If desired to reuse Portland Cement concrete as engineered fill, we recommend that it should be grounded up and thoroughly mixed with on-site or import soil. In general, recycled concrete should be grounded down to less than 4 inches in greatest dimension, with no more than 25 percent larger than 2½ inches. Recycled material should be thoroughly mixed with a sufficient amount of soil, such that there is no more than 40 percent by weight of recycled material in the final mix.

We recommend that fill containing recycled concrete be placed near the bottom of proposed fill underneath proposed roadways and parking.

The existing Portland Cement concrete can be considered as recycle aggregate base for pavements. The material will need to be broken down, but not pulverized and conform with the Caltrans gradations of aggregate base if used to substitute for roadway base.

5.7 FILL COMPACTION

The contractor should perform subgrade compaction prior to fill placement to provide adequate bonding with the initial lift of fill. The contractor should first scarify the exposed soil to a depth of at least 12 inches then moisture condition and compact the subgrade in accordance with the requirements listed in the table below. The lift thickness should not exceed 12 inches or the depth of penetration of the compaction equipment used, whichever is less. The following compaction recommendations should be used for the placement and compaction of subgrade and fill:

TABLE 5.7-1: Subgrade and Engineered Fill Compaction and Moisture Content Requirements

FILL DEPTH	MATERIALS	MINIMUM RELATIVE COMPACTION (%)	MINIMUM MOISTURE CONTENT (percentage points above optimum)**
Within the upper 5 feet of finished grade	On-site Soil	87 to 92	4
From 5 feet below finished grade	On-site Soil	90	4
Pavement, Upper 1 foot Subgrade	On-site Soil	90	4
Pavement	Class 2 Aggregate Base	95	0

The relative compaction and optimum moisture content of soil and aggregate base referred to in this report are based on the most recent ASTM D1557 test method.

5.7.1 Underground Utility Backfill

5.7.1.1 General

The contractor is responsible for conducting trenching and shoring in accordance with Cal/OSHA requirements. Project consultants involved in utility design should specify pipe bedding materials.

Where utility trenches cross underneath buildings, we recommend that a plug be placed within the trench backfill to help prevent the normally granular bedding materials from acting as a conduit for water to enter beneath the building. The plug should be constructed using a sand cement slurry (minimum 28-day compressive strength of 500 psi) or relatively impermeable native soil for pipe bedding and backfill. We recommend that the plug extend for a distance of at least 3 feet in each direction from the point where the utility enters the building perimeter.

Jetting of backfill is not an acceptable means of compaction. We may allow thicker loose lift thicknesses based on acceptable density test results, where increased effort is applied to rocky fill, or for the first lift of fill over pipe bedding.

5.7.2 Landscape Fill

Process, place, and compact fill in accordance with Section 5.7, except compact to at least 85 percent relative compaction (ASTM D1557).

5.8 SITE DRAINAGE

5.8.1 Surface Drainage

The project civil engineer is responsible for designing surface drainage improvements. With regard to geotechnical engineering issues, we recommend that finish grades be sloped away from buildings and pavements to the maximum extent practical to reduce the potentially damaging effects of expansive soil. The latest California Building Code Section 1804.4 specifies minimum slopes of 5 percent within 10 feet away from foundations. Where lot lines or surface improvements restrict meeting this slope requirement, we recommend that specific drainage requirements be developed. As a minimum, we recommend the following.

1. Discharge roof downspouts into closed conduits and direct away from foundations to appropriate drainage devices.
2. Consider the use of rear lot surface drainage collection systems to reduce overland surface drainage from back to front of lot.
3. Do not allow water to pond near foundations, pavements, or exterior flatwork.
4. Maintain uniform moisture around the buildings.

5.8.2 Subsurface Drainage

Based on our site exploration and current grading concepts for the site, we do not anticipate that subdrainage systems will be recommended. We recommend that we review the site grading plans to further evaluate the need for subdrainage systems as well as observe the earthwork operations during site grading.

5.9 STORMWATER BIORETENTION AREAS

If bioretention areas are implemented, we recommend that, when practical, they be planned a minimum of 5 feet away from structural site improvements, such as buildings, streets, retaining walls, and sidewalks/driveways. When this is not practical, bioretention areas located within 5 feet of structural site improvements can either:

1. Be constructed with structural side walls capable of withstanding the loads from the adjacent improvements, or
2. Incorporate filter material compacted to between 85 and 90~percent relative compaction (ASTM D1557, latest edition) and a waterproofing system designed to reduce the potential for moisture transmission into the subgrade soil beneath the adjacent improvement.

In addition, one of the following options should be followed.

1. We recommend that bioretention design incorporate a waterproofing system lining the bioswale excavation and a subdrain, or other storm drain system, to collect and convey water to an approved outlet. The waterproofing system should cover the bioretention area excavation in such a manner as to reduce the potential for moisture transmission beneath the adjacent improvements.
2. Alternatively, and with some risk of movement of adjacent improvements, if infiltration is desired, we recommend the perimeter of the bioretention areas be lined with an HDPE tree root barrier that extends at least 1 foot below the bottom of the bioretention areas/infiltration trenches.

Site improvements located adjacent to bioretention areas that are underlain by base rock, sand, or other imported granular materials, should be designed with a deepened edge that extends to the bottom of the imported material underlying the improvement.

Where adjacent site improvements include buildings greater than three stories, streets steeper than 3 percent, or design elements subject to lateral loads (such as from impact or traffic patterns), additional design considerations may be recommended. If the surface of the bioretention area is depressed, the slope gradient should follow the slope guidelines described in earlier section(s) of this document. In addition, although not recommended, if trees are to be planted within bioretention areas, HDPE Tree Boxes that extend below the bottom of the bioretention system should be installed to reduce potential impact to subdrain systems that may be part of the bioretention area design. For this condition, the waterproofing system should be connected to the HPDE Tree Box with a waterproof seal.

Given the nature of bioretention systems and possible proximity to improvements, we recommend ENGEO be retained to review design plans and provide testing and observation services during the installation of linings, compaction of the filter material, and connection of designed drains.

It should be noted that the contractor is responsible for conducting all excavation and shoring in a manner that does not cause damage to adjacent improvements during construction and future maintenance of the bioretention areas. As with any excavation adjacent to improvements, the contractor should reduce the exposure time such that the improvements are not detrimentally impacted.

5.10 LANDSCAPING CONSIDERATION

As the near-surface soil is moderately to highly expansive, we recommend greatly restricting the amount of surface water infiltration near structures, pavements, flatwork, and slabs-on-grade. This may be accomplished by:

- Selecting landscaping that requires little or no watering, especially within 3 feet of structures, slabs-on-grade, or pavements.
- Using low precipitation sprinkler heads.
- Regulating the amount of water distributed to lawn or planter areas by installing timers on the sprinkler system.
- Providing surface grades to drain rainfall or landscape watering to appropriate collection systems and away from structures, slabs-on-grade, or pavements.
- Preventing water from draining toward or ponding near building foundations, slabs-on-grade, or pavements.
- Avoiding open planting areas within 3 feet of the building perimeter.

We recommend that these items be incorporated into the landscaping plans.

6.0 FOUNDATION RECOMMENDATIONS

We developed foundation recommendations using data obtained from our field exploration, laboratory test results, and engineering analysis. As previously mentioned, the alternatives proposed for addressing the effects of the native expansive soil on building foundations include post-tensioned mat foundations or conventional footings with slabs-on-grade and pre-saturation.

6.1 POST-TENSIONED MAT FOUNDATIONS

Based on our discussions with you and the structural engineer, we understand that the proposed townhomes will be supported on post-tensioned (PT) mat foundations bearing on prepared engineered fill. The PT mat foundation will be thickened to accommodate the anticipated liquefaction-induced settlement. We estimated a total liquefaction-induced settlement of up to approximately 2½ inches, with a differential settlement of 1¼ inches over a span of 50 feet for the majority areas of the site. A total liquefaction-induced settlement of up to approximately 5 inches, with a differential settlement of up to 2½ inches over 50 feet are estimated for the southwestern area of the site. The approximate delineation of the area with higher liquefaction-induced settlement is shown in Figure 2. In addition, the structural engineer should confirm that the superstructures of the buildings can be able to tolerate the movement associated with the liquefaction-inducted settlement.

The post-tensioned mats should be at least 10 inches thick. The structural engineer should determine the actual PT mat thickness using the geotechnical recommendations in this report; we defer to the professional judgment of the structural engineer on the necessary mat thickness. ENGEO should be retained to review the PT mat foundation design. We recommend that the thickened edge be at least 12 inches wide.

PT mats may be designed for an average allowable bearing pressure of up to 1,000 pounds per square foot (psf) for dead-plus-live loads with maximum localized bearing pressures of 1,500 psf at column or wall loads. Allowable bearing pressures can be increased by one-third for wind or seismic loads. Design PT mats using the criteria presented in Table 6.1-1 below.

TABLE 6.1-1: Post-Tensioned Mat Design Recommendations

CONDITION	CENTER LIFT	EDGE LIFT
Edge Moisture Variation Distance, e_m (feet)	8.7	4.4
Differential Soil Movement, y_m (inches)	0.7	1.1

The above values are based on the procedure presented in "Standard Requirements for Design and Analysis of Shallow Post-Tensioned Concrete Foundations on Expansive and Stable Soil" (PTI DC10.5-19, 2019) by the Post-Tensioning Institute.

Underlay PT mats with a moisture reduction system as recommended below. In addition, moisture conditioning of the building foundation subgrade should be to a moisture content at least 4 percentage points above optimum immediately prior to foundation construction. The subgrade should not be allowed to dry prior to concrete placement. We also recommend that ENGEO be retained to observe the pre-pour moisture conditions to check that our report recommendations have been followed.

6.1.1 Slab Moisture Vapor Reduction

When buildings are constructed with concrete slab-on-grade, such as post-tensioned mats, water vapor from beneath the slab will migrate through the slab and into the building. This water vapor can be reduced but not stopped. Vapor transmission can negatively affect floor coverings and lead to increased moisture within a building. When water vapor migrating through the slab would be undesirable, we recommend the following to reduce, but not stop, water vapor transmission upward through the slab-on-grade.

1. Install a vapor retarder membrane directly beneath the slab. Seal the vapor retarder at all seams and pipe penetrations. Vapor retarders shall conform to Class A vapor retarder in accordance with ASTM E1745, latest edition, "Standard Specification for Plastic Water Vapor Retarders used in Contact with Soil or Granular Fill under Concrete Slabs."
2. Concrete shall have a concrete water-cement ratio of no more than 0.50.
3. Provide inspection and testing during concrete placement to check that the proper concrete and water cement ratio are used.

6.2 EXTERIOR FLATWORK

Exterior flatwork includes items such as concrete sidewalks, steps, and outdoor courtyards exposed to foot traffic only. Provide a minimum section of 4 inches of concrete over 4 inches of aggregate base. Compact the aggregate base to at least 90 percent relative compaction (ASTM D1557). Thicken flatwork edges to at least 8 inches to help control moisture variations in the subgrade and place wire mesh or rebar within the middle third of the slab to help control the width and offset of cracks. Construct control and construction joints in accordance with current Portland Cement Association Guidelines.

7.0 PRELIMINARY PAVEMENT DESIGN

7.1 FLEXIBLE PAVEMENT

Based on the site soil conditions, the following preliminary pavement sections are determined for an assumed resistance value (R-value) of 5 and in accordance with the design methods contained in Chapter 630 of the Caltrans Highway Design Manual.

TABLE 7.1-1: Recommended Asphalt Concrete Pavement Sections

TRAFFIC INDEX	SECTION	
	ASPHALT CONCRETE (Inches)	CLASS 2 AGGREGATE BASE (Inches)
5.0	3	10
6.0	3½	13
7.0	4	16

The above preliminary pavement sections are provided for estimating only. We recommend actual subgrade material be tested for R-value, and the traffic index and minimum pavement section(s) should be confirmed by the civil engineer and the City of Newark.

7.2 RIGID PAVEMENT

We anticipate that concrete pavement sections may be used in areas such as fire lanes or trash enclosure aprons. Final design of rigid pavement sections, and accompanying reinforcement, should be performed based on estimated traffic loads and frequencies. We recommend the following minimum design sections for rigid pavements.

- Use a minimum section of 7½ inches of Portland Cement concrete over 12 inches of Caltrans Class 2 Aggregate Base.
- Reinforce with No. 4 bars at 12 inches on center each way.
- Have a minimum 28-day concrete compressive strength of 3,500 psi.
- Provide minimum control joint spacing in accordance with Portland Cement Association guidelines.

7.3 SUBGRADE AND AGGREGATE BASE COMPACTION

Compact finish subgrade and aggregate base in accordance with Section 5.7. Aggregate Base (AB) should meet the requirements for Class 2 AB in accordance with Section 26-1.02B of the latest Caltrans Standard Specifications.

7.4 CUTOFF CURBS

Saturated pavement subgrade or aggregate base can cause premature failure or increased maintenance of asphalt concrete pavements. This condition often occurs where landscape areas directly abut and drain toward pavements. If desired to install pavement cutoff barriers, they should be considered where pavement areas lie downslope of any landscape areas that are to be sprinklered or irrigated and should extend to a depth of at least 4 inches below the base rock layer. Cutoff barriers may consist of deepened concrete curbs or deep-root moisture barriers.

If reduced pavement life and greater than normal pavement maintenance are acceptable to the owner, then the cutoff barrier may be eliminated.

7.5 RESIDENTIAL DRIVEWAYS/GARAGE SLABS

We were not retained to provide design recommendations for residential driveways or garage slabs. They should be designed to resist the anticipated traffic and structural loads, (and the effects of expansive soil movement.

8.0 LIMITATIONS AND UNIFORMITY OF CONDITIONS

This report presents geotechnical recommendations for design of the improvements discussed in Section 1.3 for the 38600 Cedar Boulevard project. If changes occur in the nature or design of the project, we should be allowed to review this report and provide additional recommendations, if any. It is the responsibility of the owner to transmit the information and recommendations of this report to the appropriate organizations or people involved in design of the project, including but not limited to developers, owners, buyers, architects, engineers, and designers. The conclusions and recommendations contained in this report are solely professional opinions and are valid for a period of no more than 2 years from the date of report issuance.

We strived to perform our professional services in accordance with generally accepted principles and practices currently employed in the area; there is no warranty, express or implied. There are risks of earth movement and property damages inherent in building on or with earth materials. We are unable to eliminate all risks; therefore, we are unable to guarantee or warrant the results of our services.

This report is based upon field and other conditions discovered at the time of report preparation. We developed this report with limited subsurface exploration data. We assumed that our subsurface exploration data are representative of the actual subsurface conditions across the site. Considering possible underground variability of soil and groundwater, additional costs may be required to complete the project. We recommend that the owner establish a contingency fund to cover such costs. If unexpected conditions are encountered, ENGEO must be notified immediately to review these conditions and provide additional and/or modified recommendations, as necessary.

Our services did not include excavation sloping or shoring, soil volume change factors, flood potential, or a geohazard exploration. In addition, our geotechnical exploration did not include work to determine the existence of possible hazardous materials. If any hazardous materials are encountered during construction, the proper regulatory officials must be notified immediately.

This document must not be subject to unauthorized reuse, that is, reusing without written authorization of ENGEO. Such authorization is essential because it requires ENGEO to evaluate the document's applicability given new circumstances, not the least of which is passage of time.

Actual field or other conditions will necessitate clarifications, adjustments, modifications or other changes to ENGEO's documents. Therefore, ENGEO must be engaged to prepare the necessary clarifications, adjustments, modifications or other changes before construction activities commence or further activity proceeds. If ENGEO's scope of services does not include on-site construction observation, or if other persons or entities are retained to provide such services, ENGEO cannot be held responsible for any or all claims arising from or resulting from the performance of such services by other persons or entities, and from any or all claims arising from or resulting from clarifications, adjustments, modifications, discrepancies or other changes necessary to reflect changed field or other conditions.

We determined the lines designating the interface between layers on the exploration logs using visual observations. The transition between the materials may be abrupt or gradual. The exploration logs contain information concerning samples recovered, indications of the presence of various materials such as clay, sand, silt, rock, existing fill, etc., and observations of groundwater encountered. The field logs also contain our interpretation of the subsurface conditions between sample locations. Therefore, the logs contain both factual and interpretative information. Our recommendations are based on the contents of the final logs, which represent our interpretation of the field logs.

ABOUT THIS REPORT

The enclosed report presents the results of the site investigation program conducted by ConeTec Inc. The program consisted of Piezocone Penetration Testing and Pore Pressure Dissipation Testing. Please note that this report, which also includes all accompanying data, are subject to the 3rd Party Disclaimer and Client Disclaimer that follow in the 'Limitations' section of this report.

Project Information

Client	ENGEO Incorporated
Project	Cedar Blvd
ConeTec Project Number	22-56-24946
Rig Description	30-ton Truck CPT Rig (C-17)

Coordinates

Collection Method	Consumer Grade GPS
EPSG Number	32610 (WGS 84 / UTM 10S)

Cone Penetration Test (CPTu)

Depth Reference	Existing ground surface at the time of the investigation
Sleeve data offset	0.1 Meters

Calculated Geotechnical Parameters Tables

Additional Information

The Normalized Soil Behaviour Type Chart based on Q_{tn} (SBT Q_{tn}) (Robertson, 2009) was used to classify the soil for this project. A detailed set of calculated CPTu parameters have been generated and are provided in Excel format files in the release folder. The CPTu parameter calculations are based on values of corrected tip resistance (q_t) sleeve friction (f_s) and pore pressure (u_2).

Effective stresses are calculated based on unit weights that have been assigned to the individual soil behaviour type zones and the assumed equilibrium pore pressure profile.

Soils were classified as either drained or undrained based on the Q_{tn} Normalized Soil Behaviour Type Chart (Robertson, 2009). Calculations for both drained and undrained parameters were included for materials that classified as silt mixtures (zone 4).

Please refer to the list of attached documents following the text of this report. A test summary, location map, and plots are included. Thank you for the opportunity to work on this project.

LIMITATIONS

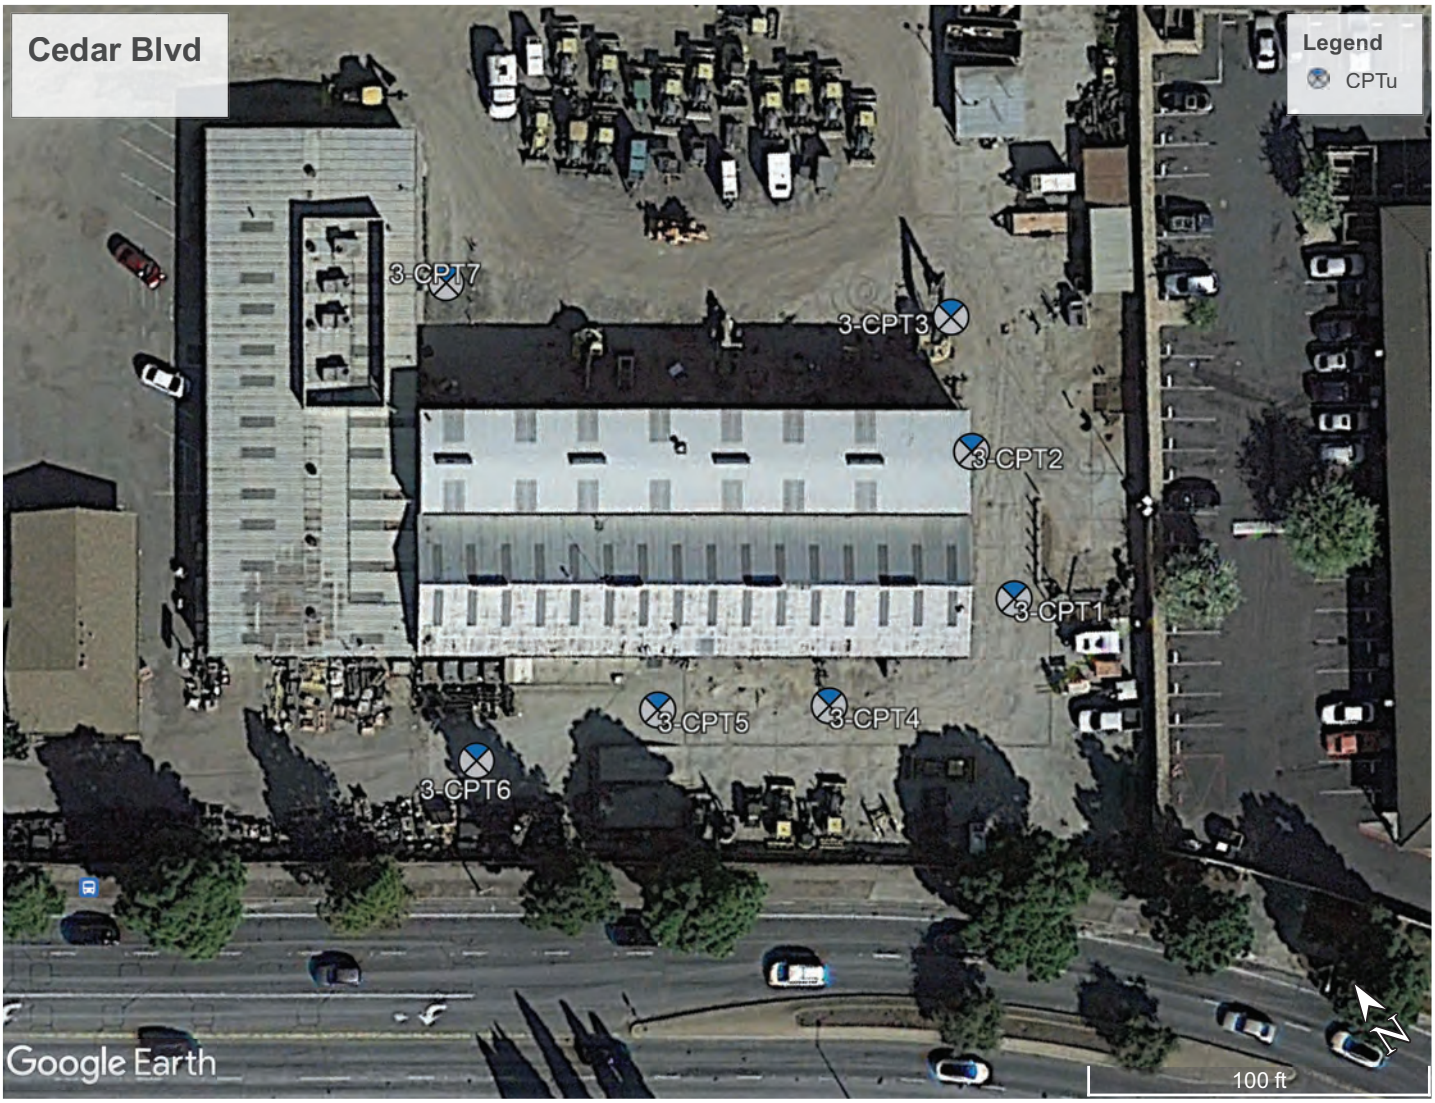
3rd Party Disclaimer

- The “Report” refers to this report titled Cedar Blvd
- The Report was prepared by ConeTec for ENGEO Incorporated

The Report is confidential and may not be distributed to or relied upon by any third parties without the express written consent of ConeTec. Any third parties gaining access to the Report do not acquire any rights as a result of such access. Any use which a third party makes of the Report, or any reliance on or decisions made based on it, are the responsibility of such third parties. ConeTec accepts no responsibility for loss, damage and/or expense, if any, suffered by any third parties as a result of decisions made, or actions taken or not taken, which are in any way based on, or related to, the Report or any portion(s) thereof.

Client Disclaimer

- ConeTec was retained by ENGEO Incorporated
- The “Report” refers to this report titled Cedar Blvd
- ConeTec was retained to collect and provide the raw data (“Data”) which is included in the Report.



ConeTec has collected and reported the Data in accordance with current industry standards. No other warranty, express or implied, with respect to the Data is made by ConeTec. In order to properly understand the Data included in the Report, reference must be made to the documents accompanying and other sources referenced in the Report in their entirety. Other than the Data, the contents of the Report (including any Interpretations) should not be relied upon in any fashion without independent verification and ConeTec is in no way responsible for any loss, damage or expense resulting from the use of, and/or reliance on, such material by any party.

CONTENTS

The following listed below are included in the report:

- Site Map
- Cone Penetration Test Summary and Standard Cone Penetration Test Plots
- Advanced Cone Penetration Test Plots
- Soil Behavior Type (SBT) Scatter Plots
- Pore Pressure Dissipation Summary and Pore Pressure Dissipation (PPD) Test Plots
- Methodology Statements
- Data File Formats
- Description for Methods for Calculated CPT Geotechnical Parameters

1. The assumed phreatic surface was based on pore pressure dissipation tests, unless otherwise noted. Hydrostatic conditions were assumed for the calculated parameters.
2. The coordinates were collected using consumer grade GPS equipment. EPSG number: 32610 (WGS84 / UTM Zone 10S).
3. Elevations are referenced to the ground surface and were acquired from the Google Earth Elevation for the recorded coordinates.
4. The assumed phreatic surface was based on the dynamic pore pressure response.

Methodology Statements and Data File Formats

Cone penetration tests (CPTu) are conducted using an integrated electronic piezocone penetrometer and data acquisition system manufactured by Adara Systems Ltd., a subsidiary of ConeTec.

ConeTec's piezocone penetrometers are compression type designs in which the tip and friction sleeve load cells are independent and have separate load capacities. The piezocones use strain gauged load cells for tip and sleeve friction and a strain gauged diaphragm type transducer for recording pore pressure. The piezocones also have a platinum resistive temperature device (RTD) for monitoring the temperature of the sensors, an accelerometer type dual axis inclinometer and two geophone sensors for recording seismic signals. All signals are amplified and measured with minimum sixteen-bit resolution down hole within the cone body, and the signals are sent to the surface using a high bandwidth, error corrected digital interface through a shielded cable.

ConeTec penetrometers are manufactured with various tip, friction and pore pressure capacities in both 10 cm^2 and 15 cm^2 tip base area configurations in order to maximize signal resolution for various soil conditions. The specific piezocone used for each test is described in the CPT summary table presented in the first appendix. The 15 cm^2 penetrometers do not require friction reducers as they have a diameter larger than the deployment rods. The 10 cm^2 piezocones use a friction reducer consisting of a rod adapter extension behind the main cone body with an enlarged cross sectional area (typically 44 millimeters diameter over a length of 32 millimeters with tapered leading and trailing edges) located at a distance of 585 millimeters above the cone tip.

The penetrometers are designed with equal end area friction sleeves, a net end area ratio of 0.8 and cone tips with a 60 degree apex angle.

All ConeTec piezocones can record pore pressure at various locations. Unless otherwise noted, the pore pressure filter is located directly behind the cone tip in the "u_2" position (ASTM Type 2). The filter is six millimeters thick, made of porous plastic (polyethylene) having an average pore size of 125 microns (90-160 microns). The function of the filter is to allow rapid movements of extremely small volumes of water needed to activate the pressure transducer while preventing soil ingress or blockage.

The piezocone penetrometers are manufactured with dimensions, tolerances and sensor characteristics that are in general accordance with the current ASTM D5778 standard. ConeTec's calibration criteria also meets or exceeds those of the current ASTM D5778 standard. An illustration of the piezocone penetrometer is presented in Figure CPTu.

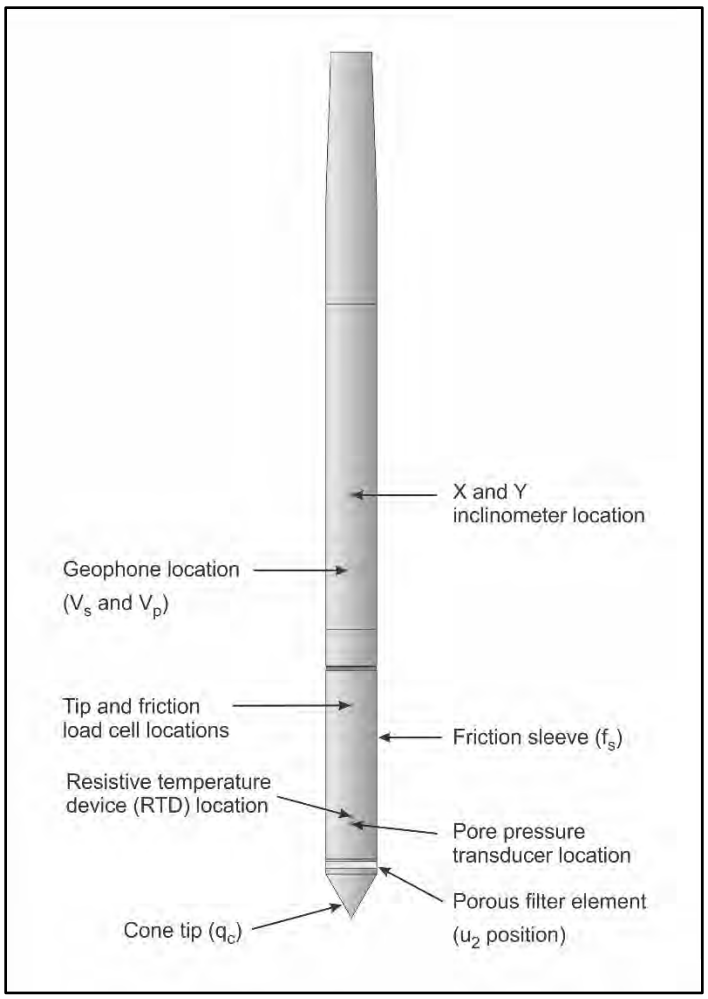

Figure CPTu. Piezocone Penetrometer (15 cm^2)

The ConeTec data acquisition systems consist of a Windows based computer and a signal interface box and power supply. The signal interface combines depth increment signals, seismic trigger signals and the downhole digital data. This combined data is then sent to the Windows based computer for collection and presentation. The data is recorded at fixed depth increments using a depth wheel attached to the push cylinders or by using a spring loaded rubber depth wheel that is held against the cone rods. The typical recording interval is 2.5 centimeters; custom recording intervals are possible.

