long-term management of the PMP. Pavement management involves frequent preventative maintenance; as pavement deteriorates through heavy traffic impacts, weathering and time, preventative maintenances (such as slurry seal, stop gap, etc.) have limited benefits. More aggressive maintenance applications have to be used. Our study has shown that several MPAH and local overlay projects will be needed over the next seven years to maintain the network’s high level of condition.

Currently, the City’s three major streets networks (Arterial/Collector, Local & Alley) hold high weighted PCI values; it is our recommendation that a proactive, common sense overlay program be assessed and scheduled over the next several fiscal years. This will ensure that the citywide weighted PCI will sustain itself and allow for routine slurry seal maintenance to continue.

Through our analysis of the La Habra PMP we have found and recommend the following items which should be considered for a proactive approach to the PMP and future management of the program:

ARTERIAL/COLLECTOR (MPAH) FINDINGS AND RECOMMENDATIONS

The recent 2023 MPAH inspections and PCI results have indicated that the La Habra MPAH network is currently in “Good” condition (weighted avg. PCI of 83.9). The City has been able to increase this average since 2017 and continues to apply proactive and timely maintenance. To maintain this condition, it is critical that preventive maintenance and overlay activities are funded at the levels identified on page 19 and its corresponding spreadsheet reports to maintain a “Good” network weighted average PCI value.

Our MPAH findings for conditional data and recommendations for revenue expenditures are shown below:

- The MPAH network has a weighted PCI of 83.9;
- The MPAH network consists of 16.3 miles and 5,004,355 SF of pavement;
- Currently, 5% of the MPAH network (0.8 miles) qualify for rehabilitation/reconstruction; while 42% (6.8 miles) qualify for preventative/slurry seal maintenance;
- MPAH maintenance projects should focus on maintaining the current PCI above a weighted average of 83 over the next seven years;
- Develop a proactive fiscal and planned approach to identify MPAH overlay projects based on the deterioration modeling within MicroPAVER;
- At a minimum, maintain the MPAH revenues at the \$1,006,500/yr level for the term of the CIP to generate the projects identified on page 8; and

- Perform pavement inspections on the MPAH network every two years to continue the City's solid planning model within MicroPAVER to track PCI deterioration; also follows new OCTA guidelines for Measure M2.

LOCAL FINDINGS AND RECOMMENDATIONS

The recent 2023 Local inspections and PCI results have indicated that the La Habra Local network is currently in "Good" condition (weighted avg. PCI of 83.8). The City has been able to increase or sustain this average every year since 2011 and continues to apply proactive and timely maintenance which has stabilized conditions at mid-80's PCI level. At a minimum, to maintain this condition, it is critical that preventive maintenance and overlay activities are funded at the levels identified on page 19 and its corresponding spreadsheet reports to maintain a "Good" network weighted average PCI value.

Our Local network findings for conditional data and recommendations for revenue expenditures are shown below:

- The Local network has a weighted PCI of 83.8;
- The Local network consists of 92.9 miles and 16,562,693 SF of pavement;
- Currently, 6% of the Local network (5.2 miles) qualify for rehabilitation/reconstruction; while 35% (32.6 miles) qualify for preventative/slurry seal maintenance;
- Local maintenance projects should focus on the maintaining the current PCI at an weighted average of 83 over the next seven years;
- Develop a proactive fiscal and planned approach to identify local overlay projects based on the deterioration modeling within MicroPAVER;
- At a minimum, maintain the Local revenues at the \$1,884,200/yr level for the term of the CIP to generate the projects identified on page 8;
- Perform pavement inspections on the Local network every two years to continue the City's solid planning model within MicroPAVER to track PCI deterioration; also follows new OCTA guidelines for Measure M2; and
- Continue to schedule and apply Local maintenance & rehabilitations within the City's defined Zone boundaries; our Section IV reporting demonstrates these recommendations.

ALLEY FINDINGS AND RECOMMENDATIONS

The recent 2023 Alley inspections and PCI results have indicated that the network is currently in "Fair" condition (weighted avg. PCI of 73.5). The City has been able to increase this condition value every year since 2009 (79% increase) and continues to apply proactive and timely rehabilitation/overlays which have stabilized conditions at mid-70's PCI level. Over the next 5+ years, to continue to see

this annual improvement, it is critical that overlay activities are funded at the levels identified on page 19 and its corresponding spreadsheet reports to increase the weighted average PCI value to the Good range.

Our Alley network findings for conditional data and recommendations for revenue expenditures are shown below:

- The Alley network has a weighted PCI of 73.5;
- The Alley network consists of 6.4 miles and 582,079 SF of pavement;
- Currently, 28% of the Alley network (1.8 miles) qualify for rehabilitation/reconstruction; while 20% (1.3 miles) qualify for preventative/slurry seal maintenance;
- Alley maintenance/rehabilitation projects should focus on increasing the current PCI to a weighted average of 78 over the next seven years;
- Develop a proactive fiscal and planned approach to identify Alley overlay projects based on the deterioration modeling within MicroPAVER;
- Maintain the Alley revenues at the \$150k to \$300k/yr level for the 7-yr term of the CIP to generate the projects identified on page 19; and
- Perform pavement inspections on the Alley network every two years to continue the City's solid planning model within MicroPAVER to track PCI deterioration; also follows new OCTA guidelines for Measure M2.

SECTION II

PAVEMENT MANAGEMENT PROGRAM – CAPITAL IMPROVEMENT PROGRAM

Bucknam performed the following services in accordance with the scope of services that was contracted with the City of La Habra. As a quick overview, the following tasks were performed to complete the work over the past several months:

2023 Pavement Management Work Efforts:

- Task 1:** Project Kickoff-Data Management
- Task 2:** Update of Maintenance Activities
- Task 3:** Pavement Condition Survey (MPAH Citywide, Local-Alley Streets)
- Task 4:** Budgetary Analysis and Capital Improvement Reports
- Task 5:** Executive Summary and Final CIP Reports
- Task 6:** Mapping of the Pavement Network

Pavement Management Update 2023

As a part of the 2023 update of the pavement management program, a major element of work was to complete a comprehensive assessment of the existing street network and PMP data within the City. This included assessing the City's existing 2021 PMP report, GIS centerline, street naming conventions and work history information. From there, Bucknam worked with the City to confirm public and private street listings which set the foundation for accurate CIP reporting. All data was then updated into the City's current MicroPAVER database.

Work history information was provided by the City in the form of institutional knowledge, maps and Excel documents. This information was entered into the proper pavement segments that match the limits of those projects. From there, CIP pavement recommendations were performed (discussed and demonstrated below) where the pavement maintenance information the City provided (PMP material practices, unit costs, and capital budgets) were used to generate recommendations through the MicroPAVER system.

Table 5 demonstrates PCI ranges identified within MicroPAVER. Once a pavement inspection is complete, a PCI is calculated for each pavement section. Each PCI calculated falls within a defined PCI range category (Very Good, Poor, etc.). Furthermore, a weighted PCI was calculated for the each functional class within the network (arterials and locals).

The PCI is a condition rating that ranges from 100 (a new pavement section or recently overlaid or reconstructed) to 0 for a section that has structurally failed and deteriorated dramatically. Weighted average PCI of a given area/zone = pavement section PCI multiplied by its own area divided by the total square footage of the given area/zone. This information can also be represented through MicroPAVER to show how much square footage or percentage of area falls within a PCI range category.

<u>PCI RANGE</u>	<u>CONDITION</u>
86-100	Very Good
75-85	Good (La Habra Network 2023 = 83.9)
60-74	Fair
41-59	Poor
0-40	Very Poor

Table 5 – Pavement Condition Index (PCI) Range

(Additionally, see page 24 for detailed description of PCI ranges)

These condition ranges are defined by the Army Corps of Engineers and defaulted within the MicroPAVER software. The summary of all roads condition data and their representative PCI's can be seen in the Pavement Condition Report in Section III.

