B. An authorized representative of the CONTRACTOR shall inspect the equipment on delivery to the jobsite and shall report any damage or missing components to the Manufacturer and the ENGINEER within 72 hours of receipt of the shipment.

3.04 INSTALLATION – The installation of the grit removal system shall be as indicated on the drawings and in strict accordance with the Manufacturer’s instructions and recommendations.

DRAFT

3.05 FIELD TESTS, ADJUSTMENTS AND COMMISSIONING

A. The equipment shall be shipped completely factory assembled. CONTRACTOR shall verify all access dimensions, channel dimensions, and any interior building dimensions to ensure equipment may be installed as a factory assembled units.

B. After completion of the installation, the equipment shall be inspected and certified by an authorized representative of the Manufacturer as complying with the Manufacturer's recommendations and requirements. At such time as the Manufacturer has deemed the installation to be acceptable, the Manufacturer's authorized service representative shall make any required adjustments and shall start the equipment to assure proper operation.

C. The Manufacturer's authorized representative shall provide instruction to the plant personnel as to the operation and maintenance of the equipment including commissioning, shut down, on-line operations, lubrication, and preventative maintenance.

D. Manufacturer shall state field service rates for a Service ENGINEER to OWNER and CONTRACTOR. In the event that the field service time required by this section should not be sufficient to properly place the equipment into operation, and the requirement for additional time is beyond the manufacturer's responsibility, additional time shall be purchased by CONTRACTOR to correct deficiencies in installation, equipment, or material without additional cost to OWNER.

E. The CONTRACTOR shall include in his bid, the cost of the above referenced authorized service representative. See screen specification for trip and days supplied.

END OF SECTION

DRAFT

SECTION 46 3323 – POLYMER BLENDING AND FEED EQUIPMENT

PART 1 – GENERAL

1.01 SUMMARY

A. Furnish one (1) polymer blending system with progressive cavity pump, motors, and controls, including all integral piping, valves, fitting, pipe supports, special equipment and appurtenances in accordance with these specifications, including all incidental work necessary to make it complete, satisfactory, and ready for operation.

B. The polymer dilution and feed system shall be capable of effectively activating and fully blending with water a homogenous polymer solution ranging from 0.1% to 1% concentration of emulsion polymers with active contents up to 75%.

1.02 SYSTEM DESCRIPTION

A. DESIGN CRITERIA
1. Polymer Type: Emulsion
2. Polymer Activity (percent active): 30 to 75
3. Solution Concentration Range: 0.1% to 1%

Neat Polymer Flow Range (GPH)	Dilution Water Range (GPH)
0.5 - 5	5 - 20

1.03 SUBMITTALS

A. Product Data:
1. Submit data completely describing product, including detailed scope of supply, detailed bill of materials and annotated specification sheets of all components.

B. Shop Drawings:
1. Submit detailed specifications and shop drawings with both shaded isometric and orthogonal views of the proposed system, including dimensions and weights.
2. Submit wiring, control schematics, and control logic diagrams for all electrical and control components furnished.

C. Provide detailed Operations and Maintenance Manuals including storage, installation start-up and operating instructions. Provide safety precautions and warnings of all hazards operating equipment.

1.04 QUALITY ASSURANCE

A. Prior to shipment the system shall be inspected for quality of construction verifying all fasteners and fittings are tight, all wires are secure and connections whisker-free. The system shall be tested under pressure for a minimum of one hour at 100 psi. If leaks are found they shall be fixed and a new test shall be conducted for one hour at 100 psi until the plumbing system is verified to be leak free.

1.05 DELIVERY & STORAGE

A. The equipment will be shipped in a new, high quality completely enclosed weather proof wooden crate constructed of 2” x 4” studs and 3/8”-thick plywood. Access to the crate shall be by a front panel removable by lag bolts. A skid shall be constructed of 4” x 4” or two 2” x 4” each, allowing fork-lifting. The crate shall include a shock sensor to warn of equipment mishandling during shipment.

DRAFT

1.06 WARRANTY

A. The system shall be covered by a one- (1) year limited warranty against defects in materials and workmanship.

1.07 SPARE PARTS

A. One (1) polymer injection check valve

PART 2 – PRODUCTS

2.01 MANUFACTURERS

A. Acceptable Manufacturers:
   1. FKC Co., Ltd., or ENGINEER-approved equal

2.02 IDENTIFICATION

A. Provide a name plate securely affixed to the unit providing Manufacturer with phone number, model number, serial number.

2.03 MATERIALS

A. The following material requirements will be strictly adhered to:
   1. System skid: 304 stainless steel
   2. Hardware: Type 18-8 stainless steel
   3. Piping & pipe fittings: schedule 80 PVC
   4. Tubing and tube fittings: polyethylene, polypropylene, stainless steel, and Viton
   5. Water solenoid valve: brass
   6. Pressure gauges: stainless steel, liquid filled
   7. Pressure switches: NEMA 4, brass connection
   8. Flow meter: acrylic, stainless steel, PVC and or polypropylene
   9. Water control valve: stainless steel with stainless steel seat
   10. Mixing chamber body / flanges: PVC
   11. Mixing chamber cover / chamber: clear polycarbonate
   12. Impeller: 304 stainless steel
   13. Impeller shaft seal: Viton, stainless steel, ceramic, carbon
   14. Mixing chamber pressure relief valve: brass, stainless steel, or PVC
   15. Metering pump wetted parts: stainless steel & Viton
   16. Seals: Viton, ceramic, Teflon, and or carbon
   17. Control enclosure: FRP

2.04 EQUIPMENT

A. Polymer Activation & Blending Chamber:
   1. These specifications are based on a multi-stage, multi-zone, Hydro-Mechanical polymer activation & blending technology. Alternate technologies will only be considered if proven to provide an equal level of performance, versatility, reliability, and quality, otherwise the following technology will be provided without exception.
   2. In order to provide control and versatility to optimize the performance of the wide range of polymers available and to optimize system reliability, a multi-stage Hydro-Mechanical polymer blending technology shall be provided with both a non-mechanical and mechanical mixing stage:
      a. Non-Mechanical Stage: To optimize reliability, the device shall be capable of activating and blending polymer based on plant water pressure alone at 30 psid or greater. Polymer shall be injected directly into a water jet by means of an injection quill positioned such that the non-mechanical mixing energy is no way diminished prior to polymer and water contact. The non-mechanical zone shall be designed

DRAFT

such that the velocity of the mixing energy- producing water jet is maintained or increases as flow decreases.

b. Hydro-Mechanical mixing Stage: In order to provide optimal polymer performance under all operating conditions and to provide total control over mixing energy, in addition to the non-mechanical mixing stage the device shall be capable of producing its mixing energy independent of plant water pressure through a variable intensity, controllable stainless steel hydro-mechanical mixer. The mixing impeller shall be fully controllable and capable of inducing ultra-high, non-damaging mixing energy at all flow rates. This shall be accomplished by controlling mixing intensity and preventing over exposure to, or damaging recirculation through the impeller. The polymer mixing impeller shall be designed to produce both axial and radial flow to optimize mixing effectiveness and to effectively inducing high, non-damaging mixing energy over the systems full flow range.

c. Mixers that rely solely on plant water pressure and or flow for mixing energy will not be acceptable. Mixers where performance is affected by flow rate and therefore retention time resulting in under or over exposure to mixing energy, or which rely on constant speed impellers or that rely on close tolerances for blending shall not be acceptable.

3. In order to prevent polymer build-up, the mixing chamber shall maintain high velocity in the entire chamber - at no time shall there be low velocity within any portion of the mixing chamber.
4. The mixing impeller shall be controlled by VFD motor controller and driven by a wash-down duty AC motor. The motor shall be mounted horizontally. Motors mounted under the mixing chamber where seal failure or leaks can damage the motor shall not be acceptable.
5. The mixer drive shaft shall be sealed by a mechanical seal which shall have an integrally mounted and factory plumbed seal flush. A drain port behind the seal shall be provided in the mixing chamber to drain the polymer solution in case of a seal failure. The seal shall be easily accessible for replacement. All bearings shall be external from the mixing chamber. Internal bearings shall not be acceptable.
6. Both mechanical and non-mechanical mixing zones shall be clear polycarbonate to view the mixing action and blending effectiveness. Acrylic chambers prone to becoming brittle over time and cracking, or opaque pipe shall not be acceptable to meet this requirement.
7. The mixing chamber shall have a maximum rated pressure of 100 psi. Provide a pressure relief on the mixing chamber factory set at 75 psi.
8. Provide a neat polymer check valve specifically designed to isolate neat polymer from dilution water.

B. Dilution Water Assembly:

1. The dilution water flow rate shall be monitored by a Rotameter type flow meter having the range as specified under paragraph 1.02 above. Unions or flanges shall be provided on the flow meter to allow easy removal for cleaning.
2. The unit shall have an electric solenoid valve for on/off control of total dilution water flow.
3. A differential pressure type low water differential pressure alarm shall be provided. The switch shall be adjustable between 25 and 100 psid. Proof pressure shall be 500 psi minimum. The pressure switch shall be as manufactured by Ashcroft.
4. Provide a 2-1/2” stainless steel liquid filled pressure gauge to monitor dilution water inlet pressure.

DRAFT

C. Progressive Cavity Neat Polymer Metering Pump
   1. The unit shall have one (1) neat polymer metering pump(s) integrally mounted on the systems skid. The metering pump(s) shall have a range as specified under paragraph 1.02 above. The pump shall be a positive displacement, progressive cavity type constructed of stainless steel and Viton. The shaft seal shall be mechanical seals, packing type shall not be used. A 240 VAC wash-down duty motor shall drive the pump. DC motor are not acceptable. A gear reducer shall be provided to produce a maximum pump shaft speed of not more than 545 RPM. The motor shall be controlled by an VFD located in the system control panel.
   2. Provide a calibration column with two full port PVC ball valves having Viton O-rings. The column shall be calibrated for a one minute draw-down and read in GPH and milliliters. The calibration column shall be rigidly mounted to the systems frame with a minimum of two heavy duty brackets. Mounting the calibration to the neat polymer inlet piping shall not be acceptable.
   3. Provide a thermal type loss of polymer flow sensor.

D. Solution Discharge Assembly:
   1. Provide a 2-1/2” stainless steel liquid filled pressure gauge to monitor system discharge pressure.

E. Controls:
   1. A control panel integral to the systems frame shall be provided. The enclosure shall be rated NEMA 4X and constructed of FRP. The control panel shall consist of all controllers, digital displays, potentiometers, switches, lights, relays, and other control devices required for a complete operable system. The control panel and all components shall be industrial duty. All skid mounted electrical components interconnected to the control panel shall terminate at numbered and labeled terminal blocks. The terminal blocks shall be sized for 14 gauge wire. Wires shall be neatly run through wire race-way and numbered with shrink tubing type labels. Adhesive labels shall not be used. The control panel shall be positioned such that there are no obstructions in front of the control panel per related NFPA requirements. Control.
   2. Power: 120 VAC, 1Ph, 60/50 Hz.
      D Control Series:
   3. Operator Interface – Discrete Selector Switch:
      a. System ON / OFF (reset) / Remote
      b. One-Turn Potentiometer – Mixer Speed
      c. Ten-Turn Potentiometer – Progressive Cavity Metering Pump Control
   4. Status / Alarm Indicators:
      a. Main Power ON Indication
      b. LED display of Metering Pump Rate
      c. Low Water Differential Pressure Alarm
      d. Low Polymer Flow Alarm
   5. Inputs (signals by others):
      a. Remote Start / Stop (discrete dry contact)
      b. Pacing Signal Based on Process Flow (4-20mA)
   6. Outputs:
      a. System Running (discrete dry contact)
      b. Remote Mode (discrete dry contact)
      c. Common Alarm (discrete dry contact)

F. System Skid:
   1. The system's frame shall be of rugged 304 stainless steel construction. No mild steel shall be used. All piping shall be rigidly supported.

DRAFT

2. Under no circumstance shall the pump suction exceed 5” from the bottom of the skid for progressive cavity pumps and 12” from the bottom of the skid for diaphragm pumps.
3. The overall system dimensions shall not exceed 36” W x 26” D X 60” H.

PART 3 – EXECUTION

3.01 FIELD SERVICES

A. Process equipment manufacturer shall provide the services of a qualified field service technician to inspect and certify the installation, start-up the equipment, trouble shoot any problems that may arise and providing complete and thorough training of operator personnel.

END OF SECTION

DRAFT

SECTION 46 4121 – SUBMERSIBLE MIXERS

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Furnish and install submersible mixers with associated appurtenances, complete and operable, in accordance with the Contract Documents.

1.02 SUBMITTALS

A. Submittals shall be made in accordance with Section 01 3300 – Submittal Procedures.

B. Shop Drawings: Furnish complete drawings and technical information for equipment, piping, valves, and controls. Where indicated or required by the ENGINEER, Shop Drawings shall include clear, concise calculations showing equipment and anchorage forces and the capacities of the anchorage elements.

C. Spare Parts List: A list of spare parts for each piece of equipment shall be obtained from the manufacturer and submitted at the same time as Shop Drawings. The name, address, and telephone number of the nearest distributor for each piece of equipment shall be furnished. This list shall contain all data necessary to allow the OWNER to purchase spare parts as necessary.

1.03 OPERATION AND MAINTENANCE MANUAL

A. Operation and Maintenance Manual shall be furnished in accordance with these Specifications.

B. Provide six (6) hard copies and one (1) electronic copy in PDF format.

1.04 QUALTY ASSURANCE

A. The Manufacturer shall provide a 2-year equipment warranty.

B. The mixing equipment specified herein shall be the design and fabrication of a single Manufacturer which shall have sole source responsibility for said equipment.

1.05 SPARE PARTS

A. Provide all spare parts anticipated to be required for the first 2 years of operation. Manufacturer shall clearly define quantity, description of part and associated part numbers as part of manufacturer's scope of supply.

B. Spare parts shall be placed in a separate container clearly marked as "Spare Parts." All parts shall be identified and clearly labeled with applicable part numbers.

PART 2 – PRODUCTS

2.01 GENERAL REQUIREMENTS

A. The mixer(s) shall be capable of handling raw, screened sewage. The mixer(s) shall be able to be raised and lowered and shall be easily removed for inspection or service without the need for personnel to enter the mixing vessel. A sliding guide bracket shall be an integral part of the mixer unit. The entire weight of the mixer unit shall be guided by a single bracket which must be able to handle all thrust created by the mixer. The standard mixer, with its appurtenances and cable, shall be capable of continuous submergence under water without loss of watertight integrity to a depth of 57 ft.

B. Operating Conditions: The WORK of this Section shall be suitable for operation under the following conditions:

Mixer Location	Rated HP
Anoxic Mixers	6

DRAFT

2.02 DIRECT DRIVE MIXER

A. Motor: The multi-pole motor shall be directly connected to the propeller. The mixer motor shall be squirrel cage, induction, shell type design, housed in an air filled, watertight chamber. The stator windings shall be insulated with moisture resistant Class F insulation rated for 315°F. The stator shall be insulated by the trickle impregnation method using Class H monomer-free polyester resin resulting in a winding fill factor of at least 95%. The motor shall be inverter duty rated in accordance with NEMA MG1, Part 31. The motor shall be designed for continuous duty, capable of sustaining a maximum of at least ten (10) evenly spaced starts per hour. The rotor bars and short circuit rings shall be made of aluminum.

B. Mixer Construction: Each mixer shall be of the integral design, close coupled, submersible type. All components of the mixer, including motor shall be capable of continuous underwater operation. Exposed mixer components shall be of 304 Stainless Steel construction. The oil housing cover plate shall be of corrosion resistant composite. All exposed nuts and bolts shall be made of stainless steel. All metal surfaces coming into contact with the mixed media, other than stainless steel, shall be protected by a factory applied spray coating of acrylic dispersion zinc phosphate primer with an epoxy finish coat on the exterior of the mixer.

C. Elastomers: All mating surfaces where watertight sealing is required shall be machined and fitted with a double set of Nitrile rubber or Viton O-rings. Fitting shall be such that sealing is accomplished by metal-to-metal contact between machined surfaces. This will result in controlled compression of the O-rings without requiring a specific torque limit. No secondary sealing compounds, rectangular gaskets, elliptical O-rings, grease, or other devices shall be used.

D. Propeller: The propeller shall be of 316 stainless steel dynamically balanced, non-clogging backward curved design. The propeller shall be capable of handling solids, fibrous materials, heavy sludge, and other matter found in normal sewage applications.

E. Cable Entry: The cable entry housing shall be an integral part of the back plate. The cable entry shall have a leak-proof seal. Epoxies, silicones, or other secondary sealing systems shall not be considered acceptable.

F. Bearings: All bearings shall have a minimum B-10 or L-10 rated life of 100,000 hours and shall have inner and outer races of metal construction. Bearings with races made of nonmetallic construction will not be deemed acceptable or meeting the load handling and environmental requirements of this application.

G. Thermal Sensors: Thermal sensors shall be used to monitor stator temperatures. The stator shall be equipped with three (3) thermal switches embedded in the end coils of the stator winding and set for 248°F. These shall be used in conjunction with, and supplemental to, external motor overload protection, and wired to the control panel.

H. Oil Housing: The oil housing shall contain two compartments consisting of an inner and an outer section with four ports to connect and facilitate oil flow. In the event that the mixed media bypasses the other seal, this design will allow the outer compartment to collect the heavier (denser) fluids by means of a simple gravity process.

DRAFT

I. Mechanical Seals:
   1. Each mixer shall be provided with two sets of lapped end face type mechanical seals running in oil reservoirs for cooling and lubrication. In order to avoid seal failure due to sticking, clogging, and misalignment from elements contained in the mixed media, only the seal faces of the outer seal assembly and its retaining clips shall be exposed to the mixed media. All other components shall be contained in the oil housing.
   2. The seals shall require neither maintenance nor adjustment, but shall be easy to check and replace.

J. Mixer Mount Assembly:
   1. A stainless steel, mixer mount/mast assembly shall be supplied by the mixer manufacturer and used to mount the mixer during operation and to guide the unit during installation and removal from service. The assembly shall consist of an upper, lower (stop) and intermediate bracket (if required, see plans) made of 304 stainless steel.
   2. The mixer mount assembly shall include a 40 ft. field adjustable length of 304 stainless steel mixer support cable assembly when up to one intermediate bracket is supplied. A 2”- or 3”-mast shall securely interface with the mixer manufacturer’s upper, lower, and intermediate brackets and integrate in such a way to securely support the mixer during operation. All support bracket assemblies shall be supplied by the mixer manufacturer only in order to ensure the integrity of the system under operational loads.
   3. The assembly shall also be provided with cable holders to secure the mixer electric power cable (one every 5 ft.). Their purpose shall be to prevent the electric cable from becoming entangled in the mixer propeller during operation. In addition, the mast shall be constructed with a positioning locking plate which will work in conjunction with a lock pin on the upper guide holder to positively lock the mast in place at various operating angles.
   4. The mixer must have the capability of redirecting the center line of its jet to 40 degrees in a vertical plane and 120 degrees in a horizontal plane. The above adjustment can be accomplished without draining the tank.
   5. The assembly shall include an integrated crane mount to allow for the installation of a removable crane.

K. Removable Crane Arm System (if required)
   1. One portable crane arm assembly shall be provided for the project to easily raise and lower the mixers for installation and inspection. It shall consist of a crane arm with telescopic capabilities, rotatable at 360 degrees, a hand winch with brake for load control with stainless steel wire, a hook, and an intermediate piece.

L. Classification: All submersible mixers supplied for the work in this Section shall be UL/FM approved for use in Class I, Division 1 areas (explosive proof).

M. Manufacturer shall be:

N. Approved Manufacturers:
   1. Flygt
   2. Or ENGINEER-approved equal.

DRAFT

PART 3 – EXECUTION

3.01 SERVICES OF MANUFACTURER

A. Inspection, Startup, and Field Adjustment: Where required by individual Sections, an authorized, experienced, and competent service representative of the manufacturer shall visit the Site to witness or perform the following in accordance with these Specifications, and to certify in writing that the equipment and controls have been properly installed, aligned, lubricated, adjusted, and readied for operation.
   1. Inspection, checking, and adjusting the equipment and approving its installation.
   2. Startup and field testing for proper operation, efficiency, and capacity.
   3. Performing field adjustments during the test period to ensure that the equipment installation and operation comply with requirements.
   4. Instruct plant operating personnel on proper operations, maintenance, and care.

3.02 INSTALLATION

A. Equipment shall be installed in accordance with the manufacturer's written recommendations and with the requirements of these Specifications.

3.03 PRE-PACKAGED EQUIPMENT

A. Coordination of all necessary space and structural requirements, clearances, utility connections, signals, and outputs shall be required to avoid later change orders when any system is furnished as pre-packaged equipment.

3.04 FIELD TESTS

A. Where indicated by the individual equipment Sections, equipment shall be field tested after installation to demonstrate satisfactory operation without excessive noise, vibration, or overheating of bearings or motor.

B. The following field testing shall be conducted:
   1. Start equipment, check, and operate the equipment over its entire operating range. Vibration level shall be within the amplitude limits as indicated or as recommended by the reference applicable Standards.
   2. Obtain concurrent readings of motor voltage, amperage, capacity, vibration and bearing temperatures.

C. In the event that any equipment fails to meet the test requirements, the equipment shall be modified and retested until it satisfies the requirement.

END OF SECTION

DRAFT

SECTION 46 5143 – FINE BUBBLE MEMBRANE DIFFUSERS

PART 1 – GENERAL

1.01 SECTION INCLUDES

A. Work necessary to deliver to the job site, the fine bubble tube diffuser aeration equipment, complete and ready for installation by others.

1.02 GENERAL

A. It is the intent of the OWNER that the fine bubble membrane diffuser aeration equipment Supplier/Manufacturer (hereafter called the "Manufacturer"), shall furnish completely engineered systems suitable for the operating conditions as outlined in these Specifications. Fine bubble membrane diffuser aeration equipment features such as drop leg size, air manifold sizes, and spacing, air manifold and header supports and spacing, diffuser spacing, etc., required to comply with all requirements of this section shall be defined by the Manufacturer and be furnished complete.

1.03 DEFINITIONS

A. SCFM: Standard Cubic Feet per Minute is understood to be air at 68°F, 14.7 psia, and 36 percent relative humidity flowing at a rate of 1 cubic foot per minute.

B. SOTR: Standard Oxygen Transfer Rate is understood to be the rate of oxygen transferred to tap water (pounds of oxygen per hour) at standard conditions of 20°C, 0.0 mg/l residual dissolved oxygen concentration, and a barometric pressure of 760 mm Hg (dry air).

C. SOTE: Standard Oxygen Transfer Efficiency is understood to be the fraction of oxygen transferred to tap water under standard conditions of 20°C, 0.0 mg/l residual dissolved oxygen concentration, and a barometric pressure of 760 mm Hg (dry air).

D. Side water Depth: Side water depth is understood to be the interior dimensions from the structure base to the water surface.

1.04 SUBMITTALS

A. Shop drawings shall be submitted in accordance with Section 01 3300. In addition, the following information shall be submitted in accordance with Section 01 3300:

1. Complete description and materials listing of the fine bubble membrane diffuser aeration equipment including equipment data sheets, description literature and bulletins which shall include the drop pipes, connections to the air manifolds, air manifolds, air distribution headers, diffusers, drain system, supports, anchorage details, expansion joints, air manifold and header joints, gaskets, bolts, nuts and washers, and all materials used.
2. Detailed Drawings of the proposed fine bubble membrane diffuser aeration equipment layout, elevation, and appropriate cross sections for each basin, showing all air line sizes and lengths, distances between air distribution headers, and the location of all diffuser holders, diffusers, supports, and expansion joints.
3. Aeration system performance data including standard oxygen transfer efficiency by independent testing facility.
4. Diffuser, diffuser connector, and system head loss curves covering the range of airflow rates specified under PERFORMANCE REQUIREMENTS.
5. Addresses and phone numbers of nearest manufacturer's representative.
6. Complete test data including 3rd party independent certified oxygen transfer performance curves, sufficient to determine the oxygenation capacity of the fine bubble membrane strip diffuser aeration equipment proposed. SOTE test data form non-3rd party accredited and independent testing services are not permissible.

DRAFT

7. Complete headless calculations for the aeration system from the Manufacturer's point of responsibility.

1.05 QUALITY ASSURANCE

A. Provide equipment furnished by a single manufacturer qualified and experienced in the production of similar equipment

1.06 OPERATION AND MAINTENANCE MANUAL

A. Installation, Operation and Maintenance Manual for the equipment specified herein shall contain as a minimum the following items:
   1. Equipment Data Sheets
   2. Installation instructions
   3. Operation and maintenance instructions
      a. Aeration system monitoring and maintenance
      b. Startup and test operations
      c. Normal operations
      d. Shutdown procedures
      e. Parts list
   4. Aeration equipment shop drawings
   5. Customer contact

PART 2 – PRODUCTS

2.01 GENERAL

A. The fine bubble membrane aeration equipment furnished under this section shall be the end products of one Manufacturer in order to achieve standardization for operation, maintenance, spare parts, and Manufacturer's service.

2.02 MANUFACTURERS

A. Fine bubble membrane strip diffuser aeration equipment for this project shall be manufactured by JAEGER AERATION LLC or ENGINEER-approved equal.

2.03 PROJECT CONDITIONS

Parameter	Value
Project Location	San Luis, AZ
Wastewater Type	Municipal/ Residential
Elevation above Sea Level	100-feet
Ambient Temperature Range	35°F - 115°F
Exposure	Submerged, tank opens to ambient condition
Water Temperature Range	55°F - 80°F

Design Parameter	Value
Type of Wastewater Treatment Process	MLE with MBR
Treatment Design Flow	3 MGD
Number of Aeration Basins	3
Basin Nominal Floor Dimensions	22 ft x 24ft
Basin Nominal Top Dimensions*	Same as Floor
Nominal Operating Water Depth**	14 - 17 ft
Nominal Volume per Basin	97,000 gallons
MLSS (mg/L)	8,000 -13,000
AOR, Lbs/Day per Basin	3600
α - Alpha Factor	0.60
B – Beta Factor	0.99

DRAFT

Design Dissolved Oxygen Concentration	2.0 mg/L
Aeration Period	24-hr continuous operation

2.04 EQUIPMENT DESCRIPTION - (Rectangular Flatten Panel Fine Bubble Membrane Diffuser)

A. General:

1. The diffuser equipment system shall be a fixed grid diffuser system type, where the fine bubble membrane diffuser:
   a. Shall be approx. 2.07 m [82”] long x 180mm [7”] wide rectangular flattened panel / strip diffuser.
   b. The flexible fine bubble diffuser membrane shall be constructed of Silicone rubber.
   c. Where the diffuser membrane shall act as a check valve
   d. Where there is a 2nd check valve shall be installed in the diffuser body acting independently of the diffuser membrane
   e. The diffuser panel shall be anchored directly to the basin floor using a bottom and top clamp bracket constructed of PP GF 30 material
2. Where the bottom mounting bracket shall be fixed to the floor with one centered anchor bolt for flat tank bottoms or two threaded anchor rods for leveling in sloped tanks.
   a. Where the diffuser assembly shall be attached to the air distribution piping with a flexible hose connection orientated perpendicular to the air distribution piping.
   b. Where two diffuser panels can be connected and mounted in line to each other.
   c. Where the panel diffuser shall not be using the air distribution pipe for anchoring the diffuser to the tank bottom.
3. The diffuser equipment system shall be suitable for installation in the structures shown on the Drawings.
4. The locations and size of the drop pipes to each diffuser grid are shown on the drawing. The diffuser equipment for each zone shall include, but not be limited to, a vertical section of drop pipe, a flexible connection to the drop pipe, an air manifold, air headers, diffusers, supports, expansion joints, air manifold and header joints, gaskets, bolts, nuts, and washers.
5. The design, fabrication, and installation of the diffuser equipment shall be such that, upon completion of installation, all diffusers are leveled to within +1/4-inch of a common horizontal plane.
6. The fine bubble membrane panel aeration equipment shall be designed for easy installation and shall include provisions for level adjustment, rotational adjustment, and thermal expansion.
7. The entire system shall be designed to allow for expansion and contraction over a temperature range of up to 140°F when installed.
8. All welded pipe supports and assemblies shall be shop fabricated from Type 304L stainless steel with a 2D finish conforming to AISI 304L and ASTM A240-78a. Unless specified otherwise, all non-welded pipe supports and pieces shall be shop fabricated from sheets and plates of 304 stainless steel conforming to AISI 304 and ASTM A240-78a.

B. Drop Pipe, Air Manifold, and Headers:

1. The installation contractor shall provide yard piping from the air supply main connection to the aeration basin.
2. Drop pipes:
   a. 304 STL schedule 10 drop pipes with a horizontal 150# ANSI flange.
   b. The SS drop pipe shall sweep horizontally at the tank bottom, continuing past a 90-degree elbow for 6” to a vertical 150# ANSI flange before transitioning to the PVC Sched 40 air distribution lateral pipes.
   c. The air headers shall be constructed of Distribution Manifolds will be constructed

DRAFT

of SCH.40 PVC pipe and will have a stub for connection to the SS drop pipe coupling. Both classes of pipe shall have a maximum SDR rating of 26. The headers shall connect to the air manifold as indicated above. The air headers shall be perpendicular to the air manifold. Headers shall be fabricated in sections up to a maximum of 25 feet in length. Sections shall be joined with fixed joints or expansion joints as required.

d. All PVC piping shall contain 1½ - 2 percent by weight titanium dioxide ultraviolet light inhibitor.

C. Purge System:

1. Each rectangular flattened diffuser panel / strip diffuser shall be equipped with an automatic moisture purge system; the diffuser air distribution header shall be mounted at a higher elevation than the strip diffusers so that the i.e. condensation in the air distribution system is purges through the diffuser bottom purge system.

D. Diffuser Assemblies:

1. Air diffuser assemblies shall be of the rectangular flattened diffuser panel / strip, oval shaped cross-section, non-clog, fine bubble type with a flexible perforated air release membrane. The membrane shall be fixed with a stainless steel band clamp to the diffuser body. The perforations shall be die cut I-shaped slits.
2. The diffuser membrane shall be constructed from extruded silicone rubber and be suitable for continuous or intermittent aeration. The membrane shall include UV inhibitor and compounds designed for resistance to chemical attack, weathering, and aging.
3. The diffuser assemblies shall have double backflow prevention / check valves to prevent liquid from passing into the aeration header of which the first check valve is composed of the flexible perforated diffuser membrane, and the second check valve is composed of a flexible flapper / membrane located over the air inlet opening of the diffuser body to the air distribution chamber between the diffuser body and the diffuser flexible perforated membrane.
4. The diffuser assembly shall be shipped completely assembled to the job site. Diffusers which require field assembly are not acceptable.
5. The membrane exterior surface shall be smooth as to inhibit biological film growth. The membrane shall inflate during aeration and deflate when the airflow is discontinued, further restricting biological film growth. The membrane shall be cleanable in place with water from a high pressure wash. Acid or other chemical cleaning methods shall not be required to restore the diffuser to like-new performance conditions.
6. Diffuser supports - strip diffusers:
   a. Each diffuser assembly shall by mounted directly to the tank floor with suitable cradle support mounting brackets. It shall not rely on the air distribution header for anchoring to basin floor. Each bottom cradle mount shall be anchored threaded anchor, with mounting hardware, all constructed entirely of 304 Stainless Steel.

E. Diffuser Connections:

1. The connection between the air distribution header and the diffuser connector shall be a flexible hose line. This connection shall be a shock absorbent type that is unaffected by system vibration.

DRAFT

F. Supports:
   1. Supports shall be fabricated of Type 304 stainless steel for non-welded and 304L for welded. The supports shall be designed to provide +1/2-inch lateral and +1-inch vertical adjustment of the header. Adjustment shall be continuous and possible without removing the air piping from the support. All pipe ends and joints shall be provided with a pipe support.
   2. Air manifold piping shall have a maximum spacing between supports of 10 feet. Manifold supports shall be attached to the tank floor with anchor bolts and shall be designed for ten (10) times the normal uplift force.
   3. Header supports, shall allow longitudinal movement of the header section to prevent stress buildup in the header due to thermal expansion/contraction forces. Maximum horizontal thrust of 20 pounds or less shall initiate movement of the header relative to the mechanism under full buoyant up-lift load.
   4. Anchor bolts for fastening the supports to the aeration basin concrete slab and walls shall by Type 304 stainless steel. Minimum anchor bolt diameter to be used is 3/8 inch. Supports shall be located such that concrete anchors are not installed within 6 inches of any concrete expansion joint.

G. Header Joints:
   1. Connections between sections of the air distribution header shall be special flanged joints. These joints shall be designed so that individual header sections can be rotated independently of adjacent header sections for alignment purposes. The flanged joints shall be structurally designed to transmit the longitudinal forces caused by expansion and contraction in the air distribution header. Slip joints shall be designed to allow for expansion and contraction of the air distribution header.
   2. Expansion joints shall be capable of handling the expansion and contraction of the air distribution system over a temperature range of up to 140°F.

H. Miscellaneous: Nuts, bolts, washers, and other non-welded parts directly exposed to the wastewater shall be Type 304 or 18-8 stainless steel. Threaded assemblies shall be chemically treated or lubricated prior to assembling to prevent galling.

I. Spare parts: The following spare parts shall be furnished and shall be suitably marked and boxed (protected from UV light) for shipment and storage:

Item:	Diffuser Assemblies (ready for installation on air header)
Quantity:	4 x

PART 3 – EXECUTION

3.01 FABRICATION

A. All assembly of the aeration equipment shall be completed in the factory.

B. Factory certified testing of pressure drop, leak free operation, and consistent air distribution at the specified flux rate range per diffuser model [SCFN/ft^2 of effective membrane area]. Factory testing data and cert shall be supplied with the shipping documents like bill of material as part of the project documentation.

C. All stainless steel welding shall be by the shielded arc, inert gas, MIG, or TIG method. Filler wire shall be added to all welds to provide a cross section of weld metal equal to, or greater than, the parent metal. Butt welds shall have full penetration to the interior surface, and gas shielding shall be provided to the interior and exterior of the joint.

D. Interior weld beads shall be smooth, evenly distributed, with an interior projection not exceeding 1/16 inch beyond the inner diameter of the air header or fitting.

E. All outside weld areas shall be wire-brushed to remove weld splatter. Brushes shall be of stainless steel and used only stainless steel.

DRAFT

F. Solvent weld of all PVC joints shall be completed in the factory.

3.02 PREPARATION FOR SHIPMENT

A. The fine bubble membrane strip diffuser aeration and air distribution lateral equipment shall be packaged and shipped by the Manufacturer ready for unloading, storage, and installation by the Installation Contractor. The OWNER will provide a suitable storage space for the aeration equipment.

3.03 MANUFACTURER'S CERTIFICATE

A. A Manufacturer's certificate of satisfactory installation and systems start up (sign-off sheet) is required for work under this section.

3.04 CLEAN WATER FUNCTIONAL TESTS

A. After installation of the fine bubble membrane panel / strip diffuser aeration equipment is complete, witness functional testing conducted by the Installation Contractor to check for leaks, uniformity of air release, and verification of level installation. Functional testing shall be performed with clean water at a depth over the diffusers as recommended by the aeration system Manufacturer. Any leaks in the headers, diffusers, pipes, or any part of the system shall be repaired by the Installation Contractor. The test shall be repeated until the installation is void of air leaks.

3.05 WARRANTY

A. The Manufacturer shall warrant all parts, including diffuser assemblies, distribution piping, and supports, free from defective material and workmanship for a period of 1 year (12 months) after the diffuser system contacts wastewater, system start-up, or 15 months after receipt of equipment at the job site of whatever comes first. Warranty shall be limited replacement of parts within the warranty period provided.

3.06 MANUFACTURERS' SERVICES

A. A technically-qualified Manufacturer's representative for the equipment specified herein shall be present at the job site and/or classroom designated by the OWNER for 2 minimum person-days for installation, testing, training, and assistance.

END OF SECTION

DRAFT

SECTION 46 5349 – MEMBRANE BIOREACTOR SYSTEM

PART 1 – GENERAL

1.01 WORK INCLUDED

A. This Section specifies the requirements for the furnishing, installing, testing, training, Startup, and Warranty Support of all process equipment required for the submerged membrane bioreactor (MBR) system for the treatment of wastewater. The CONTRACTOR, to be selected under a separate contract, will provide site civil and furnish all labor, rigging, and incidentals required for installation of the MBR System. Once installed, the MBR System shall be complete and operational with all control equipment and accessories as specified herein.

B. The MBR SYSTEM VENDOR shall assign a Project Manager to be the single point of contact for the CONTRACTOR and the OWNER for the entire duration of the project. The MBR SYSTEM VENDOR shall be responsible for coordinating all inquiries, activities, installation, support, delivery, start-up, commissioning, training and warranty support for components and equipment supplied by the MBR SYSTEM VENDOR.

C. The MBR SYSTEM VENDOR will design, manufacture, and deliver a full package MBR treatment system including, but not limited to the following:
   1. Anoxic Mixers
   2. Pre-aeration Fine Bubble Diffusers and Blowers
   3. Feed Forward Pumps
   4. MBR Submerge Membrane Unit / Cassettes
   5. MBR Scour Blowers
   6. Clean-In-Place (CIP) System
   7. MBR Process Instrumentation and Control Valves
   8. MBR PLC Control Panel and Remote I/O Panel
   9. MBR SYSTEM VENDOR is responsible for providing all components required for a fully functional system using their typical control and protective functions that may not be shown explicitly in the Plans or as specified herein.

1.02 DEFINITIONS

A. MBR System Supplier: The company responsible for supplying the membranes to be used in this project and for providing all equipment, instrumentation, controls and services as described in the proposal or described herein and for providing warranty support.

B. Membrane Manufacturer: The company who manufactures the Submerged Membrane Unit (SMU).

C. CONTRACTOR: The company responsible for construction and installation of the MBR System, including, but not limited to, site preparation, tank and basin construction, and mechanical and electrical installation.

D. ENGINEER: The ENGINEER is the prime professional with respect to the project.

E. MBR System: A collective term for all process and membrane zones that make a complete biological treatment system.

F. Process Train: A stand-alone combination of Process Zones designed and operated to achieve specific treatment objectives.

G. Process Zone: An area in a Process Train designed and operated to meet a specific biological treatment objective.

H. Membrane Zone: Any Membrane Tank or MBR containing membranes.

DRAFT

I. Membrane Tank: A tank or basin containing one or more large membrane sub-units that are operated as one unit. A Membrane Tank has an HRT at Average Design Flow (ADF) of less than 1.0hr.

J. MBR: A tank or basin containing one or more large membrane sub-units that are operated as one unit. An MBR has an HRT at Average Design Flow (ADF) of more than 1.0hr

K. Membrane Bank: A grouping of large membrane subunits which share a common permeate header, a common air supply header, and that are taken off-line as an entity for any type of Clean-In-Place (CIP) procedure.

L. Submerged Membrane Unit (SMU): An assembly consisting of one or more SMU Subunits ("racks", "cassettes", etc.) and an integral diffuser assembly.

M. Membrane Cartridge: The smallest assembled unit of a delivered system that is designed to be removed from a SMU and replaced as a complete unit. This may be flat sheets attached to a rigid support structure and may be referred to as a "module", "cassette", or other terms.

N. Plant Hydraulic Loading Criteria: The net permeate flow rate over a given period of continuous operation accounting for CIP procedures and relaxation. Production capacity requirements are given in terms of:
   1. Average Annual Flow (AAF): The net daily flow requirement generally occurring during dry weather conditions.
   2. Maximum Monthly Flow (MMF): The net daily flow requirement generally occurring during wet weather conditions.
   3. Peak Daily Flow (PDF): The net daily flow required during peak daily flow conditions.
   4. Peak Week Flow (PWF): A net daily flow total generally occurring during wet weather conditions.
   5. Peak Hourly Flow (PHF): A net peak hourly flow requirement generally occurring during wet weather flow conditions.
   6. Peak Instantaneous Flow: The highest allowable flow rate under any conditions.

O. Flux: Gallons of permeate flow per day per square foot of membrane area (gfd). Additional definitions of flux that are used to characterize design criteria and membrane performance include:
   1. Instantaneous Flux: Calculated by dividing measured permeate flow rate by working membrane area at any instant.
   2. Gross Flux: See Instantaneous Flux.
   3. Net Flux: Calculated by dividing the total amount of permeate produced (available for discharge) in a given time frame by the working membrane area.

P. Maintenance Clean: Synonymous with chemically enhanced backwash and CIP. A Maintenance Cleaning is performed in-situ and in mixed liquor or activated sludge. The procedure is conducted by charging cleaning chemicals to membranes in the reverse direction of permeate flow with a soak time lasting more than 0.5hr. Typical Maintenance Cleaning characteristics are provided below.

DRAFT

Parameter	Value (Condition)
Membrane Soak Time	> 0.5hr
Conducted In Mixed Liquor	Yes
Conducted In-Situ	Yes
Typical Duration	0.5hr – 4.0hr
Fill Direction	Reverse
Tank Fill/Drain	No
Chemicals Required	Yes

Q. Recovery Cleaning: Synonymous with intensive cleaning and CIP. A Recovery Cleaning is performed in-situ or ex-situ and in water or dilute chemical. The procedure is conducted by charging cleaning chemicals to membranes in either direction with variable soak times. Typical Recovery Cleaning characteristics are provided below.

Parameter	Value (Condition)
Membrane Soak Time	Optional
Conducted In Mixed Liquor	No
Conducted In-Situ	Optional
Typical Duration	6.0hr – 24.0hr
Fill Direction	Optional
Tank Fill/Drain	Optional
Chemicals Required	Yes

R. Mechanical Cleaning: Synonymous with manual cleaning, physical cleaning and hand cleaning. Mechanical Cleaning is any instance where membranes are cleaned by hand or machine (water jetting or other) for the purposes of removing fouling or localized dewatering.

S. Localized Dewatering: Synonymous with clogging, sludging and plugging. Localized dewatering is the excessive accumulation of solids at a membrane surface in the form of refractory cake and generally in discrete, localized areas. Often caused by excessive filtration in combination with unequal or inadequate air scouring.

T. Days: Defined as calendar days.

U. In-Situ: Inside the normal service area and submerged in mixed liquor.

V. MLSS: Mixed liquor suspended solids reported as mg/l.

W. Permeability: Equals the instantaneous flux rate divided by the transmembrane pressure (TMP). The units of permeability are gfd/psi.

X. Relaxation: A temporary suspension of membrane filtration with continued air scouring for the purpose maintaining treatment capacity or reducing CIP requirements.

Y. Transmembrane Pressure (TMP): The effective pressure differential across the membrane during normal operation.

1.03 DESCRIPTION OF WORK

A. This Section specifies the requirements for the furnishing, installing, testing, training, Startup, and Warranty Support of all process equipment required for upgrading the San Luis West Wastewater Treatment Plant submerged membrane microfiltration bioreactor system for the treatment of wastewater.

DRAFT

B. The MBR System supplier must be the Membrane manufacturer and shall furnish and commission the MBR System as describe in this specification, inclusive of all equipment, instrumentation, scope-specific piping systems, controls, integration, and warranty support.

C. The MBR System Supplier shall provide the MBR Product Engineering and Design Services in support of the treatment system design as described in this specification. The MBR System Supplier shall review the complete MBR system requirements as necessary to achieve the performance requirements specified herein with their specific equipment.

D. If any changes to the equipment, instrumentation, piping, controls, wiring, tank size and/or layout as depicted in the drawings are required to meet the treatment or hydraulic requirements, the MBR system supplier shall clearly define these items in the bid submittal and include all costs. These costs shall include a breakdown of the estimated engineering costs to complete the adjustments required to comply with their system requirements to provide a complete and operable MBR treatment system. The cost breakdown must be adequately supported, and will be verified. The MBR system supplier shall certify in writing that the system with changes noted meets their requirements necessary to achieve the performance requirements specified herein.

E. The CONTRACTOR shall furnish all labor, rigging, materials, and incidentals required for the installation of the MBR System in accordance with the installation instructions provided by the Supplier. Once installed, the MBR System shall be complete and operational with all control equipment and accessories as specified herein and described in the Contract Documents.

F. The ENGINEER is responsible for coordinating the Work with the services of others involved in the project. The ENGINEER shall decide as to the quality and acceptability of services and materials furnished and Work performed. All questions which may arise as to the interpretation of any or all Plans and Specifications and all questions as to the acceptable fulfillment of the Contract on the part of the CONTRACTOR and Suppliers shall be resolved by the ENGINEER.

G. The MBR System Supplier must clearly identify in detail any and all exceptions to the Services and Scope of Supply described in this Specification.

1.04 SUBMITTALS

A. Project Submittal: The MBR System Supplier which must also be the Membrane manufacturer shall submit to the ENGINEER the complete descriptive information for all equipment, instrumentation, and component in the Supplier's Scope of Supply for the ENGINEER's approval prior to purchase of equipment. The Supplier is to provide PDF file(s) containing all submittal information organized and by component, clearly marking options, models, materials, etc. The Project Submittal shall contain the following:

1. Membrane installation drawings, detailing membrane unit dimensions, materials, weights, locations of lifting lugs/points, and anchor bolt locations.
2. MBR basin mechanical layout drawings, detailing the number of membrane units, air and permeate piping distribution, piping supports, in-basin instrumentation and valves, and all other components comprising the MBR basin systems. Drawings with detail information in plan and elevation/section views and include details as necessary to completely describe the installation requirements. Drawings will be based on the basin/structural design provided by the ENGINEER.
3. Plan view equipment and instrument drawings showing the location of all components provided by the MBR Supplier. Locations and installation details are to be coordinated with the ENGINEER's drawings to avoid conflicting information.

DRAFT

4. MBR system supplier's literature for all equipment in the Scope of Supply will include (as applicable):
    a. Pump curves
    b. Blower curves
    c. Mixer velocity distribution profiles
    d. Materials of construction
    e. Shop drawings showing all dimensions, sizes and locations of anchors
    f. Minimum, maximum, and design duty points (flow rates and pressures/TDH)
    g. Unit performance and efficiency data
    h. Motor horsepower and voltage
    i. Complete wiring and control diagrams which show the point of connection for the power supply and control system
    j. All project-specific installation data for use by the CONTRACTOR.
5. Where manufacturers' standard literature is submitted, it shall be clearly marked to indicate which features are to be furnished under this contract.
6. Process and Instrumentation Diagrams (P&IDs) showing all equipment and instrumentation which will be controlled by the MBR system supplier control system, including components provided by others. P&IDs will show components supplied by MBR System Supplier. Unless otherwise directed by the ENGINEER, the MBR System supplier is responsible for establishing the tagging scheme for the P&IDs. Tagging scheme will assign a unique tag to all components and their associated I/O. Tagging scheme will organize components by subsystem and train.
7. Instrumentation list and manufacturers' literature and cut sheets, clearly identifying manufacturer, models, ranges, materials of construction, installation details, power supply voltage, wiring information.
8. Valve list and manufacturers' literature and cut sheets, clearly identifying manufacturer, models, Cv range, materials of construction, pressure rating, and dimensions.
9. Valve actuator manufacturers' literature and cut sheets, clearly identifying models, motor horsepower and voltage, control wiring, installation/connection details, torque rating, actuation times, duty cycle, and materials of construction.
10. Control panel drawings, detailing the interior and exterior layouts, components, panel dimensions, and panel materials of construction and NEMA rating.
11. Control panel component manufacturers' literature, clearly denoting model numbers of all PLC components, relays, terminal blocks, power supplies, buttons, switches, fuse blocks, etc.
12. Control panel wiring schematics
13. Warranty information
14. System start-up and test procedures

B. Installation and Operations Manual (IOM): The MBR System Supplier shall furnish an Installation and Operations Manual 2-4 weeks prior to the delivery of the Supplier's equipment on site. The IOM will include Supplier and manufacturer's manuals and drawings detailing dimensions, locations, wiring information, and any other information necessary to convey the correct assembly and installation of the MBR System components provided by the Membrane Manufacturer and MBR System Supplier. In addition to installation documents, the IOM shall include requirements for the Mechanical Inspection and a schedule of events for the System Commissioning. The Supplier is to provide PDF files containing all information organized by component.

DRAFT

C. Plant Operations Manual (POM): The MBR System Supplier shall furnish a Plant Operations Manual within 2-4 weeks after completion of the System Commissioning. The supplier is to provide three hard copies and two CDs containing the following information:
   1. HMI (Human machine Interface) User's manual, detailing screens, and functions within the operator interface program
   2. Process variables and final control narrative
   3. As-built P&IDs
   4. As-built electrical schematics and control panel drawings
   5. Safety guidelines

1.05 QUALITY ASSURANCE

A. MBR system design is based on Flat Plate Membrane equipment supplied by **KUBOTA Water and Environment U.S.A. Corporation or ENGINEER-approved equal** .

   If a non-specified MBR system supplier/Membrane manufacturer is being proposed, the MBR system supplier/Membrane manufacturer must meet the below requirements, and a request to provide the non-specified MBR system supplier must be submitted in writing to the OWNER and ENGINEER no fewer than fourteen (14) days before the bid due date.

B. Following requirement needs to be met for approval of non-specified MBR System Supplier and Membrane manufacturer.
   1. All the equipment and services specified under this Section shall be furnished by the Membrane Manufacturer as the MBR system supplier, and shall be standard units of proven ability as a competent organization that is fully experienced, reputable and qualified in the manufacture of the equipment to be furnished. The equipment shall be designed, constructed and installed in accordance with the best practice and methods of the Membrane Manufacturer, and shall operate satisfactorily when installed.
   2. To show evidence of being able to provide the quality of equipment and services described in this specification, the Membrane Manufacturer and System Supplier shall submit their quality system ISO certification. Certification shall remain in effect throughout the project startup.
   3. The membrane shall be a flat plate type membrane.
   4. Flux rate shall not exceed the values shown in the table below.
      a. The maximum fluxes permitted for microfiltration membranes and ultrafiltration membranes at the Max Month and Peak Hour Flows are listed in the table below.
      b. Microfiltration is a membrane that has an average pore size of 0.2um or larger.
      c. Ultrafiltration is a membrane that has an average pore size of below 0.2um.
   5. The Membrane Manufacturer shall have a minimum of 10-year history of manufacturing the flat plate membranes.
   6. The MBR System Supplier shall have a minimum of 10-year history of supplying the MBR system.
   7. The MBR System Supplier shall have a local certified service technician in the State of Washington who has worked for more than 1 year as an employee of the MBR System Supplier.
   8. Qualifications: The MBR System Supplier shall submit, as part of their proposal, the location, size, and start-up dates of five (5) representative installations in the that meet the following criteria in order to be considered qualified:
      a. Utilize the same type of membrane system proposed for this project.
      b. Have a plant or process train design capacity equal or similar to the listed MMF.
      c. Use MBR Manufacturer's aeration and CIP strategies as that of the proposed MBR Membrane Manufacturer
      d. Have been in operation for at least ten (10) years at time of bid.

DRAFT

e. Have operated within 35% of nominal rated capacity for a minimum of 12 months at time of bid.

1.06 WORK BY OTHERS

A. The following work and Scope of Supply is specifically excluded from the MBR Supplier scope:

1. Design and Engineering:
   a. Architectural
   b. Buried pipe, including soil requirements, thrust blocks, galvanic protection
   c. Concrete basins
   d. Wall penetrations
   e. Support of piping outside of MBR scope
   f. Seismic design or calculations other than for seismic anchorage of the SMUs
   g. Sealing of calculations and drawings
2. Structural:
   a. Building(s) for housing MBR
   b. Concrete tankage for process and membrane zones
   c. Imbedded wall spools, pipe sleeves, pipe seals in concrete tank walls for the various process pipe connections/penetrations
   d. Covers or grating over process and membrane zones
   e. Equipment access platforms, walkways, stairs, etc.
   f. Protective coatings for concrete
   g. Anchor bolts for any equipment outside of MBR basin
   h. Platform for fine screen
3. Mechanical:
   a. Mixed liquor recycle piping, including branch connections and headers
   b. Membrane CIP piping, including branch connections and headers
   c. Pipe supports and hangers unless otherwise noted
   d. Hoist equipment above the membrane basin for installation and removal of the membrane subunits.
   e. Membrane tank drain piping, valves, operators, and pumps, if required
   f. Installation of any kind, including equipment and piping within or outside of Scope of Supply
   g. Installation materials for instrumentation and automatic valves, including, but not limited to, air / sample line tubing, fittings, and mountings
4. Electrical:
   a. Electrical wiring interconnections (including wiring, conduit and other appurtenances required to provide power connections as needed) from the electrical power source to the MBR System Control Panel.
   b. Electrical wiring interconnections (including wiring, conduit and other appurtenances required to provide power connections as needed) from MCC and/or Panelboard(s) to all field equipment.
   c. Instrumentation wiring, conduit and other appurtenances required to provide connections as needed between all field devices and the membrane PLC control panel or MCC.
   d. Motor control centers, Variable Frequency Drives (VFDs), panel boards, transformers, and other equipment necessary to provide power distribution for equipment, unless specifically listed in **2.03** SUBSYSTEM SCOPE OF SUPPLY.
   e. Network communications connections, conduit, wiring or fiber optic cable including fiber terminations to the Plant SCADA and the MBR System HMI systems (if the two are different). Includes network communications connections from PLC control panels to remote I/O control panels.

DRAFT

f. Internet network provisions to permit remote access of MBR Control System

5. Other:
   a. Anything listed in the exclusion section described in Kubota's proposal.
   b. Receiving, unloading and safe storage of equipment at site or a storage facility until ready for installation.
   c. Equipment installation.
   d. Instrumentation installation including continuity checks and assistance with related loop checkout.
   e. Raw materials, chemicals and utilities during equipment testing. This includes potable water for system function testing and seed sludge per supplier requirements.
   f. Laboratory services, operating and maintenance personnel during equipment checkout, startup and operations.
   g. Onsite painting or touch-up painting of MBR, with the exception of painting required due to damage incurred prior to equipment being received onsite.
   h. Seeding

1.07 WARRANTY

A. MBR Manufacturer and System Supplier shall provide a warranty statement in the submittal.

B. MBR System Supplier shall warranty and replace the Membrane Cartridge under warranty for a period of 2 years after startup. The warranty shall not be pro-rated.

C. All warrantee support, as defined in the warranty statement, shall be provided by the MBR System Supplier directly or through certified sub-contractors.

D. MBR System Supplier shall warrant small membrane subunits under the following terms:
   1. MBR System Supplier shall replace any small membrane Subunits that fail before 2 years from the date of successful completion of the System Commissioning.
   2. Failure is defined as any of the following:
      a. Inability to meet production capacity requirements as specified herein.
      b. Inability to meet TSS and turbidity requirements as specified herein.
   3. The following are specifically excluded from warranted membrane failure conditions:
      a. Exceeding TSS or Turbidity limits due to physical damage of the membranes and/or loss of piping integrity.
      b. Loss of capacity due to failure to operate within design fluxes and permeability limits as defined in this Section.
      c. Loss of capacity due to failure to perform required Maintenance cleans.

E. Supplier shall warranty all other equipment, not specifically mentioned above, against defects in workmanship and materials for a period of 30 months after delivery or 24 months after successful completion of performance testing, whichever is shorter.

F. Supplier shall provide phone support for the MBR System for one year following successful completion of the System Commissioning.

PART 2 – PRODUCTS

2.01 MBR PRODUCT ENGINEERING AND DESIGN SERVICES

A. The MBR Manufacturer and System Supplier will provide the following design services related to the MBR product under a separate contract between the OWNER and Supplier:
   1. Biological Process Design Verification – The MBR Supplier shall support the ENGINEER in providing analysis and verification of the biological process design, based on the customer's influent mass loading, diurnal flow curves, peak flow/loading

DRAFT

numbers, and permit limits. The Supplier shall verify basin volumes, recycle rates, aerations requirements, chemical dosing requirements, and waste solids projections. The supplier shall provide a written report summarizing the design results.

2. Piping Hydraulic Analysis and Design – The MBR Supplier shall provide a detailed hydraulic analysis and mechanical design documentation of each process subsystem contained in the MBR system Scope of Supply. Piping design files shall be provided to the ENGINEER for integration into the design package. The subsystems included in the hydraulic analysis shall include:
   a. Recycle pump systems
   b. MBR air distributions systems
   c. Permeate systems
   d. WAS systems
3. Equipment Sizing and Installation Details – The MBR Supplier shall verify duty points and turn-down, supply voltages, materials of construction, communications IO, equipment access and serviceability, area classifications, and pressure ratings for the MBR system's pumps, blowers, mixers, and valves. In addition to identifying manufacturers and specific part numbers for each component, installation details and CAD drawings shall be provided for integration into the ENGINEER's design package.
4. Instrumentation Design – The MBR Supplier shall provide the ENGINEER with complete specification and documentation of all MBR system instrumentation. Installation details shall be provided in AutoCAD format for integration into the ENGINEER's design package.
5. Controls Design – The MBR Supplier shall supply MBR system Process and Instrumentation Diagrams utilizing the Supplier's standard symbols and tagging schemes,

2.02 SYSTEM PERFORMANCE REQUIREMENTS

A. The MBR System will be sized to hydraulically convey the flows shown in Table 2-1.

Table 2-1: Plant Hydraulic Loading Criteria

Parameter	Influent		Event Duration	Frequency	Total Duration
Maximum Month Daily Flow (MMADF)	3.0	MGD	30 days	3 year	90 days
Peak Hour Flow (PHF)*	3.9	MGD	3 hours	8/ year	1 days

*Flow will be equalized

B. The MBR system shall be designed to accommodate the diurnal pattern as indicated per ENGINEER.

C. The MBR System shall be capable of treating raw wastewater at listed flows to the specified effluent criteria shown in Table 2-2.

Table 2-2: Plant Pollutant Loading and Effluent Criteria

Parameter	Influent		Plant Loading @ Average Flow[1,2]		Effluent Limit/ Performance Requirement[7]
Maximum Month BOD_5	360	mg/l	9,013	lb/day	<10 mg/l
Maximum Month Daily Average TSS[1,2,3]	300	mg/l	7,511	lb/day	<10 mg/l
Maximum Month Daily Average TKN	80	mg/l	2,003	lb/day	TN: <10 mg/L
Design Minimum Temperature	18.3	Deg C	--	--	--

DRAFT

Table 2-2 Notes:

1. Measured turbidity shall be less than or equal to 0.2 NTU on 9 of 10 consecutive samples and no sample shall exceed 0.5 NTU.
2. Measured TSS shall be less than or equal to 2 mg/L on 9 of 10 consecutive samples and no sample shall exceed 5 mg/L.
3. Effluent limits are based on measurements using *Standard Methods for the Examination of Water and Wastewater (Latest Edition).*
4. Concentration of grit, defined as particles having a specific gravity of >1.6 and unable to pass through a 65-mesch screen (0.21mm), shall be less than 5 mg/l

D. System Configuration
   1. The MBR System shall consist of three (3) process trains, each consisting of
      a. One Pre-anoxic basin with a minimum volume of 138,240 gallons. Total system anoxic volume will be 415,000 gallons.
      b. One pre-aeration basin with a minimum volume of 96,770 gallons. Total system pre-aeration volume will be 290,310 gallons.
      c. One MBR Zones with a minimum volume of 77,020 gallons. Total system MBR volume will be 231,060 gallons.

E. The design MLSS in the MBR shall be 13,000 mg/l.

F. The allowable MLSS concentration in the Membrane Zones shall range between 8,000 mg/l and 15,000 mg/l.

G. The MBR basins shall be considered part of the biological process when calculating aerobic volume requirements.

H. Membrane CIP Procedures
   1. Membrane subunits shall be cleaned in place using any of the four CIP methods in order to maintain production capacity and meet performance requirements specified herein. The allowable frequency of listed CIP methods shall be as follows:
      a. Backwash frequency shall not exceed 1/hr
      b. Maintenance Clean frequency shall be as necessary
      c. Recovery Clean frequency shall not exceed 4/yr

I. For MBR Systems that require Recovery Cleaning as part of routine maintenance:
   1. Tank liners shall be required for Membrane Zones to protect against corrosion or deterioration of wall materials.
   2. All fasteners, including nuts, bolts, screws, cables, washers and other appurtenances, associated with the SMU shall be manufactured from Type 316L stainless steel.

J. The MBR shall be designed to operate at or below a trans-membrane pressure (TMP) of 3 psig.

K. Site Conditions
   1. The elevation above sea level is 100 ft.
   2. Influent wastewater shall contain less than 15% of the influent BOD_5 as fats, oils and grease (FOG).
   3. No substances shall be placed in the system in quantities which are not biodegradable or toxic to the biological system.
   4. The influent wastewater pH shall be between 6-8 SU.
   5. Water hardness shall not exceed 300 mg/l as CaCO3.

DRAFT

2.03 SUBSYSTEM SCOPE OF SUPPLY

MBR System Supplier shall furnish the Subsystem Components per the equipment list in Kubota proposal in accordance with the requirements of this the project Specifications and Contract Documents. All components shall be shipped loose for installation by installing CONTRACTOR unless otherwise noted.

A. Pre-Anoxic Basins
   1. Mixers
   2. Basin high and low level switches
   3. Basin level sensor/transmitter

B. Pre-Aeration Basins
   1. Basin high and low level switches
   2. Basin level sensor/transmitter
   3. Fine bubble diffusers
   4. Combination DO/temperature sensor/transmitter

C. Membrane Basins
   1. Membrane Submerged Membrane Units (SMUs)
   2. In-basin interconnecting air and permeate piping three (3) inches or less
   3. In-basin Pipe supports and support anchors for all Supplier-provided piping
   4. Basin high and low level switches

D. Permeate Collection System
   1. MBR permeate pumps if needed
   2. MBR permeate control valves
   3. MBR Permeate process instrumentation
   4. MBR Permeate turbidimeters

E. Cleaning Systems
   1. Maintenance Cleaning system

F. WAS Handling System
   1. WAS pumps (if needed)
   2. WAS control valves if required
   3. WAS instrumentation

G. Supplemental (Process) Aeration System
   1. Process air blowers with one standby of equal or greater capacity
   2. Process air flow control valves
   3. Process air instrumentation

H. Membrane Zone (Scour) Aeration System
   1. Scour air blowers with one standby of equal or greater capacity
   2. Scour air flow control valves
   3. Scour air instrumentation

I. Internal Recycle System (if needed)
   1. RAS pumps with standby of equal capacity
   2. RAS flow control valves
   3. RAS instrumentation

J. Feed Forward Pump (if needed)
   1. Feed Forward pumps with standby of equal capacity
   2. Feed Forward pump instrumentation

DRAFT

K. Controls
   1. MBR PLC control panel and if applicable remote I/O control panel(s)
   2. MBR Human-Machine Interface (HMI) Computer and runtime software licensed to OWNER
   3. HMI and PLC programming

2.04 GENERAL EQUIPMENT DESIGN AND FABRICATION REQUIREMENTS

The requirements listed below are in addition to those called out in the Specifications listed in Part 1.01 of this Specification.

A. Submersible Mixers
   1. Submersible mixers shall be direct driven, close-coupled, guide-rail-mounted, non-clogging propeller type designed for mixing of raw or processed sewage. All components of the mixer shall be capable of continuous submerged operation. The mixer shall be sized to provide complete mixing.
   2. All major components of the submersible mixers shall be manufactured of Cast Iron. All bearings shall have a minimum B-10 rated bearing life of 100,000 hours.
   3. Mixers shall have integral motor thermal overload protection and seal failure (moisture) sensor.
   4. The mixers shall be provided with guide rails, guide brackets, and lifting cables.

B. Mixed Liquor Recirculation Pumps if needed
   1. Mixed liquor recirculation pumps shall be capable of passing a three-inch spherical solid.
   2. Major pump components shall be cast iron, ductile iron, or stainless steel.
   3. Submersible pumps: Pumps shall have integral motor thermal overload protection and seal failure (moisture) sensor and be provided with guide rails, guide brackets, and lifting cables.
   4. Dry-mount pumps: Pumps shall be horizontal, self-priming centrifugal type, designed specifically for handling municipal waste.

C. Fine Bubble Diffuser Systems
   1. Fine bubble diffuser systems shall include in-basin aeration piping, pipe drops, submerged manifolds, laterals, diffusers, drain pipes, pipe supports, and purge system.

D. Submerged Membrane Unit (SMU)
   1. The SMU shall be the SP900 type as manufactured by KUBOTA.
   2. Depending on the membrane technology, a Membrane Zone can be classified as an MBR or a Membrane Tank (see Part 1.02 of this Specification).
   3. Each Membrane Zone shall include one or more Membrane Banks.
   4. Each Membrane Bank shall consist of one or more Submerged Membrane Units (SMU). Each SMU shall be:
      a. Prefabricated, preassembled and factory certified before shipment to the site.
      b. Provided complete, with all necessary components, accessories and appurtenances required to make a complete and operable system.
      c. Furnished with 304 SS housing, appurtenances and fasteners (including nuts, bolts, screws, cables, washers).
      d. Furnished with integral diffusers designed to promote efficient air scouring of Membrane Elements. The diffuser must be manufactured by membrane manufacturer.
      e. Equipped with one or more SMU Subunits.
   5. SMU sub-units contain multiple Membrane Elements. Membrane Elements shall be:
      a. Be assembled into a housing called a cassette or other.

DRAFT

b. Be constructed such that the membranes are held vertically and bonded firmly at the top and/or bottom of the Subunit.
c. Be manufactured using materials suitable for use in submerged MBR applications and:
1) Have an average pore size of 0.2 micron or less.
2) By physically strong enough to withstand the operating conditions associated with continuous operation in an aerated tank of mixed liquor at concentrations of up to the value as specified by SMU manufacturer in its operation manual.