The system displays the CPTu data in real time and records the following parameters to a storage media during penetration:

- Depth
- Uncorrected tip resistance (q_c)
- Sleeve friction (f_s)
- Dynamic pore pressure (u)
- Additional sensors such as resistivity, passive gamma, ultra violet induced fluorescence, if applicable

All testing is performed in accordance to ConeTec's CPTu operating procedures which are in general accordance with the current ASTM D5778 standard.

Prior to the start of a CPTu sounding a suitable cone is selected, the cone and data acquisition system are powered on, the pore pressure system is saturated with silicone oil and the baseline readings are recorded with the cone hanging freely in a vertical position.

The CPTu is conducted at a steady rate of two centimeters per second, within acceptable tolerances. Typically one meter length rods with an outer diameter of 1.5 inches (38.1 millimeters) are added to advance the cone to the sounding termination depth. After cone retraction final baselines are recorded.

Additional information pertaining to ConeTec's cone penetration testing procedures:

- Each filter is saturated in silicone oil under vacuum pressure prior to use
- Baseline readings are compared to previous readings
- Soundings are terminated at the client's target depth or at a depth where an obstruction is encountered, excessive rod flex occurs, excessive inclination occurs, equipment damage is likely to take place, or a dangerous working environment arises
- Differences between initial and final baselines are calculated to ensure zero load offsets have not occurred and to ensure compliance with ASTM standards

The interpretation of piezocone data for this report is based on the corrected tip resistance (q_t), sleeve friction (f_s) and pore water pressure (u). The interpretation of soil type is based on the correlations developed by Robertson et al. (1986) and Robertson (1990, 2009). It should be noted that it is not always possible to accurately identify a soil behavior type based on these parameters. In these situations, experience, judgment and an assessment of other parameters may be used to infer soil behavior type.

The recorded tip resistance (q_c) is the total force acting on the piezocone tip divided by its base area. The tip resistance is corrected for pore pressure effects and termed corrected tip resistance (q_t) according to the following expression presented in Robertson et al. (1986):

$$q_t = q_c + (1\text{-}a) \bullet u_2$$

where: q_t is the corrected tip resistance
q_c is the recorded tip resistance
u_2 is the recorded dynamic pore pressure behind the tip (u_2 position)
a is the Net Area Ratio for the piezocone (0.8 for ConeTec probes)

The sleeve friction (f_s) is the frictional force on the sleeve divided by its surface area. As all ConeTec piezocones have equal end area friction sleeves, pore pressure corrections to the sleeve data are not required.

The dynamic pore pressure (u) is a measure of the pore pressures generated during cone penetration. To record equilibrium pore pressure, the penetration must be stopped to allow the dynamic pore pressures to stabilize. The rate at which this occurs is predominantly a function of the permeability of the soil and the diameter of the cone.

The friction ratio (R_f) is a calculated parameter. It is defined as the ratio of sleeve friction to the tip resistance expressed as a percentage. Generally, saturated cohesive soils have low tip resistance, high friction ratios and generate large excess pore water pressures. Cohesionless soils have higher tip resistances, lower friction ratios and do not generate significant excess pore water pressure.

A summary of the CPTu soundings along with test details and individual plots are provided in the appendices. A set of files with calculated geotechnical parameters were generated for each sounding based on published correlations and are provided in Excel format in the data release folder. Information regarding the methods used is also included in the data release folder.

For additional information on CPTu interpretations and calculated geotechnical parameters, refer to Robertson et al. (1986), Lunne et al. (1997), Robertson (2009), Mayne (2013, 2014) and Mayne and Peuchen (2012).

The cone penetration test is halted at specific depths to carry out pore pressure dissipation (PPD) tests, shown in Figure PPD-1. For each dissipation test the cone and rods are decoupled from the rig and the data acquisition system measures and records the variation of the pore pressure (u) with time (t).

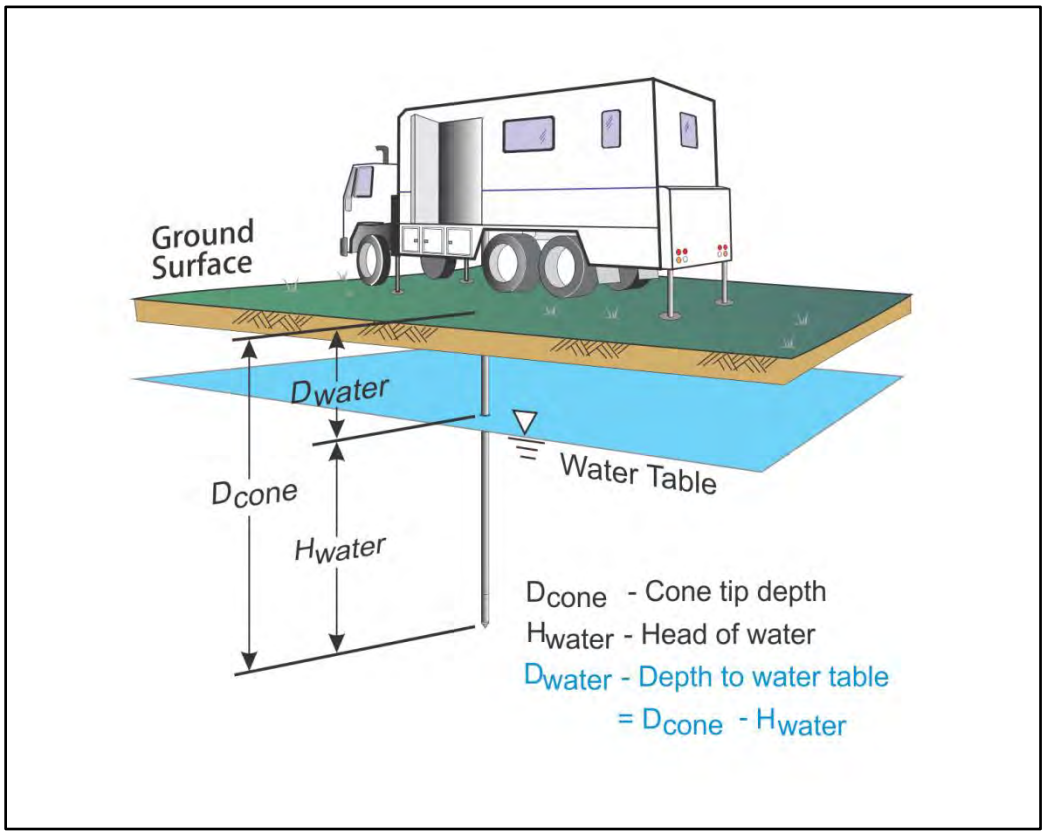

Figure PPD-1. Pore pressure dissipation test setup

Pore pressure dissipation data can be interpreted to provide estimates of ground water conditions, permeability, consolidation characteristics and soil behavior.

The typical shapes of dissipation curves shown in Figure PPD-2 are very useful in assessing soil type, drainage, in situ pore pressure and soil properties. A flat curve that stabilizes quickly is typical of a freely draining sand. Undrained soils such as clays will typically show positive excess pore pressure and have long dissipation times. Dilative soils will often exhibit dynamic pore pressures below equilibrium that then rise over time. Overconsolidated fine-grained soils will often exhibit an initial dilatory response where there is an initial rise in pore pressure before reaching a peak and dissipating.

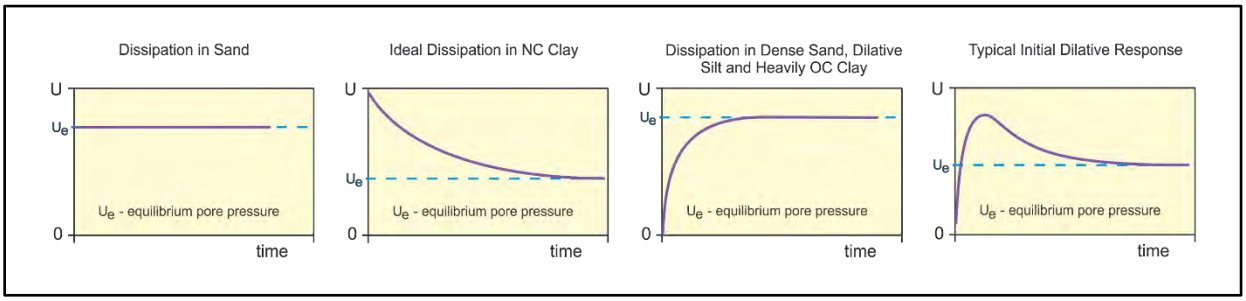

Figure PPD-2. Pore pressure dissipation curve examples

In order to interpret the equilibrium pore pressure (u_{eq}) and the apparent phreatic surface, the pore pressure should be monitored until such time as there is no variation in pore pressure with time as shown for each curve in Figure PPD-2.

In fine grained deposits the point at which 100% of the excess pore pressure has dissipated is known as t_{100}. In some cases this can take an excessive amount of time and it may be impractical to take the dissipation to t_{100}. A theoretical analysis of pore pressure dissipations by Teh and Houlsby (1991) showed that a single curve relating degree of dissipation versus theoretical time factor (T*) may be used to calculate the coefficient of consolidation (c_h) at various degrees of dissipation resulting in the expression for c_h shown below.

$$c_h = \frac{T^* \cdot a^2 \cdot \sqrt{I_r}}{t}$$

Where:

T* is the dimensionless time factor (Table Time Factor)
a is the radius of the cone
I_r is the rigidity index
t is the time at the degree of consolidation

Table Time Factor. T* versus degree of dissipation (Teh and Houlsby (1991))

Degree of Dissipation (%)	20	30	40	50	60	70	80
T* (u_2)	0.038	0.078	0.142	0.245	0.439	0.804	1.60

The coefficient of consolidation is typically analyzed using the time (t_{50}) corresponding to a degree of dissipation of 50% (u_{50}). In order to determine t_{50}, dissipation tests must be taken to a pressure less than u_{50}. The u_{50} value is half way between the initial maximum pore pressure and the equilibrium pore pressure value, known as u_{100}. To estimate u_{50}, both the initial maximum pore pressure and u_{100} must be known or estimated. Other degrees of dissipations may be considered, particularly for extremely long dissipations.

At any specific degree of dissipation the equilibrium pore pressure (u at t_{100}) must be estimated at the depth of interest. The equilibrium value may be determined from one or more sources such as measuring the value directly (u_{100}), estimating it from other dissipations in the same profile, estimating the phreatic surface and assuming hydrostatic conditions, from nearby soundings, from client provided information, from site observations and/or past experience, or from other site instrumentation.

For calculations of c_h (Teh and Houlsby (1991)), t_{50} values are estimated from the corresponding pore pressure dissipation curve and a rigidity index (I_r) is assumed. For curves having an initial dilatory response in which an initial rise in pore pressure occurs before reaching a peak, the relative time from the peak value is used in determining t_{50}. In cases where the time to peak is excessive, t_{50} values are not calculated.

A summary of the pore pressure dissipation tests and dissipation plots are presented in the relevant appendix.

CPT Data Files (COR Extension)

ConeTec CPT data files are stored in ASCII text files that are readable by almost any text editor. ConeTec file names start with the job number (which includes the two digit year number) an underscore as a separating character, followed by two letters based on the type of test and the sounding ID. The last character position is reserved for an identifier letter (such as b, c, d etc) used to uniquely distinguish multiple soundings at the same location. The CPT sounding file has the extension COR. As an example, for job number 21-02-00001 the first CPT sounding will have file name 21-02-00001_CP01.COR

The sounding (COR) file consists of the following components:

1. Two lines of header information
2. Data records
3. End of data marker
4. Units information

Header Lines

Line 1: Columns 1-6 may be blank or may indicate the version number of the recording software
Columns 7-21 contain the sounding Date and Time (Date is MM:DD:YY)
Columns 23-38 contain the sounding Operator
Columns 51-100 contain extended Job Location information

Line 2: Columns 1-16 contain the Job Location
Columns 17-32 contain the Cone ID
Columns 33-47 contain the sounding number
Columns 51-100 may contain extended sounding ID information

Data Records

The data records contain 4 or more columns of data in floating point format. A comma and spaces separate each data item:

Column 1: Sounding Depth (meters)
Column 2: Tip (q_c), recorded in units selected by the operator
Column 3: Sleeve (f_s), recorded in units selected by the operator
Column 4: Dynamic pore pressure (u), recorded in units selected by the operator
Column 5: Empty or may contain other requested data such as Gamma, Resistivity or UVIF data

End of Data Marker

After the last line of data there is a line containing an ASCII 26 (CTL-Z) character (small rectangular shaped character) followed by a newline (carriage return / line feed). This is used to mark the end of data.

Units Information

The last section of the file contains information about the units that were selected for the sounding. A separator bar makes up the first line. The second line contains the type of units used for depth, q_c, f_s and u. The third line contains the conversion values required for ConeTec's software to convert the recorded data to an internal set of base units (bar for q_c, bar for f_s and meters for u). Additional lines intended for internal ConeTec use may appear following the conversion values.

CPT Data Files (XLS Extension)

Excel format files of ConeTec CPT data are also generated from corresponding COR files. The XLS files have the same base file name as the COR file with a -BSC suffix. The information in the file is presented in table format and contains additional information about the sounding such as coordinate information, and tip net area ratio.

The BSCI suffix is given to XLS files which are enhanced versions of the BSC files and include the same data records in addition to inclination data collected for each sounding.

CPT Dissipation Files (XLS Extension)

Pore pressure dissipation files are provided in Excel format and contain each dissipation trace that exceeds a minimum duration (selected during post-processing) formatted column wise within the spreadsheet. The first column (Column A) contains the time in seconds and the second column (Column B) contains the time in minutes. Subsequent columns contain the dissipation trace data. The columns extend to the longest trace of the data set.

Detailed header information is provided at the top of the worksheet. The test depth in meters and feet, the number of points in the trace and the particular units are all presented at the top of each trace column.

CPT Dissipation files have the same naming convention as the CPT sounding files with a "–PPD" suffix.

Data Records

Each file will contain dissipation traces that exceed a minimum duration (selected during post-processing) in a particular column. The dissipation pore pressure values are typically recorded at varying time intervals throughout the trace; rapidly to start and increasing as the duration of the test lengthens. The test depth in meters and feet, the number of points in the trace and the trace number are identified at the top of each trace column.

Cone Type Designations

Description of Methods for Calculated CPT Geotechnical Parameters

CALCULATED CPT GEOTECHNICAL PARAMETERS

A Detailed Description of the Methods Used in ConeTec's CPT Geotechnical Parameter Calculation and Plotting Software

Revision SZW-Rev 14

Revised November 26, 2019
Prepared by Jim Greig, M.A.Sc, P.Eng (BC)

Limitations

The geotechnical parameter output was prepared specifically for the site and project named in the accompanying report subject to objectives, site conditions and criteria provided to ConeTec by the client. The output may not be relied upon by any other party or for any other site without the express written permission of ConeTec Group (ConeTec) or any of its affiliates. For this project, ConeTec has provided site investigation services, prepared factual data reporting and produced geotechnical parameter calculations consistent with current best practices. No other warranty, expressed or implied, is made.

To understand the calculations that have been performed and to be able to reproduce the calculated parameters the user is directed to the basic descriptions for the methods in this document and the detailed descriptions and their associated limitations and appropriateness in the technical references cited for each parameter.

ConeTec's Calculated CPT Geotechnical Parameters as of November 26, 2019

ConeTec's CPT parameter calculation and plotting routine provides a tabular output of geotechnical parameters based on current published CPT correlations and is subject to change to reflect the current state of practice. Due to drainage conditions and the basic assumptions and limitations of the correlations, not all geotechnical parameters provided are considered applicable for all soil types. The results are presented only as a guide for geotechnical use and should be carefully examined for consideration in any geotechnical design. Reference to current literature is strongly recommended. ConeTec does not warranty the correctness or the applicability of any of the geotechnical parameters calculated by the program and does not assume liability for any use of the results in any design or review. For verification purposes we recommend that representative hand calculations be done for any parameter that is critical for design purposes. The end user of the parameter output should also be fully aware of the techniques and the limitations of any method used by the program. The purpose of this document is to inform the user as to which methods were used and to direct the end user to the appropriate technical papers and/or publications for further reference.

The geotechnical parameter output was prepared specifically for the site and project named in the accompanying report subject to objectives, site conditions and criteria provided to ConeTec by the client. The output may not be relied upon by any other party or for any other site without the express written permission of ConeTec Group (ConeTec) or any of its affiliates.

The CPT calculations are based on values of tip resistance, sleeve friction and pore pressures considered at each data point or averaged over a user specified layer thickness (e.g. 0.20 m). Note that q_t is the tip resistance corrected for pore pressure effects and q_c is the recorded tip resistance. The corrected tip resistance (corrected using u_2 pore pressure values) is used for all of the calculations. Since all ConeTec cones have equal end area friction sleeves pore pressure corrections to sleeve friction, f_s, are not required.

The tip correction is: $q_t = q_c + (1-a) \bullet u_2$ (consistent units are implied)

where: q_t is the corrected tip resistance
q_c is the recorded tip resistance
u_2 is the recorded dynamic pore pressure behind the tip (u_2 position)
a is the Net Area Ratio for the cone (typically 0.80 for ConeTec cones)

The total stress calculations are based on soil unit weight values that have been assigned to the Soil Behavior Type (SBT) zones, from a user defined unit weight profile, by using a single uniform value throughout the profile, through unit weight estimation techniques described in various technical papers or from a combination of these methods. The parameter output files indicate the method(s) used.

Effective vertical overburden stresses are calculated based on a hydrostatic distribution of equilibrium pore pressures below the water table or from a user defined equilibrium pore pressure profile (typically obtained from CPT dissipation tests) or a combination of the two. For over water projects the stress effects of the column of water above the mudline have been taken into account as has the appropriate unit weight of water. How this is done depends on where the instruments were zeroed (i.e. on deck or at the mudline). The parameter output files indicate the method(s) used.

A majority of parameter calculations are derived or driven by results based on material types as determined by the various soil behavior type charts depicted in Figures 1 through 5. The parameter output files indicate the method(s) used.

The Soil Behavior Type classification chart shown in Figure 1 is the classic non-normalized SBT Chart developed at the University of British Columbia and reported in Robertson, Campanella, Gillespie and Greig (1986). Figure 2 shows the original normalized (linear method) SBT chart developed by Robertson (1990). The Bq classification charts shown in Figures 3a and 3b incorporate pore pressures into the SBT classification and are based on the methods described in Robertson (1990). Many of these charts have been summarized in Lunne, Robertson and Powell (1997). The

Jefferies and Davies SBT chart shown in Figure 3c is based on the techniques discussed in Jefferies and Davies (1993) which introduced the concept of the Soil Behavior Type Index parameter, I_c. Please note that the I_c parameter developed by Robertson and Fear (1995) and Robertson and Wride (1998) is similar in concept but uses a slightly different calculation method than that used by Jefferies and Davies (1993) as the latter incorporates pore pressure in their technique through the use of the Bq parameter. The normalized Qtn SBT chart shown in Figure 4 is based on the work by Robertson (2009) utilizing a variable stress ratio exponent, n, for normalization based on a slightly modified redefinition and iterative approach for I_c. The boundary curves drawn on the chart are based on the work described in Robertson (2010).

Figure 5 shows a revised behavior based chart by Robertson (2016) depicting contractive-dilative zones. As the zones represent material behavior rather than soil gradation ConeTec has chosen a set of zone colors that are less likely to be confused with material type colors from previous SBT charts. These colors differ from those used by Dr. Robertson.

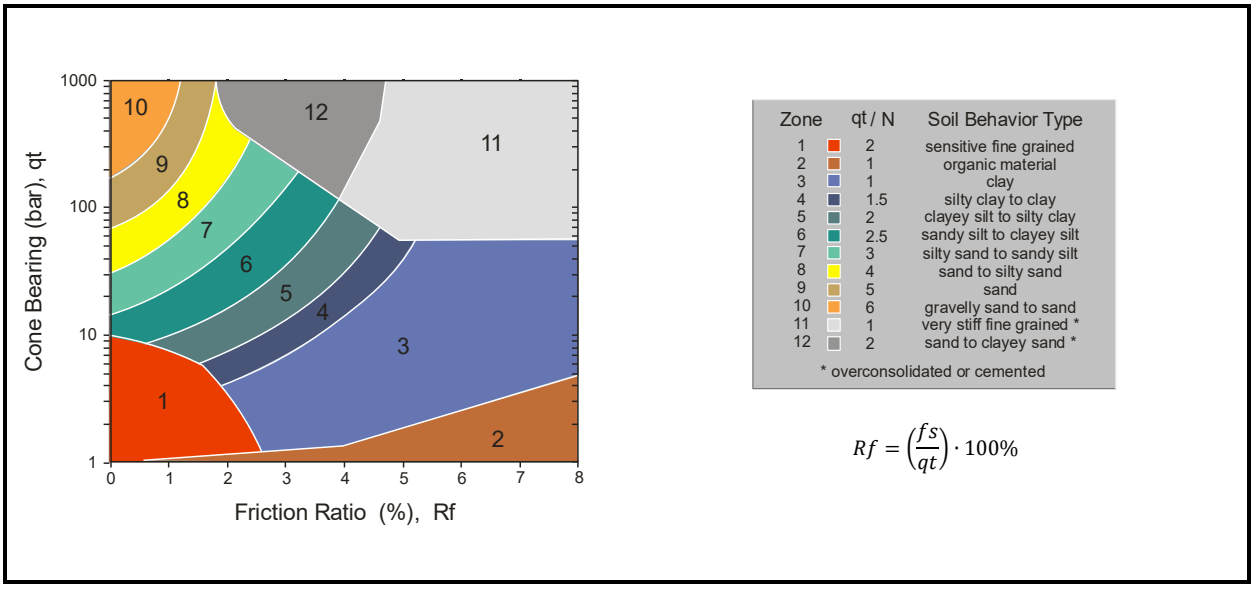

Figure 1. Non-Normalized Soil Behavior Type Classification Chart (SBT)

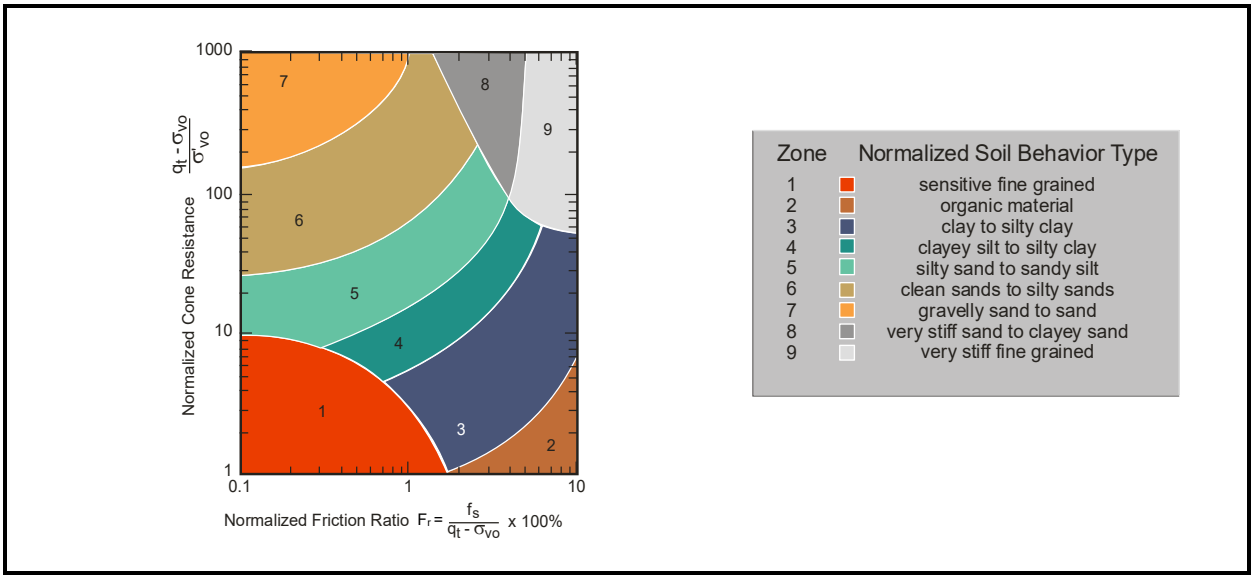

Figure 2. Normalized Soil Behavior Type Classification Chart (SBTn)

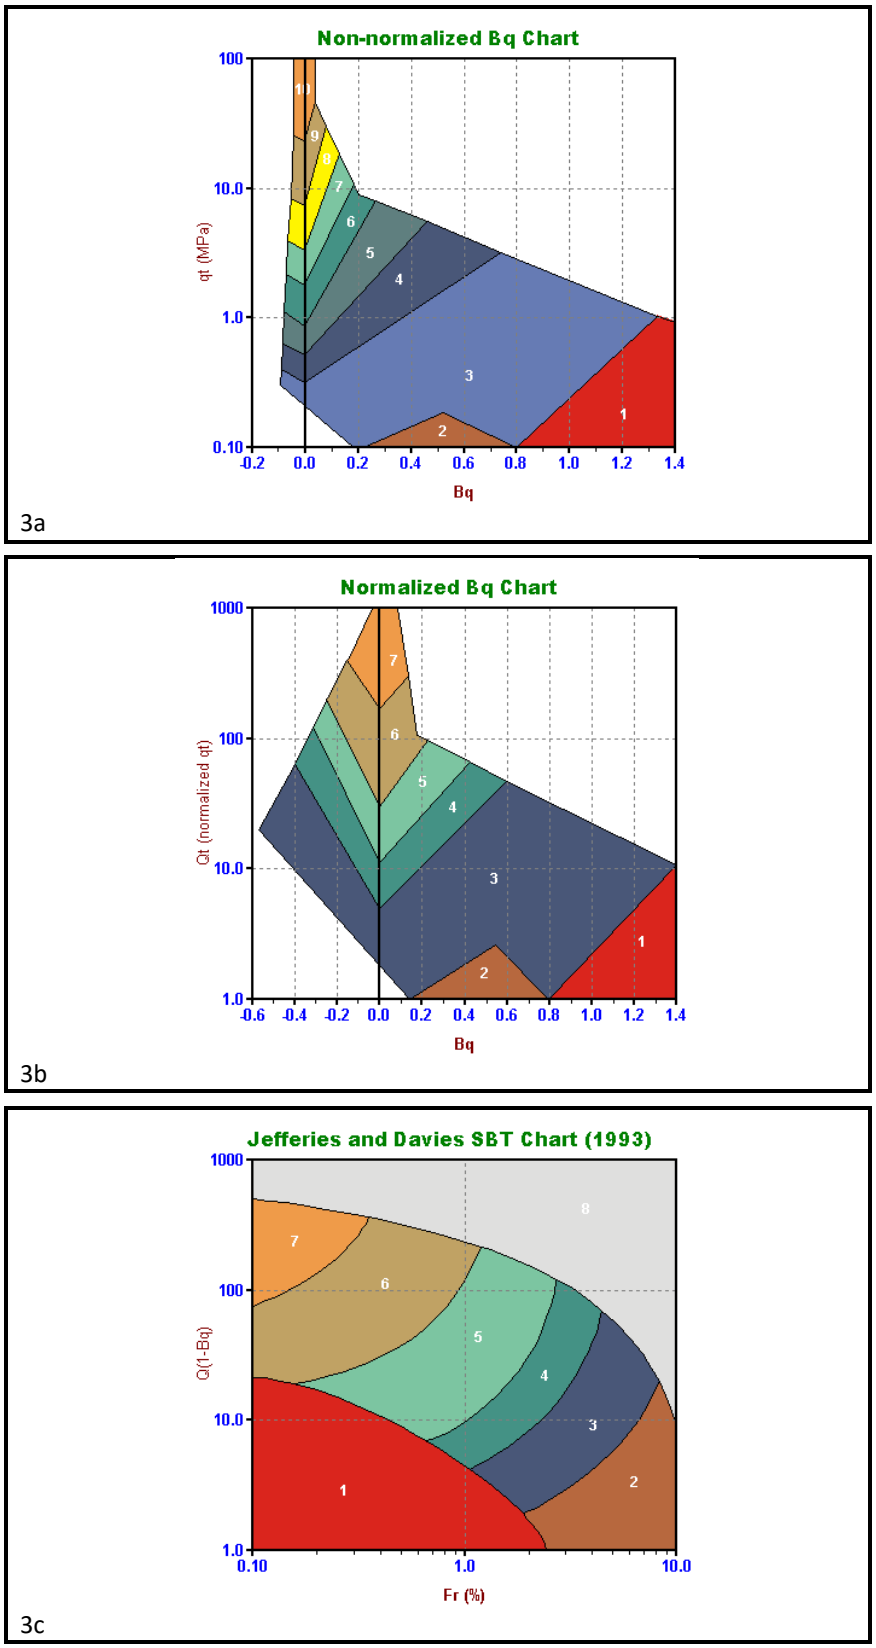

Figure 3. Alternate Soil Behavior Type Charts

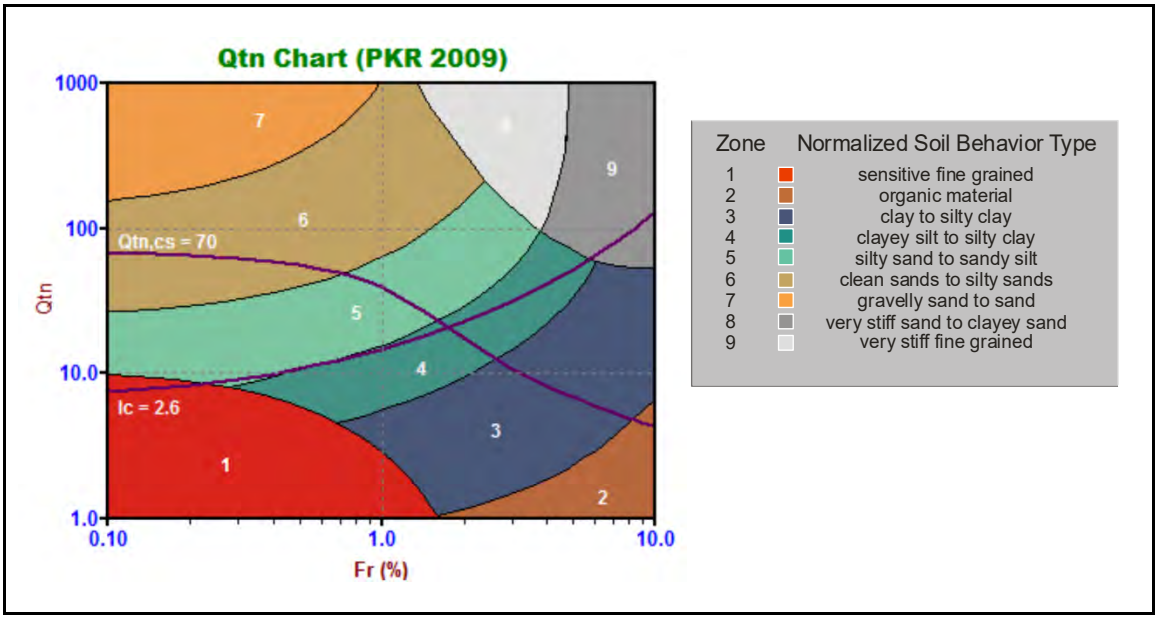

Figure 4. Normalized Soil Behavior Type Chart using Q_{tn} (SBT Qtn)

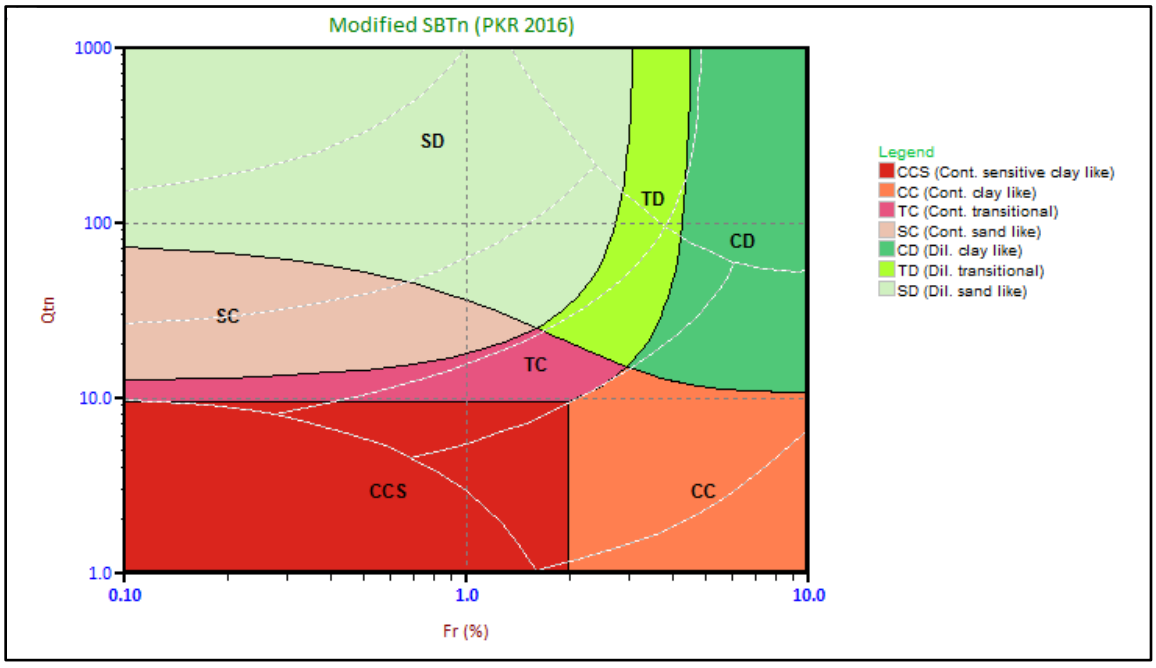

Figure 5. Modified SBTn Behavior Based Chart

Details regarding the geotechnical parameter calculations are provided in Tables 1a and 1b. The appropriate references cited are listed in Table 2. Non-liquefaction specific parameters are detailed in Table 1a and liquefaction specific parameters are detailed in Table 1b.

