Applications: Advanced Metering Infrastructure (AMI) Implementation Program

Profile

eesparza@sanluisaz.gov

Entity Name:

City of San Luis

I. General Information**1. Title of Project:**

Advanced Metering Infrastructure (AMI) Implementation Program

2.Type of Conservation Activity (A.R.S. § 49-1332(B)):

Programs and projects that reduce water use Per A.R.S. 49-1332(B)(2)

Note: for the purpose of the application, the term project and program will be referred to as “conservation activity”

3. Is this for an individual Water Conservation Project or a general Water Conservation Program?

Water Conservation Program

Please describe the specific components that make it a program.

The City of San Luis (City) Water Utility consists of nearly 8,500 water service connections. However, about 60% of our current water meters are between 10-15 years old. The AMI Program will replace our outdated water meters and endpoint technology. The City understands the need to advance its conservation efforts by moving with Advance Metering Infrastructure (AMI). The specific components of the program include: 1. Replacing existing Automatic Meter Reading (AMR) that is past or nearing its operational lifespan. 2. Adding AMI network 3. City Billing Department interface and training 4. Customer interface, outreach, and support 5. To support the City’s efforts to meet or exceed ADWR conservation requirements

4. What is the location of conservation activity?**City**

5.Conservation Activity Cost**Amount requested from the WCGF for this activity:**

\$2,017,065.21

Amount of matching funds:

\$672,355.08

Total conservation activity cost:

\$2,689,420.29

When applying for the grant, note that a single water conservation program grant may not exceed \$3,000,000. A single water conservation project grant may not exceed \$250,000. The WCGF requires at least a twenty-five percent match for each water conservation program or project.

6. What is the estimated water savings in acre-feet per year?

509

Explain calculation:

Based on American Water Works Association report titled "Increasing Consumer Benefits & Engagement in AMI-based Conservation Programs" dated January 2022, it states, "We found that signing up for an AMI portal led to an average decrease in daily water usage in the range of 6.3 to 12.1%." Applying this calculation to the City's 2022 water production of 4,204 acre-feet (AF), results to an estimated range of potential water savings between 265 AF/yr. and 509 AF/yr. The City's citizens are actively seeking for efficient water use. With this type of community interest and with deliberate education and outreach, the City anticipates water savings to be on the higher end of the previous mentioned range.

7. What is the expected duration of the conservation activity?

Newly installed meters last between 10 and 15 years. Electronic communication devices can last up to 20 years. As the meters and electronic communication devices reach the end of their life span, they will be replaced with updated technology.

II. Conservation Activity Benefits and Results

8. What is the water conservation activity you propose to fund with grant monies? Describe in detail.

The grant monies will be used to replace our current outdated meters and our current Automatic Meter Reading (AMR) system that is past or nearing its operational lifespan. Our current reading system will be replaced with Advanced Metering Infrastructure (AMI), a robust form of water metering technology that allows direct transmission of water use data, to our billing department.

AMI improves the ability to collect accurate water usage data to improve billing, leak detection, and water resource management. The technology has now reached competencies that allow for communities, with terrain similar to the City's, to participate within more acceptable cost levels. AMI allows real time reads using cellular technology to transmit to the database. With this type of communication, the City's residents can download a cellular application to access their live water usage and reads. The advanced equipment will alert customers and the City of any unusual activity that may occur within their household piping system.

The new transmitting devices would allow leaks to be detected up to 30 days sooner than current equipment permits. The software that accompanies this program would instruct customers where and how to look for leaks and provide other techniques for reducing water loss. Customers will be able to access their water usage on a daily basis and avoid potentially losing thousands of gallons of water per incident. Since this data is available to the homeowner and the City, leak alerts will be transmitted within 6 hours of a high-flow incident, allowing correction of the water loss.

9. What is the source of the water that will be conserved? If it is mainstem Colorado River water or Colorado River water delivered through the Central Arizona Project, please clearly indicate so.

Groundwater from the Yuma Basin and Sub-basin.

10. Describe the community (population size, demographics, principal economic activities, etc.) impacted by the conserved water.