6. The membrane module shall be approved by the California Department of Health Services (DHS) under the California Recycled Water Criteria (Title 22 of the California Code of Regulations). Submitters shall provide a copy of the DHS acceptance letter and test report.

E. Permeate Pumps if required
1. Permeate pumps shall be required when the hydraulic loading as described in this Specification cannot be met using gravity filtration.
2. Permeate pumps shall be sized to handle peak instantaneous flow as defined in this Specification -.
3. Permeate pumps shall be horizontal, self-priming centrifugal type or rotary lobe type, designed specifically for handling municipal waste.

F. Blowers
1. Blowers shall be provided as blower package.
2. Process aeration blowers shall be sized to maintain a residual DO of 2.0 mg/L at MMF flow rates and loadings and a minimum of a 2:1 turndown. Process aeration system shall include a standby blower of equal or greater capacity than the duty blowers.
3. MBR scour air blowers shall be sized such that sufficient scour air is provided to support MMF flows as described in this Specification without requiring additional maintenance cleans. The scour air system shall include a standby blower of equal or greater capacity than the duty blowers.
4. MBR scour air blowers shall accommodate a minimum surge or 1.5 psig under normal operating conditions.

G. Cleaning Systems
1. The Cleaning Systems shall include backwash, maintenance clean, and recovery clean systems as required by the Supplier's specific systems.
2. Cleaning Systems shall be inclusive of all valves, instrumentation, controls, and all other ancillary equipment necessary for a complete cleaning operation.
3. Supplier shall define building space to be allotted for all Cleaning Systems, including space for:
a. Chemical storage
b. Mix tanks if needed
c. Cleaning system equipment
d. Safety equipment
e. Containment and neutralization of spent chemicals. Containment space shall include space necessary for separation of incompatible materials to meet International Building Codes and International Fire Codes.

H. Waste Activated Sludge (WAS) Pumps (if needed)
1. WAS pumps shall be capable of passing a three-inch spherical solid.
2. The pumps shall be sized to transfer the expected MMF waste sludge volumes in less than 3 hours.
3. Major pump components shall be cast iron, ductile iron, or stainless steel.

DRAFT

4. Submersible pumps: Pumps shall have integral motor thermal overload protection and seal failure (moisture) sensor and be provided with guide rails, guide brackets, and lifting cables.

I. Dry-mount pumps: Pumps shall be horizontal, self-priming centrifugal type or rotary lobe type, designed specifically for handling municipal waste.

J. Valve Actuators

1. In order to reduce operating noise levels, it is preferred that all valves be electric actuated valves. Valves must have On/Off Manual options, at the valve and in HMI

K. Instrumentation

1. Identification Tags: All field instruments shall have identification tags meeting the following requirements:
   a. Tag number of instruments shall be established by the MBR System Supplier and approved by the ENGINEER
   b. Tags shall be made of stainless steel, engraved with 3/16-inch letters, and attached using a stainless steel cable.
   c. Instruments mounted on or within control panels and enclosures shall have the identification tag installed so that the engravings are easily visible to service personnel.

L. Membrane Tank In-Basin Piping

1. All in-basin MBR System air scour piping, on the inlet side, shall be Type 304 stainless steel schedule 10, until the piping becomes submerged in the MLSS. The air scour piping on the outlet side may be schedule 80 PVC, as submergence in the MLSS will have cooled the process air, reducing thermal stress on the piping.
2. In basin Permeate piping shall be schedule 80 PVC.
3. Piping shall have welded, glued, flanged, or mechanical groove (Victaulic) connections.
4. Pipe supports shall be 304 stainless steel Unistrut (or equivalent) systems or 304 stainless steel angle and structural shapes with stainless hardware, clamps, and guides
5. Transitions from MBR Supplier piping to CONTRACTOR's piping shall use ANSI 150-pound flanges unless otherwise noted or coordinated with the CONTRACTOR.
6. Insulation, heat tracing and or painting shall be provided by the CONTRACTOR.

M. MBR SYSTEM CONTROLS

1. The MBR System controls shall be housed in a NEMA 12 enclosure unless otherwise specified. The control panel assembly shall be a UL 508a listed Industrial Control Panel. The control panel will house the MBR system PLC and I/O modules as necessary, and valve Open/Close/Auto switches. The panel shall include the following features:
   a. UL1449 listed Type1/Type 2 incoming power supply surge protective device capable of 50kA 8x20us
   b. Redundant 24 VDC power supplies connected through a protective diode such that failure of one power supply does not affect the other.
   c. PLC sized to handle all I/O for components in the MBR System as indicated on the P&IDs plus 10% spare I/O terminated to terminal blocks in each PLC or I/O panel.
   d. Power to each I/O module shall be fused. All instrument power fed from panel shall be fused per UL requirements.
   e. PLC user memory greater than 2MB and processor capable of connection to 32 Ethernet Nodes minimum.
   f. PLC, HMI and remote I/O devices shall connect via Ethernet/IP to an industrial managed Ethernet switch.

DRAFT

g. System shall include an HMS Networks EWON flexy industrial VPN device for secure remote access or approved equal.
h. Control Panels shall include a pure sine wave UPS including UPS Maintenance/Bypass switch which permits seamless transfer of power to utility in case of UPS maintenance and relay contacts for UPS failure, on battery and low battery status.

2. The MBR System shall include one Human-Machine Interface (HMI), including Windows-based PC and HMI runtime software licensed to OWNER. System displays shall include graphical representations of all equipment and instrumentation and indication and trending of all process values.
3. The Supplier shall be responsible for all programming for the MBR System PLCs, database creation, generation of all graphic display screens, alarm configurations and trends for the operator stations.
4. MBR System controls shall be designed to allow for full manual (hand) operation in the event of PLC failure. Hand operations shall be manageable by two operators for a period of 72 hrs.

N. Unless otherwise specified in the Contract Documents or Drawings, none of the MBR equipment or instrumentation are required to meet the requirements for hazardous area installations (Class 1, Division 1 or Division 2).

2.05 HAZARDOUS AREAS

A. Unless otherwise specified in the Contract Documents or Drawings, none of the MBR equipment or instrumentation are required to meet the requirements for hazardous area installations (Class 1, Division 1 or Division 2).

2.06 SPARE PARTS AND SPECIAL TOOLS

A. The MBR Supplier shall provide the following spare parts:
1. Spare parts for pumps in accordance with these Specifications.
2. Spare parts for blowers in accordance with these Specifications.
3. Spare parts for mixers in accordance with these Specifications.

B. MBR Supplier shall furnish one set of special tools required for normal operation and maintenance of the MBR Units.

PART 3 – EXECUTION

2.07 PROJECT EXECUTION

A. Unless otherwise required in the Contract Documents, the MBR Supplier shall provide all submittal documentation as described in this Section no later than 10 weeks after receipt of purchase order and notice to proceed.

2.08 CONTROL SYSTEM FACTORY ACCEPTANCE TEST

A. The MBR System Supplier shall coordinate and conduct a factory acceptance test (FAT) of the MBR control system during which:
1. The PLC control logic and HMI operability shall be demonstrated by systematically forcing I/O to verify all controls functions and HMI screen representations defined in the system control narrative.
2. The MBR control panel shall be inspected for completeness, and workmanship.

B. The MBR System Supplier shall provide a minimum of 2 weeks' notice to the OWNER and ENGINEER prior to the FAT. The OWNER and ENGINEER may, at their option and the expense of others, choose to attend and witness the FAT.

C. Whether or not the OWNER and/or ENGINEER attend the FAT, the MBR Supplier shall provide written documentation and certification of the completed FAT.

DRAFT

2.09 MATERIALS INSPECTION

A. The CONTRACTOR shall inspect delivered equipment upon arrival on site for completeness of scope delivery and to verify that all components have arrived undamaged. The CONTRACTOR is responsible for notifying the Supplier of deficiencies in quantities or conditions within 28 days from the ship date.

B. The CONTRACTOR shall provide all labor, materials, and equipment for unloading, de-crating, organizing, and compiling take-off of received MBR equipment, components, and instrumentation.

C. The Supplier shall make available, upon the request of the CONTRACTOR, personnel to assist in the inspection of the Supplier's equipment upon unload at the site. Supplier's personnel shall provide services in accordance with their standard daily rates.

2.10 MECHANICAL INSPECTION PRIOR TO COMMISSIONING

A. The CONTRACTOR shall schedule with the MBR System Supplier to perform a Mechanical Inspection at least 2 weeks prior to the scheduled Commissioning of the System.

B. The MBR Suppler shall conduct a Mechanical Inspection of the MBR System to verify that the installation is complete and ready to begin Commissioning activities. The Supplier shall verify the following:
   1. Installation of all equipment per the ENGINEER's and Supplier's drawings and Supplier's IOM information.
   2. Installation of all instrumentation per the ENGINEER's drawings and IOM information.
   3. Completeness of all piping installations.
   4. Completeness of all electrical installations.
   5. Proper installation of the MBR SMU diffuser assemblies per the Submittal and IOM information.
   6. Completeness of all basins, including removal of all debris that may cause damage to the MBR SMU membranes.
   7. Review of all pipe integrity testing results.

C. Upon completion of the Mechanical Inspection, the Supplier shall provide written documentation of the inspection results.

D. Follow up to Mechanical Inspection
   8. If the MBR System is complete per the requirements of the Mechanical inspection, the MBR Supplier shall schedule the System Commissioning with the CONTRACTOR. The date for the System Commissioning is to be established within 2 weeks of the successful completion of the Mechanical Inspection.
   9. If the MBR System is not complete at the time of the Mechanical Inspection, the Supplier shall document system deficiencies to the CONTRACTOR, ENGINEER, and OWNER. The CONTRACTOR will then complete all necessary work and provide documentation (including digital photographs) of the completed work.
      a. Electrical and Control System Documentation Requirements
         1) Wire ring-out documentation signed by electrician
         2) Pictures of completed terminations (if terminations in CONTRACTOR scope) in field and PLC panel including wire labeling.
         3) Documentation of completed network cabling, Ethernet cable termination and fiber optic termination and patching.
         4) Documentation of all motor and valve terminations, motor cable Insulation resistance testing

DRAFT

After all noted deficiencies are resolved to the satisfaction of the ENGINEER, OWNER, and Supplier, the date for the System Commissioning is to be established within 2 weeks.

10. If the Mechanical Inspection deficiencies are deemed as sufficiently important by the Supplier, OWNER, or ENGINEER, the CONTRACTOR shall arrange for the Mechanical Inspection to be repeated at the CONTRACTOR's expense.
11. If electrical and control system wiring is incomplete prior to system commissioning scheduling, CONTRACTOR must complete all necessary work and provide documentation of the completed work (as described in 3.04 D. 2. above). The CONTRACTOR must update the ENGINEER, OWNER, and Supplier of the progress so that a revised system commissioning date can be organized as soon as possible. In this scenario, penalties for project delay will become the responsibility of the CONTRACTOR.

2.11 SYSTEM COMMISSIONING

A. The MBR System Supplier shall coordinate with the CONTRACTOR, ENGINEER, and OWNER for execution of the System Commissioning. In advance of System Commissioning, the MBR System Supplier shall perform an onsite Mechanical Inspection of the facility and generate a punch-list of inconsistencies. The CONTRACTOR is required to resolve the punch-list items to the satisfaction of the System Supplier, prior to scheduling System Commissioning. The System Commissioning will consist of the following:
   1. General inspection of systems (lubrication, rotation, calibration)
   2. Loop checking, instrumentation, and control system verification
   3. Clean Water diffuser testing
   4. Sludge re-seeding
   5. Training

B. The CONTRACTOR shall provide materials and personnel in support of the System Commissioning to fill basins with clean water, transfer fluids, repair/remedy any and all electrical and mechanical issues, provide temporary tie-ins, temporary piping, transfer pumps, etc.

C. The CONTRACTOR shall coordinate with the ENGINEER and OWNER to seed the MBR system with sludge at the conclusion of the clean water testing. The MBR Supplier is not responsible for supplying the seed sludge.

D. The System Commissioning shall begin at the CONTRACTOR's discretion, within the limits defined herein:
   1. Successful completion of a pre-commissioning Mechanical Inspection is required.
   2. Start of Commissioning shall be no later than 60 days after completion of Mechanical Inspection.

E. The OWNER shall operate the plant during the Commissioning Period; however, Supplier and CONTRACTOR shall be allowed to provide onsite assistance.

F. Supplier is responsible for monitoring operating conditions and performance during the Commissioning Period.

G. Supplier shall provide the OWNER with a Plant Operations Manual after the end of the Commissioning Period. The manual shall include at a minimum:
   1. As-built drawings
   2. Safety Manual
   3. HMI User's Manual
   4. As-built control schematics
   5. Process variables and control narrative.

DRAFT

H. Supplier shall submit the Plant Operations Manual within 2-4 weeks after the end of the Commissioning Period.

I. Membrane permeate quality shall be evaluated to determine compliance of the MBR System with Performance Requirements. If the MBR system fails to comply with requirements of membrane permeate quality, Supplier shall provide the OWNER and the ENGINEER a written plan of modifications to the system (such as repairing damaged membranes, replacing seals, complete replacement of system) to achieve compliance with the requirements. Upon implementation of modifications plan, the permeate quality tests shall re-commence in their entirety.

2.12 TRAINING

A. The MBR System Supplier shall provide Training in the maintenance and operation of all systems included in the Supplier's control system.

B. Training shall be completed prior to the completion of the System Commissioning. All training shall be performed by the Supplier or a factory-certified representative of the supplier or component supplier. Training is to include:
1. Navigation of all HMI screens and menus
2. Review of automatic operations and controls
3. Changing process set points
4. Overriding controls from the HMI
5. Manual operation of the system in the event of a power failure
6. Maintenance cleaning
7. Trouble shooting

END OF SECTION

DRAFT

SECTION 46 7626 – SLUDGE DEWATERING SCREW PRESS

PART 1 – GENERAL

1.01 WORK INCLUDED

A. There shall be furnished a dewatering system including in-line flocculation tank and dewatering screw press with drivers and features specified in this Section and scheduled below. All equipment shall be provided by a single manufacturer. The dewatering system line shall be capable of dewatering municipal waste activated sludge.

1.02 REFERENCES

A. American Bearing Manufacturers Association (ABMA)

B. American Gear Manufacturers Association (AGMA)

C. American Society of Mechanical Engineers (ASME)

D. Institute of Electrical and Electronics Engineers, Inc. (IEEE)

E. American Welding Society (AWS) D1.1, Structural Welding Code.

F. National Electric Code (NEC).

G. National Electrical Manufacturers Association (NEMA).

H. American National Standards Institute (ANSI).

1.03 SCREW PRESS DESCRIPTION

A. Screw press system shall be capable of municipal waste activated sludge described below.

B. Dewatering screw press with components as specified in this Section and shown on the Drawings and as required for a complete and functional screw press system, including:
1. Screw press with all 304 stainless steel wetted parts
2. Sludge inlet headbox
3. Removable drums
4. Removable drum covers
5. Three screen spray showers
6. Speed reducer
7. Galvanized carbon steel base
8. Flanged filtrate outlet
9. Back pressure cone
10. Flocculation tank with mixer
11. Equipment Motors
12. Anchor age/seismic support calculations
13. Pressure transducer type level element with indicating transmitter and high level probe

C. Design Requirements:
1. Screw Press Minimum Performance Requirements for Municipal Waste Activated Sludge

Feed Solids, % total solids (TS)	1% or greater
Discharge Solids, % TS	15.0% with polymer addition
Design Inlet Capacity	994 dry pounds per hour
Design Hydraulic Capacity	200 gpm at 1%
Max Polymer Usage	20 lbs/hr

DRAFT

2. Motor Characteristics – as described in this Section.

1.04 SUBMITTALS

A. Submit as specified in Section 01 3300 – Submittal Procedures.

B. Product Data:
   1. Submit data completely describing product including plan and section views and listings of materials of construction.
   2. Submit surface preparation and finishes to be applied to all equipment.

C. Shop Drawings:
   1. Complete manufacturer fabrication/assembly drawings stamped by a registered Engineer.
   2. Certified drawings showing dimensions, weights, loading information and location of all components; Include details on interconnecting piping, supports, and control panel.
   3. Wiring, control schematics, and control logic diagrams for all electrical and control components furnished.
   4. Manufacturer's Drawings shall be coordinated with the Contract Drawings, including equipment numbers and piping designations.
   5. List of Recommended Spare Parts with price information

D. Structural Calculations
   1. Structural anchor points to concrete foundation
   2. Seismic loads on frame and anchor bolts

E. Resume of Technician to perform thickener screw press adjustments, inspections, observations of test operations, supervision of functional and performance testing, and training.

F. Training Course Outline

G. Operating and Maintenance Manuals: Include complete lubrication, maintenance, and operation instructions, including initial start-up instructions, and unloading and handling methods.

H. Manufacturer's references

I. Quality Control Submittals:
   1. Special shipping storage, protection, and handling instructions
   2. Manufacturer's Installation Instructions
   3. Factory Test Results

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Consideration will be given only to the equipment of Manufacturers who are regularly engaged in such work and thoroughly experienced in the design and manufacture of screw press equipment specifically manufactured for municipal, secondary treated, waste activated sludge. Manufacturer shall meet the requirements below:
   1. Have a minimum of 10 years of experience of producing substantially similar equipment, and show evidence of satisfactory operation in North America for presses dewatering municipal waste activated sludge.
   2. Must have a company-owned service and parts facility within the continental United States.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Contractor shall unload, store, and handle the equipment per the manufacturer's instructions.

DRAFT

1.07 WARRANTY

A. Warranty shall extend for 12 months after start-up or 18 months after delivery, whichever comes first.

B. Warranty shall include all parts, labor, and coatings for repairing or replacing equipment that fails during the warranty period. Defects occurring within the warranty period shall be repaired or replaced by the manufacturer at no cost to the OWNER.

C. An Extended Mechanical Warranty shall be offered for all mechanical components of the flocculation tank and dewatering screw press. The Extended Mechanical Warranty shall be for 10 years after start-up.
   1. Extended Warranty shall include coverage of:
      a. Gearboxes, bearings, bushings, spray showers, and any wear items.
   2. Extended Mechanical Warranty does not cover:
      a. Damage or failures due to lack of proper lubrication types, quantities, or schedules.
      b. Motors, field instrumentation, power control, logic control, or any other electronic component.
      c. Coatings.
   3. Extended Mechanical Warranty shall include all parts and labor for repairing or replacing components to maintain the screw press minimum performance requirements listed.

1.08 PROJECT CONDITIONS

A. Deliver screw press and flocculation tank as completely assembled as practical to minimize field assembly. Contractor shall be responsible for unloading and any necessary field assembly. Contractor shall contact manufacturer for screw press field assembly requirements during bid.

1.09 SEQUENCING AND SCHEDULING

A. Coordinate work with restrictions as specified.

1.10 MAINTENANCE

B. Special Tools: Provide standard manufacturer supplied toolbox with all tools needed to assemble and disassemble the screw press.

PART 2 – PRODUCTS

2.01 MANUFACTURER

A. Manufacturer: FKC Co., LTD or approved equal.
   1. Screw press, flocculation tank, and appurtenances shall be provided by one manufacturer.

2.02 MATERIALS

A. Wetted Parts: Stainless Steel, Type 304, unless otherwise indicated

B. Drive Unit: As scheduled

C. Galvanized carbon steel base

D. Other parts: Coated carbon steel

DRAFT

E. Miscellaneous hardware, including bolts, nuts, washers, and fastener clips in the wetted area: Stainless steel.

2.03 HOUSING

A. Housing shall be rigid Type 304 stainless steel weldment, supported by structural carbon steel base and shall have removable Type 304 stainless steel covers for screen access.

B. Sludge feed connections and filtrate discharge connections shall be Type 304 stainless steel 6-inch pipe stub and 4-inch (respectively) flanged meeting ANSI/ASME B 16.1, Class 125, or ANSI/ASME B 16.5, Class 150; provide higher pressure class as required to meet Design Working Pressure.

C. Press shall have Type 304 stainless steel discharge box with hinged lid. Dimensions as indicated on the Drawings.

D. Housing shall be designed for noise reduction, to act as a protective guard and to provide a complete enclosure for odor containment.

E. The screw press shall be provided with Type 304 stainless steel spray covers on the top and sides of the screw press drums where necessary for sanitation and personnel protection. Side covers shall be easily removable by a single person.

F. If applicable, include 304 stainless steel foul air connections suitable for flexible duct connections with clamps for as shown on the Drawings.

G. Headbox shall include hinged top inspection doors (12 inch by 12 inch min).

2.04 DRIVE SYSTEM

A. Drive system shall consist of an electric motor suitable to use with a variable speed drive system as required to provide full load capacity and also to withstand the full starting torque of the system. VFD shall be provided as part of the Dewatering Control Panel.

B. Screw speed shall be electronically controlled by means of a VFD in a NEMA 4X enclosure. Maximum screw speed shall be 4 rpm or lower.

C. Speed Reducer:
   1. Provide speed reducer rated for uniform shock load classification with a SUM ITOMO-CYCLO reducer service factor of 1.00.
   2. Speed reducer shall be Sumitomo Cyclo Reducer or ENGINEER-approved equal.

D. Shaft Seals shall be Musashi double lip spring-loaded Nitrite oil seal or ENGINEER-approved equal.

E. Bearings:
   1. Bearings:
      a. Screw press shall be designed so that the entire rotating assembly is supported on the discharge end by a grease lubricated ball or spherical roller type bearing. The bearing shall be conservatively designed to withstand all stresses of the service specified. Main bearings shall have a minimum B-10 life rating of 500,000 hours at standard operating speeds.
      b. Bearings for the screw shall be anti-friction with grease lubrication.

F. Flexible connectors for the drive motor and screw press junction boxes shall be furnished by the installing Contractor such that all local electrical codes are met.

G. Screw Press Motor
   1. Provide inverter rated, severe duty motor, 1.15 SF, NEMA Premium Efficiency, cast iron frame with manufacturer's standard, corrosion resistant, epoxy finish.
   2. Minimum screw press motor requirements of 5 HP, (480v/3 phase)

DRAFT

2.05 SCREW ASSEMBLY

A. Screw Shell: Stainless steel, Type 304

B. Helical flight welded to screw shell: Stainless steel Type 304 Brushless Flight

C. The screw supported in the head by a radial bearing

2.06 SCREEN ASSEMBLY

A. Type 304 stainless steel panels with punched holes

B. Wedge wire screens are not acceptable.

C. Screens shall offer a minimum total surface area of 21 m^2

2.07 DRUM ASSEMBLY

A. Drums shall be 0.5 to 1.0 meters in length and split into two, removable drum halves.

B. Drum configuration shall allow maintenance work in the screw press flight area without removal of the screw from the press.

C. The inner diameter for each drum shall be a minimum of 1200 mm.

2.08 PRESS ASSEMBLY

A. Screw press assembly shall be such that clearances around the entire perimeter of the unit for maintenance work shall not exceed 36 inches.

2.09 FLOCCULATION TANK

A. Flocculation tank wetted parts shall be constructed of 304 stainless steel throughout.

B. Flocculation tank shall be designed for a retention time of 2 to 4 minutes under the normal design flow rate. The inlet of the tank shall be located at the bottom of the tank and conditioned sludge shall overflow from the discharge pipe located near the top of the tank. Provide XX-inch discharge pipe stub with flexible rubber hose sleeve connection.

C. Flocculation tank shall be supplied complete with an agitator. The agitator drive shall be an SEW Eurodrive Varimot speed reducer/mechanical variator or ENGINEER-approved equal. Agitator speed shall be adjusted manually at the flocculation tank.

D. Flocculation tank, agitator, and agitator drive shall be designed to handle the entire flow capacity range of the screw press.

E. Motor for the drive shall be 480 v / 3-phase unit. Motor shall have an aluminum cast frame. Motor efficiency will be 77% or greater. Motor bearings shall be 6306 C3-2RS or ENGINEER-approved equal on the drive end and 6205 C3-2RS or ENGINEER-approved equal on the fan end.

F. Provide split flocculation tank cover with a hinged inspection port. Include a 4-inch pipe stub vent connection on the fixed portion of the cover.

2.010 INSTRUMENTATION AND CONTROLS

A. Screw press manufacturer shall provide the dewatering control panel, PLC, and field instrumentation for the dewatering system, as described and shown on the Drawings.

B. Within 180 days of Contract Notice to Proceed, screw press manufacturer shall provide a detailed written description of the modes of operation, interlocking and process control requirements for use by the Contractor, sufficient for proper operation of the dewatering system.

C. The PLC will be programmed by the screw press manufacturer. Screw press manufacturer is responsible to direct all programming changes required to meet the system performance standards.

DRAFT

D. The HMI will be programmed by the screw press manufacturer.

E. Screw press manufacturer shall provide a pressure sensing type level indicating transmitter as follows:
   1. Manufacturer: One of the following or ENGINEER-approved equal:
      a. Rosemount
      b. Fischer and Porter
      c. Leeds and Northrup
      d. Foxboro
   2. Level Indicating Transmitters: Pressure sensing, 24 volt direct current 2 wire type with the following:
      a. 3-inch ANSI B16.5, Class 150 carbon steel mounting flange
      b. 1/2 inch National Pipe Tread pressure or reference connection
      c. No mechanical fulcrum points
      d. Electronic span
      e. Zero adjustments
      f. Adjustable damping feature
      g. Positive over-range protection
      h. Field adjusted zero elevation or suppression
      i. 3-valve manifold
   3. Transmitters Housings: NEMA 4X corrosion resistant and weatherproof, with operation temperature range of from 0°F to 175°F with relative humidity of 0 to 100 percent.
   4. Wetted Material: Cadmium-plated carbon steel, stainless steel, or other corrosion-resistant materials, compatible with process fluid.
   5. Accuracy: Within 0.25 percent of span with repeatability of 0.10 percent.
   6. Output: 4 to 20 milliampere direct current without need for external load adjustments.
   7. Calibrate transmitters to required range.
   8. Provide flange on headbox for mounting the level element.

F. Conductivity Level Probe by Screw Press Manufacturer
   1. Manufacturers, Products: Omega LVC-E511 or ENGINEER-approved equal.
   2. 303 Stainless Steel electrodes, ¼" diameter.

2.011 ANCHOR BOLTS

A. Anchor bolts will be sized by the screw press Manufacturer and provided by the Contractor.

2.012 FINISHES

A. Surface preparation of carbon steel surfaces on the screw press and flocculation tank shall be in accordance with SSPC-SP6 standards and shall be coated as follows:
   1. Prime Coat: 5 mils of Carboline 890
   2. Top Coat: 2 mils of Carboline 890 (if outdoors & exposed to direct sunlight), 5 mils (if indoors or covered outdoors)

B. Motors and gearboxes for the screw press and flocculation tank shall be prepared and coated with the manufacturer's standard surface preparation, prime coat, and top coat for corrosion resistance.

DRAFT

PART 3 – EXECUTION

3.01 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. The Contractor shall provide all hardware and accessories required for installation.

C. Manufacturer’s Field Services
   1. Include the following:
      a. Inspection and Functional/Operational Testing: One trip with 3 days service.
      b. Performance Testing/Training: One trip with 2 days service.
   2. Additional trips resulting from failed tests shall be the sole responsibility of the manufacturer.

3.02 EQUIPMENT STARTUP AND TESTING

A. Perform start-up and functional testing for entire dewatering system, with all units operating in AUTO mode. The Contractor shall complete all electrical/instrumentation and loop testing prior to functional performance testing

B. Provide Major Certificate of Proper Installation.

C. Operational Test:
   1. Functional/operational tests may be performed in the same trip.

D. Guaranteed Performance Testing:
   1. Include the minimum number of trips and duration of service as previously indicated.
   2. Include demonstration that dewatering system meets minimum specified performance requirements of this specification.
   3. Manufacturer’s representative shall supervise all performance testing and be solely responsible for operating the dewatering and ancillary equipment (e.g., sludge and polymer feed systems). The OWNER shall furnish personnel to assist in operating the equipment and take samples. Manufacturer shall provide certified test reports.
   4. After adjustments are made to achieve the operating requirements, the dewatering system will be operated at the design conditions to demonstrate consistent performance. Samples of feed, filtrate, and cake shall be collected by Engineer's appointed representative or Owner and evaluated by the Owner. The test will be deemed successful if average test results meet or exceed those specified.
   5. Sample testing and analysis costs shall be the responsibility of the Owner.
   6. Polymer shall be as selected by the polymer representative and supplied by the Owner for testing.
   7. Data collected during each test run used to complete guaranteed performance testing shall include, as a minimum:
      a. Run number
      b. Date
      c. Time
      d. Feed sludge percent total solids, %TS
      e. Sludge feed rate, gpm
      f. Polymer name
      g. Polymer percent active, %
      h. Polymer feed rate (neat), gph
      i. Screw press speed, rpm
      j. Amperage draw by the screw press drive
      k. Cake percent total solids, %TS
   8. Provide calculated values for the following:
      a. Solids throughput, lbs TS/hr
   9. Solids concentrations will be determined using “Standard Methods.”

DRAFT

10. Guaranteed Performance Test Runs:
    a. Test runs shall consist of two 5 hour steady state runs performed on two consecutive days. Maintain the average design solids throughput of 994 dry pounds per hour throughout the test runs.
    b. All test data and values and previously described and required to demonstrate compliance shall be recorded at the start of each run and every hour thereafter. The averaged results for each sample shall meet or exceed the minimum and guaranteed performance standards.
    c. The units shall be operated in AUTO mode at all times during the Guaranteed Performance test runs.
    d. Should the installed equipment fail to meet the specified minimum performance requirements, the manufacturer shall within 30 days make all necessary changes to the equipment and/or operation at no cost to the OWNER. The equipment shall be retested using the same procedure indicated above. If after the second test the equipment still does not meet the minimum performance requirements and/or guaranteed performance standards, damages will be assessed and/or equipment replaced. If assessed, damages will be limited to ten percent (10%) retention, if performance requirements are not met.
    e. The screw press dewatering system shall meet every item of the performance criteria as specified prior to acceptance of the OWNER.
11. MANUFACTURER shall prepare and submit a written report documenting the test data listed above.
12. Provide a computer spreadsheet compatible with Microsoft Excel (latest version) with the test data listed above.

E. Witnessing: All field testing shall be witnessed by the ENGINEER.

F. A representative of the screw press manufacturer shall be provided for the following:
    1. To inspect the equipment and installation
    2. To make any field adjustments to ensure proper equipment operation
    3. To furnish affidavit stating that the dewatering system has been tested and is ready for installation as specified.
    4. To inspect start-up

G. Manufacturer shall inspect system before initial start-up and certify that system has been correctly installed and prepared for start-up.

H. Training:
    1. Provide operator training for at least 2 days on-site by factory trained representative. Operator training to include:
        a. Operations and inspection training
        b. Safety instruction
        c. Preventative maintenance instruction
        d. Calibration and other pertinent services

SHOP DRAWING REVIEW

Project: **San Luis West WWTP Improvements**

Submittal No. **#46 73 63.23_002 FKC Control Panel & Instrumentation**

Date Received: **06/03/2025**

Job #: **B777**

Comments:

No Exceptions Taken..... ☐
Submit Specific Item ..... ☒
Accepted with Corrections Noted..... ☒
Revise and Resubmit..... ☐
Rejected ..... ☐

Note:
Review is only for general conformance with the design concept of the project and general compliance with the information included in the Contract Documents. Any action shown is subjected to the requirements of the drawings and the specifications. Contractor is responsible for correlating and confirming dimensions at the job site, choice of fabrication processes and techniques of construction: coordination of his work with that of other trades; and performing the work in a safe satisfactory manner.

DATE: 7/16/2025 BY: NT/NC

Submittal Comments:

1. **Submit Specific Item:** Please provide an updated 3-line diagram with correct VFD and motor sizes as soon as possible.

2. **Accepted with Corrections:** Vendor to note that the provided 3-line diagram has inconsistencies between this submittal and the previous mechanical submittal in regards to stated motor sizes. Verify all motor and VFD sizes and update in all future submittals.

Technical Information
Proline Promag W 400

Electromagnetic flowmeter

DRAFT

Versatile standard flowmeter for the water and wastewater industry

Application

- The bidirectional measuring principle is virtually independent of pressure, density, temperature and viscosity
- Ideal for water measurement, e.g. drinking water, utility water and industrial/municipal wastewater

Device properties

- International drinking water approvals
- Degree of protection IP68 (Type 6P enclosure)
- Approved for custody transfer to MI-001/OIML R49
- Transmitter housing made of durable polycarbonate or aluminum
- WLAN access
- Integrated data logger: measured values monitoring

Your benefits

- Reliable measurement at constant accuracy with 0 x DN run without pressure loss
- Flexible engineering – sensors with fixed flanges or lap joint flanges
- Application suitability – corrosion protection according to EN ISO 12944 for buried or underwater installations
- Improved plant availability – sensor compliant with industry-specific requirements
- Safe operation – no need to open device
- Time-saving local operation without additional software and hardware – integrated web server
- Built-in verification and build-up detection – Heartbeat Technology

About this document

Symbols

Electrical symbols

Symbol	Meaning
	Direct current
	Alternating current
	Direct current and alternating current
	**Ground connection** A grounded terminal which, as far as the operator is concerned, is grounded via a grounding system.
	**Protective Earth (PE)** A terminal which must be connected to ground prior to establishing any other connections. The ground terminals are situated inside and outside the device: ▪ Inner ground terminal: Connects the protectiv earth to the mains supply. ▪ Outer ground terminal: Connects the device to the plant grounding system.

Communication symbols

Symbol	Meaning
	**Wireless Local Area Network (WLAN)** Communication via a wireless, local network.
	**Bluetooth** Wireless data transmission between devices over a short distance.
	**LED** Light emitting diode is off.
	**LED** Light emitting diode is on.
	**LED** Light emitting diode is flashing.

Symbols for certain types of information

Symbol	Meaning
	**Permitted** Procedures, processes or actions that are permitted.
	**Preferred** Procedures, processes or actions that are preferred.
	**Forbidden** Procedures, processes or actions that are forbidden.
	**Tip** Indicates additional information.

Function and system design

Measuring principle

Following *Faraday's law of magnetic induction*, a voltage is induced in a conductor moving through a magnetic field.

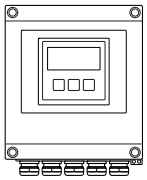
A0028962

Ue Induced voltage
B Magnetic induction (magnetic field)
L Electrode spacing
I Current
v Flow velocity

In the electromagnetic measuring principle, the flowing medium is the moving conductor. The voltage induced (U_e) is proportional to the flow velocity (v) and is supplied to the amplifier by means of two measuring electrodes. The flow volume (Q) is calculated via the pipe cross-section (A). The DC magnetic field is created through a switched direct current of alternating polarity.

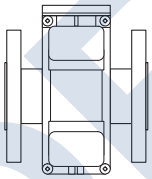
Formulae for calculation

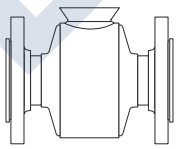
- Induced voltage $U_e = B \cdot L \cdot v$
- Volume flow $Q = A \cdot v$



DRAFT

Measuring system

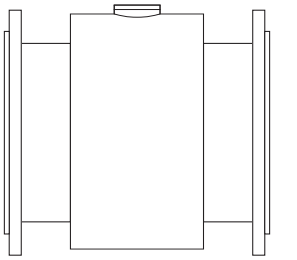




The device consists of a transmitter and a sensor.

Two device versions are available:
- Compact version - transmitter and sensor form a mechanical unit.
- Remote version - transmitter and sensor are mounted in separate locations.

Transmitter



Proline 400

A0045222
	Device versions and materials:
	▪ Compact version: compact housing
	  ▪ Polycarbonate plastic
	  ▪ Aluminum, AlSi10Mg, coated
	▪ Remote version: wall-mount housing
	  ▪ Polycarbonate plastic
	  ▪ Aluminum, AlSi10Mg, coated
	Configuration:
	▪ External operation via four-line, illuminated local display with touch control and guided menus ("Make-it-run" wizards) for applications
	▪ Via operating tools (e.g. FieldCare)
	▪ Via Web browser (e.g. Microsoft Internet Explorer)
	▪ Also for device version with EtherNet/IP output:
	  ▪ Via Add-on Profile Level 3 for automation system from Rockwell Automation
	  ▪ Via Electronic Data Sheet (EDS)
	▪ Also for device version with PROFIBUS DP output:
	Via PDM driver for Siemens automation system

Sensor

Safety

IT security

Our warranty is valid only if the device is installed and used as described in the Operating Instructions. The device is equipped with security mechanisms to protect it against any inadvertent changes to the settings.

IT security measures, which provide additional protection for the device and associated data transfer, must be implemented by the operators themselves in line with their security standards.

Device-specific IT security

The device offers a range of specific functions to support protective measures on the operator's side. These functions can be configured by the user and guarantee greater in-operation safety if used correctly. An overview of the most important functions is provided in the following section.

Protecting access via a password

Different passwords are available to protect write access to the device parameters or access to the device via the WLAN interface.

- User-specific access code
  Protect write access to the device parameters via the local display, Web browser or operating tool (e.g. FieldCare, DeviceCare). Access authorization is clearly regulated through the use of a user-specific access code.
- WLAN passphrase
  The network key protects a connection between an operating unit (e.g. notebook or tablet) and the device via the WLAN interface which can be ordered as an option.

DRAFT

User-specific access code

Write access to the device parameters via the local display or operating tool (e.g. FieldCare, DeviceCare) can be protected by the modifiable, user-specific access code.

WLAN passphrase: Operation as WLAN access point

A connection between an operating unit (e.g. notebook or tablet) and the device via the WLAN interface, which can be ordered as an optional extra, is protected by the network key. The WLAN authentication of the network key complies with the IEEE 802.11 standard.

When the device is delivered, the network key is pre-defined depending on the device. It can be changed via the **WLAN settings** submenu in the **WLAN passphrase** parameter.

General notes on the use of passwords

- The access code and network key supplied with the device should be changed during commissioning.
- Follow the general rules for generating a secure password when defining and managing the access code or network key.
- The user is responsible for the management and careful handling of the access code and network key.

Access via Web server

The device can be operated and configured via a Web browser with the integrated Web server. The connection is via the service interface (CDI-RJ45) or the WLAN interface. For device versions with the EtherNet/IP and PROFINET communication protocols, the connection can also be established via the terminal connection for signal transmission with EtherNet/IP or PROFINET (RJ45 plug).

The Web server is enabled when the device is delivered. The Web server can be disabled if necessary (e.g. after commissioning) via the **Web server functionality** parameter.

The device and status information can be hidden on the login page. This prevents unauthorized access to the information.

For detailed information on device parameters, see:
The "Description of Device Parameters" document → 106

Input

Measured variable

Direct measured variables

- Volume flow (proportional to induced voltage)
- Electrical conductivity

In custody transfer: only volume flow

Calculated measured variables

Mass flow

Measuring range

Typically v = 0.01 to 10 m/s (0.03 to 33 ft/s) with the specified accuracy

Electrical conductivity: ≥ 5 µS/cm for liquids in general

Flow characteristic values in SI units: DN 25 to 125 mm (1 to 4 in)

Nominal diameter		Recommended flow	Factory settings		
		min./max. full scale value (v ~ 0.3...10 m/s)	Full scale value current output (v ~ 2.5 m/s)	Pulse value (~ 2 Pulse/s at v ~ 2.5 m/s)	Low flow cut off (v ~ 0.04 m/s)

Recommended measuring range

Flow limit → 52

For custody transfer, the applicable approval determines the permitted measuring range, the pulse value and the low flow cut off.

Operable flow range

Over 1000 : 1

For custody transfer, the operable flow range is 100 : 1 to 630 : 1, depending on the nominal diameter. Further details are specified by the applicable approval.

DRAFT

Input signal

External measured values

Various pressure transmitters and temperature measuring devices can be ordered from Endress +Hauser: see "Accessories" section → 105

It is recommended to read in external measured values to calculate the following measured variables: Mass flow

HART protocol

The measured values are written from the automation system to the measuring device via the HART protocol. The pressure transmitter must support the following protocol-specific functions:
- HART protocol
- Burst mode

Digital communication

The measured values can be written from the automation system to the measuring via:
- PROFIBUS DP
- Modbus RS485
- EtherNet/IP

Status input

Maximum input values	▪ DC 30 V ▪ 6 mA
Response time	Configurable: 5 to 200 ms
Input signal level	▪ Low signal (low): DC –3 to +5 V ▪ High signal (high): DC 12 to 30 V
Assignable functions	▪ Off ▪ Reset totalizers 1-3 separately ▪ Reset all totalizers ▪ Flow override

Output

Output signal

Current output

Current output	Can be set as: ▪ 4 to 20 mA NAMUR ▪ 4 to 20 mA US ▪ 4 to 20 mA HART ▪ 0 to 20 mA
Maximum output values	▪ DC 24 V (no flow) ▪ 22.5 mA
Load	0 to 700 Ω
Resolution	0.5 µA

DRAFT

Damping	Configurable: 0.07 to 999 s
Assignable measured variables	▪ Volume flow ▪ Mass flow ▪ Corrected volume flow ▪ Flow velocity ▪ Conductivity [1] ▪ Corrected conductivity [1] ▪ Temperature [1] ▪ Electronics temperature ▪ Reference electrode potential [1] ▪ Coil current rise time [1] ▪ Noise [1] ▪ Build-up measured value [1] ▪ Test points 1-3

1) Visible depending on order options or device settings

Pulse/frequency/switch output

Function	▪ With the order code for "Output; Input", option **H**: output 2 can be set as a pulse or frequency output ▪ With the order code for "Output; Input", option **I**: output 2 and 3 can be set as a pulse, frequency or switch output ▪ With the order code for "Output; Input", option **J**: output 2 firmly assigned as certified pulse output
Version	Passive, open collector
Maximum input values	▪ DC 30 V ▪ 250 mA
Voltage drop	At 25 mA: ≤ DC 2 V
Pulse output	
Pulse width	Configurable: 0.05 to 2 000 ms
Maximum pulse rate	10 000 Impulse/s
Pulse value	Configurable
Assignable measured variables	▪ Volume flow ▪ Mass flow ▪ Corrected volume flow
Frequency output	
Output frequency	Configurable: 0 to 12 500 Hz
Damping	Configurable: 0 to 999 s
Pulse/pause ratio	1:1
Assignable measured variables	▪ Volume flow ▪ Mass flow ▪ Corrected volume flow ▪ Flow velocity ▪ Conductivity [1] ▪ Corrected conductivity [1] ▪ Temperature [1] ▪ Electronics temperature ▪ Noise [1] ▪ Coil current rise time [1] ▪ Reference electrode potential [1] ▪ Build-up measured value [1] ▪ Test points 1-3
Switch output	
Switching behavior	Binary, conductive or non-conductive
Switching delay	Configurable: 0 to 100 s

DRAFT

Number of switching cycles	Unlimited

Assignable functions	▪ Off
	▪ On
	▪ Diagnostic behavior
	▪ Limit value:
	  ▪ Off
	  ▪ Volume flow
	  ▪ Corrected volume flow
	  ▪ Mass flow
	  ▪ Flow velocity
	  ▪ Conductivity [1]
	  ▪ Corrected conductivity [1]
	  ▪ Totalizer 1-3
	  ▪ Temperature [1]
	  ▪ Electronics temperature
	▪ Flow direction monitoring
	▪ Status:
	  ▪ Empty pipe detection
	  ▪ Low flow cut off
	  ▪ Build-up limit value [1]

1) Visible depending on order options or device settings

PROFIBUS DP

Signal encoding	NRZ code
Data transmission	9.6 kBaud...12 MBaud

Modbus RS485

Physical interface	In accordance with EIA/TIA-485-A standard
Terminating resistor	Integrated, can be activated via DIP switch on the transmitter electronics module

EtherNet/IP

Standards	In accordance with IEEE 802.3

Signal on alarm

Depending on the interface, failure information is displayed as follows:

Current output 4 to 20 mA

4 to 20 mA

Failure mode	Choose from: ▪ 4 to 20 mA in accordance with NAMUR recommendation NE 43 ▪ 4 to 20 mA in accordance with US ▪ Min. value: 3.59 mA ▪ Max. value: 22.5 mA ▪ Freely definable value between: 3.59 to 22.5 mA ▪ Actual value ▪ Last valid value

0 to 20 mA

Failure mode	Choose from: ▪ Maximum alarm: 22 mA ▪ Freely definable value between: 0 to 22.5 mA

DRAFT

HART current output

Device diagnostics	Device condition can be read out via HART Command 48

Pulse/frequency/switch output

Pulse output	
Failure mode	Choose from: ▪ Actual value ▪ No pulses
Frequency output	
Failure mode	Choose from: ▪ Actual value ▪ 0 Hz ▪ Defined value: 0 to 12 500 Hz
Switch output	
Failure mode	Choose from: ▪ Current status ▪ Open ▪ Closed

PROFIBUS DP

Status and alarm messages	Diagnostics in accordance with PROFIBUS PA Profile 3.02

Modbus RS485

Failure mode	Choose from: ▪ NaN value instead of current value ▪ Last valid value

EtherNet/IP

Device diagnostics	Device condition can be read out in Input Assembly

Local display

Plain text display	With information on cause and remedial measures
Backlight	Red backlighting indicates a device error.

Status signal as per NAMUR recommendation NE 107

Interface/protocol

- Via digital communication:
  - HART protocol
  - PROFIBUS DP
  - Modbus RS485
  - EtherNet/IP
- Via service interface
  - CDI-RJ45 service interface
  - WLAN interface

DRAFT

Plain text display	With information on cause and remedial measures

Additional information on remote operation → 95

Web browser

Plain text display	With information on cause and remedial measures

Light emitting diodes (LED)

Status information	Status indicated by various light emitting diodes The following information is displayed depending on the device version: ▪ Supply voltage active ▪ Data transmission active ▪ Device alarm/error has occurred ▪ EtherNet/IP network available ▪ EtherNet/IP connection established

Low flow cut off

The switch points for low flow cut off are user-selectable.

Galvanic isolation

The following connections are galvanically isolated from each other:
- Inputs
- Outputs
- Power supply

Protocol-specific data

HART

Manufacturer ID	0x11
Device type ID	0x1169
HART protocol revision	7
Device description files (DTM, DD)	Information and files under: www.endress.com
HART load	Min. 250 Ω
Dynamic variables PV, SV, TV, QV	▪ Read out the dynamic variables via HART command 3 ▪ The measured variables can be freely assigned to the dynamic variables
Device variables	▪ Read out the device variables via HART command 9 ▪ The measured variables can be freely assigned ▪ A maximum of 8 device variables can be transmitted
System integration	Operating Instructions for the device → 106

PROFIBUS DP

Manufacturer ID	0x11
Ident number	0x1562
Profile version	3.02
Device description files (GSD, DTM, DD)	Information and files under: ▪ www.endress.com ▪ www.profibus.org
Output values	Output values (from the measuring device to the automation system) ▪ 4 Analog input ▪ 2 Digital input ▪ 3 Totalizer

DRAFT

Input values	Input values (from the automation system to the measuring device) ▪ 2 Analog output (fixed assignment) ▪ 2 Digital output (fixed assignment) ▪ 3 Totalizer
Device address configuration options	Configuration of the device address ▪ Hardware: DIP switches on the I/O electronics module ▪ Software: Via operating tools (e.g. FieldCare)
Supported functions	▪ Identification & Maintenance: Simplest device identification on the part of the control system and nameplate ▪ PROFIBUS upload/download: Reading and writing parameters is up to ten times faster with PROFIBUS upload/download ▪ Condensed status: Simplest and self-explanatory diagnostic information by categorizing diagnostic messages that occur
System integration	Operating Instructions for the device → 106

Modbus RS485

Protocol	Modbus Applications Protocol Specification V1.1
Device type	Slave
Slave address range	1 to 247
Broadcast address range	0
Function codes	▪ 03: Read holding register ▪ 04: Read input register ▪ 06: Write single registers ▪ 08: Diagnostics ▪ 16: Write multiple registers ▪ 23: Read/write multiple registers
Broadcast messages	Supported by the following function codes: ▪ 06: Write single registers ▪ 16: Write multiple registers ▪ 23: Read/write multiple registers
Supported baud rate	▪ 1 200 BAUD ▪ 2 400 BAUD ▪ 4 800 BAUD ▪ 9 600 BAUD ▪ 19 200 BAUD ▪ 38 400 BAUD ▪ 57 600 BAUD ▪ 115 200 BAUD
Modus data transmission	▪ ASCII ▪ RTU
Data access	Each device parameter can be accessed via Modbus RS485. For detailed information on the "Modbus RS485 register information", see the Description of Device Parameters → 106
System integration	Operating Instructions for the device → 106

EtherNet/IP

Protocol	▪ The CIP Networks Library Volume 1: Common Industrial Protocol ▪ The CIP Networks Library Volume 2: EtherNet/IP Adaptation of CIP
Communication type	▪ 10Base-T ▪ 100Base-TX
Device profile	Generic device (product type: 0x2B)
Manufacturer ID	0x49E

DRAFT

ITEM F-011D

Device type ID	0x1069
Baud rates	Automatic 10/100 Mbit with half-duplex and full-duplex detection
Polarity	Auto-polarity for automatic correction of crossed TxD and RxD pairs
Supported CIP connections	Max. 3 connections
Explicit connections	Max. 5 connections
I/O connections	Max. 6 connections (scanner)
Configuration options for measuring device	Configuration options for measuring device ▪ DIP switches on the electronics module for IP addressing ▪ Manufacturer-specific software (FieldCare) ▪ Custom Add-on Profile for Rockwell Automation control systems ▪ Web browser ▪ Electronic Data Sheet (EDS) integrated in the measuring device
EtherNet interface configuration options	Configuration of the EtherNet interface ▪ Speed: 10 MBit, 100 MBit, auto (factory setting) ▪ Duplex: half-duplex, full-duplex, auto (factory setting)
Device address configuration options	Configuration of the device address ▪ DIP switches on the electronics module for IP addressing (last octet) ▪ DHCP ▪ Manufacturer-specific software (FieldCare) ▪ Custom Add-on Profile for Rockwell Automation control systems ▪ Web browser ▪ EtherNet/IP tools, e.g. RSLinx (Rockwell Automation)
Device Level Ring (DLR)	No
Assembly	▪ Legacy Input Assembly Fix (Assem 100) ▪ Legacy Input Assembly Configurable (Assem 101) ▪ Legacy Output Assembly Fix (Assem 102) ▪ Legacy Configuration Assembly (Assem 104) ▪ Input Assembly Fix (Assem 120) ▪ Input Assembly Configurable (Assem 121) ▪ Output Assembly Fix (Assem 122) ▪ Configuration Assembly (Assem 124) ▪ Volume Flow Extended Fix Input (Assem 126) ▪ Volume Flow Universal Fix Input (Assem 127) ▪ Dummy Output Assembly Fix (Assem 199)
Requested Packet Interval (RPI)	5 ms to 10 s (factory setting: 20 ms)
System integration	Operating Instructions for the device → 🖹 106

Power supply

Terminal assignment

Transmitter: 0 to 20 mA/4 to 20 mA HART

The sensor can be ordered with terminals.

Connection methods available		Possible options for order code "Electrical connection"
Outputs	**Power supply**	
Terminals	Terminals	▪ Option **A**: coupling M20x1 ▪ Option **B**: thread M20x1 ▪ Option **C**: thread G ½" ▪ Option **D**: thread NPT ½"

Potential equalization

Introduction

Correct potential equalization (equipotential bonding) is a prerequisite for stable and reliable flow measurement. Inadequate or incorrect potential equalization can result in device failure and present a safety hazard.

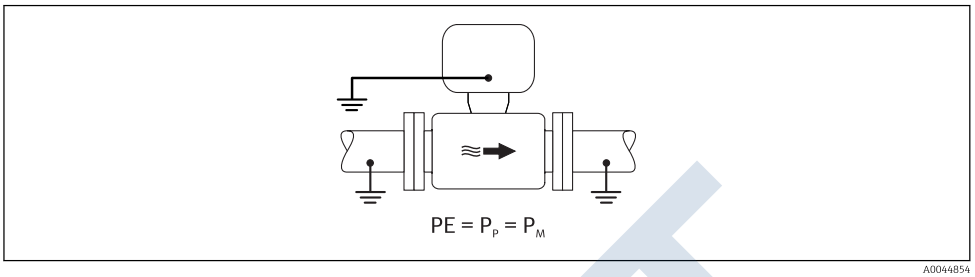
The following requirements must be observed to ensure correct, trouble-free measurement:
- The principle that the medium, the sensor and the transmitter must be at the same electrical potential applies.
- Take in-company grounding guidelines, materials and the grounding conditions and potential conditions of the pipe into consideration.
- Any necessary potential equalization connections must be established by ground cables with a minimum cross-section of 6 mm^2 (0.0093 in^2).
- For remote device versions, the ground terminal in the example always refers to the sensor and not to the transmitter.

You can order accessories like ground cables and ground disks from Endress+Hauser → 103

For devices intended for use in hazardous locations, observe the instructions in the Ex documentation (XA).

Abbreviations used

- PE (Protective Earth): potential at the protective earth terminals of the device
- P_P (Potential Pipe): potential of the pipe, measured at the flanges
- P_M (Potential Medium): potential of the medium



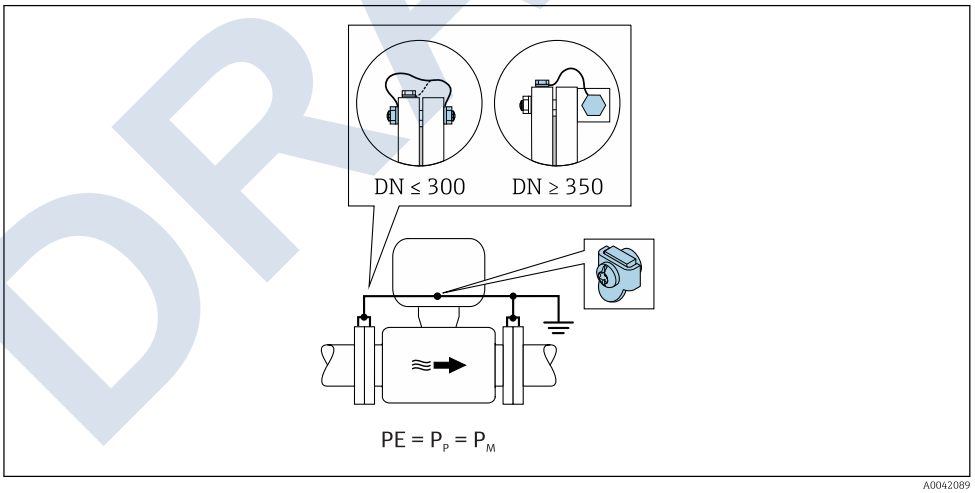
DRAFT

Connection examples for standard situations

Unlined and grounded metal pipe

- Potential equalization is via the measuring pipe.
- The medium is set to ground potential.

Starting conditions:
- Pipes are correctly grounded on both sides.
- Pipes are conductive and at the same electrical potential as the medium



A0044854

► Connect the connection housing of the transmitter or sensor to ground potential by means of the ground terminal provided for this purpose.

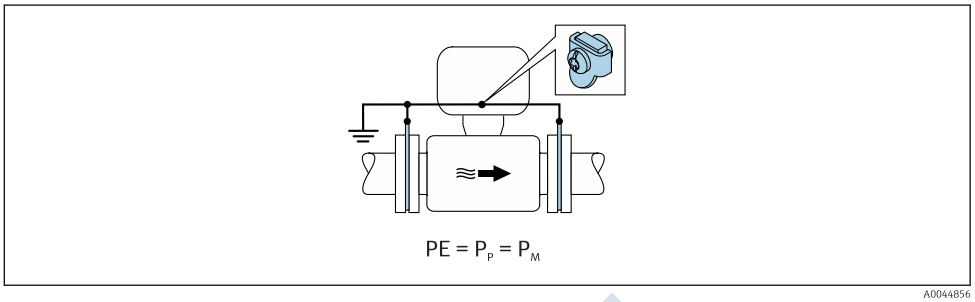
Unlined metal pipe

- Potential equalization is via the ground terminal and pipe flanges.
- The medium is set to ground potential.

Starting conditions:
- Pipes are not sufficiently grounded.
- Pipes are conductive and at the same electrical potential as the medium

A0042089

1. Connect both sensor flanges to the pipe flange via a ground cable and ground them.
2. Connect the connection housing of the transmitter or sensor to ground potential by means of the ground terminal provided for this purpose.



- For DN ≤ 300 (12"): Mount the ground cable directly on the conductive flange coating of the sensor with the flange screws.
- For DN ≥ 350 (14"): Mount the ground cable directly on the metal transport bracket. Observe screw tightening torques: see the Brief Operating Instructions for the sensor.

Plastic pipe or pipe with insulating liner

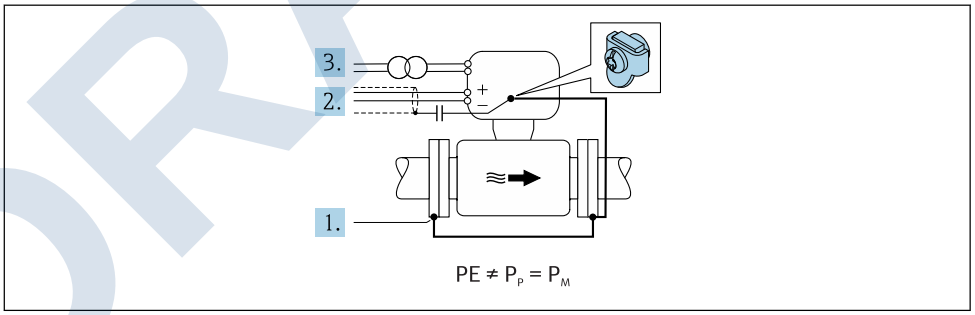
- Potential equalization is via the ground terminal and ground disks.
- The medium is set to ground potential.

DRAFT

Starting conditions:
- The pipe has an insulating effect.
- Low-impedance medium grounding close to the sensor is not guaranteed.
- Equalizing currents through the medium cannot be ruled out.

A0044856

1. Connect the ground disks to the ground terminal of the connection housing of the transmitter or sensor via the ground cable.
2. Connect the connection to ground potential.



Connection example with the potential of the medium not equal to the protective ground

In these cases, the medium potential can differ from the potential of the device.

Metal, ungrounded pipe

The sensor and transmitter are installed in a way that provides electrical insulation from PE, e.g. applications for electrolytic processes or systems with cathodic protection.

Starting conditions:
- Unlined metal pipe
- Pipes with an electrically conductive liner

A0042253

1. Connect the pipe flanges and transmitter via the ground cable.
2. Route the shielding of the signal lines via a capacitor (recommended value 1.5µF/50V).
3. Device connected to power supply such that it is floating in relation to the protective earth (isolation transformer). This measure is not required in the case of 24V DC supply voltage without PE (= SELV power unit).

Connection examples with the potential of medium not equal to protective earth with the "Measurement isolated from ground" option

In these cases, the medium potential can differ from the potential of the device.

Introduction

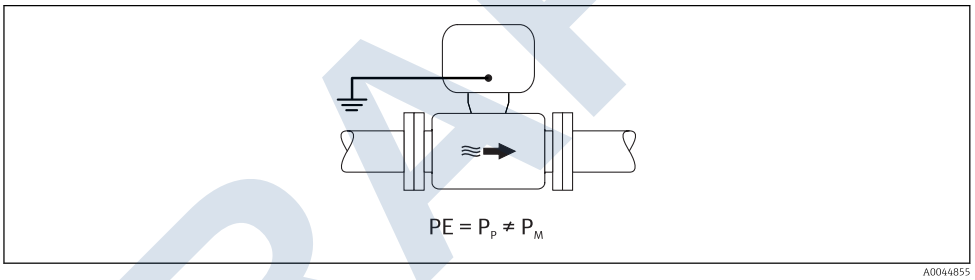
The "Measurement isolated from ground" option enables the galvanic isolation of the measuring system from the device potential. This minimizes harmful equalizing currents caused by differences

DRAFT

in potential between the medium and the device. The "Measurement isolated from ground" option is optionally available: order code for "Sensor option", option CV

Operating conditions for the use of the "Measurement isolated from ground" option

Device version	Compact version and remote version (length of connecting cable ≤ 10 m)
Differences in voltage between medium potential and device potential	As small as possible, usually in the mV range
Alternating voltage frequencies in the medium or at ground potential (PE)	Below typical power line frequency in the country



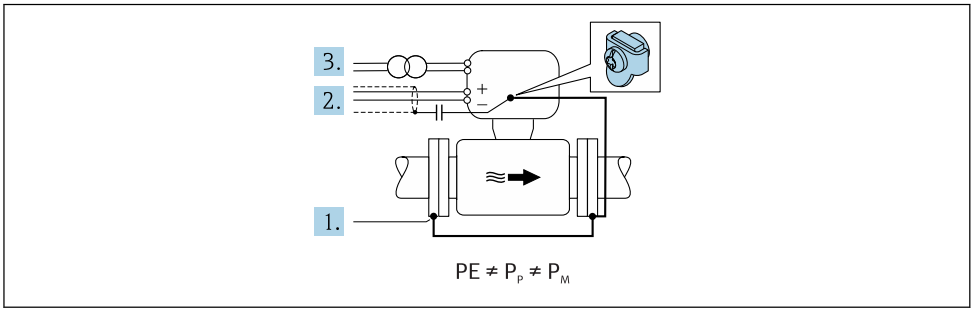
To achieve the specified conductivity measuring accuracy, a conductivity calibration is recommended when the device is installed.

A full pipe adjustment is recommended when the device is installed.

Plastic pipe

Sensor and transmitter are correctly grounded. A difference in potential can occur between the medium and protective earth. Potential equalization between P_M and PE via the reference electrode is minimized with the "Measurement isolated from ground" option.

Starting conditions:
- The pipe has an insulating effect.
- Equalizing currents through the medium cannot be ruled out.



A0044855

1. Use the "Measurement isolated from ground" option, while observing the operating conditions for measurement isolated from ground.
2. Connect the connection housing of the transmitter or sensor to ground potential by means of the ground terminal provided for this purpose.

Metal, ungrounded pipe with insulating liner

The sensor and transmitter are installed in a way that provides electrical insulation from PE. The medium and pipe have different potentials. The "Measurement isolated from ground" option minimizes harmful equalizing currents between P_M and P_P via the reference electrode.

Starting conditions:
- Metal pipe with insulating liner
- Equalizing currents through the medium cannot be ruled out.

A0044857

DRAFT

1. Connect the pipe flanges and transmitter via the ground cable.
2. Route the shielding of the signal cables via a capacitor (recommended value 1.5µF/50V).
3. Device connected to power supply such that it is floating in relation to the protective earth (isolation transformer). This measure is not required in the case of 24V DC supply voltage without PE (= SELV power unit).
4. Use the "Measurement isolated from ground" option, while observing the operating conditions for measurement isolated from ground.

Terminals

Transmitter
- Supply voltage cable: plug-in spring terminals for wire cross-sections 0.5 to 2.5 mm² (20 to 14 AWG)
- Signal cable: plug-in spring terminals for wire cross-sections 0.5 to 2.5 mm² (20 to 14 AWG)
- Electrode cable: spring terminals for wire cross-sections 0.5 to 2.5 mm² (20 to 14 AWG)
- Coil current cable: spring terminals for wire cross-sections 0.5 to 2.5 mm² (20 to 14 AWG)

Sensor connection housing
Spring terminals for wire cross-sections 0.5 to 2.5 mm² (20 to 14 AWG)

Cable entries

Cable entry thread
- M20 x 1.5
- Via adapter:
  - NPT ½"
  - G ½"

Cable gland
- For standard cable: M20 × 1.5 with cable ⌀ 6 to 12 mm (0.24 to 0.47 in)
- For armored cable: M20 × 1.5 with cable ⌀ 9.5 to 16 mm (0.37 to 0.63 in)

If metal cable entries are used, use a grounding plate.

Cable specification

Permitted temperature range
- The installation guidelines that apply in the country of installation must be observed.
- The cables must be suitable for the minimum and maximum temperatures to be expected.

Power supply cable (incl. conductor for the inner ground terminal)

Standard installation cable is sufficient.

Signal cable

Current output 0/4 to 20 mA

Standard installation cable is sufficient.

Current output 4 to 20 mA HART

A shielded cable is recommended. Observe grounding concept of the plant.

Pulse/frequency/switch output

Standard installation cable is sufficient.

Status input

Standard installation cable is sufficient.

PROFIBUS DP

The IEC 61158 standard specifies two types of cable (A and B) for the bus line which can be used for every transmission rate. Cable type A is recommended.

Cable type	A
Characteristic impedance	135 to 165 Ω at a measuring frequency of 3 to 20 MHz
Cable capacitance	< 30 pF/m
Wire cross-section	> 0.34 mm² (22 AWG)

DRAFT

Cable type	Twisted pairs
Loop resistance	≤110 Ω/km
Signal damping	Max. 9 dB over the entire length of the cable cross-section
Shield	Copper braided shielding or braided shielding with foil shield. When grounding the cable shield, observe the grounding concept of the plant.

For further information on planning and installing PROFIBUS networks see:

Operating Instructions "PROFIBUS DP/PA: Guidelines for planning and commissioning" (BA00034S)

Modbus RS485

The EIA/TIA-485 standard specifies two types of cable (A and B) for the bus line which can be used for every transmission rate. Cable type A is recommended.