Where methods are based on charts or techniques that are too complex to describe in this summary the user should refer to the cited material. Specific limitations for each method are described in the cited material.

Where the results of a calculation/correlation are deemed *'invalid'* the value will be represented by the text strings "-9999", "-9999.0", the value 0.0 (Zero) or an empty cell. Invalid results will occur because of (and not limited to) one or a combination of:

1. Invalid or undefined CPT data (e.g. drilled out section or data gap).
2. Where the calculation method is inappropriate, for example, drained parameters in a material behaving as an undrained material (and vice versa).
3. Where input values are beyond the range of the referenced charts or specified limitations of the correlation method.
4. Where pre-requisite or intermediate parameter calculations are invalid.

The parameters selected for output from the program are often specific to a particular project. As such, not all of the calculated parameters listed in Table 1 may be included in the output files delivered with this report.

The output files are typically provided in Microsoft Excel XLS or XLSX format. The ConeTec software has several options for output depending on the number or types of calculated parameters desired or requested by the client. Each output file is named using the original COR file base name followed by a three or four letter indicator of the output set selected (e.g. BSC, TBL, NLI, NL2, IFI, IFI2) and possibly followed by an operator selected suffix identifying the characteristics of the particular calculation run.

Table 1a. CPT Parameter Calculation Methods – Non liquefaction Parameters

Calculated Parameter	Description	Equation	Ref
Depth	Mid Layer Depth *(where calculations are done at each point then Mid Layer Depth = Recorded Depth)*	*[Depth (Layer Top) + Depth (Layer Bottom)]/ 2.0*	CK*
Elevation	Elevation of Mid Layer based on sounding collar elevation supplied by client or through site survey	Elevation = Collar Elevation - Depth	CK*
Avg qc	Averaged recorded tip value (q_c)	$Avgqc = \frac{1}{n}\sum_{i=1}^{n} q_c$ *n=1 when calculations are done at each point*	CK*
Avg qt	Averaged corrected tip (q_t) where: $q_t = q_c + (1-a) \bullet u_2$	$Avgqt = \frac{1}{n}\sum_{i=1}^{n} q_t$ *n=1 when calculations are done at each point*	1
Avg fs	Averaged sleeve friction (f_s)	$Avgfs = \frac{1}{n}\sum_{i=1}^{n} fs$ *n=1 when calculations are done at each point*	CK*
Avg Rf	Averaged friction ratio (R_f) where friction ratio is defined as: $Rf = 100\% \bullet \frac{fs}{q_t}$	$AvgRf = 100\% \cdot \frac{Avgfs}{Avgqt}$ *n=1 when calculations are done at each point*	CK*
Avg u	Averaged dynamic pore pressure *(u)*	$Avgu = \frac{1}{n}\sum_{i=1}^{n} u_i$ *n=1 when calculations are done at each point*	CK*

Calculated Parameter	Description	Equation	Ref
Avg Res	Averaged Resistivity (this data is not always available since it is a specialized test requiring an additional module)	$AvgRes = \frac{1}{n}\sum_{i=1}^{n} Resistivity_i$ *n=1 when calculations are done at each point*	CK*
Avg UVIF	Averaged UVIF ultra-violet induced fluorescence (this data is not always available since it is a specialized test requiring an additional module)	$AvgUVIF = \frac{1}{n}\sum_{i=1}^{n} UVIF_i$ *n=1 when calculations are done at each point*	CK*
Avg Temp	Averaged Temperature (this data is not always available since it requires specialized calibrations)	$AvgTemp = \frac{1}{n}\sum_{i=1}^{n} Temperature_i$ *n=1 when calculations are done at each point*	CK*
Avg Gamma	Averaged Gamma Counts (this data is not always available since it is a specialized test requiring an additional module)	$AvgGamma = \frac{1}{n}\sum_{i=1}^{n} Gamma_i$ *n=1 when calculations are done at each point*	CK*
SBT	Soil Behavior Type as defined by Robertson et al 1986 (often referred to as Robertson and Campanella, 1986)	See Figure 1	1, 5
SBTn	Normalized Soil Behavior Type as defined by Robertson 1990 (linear normalization)	See Figure 2	2, 5
SBT-Bq	Non-normalized Soil Behavior type based on the Bq parameter	See Figure 3	1, 2, 5
SBT-Bqn	Normalized Soil Behavior based on the Bq parameter	See Figure 3	2, 5
SBT-JandD	Soil Behavior Type as defined by Jeffries and Davies	See Figure 3	7
SBT Qtn	Soil Behavior Type as defined by Robertson (2009) using a variable stress ratio exponent for normalization based on I_c	See Figure 4	15
Modified SBTn (contractive /dilative)	Modified SBTn chart as defined by Robertson (2016) indicating zones of contractive/dilative behavior.	See Figure 5	30
Unit Wt.	Unit Weight of soil determined from one of the following user selectable options: 1) uniform value 2) value assigned to each SBT zone 3) value assigned to each SBTn zone 4) value assigned to SBTn zone as determined from Robertson and Wride (1998) based on q_{c1n} 5) values assigned to SBT Qtn zones 6) Mayne fs (sleeve friction) method 7) Robertson 2010 method 8) user supplied unit weight profile The last option may co-exist with any of the other options	See references	3, 5, 15, 21, 24, 29

Calculated Parameter	Description	Equation	Ref
TStress σ_v	Total vertical overburden stress at Mid Layer Depth *A layer is defined as the averaging interval specified by the user where depths are reported at their respective mid-layer depth.* *For data calculated at each point layers are defined using the recorded depth as the mid-point of the layer. Thus, a layer starts half-way between the previous depth and the current depth unless this is the first point in which case the layer start is at zero depth. The layer bottom is half-way from the current depth to the next depth unless it is the last data point.* *Defining layers affects how stresses are calculated since the unit weight attributed to a data point is used throughout the entire layer. This means that to calculate the stresses the total stress at the top and bottom of a layer are required. The stress at mid layer is determined by adding the incremental stress from the layer top to the mid-layer depth. The stress at the layer bottom becomes the stress at the top of the subsequent layer. Stresses are NOT calculated from mid-point to mid-point.* *For over-water work the total stress due to the column of water above the mud line is taken into account where appropriate.*	$TStress = \sum_{i=1}^{n} \gamma_i h_i$ *where* γ_i is layer unit weight h_i is layer thickness	CK*
EStress σ_v'	Effective vertical overburden stress at mid-layer depth	$\sigma_v' = \sigma_v - u_{eq}$	CK*
Equil u u_{eq} or u_0	Equilibrium pore pressure determined from one of the following user selectable options: 1) hydrostatic below water table 2) user supplied profile 3) combination of those above When a user supplied profile is used/provided a linear interpolation is performed between equilibrium pore pressures defined at specific depths. If the profile values start below the water table then a linear transition from zero pressure at the water table to the first defined pointed is used. Equilibrium pore pressures may come from dissipation tests, adjacent piezometers or other sources. Occasionally, an extra equilibrium point ("assumed value") will be provided in the profile that does not come from a recorded value to smooth out any abrupt changes or to deal with material interfaces. These "assumed" values will be indicated on our plots and in tabular summaries.	For hydrostatic option: $u_{eq} = \gamma_w \cdot (D - D_{wt})$ where u_{eq} is equilibrium pore pressure γ_w is unit weight of water D is the current depth D_{wt} is the depth to the water table	CK*
K_0	Coefficient of earth pressure at rest, K_0	$K_O = (1 - \sin\Phi')\ OCR^{\sin\Phi'}$	17
C_n	Overburden stress correction factor used for $(N_1)_{60}$ and older CPT parameters	$C_n = (P_a/\sigma_v')^{0.5}$ where $0.0 < C_n < 2.0$ *(user adjustable, typically 1.7)* P_a *is atmospheric pressure (100 kPa)*	12
C_q	Overburden stress normalizing factor	$C_q = 1.8 / (0.8 + (\sigma_v'/P_a))$ where $0.0 < C_q < 2.0$ *(user adjustable)* P_a *is atmospheric pressure (100 kPa)*	3, 12

Calculated Parameter	Description	Equation	Ref
N_{60}	SPT N value at 60% energy calculated from q_t/N ratios assigned to each SBT zone. This method has abrupt N value changes at zone boundaries.	*See Figure 1*	5
(N1)60	SPT N_{60} value corrected for overburden pressure	$(N_1)_{60} = C_n \bullet N_{60}$	4
N60Ic	SPT N_{60} values based on the I_c parameter [as defined by Roberston and Wride 1998 (5), or by Robertson 2009 (15)].	$(q_t/P_a)/ N_{60} = 8.5 (1 – I_c/4.6)$ $(q_t/P_a)/ N_{60} = 10^{(1.1268 – 0.2817Ic)}$ Pa being atmospheric pressure	5 15, 31
(N1)60Ic	SPT N_{60} value corrected for overburden pressure (using N_{60} I_c). User has 3 options.	1) $(N_1)_{60}Ic = C_n \bullet (N_{60} I_c)$ 2) $q_{c1n}/ (N_1)_{60}I_c = 8.5 (1 – I_c/4.6)$ 3) $(Q_{tn})/ (N_1)_{60}I_c = 10^{(1.1268 – 0.2817Ic)}$	4 5 15, 31
Su or Su (Nkt)	Undrained shear strength based on q_t S_u factor N_{kt} is user selectable	$Su = \frac{qt - \sigma_v}{N_{kt}}$	1, 5
Su or Su (Ndu)	Undrained shear strength based on pore pressure S_u factor $N_{\Delta u}$ is user selectable	$Su = \frac{u_2 - u_{eq}}{N_{\Delta u}}$	1, 5
Dr	Relative Density determined from one of the following user selectable options: a) Ticino Sand b) Hokksund Sand c) Schmertmann (1978) d) Jamiolkowski (1985) - All Sands e) Jamiolkowski et al (2003) (various compressibilities, K_o)	See reference (methods a through d) Jamiolkowski et al (2003) reference	5 14
PHI ϕ	Friction Angle determined from one of the following user selectable options (methods a through d are for sands and method e is for silts and clays): a) Campanella and Robertson b) Durgunoglu and Mitchel c) Janbu d) Kulhawy and Mayne e) NTH method (clays and silts)	See appropriate reference	5 5 5 11 23
Delta U/qt	Differential pore pressure ratio (older parameter used before B_q was established)	$= \frac{\Delta u}{qt}$ *where:* $\Delta u = u - u_{eq}$ *and* u = *dynamic pore pressure* u_{eq} = *equilibrium pore pressure*	CK*
Bq	Pore pressure parameter	$Bq = \frac{\Delta u}{qt - \sigma_v}$ where : $\Delta u = u - u_{eq}$ *and* u = *dynamic pore pressure* u_{eq} = *equilibrium pore pressure*	1, 2, 5
Net qt or qtNet	Net tip resistance (used in many subsequent correlations)	$qt - \sigma_v$	CK*
qe	Effective tip resistance (using the dynamic pore pressure u_2 and not equilibrium pore pressure)	$qt - u_2$	CK*

Calculated Parameter	Description	Equation	Ref
qeNorm	Normalized effective tip resistance	$\frac{qt-u_2}{\sigma_v}$	CK*
Q_t or Norm: Qt	Normalized q_t for Soil Behavior Type classification as defined by Robertson (1990) using a linear stress normalization. Note this is different from Q_{tn}.	$Qt=\frac{qt-\sigma_v}{\sigma_v}$	2, 5
F_r or Norm: Fr	Normalized Friction Ratio for Soil Behavior Type classification as defined by Robertson (1990)	$Fr=100\%\cdot\frac{fs}{qt-\sigma_v}$	2, 5
Q(1-Bq)	Q(1-Bq) grouping as suggested by Jefferies and Davies for their classification chart and the establishment of their I_c parameter	$Q\cdot(1-Bq)$ *where Bq is defined as above and Q is the same as the normalized tip resistance, Q_t, defined above*	6, 7
qc1	Normalized tip resistance, q_{c1}, using a fixed stress ratio exponent, n (this method has stress units)	$q_{c1} = q_t \cdot (Pa/\sigma_v')^{0.5}$ where: Pa = atmospheric pressure	21
qc1 (0.5)	Normalized tip resistance, q_{c1}, using a fixed stress ratio exponent, n (this method is unit-less)	$q_{c1}\ (0.5) = (q_t/P_a) \cdot (Pa/\sigma_v')^{0.5}$ where: Pa = atmospheric pressure	5
qc1 (Cn)	Normalized tip resistance, q_{c1}, based on C_n (this method has stress units)	$q_{c1}(Cn) = C_n * q_t$	5, 12
qc1 (Cq)	Normalized tip resistance, q_{c1}, based on C_q (this method has stress units)	$q_{c1}(Cq) = C_q * q_t$ (some papers use q_c)	5, 12
qc1n	normalized tip resistance, q_{c1n}, using a variable stress ratio exponent, n (where n=0.0, 0.70, 1.0) (this method is unit-less)	$q_{c1n} = (q_t / P_a)(P_a/\sigma_v')^n$ where: P_a = atm. Pressure and n varies as described below	3, 5
I_c or Ic (RW1998)	Soil Behavior Type Index as defined by Robertson and Fear (1995) and Robertson and Wride (1998) for estimating grain size characteristics and providing smooth gradational changes across the SBTn chart	$I_c = [(3.47 - \log_{10}Q)^2 + (\log_{10} Fr + 1.22)^2]^{0.5}$ *Where:* $Q=\left(\frac{qt-\sigma_v}{P_a}\right)\left(\frac{P_a}{\sigma_v'}\right)^n$ *Or* $Q=q_{c1n}=\left(\frac{qt}{P_a}\right)\left(\frac{P_a}{\sigma_v'}\right)^n$ *depending on the iteration in determining I_c* *And* *Fr is in percent* *P_a = atmospheric pressure* *n varies between 0.5, 0.70 and 1.0 and is selected in an iterative manner based on the resulting I_c*	3, 5, 21
Ic (PKR 2009)	Soil Behavior Type Index, I_c (PKR 2009) based on a variable stress ratio exponent n, which itself is based on I_c (PKR 2009). An iterative calculation is required to determine Ic (PKR 2009) and its corresponding n (PKR 2009).	I_c (PKR 2009) = $[(3.47 - \log_{10}Q_{tn})^2 + (1.22 + \log_{10}F_r)^2]^{0.5}$	15

Calculated Parameter	Description	Equation	Ref
n (PKR 2009)	Stress ratio exponent n, based on I_c (PKR 2009). An iterative calculation is required to determine n (PKR 2009) and its corresponding Ic (PKR 2009).	*n (PKR 2009) = 0.381 (I_c) + 0.05 (σ_v'/P_a) – 0.15*	15
Qtn (PKR 2009)	Normalized tip resistance using a variable stress ratio exponent based on I_c (PKR 2009) and n (PKR 2009). An iterative calculation is required to determine Qtn (PKR 2009).	$Q_{tn} = [(qt - \sigma_v)/P_a](P_a/\sigma_v')^n$ *where P_a = atmospheric pressure (100 kPa)* *n = stress ratio exponent described above*	15
FC	Apparent fines content (%)	*FC=1.75($Ic^{3.25}$) - 3.7* *FC=100 for $I_c > 3.5$* *FC=0 for $I_c < 1.26$* *FC = 5% if 1.64 < I_c < 2.6 AND F_r<0.5*	3
I_c Zone	This parameter is the Soil Behavior Type zone based on the I_c parameter (valid for zones 2 through 7 on SBTn or SBT Qtn charts)	I_c < 1.31 Zone = 7 1.31 < I_c < 2.05 Zone = 6 2.05 < I_c < 2.60 Zone = 5 2.60 < I_c < 2.95 Zone = 4 2.95 < I_c < 3.60 Zone = 3 I_c > 3.60 Zone = 2	3
State Param or State Parameter or ψ	The state parameter index, ψ, is defined as the difference between the current void ratio, e, and the critical void ratio, e_c. Positive ψ - contractive soil Negative ψ - dilative soil This is based on the work by Been and Jefferies (1985) and Plewes, Davies and Jefferies (1992) - vertical effective stress is used rather than a mean normal stress	See reference	6, 8
Yield Stress σ_p'	Yield stress is calculated using the following methods a) General method b) 1st order approximation using q_tNet (clays) c) 1st order approximation using Δu_2 (clays) d) 1st order approximation using q_e (clays)	All stresses in kPa a) $\sigma_p' = 0.33 \cdot (q_t - \sigma_v)^{m'} (\sigma_{atm}/100)^{1-m'}$ where $m' = 1 - \frac{0.28}{1 + (I_c/2.65)^{25}}$ b) $\sigma_p' = 0.33 \cdot (q_t - \sigma_v)$ c) $\sigma_p' = 0.54 \cdot (\Delta u_2)$ $\Delta u_2 = u_2 - u_0$ d) $\sigma_p' = 0.60 \cdot (q_t - u_2)$	19 20 20 20
OCR OCR(JS1978) OCR(Mayne2014) OCR (qtNet) OCR (deltaU) OCR (qe) OCR (Vs) OCR (PKR2015)	Over Consolidation Ratio based on a) Schmertmann (1978) method involving a plot plot of S_u/σ_v' /($S_u/\sigma_v')_{NC}$ and OCR b) based on Yield stresses described above c) approximate version based on qtNet d) approximate version based on Δu e) approximate version based on effective tip, q_e f) approximate version based on shear wave velocity, V_s g) based on Qt	 a) requires a user defined value for NC Su/P_c' ratio b through f) *based on yield stresses* g) OCR = 0.25·$(Qt)^{1.25}$	 9 19 20 20 20 18 32

Calculated Parameter	Description	Equation	Ref
Es/qt	Intermediate parameter for calculating Young's Modulus, E, in sands. It is the Y axis of the reference chart.	Based on Figure 5.59 in the reference	5
Es Young's Modulus E	Young's Modulus based on the work done in Italy. There are three types of sands considered in this technique. The user selects the appropriate type for the site from: a) OC Sands b) Aged NC Sands c) Recent NC Sands Each sand type has a family of curves that depend on mean normal stress. The program calculates mean normal stress and linearly interpolates between the two extremes provided in the E_s/q_t chart. Es is evaluated for an axial strain of 0.1%.	Mean normal stress is evaluated from: $\sigma'_m = \frac{1}{3}(\sigma'_v + \sigma'_h + \sigma'_h)^3$ where σ_v'= vertical effective stress σ_h'= horizontal effective stress *and* $\sigma_h = K_o \bullet \sigma_v'$ with K_o assumed to be 0.5	5
Delta U/TStress	Differential pore pressure ratio with respect to total stress	$= \frac{\Delta u}{\sigma_v}$ *where:* $\Delta u = u - u_{eq}$	CK*
Delta U/Estress, P Value, Excess Pore Pressure Ratio	Differential pore pressure ratio with respect to effective stress. Key parameter (P, Normalized Pore Pressure Parameter, Excess Pore Pressure Ratio) in the Winckler et. al. static liquefaction method.	$= \frac{\Delta u}{\sigma'_v}$ *where:* $\Delta u = u - u_{eq}$	25, 25a, CK*
Su/EStress	Undrained shear strength ratio with respect to vertical effective overburden stress using the S_u (N_{kt}) method	$= Su\ (N_{kt}) / \sigma_v'$	CK*
Gmax	G_{max} determined from SCPT shear wave velocities (not estimated values)	$G_{max} = \rho V_s^2$ where ρ is the mass density of the soil determined from the estimated unit weights at each test depth	27
qtNet/Gmax	Net tip resistance ratio with respect to the small strain modulus G_{max} determined from SCPT shear wave velocities (not estimated values)	$= (qt - \sigma_v) / G_{max}$ where $G_{max} = \rho V_s^2$ and ρ is the mass density of the soil determined from the estimated unit weights at each test depth	15, 28, 30

*CK – common knowledge

Table 1b. CPT Parameter Calculation Methods – Liquefaction Parameters

Calculated Parameter	Description	Equation	Ref
K_{SPT}	Equivalent clean sand factor for $(N_1)60$	$K_{SPT} = 1 + ((0.75/30) \bullet (FC - 5))$	10
K_{CPT} or K_C (RW1998)	Equivalent clean sand correction for q_{c1N}	$K_{cpt} = 1.0$ for $I_c \leq 1.64$ $K_{cpt} = f(I_c)$ for $I_c > 1.64$ (see reference) $K_c = -0.403\ I_c^4 + 5.581\ I_c^3 - 21.63 I_c^2 + 33.75\ I_c - 17.88$	3, 10
Kc (PKR 2010)	Clean sand equivalent factor to be applied to Q_{tn}	$K_c = 1.0$ for $I_c \leq 1.64$ $K_c = -0.403\ I_c^4 + 5.581\ I_c^3 - 21.63 I_c^2 + 33.75\ I_c - 17.88$ for $I_c > 1.64$	16
$(N_1)_{60cs}Ic$	Clean sand equivalent SPT $(N_1)_{60}I_c$. User has 3 options.	1) $(N_1)_{60cs}Ic = \alpha + \beta((N_1)_{60}I_c)$ 2) $(N_1)_{60cs}Ic = K_{SPT} * ((N_1)_{60}I_c)$ 3) $(q_{c1ncs})/(N_1)_{60cs}I_c = 8.5\ (1 - I_c/4.6)$ FC ≤ 5%: $\alpha = 0,\ \beta = 1.0$ FC ≥ 35% $\alpha = 5.0,\ \beta = 1.2$ 5% < FC < 35% $\alpha = exp[1.76 - (190/FC^2)]$ $\beta = [0.99 + (FC^{1.5}/1000)]$	10 10 5
q_{c1ncs}	Clean sand equivalent q_{c1n}	$q_{c1ncs} = q_{c1n} \bullet K_{cpt}$	3
Qtn,cs (PKR 2010)	Clean sand equivalent for Q_{tn} described above - Q_{tn} being the normalized tip resistance based on a variable stress exponent as defined by Robertson (2009)	$Q_{tn,cs} = Q_{tn} \cdot K_c$ (PKR 2016)	16
Su(Liq)/ESv	Liquefied shear strength ratio as defined by Olson and Stark	$\frac{Su(Liq)}{\sigma_v'} = 0.03 + 0.0143(q_{c1})$ Note: σ_v' and s_v' are synonymous	13
Su(Liq)/ESv (PKR 2010)	Liquefied shear strength ratio as defined by Robertson (2010)	$\frac{Su(Liq)}{\sigma_v'}$ Based on a function involving $Q_{tn,cs}$	16
Su (Liq) (PKR 2010)	Liquefied shear strength derived from the liquefied shear strength ratio and effective overburden stress		16
Cont/Dilat Tip	Contractive / Dilative qc1 Boundary based on $(N_1)_{60}$	$(\sigma_v')_{boundary} = 9.58 \times 10^{-4}\ [(N_1)_{60}]^{4.79}$ *qc1* is calculated from specified qt(MPa)/N ratio	13
CRR	Cyclic Resistance Ratio (for Magnitude 7.5)	$q_{c1ncs} < 50$: $CRR_{7.5} = 0.833\ [q_{c1ncs}/1000] + 0.05$ $50 \leq q_{c1ncs} < 160$: $CRR_{7.5} = 93\ [q_{c1ncs}/1000]^3 + 0.08$	10
Kg	Small strain Stiffness Ratio Factor, Kg	[Gmax/qt]/[qc1n^{-m}] m = empirical exponent, typically 0.75	26

Calculated Parameter	Description	Equation	Ref
SP Distance	State Parameter Distance, Winckler static liquefaction method	Perpendicular distance on Qtn chart from plotted point to state parameter Ψ = -0.05 curve	25
URS NP Fr	Normalized friction ratio point on Ψ = -0.05 curve used in SP Distance calculation		25
URS NP Qtn	Normalized tip resistance (Qtn) point on Ψ = -0.05 curve used in SP Distance calculation		25

Corrosivity Analysis – ASTM Test Methods

Dear Mr. Chen:

Pursuant to your request, CERCO Analytical has analyzed the soil samples submitted on September 08, 2022. Based on the analytical results, this brief corrosivity evaluation is enclosed for your consideration.

Based upon the resistivity measurements, Sample No.002 is classified as "corrosive" and Sample No.002 is classified as "moderately corrosive". All buried iron, steel, cast iron, ductile iron, galvanized steel and dielectric coated steel or iron should be properly protected against corrosion depending upon the critical nature of the structure. All buried metallic pressure piping such as ductile iron firewater pipelines should be protected against corrosion.

The chloride ion concentrations are none detected and 85 mg/kg, and are determined to be insufficient to attack steel embedded in a concrete mortar coating.

The sulfate ion concentrations reflect none detected with a reporting limit of 15 mg/kg.

The pH of the soils are 7.00 and 9.15, which does not present corrosion problems for buried iron, steel, mortar-coated steel and reinforced concrete structures.

The redox potentials are 220-mV and 300-mV. Both samples are indicative of potentially "slightly corrosive" soils resulting from anaerobic soil conditions.

This corrosivity evaluation is based on general corrosion engineering standards and is non-specific in nature. For specific long-term corrosion control design recommendations or consultation, please call *JDH Corrosion Consultants, Inc. at (925) 927-6630.*

We appreciate the opportunity of working with you on this project. If you have any questions, or if you require further information, please do not hesitate to contact us.

Very truly yours,
CERCO ANALYTICAL, INC.