STRATEGY ASSIGNMENT TABLE

Once the appropriate activities from the above listings were selected by the City, a Maintenance Strategy Table was defined within the system that allocated the appropriate actions to the specific repair needs of the street. In defining the maintenance strategy list, emphasis was placed on defining pavement condition thresholds and using the PCI for the specific maintenance activities within these categories.

Strategy Assignment Table

All Streets		
PCI Range	Description	Unit Cost
20-100	Preventative, Stop Gap, Patching	Varies by Activity
Varies by Activity		
60-85	Type II Slurry (Locals)	\$0.43/SF
60-85	Type II Slurry (Arterials)	\$0.57/SF
Minimal Level of Service (65)		
20-65	Mill and AC Overlay (Local)	\$3.10/SF
20-65	Mill & ARHM Overlay	\$4.20/SF
0-20	Full AC/Base Remove & Replace (Local)	\$7.35/SF
0-20	Full AC/Base Remove & Replace (Arterial)	\$17.55/SF
0-20	PCC Reconstruction	\$24.50/SF
20-60	Alley (4" Mill and AC Overlay)	\$6.26/SF
<i>25% Contingency included within All Unit Costs</i>		

Table 6 - Strategy Assignment Table

The Strategy Assignments List, shown in Table 6, was developed to identify the most critical segments in each of the work programs (Arterial, Collector and Local). Segment priorities were established by determining the range of PCI's requiring first attention based on the relative value of each segment's PCI, thus maximizing the annual maintenance budget. Also, distress quantity, area extent, type (load / climate) and distress severity levels were critical elements in the decision process for recommending maintenance. The assignment table is used as a guide within MicroPAVER to recommend maintenance, however, further assessment by City staff and/or outside parties can override maintenance recommendations. This can be done by reviewing and assessing distress extents and their weighted percentages.

Once the strategy assignments were set within the system, budgets and work assignments were generated for each work program on an annual basis. Using pavement deterioration curves for each type of pavement surface and class of road, both current year and future years work requirements for each pavement segment within the City were determined. In forecasting the maintenance requirements in future years, the current PCI value is reduced annually for each pavement segment based on the MicroPAVER deterioration curves within the City's database.

Section II

Likewise, maintenance activities performed in a given year increase the PCI value as they are applied to the segment. The overall program is dynamic in that each strategy consists of a cyclic series of actions that simulates the pavement anticipated life cycle.

Figure 4 – Sample Pavement Life Cycle / Deterioration Rate

MULTI-YEAR ANNUAL WORK PROGRAM PROJECTIONS

The goal of these projections is to assist City policy makers in utilizing the recommendations of the MicroPAVER system. By using the City of La Habra's current budgets and maintenance practices the system will develop "section unique" improvements and strategies. Each segment will be tied to a specific fiscal year. As shown in the following pages, we have assessed the budgets that have been projected to meet the maintenance and rehabilitations needed to maximize the City's return on investment. The budget forecasting goal for the City network focused on:

- ❖ Establishing a proactive multi-year Maintenance & Rehabilitation Program;
- ❖ Developing a preventive maintenance program; and
- ❖ Selecting the most cost-effective repairs based on City strategies
- ❖ Spreading the annual M&R recommendations across all City Council Districts

ANNUAL \$21 MILLION BUDGET – A \$21 Million/seven-yr budget was generated for the City to demonstrate how its existing Public Works M&R/CIP budget allocation would perform against the current citywide conditions.

Plan Year	Measure M, Gas Tax, SB1
2023-24	\$3,000,000
2024-25	\$3,000,000
2025-26	\$3,000,000
2026-27	\$3,000,000
2027-28	\$3,000,000
2028-29	\$3,000,000
2029-30	\$3,000,000
Total	\$21,000,000

Table 7 – Annual Public Works PMP Budget

City Public Works PMP funding is identified through:

- *Arterial: \$1,100,000 annually (SB1, M2, Gas Tax, General Fund);*
- *Local: \$1,300,000 annually for local rehabilitation (M2, Gas Tax, General Fund);*
- *Alley: \$600,000 annually (M2, Gas Tax, CDBG)*

INCREASE PCI BUDGET – A "increase" budget was generated for the City to demonstrate the necessary annual funding required to increase the current weighted PCI level of 83.9 to 84.9 after seven years.

***All multi-year budget projections include a 5% inflation rate for the term of the budget forecast.**

ARTERIAL-COLLECTOR / LOCAL / ALLEY BUDGET PROJECTIONS

The annual projected revenues shown below only account for the cost of pavement maintenance and rehabilitation activities. A 25% contingency was applied to the pavement costs. Additional soft costs not included within the cost of pavement maintenance include:

- Right-of-way, curb & gutter, ADA ramp improvements;
- Utility improvements;
- Design, construction management, inspection, testing;
- Tree removals;
- Striping and pavement markings

ACTUAL (\$21 Million, Seven-Year) – The first key step in developing a proactive PMP is to model the City’s existing conditions against an “actual” annual budget. In doing this, PCI performance, deferred maintenance and pavement application uses are able to benchmarked and demonstrated in a positive or negative result. Bucknam utilized the City’s \$21 Million, Seven-yr budget to establish a benchmark scenario for pavement funding; the City provided Bucknam with current 2023 unit costs for pavement maintenance applications currently being used by the City.

\$21 MILLION, SEVEN-YR BUDGET PROGRAM

This budget program incorporates pavement sections that have a functional class of Arterial (A, C), Local (E) and Alleys (O).

Plan Year	PCI Result	Slurry / Cape	Overlay / Recon	Total \$	Deferred Backlog
2023-24	84.5	\$1,585,800	\$1,428,300	\$3,014,100	\$7,271,600
2024-25	85.4	\$1,415,500	\$1,582,500	\$2,998,000	\$5,256,000
2025-26	85.9	\$1,397,100	\$1,603,600	\$3,000,700	\$3,789,600
2026-27	86.2	\$1,478,300	\$1,523,500	\$3,001,800	\$1,798,100
2027-28	85.9	\$1,411,500	\$1,568,100	\$2,979,600	\$0
2028-29	85.1	\$1,395,400	\$1,609,100	\$3,004,500	\$1,566,400
2029-30	84.1	\$1,320,900	\$1,680,200	\$3,001,100	\$0
		\$10,004,500	\$10,995,300	\$20,999,800	

Table 8 – Citywide Projection Utilizing \$21 Million/ Seven-Yr Budget

By modeling the existing pavement conditions against \$21 Million/seven-yr funding, we have found that the weighted PCI for the entire network increases from a level of 83.9 to a level of 84.9 over the seven year CIP (See Figure 5 below). The allocated seven-year budget generates a sustaining/maintained weighted PCI by FY 2029-30. This is a very positive sign in that the City has now reached an optimal performance level regarding PCI. As noted in the Executive Summary the general goal of any pavement management program should be to achieve a citywide PCI between 82 to 84 and sustain that value for the long-term. La Habra is there and should be able to sustain these conditions over the next decade as long as the proper/adequate Arterial-Collector / Local funding is allocated.

Secondly, the resulting deferred maintenance backlog decreases from \$9.9 million to basically \$0 due to the life-cycle application schedules for slurry seals and overlays. By fiscal year 2027 all necessary slurry and overlay projects will have been applied based upon this budget. Keep in mind however, by FY 2030-2031, deferred maintenance/rehabilitations is projected to come back into the system due to industry standard deterioration curves. This budget scenario indicates that an appropriated \$21 million/seven-yr pavement budget is ample enough to generate the desired results on the pavement network.

In order for these scenarios to produce these results, proactive and continued funding is necessary; on a annual basis, the City should monitor the management of overlay deferred maintenance. The potential delay in projects and the resulting buildup of more overlay work in the seven-year time frame is not a debt service the City will want to accept.

Through Bucknam’s analysis of the previous pavement database, work history dates and our experience with AC Overlay deterioration rates, it is important to point out that pavement sections that were overlaid in the early part of the 2010’s (FY’s 2011-2012) will need proper overlay rehabilitation approximately around fiscal year 2027-28 and beyond.