Cable type	A
Characteristic impedance	135 to 165 Ω at a measuring frequency of 3 to 20 MHz
Cable capacitance	< 30 pF/m
Wire cross-section	> 0.34 mm² (22 AWG)
Cable type	Twisted pairs
Loop resistance	≤110 Ω/km
Signal damping	Max. 9 dB over the entire length of the cable cross-section
Shield	Copper braided shielding or braided shielding with foil shield. When grounding the cable shield, observe the grounding concept of the plant.

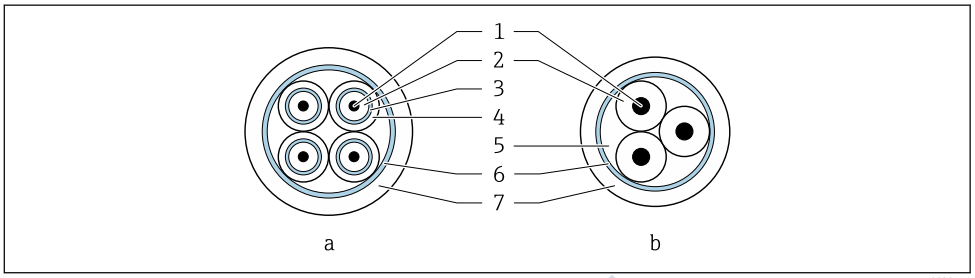
EtherNet/IP

The standard ANSI/TIA/EIA-568-B.2 Annex specifies CAT 5 as the minimum category for a cable used for EtherNet/IP. CAT 5e and CAT 6 are recommended.

For more information on planning and installing EtherNet/IP networks, please refer to the "Media Planning and Installation Manual. EtherNet/IP" of ODVA Organization

Connecting cable for remote version

Electrode cable



Standard cable	3 ×0.38 mm² (20 AWG) with common, braided copper shield (ϕ ~9.5 mm (0.37 in)) and individual shielded cores
Cable for empty pipe detection (EPD)	4 ×0.38 mm² (20 AWG) with common, braided copper shield (ϕ ~9.5 mm (0.37 in)) and individual shielded cores
Conductor resistance	≤50 Ω/km (0.015 Ω/ft)
Capacitance: core/shield	≤420 pF/m (128 pF/ft)
Operating temperature	–20 to +80 °C (–4 to +176 °F)

Coil current cable

Standard cable	3 ×0.75 mm² (18 AWG) with common, braided copper shield (ϕ ~9 mm (0.35 in))
Conductor resistance	≤37 Ω/km (0.011 Ω/ft)
Capacitance: core/core, shield grounded	≤120 pF/m (37 pF/ft)

DRAFT

Operating temperature	–20 to +80 °C (–4 to +176 °F)
Test voltage for cable insulation	≤ AC 1433 V rms 50/60 Hz or ≥ DC 2026 V

A0029151

7 *Outer jacket*

A connecting cable can be ordered from Endress+Hauser for IP68:
- Pre-terminated cables that are already connected to the sensor
- Pre-terminated cables, where the cables are connected by the customer onsite (incl. tools for sealing the connection compartment)

Armored connecting cable

Armored connecting cables with an additional, reinforcing metal braid should be used:
- When laying the cable directly in the ground
- Where there is a risk of damage from rodents
- Use as per IP68 degree of protection

Armored connecting cables with an additional, reinforcing metal braid can be ordered from Endress+Hauser → 103.

Operation in environments with strong electrical interference

The measuring system meets the general safety requirements → 102 and EMC specifications → 48.

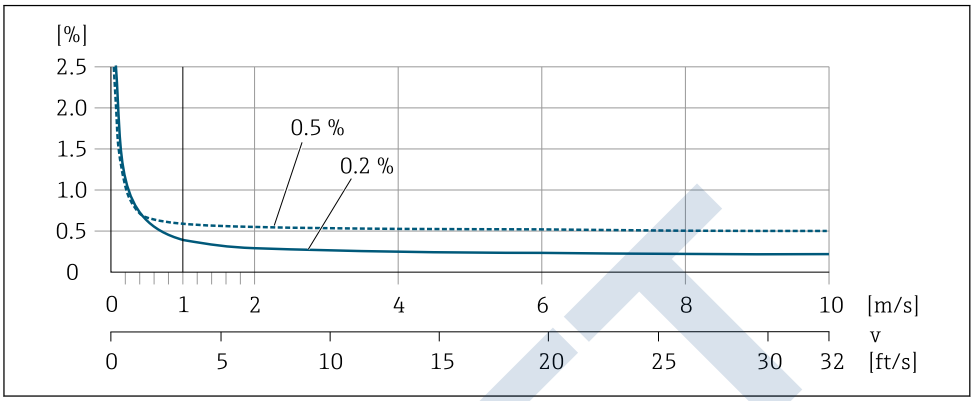
Grounding is by means of the ground terminal provided for the purpose inside the connection housing. The stripped and twisted lengths of cable shield to the ground terminal must be as short as possible.

Performance characteristics

Reference operating conditions

- Error limits following DIN EN 29104, in future ISO 20456
- Water, typically +15 to +45 °C (+59 to +113 °F); 0.5 to 7 bar (73 to 101 psi)
- Data as indicated in the calibration protocol
- Accuracy based on accredited calibration rigs according to ISO 17025

DRAFT

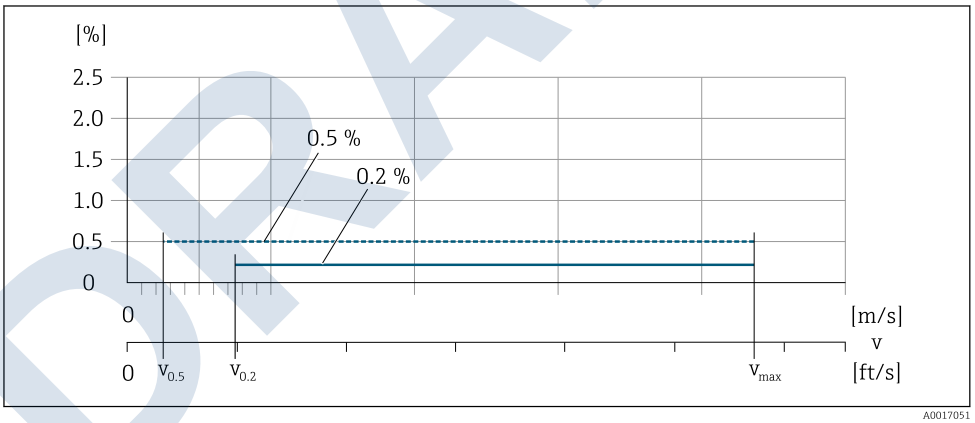


Maximum measured error

Error limits under reference operating conditions

Volume flow

- ±0.5 % o.r. ± 1 mm/s (0.04 in/s)
- Optional: ±0.2 % o.r. ± 2 mm/s (0.08 in/s)



Fluctuations in the supply voltage do not have any effect within the specified range.

14 *Maximum measured error in % o.r.*

Flat Spec

For Flat Spec in the range $v_{0.5}$ ($v_{0.2}$) up to v_{max} the measured error is constant.

15 *Flat Spec in % o.r.*

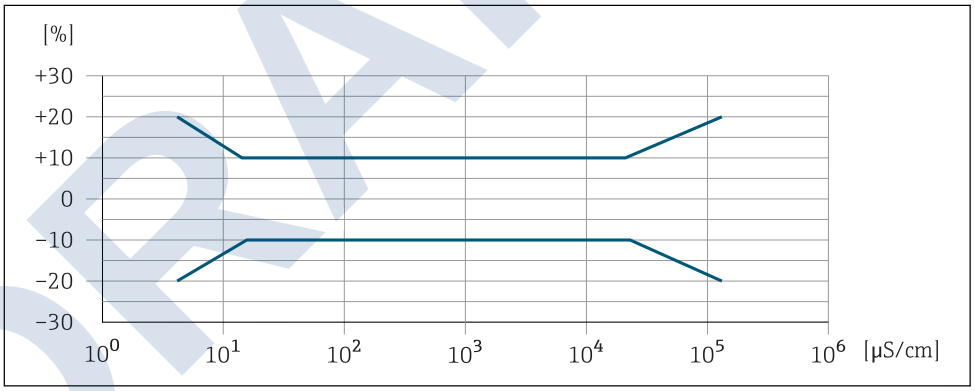
Flat Spec flow values 0.5 %

Nominal diameter		$v_{0.5}$		v_{max}	
[mm]	[in]	[m/s]	[ft/s]	[m/s]	[ft/s]
25 to 600	1 to 24	0.5	1.64	10	32
50 to 300 [1)]	2 to 12	0.25	0.82	5	16

1) Order code for "Design", option C

DRAFT

Flat Spec flow values 0.2 %



Nominal diameter		$v_{0.2}$		v_{max}	
[mm]	[in]	[m/s]	[ft/s]	[m/s]	[ft/s]
25 to 600	1 to 24	1.5	4.92	10	32
50 to 300 [1]	2 to 12	0.6	1.97	4	13

1) Order code for "Design", option C

Electrical conductivity

The values apply for:
- Measurements at a reference temperature of 25 °C (77 °F)
  At different temperatures, attention must be paid to the temperature coefficient of the medium (typically 2.1 %/K)
- Device version: compact version - transmitter and sensor form a mechanical unit
- Devices installed in a metal pipe or in a non-metal pipe with ground disks
- Devices whose potential equalization was performed according to the instructions in the associated Operating Instructions

Conductivity [µS/cm]	Measured error [%] o. r.
5 to 20	± 20%
20 to 20 000	± 10%
20 000 to 100 000	± 20%

16 *Measured error*

Accuracy of outputs

The outputs have the following base accuracy specifications.

Current output

Accuracy	Max. ±5 µA

Pulse/frequency output

o.r. = of reading

Accuracy	Max. ±50 ppm o.r. (over the entire ambient temperature range)

Repeatability

o.r. = of reading

Volume flow
max. ±0.1 % o.r. ± 0.5 mm/s (0.02 in/s)

DRAFT

Electrical conductivity
Max. ±5 % o.r.

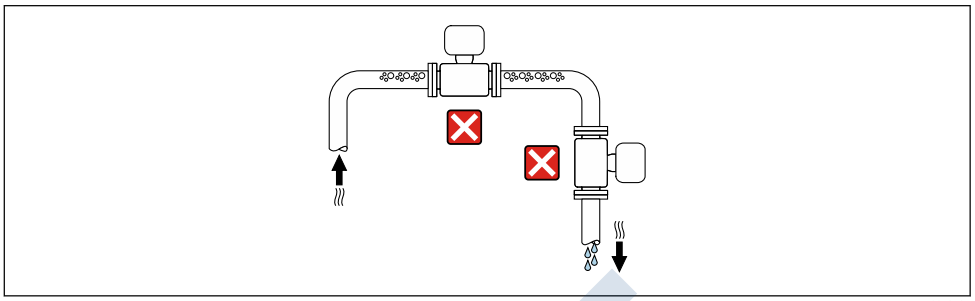
Influence of ambient temperature

Current output

o.r. = of reading

Temperature coefficient	Max. ±0.005 % o.r./°C

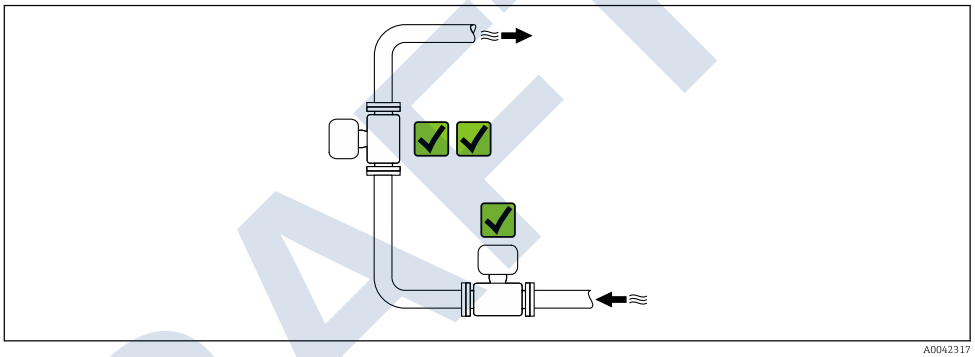
Pulse/frequency output



Temperature coefficient	No additional effect. Included in accuracy.

DRAFT

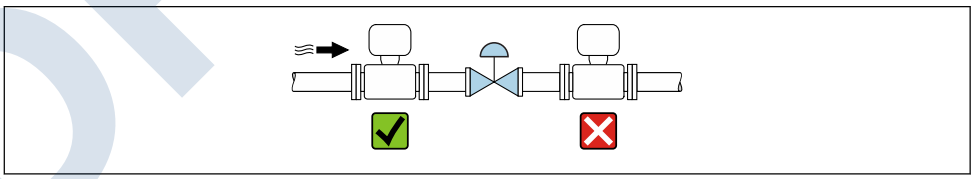
Installation



Mounting location

- Do not install the device at the highest point of the pipe.
- Do not install the device upstream from a free pipe outlet in a down pipe.

A0042131



The device should ideally be installed in an ascending pipe.

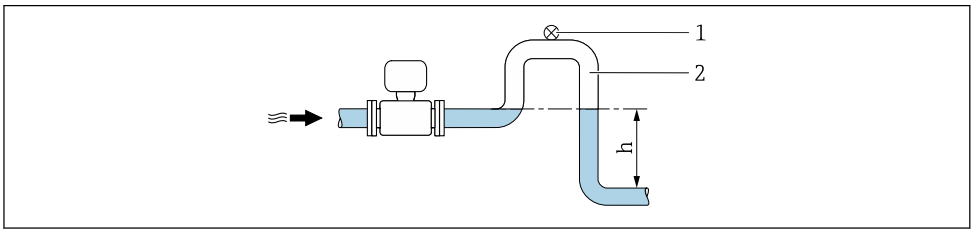
A0042317

Installation near valves

Install the device in the direction of flow upstream from the valve.

A0041091

Installation upstream from a down pipe



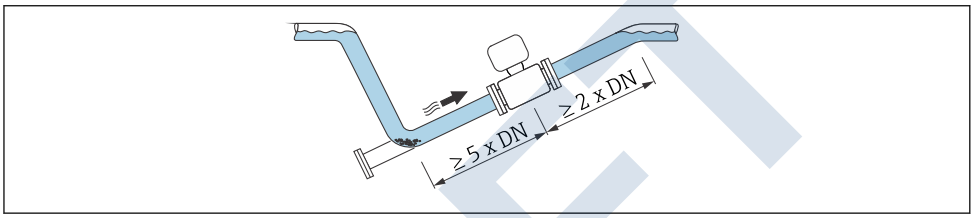
NOTICE

Negative pressure in the measuring pipe can damage the liner!

▶ If installing upstream from down pipes with a length h ≥ 5 m (16.4 ft), install a siphon with a vent valve downstream from the device.

This arrangement prevents the stoppage of liquid flow and the formation of air pockets.

DRAFT



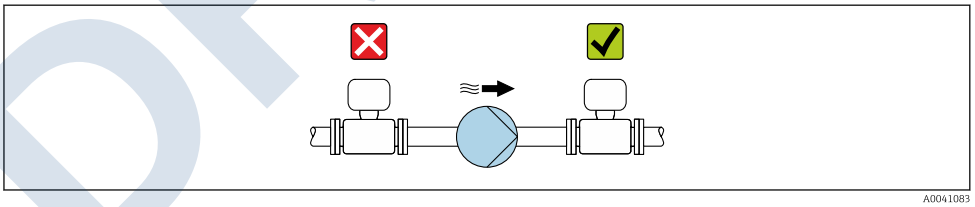
A0028981

1 Vent valve
2 Pipe siphon
h Length of down pipe

Installation with partially filled pipes

- Partially filled pipes with a gradient require a drain-type configuration.
- The installation of a cleaning valve is recommended.

A0041088



No inlet and outlet runs for devices with the order code for "Design": Option C, H, I, J or K.

Installation near pumps

NOTICE

Negative pressure in the measuring pipe can damage the liner!

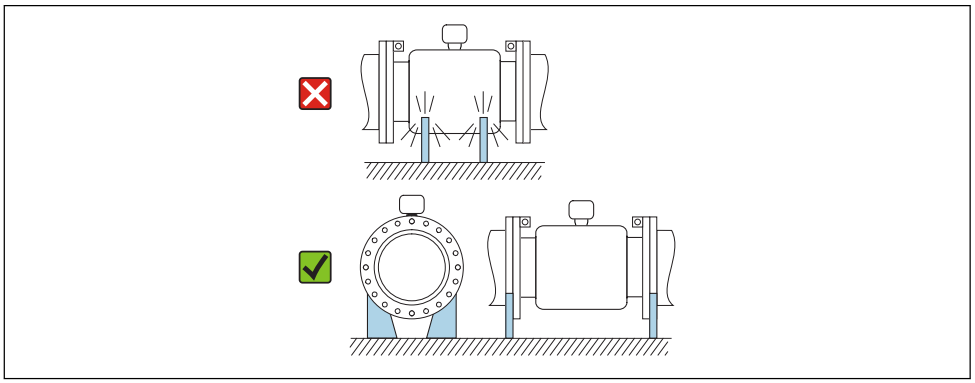
- ▶ In order to maintain the system pressure, install the device in the flow direction downstream from the pump.
- ▶ Install pulsation dampers if reciprocating, diaphragm or peristaltic pumps are used.

A0041083

- Information on the liner's resistance to partial vacuum → 51
- Information on the measuring system's resistance to vibration and shock → 47

Installation of very heavy devices

Support required for nominal diameters of DN ≥ 350 mm (14 in).



NOTICE

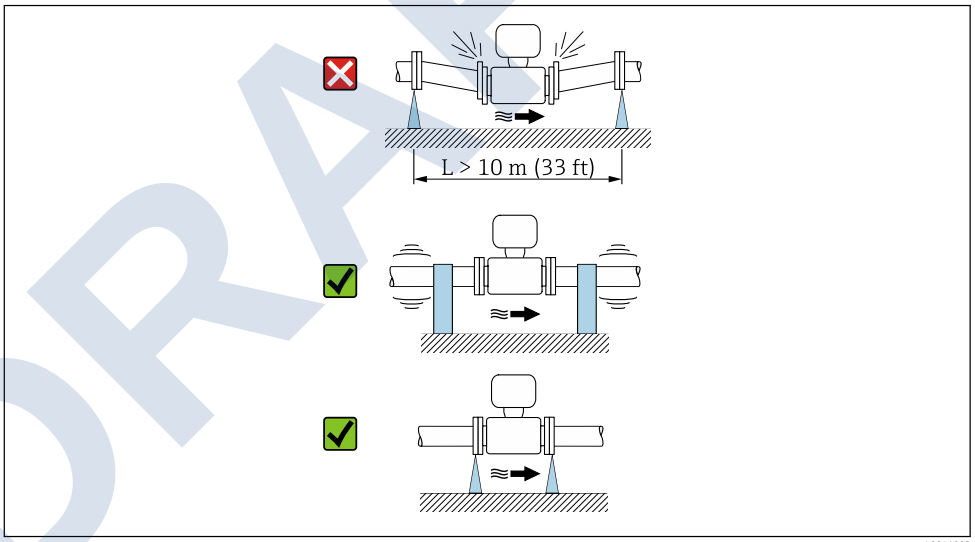
Damage to the device!

If incorrect support is provided, the sensor housing could buckle and the internal magnetic coils could be damaged.

- ▶ Only provide supports at the pipe flanges.

DRAFT

A0041087



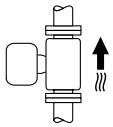
Installation in event of pipe vibrations

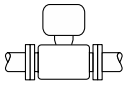
A remote version is recommended in the event of strong pipe vibrations.

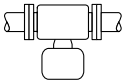
NOTICE

Pipe vibrations can damage the device!

- Do not expose the device to strong vibrations.
- Support the pipe and fix it in place.
- Support the device and fix it in place.
- Mount the sensor and transmitter separately.





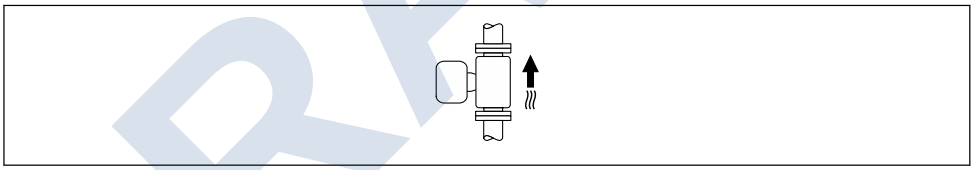


A0041092

Information on the measuring system's resistance to vibration and shock → 47

Orientation

The direction of the arrow on the sensor nameplate helps you to install the sensor according to the flow direction (direction of medium flow through the piping).

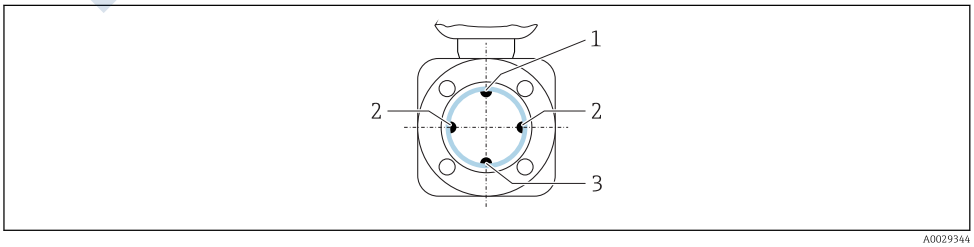


DRAFT

Orientation		Recommendation
Vertical orientation	 A0015591	✓✓
Horizontal orientation, transmitter at top	 A0015589	✓✓ 1)
Horizontal orientation, transmitter at bottom	 A0015590	✓✓ 2) 3) ✗ 4)
Horizontal orientation, transmitter at side	 A0015592	✗

1) Applications with low process temperatures may decrease the ambient temperature. To maintain the minimum ambient temperature for the transmitter, this orientation is recommended.
2) Applications with high process temperatures may increase the ambient temperature. To maintain the maximum ambient temperature for the transmitter, this orientation is recommended.
3) To prevent the electronics module from overheating in the case of a sharp rise in temperature (e.g. CIP or SIP processes), install the device with the transmitter component pointing downwards.
4) With the empty pipe detection function switched on: empty pipe detection only works if the transmitter housing is pointing upwards.

Vertical



Optimum for self-emptying pipe systems and for use in conjunction with empty pipe detection.

A0015591

Horizontal

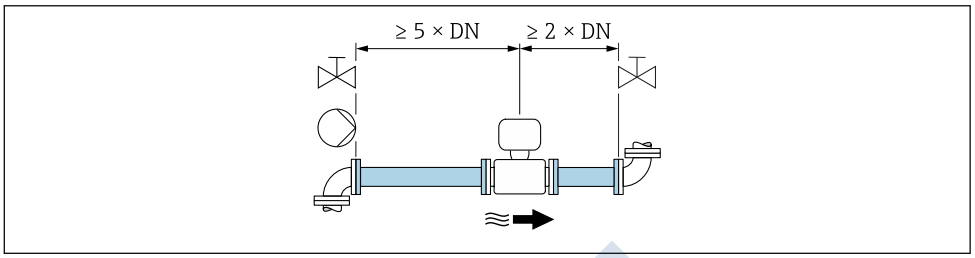
- Ideally, the measuring electrode plane should be horizontal. This prevents brief insulation of the measuring electrodes by entrained air bubbles.
- Empty pipe detection only works if the transmitter housing is pointing upwards as otherwise there is no guarantee that the empty pipe detection function will actually respond to a partially filled or empty measuring tube.

A0029344

1 EPD electrode for empty pipe detection
2 Measuring electrodes for signal detection
3 Reference electrode for potential equalization

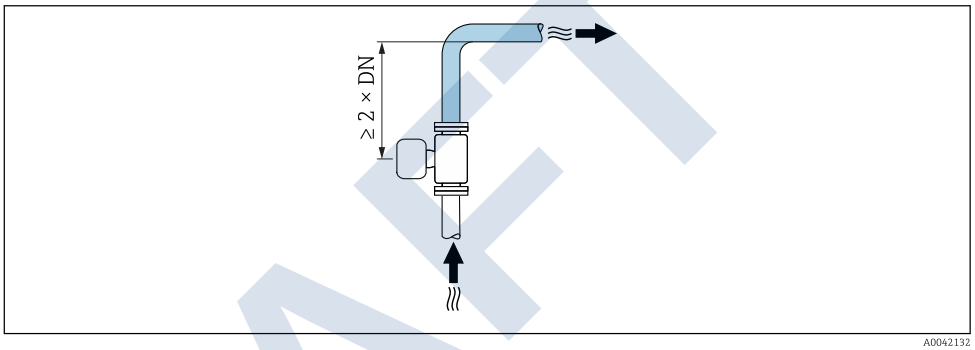
Inlet and outlet runs

Installation with inlet and outlet runs



Installation requires inlet and outlet runs: devices with the order code for "Design", option D, E, F and G.

DRAFT



Installation with elbows, pumps or valves

To avoid a vacuum and to maintain the specified level of accuracy, install the device upstream from assemblies that produce turbulence (e.g. valves, T-sections) and downstream from pumps, wherever possible.

Maintain straight, unimpeded inlet and outlet runs.

A0028997

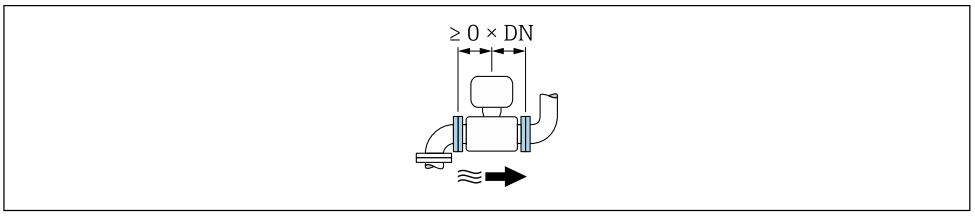
A0042132

Installation without inlet and outlet runs

Depending on the device design and installation location, the inlet and outlet runs can be reduced or omitted entirely.

Maximum measured error
When the device is installed with the inlet and outlet runs described, a maximum measured error of ±0.5 % of the reading ±1 mm/s (0.04 in/s) can be guaranteed.

Devices and possible order options

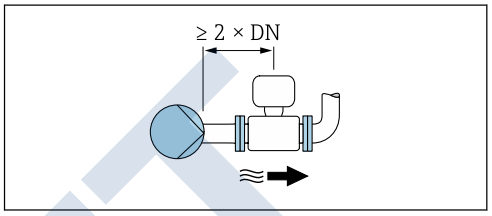


Order code for "Design"		
Option	**Description**	**Design**
C	Fixed flange, constricted measuring tube, 0 x DN inlet/outlet runs	Constricted measuring tube [1]
H	Lap joint flange, 0 x DN inlet/outlet runs	Full Bore [2]
I	Fixed flange, 0 x DN inlet/outlet runs	
J	Fixed flange, short installed length, 0 x DN inlet/ outlet runs	
K	Fixed flange, long installed length, 0 x DN inlet/ outlet runs	

1) "Constricted measuring tube" stands for a reduction of the internal diameter of the measuring tube. The reduced internal diameter causes a higher flow velocity inside the measuring tube.
2) "Full Bore" stands for the full diameter of the measuring tube. There is no pressure loss with a full diameter.

Installation before or after bends

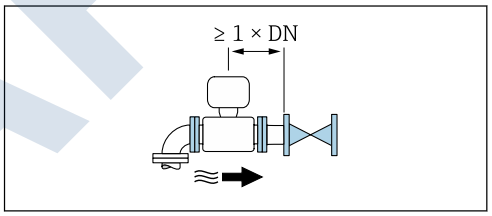
Installation without inlet and outlet runs is possible: devices with the order code for "Design", option C, H, I, J and K.



DRAFT

Installation downstream of pumps

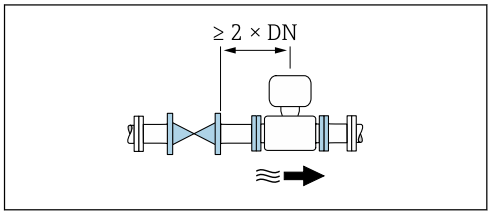
Installation without inlet and outlet runs is possible: devices with the order code for "Design", option C, H and I.



In the case of devices with the order code for "Design", option J and K, an inlet run of only ≥ 2 x DN must be taken into consideration.

Installation upstream of valves

Installation without inlet and outlet runs is possible: devices with the order code for "Design", option C, H and I.



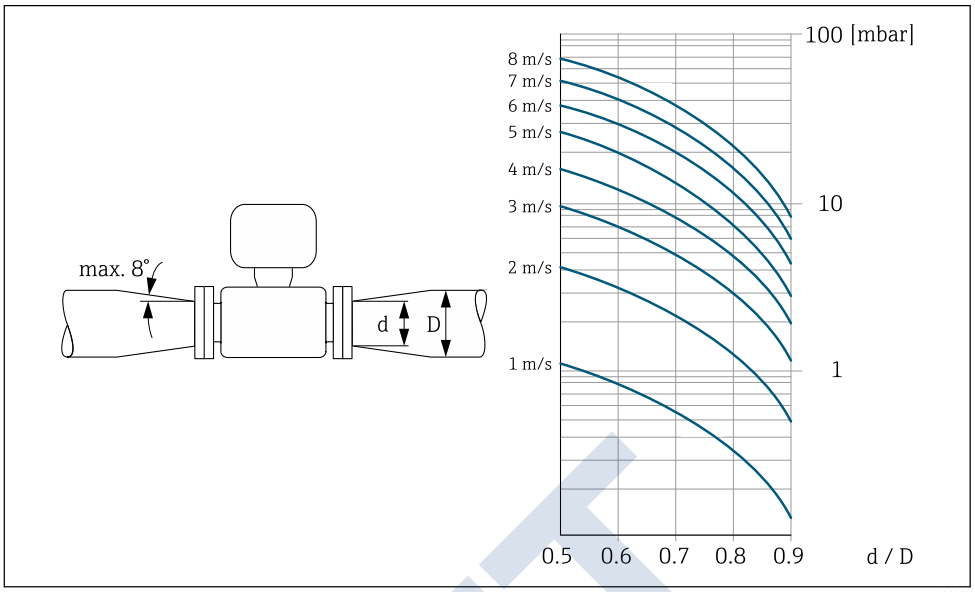
In the case of devices with the order code for "Design", option J and K, an outlet run of only ≥ 1 x DN must be taken into consideration.

Installation downstream of valves

Installation without inlet and outlet runs is possible if the valve is 100% open during operation: devices with the order code for "Design", option C, H and I.

In the case of devices with the order code for "Design", option J and K, an inlet run of only ≥ 2 x DN must be taken into consideration if the valve is 100% open during operation.

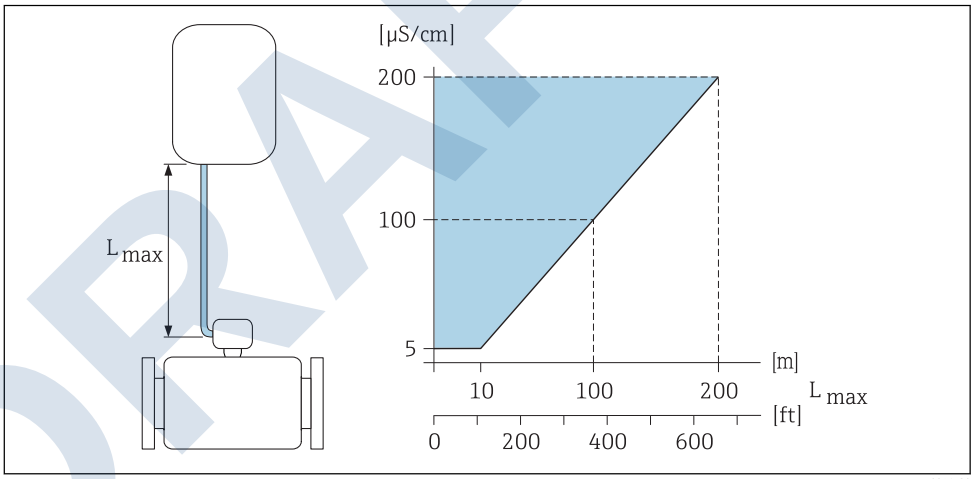
Adapters



Suitable adapters to DIN EN 545 (double-flange reducers) can be used to install the sensor in larger-diameter pipes. The resultant increase in the rate of flow improves measuring accuracy with very slow-moving fluids.

The nomogram shown here can be used to calculate the pressure loss caused by reducers and expanders:

- Calculate the ratio of the diameters d/D.
- From the nomogram read off the pressure loss as a function of flow velocity (downstream from the reduction) and the d/D ratio.



The nomogram only applies to liquids with a viscosity similar to that of water.

DRAFT

Length of connecting cable

To obtain correct measurement results, observe the permitted connecting cable length of L_{max}. This length is determined by the conductivity of the fluid. If measuring liquids in general: 5 µS/cm

17 *Permitted length of connecting cable*

Colored area = permitted range
L_{max} = length of connecting cable in [m] ([ft])
[µS/cm] = fluid conductivity

Special mounting instructions

Display guard

To ensure that the optional display guard can be easily opened, maintain the following minimum head clearance: 350 mm (13.8 in)

Immersion in water

- Only the remote version of the device with IP68 protection, Type 6P is suitable for underwater use: order code for "Sensor option", options CB, CC, CD, CE and CQ.
- Pay attention to regional installation instructions.

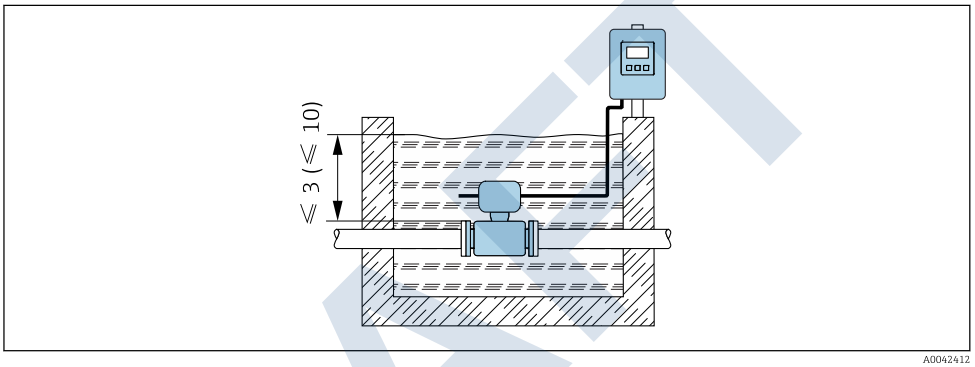
NOTICE

If the maximum water depth and operating duration is exceeded, this can damage the device!

▶ Observe the maximum water depth and operating duration.

DRAFT

Order code for "Sensor option", options CB, CC



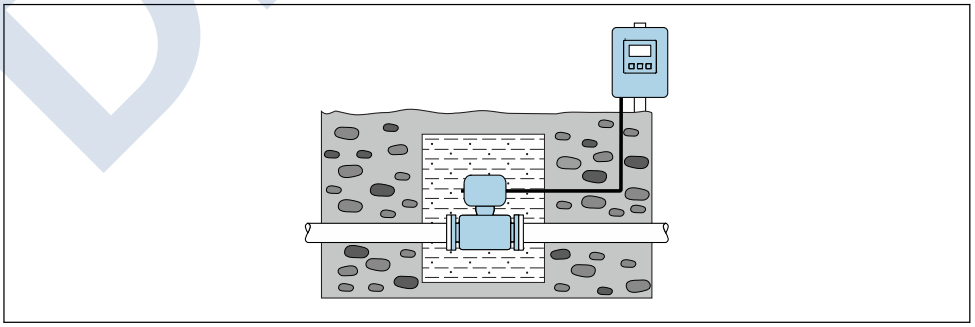
- For the operation of the device under water
- Operating duration at a maximum depth of:
  - 3 m (10 ft): permanent use
  - 10 m (30 ft): maximum 48 hours

Order code for "Sensor option", option CQ "Temporarily water-proof "

- For the temporary operation of the device under non-corrosive water
- Operating duration at a maximum depth of:
  3 m (10 ft): maximum 168 hours

Order code for "Sensor option", options CD, CE

- For the operation of the device under water and in saline water
- Operating duration at a maximum depth of:
  - 3 m (10 ft): permanent use
  - 10 m (30 ft): maximum 48 hours



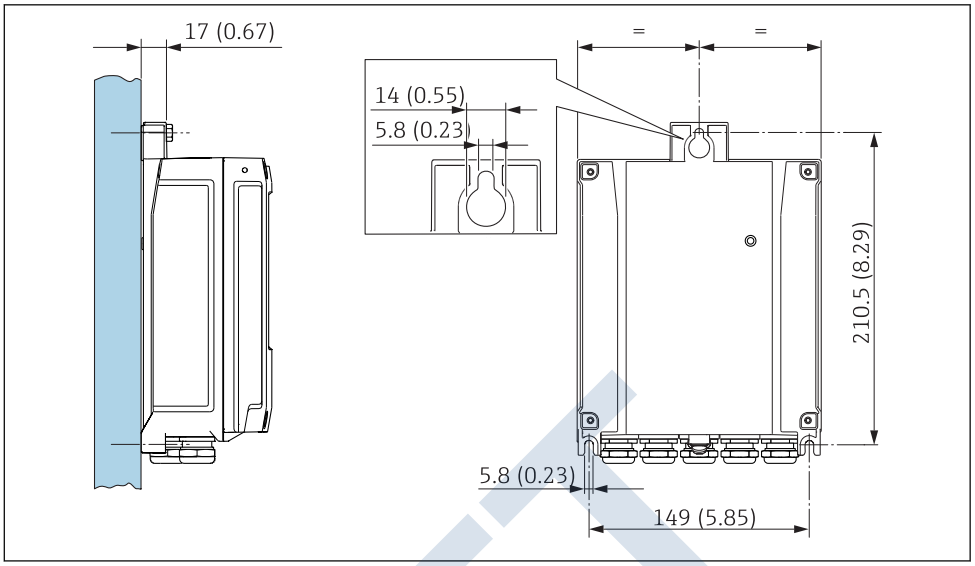
A0042412

Use in buried applications

- Only the remote version of the device with IP68 protection is suitable for use in buried applications: order code for "Sensor option", options CD and CE.
- Pay attention to regional installation instructions.

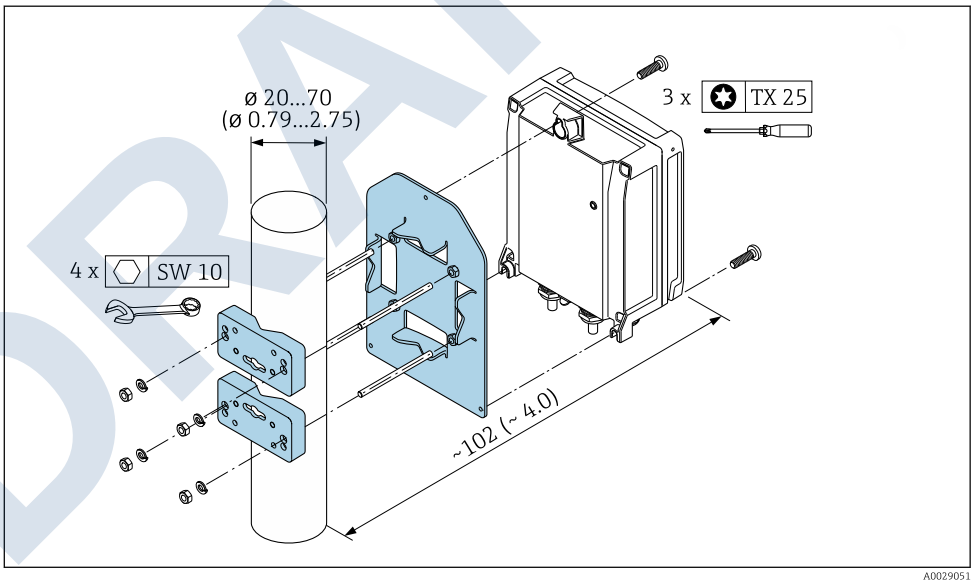
Order code for "Sensor option", options CD, CE

For the use of the device in buried applications.



A0042646

DRAFT



Mounting the transmitter housing

Wall mounting

Post mounting

19 *Engineering unit mm (in)*

Environment

Ambient temperature range

Transmitter	−40 to +60 °C (−40 to +140 °F)
Local display	−20 to +60 °C (−4 to +140 °F), the legibility of the local display may be impaired at temperatures outside the temperature range.

DRAFT

Sensor	▪ Process connection material, carbon steel: −10 to +60 °C (+14 to +140 °F) ▪ Process connection material, stainless steel: −40 to +60 °C (−40 to +140 °F) If both the ambient and the medium temperatures are high, mount the sensor separately from the transmitter.
Liner	Do not exceed or fall below the permitted temperature range of the liner → 48.

If operating outdoors:
- Install the measuring device in a shady location.
- Avoid direct sunlight, particularly in warm climatic regions.
- Avoid direct exposure to weather conditions.
- If the compact version of the device is insulated at low temperatures, the insulation must also include the device neck.
- Protect the display against impact.
- Protect the display from abrasion, e.g. caused by sand in desert areas.

Display guard available as an accessory → 103.

Temperature tables

Observe the interdependencies between the permitted ambient and fluid temperatures when operating the device in hazardous areas.

For detailed information on the temperature tables, see the separate document entitled "Safety Instructions" (XA) for the device.

Storage temperature

The storage temperature corresponds to the operating temperature range of the transmitter and the sensor → 45.

- Protect the measuring device against direct sunlight during storage in order to avoid unacceptably high surface temperatures.
- Select a storage location where moisture cannot collect in the measuring device as fungus or bacteria infestation can damage the liner.
- If protection caps or protective covers are mounted these should never be removed before installing the measuring device.

Atmosphere

If a plastic transmitter housing is permanently exposed to certain steam and air mixtures, this can damage the housing.

In cases of doubt, please contact the Sales Center.

Degree of protection

Transmitter

- IP66/67, type 4X enclosure
- When housing is open: IP20, type 1 enclosure
- Display module: IP20, type 1 enclosure

Sensor

Compact and remote version

IP66/67, type 4X enclosure

Optionally available for compact and remote version:

Order code for "Sensor option", option CA, C3
- IP66/67, type 4X enclosure
- Fully welded, with protective coating as per EN ISO 12944 C5-M
- For the operation of the device in corrosive environments

DRAFT

Optionally available for remote version:

Order code for "Sensor option", option CB, CC
- IP68, type 6P enclosure
- Fully welded, with protective coating as per EN ISO 12944 C5-M/Im1 and EN 60529
- For the operation of the device under water
- Operating duration at a maximum depth of:
  - 3 m (10 ft): permanent use
  - 10 m (30 ft): maximum 48 hours

Order code for "Sensor option", option CQ
- IP68, type 6P, temporarily waterproof
- Sensor with aluminum half-shell housing
- For the temporary operation of the device under non-corrosive water
- Operating duration at a maximum depth of:
  3 m (10 ft): maximum 168 hours

Order code for "Sensor option", option CD, CE
- IP68, type 6P enclosure
- Fully welded, with protective coating as per EN ISO 12944 Im2/Im3 and EN 60529
- For the operation of the device in buried applications
- For the operation of the device under water and in saline water
- Operating duration at a maximum depth of:
  - 3 m (10 ft): permanent use
  - 10 m (30 ft): maximum 48 hours

Vibration- and shock-resistance

Sinusoidal vibration according to IEC 60068-2-6

Compact version; order code for "Housing", option A "Compact, aluminum, coated"
- 2 to 8.4 Hz, 3.5 mm peak
- 8.4 to 2 000 Hz, 1 g peak

Compact version; order code for "Housing", option M "Compact, polycarbonate"
- 2 to 8.4 Hz, 7.5 mm peak
- 8.4 to 2 000 Hz, 2 g peak

Remote version; order code for "Housing", option N "Remote, polycarbonate" and option P "Remote, aluminum, coated"
- 2 to 8.4 Hz, 7.5 mm peak
- 8.4 to 2 000 Hz, 2 g peak

Vibration broad-band random, according to IEC 60068-2-64

Compact version; order code for "Housing", option A "Compact, aluminum, coated"
- 10 to 200 Hz, 0.003 g^2/Hz
- 200 to 2 000 Hz, 0.001 g^2/Hz
- Total: 1.54 g rms

Compact version; order code for "Housing", option M "Compact, polycarbonate"
- 10 to 200 Hz, 0.01 g^2/Hz
- 200 to 2 000 Hz, 0.003 g^2/Hz
- Total: 2.70 g rms

Remote version; order code for "Housing", option N "Remote, polycarbonate" and option P "Remote, aluminum, coated"
- 10 to 200 Hz, 0.01 g^2/Hz
- 200 to 2 000 Hz, 0.003 g^2/Hz
- Total: 2.70 g rms

Shock half-sine, according to IEC 60068-2-27

- Compact version; order code for "Housing", option A "Compact, aluminum, coated"
  6 ms 30 g
- Compact version; order code for "Housing", option M "Compact, polycarbonate"
  6 ms 50 g
- Remote version; order code for "Housing", option N "Remote, polycarbonate" and option P "Remote, aluminum, coated"
  6 ms 50 g

Rough handling shocks according to IEC 60068-2-31

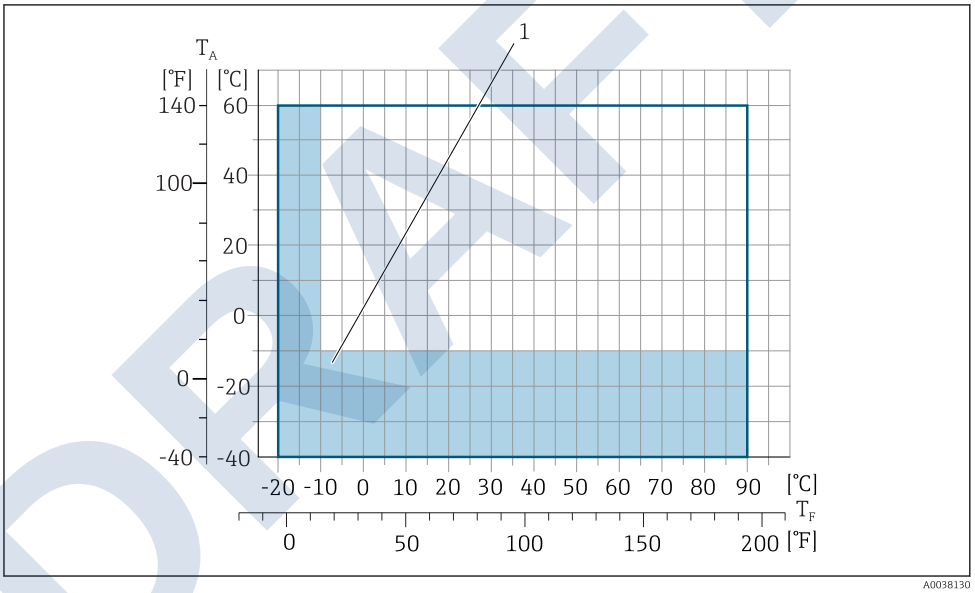
DRAFT

Mechanical load

- Protect the transmitter housing against mechanical effects, such as shock or impact; the use of the remote version is sometimes preferable.
- Never use the transmitter housing as a ladder or climbing aid.

Electromagnetic compatibility (EMC)

- As per IEC/EN 61326 and NAMUR Recommendation 21 (NE 21)
- Complies with emission limits for industry as per EN 55011 (Class A)
- Device version with PROFIBUS DP: Complies with emission limits for industry as per EN 50170 Volume 2, IEC 61784



The following applies for PROFIBUS DP: If baud rates > 1.5 MBaud, an EMC cable entry must be used and the cable shield must continue as far as the terminal wherever possible.

Details are provided in the Declaration of Conformity.

Process

Medium temperature range

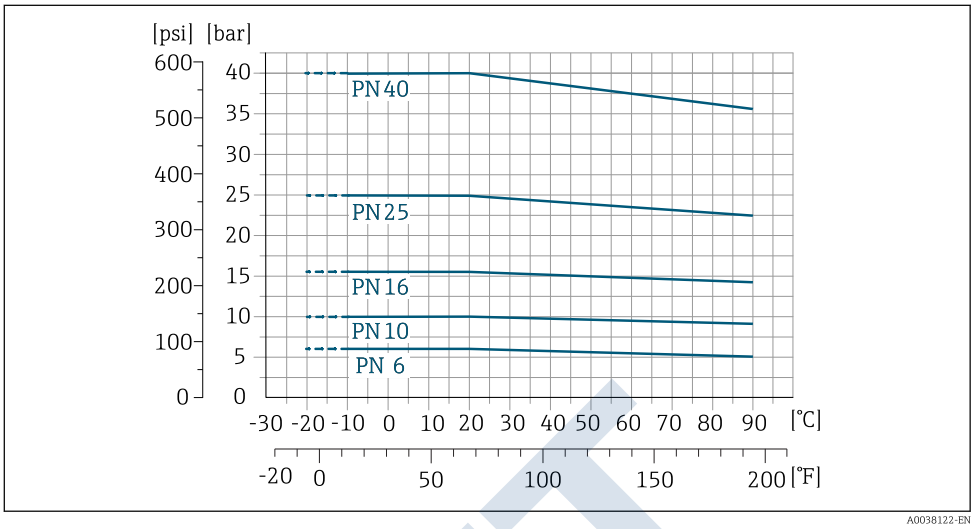
- 0 to +80 °C (+32 to +176 °F) for hard rubber, DN 50 to 3000 (2 to 120")
- −20 to +50 °C (−4 to +122 °F) for polyurethane, DN 25 to 1200 (1 to 48")
- −20 to +90 °C (−4 to +194 °F) for PTFE, DN 25 to 300 (1 to 12")

T_A *Ambient temperature*
T_F *Medium temperature*
1 *Colored area: The ambient temperature range of −10 to −40 °C (+14 to −40 °F) and the medium temperature range of −10 to −20 °C (+14 to −4 °F) only apply for stainless flanges*

The permitted fluid temperature in custody transfer is 0 to +50 °C (+32 to +122 °F).

Conductivity

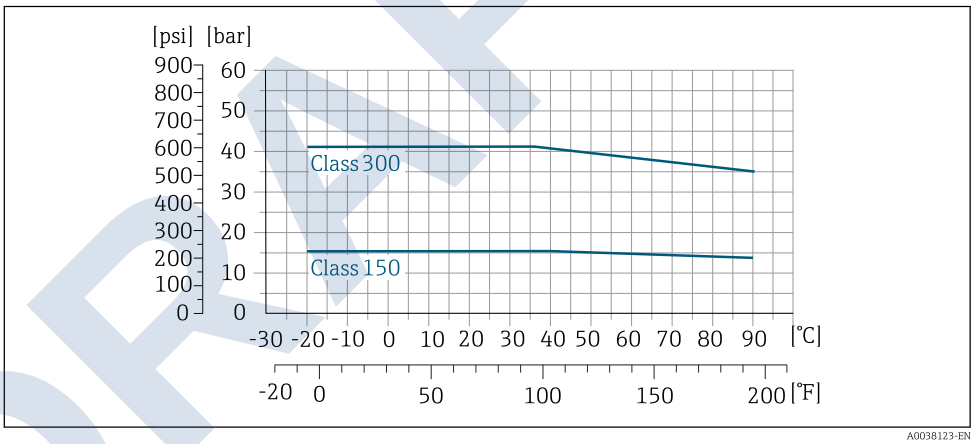
≥5 µS/cm for liquids in general.



- Note that in the case of the remote version, the requisite minimum conductivity additionally depends on the length of the connecting cable → 43.
- Maximum measured error for electrical conductivity → 35.

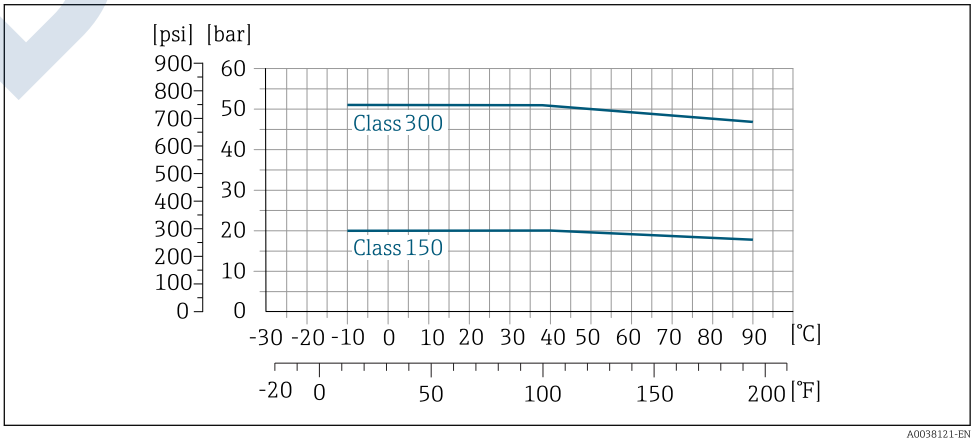
Pressure/temperature ratings

The following pressure/temperature diagrams apply to all pressure-bearing parts of the device and not just the process connection. The diagrams show the maximum permissible medium pressure depending on the specific medium temperature.



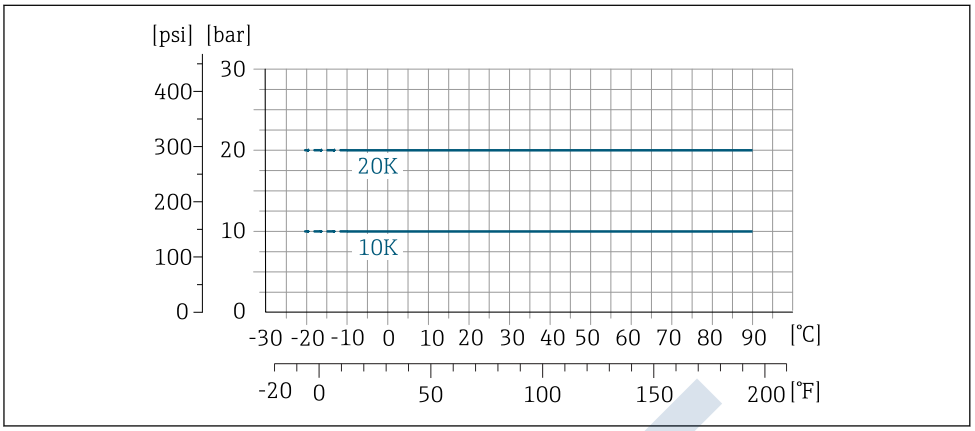
DRAFT

Process connection: fixed flange according to EN 1092-1 (DIN 2501)



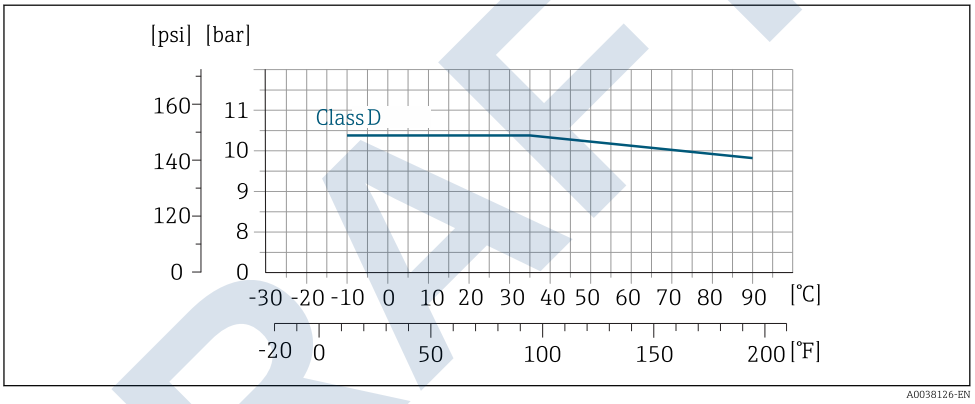
20 *Process connection material: stainless steel (−20 °C (−4 °F)); carbon steel (−10 °C (14 °F))*

Process connection: fixed flange according to ASME B16.5



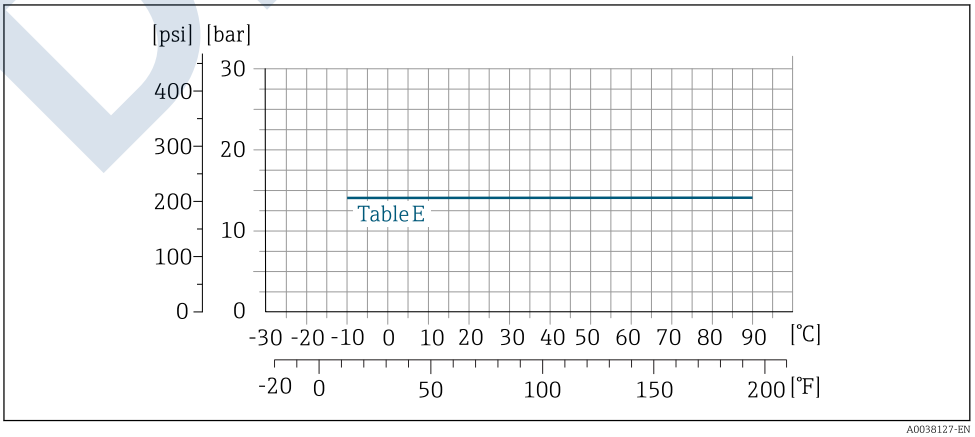
21 *Process connection material: stainless steel*

22 *Process connection material: carbon steel*



DRAFT

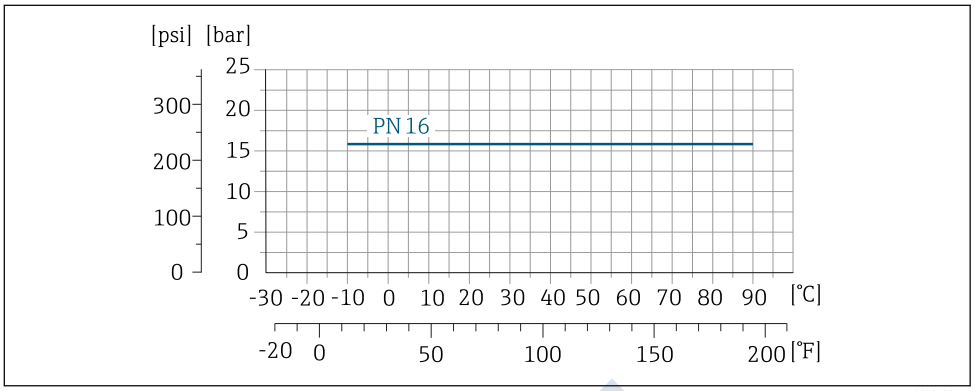
Process connection: fixed flange according to JIS B2220



23 Process connection material: stainless steel (−20 °C (−4 °F)); carbon steel (−10 °C (14 °F))

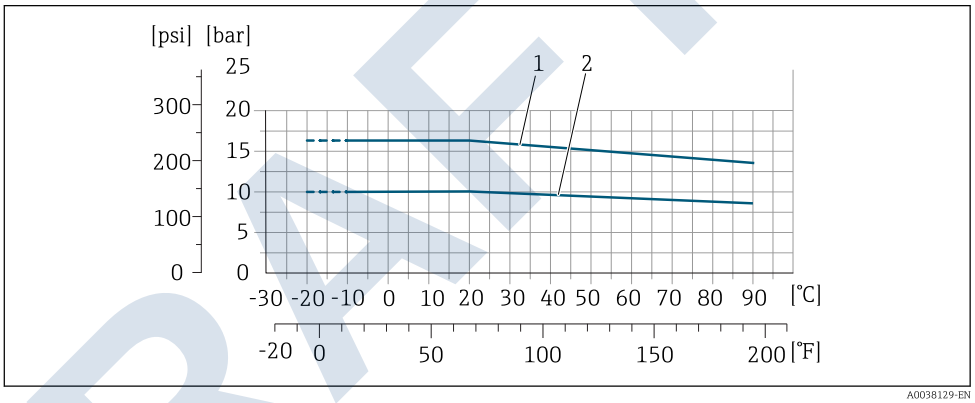
Process connection: fixed flange according to AWWA C207

24 Process connection material: carbon steel



Process connection: fixed flange according to AS 2129

25 Process connection material: carbon steel



DRAFT

Process connection: fixed flange according to AS 4087

26 *Process connection material: carbon steel*

Process connection: lap joint flange/lap joint flange, stamped plate according to EN 1092-1 (DIN 2501) and ASME B16.5; DN 25 to 300 (1 to 12")

27 *Process connection material: stainless steel (−20 °C (−4 °F)); carbon steel (−10 °C (14 °F))*

1 Lap joint flange PN16/ Class150
2 Lap joint flange, stamped plate PN10, lap joint flange PN10

Pressure tightness

Liner: hard rubber

Nominal diameter		Limit values for absolute pressure in [mbar] ([psi]) for medium temperatures:		
[mm]	[in]	+25 °C (+77 °F)	+50 °C (+122 °F)	+80 °C (+176 °F)
50 … 3000	2 … 120	0 (0)	0 (0)	0 (0)

Liner: polyurethane

Nominal diameter		Limit values for absolute pressure in [mbar] ([psi]) for medium temperatures:	
[mm]	[in]	+25 °C (+77 °F)	+50 °C (+122 °F)
25 … 1200	1 … 48	0 (0)	0 (0)

Liner: PTFE

[mm]	[in]	+25 °C (+77 °F)	+90 °C (+194 °F)
25	1	0 (0)	0 (0)
40	2	0 (0)	0 (0)

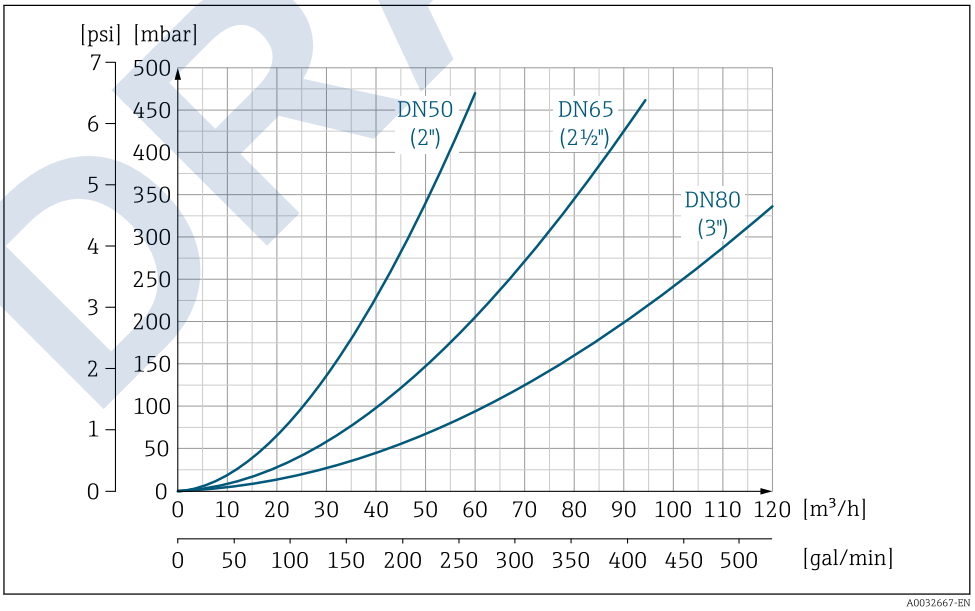
DRAFT

Nominal diameter		Limit values for absolute pressure in [mbar] ([psi]) for medium temperatures:	
[mm]	[in]	+25 °C (+77 °F)	+90 °C (+194 °F)
50	2	0 (0)	0 (0)
65	2 ½	0 (0)	40 (0.58)
80	3	0 (0)	40 (0.58)
100	4	0 (0)	135 (2.0)
125	5	135 (2.0)	240 (3.5)
150	6	135 (2.0)	240 (3.5)
200	8	200 (2.9)	290 (4.2)
250	10	330 (4.8)	400 (5.8)
300	12	400 (5.8)	500 (7.3)

Flow limit

The diameter of the pipe and the flow rate determine the nominal diameter of the sensor. The optimum velocity of flow is between 2 to 3 m/s (6.56 to 9.84 ft/s). Also match the velocity of flow (v) to the physical properties of the medium:

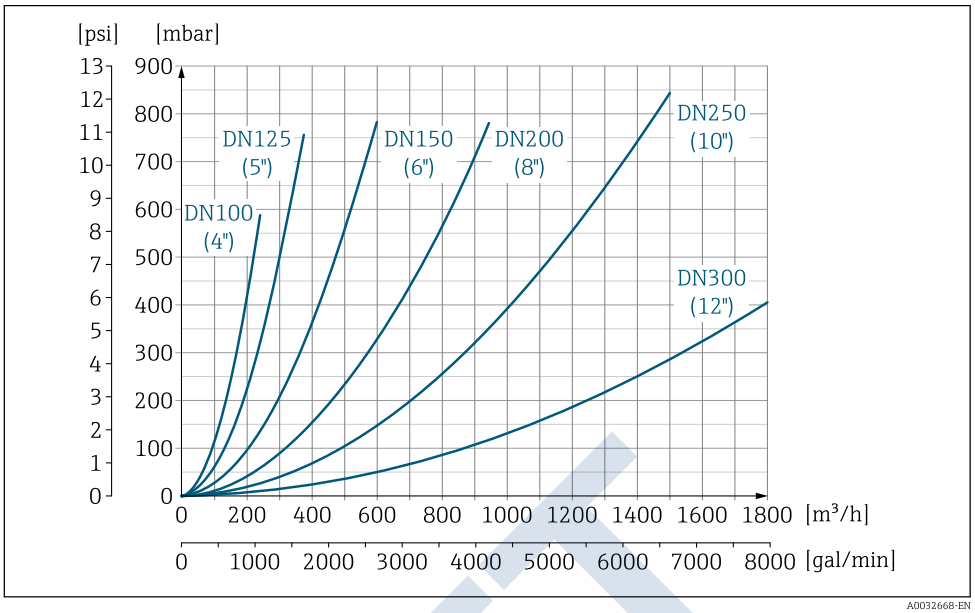
- v < 2 m/s (6.56 ft/s): for abrasive media (e.g. potter's clay, lime milk, ore slurry)
- v > 2 m/s (6.56 ft/s): for media producing buildup (e.g. wastewater sludge)



A necessary increase in the flow velocity can be achieved by reducing the sensor nominal diameter.