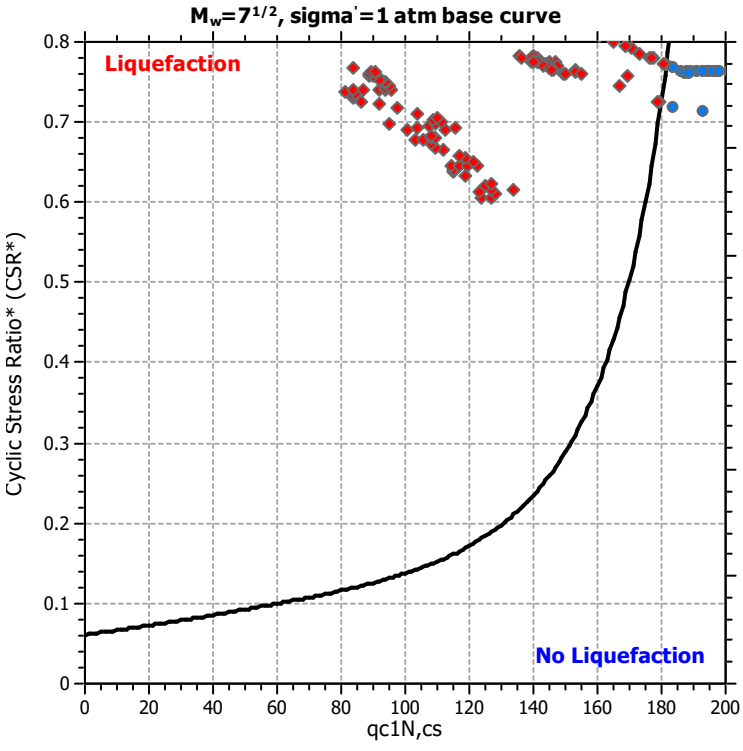
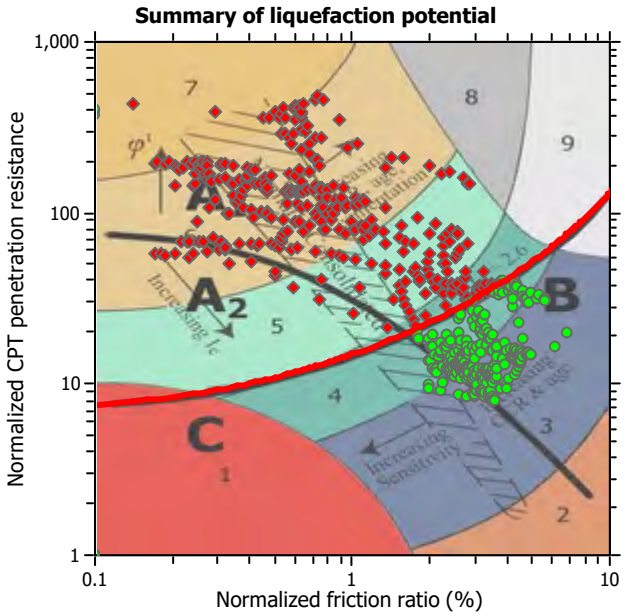
LIQUEFACTION ANALYSIS REPORT



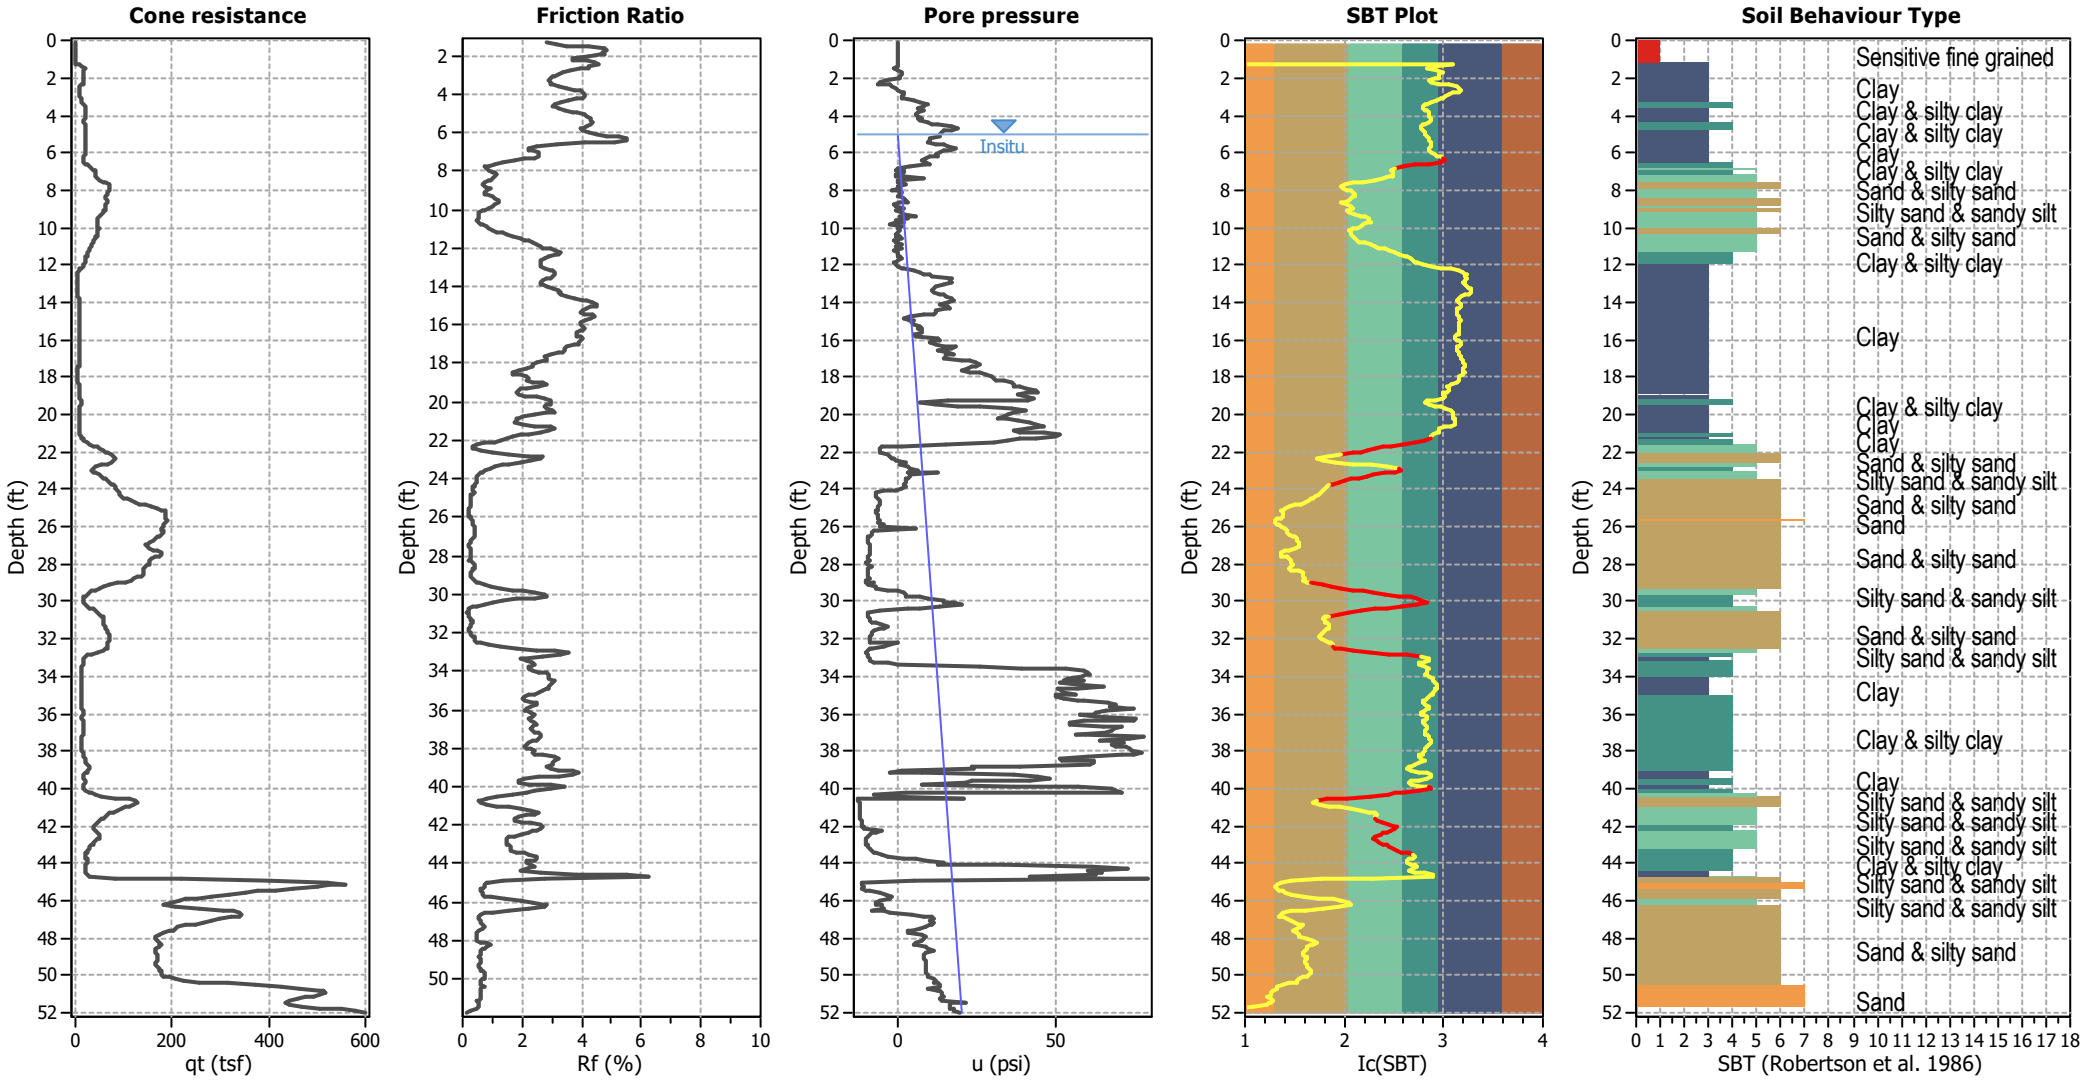
Project title : **Location :**



CPT file : 1-CPT1

Input parameters and analysis data

Analysis method:	B&I (2014)	G.W.T. (in-situ):	5.00 ft	Use fill:	No	Clay like behavior applied:	Sands only
Fines correction method:	B&I (2014)	G.W.T. (earthq.):	5.00 ft	Fill height:	N/A	Limit depth applied:	Yes
Points to test:	Based on Ic value	Average results interval:	3	Fill weight:	N/A	Limit depth:	50.00 ft
Earthquake magnitude M_w:	7.01	Ic cut-off value:	2.60	Trans. detect. applied:	Yes	MSF method:	Method based
Peak ground acceleration:	0.85	Unit weight calculation:	Based on SBT	K_σ applied:	No		



Zone A_1: Cyclic liquefaction likely depending on size and duration of cyclic loading
Zone A_2: Cyclic liquefaction and strength loss likely depending on loading and ground geometry
Zone B: Liquefaction and post-earthquake strength loss unlikely, check cyclic softening
Zone C: Cyclic liquefaction and strength loss possible depending on soil plasticity, brittleness/sensitivity, strain to peak undrained strength and ground geometry

CPT basic interpretation plots

SUBJECT: **Geotechnical Peer Review**
RE: Cedar Townhomes (DR2022-011)
38600 Cedar Boulevard (APN 92A-2585-12-1, 92A-2585-31)
Newark, California

At your request, we have completed a geotechnical peer review of the application for site development using:

- ENGEO Geotechnical Exploration (report), 38600 Cedar Boulevard, dated January 31, 2023; and

- California Geologic Survey (CGS) Guidelines for Evaluating and Mitigating Seismic Hazards in California, Special Publication 117A, re-adopted September 11, 2008.

In addition, we have reviewed pertinent technical maps and reports from our office files.

DISCUSSION

The referenced Geotechnical Exploration report indicates that the existing 3.5-acre parcel is bordered by the Interstate 880 to the northeast, a light industrial building to the southeast, Cedar Boulevard to the Southwest, and a drainage channel and light industrial building to the northwest. A historic map of the area, indicates that a natural creek drainage used to flow across the northern corner of the parcel, and currently there is an improved drainage channel extending along the northwestern property line. We understand that the proposed development consists constructing 14 buildings with a total of 76 townhomes, and installing paved roadways and parking areas, and buried utilities. It appears that the residences will be built at-grade, without subterranean levels.

The purpose of this review is to determine whether the referenced January 31, 2023 Geotechnical Exploration report is consistent with State criteria for project approval with respect to seismic hazards. Our geotechnical peer review does not include construction plan review and is not intended to address all geotechnical aspects of proposed project design.

SITE CONDITIONS

The project is located within a liquefaction hazard zone as mapped by the California Geological Survey, but not in an earthquake-induced landslide hazard zone. The project site is also not located within a State designated Alquist Priolo/fault rupture zone. According to the State's Seismic Hazard Mapping Act, a qualifying project within the liquefaction hazard zone must be supported by a site-specific geotechnical investigation (report) addressing the mapped hazard.

The site is relatively level, and located 3.9 kilometers (2.4 miles) southwest of the closest mapped trace of the Hayward Fault; however, the Geotechnical Consultant indicates that the Hayward Fault is 3.7 miles from the site.

The Geotechnical Consultant (ENGEO) investigated the subsurface conditions at the site by means of six test pits excavated to depths of 5 to 11.5 feet, three borings drilled to depths of 25 to 115 feet, and 12 Cone Penetration Tests (CPTs) probed to depths of approximately 32 feet to 50 feet; however, only the seven CPT's performed in 2022 were included in the submitted report.

ENGEO encountered up to 8 feet of fill (potentially undocumented) overlying alluvial clays, silts, sands, and gravels, and groundwater depths of 5.1 feet to 16.0 feet below ground surface in their borings and CPT probes. Historic groundwater depths are mapped at about 10 feet below the ground surface.

GEOTECHNICAL EVALUATIONS

ENGEO concluded that the primary geotechnical hazards potentially impacting the proposed development include, the existing fill, high groundwater, slope stability along the northwestern property line, and liquefaction and resulting surficial settlement.

ENGEO prepared a figure (Figure 3) showing approximate fill thickness across the site, and recommended that all undocumented fill be removed and recompacted. We note

that ENGEO has not accounted for the fill placed in the historic creek channel crossing the northern corner of the site in their Figure 3, Fill Contour Map.

ENGEO completed liquefaction analysis on all 12 CPT's using a Mw =7.01, a PGA = 0.85g, a depth to groundwater of 5.0, and an Ic threshold of 2.6, and calculated a maximum total liquefaction-induced settlement of up to approximately 5 inches. ENGEO has delineated an area of higher liquefaction potential on Figure 2, and it is located towards the southern corner of the site. ENGEO also concluded that the potential for surface rupture associated with liquefaction was low due to the 5- to 10-foot cap thickness of non-liquefiable soils overlying the liquefiable layers across much of the site, except towards the eastern side (and possibly southern side) of the site, where sand boils are possible. We note that ENGEO has not recommended measures to mitigate the potential for sand boils and other surficial manifestations of liquefaction at this area.

ENGEO completed slope stability analysis using a residual strength (C=400 psf) for the near surface sand layer, a groundwater surface at a depth of 5 feet, and a seismic coefficient of 0.22 to analyze lateral spreading/slope failure into the drainage channel along the northern property line. ENGEO concluded that there is a Factor of Safety = 1.5 for a seismically induced landslide into the adjacent drainage channel. ENGEO's analysis included the installation of two layers of geogrid reinforcement below the buildings along the northwestern property line to provide additional stability to the slope. ENGEO concluded that with the addition of the two layers of 15-foot long geogrid along the western property line, the proposed 5.5-foot setback from the top of the slope is adequate, and the creek bank should remain stable under seismic ground shaking. We note that this is not a typical lateral spreading type analysis, and that a lateral spreading analysis may indicate more than the code allowable 18 inches of displacement.

ENGEO also encountered a thin compressible clay layer at about 35 feet below ground surface, and concluded that the effect of building loads on this clay layers is minimal.

The Geotechnical Consultant has recommended post-tensioned slab foundations to support the proposed residential structures and provided seismic design criteria in their referenced Seismic Hazard Analysis letter, in accordance with CBC 2022 and ASCE 7-16.

CONCLUSIONS AND RECOMMENDED ACTIONS

The proposed site development is constrained by potentially liquefiable soils with total liquefaction induced settlement estimated at up to 5 inches as calculated by the

Geotechnical Consultant, the potential for sand boils towards the eastern and southern sides of the site, underlying undocumented compressible fill, and the potential for lateral spreading into the existing drainage channel located along the northwestern property line. The Geotechnical Consultant has completed site subsurface exploration in general conformance with State requirements. We concur with the Geotechnical Consultant that there is a potential for liquefaction likely resulting in relatively moderate post seismic shaking settlement at the ground surface.

Prior to providing a conclusion as to whether the seismic hazard has been satisfactorily evaluated, we request that the Geotechnical Consultant provide specific clarifications to several concerns. We recommend the Project Geotechnical Consultant address the following items prior to geotechnical seismic hazard sign-off:

1. **Geotechnical Clarifications** – The Geotechnical Consultant should clarify the following four items:

   a) The Geotechnical Consultant should provide specific recommendations to mitigate the potential for surficial manifestation of liquefaction (sand boils, ejecta, loss of bearing, etc.) where they might occur (eastern and southern sides of the site).

   b) The Geotechnical Consultant should analyze the potential for and magnitude of lateral spreading using lateral spreading analysis. If calculated lateral spreading magnitudes exceed the code maximum of 18 inches, then either mitigation or deep foundations are typically recommended.

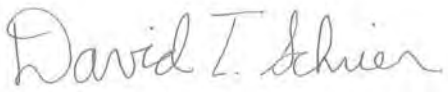
   c) The Geotechnical Consultant should show the historic creek alignment on their Figure 3, along with estimated fill thicknesses.

   d) The Geotechnical Consultant should complete and provide slope stability analysis evaluating and presenting results for both liquefiable sand layers and using similar search methods.

   e) The Geotechnical Consultant should complete and provide a seismic slope stability analysis using a residual strength for the liquefiable sand based on Idriss I.M., and Boulanger R.W., (2008, Page 129) which recommends that *"For example, if it is assumed that tan Φ'=0.6 for loose sands, then the S_r/σ_{vc} =0.05-0.12 obtained from most of these case histories are about 8-20% of the pre-earthquake drained strength (i.e. a strength loss of 80-92% because of liquefaction)."*

Clarifications addressing the above items should be organized by the Geotechnical Consultant in a letter-report submitted to the City for supplemental review by the City Geotechnical Consultant.

LIMITATIONS



This geotechnical peer review has been performed to provide technical advice to assist the City with its discretionary permit decisions. Our services have been limited to an independent review the referenced geotechnical report to determine the adequacy of the liquefaction hazard evaluation and any associated mitigation measures. Our opinions and conclusions are made in accordance with generally accepted principles and practices of the geotechnical profession. This warranty is in lieu of all other warranties, either expressed or implied.

Respectfully submitted,

RESPONSE TO GEOTECHNICAL REVIEW COMMENTS

References:
1. ENGEO. Geotechnical Exploration, 38600 Cedar Boulevard, Newark, California. January 31, 2023. Project No. 15799.004.000.
2. Cotton, Shires and Associates, Inc. Geotechnical Peer Review, Newark, California. April 10, 2023. Project DR2022-011.

Dear Mr. Proctor:

As requested, this letter provides our response(s) to geotechnical review comments by Cotton, Shires and Associates, Inc. (CSA) pursuant to their review of our geotechnical exploration report for the planned residential development at 38600 Cedar Boulevard in Newark, California. Our geotechnical report is contained in Reference 1, and the CSA review comments contained in Reference 2.

The planned development at the approximately 4-acre site will consist of 14 separate structures and parking areas, as well as site improvements (utilities, pavements, concrete flatwork, landscape, bioretention basin, and drainage). An Alameda County drainage channel is located along the western properly line of the project site. In Reference 1, ENGEO provided our geotechnical recommendations as Geotechnical Engineer-of-Record (GEOR) representing Cedar Blvd Townhomes, LLC for planned residential developments.

RESPONSE TO COMMENTS

The CSA comments are provided below in bold italics followed by our response(s).

CSA Comment 1: Provide specific recommendations to mitigate the potential for surficial manifestation of liquefaction (sand boils, ejecta, loss of bearing, etc.) where they might occur (eastern and southern sides of the site).

ENGEO Response to Comment 1: It is anticipated that remedial grading will be performed to mitigate risk of liquefaction and secondary ground deformation adversely impacting the planned development. This is anticipated to include overexcavation to remove all or a portion of the underlying loose susceptible soil deposits, restore grades with engineered fill, including possible inclusion or geogrid reinforcement if portions are to remain in place. Alternatively, other mitigation measures such as geopiers or ground improvement may be considered to densify loose susceptible layers.

To define areas susceptible to liquefaction, we performed densification analysis using methods from Idriss and Boulanger (2008). The peak ground acceleration of 0.85g was taken from the mapped seismic design parameters for the site (Table 3.7-1). The predominant earthquake magnitude value of 7.01M was chosen based on our deaggregation of the hazard at a spectral period of the peak ground acceleration for a 2475-year return period, and a design groundwater level of 9 feet below ground surface (bgs) is the assumed historic high level. Our densification analysis indicates that seismically induced settlements of up to 5½ inches may occur in the vicinity of Boring 2-B1. Considering the potential for liquefaction in Boring 2-B1, we performed an assessment for sand boils using methods by Youd and Garris (1995). The results indicate the layer of non-liquefiable cap above the liquefiable layer is marginal at approximately the southeastern corner of the site and surface manifestation of liquefaction is likely.

***CSA Comment 2:* Analyze the potential for and magnitude of lateral spreading using lateral spreading analysis. If calculated lateral spreading magnitudes exceed code maximum of 18 inches, then either mitigation or deep foundations are typically recommended.**

ENGEO Response to Comment 2: We utilized the methodology outlined by Youd, Hansen, and Bartlett (2002) to evaluate the potential for lateral spreading considering the open flood control channel located northwest of the site, assuming that the subgrade is not being reinforced by geogrid. We understand that the townhomes will be located 5½ feet away from the top of slope. Within this boundary, our borings encountered potentially liquefiable material in Boring 2-B2 at a depth of approximately 8 feet below ground surface approximately 5 feet in thickness.

Under an extreme seismic event, we compute a range of lateral displacement at the western site boundary could range from 3 to 13 inches (depending on relationship used in our analysis). However, it is important to note that the results of these lateral displacement analyses are considered indices of expected seismic performance and not predictions of actual slope displacements.

It is our experience that the risk of lateral spreading may be mitigated by removing the potential liquefiable material and completely replacing these with engineered fill; actual depth and lateral extent of the overexcavation and recompaction process would be determined during grading. Alternatively, the liquefiable layer may be disrupted with a trench of engineered fill along the western boundary of the site; the trench would be anticipated to extend a minimum of 15 feet below ground surface. The actual depth and lateral extent of the trench should be determined by ENGEO during grading.

***CSA Comment 3:* Show the historic creek alignment on Figure 3, along with estimated fill thicknesses.**

ENGEO Response to Comment 3: We have revised Figure 3 – Fill Contour to also include the historic creek alignment based on a topographic map from the United States Geological Survey (USGS) dated 1947. We have attached the updated figure to this letter.

***CSA Comment 4:* Complete and provide slope stability analysis evaluating and presenting results for both liquefiable sand layers and using similar search methods.**

ENGEO Response to Comment 4: We have included slope stability analysis results for both liquefiable sand layers as an attachment to this letter. We analyzed both layers using residual strengths based on Seed and Harder (1990) and Boulanger and Idriss (2008), as requested in Comment 5. The Boulanger and Idriss (2008) method provide a residual strength of the shallow

layer of approximately 80 psf and a residual strength of the deeper layer of approximately 200 psf. Utilizing the Boulanger and Idriss (2008) method for residual strength of the shallow liquefiable sand layer results in a factor of safety less than 1.0. Slope failure due to liquefaction of the shallow sand layer can be mitigated by installation of geotextile fabric directly beneath the buildings, localized ground improvement to densify the sand layer, or complete removal and replacement of the shallow liquefiable sand layer.

CSA Comment 5: ***Complete and provide seismic slope stability analysis using a residual strength for the liquefiable sand based on Idriss I.M, and Boulanger R.W., (2008, Page 129) which recommends that "For example, if it is assumed that tanϕ' =0.6 for loose sands, then S_r/σ_{vc} =0.05-0.12 obtained from most of these case histories are about 8-20% of the pre-earthquake drained strength (i.e., a strength loss of 80-92% because of liquefaction)."***

ENGEO Response to Comment 5: We performed a residual strength correlation using the Idriss and Boulanger (2008) method applied to the cone penetration test (CPT) data in the computer program, CLiq. The analysis results in a residual strength of the shallow layer of approximately 80 psf and a residual strength of the deeper layer of approximately 200 psf. The results of the slope stability analysis are presented as an attachment to this letter. Utilizing Boulanger and Idriss (2008) results in a factor of safety (FOS) of less than 1.0 when evaluating the shallow liquefiable layer under seismic conditions. While we believe the Boulanger and Idriss (2008) residual strength correlation to be highly conservative, we recognize that the true residual strength of the liquefied soil will likely fall somewhere between the residual strength provided by Seed and Harder (1990) and Boulanger and Idriss (2008).

The shallow, liquefiable sand layer is variable and discontinuous throughout the site. To mitigate potential liquefaction-induced settlement and reduce the possibility of liquefaction-induced slope failure, earthwork improvements may be required. Improvement measures could include installation of geotextile fabric directly beneath the building, localized ground improvement to densify the sand layer, or complete removal and replacement of the shallow liquefiable sand layer.

If you have any questions or comments regarding this letter, please call and we will be glad to discuss them with you.

Sincerely,

ENGEO Incorporated

SUBJECT: **Supplemental Geotechnical Peer Review**
RE: Cedar Townhomes (DR2022-011)
38600 Cedar Boulevard (APN 92A-2585-12-1, 92A-2585-31)
Newark, California

At your request, we have completed a supplemental geotechnical peer review of the application for site development using:

- ENGEO Response to Geotechnical Review Comments (letter), 38600 Cedar Boulevard, dated June 5, 2023;
- ENGEO Geotechnical Exploration (report), 38600 Cedar Boulevard, dated January 31, 2023; and
- California Geologic Survey (CGS) Guidelines for Evaluating and Mitigating Seismic Hazards in California, Special Publication 117A, re-adopted September 11, 2008.

In addition, we have reviewed pertinent technical maps and reports from our office files.

DISCUSSION

The referenced Geotechnical Exploration report indicates that the existing 3.5-acre parcel is bordered by the Interstate 880 to the northeast, a light industrial building to the southeast, Cedar Boulevard to the Southwest, and a drainage channel and light industrial building to the northwest. A historic map of the area, indicates that a natural creek drainage used to flow across the northern corner of the parcel, and currently there is an improved drainage channel extending along the northwestern property line. We understand that the proposed development consists constructing 14 buildings with a total

of 76 townhomes, and installing paved roadways and parking areas, and buried utilities. It appears that the residences will be built at-grade, without subterranean levels.

The purpose of this supplemental peer review is to evaluate whether the referenced January 31, 2023 Geotechnical Exploration report and June 5, 2023 Response to Geotechnical Review Comments are consistent with State criteria for project approval with respect to seismic hazards. Our geotechnical peer review does not include construction plan review and is not intended to address all geotechnical aspects of proposed project design.

SITE CONDITIONS

The project is located within a liquefaction hazard zone as mapped by the California Geological Survey, but not in an earthquake-induced landslide hazard zone. The project site is also not located within a State designated Alquist Priolo/fault rupture zone. According to the State's Seismic Hazard Mapping Act, a qualifying project within the liquefaction hazard zone must be supported by a site-specific geotechnical investigation (report) addressing the mapped hazard.

The Geotechnical Consultant (ENGEO) investigated the subsurface conditions at the site by means of six test pits excavated to depths of 5 to 11.5 feet, three borings drilled to depths of 25 to 115 feet, and 12 Cone Penetration Tests (CPTs) probed to depths of approximately 32 feet to 50 feet; however, only the seven CPT's performed in 2022 were included in the submitted report.

ENGEO encountered up to 8 feet of fill (potentially undocumented) overlying alluvial clays, silts, sands, and gravels, and groundwater depths of 5.1 feet to 16.0 feet below ground surface in their borings and CPT probes. Historic groundwater depths are mapped at about 10 feet below the ground surface. We refer to our prior letter for a more detailed description of the site conditions.

RESPONSE TO PEER REVIEW COMMENTS

The Geotechnical Consultant (ENGEO) provided responses to five items listed in our Geotechnical Peer Review letter dated April 10, 2023, and are summarized below:

a) *"The Geotechnical Consultant should provide specific recommendations to mitigate the potential for surficial manifestation of liquefaction (sand boils, ejecta, loss of bearing, etc.) where they might occur (eastern and southern sides of the site)."*

ENGEO Response to Comment 1: It is anticipated that remedial grading will be performed to mitigate risk of liquefaction and secondary ground deformation adversely impacting the planned development. This is anticipated to include over excavation to remove all or a portion of the underlying loose susceptible soil deposits, restore grades with engineered fill, including possible inclusion or geogrid reinforcement if portions are to remain in place. Alternatively, other mitigation measures such as geopiers or ground improvement may be considered to densify loose susceptible layers.

To define areas susceptible to liquefaction, we performed densification analysis using methods from Idriss and Boulanger (2008). The peak ground acceleration of 0.85g was taken from the mapped seismic design parameters for the site (Table 3.7-1). The predominant earthquake magnitude value of 7.01M was chosen based on our deaggregation of the hazard at a spectral period of the peak ground acceleration for a 2475-year return period, and a design groundwater level of 9 feet below ground surface (bgs) is the assumed historic high level. Our densification analysis indicates that seismically induced settlements of up to 5½ inches may occur in the vicinity of Boring 2-B1. Considering the potential for liquefaction in Boring 2-B1, we performed an assessment for sand boils using methods by Youd and Garris (1995). The results indicate the layer of non-liquefiable cap above the liquefiable layer is marginal at approximately the southeastern corner of the site and surface manifestation of liquefaction is likely.

b) *"The Geotechnical Consultant should analyze the potential for and magnitude of lateral spreading using lateral spreading analysis. If calculated lateral spreading magnitudes exceed the code maximum of 18 inches, then either mitigation or deep foundations are typically recommended."*
ENGEO Response to Comment 2: We utilized the methodology outlined by Youd, Hansen, and Bartlett (2002) to evaluate the potential for lateral spreading considering the open flood control channel located northwest of the site, assuming that the subgrade is not being reinforced by geogrid. We understand that the townhomes will be located 5½ feet away from the top of slope. Within this boundary, our borings encountered potentially liquefiable material in Boring 2-B2 at a depth of approximately 8 feet below ground surface approximately 5 feet in thickness.
Under an extreme seismic event, we compute a range of lateral displacement at the western site boundary could range from 3 to 13 inches (depending on relationship used in our analysis). However, it is important to note that the results of these lateral displacement analyses are considered indices of expected seismic performance and not predictions of actual slope displacements.