Figure 5 – Resulting Network PCI (\$21 Million/7yr Budget)

The resulting “increase” of the weighted PCI shown above for the entire network demonstrates how applying adequate capital funds to specific areas of the network allows the City’s pavement to improve at a rate that is conducive to a successful PMP (i.e. proper/timely application of preventive maintenance and extension of section life-cycles through timely overlays, decrease in deferred maintenance).

Additionally, even with an ample budget, the City should continue to implement stop gap/localized maintenance (i.e. deep patching, leveling courses, crack sealing, etc.) prior to any major slurry seal and/or overlay rehabilitation. By performing stop gap measures to individual pavement sections the overall performance of the sections condition will improve over time and sustain itself longer than if no preventive maintenance was performed.

On the flip side, if limited annual funding is applied to the network over the next seven years (i.e. citywide budget of \$1,000,000/yr) a drop in overall weighted PCI to 79 will occur and deferred maintenance/CIP projects will exceed \$17.1 million. Limited funding equals deferred projects which does not allow necessary overlay projects to be completed in a timely manner on the arterial, collector and local networks.

INCREASE PCI PROGRAM (SEVEN YEAR MODEL)

With the previous maintenance strategy shown above we have demonstrated the proactive results of applying the necessary annual funding to sustain the City's weighted PCI at today's conditions. Our goal under this model is to increase the current 2023 weighted PCI of 83.9 to 84.9 through a seven-year program. This model will demonstrate the necessary annual funding to achieve this goal.

We used the previous model (shown above) as the basis for our modeling within the "increase" program. The "Increase PCI" budget incorporates pavement sections that have a functional class of Arterial (A, C), Local (E) and Alleys (O).

Plan Year	PCI Result	Slurry / Cape	Overlay / Recon	Total \$	Deferred Backlog
2023-24	84.5	\$1,585,800	\$1,428,300	\$3,014,100	\$7,271,600
2024-25	85.4	\$1,415,500	\$1,582,500	\$2,998,000	\$5,256,000
2025-26	86.0	\$1,505,400	\$1,603,600	\$3,109,000	\$3,571,500
2026-27	86.1	\$1,522,600	\$1,523,500	\$3,046,100	\$1,646,200
2027-28	86.0	\$1,494,000	\$1,611,000	\$3,105,000	\$0
2028-29	85.5	\$1,487,900	\$1,641,300	\$3,129,200	\$1,336,700
2029-30	84.9	\$1,451,300	\$1,705,100	\$3,156,400	\$0
		\$10,462,500	\$11,095,300	\$21,557,800	

Table 9 – Necessary Annual Funding to Increase PCI to 84.9

Referring to Table 9, it is noted that the weighted PCI increases through the seven-year projection (83.9 to 84.9). Furthermore, the annual deferred maintenance total decreases from \$7.3 million to \$0 at the end of the seven-years. This is a sign that if the City applies annual average funding at \$3.1 million/yr over the next seven years (\$21.6 million investment), today's conditions will moderately increase thru FY 2030. The City will be able to "hold" the current conditions and will continue to see a moderate decrease in the amount of deferred maintenance (majority is overlay rehabilitation).

Once the City has performed the recommended pavement rehabilitation projects for FY 2023 through 2024; the City should continue to utilize a Local slurry maintenance "neighborhood" strategy for several reasons. First, preventive maintenance applications applied five plus (5+) years after rehabilitation, like those mentioned above, will help to sustain high levels of condition while reducing annual expenditures. Secondly, with a citywide maintenance neighborhood methodology established, four beneficial impacts occur:

- 1) Planned / Maintenance areas are addressed through a multi-yr maintenance cycle which creates a dedicated project schedule for City staff and constituent inquiries;
- 2) Deferred overlay rehabilitation can be addressed in a more effective manner due to accrued savings of revenues (reduced construction logistical costs, volume-based costs, etc.)
- 3) A preventive maintenance strategy is more cost-effective in a long-term PMP rather than implementing a maintenance approach that addresses only the "worst-first" streets.
- 4) All maintenance alternatives are available due to the increased funding and focused maintenance per year.

Figure 6 – Resulting Network PCI (Increase PCI Budget)

The Local maintenance model/budget that has been developed can be used as a benchmark to monitor the City's annual PMP-CIP allocations as the network continues to mature and age; the proper amount of funding for overlay rehabilitation needs to be the City's highest priority.

Again, it is recommended that the City continue to monitor the deterioration rates for the applications of Mill & Overlay and Type II slurry seal to ensure the City is generating the greatest return-on-investment and extend life-cycles; this should be done through frequent inspections and deterioration studies.

PAVEMENT MANAGEMENT PROGRAM REPORTS

In addition to the annual budget scenario, this report contains a comprehensive and complementary assemblage of pavement management reports ranging from summary reports to annual maintenance and rehabilitation schedules (Forecast Maintenance Report, Section IV). Collectively as well as individually, the reports represent reasonable projections of pavement maintenance needs and performance based on visual condition assessments, unit cost estimates, and pavement deterioration models.

It is important to note that pavement segment dimensions and surface area (recorded during 2006 thru 2021 and 2023 inspections), along with the action and repair costs, as presented within the reports are accurate within tolerable limits. This is noteworthy due to the "implied" accuracy of reporting length and width to the nearest foot, surface area to the nearest square foot, and action and repair unit costs and project estimates to the nearest penny and dollar, respectively.

NEXT STEPS

As with any infrastructure management software program, time investments need to be made by key Public Works staff to maintain the integrity of the data as well as the accuracy. Bucknam can perform training sessions in the use of the MicroPAVER system and demonstrate how to generate standard maintenance reports to assist City staff in developing yearly budgets, project level analysis, and CIP projections. This will be key to future staff management of the pavement program and reporting. City personnel need to maintain their commitment to the preventive maintenance system, while working toward reducing the City's present backlog of rehabilitation projects.

In order to ensure that report outputs are accurate and credible, it is essential that the integrity of all data files be maintained. This will require performing all necessary updates when changes are made to scheduling scenarios, unit cost information, historical data, etc. In addition, the entire pavement network will have to be re-inventoried at regular intervals. This typically includes surveying arterial and collectors every two years and Locals every two.

This will not only allow work to be scheduled based on the most current condition data available, but will provide City personnel with a means to monitor actual rates of pavement deterioration so appropriate modifications can be made to the system curves. To be compliant with the OCTA requirements, the City must generate a triennial Arterial and Collector network pavement management report indicating condition ratings.

Bucknam will be supporting the City with staff level support to assist in the continuous updates with the MicroPAVER system. This will include work history updates, generating reports from the system, unit cost updates, and future inspections.

La Habra MyRoads® Web-Portal – Bucknam’s MyRoads® is a great match for the La Habra PMP today and the future. **MyRoads® brings your PMP data to life within a dynamic dashboard!** Bucknam now provides all our PMP clients with a unique and agency driven “MyRoads®” web-portal that provides instantaneous access to your pavement management database. This “dashboard” allows users to toggle through individual sections via GIS mapping selections, zone queries, rank selection, PCI ranges, etc. to review all section metrics, latest/previous inspections, work histories generate filtered PCI reports and identify potential maintenance / rehabilitation costs based upon your unique needs.

Bucknam has shown the current La Habra MyRoads® actively working! This tool can be accessed by simply through a Username/Password methodology. As changes are made to the La Habra Heights’ PMP database the MyRoads® dataset is changed to reflect work history edits, PCI inspections and section changes. We have activated the City’s MyRoads® account and it can be utilized.

Figure 7 – La Habra MyRoads® PMP Web-Portal

In summary, MyRoads® allows the user perform the following dynamic functions:

- Query specific pavement segment(s) to view current/historic PCI, work history inspection;
- Filter for pavement sections within a defined zone, PCI range and/or functional class;
- Select a pavement section or grouping of section through the on-board GIS tool;
- Enter slurry, overlay & reconstruction unit costs to determine preliminary cost of maintenance and resulting citywide PCI
 - Display critical street / sidewalk / ROW assets along pavement section(s) that are critical to Engineering Bid development and solicitation (ADA ramps, utilities, manholes, trees, etc.
- Displays all final GIS project maps (PCI, work history, 5-yr forecasted maintenance, etc.)
- Bucknam will train La Habra staff on the simply use of the MyRoads® dashboard.