Nestled in the Yuma County, the City of San Luis lies in the southwest corner of the United States' Lower Sonoran Desert on the California-Mexico-Arizona border, near the convergence of the Colorado and Gila rivers. The city was established in 1930 and stands on the U.S. - Mexico border opposite San Luis Rio Colorado, Sonora. As matter of fact, the San Luis Port of Entry is currently going over an expansion that is expected to cost around \$300 million. The expansion consists of doubling the number of vehicle lanes from eight to sixteen, adding four pedestrian lanes, and boost overall technology. Currently, three million cars and two million people cross back and forth a year.

The lowest point in Arizona is located on the Colorado River in San Luis, where it flows out of Arizona and into Sonora. The City of San Luis has an area of 26.5 square miles and a population of 35,500. The population can be spread as follows: 35.6% under the age of 18, 12.8% from 18 to 24, 34.1% from 25 to 44, 13.4% from 45 to 64, and 4% who were 65 years of age or older. As of the census of 2020, the racial makeup of the city was 94.8% Hispanic followed by 3.3% White and 1.2% Black or African American. Out of any of the populated places in the contiguous United States, the City of San Luis is the sunniest, least humid, lowest frequency of precipitation, and has the highest number of days per year with the maximum temperature of 90 Fahrenheit degrees or higher. Summer temperatures reach well above 100 Fahrenheit degrees. Despite the previous mentioned climate, San Luis was named of the fastest growing cities in Arizona. One of the principal economic activities for San Luis is agriculture. The median income for a household in the city was \$43,630.00. However, about 24.3% of the population were below the poverty line.

11. What is the extent to which your water conservation activity achieves one or more of the following (select all that apply):

Long-term reductions in water use, Improvements in water use efficiency

Describe:

The City expects long-term reductions in water use in all existing billing categories (Single Family, Multi-Family, Commercial, Government, Schools, Construction). The City's water use is predominately residential, in 2022, the City served approximately 2,416 acre-feet to this category. With the range estimate referenced in Question 6, The City anticipates between 265 and 509 acre-feet of water savings in the long-term. Due to most of the supplies being served to this category, the City is preparing its outreach plans to help customers achieve possible long-term reductions and improved efficiencies. The City knows that outreach planning is critical to this and other customer sectors to maximize the benefits of an AMI system.

Since the new meters and software system will be able to provide near-real time water usage rates, this increases the likelihood that a leak, in the customer's system, would be identified and mitigated in less than a day. Additionally, the new software will allow customers to view their daily water usage and adjust their usage to fit their needs. With reductions in water use and improvements in water use efficiency, along with faster detection of leaks and water loss, this will in turn set forth improvements in water reliability. The less pumping needed leaves the water supply in storage and extends the supply in the local aquifer/groundwater systems.

12. What is the extent to which your water conservation activity addresses one of more of the following:

Water supply shortages, Reliance on non-renewable water supplies, Groundwater depletion

Describe:

The outcome of this conservation activity will be a long-term demand reduction of our groundwater depletion which will help mitigate water shortages by using less. Our primary source of water is groundwater delivered by Yuma Basin and Sub-basins. With AMI, along with significant outreach and education, customers will have access to a cellular application providing near-real time data to determine their water usage. Also, this smart technology will enable customers and billing department to receive alerts of abnormal activity providing the ability to detect and fix leaks before they become larger. With such an advancement in technology, AMI is expected to result in annual water savings of an estimated 6.3% to 12.1%.

13. How will your water conservation activity align with a local, regional, or statewide water plan or integrated resource management plan?

The City sees AMI as one of the leading efforts to advance the community's conservation and protect the local groundwater supplies. The City is pursuing its General Plan update which includes a water resources element, specifically working to not only produce a plan but have ongoing implementation efforts. The new system encourages the population to reduce their water usage by providing more data for their consideration.

14. What are the costs and benefits of your water conservation activity, including any environmental impacts?

The cost of the AMI system is \$2,689,420.29, which includes the meter cost, installation, commissioning, routine maintenance, and the cost to maintain the program such as internal training, planning, and data extraction. The most significant impact of this program will come in the form of water conservation benefits. Again, research from the American Water Works Association (AWWA) has shown AMI leads to an average daily water savings in the range of 6.3%-12.1% for engaged customers. Additionally, AMI allows for near real-time leak detection. Whereas with the current reading system, leak detection occurs when doing our monthly reads, when there are obvious signs of leaks (water in the street), or when customers noticed irregularly in their monthly bills. The sooner a leak is detected and fixed, the less a customer will be billed for the excess water usage.

