Petition to reject the City of Ramsey's plan to rezone the former Municipal Center Complex at 15153 Nowthen Blvd. and then sell the property and allow 1 or 2 Data Centers to be built on the property.

Petition summary and background	The City of Ramsey notified several residents via mail on March 27, 2013 that they are considering a data center development for this property. This area is surrounded by single family homes. Data centers consume an enormous amount of energy. They generate a lot of heat requiring constant air conditioning, which in turn causes noise pollution. In addition they require constant energy supply- resorting to diesel powered generators in the event of power outage- thus increasing air pollution. Light pollution is also a concern due to the requirement of security lights. Traffic on County Road 5/Nowthen Blvd. will also increase with the addition of a data center(s). Traffic is already an issue on this road in front of the elementary school. Industrial buildings in a residential area lower property values. Homeowners do not want to lose value on their property.
Action petitioned for	We, the undersigned, are concerned citizens who urge our leaders to act now to remove this development scenario from their plans. If this property must be developed we agree with the city's own statement in their comparison chart that residential development of 47 single family homes is the "best fit" and "most compatible."