It is our experience that the risk of lateral spreading may be mitigated by removing the potential liquefiable material and completely replacing these with engineered fill; actual depth and lateral extent of the overexcavation and recompaction process would be determined during grading. Alternatively, the liquefiable layer may be disrupted with a trench of engineered fill along the western boundary of the site; the trench would be anticipated to extend a minimum of 15 feet below ground surface. The actual depth and lateral extent of the trench should be determined by ENGEO during grading.

c) *"The Geotechnical Consultant should show the historic creek alignment on their Figure 3, along with estimated fill thicknesses."*
ENGEO Response to Comment 3: We have revised Figure 3 – Fill Contour to also include the historic creek alignment based on a topographic map from the United States Geological Survey (USGS) dated 1947. We have attached the updated figure to this letter.

d) *"Complete and provide slope stability analysis evaluating and presenting results for both liquefiable sand layers and using similar search methods."*
ENGEO Response to Comment 4: We have included slope stability analysis results for both liquefiable sand layers as an attachment to this letter. We analyzed both layers using residual strengths based on Seed and Harder (1990) and Boulanger and Idriss (2008), as requested in Comment 5. The Boulanger and Idriss (2008) method provide a residual strength of the shallow layer of approximately 80 psf and a residual strength of the deeper layer of approximately 200 psf. Utilizing the Boulanger and Idriss (2008) method for residual strength of the shallow liquefiable sand layer results in a factor of safety less than 1.0. Slope failure due to liquefaction of the shallow sand layer can be mitigated by installation of geotextile fabric directly beneath the buildings, localized ground improvement to densify the sand layer, or complete removal and replacement of the shallow liquefiable sand layer.

e) *"The Geotechnical Consultant should complete and provide a seismic slope stability analysis using a residual strength for the liquefiable sand based on Idriss I.M., and Boulanger R.W., (2008, Page 129) which recommends that "For example, if it is assumed that* $\tan\Phi'=0.6$ *for loose sands, then the* $Sr/\sigma_{vc}=0.05\text{-}0.12$ *obtained from most of these case histories are about 8-20% of the pre-earthquake drained strength (i.e. a strength loss of 80-92% because of liquefaction)."*
ENGEO Response to Comment 5: We performed a residual strength correlation using the Idriss and Boulanger (2008) method applied to the cone penetration test (CPT) data in the computer program, CLiq. The analysis results in a residual strength of the shallow layer of approximately 80 psf and a residual strength of the deeper layer of approximately 200 psf. The results of the slope stability analysis

are presented as an attachment to this letter. Utilizing Boulanger and Idriss (2008) results in a factor of safety (FOS) of less than 1.0 when evaluating the shallow liquefiable layer under seismic conditions. While we believe the Boulanger and Idriss (2008) residual strength correlation to be highly conservative, we recognize that the true residual strength of the liquefied soil will likely fall somewhere between the residual strength provided by Seed and Harder (1990) and Boulanger and Idriss (2008). The shallow, liquefiable sand layer is variable and discontinuous throughout the site. To mitigate potential liquefaction-induced settlement and reduce the possibility of liquefaction-induced slope failure, earthwork improvements may be required. Improvement measures could include installation of geotextile fabric directly beneath the building, localized ground improvement to densify the sand layer, or complete removal and replacement of the shallow liquefiable sand layer.

CONCLUSIONS AND RECOMMENDED ACTIONS

The proposed site development is constrained by potentially liquefiable soils with total liquefaction induced settlement estimated at up to 5 inches as calculated by the Geotechnical Consultant, the potential for sand boils towards the eastern and southern sides of the site, underlying undocumented compressible fill, and the potential for lateral spreading into the existing drainage channel located along the northwestern property line. The Geotechnical Consultant has completed site subsurface exploration in general conformance with State requirements. We concur with the Geotechnical Consultant that there is a potential for liquefaction likely resulting in relatively moderate post seismic shaking settlement at the ground surface.

The Geotechnical Consultant provided responses to the five items we requested Geotechnical Clarifications. Based on our review of their responses, it appears that the Geotechnical Consultant provided various conceptual mitigation alternatives that are typically recommended to mitigate surficial manifestation of liquefaction, lateral spreading, and liquefaction induced slope instability.

The Response to Geotechnical Review Comments letter prepared by the Geotechnical Consultant has not addressed our prior request for clarification pertaining to potential seismic hazards impacting the proposed project. Consequently, we have reiterated and paraphrased three of remaining items that the Geotechnical Consultant should provide specific recommendations, including, but not limited to the recommended mitigation method, depth range of mitigation (shown on a cross section), and extent of mitigation (shown on a map). If ground improvement is recommended include performance testing requirements, minimum acceptable performance, and supplemental mitigation if performance testing fails. Mitigation should be recommended where sand

boils/loss of bearing material is a potential, where excessive lateral spreading is calculated and where liquefaction induced slope instability is calculated with a Factor of Safety of less than 1.0.

Prior to providing a conclusion as to whether the seismic hazard has been satisfactorily evaluated and suitable mitigation recommendations provided, we request that the Geotechnical Consultant develop and provide specific recommendation clarifications to three remaining items prior to recommended geotechnical seismic hazard sign-off:

1. **Geotechnical Clarifications** – The Geotechnical Consultant should provide specific recommendations to mitigate the identified seismic hazards discussed in the following three items:

   a) The Geotechnical Consultant should provide specific recommendations to mitigate the potential for surficial manifestation of liquefaction (sand boils, ejecta, loss of bearing, etc.) where they might occur (eastern and southern sides of the site). In addition to the recommended method, the Geotechnical Consultant should include, but not limited to, depth range of mitigation (shown on a cross section), and extent of mitigation (show on a map).

   b) The Geotechnical Consultant should provide specific recommendations to mitigate the potential for lateral spreading. In addition to the recommended method, the Geotechnical Consultant should include, but not limited to, depth range of mitigation (show on a cross section), and extent of mitigation (show on a map).

   c) Based on the provided results of the Geotechnical Consultants seismic slope stability analysis, it appears that the calculated factor of safety is at or less than 1.0 if the underlying sand layer(s) are assumed to liquefy and decreased to residual shear strength. Consequently, The Geotechnical Consultant should provide specific recommendations to mitigate the potential liquefaction induced slope instability. In addition to the recommended method, the Geotechnical Consultant should include, but not limited to, depth range of mitigation (shown on a cross section), and extent of mitigation (shown on a map). The Geotechnical Consultant should provide seismic slope stability analysis implementing the

recommended mitigation alternatives and show the mitigated seismic factor of safety is equal to or greater than 1.0.

Clarifications addressing the above items should be organized by the Geotechnical Consultant in a letter-report submitted to the City for supplemental review by the City Geotechnical Consultant.

LIMITATIONS

This supplemental geotechnical peer review has been performed to provide technical advice to assist the City with its discretionary permit decisions. Our services have been limited to an independent review the referenced geotechnical report to determine the adequacy of the liquefaction hazard evaluation and any associated mitigation measures. Our opinions and conclusions are made in accordance with generally accepted principles and practices of the geotechnical profession. This warranty is in lieu of all other warranties, either expressed or implied.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Dear Ms. Wilson:

ENGEO is pleased to present our phase I environmental site assessment of the subject property (Property), located in Newark, California. The attached report includes a description of the site assessment activities, along with ENGEO's findings, opinions, and conclusions regarding the Property.

ENGEO has the specific qualifications based on education, training, and experience to assess the nature, history, and setting of the Property, and has developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312 and the American Society for Testing and Materials (ASTM) Practice E1527-21. We declare that, to the best of our professional knowledge and belief, the responsible charge for this study meets the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312 and ASTM E1527-21.

We are pleased to be of service to you on this project. If you have any questions concerning the contents of our report, please contact us.

Sincerely,

ENGEO Incorporated

EXECUTIVE SUMMARY

ENGEO conducted a phase I environmental site assessment for the property located at 38600 Cedar Boulevard and 38683 Timber Street in Newark, California (Property). The Property is approximately 3.45 acres in area and is identified by Assessor's Parcel Numbers (APNs) 92A-2585-12-1 and 92A-2585-31.

The Property consists of a construction and forestry equipment rental business. Review of historical records indicates that the Property was used for dry farming until the early 1960s when the eastern warehouse and office were constructed. Since that time, the Property has been occupied by various construction and agricultural equipment rental, sales, and/or repair businesses. The first known tenant was International Harvester Company. Horton Equipment Company (Empire) began leasing the site in the 1970s. Nortrax began leasing the Property in 2001. Papé Machinery, the current tenant, has leased the Property since 2005 and currently operates a construction and forestry equipment rental facility.

This assessment included a review of local, state, tribal, and federal environmental record sources, standard historical sources, aerial photographs, fire insurance maps, and physical setting sources. A reconnaissance of the Property was completed to review site use and current conditions to check for the storage, use, production, or disposal of hazardous or potentially hazardous materials and to conduct written/oral interviews with persons knowledgeable about current and past site use.

The site reconnaissance, records review, and review of regulatory databases maintained by county, state, tribal, and federal agencies have revealed evidence of soil, groundwater, and soil gas impacts at the Property in connection with former leaking underground storage tanks and hazardous materials handling. Regional Water Quality Control Board (RWQCB) GeoTracker cleanup case T0600100516 (under the name Nortrax West) is the open cleanup case (as of September 1992) pertaining to the Property.

Five underground storage tanks were formerly located at the Property. One 10,000-gallon diesel underground storage tank (UST), one 10,000-gallon gasoline UST, and two 500- or 550-gallon diesel USTs were formerly located in the eastern area of the 38683 Timber Street parcel. A former 500- or 550-gallon waste oil tank was located in the southern area of the parcel, south of the building, near Cedar Boulevard. An additional 500- or 550-gallon diesel UST was discovered in 1989. Four groundwater monitoring wells (MW-1 through MW-4) were first installed in the vicinity of the four known fuel USTs in 1986. All five USTs were removed in 1989. Groundwater monitoring was conducted following installation of the monitoring wells and after the tanks were removed and indicated that the USTs had impacted the underlying soil and/or groundwater with the following main contaminants.

- TPH-g, TPH-d, and TPH-mo
- Benzene
- 1,1-DCE
- Cis-1,2-DCE
- 1,1-DCA
- Methylene Chloride
- TCE
- 1,1,1-TCA
- PCE
- Carbon Tetrachloride

Groundwater monitoring has been conducted quarterly or semi-annually during most years since removal of the tanks. The fuel USTs were generally associated with total petroleum hydrocarbon contamination in groundwater while the waste oil tank was generally associated with total petroleum hydrocarbon and volatile organic compound contamination in groundwater. In soil, TPH and VOC impacts have been sporadically detected, and minor heavy metal impacts to soil have also been noted.

Several recent soil, groundwater, and soil gas investigations have been conducted to provide additional characterization and address impediments to case closure. Soil sampling results, including those from ENGEO's August 2020 phase II investigation, have shown decreasing concentrations of TPH and VOCs, particularly near the former fuel USTs. Groundwater impacts appear to be localized to the immediate vicinity of the former tanks and continue to attenuate based on historical monitoring events.

Though soil and groundwater impacts appear to have attenuated and are unlikely to continue to contribute as a vapor intrusion source, soil gas concentrations at the Property remain elevated. PCE concentrations were significantly in exceedance of the RWQCB Environmental Screening Level (ESL) for all, but one of 13 soil gas sample points assessed in ENGEO's August 2020 investigation. Soil gas impacts appear to be the most concentrated in the vicinity of the former waste oil UST, though there is currently limited control on the extent of the PCE soil vapor plume, based on the data. Additional soil gas characterization has been recommended to determine the extent of the chlorinated solvent vapor plume.

In a September 2021 letter to the current property owner, the Alameda County Water District (ACWD) requested that an additional soil vapor investigation be conducted. ACWD cited the soil gas results of ENGEO's previous phase II investigation, noting that the elevated VOC concentrations may pose a risk to human health. ACWD noted that the extent of VOC contamination in soil vapor should be defined on site and off site, and any potential vapor intrusion to indoor air pathways should be evaluated. Depending on the results of the investigation, a Corrective Action Plan to remediate and/or mitigate the soil vapor impact may be required. ENGEO submitted a workplan for additional soil gas investigation in March 2022 to address the additional soil gas sampling. The investigation has not been completed to date.

During the site reconnaissance, the following hazardous materials, petroleum-containing products, and other features of potential environmental concern were identified.

- Two active concrete above-ground storage tanks (ASTs) which contained diesel and used waste oil.
- Uncovered and covered drums throughout the Property used to store cleaning solutions, hydraulic oil, antifreeze, waste gasoline, waste diesel, used antifreeze, used absorbent materials, used coolant, used solvents, used diesel, and other waste or unknown materials.
- Large quantities of small quantity (5 gallons or less) chemicals mainly including engine coolant, hydraulic oil, engine oil, transmission oil, compression oil, and gear lubricant.
- Small spray cans and other containers (1 gallon or less) of various lubricants and cleaners.
- Four empty ASTs that formerly contained hydraulic fluid, SAE 10W-30 engine oil, hydraulic tractor fluid, and SAE 15W-40 engine oil.
- A 270-gallon tote of FlocClear 2% BioPolymer is used to manage settlement of solids in the stormwater filtration system.

- Acetylene and propane gas tanks.
- Old battery storage.
- Two pole-mounted transformers on the northwestern corner of the Property and on the southern portion of the Property.
- Six on-site groundwater monitoring wells and one off-site groundwater monitoring wells.

Several commercial/industrial businesses are located west to northwest of the Property. However, this assessment did not identify contaminated facilities within the appropriate American Society for Testing and Materials (ASTM) search distances that would reasonably be expected to impact the Property.

Based on the findings of this assessment, no controlled Recognized Environmental Conditions (RECs) or historical RECs were identified.

The following REC was identified for the Property.

- Soil gas impacts remain elevated in the area of the former waste oil tank. PCE concentrations were significantly in exceedance of the residential ESL for all but one of 13 soil gas sample points assessed in ENGEO's August 2020 investigation. The site has not yet achieved closure for the former USTs from ACWD and RWQCB. The current ACWD-approved work plan should be implemented to determine the extent of soil gas impacts and potential remediation requirements.

Based on the review of regulatory databases and site reconnaissance, we present information on features of potential environmental concern that were either contained in the databases or observed on the Property. These features were not considered to be RECs. We briefly discuss each feature below.

- Given the age of the buildings on site, there is the potential for lead-based paint (LBP) and asbestos-containing material (ACM) to exist within building materials.
- Numerous chemicals are stored in drums and other containers on site that may have contributed to de minimis releases to soil. Oil impacts to the surface from heavy machinery were also observed during the site reconnaissance.

We have performed a phase I environmental site assessment in general conformance with the scope and limitations of ASTM E1527-21 and the standards and practices of the All-Appropriate Inquiry – Final Rule (40 Code of Federal Regulations Part 312). Any exception to, or deletions from this practice are described in Section 8.1 of the report.

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC.

No data gaps were identified during this process. This assessment has revealed the following evidence of RECs in connection with the Property.

- Soil gas impacts remain elevated in the area of the former waste oil tank. PCE concentrations were significantly in exceedance of the residential ESL for all but one of 13 soil gas sample

points assessed in ENGEO's August 2020 investigation. The site has not yet achieved closure for the former USTs from ACWD and RWQCB.

ENGEO recommends the following.

- We recommend implementing the additional soil gas characterization and groundwater monitoring proposed in ENGEO's March 2022 Work Plan, in order to delineate the extent of the PCE plume and assess off-site impacts.
- Based on the use of heavy equipment on site, near-surface soil is potentially impacted by metals, TPH, VOCs, and SVOCs in areas not well characterized during previous investigations. We recommend that a soil management plan be implemented to manage impacted soil that may be encountered during future site development.
- Given the age of the buildings on site, there may be the potential for lead-based paint (LBP) and asbestos-containing material (ACM) within building materials. We recommend retaining a licensed ACM and LBP contractor prior to future building demolition.

1.0 INTRODUCTION

1.1 PURPOSE OF PHASE I ENVIRONMENTAL SITE ASSESSMENT

This assessment was performed at the request of Resmark Equity Partners, LLC for the purpose of environmental due diligence during property acquisition. The objective of this phase I environmental site assessment is to identify Recognized Environmental Conditions (RECs) associated with the Property. As defined in the ASTM Standard Practice E1527-21, an REC is "(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment."

1.2 DETAILED SCOPE OF SERVICES

The scope of services performed included the following.

- A review of previous environmental reports prepared for the Property.
- A review of publicly available and practicably reviewable standard local, state, tribal, and federal environmental record sources.
- A review of publicly available and practicably reviewable standard historical sources, aerial photographs, fire insurance maps and physical setting sources.
- A reconnaissance of the Property to review site use and current conditions. The reconnaissance was conducted to check for the storage, use, production, or disposal of hazardous or potentially hazardous materials.
- Written/oral interviews with owners/occupants and public sector officials.
- Preparation of this report with our findings, opinions, and conclusions.

1.3 SITE LOCATION AND DESCRIPTION

The Property is located at 38600 Cedar Boulevard and 38683 Timber Street in Newark, California (Figures 1 and 2). The approximately 3.45-acre Property is identified as APNs 92A-2585-12-1 and 92A-2585-31 (Figure 3) and is currently occupied by a construction and forestry equipment rental/sales business.

1.4 CURRENT USE OF PROPERTY AND ADJOINING PROPERTIES

A construction and forestry equipment dealer (Papé Machinery) currently occupies the Property. The majority of the Property is covered with concrete and two large warehouse buildings, with the northeastern portion covered in gravel and vegetation. The Property is operated as a storage and maintenance facility for the vehicle and equipment operations. Maintenance activities are completed under cover, within the large maintenance warehouse. Equipment and vehicle washing is completed in a bermed area where water is collected and managed. Storage of equipment and chemicals is completed in the large warehouses and outside on pallets. Papé Machinery operates a large stormwater treatment system that removes contaminants from the water prior to discharge into the storm system.

The Property has above-ground storage tanks (ASTs) that are in use and some that are no longer used but are still on site. Additionally, there were former underground storage tanks (USTs) that have leaked. A system of monitoring wells was installed to monitor the impacts in groundwater under an open case with ACWD and the RWQCB. Ohana Land Company, LLC, the current Property owner, has recently sought legal counsel to establish the responsible party (RP) for cleanup. Ohana is not responsible parties. Ohana acknowledges that Ohana and Nortax (through its dealings with Empire Tractor) are considered responsible parties.

Based on a review of current records and our site reconnaissance, the adjoining site users are summarized below.

TABLE 1.4-1: Adjoining Site Uses

DIRECTION	SITE USE
North	Interstate 880
South	Residential
East	Commercial development
West	Commercial development

1.5 SITE AND VICINITY CHARACTERISTICS

According to published topographic maps, the Property is situated at an elevation of approximately 30 feet above mean sea level (msl). Review of the Geologic map of the Newark 7.5-minute quadrangle, Alameda County, California (Helley, E.J., and Miller, D.M, 1992) found that the Property is underlain by older Pleistocene alluvial fan (Qpaf) characterized by loose sand and gravel.

Previous investigations have encountered groundwater beneath the Property at depths of approximately 10 to 15 feet below ground surface (bgs). The historical groundwater flow direction at the Property varies between west-southwest and south-southeast. The most recent groundwater monitoring report prepared by TRC recorded a southwest direction (TRC, 2018).

Fluctuations in groundwater levels may occur seasonally and over a period of years due to variations in precipitation, temperature, irrigation, and other factors.

We reviewed the Department of Conservation, Geologic Energy Management (CalGEM), formerly the Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR), website and map database to determine if any historical oil and/or gas wells were located within the Property. No wells were mapped within 1 mile of the Property.

We reviewed the National Pipeline Mapping System (NPMS) public viewer website for information about petroleum, natural gas, or hazardous liquid storage, processing, or transmission facilities in the vicinity of the Property. One active natural gas pipeline operated by PG&E is located parallel to Highway I-880 along the northern Property boundary.

1.6 INDOOR AIR QUALITY

An evaluation of indoor air quality, mold, or radon was not included as part of the contracted scope of services. The California Department of Public Health has conducted studies of radon risks throughout the state, sorted by zip code. Results of the studies indicate that 19 tests were

conducted within the Property zip code, with no tests exceeding the current EPA action level of 4 picocuries per liter {pCi/L}[1]).

In accordance with ASTM E2600-15 (Tier 1) (*Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*); there is one potential petroleum hydrocarbon source for vapor intrusion within 1/10 mile of the Property or volatile organic compound (VOCs) sources within 1/3 mile of the Property, Fremont paving. This facility is discussed in Section 3.3.1.2.

Soil vapor issues have been previously documented for the Property associated with past land use (Section 2.0).

2.0 SITE HISTORY AND PREVIOUS ENVIRONMENTAL REPORTS

Nortrax West (GeoTracker case ID T0600100516) is the open cleanup case (as of September 1992) pertaining to the Property. The Property has been occupied by various construction and agricultural equipment rental, sales, and/or repair businesses throughout its history. The first known tenant was International Harvester Company. The site was purchased by the Horton family in the 1970s. Between 1975 and 1979, the western warehouse was constructed. Horton Equipment Company operated at the Property until 1985, at which time Empire Tractor and Equipment Company began leasing the site. Nortrax purchased Empire in 2001 and were subsequently purchased by Papé Machinery in 2005, which remains the current tenant.

One 10,000-gallon diesel underground storage tank (UST), one 10,000-gallon gasoline UST, and two 550-gallon diesel USTs were formerly located in the eastern area of the 38683 Timber Street parcel. A former 550-gallon waste oil tank was located in the southern area of the parcel, south of the building, near Cedar Boulevard. The 10,000-gallon gasoline UST, 10,000-gallon diesel UST, 550-gallon diesel UST (sometimes reported as 500 gallons), and 550-gallon waste oil tank (sometimes reported as 500 gallons) were known to exist when the Property was purchased by the current owner in the 1970s. An additional 500-gallon diesel UST was discovered during the UST removal in 1989. Four groundwater monitoring wells (MW-1 through MW-4) were first installed in the vicinity of the known fuel USTs in 1986, in accordance with ACWD regulations for USTs. Soil samples were collected from the unsaturated zone at depths targeted near the bottom of each nearest UST (7 to 13 feet bgs). This initial sampling did not detect total petroleum hydrocarbons (TPH) above laboratory reporting limits (Ramboll, 2016).

In February 1987, approximately 20 to 30 gallons of waste oil overflowed out of the waste oil UST located on the southeastern portion of the site. Impacted surficial soil was reportedly excavated and removed from the Property. Soil samples within the immediate vicinity exhibited waste oil concentrations up to 930 milligrams per kilogram (mg/kg) and tetrachloroethylene (PCE) at concentrations of 9 to 12 micrograms per kilogram (µg/kg). Groundwater samples exhibited TPH as motor oil (TPH-mo) at 3.8 mg/kg1, PCE up to 86 µg/kg, with benzene and 1,1-dichloroethene (1,1-DCE) slightly above reporting limits. Subsequent sampling indicated no petroleum hydrocarbons were detected above laboratory limits in soil or groundwater. However, 1,1,1-trichloroethane (1,1,1-TCA) and PCE were detected at concentrations of 280 and 13 micrograms per liter (µg/L), respectively, and chloroform and 1,1-DCE were slightly above

[1] California Department of Public Health – Radon Program– (https://www.cdph.ca.gov/Programs/CEH/DRSEM/CDPH%20Document%20Library/EMB/Radon/Radon%20Test%20Results.pdf).

reporting limits. Correspondence between the owner and RWQCB indicated closure was granted by the City of Newark Fire Department in May 1988 (Ramboll, 2016).

A semi-annual groundwater monitoring event in March 1988 did not show significant concentrations of TPH or VOCs. However, a subsequent semi-annual groundwater monitoring event conducted in October 1988 reported 1/16th inch of light non-aqueous phase liquid, reportedly diesel, in the sample collected from MW-2. The sample from MW-2 had a concentration of 230,000 µg/L of TPH as gasoline (TPH-g). An UST release report was filed by the Newark Fire Department with ACWD. The 500-gallon diesel UST was ordered to be emptied immediately and removed. All USTs were removed from the site in April 1989 under oversight of the Fire Department and ACWD. During tank excavations and removals, the additional 500-gallon diesel UST was discovered. In total, five tanks were removed, and visibly contaminated soil was excavated for disposal (Ramboll, 2016).

Quarterly groundwater monitoring was conducted intermittently between 1991 and 1993, 1997 and 1998, and in 2001, which indicated that contamination was not sufficiently remediated. According to the site history section on GeoTracker, TPH-g was detected in groundwater at concentrations up to 4,300 µg/L in 1992. In 1993, total petroleum hydrocarbons as diesel (TPH-d) were detected in groundwater in concentrations up to 120,000 µg/L (the commercial/industrial environmental screening level [ESL[2]] for TPH-d in groundwater is 500 µg/L). Methyl tert-butyl ether (MTBE) was either non-detect or detected at very low levels in soil and groundwater. Chlorinated volatile organic compounds (VOCs) were also detected in high concentrations onsite. Tetrachloroethylene (PCE) was detected in groundwater at a concentration of 160 µg/L (the commercial/industrial ESL for PCE in is 0.7 µg/L); 1,1,1-trichloroethane (TCA) was detected up to 180 µg/L (the commercial/industrial ESL is 0.07 µg/L); and 1,1,-Dichloroethane (DCA) was detected up to 57 µg/L (the commercial/industrial ESL is 0.2 µg/L) (Ramboll, 2016).

Hydro Analysis, Report of Subsurface Investigation, Nortrax West, 38600 Cedar Boulevard, Newark, California; November 16, 2004.

Hydro Analysis, Inc. conducted an investigation in 2004 to delineate the horizontal and vertical extent of groundwater impacts and to potentially install additional groundwater monitoring wells. Fourteen borings were installed on site and downgradient to the south of the site to depths of 20 feet bgs. Soil samples were collected at 5 and 10 feet in all borings and 15 feet in select borings. All soil samples were analyzed for TPH, BTEX, and MTBE. Select samples were analyzed for VOCs. Grab groundwater samples were collected at each location and analyzed for TPH, BTEX, MTBE, and VOCs. Two deeper groundwater samples were collected at 55 to 60 feet bgs from CPT locations and analyzed for TPH, BTEX, MTBE, and VOCs. Results of the soil sampling in the vicinity of the former fuel UST cluster reported low concentrations of TPH-g and TPH-d in shallow samples and low concentrations of BTEX in the 5 feet bgs sample. Soil sampling in the vicinity of the former waste oil UST reported low concentrations of TPH and BTEX. Downgradient soil samples did not report TPH or BTEX above reporting limits. Low concentrations of PCE were reported in deeper samples in the vicinity of the former waste oil UST. 1,1-DCA was detected in the 15 feet bgs sample. The only exceedance of regulatory screening criteria for all soil samples was the concentration of TPH-d in the 5 feet bgs sample. Results of groundwater samples reported low concentrations of TPH-d in the vicinity of the former fuel UST cluster. Low concentrations of TPH, BTEX, and VOCs were also detected in samples collected in the vicinity

[2] San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels for Soil, Commercial/Industrial (Interim Final 2019, Rev 2).

and downgradient of the former waste oil UST. In general, concentrations of TPH and VOCs were consistent with those reported during periodic groundwater monitoring events at the site. TPH, MTBE, BTEX, or VOCs were not detected in deep groundwater samples from the Newark Aquifer.

Hydro Analysis, Report of Subsurface Investigation, Nortrax West, 38600 Cedar Boulevard, Newark, California; November 30, 2007.

A 2007 monitoring well installation was performed at the request of ACWD to determine the lateral extent of the VOC contamination. Four additional monitoring wells were installed at the site upgradient, cross gradient, and downgradient of the former waste oil UST. Soil samples were collected at 5-foot intervals to 20 feet bgs and analyzed for TPH, BTEX, MTBE, and VOCs. No concentrations of TPH or BTEX were detected in soil samples with the exception of one low TPH-d concentration. Low VOC concentrations were detected at two of the locations. No concentrations of TPHs or VOCs were above regulatory screening criteria. Groundwater sampling indicated low concentrations of TPH-d in two well locations and no other TPH, BTEX, or MTBE above reporting limits within the remaining. All four monitoring wells had at least one detection of a VOC, including low concentrations of PCE, 1,1,1-TCA, TCE, 1,1-DCA, and cis-1,2-DCE. PCE was detected in all four monitoring wells (Ramboll, 2016).

Recent investigation reports are discussed below.

Ramboll, Site Characterization Report, 38600 Cedar Boulevard, Newark, California; September 2016.

Ramboll prepared a Site Characterization Report to provide recent site conditions. Groundwater samples have been analyzed for TPH, BTEX, MTBE, and VOCs. Since 2010, groundwater VOC concentrations have generally decreased in all wells except two. Ramboll identified the former 500-gallon waste oil UST on the southeastern portion of the site and former fuel UST cluster near the northeastern portion of the site as being the two impact sources to subsurface soil and groundwater. Ramboll identified the following chemicals of potential concern (COPCs) for the former 500-gallon waste oil UST:

- TPH-g, -d
- Benzene
- 1,1-DCE
- Cis-1,2-DCE
- 1,1-DCA
- Methylene Chloride
- TCE
- 1,1,1-TCA
- PCE
- Carbon Tetrachloride

And the following COPCs for the former fuel USTs:

- TPH-g, TPH-d
- Benzene

Ramboll concluded that TPH-d remains above regulatory screening criteria in two of the monitoring wells near the former fuel UST area and several VOCs remain above regulatory screening criteria in wells in the vicinity of the former waste oil UST. Ramboll provided the following recommendations.

- In-situ treatment of groundwater in the former UST areas.
- A soil vapor investigation to confirm there is not a significant risk to site occupants from vapor intrusion of residual VOCs in shallow groundwater.

These steps were recommended to be discussed with ACWD.