The benefit seen in the reduction of water use is projected in multiple ways: 1. Water conservation will not only reduce the amount of water being used which conserves water for future use but also means less water is brought back through the effluent system which requires treatment before discharge. 2. Reduction in treatment cost is comprised through reduced use of electricity, fuel, and chemicals during the treatment process. Energy saving can be made through better understanding of water consumption patterns that allow timing and optimization for pump stations and water tank filling to lower energy price tiers. 3. The overall water infrastructure will benefit from reduced water usage which will extend the lifespan of these systems. 4. The environmental impact is through less pumping of groundwater which is retained in the aquifer. With the recent droughts and water shortages throughout the state, all water saving activities benefit preserving water supplies.

15. How will you measure the effectiveness of the conservation activity?

The effectiveness of the AMI system can be measured directly from the large amount of data that will be collected from the system which will allow data-driven decision making. The data derived from the smart meters will provide direct indication of customer water usage during drought conditions, at different times of the day and year. The evaluation of this data will benefit water conservation strategies by showing direct indicators of water usage. The metric of water saved, after implementation, is the most obvious indicator of program effectiveness but not the only one. Once the AMI system is installed, a Utility Billing customer has the option to download, in electronic format, an application to see their data. The City anticipates that conservation will be gained by allowing a customer to see their monthly water usage. During summer months, there is a spike in irrigation water, which is expensive potable water; the typical customer may be unaware of how much extra water is being used. The customer will also be able to detect leaks quickly, reducing waste, and letting the customer know when corrective actions need to be taken. Providing customers with this tool and information will allow them to gauge their own water usage and make choices that provide the most benefit. The City's Gallons per Capita per Day (GPCD), a measurement of how much water each customer uses each day, is a direct measurement of the City's water conservation efforts. It is projected that GPCD will decrease as customers recognize and try to reduce their usage.

III. Funding Sources

16. If your water conservation activity is eligible for funding from WIFA's Long-Term Water Augmentation Fund or Water Supply Development Fund, does the nature of your conservation activity make funding from those funds impractical, and why?

This conservation activity is not eligible for funding from the Long-Term Augmentation Fund or Water Supply Development Fund. The City is only seeking this grant for implementation of the AMI program.

17. Would the conservation activity be otherwise implemented without this grant funding? Explain.

No. Advanced Metering Infrastructure (AMI) is a significant investment for the City. This grant will help the City implement, in its entirety, the AMI program.

18. To what extent will your water conservation activity maximize or leverage multiple available funding sources, including federal funding?

This conservation activity will leverage committed Capital Improvement Projects (CIP) utility funds. Our CIP is currently using water user's rates and fees for funding. We currently have meters and smart endpoints replacement projects. Our intention with these projects is water conservation as we are updating identified out-of-date meters based on age and overuse, where their performance to accurately read water consumption is declining.

19. Are there cost-sharing opportunities with other applicants or other parties? Explain.

This program does not include any cost-sharing opportunities as the program only affects the customers of the water utility. If other funding opportunities come to light, the City will aggressively pursue those options.

20. What is the source and amount of the match (including in-kind match)?

The source of the match comes from the City's water users' rates and fees. The City is requesting a \$2,689,420.29 grant, with a match of \$672,355.08 or 25%, to implement the Advanced Metering Infrastructure (AMI).

IV. Capacity, Feasibility, & Public Comment

21. What qualifications and capacity do you have for completing your proposed water conservation activity? Include any past managerial deficiencies and provide the name(s) and qualifications of the individual(s) or entities who will be managing this activity.

This program will be completed and managed by Edgar Esparza, Billing and Collections Manager, along with his staff. Our Billing and Collections Division consists of Metering and Field Services staff responsible for installing, servicing, and repairing water meters, and Customer Service and Accounting Specialist Staff, which are responsible for managing customer accounts, consumption, and billing information. Also, assisting with this project, we will have Monica Castro, City's Finance Director, and Manuel Hernandez, the City's Project Manager.