CONDITION DISTRIBUTION REPORT

This report depicts the distribution of the pavement condition throughout the street network and its functional classes by section mileage.

The PCI rating scale ranges from “Very Good” to “Very Poor”, with a “Very Good” condition corresponding to a pavement at the beginning of its life cycle, and a “Very Poor” condition representing a badly deteriorated pavement with virtually no remaining life.

The table below shows the general description for each pavement condition:

Condition Description – PCI Range – Description

Condition Description	PCI Range	Description
Very Good	86-100	Minor to low distress, no significant distress; Low severity distresses with expectation of utility patches in good condition or slight hairline cracks; minor weathering found
Good	75-85	Slight to moderately weathered, low to moderate distress severities, utility patching commonly found; moderate distress extents
Fair	60-74	Severely weathered or moderate levels of distress, generally limited to utility patching and climate related distress
Poor	41-59	Moderate to high distresses including load related types such as alligator cracking, greater distress extents
Very Poor	0-40	Severely distresses, large quantities of distortion or alligator cracking; Failure of the pavement, distress has surpassed tolerable rehabilitation limits

Table 10 – PCI Condition Description Table

CALCULATION OF PCI

In order to calculate a Pavement Condition Index (PCI) value within MicroPAVER, specific street section data needs to be inputted into MicroPAVER to define the survey limits, asphalt types, pavement age and metrics. Pavement “sections” are pavement segments within the defined branch that have consistent pavement street classifications, construction/maintenance histories and use. Representative inspection samples are then selected and visually surveyed to locate distress data. This data is used to calculate the pavement sections Pavement Condition Index (PCI) which includes distress type, extent of the distress and its severity.

The PCI is a condition rating that ranges from 100 (pavement section that is in perfect condition) to 0 for a section that has structurally failed and deteriorated dramatically. The PCI is calculated from three major data entries from our inspectors:

1. Distress Type (one of 20 AC or 19 PCC types); these include alligator cracking, bleeding, block cracking, corrugations, depressions, long/trans cracking, patch/utility cut, potholes, rutting, weathering, raveling, etc.
2. Distress Quantity (the square footage, length or count of a specific distress)
3. Distress Severity (the level of severity determined for each distress found; low, medium or high)

APPENDIX IIA LA HABRA ALLEY NETWORK

Per the request of the City, we have separated the City's Alley network within this appendix to demonstrate its unique conditional findings.

LA HABRA ALLEY NETWORK

Within the La Habra Alley network there are approximately 6.4 section miles of streets. The Alley network consists of approximately 582,079 SF of pavement which consists of 102 pavement sections.

The Alley network is broken down into manageable groups that have similar characteristics, such as pavement street classification, surface type and logical segmentation. Pavement segments are identified by their branch and section numbers. Pavement "branches" that have a common usage, such as Alley E/Corto, defines a "branch" within MicroPAVER. Pavement "sections" are pavement segments within the defined branch that have consistent pavement street classifications, construction/maintenance histories and use. Representative inspection samples are then selected and visually surveyed to locate distress data. This data is used to calculate the pavement sections Pavement Condition Index (PCI) which includes distress type, extent of the distress and its severity.

The PCI is a condition rating that ranges from 100 (a new pavement section or recently overlaid or reconstructed) to 0 for a section that has structurally failed and deteriorated dramatically. Weighted average PCI of a given area/zone = pavement section PCI * its own area divided by the total square footage of the given area/zone.

- **The weighted average PCI for the City of La Habra Alley network is 73.5**

Rank	Mileage	SF	2023 PCI	2021 PCI	2019 PCI	2017 PCI	2015 PCI	2013 PCI	2011 PCI	2009 PCI	2006 PCI	2003 PCI

SECTION III
CITYWIDE
PAVEMENT CONDITION INDEX (PCI) REPORT

- A. 2023 Citywide PCI Maps
- B. Name Order (A-Z)
- C. PCI Order (0-100)

PAVEMENT CONDITION INDEX REPORT

Listed alphabetically by street name or PCI, this report provides the City with a listing of pertinent inventory and pavement condition data for each inventory unit within the City's pavement network. The Pavement Condition Index (PCI) Report notes the names, limits, classification, dimension, surface type, and lane configuration of each inventory unit.

Detailed descriptions of the information appearing on this report are presented below:

BRANCH NAME - The name of each inventory unit appears in this column. Generally, the inventory unit name is taken directly from a street sign; however, where no street signs are posted, the name appearing on the network map is noted instead.

A sample set of street name suffix abbreviation definitions is presented below:

AV - Avenue	CT - Court	CIR - Circle	BLVD - Boulevard
DR - Drive	LN - Lane	RD - Road	HWY - Highway
ST - Street	WAY - Way	EB - East Bound	F – Frontage Road
NB - North Bound	SB - South Bound	WB - West Bound	TER – Terrace
PL - Place			

FROM - A description of the beginning limit of each inventory unit appears in this column. If the beginning limit exists between intersections, then the beginning limit description may be an address, post mile marker, or a distance from a known point of reference (e.g., "500' N/MAIN ST").

TO - A description of the ending limit of each inventory unit appears in this column. Like BEGIN limit, the END limit description may consist of a street name, an address, or a distance from a known point of reference. In the case of cul-de-sacs, or dead-ends, the END limit consists of an address, or a directional reference, such as "NORTH END," when no address is available.

STREET CLASSIFICATION - The codes for the four street classifications are represented below. Basically, units are classified according to the LA County MPAH and City classifications.

<u>CODE</u>	<u>DESCRIPTION</u>
A	Arterial
C	Collector / Secondary
E	Local
O	Alley

SURFACE TYPE - A code was assigned to each inventory unit to describe surface type.

<u>CODE</u>	<u>DESCRIPTION</u>
AC	Asphalt Concrete
PCC	Concrete

LENGTH - The length of the section within each branch.

UNITS - The unit of measurement for the section length, typically linear feet (LF).

AREA - The area of each section within a branch.

UNITS - The unit of measurement for the section area, typically square feet (SF).

PCI - Pavement Condition Indices were calculated for inventory units based on severity and extent of distress manifestations observed within the inventory unit. Ranging between 0 and 100, a PCI of "100" corresponds to a pavement at the beginning of its life cycle, while a PCI of "0" corresponds to a badly deteriorated pavement which is at or near the end of its life cycle.

PCI CLIMATE, LOAD AND OTHER – reflects “Section Extrapolated Distress”; these values are shown within the Sample Distresses tab within the PCI window. Distresses are aggregated based on the type and severity level. For random samples, distress quantities are adjusted to reflect the extrapolated value based on the sections total area. Extrapolated distress deducts are classified as resulting from Climate, Load and Other distresses. The Distress Classification portion of the tab shows the “percent” of extrapolated distress deduct belonging to Climate, Load and Other (these %’s are shown within the PCI reports herein). These values are beneficial in that they support the decision whether recommend slurry seal, overlay or reconstruction project for street sections.

Asphalt Distresses	Cause Classification	PCC Distresses	Cause Classification
Alligator cracking	Load	Blow up	Climate
Bleeding	Other	Corner break	Load
Block cracking	Climate	Divided Slab	Load
Bumps/Sags	Other	Durability cracking	Climate
Corrugation	Other	Faulting	Other
Depression	Other	Joint Seal cracking	Climate
Edge cracking	Load	Lane Shoulder Drop-off	Climate
Joint Reflection cracking	Climate	Linear cracking	Load
Lane Shoulder Drop-off	Climate	Small Patching	Other
L&T cracking	Climate	Large Patching	Other
Patch/Utility cut	Other	Polished Agg	Load
Polished Agg	Other	Popouts	Other
Pothole	Climate	Pumping	Other
RR Crossing	Other	Punchout	Load
Rutting	Load	RR Crossing	Other
Shoving	Other	Scaling/crazing	Other
Slippage cracking	Other	Shrinkage cracking	Other
Swell	Other	Corner Spall	Other
Raveling	Other	Joint Spall	Other
Weathering	Climate		

INSPECTION DATE – Represents the most recent inspection date performed on a given sections. PCI shown is historical in value and may not indicate what “today’s” PCI is due to variance in time. Pavement deterioration calculations can be performed on a section(s) to demonstrate a deteriorated PCI based upon a new current date.