For an overview of the full scale values for the measuring range, see the "Measuring range" section → 8

For custody transfer, the applicable approval determines the permitted measuring range.



Pressure loss

- No pressure loss occurs if the sensor is installed in a pipe with the same nominal diameter.
- Pressure losses for configurations incorporating adapters according to DIN EN 545 → 42

28 *Pressure loss DN 50 to 80 (2 to 3") for order code for "Design", option C "Fixed flange, constricted measuring tube", 0 x DN inlet/outlet runs"*

DRAFT

29 *Pressure loss DN 100 to 300 (4 to 12") for order code for "Design", option C "Fixed flange, constricted measuring tube", 0 x DN inlet/outlet runs"*

System pressure

Installation near pumps → 38

Vibrations

Installation in event of pipe vibrations → 39

DRAFT

Custody transfer mode

The measuring device is optionally tested in accordance with OIML R49 and has an EU type-examination certificate according to Measuring Instruments Directive 2014/32/EU for service subject to legal metrological control ("custody transfer") for cold water (Annex III).

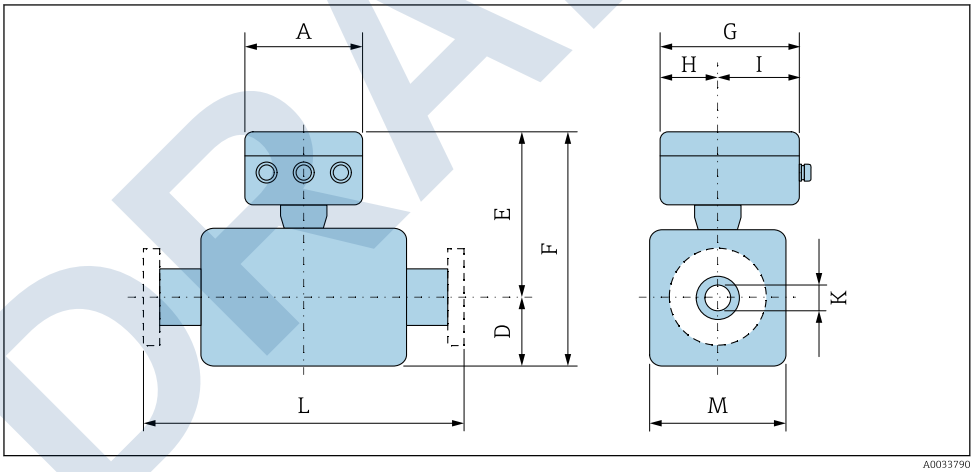
The permitted medium temperature in these applications is 0 to +50 °C (+32 to +122 °F).

The device is used with a legally controlled totalizer on the local display and optionally with legally controlled outputs.

Measuring devices subject to legal metrological control totalize in both directions, i.e. all the outputs consider flow components in the positive (forward) and negative (reverse) flow direction.

Generally a measuring device subject to legal metrological control is secured against tampering by seals on the transmitter or sensor. These seals may normally only be opened by a representative of the competent authority for legal metrology controls.

After putting the device into circulation or after sealing the device, operation is only possible to a limited extent.



Detailed ordering information is available from your local Endress+Hauser sales center for national approvals (outside Europe) as cold water meters based on OIML R49.

1) In the case of DN 25 to 250, ground disks can be used for all the flange standards/pressure ratings which can be supplied in the standard version

DRAFT

Weight

All values (weight exclusive of packaging material) refer to devices with flanges of the standard pressure rating.
The weight may be lower than indicated depending on the pressure rating and design.

Weight in SI units

1) Order code for "Design", option C

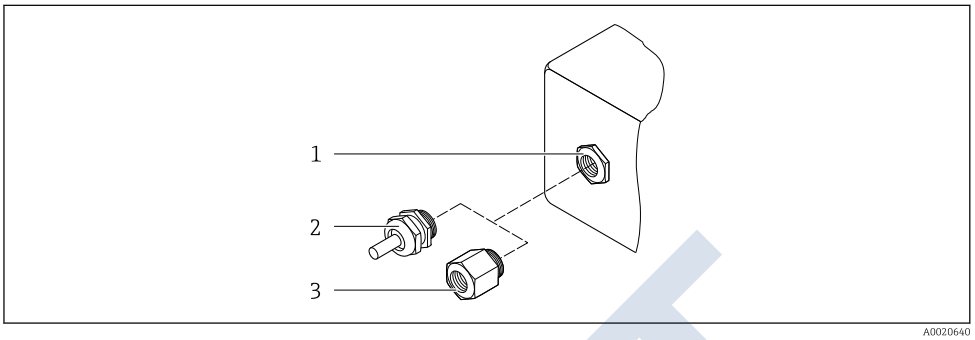
Materials

Transmitter housing

Compact version

- Order code for "Housing", option **A** "Compact, alu, coated": Aluminum, AlSi10Mg, coated
- Order code for "Housing", option **M**: polycarbonate plastic
- Window material:
  - For order code for "Housing", option **A**: glass
  - For order code for "Housing", option **M**: plastic

Remote version (wall-mount housing)



- Order code for "Housing", option **P** "Remote, alu, coated": Aluminum, AlSi10Mg, coated
- Order code for "Housing", option **N**: polycarbonate plastic
- Window material:
  - For order code for "Housing", option **P**: glass
  - For order code for "Housing", option **N**: plastic

DRAFT

Sensor connection housing

- Aluminum, AlSi10Mg, coated
- Polycarbonate plastic (only in conjunction with order code for "Sensor option", options CA, C3, CB, CC, CD, CD)

Cable entries/cable glands

30 *Possible cable entries/cable glands*

1 *Female thread M20 × 1.5*
2 *Cable gland M20 × 1.5*
3 *Adapter for cable entry with female thread G ½" or NPT ½"*

Compact and remote versions and sensor connection housing

Cable entry/cable gland	Material
Cable gland M20 × 1.5	▪ Plastic ▪ Nickel-plated brass
Remote version: cable gland M20 × 1.5 Option of armored connecting cable	▪ Sensor connection housing: Nickel-plated brass ▪ Transmitter wall-mount housing: Plastic
Adapter for cable entry with female thread G ½" or NPT ½"	Nickel-plated brass

Device plug

Electrical connection	Material
Plug M12x1	▪ Socket: Stainless steel, 1.4404 (316L) ▪ Contact housing: Polyamide ▪ Contacts: Gold-plated brass

Remote version connecting cable

UV rays can impair the cable outer sheath. Protect the cable from exposure to sun as much as possible.

Electrode and coil current cable:
- Standard cable: PVC cable with copper shield
- Armored cable: PVC cable with copper shield and additional steel wire braided jacket

Sensor housing

- DN 25 to 300 (1 to 12")
  - Aluminum half-shell housing, aluminum, AlSi10Mg, coated
  - Fully welded carbon steel housing with protective varnish
- DN 350 to 3000 (14 to 120")
  Fully welded carbon steel housing with protective varnish

DRAFT

Measuring tubes

- DN 25 to 600 (1 to 24")
  Stainless steel: 1.4301, 1.4306, 304, 304L
- DN 700 to 3000 (28 to 120")
  Stainless steel: 1.4301, 304

Liner

- DN 25 to 300 (1 to 12"): PTFE
- DN 25 to 1200 (1 to 48"): polyurethane
- DN 50 to 3000 (2 to 120"): hard rubber

Electrodes

- Stainless steel, 1.4435 (316L)
- Alloy C22, 2.4602 (UNS N06022)
- Tantalum

Process connections

For flanges made of carbon steel:
- DN ≤ 300 (12"): with Al/Zn protective coating or protective varnish
- DN ≥ 350 (14"): protective varnish

All carbon steel lap joint flanges are supplied with a hot-dip galvanized finish.

EN 1092-1 (DIN 2501)

Fixed flange
- Carbon steel:
  - DN ≤ 300: S235JRG2, S235JR+N, P245GH, A105, E250C
  - DN 350 to 3000: P245GH, S235JRG2, A105, E250C
- Stainless steel:
  - DN ≤ 300: 1.4404, 1.4571, F316L
  - DN 350 to 600: 1.4571, F316L, 1.4404
  - DN 700 to 1000: 1.4404, F316L

Lap joint flange
- Carbon steel DN ≤ 300: S235JRG2, A105, E250C
- Stainless steel DN ≤ 300: 1.4306,1.4404, 1.4571, F316L

Lap joint flange, stamped plate
- Carbon steel DN ≤ 300: S235JRG2 similar to S235JR+AR or 1.0038
- Stainless steel DN ≤ 300: 1.4301 similar to 304

ASME B16.5

Fixed flange, lap joint flange
- Carbon steel: A105
- Stainless steel: F316L

JIS B2220

- Carbon steel: A105, A350 LF2
- Stainless steel: F316L

AWWA C207

Carbon steel: A105, P265GH, A181 Class 70, E250C, S275JR

AS 2129

Carbon steel: A105, E250C, P235GH, P265GH, S235JRG2

AS 4087

Carbon steel: A105, P265GH, S275JR

Seals

As per DIN EN 1514-1, form IBC

DRAFT

Accessories

Display guard

Stainless steel, 1.4301 (304L)

Ground disks

- Stainless steel, 1.4435 (316L)
- Alloy C22, 2.4602 (UNS N06022)
- Tantalum

Fitted electrodes

Measurement, reference and empty pipe detection electrodes available as standard with:
- 1.4435 (316L)
- Alloy C22, 2.4602 (UNS N06022)
- Tantalum

Process connections

- EN 1092-1 (DIN 2501)
- ASME B16.5
- JIS B2220
- AS 2129 Table E
- AS 4087 PN 16
- AWWA C207 Class D

For information on the different materials used in the process connections → 93

Surface roughness

Electrodes with 1.4435 (316L); Alloy C22, 2.4602 (UNS N06022); tantalum: < 0.5 µm (19.7 µin)

(All data relate to parts in contact with medium)

Human interface

Operating concept

Operator-oriented menu structure for user-specific tasks
- Commissioning
- Operation
- Diagnostics
- Expert level

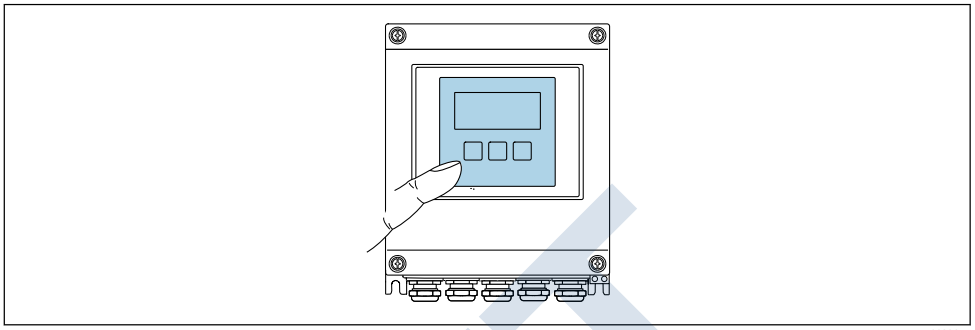
Fast and safe commissioning
- Guided menus ("Make-it-run" wizards) for applications
- Menu guidance with brief descriptions of the individual parameter functions
- Access to the device via Web server
- WLAN access to the device via mobile handheld terminal, tablet or smart phone

Reliable operation
- Operation in local language
- Uniform operating philosophy applied to device and operating tools
- If replacing electronic modules, transfer the device configuration via the integrated memory (HistoROM backup) which contains the process and measuring device data and the event logbook. No need to reconfigure.

Efficient diagnostic behavior increases measurement availability
- Troubleshooting measures can be called up via the device and in the operating tools
- Diverse simulation options, logbook for events that occur and optional line recorder functions

Languages

Can be operated in the following languages:
- Via local operation:
  English, German, French, Spanish, Italian, Dutch, Portuguese, Polish, Russian, Turkish, Chinese, Japanese, Bahasa (Indonesian), Vietnamese, Czech, Swedish
- Via "FieldCare", "DeviceCare" operating tool:
  English, German, French, Spanish, Italian, Chinese, Japanese
- Via Web browser (only available for device versions with HART, PROFIBUS DP and EtherNet/IP):
  English, German, French, Spanish, Italian, Dutch, Portuguese, Polish, Russian, Turkish, Chinese, Japanese, Bahasa (Indonesian), Vietnamese, Czech, Swedish



DRAFT

Local operation

Via display module

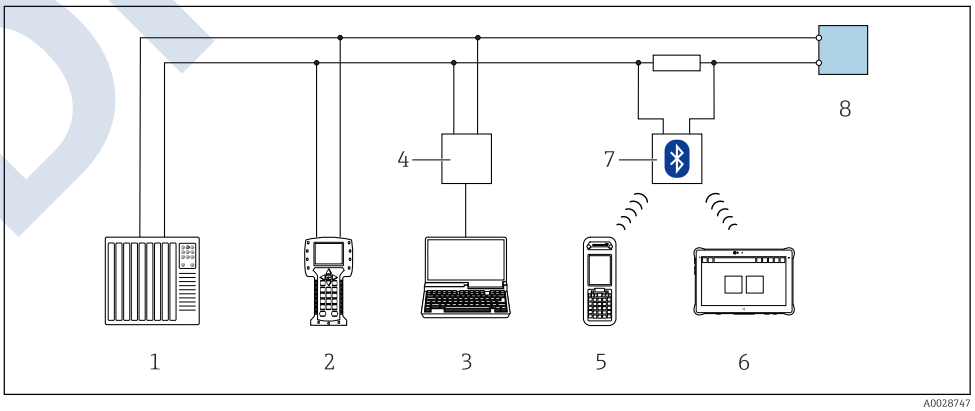
Equipment:
- Standard features 4-line, illuminated, graphic display; touch control
- Order code for "Display; operation", option BA "WLAN" offers standard equipment features in addition to access via Web browser

Information about WLAN interface → 98

31 *Operation with touch control*

Display elements

- 4-line, illuminated, graphic display
- White background lighting; switches to red in event of device errors
- Format for displaying measured variables and status variables can be individually configured
- Permitted ambient temperature for the display: –20 to +60 °C (–4 to +140 °F)
  The readability of the display may be impaired at temperatures outside the temperature range.



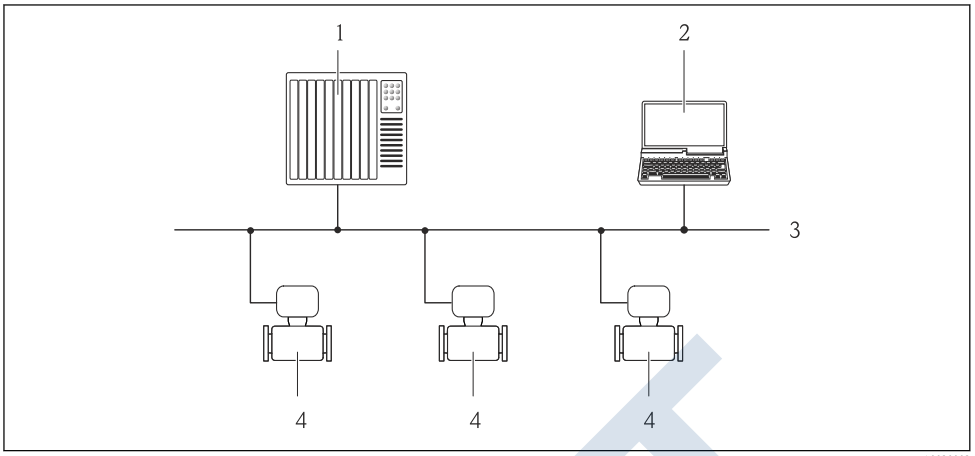
Operating elements

- External operation via touch control (3 optical keys) without opening the housing: ⊞, ⊟, E
- Operating elements also accessible in the various zones of the hazardous area

Remote operation

Via HART protocol

This communication interface is available in device versions with a HART output.



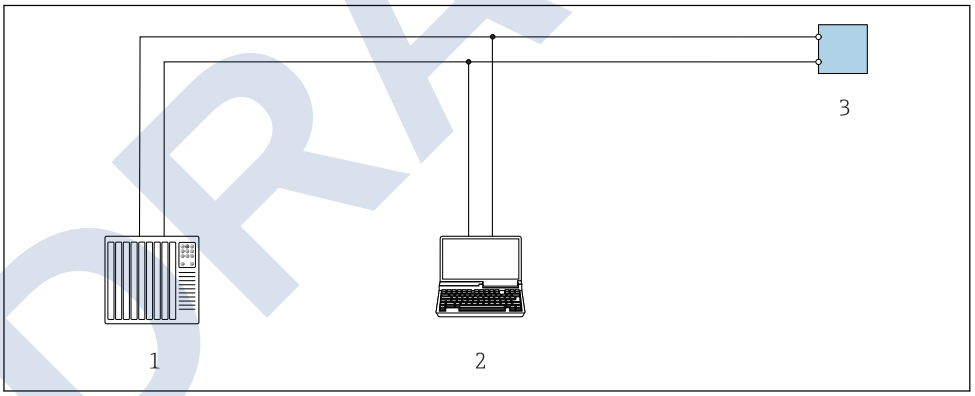
32 *Options for remote operation via HART protocol*

1 *Control system (e.g. PLC)*
2 *Field Communicator 475*
3 *Computer with operating tool (e.g. FieldCare, AMS Device Manager, SIMATIC PDM)*
4 *Commubox FXA195 (USB)*
5 *Field Xpert SFX350 or SFX370*
6 *Field Xpert SMT70*
7 *VIATOR Bluetooth modem with connecting cable*
8 *Transmitter*

DRAFT

Via PROFIBUS DP network

This communication interface is available in device versions with PROFIBUS DP.



33 *Options for remote operation via PROFIBUS DP network*

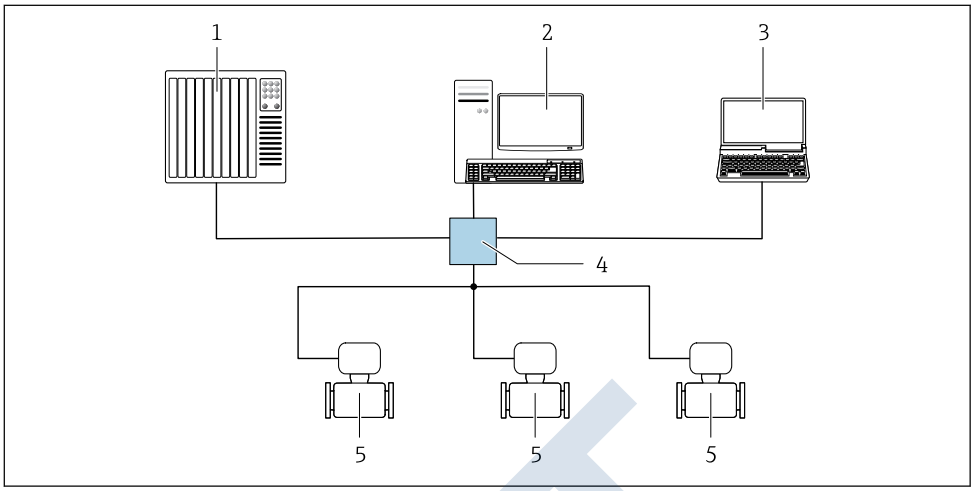
1 *Automation system*
2 *Computer with PROFIBUS network card*
3 *PROFIBUS DP network*
4 *Measuring device*

Via Modbus RS485 protocol

This communication interface is available in device versions with a Modbus-RS485 output.

34 *Options for remote operation via Modbus-RS485 protocol (active)*

1 *Control system (e.g. PLC)*
2 *Computer with Web browser (e.g. Internet Explorer) for accessing the integrated device Web server or with operating tool (e.g. FieldCare, DeviceCare) with COM DTM "CDI Communication TCP/IP" or Modbus DTM*
3 *Transmitter*



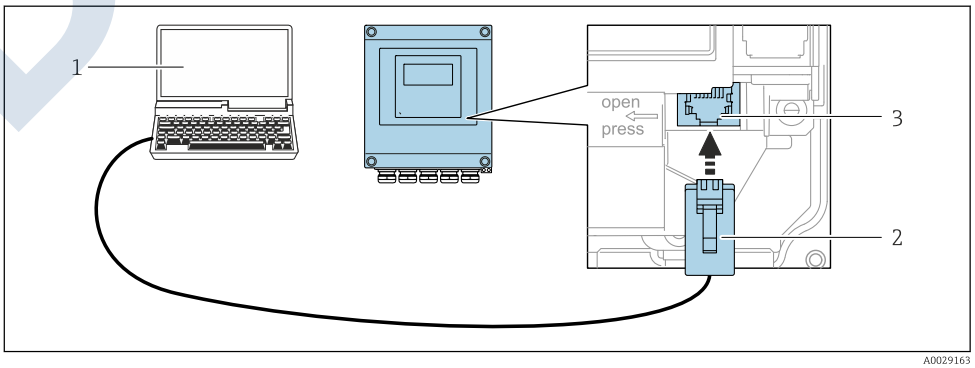
Via EtherNet/IP network

This communication interface is available in device versions with EtherNet/IP.

DRAFT

ITEM F-011D

Star topology



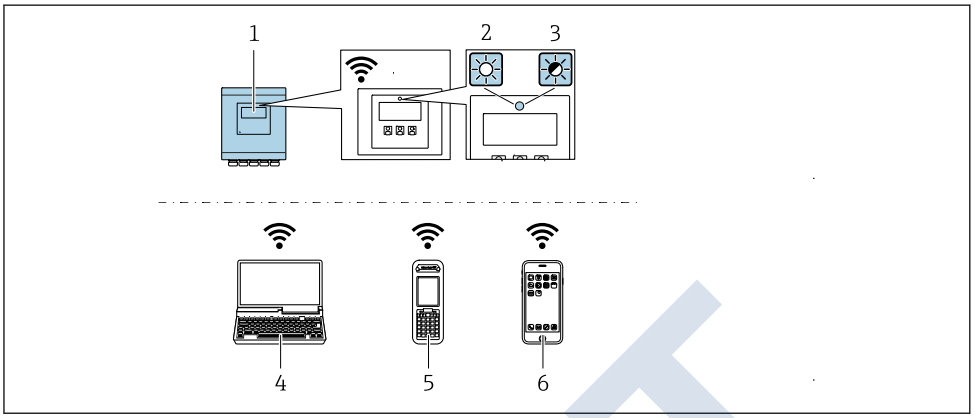
35 *Options for remote operation via EtherNet/IP network: star topology*

1 *Automation system, e.g. "RSLogix" (Rockwell Automation)*
2 *Workstation for measuring device operation: with Custom Add-On Profile for "RSLogix 5000" (Rockwell Automation) or with Electronic Data Sheet (EDS)*
3 *Computer with Web browser (e.g. Internet Explorer) for accessing the integrated device Web server or computer with operating tool (e.g. FieldCare, DeviceCare) with COM DTM "CDI Communication TCP/IP"*
4 *Ethernet switch*
5 *Measuring device*

Service interface

Via service interface (CDI-RJ45)

This communication interface is present in the following device version:
- Order code for "Output", option **H**: 4 to 20 mA HART, pulse/frequency output, switch output
- Order code for "Output", option **I**: 4 to 20 mA HART, 2 x pulse/frequency/switch output, status input
- Order code for "Output", option **J**: 4 to 20 mA HART, certified pulse output, switch output; status input
- Order code for "Output", option **L**: PROFIBUS DP
- Order code for "Output", option **M**: Modbus RS485
- Order code for "Output", option **O**: Modbus RS485, 4 to 20 mA, 2 x pulse/frequency/switch output
- Order code for "Output", option **P**: Modbus RS485, 4 to 20 mA, certified pulse output, pulse/frequency/switch output
- Order code for "Output", option **N**: EtherNet/IP



36 *Connection via service interface (CDI-RJ45)*

1 *Computer with Web browser (e.g. Microsoft Internet Explorer, Microsoft Edge) for accessing the integrated device Web server or with "FieldCare", "DeviceCare" operating tool with COM DTM "CDI Communication TCP/IP" or Modbus DTM*
2 *Standard Ethernet connecting cable with RJ45 plug*
3 *Service interface (CDI-RJ45) of the measuring device with access to the integrated Web server*

DRAFT

Via WLAN interface

The optional WLAN interface is available on the following device version:
Order code for "Display", option BA "WLAN":
4-line, illuminated, graphic display; touch control + WLAN

1 *Transmitter with integrated WLAN antenna*
2 *LED lit constantly: WLAN reception is enabled on measuring device*
3 *LED flashing: WLAN connection established between operating unit and measuring device*
4 *Computer with WLAN interface and Web browser (e.g. Microsoft Internet Explorer, Microsoft Edge) for accessing the integrated device Web server or with operating tool (e.g. FieldCare, DeviceCare)*
5 *Mobile handheld terminal with WLAN interface and Web browser (e.g. Microsoft Internet Explorer, Microsoft Edge) for accessing the integrated device Web server or operating tool (e.g. FieldCare, DeviceCare)*
6 *Smart phone or tablet (e.g. Field Xpert SMT70)*

Function	WLAN: IEEE 802.11 b/g (2.4 GHz) ▪ Access point with DHCP server (default setting) ▪ Network
Encryption	WPA2-PSK AES-128 (in accordance with IEEE 802.11i)
Configurable WLAN channels	1 to 11
Degree of protection	IP67
Available antenna	Internal antenna
Range	Typically 10 m (32 ft)

Supported operating tools

Different operating tools can be used for local or remote access to the measuring device. Depending on the operating tool used, access is possible with different operating units and via a variety of interfaces.

Supported operating tools	Operating unit	Interface	Additional information
Web browser	Notebook, PC or tablet with Web browser	▪ CDI-RJ45 service interface ▪ WLAN interface ▪ Ethernet-based fieldbus (EtherNet/IP)	Special Documentation for the device
DeviceCare SFE100	Notebook, PC or tablet with Microsoft Windows system	▪ CDI-RJ45 service interface ▪ WLAN interface ▪ Fieldbus protocol	→ 🖹 105

DRAFT

Supported operating tools	Operating unit	Interface	Additional information
FieldCare SFE500	Notebook, PC or tablet with Microsoft Windows system	▪ CDI-RJ45 service interface ▪ WLAN interface ▪ Fieldbus protocol	→ 🖹 105
Device Xpert	Field Xpert SFX 100/350/370	Fieldbus protocol HART	Operating Instructions BA01202S Device description files: Use update function of handheld terminal

Other operating tools based on FDT technology with a device driver such as DTM/iDTM or DD/EDD can be used for device operation. These operating tools are available from the individual manufacturers. Integration into the following operating tools, among others, is supported:

- FactoryTalk AssetCentre (FTAC) from Rockwell Automation → www.rockwellautomation.com
- Process Device Manager (PDM) from Siemens → www.siemens.com
- Asset Management Solutions (AMS) from Emerson → www.emersonprocess.com
- FieldCommunicator 375/475 from Emerson → www.emersonprocess.com
- Field Device Manager (FDM) from Honeywell → www.honeywellprocess.com
- FieldMate from Yokogawa → www.yokogawa.com
- PACTWare → www.pactware.com

The related device description files are available: www.endress.com → Downloads

Web server

Thanks to the integrated Web server, the device can be operated and configured via a Web browser and via a service interface (CDI-RJ45) or via a WLAN interface. The structure of the operating menu is the same as for the local display. In addition to the measured values, device status information is also displayed, allowing users to monitor the status of the device. Furthermore the device data can be managed and the network parameters can be configured.

A device that has a WLAN interface (can be ordered optionally) is required for the WLAN connection: order code for "Display", option BA "WLAN". The device acts as an Access Point and enables communication by computer or a mobile handheld terminal.

Supported functions
Data exchange between the operating unit (such as a notebook for example) and the measuring device:

- Upload the configuration from the measuring device (XML format, configuration backup)
- Save the configuration to the measuring device (XML format, restore configuration)
- Export event list (.csv file)
- Export parameter settings (.csv file or PDF file, document the measuring point configuration)
- Export the Heartbeat verification log (PDF file, only available with the "Heartbeat Verification" application package)
- Flash firmware version for device firmware upgrade, for instance
- Download driver for system integration
- Visualize up to 1000 saved measured values (only available with the **Extended HistoROM** application package → 🖹 103)

Web server special documentation → 🖹 106

HistoROM data management

The measuring device features HistoROM data management. HistoROM data management comprises both the storage and import/export of key device and process data, making operation and servicing far more reliable, secure and efficient.

DRAFT

Additional information on the data storage concept

There are different types of data storage units in which device data are stored and used by the device:

	HistoROM backup	T-DAT	S-DAT

Available data	▪ Event logbook such as diagnostic events for example
	▪ Device firmware package
	▪ Driver for system integration for exporting via Web server, e.g:
	  ▪ GSD for PROFIBUS DP
	  ▪ EDS for EtherNet/IP
		▪ Measured value logging ("Extended HistoROM" order option)
		▪ Current parameter data record (used by firmware at run time)
		▪ Peakhold indicator (min/max values)
		▪ Totalizer values
			▪ Sensor data: nominal diameter etc.
			▪ Serial number
			▪ Calibration data
			▪ Device configuration (e.g. SW options, fixed I/O or multi I/O)

Storage location	Fixed on the user interface board in the connection compartment	Attachable to the user interface board in the connection compartment	In the sensor plug in the transmitter neck part

Data backup

Automatic
- The most important device data (sensor and transmitter) are automatically saved in the DAT modules
- If the transmitter or measuring device is replaced: once the T-DAT containing the previous device data has been exchanged, the new measuring device is ready for operation again immediately without any errors
- If the sensor is replaced: once the sensor has been replaced, new sensor data are transferred from the S-DAT in the measuring device and the measuring device is ready for operation again immediately without any errors

Data transmission

Manual
- Transfer of a device configuration to another device using the export function of the specific operating tool, e.g. with FieldCare, DeviceCare or Web server: to duplicate the configuration or to store in an archive (e.g. for backup purposes)
- Transmission of the drivers for system integration via Web server, e.g.:
  - GSD for PROFIBUS DP
  - EDS for EtherNet/IP

Event list

Automatic
- Chronological display of up to 20 event messages in the events list
- If the **Extended HistoROM** application package (order option) is enabled: up to 100 event messages are displayed in the events list along with a time stamp, plain text description and remedial measures
- The events list can be exported and displayed via a variety of interfaces and operating tools e.g. DeviceCare, FieldCare or Web server

Data logging

Manual

If the **Extended HistoROM** application package (order option) is enabled:
- Record up to 1 000 measured values via 1 to 4 channels
- User configurable recording interval
- Record up to 250 measured values via each of the 4 memory channels
- Export the measured value log via a variety of interfaces and operating tools e.g. FieldCare, DeviceCare or web server

Certificates and approvals

Current certificates and approvals for the product are available via the Product Configurator at www.endress.com.

1. Select the product using the filters and search field.
2. Open the product page.

DRAFT

ITEM F-011D

The **Configuration** button opens the Product Configurator.

CE mark

The device meets the legal requirements of the applicable EU Directives. These are listed in the corresponding EU Declaration of Conformity along with the standards applied.

Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.

UKCA marking

The device meets the legal requirements of the applicable UK regulations (Statutory Instruments). These are listed in the UKCA Declaration of Conformity along with the designated standards. By selecting the order option for UKCA marking, Endress+Hauser confirms a successful evaluation and testing of the device by affixing the UKCA mark.

Contact address Endress+Hauser UK:
Endress+Hauser Ltd.
Floats Road
Manchester M23 9NF
United Kingdom
www.uk.endress.com

RCM mark

The measuring system meets the EMC requirements of the "Australian Communications and Media Authority (ACMA)".

Ex approval

The devices are certified for use in hazardous areas and the relevant safety instructions are provided in the separate "Control Drawing" document. Reference is made to this document on the nameplate.

Drinking water approval

- ACS
- KTW/W270
- NSF 61
- WRAS BS 6920

HART certification

HART interface

The measuring device is certified and registered by the FieldComm Group. The measuring system meets all the requirements of the following specifications:
- Certified according to HART 7
- The device can also be operated with certified devices of other manufacturers (interoperability)

PROFIBUS conformity

PROFIBUS interface

The measuring device is registered with PI (PROFIBUS and PROFINET International). It meets all the requirements of PROFIBUS PA Profile 3.02 specifications and can also be operated with certified devices of other manufacturers (interoperability).

Modbus RS485 certification

The measuring device meets all the requirements of the MODBUS/TCP conformity test and has the "MODBUS/TCP Conformance Test Policy, Version 2.0". The measuring device has successfully passed all the test procedures carried out.

EtherNet/IP certification

The measuring device is certified and registered by the ODVA (Open Device Vendor Association). The measuring system meets all the requirements of the following specifications:
- Certified in accordance with the ODVA Conformance Test
- EtherNet/IP Performance Test
- EtherNet/IP PlugFest compliance
- The device can also be operated with certified devices of other manufacturers (interoperability)

Radio approval

The measuring device has radio approval.

For detailed information regarding radio approval, see the Special Documentation → 106

Measuring instrument approval

The measuring device is (optionally) approved as a cold water meter (MI-001) for volume measurement in service subject to legal metrological control in accordance with the European Measuring Instruments Directive 2014/32/EU (MID).

The measuring device is qualified to OIML R49: 2013.

DRAFT

Ordering information

Detailed ordering information is available for your nearest sales organization www.addresses.endress.com or in the Product Configurator under www.endress.com :

1. Click Corporate
2. Select the country
3. Click Products
4. Select the product using the filters and search field
5. Open the product page

The Configuration button to the right of the product image opens the Product Configurator.

Product Configurator - the tool for individual product configuration
- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

Application packages

Many different application packages are available to enhance the functionality of the device. Such packages might be needed to address safety aspects or specific application requirements.

The application packages can be ordered with the device or subsequently from Endress+Hauser. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

Cleaning

Package	Description
Electrode cleaning circuit (ECC)	The electrode cleaning circuit (ECC) function has been developed to have a solution for applications where magnetite (Fe_3O_4) deposits frequently occur (e.g. hot water). Since magnetite is highly conductive this build up leads to measuring errors and ultimately to the loss of signal. The application package is designed to avoid build-up of very conductive matter and thin layers (typical of magnetite).

Diagnostics functions

Package	Description
Extended HistoROM	Comprises extended functions concerning the event log and the activation of the measured value memory. Event log: Memory volume is extended from 20 message entries (standard version) to up to 100 entries. Data logging (line recorder): ▪ Memory capacity for up to 1000 measured values is activated. ▪ 250 measured values can be output via each of the 4 memory channels. The recording interval can be defined and configured by the user. ▪ Measured value logs can be accessed via the local display or operating tool e.g. FieldCare, DeviceCare or Web server.

Heartbeat Technology

Package	Description
Heartbeat Verification +Monitoring	**Heartbeat Verification** Meets the requirement for traceable verification to DIN ISO 9001:2008 Chapter 7.6 a) "Control of monitoring and measuring equipment". ▪ Functional testing in the installed state without interrupting the process. ▪ Traceable verification results on request, including a report. ▪ Simple testing process via local operation or other operating interfaces. ▪ Clear measuring point assessment (pass/fail) with high test coverage within the framework of manufacturer specifications. ▪ Extension of calibration intervals according to operator's risk assessment. **Heartbeat Monitoring** Continuously supplies data, which are characteristic of the measuring principle, to an external condition monitoring system for the purpose of preventive maintenance or process analysis. These data enable the operator to: ▪ Draw conclusions - using these data and other information - about the impact process influences (such as corrosion, abrasion, buildup etc.) have on the measuring performance over time. ▪ Schedule servicing in time. ▪ Monitor the process or product quality, e.g. gas pockets.

Accessories

Various accessories, which can be ordered with the device or subsequently from Endress+Hauser, are available for the device. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

Device-specific accessories

For the transmitter

Accessories	Description
Promag 400 transmitter	Transmitter for replacement or storage. Use the order code to define the following specifications: ▪ Approvals ▪ Output/input ▪ Display/operation ▪ Housing ▪ Software For details, see Installation Instructions EA00104D

DRAFT

Display guard	Is used to protect the display against impact or scoring, for example from sand in desert areas. Order number: 71228792 Installation Instructions EA01093D
Connecting cable for remote version	Coil current and electrode cables, various lengths, reinforced cables available on request.
Ground cable	Set, consisting of two ground cables for potential equalization.
Post mounting kit	Post mounting kit for transmitter.
Compact → Remote conversion kit	For converting a compact device version to a remote device version.
Conversion kit Promag 50/53 → Promag 400	For converting a Promag with transmitter 50/53 to a Promag 400.

For the sensor

Accessory	Description
Ground disks	Are used to ground the medium in lined measuring tubes to ensure proper measurement. For details, see Installation Instructions EA00070D

Communication-specific accessories

Accessories	Description
Commubox FXA195 HART	For intrinsically safe HART communication with FieldCare via the USB interface. Technical Information TI00404F
Commubox FXA291	Connects Endress+Hauser field devices with a CDI interface (= Endress+Hauser Common Data Interface) and the USB port of a computer or laptop. Technical Information TI405C/07
HART Loop Converter HMX50	Is used to evaluate and convert dynamic HART process variables to analog current signals or limit values. ▪ Technical Information TI00429F ▪ Operating Instructions BA00371F
Wireless HART adapter SWA70	Is used for the wireless connection of field devices. The WirelessHART adapter can be easily integrated into field devices and existing infrastructures, offers data protection and transmission safety and can be operated in parallel with other wireless networks with minimum cabling complexity. Operating Instructions BA00061S
Fieldgate FXA42	Is used to transmit the measured values of connected 4 to 20 mA analog measuring devices, as well as digital measuring devices ▪ Technical Information TI01297S ▪ Operating Instructions BA01778S ▪ Product page: www.endress.com/fxa42

DRAFT

Field Xpert SMT70	The Field Xpert SMT70 tablet PC for device configuration enables mobile plant asset management in hazardous and non-hazardous areas. It is suitable for commissioning and maintenance staff to manage field instruments with a digital communication interface and to record progress. This tablet PC is designed as an all-in-one solution with a preinstalled driver library and is an easy-to-use, touch-sensitive tool which can be used to manage field instruments throughout their entire life cycle. ▪ Technical Information TI01342S ▪ Operating Instructions BA01709S ▪ Product page: www.endress.com/smt70
Field Xpert SMT77	The Field Xpert SMT77 tablet PC for device configuration enables mobile plant asset management in areas categorized as Ex Zone 1. ▪ Technical Information TI01418S ▪ Operating Instructions BA01923S ▪ Product page: www.endress.com/smt77

Service-specific accessories

Accessory	Description
Applicator	Software for selecting and sizing Endress+Hauser measuring devices: ▪ Choice of measuring devices with industrial requirements ▪ Calculation of all the necessary data for identifying the optimum flowmeter: e.g. nominal diameter, pressure loss, flow velocity and accuracy. ▪ Graphic illustration of the calculation results ▪ Determination of the partial order code, administration, documentation and access to all project-related data and parameters over the entire life cycle of a project. Applicator is available: ▪ Via the Internet: https://portal.endress.com/webapp/applicator ▪ As a downloadable DVD for local PC installation.
W@M	W@M Life Cycle Management Improved productivity with information at your fingertips. Data relevant to a plant and its components is generated from the first stages of planning and during the asset's complete life cycle. W@M Life Cycle Management is an open and flexible information platform with online and on-site tools. Instant access for your staff to current, in-depth data shortens your plant's engineering time, speeds up procurement processes and increases plant uptime. Combined with the right services, W@M Life Cycle Management boosts productivity in every phase. For more information, see: www.endress.com/lifecyclemanagement
FieldCare	FDT-based plant asset management tool from Endress+Hauser. It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition. Operating Instructions BA00027S and BA00059S
DeviceCare	Tool for connecting and configuring Endress+Hauser field devices. Innovation brochure IN01047S
Commubox FXA291	Connects Endress+Hauser field devices with a CDI interface (= Endress +Hauser Common Data Interface) and the USB port of a computer or laptop. Technical Information TI00405C

System components

Accessories	Description
Memograph M graphic data manager	The Memograph M graphic data manager provides information on all the relevant measured variables. Measured values are recorded correctly, limit values are monitored and measuring points analyzed. The data are stored in the 256 MB internal memory and also on a SD card or USB stick. ▪ Technical Information TI00133R ▪ Operating Instructions BA00247R

Series 3E fittings are cast metal, pressure-tight assemblies capable of handling 1-7 probes. Attachment to vessels is accomplished with external pipe threading. 3E Fittings require the use of 3R rigid or 3W wire suspended electrodes.	Series 3N fittings accommodate 1-3 probes operating at atmospheric pressure. The assembly mounts on a flat surface atop open tanks or closed vessels. 3N Fittings require the use of 3R rigid or 3W wire suspended electrodes.	Series 3B fittings are compact pressure tight assemblies that hold a single electrode probe for use in water and chemicals. These fittings incorporate a 1/4-20 female thread that must be combined with a Series 3R (rigid rod electrode) or Series 3W/3Y (wire suspended electrode) to make a complete assembly.

Gems Sensors & Controls

Series 16 Modules
Controls – Solid State Plug-In Modules

- Compact Size
- Modular Plug-in Design
- Various Time Delays
- Low Voltage Sensor
- Solid State Reliability
- LED Monitoring
- U.L. "Motor Control"

Series 16M/16HM

Series 16DM/16VM

Series 16M – General Purpose Control

• New Microprocessor Design

Designed for either differential or single-level service. U.L. "Motor Controller" listing, 8 pin socket with screw-type connections make the unit easy to install and service. Sensitivity of up to 1 million ohm/cm.

Series 16HM – High Sensitivity Control

Series 16HM is similar to Series 16M but provides higher sensitivity up to 5.5 million ohm/cm. Probe voltage is 12 VDC for applications with low conductive media.

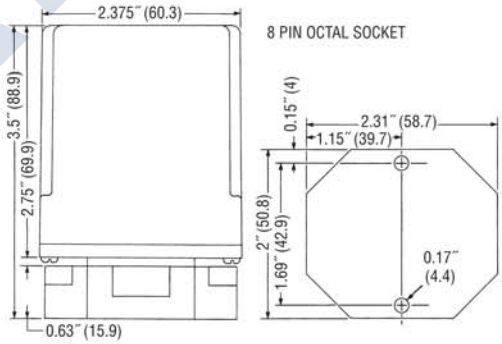
Series 16DM – DPDT Load Contact

Similar to Series 16M but with DPDT load contacts. Eliminates the need for slave relays. 11 pin octal plugs. Requires little panel space. General purpose single-level or differential applications. U.L. listed.

Series 16VM – Field Selectable Sensitivity

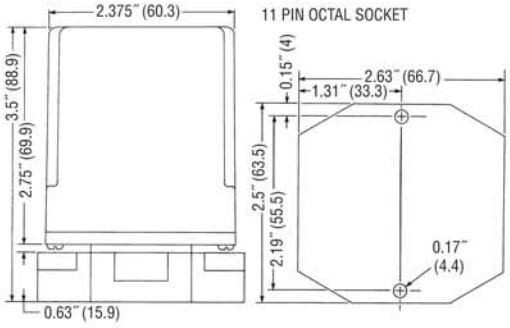
Similar to Series 16M but with the added flexibility of field adjustable sensitivity, made possible through external setpoint resistors. Uses 11pin octal socket. U.L. listed.

Specifications



Contact Design	
Series 16M & 16HM	1 N.O. & 1 N.C. (1 form C)
Series 16DM	2 N.O. & 2 N.C. (2 form C)
Series 16VM	1 N.O. & 1 N.C. (1 form C)
Contact Rating (120. 240 VAC)	
Series 16M & 16HM	10 amp Resistive 1/3 hp
Series 16DM	5 amp Resistive 1/10 hp
Series 16VM	10 amp Resistive 1/3 hp
Mode of Operation	Direct/Inverse, factory set
Sensitivity	
Series 16M	0-1M ohm, factory set
Series 16HM	0-5.5M ohm, factory set
Series 16DM	0-1M ohm, factory set
Series 16VM	0-1M ohm, field adjustable
Primary Voltage	24 VAC, 120 VAC, 240 VAC (+10%/-15%) 208/240: 187 V min. to 255 V max. VAC 50/60 Hz
Secondary Voltage	
Series 16M	12 VAC, 1.5 mA
Series 16HM	12 VDC
Series 16DM & 16VM	12 VAC, 1.5 mA
Temperature	-40°F to +150°F (-40°C to +65°C)
Approvals	U.L. 508 File #E44426
Terminal Style	Screw connector
Options	Time Delays

Applications

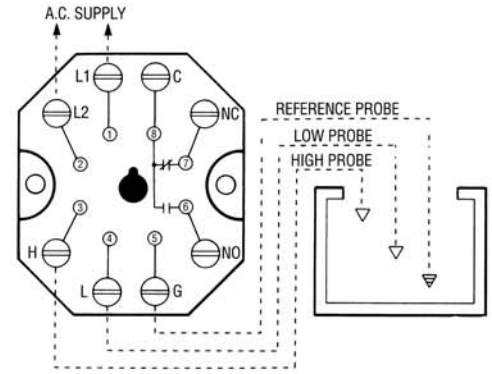


- Single-Level Service
- Point Level
- Valve Control
- Differential Service
- Alarms
- Pump Control

Dimensions

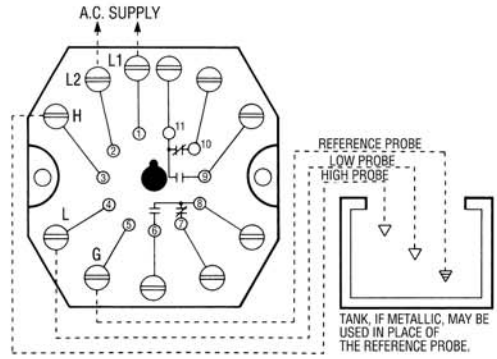
Series 16M & 16HM

Series 16DM & 16VM



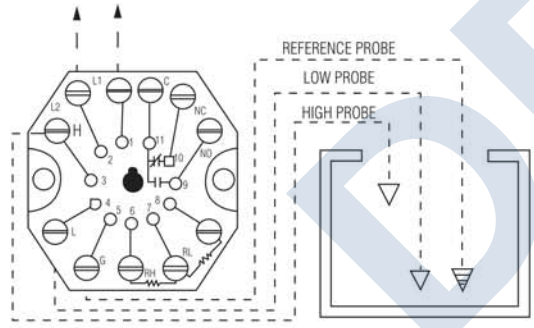
Note: Controls also available with DIN mount socket.

DRAFT

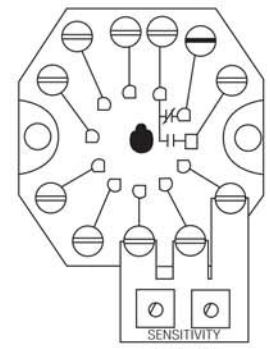


Wiring

Series 16M & 16HM



Note: For single level service, use "H" and "G" connections.



Series 16DM

Series 16VM

Variable Sensitivity Option

Part number 16Z1VG Potentiometer Board available for 16VM only. Consult factory.

How to Order

C – 26K	**G** – 1M	**M** – 26K	**S** – 1M
D – 50K		**N** – 50K	

3. Supply Voltage
   1 120 VAC; **2** 240 VAC; **3** 24 VAC; **8** 208/240 VAC
4. Socket Style*
   A 8 Pin Octal **M** Module Only
   B 8 Pin DIN
5. Enclosure
   0 None; **1** NEMA 1; **4** NEMA 4
6. Time Delay (increasing level) Option
   00-90 seconds
   Blank 0 seconds
7. Time Delay (decreasing level) Option
   00-90 seconds
   Blank 0 seconds
8. Time Out Option
   See page E-11, Chart A

*See page E-11 for descriptions.

16 HM, 16DM or 16VM Series

16HM **X** **X** **X** **X** **XX** **XX**

1. Series
   16HM High Sensitivity;
   16DM DPDT Load Contact;
   16VM Field Selectable Sensitivity[1]
2. Mode of Operation[2]

Direct		Inverse	
A – 4.7K[4]	**F** – 470K[4]	**K** – 4.7K[4]	**R** – 470K[4]
B – 10K[4]	**G** – 1M[4]	**L** – 10K[4]	**S** – 1M[4]
C – 26K[4]	**H** – 3M[3]	**M** – 26K[4]	**T** – 3M[3]
D – 50K[4]	**J** – 5.5M[3]	**N** – 50K[4]	**W** – 5.5M[3]
E – 100K[4]	**Y** – 0-700K[5, 7]	**P** – 100K[4]	**Z** – 0-700K[5, 7]

3. Supply Voltage
   1 120 VAC; **2** 240 VAC; **3** 24 VAC; **8** 208/240 VAC
4. Socket Style
   A 8 Pin Octal (16M & 16HM), 11 Pin Octal (16DM & 16VM);
   B DIN Mount; **M** None, Module Only[6]
5. Enclosure
   0 None; **1** NEMA 1; **4** NEMA 4
6. Time Delay (increasing level) Option
   01-20 seconds; **0V** variable (16VM only)
7. Time Delay (decreasing level) Option
   01-20 seconds; **0V** variable (16VM only)

Notes:
1. 16VM select modes **A**, **K**, **Y** or **Z** only.
2. 16HM & 16DM only. Series 16VM includes full set of the resistors listed above. Specify a sensitivity to determine mode of operation.
3. 16VM only.
4. All Series except 16HM.
5. 16VM only.
6. Socket style M requires enclosure **0** – None.
7. Mounting style A (11 pin octal only)

Socket Details and Option Availability are located on web site.

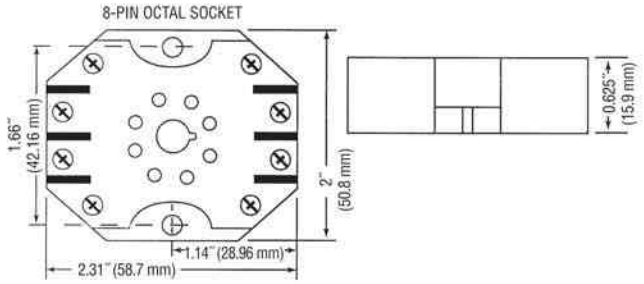
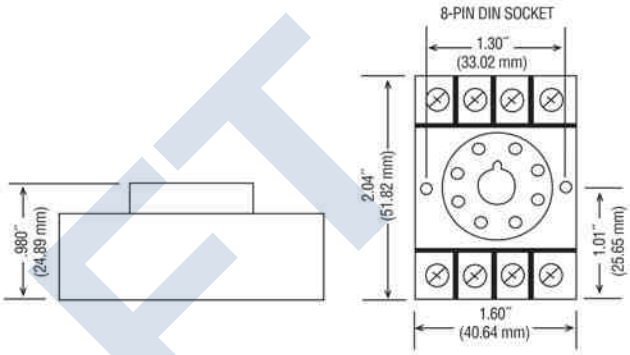
Gems Sensors & Controls

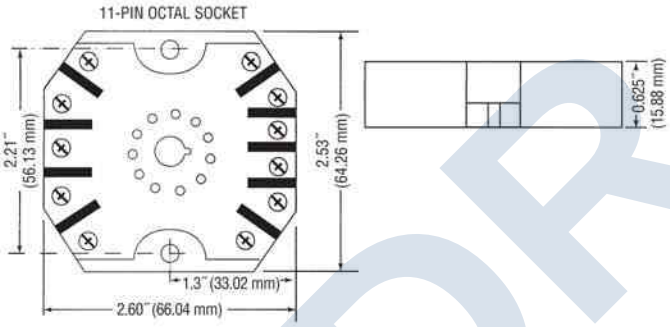


Sockets and Standoffs – 16, 26 and DF Series Only

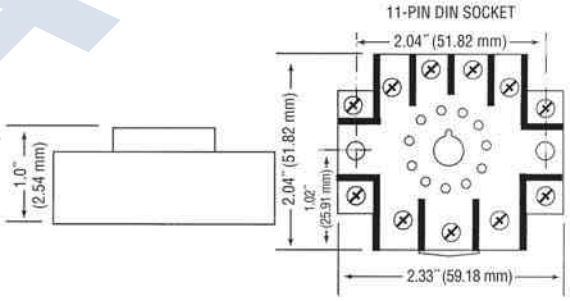


Sockets

Warrick provides four different types of sockets for use with plug-in control modules.

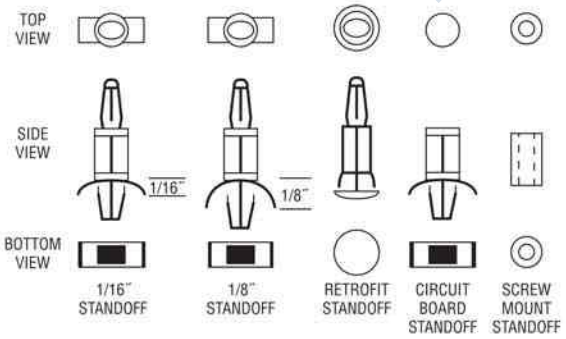


8-PIN OCTAL SOCKET



8-PIN DIN SOCKET

11-PIN OCTAL SOCKET



11-PIN DIN SOCKET

Standoffs

Warrick provides four different types of standoffs designed to connect circuit boards to panels.

DRAFT

Optional Character Reference – 16, 26 and DF Series Only

Manual Reset

Available on Series 26, 26M and DF controls

(Normally closed pushbutton across reset terminals. Pushbutton ordered separately): Manual reset only applies to the function associated with terminal LLCO. When the liquid rises to the electrode on terminal LLCO, the control will remain de-energized (load contacts in original state) until the pushbutton is depressed. The control will then energize, (LED will be lit) changing the state of the contacts. The control remains energized until the liquid level recedes below electrode on terminal LLCO. The control then de-energizes, (LED will go off) returning load contacts to their original state. Unless otherwise specified, there is a three second time delay on decreasing level. Liquid must be below probe on terminal LLCO for full three seconds before control de-energizes.

Manual Reset with Power Outage Feature

Available on Series 26, 26M, and DF controls

Reset (Normally closed pushbutton across reset terminals. Pushbutton ordered separately) Control will ignore power loss to control. With liquid in contact with electrode on terminal LLCO, a power outage will cause the control to de-energize, but will automatically energize upon return of power. However, loss of liquid will cause control to de-energize and remain so until liquid again rises to electrode and pushbutton is depressed.

Time Delays Associated with Terminals H and L

Available on Series 16, 16M, and DF controls

With time delay on increasing level, the liquid must be in contact with the high electrode for the full duration of the time delay before control will operate. With delay on decreasing level, the liquid must be below the low electrode for the full duration of the time delay before control will operate. In single level service, terminals 3 and 4 must be jumpered together to achieve time delays on both increasing and decreasing levels or just decreasing level.

Time Delays Associated with Terminal LLCO

Available on Series 26, 26M, and DF controls

3 Second time delay on decreasing level is standard. Delay up to 90 seconds, can be specified and would act in the same manner as listed above.

Time Out Option

Available on Series 16, 16M, and DF controls

The latching circuit for the high and low electrode has an optional timer. In some applications the High or Low electrode may become short circuited or disconnected. Such an occurrence may potentially over fill in fill applications, or cause the pump to run dry in pump down applications. The time option is custom programmed up to 3 minutes. When a fault condition occurs, the FILL LED will have a blink sequence of .5 seconds on 2 seconds off. See Chart A for time delay options.

Test Feature

Available on Series 26, 26M, and DF controls

Allows LLCO circuit to be tested. Holding down the reset button for 3 seconds will allow the LLCO circuit to trip which simulates the loss of water, without the need of draining the water level in the boiler. The control will return to normal operation once the reset button is pressed a second time. (Test feature option only available with the manual reset function.)

SAGINAW CONTROL & ENGINEERING
Your Enclosure Source ®

STAINLESS STEEL ENVIROLINE® SERIES WALL-MOUNT ENCLOSURES WITH 3-POINT HARDWARE

Application
Designed to house electrical and electronic controls, instrumentation and components in indoor or outdoor locations. For outdoor applications a drip shield is recommended. For installation information, consult our installation manual at www.saginawcontrol.com.

Construction
- 0.075" stainless steel Type 304 & 316/316L.
- Seams continuously welded and ground smooth.
- Flange trough collar around all sides of door opening.
- Collar studs provided for mounting optional sub-panels.
- Mounting holes in back of the enclosure for wall-mounting.
- Mounting hardware, sealing washers and hole plugs included.
- Stainless steel concealed hinges.
- Removable and interchangeable doors.
- Black zinc die cast keylocking/padlocking handles.
- 3-point latching mechanism.
- Black quarter turn latches as required.
- Removable print pocket.
- Pour in place oil and water resistant gasket.
- Ground stud on door and body.

Finish
#4 brushed finish on all exterior surfaces. Optional sub-panels powder coated white.

IS6 Industry Standards
NEMA Type 3R, 4, 4X, 12 & Type 13
UL Listed Type 3R, 4, 4X & 12
CSA Type 3R, 4, 4X & 12
IEC 60529 IP66

***To maintain Type 3R listing, drainage is required. Install equally rated drainage device or drill a 1/8 to 1/4 inch hole in the bottom center of the enclosure, approximately 1 inch from the right, and 1 inch from the left for drainage, use listed rain-tight or wet location hubs. Drip shield over the door is recommended for all outdoor applications.

STAINLESS STEEL ENVIROLINE ® SERIES TWO-DOOR ENCLOSURES FOR FLANGE-MOUNTED DISCONNECTS

Application
Designed to house most standard type disconnects. For outdoor application a drip shield is recommended. For installation information, consult our Installation Manual at www.saginawcontrol.com.

Construction
- 0.104" stainless steel Type 304 & 316/316L.
- Seams continuously welded and ground smooth.
- Pour in place oil and water resistant gasket.
- Flange trough collar around all sides of door opening.
- Stainless steel concealed hinges.
- Removable and interchangeable doors.
- 3-point latching mechanism.
- Black quarter turn latches as required.
- Removable print pocket on main door of disconnect enclosures.
- Lifting eyes for easy handling.
- Ground studs on door and body.
- Collar studs provided for mounting optional sub-panels.
- 15" removable floor stands.
- Removable center post.
- Mechanical interlock.
- No door stiffeners required.
- Black zinc die cast coinproof/padlocking handle on main door of disconnect enclosures.
- Black zinc die cast padlocking handle on all other doors.
- Provisions for light kit.

Finish
#4 brushed finish on all exterior surfaces. Optional sub-panels powder coated white.

Disconnect switch (or circuit breaker) and operating mechanism are not furnished with this enclosure

IS6 Industry Standards
NEMA Type 3R, 4, 4X, 12 & Type 13
UL Listed Type 3R, 4, 4X & 12
CSA Type 3R, 4, 4X & 12
IEC 60529 IP66

***To maintain Type 3R listing, Drainage is required. Install equally rated drainage device or drill a 1/8 to 1/4 inch hole in the bottom center of the enclosure, approximately 1 inch from the right, and 1 inch from the left for drainage, use listed rain-tight or wet location hubs. Drip shield over the door is recommended for all outdoor applications.

REMOTE DOOR SWITCHES

- The remote door switch can activate a light or other electrical component when the enclosure door is opened
- Mounts on enclosure frame and includes mounting hardware
- Mounting plate is 14 gauge steel with a plated finish
- Can be hard-wired to the PANELITE LED or Fluorescent light or connected via the PANELITE Door Switch Cable

BULLETIN: A80LT, P20

Catalog Number	Description
ALFSWD	Door switch assembly (order connection cable separately)
PLFSWD	Door switch assembly for PROLINE and PROLINE G2 (order connection cable separately)

TOUCH-SAFE UL LIGHT SWITCH

APPLICATION

The Touch-Safe light switch is designed to be used with Hoffman light kits (AC and DC). It provides a UL listed touch-safe switch that can be used on many enclosure types and includes hardware for most applications. The light switch maintains enclosure overall rating up to UL 508A Type 4X or 12.

FEATURES

- UL listed for a touch-safe wire connection
- Easily mounted to various enclosure types; common bracket and hardware included for many enclosure types (NEMA, CONCEPT/FUSION G7, PROLINE, Free-Stand Type 12)
- Cable PG compression hub
- Wide operating temperature range: -49°F to +158°F (-45°C to 70°C)
- Rugged die-cast anodized zinc construction
- Connection 3 cage clamps for solid and stranded wire AWG 20-14 (0.5-2.5mm²)
- Protection class I (grounded)

BULLETIN: A80LT

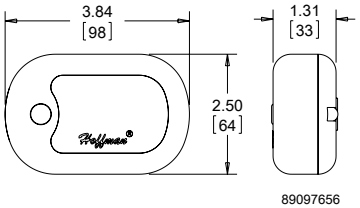
Catalog Number	Max. Cable Dia.	Max. Voltage
LDSWITCH	.375 in.	250 AC / 48 DC

MOUNTING BRACKET KIT FOR LIGHT PACKAGE

Kit simplifies mounting light package in Hoffman PROLINE disconnect enclosures. Includes brackets, all mounting hardware and complete instructions.

BULLETIN: A80LT

Catalog Number	Description
PDLFBRKT	Mounting Bracket Kit



LED PUCK LIGHT

The LED Puck Light is ideal for remote and darkened applications. This versatile light provides mounting flexibility; it can be magnetically attached to flat steel surfaces or can be hung with a swivel hook. This small form factor, light-weight LED light provides superior lighting performance with minimal power consumption. It can be used as a three-LED flashlight or as a 24-LED work light with operating temperature of 40 F to 120 F (4 C to 48 C). An on/off switch is incorporated in the light and three AAA batteries are included.

GENERAL ACCESSORIES

Application
LED light fixture is designed to provide interior lighting for an enclosure. Can be mounted to light channels in the top of an enclosure or on the front flange of most enclosures.

Construction
- Door activated adjustable switch, switch can be removed and relocated.
- Terminal block on each end of fixture, making it easy to wire and daisy chain multiple lights continuously.
- LED bulb with PVC frosted white protective light diffuser included.
- Housing made from steel and powder coated white.
- Units with convenience receptacle outlet are 120 VAC with ground 50/60 Hz. Without convenience receptacle outlet 100 to 240 VAC 50/60 Hz.
- 4000K Frosted White
- 18 inch 750 Lumens
- 24 inch 900 Lumens
- 18 inch 24VDC 500 Lumens

Description

Strip (Common: 2-ft; Actual: 2-ft)

- Energy saving LED uses 41% less electricity than a comparable 1-light T8 fluorescent light fixture
- LED lasts longer - rated to last 35,000 hours
- Produces 900 lumens of brightness using only 10 watts
- 10 watt integrated LED therefore no light bulbs will need to be replaced
- Easy to link up to thirty 24-inch, 1-light LED strip lights
- Gives off bright white light that is perfect for detailed tasks (4,000k CCT)
- UL rated for damp locations
- 3 year limited warranty
- White metal housing

SAFETY INFORMATION

NOTICE

- This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on. The user is encouraged to try to correct the interference by one or more of the following measures:
  - Reorient or relocate the receiving antenna.
  - Increase the separation between the equipment and the receiver.
  - Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
  - Consult the dealer or an experienced radio/TV technician for help.

- This Class B digital apparatus complies with Canadian ICES-003.

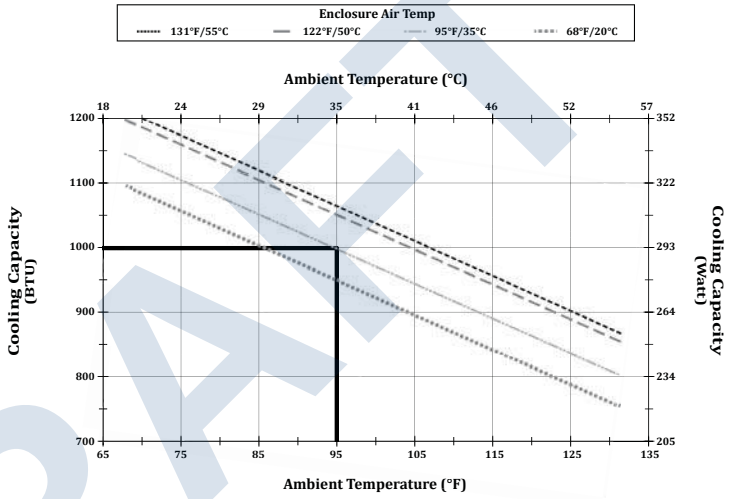
ENVIRO-THERM® THERMAL MANAGEMENT
AIR CONDITIONERS

Application
Enviro-Therm® Air Conditioners are designed with an internal closed loop system to provide protection from dust, oil and water. For indoor and outdoor application. Rugged, energy efficient, and reliable cooling system. For more details and Installation Information, consult our Installation Manual at www.saginawcontrol.com.

Construction
- Heavy gauge steel/stainless steel.
- Internal components are corrosion resistant.
- Coils are designed as filterless units, fin spacing and hydrophobic Nano coating to help reduce chance of clogging.
- Washable, Reusable 8 layer aluminum mesh filters included.
- Captive screw fastened filter cover.
- Compressor Heater.
- Enclosure Heater for low ambient temperatures.
- Easy Mounting Flange hangers for installation included.
- High temp alarm.
- High performance ball bearing fans.
- Door activated switch wiring provisions.
- Cage clamp terminal connector.
- Oil and water resistant gaskets installed.

