Hello,

I have another question.

Who can order a new street light for our corner?

My husband bought this house in 2002 and we pay taxes and bills on time but it looks like a problem to upgrade to energy saving light. My husband works second shift and come home at 12:30 am. Since there is an increase in crime we would like to have a better street light.

Here is a copy from Connexus Energy:

Good Morning –

Thank you for contacting me today regarding upgrading the light at the corner of 144<sup>th</sup> Ln NW and Tungsten Way. I reached out to our lighting specialist to see if we could upgrade this to the LED type of bulb. I was informed that for this type of light we cannot simply change out the bulb, but rather would have to change out the entire fixture, which costs approximately \$800. At this time, we do not upgrade this type of light to LED unless it cannot be repaired.