SECTION IV
FORECAST MAINTENANCE & REHABILITATION (FMR) REPORT

A. Recommended Budget, Seven Year Plan (2023-2030)

FORECAST MAINTENANCE REPORT

Specific street section listing sorted by street classification, plan year then alphabetically; this report presents the year and action corresponding to the next scheduled work activity for specific segments within the pavement network. Sections not shown are considered as deferred maintenance.

RECOMMENDED BUDGET – A recommended budget was generated for the City to demonstrate how a \$21 Million / yr budget allocation would perform against the current citywide conditions.

We have sorted the following report by street classifications for easy review (Arterial – Local, A to Z order).

The annual projected revenues shown below only account for the cost of pavement maintenance and rehabilitation activities. A 25% contingency was applied to the pavement costs. Additional right-of-way, utility, curb & gutter, ADA ramps, tree removals, etc. were not included in these cost projections.

In general sections are chosen first and foremost on available budget; secondly, the square footage of each section, found distress types, extents and severities and PCI Load and PCI Climate act as large factors to when a section is recommended for maintenance/rehabilitation. The software initially chooses the draft sections that will increase PCI, sustain PCI or slow PCI deterioration within the budgeted timeframe. Additionally, zone designations, the types of distress, extents of distress and severities of distress (high, medium, low) also determine how sections are/can be selected.

The City of La Habra makes all final decisions on what pavement sections are scheduled for improvement and within which fiscal year.

City of La Habra, CA
Forecast Maintenance / Rehabilitation (FMR) Report - FY 2023-2030

SECTION V

OCTA – LA HABRA PAVEMENT MANAGEMENT COMPLIANCE REPORT 2023

April 13, 2023

Mr. Tony An, P.E.
Principal Engineer
City of La Habra
110 E. La Habra Boulevard
La Habra, CA 90631

Subject: City of La Habra – OCTA Pavement Management Compliance Report 2023

Dear Tony:

As part of the 2023 Update of the Pavement Management Plan (PMP) for the City of La Habra, *Bucknam Infrastructure Group, Inc.* is pleased to submit the PMP reporting required by the Orange County Transportation Authority (OCTA). This data/report will be submitted to OCTA as part of the City's required biennial PMP prior to June 30, 2023.

The information contained in this report was used to develop the recommended improvement program for the pavement network. The report covers the following categories:

- **Pavement Management Plan Certification**
- **Quality Assurance / Quality Control (QA/QC) Plan**
- **Pavement Management Data Files (electronic La Habra.e70 file format)**
- **Pavement Management Plan that includes the following:**
 - **Average Pavement Conditions For Each Segment in the Network (PCI Report)**

The Pavement Condition Index report shows the present condition of each street in the pavement network (MPAH and Locals). In addition, the report shows the basic geometry of each street segment.
 - **Seven-year Projected PCI Under Existing Funding Levels**

This report identifies the projected PCI's based on the local agencies current funding programs. This report details the PCI projects for the entire network, MPAH roadways and Local streets.
 - **Seven-year Plan for Road Maintenance and Rehabilitation (Forecast Maintenance & Rehabilitation - FMR Report)**

The Forecast Maintenance & Rehabilitation (FMR) Report projects the street maintenance activities required for the next seven years, broken down to show maintenance levels for all streets. This includes all scheduled projects provided by the City for fiscal years 2023 through 2030.

- **Alternative Funding Levels**

OCTA has requested two reports indicating the necessary funding to maintain the City's current weighted average PCI as well as the necessary funding to improve the weighted average PCI by one PCI point over the next seven years.

- **Backlog by Fiscal Year (re: unfunded restoration, rehabilitation and reconstruction)**

- **Percentage of total network in each of the five condition categories based on centerline mileage**

- **Local Match Reduction Reporting**

❖ In order to be eligible for Local Match Reduction of 10%, the following must be submitted:

- Measurable improvement of paved road conditions during the previous reporting period defined as an overall weighted (by area) average system improvement of one PCI point.
- No reduction in the overall weighted (by area) average PCI in the MPAH or local street categories
- or -
- Have road pavement conditions, for the overall network, during the previous reporting period within the highest twenty (20%) of the scale for road pavement conditions in conformance with OCTA Ordinance No. 3, defined as a PCI of 75 or higher, otherwise defined as in "good condition".

These reports will be submitted to the City of La Habra as part of the biennial Pavement Management Plan that is due prior to June 30, 2023. These reports will be packaged in a way that it will be easy for staff to review.

All comments received from the City have been incorporated in the reports that follow. All of the City's issues and needs that were brought to our attention are included in the report. It has been a pleasure working with you and the City on updating your Pavement Management Plan. We look forward to the continued success of this project and future teamwork with City staff.

Sincerely,

Bucknam Infrastructure Group, Inc.

Peter J. Bucknam

CITY OF LA HABRA PAVEMENT MANAGEMENT PLAN

- part of -

**COUNTYWIDE PAVEMENT MANAGEMENT PLAN GUIDELINES
(OCTA Guideline – April 2022)**

Prepared by: Bucknam Infrastructure Group, Inc.
Submitted to OCTA: June 30, 2023

**2023 Citywide Pavement Management Plan – OCTA Submittal
Final Report – April 13, 2023**

I. Pavement Management Plan Certification

The City of La Habra, CA certifies that it has a Pavement Management Plan in conformance with the criteria stated in the Orange County Transportation Authority Ordinance No. 3. This ordinance requires that a Pavement Management Plan be in place and maintained to qualify for allocation of revenues generated from renewed Measure M (M2).

The plan was developed by Bucknam Infrastructure Group, Inc. using MicroPAVER, a pavement management system conforming to American Society for Testing and Materials (ASTM) Standard D6433, and contains, at a minimum, the following elements:

- Inventory of MPAH and Local routes reviewed and updated biennially. The last update of the inventory was completed on March 2023 for the Arterial (MPAH) and March 2023 for portion of the Local streets;
- Assessment of the pavement condition for all routes in the system, updated biennially. The last field review of the pavement condition was completed in March 2023;
- Percentage of all sections of pavement needing:
 - Preventive Maintenance = 33.3%;
 - Rehabilitation = 16.6%;
 - Reconstruction = 1.7%
- Budget needs for preventive maintenance, rehabilitation and/or reconstruction of deficient sections of pavement for:
 - Current biennial period \$6,012,100;
 - Following biennial period \$6,155,100
- Funds budgeted or available for Preventive Maintenance, Rehabilitation and/or Reconstruction.
 - Current biennial period \$6,000,000;
 - Following biennial period \$6,000,000
- Backlog by year of unfunded rehabilitation, restoration and reconstruction needs (See page 9);
- The Pavement Management Plan is consistent with countywide pavement condition assessment standards as described in the OCTA Countywide Pavement Management Plan Guidelines adopted by the OCTA Board of Directors.

*An electronic copy of the Pavement Management Plan (with MicroPAVER or StreetSaver compatible files) has been or will be submitted with the certification statement. A copy of this certification is being provided to the Orange County Transportation Authority.

Final Report – April 13, 2023**

II. EXECUTIVE SUMMARY

2023 UPDATE OF PAVEMENT MANAGEMENT PROGRAM (PMP)

As the City of La Habra continues to show growth with its population, demographics, infrastructure, and maintenance needs, the street network has been running parallel as new developments/annexations increase the size of La Habra's pavement infrastructure. As growth continues within the City and regionally, wear and tear on the infrastructure will occur at an ever increasing rate. Pavement aging through annual weathering and increased usage, compounded with the increased cost of performing maintenance add to the yearly operational maintenance of the pavement network. System sustainability can only be achieved through proactive scheduling and the implementation of cost-efficient pavement applications.

