Subject: PW direction last night

Len,

The direction of the PW Comm last night was to go ahead with the electrical work near Sunwood Drive with a few conditions that we need to work out before the Report from PW goes to the CC on June 14. I will be out town that night so Tim will have to have the information before the meeting in case any questions arise if it gets taken off of the consent agenda. They are:

- Not to exceed amount of \$13,000
- Provide a graphic of what the end result will look like
- If obtrusive, explore the option of an enclosure above and below grade (but must be still within the original \$13,000)
- Provide 2 - 200 amp services to the stage area on the east side of the unbuilt road – or – 1 400 amp service (whichever is cheaper and provides the most flexibility)
- Provide real quotes for the electrical work (ReadiWatt Electric, Aid Electric and Connexus to provide, and the one that gave you the \$3,000 estimate)

Please coordinate this activity for Tim,

Thanks,
Brian