Electrical
- cULus Listed
- CE
- Surge protected and EMI compliant - IEC61000 and CE requirement



Finish
Powder coated steel cover RAL 7035 River Texture over Aluzinc coated steel.

UT 4 - Feed-through terminal block

3044102

https://www.phoenixcontact.com/us/products/3044102

Please be informed that the data shown in this PDF document is generated from our online catalog. Please find the complete data in the user documentation. Our general terms of use for downloads are valid.

Feed-through terminal block, nom. voltage: 1000 V, nominal current: 32 A, number of connections: 2, connection method: Screw connection, Rated cross section: 4 mm^2, cross section: 0.14 mm^2 - 6 mm^2, mounting type: NS 35/7,5, NS 35/15, color: gray

Your advantages

- The large wiring space enables the connection of solid and stranded conductors without ferrules, even above the nominal cross section
- As well as saving space, the compact design enables user-friendly wiring in a small amount of space
- Optimum screwdriver guidance through closed screw shafts
- The cable entry funnel enables the use of conductors with ferrules and plastic collars within the nominal cross section
- Tested for railway applications

UT 6 - Feed-through terminal block

3044131

https://www.phoenixcontact.com/us/products/3044131

Please be informed that the data shown in this PDF document is generated from our online catalog. Please find the complete data in the user documentation. Our general terms of use for downloads are valid.

Feed-through terminal block, nom. voltage: 1000 V, nominal current: 41 A, number of connections: 2, connection method: Screw connection, Rated cross section: 6 mm^2, cross section: 0.2 mm^2 - 10 mm^2, mounting type: NS 35/7,5, NS 35/15, color: gray

Your advantages

- The large wiring space enables the connection of solid and stranded conductors without ferrules, even above the nominal cross section
- As well as saving space, the compact design enables user-friendly wiring in a small amount of space
- Optimum screwdriver guidance through closed screw shafts
- The cable entry funnel enables the use of conductors with ferrules and plastic collars within the nominal cross section
- Tested for railway applications

Plug-in bridge, pitch: 6.2 mm, number of positions: 20, color: red

Your advantages

- The 2- to 50-pos. jumpers can bridge up to 50 terminal blocks in the two bridge shafts of the CLIPLINE complete system in one step

Technical data

Product properties

Product type	Jumper
Number of positions	20
Pitch	6.2 mm

Electrical properties

Maximum load current	32 A (The current values for the jumpers can deviate when used in different modular terminal blocks. The precise values can be found in the accessories data for the respective modular terminal blocks.)

Connection data

Maximum load current	32 A (The current values for the jumpers can deviate when used in different modular terminal blocks. The precise values can be found in the accessories data for the respective modular terminal blocks.)

Dimensions

Width	122.3 mm
Height	23 mm
Depth	23 mm
Pitch	6.2 mm

Material specifications

Color	red
Material	Copper
Flammability rating according to UL 94	V0
Insulating material	PA

Mounting

Mounting type	Plug-in mounting

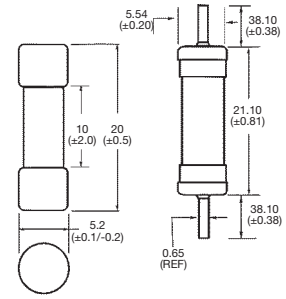
COOPER Bussmann

5 x 20mm, Fast-Acting, Glass Tube Fuses

S500 Series

Description

- Fast-acting, low breaking capacity
- Optional axial leads available
- 5 x 20mm physical size
- Glass tube with silver-plated (32-125mA) and nickel-plated (160mA-10A) endcaps
- Designed to IEC 60127-2 (160mA-10A)



Electrical Characteristics							
In	1.5 In min	2.1 In max	2.75 In min	2.75 In max	4 In min	4 In max	10 In max
32mA-125mA	60min	30min	–	–	–	–	–
160mA-6.3A	60min	30min	50ms	2sec	10ms	300ms	20ms
8A-10A	30min	30min	50ms	2sec	10ms	400ms	40ms

Agency Information

- cURus: File E19180, Guide JDYX2, JDYX8
- SEMKO Approval: File 913796
- VDE Approval: File 40014109
- BSI Approval: File KM55676
- IMQ Approval: File CA03.00097
- CCC Approval: File 2005010207155694
- PSE Approval File: JET1641-31003-1013, JET1641-31003-1014, JET1641-31003-1015, JET1641-31003-1016

Dimensions - mm

Drawing Not to Scale

- Ratings above 6.3A have a 0.8mm diameter lead
- With TR2 packaging code, lead wire length is 19.05mm

Ordering

Specify product code

- Insert packaging code prefix before part number. E.g., BK/S500-32-R

Specify option code if desired

- For axial leads, insert “V” between catalog series and amp rating. E.g., S500-V-100-R

Please be informed that the data shown in this PDF document is generated from our online catalog. Please find the complete data in the user documentation. Our general terms of use for downloads are valid.

Primary-switched power supply unit, TRIO POWER, Push-in connection, DIN rail mounting, input: 1-phase, output: 24 V DC / 5 A, adjustable from 24 V DC ... 28 V DC

DRAFT

Product description

All TRIO POWER power supplies feature smart diagnostics with multicolor LEDs and a collective alarm contact. This is used to signal all relevant states such as DC OK, overload, and short circuit. Devices with integrated multi-channel device protection and an IO-Link interface for diagnostics and parameterization are optionally available. The compact devices reduce the installation work, space requirements in the control cabinet, and material costs. TRIO POWER power supplies therefore provide power reliability in one device.

Your advantages

- Space-saving due to its low overall width and capability of being mounted side by side
- Robust and reliable due to dynamic boost with a powerful output characteristic curve
- Easy handling with Push-in connection technology
- Smart diagnostics with multicolor LEDs and collective relay contact for a clear status display, with optional IO-Link
- High system availability: power reliability in one device due to the integrated compact multi-channel circuit breaker

Technical data

Input data

AC operation

Supply system configuration	Star network (TN, TT, IT (PE))
Nominal input voltage range	100 V AC ... 240 V AC
Input voltage range	100 V AC ... 240 V AC -15 % ... +10 %
	115 V AC ... 240 V AC ±10 % (UL)
Derating	< 100 V AC (1 %/V)
	2.5 %/K, > 60 °C
Typical national grid voltage	120 V AC
	230 V AC
Voltage type of supply voltage	AC
Inrush current	< 33 A (25 °C)
Inrush current integral (I^2t)	< 0.55 A^2s
Frequency range (f_N)	50 Hz ... 60 Hz ±10 %
Mains buffering time	typ. 28 ms (120 V AC)
	typ. 28 ms (230 V AC)
Current consumption	1.3 A (100 V AC)
	1.1 A (120 V AC)
	0.6 A (230 V AC)
	0.59 A (240 V AC)
Protective circuit	Transient protection; Varistor
Power factor (cos phi)	0.93 (230 V AC)
Device mains fuse	6.3 A internal (device protection)
Recommended breaker for input protection	6 A ... 16 A (Characteristic B, C, D, K or comparable)
Discharge current to PE	< 3.5 mA

DC operation

Input voltage range	100 V DC ... 240 V DC ±10 %
	160 V DC ... 240 V DC ±10 % (UL)
Derating	< 140 V DC (1 %/V)
Current consumption	1.29 A (100 V DC)
	0.53 A (240 V DC)

Output data

Efficiency	typ. 93 % (120 V AC)
	typ. 94 % (230 V AC)
Nominal output voltage	24 V DC
Setting range of the output voltage (U_{Set})	24 V DC ... 28 V DC (> 24 V DC, constant capacity restricted)
Nominal output current (I_N)	5 A
Dynamic Boost ($I_{Dyn.Boost}$)	max. 7.5 A (5 s)
Short-circuit-proof	yes

DRAFT

TRIO3-PS/1AC/24DC/5 - Power supply unit

1159037

https://www.phoenixcontact.com/us/products/1159037

No-load proof	yes
Derating	60 °C ... 70 °C
Crest factor	typ. 1.72 (120 V AC)
	typ. 1.89 (230 V AC)
Output power (P_N)	120 W
Output power ($P_{Dyn. Boost}$)	max. 180 W (5 s)
Connection in parallel	yes, for increased efficiency and redundancy
Connection in series	yes, for increased output voltage (observe SELV limit)
Feedback voltage resistance	≤ 35 V DC
Protection against overvoltage at the output (OVP)	≤ 35 V DC
Residual ripple	typ. 50 mV_{PP} (with nominal values)
Control deviation	< 1 % (change in load, static 10 % ... 90 %)
	< 3 % (change in load, dynamic 10 % ... 90 %)
	< 0.1 % (change in input voltage ±10 %)
Rise time	≤ 1 s (U_{Out} = 10 % ... 90 %)
Minimum no-load power dissipation	< 2.14 W (120 V AC)
Maximum no-load power dissipation	< 1.75 W (230 V AC)
Minimum nominal load power dissipation	< 8.54 W (120 V AC)
Power loss nominal load max.	< 6.51 W (230 V AC)
Integrated fuse protection	no

Signal relay 13/14

Position	3.x
Position marking	3.1 (13), 3.2 (14)
Switch contact (floating)	OptoMOS
Switching voltage	max. 30 V DC (SELV)
Current carrying capacity	max. 100 mA
State condition	U_{Out} > 21 V DC and I_{Out} < 0.9 x I_N (Contact closed)
	U_{Out} < 21 V DC or I_{Out} > 0.9 x I_N (averaging over 60 s) (Contact open)

Mounting

Mounting type	DIN rail mounting
Assembly note	alignable: 0 mm horizontally, 30 mm vertically
Mounting position	horizontal DIN rail NS 35, EN 60715
With protective coating	no

Material specifications

Flammability rating according to UL 94	V0 (Housing, terminal blocks)
Hood version	Polycarbonate
Side element version	Aluminum

Environmental and real-life conditions

Ambient conditions

Degree of protection	IP20
Ambient temperature (operation)	-25 °C ... 70 °C (> 60 °C Derating: 2,5 %/K)
Ambient temperature (storage/transport)	-40 °C ... 85 °C
Ambient temperature (start-up type tested)	-40 °C
Maximum altitude	≤ 5000 m (> 2000 m, Derating: 10 %/1000 m)
Max. permissible relative humidity (operation)	≤ 95 % (at 25 °C, non-condensing)
Shock (operation)	18 ms, 30g, per spatial direction (IEC 60068-2-27)
Vibration (operation)	10 Hz ... 50 Hz, amplitude ±0.2 mm (IEC 60068-2-6)
	50 Hz ... 150 Hz, 2.3g, 90 min.
Temp code	T4 (-25 ... +70 °C; > 60 °C, Derating: 2,5 %/K)

Standards and regulations

Overvoltage category

EN 61010-1	III (≤ 2000 m)
	II (≤ 5000 m)

Overvoltage category

EN 61010-2-201	III (≤ 2000 m)
	II (≤ 5000 m)

Safety of power supply units up to 1100 V (insulation distances)

Standard designation	Safety of power supply units up to 1100 V (insulation distances)

Control Circuit & Load Protection

LOGIC

Miniature Circuit Breakers 1489

- UL/CSA Listed for branch circuit protection
- Current limiting
- Reversible line and load connections
- Attachments available for Lockout/Tagout
- Trip curves: C and D

1489-M thermal-magnetic circuit breakers are approved for branch circuit protection in the United States and Canada, and are certified as Miniature circuit breakers for IEC applications.

These branch protectors are compatible with many accessories to meet diverse application needs, including UL 508 Listed bus bars for convenience in panel assembly, auxiliary contacts, signal contacts and shunt trips for versatility, and lockout attachments for safety during maintenance.

PLT-SEC-T3-120-FM-UT - Type 3 surge protection device

2907918

https://www.phoenixcontact.com/us/products/2907918

Please be informed that the data shown in this PDF document is generated from our online catalog. Please find the complete data in the user documentation. Our general terms of use for downloads are valid.

Type 2/3 surge protection, consisting of protective plug and base element, with integrated status indicator and remote signaling for single-phase power supply networks. Nominal voltage: 120 V AC/DC

Your advantages

- Surge protection family for universal use with optimum energy coordination from the lightning current arrester to the device protection
- Easy to maintain due to consistently pluggable protection modules
- Excellent level of information provided by mechanical/visual status indicator and remote indication contact
- Your preferred connection technology can be selected as both screw connection and Push-in connection are available
- Optimal additional protection of the industrial power supply for a longer service life and increased availability of the system
- 5-year warranty on your QUINT 4 power supply when installed together with PLT-SEC, see document in the download area

StructuredGround™ Universal Ground Bar System

PANDUIT®

SPECIFICATION SHEET

specifications

Provide a field wiring terminal for the connection of an equipment grounding conductor in each control panel and enclosure. The terminal shall be UL 467 Listed or CSA 22.2 certified. The equipment grounding conductor shall have electrical continuity with the enclosure or sub-panel. The field wiring terminal may also provide multiple locations or ports for terminating equipment ground conductors from devices inside the panel or enclosure, functioning as the ground bar within the panel or enclosure. The ground bar shall provide a means to attach and to identify the main equipment grounding conductor.

PATENT PENDING

technical information

Performance level:	UL 467 Listed and CSA 22.2 Certified for grounding and bonding an equipment grounding conductor up to 2/0 AWG; meets UL 508A requirements
Main:	Provides a location for the main equipment grounding conductor using a compression or mechanical connector
Wire ports:	Accept bare stripped copper wire from #14 to #4 AWG Accept wire ferrules from #14 AWG to #6 AWG Top of ground bar accepts ring terminals, compression connectors or mechanical connectors with a ¼" stud hole size and maximum width of 0.55"
Materials:	Ground bars and bonding stand-offs precision machined from 110 electrolytic copper with a 99.9% copper content and then tin-plated for additional corrosion resistance
Packaging:	Each part is provided with all fasteners required for terminating wires and for each mounting option

key features and benefits

Flexible design	Works with all types of wire termination methods including stripped wire, ferrules, terminals, and compression or mechanical connectors; compatible with over 140 Panduit connectors
Multiple mounting options	In addition to surface mounting, two mounting stand-off options are available, one that bonds to the mounting surface and one that isolates from the mounting surface; both options provide additional finger wiring space in tight places
Unique geometry	The unique shape of the universal ground bar allows more surface contact between the wire connectors and the ground bar

applications

The StructuredGround™ Universal Ground Bar System (UGB) offers multiple termination methods and mounting options making it ideal for any control panel or enclosure application. The UGB enables the end user to choose the method in which to terminate conductors with connectors of their choice or simply cut and strip the wires. The UGB system will help reduce the types of ground bars that a panel shop or distributor needs to keep in stock to meet the various applications and customer requirements.

Universal Ground Bar System

6-port ground bar:	UGB2/0-414-6
12-port ground bar:	UGB2/0-414-12
18-port ground bar:	UGB2/0-414-18
Isolation standoffs:	UGB-IN-SO
Bonding standoffs:	UGB-B-SO

Recommended Connectors for Main Equipment Ground Conductor, Maximum 2/0 AWG

Copper Mechanical with Anti-Rotation

#14 – 2/0 AWG:	CLMAR2/0-14-Q

Two-Hole Copper Compression, 1/4" Stud Hole with 5/8" Spacing; #14 to 2/0 AWG

#14 – 10 AWG:	LCA10-14A-L
#8 AWG:	LCD8-14A-L
#6 AWG:	LCD6-14A-L
#4 AWG:	LCD4-14A-L
#2 AWG:	LCD2-14A-Q
#1 AWG:	LCD1-14A-E
1/0 AWG:	LCD1/0-14A-X
2/0 AWG:	LCD2/0-14A-X

One-Hole Copper Compression, 1/4" Stud Hole; #14 to 2/0 AWG

#14 – 10 AWG:	LCA10-14-L
#8 AWG:	LCAS8-14-L
#6 AWG:	LCAS6-14-L
#4 AWG:	LCAS4-14-L
#2 AWG:	LCAS2-14-Q
#1 AWG:	LCAS1-14-E
1/0 AWG:	LCAS1/0-14-X
2/0 AWG:	LCAS2/0-14-X

One and two-hole copper compression connectors available for both code and flex conductors, with narrow tongue and bent tongue configurations.

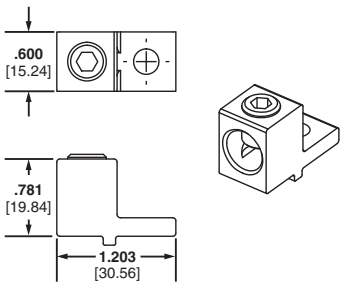
Recommended Connectors for Port Connections

Ring Terminals, ¼" Stud Hole, Maximum Width of 0.55"; #22 to #4 AWG

Ring terminals available with vinyl, nylon, KYNAR*, high-temp, or heavy duty insulation or non-insulated.

Compression Connectors, Maximum Width of 0.55"; up to #4 AWG Typical

Ferrules, Minimum Pin Depth of 12mm; #14 to #6 AWG



*KYNAR is a registered trademark of Atofina Chemicals, Inc.

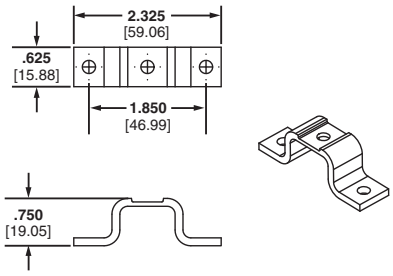
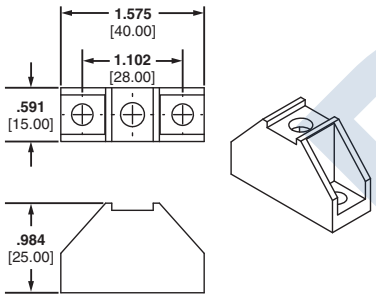
ITEM 260A

StructuredGround™ Universal Ground Bar System

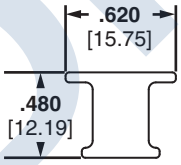


CLMAR2/0-14-Q: Tin-plated copper connector with anti-rotational feature.

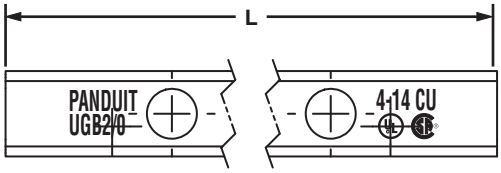
UGB2/0-414-18: 18-port UGB mounted directly to surface with the equipment grounding conductor terminated in an anti-rotational, copper mechanical connector.



UGB-B-SO: Bonding stand-off.



UGB2/0-414-12: 12-port UGB mounted on bonding stand-offs with the equipment grounding conductor terminated in a two-hole compression lug.



UGB-IN-SO: Isolation stand-off.

UGB2/0-414-6: 6-port UGB mounted on isolation stand-offs with the equipment grounding conductor terminated in an anti-rotational, copper mechanical connector.

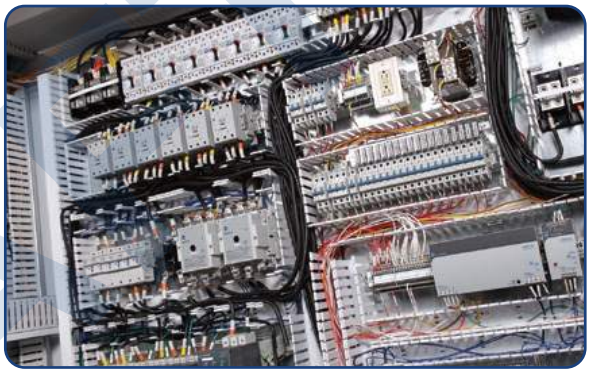
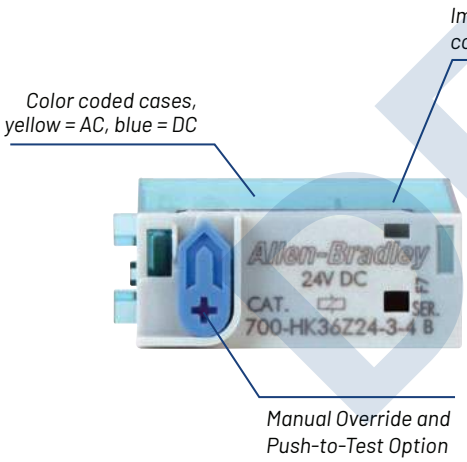
Relays & Timers

LOGIC



Slim Line Relays 700-HK



- 8 A (2-pole) or 16 A (1-pole) contact ratings
- DPDT or SPDT
- Blade-style
- ON/OFF flag indicator
- LED, push-to-test and manual override options
- Standard or gold-plated AgNi contacts
- Maximum duty version available
- Screw or push-in socket terminals

The 700-HK relays are designed for a variety of high-density isolation and interposing applications. Installation is easy and cost effective through the use of the 8-way jumper wiring system that requires only one wire connection to a coil, common or contact power distribution terminal. Optional gold contacts switch low-energy loads reliably as low as 5V, 10 mA, 50 mW.

Ideal Applications

- Provides longer life for PLC, saving money and increasing efficiency
- Switching currents or voltages too high for PLC outputs to handle
- Interfacing two or more system voltages – for example, 24V to 120V
- Multiplies PLC outputs by using relays to turn two devices on and off simultaneously
- Provides isolation from solid-state output leakage current

Product Selection

Slim Line Relay

Description	Contact Rating	Coil Voltage	Pkg. Qty.	Cat. No. [1, 2, 3]
SPDT 1-pole 1 form C AgNi contacts	16 A	24V AC	1	700-HK36A24
		120V AC		700-HK36A1
		240V AC		700-HK36A2
		12V DC		700-HK36Z12
		24V DC		700-HK36Z24
		110V DC		700-HK36Z1
DPDT 2-pole 2 form C AgNi contacts	8 A	24V AC	1	700-HK32A24
		120V AC		700-HK32A1
		240V AC		700-HK32A2
		12V DC		700-HK32Z12
		24V DC		700-HK32Z24
		110V DC		700-HK32Z1

1 LED option: Add suffix **-4** to the selected 700-HK relay catalog number; for the 240V AC units, add -**4L**.

2 Push-to-test and LED option: Add suffix **-3-4** to the selected 700-HK relay catalog number; for 240V AC units, add suffix **-3-4L**.

3 For AgNi contact with gold plating: Replace **3** with **X** in catalog number For example, catalog number 700-HK**3**6A1 becomes catalog number 700-HK**X**6A1.

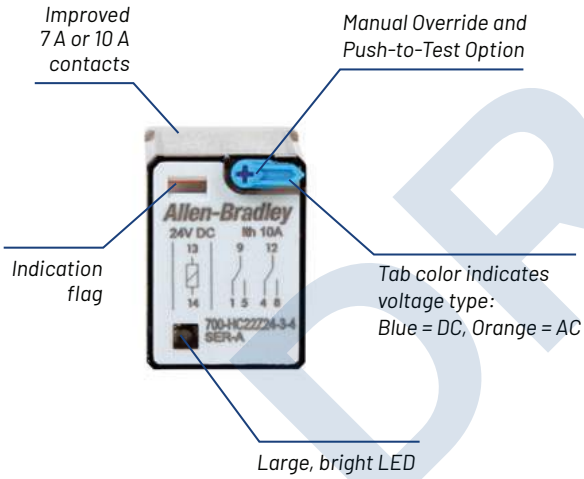
Relays & Timers



LOGIC

Miniature Ice Cube Relays 700-HC

- 7 or 10 A contact ratings
- DPDT or 4PDT
- Blade-style
- ON/OFF flag indicator
- LED, push-to-test with manual override options
- Optional bifurcated gold-plated contacts available for low energy switching

700-HC Miniature Square Base Relays are 2-pole or 4-pole plug-in relays for your low-energy switching applications. The same sockets can be used for DPDT or 4PDT versions, which improves flexibility and reduces inventory.

Ideal Applications

- Provides longer life for PLC, saving money and increasing efficiency
- Switching currents or voltages too high for PLC outputs to handle
- Interfacing two or more system voltages – for example, 24V to 120V
- Multiplies PLC outputs by using relays to turn many devices on and off simultaneously
- Provides isolation from solid-state output leakage current

Note: X = Closed/O = Open **Note:** These caps are only available in plastic.

Note: Emergency stop push buttons are compliant with EN ISO 13850 and EN/IEC 60947-5-5 Standards when using N.C.L.B. contact blocks.

❄ The Self Monitoring Contact Block (S.M.C.B.) is composed of a N.C.L.B. contact wired in series with a N.O. monitoring contact. The N.O. monitoring contact automatically closes when the S.M.C.B. is properly installed onto the E-stop operator. If the S.M.C.B. is separated from the E-stop operator, the N.O. monitoring contact will automatically open.

Vertiv™ Liebert® GXT5 UPS

500 - 3000VA 120V

Intelligent and Efficient UPS for Protection of Your Mission-Critical Applications

DRAFT

Vertiv™ Liebert® GXT5 | 500 - 3000VA 120V UPS

Intelligent and Efficient UPS for Protection of Your Mission-Critical Applications

The Vertiv™ Liebert® GXT5 UPS is an online double conversion UPS solution which offers premium power outage protection and continuous power conditioning in a compact and flexible rack/tower form factor.

The Liebert GXT5 single-phase UPS operates with high power efficiency, making it ideally suited to protect critical infrastructure in both centralized and edge network applications.

Scalable runtime options with matching external battery cabinets offer additional flexibility when extended uninterrupted power is required. Plus, the Liebert GXT5 provides battery health status and replacement date prediction for intelligent battery health management.

The UPS system is easy to deploy and maintain due to its user-friendly LCD interface and remote management capabilities supported by the Vertiv RDU101 communications card which makes the Liebert GXT5 compatible with Vertiv infrastructure management solutions such as LIFE™ Services, environmental sensors, *Trellis*™ Power Insight, and more.

With market leading efficiency and unity power factor operation, the Liebert GXT5 will meet your critical application needs. And you can rest assured that your business is protected with this Vertiv solution that includes a standard, three-year advanced exchange product warranty.

What's in the box

- UPS
- Tower stand
- 4-Post Rack Mounting Kit
- USB Cable
- Quick Start Guide
- Safety Manual
- Power Insight management software (free download from Vertiv.com)

ENERGY STAR

Liebert GXT5 Features

Leading UPS Technology

- High output power factor = up to 1.0
- Full-color graphic LCD with gravity sensing orientation
- Individually controllable output power sockets
- External battery cabinets with auto-detection
- Battery health status and replacement date prediction
- Remote management, update, and configuration capabilities
- Optimized thermal management and variable speed fan

Efficient and Green Product

- High efficiency in online mode
- Energy Star® 2.0 certified
- Even higher efficiency (up to 98%) in Active ECO mode
- Programmable outlets for power cycling hung equipment and optimum battery usage
- Compliance with Restriction of Hazardous Substances (RoHS) directive and the Registration, Evaluation, Authorization and Restriction of Chemicals (REACH) regulation

Solutions Wide

- Compact rack/tower design
- Broad range of services and extended warranty
- Easy to install, configure and operate
- Vertiv RDU101 network communications card with advanced features
- Compatibility with environmental sensors
- Integrated dry-contacts with selectable definition
- Free *Trellis*™ Power Insight management software
- Serial port for out-of-band management with Avocent® serial consoles
- Automatic internal bypass and external maintenance bypass options

DRAFT

Vertiv™ Liebert® GXT5 Features

High power factor (0.9-1.0)
More usable power enables more connected loads saving space and costs.

Efficiency (up to 95%) in online mode
Energy Star 2.0 certification. Higher efficiency means an optimized energy management and lower heat dissipation, for energy savings and improved reliability.

Efficiency (up to 98%) in Active ECO mode
Superior protection with maximum efficiency.

Colored graphic LCD with gravity sensitive orientation
User-friendly interface provides insight to UPS status for easy installation, configuration and operation.

Compact rack/tower design
Space-saving UPS provides rack space optimization and flexible installation.

Battery cabinets with auto-detection
Be confident the UPS is set up correctly to report available runtime when used with external battery cabinets.

Product warranty
Comprehensive coverage through a standard three-year advanced exchange warranty.

DRAFT

Vertiv™ Liebert® GXT5 | 500 - 3000VA 120V UPS

How You Benefit from the Vertiv™ Liebert® GXT5 UPS

Designed for high availability

- The higher power factor (0.9 - 1.0) ensures the connection of more loads and IT equipment
- With individually controlled output receptacles, you can manage power to individual devices without impacting other critical network equipment operation
- Minimum downtime of the device provided by hot-swappable, user-replaceable battery modules which can be changed during operation
- LIFE™ Services helps to enhance uptime, as well as operational efficiency with continuous remote monitoring, expert analysis, and proactive response
- Automatic self-test

User-friendly installation and operation

- Easy-to-read, gravity-sensing graphical color display
- Intuitive user interface for local configuration and management
- Support for the Vertiv suite of remote management tools (*Trellis™* Power Insight, RDU101 network interface card, and serial connectivity support)
- Auto-detection of external battery cabinets enables faster deployment and accurate runtime information
- Remote UPS firmware upgrade capability ensures the UPS has the latest features and enhancements

Longer service life and runtime of the batteries

- Extended runtimes provided by the addition of external battery cabinets
- Improved battery care by temperature-compensated battery charging
- Intelligent battery health management ensures a longer service life (optimized battery maintenance and replacement when needed)

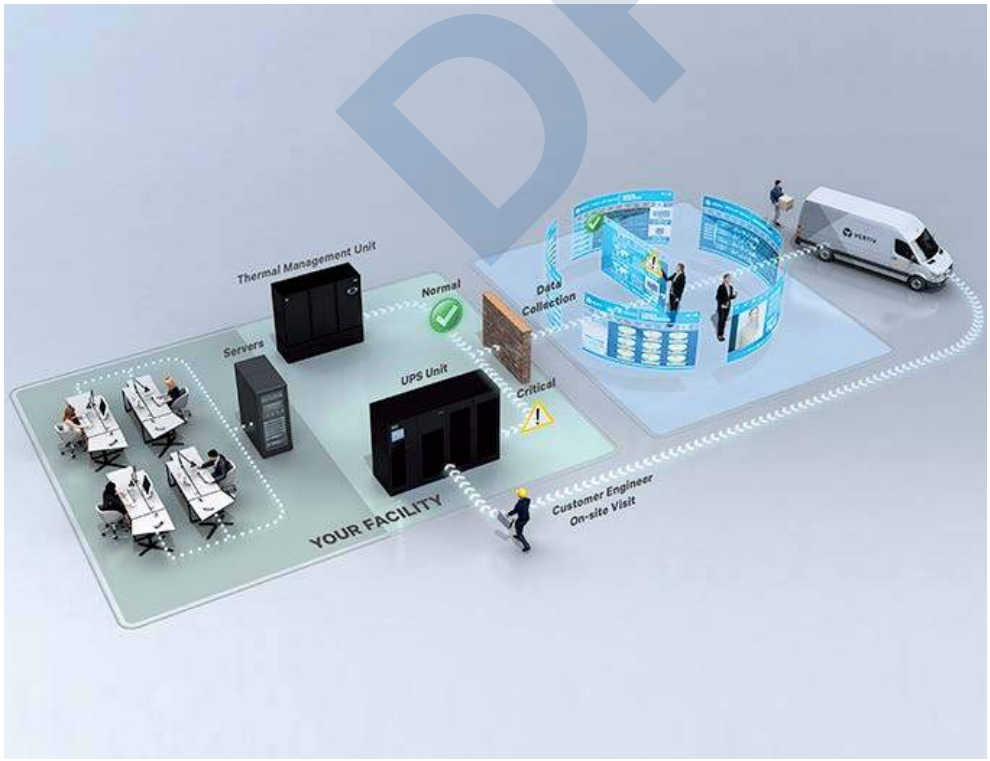
Optimized energy and capacity management

- Active ECO operating mode with up to 98% efficiency
- Efficiency in online double conversion mode up to 95%
- Energy Star 2.0 certified
- Four individually programmable output receptacles can be use to extend runtime for the most critical loads and smart disconnection of the less critical ones

Seamless connectivity

- Four onboard, user-definable dry contact I/O for integration of support management systems
- Supports SNMP, web, and environmental sensors with the optional RDU101 communications card
- Serial connection for integration of Avocent® ACS product or direct serial management and control of the UPS

DRAFT



Power Assurance Package: Comprehensive Service Support for Critical Systems

- **Five-year protection plan** with 100% parts coverage and 24x7 emergency service
- **On-site installation and startup** of UPS and internal batteries (excludes hard-wired applications); configuration of new UPS and accessories; and if purchased, safe removal and disposal of legacy UPS and batteries
- **On-site service support** available 24x7 (within 150 miles of regional service center) and includes 100% labor and travel coverage
- **100% parts coverage** for UPS and includes internal batteries, POD (power output distribution), and web card
- **24x7 access** to customer resolution center and online access to Customer Services Network

Key benefits:

- Hassle-free management of multi-site rollouts
- Frees up time-strapped IT staff by managing and tracking UPS health, maintenance and service
- Reduces the worry of critical equipment downtime
- Ensures rapid recovery in the event of failure (within 24-48 hours)
- Frees you from the responsibility of handling and documenting the disposal of legacy UPS and batteries

Remote Diagnostic Services for Rapid Response

Uptime assurance

- Continuous monitoring for early detection of trends and operating anomalies
- Analysis and interpretation of alarm and status messages

Rapid incident response

- Automatic transmission of data for analysis
- Concurrent diagnosis and dispatch of engineer to site
- Shipment of parts for corrective maintenance

Increased insight and ease of management

- Notification of operating conditions that may impact system health
- Periodic trend and analysis reports
- Integration of remote and on-site services to ensure business continuity

Refer to page 11 for service offerings' SKUs

GXT5 UPS + RDU101 Network Communication card bundles available — Add an "N" to the end of the model number. Available through select distributors.

DRAFT

Vertiv™ VR Rack
Supports a wide variety of equipment and gives you the flexibility you need with easy installation

Vertiv™ Geist™ rPDU
Reliably distributes power to the rack, supporting dynamic data center operations and DCIM

Vertiv™ SwitchAir
Prevents overheating of network switches by directing cool air to switch intakes, keeping hot exhaust air out

Vertiv™ ACS Console
Enables integrated remote monitoring, out-of-band management, and IoT connectivity

Vertiv™ KVM Switch
Enables single-point access for switching between multiple computers

Vertiv™ Rack Cooling
Provides energy-efficient cooling close to the IT equipment and UPS units

Vertiv™ Liebert® GXT5
Helps protect mission-critical equipment from all power disturbances due to blackouts, brownouts, sags, surges or noise interference

Accessories

Racks and enclosures: Support a wide variety of equipment with the Vertiv™ VR Rack including servers, storage, switches, routers, PDUs, UPS units, console port servers, and KVM switches.

Rails and mounting hardware: Install equipment with a four-post rail kit and hardware for mounting in a 19- or 23-inch rack or choose a two-post telecom rack for front- or mid-chassis, wall, or Zero U configuration.

Rack mount PDUs: For basic or intelligent power distribution that helps prevent overloaded circuits in the data center, choose from products such as upgradable PDUs, inline power meters, transfer switches, and monitoring sensors.

Extended battery modules: Enable scalable runtime for support during extended power outage situations by adding reliable power and protection to new or existing deployments.

Environmental sensor: Maintain knowledge of remote environments with temperature, humidity and leak detection, or monitor available dry-contact sensors for security access control or smoke detection.

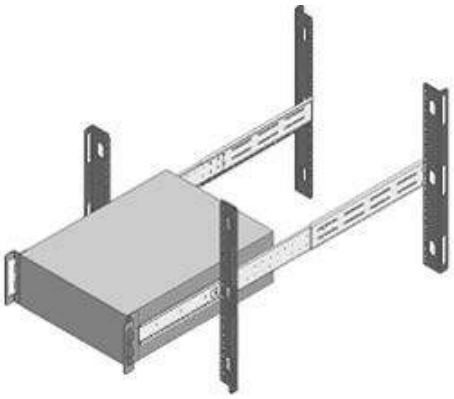
Network communications and environmental sensors

Network Communications	RDU101	Intellislot web card for SNMP and web management. Supports environmental sensors.
	IS-RELAY	Intellislot Interface Kit for Relay Contacts
Environmental Sensors	SN-Z01	Integrated cable with single temperature sensor
	SN-Z02	Integrated cable with three temperature sensors
	SN-Z03	Integrated cable with three temperature and one humidity sensors
	SN-T	Modular with single temperature sensor
	SN-TH	Modular with single temperature and single humidity sensor
	SN-2D	Modular with two door contact inputs
	SN-3C	Modular with three dry contact inputs
	SN-L20	Modular leak zone sensor with 20 foot cable (Liebert RDU-S only)
UPS manageability options	*Trellis*™ Power Insight Software Management	*Trellis*™ Power Insight is a complimentary web-based software designed to monitor up to 100 Vertiv™ UPSs and rPDUs

MicroPOD - Maintenance bypass and output distribution



The Liebert® MicroPOD (Power Output Distribution) is a maintenance bypass option for UPS products, 3 kVA and below. It allows removal of the UPS without powering down the connected equipment. The 2U POD's can be installed on the floor or mounted to a Liebert GXT5 UPS using the included mounting brackets.

UPS VA rating	POD model number	Output receptacles	Plug to utility

Power Assurance Package - Summary

- Includes all below "Power Start-up Services" and "Power Emergency Services" support
- One Preventative Maintenance visit after 3rd year (5-10kVA UPS only)

Power Startup Services - Summary

- Installation includes mounting and start-up of new UPS or EBC (excludes hard-wired applications)
- Services performed by Vertiv factory trained technician
- Services performed 7 X 24, excluding national holidays within the 48 contiguous states and Hawaii
- Removal and disposal of existing UPS or EBC equipment, if selected

Power Emergency Services - Summary

- On Site Service Support
- Full-service five (5) year contract term commencing upon the start-up date
- 100% parts coverage, including internal batteries, POD and web card
- 100% labor and travel coverage 7 days/week, 24 hours/day
- 24-Hour Customer Resolution Center via 1-800-LIEBERT
- Access to Customer Services Network portal

LIFE Services includes above plus:

- Continuous Monitoring, Expert Analysis, and Proactive Response

Note: LIFE Services requires an RDU101 card, which is included on all 5000VA to 10000VA models.
Please refer to the Scopes of Work for full and additional details.

500-1500VA – 120V Rack/Tower

External Battery Connector
Scalable runtime solution supported for extended outage protection

4 x Individually Controllable Receptacle
Manage load on battery and control unauthorized access to UPS receptacle

Communications
SNMP, Serial, Dry contact, Local USB Local and remote configuration and UPS Management

NEMA 5/15P input with over current protection
Simple installation and power on with connected input cord

2000VA – 120V Rack/Tower

External Battery Connector
Scalable runtime solution supported for extended outage protection

NEMA L5-20R
Support larger devices or rack PDU

4x Individually Controllable Receptacle, 2x Always on Receptacles
Manage load on battery and control unauthorized access to UPS receptacle

Communications
SNMP, Serial, Dry contact, Local USB Local and remote configuration and UPS Management

NEMA L5-20P input with over current protection
Includes NEMA 5-20 Adapter Cable for non-locking receptacles

3000VA – 120V Rack/Tower

External Battery Connector
Scalable runtime solution supported for extended outage protection

NEMA L5-30R
Support larger devices or rack PDU

4x Individually Controllable Receptacle, 2x Always on Receptacles
Manage load on battery and control unauthorized access to UPS receptacle

Communications
SNMP, Serial, Dry contact, Local USB Local and remote configuration and UPS Management

NEMA L5-30P input with over current protection
Simple installation and power on with connected input cord

FL SWITCH SFN 5TX - Industrial Ethernet Switch

2891152

https://www.phoenixcontact.com/us/products/2891152

Please be informed that the data shown in this PDF document is generated from our online catalog. Please find the complete data in the user documentation. Our general terms of use for downloads are valid.

Ethernet switch, 5 TP RJ45 ports, automatic detection of data transmission speed of 10 or 100 Mbps (RJ45), autocrossing function

Your advantages

- RJ45 ports support a transmission speed of 10/100 Mbps
- Fiber-optic ports support 100 Mbps
- QoS-prioritized (Quality of Service) messages
- Local diagnostic indicators with LEDs
- The switch also offers cable locking and port blocking

Technical data

Dimensions

Width	30 mm
Height	120 mm
Depth	70 mm

Material specifications

Housing material	Aluminum

Mounting

Mounting type	DIN rail mounting

Interfaces

Ethernet (RJ45)

Connection method	RJ45
Note on the connection method	Auto negotiation and autocrossing
Transmission speed	10/100 Mbps
Transmission physics	Ethernet in RJ45 twisted pair
No. of channels	5 (RJ45 ports)

Product properties

Product type	Switch
Product family	Unmanaged Switch SFN
Type	Block design
MTTF	192.9 Years (MIL-HDBK-217F standard, temperature 25°C, operating cycle 100%)

Insulation characteristics

Protection class	III (IEC 61140, EN 61140, VDE 0140-1)

Switch functions

Basic functions	Unmanaged switch / auto negotiation, complies with IEEE 802.3, store and forward switching mode
Status and diagnostic indicators	LEDs: U_S, link and activity per port
Additional functions	Autonegotiation

Security functions

Basic functions	Unmanaged switch / auto negotiation, complies with IEEE 802.3, store and forward switching mode

Electrical properties

Local diagnostics	US Supply voltage Green LED
	LNK/ACT Link status/data transmission Green LED
	100 Data transmission speed Yellow LED
Maximum power dissipation for nominal condition	2.16 W

DRAFT

FL SWITCH SFN 5TX - Industrial Ethernet Switch

2891152

https://www.phoenixcontact.com/us/products/2891152

Test section	500 V DC 1 min.
Transmission medium	Copper

Supply

Supply voltage (DC)	24 V DC
Supply voltage range	9 V DC ... 32 V DC
Power supply connection	Via COMBICON, max. conductor cross section 2.5 mm²
Residual ripple	3.6 V_{PP} (within the permitted voltage range)
Max. current consumption	205 mA (at 9 V DC)
Typical current consumption	90 mA (at U_S = 24 V DC)

Connection data

Connection technology

Connection name	Power supply
pluggable	yes

Power supply

Connection method	Screw connection
Conductor cross section, rigid	0.2 mm² ... 2.5 mm²
Conductor cross section, flexible	0.2 mm² ... 2.5 mm²
Conductor cross section AWG	24 ... 12
Stripping length	7 mm

Environmental and real-life conditions

Ambient conditions

Degree of protection	IP20
Ambient temperature (operation)	0 °C ... 60 °C
Ambient temperature (storage/transport)	-20 °C ... 70 °C
Permissible humidity (operation)	5 % ... 95 % (non-condensing)
Permissible humidity (storage/transport)	5 % ... 95 % (non-condensing)
Vibration (operation)	in acc. with IEC 60068-2-6: 5g, 150 Hz
Air pressure (operation)	86 kPa ... 5 kPa (up to 1500 m above sea level)
Air pressure (storage/transport)	66 kPa ... 108 kPa (up to 3500 m above sea level)
Resistance to gases that may endanger the functions, in acc. with DIN 40046-36, DIN 40046-37	Sulfur dioxide (SO_2) 10 ±0.3 cm^3/m^3, hydrogen sulfide (H_2S) 1 ±0.3 cm^3/m^3, at 25°C and 75% humidity and exposure of four days

Standards and regulations

Free from substances that could impair the application of coating	In acc. with VW specification

Approvals

Conformity/Approvals

Conformance	CE-compliant
UL, USA / Canada	Class I, Div. 2, Groups A, B, C, D, T4

Why Buy A Maple HMI

In addition to our powerful and affordable hardware, we'll also continue to support your company long after a sale. Wide product selection, large in-stock inventory, outstanding product warranty, free technical support and software, and in-house repairs with quick turnaround times, Maple Systems has your business covered.

Add Remote IO for PLC Functionality

Select Maple Advanced and High-Performance HMIs have a sleek hardware platform that runs both an HMI application created with our free HMI software and PLC logic programmed with CODESYS; each on its own dedicated processor. Unlike the typical multicore set up, where the operating system scheduler is responsible for allocating tasks to each processor, these HMIs have a hard separation between cores. One core is dedicated to the HMI application, the other to executing PLC logic of the CODESYS project. This ensures taxing graphics processing operations will not interfere with deterministic real time control tasks executing on the other processor.

After selecting your HMI, choose from a suite of easy to use powerful I/O modules to connect to your field equipment. We offer a complete set of I/O modules which can be combined with one of our communication couplers to create a remote I/O block.

Remote Access and the IIoT

Remote access is the ability to access an HMI or connected device, from another device, at any time, and from anywhere. With our free HMI software and supported hardware solutions, you have the freedom to access the HMI, and all its data and applications, from another device and control it as if you were standing in front of it. Our Advanced and High-Performance HMIs support cMT Viewer, WebView, Web Streaming, and EasyAccess 2.0 and are designed to make accessing your HMI and data fast and streamlined.

Let us serve as your guide, making it an easy process to join the next evolution of automated control. Our Advanced and High-Performance HMIs can act as an access point enabling operating equipment on the plant floor to connect to information technologies of the Industrial Internet of Things (IIoT). With our IIoT solutions, that are already included in the EBPro software, we can help you achieve better access to invaluable data and open a world of possibilities for your business. Read more about our IIoT solutions.

Build your SCADA

We offer all the components you need to create your own unique level of supervisory data acquisition and control, from the simplest stand-alone machine to sophisticated multi-device networked production line(s), all the way to enterprise-level operations and IIoT functionalities leveraging cloud connectivity.

Our products can help you standardize communications between devices, gluing different systems together for one source to your SCADA. No need to redesign your entire application. Keep the components that are already working for you, just add Maple Systems components to grow your abilities to supervise, control, and acquire data.

DRAFT

Incredible Functionality Out of the Box

- Easily and quickly create the project with functional objects including numeric object, lamp object, combo-button, alarms, and recipes
- Pick and place objects, pictures, and shapes
- Import/export recipes
- Create trend display, graphs, XY plots, and pie charts
- Add passwords and security levels
- Assign communication (PLC) drivers easily and more with our Free HMI software

Additionally our HMIs support remote access solutions with VNC, MQTT, and OPC UA. For additional features see our High-Performance HMI series.

User Friendly HMI Configuration Software

Because designing the layout of screens and user-interface (UI) of the HMI is typically where most of the development time is spent, we've made our Free HMI configuration software easy to use.

- Import tags feature
- Tools to diagnose and monitor PLC to HMI connection
- Debugging tools
- Pre-built libraries
- Off-line and on-line simulation

These are just a few of the ways our software makes creating your project easier. We also have controller information sheets, cable drawings, sample projects, Getting Started Guides, and videos/tutorials available in our support center 24/7.

Allen-Bradley ABB babcock

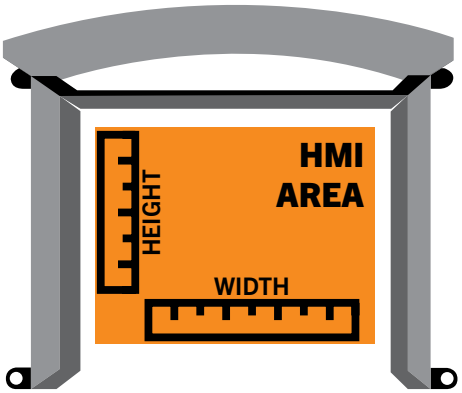
PROTECTING YOUR HMI

Look for your HMI model on our sizing chart on page 3 to find out which **SHADE AIDE®** you need.

NOW IP66 & UL RATED

DRAFT



Smith & Loveless Inc.

MEASURING GUIDE

WHY BUY A ONE-SIZE-FITS-ALL HMI PROTECTOR?

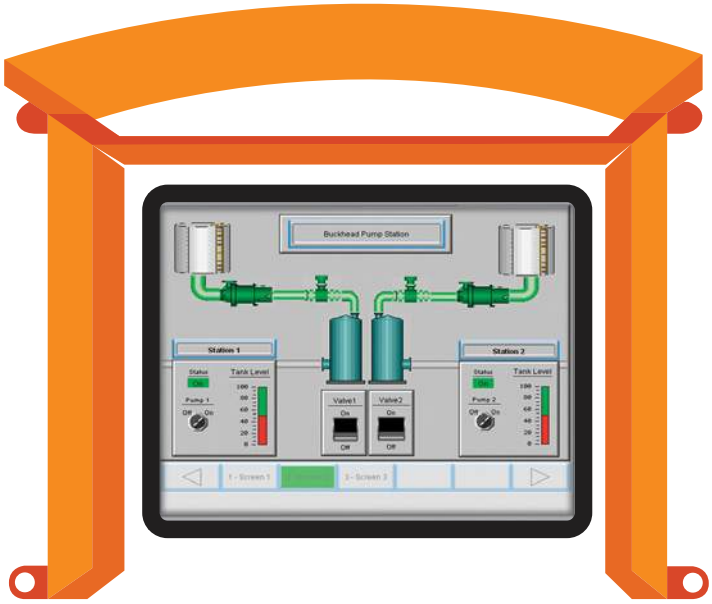
The **SHADE AIDE®** HMI protector comes in many different sizes and colors. Built for rugged, industrial environments, the **SHADE AIDE®** is sure to fit your HMI.

NOT SURE WHAT SIZE **SHADE AIDE®** TO GET?

Select Your Maximum HMI Area

DEPTH

Measure your HMI's length and width, making sure to measure edge to edge from the plastic casing of the HMI.



Account for how far the HMI face sticks out from the control panel to determine the depth.

Check what is behind the door. Your measurement should make it so none of the holes you drill will run into wiring or buttons on the back!

Find the distance from your HMI to any buttons or labels on the panel door. You will need 9/16" or 15mm clearance.

Find the **SHADE AIDE®** that is closest to your measurements and you're ready to order!

See page 3 for model sizes.

SHADE AIDE®
MODIFIED MINI

The New Modified Mini **SHADE AIDE®** protects many 5” HMI displays with its 5.75” W x 3.9325” H size.

Modified Mini
Part #: H87A570-4 or H87A570-4X
5.75” W x 3.9375” H x 1” D
146mm W x 100mm H x 25mm D

SHADE AIDE®
MEDIUM

With its easy-to-use design and snug fit, this medium-sized **SHADE AIDE®** is the ideal choice for anyone looking to keep their HMI screen in top condition with it’s easy to view technology.

Medium
Part #: H87A582-4 or H87A582-4X
12” W x 9.0625” x 1” D
304mm W x 230mm H x 25mm D

NEW MODELS

SHADE AIDE® LARGE DEEP

For HMIs with added depth, the new Large Deep **SHADE AIDE®** protects against sun, water and dust with it's **NEMA** and **IP66** ratings.

Large Deep
Part #: H87A555-4 or H87A555-4X
15.875" W x 11.4375" H x 2" D
403mm W x 290mm H x 50mm D

SHADE AIDE® X-LARGE MODIFIED

Whether you need to protect your screen from the elements or want to keep it looking its best, our X-Large Modified HMI cover protects even the largest of screens. Clearly see your HMI screen every time.

X-Large Modified
Part #: H87A578-4 or H87A578-4X
17" W x 14.8125" H x 1" D
431mm W x 376mm H x 25mm D

DRAFT

CLEARLY SEE YOUR SCREEN WITH **SHADE AIDE®** TECHNOLOGY!

No more glares or reflections on sunny days to prevent you from getting your work done effectively.

ITEMS 460A, B

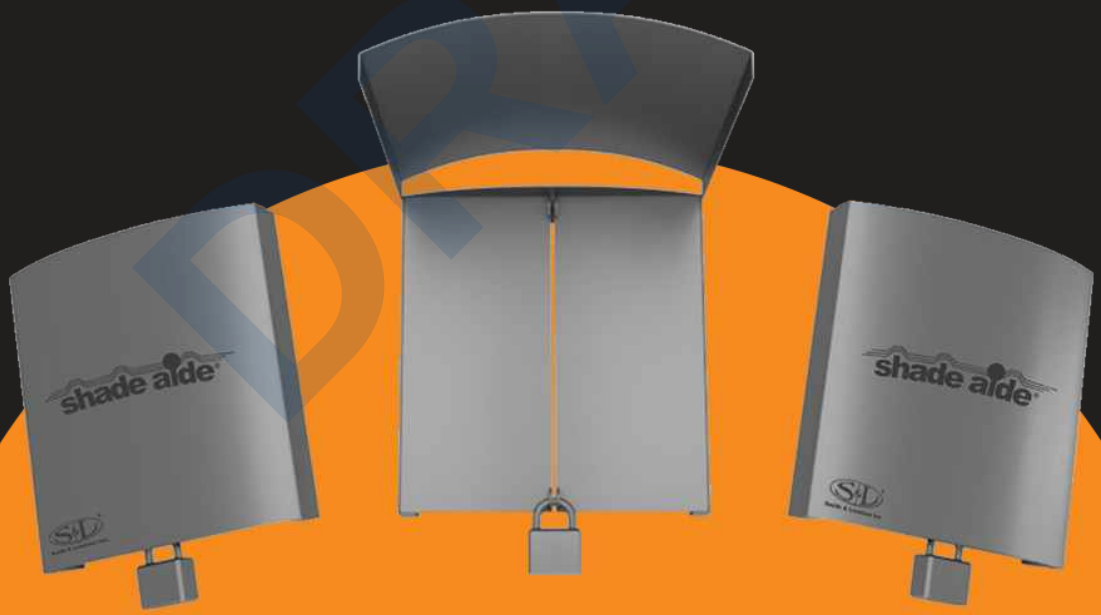
CERTIFIED PROTECTION

TO PROTECT YOUR HMIs FROM DUST AND WATER!

NOW IP66 & UL RATED

Sun, dust or water, **SHADE AIDE**® has you covered.
Every **SHADE AIDE**® now comes standard with IP66 quality to protect against dust and water, in addition to its shading capabilities.

Choose between the UL ratings of NEMA 4 or NEMA 4x, and let **SHADE AIDE**® do the rest with its IP66 rating. Select the **SHADE AIDE**® model for your unique HMI today!



DRAFT

KEEP SECURITY A PRIORITY!

Don’t let unsecure systems get in your way!

SHADE AIDE® has locking capability to give you peace of mind that your HMIs are safe with the padlock-compatible design. This secure feature keeps out unwanted users to your most important controls. Upgrade your security now when you visit ShadeAide.com

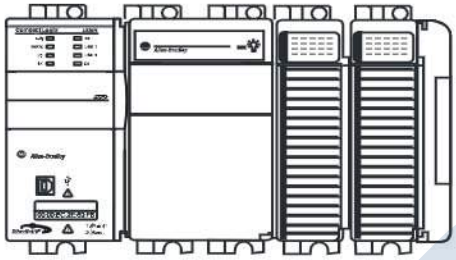
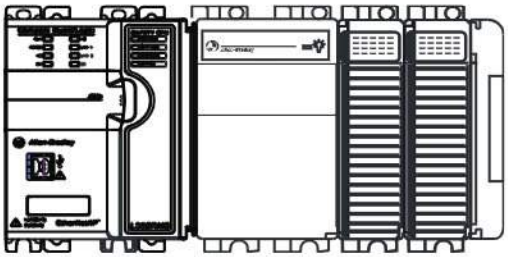
CompactLogix 5370 Controllers



CompactLogix 5370 L1 Control System

CompactLogix 5370 L2 Control System

CompactLogix 5370 L3 Control System



CompactLogix 5370 controllers provide scalable controller solutions to address a wide variety of applications. All CompactLogix 5370 controllers provide the following functionality:

- Two Ethernet ports
- One USB port
- Support for local expansion modules
- Control of local and distributed I/O modules
- Use of 1784-SD1 or 1784-SD2 Secure Digital (SD) card for nonvolatile memory
- A battery is no longer necessary because of the internal energy-storage solution

Some CompactLogix 5370 controllers provide the following functionality:

- Built-in power supply
- Some combination of embedded digital, analog, and high-speed counter modules
- Support for Integrated Motion over an EtherNet/IP™ network
- Access to DeviceNet® networks

Compact GuardLogix 5370 Control System

The Compact GuardLogix controller is a 1769-L3 CompactLogix controller that provides safety control to achieve SIL CL 3 according to EN62061 / EN 61511-1 / IEC 61508 and PLe according to EN ISO 13849-1. A major benefit of this system is that it's still one project; safety and standard control together.

Application	Description
SIL 1, 2, 3	The Compact GuardLogix controller system is type-approved and certified for use in safety applications up to and including SIL 3 according to IEC 61508, and applications up to and including PLe/Cat.4 according to ISO 13849-1. For more information, see these manuals: • GuardLogix 5570 and Compact GuardLogix 5370 Controllers Systems Safety Reference Manual, publication 1756-RM099 • Compact GuardLogix 5370 Controllers User Manual, publication 1769-UM002 • GuardLogix Safety Application Instruction Set Reference Manual, publication 1756-RM095

During development, safety and standard have the same rules. The following are allowed:

- Multiple programmers
- Online editing
- Forcing

Once the project is tested and ready for final validation, apply the safety application signature and safety-lock the application. This process sets the safety task to a SIL 3 integrity level. The Compact GuardLogix controller enforces the SIL 3 integrity level. When safety memory is locked and protected, the safety logic can't be modified and all safety functions operate with SIL 3 integrity. On the standard side of the Compact GuardLogix controller, all functions operate like a regular Logix controller. Thus online editing, forcing, and other activities are all allowed.

Standard logic and external devices, like HMIs or other controllers, can read safety memory with this level of integration. This level of integration removes the need to condition safety memory for use elsewhere. The result is easy systemwide integration and the ability to display safety status on displays or marquees. Use Guard I/O™ modules for field device connectivity. For safety interlocking between Compact GuardLogix controllers, use Ethernet or ControlNet® networks. Multiple Compact GuardLogix controllers can share safety data for zone to zone interlocking, or one Compact GuardLogix controller can use remote distributed safety I/O between different cells/areas.

Features - CompactLogix 5370 Controllers and Compact GuardLogix 5370 Controllers

Feature	1769-L16ER-BB1B 1769-L18ER-BB1B 1769-L18ERM-BB1B, 1769-L18ERM-BB1BK 1769-L19ER-BB1B, 1769-L19ER-BB1BK	1769-L24ER-QB1B 1769-L24ER-QBFC1B, 1769-L24ER-QBFC1BK 1769-L27ERM-QBFC1B	1769-L30ER, 1769-L30ERK 1769-L30ER-NSE 1769-L30ERM, 1769-L30ERMK 1769-L33ER, 1769-L33ERK 1769-L33ERM, 1769-L33ERMK, 1769-L36ERM, 1769-L37ERM, 1769-L37ERMK, 1769-L38ERM, 1769-L38ERMK	1769-L30ERMS 1769-L33ERMS, 1769-L33ERMSK 1769-L36ERMS 1769-L37ERMS, 1769-L37ERMSK 1769-L38ERMS, 1769-L38ERMSK
Controller tasks Continuous Periodic	32 tasks 100 programs/task			
Built-in communication ports	• Two Ethernet ports - CompactLogix 5370 controllers have two Ethernet ports. The ports carry the same network traffic as part of the embedded switch of the controller. However, the controller uses only one IP address. • One USB port (only for temporary connection).			
Communication options	EtherNet/IP	• EtherNet/IP • DeviceNet via 1769-SDN scanner		
EtherNet/IP node, max	• 1769-L16ER-BB1B: Up to 4 nodes • 1769-L18ER-BB1B, 1769-L18ERM-BB1B, 1769-L18ERM-BB1BK, 1769-L19ER-BB1B, 1769-L19ER-BB1BK: Up to 8 nodes	• 1769-L24ER-QB1B, 1769-L24ER-QBFC1B, 1769-L24ER-QBFC1BK: Up to 8 nodes • 1769-L27ERM-QBFC1B: Up to 16 nodes	• 1769-L30ER, 1769-L30ER-NSE, 1769-L30ERK, 1769-L30ERM, 769-L30ERMK, 1769-L30ERMS: Up to 16 nodes • 1769-L33ER, 1769-L33ERK, 1769-L33ERM, 1769-L33ERMK, 1769-L33ERMS, 1769-L33ERMSK: Up to 32 nodes • 1769-L36ERM, 1769-L36ERMS: Up to 48 nodes • 1769-L37ERM, 1769-L37ERMK, 1769-L37ERMS, 1769-L37ERMSK: Up to 64 nodes • 1769-L38ERM, 1769-L38ERMK, 1769-L38ERMS, 1769-L38ERMSK: Up to 80 nodes	
Controller connections	256			
Embedded I/O modules	• 16 DC digital inputs • 16 DC digital outputs	All controllers: • 16 DC digital inputs • 16 DC digital outputs Only 1769-L24ER-QBFC1B, 1769-L24ER-QBFC1BK, and 1769-L27ERM-QBFC1B: • 4 high-speed counter modules • 4 high-speed counter module outputs • 4 universal analog inputs • 2 analog output points	–	
Sockets, max	32			
Integrated Motion over an EtherNet/IP network	1769-L18ERM-BB1B, 1769-L18ERM-BB1BK: 1 or 2 axes	1769-L27ERM-QBFC1B - As many as 4 axes	• 1769-L30ERM, 1769-L30ERMK, 1769-L30ERMS: As many as 4 axes • 1769-L33ERM, 1769-L33ERMK, 1769-L33ERMS, 1769-L33ERMSK: As many as 8 axes • 1769-L36ERM, 1769-L36ERMS: As many as 16 axes • 1769-L37ERM, 1769-L37ERMK, 1769-L37ERMS, 1769-L37ERMSK: As many as 16 axes • 1769-L38ERM, 1769-L38ERMK, 1769-L38ERMS, 1769-L38ERMSK: As many as 16 axes	
Programming languages	• Relay ladder[1] • Structured Text • Function block • SFC			
Integrated safety	–			Yes

(1) The Compact GuardLogix 5370 controllers support only the relay ladder programming language in the safety task. The Compact GuardLogix 5370 controllers support all listed programming languages in the standard task.

Conducted RF immunity IEC 61000-4-6	10V rms with 1 kHz sine wave 80% AM from 150 kHz...80 MHz				

(1) If you are mounting a CompactLogix™ 5370 L1 controller on an EN 50 022 - 35 x 15 mm (1.38 x 0.59 in.) DIN rail, you must first adhere a bumper on the back of the controller. Failure to install the bumper before mounting the controller causes the system to fail to meet this specification. For more information, see the CompactLogix 5370 Controllers User Manual, publication 1769-UM021.

(2) If you are mounting a CompactLogix 5370 L1 controller on an EN 50 022 - 35 x 15 mm (1.38 x 0.59 in.) DIN rail, the Shock, nonoperating specification = 30 g.

(1) You can use up to the maximum number of local expansion modules with the CompactLogix 5370 L1 controllers that are listed. This condition applies only if the total current drawn by the embedded I/O and local expansion modules does not exceed both the available POINTBus™ backplane current of 1 A and the field power current of 3 A. For more information on POINTBus backplane current and field-power current considerations when installing local expansion modules, see page 9.

(2) Use this Conductor Category information to plan conductor routing. See the Industrial Automation Wiring and Grounding Guidelines, publication 1770-4.1 and the appropriate system-level installation manual.

(3) In regard to the CompactLogix 5370 L1 controllers, this specification applies to connecting wires to the power connector that is inserted in the controller. In regard to the CompactLogix 5370 L2 controllers, this specification applies to connecting wires to power terminals built into the controller.

DRAFT

Real-time Clock Accuracy

This table lists the real-time clock accuracy specifications for the CompactLogix 5370 controllers.

Ambient Temperature	Accuracy
0 °C (32 °F)	-143...+42 s/mo
25 °C (77 °F)	-78...+91 s/mo
40 °C (104 °F)	-101...+73 s/mo
60 °C (140 °F)	-204...-4.50 s/mo

Real-time Clock Hold-up Times

This table lists the typical real-time clock hold-up specifications for the CompactLogix 5370 controllers.

IMPORTANT The values in this table are typical and can vary with some CompactLogix 5370 control systems.

Ambient Temperature	Holdup Time, Typical
0 °C (32 °F)	40 days
25 °C (77 °F)	35 days
40 °C (104 °F)	28 days
60 °C (140 °F)	16 days

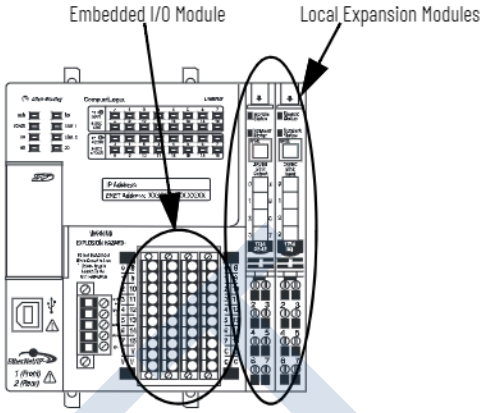
The I/O module support for CompactLogix 5370 controller systems varies by controller.

I/O Module Support - CompactLogix 5370 L1 Controllers

The CompactLogix 5370 L1 controllers offer an embedded I/O module and the option to use 1734 POINT I/O modules as local expansion modules.

The embedded I/O module provides the following:

- 16 sinking 24V DC digital input points
- 16 sourcing 24V DC digital output points



To use 1734 POINT I/O modules as local expansion modules, keep in mind the following:

- Local expansion modules must be installed in the same system as the CompactLogix 5370 L1 controller.
- The modules are installed to the right of the controller.
- The maximum number of local expansion modules available depends on the controller catalog of that system.

This table lists the number of 1734 POINT I/O modules the CompactLogix 5370 L1 controllers support. The minimum RPI of each I/O module is 1.0 ms and can be changed by 0.5 ms increments. You can use the maximum number of 1734 POINT I/O modules with these CompactLogix 5370 L1 controllers. The total current that the embedded I/O and local expansion modules draw can't exceed both the available POINTBus backplane current of 1 A and the field power current of 3 A.