22. Will there be significant management impacts as the result of the proposed conservation activity, or any technology associated with the conservation activity? (For example: additional costs or staffing requirements)

The management impacts will be minimal; the new system will reduce the amount of labor hours employees are currently needing to read water meters each month. Technology will be self-contained. Communication devices installed with the meters will send data through the cell phone system to a central server. The server will evaluate the data using proprietary software and identify the change of state of all readings. Any measurements that are outside of the set parameters will be sent through email to be evaluated by the project management team. The only technology that will require maintenance will be the endpoints associated with the individual meters, which have a 10-year battery life. The software from the vendor will then communicate with the customer portal, providing near real-time data.

23. Will the proposed conservation activity promote collaborative partnerships to address water-related issues? Explain.

The implementation of the AMI system goes seamlessly into the continuous efforts of the City to promote and educate the community on water conservation practices. Partnerships with local organizations that promote water conservation and water quality for the health of the local aquifer are perfect collaborative partners to promote the use of smart meter technology for the benefit of the water system. The City's General Plan provides the overarching goals of strengthening water conservation, water quality, and water supply to the community through development of a long-term water plan. The implementation of the long-term water plan requires collaboration with community stakeholders, the AMI system is one of key components that brings this collaboration together. It is anticipated that outreach efforts will be put in place to bring in many more organizations, groups, and stakeholders.

24. What is the stakeholder involvement in the conservation activity planning process?

The City has been aware of AMI program for quite a few years. But, due to limited budget and other water projects, the AMI implementation has not been a feasible option. However, a comprehensive outreach plan will be implemented to achieve the possible efficiencies the City described in Question 6. The City's plan will include 3 stages and several communication tools to reach various types of customers and stakeholders. The first stage will be to train in-house staff to assist customers with this technology. Secondly, the City will be informing water customers about the AMI user-interface, generating excitement about the use, and how it could save them money. Lastly, the City will publish the registration/sign-up procedures for the user interface.

25. Will the proposed conservation activity include public outreach and opportunities for the public to learn about the conservation activity? Explain.

This conservation program will include public outreach and opportunities for the public to learn about the conservation activity. The City will be utilizing City's website to deliver information on how to save water indoors (kitchen, bathroom, laundry) and outdoors (primarily irrigation). Our website will be one of many forms of communication methods that the City will be using. The City will also be utilizing press releases, local newspapers, multiple social media platforms, advertising in selected publications, email and text notifications, and public events. All of these will be done to continue to develop customer engagement and education protocols based upon industry best practices published by the American Water Works Association (AWWA) and other leading industry experts.

26. Is there community and/or sector support for the conservation activity? Explain.

The City has great support from the community as they are interested in heightened conservation practices in both indoor and outdoor water use.

27. How feasible is it to complete your water conservation activity? Explain.

Successful completion of this activity within the required timeframe is highly feasible. After speaking with the AMI vendor, the fully implementation of the program will take from 6-7 months. During the previous mentioned time frame, an installation of AMI network will be completed, replacement of outdated meters and smart endpoints, and data integration set up for billing. Also, vendor will provide the support and training needed to create a successful program.

28. If the conservation activity is a continuation of ongoing activities, has the activity been shown to be effective? If a new activity, has the proposed project, technology, or technique previously been implemented?

This is a new program the City us undertaking. There has not been a smart meter program in the City previously. However, with the evolution of communication technology, this program will advance the smart city ideals allowing customers and utility staff to work together to find solutions for water loss that continue to challenge the utility system. Also, there have been other cities in Arizona that have had success in the implementation of this program as well as those across the country.

29. Will the proposed conservation activity implement an established Best Management Practice? Explain.

Yes, the proposed conservation activity will implement established Best Management Practice (BMP). We look towards the American Water Works Association (AWWA) and U.S. Environmental Protection Agency (EPA) for these BMP's, especially in terms of customer outreach to drive high engagement. To give a few examples, commercial sites, schools, and multi-family buildings, which have a particular pattern of water consumption. AMI can be an especially useful tools for these customers. AMI can help them understand and manage their water use, help facilities establish an effective water management program, and identify projects and practices that can reduce facility water use. In addition to these BMP's, City of San Luis will develop Standard Operating Procedures (SOPs) for customer outreach, as well the management of the technology in the field, and in the office particularly for data management and data analytics.