TRC; First Semi-Annual 2018 Groundwater Monitoring Report; 38600 Cedar Boulevard, Newark, California; June 22, 2018

The most recent groundwater monitoring report available on GeoTracker documents groundwater sampling performed in the summer of 2018. Groundwater monitoring was performed for wells MW-1 through MW-8. For wells MW-2 and MW-4, located in the upgradient portion of the site, analyses detected no TPH-g, benzene, ethylbenzene, xylenes, MTBE, or naphthalene. With the exception of one detection of TPH-d at 2,400 µg/L in MW-3, analyses detected no analytes exceeding respective MCLs[3]. The following summarizes concentrations of analytes detected in upgradient wells.

- 2,400 µg/L of TPH-d in MW-3
- 1,200 µg/L of TPH-mo in MW-3
- 0.12 and 0.11 µg/L toluene in MW-2 and MW-4, respectively
- 0.093 µg/L of PCE in MW-3
- 0.22 µg/L 1,1 DCA in MW-3

Wells MW-1 and MW-5 through MW-8 are located in the downgradient portion of the Site. With the exception of 170 µg/L of TPH-mo at MW-1, analyses detected no concentrations of TPH-g, TPH-d, TPH-mo, BTEX, MTBE, or naphthalene in any of the downgradient wells. The following summarizes concentrations of analyses detected in downgradient wells:

- PCE concentrations ranging from 1.7 µg/L (MW-5) to 37 µg/L (MW-1)
- TCE concentrations ranging from 1.1 µg/L (MW-5) to 5.8 µg/L (MW-1)
- 1,1,1-TCA concentrations ranging from 0.068 µg/L (MW-6) to 7.6 µg/L (MW-1)
- 0.71 µg/L of 1,1-Dichloroethene (1,1-DCE) in MW-1
- cis-1,2-Dichloroethene (cis-1,2 DCE) concentrations ranging from 1.3 µg/L (MW-8) to 16 µg/L (MW-1)
- 0.081 µg/L of trans-1,2-Dichloroethene in MW-1
- 1,1-DCA concentrations ranging from 0.13 µg/L (MW-8) to 8.5 µg/L (MW-1)
- 1,2-Dichloroethane (1,2-DCA) concentrations of 0.32 µg/L in MW-8 and 0.50 µg/L in MW6
- Vinyl Chloride concentrations ranging from 0.071 µg/L (MW-6) to 0.10 µg/L (MW-1)
- 0.064 µg/L of Chloroform in MW-1

[3] San Francisco Bay Regional Water Quality Control Board Groundwater Maximum Contaminant Level (MCL) Priority Residential (Interim Final 2019, Rev 2.)

Results showed continued water quality improvement compared to historical findings. Upgradient wells were consist with previous records. The detected TPH-d concentration of 2,400 µg/L at MW-3 was higher than the values samples presented in December 2017 and samples reported in TRC's semi-annual monitoring report, and exceeded the Tier 1 ESL for TPH-d of 100 µg/L. Although this value was higher than in the previous sampling event, it is within the historical range for the site. No other detected concentrations exceeded their respective screening levels in the upgradient wells.

With the exception of MW-1, there was no detection of TPH in any of the downgradient wells. At MW-1 the detected TPH-mo concentration was consistent with historical concentrations. Analyses detected no PAH concentrations, including naphthalene, at or above the reporting limit. The following exceedances were noted.

- In MW-5, the detected cis-1,2 DCE concentration exceeded its ESL and MCL criteria
- In MW-6, detected PCE and 1,2 DCA concentrations exceeded respective ESL and MCL Criteria
- In MW-7, PCE and cis 1,1-DCE concentrations exceeded respective ESL and MCL criteria.

Despite the exceedances, detected analytes in the downgradient wells were within the historical range and analyses detected no analytes exceeding respective MCL or Tier 1 ESLs in MW-8, the most downgradient well. No vinyl chloride concentrations exceeded the MCL of 0.5 µg/L.

Stantec, Documentation of Shallow Soil Sample Collection and Soil Vapor Sampling; 38600 Cedar Boulevard; Newark, California; October 18, 2018

Based on ACWD direction, Stantec attempted to redevelop three wells, MW-1 through MW-3. Only MW-2 was able to be redeveloped because MW-1 and MW-3 had bends in the wells. At the time of the report, Stantec was in discussion with ACWD to determine a path forward to repairing and redeveloping the damaged wells. One soil sample was obtained at 10 feet bgs. PCE was detected at 0.023 mg/kg. Several metals were detected with nickel detected above residential ESLs. No VOCs, TPHs, or PAHs were detected. One soil vapor well was installed at the same location and analyzed for VOCs and helium. 1,1-DCE, carbon disulfide, 1,1-DCA, cis-1,2-DCE, 1,1,1-TCA, TCE, and PCE were detected. 1,1-DCA, TCE, and PCE were detected above their respective ESLs.

Stantec proposed to install six additional soil vapor wells and the redevelopment of monitoring wells MW-1 and MW-3.

ENGEO, Phase I Environmental Site Assessment, 38600 Cedar Boulevard, Newark, California, April 7, 2020; Project No. 15799.001.000.

ENGEO prepared a phase I environmental site assessment for the subject Property dated April 7, 2020. At the time of writing of the environmental site assessment, the Property consisted of a construction and forestry equipment rental business, Papé Machinery. The site reconnaissance and records review found documentation and physical evidence of soil, soil gas, and groundwater impairments associated with the use or past use of the Property. A review of regulatory databases maintained by county, state, tribal, and federal agencies also found documentation of hazardous materials violations and discharge on the Property. However, no contaminated facilities were identified within the appropriate American Society for Testing and Materials (ASTM) search distances that would reasonably be expected to impact the Property.

No historical RECs and no controlled RECs were identified for the Property. The following RECs were identified:

- The property is an open leaking underground storage tank (LUST) case with the Alameda County Water District (ACWD) and the Regional Water Quality Control Board (RWQCB). Former diesel underground storage tanks (USTs) (two 550 gallon and one 10,000 gallon), one gasoline UST (10,000 gallon), and one waste oil UST (550 gallon) previously operated at the Property. These tanks were removed in 1989 and soil and groundwater monitoring for the site has been conducted for known elevated hydrocarbon, MTBE, and chlorinated volatile organic compounds.

The following potential environmental concern was also noted.

- Given the age of the buildings on site, there may be the potential for lead-based paint (LBP) and asbestos-containing material (ACM) within building materials.

ENGEO also recommended the following activities be performed based upon a Supplemental Site Investigation Workplan.

- Development and re-sampling of eight existing groundwater wells.
- Soil, groundwater, and soil gas investigation to assess subsurface impacts across the Property.

ENGEO, Phase II Environmental Site Assessment, 38600 Cedar Boulevard, Newark, California, August 28, 2020; Project No. 15799.001.000.

ENGEO conducted a phase II environmental site assessment in August 2020 to address remaining impediments to closure, which included additional soil and soil gas testing near the former waste oil UST, further delineation of soil vapor impacts, and assessment and sampling of the existing eight monitoring wells.

Soil sampling included collection of a total of 16 samples from four boring locations at depths of 1, 5, 10, and 15 feet bgs (with the exception of S-4 at 1 foot, which was unable to be recovered). The samples were analyzed for TPH-g, VOCs, TPH-d, TPH-mo, and metals.

Grab groundwater sampling included collection of three samples from the five attempted boring locations (GW-1 through GW-5). Locations GW-3 and GW-5 did not have sufficient recharge during sample collection. The three samples were analyzed for TPH-g, VOCs, TPH-d, and TPH-mo. Monitoring wells MW-1 through MW-7 were sampled and submitted for the same analyses as the grab groundwater samples.

Thirteen soil gas wells were also installed on the Property. Seven wells were installed as nested wells near the former waste oil tank at depths of 6 and 10 feet bgs and the remaining six soil vapor probes were installed to 6 feet bgs.

The soil samples exhibited detections of chromium, lead, nickel, and zinc. TPH-g, TPH-d, and TPH-mo were detected in various samples. One VOC, tert-butanol, was detected in three samples. All concentrations were below SFBRWQCB residential ESLs, with the exception of TPH-d, reported at 481 mg/kg (above the screening level of 260 mg/kg) in Sample S-4@5.

Overall, soil impacts appear to be relatively minor with only one exceedance with respect to residential ESLs.

The grab groundwater samples contained low concentrations of VOCs including PCE, TCE, cis-1, 2-DCE, 1,1-DCA, and isopropyl benzene, at concentrations below RWQCB Priority Maximum Contaminant Levels (MCLs). TPH was not detected above laboratory reporting limits. The monitoring well samples contained low concentrations of VOCs including PCE, TCE, cis-1,2-DCE, 1,1-DCE, vinyl chloride, 1,1-DCA, and 1,1,1-trichloroethane. MW-1 exhibited exceedances of PCE, TCE, cis-1,2-DCE, vinyl chloride, and 1,1-DCA, with respect to MCLs. PCE was additionally reported in exceedance of its screening levels in MW-7. Cis-1,2-dichloroethene was reported in exceedance of its MCL screening level in MW-7. TPH-g was reported at 209 µg/L in MW-1, below its MCL. Minor concentrations of TPH-d were reported in MW-2 and MW-3, both below its MCL. TPH-mo was not detected above laboratory reporting limits in any samples. Groundwater impacts appear to be localized to the immediate vicinity of the former waste oil tank and continue to attenuate based on historical monitoring events.

The soil gas samples exhibited numerous VOC detections. Chlorinated solvent products PCE, TCE, cis-DCE, and vinyl chloride were detected in a majority of the samples. PCE was in exceedance of RWQCB residential ESLs[4] in all except one sample (SG-10), at concentrations ranging between 27 and 36,000 micrograms per cubic meter (µg/m^3). TCE was in exceedance of ESLs for sample locations SG-2@6', SG-2@10', SG-3@10', SG-4@6', SG-4@10', SG-5@6', and SG-5@10', at concentrations ranging between 35 and 6,600 µg/m^3. Cis-1,2-DCE was reported in exceedance of its ESL at SG-4@10', SG-5@6', and SG-5@10', at concentrations ranging between 7,000 and 33,000 µg/m^3. Vinyl chloride was reported in exceedance of its ESL at SG-5@6' (1,900 µg/m^3) and SG-5@10' (2,000 µg/m^3). Other VOCs detected in samples exceeding ESLs included 1,1,2-trichloroethane, 1,1-DCA, benzene, carbon tetrachloride, chloroform, and naphthalene. TPH-g was reported in exceedance of its ESL for SG-1@6', SG-1@10', SG-2@10', SG-3@6', SG-4@10', SG-5@6' and SG-5@10'. Overall, soil gas impacts appear to the most concentrated in the vicinity of the former waste oil UST and there is evidence of reductive dichlorination occurring for at least S-4 and SG-5. There is currently limited control on the extent of the PCE soil vapor plume based on the data.

Based on these findings, ENGEO concluded that soil and groundwater impacts appear to have attenuated and are unlikely to continue to attribute as a vapor intrusion source. While groundwater impacts are minor, continued groundwater monitoring should be performed for MW-1 and MW-7 to verify attenuation. ENGEO recommended additional soil gas characterization to determine the extent of the chlorinated solvent vapor plume. PCE concentrations were significantly in exceedance of the ESL for all but one of the soil gas sample points assessed. A soil vapor extraction (SVE) system will likely need to be implemented across the southeastern portion of the site to remediate chlorinated solvent (PCE), impacts to acceptable residential levels. A remedial action workplan (RAW) should be prepared to address SVE methodology and goals. A long-term vapor intrusion mitigation (VIMS) system will likely be required for structures overlying the existing soil vapor plume to address residual post-remediation impacts. ENGEO recommended to provide the results of the phase II assessment to ACWD for their review to discuss remedial action objectives and any remaining impediments to closure for the waste oil tank. Engagement with RWQCB may be required to address vapor intrusion concerns and necessary requirements for residential redevelopment.

[4] San Francisco Bay Regional Water Quality Control Board ESLs for Subslab/ Soil Gas Vapor Intrusion ESL Levels, Residential (Interim Final 2019, Rev 1).

ACWD, Request for Soil Gas Investigation, September 22, 2021.

In a September 2021 letter to Ohana Land Company, LLC (current Property owner), ACWD requested that an additional soil vapor and indoor air investigation be conducted. ACWD cited the soil gas results of ENGEO's previous phase II investigation, noting that the elevated VOC concentrations may pose a risk to human health. ACWD noted that the extent of VOC contamination in soil vapor should be defined onsite and offsite, and any potential vapor intrusion to indoor air pathways should be evaluated. Depending on the results of the investigation, a Corrective Action Plan to remediate and/or mitigate the soil vapor impact may be required.

ENGEO, Supplemental Environmental Assessment Work Plan, 38600 Cedar Boulevard, Newark, California; November 23, 2021 (Revised March 3, 2022). Project No. 15799.002.000.

ENGEO proposed a work plan to address remaining impediments to closure as part of ACWD's request. The following scope of work was proposed.

- Collection of soil gas samples from the existing 14 soil gas wells SV-1 and SG-1 through SG-13 for analysis of VOCs.
- Installation of eight additional permanent soil gas wells on the Property, including six on-site and two off-site along the southern side of Cedar Boulevard for analysis of VOCs.

Collection of groundwater samples from monitoring wells MW-1 through MW-7 for analysis of TPH-g, VOCs, TPH-d, and TPH-mo (wells MW-8 could not be located and appeared to have been buried or damaged due to recent City of Newark landscape and sidewalk improvements).

3.0 RECORDS REVIEW

3.1 PROPERTY RECORDS

3.1.1 Title Report/Ownership

The Title Report lists recorded land title detail, ownership fees, leases, land contracts, easements, liens, deficiencies, and other encumbrances attached to or recorded against a subject property. Laws and regulations pertaining to land trusts vary from state to state and the detail of information presented in a Title Report can vary greatly by jurisdiction. As a result, ENGEO utilizes a Title Report, when provided to us, as a supplement to other historical record sources. ENGEO assumes that any environmental lien, activity use limitations (AUL), and/or institutional controls for the Property are noted in the Preliminary Title Report.

A Preliminary Title Report for the Property, prepared by First American Title Company and dated March 18, 2022, was provided for our review. The Property title is vested in Ohana Land Company, LLC. No references to environmental liens, deed restrictions or other potential environmental issues were noted. This report is included in Appendix B. However, an easement granted in favor of Pacific Gas & Electric (PG&E) for the following right was noted.

- *An easement for right at any time, and from time to time, to excavate for, install, replace (of the initial or any other size), maintain and use such pipe lines as second party shall from time to time elect for conveying gas, oil, petroleum products, or any other liquids, gases, or substances which can be transported through a pipe line, with necessary and proper valves and other appliances and fittings, and devices for controlling electrolysis for use in connection with said pipe lines, together with adequate protection and incidental purposes, recorded November 29, 1979, as Instrument No. 1979-242804 of Official Records.*

3.1.2 Environmental Liens and Activity Use Limitations

The Title Report lists recorded land title detail, ownership fees, leases, land contracts, easements, liens, deficiencies, and other encumbrances attached to or recorded against a subject property. Laws and regulations pertaining to land trusts vary from state to state and the detail of information presented in a Title Report can vary greatly by jurisdiction. As a result, ENGEO utilizes a Title Report, when provided to us, as a supplement to other historical record sources. A Preliminary Title Report for the Property, prepared by First American Title Company and dated March 18, 2022, was provided for our review. The Property title is vested in *OHANA LAND COMPANY, LLC*. No references to environmental liens, deed restrictions or other potential environmental issues were noted. This report is included in Appendix B.

We reviewed two engineering control (EC) and institutional control (IC) registries: EnviroStor, a website maintained by the State of California Department of Toxic Substances Control, and GeoTracker, a website maintained by the State of California Water Resources Control Board, for environmental liens or AULs associated with the Property. No records of environmental liens or AULs were noted.

3.2 HISTORICAL RECORD SOURCES

The purpose of the historical record review is to develop a history of the previous uses or occupancies of the Property and surrounding areas to identify those uses or occupancies that are likely to have led to recognized environmental conditions on the Property.

3.2.1 Historical Topographic Maps/Aerial Photographs/Sanborn Maps

Historical USGS topographic maps and aerial photographs were reviewed to determine if discernible changes pertaining to the Property had been recorded. EDR provided the following maps and photographs, presented in Appendices C and D. A Sanborn fire insurance map search did not identify maps for the Property; the search report is presented in Appendix E.

TABLE 3.2.1-1: Historical Review Summary

HISTORIC MAP/PHOTOGRAPH	YEARS
Topographic Maps	1899, 1906, 1915, 1941, 1947, 1948, 1953, 1959, 1968, 1973, 1980, 1996, 1997, 2012, 2015, 2018
Aerial Photographs	1939, 1946, 1948, 1958, 1963, 1968, 1974, 1979, 1982, 1993, 1998, 2006, 2009, 2012, 2016
Sanborn Maps	N/A

In the 1899 topographic map, several roads and dispersed structures are depicted in the vicinity of the Property. In 1939 the site appears to be vacant and likely used as a farm. A small area located adjacent to the southwest of the site appears to be used for fruit trees. Surrounding areas are primarily agricultural. The Property is first mapped in the 1947 topographic map along Cedar Road. An intermittent creek is mapped trending northeast/southwest through the Property, and the Hetch Hetchy aqueduct is mapped trending east/west, just south of the Property. The site appeared similar until 1958, when Highway I-880 and the Mowry Avenue/Highway I-880 interchange appeared under construction north and east of the Property, respectively. In the 1959 topographic map, the intermittent creek appears to have been channelized and is now located along the western Property boundary.

In the 1963 aerial photograph, two buildings appear in the southwestern and southeastern corners of the 18683 Timber Street property. By 1968, these appeared to be replaced with two larger, joined buildings in the southeastern corner of the Property. 38600 Cedar Boulevard was paved and appeared to be used for parking. Residential developments were constructed in the surrounding areas. By 1979, a large warehouse building was constructed in the central area of 38600 Cedar Boulevard. Surrounding areas were developed with commercial/residential and other land uses by 1993.

3.2.2 City Directory

City Directories, published since the 18th century for major towns and cities, list the name of the resident or business associated with each address. A city directory search conducted by EDR is located in Appendix F.

TABLE 3.2.2-1: City Directory

YEAR	LISTINGS
1970	International Harvester Company Construction Equipment BR Newark
1980	Horton Equipment, Inc.
1982	Horton Equipment, Inc. Newark
1986	Horton Equipment, Inc.
1991	Employ Exterminators Oakland Office; Employee Assistance Program
1994	Empire Tractor & Equipment Company
1999	Empire Equipment Company
2002	Horton, John
2004	Nortrax West
2014	Papé Machinery, Inc.
2017	Pape Group, Papé Machinery, Inc.

The other site address of 38683 Timber Street was not listed. Nearby listings show a variety of residential, commercial, and light industrial land uses.

3.3 ENVIRONMENTAL RECORD SOURCES

EDR performed a search of federal, tribal, state, and local databases regarding the Property and nearby properties. Details regarding the databases searched by EDR are provided in Appendix A. A list of the facilities documented by EDR within the approximate minimum search distance of the Property is provided below.

3.3.1 Environmental Records

3.3.1.1 Property

The Property address of 38600 Cedar Boulevard is listed on the following Environmental Record source databases.

TABLE 3.3.1.1-1

FACILITY	DATABASES
Empire Tractor & Equipment Company	CERS, CORTESE, ECHO, FINDS, HAZNET, HIST CORTESE, HWTS, LUST, RCRA-SQG, RGA LUST
Nortrax, Inc.	ECHO, FINDS, HAZNET, HWTS, RCRA NONGEN / NLR, RGA LUST
Papé Machinery, Inc.	AST, CERS, CERS HAZ WASTE, CERS TANKS, CIWQS, ECHO, FINDS, HAULERS, NPDES, RCRA NONGEN / NLR,
Morton Equipment, Inc.	HIST UST
None listed	ERNS, CHMIRS

The listings describe various environmental issues associated with the Property, including the following.

- The former facilities and/or current facility are documented handlers of chemicals including halogenated solvents; fuel; acids; oxygenated solvents such as acetone, butanol, and ethyl acetate; waste oil and mixed oil; and hydrocarbon solvents such as benzene, hexane, and Stoddard solvent.
- The Property is or was enrolled under a NPDES stormwater permit.
- At least one aboveground storage tank is present at the Property.
- Underground storage tanks and leaking underground storage tanks have been previously, or are presently, located at the Property.
- The facility has received numerous violations from Alameda County Department of Environmental Health pertaining to hazardous waste storage.
- The Emergency Response Notification System (ERNS) and California Hazardous Materials Incident Reporting System (CHMIRS) databases document an incident that occurred in 2001 when a caller stated that earth-moving equipment was observed dripping oil onto the soil and pavement.

Impacts associated with the past and current uses of the site, as well as cleanup responses to these impacts, are discussed in more detail in Section 2.0.

3.3.1.2 Other Properties

The following databases include facilities listed within the appropriate ASTM search distances of the Property on Environmental Records sources.

TABLE 3.3.1.2-1

DATABASE	NUMBER OF LISTED FACILITIES
RCRA NonGen / NLR	17
LUST	15
ENVIROSTOR	12
Cortese	10
HIST CORTESE	9
CERS HAZ WASTE	5

CORRACTS	2
NPDES	2
CERS TANKS	1
CHMIRS	1
HAULERS	1
PFAS	1
SWF/LF	1
VCP	1

Several commercial/industrial sites occupy warehouses at a site located between approximately 100 feet to 750 feet west-northwest of the subject Property, at the addresses shown below.

TABLE 3.3.1.2-2

ADDRESS	TENANT
38288 Cedar Boulevard	Viviano Trucking, J&M Concrete
38370 Cedar Boulevard	Fremont Paving
38424 Cedar Boulevard	Applied Air Filters
38456 Cedar Boulevard	California Camper Repair; Bracho Marble and Granite
38472 Cedar Boulevard	Zipin Out Auto Repair/ Phoenix Auto/Bay Area Body Shop
38486 Cedar Boulevard	Eurobaun Motorsports; Freitas Family personal storage
38592 Cedar Boulevard	Autoland Car Sales; Newark Commercial truck Repair
38594 Cedar Boulevard	Yama Auto Brokers; Golden State Auto Body

Three facilities of potential environmental concern are discussed below.

J & M Concrete – 38288 Cedar Boulevard

J&M Concrete, located approximately 500 feet west-northwest of the Property, is an open LUST cleanup case under GeoTracker case ID T0600173774. The site has been adequately characterized and the case is listed as eligible for closure as of March 11, 2022; therefore, it is not expected to pose an environmental concern to the Property.

Fremont Paving – 38370 Cedar Boulevard

Fremont Paving, located approximately 500 feet west-northwest of the Property, is listed as an open LUST case under GeoTracker case ID T0600102260. Six USTs which stored diesel and gasoline fuels were removed in 1989. Periodic groundwater monitoring has been conducted on an approximate quarterly basis since March 2001. Grab groundwater samples have reported TPH-g from up to 48,000 µg/L, TPH-d from up to 31,000 µg/L, BTEX up to 10,000 µg/L, and MTBE up to 26 µg/L. Historical groundwater flow directions vary between west-southwest and south-southeast. Previous monitoring reports have indicated a southwest direction (TRC, 2018). Given the groundwater flow direction and distance from the Property, it is unlikely that this site poses an environmental concern for the Property.

Zipin Out Auto Services / Phoenix Auto / Bay Area Body Shop – 38472 Cedar Boulevard

This automobile repair facility, located approximately 500 feet west-northwest of the Property, is listed in the CERS HAZ WASTE, ECH, FINDS, HAZNET, HWTS, RCRA NONGEN/NLR, and RCRA-SQG databases. The facility has received numerous violations pertaining to hazardous waste storage and disposal, including documentation of oil spills to the soil surface. However, based on distance and the regional groundwater flow direction (generally directed toward the southeast), this facility is not expected to pose an environmental concern for the Property.

In addition to the above listed properties, one facility was listed on the “Orphan Summary” list. However, this facility appears to be located beyond the ASTM recommended radius search criteria.

Based on the distances to the identified database sites, regional topographic gradient, and the EDR findings, it is unlikely that the above-stated database sites pose an environmental risk to the Property.

3.4 REGULATORY AGENCY FILES AND RECORDS

The following agencies were contacted pertaining to possible past development and/or activity at the Property.

TABLE 3.4-1: Regulatory Agency Records

NAME OF AGENCY	RECORDS REVIEWED
City of Newark Building and Planning Department	We contacted the Newark City Clerk regarding historical building permit files for the Property. The files reviewed included the following: • A building permit to install a fuel storage tank, dispensers, and associated electrical components on the Property from July 1990; • Permit inspection records; • Building permits for a roof equipment screen from October 2005 and November 2007; • A building permit for aboveground storage tanks from November 2009; • A permit for tenant improvement (piping removal and replacement) from November 2009;

NAME OF AGENCY	RECORDS REVIEWED
	• A mechanical permit for heating and air conditioning from August 2010; • A building permit for electrical components from December 2009; • A building permit for electrical components from December 2010; • Various cover pages for structural calculation reports • Various inspection records for final grading, plumbing, and electrical from the 1990s and 2009-2012; and • A permit for repair of an electrical line from December 2012.
City of Newark Fire Department	We contacted the City of Newark Fire Department regarding environmental records pertaining to the former USTs removed from the Property. The following files were reviewed: • A site plan depicting the locations of buildings, ASTs, used batteries, used oil filters, the former used oil UST, oil water separators, and a sludge staging area; • A checklist from the Water Board for submitting a notice of intent for stormwater discharge at the Property; • A document titled "Business Owner/ Operator Identification" which provides instruction for submission of a hazardous materials inventory; • The title page of the November 2004 report written by Hydro Analysis (refer to Section 2.0); • A permit from the City of Newark Public Works Department, Building Inspection Division for a stormwater treatment system; and • A California Environmental Reporting System (CERS) document from June 2014 identifying business activities. This plan identified the presence of ASTs at the Property and handling of oil, fuel, gases, batteries, antifreeze, used oil filters, and wash rack detergent. These hazardous chemicals are consistent with those observed during our site reconnaissance (Section 4.0). The plan notes that the facility does not operate underground storage tanks. The file also included an emergency response and contingency plan, hazardous materials business plan, and inspection forms from Alameda County Fire Department.
Alameda County Department of Environmental Health	We submitted an online request for environmental records from ACDEH pertaining to the Property addresses. No records were available for 38683 Timber Street. We received numerous records for 38600 Cedar Boulevard pertaining to the former USTs and hazardous materials handling, which verified the information available in previous reports on GeoTracker.
Alameda County Water District	We contacted ACWD regarding environmental records pertaining to the Property. All files have been uploaded to GeoTracker.
Alameda County Fire Department	We contacted ACFD regarding environmental records pertaining to the former USTs located at the Property. ACFD did not maintain any records.

NAME OF AGENCY	RECORDS REVIEWED
Alameda County Assessor's Office	We reviewed online parcel maps provided by Alameda County Assessor's Office. The Property boundaries and APNs are consistent with the parcel information provided by EDR.
California State Water Resources Control Board	We reviewed GeoTracker, the website maintained by the California State Water Resources Control Board, for records pertaining to the subject Property. 38600 Cedar Boulevard is listed as Nortrax West with GeoTracker ID T0600100516. This facility is discussed in Section 2.0. No records are available for 38683 Timber Street.
Department of Toxic Substances Control	We reviewed EnviroStor, the website maintained by the California Department of Toxic Substances Control, for records pertaining to the subject Property. Neither of the Property addresses are listed on EnviroStor.

4.0 SITE RECONNAISSANCE

4.1 METHODOLOGY

ENGEO conducted a reconnaissance of the Property on April 6, 2022. The reconnaissance was performed by Stephen Fallon, a Project Engineer of ENGEO. The Property was viewed for hazardous materials storage, superficial staining or discoloration, debris, stressed vegetation, or other conditions that may be indicative of potential sources of soil or groundwater contamination. The Property was also checked for evidence of fill/ventilation pipes, ground subsidence, or other evidence of existing or preexisting underground storage tanks. Photographs taken during the site reconnaissance are presented in Figure 4.

4.2 GENERAL SITE SETTING

There are four structures on site: two offices, a storage warehouse, and a maintenance warehouse. The majority of the Property is covered with concrete and the two large warehouse buildings, with the northeastern portion covered in gravel and vegetation. Maintenance activities are completed under cover within the large maintenance warehouse. Equipment and vehicle washing is completed in a bermed area where water is collected and managed. Storage of equipment and chemicals is completed in the large warehouses and outside on pallets. Papé Machinery operates a large stormwater treatment system that removes contaminants from the water prior to discharge into the storm system. The two office buildings are located within the central portion of the Property.

4.3 EXTERIOR OBSERVATIONS

The following table summarizes our observations during the reconnaissance.

TABLE 4.3-1: Exterior Site Observations

FEATURE TYPE	OBSERVATIONS
Structures	There are four structures on site. We observed two warehouses associated with storage and maintenance of various types of vehicles and equipment. Two office buildings are located within the central portion of the Property, and we observed the main office building.

FEATURE TYPE	OBSERVATIONS
Hazardous Substances and Petroleum Products in Connection with Identified Uses	We observed the following hazardous substances and petroleum products. • Two active concrete above-ground storage tanks (ASTs) which contained diesel and used waste oil • Approximately 11 drums were observed throughout the Property (uncovered) which appeared to store cleaning solutions, hydraulic oil, antifreeze, waste gasoline, waste diesel, and other unknown materials (unlabeled drums) • Approximately 24 drums (covered storage) containing used antifreeze, used absorbent materials, used coolant, used solvents, used diesel, and other waste materials • Large quantities of small quantity (5-gallon or less) chemicals mainly including engine coolant, hydraulic oil, engine oil, transmission oil, compression oil, and gear lubricant • Small spray cans and other containers (1-gallon or less) of various lubricants, cleaners, etc. • Four empty ASTs that formerly contained hydraulic fluid, SAE 10W-30 engine oil, hydraulic tractor fluid, and SAE 15W-40 engine oil • A 270-gallon tote of FlocClear 2% BioPolymer is used to manage settlement of solids in the stormwater filtration system • Acetylene and propane gas tanks • Old battery storage (>8 batteries stored)
Storage Tanks (underground and above-ground)	Two above-ground storage tanks were observed within the northeastern portion of the Property in the approximate location of the former USTs (Figure 2). One of these tanks was labeled as 'Waste Oil' and the other as 'Diesel'. Four 500-gallon ASTs that were no longer in operation were observed in the central portion of the Property. We are aware five USTs formerly operated within the Property. Pavement cuttings were observed on the northwestern portion of the Property (Figure 2); however, this is likely not in conjunction with former USTs. It is not evident the reasoning for this pavement cutting. We observed two above-ground poly tanks for water storage on the northwestern end of the Property (Figure 2). The large poly tanks are associated with the stormwater filtration system that is operated to manage the stormwater prior to off-site discharge.
Odors	A petroleum odor was noted near the current operating ASTs in the southeastern portion of the Property. Additionally, petroleum odors were observed in the active maintenance shop near the waste fluid collection, parts cleaners, and active maintenance areas.
Pools of Potentially Hazardous Liquid	A vehicle washing pit was observed within the southeastern portion of the Property. The water appeared turbid with no sheen or odor observed.
Drums	Numerous drums were observed throughout the Property. A majority appeared to store waste oil and other hazardous petroleum products. Two drums with soil cuttings from a prior subsurface investigation were observed with southern boundary of the Property.