1769-L1 Controllers - Local I/O Module Support

Cat. No.	Local 1734 POINT I/O Modules Supported, Max
1769-L16ER-BB1B	6
1769-L18ER-BB1B	8
1769-L18ERM-BB1B, 1769-L18ERM-BB1BK	
1769-L19ER-BB1B, 1769-L19ER-BB1BK	

Depending on the configuration of your application, you can use one of these devices to make additional POINTBus backplane current or field power current available:

Device	Description
1734-EP24DC	POINT I/O Expansion Power Supply - An expansion power supply is installed between embedded I/O modules and local expansion modules or between local expansion modules. The expansion power supply breaks the available POINTBus backplane current between the modules to its left and right. With the expansion power supply installed, the modules to its left can draw up to 1 A of POINTBus backplane current. The modules to the right of the expansion power supply can draw as much current as the current provided by the expansion power supply. Additionally, the expansion power supply breaks the available field power current between the modules to its left and right. With the expansion power supply installed, the modules to its left can draw up to 3 A of field power current. The modules to the right of the expansion power supply can draw as much field power current as allowed by the expansion power supply. For more information on the 1734-EP24DC expansion power supply, see the POINT I/O 24V DC Expansion Power Supply Installation Instructions, publication 1734-IN058.
1734-FPD	POINT I/O Field Power Distributor Module - A field power distributor module can also be installed between embedded I/O modules and local expansion modules or between local expansion modules. The field power distributor module breaks the available field power current between the modules to its left and right. With the field power distributor module installed, the modules to its left can draw up 3 A of field power current. The modules to the right of the field power distributor can draw as much field power current as allowed by the field power distributor. For more information on the 1734-FPD POINT I/O Field Power Distributor module, see the POINT I/O Field Power Distributor Module Installation Instructions, publication 1734-IN059. **IMPORTANT:** Remember, the field power distributor module changes only the level of field power current available in the system. The module does not affect the level of POINTBus backplane current available.

DRAFT

Local I/O Performance of the CompactLogix 5371 L1 Controllers

The requested packet interval (RPI) defines the frequency at which the controller sends data to and receives data from I/O modules. You set an RPI rate for each I/O module in your system.

CompactLogix 5370 L1 controllers always attempt to scan an I/O module at the configured RPI rate. For individual I/O modules, a Module RPI Overlap minor fault occurs if there are enough I/O modules with RPI rates set too fast that they can't all be serviced in the allotted interval.

The specific configuration parameters for a system determine the impact on actual RPI rates. These configuration factors can impact the effective scan frequency for any individual module:

- Rates at which the RPI rates of other 1734 POINT I/O modules are set
- Number of other 1734 POINT I/O modules in the system
- Types of other 1734 POINT I/O modules in the system
- Application user task priorities

In general, follow these guidelines when setting the RPI rates in a CompactLogix 5370 L1 control system:

Module Type	Guidelines
Digital	• 1...2 modules can be scanned in 2 ms. • 3...4 modules can be scanned in 4 ms. • 5...8 modules can be scanned in 8 ms. **IMPORTANT:** Remember that digital modules can be the embedded I/O module on the controller or 1734 POINT I/O modules that are used as local expansion modules. Therefore, the consideration for using two modules can be the embedded I/O module and a 1734 POINT I/O module or two 1734 POINT I/O modules.
Specialty and Analog	• 1 module can be scanned at 20 ms. • For each additional module, add 20 ms. For example, if a CompactLogix 5370 L1 control system uses two analog modules, the module can be scanned in 40 ms.
1734-485ASC	The total data size for all ASC modules determines the RPI rates: • For total data size less than 20 bytes, each module can be scanned in 20 ms. • For data size greater than 20 bytes, use the size value as the RPI. For example, if the total data size is 40 bytes, each ASC module can be scanned in 40 ms.

You aren't required to set the RPI values of an individual 1734 POINT I/O module to the values listed previously. For example, if your application scans one or two modules, you do not have to use RPI rates of 2 ms. Remember, though, that higher RPI rates result in scanning the data less frequently.

The RPI shows how quickly modules can be scanned, not how quickly an application can use the data. The RPI is asynchronous to the program scan. Other factors, such as program execution duration, affect I/O throughput.

Embedded Specifications - CompactLogix 5371 L1 Controllers

Attribute	1769-L16ER-BB1B, 1769-L18ER-BB1B, 1769-L18ERM-BB1B, 1769-L18ERM-BB1BK, 1769-L19ER-BB1B, 1769-L19ER-BB1BK
Embedded DC Input Specifications	
Inputs	16
Voltage category	24V DC sink
Operating voltage range	10...28.8V DC 24V DC nom
Digital filter, off to on/on to off	0.5 ms hardware plus 0...65 ms (selectable)
Input delay, off to on/on to off	
Off-state voltage, max	5V DC
Off-state current, max	1 mA
On-state current, min	2 mA @ 24V DC
Input impedance, max	5.4 kΩ
Cyclic update time	1...750 ms
Isolation voltage	50V DC (continuous), Basic Insulation Type Tested at 500V AC for 60 s, system to field No isolation between individual channels
IEC input compatibility	Type 3
Isolated groups	None
Embedded DC Output Specifications	
Outputs	16
Voltage category	24V DC source
Operating voltage range	10...28.8V DC 24V DC nom
Output delay, off to on	0.1 ms
Output delay, on to off	0.1 ms
Off-state leakage current, max	0.5 mA @ 24V DC
On-state current, min	1 mA per channel
On-state voltage drop, max	0.6V DC
Current per point, max	0.5 A
Current per module, max	3 A
Surge current per point, max	1 A for 100 ms per point, repeatable every 2 s
Isolation voltage	50V DC (continuous), Basic Insulation Type Tested at 500V AC for 60 s, system to field No isolation between individual channels
Isolated groups	None
Pilot duty rating	0.5 A
Embedded Power Supply Specifications	
Input voltage range	10...28.8V DC
Input voltage, nom	24V DC
Line requirement (VDC), min	30VA
Available 5V DC POINTBus backplane current	1 A @ 5V DC
Current draw @ 24V DC, field power, max	3 A(1)
Inrush, max	10 A
Line loss ride-through	10 ms...10 s
Output bus current capacity, max	0.1...3 A @ 5V DC
Load current, min	300 mA
Power dissipation, max	12 W
Short circuit protection	Internal fuse Not replaceable
Overvoltage protection	Yes

(1) Combined total for all devices that draw current from field power connections.

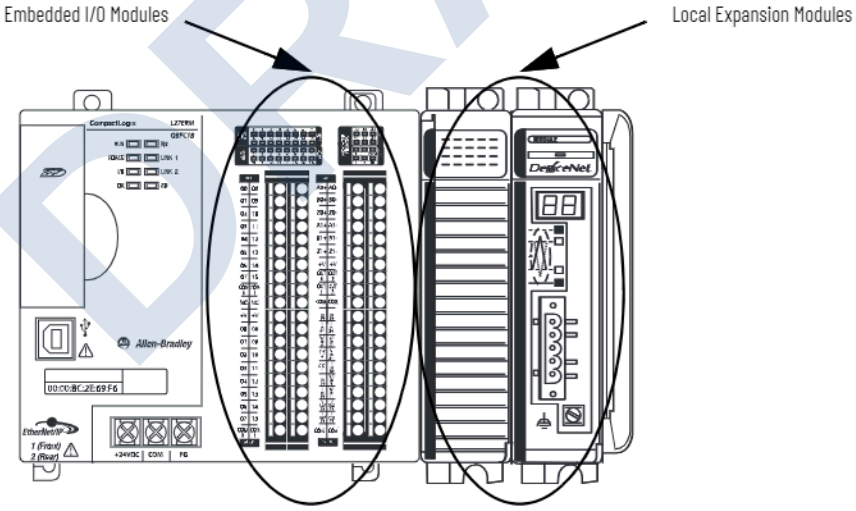
I/O Module Support - CompactLogix 5370 L2 Controllers

The CompactLogix 5370 L2 controllers offer embedded I/O modules and the option to use 1769 Compact I/O modules as local expansion modules. This table describes the embedded I/O modules and local expansion modules that the CompactLogix 5370 L2 controllers support.

Cat. No.	Embedded I/O Module Support						Local Expansion Modules Support
	Sinking/Sourcing 24V DC Digital Input Points	Sourcing 24V DC Digital Output Points	High-speed Counter Modules	High-speed Counter Module Output Points	Universal Analog Input Points	Analog Output Points	1769 Compact I/O Modules
1769-L24ER-QB1B	16	16	-	-	-	-	As many as 4 modules
1769-L24ER-QBFC1B, 1769-L24ER-QBFC1BK			4	4	4	2	
1769-L27ERM-QBFC1B							



IMPORTANT Remember the following when using the embedded I/O modules on CompactLogix 5370 L2 controllers:

- 1769-L24ER-QB1B controller - The digital input points and digital output points are on one embedded I/O module. Therefore, the 1769-L24ER-QB1B controller is considered to have one embedded I/O module.
- 1769-L24ER-QBFC1B, 1769-L24ER-QBFC1BK, and 1769-L27ERM-QBFC1B controllers - The digital input points and digital output points are on one embedded I/O module. The high-speed counter module input/output points, universal analog input points, and analog output points are on another single embedded I/O module. Therefore, the 1769-L24ER-QBFC1B, 1769-L24ER-QBFC1BK, and 1769-L27ERM-QBFC1B controllers are considered to have two embedded I/O modules.

You configure an RPI rate for the embedded I/O modules to establish specific time intervals at which data is transmitted between the controller and the embedded I/O modules. The available RPI range of the embedded I/O modules is 0.5...750.0 ms and can be changed by 0.5 ms increments. The default setting is 20 ms.

To use 1769 Compact I/O modules as local expansion modules, keep in mind the following:

- Local expansion modules must be installed in the same system as the CompactLogix 5370 L2 controller.
- Local expansion modules are installed to the right of the embedded I/O modules.
- You must install a 1769-ECR Compact I/O end cap on the right side of the control system. The end cap can be installed on the right side of the embedded I/O module. If local expansion modules are used, the end cap can be installed on the right side of the 1769 Compact I/O module.

DRAFT

CompactLogix 5370 L2 Controller Local I/O Performance

The Requested Packet Interval (RPI) defines the frequency at which the controller sends data to and receives data from I/O modules. You set an RPI rate for each I/O module in your system in the programming software. You also set RPI rates through the programming software for embedded I/O modules, local expansion modules, and distributed I/O modules over an EtherNet/IP network.

The CompactLogix 5370 L2 controllers always attempt to scan an I/O module at the configured RPI rate. The controller scans distributed I/O modules at the configured RPI rates.

With embedded I/O modules and local expansion modules, however, some specific system-configuration parameters determine the actual rate at which the controller scans the modules. That is, the controller can be configured to scan an I/O module at one rate, but actually scan the module at another rate.

For individual I/O modules, a Module RPI Overlap minor fault occurs if there is at least one I/O module that can't be serviced within its RPI time.

The specific configuration parameters for a system determine the impact on actual RPI rates. These configuration factors can impact the effective scan frequency for any individual embedded or local expansion module:

- Rates at which the RPI values of the embedded I/O modules are set
- Number of embedded I/O modules that are used in the system
- Types of embedded I/O modules that are used in the system
- Rates at which RPI values for the 1769 Compact I/O module are set
- Number of 1769 Compact I/O modules in the system
- Types of 1769 Compact I/O modules in the system
- Application user task priorities

RPI Rate Guidelines

Type of Module	Guidelines
Digital and analog (any mix)	The following guidelines apply: • 1...2 modules can be scanned in 0.5 ms. • 3...4 modules can be scanned in 1 ms. • 5...6 modules can be scanned in 2 ms. • Some input modules have a fixed 8 ms filter, so selection of a faster RPI has no effect.
Specialty	The following conditions apply: • For every full-sized 1769-SDN module in the system, increase the RPI of every other module by 2 ms. • For every 1769-HSC module in the system, increase the RPI of every other module by 1 ms. • For every full-sized 1769-ASCII module system, increase the RPI of every other module by 1 ms. • For every 1769-SM2 module in the system, increase the RPI of every other module by 2 ms. For example, the system includes four I/O modules that are configured with an RPI = 1 ms and you add a 1769-SDN module to the system. You must increase the RPI value for all four I/O modules by 2 ms. Therefore, when the 1769-SDN module is added to the system, the four I/O modules use an RPI = 3 ms. If, in the same system, you add a second 1769-SDN module, the RPI value of the four I/O modules is increased to 5 ms.

IMPORTANT The number of I/O modules can be the embedded I/O modules on the controller or 1769 Compact I/O modules that are used as local expansion modules.

Therefore, the consideration for using modules can be any of the following system configurations:

- Only embedded I/O modules
- Only 1769 Compact I/O modules
- Some combination of embedded I/O modules and 1769 Compact I/O modules

You can set individual RPI rates for 1769 Compact I/O modules higher than those values listed in this table. The RPI shows how quickly modules can be scanned, not how quickly an application can use the data. The RPI is asynchronous to the program scan. Other factors, such as program execution duration, affect I/O throughput.

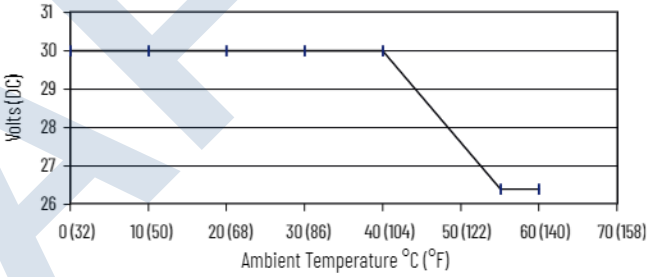
Embedded HSC Module Specifications - CompactLogix 5370 L2 Controllers

Attribute	1769-L24ER-QBFC1B, 1769-L24ER-QBFC1BK 1769-L27ERM-QBFC1B
Input Specifications	
Input frequency, max	250 kHz
Input current, max	15 mA per channel
Input current, min	6.8 mA
Input voltage range	2.6...30V DC(1)
On-state voltage, max	30V DC
On-state current, min	6.8 mA
Off-state voltage, max	1.0V DC
Off-state current, max	1.5 mA
Off-state leakage current, max	1.5 mA
Input impedance, nom	1950 Ω
Pulse width, min	2.5 µs
Phase separation, min	1.3 µs
Isolation voltage	75V (continuous), reinforced insulation type Type tested at 1200V AC for 60 s; inputs to system backplane and input to input
Output Specifications	
Output voltage range	5...30V DC
On-state voltage, max	User power - 0.1V DC
On-state output current, max	0.25 A per channel
On-state output current, min	1 mA
On-state voltage drop, max	0.5V DC
Off-state leakage current, max	5 µA
Turn-on time, max	400 µs
Turn-off time, max	200 µs
Reverse polarity protection	30V DC
Isolation voltage	75V (continuous), reinforced insulation type Type tested at 1200V AC for 60 s; inputs to system backplane and input to input
Current per channel, max	1.0 A @ 40 °C (104 °F) 0.5 A @ 55 °C (131 °F) 0.25 A @ 60 °C (140 °F)
Current per module, max	4.0 A @ 40 °C (104 °F) 2.0 A @ 55 °C (131 °F) 1.0 A @ 60 °C (140 °F)

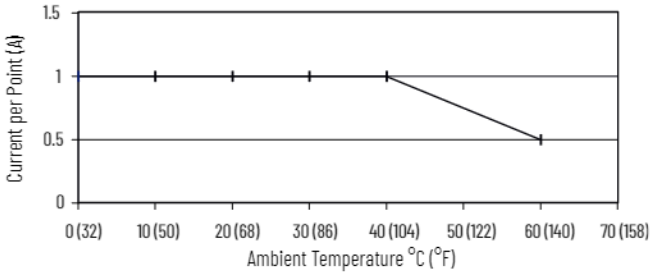
(1) See Maximum Input Voltage - 24V DC Operation temperature derating.

Embedded HSC Module Temperature Derating



Maximum Input Voltage - 24V DC Operation

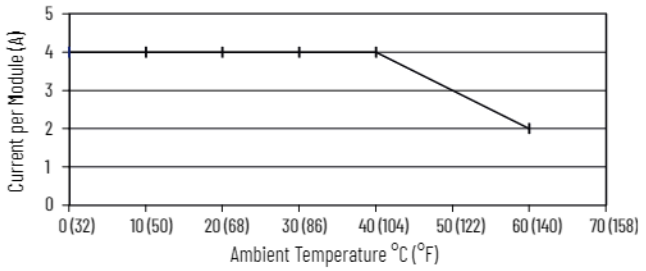
Temperature	Derated Voltage(1)
40 °C (104 °F)	30V DC
55 °C (131 °F)	26.4V DC
60 °C (140 °F)	5V DC



(1) You achieve an input voltage derating of 55...60 °C (131...140 °F) by using a dropping resistor.
For 24V DC input voltage, use a 2.4 kΩ, 1/2 W resistor.
For input voltages other than 24V DC, use a 1/2 W resistor with value: 125 x (V_{in} - 5V).

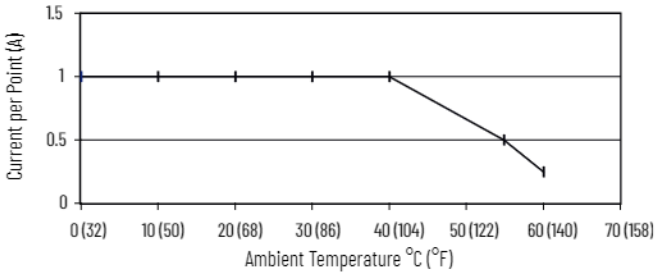
Maximum Output Voltage - 24V DC Operation

Temperature	Derated Voltage
40 °C (104 °F)	30V DC
55...60 °C (131...140 °F)	26.4V DC



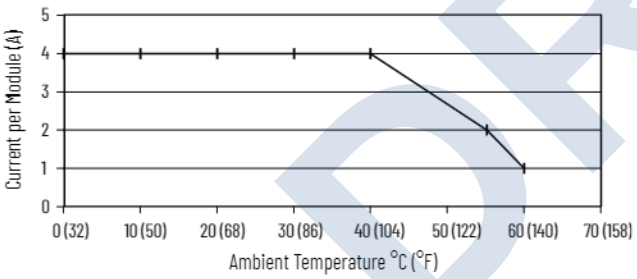
Maximum Input Current Per Point - 5V DC Operation

Temperature	Derated Current
0...40 °C (32...104 °F)	1 A
60 °C (140 °F)	0.5 A



DRAFT

Maximum Output Current Per Point - 5V DC Operation



Temperature	Derated Current
0...40 °C (32...104 °F)	4 A
60 °C (140 °F)	2 A

Maximum Output Current Per Point - 24V DC Operation

Temperature	Derated Current
0...40 °C (32...104 °F)	1 A
55 °C (131 °F)	0.5 A
60 °C (140 °F)	0.25 A

Maximum Output Current Per Module - 24V DC Operation

Temperature	Derated Current
40 °C (104 °F)	4 A
55 °C (131 °F)	2 A
60 °C (140 °F)	1 A

Embedded Power Supply Specifications - CompactLogix 5370 L2 Controllers

Attribute	1769-L24ER-QB1B	1769-L24ER-QBFC1B, 1769-L24ER-QBFC1BK, 1769-L27ERM-QBFC1B
Input voltage range	19.2...31.2V DC	
Input voltage, nom	24V DC	
Line requirement, max[1]	2.1 A @ 24V DC, Class 2/SELV	
Available 5V DC bus current	1.54 A	1.0 A
Available 24V DC bus current	0.95 A	0.8 A
Inrush, max	< 30 A @ 19.2...31.2V DC	
Line loss ride-through	10 ms...10 s	
Short circuit protection	Internal fuse Not replaceable	
Overvoltage protection	Yes	
Isolation voltage	30V AC/30V DC (continuous), reinforced insulation type Type tested at 500V AC or 710V DC for 60 s; outputs to system backplane	

(1) Value rated at the following ambient temperatures: 40 °C (104 °F), 55 °C (131 °F), 60 °C (140 °F).

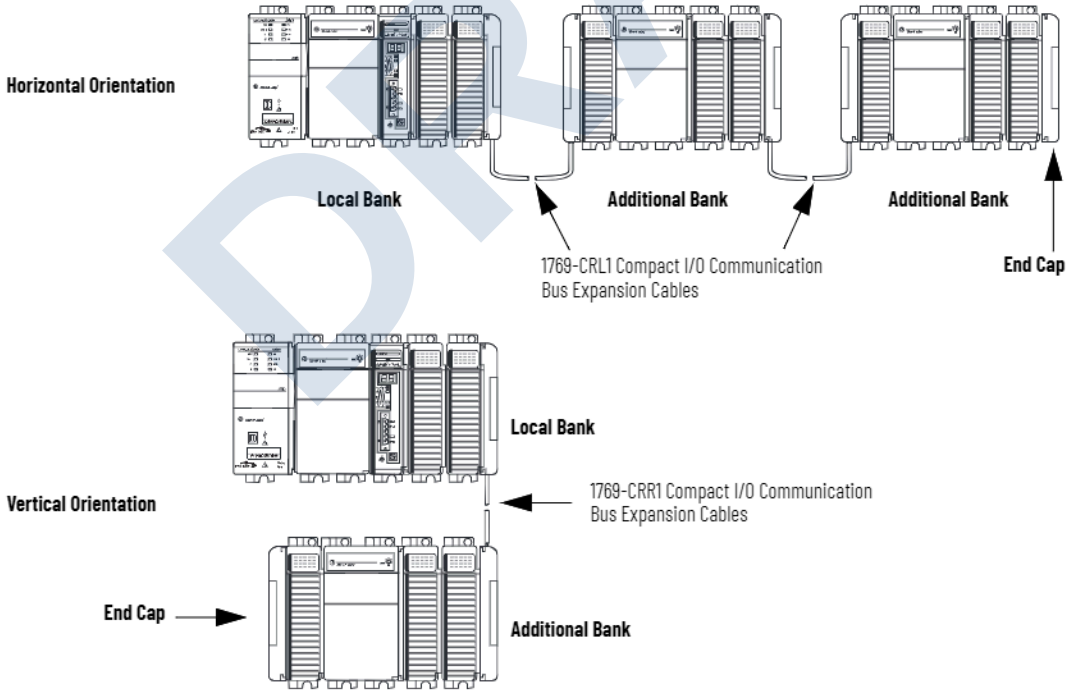
I/O Module Support - CompactLogix 5370 L3 and Compact GuardLogix 5370 Controllers



The CompactLogix 5370 L3 controllers offer local expansion modules that are installed across up to three banks of modules. You must use 1769 Compact I/O modules with these controllers.

Remember the following when using I/O modules with the CompactLogix 5370 L3 and Compact GuardLogix 5370 controllers:

- The controller must be the leftmost module in the local bank of the system.
- The number of I/O modules that are supported in a controller system varies by controller catalog number.

Cat. No.	Local 1769 Compact I/O Modules Supported, Max
1769-L30ER, 1769-L30ERK 1769-L30ER-NSE 1769-L30ERM, 1769-L30ERMK 1769-L30ERMS	8
1769-L33ER, 1769-L33ERK 1769-L33ERM, 1769-L33ERMK 1769-L33ERM, 1769-L33ERMSK	16
1769-L36ERM 1769-L36ERMS 1769-L37ERM, 1769-L37ERMK 1768-L37ERMS, 1768-L37ERMSK 1769-L38ERM, 1769-L38ERMK 1769-L38ERMS, 1769-L38ERMSK	30

- You can install I/O modules in as many as three banks, that is, the local bank and two additional banks.
- You can install as many as three I/O modules between the controller and power supply.
- You can install as many as eight I/O modules to the right of the power supply in the local bank.
- You can install as many as eight I/O modules on both the left and right sides of the power supply in additional banks.
- You must consider the distance rating and current draw of the controller and all I/O modules when designing your system.
- Systems with multiple banks can be installed vertically or horizontally.
- You must use expansion cables to connect banks in multi-bank systems.
- You must use an end cap at the end of the last bank in a system.

DRAFT

Local I/O Performance of CompactLogix 5370 L3 Controllers

The requested packet interval (RPI) defines the frequency at which the controller sends data to and receives data from I/O modules. In the programming software, you set an RPI rate for each I/O module in your system.

The CompactLogix 5370 L3 controllers always attempt to scan an I/O module at the configured RPI rate. An I/O Task Overlap minor fault occurs if there isn't enough system bandwidth. This fault occurs if other, higher priority tasks help prevent the 1769 Compact I/O subsystem from completing before the next scheduled time for it to run again, which consumes system bandwidth. Higher priority tasks that help prevent the 1769 Compact I/O subsystem task from completing before the next scheduled time for it to run again use up system bandwidth.

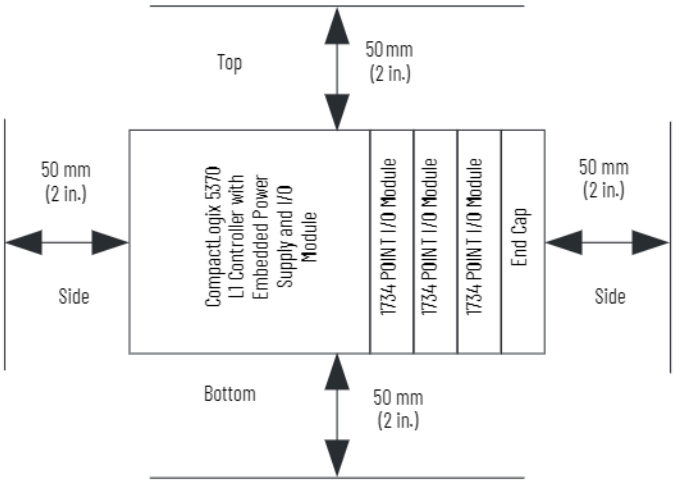
For individual I/O modules, a Module RPI Overlap minor fault occurs if there is at least one I/O module that can't be serviced within its RPI time.

The specific configuration parameters for a system determine the impact on actual RPI rates. These configuration factors can impact the effective scan frequency for any individual module:

- Rates at which the RPI rates of other 1769 Compact I/O are set
- Number of other 1769 Compact I/O modules in the system
- Types of other 1769 Compact I/O modules in the system
- Application user task priorities

RPI Rate Guidelines

Type of Module	Guidelines
1769 Compact I/O digital and analog (any mix) modules	The following guidelines apply: • 1...2 modules can be scanned in 0.5 ms. • 3...4 modules can be scanned in 1 ms. • 5...30 modules can be scanned in 2 ms. • Some input modules have a fixed 8 ms filter, so selection of a faster RPI has no effect.
1769 Compact I/O specialty modules	The following conditions apply: • For every full-sized 1769-SDN module in the system, increase the RPI of every other module by 2 ms. • For every 1769-HSC module in the system, increase the RPI of every other module by 1 ms. • For every full-sized 1769-ASCII module system, increase the RPI of every other module by 1 ms. For every 1769-SM2 module in the system, increase the RPI of the other module by 2 ms. For example, the system includes four I/O modules that are configured with an RPI = 1 ms and you add a 1769-SDN module to the system. You must increase the RPI value for all four I/O modules by 2 ms. Therefore, when the 1769-SDN module is added to the system, the four I/O modules use an RPI = 3 ms. If, in the same system, you add a second 1769-SDN module, the RPI value of the four digital I/O modules is increased to 5 ms.



You can set individual RPI values of the 1769 Compact I/O module higher than these values. For example, if your application scans one or two modules, you do not have to use RPI values = 0.5 ms. You can set the RPI to a higher value, such as 1.0 ms, if necessary. Remember, higher RPI values result in scanning the data less frequently.

The RPI is asynchronous to the program scan. Other factors, such as program execution duration, affect I/O throughput.

Armor CompactLogix and Armor Compact GuardLogix Controllers

Armor CompactLogix

Armor Compact GuardLogix

The Armor CompactLogix and Armor Compact GuardLogix controllers extend the CompactLogix platform to the On-Machine™ space, this puts industrial control closer to the application and sometimes onto the machine itself. The safety controllers provide standard and safety memory. The memory that each catalog number supports is listed in the Technical Specifications table on page 27. The controllers also support two independent Ethernet ports to connect to an EtherNet/IP network.

This safety controller supports the full temperature range as CompactLogix controllers, while offering global certifications and ratings for IP67 dust and water protection. It's certified for use in safety applications up to and including safety integrity level (SIL) 3 and Performance Level (e) in which the de-energized state is the safe state. With so many hardware functions in one device, the Armor CompactLogix and Armor Compact GuardLogix controllers provide the following benefits:

- Minimized cabinet hardware
- Simplified wiring layouts
- No required tools or specialty personnel for component replacement
- Improve Mean Time to Restoration (MTTR)
- Simplified troubleshooting
- Readily available system status without the need to open a cabinet or visit a control room

The Armor CompactLogix and Armor Compact GuardLogix controllers provide memory capacity for the most demanding applications. In some applications, for example, when you use these controllers on a Device Level Ring (DLR) network, resiliency is provided from the loss of one network connection and you can replacement devices while production is in progress.

Similar to the Compact GuardLogix controllers, the Armor Compact GuardLogix controllers offer the standard features of a CompactLogix controller and safety features. One difference is that the Armor Compact GuardLogix controllers can use I/O modules that are on-machine and are accessible over an EtherNet/IP network.

Features - Armor CompactLogix and Armor Compact GuardLogix Controllers

Feature	1769-L33ERM0 1769-L36ERM0 1769-L37ERM0 1769-L38ERM0	1769-L33ERMOS 1769-L36ERMOS 1769-L37ERMOS 1769-L38ERMOS
Controller tasks Continuous Periodic	32 tasks 100 programs/task	
Built-in communication ports	• Two Ethernet ports - CompactLogix 5370 controllers have two Ethernet ports. The ports carry the same network traffic as part of the embedded switch of the controller. However, the controller uses only one IP address. • One USB port (only for temporary connection)	
Communication options	EtherNet/IP	
EtherNet/IP node, max	• 1769-L33ERM0, 1769-L33ERMOS: Up to 32 nodes • 1769-L36ERM0, 1769-L36ERMOS: Up to 48 nodes • 1769-L37ERM0, 1769-L37ERMOS: Up to 64 nodes • 1769-L38ERM0, 1769-L38ERMOS: Up to 80 nodes	
Controller connections	256	
Sockets, max	32	
Integrated Motion over an EtherNet/IP network	• 1769-L33ERM0, 1769-L33ERMOS: As many as 8 axes • 1769-L36ERM0, 1769-L36ERMOS: As many as 16 axes • 1769-L37ERM0, 1769-L37ERMOS: As many as 16 axes • 1769-L38ERM0, 1769-L38ERMOS: As many as 16 axes	
Programming languages	• Relay ladder(1) • Structured Text • Function block • SFC	
Integrated safety	–	Yes

(1) The Armor Compact GuardLogix controllers support only the relay ladder programming language in the safety task. The Armor Compact GuardLogix controllers support all listed programming languages in the standard task.

1769 Packaged CompactLogix Controllers with Embedded I/O

The 1769-L23*x* controllers provide the following functionality:

- Built-in power supply
- Either two serial ports or one serial and one Ethernet port, depending on controller catalog number
- Combination of embedded digital, analog, and high-speed counter module I/O modules
- 1769-ECR right-end cap

Features - 1769 Packaged CompactLogix Controllers

Characteristic	1769-L23E-QB1B	1769-L23E-QBFC1B	1769-L23-QBFC1B
Available user memory	512 KB		
CompactFlash card	-		
Communication ports	1 Ethernet port 1 RS-232 serial port (DF1 or ASCII)		2 RS-232 ports (isolated DF1 or ASCII; only nonisolated DF1)
Embedded I/O	16 DC inputs 16 DC outputs	16 DC inputs 16 DC outputs 4 analog inputs 2 analog outputs 4 high-speed counter modules	
Module expansion capacity	Up to three additional 1769 modules	Up to two additional 1769 modules	
Embedded power supply	24V DC		

You can add one or two additional 1769 modules to the right of the controller package. The modules that you can add depend on their current draw. Each packaged controller has the following amount of 5V DC bus current.

1769-L23*x* Available DC Current

Controller	Available 5V DC Bus Current
1769-L23E-QB1B	1000 mA
1769-L23E-QBFC1B	450 mA
1769-L23-QBFC1B	800 mA

Local I/O Performance - 1769 Packaged CompactLogix L23 Controllers

The requested packet interval (RPI) defines the frequency at which the controller sends and receives all I/O data on the backplane. The default RPI is 5 ms. The combination of embedded I/O in the packaged controllers determines the fastest RPI that you can configure.

Controller	Guideline
1769-L23E-QB1B	1...4 modules can be scanned in 1.0 ms
1769-L23E-QBFC1B 1769-L23-QBFC1B	1...4 modules can be scanned in 1.5 ms 5...6 modules can be scanned in 2.0 ms

You can always select an RPI that is slower than listed previously. These considerations show how fast modules can be scanned—not how fast an application can use the data. The RPI is asynchronous to the program scan. Other factors, such as program execution duration, affect I/O throughput.

Certifications - 1769 Packaged CompactLogix Controllers

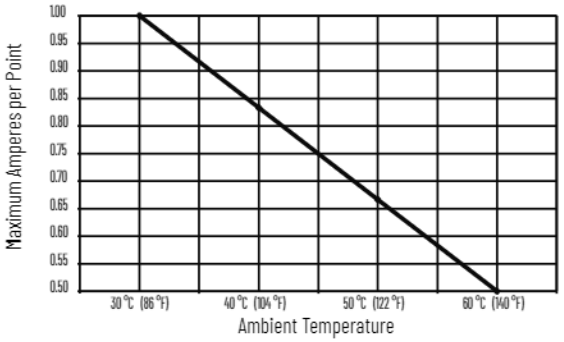
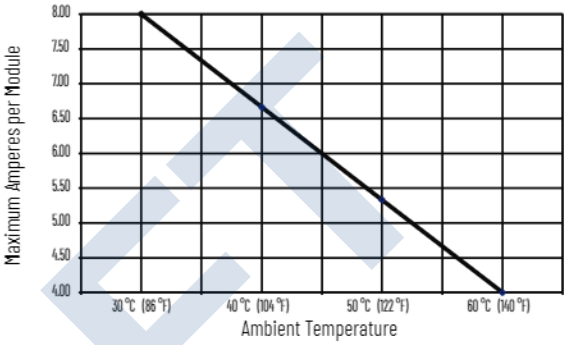
Embedded DC Input Specifications



Attribute	1769-L23E-QB1B, 1769-L23E-QBFC1B, 1769-L23-QBFC1B
Inputs	16 (8 points/group)
Voltage category	24V DC sink/source
Operating voltage range	10...30V DC @ 30 °C (86 °F) 10...26.4V DC @ 60 °C (140 °F)
Digital filter, off to on	0 s, 100 µs, 500 µs, 1 ms, 2 ms
Input delay, off to on	100 µs (typical), 300 µs (max)
Digital filter, on to off	0 s, 100 µs, 500 µs, 1 ms, 2 ms
Input delay, on to off	250 µs (typical), 1 ms (max)
Off-state voltage, max	5V DC
Off-state current, max	1.5 mA
On-state current, min	2 mA @ 10V DC
Inrush current, max	250 mA
Input impedance, max	3 kΩ
Cyclic update time	100 µs...750 ms
Isolation voltage	75V (continuous), basic insulation type Type tested at 1200V AC for 60 s; inputs to system backplane and input group to input group
IEC input compatibility	Type 3
Isolated groups	Group 1: inputs 0...7 Group 2: inputs 8...15 Isolated groups operate in either sink or source configurations

Embedded DC Output Specifications



Attribute	1769-L23E-QB1B, 1769-L23E-QBFC1B, 1769-L23-QBFC1B
Outputs	16
Voltage category	24V DC source
Operating voltage range	20.4...26.4V DC
Output delay, off to on	0.1 ms
Output delay, on to off	1.0 ms
Off-state leakage current, max	1.0 mA @ 26.4V DC
On-state current, min	1.0 mA
On-state voltage drop, max	1.0V DC @ 1.0 A
Current per point, max	0.5 A @ 60 °C (140 °F) 1.0 A @ 30 °C (86 °F) Also see the derating graphs
Current per module, max	4.0 A @ 60 °C (140 °F) 8.0 A @ 30 °C (86 °F) Also see the derating graphs on page 31
Surge current per point	2 A for 10 ms per point, repeatable every 2 s
Load current, min	3 mA per point
Isolation voltage	75V (continuous), basic insulation type Type tested at 1200V AC for 60 s; outputs to system backplane
Isolated groups	Group 1: Outputs 0...15 (internally connected to common)
Pilot duty rating	0.5 A, 24V DC @ 60 °C (140 °F) 1.0 A, 24V DC @ 30 °C (86 °F)

DRAFT

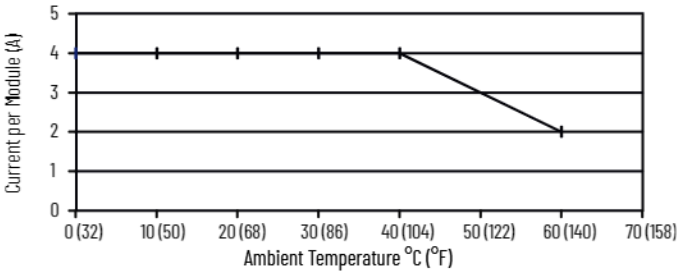
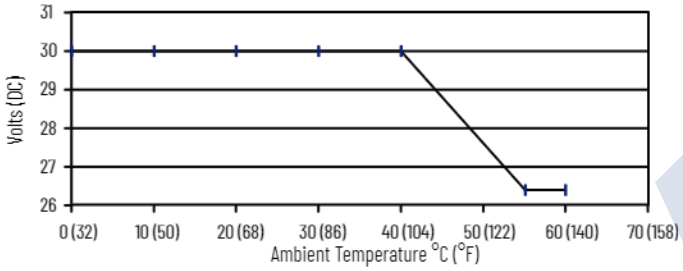
Embedded HSC Module Temperature Derating



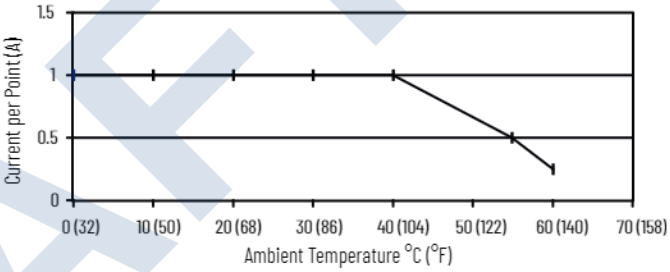
Maximum Input Voltage - 24V DC Operation

Temperature	Derated Voltage[1]
0...40 °C (32...104 °F)	30V DC
55 °C (131 °F)	26.4V DC
60 °C (140 °F)	5V DC



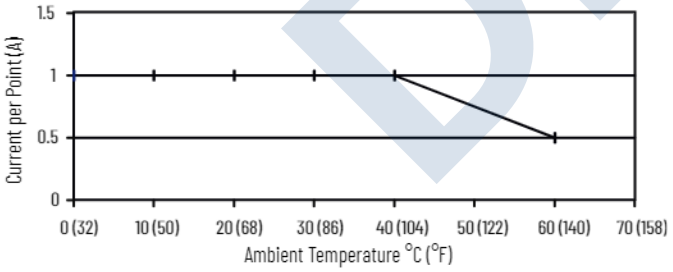
(1) You achieve an input voltage derating 55...60 °C (131...140 °F) by using a drop resistor.
For 24V DC input voltage, use a 2.4 kΩ, 1/2 Watt resistor.
For input voltages other than 24V DC, use a 1/2 W resistor with value: 125 x (V_{in} - 5V).

Maximum Output Current Per Module - 5V DC Operation



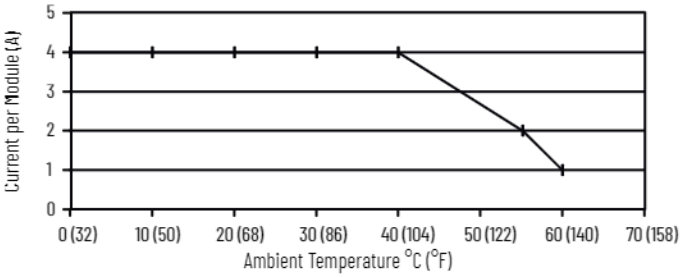
Temperature	Derated Current
0...40 °C (32...104 °F)	4 A
60 °C (140 °F)	2 A

Maximum Output Voltage - 24V DC Operation



Temperature	Derated Voltage
0...40 °C (32...104 °F)	30V DC
55...60 °C (131...140 °F)	26.4V DC

Maximum Output Current Per Point - 24V DC Operation

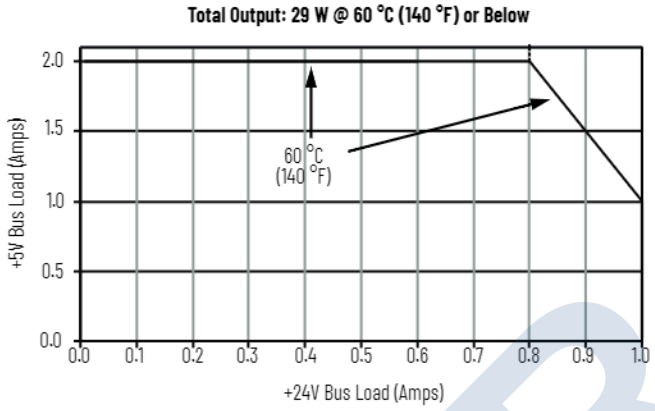


Temperature	Derated Current
0...40 °C (32...104 °F)	1 A
55 °C (131 °F)	0.5 A
60 °C (140 °F)	0.25 A

Maximum Output Current Per Point - 5V DC Operation

Temperature	Derated Current
0...40 °C (32...104 °F)	1 A
60 °C (140 °F)	0.5 A

Maximum Output Current Per Module - 5V DC Operation



Temperature	Derated Current
0...40 °C (32...104 °F)	4 A
55 °C (131 °F)	2 A
60 °C (140 °F)	1 A

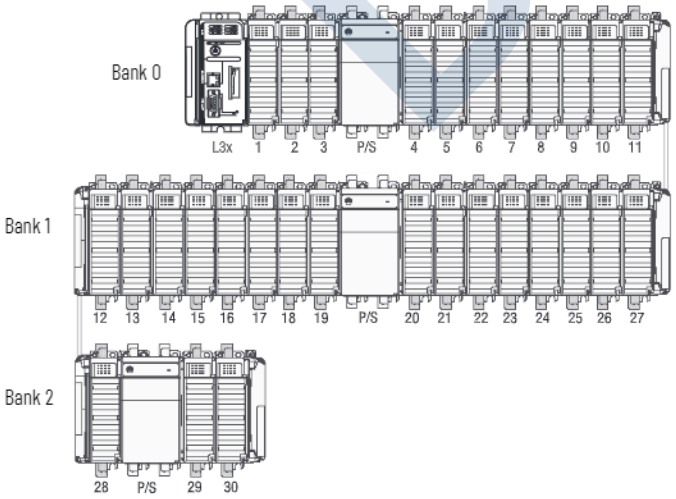
1769 Modular CompactLogix Controllers



In a 1769-L3*x* controller system, the 1769 I/O modules can be placed to the left and the right of the power supply. As many as eight modules can be placed on each side of the power supply.

Features - 1769 Modular CompactLogix Controllers

Characteristic	1769-L31	1769-L32C	1769-L32E, 1769-L32EK	1769-L35CR	1769-L35E
Available user memory	512 KB	750 KB		1.5 MB	
CompactFlash card	1784-CF128				
Communication ports	2 RS-232 ports (isolated DF1 or ASCII; only nonisolated DF1)	1 ControlNet port	1 Ethernet port	1 ControlNet port	1 Ethernet port
		1 RS-232 serial port (DF1 or ASCII)			
Module expansion capacity	16 1769 modules			30 1769 modules	
Power supply distance rating	4 modules				

The CompactLogix controller has a power supply distance-rating of four modules. The controller must be the leftmost module in the first bank of the system. The maximum configuration for the first bank of a CompactLogix controller includes the following:

- The controller
- Three I/O modules to the left of the power supply
- Eight I/O modules to the right of the power supply

Local I/O Performance - 1769 CompactLogix L3 *Controllers*

You can configure an individual RPI for each local 1769 Compact I/O module. The RPI defines the frequency at which the controller sends and receives all I/O data on the backplane.

Type of Module	Guideline
Digital and analog (any mix)	1...4 modules can be scanned in 1 ms 5...30 modules can be scanned in 2 ms Some input modules have a fixed 8 ms filter, so selection of a faster RPI has no effect
Specialty	Full-sized 1769-SDN modules add 2 ms per module 1769-HSC modules add 1 ms per module Full-sized 1769-ASCII modules add 1 ms per module

You can always select an RPI that is slower than listed previously. These considerations show how fast modules can be scanned—not how fast an application can use the data. The RPI is asynchronous to the program scan. Other factors, such as program execution duration, affect I/O throughput.

DRAFT

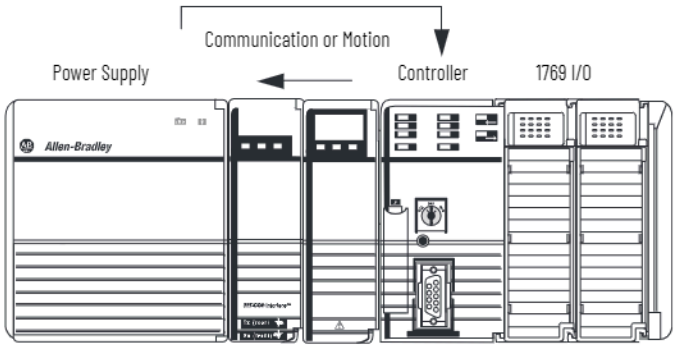
1768 CompactLogix Controllers

The 1768-L4*x* controller combines both a 1768 backplane and a 1769 backplane. The 1768 backplane supports the 1768 controller, the 1768 power supply, and a maximum of four 1768 modules. The 1769 backplane supports 1769 modules.

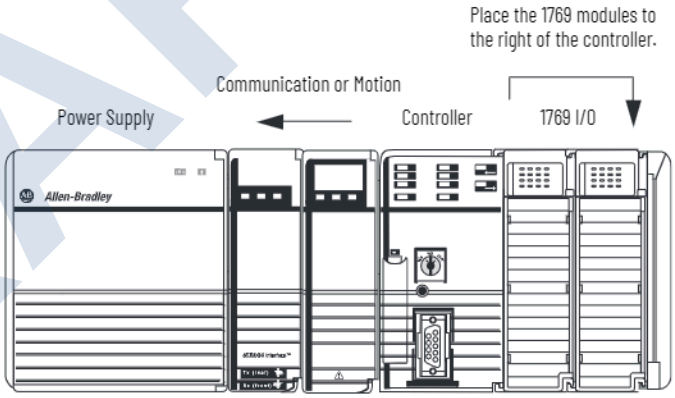
Features - 1768 CompactLogix Controllers



Characteristic	1768-L43	1768-L45	1768-L43S	1768-L45S
Available user memory	2 MB	3 MB	2 MB standard 0.5 MB safety	3 MB standard 1 MB safety
CompactFlash card	1784-CF128			
Communication options	EtherNet/IP (standard and safety) ControlNet (standard and safety) DeviceNet (standard)			
Serial communication port	1 RS-232 port			
Module expansion capacity	Two 1768 modules Sixteen 1769 modules			
Power supply distance rating	-			
Programming languages	Relay ladder Structured Text Function block Sequential Function Chart		Standard task: all languages Safety task: relay ladder, safety application instructions	

Compact GuardLogix Safety System

The Compact GuardLogix controller is a 1768-L4xS CompactLogix controller that provides safety control to achieve SIL 3/PLe according to ISO 13849. A major benefit of this system is that it's still one project; safety and standard control together. See page 3 for more information on how to develop projects with Compact GuardLogix controllers.



Placement - 1768 CompactLogix L4 Controllers

In a 1768-L4*x* controller system, place 1768 modules between the power supply and the controller.

Place the 1769 modules to the right of the 1768 backplane:

- As many as eight 1769 modules can be attached to the right of the 1768 system.
- The 1769 I/O connected directly to the 1768 backplane does not need a 1769 power supply.
- Additional 1769 modules must be in additional I/O banks.
- Each additional I/O bank must have its own 1769 power supply.

Local I/O Performance - 1768 CompactLogix L4 Controllers

Configure an individual RPI for each local 1769 Compact I/O module. Use the default RPI numbers that the programming software automatically assigns or select faster RPI values as fast as 1 ms. I/O module update times do not affect overall 1768 bus performance in the following situations:

- Use faster RPI values for time critical I/O without impacting overall 1769 Compact I/O performance.
- Use Immediate Output (IOT) instructions for further reduction in I/O module update times.

DRAFT

Certifications - 1768 CompactLogix Controllers

Certification[1]	1768-L43 1768-L45	1768-L43S 1768-L45S
c-UL-us	UL Listed Industrial Control Equipment, certified for US and Canada. See UL File E65584. UL Listed for Class I, Division 2 Group A,B,C,D Hazardous Locations, certified for U.S. and Canada. See UL File E194810.	
CE	European Union 2004/108/EC EMC Directive, compliant with: EN 61326-1; Meas./Control/Lab., Industrial Requirements EN 61000-6-2; Industrial Immunity EN 61000-6-4; Industrial Emissions EN 61131-2; Programmable Controllers (Clause 8, Zone A & B)

Controller Memory Use

These equations provide an estimate of the memory that is needed for a controller. These numbers are rough estimates.

Controller tasks	_____ * 4000	=	_____ bytes (minimum 1 task)
Digital I/O points	_____ * 400	=	_____ bytes
Analog I/O points	_____ * 2600	=	_____ bytes
DeviceNet modules(1)	_____ * 7400	=	_____ bytes
Other communication modules(2)	_____ * 2000	=	_____ bytes
Motion axes	_____ * 8000	=	_____ bytes
FactoryTalk® alarm instruction	_____ * 1000	=	_____ bytes (per alarm)
FactoryTalk subscriber	_____ * 10000	=	_____ bytes

(1) The first DeviceNet module is 7400 bytes. Additional DeviceNet modules are 5800 bytes each.
(2) Count all communication modules in the system, not just the modules in the local chassis. This total includes device connection modules, adapters, and ports on PanelView™ terminals.

Reserve 20...30% of the controller memory for future expansion.

Controller Compatibility

This section details the other devices that your controller can control and communicate with.

Control Distributed I/O Modules

The controller can control these distributed I/O modules.

I/O Modules	CompactLogix 5370 1768-ENBT 1769-L23Ex 1769-L32E, 1769-L32EK, 1769-L35E EtherNet/IP Network(1)	1768-CNB, 1768-CNBR 1769-L32C, 1769-L35CR ControlNet Network	CompactLogix 5370 L2 and L3 1769-SDN DeviceNet Network(2) (3)
Chassis-based I/O			
1746 SLC™ I/O	Yes	No	No
1756 ControlLogix® I/O	Yes	Yes	Yes

(1) A non-EtherNet/IP CompactLogix controller requires a 1761-NET-ENI interface to connect to an EtherNet/IP network. This interface is only a messaging bridge.
(2) For DeviceNet access, use either a 1769-SDN scanner (control I/O and send/receive messages) or a 1761-NET-DNI interface (messaging bridge).
(3) The CompactLogix 5370 L1 controllers can't access a DeviceNet network and, therefore, can't communicate with other controllers on a DeviceNet network.
(4) The CompactLogix 5370 controllers do not have an embedded serial port. You must add external modules to communicate over an RS-232 (DF1) network.
(5) The CompactLogix 5370 controllers do not have an embedded serial port. You must add external modules to communicate over a DH-485 network.
(6) The Ethernet PLC-5 controller must be series C, firmware revision N.1 or later; series D, firmware revision E.1 or later; or series E, firmware revision D.1 or later.
(7) The 1785-ENET Ethernet communication interface module must be series A, firmware revision D or later.
(8) The PLC-5, SLC, and MicroLogix processors appear as I/O points to the Logix controller. Use the appropriate DeviceNet interface for the controller.
(9) Use a 1747-L55*x* controller with OS501 or later.
(10) Includes: Allen-Bradley integrated display computers with rotating media (HDD) or solid-state drives (SSD), Allen-Bradley non-display computers, and Allen-Bradley integrated display computers with keypad.
(11) The 1788-EN2DN does not support safety communication (CIP Safety™).
(12) Use a CIP™ generic MSG instruction to communicate with the 1203-FM1 SCANport module on a DIN rail that is remote to the controller. The remote DIN rail also requires a 1794-ACN15 or 1794-ACNR15 ControlNet adapter.
(13) Use the generic module configuration to configure the 1203-CN1 module and a CIP generic MSG instruction to communicate with the module.

DRAFT

Controller Connections

A CompactLogix system uses the connection types to establish communication links between devices:	• Controller-to-local I/O modules or local communication modules • Controller-to-remote I/O or remote communication modules • Controller-to-remote I/O (rack-optimized) modules • Produced and consumed tags • Messages • Controller access by the programming software • Controller access by RSLinx® Classic software for HMI or other applications
You indirectly determine the number of connections the controller uses by configuring the controller to communicate with other devices in the system. The limit of connections can ultimately reside in the communication module you use for the connection. If a message path routes through a communication module, the connection that is related to the message also counts toward the connection limit of that communication module.	

CompactLogix 5370 Controller Ethernet Node Limits and Connections

When designing a CompactLogix 5370 control system, you must consider the following:	• Maximum number of Ethernet nodes available for the project of your controller • Connections
The controller that you select determines the number of Ethernet nodes available.	

Cat. No.	Ethernet Nodes Supported
1769-L16ER-BB1B	4
1769-L18ER-BB1B	8
1769-L18ERM-BB1B, 1769-L18ERM-BB1BK	
1769-L19ER-BB1B, 1769-L19ER-BB1BK	
1769-L24ER-QB1B	8
1769-L24ER-QBFC1B, 1769-L24ER-QBFC1BK	
1769-L27ERM-QBFC1B	16
1769-L30ER, 1769-L30ERK	
1769-L30ERM, 1769-L30ERMK	
1769-L30ER-NSE	
1769-L33ER, 1769-L33ERK	32
1769-L33ERM, 1769-L33ERMK	
1769-L33ERMO	
1769-L36ERM	48
1769-L36ERMO	
1769-L37ERM, 1769-L37ERMK	64
1769-L37ERMO[1]	
1769-L38ERM, 1769-L38ERMK	80
1769-L38ERMO[1]	

All CompactLogix 5370 controllers support 256 CIP™ connections and 120 TCP/IP connections.

1769-L23x CompactLogix Connections

The controller that you select determines the connections for I/O and messages.

Controller	Supports
1769-L23EQB1B	32 CIP connections 8 TCP/IP connections
1769-L23EQBFC1B	

The total connection requirements for a 1769 CompactLogix system include both local and remote (distributed) connections. The controller supports 100 connections. The available remote connections depend on the network interface.

1769-L3x CompactLogix Connections

The controller that you select determines the connections for I/O and messages.

Controller	Supports
1769-L32C 1769-L35CR	32 CIP connections
1769-L32E, 1769-L32EK 1769-L35E	32 CIP connections 32 TCP/IP connections

The total connection requirements for a 1769 CompactLogix system include both local and remote (distributed) connections. The controller supports 100 connections. The available remote connections depend on the network interface.

1768-L4x CompactLogix Connections

The communication module that you select determines the connections for I/O and messages.

Communication Module	Supports
1768-ENBT 1768-EWEB	128 CIP connections 64 TCP/IP connections
1768-CNB 1768-CNBR	48 CIP connections

The total connection requirements for a 1768 CompactLogix system include both local and remote (distributed) connections. The controller supports 250 connections. The available remote connections depend on the network interface.

(1) Available at software version 31 and firmware revision 31.

DRAFT

Determine Total Connection Use

The total connection requirements for a CompactLogix system include remote (distributed) connections. The available remote connections depend on the network interface.

The controllers support these numbers of total connections:	• 1769-L23x and 1769-L3x controllers support 100 total connections. • 1768-L4x controllers support 250 total connections. • CompactLogix 5370 controllers support 256 total connections.

When designing your CompactLogix system, to estimate the number of connections per connection type and the total connections that are used, use this table or the EtherNet/IP Capacity Tool Wizard that is embedded in the Integrated Architecture® Builder (IAB) software from Rockwell Automation.

Connection Type	Device Quantity	Connections Per Device	Total Connections
Remote ControlNet communication module Configured as a direct (none) connection Configured as a rack-optimized connection		 0 1

DRAFT

CompactLogix Controller Accessories

These accessories are compatible with the indicated CompactLogix controllers.

Memory Cards

Memory cards offer nonvolatile memory to store a user program and tag data on a controller. You can use the programming software to prompt the controller to save to or load from nonvolatile memory or you can configure the controller to load from nonvolatile memory on power-up.

IMPORTANT The 1769-L23x packaged CompactLogix controllers do not offer a nonvolatile memory option.

The CompactLogix 5370 controllers come with a 1784-SD1 Secure Digital (SD) card installed. Order a 1784-SD2 SD card separately for additional nonvolatile memory with the CompactLogix 5370 controllers.

You can use a 1784-CF128 CompactFlash card with the 1768 L4 and L3 modular CompactLogix controllers for a nonvolatile memory option. Insert the CompactFlash card into the memory card slot on the controller.

Certifications - 1784 Memory Cards

Certification(1)	1784-CF128, 1784-SD1, 1784-SD2
CE	European Union 2014/30/EU EMC Directive, compliant with: • EN 61000-6-4; Industrial Emissions • EN 61326-1; Meas./Control/Lab., Industrial Requirements • EN 61000-6-2; Industrial Immunity • EN 61131-2; Programmable Controllers (Clause 8, Zone A & B) European Union 2011/65/EU RoHS, compliant with: • EN IEC 63000; Technical documentation
RCM	Australian Radiocommunications Act, compliant with: AS/NZS CISPR 11; Industrial Emissions
KC	Korean Registration of Broadcasting and Communications Equipment, compliant with: Article 58-2 of Radio Waves Act, Clause 3

(1) When marked. See the Product Certification link at rok.auto/certifications for Declarations of Conformity, Certificates, and other certification details.

Environmental Specifications - 1784 Memory Cards

Attribute	1784-CF128, 1784-SD1, 1784-SD2
Temperature, operating IEC 60068-2-1 (Test Ad, Operating Cold), IEC 60068-2-2 (Test Bd, Operating Dry Heat), IEC 60068-2-14 (Test Nb, Operating Thermal Shock)	-25...+70 °C (-13...+158 °F)
Temperature, storage IEC 60068-2-1 (Test Ab, Unpackaged Nonoperating Cold), IEC 60068-2-2 (Test Bb, Unpackaged Nonoperating Dry Heat), IEC 60068-2-14 (Test Na, Unpackaged Nonoperating Thermal Shock)	-40...+85 °C (-40...+185 °F)

Weight, approx	14.2 g (0.5 oz)	1.76 g (0.062 oz)	

1769 CompactLogix Batteries

The 1769 L23 and L3*x* controllers come with one 1769-BA lithium battery.

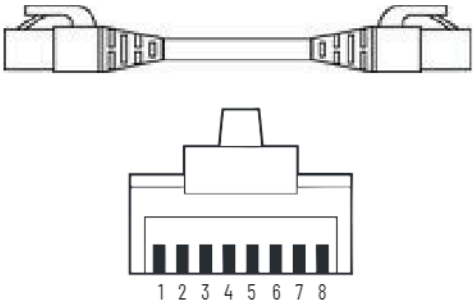
The 1768 controllers and the CompactLogix 5370 controllers do not require a battery. The controller uses internal nonvolatile memory to store its program during shutdown. Energy that is stored in the system maintains controller power long enough to store the program to internal nonvolatile memory, but not the external CompactFlash card nor SD card respectively.

Technical Specifications - 1769-BA

Attribute	1769-BA
Description	Lithium battery (0.59 g)
CompactLogix controllers	1769-L23-QBFC1B, 1769-L23E-QB1B, 1769-L23E-QBFC1B 1769-L31 1769-L32C, 1769-L35CR 1769-L32E, 1769-L35E

Removable Terminal Kits

You can order removable terminal kits separately for the CompactLogix 5370 L1 and L2 controllers.

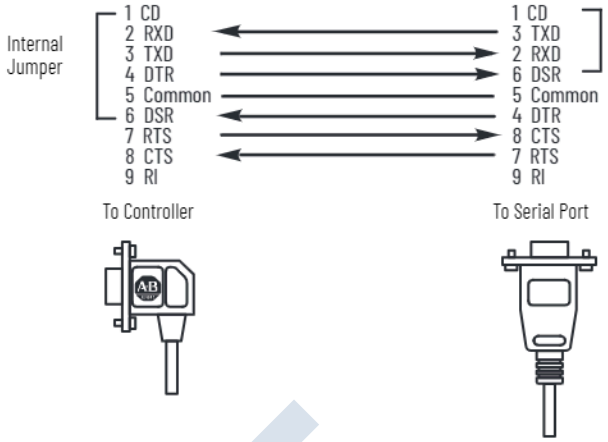


Cat. No.	Controllers Supported	Description
1769-RTB45	CompactLogix 5370 L1	• Four 10-pin connectors are used to connect the wiring to the embedded digital I/O module of the controller. • One 5-pin connector is used to connect an external 24V DC power source to the controller.
1769-RTB40DI0	CompactLogix 5370 L2	Four 10-pin connectors are used to connect the wiring to the embedded digital I/O module of the controller.
1769-RTB40AI0	1769-L24ER-QBFC1B, 1769-L27ERM-QBFC1B	Four 10-pin connectors are used to connect the wiring to the embedded analog I/O module of the controller.

DRAFT

Cold Junction Compensation

The CompactLogix 5370 L2 controllers require the use of the 1769-CJC CompactLogix CJC Sensor when the embedded analog input of the controller is configured for Thermocouple mode.



Ethernet Communication Cables

Connector Number	Color	1585J-M8xBJM-2	1585J-M4TBJM-2

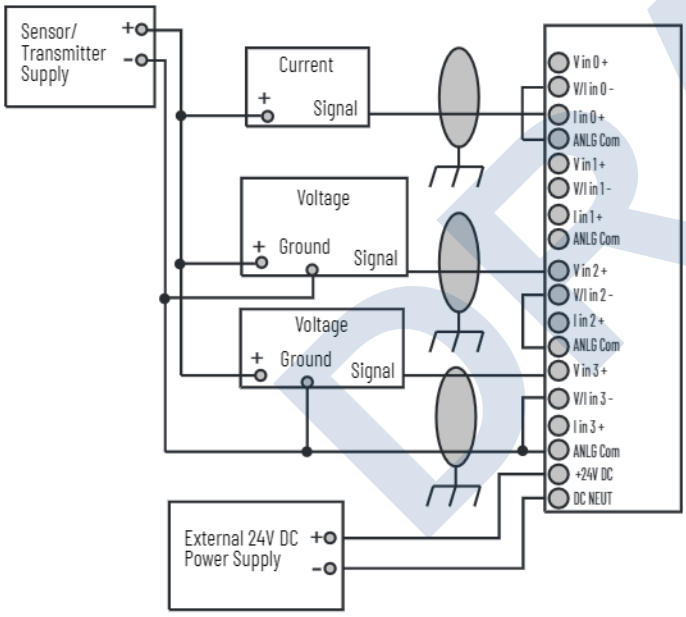
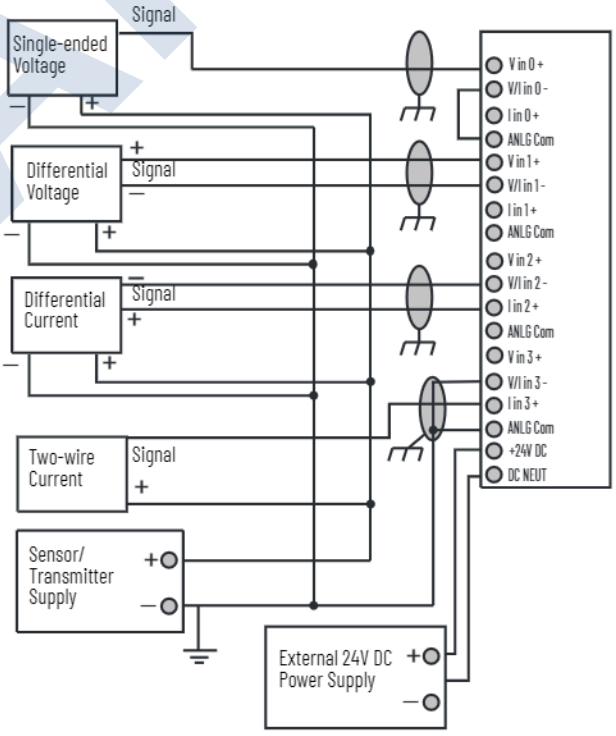
1769-IF4, 1769-IF4K



Compact voltage/current analog input module

Differential Input Wiring



The external power supply must be rated Class 2, with a 24V DC range of 20.4...26.4V DC and 60 mA minimum. Series B and later modules support this option.