In the upcoming years as the City continues to build upon this study through future inspections and maintenance efforts, La Habra pavement data will continue to provide reliable data to enhance the PMP through detailed Orange County Transportation Authority (OCTA) Measure M2 funding analysis, City specific budgetary reporting and level of service reporting.

The La Habra PMP has been developed to assist City personnel by providing current data on the City's street network and to develop cost-effective maintenance strategies to maintain a desirable level of pavement performance on a network scale, while optimizing the expenditure of limited fiscal resources. The project consisted of analyzing the City's 2021 dataset for quality and usability. In doing this, we were tasked to generate an updated Capital Improvement Program report that identified recommendations and deficiencies in the current operating and maintenance efforts put forth by the City.

We surveyed all defined Master Plan of Arterial Highways (MPAH) routes (Arterials/Collectors) this past winter/spring to assist the City in being consistent with OCTA Measure M2 guidelines; additionally, we surveyed all local and alley streets that required inspection. We updated the City's unique Pavement Management – GIS layer that will continue to assist the City in analyzing pavement conditions and other attribute information through the use of the City's MyRoads® and GIS Enterprise.

Bucknam Infrastructure Group reviewed the City's previous maintenance efforts, current 2022-23 and proposed FY 2023-24 projects. These street improvements for pertinent pavement information in order to generate a CIP report that identified recommendations and opportunities for improvement in the current operating and maintenance efforts put forth by the City. The result of these work efforts is this report.

2023 Citywide Pavement Management Plan – OCTA Submittal

Final Report – April 13, 2023

III. BACKGROUND

In late 1990, voters throughout Orange County approved a ½-cent sales tax for transportation improvements known as OC Go, formerly known as Measure M2. Funding for streets and roads are included within the sales tax and are distributed to local agencies through both formula and a competitive method. In late 2006, the renewal of OC Go was approved by voters that would continue the ½-cent sales tax for thirty additional years, starting in 2011.

The primary goal of this report is to comply with established guidelines from OCTA to ensure that field data collection and reporting efforts performed by outside consultants or local agency staff are consistent. This is required in order that funding allocations can be reviewed and based on agency comparable pavement conditions. Specifically, our findings and recommendations provide Public Works administrators, managers and field personnel with:

- * *PMP report consistent with OCTA OC Go guidelines*
- * *the present condition status of the pavement network (arterial, collector, residential and industrial streets), as a whole and of any grouping or individual component within the City;*
- * *a ranked list of all streets, or segments of streets, by condition within the network;*
- * *rehabilitation/maintenance needs of each street segment by year;*
- * *an optimized priority maintenance and rehabilitation program based on cost/benefit analysis and various levels of funding;*
- * *optimum annual pavement expenditure levels for pavement maintenance for the next seven (7) years;*
- * *prediction of the life-cycle performance of the City's pavement network and each individual street section; and*
- * *pavement condition data and analysis presented in GIS through ESRI ArcMap*

Pavement is a dynamic structure where deterioration is constantly occurring; thus the pavement management system needs to be updated on a regular basis to reflect these changes in pavement conditions, pavement maintenance histories, and maintenance strategies based upon budgetary constraints. In our approach to develop the City's forecasted maintenance recommendations we worked with La Habra Public Works/Engineering staff in identifying unit costs for all maintenance practices used on an annual basis. Currently, based upon the City's maintenance practices and their associated unit costs, the total replacement value of the La Habra pavement network is \$287,938,700. This value clearly indicates that the City's pavement network is the most valuable and essential asset to La Habra. The City's use of slurry seal, AC Overlay and R&R practices are typically applied at a five year, ten year and 25 year frequency respectively subject to funding availability. These frequencies are preferred but if not implemented the City may see increases in deterioration rates due to environmental, load and high average daily traffic (ADT) volumes. For example, high ADT volumes along one of La Habra's arterial streets will increase deterioration rates for a previously applied AC Overlay compared to a small local street. These deterioration rates are monitored through frequent inspections and functional class deterioration analysis within the City's PMP database.

**2023 Citywide Pavement Management Plan – OCTA Submittal
Final Report – April 13, 2023**

FINDINGS AND RECOMMENDATIONS

Through our assessment of historical maintenance performed within the City as well as the conditional data found across the network clearly shows that more proactive and creative funding mechanisms need to occur on the La Habra PMP network. Pavement management involves frequent preventative maintenance; as pavement deteriorates through heavy traffic impacts, weathering and time, preventative maintenances (such as slurry seal, stop gap, etc.) have limited benefits. More aggressive maintenance applications have to be used.

Our study has shown, at a minimum, that key slurry/overlay projects will be needed over the next several years to maintain the network's level of condition. Currently, the City's two major streets networks (Arterial/Collector & Local) hold above average weighted PCI values; it is our recommendation that a proactive, common sense overlay program and a continued slurry seal program be scheduled over the next several fiscal years. This will ensure that the citywide weighted PCI will sustain itself and allow for routine slurry seal maintenance to continue. We have found and recommend the following detailed items which should be reviewed and considered for a proactive approach to the future management of the PMP:

ARTERIAL/COLLECTOR (MPAH) FINDINGS AND RECOMMENDATIONS

The recent 2023 MPAH inspections and PCI results have indicated that the La Habra MPAH network is currently in "Good" condition (weighted avg. PCI of 83.9). The City has been able to increase this average since 2017 and continues to apply proactive and timely maintenance. To maintain this condition, it is critical that preventive maintenance and overlay activities are funded at the levels identified on page 8 and its corresponding spreadsheet reports to maintain a "Good" network weighted average PCI value.

Our MPAH findings for conditional data and recommendations for revenue expenditures are shown below:

- The MPAH network has a weighted PCI of 83.9;
- The MPAH network consists of 16.3 miles and 5,004,355 SF of pavement;
- Currently, 5% of the MPAH network (0.8 miles) qualify for rehabilitation/reconstruction; while 42% (6.8 miles) qualify for preventative/slurry seal maintenance;
- MPAH maintenance projects should focus on maintaining the current PCI above a weighted average of 83 over the next seven years;
- Develop a proactive fiscal and planned approach to identify MPAH overlay projects based on the deterioration modeling within MicroPAVER;
- At a minimum, maintain the MPAH revenues at the \$1,006,500/yr level for the term of the CIP to generate the projects identified on page 8; and
- Perform pavement inspections on the MPAH network every two years to continue the City's solid planning model within MicroPAVER to track PCI deterioration; also follows new OCTA guidelines for Measure M2.

**2023 Citywide Pavement Management Plan – OCTA Submittal
Final Report – April 13, 2023**

LOCAL FINDINGS AND RECOMMENDATIONS

The recent 2023 Local inspections and PCI results have indicated that the La Habra Local network is currently in “Good” condition (weighted avg. PCI of 83.8). The City has been able to increase or sustain this average every year since 2011 and continues to apply proactive and timely maintenance which has stabilized conditions at mid-80 PCI levels. At a minimum, to maintain this condition, it is critical that preventive maintenance and overlay activities are funded at the levels identified on page 8 and its corresponding spreadsheet reports to maintain a “Good” network weighted average PCI value.

Our Local network findings for conditional data and recommendations for revenue expenditures are shown below:

- The Local network has a weighted PCI of 83.8;
- The Local network consists of 92.9 miles and 16,562,693 SF of pavement;
- Currently, 6% of the Local network (5.2 miles) qualify for rehabilitation/reconstruction; while 35% (32.6 miles) qualify for preventative/slurry seal maintenance;
- Local maintenance projects should focus on the maintaining the current PCI at an weighted average of 83 over the next seven years;
- Develop a proactive fiscal and planned approach to identify local overlay projects based on the deterioration modeling within MicroPAVER;
- At a minimum, maintain the Local revenues at the \$1,884,200/yr level for the term of the CIP to generate the projects identified on page 8;
- Perform pavement inspections on the Local network every two years to continue the City’s solid planning model within MicroPAVER to track PCI deterioration; also follows new OCTA guidelines for Measure M2.
- Continue to schedule and apply Local maintenance & rehabilitations within the City’s defined Zone boundaries; our Section IV reporting demonstrates these recommendations.