FEATURE TYPE	OBSERVATIONS
Polychlorinated Biphenyls (PCBs) Containing Equipment	We observed two pole-mounted transformers on the northwestern corner of the Property and on the southern portion of the Property. One of the units appeared to be in poor condition; however, we did not observe signs of leaking or staining beneath the pole
Pits, Ponds, and Lagoons	A wash pit filled with turbid water was observed within the southeastern boundary of the Property associated with vehicle and machinery cleaning. No sheen or odor was observed.
Stained Soil/Pavement	We observed minor stains within the secondary containment of the operating ASTs. Minor stains beneath construction equipment were observed due to oil drippings. Minor staining with the maintenance warehouse and storage warehouses near drums, parts cleaners, waste oil collection systems, etc.
Stressed Vegetation	We did not observe significant vegetation throughout the Property.
Solid Waste/Debris	Various debris was observed throughout the Property in conjunction with facility operations. Three covered soil storage areas were observed.
Stockpiles/Fill Material	We did not observe stockpiles or fill material. Three covered soil storage areas were observed. Onsite personnel indicated that this material is collected from the site generally and the vehicle cleaning area specifically. Soil is stored temporarily, characterized for metals and petroleum hydrocarbons, and disposed of off-site.
Wastewater	No wastewater conveyance systems were observed at the Property during the reconnaissance. However, a large stormwater filtration system is operated at the northwestern corner of the Property. Two large poly water tanks and a container filled with a filtration system manage the water, prior to off-site discharge during rain events. An interceptor trench was created with conveyance piping to collect stormwater. The trench drains along the northern portion of the site at the edge of the asphalt and gravel portions of the Property. The piping conveys stormwater to the treatment system.
Wells	We observed six on-site groundwater monitoring wells and one off-site groundwater monitoring well.
Septic Systems	No septic systems were found within the Property during our site reconnaissance. It is likely there is a municipal sewer system in place for the operating buildings.

4.4 INTERIOR OBSERVATIONS

The buildings include two offices, a storage warehouse, and a maintenance warehouse. The contents of which were included in the descriptions provided above in Table 4.3-1. The warehouse stores materials and chemicals used for sale and for maintenance of equipment and vehicles completed in the maintenance shop. The maintenance shop contains large equipment and vehicles under active repair, waste material collection systems, parts cleaners, welders, tools, etc.

The Property is operated under a Spill Prevention Controls and Countermeasures (SPCC) plan. Sampling, storage, and stormwater management are all required as part of the plan. The SPCC plan is stored and available for inspection in the main office.

4.5 ASBESTOS, LEAD, AND PCB-CONTAINING MATERIALS

An asbestos, lead, and PCB-containing building material survey was not conducted as part of this assessment. Given the age of the existing structures, it is conceivable that asbestos, lead, and PCB-containing materials may exist within the structures.

5.0 INTERVIEWS

Ms. Susan Wilson of Resmark Equity Partners, LLC completed an environmental site questionnaire pertaining to user-related applicable environmental information regarding the Property. In the questionnaire, Ms. Wilson did not have specific knowledge of potentially environmentally related issues with the Property. Ms. Wilson is unaware of commonly known, reasonably ascertainable, or specialized knowledge indicative of releases or threatened releases that is material to the potential presence of RECs.

Ms. Darcy Horton completed a key-site manager environmental site assessment questionnaire pertaining to applicable past and present uses and physical characteristics of the Property and surrounding properties. In the questionnaire, Ms. Horton indicated the Property is used for heavy construction equipment sales/parts/service. In addition, Ms. Horton identified the following.

- Previous waste oil spill, which was mitigated.
- Five USTs were removed in 1989
- Six existing monitoring wells; two off-site, associated with former USTs
- Documented soil, groundwater, and soil gas impacts

The questionnaires are presented in Appendix G.

6.0 FINDINGS AND OPINIONS

This assessment included a review of local, state, tribal, and federal environmental record sources, standard historical sources, aerial photographs, fire insurance maps and physical setting sources. A reconnaissance of the Property was completed to review site use and current conditions to check for the storage, use, production, or disposal of hazardous or potentially hazardous materials and to conduct written/oral interviews with persons knowledgeable about current and past site use.

The site reconnaissance, records review, and review of regulatory databases maintained by county, state, tribal, and federal agencies have revealed evidence of soil, groundwater, and soil gas impacts at the Property in connection with former leaking underground storage tanks and hazardous materials handling. Regional Water Quality Control Board (RWQCB) GeoTracker cleanup case T0600100516 (under the name Nortrax West) is the open cleanup case (as of September 1992) pertaining to the Property.

Five underground storage tanks were formerly located at the Property. One 10,000-gallon diesel underground storage tank (UST), one 10,000-gallon gasoline UST, and two 500- or 550-gallon diesel USTs were formerly located in the eastern area of the 38683 Timber Street parcel. A former 500- or 550-gallon waste oil tank was located in the southern area of the parcel, south of the building, near Cedar Boulevard. An additional 500- or 550-gallon diesel UST was discovered in 1989. Four groundwater monitoring wells (MW-1 through MW-4) were first installed in the vicinity of the four known fuel USTs in 1986. All five USTs were removed in 1989. Groundwater monitoring

was conducted following installation of the monitoring wells and after the tanks were removed and indicated that the USTs had impacted the underlying soil and/or groundwater with petroleum hydrocarbons and volatile organic compounds.

Groundwater monitoring has been conducted quarterly or semi-annually during most years since removal of the tanks. The fuel USTs were generally associated with total petroleum hydrocarbon contamination in groundwater while the waste oil tank was generally associated with total petroleum hydrocarbon and volatile organic compound contamination in groundwater. In soil, TPH and VOC impacts have been sporadically detected, and minor heavy metal impacts to soil have also been noted.

Several recent soil, groundwater, and soil gas investigations have been conducted to provide additional characterization and address impediments to case closure. Soil sampling results, including those from ENGEO's August 2020 phase II investigation, have shown decreasing concentrations of TPH and VOCs, particularly near the former fuel USTs. Groundwater impacts appear to be localized to the immediate vicinity of the former tanks and continue to attenuate based on historical monitoring events.

Though soil and groundwater impacts appear to have attenuated and are unlikely to continue to contribute as a vapor intrusion source, soil gas concentrations at the Property remain elevated. PCE concentrations were significantly in exceedance of the RWQCB Environmental Screening Level (ESL) for all but one of 13 soil gas sample points assessed in ENGEO's August 2020 investigation. Soil gas impacts appear to the most concentrated in the vicinity of the former waste oil UST, though there is currently limited control on the extent of the PCE soil vapor plume, based on the data. Additional soil gas characterization has been recommended to determine the extent of the chlorinated solvent vapor plume.

ACWD has requested that an additional soil vapor investigation be conducted. ACWD cited the soil gas results of ENGEO's previous phase II investigation, noting that the elevated VOC concentrations may pose a risk to human health. ACWD noted that the extent of VOC contamination in soil vapor should be defined on-site and off-site, and any potential vapor intrusion to indoor air pathways should be evaluated. ENGEO submitted a workplan for additional soil gas investigation in March 2022 to address the additional soil gas sampling. The investigation has not been completed to date.

During the site reconnaissance, the following hazardous materials, petroleum-containing products, and other features of potential environmental concern were identified.

- Two active concrete above-ground storage tanks (ASTs) which contained diesel and used waste oil
- Uncovered and covered drums throughout the Property used to store cleaning solutions, hydraulic oil, antifreeze, waste gasoline, waste diesel, used antifreeze, used absorbent materials, used coolant, used solvents, used diesel, and other waste or unknown materials
- Large quantities of small quantity (5-gallon or less) chemicals mainly including engine coolant, hydraulic oil, engine oil, transmission oil, compression oil, and gear lubricant
- Small spray cans and other containers (1-gallon or less) of various lubricants and cleaners
- Four empty ASTs that formerly contained hydraulic fluid, SAE 10W-30 engine oil, hydraulic tractor fluid, and SAE 15W-40 engine oil

- A 270-gallon tote of FlocClear 2% BioPolymer is used to manage settlement of solids in the stormwater filtration system
- Acetylene and propane gas tanks
- Old battery storage
- Two pole-mounted transformers on the northwestern corner of the Property and on the southern portion of the Property
- Six on-site groundwater monitoring wells and one off-site groundwater monitoring wells

Several commercial/industrial businesses are located west-northwest of the Property. However, this assessment did not identify contaminated facilities within the appropriate American Society for Testing and Materials (ASTM) search distances that would reasonably be expected to impact the Property.

Based on the findings of this assessment, no controlled RECs or historical RECs were identified. The following REC was identified for the Property.

- Soil gas impacts remain elevated in the area of the former waste oil tank. PCE concentrations were significantly in exceedance of the residential ESL for all but one of 13 soil gas sample points assessed in ENGEO's August 2020 investigation. The site has not yet achieved closure for the former USTs from ACWD and RWQCB. The current ACWD-approved work plan should be implemented to determine the extent of soil gas impacts and potential remediation requirements.

Based on the review of regulatory databases and site reconnaissance, we present information on features of potential environmental concern that were either contained in the databases or observed on the Property. These features were not considered to be RECs. We briefly discuss each feature below.

- Given the age of the buildings on site, there is the potential for lead-based paint (LBP) and asbestos-containing material (ACM) to exist within building materials.
- Numerous chemicals are stored in drums and other containers on site that may have contributed to de minimis releases to soil. Oil impacts to the surface from heavy machinery were also observed during the site reconnaissance.

6.1 SIGNIFICANT DATA GAPS

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC. Data gaps were not identified during this process.

6.2 SIGNIFICANT ASSUMPTIONS OR DEVIATIONS FROM ASTM STANDARD PRACTICE

There were no significant deviations from ASTM Standard Practice E1527-21 in the preparation of this report.

7.0 CONCLUSIONS

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC.

We have performed a phase I environmental site assessment in general conformance with the scope and limitations of ASTM E1527-21 and the standards and practices of the All-Appropriate Inquiry – Final Rule (40 Code of Federal Regulations Part 312) of the Property. Any exception to, or deletions from this practice are described in Section 8.1 of the report.

This assessment has revealed evidence of RECs in connection with the Property, and additional soil gas sampling is recommended to address remaining impediments to closure.

8.0 LIMITATIONS

8.1 LIMITATIONS AND EXCEPTIONS OF ASSESSMENT

The professional staff at ENGEO strives to perform its services in a proper and professional manner with reasonable care and competence but is not infallible. The recommendations and conclusions presented in this report were based on the findings of our study, which were developed solely from the contracted services. The findings of the report are based in part on contracted database research, out-of-house reports, and personal communications. The opinions formed by ENGEO are based on the assumed accuracy of the relied upon data in conjunction with our relevant professional experience related to such data interpretation. We assume no liability for the validity of the materials relied upon in the preparation of this report.

This document must not be subject to unauthorized reuse; that is, reuse without written authorization of ENGEO. Such authorization is essential because it requires ENGEO to evaluate the document's applicability given new circumstances, not the least of which is passage of time. The findings from a phase I environmental site assessment are valid for 1 year after from the earliest date of the following components: records review, site reconnaissance, interviews, declaration by environmental professional. Updates of portions of the assessment may be necessary after a period of 180 days of the earliest date of the four components.

A more extensive assessment that would include a subsurface exploration with laboratory testing of soil, soil gas, and groundwater samples could provide more definitive information concerning site-specific conditions. If additional assessment activities are considered for the Property and if other entities are retained to provide such services, ENGEO cannot be held responsible for any and all claims arising from or resulting from the performance of such services by other persons or entities. ENGEO can also not be held responsible from any and all claims arising or resulting from clarifications, adjustments, modifications, discrepancies or other changes necessary to reflect changed field or other conditions.

8.2 SPECIAL TERMS AND CONDITIONS

We have prepared this report for the exclusive use of our client, Resmark Equity Partners, LLC. It is recognized and agreed that ENGEO has assumed responsibility only for undertaking the study for the Client. The responsibility for disclosures or reports to a third party and for remedial or mitigative action shall be solely that of the Client.

This phase I environmental site assessment is not intended to represent a complete soil, soil gas, or groundwater characterization, nor define the depth or extent of soil, soil gas, or groundwater contamination. It is intended to provide an evaluation of potential environmental concerns associated with the use of the Property. Laboratory testing of soil, soil gas, or groundwater samples was not within the scope of the contracted services. The assessment did not include an asbestos survey, an evaluation of lead-based paint, an inspection of light ballasts for polychlorinated biphenyls (PCBs), or a mold survey. A radon evaluation was not performed.

This report is based upon field and other conditions discovered at the time of preparation of ENGEO's assessment. Visual observations referenced in this report are intended only to represent conditions at the time of the reconnaissance. We would not be aware of site contamination, such as dumping and/or accidental spillage, which occurred subsequent to the reconnaissance conducted by ENGEO personnel.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

RGA LF ---------- Recovered Government Archive Solid Waste Facilities List

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 02/28/2022 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/28/2022 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/25/2021 has revealed that there are 12 ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/28/2022 has revealed that

there are 15 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FINDS:
Registry ID: 110055782915

Click Here:

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Case Worker:	THC
RB Case Number:	01-0563
Local Agency:	ALAMEDA COUNTY WATER DISTRICT
File Location:	Not reported
Local Case Number:	TT0045
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	The subject property (Site) is a tractor and large equipment facility located on Cedar Blvd where Moores Avenue ends in Newark, California. The commercial/industrial yard consists of two (2) main large warehouse and repair buildings, an office building and has asphalt and gravel cover. Large equipment and tractors are parked on Site. Commercial and industrial land use with single-family residential compose the surrounding properties. The parcel is bordered to the north and east by State Freeway 880 (Nimitz), a large car smog shop to the northwest, across Cedar Avenue to the southwest are the residential properties, and a small motel to the southeast. A former 550-gal waste-oil tank (WOT) was located on the west side of the parcel near Cedar venue. Former underground storage tanks (USTs) for diesel (10,000-gal), gasoline (10,000-gal), and two smaller diesel USTs (550 gal each) were located in the southeastern corner of the parcel. Testing for hydrocarbon release of contaminated soil and groundwater began in 1988. The WOT was removed in 1989. In 1993, concentrations of total petroleum hydrocarbons as diesel (TPHd) reported in groundwater up to 120,000 ug/L (environmental screening levels for TPHd in water are 500 ug/L for commercial and industrial use). Total petroleum hydrocarbons as gasoline was also found on Site

EMPIRE TRACTOR (Continued) **S100934694**

in groundwater at concentrations up to 4,300 ug/L in 1992. Methyl tert butyl ether (MTBE) was either non-detect or very low levels in both soil and groundwater on Site. Chlorinated Volatile organic compounds (CVOVs) were also detected in high concentrations on Site, where Tetrachloroethene (PCE, or "perc", perchlorate) was found up to 160 ug/L (ESL of 0.7 ug/L in commercial industrial settings), 1,1,1,-Trichloroethane (TCA) up to 180 ug/L (ESL of 0.07 ug/L), 1,1,-Dichloroethane (DCA), up to 57 ug/L (ESL 0.2 ug/L, for commercial use). Ongoing monitoring of soil and groundwater continues on Site.

NORTRAX INC (Continued) **1016431225**

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS Description:	Industrial Facility Storm Water

Evaluation:

Eval General Type:	Case Development Inspection
Eval Date:	10-25-2018
Violations Found:	No
Eval Type:	Industrial Storm Water Enforcement Follow-up
Eval Notes:	The facility did not submit their 2017-18 AR. They are aware of this and working with their consultant to submit the report next week. The facility sells, rents and repairs John Deer construction equipment. The facility is unpaved. The facility has filter socks in all their storm drain inlets. They keep the storm drain inlets covered during non-rainy season due avoid sediment buildup. The facility has an advanced storm water treatment system. I did not observe any issues at this facility.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation:	40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Description:	Failure to ensure employees are familiar with the handling and compliance of hazardous waste regulations and emergency response.
Violation Notes:	Returned to compliance on 07/18/2014.
Violation Division:	Alameda County Environmental Health
Violation Program:	HW
Violation Source:	CERS,

Site ID:	399076
Site Name:	Pape Machinery, Inc.
Violation Date:	09-27-2017
Citation:	22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description:	Failure to provide employees with hazardous waste training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility.
Violation Notes:	Returned to compliance on 05/11/2018. OBSERVATION: The initial/annual hazardous waste training was available for the year 2015 and 2016, however, the hazwaste training for the year 2017 was not available during this inspection. CORRECTIVE ACTION: Provide employees with initial or refresher hazardous waste training and submit a copy of the roster including name of the employee filling each job, a job description for each position, duties of facility personnel assigned to each position, job title for each position at the facility related to hazardous waste management, and the syllabus to ACDEH within 30 days.

Eval Type: Routine done by local agency
Eval Notes: ROUTINE INSPECTION FOR APSA, HAZ WASTE GENERATOR, HMBP, AND WASTE TIRE PROGRAMS. PERMISIN FOR INSPECTIONS PROVIDED BY JANEL BIANCHIN OF BAJADA GEOSCIENCES, INC. FACILITY HAS ONE 2,000-GALLON RED DIESEL TANK AND A SPLIT 1,000 GALLON USED OIL TANK. THE TANKS ARE CONCRETE CONVAULT TANKS WITH SECONDARY CONTAINMENT, SPILL CONTAINERS, LEVEL GAUGES, EMERGENCY AND NORMAL VENTS. THE TANKS ARE INSPECTED DAILY BY FACILITY PERSONNEL AND LOGGED ON A SINGLE PAGE INSPECTION SHEET ALONG WITH THE HAZARDOUS WASTE DAILY TANK INSPECTION.

Eval Source:	CERS,
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	09-27-2017
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	On the Business Owner/Operator Information in CERS, the secondary emergency contact, Don Quillen, is no longer with the company. Please update CERS with the correct secondary emergency contact person. Two Emergency Response Plans have been submitted to CERS. One is the "Consolidated Emergency Response/Contingency Plan". This plan incorrectly lists the Alameda County CUPA phone number as (510) 567-6780. This plan must update the CUPA phone number to be (510) 567-6700. The second plan "Emergency Response Plan for Pape Machinery, Inc. - Newark" also lists Don Quillen and Newark Fire Department. Newark Fire Department is now the Alameda County Fire Department. Please update accordingly. All violations noted in this HMBP inspection report are to be corrected within 30 days and proof of those corrections submitted to this office in the same time frame. CERTIFICATION OF RE TURN TO COMPLIANCE I certify that the violation(s) noted in this HMBP inspection report have [Truncated]

Eval Type:	Routine done by local agency
Eval Notes:	ROUTINE INSPECTION OF HAZARDOUS WASTE GENERATOR PROGRAM. FACILITY GENERATES USED OIL IN A SPLIT CONVAULT TANK (TWO 500-GALLON TANKS) THAT IS DOUBLE-WALLED AND IN COVERED TERTIARY CONTAINMENT. TANK IS MONITORED DAILY BY FACILITY PERSONNEL AND EACH TIME THE TANK IS FILLED, THE FLUID LEVEL IS MONITORED BY CHECKING THE TANK LEVEL ALONG WITH THE GAUGE (AS DESCRIBED BY FACILITY PERSONNEL). DAILY LOGS OF INSPECTION ARE MAINTAINED. WASTE ANTIFREEZE IS ALSO GENERATED AND HELD IN A POLY TANK. CONTAINERS OF NEW PRODUCT OIL ARE DRAINED INTO LARGE OPEN DRAIN RACKS WHICH ARE EMPTIED DAILY INTO THE USED OIL TANKS AND ARE APPROPRIATELY LABELED AS USED OIL.

Eval Notes:	Alameda County Dept. of Environmental Health (ACDEH) inspectors arrived on site at Pape Machinery, Inc. 38600 Cedar Blvd. Newark, CA 94560 to conduct a routine inspection of Hazardous Materials Business Plan (HMBP), Hazardous Waste Generator (HWG), Aboveground Petroleum Storage Act (APSA), and Waste Tire (WT) programs. ACDEH met with Daniel Radonski the facility's environmental and project manager who granted consent and assisted ACDEH with this inspection. - According to the facility representative (Dan Radonski) the number of employees handling hazardous waste are 10-15 people. All violations noted in this HWG inspection report are to be corrected within 30 days and proof of those corrections submitted in the same time frame.

Local Agency: ALAMEDA COUNTY WATER DISTRICT
File Location: Not reported
Local Case Number: TT0590
Potential Media Affect: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Benzene, Ethylbenzene, Gasoline, MTBE / TBA / Other Fuel Oxygenates, Toluene, Xylene
Site History: The subject property is located west of the Interstate 880 Freeway and south of Central Avenue at 38370 Cedar Boulevard, Fremont, California (Figure 1). The property is relatively flat. Groundwater flow direction was previously calculated to be southeast at a gradient of 0.045 foot per foot. The reported groundwater flow direction is consistent with the anticipated regional trend. Six USTs which had stored diesel and gasoline fuels were removed in 1989. Confirmation soil samples collected beneath the USTs reported up to 7,700 milligrams per kilogram (mg/kg) total petroleum hydrocarbons as gasoline (TPHg), up to 53 mg/kg total petroleum hydrocarbons as diesel (TPHd), and varying concentrations of benzene, toluene, ethylbenzene, and xylenes (BTEX). Soil was excavated to a depth of 21 feet below ground surface (bgs) and approximately 100 cubic yards of soil was stockpiled onsite. This soil was aerated onsite and two confirmation stockpile soil samples reported TPHg concentrations decreased to 1.7 to 3.1 mg/kg and the only reported BTEX was 0.3 mg/kg xylenes. The stockpiled soil was subsequently used as backfill. Grab groundwater samples in four of six soil borings reported TPHg from 260 to 48,000 micrograms per Liter (g/L), TPHd from 130 to 31,000 g/L, and concentrations of BTEX from 0.72 to 10,000 g/L. Methyl tertiary butyl ether (MTBE) was reported at concentrations of 3.5 to 26 g/L in the two downgradient wells. Periodic groundwater monitoring has been conducted on an approximate quarterly basis since

FREMONT PAVING (Continued) **S103723085**

March 2001. Groundwater gradients and flow directions vary considerably.

Violation Date: 01-22-2020
Citation: 22 CCR 23 66273.34 - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.34
Violation Description: Failure to label or mark each individual or container or the designated area of universal waste as required. 1) Waste batteries shall be marked with "Universal Waste-Battery(ies) . 2) Mercury

PHOENIX AUTO (Continued) **S113029110**

containing equipment shall be marked with "Universal Waste -Mercury-Containing Equipment . 3) Lamps shall be marked with Universal Waste-Lamp(s) . 4)Each electronic devices or the container or the designated area shall be marked with Universal Waste-Electronic Device(s) . 5) Each CRTs or the container or the designated area shall be marked with "Universal Waste-CRT(s) . 6) CRT glass or the designated area shall be marked with Universal Waste-CRT glass .

Violation Notes: Owner/Operator failed to properly store and label universal waste. Observed waste fluorescent lamps stored on pavement outdoors with no container or label. Store waste fluorescent lamps in closed container to prevent breakage and release of mercury with properly labeling "Universal Waste-Lamps" with accumulation start date. Properly label universal waste lamps and submit statement of compliance and/or a photo of the waste labeled and stored properly.

Violation Description: Failure to dispose of hazardous waste at a facility which has a permit from DTSC or disposing of hazardous waste at any point which is not

APPLIED AIR FILTERS (Continued) **S121781469**

	authorized.
Violation Notes:	Waste disposal records were not available to the inspectors during the inspection. The business owner stated that employees sometimes take used oil and antifreeze from RV maintenance home with them, and that facility encourages customers to take home used oil in one-gallon containers for them to dispose of themselves. Discontinue these practices immediately and contact a registered hazardous waste transporter to dispose of the used oil and antifreeze. The registered hazardous waste transporter must provide a consolidated manifest for both the used oil and the used antifreeze (that meets all consolidated manifest requirements) and copies of the consolidated manifests must be kept on site for three (3) years.

Violation Description:	Failure to establish and/or electronically submit an adequate training program in safety procedures in the event of a release or threatened release of a hazardous material. *Verify agricultural handler exemption HSC 25507.1
Violation Notes:	The business failed to establish and electronically submit an adequate employee training plan, which is reasonable and appropriate for the size of the business and the nature of the hazardous material handled.

APPLIED AIR FILTERS (Continued) **S121781469**

	Prepare and electronically submit an adequate employee training program pertaining to safety procedures in the event of a release (or threatened release) of a hazardous material to CERS (https://cers.calepa.ca.gov/) no later than 9/4/2021. Training must include, at minimum: 1. Immediate notification contacts to the appropriate local emergency response personnel and to the unified program agency. 2. Procedures for the mitigation of a release or threatened release to minimize any potential harm or damage to persons, property, or the environment. 3. Evacuation plans and procedures, including immediate notice, for the business site. Training must be refreshed annually and training records must be kept on site for three (3) years.

Citation:	22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description:	Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes:	Fine metal particles/powders were observed on the floor beneath the bench grinder located in the warehouse near the RV maintenance bay. The facility has not made a waste determination for these metal particles/powders, and the business owner stated they are normally swept up and thrown away in the municipal trash can. Conduct a hazardous waste determination for the metal particles/powder produced by the bench grinder lathe no later than 9/4/2021. To conduct a hazardous waste determination: 1. Contact at a state certified laboratory and tell them you need a hazardous waste determination for your metal particles/powder. 2. Ask if they can perform a sieve analysis for 100-micrometer (micron) fines and a TTLC/STLC (WET) analysis for CAM 17 metals. 3. Send them a sample of the metal fines in accordance with their sampling procedures. 4. Submit the test results to Alameda County CUPA.

Violation Date:	08-05-2021
Citation:	40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description:	Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.
Violation Notes:	The facility does not conduct weekly inspections of hazardous waste

APPLIED AIR FILTERS (Continued) **S121781469**

storage area. Conduct weekly inspections for leaking containers and for deterioration of containers caused by corrosion or other factors, and submit a copy of the attached inspection log to Alameda County CUPA no later than 9/4/2021.

Violation Division: Alameda County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 423316
Site Name: APPLIED AIR FILTERS
Violation Date: 08-05-2021
Citation: HSC 6.5 25160.2 - California Health and Safety Code, Chapter 6.5, Section(s) 25160.2
Violation Description: Failure of a generator of hazardous waste that meets the conditions to be transported on a consolidated manifest to comply with one or more of the required consolidated manifesting procedures and retain copies of receipts for three years.
Violation Notes: Consolidated manifests for the disposal of used oil and used antifreeze were not available for the inspector to review during the inspection. The business owner stated that employees sometimes take these materials home with them and that facility encourages customers to take home used oil in one-gallon containers for them to dispose of themselves. Discontinue these practices immediately and contact a registered hazardous waste transporter to dispose of the used oil and antifreeze. The registered hazardous waste transporter must provide a consolidated manifest for both the used oil and the used antifreeze (that meets all consolidated manifest requirements) and copies of the consolidated manifests must be kept on site for three (3) years.

Violation Date: 02-07-2019
Citation: HSC 6.5 25160.2 - California Health and Safety Code, Chapter 6.5, Section(s) 25160.2
Violation Description: Failure of a generator of hazardous waste that meets the conditions to be transported on a consolidated manifest to comply with one or more of the required consolidated manifesting procedures and retain copies of receipts for three years.
Violation Notes: Owner/Operator failed to comply with one or more consolidated manifesting requirements. Facility have no records of disposing hazardous waste. Per facility manager and staff, waste antifreeze and used oil are taken to Fremont HHW on Boyce Street 15 gallons at a time. Bad carbon is stored in 55 gallon container drums and are recycled per operator. Ensure that all wastes transported on a consolidated manifest meet all consolidated manifest requirements, and maintain copies of manifests for three years. If taken Fremont Household hazardous waste, waste must be taken as a business and a receipt will be generated. Provide a copy of hazardous waste disposal within 30 days.

