Subject: Neighborhood Traffic Management Program Priority List, Updated Winter 2024

OC22-0889

The Neighborhood Traffic Management Program (NTMP) was adopted by the City of La Habra in August 2006. The goal of the program is to improve livability by reducing the impact of traffic on neighborhood streets and promoting safe conditions for all street users.

For the NTMP, the City of La Habra identified 38 neighborhoods (Neighborhood 'A' through 'Z' and 'Alpha' through 'Mu') where improvements would be considered. Neighborhoods were developed by grouping resident requests into geographical clusters and using boundaries such as arterial streets and geographical features. A map of neighborhoods and their status is provided in **Figure 1**.

Since the program launched, 16 neighborhoods have received traffic calming treatments. Four of these neighborhoods ('W', 'Y', 'Alpha', and 'Delta') were treated in 2006 as part of the first phase of the NTMP; they are being reconsidered for additional improvements. Overall, neighborhoods that have received traffic calming treatments report:

- An average 5 mph decrease in 85th percentile vehicle speeds, with all neighborhoods experiencing decreases in vehicle speeds.
- Approximately 260 fewer vehicles daily (8 percent average reduction). Ten neighborhoods experienced decreases in volumes, while six neighborhoods ('A', 'D', 'E', 'J', 'M', and 'W') saw traffic volumes increase following treatment. However, this growth is relatively modest (fewer than 250 vehicles daily).
- Volume changes are dependent on a neighborhood's land use context and presence of "cut-through" routes.

Three neighborhoods ('I', 'L', and 'N') were previously addressed by the City but have not been treated, as those neighborhoods failed to meet the minimum support requirements. Data was collected in these neighborhoods to evaluate speed and volume trends in untreated areas.[1] Findings include:

- Essentially unchanged speeds, with 85th percentile speeds remaining at or above 30 MPH.
- Volume changes are consistent with those observed in treated neighborhoods and are influenced by neighborhood land use context.

Figure 2 through **Figure 5** show the raw change in 85th percentile speed and average daily traffic (ADT) for treated and untreated neighborhoods. This information is also provided in **Table 1.**

[1] Sample size for untreated neighborhoods is relatively small (three neighborhoods, seven total data points) compared to the treated neighborhood sample size (16 neighborhoods, 65 total data points).

The remaining 22 neighborhoods have yet to receive traffic calming treatments. This includes the seven neighborhoods identified by City staff in Summer 2023 to be added to the NTMP (Neighborhoods 'Zeta' through 'Mu').

To account for the newly added neighborhoods and review changes at neighborhoods that have already received treatments, Fehr & Peers collected speed and traffic volume data in May 2022

and October 2023. The selection of streets for data collection was based on engineering judgment factoring the size of the neighborhood, assumed travel patterns of commuter and cut-through traffic, school traffic, and the inherent benefit of having more than one data point. This information was used to compare neighborhoods and re-evaluate neighborhoods following treatment.

While the City would desire to act on all neighborhoods immediately, resource constraints require that priorities be established. Fortunately, the NTMP includes a process for developing priorities. The "priority rating worksheet" adopted in the NTMP allows the City to objectively evaluate multiple neighborhood requests and provide a score associated with the neighborhood.

The priority rating worksheet requires traffic speed, traffic volume, and collision history to be collected and evaluated. Traffic speeds and volumes used in the priority rating worksheet are based on the highest reported values within a neighborhood. Collision data was considered for the entire neighborhood, excluding collisions on major arterials. In addition to these quantitative factors, the priority rating worksheet includes two qualitative factors: whether the problem is near a pedestrian generator (school, park, civic center, etc.) and whether the problem is on a gateway street into the neighborhood/ community. The priority rating worksheets are scored by a point system with each of the three quantitative factors having a maximum point value of 10 points each, for a total maximum score of 30 points.

The results of the data collection for each neighborhood are provided in Appendix A. The raw speed and volume count data can be found in Appendix B. The collision history for each segment of the street was collected from 2019-2021[2] through the Statewide Integrated Traffic Records System (SWITRS) and was compiled into the worksheet. Due to the large volume of collision data, the individual collision records were omitted from this report. This information is available through the SWITRS system to any interested party.

The scoring of the neighborhoods resulted in identical scores for several neighborhoods; therefore, a tiebreaker system was developed by comparing the 85th percentile speeds within each neighborhood and the neighborhood with the higher speed was ranked higher.

The summary of individual values, total score, and ranking for each neighborhood is presented in **Table 2** below.

[2] 2022 collision data was available through SWITRS but is still considered provisional and subject to change. 2023 collision data is not yet available. As such, 2019 through 2021 collision data was used in this prioritization.

Notes: 1.) For neighborhoods with same score, the 85th percentile measured speeds were used to determine ranking.

The list presented above is our recommendation to City staff and Council as a priority for continued implementation of the NTMP in neighborhoods throughout the City of La Habra. As stated in the NTMP, the City Council has the option to choose the requests they feel are most vital and not necessarily at the top of the list. Neighborhoods that have yet to receive any treatment can also be prioritized to ensure the NTMP serves all areas of the City.

Other Considerations

4. Pedestrian Generators Yes

Does a pedestrian generator exist within ¼ mile of the perceived problem?
(pedestrian generators include schools, parks, civic centers, etc.)

5. Gateway Streets Yes

Is the perceived problem located on a street that is a major gateway into the neighborhood/community?

Appendix A. Priority Rating Worksheet

This worksheet will be completed by City of La Habra Department of Public Works staff to identify relative priorities for City Council consideration. This worksheet will be used to prioritize potential initiation of specific neighborhood traffic management projects.

Data may be collected on several different streets in the study area. In these situations the worst-case street will be used for prioritization.