2027-28	86.0	\$1,494,000	\$1,611,000	\$3,105,000	\$0
2028-29	85.5	\$1,487,900	\$1,641,300	\$3,129,200	\$1,336,700
2029-30	84.9	\$1,451,300	\$1,705,100	\$3,156,400	\$0
		\$10,462,500	\$11,095,300	\$21,557,800	

VII. CURRENT AND PROJECTED BACKLOG BY YEAR OF PAVEMENT MAINTENANCE NEEDS

DEFERRED MAINTENANCE

Delaying repairs on streets where pavement conditions indicate a need generates deferred maintenance or "backlog". Deferred maintenance is work that is postponed to a future budget cycle, or until funds are available. As maintenance is deferred, the opportunity to apply preventive, life extending pavement treatments is forfeited and the ultimate cost of rehabilitation multiplies (i.e. slurry seal costs to overlay costs). By using the City's pavement maintenance applications and their associated unit costs, when a budgetary model is exercised within the PMP software the amount of deferred maintenance is calculated. Based upon the available budget applied to the model, deferred maintenance will increase or decrease.

As maintenance is deferred, the opportunity to apply life extending preventive pavement applications is lost and the ultimate cost of rehabilitation multiplies.

2023 Citywide Pavement Management Plan – OCTA Submittal Final Report – April 13, 2023

In the case of La Habra, the City's current annual funding through FY 2029-30 will continue to generate an positive reduction in the amount of deferred maintenance on the network to \$0 level by FY 2030.

Plan Year	Actual Funding Backlog	Maintain PCI Backlog	Increase PCI Backlog
Current	\$9,981,500	\$9,981,500	\$9,981,500
2023-24	\$7,271,600	\$7,271,600	\$7,271,600
2024-25	\$5,256,000	\$5,256,000	\$5,256,000
2025-26	\$3,789,600	\$3,789,600	\$3,571,500
2026-27	\$1,798,100	\$1,798,100	\$1,646,200
2027-28	\$0	\$0	\$0
2028-29	\$1,566,400	\$1,566,400	\$1,336,700
2029-30	\$0	\$0	\$0

* Maintain PCI reporting requirements are met with Current Budget findings

VIII. CENTERLINE MILEAGE

Rank	Mileage	SF	W. PCI

**2023 Citywide Pavement Management Plan – OCTA Submittal
Final Report – April 13, 2023**

X. REDUCTION IN M2 LOCAL MATCH

A local agency match reduction of 10% of the eligible cost for projects submitted for consideration of funding through the M2 Comprehensive Transportation Funding Programs (CTFP) call for projects is available if the local agency either:

- a. Shows measurable improvement of paved road conditions during the previous reporting period defined as an overall weighted (by area) average system improvement of one Pavement Condition Index (PCI) point with no reduction in the overall weighted (by area) average PCI in the Master Plan of Arterial Highways (MPAH) or local categories:

or

- b. Have road pavement conditions during the previous reporting period, within the highest 20% of the scale for road pavement conditions in conformance with OCTA Ordinance No. 3, defined as a PCI of 75 or higher, otherwise defined as in “good condition”.

Road conditions found through our 2023 PMP management study shows that the City is eligible for Local Match Reduction based on the current network weighted PCI of 83.9 (system is showing measurable improvement from last 2021 PMP report).

**XI. APPENDIX A – SEVEN YEAR ROAD MAINTENANCE AND REHABILITATION

XIII. APPENDIX C – GIS DIGITAL DATA

Introduction

The OCTA GIS Section maintains a spatial inventory of transportation infrastructure which mostly consists of major arterial streets, roads, and highways. A key component of road information is pavement condition. Maintaining an inventory of pavement condition will enhance OCTA's GIS visualization and analysis capabilities and assist in understanding the transportation investment needs throughout the region. Therefore, a GIS dataset in digital format should be included in this report.

Structure of GIS Data

The GIS dataset must consist of linear geographic features that represent road/street segments. All segments that are part of the report should be included in the GIS dataset. The attribute information of each segment should generally follow the format of the Complete Listing of Current Street Conditions in Appendix B above.

The GIS data requirements are discussed below. Most commercial and open-source GIS software provide industry-standard tools to manage GIS data to meet these requirements.

GIS Digital Data Format

The GIS data must be submitted in either one of the following formats:

- Esri Shapefile, or
- Esri File Geodatabase

Metadata

The GIS data are required to have associated metadata. The minimum metadata items required are:

- Title of Dataset
- Tags (A set of words that can be used by GIS to search for the resource. For example: "pavement", "transportation", "roads")
- Summary (A brief purpose statement of the dataset)
- Description (A brief narrative of the dataset's content)
- Credits (A recognition of those who created or contributed to the resource)

Spatial Geometry Type

The spatial geometry of the segment features must be lines that represent the roadway centerline as accurately as possible.

Projection

The GIS data must have spatial reference information and have its coordinate system identified and

**2023 Citywide Pavement Management Plan – OCTA Submittal
Final Report – April 13, 2023**

embedded in or associated with the data file(s). All GIS data submitted to OCTA should be in the following projected coordinate system:

- NAD 1983 State Plane California VI FIPS 0406 (US Feet) - More information about this system can be found at: <https://spatialreference.org/ref/epsg/nad83-california-zone-6-ftus/>

GIS Feature Attributes

The required segment attributes are:

- Street name
- Unique segment identifier (Segment ID from original source if available)
- Name of intersecting road at the beginning of a segment
- Name of intersecting road at the end of the segment
- Current pavement condition index (PCI)
- Current PCI inspection date
- Length of road segment in feet
- Width of road segment in feet
- Paved area of road segment in square feet or square yards
- Projected PCI at end of Seven-Year Road Maintenance and Rehabilitation Plan

Additional attributes such as number of through travel lanes, direction of travel and pavement surface type may be provided.

XIV. APPENDIX D – QUALITY ASSURANCE / QUALITY CONTROL PLAN**Introduction**

When performing data collection in any field, the need for quality control is paramount as it is essential for accurate planning, analysis and design. This is particularly true for collecting pavement distress data for a pavement management program.

The Quality Assurance / Quality Control (QA/QC) Plan establishes minimum quality standards for performance and procedures for update of the pavement management program.

Objectives

This document constitutes a formal QA/QC Plan for the City of La Habra. It was prepared on March, 2018 and last revised in January, 2023.

Specifically, it is intended for the 2023 Pavement Management Plan Update. The focus is on the collection of network-level pavement distress data (defined by National Cooperative Highway Research Program (NCHRP) Synthesis 401 Quality Management of Pavement Data Collection, as “Network-level data collection involves collection of large quantities of pavement condition data, which is often converted to individual condition indices or aggregated into composite condition indices”).

This document also addresses the QA/QC plan requirements of the Orange County Transportation

2023 Citywide Pavement Management Plan – OCTA Submittal

Final Report – April 13, 2023

Authority (OCTA)'s "Countywide Pavement Management Plan Guidelines" (Section 2.4), adopted in May 2010.

Structure of QA/QC Plan

The following components are addressed in this QA/QC Plan:

- Condition survey procedures used;
- Accuracy required for data collection;
- Inspector qualifications and experience; and
- Safety.