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 04-16-2019
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Alameda County Department of Environmental Health onsite for follow up inspection. Consent provided by Jim Kanomata, Facility Manager. The facility still has open violations from the routine inspection that need to be corrected: 1. Provide training records for the other two employees that have not completed training in hazardous waste. One employee has been trained. 2. Provide disposal records for antifreeze and spent carbon. 3. Complete application for Alameda County Household Hazardous Waste. 4. Provide lids for open containers of waste anti-freeze and used oil. 5. Fill in "Generator name and address", "Accumulation Start Date", "Physical State", and "Hazard Properties" on hazardous waste labels for waste antifreeze and used oil. Facility operator states that metal filters are drained and then placed in metal recycling bin and picked up by metal recycler. Facility operator also states that hazardous waste inspections are conducted weekly.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date:	07-06-2017
Citation:	HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
Violation Description:	Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes:	Returned to compliance on 09/01/2017. OBSERVATIONS: 1.Observed one black 55 gallon drum of drained used oil filters with no label. Provide "Used Oil Filter" label. 2. Observed propane cylinder not properly secured. Properly secure propane cylinders to prevent falling due to contact, vibration, or seismic activity. 3. Observed empty label on one 30 gallon drum with paint thinner waste. Remove empty label from drum. 4. Observed 10 gallon container of antifreeze with no label. Provide label for antifreeze. CORRECTIVE ACTIONS: 1. Provide "Used Oil Filter Label" for 55 gallon drum of drain used oil filters. Submit photo documentation to the CUPA demonstrating proof of corrective action within thirty days. 2. Properly secure propane cylinder. Submit photo documentation to the CUPA demonstrating proof of corrective action within 30 days. 3. Remove empty label from 30 gallon paint thinner waste drum. Submit photo documentation to the CUPA demonstrating proof of corrective action within 30 [Truncated]

Violation Date:	07-06-2017
Citation:	HSC 6.5 25123.3(h)(1)(c) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)(c)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal of acute/extremely hazardous waste after the first 1-kilogram threshold amount was accumulated within a 90 day period.
Violation Notes:	Returned to compliance on 09/08/2017. OBSERVATION: One 30 gallon of waste based solvent and one 30 gallon of waste paint thinner observed in paint storage area and has not been picked up since 2015. CORRECTIVE ACTION: Immediately dispose of waste based solvent and waste paint thinner and submit copy of the disposal receipt to inspector within 30 days. All hazardous waste must be disposed of within 90 days once 27 gallons of hazardous waste has been generated.
Violation Division:	Alameda County Environmental Health
Violation Program:	HW
Violation Source:	CERS,

Site ID:	388817
Site Name:	CALIFORNIA CAMPER REPAIR
Violation Date:	07-06-2017
Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description:	Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes:	Returned to compliance on 09/19/2017. OBSERVATION: Initial and refresher training documentation for all employees was not available. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that employees have received training on safe handling of hazardous materials. Maintain training records for three years. ACDEH provided HMBP training form to facility as an example of required documentation.

Citation:	HSC 6.5 25163(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25163(a)
Violation Description:	Failure to use a DTSC registered hazardous waste transporter to transport hazardous waste or transporting hazardous waste without being a DTSC registered hazardous waste transporter.
Violation Notes:	Returned to compliance on 12/12/2017. OBSERVATION: Facility employee stated that spent absorbent is discarded in regular garbage. CORRECTIVE ACTION: Spent absorbents with used oil should be treated as hazardous waste. Dispose of spent absorbents as hazardous waste. Store spent absorbent in container labeled with hazardous waste. Submit proof of corrective actions to CUPA.

Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 12/12/2017. OBSERVATIONS: 1. Observed one 55 gallon drum of drained used oil filters with no hazardous waste label. 2. Observed one 30 gallon drum of water based solvent with missing physical state and hazardous properties information on hazardous waste label. 3. Observed one 30 gallon drum of paint thinner with missing physical state and hazardous properties information on hazardous waste label. 4. Observed one 55 gallon drum of used oil with missing accumulation start date information on hazardous waste label. CORRECTIVE ACTIONS: 1. Provide used oil filter label for 55 gallon drum of drained oil filters. Submit photo documentation demonstrating that label has been provided to CUPA within 30 days. 2. Provide missing physical state and hazardous properties information for 30 gallon drum of water based solvent. Submit photo documentation demonstrating that missing physical state and hazardous information has been provided on label to CUPA within 30 days. [Truncated]

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Local Case Number:	TT0279
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Benzene, Ethylbenzene, MTBE / TBA / Other Fuel Oxygenates, Total Petroleum Hydrocarbons (TPH)
Site History:	The site is located in Section 5, Township 5 South, and Range 1 West on the northeast corner of the intersection of Mowry Avenue and

UNOCAL 7003 (Continued) **S113133988**

Alpenrose Court in Newark, Alameda, California.The site is currently an active 76 Service Station and Firestone Automotive service facility. Station facilities include the service station building, two 12,000 gallon underground storage tanks (USTs) in the east half of the site, three fuel dispenser islands, a Firestone office, and a Firestone garage with service bays.Properties in the site vicinity include parking for commercial properties and Swiss Park, a recreational clubhouse and playground area. It appears that a release occurred at some undetermined time from the former site USTs removed in 1989.The depth of the UST excavation pit compared with ground water depths suggests that the USTs were set at least partially below the water table.Steel tanks which are continuously exposed to groundwater, without protection, are highly susceptible to corrosion which could, over time, breach the walls of the tank. Once the discharged hydrocarbons entered the groundwater, they were dissolved and began migrating with the shallow groundwater. (03/31/2011 Pilot Study Work plan)

RB Case Number:	01-1607
Local Agency:	ALAMEDA COUNTY WATER DISTRICT
File Location:	All Files are on GeoTracker or in the Local Agency Database
Local Case Number:	TT0123
Potential Media Affect:	Well used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	The site is located on the western corner of the intersection of Mowry Avenue and Farwell Drive in Fremont, Alameda County, California.The site is an active 76 station consisting of two underground storage tanks (USTs) containing gasoline, three product dispenser islands under a single canopy, 17 groundwater monitoring wells (10 off‐site and 7 on‐site wells), one on‐site groundwater extraction well, a station building, and a soil vapor extraction (SVE) and air sparge (AS) remediation compound.The site is bounded by Farwell Drive to the north and northwest (beyond which is a commercial structure and single‐family residential structures), to the east by Mowry Avenue (beyond which is a Chevron service station), to the south by the Country Way restaurant, and to the west by a Quick Stop station (38995 Farwell Drive, ACWD Case No. 0092).According to the ACWD, ConocoPhillips is responsible for soil and groundwater assessment and cleanup at this station based on a legal agreement in 1993. (11/21/2011 Work Plan Addendum)

Local Case Number:	TT0623
Potential Media Affect:	Soil
Potential Contaminants of Concern:	Gasoline
Site History:	The subject property (Site) is a developed commercial parcel with a single, large metal warehouse building surrounded by exposed soil and gravel cover. The Site is the current location of a concrete provider (Al-con Concrete) in the area of large industrial and commercial properties, bounded by Cedar Blvd on the south and Freeway 880 (Nimitz Freeway) to the north, or back side of parcel. A preschool and Academy for Dyslexics are located on the parcel directly across Cedar Blvd to the south, along with single-family residential homes and a neighborhood church (Cedar Blvd). Contaminant constituents, concentrations, and plume (if any) extent are unknown and undocumented.

CPS-SLIC:
Name: SPARKLIZING CLEANERS
Address: 5200 MOWRY AVENUE
City,State,Zip: FREMONT, CA 94538
Region: STATE
Facility Status: **Open - Verification Monitoring**
Status Date: 04/01/2015
Global Id: SL0600199502
Lead Agency: ALAMEDA COUNTY WATER DISTRICT
Lead Agency Case Number: 0744
Latitude: 37.5331951
Longitude: -121.9991938
Case Type: Cleanup Program Site
Case Worker: SZ
Local Agency: ALAMEDA COUNTY WATER DISTRICT
RB Case Number: 01S0623
File Location: Local Agency
Potential Media Affected: Aquifer used for drinking water supply, Soil, Soil Vapor, Surface water
Potential Contaminants of Concern: * Chlorinated Solvents - PCE, * Chlorinated Solvents - TCE
Site History: The Site is a commercial unit located in a shopping center. Dry cleaning operations have been in existence at this site since approximately 1982. It appears that the prior dry-cleaning operators used cleaning products containing tetrachloroethene (PCE). The current dry-cleaning system that has been in operation for more than10 years uses a non-solvent based cleaner. Since 2003, soil, groundwater, soil vapor investigations have been conducted at the site.

Local Agency:	ALAMEDA COUNTY WATER DISTRICT
File Location:	Not reported
Local Case Number:	TT0127
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	The site is located on the south side of Mowry Avenue, west of Blacow Road in Fremont, California. The site is a former 76-branded gasoline service station and a former wheel and tire shop. The site is bounded on the northwest by Mowry Avenue, on the northeast by a parking lot, on the southeast by a parking lot, and to the southwest by a Bank of the West-branded bank. The Los Arboles Shopping Center is located to the east of the site. The above-ground structures at the site consist of one former automotive shop that is still in use as a tire shop. All former underground storage tanks (USTs), dispenser islands, and product piping associated with gasoline sales were removed in January 1999. (09/23/2014 Well Replacement Work Plan)

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Application
Completed Date: 06/23/2016
Comments: In March 2016, Alameda County Water District referred this case to DTSC and SWRQB, due to elevated PCE in soil vapor and sub-slab soil gas. In June 2016, DTSC accepted the Request for Agency Oversight Application , dated 4/11/2016, and submitted by Shamco Management Co., LLC, for JC Cleaners, located at 39253 Cedar Blvd. Newark CA 94560, owned by Shamco Investments, A CA General Partnership.

Completed Area Name: PROJECT WIDE

Comments: Historic Reports 2003-2016: 2003 Report of Phase II Environmental Site Assessment, 2010 Groundwater Well Installation and Monitoring Report, 2010-2011 Quarterly Groundwater Monitoring Reports, 2011 Soil Vapor Assessment Report, 2012 Closure Denial by Alameda County Water District, 2013 Sub-Slab Soil Gas Survey Report, 2016 Soil Vapor Assessment Report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Workplan
Completed Date: 06/23/2017
Comments: The PEA Workplan, dated June 2017, outlines and details the plan to collect and analyze three soil vapor samples from the Site at locations near the eastern and western boundaries, and the rear of the JC Cleaners tenant space. Additionally, the plan includes the collection of one indoor air sample and one groundwater sample. The

JC CLEANERS (Continued) **S118757330**

purpose of the PEA is to define the area of the Site to be restricted by a Land Use Covenant to address volatile organic compounds (VOCs) in soil vapor in the dry-cleaning area of JC Cleaners. A PEA Report, presenting the results of the soil vapor investigation and including previous site assessment information, will be prepared and submitted to DTSC.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

Completed Date: 07/30/2017
Comments: Fieldwork for Preliminary Endangerment Assessment (PEA)

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Standard Voluntary Agreement
Completed Date: 09/12/2016
Comments: This Voluntary Cleanup Agreement, executed September 12, 2016, applies to the property located at 39253 Cedar Blvd., Newark, in Alameda County, California 94560 (Site), identified by Alameda County Assessor's Parcel Numbers 901-188-14, and any off-site area to which hazardous substances have or may have migrated from the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 11/13/2019
Comments: DTSC subsequently requested that soil vapor and indoor air be sampled from the Site and adjoining tenant spaces to assess the extent of soil vapor contamination and to characterize the risk to onsite and nearby receptors.

Completed Date: 10/01/2021
Comments: Historically, the site was used as orchards prior to residential construction. Soil impacted with arsenic, lead and organochlorine pesticides from the agricultural activities and former buildings was removed and disposed off-site prior to entering into a Standard Voluntary Agreement with DTSC. In June 2021, additional soil samples were collected, under DTSC s oversight, in the northwestern portion of the site to address data gaps identified from previous investigations. The analytical data for confirmation samples and additional characterization samples were below the residential screening levels. DTSC determined that no further action is adequate for the site at this time.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: RCRA Facility Assessment Report
Completed Date: 05/30/1998
Comments: RCRA Facility Assessment Completed, site formerly known as Peterbilt Motors The SWMUs and AOCs identified at the former Peterbilt Motors facility in Newark California have been either remediated, closed under the authority of a regulatory agency (i e DISC DHS, City of Newark) or did not require any remediation activities because no releases to the environment occurred Additionally, the groundwater extraction and treatment system, which began operation in 1991 with oversight by the San Francisco Regional Water Quality Control Board, addressed the remediation of the groundwater contamination which resulted 1rom the operation of the facility. As a result of these previous remediation activities, there is no need for further action, at this facility, by the Department of Toxic Substances Control, under RCRA Corrective Action

Site Name:	Master Builders Solutions
Violation Date:	09-28-2017
Citation:	HSC 6.5 25201 - California Health and Safety Code, Chapter 6.5, Section(s) 25201
Violation Description:	Failure to obtain a permit or grant of interim status after generator has accumulated hazardous waste on-site for longer than 90 days.
Violation Notes:	Returned to compliance on 11/02/2017. OBSERVATION: The accumulation date on the used oil drum was 2-26-2017. Facilities who generate more than 1000 kg of hazardous waste per month may store waste on site up to 90 days. "CORRECTIVE ACTION: Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the ACDEH inspector within 30 days of this report. Immediately implement procedures to ensure hazardous waste is disposed of within the 90 day allowable time frame. Send the ACDEH inspector information regarding how the facility will ensure wastes are not held for over 90 days.

THORO SYSTEM PRODUCTS (Continued) **U001597795**

Site Name:	Master Builders Solutions
Violation Date:	09-28-2017
Citation:	HSC 6.5 25201 - California Health and Safety Code, Chapter 6.5, Section(s) 25201
Violation Description:	Failure to obtain a permit or grant of interim status after generator has accumulated hazardous waste on-site for longer than 90 days.
Violation Notes:	Returned to compliance on 11/02/2017. OBSERVATION: The accumulation date on the used oil drum was 2-26-2017. Facilities who generate more than 1000 kg of hazardous waste per month may store waste on site up to 90 days. "CORRECTIVE ACTION: Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the ACDEH inspector within 30 days of this report. Immediately implement procedures to ensure hazardous waste is disposed of within the 90 day allowable time frame. Send the ACDEH inspector information regarding how the facility will ensure wastes are not held for over 90 days.

Violation Source:	CERS,
Site ID:	11105
Site Name:	Master Builders Solutions
Violation Date:	09-28-2017
Citation:	22 CCR 15 66265.174 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.174
Violation Description:	Failure to inspect weekly, areas where hazardous waste containers are stored or transferred. The owner or operator shall look for leaking containers and for deterioration of containers and the containment system caused by corrosion or other factors.
Violation Notes:	Returned to compliance on 11/02/2017. OBSERVATION: The site has developed an inspection checklist and performed one inspection. The owner or operator shall inspect areas used for container storage or transfer, at least weekly, looking for leaking containers and for deterioration of containers and the containment system caused by corrosion and other factors. CORRECTIVE ACTION: Immediately begin conducting the necessary weekly inspections for all hazardous waste containers at this facility. Ensure all waste accumulation areas are inspected and container labeling is included. Send three weeks of completed inspection forms to the ACDEH inspector.

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 11/02/2017. OBSERVATIONS: The chemical inventory in CERS is incorrect and the site map does not include the

THORO SYSTEM PRODUCTS (Continued) **U001597795**

outside storage of hazardous materials or the hazardous waste generated from the lab. CORRECTIVE ACTION: Review and update the chemical inventory in CERS. See Violation # 4 for more details. Revise the site map to include all hazardous materials and hazardous waste storage areas and submit the new map to CERS.

Violation Date: 03-05-2021
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 07/13/2021. Facility could not provide documentation of hazardous waste determination for the following waste streams: - Dust from indoor facility chemical mixing captured in the bag outdoors by the water treatment area, has not had a hazardous waste determination - Filter cake debris from the water treatment area has not had a hazardous waste determination. The influent material (prior to any treatment such as PH adjustment or filtration) has not had a hazardous waste determination. Perform hazardous waste determination on the observed waste streams, a lab analysis will determine hazardous waste characteristics. Hazardous waste determination includes a 96 hour aquatic bioassay, TTLC/STLC and CAM-17 metal test. Provide documentation of lab results to ACDEH inspector. The influent material being treated in the water treatment area must have a hazardous waste determination prior to being treated. Please provide a description of the treatment proce... THORO SYSTEM PRODUCTS (Continued) **U001597795**

Eval Notes: ACDEH inspectors arrived on site at 38403 Cherry St Newark, Master Builders Solutions to conduct an inspection for the Hazardous Materials Business Plan and Hazardous Waste Generator programs. Facility manager Johnathan assisted ACDEH with the inspection. Master Builders Solutions is the global brand of advanced chemical solutions for construction. Construction chemicals portfolio includes concrete admixtures, waterproofing solutions, concrete repair and protection solutions, performance grouts and performance flooring solutions. The facility utilizes sand as a primary base and stores several thousands of gallons of product mixtures used for formulating different types of concrete filling adhesives with the sand. Most of the variety of chemicals used in the production are contained within several hundred 5 gallon buckets stacked across the warehouse. Within the entire facility, there are 354 different types of chemicals reported into... [TRUNCATED: Refer to full Inspection Report]

Eval Notes: Master Builders Solutions is the global brand of advanced chemical solutions for construction. Construction chemicals portfolio includes concrete admixtures, waterproofing solutions, concrete repair and protection solutions, performance grouts and performance flooring solutions. Facility also operates a water treatment unit that treats water slurry. Master Builder's Solution is permitted with Union Sanitary District, and maintains documentation on the PH levels of the treated waste water after it is processed. However, facility representative Johnathan Hightower could not provide testing records or identification of the influent material being processed. Hazardous waste and PH determination is required on the materials being processed into the water treatment unit. Waste streams include non-RCRA hazardous waste liquid mixes (limestone) and waste oil, hydraulic fluid from the facility maintenance shop. Hazardous Waste hauler is Safety-Kleen Systems Inc.

	6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	Returned to compliance on 01/21/2015.
Violation Division:	Alameda County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	11105
Site Name:	Master Builders Solutions
Violation Date:	09-28-2017
Citation:	HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
Violation Description:	Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes:	Returned to compliance on 11/02/2017. OBSERVATIONS: Two large plastic tanks stored outside in the southwest corner of their property do not have labels on them. The chemical inventory in CERS is incorrect. Emergency response training last occurred on 2/9/16. CORRECTIVE ACTIONS: Label the two plastic tanks as "EMPTY" and submit a photo of the labeled tanks. This violation was corrected on-site. Update and correct the chemical inventory in CERS. See Violation #4 for more details. Document and train all employees in emergency response procedures and submit a copy of the training documentation to ACDEH.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-05-2021
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: ACDEH inspectors arrived on site at 38403 Cherry St Newark, Master Builders Solutions to conduct an inspection for the Hazardous Materials Business Plan and Hazardous Waste Generator programs. Facility manager Johnathan assisted ACDEH with the inspection. Master Builders Solutions is the global brand of advanced chemical solutions for construction. Construction chemicals portfolio includes concrete admixtures, waterproofing solutions, concrete repair and protection solutions, performance grouts and performance flooring solutions. The facility utilizes sand as a primary base and stores several thousands of gallons of product mixtures used for formulating different types of concrete filling adhesives with the sand. Most of the variety of chemicals used in the production are contained within several hundred 5 gallon buckets stacked across the warehouse. Within the entire facility, there are 354 different types of chemicals reported into... [TRUNCATED: Refer to full Inspection Report]

Eval Notes:	Master Builders Solutions is the global brand of advanced chemical solutions for construction. Construction chemicals portfolio includes concrete admixtures, waterproofing solutions, concrete repair and protection solutions, performance grouts and performance flooring solutions. Facility also operates a water treatment unit that treats water slurry. Master Builder's Solution is permitted with Union Sanitary District, and maintains documentation on the PH levels of the treated waste water after it is processed. However, facility representative Johnathan Hightower could not provide testing records or identification of the influent material being processed. Hazardous waste and PH determination is required on the materials being processed into the water treatment unit. Waste streams include non-RCRA hazardous waste liquid mixes (limestone) and waste oil, hydraulic fluid from the facility maintenance shop. Hazardous Waste hauler is Safety-Kleen Systems Inc.

Comments: DTSC is overseeing cleanup at this site

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: PA/SI Reassessment
Completed Date: 09/26/2014
Comments: Reassessment conducted by DTSC on EPA's behalf to determine if the site should be considered for the National Priorities List. DTSC concluded that no further federal assessment under CERCLA was necessary as DTSC had previously overseen environmental investigation and cleanup activities as part of the Ohlone Community College District Site. The main campus portion of the site was approved for unrestricted use. The adjacent agricultural parcel has a land use covenant restricting future reuse from sensitive uses.

Comments: This document was not prepared under DTSC oversight. Workplan outlining the collection of 5 soil gas samples on site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 07/15/2010
Comments: This document was not prepared with DTSC oversight. This report presents the analytical results and interpretations following the collection of four soil samples onsite.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 05/24/2011
Comments: Document was not prepared with DTSC oversight. This workplan outlines

STATE CLEANERS (Continued) **S105030856**

soil sampling of the onsite sanitary sewer line and soil stockpile.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 07/21/2011
Comments: Document was not prepared with DTSC oversight. Report of analytical results from soil sampling under on site sanitary sewer line.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 09/06/2011
Comments: Document was not prepared with DTSC oversight. Workplan outlines the collection of soil and grab groundwater samples at three locations.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 03/29/2011
Comments: Document was not prepared under DTSC oversight. Report presents analyticals and interpretations from five soil boring and three soil gas locations.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 03/05/2012
Comments: Document was not prepared with DTSC oversight. Report describes soil samples and groundwater grab samples collected at three locations.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 05/14/2013
Comments: Document was not prepared under DTSC oversight. Report describing the installation of two nested semi-permanent vapor probes screened at 3 depths per probe and a meeting that occurred between the responsible party and Alameda County Water District on August 6, 2012.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 11/08/2013
Comments: Document was not prepared with DTSC oversight. Work Plan outlining the installation of four semi-permanent soil vapor probes screened at two depths and analyzed for VOC's by EPA Method TO-15 and Fixed Gases by ASTM Method D1946.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 08/23/2013
Comments: Document was not prepared with DTSC oversight. Soil vapor monitoring report of two on site nested probes screened at 3 depths.

Completed Area Name: PROJECT WIDE

STATE CLEANERS (Continued) **S105030856**

Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 05/21/2014
Comments: Document was not prepared with DTSC oversight. Report describes the installation, sampling, and analytical concentrations from four on site nested soil vapor probes.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 06/12/2015
Comments: Document was not prepared with DTSC oversight. Letter from responsible party to Alameda County Water District to request site closure.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 03/31/2016
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Community Profile
Completed Date: 12/01/2016
Comments: Community profile was completed by DTSC Public Participation staff following the mailing of a survey. The survey focused on community demographics and the level of interest in the site. 121 of 603 surveys were returned which is a 20.1% response rate. A fact sheet will be mailed and a public notice published in the newspaper to notify the public of the beginning of the public comment period for the draft RAW. The fact sheet, public notice, and community profile will be available with the draft RAW.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 02/09/2017
Comments: Final Site Characterization workplan was approved by DTSC for additional investigation of the State Cleaners Site. A pilot Soil Vapor Extraction system will be operated as part of the work.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 07/26/2017
Comments: Work notice for site characterization activities including a soil vapor extraction pilot test and groundwater and soil vapor monitoring wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 01/16/2018
Comments: Performed radius of capture testing using helium. The SVE testing indicated not effectively pull vapors.Pilot testing was paused until new options.

STATE CLEANERS (Continued) **S105030856**

Completed Date: 11/23/2015
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 02/02/2011
Comments: This document was not prepared under DTSC oversight. Workplan outlining the collection of 5 soil gas samples on site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 07/15/2010
Comments: This document was not prepared with DTSC oversight. This report presents the analytical results and interpretations following the collection of four soil samples onsite.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 05/24/2011
Comments: Document was not prepared with DTSC oversight. This workplan outlines soil sampling of the onsite sanitary sewer line and soil stockpile.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 07/21/2011
Comments: Document was not prepared with DTSC oversight. Report of analytical results from soil sampling under on site sanitary sewer line.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 09/06/2011
Comments: Document was not prepared with DTSC oversight. Workplan outlines the collection of soil and grab groundwater samples at three locations.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 03/29/2011
Comments: Document was not prepared under DTSC oversight. Report presents analyticals and interpretations from five soil boring and three soil gas locations.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 03/05/2012
Comments: Document was not prepared with DTSC oversight. Report describes soil samples and groundwater grab samples collected at three locations.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report

STATE CLEANERS (Continued) **S105030856**

Completed Date:	05/14/2013
Comments:	Document was not prepared under DTSC oversight. Report describing the installation of two nested semi-permanent vapor probes screened at 3 depths per probe and a meeting that occurred between the responsible party and Alameda County Water District on August 6, 2012.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Workplan
Completed Date:	11/08/2013
Comments:	Document was not prepared with DTSC oversight. Work Plan outlining the installation of four semi-permanent soil vapor probes screened at two depths and analyzed for VOC's by EPA Method TO-15 and Fixed Gases by ASTM Method D1946.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	08/23/2013
Comments:	Document was not prepared with DTSC oversight. Soil vapor monitoring report of two on site nested probes screened at 3 depths.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	05/21/2014
Comments:	Document was not prepared with DTSC oversight. Report describes the installation, sampling, and analytical concentrations from four on site nested soil vapor probes.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Other Report
Completed Date:	06/12/2015
Comments:	Document was not prepared with DTSC oversight. Letter from responsible party to Alameda County Water District to request site closure.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	03/31/2016
Comments:	Not reported
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Community Profile
Completed Date:	12/01/2016
Comments:	Community profile was completed by DTSC Public Participation staff following the mailing of a survey. The survey focused on community demographics and the level of interest in the site. 121 of 603 surveys were returned which is a 20.1% response rate. A fact sheet will be mailed and a public notice published in the newspaper to notify the public of the beginning of the public comment period for the draft RAW. The fact sheet, public notice, and community profile will be available with the draft RAW.

STATE CLEANERS (Continued) **S105030856**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 02/09/2017
Comments: Final Site Characterization workplan was approved by DTSC for additional investigation of the State Cleaners Site. A pilot Soil Vapor Extraction system will be operated as part of the work.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 07/26/2017
Comments: Work notice for site characterization activities including a soil vapor extraction pilot test and groundwater and soil vapor monitoring wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 01/16/2018
Comments: Performed radius of capture testing using helium. The SVE testing indicated not effectively pull vapors.Pilot testing was paused until new options.

Description:	RP states: On 01/31/2017 by approximately 0100 hours, a railcar arrived to the Evergreen Refinery containing water contaminated with 1000ppm hydrogen sulfide gas with no placards or information. An unknown amount of the substance released when an employee opened the dome of the railcar to take a sample. One (1) Safety Kleen/Evergreen employee became ill upon inhaling the vapors but did not go to the hospital. The dome has been closed and the release is contained. Safety Kleen/Evergreen is determining what to do with the material. Rail Car ID TILX190445.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D003
Waste Description: REACTIVE WASTE

Waste Code: D004
Waste Description: ARSENIC

Waste Code: D005
Waste Description: BARIUM

Waste Code: D006
Waste Description: CADMIUM

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D010
Waste Description: SELENIUM

Waste Code: D011
Waste Description: SILVER

Waste Code: D018
Waste Description: BENZENE

Waste Code: D019
Waste Description: CARBON TETRACHLORIDE

Waste Code: D020
Waste Description: CHLORDANE

Waste Code: D021
Waste Description: CHLOROBENZENE

SAFETY-KLEEN OF CALIFORNIA INC (Continued) **1000357880**

Waste Code: D022
Waste Description: CHLOROFORM

Waste Code: D027
Waste Description: 1,4-DICHLOROBENZENE

Waste Code: D028
Waste Description: 1,2-DICHLOROETHANE

Waste Code: D029
Waste Description: 1,1-DICHLOROETHYLENE

Waste Code: D030
Waste Description: 2,4-DINITROTOLUENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: D036
Waste Description: NITROBENZENE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: D040
Waste Description: TRICHLORETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL

SAFETY-KLEEN OF CALIFORNIA INC (Continued) **1000357880**

BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F004
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F037
Waste Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Waste Code: F038
Waste Description: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT

SAFETY-KLEEN OF CALIFORNIA INC (Continued) **1000357880**

UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Waste Code: K048
Waste Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K049
Waste Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K050
Waste Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K051
Waste Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K052
Waste Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K157
Waste Description: WASTEWATERS (INCLUDING SCRUBBER WATERS, CONDENSER WATERS, WASHWATERS, AND SEPARATION WATERS) FROM THE PRODUCTION OF CARBAMATES AND CARBAMOYL OXIMES.

Waste Code: P011
Waste Description: ARSENIC OXIDE AS2O5 (OR) ARSENIC PENTOXIDE

Waste Code: P012
Waste Description: ARSENIC OXIDE AS2O3 (OR) ARSENIC TRIOXIDE

Waste Code: P022
Waste Description: CARBON DISULFIDE

Waste Code: P029
Waste Description: COPPER CYANIDE (OR) COPPER CYANIDE CU(CN)

Waste Code: P068
Waste Description: HYDRAZINE, METHYL- (OR) METHYL HYDRAZINE

Waste Code: P098
Waste Description: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

Waste Code: P105
Waste Description: SODIUM AZIDE

Waste Code: P106
Waste Description: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

Waste Code: P120
Waste Description: VANADIUM OXIDE V2O5 (OR) VANADIUM PENTOXIDE

Waste Code: U001
Waste Description: ACETALDEHYDE (I) (OR) ETHANAL (I)

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

SAFETY-KLEEN OF CALIFORNIA INC (Continued) **1000357880**

Waste Code: U003
Waste Description: ACETONITRILE (I,T)

Waste Code: U007
Waste Description: 2-PROPENAMIDE (OR) ACRYLAMIDE

Waste Code: U012
Waste Description: ANILINE (I,T) (OR) BENZENAMINE (I,T)

Waste Code: U019
Waste Description: BENZENE (I,T)

Waste Code: U021
Waste Description: [1,1'-BIPHENYL]-4,4'-DIAMINE (OR) BENZIDINE

Waste Code: U031
Waste Description: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Waste Code: U034
Waste Description: ACETALDEHYDE, TRICHLORO- (OR) CHLORAL

Waste Code: U041
Waste Description: EPICHLOROHYDRIN (OR) OXIRANE, (CHLOROMETHYL)-

Waste Code: U043
Waste Description: ETHENE, CHLORO- (OR) VINYL CHLORIDE

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U052
Waste Description: CRESOL (CRESYLIC ACID) (OR) PHENOL, METHYL-

Waste Code: U056
Waste Description: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

Waste Code: U057
Waste Description: CYCLOHEXANONE (I)

Waste Code: U070
Waste Description: BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE

Waste Code: U071
Waste Description: BENZENE, 1,3-DICHLORO- (OR) M-DICHLOROBENZENE

Waste Code: U072
Waste Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Waste Code: U080
Waste Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Waste Code: U105
Waste Description: 2,4-DINITROTOLUENE (OR) BENZENE, 1-METHYL-2,4-DINITRO-

Waste Code: U106
Waste Description: 2,6-DINITROTOLUENE (OR) BENZENE, 2-METHYL-1,3-DINITRO-

SAFETY-KLEEN OF CALIFORNIA INC (Continued) **1000357880**