Single-ended Sensor/Transmitter Input Wiring

Mixed Transmitter Input Wiring

DRAFT

Technical Specifications - 1769-IF4, 1769-IF4K

Attribute	1769-IF4, 1769-IF4K
Inputs	4 differential or single-ended
Input range	±10V 0...10V 0...5V 1...5V 0...20 mA 4...20 mA
Full-scale range(1)	±10.5V -0.5...10.5V -0.5...5.25V 0.5...5.25V, 0...21 mA 3.2...21 mA
Current draw @ 5.1V	120 mA
Current draw @ 24V	60 mA
Heat dissipation, max	2.52 W
Converter type	Delta Sigma
Resolution (2)	14 bits (unipolar) 14 bits plus sign (bipolar)
Rated working voltage(3)	30V AC/30V DC
Common mode voltage range(4)	±10V DC max per channel
Common mode rejection	> 60 dB @ 50 Hz and 60 Hz with the 50 Hz or 60 Hz filter selected, respectively
Normal mode rejection ratio	-50 dB @ 50 Hz and 60 Hz and 60 Hz with the 50 Hz or 60 Hz or 60 Hz filter selected, respectively
Input impedance	Voltage: 220 kΩ Current: 250 Ω
Accuracy(5)	Voltage: ±0.2% full-scale @ 25 °C (77 °F) Current: ±0.35% full-scale @ 25 °C (77 °F)
Accuracy drift with temperature	Voltage: ±0.003% per °C Current: ±0.0045% per °C
Nonlinearity	±0.03%
Repeatability(6)	±0.03%
Module error	Voltage: ±0.3% Current: ±0.5%
Overload at input terminals, max(7)	Voltage: ±30V DC continuous, 0.1 mA Current: ±32 mA continuous, ±7.6V DC
Isolation voltage	500V AC or 710V DC for 1 minute (qualification test), group to bus 30V AC/30V DC working voltage (IEC Class II reinforced insulation)
Weight, approx	300 g (0.65 lb)
Dimensions (HxWxD), approx	118 x 35 x 87 mm (4.65 x 1.38 x 3.43 in.) Height with mounting tabs 138 mm (5.43 in.)
Slot width	1
Module location	DIN rail or panel mount
Power supply	1769-PA2, 1769-PB2, 1769-PA4, 1769-PB4
Optional 24V DC Class 2 power supply voltage range(8)	20.4...26.4V DC
Power supply distance rating	8 modules

Technical Specifications - 1769-IF4, 1769-IF4K

Attribute	1769-IF4, 1769-IF4K
Terminal screw torque	0.68 N•m (6 lb•in)
Retaining screw torque	0.46 N•m (4.1 lb•in)
Wire size	(22...14 AWG) solid (22...16 AWG) stranded
Wire type	Cu-90 °C (194 °F)
Replacement terminal block	1769-RTBN18 (1 per kit)
Replacement door label	1769-RL2 series B (2 per kit)
Replacement door	1769-RD (2 per kit)
Vendor ID code	1
Product type code	10
Product code	35
Enclosure type rating	None (open-style)

(1) The over- or underrange flag comes on when the normal operating range (over/under) is exceeded. The module continues to convert the analog input up to the maximum full-scale range. The flag automatically resets when within the normal operating range.
(2) Resolution is dependent upon your filter selection. The maximum resolution is achieved with either the 50 Hz or 60 Hz filter selected.
(3) Rated working voltage is the maximum continuous voltage that can be applied at the input terminal, including the input signal and the value that floats above ground potential. For example, a 10V DC input signal and 20V DC potential above ground at the input terminals.
(4) For proper operation, both the plus and minus input terminals must be within ±10V DC of analog common.
(5) Includes offset, gain, nonlinearity, and repeatability error terms.
(6) Repeatability is the ability of the input module to register the same reading in successive measurements for the same input signal.
(7) Damage can occur to the input circuit if this value is exceeded.
(8) If the optional 24V DC Class 2 power supply is used, the 24V DC current draw from the bus is 0 mA.

Response Speed - 1769-IF4, 1769-IF4K

Filter Frequency	Cutoff Frequency	Step Response	Channel Update
50 Hz	13.1 Hz	60 ms	22 ms
60 Hz	15.7 Hz	50 ms	19 ms
250 Hz	65.5 Hz	12 ms	6 ms
500 Hz	131 Hz	6 ms	4 ms

The CompactLogix™ 5380 controllers are part of the Logix5000™ family of controllers. The controllers provide a scalable controller solution to address a wide variety of applications. The controllers are DIN rail mounted.

CompactLogix 5380 controllers can monitor and control local and remote I/O modules, and other devices connected to an EtherNet/IP network. The controllers provide the following functionality:

- Two EtherNet/IP ports with the option to use Dual-IP mode or Linear/DLR mode
- Use of 5069 Compact I/O™ module as local I/O modules
- One USB port
- Use of 1784-SD1 or 1784-SD2 Secure Digital (SD) card for nonvolatile memory
- Support for Integrated Motion over an EtherNet/IP network (not all CompactLogix 5380 controllers)

(1) Maximum level of MOD Power current that the module can pass through to the next module in the system. The specific level of current passed through varies based on system configuration. You must limit the external power supply that provides MOD power to 10 A, max, at 18…32V DC.

(2) Maximum level of SA Power current that the module can pass through to the next module in the system. The specific level of current passed through varies based on system configuration. You must limit the external power supply that provides SA power to 10 A, max at 18…32V DC in DC applications and to 10 A, max at 18…240V AC in AC applications.

(3) Use this Conductor Category information for planning conductor routing. See the Industrial Automation Wiring and Grounding Guidelines, publication 1770-4.1.

(4) When you use these controllers with the Logix Designer application, version 29.00.00, the application limits the number of local I/O modules in the project to 16. For more information, see the Rockwell Automation Knowledgebase article #942580, '5380 CompactLogix controllers limited to 16 local 5069 modules in V29 of Studio 5000.' The document is available at http://www.rockwellautomation.com/knowledgebase.
With the Logix Designer application, version 30.00.00 or later, the controllers support as many as 31 local I/O modules.

DRAFT

ITEM 540B

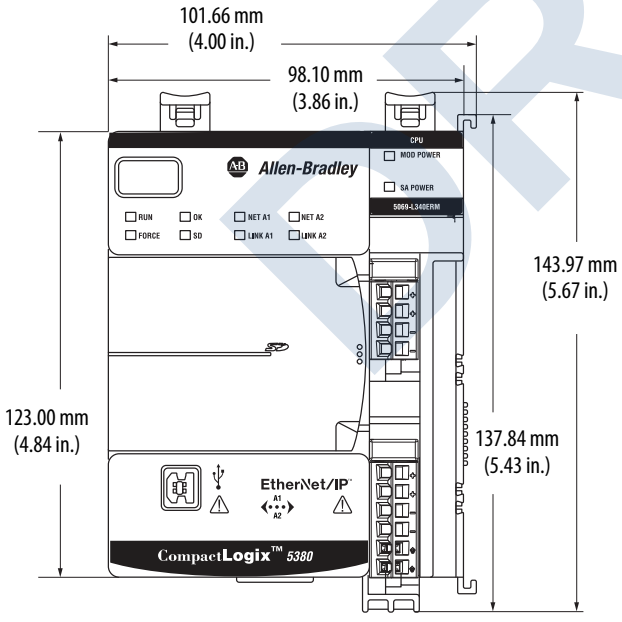
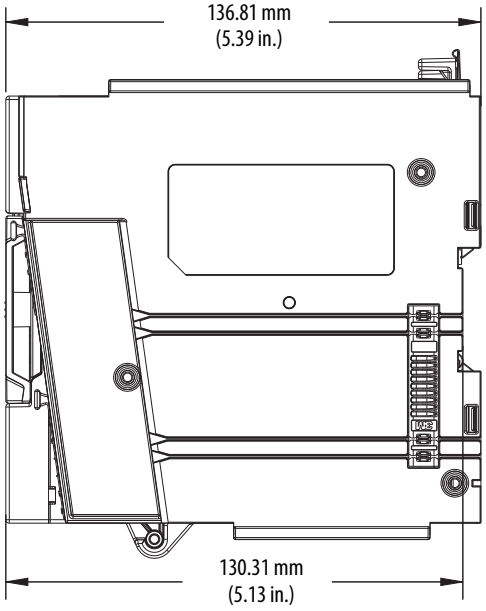
Controller Minimum Spacing Requirements



The minimum distance between the CompactLogix 5380 system and enclosure walls, wireways, and adjacent equipment varies based on the current operating temperature. The minimum distance on all sides of the system is as follows:



- 50.80 mm (2.00 in.) at 55 °C (131 °F)
- 101.60 mm (4.00 in) at 60 °C (140 °F)

IMPORTANT CompactLogix 5380 systems can only be mounted horizontally.

Controller Dimensions

DRAFT

ITEM 540B

Controller Use With Other Devices

Your controller can control and communicate with the following devices:

- Control I/O Modules
- Communicate with Display Devices
- Communicate with Other Controllers

Control I/O Modules

The CompactLogix 5380 controllers can monitor and control local and remote I/O modules.

Local I/O Modules

A CompactLogix 5380 system uses 5069 Compact I/O modules as its local I/O modules. The number of local I/O modules that are supported in a CompactLogix 5380 system varies by controller catalog number.

Cat. No.	Local 5069 Compact I/O Modules Supported, Max
5069-L306ER, 5069-L306ERM	8
5069-L310ER, 5069-L310ER-NSE, 5069-L310ERM	8
5069-L320ER, 5069-L320ERM	16
5069-L330ER, 5069-L330ERM(1)	31
5069-L340ER, 5069-L340ERM	31
5069-L350ERM	31
5069-L380ERM	31
5069-L3100ERM	31

(1) When you use these controllers with the Logix Designer application, version 29.00.00, the application limits the number of local I/O modules in the project to 16. For more information, see the Rockwell Automation Knowledgebase article #942580, '5380 CompactLogix controllers limited to 16 local 5069 modules in V29 of Studio 5000.' The document is available at http://www.rockwellautomation.com/knowledgebase.
With the Logix Designer application, version 30.00.00 or later, the controllers support 31 local I/O modules.

DRAFT

ITEM 540B

Remote I/O Modules

The controller can connect to these remote I/O modules over an EtherNet/IP network.

IMPORTANT For maximum performance, we recommend that you use 5069 Compact I/O modules when you use remote I/O modules.

Module Type	I/O Module Family
Chassis-based I/O	1746 SLC™ I/O
	1756 ControlLogix® I/O
	1769 Compact I/O
	5069 Compact I/O
In-cabinet I/O	1734 POINT I/O™
	1794 FLEX™ I/O
On-Machine™ I/O	1732 ArmorBlock® I/O
	1738 ArmorPOINT® I/O

Communicate with Display Devices

The controller can communicate with these display devices over an EtherNet/IP network.

Device Type	Display
Industrial computers	Allen-Bradley® integrated-display rotating media (HDD) and solid-state (SSD) computers
	Allen-Bradley integrated-display computers with keypad
	Allen-Bradley non-display computers
Graphic terminals	PanelView™ Plus and PanelView CE terminals
	PanelView standard terminals
Message displays	InView™ message displays

DRAFT

ITEM 540B

Communicate with Other Controllers

The controller can communicate with these programmable controllers.

Controller Type	Controller Family
Programmable automation controller	CompactLogix 5370
	CompactLogix 5380
	Compact GuardLogix® 5370 (safety)
	ControlLogix 5570
	ControlLogix 5580
	GuardLogix 5570 (safety)
	1756 Armor™ ControlLogix (safety)
	1756 Armor GuardLogix (safety)
	1768 Compact GuardLogix (safety)
	1768 CompactLogix
	1769 Modular CompactLogix
	1769 Packaged CompactLogix
Programmable logic controllers	1789 SoftLogix™ 5800
	PowerFlex® with DriveLogix™
	1785 PLC-5®(1)
	1747 SLC™(1)
	1761 MicroLogix™(2)
	1762 MicroLogix(2)
	1763 MicroLogix
	1764 MicroLogix(2)
	1766 MicroLogix

(1) These controllers require a built-in Ethernet port or a 1761-NET-ENI, EtherNet/IP RS-232-C interface to communicate with a CompactLogix 5380 controller over an EtherNet/IP network.

(2) These controllers require a 1761-NET-ENI, EtherNet/IP RS-232-C interface to communicate with a CompactLogix 5380 controller over an EtherNet/IP network.

DRAFT

ITEM 540B

Ethernet Node Limits

When you configure a CompactLogix 5380 control system, you must account for the number of Ethernet nodes that you include in the I/O configuration section in the Studio 5000 Logix Designer® application project.

Maximum Number of Ethernet Nodes

The number of nodes that are supported in a Logix Designer application project varies by CompactLogix 5380 controller.

Cat. No.	Ethernet Nodes Supported
5069-L306ER, 5069-L306ERM	16
5069-L310ER, 5069-L310ER-NSE, 5069-L310ERM	24
5069-L320ER, 5069-L320ERM	40
5069-L330ER, 5069-L330ERM	50
5069-L340ER, 5069-L340ERM	55
5069-L350ERM	60
5069-L380ERM	70
5069-L3100ERM	80

Any devices that you add directly to the I/O configuration section are counted toward the Ethernet node limit. The following are examples of devices that must be counted:

- Remote communication adapters
- Devices with an embedded EtherNet/IP port, such as I/O modules, drives, and linking devices
- Remote controllers when a produce/consume connection is established between the two controllers
- HMI devices that are included in the I/O configuration tree
- Third-party devices that are directly connected to the EtherNet/IP network

DRAFT

5069-IB16, 5069-IB16K, and 5069-IB16F Digital 16-point Sinking Input Modules

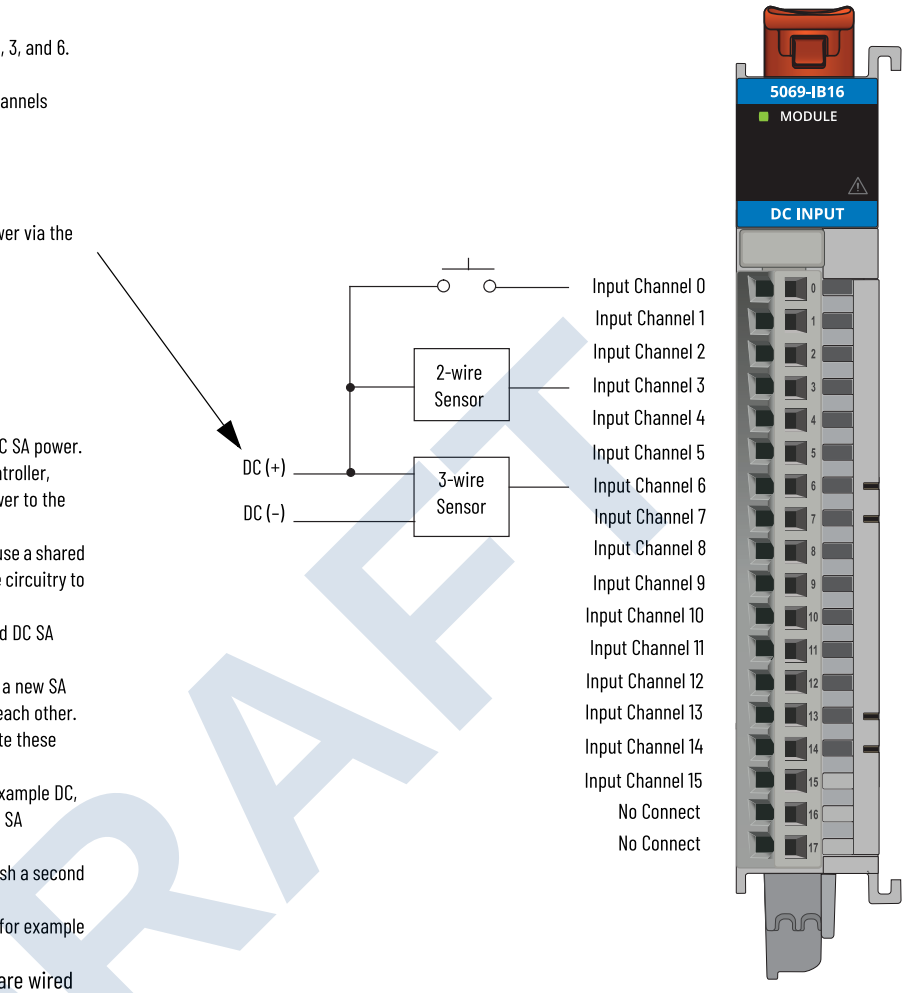
The following figure shows a wiring diagram for the 5069-IB16, 5069-IB16K, and 5069-IB16F modules.

5069-IB16, 5069-IB16K, and 5069-IB16F Wiring Diagram

Channel Connections

The example shows devices that are connected to channels 0, 3, and 6. You aren't restricted to using only those channels.
You can connect devices to any channel or combination of channels as needed.

SA Power

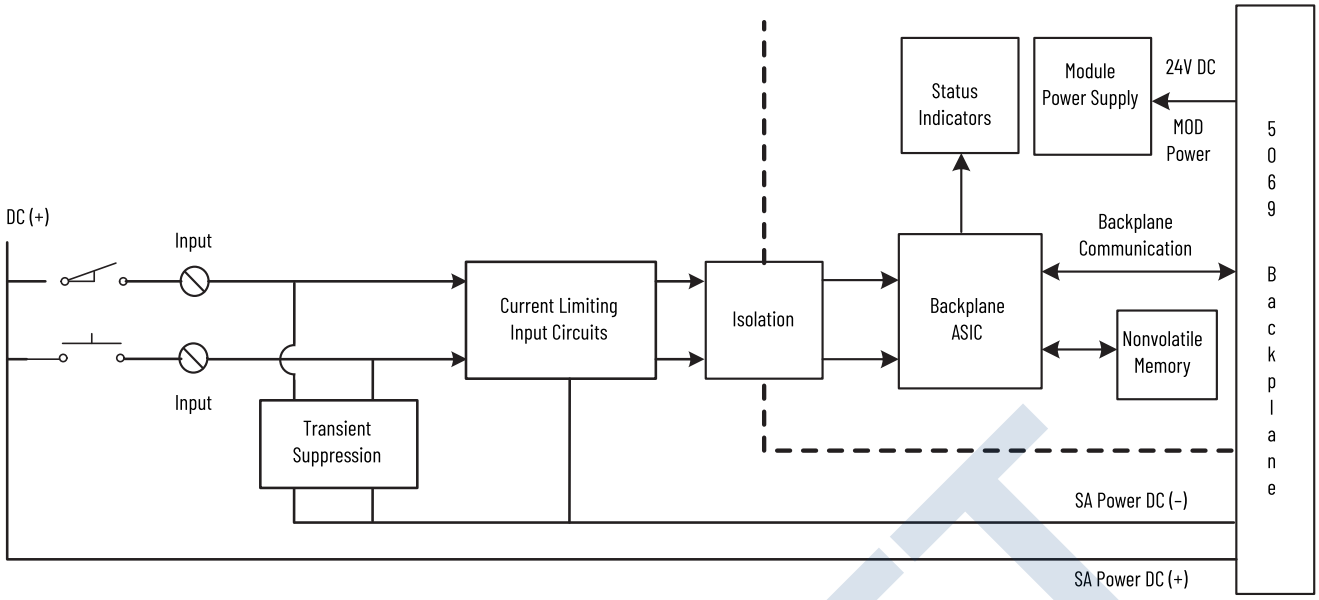


Connections to an external power supply that provides SA power via the SA power RTB on one of the following:

- CompactLogix 5380 controller
- Compact GuardLogix 5380 controller
- CompactLogix 5480 controller
- 5069-AENTR or 5069-AEN2TR EtherNet/IP Adapter
- 5069-FPD field potential distributor

IMPORTANT: Remember the following:

- The 5069-IB16, 5069-IB16K, and 5069-IB16F modules use DC SA power. You must connect DC power to the component, that is, controller, adapter, or field potential distributor, that provides SA power to the modules.
- The 5069-IB16, 5069-IB16K, and 5069-IB16F module inputs use a shared common. The inputs have a return through internal module circuitry to the SA (–) terminal on the SA power RTB.
- If you install modules in a system that use AC SA power and DC SA power, you must install them on separate SA power buses.
- You use a 5069-FPD field potential distributor to establish a new SA power bus in a system. SA power buses are isolated from each other. To keep the modules on separate SA power buses, complete these steps.
  1. Install the modules that use one type of SA power, for example DC, to the right of the adapter or controller, that is, the first SA power bus.
  2. Install the 5069-FPD field potential distributor to establish a second SA power bus.
  3. Install the modules that use the other type of SA power, for example AC, on the second SA power bus.



IMPORTANT: The 5069-IB16K and 5069-IB16K modules are wired the same as the wiring diagram that is shown for the 5069-IB16 module.

DRAFT

The following figure shows a functional block diagram for the 5069-IB16, 5069-IB16K, and 5069-IB16F modules.

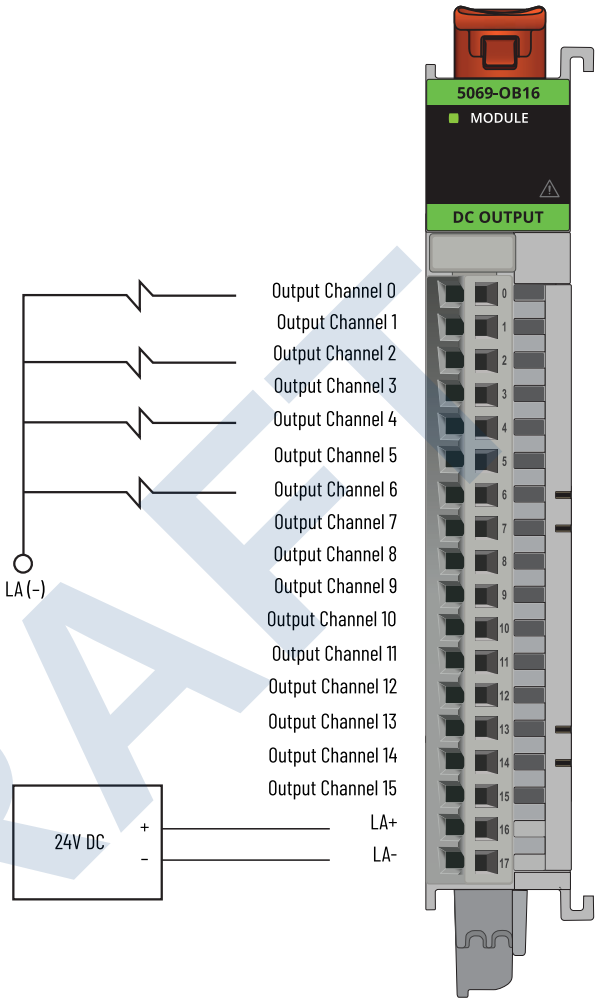
5069-OB16, 5069-OB16K, and 5069-OB16F Digital 16-point Sourcing Output Modules

The following figure shows a wiring diagram for the 5069-OB16, 5069-OB16K, and 5069-OB16F modules.

5069-OB16, 5069-OB16K, and 5069-OB16F Wiring Diagram

Channel Connections

The diagram shows devices that are connected to channels 0, 2, 4, and 6. You aren't restricted to using only those channels.
You can connect devices to any channel or combination of channels as needed.

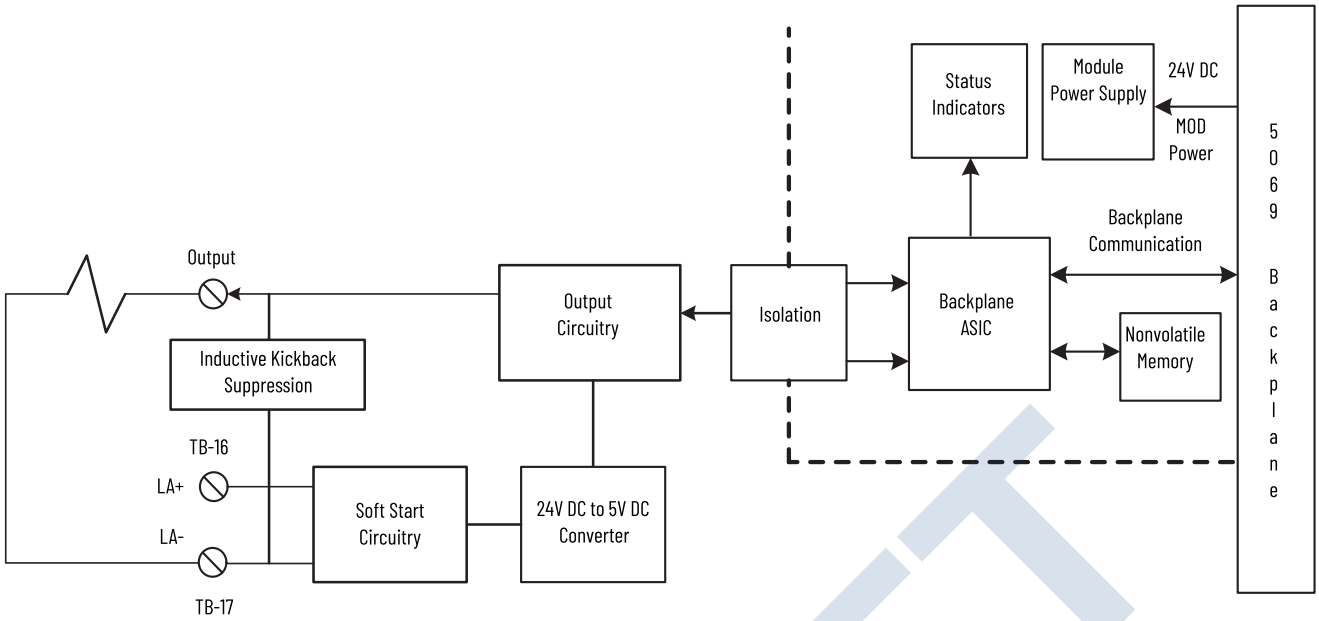


LA Power

The Local Actuator (LA+ and LA –) connections are used to supply field-side power to the module.

The 5069-OB16, 5069-OB16K, and 5069-OB16F modules **do not draw current from the SA power bus**.
Still, the modules are DC type modules, and you must install them on a DC SA power bus.

- If you install modules in a system that use AC SA power and DC SA power, you must install them on separate SA power buses.
- You use a 5069-FPD field potential distributor to establish a new SA power bus in a system. SA power buses are isolated from each other. To keep the modules on separate SA power buses, complete these steps.
  1. Install the modules that use one type of SA power, for example DC, to the right of the adapter or controller, that is, the first SA power bus.
  2. Install the 5069-FPD field potential distributor to establish a second SA power bus.
  3. Install the modules that use the other type of SA power, for example AC, on the second SA power bus.



IMPORTANT: The 5069-OB16K and 5069-OB16K modules are wired the same as the wiring diagram that is shown for the 5069-OB16 module.

DRAFT

The following figure shows a functional block diagram for the 5069-OB16, 5069-OB16K, and 5069-OB16F modules.

Output states in program mode per point	• Hold Last State • On • Off (default)	
Output states in fault mode per point	• Hold Last State • On • Off (default)	
Duration of fault mode per point	• 1 s • 2 s • 5 s • 10 s • Forever (default)	
Scheduled outputs	Not supported	±10 µs accuracy 1 ns resolution

(1) Local Actuator (LA) Field Power related attributes.

(2) Recommended Loading Resistor - To limit the effects of leakage current through solid-state outputs, you can connect a loading resistor in parallel with your load. For 24V DC operation, use a 5.6 KΩ, 0.5 W resistor for transistor operation.

(3) Supported only on Series B hardware.

General Specifications - 5069-OB16, 5069-OB16K, and 5069-OB16F

Attribute	5069-OB16, 5069-OB16K	5069-OB16F
Outputs	16 Channels (1 group of 16), sourcing	
Voltage category	12/24V DC source	
Voltage and current ratings		
Mod power	75 mA @ 18...32V DC	
Mod power Passthrough, max(1)	9.55 A @ 18...32V DC	
LA Power	0.5 A per channel @ 10...32V DC 8 A per module @ 10...32V DC	
SA power Passthrough, max(2) The module does not draw SA power current.	9.95 A @ 10...32V DC	
Do not exceed 10 A MOD or SA power (Passthrough) current draw		
Power dissipation, max	3.25 W (16 channels @ 0.5 A)	
Thermal dissipation, max	11.09 BTU/hr

Analog I/O Modules

I/O Type	Cat. No.	Description	Page
Analog input	5069-IF8	8-channel current/voltage input module	50
	5069-IY4	4-channel current/voltage/RTD/Thermocouple input module	58
	5069-IY4K	4-channel conformal coated current/voltage/RTD/Thermocouple input module	
Analog output	5069-OF4	4-channel current/voltage output module	73
	5069-OF4K	4-channel conformal coated current/voltage output module	
	5069-OF8	8-channel current/voltage output module	

5069-IF8 Analog 8-channel Current/Voltage Input Module

The following table lists the devices that are supported with the 5069-IF8 module.

Device	Mode(s)[1]	Supported	Wiring Diagram Example
2-wire analog device 4-wire analog device[2]	Current	Yes	page 51
	Voltage		page 52
	Combination of current and voltage	Yes	page 53
1-wire analog device 3-wire analog device	N/A - These devices aren't supported regardless of the channel mode configuration.	No	–
2-wire Thermocouple device			
2-wire RTD device 3-wire RTD device			

(1) Make sure that the channel configuration in your Logix Designer application project matches the input device type that is connected to the channel. You choose the input type in the Channels category on the Module Properties dialog box. For example, if a current input device is connected to channel 0 on the module, the module configuration for channel must be Input Type = Current.

(2) These devices are 2-wire current and voltage devices with 2-wire sensor power connections.

DRAFT

The following figure shows a wiring diagram for the 5069-IF8 module with channels configured for current mode.

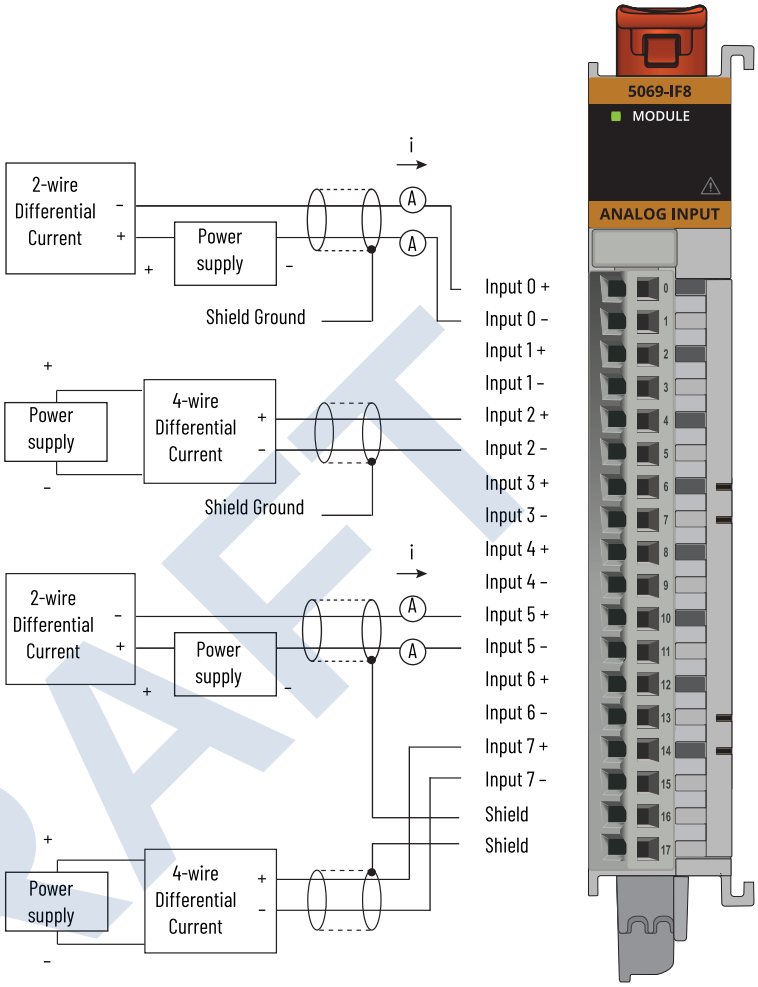
5069-IF8 Wiring Diagram - Current Mode

Channel Connections

The diagram shows devices that are connected to channels 0, 2, 5, and 7. You aren't restricted to using only this channel. You can connect devices to any channel or combination of channels as needed.

IMPORTANT: Remember the following:

- Place additional loop devices, for example, strip chart recorders, at either **A** location in the current loop.
- Use separate external power supplies to provide SA power to the system and to power external devices that are connected to the module.
- This module has only two shield terminals. Compact 5000 I/O module RTBs only support one wire per terminal.
- If you connect more than two devices to the module, you can ground two devices at the shield terminals.
  You must ground the remaining devices somewhere else, such as, to the DIN rail via a terminal strip. In this case, use the same power supply to power the additional devices. If separate power supplies are used to power the additional devices, ground the power supplies at the same ground location.



SA Power

Connections to an external power supply that provides SA power are made via the SA power RTB on one of the following:

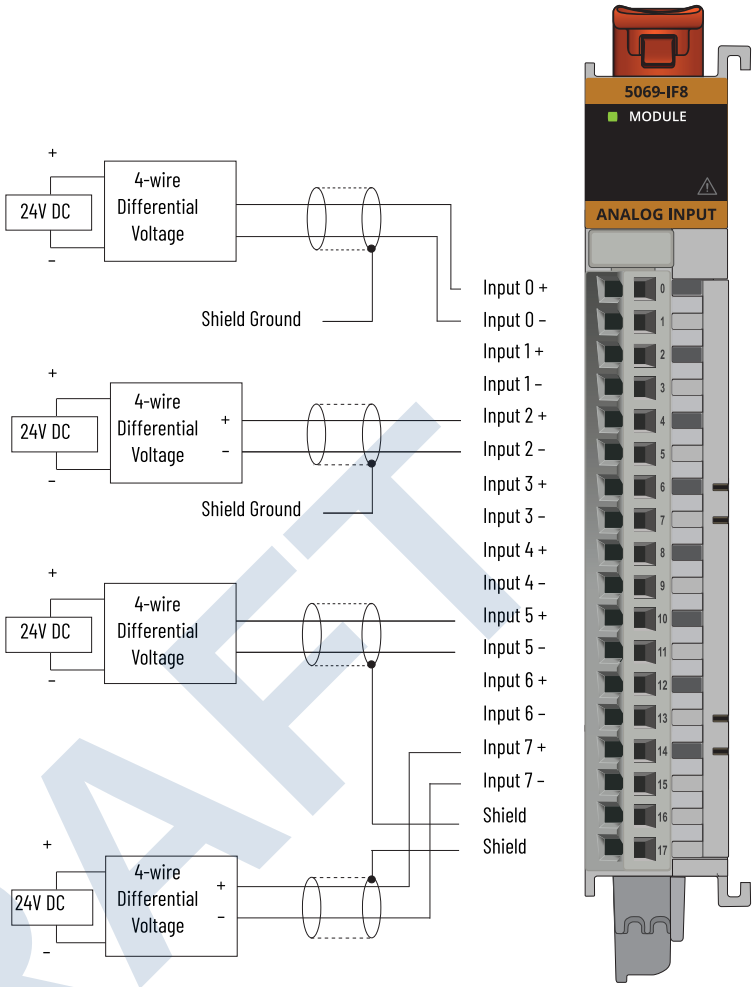
- CompactLogix 5380 controller
- Compact GuardLogix 5380 controller
- CompactLogix 5480 controller
- 5069-AENTR or 5069-AEN2TR EtherNet/IP Adapter
- 5069-FPD field potential distributor

IMPORTANT: Remember the following:

- The 5069-IF8 module uses DC SA power. You must connect DC power to the component, that is, controller, adapter, or field potential distributor, that provides SA power to the modules.
- If you install modules in a system that use AC SA power and DC SA power, you must install them on separate SA power buses.
- You use a 5069-FPD field potential distributor to establish a new SA power bus in a system. SA power buses are isolated from each other. To keep the modules on separate SA power buses, complete these steps.
  1. Install the modules that use one type of SA power, for example DC, to the right of the adapter or controller, that is, the first SA power bus.
  2. Install the 5069-FPD field potential distributor to establish a second SA power bus.
  3. Install the modules that use the other type of SA power, for example AC, on the second SA power bus.

DRAFT

The following figure shows a wiring diagram for the 5069-IF8 module with channels configured for voltage mode.



5069-IF8 Wiring Diagram - Voltage Mode

Channel Connections

The diagram shows devices that are connected to channels 0, 2, 5, and 7. You aren't restricted to using only this channel. You can connect devices to any channel or combination of channels as needed.

IMPORTANT: Remember the following:

- Use separate external power supplies to provide SA power to the system and to power external devices that are connected to the module.
- This module has only two shield terminals. Compact 5000 I/O module RTBs only support one wire per terminal.
  If you connect more than two devices to the module, you can ground two devices at the shield terminals.
  You must ground the remaining devices somewhere else, such as, to the DIN rail via a terminal strip. In this case, use the same power supply to power the additional devices. If separate power supplies are used to power the additional devices, ground the power supplies at the same ground location.

DRAFT

The following figure shows a wiring diagram for the 5069-IF8 module with different device types connected to different channels. The device type and mode configuration for each channel must match.

5069-IF8 Wiring Diagram - Combination of Device Types Connected to the Module

Channel Connections

The diagram shows devices that are connected to channels 0, 2, 5, and 7. You aren't restricted to using only this channel.
You can connect devices to any channel or combination of channels as needed.

IMPORTANT: Remember the following:

- Place additional loop devices, for example, strip chart recorders, at either **A** location in the current loop.
- Use separate external power supplies to provide SA power to the system and to power external devices that are connected to the module.

  2. Install the 5069-FPD field potential distributor to establish a second SA power bus.
  3. Install the modules that use the other type of SA power, for example AC, on the second SA power bus.

DRAFT

The following figure shows a functional block diagram for the 5069-IF8 module.

5069-IF8 Functional Block Diagram

Technical Specifications - 5069-IF8

Attribute	5069-IF8
Inputs	8 differential
Input range, voltage	±10V 0...10V 0...5V
Input range, current	0...20 mA 4...20 mA
Input impedance	Voltage: >1 MΩ Current: 90 Ω typical, 70...110 Ω range
Common mode voltage (channel to channel)	±10V (Current mode) ±2V (Voltage mode)
Module conversion method	Sigma-Delta, Two 24-bit multiplexed ADC
Resolution, voltage(1) (16 bits at 10 Hz notch filter)	±10.5V: <320 µV/count (15 bits plus sign bipolar) 0...10.5V: <160 µV/count (16 bits unipolar) 0...5.25V: <80 µ/V count (16 bits unipolar)
Resolution, current(1) (16 bits at 10 Hz notch filter)	0...21 mA: <0.32 µA/count (16 bits) 3.6...21 mA: <0.27 µA/count (16 bits)
Calibrated accuracy at 25 °C	Voltage 0.10% full scale Current 0.10% full scale
Accuracy drift with temperature	Voltage 0.20% full scale Current 0.30% full scale
Input Total Unadjusted Error (TUE)(2) (Over full temperature range)	Voltage 0.30% full scale Current 0.40% full scale
Scan Time Per channel Per group (channel group 0...3 or channel group 4...7)	 625 µs 2.5 ms
Notch filter at minimum RPI (0.2 ms, 1 channel enabled)	62.5 kHz

DRAFT

Technical Specifications - 5069-IF8

Attribute	5069-IF8
Minimum notch filter frequency at RPI of 2.5 ms	10 kHz
Step response time to 63% of value (Notch filter 10 kHz)	7.5 ms
Input notch filter (Hz) selections	5, 10 (50/60 Default), 15, 20, 50, 60, 100, 200, 500, 1000, 2500, 5000, 10000, 15625, 25000, 31250, 62500
Input anti-aliasing filter cutoff frequency, nom	500 Hz
Input digital filter	First order lag, 0 ms (Default)...32,767 ms (32.767 s)
HART handheld compliance	Add an external 250 Ω resistor into the current loop for HART transmitter compliance.
Overvoltage protection, max	Voltage and Current modes: ± 30V DC
Overcurrent protection, max	Current mode: ±30 mA
Data value during overload condition	Full scale, overrange flag, Data uncertain / data bad
Open circuit detection time	Voltage: + full scale, < 2 s Current: 4...20 mA range, <2 s
Onboard data alarming	Yes
Scaling to engineering units	Yes
Real-time channel sampling	Yes
Data format	IEEE 32-bit floating point

(1) Notch filter dependent.
(2) Includes offset, gain, non-linearity, and repeatability error terms.

General Specifications - 5069-IF8

Attribute	5069-IF8
Voltage and current ratings	
Mod power	75 mA @ 18...32V DC
Mod power Passthrough, max(1)	9.55 A @ 18...32V DC
SA power	100 mA @ 18...32V DC
SA power Passthrough, max(2)	9.95 A @ 18...32V DC
Do not exceed 10 A MOD or SA power (Passthrough) current draw.	
Power dissipation, max	Voltage mode: 2.1 W Current mode: 2.4 W
Thermal dissipation, max	Voltage mode: 7.2 BTU/hr Current mode: 8.2 BTU/hr
Isolation voltage	250V (continuous), Basic Insulation Type 50V Functional Isolation between SA power and input ports No isolation between individual Input ports
Calibration methods	Factory calibrated User-performed (optional)
Module keying	Electronic keying via programming software
Indicators	1 green/red module status indicator 8 yellow/red I/O status indicator
Slot width	1
Common mode noise rejection ratio	130 dB @ 50/60 Hz
Normal mode noise rejection ratio	65 dB @ 50/60 Hz, notch filter dependent
Dimensions (HxWxD), approx	144.57 x 22 x 105.42 mm (5.69 x 0.87 x 4.15 in.)

5069-OF4, 5069-OF4K, and 5069-OF8 Analog Current/Voltage Output Modules

The following figure shows a wiring diagram for the 5069-OF4 and 5069-OF4K modules when used in current mode.

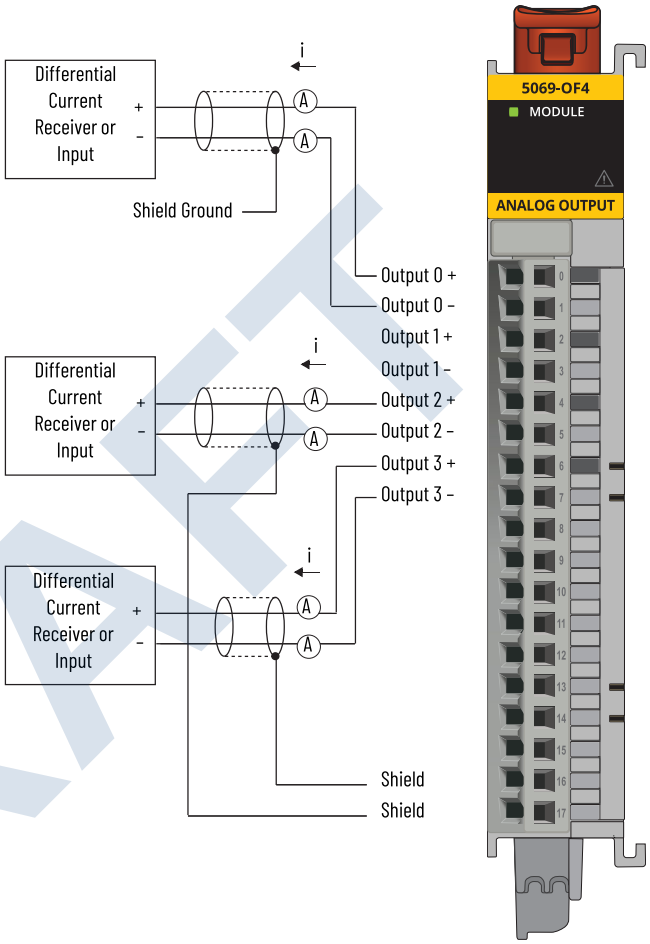
5069-OF4 and 5069-OF4K Wiring Diagram - Current Mode

Channel Connections

The diagram shows a device that is connected to channels 0, 2, and 3. You aren't restricted to using only these channels. You can connect devices to any channel or combination of channels as needed.

IMPORTANT: Remember the following:

- Place more loop devices, for example, strip chart recorders, at either **A** location in the current loop.
- This module has only two shield terminals. Compact 5000 I/O module RTBs only support one wire per terminal.
- If you connect more than two devices to the module, you can ground two devices at the shield terminals. You must ground the remaining devices somewhere else, such as, to the DIN rail via a terminal strip



SA Power

Connections to an external power supply that provides SA power are made via the SA power RTB on one of the following:

- CompactLogix 5380 controller
- Compact GuardLogix 5380 controller
- CompactLogix 5480 controller
- 5069-AENTR or 5069-AEN2TR EtherNet/IP Adapter
- 5069-FPD field potential distributor

IMPORTANT: Remember the following:

- The 5069-OF4 module uses DC SA power. You must connect DC power to the component, that is, controller, adapter, or field potential distributor, that provides SA power to the modules.
- If you install modules in a system that use AC SA power and DC SA power, you must install them on separate SA power buses.
- You use a 5069-FPD field potential distributor to establish a new SA power bus in a system. SA power buses are isolated from each other. To keep the modules on separate SA power buses, complete these steps.
  1. Install the modules that use one type of SA power, for example DC, to the right of the adapter or controller, that is, the first SA power bus.
  2. Install the 5069-FPD field potential distributor to establish a second SA power bus.
  3. Install the modules that use the other type of SA power, for example AC, on the second SA power bus.

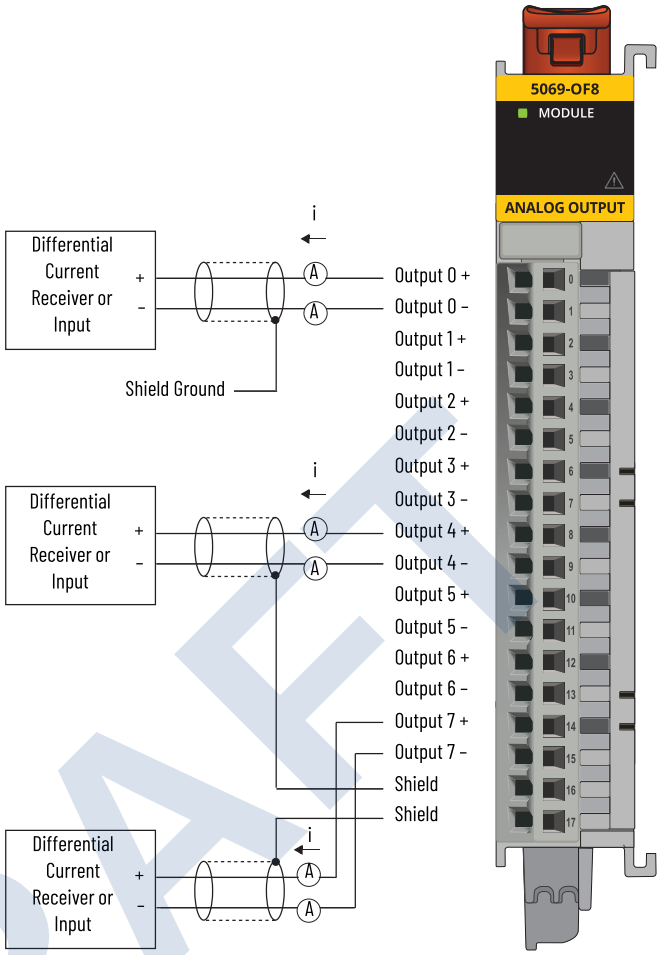
The following figure shows a wiring diagram for the 5069-OF8 module when used in current mode.

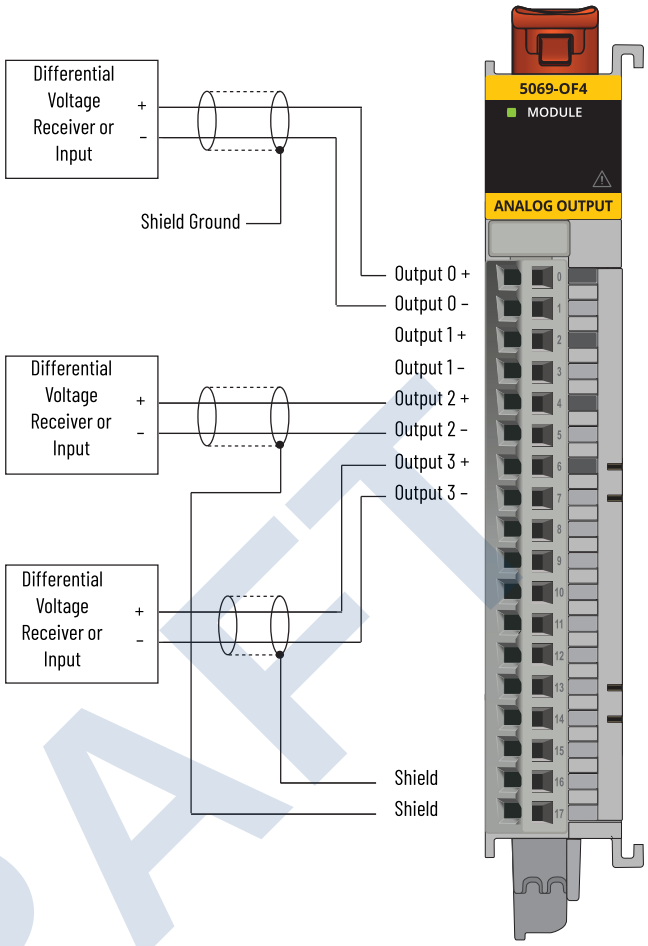


5069-OF8 Wiring Diagram - Current Mode

Channel Connections

The diagram shows devices that are connected to channels 0, 4, and 7. You aren't restricted to using only those channels. You can connect devices to any channel or combination of channels as needed.

IMPORTANT: Remember the following:



- Place more loop devices, for example, strip chart recorders, at either **A** location in the current loop.
- This module has only two shield terminals. Compact 5000 I/O module RTBs only support one wire per terminal.
- If you connect more than two devices to the module, you can ground two devices at the shield terminals. You must ground the remaining devices somewhere else, such as, to the DIN rail via a terminal strip.

DRAFT

DRAFT

Removable Terminal Kits

You must order 5069 RTB kits to connect MOD power and SA power to CompactLogix 5380 controllers. The MOD power connection uses a 4-point RTB, and the SA power connection uses a 6-point RTB. The following kits are available.

CompactLogix 5380 Controllers Removable Terminal Block Kits

Cat. No.	Description
5069-RTB64-SCREW	Contains the following: • 5069-RTB6-SCREW - 6-point RTB that uses screw-type terminals • 5069-RTB4-SCREW - 4-point RTB that uses screw-type terminals
5069-RTB64-SPRING	Contains the following: • 5069-RTB6-SPRING - 6-point RTB that uses spring-type terminals to connect SA power to the controller. • 5069-RTB4-SPRING - 4-point RTB that uses spring-type terminals to connect MOD power to the controller.

5069 Removable Terminal Blocks

This publication describes the 5069 removable terminal blocks (RTB).

The 5069 RTBs are available only in 5069 RTB kits. Each kit has a unique catalog number that represents the RTB type contained in it.

	Cat. No.			
Attribute	**5069-RTB4-SPRING(1)**	**5069-RTB6-SPRING**	**5069-RTB4-SCREW(2)**	**5069-RTB6-SCREW**
Voltage, max	300V AC			
Current, max	10 A			
Wire size (AWG conductor range)	0.5…1.5 mm^2 (22…16 AWG) solid or stranded copper wire rated at 105 °C (221 °F), or greater, 2.9 mm (1/8 in.) insulated max diameter		0.5…1.5 mm^2 (22…16 AWG) solid or stranded copper wire rated at 105 °C (221 °F), or greater, 3.5 mm (9/64 in.) insulated max diameter	
Wire strip length, max	10 mm (0.39 in.)		12 mm (0.47 in.)	
Torque	N/A		0.4 N·m (3.5 lb·in)	

(1) This RTB ships with the 5069 RTB kit catalog number 5069-RTB64-SPRING.

(2) This RTB ships with the 5069 RTB kit catalog number 5069-RTB64-SCREW.

Molded Case Circuit Breakers

Overview

Cat. No. 140G-G6C3-D12

Bulletin 140G Molded Case Circuit Breakers

- 10..3000 A current range
- 3- & 4-pole devices
- Space-saving dimensions
- Thermal/Magnetic protection: 15..800 A
- Electronic protection: 10..3000 A
- Approved for global application: UL, CSA, CCC, and IEC performance interrupting/breaking capacity
- Wide range of mounting options
- Extensive range of factory- or field-installed accessories

The Bulletin 140G family of Molded Case Circuit Breakers (MCCBs) offers a wide range of features include thermal/magnetic and electronic protection devices, high interrupting/breaking capacities and a complete line of factory and field installed accessories. The Bulletin 140G MCCBs are ideal for use in line protection of control panels.

Catalog Number Explanation — 125 A, G-Frame

Complete Circuit Breaker Assemblies with Factory-Installed Options

Examples given in this section are not intended to be used for product selection. Use ProposalWorks to configure the molded case circuit breaker. Use these configurations only to select all factory-installed options for shunt trips, undervoltage release units, auxiliary contacts, and alarm contacts. Use the codes from Table g to add on to the molded case circuit breaker cat. no. selected on the previous pages to form a complete cat. no. for a complete assembly with factory-installed options.

Internal Electrical Accessories

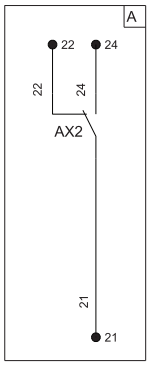
Auxiliary/Alarm Contact (AX/AL)

Auxiliary and alarm contacts are supplied in multiple variations for customer application.

- Auxiliary Contacts (AX) : Indicate ON/OFF status of the MCCB.
- Alarm Contacts (AL): Indicate trip status of the MCCB. Alarm trip can be initiated by pressing the test button on the molded case circuit breaker, a trip due to overcurrent, short circuit; or trip due to residual current, shunt, or undervoltage release signals.
- Thermal Trip Contacts (TU): Trips only when the MCCB has detected an overcurrent, short-circuit, or protection trip. H- and J-Frame MCCBs have a button to test this feature. Available only for H, J, N, NS, and R frames.



These contacts are installed by removing the MCCB cover and accessing right-side pockets within the breaker with snap-in mounting provisions. Frames G…M are supplied with pig tail wiring, with each terminal wire marked. Frames N, NS, and R are wired internal to the breaker and are terminated for connection using a 3-pin quick connector.

Environmental Data

Schneider Electric aims to achieve Net Zero status by 2050 through supply chain partnerships, lower impact materials, and circularity via our ongoing “Use Better, Use Longer, Use Again” campaign to extend product lifetimes and recyclability.

Environmental Data explained >

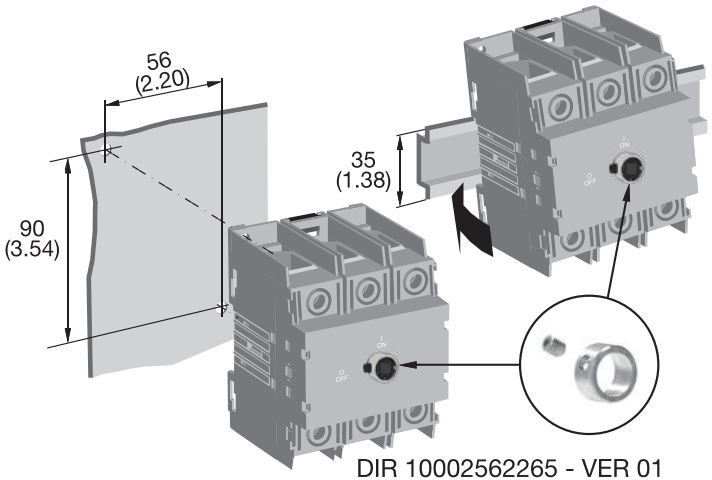
How we assess product sustainability >

Use Better

Materials and Substances

Packaging made with recycled cardboard	No
Packaging without single use plastic	No
EU RoHS Directive	Compliant with Exemptions
California proposition 65	"WARNING: This product can expose you to chemicals including: Lead and lead compounds, which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov"
Halogen content performance	Halogen free plastic parts product
PVC free	Yes

Use Again



Repack and remanufacture

Circularity Profile	No need of specific recycling operations
Take-back	No

WARNING: To prevent electrical shock, disconnect from power source before installing or servicing. Install in suitable enclosure. Keep free from contaminants.

WARNUNG: Vor Installations- oder Servicearbeiten Stromversorgung unterbrechen, um Unfälle zu vermeiden. Die Geräte müssen in einem passenden Gehäus und gegen Verschmutzung geschützt werden.

AVERTISSEMENT: Avant le montage et la mise en service, couper l'alimentation secteur afn d'éviter tout accident. Prévoir une mise en coffret ou armoire Protéger le produit contre les environnements agressifs.

AVVERTENZA: Per prevenire infortuni, togliere tensione prima dell'installazione o manutenzione. Installare in custodia indonea. Tenere lontano da contaminanti.

ADVERTENCIA: Desconectar la alimentación eléctrica antes de realizar el montaje y la puesta en servicio, con el objeto de evitar accidentes. Instalado en un apropiado. Proteger el producto de los ambientes agresivos.

ПРЕДУПРЕЖДЕНИЕ: Во избежание поражения электрическим током, отсоединить от источника питания перед установкой или обслуживанием. Устанавливать в соответствующем корпусе. Предохранять от загрязнений.

警告：为了防止触电，在安装或维修之前必须先切断电源。安装在合适的设备箱内，防止接触污染物。

SINGLE POLE DIST. BLOCK, 85 A UL/CSA, CABLE LINE, 6 CABLES LOAD, COPPER

CATALOG NUMBER

UD-80A

CERTIFICATIONS

FEATURES

- Tinned copper or aluminum block allows for copper or aluminum conductor direct connections, or using ferrule
- Screw retaining cover is hinged and removable
- Design allows for visual inspection of conductor and confirmation of connection
- Modular snap-together blocks for building multi-pole power blocks
- Easily clips onto DIN rail or mounts to panel with screws
- 95% fill ratio
- RoHS compliant
- Conforms to EN 45545 obtaining an HL3 classification for chapter R23 and HL2 classification for chapter R22
- Halogen free

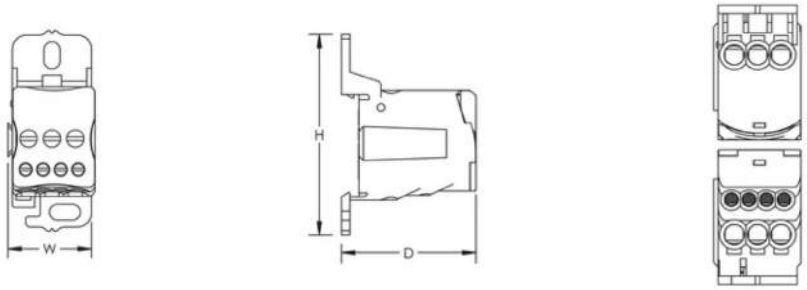
PRODUCT ATTRIBUTES

- Article Number: 569010
- Finish: Tinned
- Max Current Rating, IEC: 80A

DRAFT

- Max Current Rating, UL/CSA: 85A
- Line Side Connection: Cable
- Load Side Connection: 6 Cables
- Material: Copper;Thermoplastic
- Line Side Max Conductor Size, UL: #4
- Load Side Max Conductor Size, UL: #4
- Max Working Voltage, IEC (Ui): 1000
- Max Working Voltage, UL (Vin): 600
- Short Term Withstand Current (Icw) 1s: 3kA
- Peak Short Circuit Current (Ipk): 22kA
- Rated Conditional Short-Circuit Current (Icc): 11kA
- Short Circuit Current Rating (SCCR): 100kA
- Line Side Number of Connections: 1
- Line Side Compact Stranded Wire Size: 6 - 16 mm²
- Line Side Wire Size: 16 Min
- Load Side Number of Connections: 6
- Load Side Compact Stranded Wire Size: (2) 2,5 - 16 mm²;(4) 2,5 - 6 mm²
- Load Side Stranded Wire Size - Ferrule: (2) 2,5 - 16 mm²;(4) 2,5 - 6 mm²
- Load Side Wire Size: (2) #16 - #4;(4) #16 - #8
- Enclosure Rating: IP 20
- Depth (D): 1.84
- Height (H): 2.72"
- Width (W): 1.18"
- Unit Weight: 0.15 lb
- Certification Details: UL® 1059
- Flammability Rating: UL® 94V-0
- Complies With: IEC® 60947-7-1

DRAFT



ADDITIONAL PRODUCT DETAILS

Increase the number of outputs with one input using a jumper on blocks with a Max Current Rating, IEC up to 160 A.

Blocks with 1,000 VAC/DC Max Working Voltage, UL are ideal for solar applications.

Design Guideline for Distribution Blocks, Power Blocks and Power Terminals										
Derating according to Ambient* Temperature (°F) to maintain working temperature of 185°F

BUSSMANN SERIES

3-Pole, UL Type 1 DIN-Rail high SCCR surge protective devices

RoHS 2011/65/EU

Catalog symbol:

BSPMA3_WYGR

- BSPMA3_DLGR

Description:

The Bussmann™ series three-pole DIN-Rail UL® Listed open Type 1 surge protective devices feature a high 200 kA SCCR. Replaceable arrestor modules are mechanically coded with the base to ensure against installing an incorrect replacement. The unique module locking system fixes the module to the base, and allows it to be easily replaced without tools by simply depressing the release buttons.

Standard local visual status indication:

The module's visual indicator shows the protective status at a glance: green = good, red = replace.

Remote contact signaling:

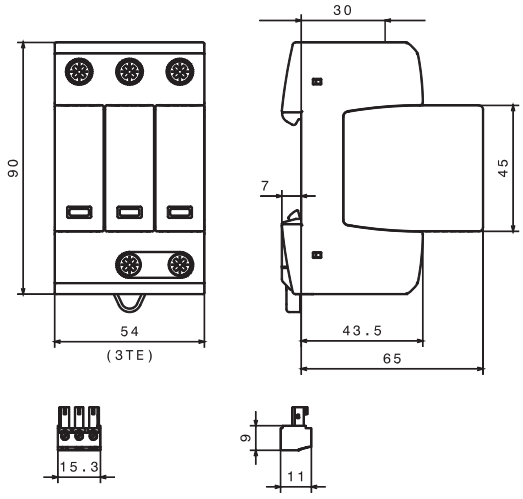
The standard three-pole terminal remote Form C contact signaling relay has a floating changeover contact for use as a break or make contact, according to circuit concept.

Ratings:

- System volts/types
  - 120/208 Vac 3-phase Wye
  - 277/480 Vac 3-phase Wye
  - 347/600 Vac 3-phase Wye
  - 240 Vac 3-phase Delta
  - 480 Vac 3-phase Delta
- Short-circuit Current Rating (SCCR) 200 kA

Agency information:

- UL Listed open Type 1, ANSI/ UL 1449 4th Edition, Guide VZCA, VZCA7
- CSA® Type 4-1 Component Assembly, C22.2 No. 269.1-14, Class 2157-27
- RoHS compliant



Mounting

- 35mm Din-Rail

Warranty

- Five years

Dimensions — mm

Catalog symbol:

- LP-CC-(amp)

Description:

Bussmann™ series Ultimate protection Low-Peak Class CC current-limiting, time-delay fuses. Time-delay – 12 seconds (minimum) at 200% of rated current.

Specifications:

Ratings

- Volts
  - 600 Vac
  - 300 Vdc (1/2 to 2-8/10 A, 20-30 A)
  - 150 Vdc (3-15 A)
- Amps 1/2-30 A
- IR
  - 200 kA Vac RMS Sym.
  - 20 kA Vdc

Agency information

- UL® Listed Class CC, Std. 248-4, Guide JDDZ, File E4273
- CSA® Certified; Class 1422-02, File 53787
- CE
- RoHS compliant

Features:

- 200 kA interrupting rating complies with NEC® Section 110.9 for today's large capacity systems.
- Fast short-circuit protection and dual-element, time-delay performance provide ultimate protection.
- Reduces existing fuse inventory by up to 33% when upgrading to Low-Peak fuses.
- Consistent 2:1 amp rating ratios for all Low-Peak fuses make selective coordination easy.
- Time-delay characteristic avoids unwanted fuse openings from surge currents while fast response speed under fault conditions provides a high degree of current limitation.
- Current-limitation protects downstream components against damaging thermal and magnetic effects of fault currents.
- A superior, all-purpose, space-saving branch circuit fuse that meets most protection requirements up to 30 A.
- Very compact physical size that's only 13/32" x 1-1/2" (10 x 38 mm) with rejction tip.
- Proper sizing can provide "No Damage" Type 2 coordinated protection for NEMA and IEC motor controllers.
- Can be used where either a time-delay or a fast-acting fuse is needed, making selection easier and reducing spare fuse inventories for substantial cost reduction.
- Superior protection for small horsepower motor circuits.

Description

The revolutionary next generation Bussmann™ series Compact Circuit Protector (cat. no. CCP2) fused disconnect switch is 3/5 the footprint of a traditional fusible switch and provides up to a high 200 kA Short-Circuit Current Rating (SCCR) to help improve panel and assembly SCCR.

The 35 mm DIN-Rail mount CCP is available in a variety of configurations to meet many application needs including rotary operation.

Application flexibility is extended with an optional multi-wire lug kit, with finger-safe shrouds, that provides three additional wire ports on each pole for power distribution applications.

Other accessories include a PLC interface device for open fuse monitoring and NO/NC auxiliary contacts that easily integrate into many monitoring systems.

Front and side rotary operated versions are easily applied for through-the-door or through the left or right side operation to enhance safety.