Condition Survey Procedures

The governing document in performing condition surveys for the City of La Habra is ASTM D6433 "Standard Practice for Roads and Parking Lots Pavement Condition Index (PCI) Surveys." Both asphalt concrete (AC) and Portland cement concrete (PCC) pavements are included in this protocol. The following distresses are collected for each pavement type:

Asphalt Concrete	Portland Cement Concrete (Jointed)
1. Alligator (fatigue) cracking	1. Blow-up/Buckling
2. Bleeding	2. Corner Breaks
3. Block Cracking	3. Divided Slab
4. Bumps and sags	4. Durability ("D") Cracking
5. Corrugation	5. Faulting
6. Depression	6. Joint Seal damage
7. Edge Cracking	7. Lane/Shoulder Drop-off
8. Joint Reflection Cracking	8. Linear Cracking
9. Lane/Shoulder Drop-off	9. Patching (large) and Utility Cuts
10. Longitudinal & Transverse Cracking	10. Patching (small)
11. Patching and Utility Cut Patching	11. Polished Aggregate
12. Polished aggregate	12. Popouts
13. Potholes	13. Pumping
14. Railroad Crossing	14. Punchout
15. Rutting	15. Railroad Crossing
16. Shoving	16. Scaling, map cracking and crazing
17. Slippage Cracking	17. Shrinkage Cracks
18. Swell	18. Spalling (corner)
19. Weathering	19. Spalling (joint)
20. Raveling	

As required by the Orange County Transportation Authority (OCTA), the City of La Habra must prepare and implement a quality assurance / quality control (QA/QC) plan regarding pavement management inspection as they pertain to MicroPAVER. For the purposes of this report, Bucknam has demonstrated below how our project team implemented QA/QC procedures during the project.

**2023 Citywide Pavement Management Plan – OCTA Submittal
Final Report – April 13, 2023**

Our QA/QC plan focuses on the how each pavement inspection is performed, what distresses are collected and ensures that it complies with the OCTA guidelines defined within the “Countywide Pavement Management Plan Guidelines (CPMPG)”.

As shown within the OCTA (CPMPG), our staff followed and delivered on the requirements stated within Chapter 2, page 2-5 which require specific QA/QC data (Items A through G). Additionally, Chapter 3 requires numerous data/deliverables from local agencies for OC Go eligibility. All general PCI budgetary report submittals will follow the Chapter 3 guidelines.

In conjunction with the outlined items within the CPMPG Section 2 we have summarized our QA/QC procedures below:

- a. **Descriptions of condition survey** - Our staff follows the required Condition Survey Protocols (CPMPG, Chapter 2); our staff assesses each pavement section for the minimum distresses outlined within Chapter 2, page 2-1. Additionally, based on the pavement conditions found, we collect all MicroPAVER/StreetSaver Army Corps of Engineers (ACOE) distresses, if found within the sample sections; for example, if slippage cracking, potholes, etc. are found our survey technicians record the proper information.
- b. **How data was collected** - Our surveys follow the OCTA accepted walking requirements. All sections that our staff surveys are performed through the walking method, approximately 10% of all sections surveyed were complemented with windshield surveys based on unique conditions found. Our staff physically measures the width of every section as well as measure for any square footage adjustment that need to be added or taken away from a sections “true area” (i.e. cul-de-sac, bus pads, street width variances, etc.). Samples taken always include a minimum of 2,500 SF coverage unless specific section limits prohibit this. Arterial section samples typically utilize a 3,500 SF sample size due to the larger section area (this is within the ASTM D6433 sample size calculation. Field crews typically include one individual for residential pavement sections while Arterial (MPAH) routes utilize a two-person crew for safety, traffic control and increases quality control.
- c. **Accuracy required for data collection** - We use a statistical sampling approach for measuring the quality of our field technician’s work. In this manner, 10 percent of the original surveys are re-surveyed by a different survey crew than the original, supervised by a field supervisor, and the results are compared to the original surveys. Our QC process involves checking the field crews’ work in a “blind study” fashion. Quality control checks are performed at the end of each survey week. This ensures that all field personnel are properly collecting section samples, distress types and distress severities for all street segments.
 - ❖ When QA/QC issues are found, our staff documents the issues within MicroPAVER’s user interface. If distress types found are not within the 97% accuracy our QA/QC is expanded beyond our minimum 10% resurvey to 20% of the original survey
- d. **Random and Systematic Re-Inspections** – As described above our staff re-inspects, as a minimum, 10% of the original survey (OCTA only requires 5%). Per the agencies requests, our staff will submit PCI reports to the agency as project status reports for their review. Agencies will typically review specific pavement sections for PCI accuracy based on recent overlay or slurry seal maintenance; this serves as an initial accuracy check on our surveys (outside Bucknam QC efforts).

2023 Citywide Pavement Management Plan – OCTA Submittal

Final Report – April 13, 2023

Additionally, our staff performs “ride-a-long” surveys with local agency staff to build consensus on how our MicroPAVER/StreetSaver ACOE surveys are performed, recorded and reported on.

Random re-inspections will include a representative selection across the following categories:

- Functional classed (i.e. MPAH, locals);
- Surface types (e.g. AC or PCC);
- Pavement conditions (e.g. good, fair, poor);
- Inspectors;
- Geographical areas, if applicable.

For systematic re-inspections, this could be due to noticed trends such as specific treatment types (e.g. open-graded mixed), a specific inspector or geographical area. In these cases Bucknam continues to utilize a 10% re-inspection policy.

- e. **PCI Comparison with Past Surveys** - if previous inspection data is available, new PCI's calculated through the most recent inspections will be compared to previous PCI's. If the variance in PCI is greater than +/- 10 PCI points, these sections will be flagged for further investigation and/or re-inspection (In the cases that a PCI increases or decreases by 10 points follows the established CPMPG guidelines; Appendix A, page A-18).
- f. **Schedule of data submittal** – Pending on the City's last major PMP submittal, Bucknam will assist the agency in submitting the following:
 - ❖ Master Plan of Arterial Highways (MPAH) routes will be surveyed and reported on at least once every two years
 - ❖ Local streets will be surveyed and reported on every six years
 - ❖ Corresponding MPAH and local PCI reporting and budgetary reporting will be submitted every two years
- g. **Experience of Inspectors** – Bucknam staff have been trained on the use of MicroPAVER and the ACOE MicroPAVER segment calibration and inspection practices. Mr. Peter Bucknam (Project Manager) and Mr. Shaun Russo (Lead Field Technician) have completed the MicroPAVER Certification of Professional Development courses. All Bucknam field technicians are trained using the ACOE survey methodologies and have passed OCTA's prequalification testing.

Bucknam Infrastructure Group inspectors have attended formal training on pavement condition distress surveys. This training was conducted prior to performing any work using the ASTM D6433 protocols, consistent with OCTA's requirements.

Inspector Name	Date of ASTM D6433 Training	Training Conducted by
Shaun Russo	2/1/2023	OCTA
Aaron Cohodas	2/15/2022	OCTA
Josh Logsdon	2/15/2020	OCTA
Cade Bucknam	2/15/2020	OCTA

**2023 Citywide Pavement Management Plan – OCTA Submittal
Final Report – April 13, 2023**

- h. **Field data collection safety procedures** – Bucknam field survey techniques utilize the following procedures:
- a. All vehicles are properly marked or flagged with appropriate sign markings indicating that a “PAVEMENT SURVEY IS IN PROGRESS”
 - b. All vehicles have the proper flashing amber light beacons placed on the top of the vehicle to allow for proper visibility and line-of-site warning
 - c. Large MPAH routes are surveyed using two field technicians to increase traffic control warning and safety
 - d. While parking or stopping along the survey route, vehicles legally park within the right-of-way or use a parking lot
 - e. All field technicians wear ANSI – 105 Class II safety vests

XV. APPENDIX E – PAVEMENT MANAGEMENT DATA FILES

The City of La Habra MicroPAVER database (.e70 file) has been enclosed for City and OCTA use. This data and the associated reporting data includes:

- Street names and limits for the City’s public streets
- Street identifiers (Branch ID, Section ID)
- Direction
- Begin and end of section
- Length, width and true areas
- Functional Classification (MPAH, Local)
- Number of travel lanes
- Pavement Condition Index (PCI) and date of inspection
- Type of recommended treatment
- Cost of recommended treatment

2023 Citywide Pavement Management Plan – OCTA Submittal
Final Report – April 13, 2023

XVI. APPENDIX F – GIS MAPS / CURRENT CONDITIONS