Conductors/terminals

- 75°C Cu/Al, see conductor tables for size, type and torque information
- Box lug, single/dual conductor
- Fork terminal suitable for line, load or accessory connection
- Multi-wire lug kit — see accessories for details

Storage and operating temperature

- - 20°C to 75°C (-4°F to 167°F)*

* For fuse performance under or above 25°C, consult fuse performance derating charts in the Bussmann Division publication no. 3002, titled Selecting Protective Devices (SPD)

Lockout/tagout provisions

- Switch only — 4 mm lock or Brady pin-out device part number 90850
- Switch with rotary operating mechanism — 1/4" lock

Minimum enclosure size

- 10" x 8" x 6" (254 x 203 x 152 mm)

Mounting

- 35 mm DIN-Rail

Local open fuse indication minimum voltage**

- 90 Vac for AC switches
- 12 Vdc for DC switches

** Open fuse indication requires an open fuse to be in the CCP2 and the switch in the ON position.

Accessories

- Multi-wire lug kit with terminal shrouds
- Selector and pistol handles for use with rotary operated switches
- 8 mm shafts for use with selector and pistol handles
- Auxiliary contacts
- PLC fuse monitor

Carton quantity and shipping weight

Item	Poles	Weight lbs (kg)

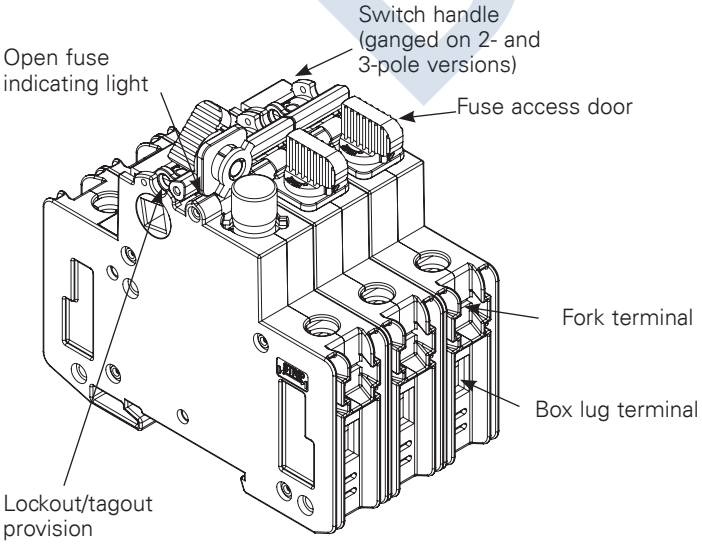
	3	1.18 (0.537)

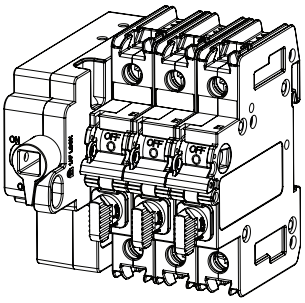
DRAFT

Compact Circuit Protector disconnect switches
For use with Class CC, Supplemental and IEC 10x38 mm fuses

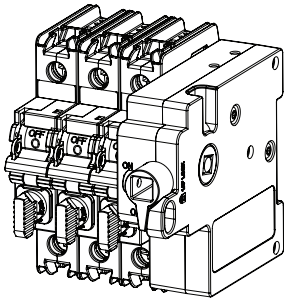


Technical Data 10789
Effective January 2019

Features



- Extremely compact (18 mm wide per pole) design
- High SCCR up to 200 kA (UL Class CC) and 120 kA (IEC)
- Disconnect rated for load isolation
- Full voltage rated up to 600 Vac or 80 Vdc
- UL 98 Listed Class CC version is horsepower rated and suitable for branch circuit protection and disconnect
- IEC 10x38 version complies with IEC 60947-3 and suitable for branch circuit protection and disconnect
- Suitable for global installations, the switches comply with UL, cULus and IEC standards accepting UL Class CC, Supplemental or IEC aM and gG/gL fuses
- Open fuse indication
  - Standard local open fuse indicating light for each pole
  - Optional PLC fuse monitor can be utilized to signal a PLC and open a contactor to de-energize all phases, if required
- IP20 finger-safe with 10 AWG (6 mm^2) or larger wire (box lug terminals only)
- Built-in switch interlock prohibits removing the fuse under load
- Padlockable handle for lockout/tagout
  - 4 mm lock for switch only
  - 1/4" lock for rotary operated switches
- Rotary operated versions provide for through-the-door and through-the-side operation flexibility and enhanced safety with:
  - Right front switch operation
  - Left front switch operation
  - Right side switch operation
  - Left side switch operation
- Optional selector, pistol and NFPA 79 compliant handles available for use with rotary operated versions
- Multi-wire lug kit with terminal shrouds allows for power distribution to multiple loads. Each lug has three ports rated for single and dual wires (see lug kit in accessories for conductor and torque details).



Right front rotary operated CCP2 switch with PLC fuse monitor.

Multi-wire lug kit

Catalog number

- CCP2-MW1-3

Description

The multi-wire lug kit permits expanding each box lug terminal on the switch into a three-port terminal for power distribution applications.

Each multi-wire lug kit comes with three (3) three-port lugs and three terminal shrouds. Shrouds provide finger-safe protection when properly installed.

Lugs may be mounted on either the loadside or lineside to meet various application needs.

Ports on any one lug accept any conductor combination listed, e.g., one of the three ports may have dual 14 AWG wires and the other two ports single 10 AWG wires.

Ratings

- Volts 600 V
- Amps 60 A max
- SCCR 200 kA

Agency information

- UL Recognized (lug only)
- RoHS compliant

Storage and operating temperature

- - 20°C to 75°C (-4°F to 167°F)

Multi-wire lug conductor information

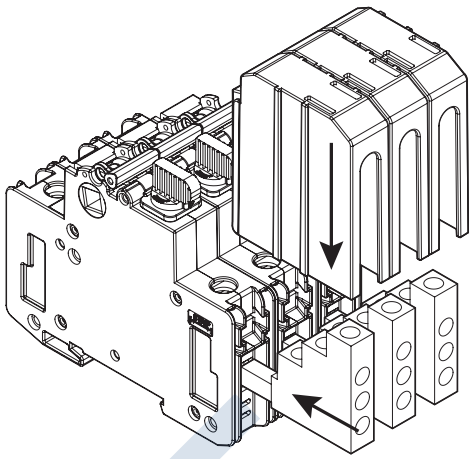
- 75°C Cu/AL
- AWG size and quantity per port - see table below

Type	AWG range	Class	Quantity	Torque N•m (lb-in)
Cu/Al	4-6	Stranded, Class B/C	Single	3.95 (35)
	8			2.82 (25)
Cu	10-14	Stranded, Class B/C	Single/dual*	2.26 (20)
	10-14	Solid	Single	2.26 (20)
	8	UL ferrule, Class B to K	Single/twin†	2.82 (25)
	10-14			2.26 (20)

* Dual wire to be same size and type.
† Two stranded conductors placed in one UL Listed twin ferrule.

CCP2 box lug torque for multi-wire lug

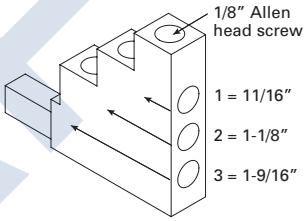
- 4.52 N•m (40 lb-in)



Terminal shroud accessory

Terminal shrouds are available without multi-wire terminals.

Catalog no.	Description
CCP2-TS1-3	Pack of three



Installed on CCP2-3-xx

Multi-wire lugs mount in switch box lug terminals to provide three additional wire ports per pole. Lugs can be mounted on the switch lineside or loadside. Each multi-wire lug kit comes with three lugs and three shrouds.

Wire insulation strip lengths

Strip back wire insulation to the lengths as indicated in the illustration above and the table below.

Lug port	Strip wire insulation back (inch)
1	11/16
2	1-1/8
3	1-9/16

Wiring versatility is provided by single/dual rated box lug terminals on the switch, or by the three-port multi-wire lug kit that's also single/dual wire rated.

DRAFT

Selector and pistol handles

Catalog symbol

- CCP2-H4X-_

Description

Selector and pistol handles for use with any 2- and 3-pole CCP2 rotary operated switch. Both selector and pistol handles are available in black/grey and red/yellow colors and clockwise/counterclockwise operating modes. Applying clockwise and counterclockwise operation depends upon the CCP2 rotary switch configuration. Installation requires an 8 mm shaft (ordered separately).

Each handle is rated NEMA 4X and capable of accepting up to three (3) 1/4" diameter shank locks for lockout/tagout in the OFF position. They can also be field configured for lock-on.

In application, only the clockwise operating handles in combination with either the left front or right front rotary switches provide a door interlock means to ensure the enclosure door remains shut during lockout/tagout or lock-on. Both clockwise and counterclockwise operating handles when mounted on the enclosure's left or right side do NOT provide a door interlock means.

See the catalog number table below for applicable rotary switch, handle and shaft combinations.

Agency information

- UL Listed, Guide DIHS, File E140305
- NEMA 4X rating
- RoHS complaint
- CE

Storage and operating temperature

- -20°C to 75°C (-4°F to 167°F)

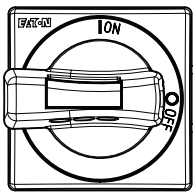
Packaging

- Each handle is packaged individually

Handle shafts

Catalog symbol

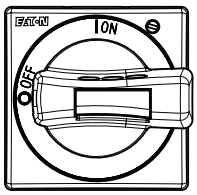
- CCP2-SH1-_



Description

Eight millimeter square shafts available in 290 and 490 millimeter (11.5 and 19.3 inch) lengths. Shafts are indexed to ensure handle/switch orientation for correct operation. Shafts are cut to length when installed.

Packaging



- Each shaft is packaged separately

Selector handles

Auxiliary contacts

Catalog number

- CCP2-AUX

Description

NO+NC contact output to indicate the switching mechanism status on the CCP2. A single unit can be mounted on any 1-, 2- or 3-pole CCP2 switch and the left front/left side rotary operated switches.

Ratings

- Amps up to 5 A
- Volts up to 240 Vac
- NC/NO contacts are closed/open when the CCP2 switch is in the "ON" position (closed)

Description	Max per CCP2*	Signal output
Auxiliary contacts NO+NC for switch status	1 per CCP2 (1-, 2- or 3-pole)	5 A / 240 Vac

* The CCP2-AUX CANNOT be mounted on the right front and right side rotary operated versions.
De-energize all circuits and follow all prevailing safety procedures before installing or removing the CCP2-AUX.

Agency information

- UL 98 Recognized, Guide WHTY2, File E155130
- cURus to Canadian Standard 22.2 No. 4-04
- IP20 finger-safe in installed state
- RoHS compliant
- CE

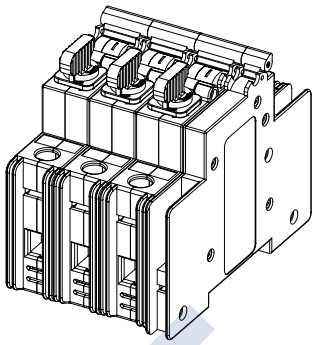
Wiring

- 75°C Cu, 20-16 AWG (0.5 to 1.5 mm²) wire
- Torque 0.56 N•m (5 lb-in)

Packaging

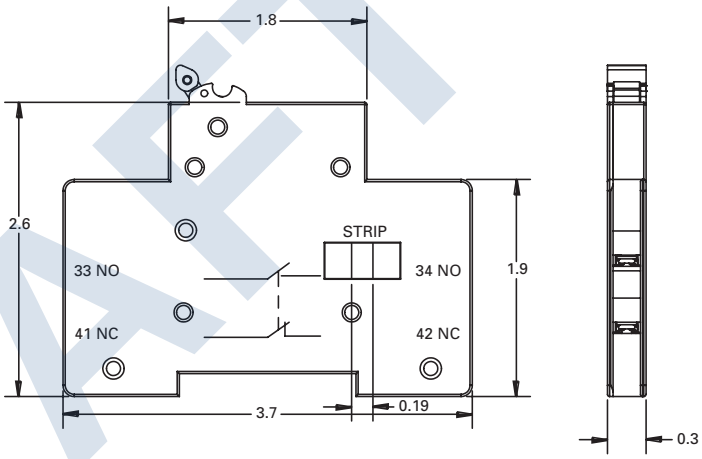
- The CCP2-AUX is packaged individually

Installation technique



- Mounts on the CCP2's right side ONLY and mechanically interlocks with the CCP2 switch handle with provided hardware. The CCP2-AUX CANNOT be mounted on the right front and right side rotary operated versions.

Storage and operating temperature

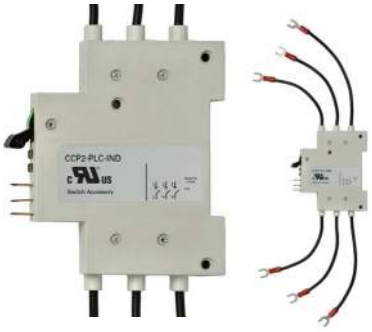


- -20°C to 75°C (-4°F to 167°F)

Installed on a CCP2-3-xx

Note: CCP2-AUX **CANNOT** be mounted on the right front and right side rotary operated versions.

Dimensions — in



CCP2-AUX auxiliary contacts mounted on a 3-pole CCP2 switch.

DRAFT

PLC fuse monitor

Catalog number

- CCP2-PLC-IND

Description

A resettable three-phase fuse monitor that integrates with the I/O card in a Programmable Logic Controller (PLC). A single unit can be mounted on any 1-, 2- or 3-pole CCP2 switch and the right front/ right side rotary operated switches. A single unit monitors up to three phases. When used on 1- and 2-pole switches unused conductor(s) are removed after installation.

The CCP2-PLC-IND **CANNOT** be mounted on the left front/left side rotary operated versions or if the multi-wire lug kit is installed.

Ratings

- Signal output to PLC*
  - +24 Vdc, 10 mA max
- Output signals
  - Digital 0 Vdc (low), 24 Vdc max (high)
  - 0 Vdc Low – fuse is good
  - 24 Vdc High – fuse has opened

* When the fuse opens, the output signal is sent high and will remain high until the unit is reset.

Emissions and immunity testing

- IEC 60947-1: Voltage Switchgear and Control Gear
- IEC 61000-6-2: Electromagnetic Compatibility (EMC)
  - IEC 61000-4-2: Electrostatic Discharge Immunity - Test at level 3 (6 kV-Contact Discharge) and level 2 (4 kV-Air Discharge)
  - IEC 61000-4-3: Electromagnetic Compatibility - Radiated, Radio-frequency, Electromagnetic Field Immunity test at level x (20 V/m)
  - IEC 61000-4-4: Electromagnetic Compatibility - Testing and Measurement Techniques at level 3 (± 2 kV - Power Port and ±1 kV - I/O Ports)
  - IEC 61000-4-5: Electromagnetic Compatibility - Surge Immunity test at level 4 (±4 kV)
  - IEC 61000-4-6: Immunity to Conducted Disturbances at level 3 (10 V)

Description	Max per CCP2**	Signal output to PLC	Min. circuit volts
Wired remote fuse indication for PLC applications	1 per CCP2 (1, 2- or 3-pole)	24 Vdc/ 10 mA	100 Vac

**The CCP2-PLC-IND CANNOT be mounted on the left front/left side rotary operated versions or if the multi-wire lug kit is installed.

De-energize all circuits and follow all prescribed safety procedures before installing or removing the CCP2-PLC-IND.

Agency information

- UL 98 Recognized, Guide WHTY2, File E155130
- cURus to Canadian, Standard 22.2 No. 4-04

Local indication

- Two distinct LEDs indicate unit power (green) and open fuse (red). Open fuse LED is resettable upon fuse replacement and actuating the reset switch.

Wiring

- For power, signal and ground connections use shielded twisted pair 22-24 AWG (0.34-0.25 mm^2) 300 V rated wire

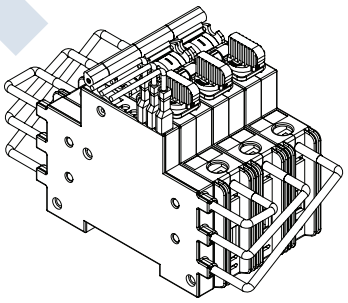
Packaging

- The CCP2-PLC-IND is packaged individually
- Includes 0.110" (2.8 mm) quick connects for power, signal and ground connections

Installation technique

- Mounts on the left side ONLY of the CCP2 and mechanically interlocks with the CCP2 switch handle with hardware provided. The CCP2-PLC-IND **CANNOT** be mounted on the left front/ left side rotary operated versions or if the multi-wire lug kit is installed.

IP20 rating — yes



Storage and operating temperature

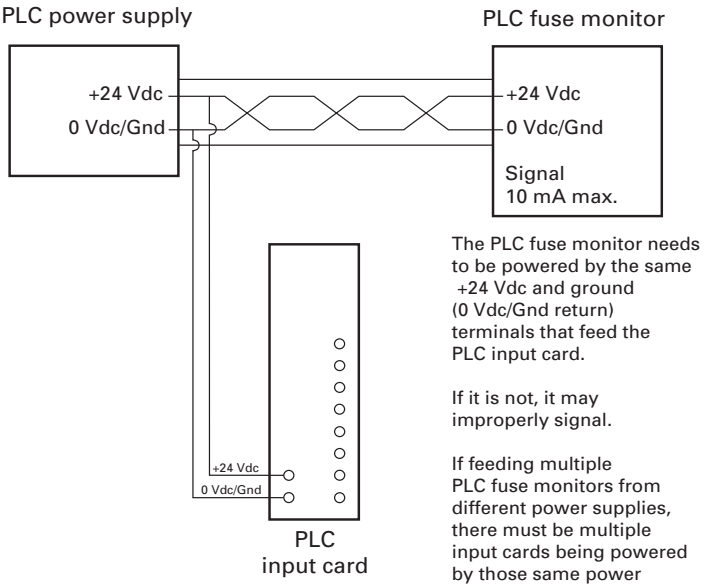
- -20°C to 75°C (-4°F to 167°F)

PLC programming

- The CCP2-PLC-IND signal line is designed to provide a digital input to a PLC I/O card. In this case, a Programmable Logic Control program must be written to properly interpret the input signal to the PLC. The PLC program should check for consecutive high signals before taking action on a critical process.

Installed on a CCP2-3-xx

CCP2-PLC-IND mounted on a 3-pole switch and using the fork terminals. When mounted on a 2- or 1-pole switch, remove unused leads.

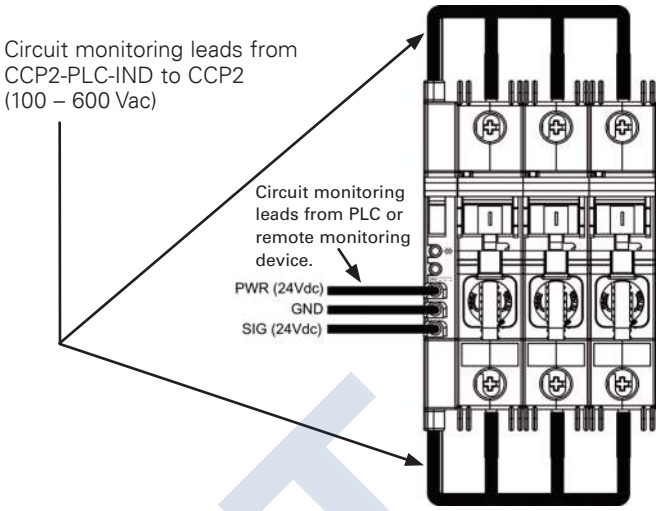


Note: The CCP2-PLC-IND **CANNOT** be mounted on the left front/left side rotary operated versions or if the multi-wire lug kit is installed.

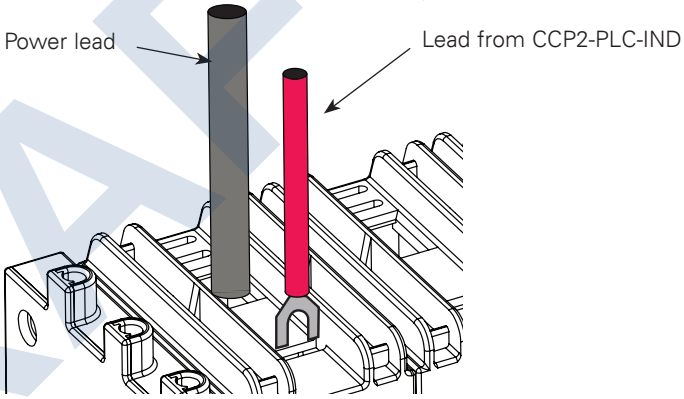
CCP2-PLC-IND fuse monitor mounted on a right front rotary operated switch.

DRAFT

PLC wiring schematic



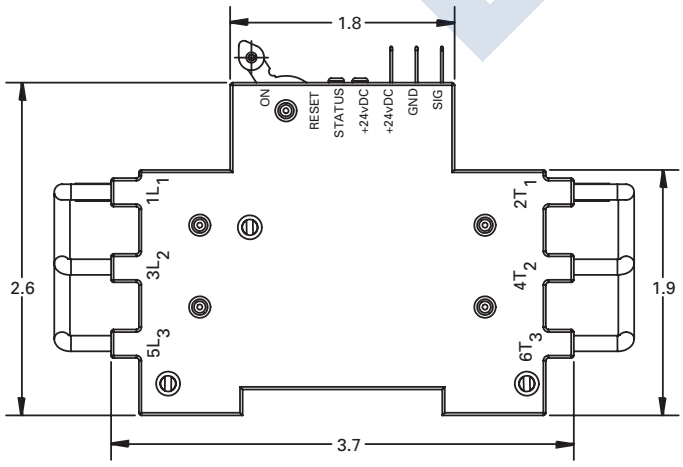
The PLC fuse monitor needs to be powered by the same +24 Vdc and ground (0 Vdc/Gnd return) terminals that feed the PLC input card.



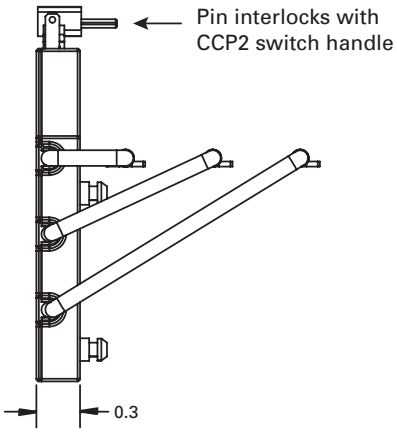
If it is not, it may improperly signal.

If feeding multiple PLC fuse monitors from different power supplies, there must be multiple input cards being powered by those same power supplies as well.

CCP2-PLC-IND connections from a CCP2-3-xx to a remote monitoring device



Connection from CCP2-PLC-IND to CCP2-3-xx



Leads from CCP2-PLC-IND are connected to the fork terminals as shown.

Note: When monitoring a 1- or 2-pole switch, remove unused leads.

ENCAPSULATED TRANSFORMERS FOR HAZARDOUS LOCATIONS

HPS Titan® has been designed to operate in harsh environments/hazardous locations where dangerous gases, liquids, dust, etc., could lead to series consequences. HPS Titan® encapsulated transformers are used in installations where safety is your priority, efficiency is a concern and the environment, location and application are key. Typical applications include institutional, commercial, industrial, petrochemical, marine, mining, etc.

HPS Titan® series transformers are UL Listed for "Class 1, Divison 2, Groups A, B, C and D Hazardous Locations" and are ABS Type Approved for "Marine Duty Service and Offshore Applications - Electrical Distribution and Propulsion". And with a North American Temperature Classification of T3C, the HPS Titan® series will remain cool under load.

Key features:

- Single phase ratings from .05 kVA to 37.5 kVA; three phase ratings from 2 kVA to 150 kVA
- 60 Hz frequency (50/60 Hz on units with 380V primary)
- Primary volts: 120, 208/240/277, 347/380, 240x480, 600, export model: 190/200/208/220x380/400/416/440
- UL 1604 approval, Class 1 Division2
- ABS type approval
- Electrostatic shield standard on all three phase units and single phase units over 0.50 kVA
- 10 year warranty

For more information, click one of the links below:

HPS TITAN Series of Products

HPS has over 85 years of experience in the design and manufacture of dry-type transformers including those for harsh environments and hazardous location applications.

The terms “Harsh Environments” and “Hazardous Location” in many industries brings to the forefront the many difficult environments which may contain dangerous gases, liquids, dust, etc., that could lead to serious consequences. Products which are designed to operate in these hazardous environmental conditions must be safe, reliable and affordable.

Other manufacturers of harsh environment and hazardous location transformers can design a functional transformer. But what makes HPS the leader in the industry is our investment in providing a complete solution.

- **Advanced Encapsulated Harsh Environment and Hazardous Location Transformer Designs**
- **Standard Features Expected in the Industry**
- **Superior Quality in Materials and Workmanship**
- **Options and Accessories that Enhance the Product Line**
- **Value, Customer Service and Support**

The new **HPS TITAN** line of encapsulated transformers have been designed for installation where safety is your priority, efficiency is a concern and the environment, location and application are key. Typical applications include institutional, commercial, industrial, petrochemical, marine, mining etc. HPS designs provide:

- **Safe Superior Performance**
- **Compact Efficient Design**
- **Easy Installation and Hook-up**

HPS TITAN series transformers are ***UL Listed*** for **“Class 1, Division 2, Groups A, B, C and D Hazardous Locations”** and are ***ABS Type Approved*** for “**Marine Duty Service and Offshore Applications - Electrical Distribution and Propulsion”**. And with a North American Temperature Classification of **T3C**, the **HPS TITAN** series will remain cool under load.

The **HPS TITAN** series of products are competitively priced for the rugged, industrial and commercial indoor and outdoor distribution transformer markets. HPS facilities have the most modern testing equipment for the requirements of ANSI, OSHA, UL, CSA, IEC, NEMA, ABS, DNV, BV, CE, etc.

Hammond Power Solutions . . . helping customers solve tough applications in today’s environments!

HPS TITAN Features and Benefits

- **Ratings:** Three phase from 2 kVA thru to 150 kVA; single phase from .05 kVA thru to 37.5 kVA
- **Approvals:** UL 1604 - File No. E258346 (**Class 1, Division 2, Groups A, B, C and D Hazardous Locations**)
  ABS Type Approval - Certificate No. 04-MO523208-X (Marine Duty Service and Offshore Applications)
- **Electrostatic Shield:** Standard on all three phase units and single phase units over 0.50 kVA; provides quality power and superior protection.
- **Quality Design:** All units are encapsulated with electrical grade silica sand and resin compounds which completely enclose the core and coil to seal out moisture, airborne contaminants and eliminates corrosion and deterioration.
- **Insulation:** Offering UL class 130°C insulation, 80°C temperature rise up to 1 kVA on single phase and 5 kVA three phase; 180°C insulation, 115°C temperature rise on all units over 1 kVA on single phase and 5 kVA three phase. Quiet operation with sound levels below NEMA standards.
- **Enclosures:** NEMA 3R enclosures meet or exceed listing criteria including NEMA, ANSI, ABS and OSHA standards for indoor and outdoor service. On three phase units, convert to a NEMA 4 or 12 enclosure rating quickly and easily by ordering the HPS NEMA 4/12 Gasket Kit.
  Competitively priced stainless steel enclosures with stainless steel nameplates are also available.
- **Conduit knockouts:** Rear and side entry into an easily accessible and roomy wiring compartment.
- **Wiring compartment:** Provides copper lead wire terminations or copper tab and standard ground lug assembly for easy cable installation.
- **Installation made quick and easy:** Via keyhole mounting slots. Wall mounting available on single phase units from .05 to 37.5 kVA and three phase from 2 to 15 kVA (excluding Q015QKKF). Lifting provisions are included on all single phase units from 5 to 37.5 kVA and three phase units from 6 to 150 kVA.
- **Dual Nameplates:** All three phase units come standard with two nameplates. One on the front and an additional nameplate is located on the inside of the top cover. (1ph units have one standard nameplate only.)
- **Additional voltage groups and kVA sizes** are available upon request.
- **Warranty:** All HPS standard catalog encapsulated transformers come with a 10 year limited* warranty. *(Please refer to the Hammond Power Solutions "standard Catalog Transformer Products Warranty for full details.)

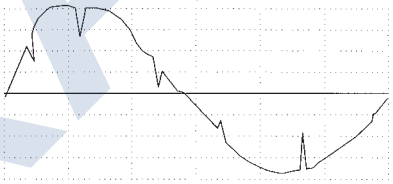
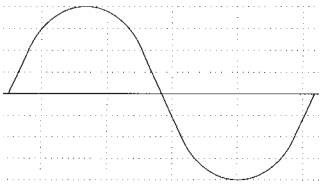
HPS Centurion® R
Line Reactor

HPS Centurion® R Reactor



The new HPS Centurion® R reactor provides a unique blend of improved performance and reliability while reducing the traditional product footprint. HPS Centurion® R reactors deliver protection for your motors and drives. They are available in standard ratings from 0.5 HP (373 Watts) to 1200 HP (895 kilowatts), up to 600 V (690 V with de-rating) and are fully compliant with UL, CSA, CE, IEC, and NEMA standards.

The efficient and cost effective HPS Centurion® R reactors are built to satisfy the power quality needs of demanding AC drive applications.



Why Choose a Reactor?

HPS reactors are designed to address line-side issues associated with variable frequency drives. They attenuate voltage and current transients that can cause nuisance tripping of a drive. Reactors also minimize harmonic current levels within the drive supply circuit. When used on the output side of IGBT-based, PWM-type AC drives, HPS reactors reduce the motor operating temperature and audible noise by moderating line transients seen by the motor. The use of HPS reactors enhances the overall system performance, life expectancy, and efficiency of the motor.

CONSTRUCTION

Assembly

- The impedance of the reactors is accurately controlled by maintaining the core gaps in the flux path.
- In some HP ranges, bobbins are used to provide exceptional mechanical strength and increase the product reliability.
- Every reactor is vacuum pressure impregnated (VPI) with VT (vinyl-toluene) Polyester Resin to minimize audible noise.

Terminations

- Finger-proof terminal blocks are provided on rated currents of approximately below 65 Amps.
- Terminal pads are supplied on approximately 65 Amps and above.
  - Terminal pads are brazed to ensure electrical integrity.

Enclosures

- Open core & coil or Type 1 standard (3R available; consult HPS for availability of enclosed units)
- Rugged steel enclosures with UL50 ANSI 61 grey paint

Specials

- For special applications or for any features that you may require beyond the standard line listed, please contact our sales office.

BENEFITS

- Mitigate nuisance tripping
- Extend the life of switching components and motors
- Reduce audible motor noise and motor operating temperature
- Mitigate the effect of long lead length
- Minimize harmonic distortion
- Reduce line notching

SPECIFICATIONS

Impedance Rating: 3% and 5%

System Frequency: 50/60 Hertz

System Voltage Ratings: 208 V, 240 V, 480 V, 575 V, 600 V (690 V de-rated)

Altitude (de-rating): Comply with NEMA ST20

Inductance Tolerance: +15/-10%

Inductance Curve:

% Nominal Inductance	% Rated Current
100	100
95	110
80	150
50	200

Dielectric strength to ground: 4000 volts for 1 minute or equivalent

Cooling Method: Natural convection

Temperature Rise:
- 80°C for 130°C Temperature Insulation Class
- 115°C for 180°C or 220°C Temperature Insulation Class

specifications subject to change

APPLICATIONS

Oil & Gas

Irrigation Fields

Wastewater

Food Processing

HVAC

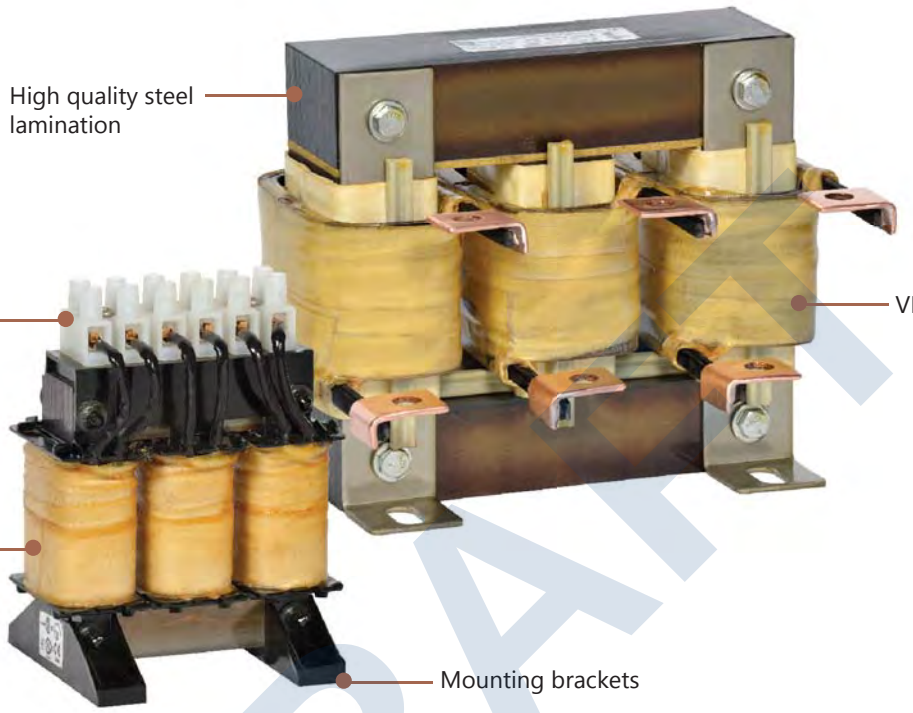
Pharmaceutical

Steel

Pulp & Paper

Automotive

COMPLIANCE & APPROVALS



HPS Centurion® R is certified to the following standards:

- UL 508
- CSA C9
- CSA C22.2 No. 47 standards
- CE Mark (IEC 61558-2-20:2000)
- UL Listed (up to 600V), file No. E61431
- CSA Certified file No. LR3902
- IEC 61558-2-20

Line Reactor

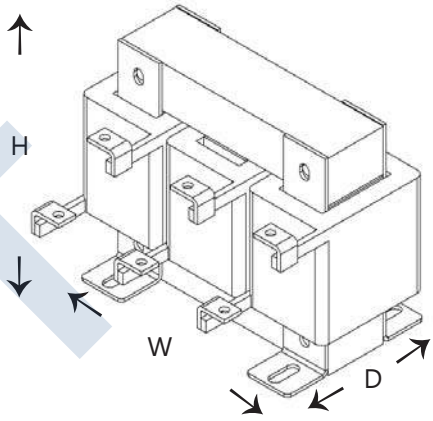
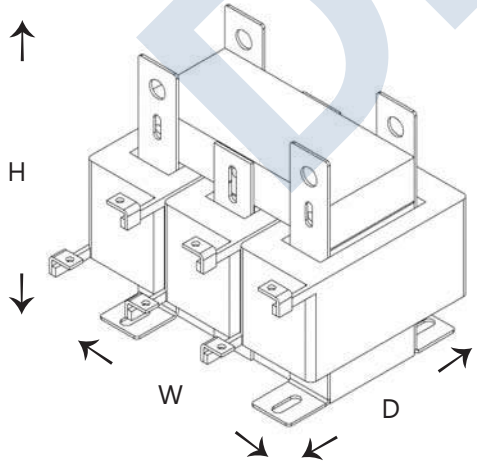
Diagrams

Figure #1



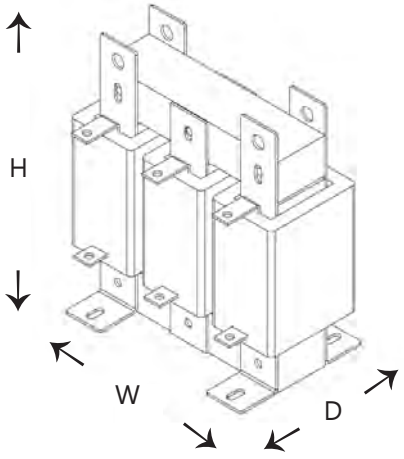
Mounting hardware
(not included)
4 pcs - 1/4 in. bolts
4 pcs - 1/4 in. nuts
8 pcs - 1/4 in. flat washers
4 pcs - 1/4 in. lock washers
Max. tightening torque: 5.5 ft-lb

Figure #2



Mounting hardware
(not included)
4 pcs - 5/16 in. bolts
4 pcs - 5/16 in. nuts
8 pcs - 5/16 in. flat washers
4 pcs - 5/16 in. lock washers
Max. tightening torque: 18 ft-lb

Figure #3



Mounting hardware (not included)	**.38x.5 slot**	**.44x1.0 slot**
4 pcs bolts	5/16 in.	3/8 in.
4 pcs nuts	5/16 in.	3/8 in.
8 pcs flat washers	5/16 in.	3/8 in.
4 pcs lock washers	5/16 in.	3/8 in.
Max. tightening torque	18 ft-lb	28 ft-lb

Figure #4

Mounting hardware
(not included)
4 pcs - 3/8 in. bolts
4 pcs - 3/8 in. nuts
8 pcs - 3/8 in. flat washers
4 pcs - 3/8 in. lock washers
Max. tightening torque: 28 ft-lb

Figure #5

Mounting hardware
(not included)
4 pcs - 3/8 in. bolts
4 pcs - 3/8 in. nuts
8 pcs - 3/8 in. flat washers
4 pcs - 3/8 in. lock washers
Max. tightening torque: 28 ft-lb

Catalog Number Explanation

C- and D-Frame Devices

140MT	-	C	3	E	-	B63	-	KN	-	MT	-	XC	-	GK
a		b	c	d		e		f		g		h		i

a	
Bulletin Number	
Code	**Description**
140MT	140MT Motor Protective Switching Device (Thermal)

b	
Current Rating/ Frame Size	
Code	**Description**
C	32 A, Frame C
D	40 A, Frame D

c	
Interrupting Rating/ Breaking Capacity	
Code	**Description**
3	Normal break
9	High break

d	
Function	
Code	**Description**
E	Adjustable Thermal/Fixed Magnetic (14 x I_n) MPCB
N	Fixed Magnetic (14 x I_n) MCP
T	Adjustable Thermal/Fixed Magnetic (18...22 x I_n) MPCB
V	Fixed Magnetic (application at output of VFD multi-motor)

e	
Current Range	
Code	**Description**
A	0.10 (example: A16 = 0.16 A)
B	1.0 (example: B16 = 1.6 A)
C	10 (example: C16 = 16 A)

f	
Knob and Adapters	
Code	**Description**
KN	Black lockable knob
KY	Red/yellow lockable knob
KB	Blue lockable knob (C-Frame only)
TE	Normal break

g	
Mounting Type	
Code	**Description**
MT	Standard busbar mount, top

h	
Auxiliary Contacts(1)	
Bottom Front	
1st Code	**Description**
X	No contact
B	1 N.O.
C	1 N.O. + 1 N.C.
D	2 N.O.
R	1 N.C. + 1 N.O. (SC+OL)
S	1 N.O. + 1 N.O. (SC+OL)
M	1 N.O. + 1 N.C. (SC+OL)
N	1 N.O. (SC+OL) + 1 N.O. (SC)
Right Side	
2nd Code	**Description**
X	No contact
C	1 N.O. + 1 N.C.
D	2 N.C.
E	2 N.C.

i	
Undervoltage and Shunt Trips	
Code	**Description**
Undervoltage Trip Units	
GK	24V, 50 Hz
GD	110V, 50 Hz/120V, 60 Hz
GF	220...230V, 50 Hz
GA	240...260V, 60 Hz
GN	380...400V, 50 Hz
GB	480V, 60 Hz/415V, 50 Hz
Shunt Trip Units	
PK	24V, 50 Hz
PD	110V, 50 Hz / 120V 60 Hz
PF	220...230V, 50 Hz
PA	240...260V, 60 Hz
PT	240V, 50 Hz/277V, 60 Hz
PN	380...400V, 50 Hz
PB	480V, 60 Hz/415V, 50 Hz
PZJ	24V DC

(1) Choose up to two auxiliary contacts. Use the first character in the code to specify the front mounted auxiliary contact; use the second character to specify the right side-mounted auxiliary contact. Example: code -XC is for no front-mounted contact, and a side-mounted auxiliary contact with 1 N.O. and 1 N.C. contact.

F-Frame Devices

140M	-	F	8	E	-	C10
a		b	c	d		e

a	
Bulletin Number	
Code	**Description**
140M	140M Motor Protection Circuit Breaker)

b	
Current Rating/ Frame Size	
Code	**Description**
F	45 A, Frame F

c	
Interrupting Rating/ Breaking Capacity	
Code	**Description**
8	High break

d	
Function	
Code	**Description**
E	Adjustable Thermal/Fixed Magnetic (14 x I_n) MPCB
N	Fixed Magnetic (14 x I_n) MCP
T	Adjustable Thermal/Fixed Magnetic (18...22 x I_n) MPCB

e	
Current Range	
Code	**Description**
C	10 (example: C16 = 16 A)

45	—	585	65	65	10	15	30	40	13	22	30	40	140M-F8N-C45

(1) Horsepower/kW ratings shown are for reference. The final selection of the MCP depends on the actual motor full load current.
(2) Suitable for continuous operation at 90% current rating at 480V only if used in a minimum enclosure size of 250 x 175 x 150 mm (10 x 7 x 6 in).

Motor Circuit Protectors (Cat. No. 140MT-D9N, 140M-F8N) do not provide thermal protection for themselves nor for downstream components. You must install a separate protective device against thermal overload, such as an overload relay as part of a starter combination. In applications that use these devices as the short-circuit protection device of heavy-duty starting motors, the rated operational current I_e of the devices must be over-sized using the factors in Table 30.

Table 30 - Oversizing for Heavy-duty Starting

Current Range [A]	Device Type	Class 10	Class 20	Class 30
0.16...10	140MT-D9N	—	—	—
16...29		—	—	1.41
32...40		—	1.41	1.73
25...45	140M-F8N	—	1.41	1.73

DRAFT

Selection Using Application Ratings

See page 42 for combination ratings.

Specifications

Table 41 - General Data

Attribute			140MT-C	140MT-D	140M-F
Standards compliance		IEC	IEC/EN 60947-2, IEC/EN 60947-4-1		
		cULus	UL 60947-4-1, CSA C22.2, No. 60947-4-1		
Certifications		Regional	cULus Listed (File No. E54612, NLRV(7); E205542, NKJH(7); E518407		
			CCC, EAC, CE, IEC, CB Scheme		CCC, EAC, CE
Rated Insulation Voltage U_i	IEC	[V]	690		
	UL/CSA	[V]	600		
Rated Impulse Withstand Voltage U_{imp}	Pollution degree		3		
	Main circuits U_{imp}/Overvoltage Category		6 kV/III, 8 kV (Disconnect)		
	Auxiliary circuits U_{imp} /Overvoltage Category		6 kV/III		
Rated Frequency		[Hz]	45-65		
Utilization Category	IEC 60947-2 (Circuit breaker)		A		
	IEC 60947-4-1 (Motor starter)		AC-3		
Life Span	Mechanical	[operations]	100,000		30,000
	Electrical (I_e max.)	[operations]	100,000		30,000
Switching Frequency		[operations/hour]	max. 25		
Ambient Temperature	Storage	[°C (°F)]	-40...+85 (-40...185)		
	Operation	[°C (°F)]	-25...+70 (-13...158)		
Climatic resistance	Operating Humidity/Moisture heat (60068-2-3)		5...95% Non-condensing		
Site Altitude		[m]	to 2000 N.N. (6561 ft)		
Protection Class			IP2X from all directions		
Resistance to Shock, Transport (60068-2-27)		ON	15 G/11 ms		
		OFF	30 G/11 ms		
Resistance to Vibration, Operation (60068-2-6)			5 G		
Rated Thermal Current I_{th}	up to 40 °C (104 °F) ambient temperature	[A]	0.1...32	0.63...40	6.3...45
	up to 60 °C (140 °F) ambient temperature	[A]	0.1...32	0.63...40	6.3...45
Rated Supply Current I_e		[A]	0.1...32	0.63...40	6.3...45
Dependence on Temperature	40 °C (104 °F)	[A]	no reduction		
	50 °C (122 °F)	[A]	no reduction		
	60 °C (140 °F)	[A]	no reduction		
	70 °C (158 °F)	[A]	15% current reduction of the upper rated current I_e		
Overload Protection Characteristics			IEC 60947-4-1 Motor protection (except Cat. Nos. 140MT-D9N, 140M-F9N)		
Ambient Temperature Compensation		[°C (°F)]	-25...+60 (-13...+140)		
Phase-loss Protection			Differential release		
Trip class			10 (except Cat. Nos. 140MT-D9N, 140M-F8N) fixed setting		
Magnetic Release			fixed setting		
Release current (±20%)	for E, N Version	[A]	14 x I_e max.(1)		13 x I_e max
	for E, N Version C36, C40	[A]	12 x I_e max.(1)		–
	for T Version	[A]	18...22 x I_e max.(2)		
Total Power loss P_v	Circuit Breaker at rated load/ operating temp.	[W]	4...11	4...14	7...22
Main Disconnect Switch Application			Yes, with accessories		
Application Conditions	140MT-D...C36, -C40: Suitable for continuous operation at 90% current rating at 480V only if used in a minimum enclosure size of 250 x 175 x 150 mm (10 x 7 x 6 in).				
	For utilization outside North America, assemblies (of products) shall comply to the IEC 61439-1 requirements				
	140M and 140MT manual motor starters are intended for use in closed areas without hazardous operating conditions such as dust or explosive or corrosive gases. Enclosures of appropriate manner need to be in place to protect devices in such environments. See Table 42.				

(1) I_e max. = maximum values of setting ranges fixed magnetic setting for 140MT-D9V; see ratings.
(2) I_e max. = maximum values of setting ranges; see ratings.

Time-Current Characteristic

Figure 10 - Motor Protection Circuit Breakers Time-Current Characteristic

140MT-C, -D, 140M-F Motor Protection Circuit Breakers (for 140MT-D9V, see ratings)

Thermal Release Trip Current

The adjustable current-dependent delayed bimetal release protects motors against overload. The curve shows the mean operating current at an ambient temperature of 20 °C (68 °F) starting from the cold state. Careful testing and setting ensures effective motor protection even in the case of single phasing. The overload characteristic is also valid for transformer protection.

Magnetic Release Trip Current

The instantaneous magnetic trip has a fixed operating current setting. This corresponds to 13...14 times the maximum value of the setting range. (Transformer protection up to 20 x I_e max.) At a lower setting, it is correspondingly higher.

Current Setting I_eF

The overload trip corresponds to a thermal overload relay in a motor starter conforming to IEC 60947-4-1. If a different value is prescribed (for example, reduced I_e for cooling medium having a temperature higher than 40 °C (104 °F) or a place of installation higher than 2000 m (6561 ft) above sea level), the setting current is equal to the reduced rated current I_e of the motor.

Allen-Bradley® PowerFlex® 525 AC Drive

The Next Generation of Powerful Performance. Flexible Control.

Allen-Bradley PowerFlex 525 AC drives are ideal for networked applications that require a range of motor control options, embedded EtherNet/IP™, energy savings and standard safety features.

- Power ratings of 0.4...22 kW / 0.5...30 Hp in global voltage classes from 100-600V to meet a wide range of applications
- The modular design eases installation and configuration
- A standard USB connection helps you upload and download configuration files quickly
- An embedded port for EtherNet/IP supports seamless integration into the Logix environment and EtherNet/IP networks
- An optional dual port EtherNet/IP card supports ring topologies and device level ring (DLR) functionality
- Help protect personnel with standard embedded Safe Torque-Off
- An integral LCD human interface module (HIM) supports multiple languages and features scrolling text to explain parameters and codes, easing configuration
- AppView™ parameter groups help speed configuration for applications like conveyors, mixers, pumps and fans
- CustomView™ configuration helps speed machine commissioning with user-defined groups of parameters
- Economizer control mode and permanent magnet motor control* can help reduce energy costs
- Drives operate in low and high ambient temperatures from -20°C (-4°F) up to 70°C (158°F) with current derating and a control module fan kit
- A compact footprint helps save space inside a panel
- A wide range of motor control options, including volts per hertz, sensorless vector control, closed loop velocity vector control and control for permanent magnet motors support many applications

* Permanent magnet motor control is scheduled for a future firmware release

Innovative Modular Design

PowerFlex 525 AC drives are made up of two modules that can be detached for simultaneous and independent wiring installation and software configuration. This innovative design allows you to begin mounting the power modules while configuration of the control modules is performed elsewhere, helping speed up installation. The same control module accommodates the entire power range of PowerFlex 525 AC drives, offering installation flexibility and helping reduce spare part inventory.

Ease of Configuration

There are several ways to quickly and easily configure PowerFlex 525 AC drives. From the integral HIM that features QuickView™ scrolling text, to Connected Components Workbench™ software or the Studio 5000 Logix Designer™ application, these tools are designed to help you reduce development time so you can deliver machines faster and more efficiently.

The Studio 5000 Logix Designer application provides complete support for PowerFlex 525 AC drives. One software tool to configure your Logix system can help reduce programming time and allow you to configure, control and monitor your system from one platform.

Automatic Device Configuration (ADC) is another productivity enhancing feature available with the Studio 5000 Logix Designer application and PowerFlex 525 AC drives. This feature allows a Logix controller to automatically detect a replaced PowerFlex 525 drive and download firmware and all configuration parameters, minimizing the need for manual reconfiguration.

PowerFlex 525 AC Drive

PowerFlex 525 AC drives feature an innovative, modular design offering fast and easy installation and configuration. These cost-effective compact drives come with embedded EtherNet/IP™ communications, safety, USB configuration and a high ambient operating temperature. PowerFlex 525 AC drives also provide a variety of motor control including volts per hertz, sensorless vector control and closed loop velocity vector control, making these drives ideal for a vast array of applications.

Product Overview

The PowerFlex® 520-Series AC drive delivers an innovative design that is remarkably versatile and can accommodate systems ranging from standalone machines to simple system integration. The PowerFlex 523 drive provides general purpose control for applications ranging up to 30 HP and 22 kW. The PowerFlex 525 drive provides maximum flexibility and performance ranging up to 30 HP and 22 kW.

By combining a variety of motor control options, communications, energy savings and standard safety features in a cost-effective drive, the PowerFlex 520-Series drive is suitable for a wide array of applications.

Maximize your system performance and productivity by taking advantage of the following key features offered in a PowerFlex 520-Series drive.

PowerFlex 520-Series AC Drives Feature

Modular Design

- Detachable control module and power module allow **simultaneous configuration and installation**.
- Each drive has **a standard control module** used across the entire power range.
- **MainsFree™ configuration** allows you to simply connect your control module to a PC with a standard USB cable and quickly upload, download, and flash the drive with new settings.
- **Support for accessory cards** without affecting footprint.
  (PowerFlex 523 drives support one, PowerFlex 525 drives support two)

Packaging and Mounting

- Installation can be quick and easy using the **DIN rail mounting** feature on A, B, and C frame drives. Panel mounting is also available, providing added flexibility.
- **Zero Stacking™** is allowed for ambient temperatures up to 45 °C, saving valuable panel space.
- **Integral filtering** is available on all 200V and 400V ratings, providing a cost-effective means of meeting EN61800-3 Category C2 and C3 EMC requirements. External filters provide compliance to EN61800-3 Category C1, C2, and C3 EMC requirements for all PowerFlex 520-Series ratings.
- An optional **IP 30, NEMA/UL Type 1 conduit box** is easily adapted to the standard IP 20 (NEMA Type Open) product, providing increased environmental ratings.

Optimized Performance

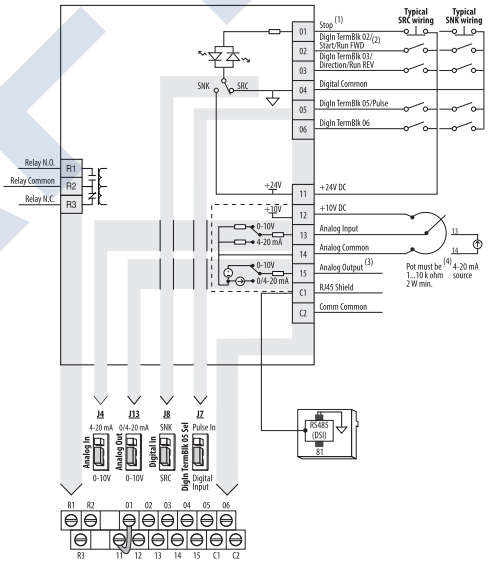
- **Removable MOV** to ground provides trouble-free operation when used on ungrounded distribution systems.
- A **relay pre-charge** limits inrush current.
- **Integral brake transistor**, available on all ratings, provides dynamic braking capability with simple low cost brake resistors.
- A jumper to switch between **24V DC sink or source control** for control wiring flexibility.
- **Dual Overload Rating** available for drives above 15 HP/11 kW. Normal duty: 110% overload for 60 seconds or 150% for 3 seconds. Heavy duty: 150% overload for 60 seconds or 180% overload (200% programmable) for 3 seconds provides robust overload protection.
- **Adjustable PWM frequency up to 16 kHz** ensures quiet operation.

DRAFT

PowerFlex 520-Series AC Drive Advanced Features

Control Performance

- **Variety of motor control options, including:**
  - Volts per hertz (V/Hz)
  - Sensorless Vector Control (SVC)
  - Closed loop velocity vector control (PowerFlex 525 drives only)
  - Permanent Magnet motor control (PowerFlex 525 drives only)
- **Variety of Positioning Control, including:**
  - PointStop™ stops motor load in a consistent position without encoder feedback
  - Closed loop feedback with an optional encoder card (PowerFlex 525 drives only)
  - Point-to-point positioning mode (PowerFlex 525 drives only)
- **Integral PID** functionality enhances application flexibility (PowerFlex 523 drives have one PID loop, PowerFlex 525 drives have two PID loops)

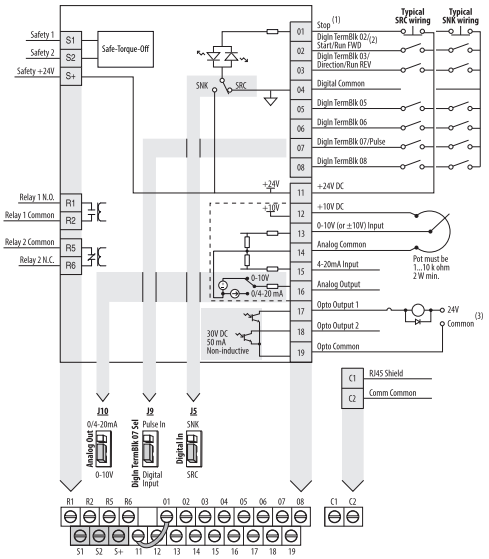


I/O Wiring

PowerFlex 523

- **One (1) Analog Input** (unipolar voltage or current) independently isolated from the rest of the drive I/O.
- **Five (5) Digital Inputs** (four programmable) provide application versatility.
- **One (1) Analog Output**(1) which is jumper selectable between either 0-10V or 0-20 mA. This scalable, 10-bit output is suitable for metering or as a speed reference to another device.
- **One (1) Relay Output** (form C) can be used to indicate various drive, motor or logic conditions.

(1) Analog output (terminal 15) is only available on PowerFlex 523 series B drive and requires firmware 3.001 and later to configure the analog output parameters.



PowerFlex 523 Series B Control I/O Wiring Block Diagram

PowerFlex 525

- **Two (2) Analog Inputs** (one unipolar and one bipolar) are independently isolated from the rest of the drive I/O. These inputs can be toggled via a digital input.
- **Seven (7) Digital Inputs** (six programmable) provide application versatility.
- **One (1) Analog Output** which is jumper selectable between either 0-10V or 0-20 mA. This scalable, 10-bit output is suitable for metering or as a speed reference to another drive.
- **Two (2) Opto Outputs and two (2) Relay Outputs** (one form A and one form B) can be used to indicate various drive, motor or logic conditions.

PowerFlex 525 Control I/O Wiring Block Diagram

DRAFT

Communications

- **Embedded EtherNet/IP™ port** allows easy configuration, control, and collection of drive data over the network. (PowerFlex 525 drives only)
- **Dual port EtherNet/IP option card** supports Device Level Ring (DLR) topologies, providing **fault-tolerant connectivity** for optimum drive availability.
- **Integral RS485/DSI communications** enable the drives to be used in a multi-drop network configuration.
- Optional communication cards such as **DeviceNet™**, and **PROFIBUS DP™** can improve machine performance.
- **Online EDS file creation** with RSNetWorx™ providing ease of set-up on a network.

Optimized for Common DC Bus Installations

Enhanced Control of Internal Pre-charge

Common DC Bus offers additional inherent breaking capabilities by utilizing all the drives/loads on the bus for energy absorption offering higher efficiency and cost savings. The PowerFlex 520-Series drive has been optimized for use in **Common DC Bus** or **Shared DC Bus installation**s.

- Configurable pre-charge control using digital inputs.
- Direct DC Bus connection to power terminal blocks.

Improved Ride Through

Operation Down to 1/2 Line Voltage

The PowerFlex 520-Series drive allows for the selection of **1/2 DC Bus operation**, for use in critical applications where continued drive output is desired even in the event of brown out or low voltage conditions. The PowerFlex 520-Series drive also supports **enhanced inertia ride through** for additional low voltage mitigation.

- Selectable 1/2 line voltage operation.
- Increased power loss ride through.

DRAFT

Additional Features of PowerFlex 525 Drives

Closed Loop Feedback

Encoder/Pulse Train Input

The PowerFlex 525 drive allows for configurable closed loop control with an optional encoder card for either speed or position feedback for improved speed regulation, basic position control, or other pulse inputs for motor control.

- Improved speed regulation
- Basic position control

Basic Position Control

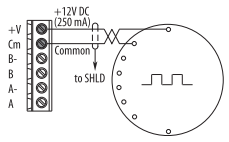
Local Position Control

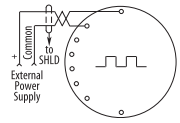
- Position regulator with StepLogic™
  - 8 positions (local logic)

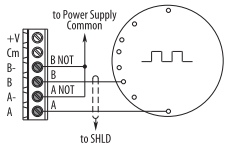
Outer Position Control Loop

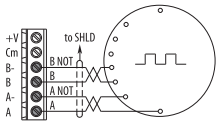
- **Analog input bipolar mode** offers improved zero-cross performance.
- **Simple motion control** applications with more complex position profiles.
- **Speed reference** supplied to drive via Analog Input or multiple field bus network options.
- **Speed ratio** available for simple draw applications.

Feedback Details









Line Driver Type Incremental Encoder Option Card

- Quadrature (dual channel) or Single Channel
- 5V/12V DC supply, 10 mA min per channel
- Single Ended or Differential (A, B Channel)
- Duty Cycle of 50%, +10%
- Input Frequency up to 250 kHz

Pulse Train Input

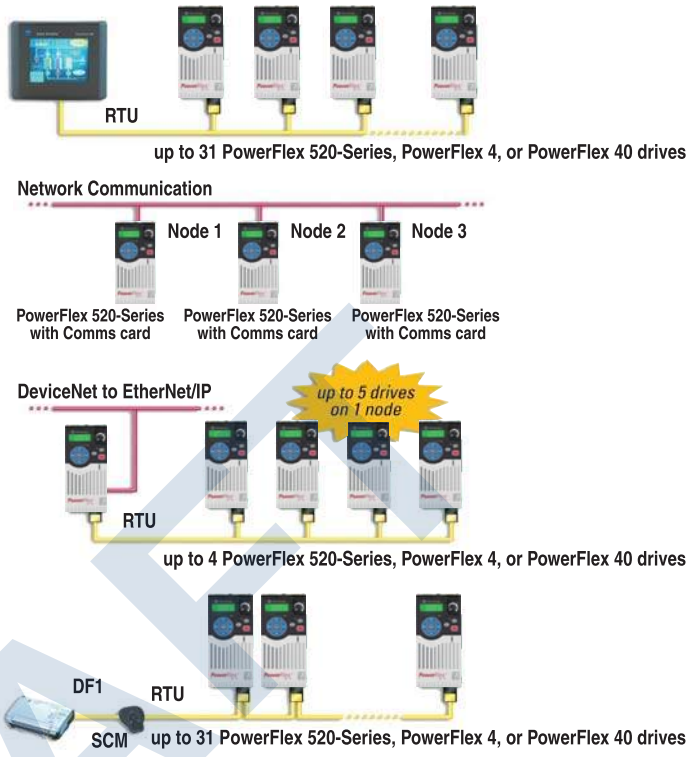
- Configurable Input Voltage 5V/12V/24V DC autodetect
- Input Frequency up to 100 kHz

Encoder Wiring Examples

I/O	Connection Example	I/O	Connection Example
Encoder Power – Internal Drive Power Internal (drive) 12V DC, 250 mA		**Encoder Power – External Power Source**	
Encoder Signal – Single-Ended, Dual Channel		**Encoder Signal – Differential, Dual Channel**	

Safety Inside using Safe-Torque-Off Function

Safe Torque-Off is a standard safety feature of the PowerFlex 525 drive to help protect personnel and equipment. Safe Torque-off allows you to restart your application faster after a safety-related situation.



- Safe Torque-Off functionality **removes rotational power without powering down the drive**.
- Embedded safety **reduces wiring and saves on installation space**.
- Meets ISO 13849-1 standards and provides safety ratings up to and including **SIL 2/PLd**.

DRAFT

Communications and Software

Versatile Programming and Network Solutions

- PowerFlex 520-Series drives are compatible with any device that acts as a **RTU Master** and supports standard 03 and 06 RTU commands.
- A network can be configured using PowerFlex 520-Series drives for **high performance and flexible configuration** capabilities.
  - Embedded port for EtherNet/IP (PowerFlex 525 drives only)
  - EtherNet/IP dual-port option card
  - DeviceNet option card
  - PROFIBUS DP option card
- A **multi-drive solution** can be reached using a single PowerFlex 520-Series drive, with the ability for up to five (5) drives to reside on one (1) node.
- **Integral RS485** communications enable the drives to be used in a multi-drop network configuration. A serial converter module (SCM) provides connectivity to any controller with a DF1 port. The SCM can be eliminated if the controller acts as a RTU Master.

PC Programming Software

Connected Components Workbench™

- Supports plug-and-play connectivity through a standard USB connection.
- AppView™ tool provides parameter groups for several of the most common applications.
- Create and save custom parameter groups using the CustomView™ tool.
- Supports PowerFlex drives, Micro800™ controllers and PanelView™ component graphic terminals.

Studio 5000™ Logix Designer

- Add-on profiles (AOPs) for PowerFlex 520-seriers AC drives provide seamless integration into the Logix environment.
- Configuration files from Studio 5000 Logix Designer(1) can be transferred directly to the PowerFlex 520-Series drive over EtherNet/IP.
- Automatic Device Configuration (ADC) uploads configuration parameters to a replaced drive, minimizing the need for a manual reconfiguration.

(1) The Logix Designer application is the rebranding of RSLogix 5000 software. You can also use RSLogix 5000 version 17 or greater.

Technical Specifications

Protection

Specifications	PowerFlex 523	PowerFlex 525
Bus Overvoltage Trip		
100...120V AC Input:	405V DC bus (equivalent to 150V AC incoming line)	
200...240V AC Input:	405V DC bus (equivalent to 290V AC incoming line)	
380...480V AC Input:	810V DC bus (equivalent to 575V AC incoming line)	
525...600V AC Input:	1005V DC bus (equivalent to 711V AC incoming line)	
Bus Undervoltage Trip		
100...120V AC Input:	190V DC bus (equivalent to 75V AC incoming line)	
200...240V AC Input:	190V DC bus (equivalent to 150V AC incoming line)	
380...480V AC Input:	390V DC bus (equivalent to 275V AC incoming line)	
525...600V AC Input		
P038 = 3 "600V":	487V DC bus (equivalent to 344V AC incoming line)	
P038 = 2 "480V":	390V DC bus (equivalent to 275V AC incoming line)	
Power Ride-Thru:	100 ms	
Logic Control Ride-Thru:	0.5 s minimum, 2 s typical	
Electronic Motor Overload Protection:	Provides class 10 motor overload protection according to NEC article 430 and motor over-temperature protection according to NEC article 430.126 (A) (2). UL 508C File 29572.	
Overcurrent:	200% hardware limit, 300% instantaneous fault	
Ground Fault Trip:	Phase-to-ground on drive output	
Short Circuit Trip:	Phase-to-phase on drive output	

Electrical

Specifications	PowerFlex 523	PowerFlex 525
Voltage Tolerance:	-15% / +10%	
Frequency Tolerance:	47...63 Hz	
Input Phases:	Three-phase input provides full rating. Single-phase input provides 35% rating on three-phase drives.	
Displacement Power Factor:	0.98 across entire speed range	
Maximum Short Circuit Rating:	100,000 Amps Symmetrical	
Actual Short Circuit Rating:	Determined by AIC Rating of installed fuse/circuit breaker	
Transistor Type:	Isolated Gate Bipolar Transistor (IGBT)	
Internal DC Bus Choke	Only for Frame E drive ratings	
200...240V AC Input:	11 kW (15 HP)	
380...480V AC Input:	15...18.5 kW (20...25 HP) – Heavy Duty	
525...600V AC Input:	15...18.5 kW (20...25 HP) – Heavy Duty	

Control

Specifications	PowerFlex 523	PowerFlex 525
Method	Sinusoidal PWM, Volts/Hertz, Sensorless Vector Control, Economizer SVC motor control, Closed Loop Velocity Vector Control, Surface Mount and Interior Permanent Magnet Motor (without encoder), Interior Permanent Magnet Motor (with encoder) (Closed Loop Velocity Vector Control and PM motor control are not applicable to PowerFlex 523 drives)	
Carrier Frequency	2...16 kHz, Drive rating based on 4 kHz	
Frequency Accuracy		
Digital Input:	Within ±0.05% of set output frequency	
Analog Input:	Within 0.5% of maximum output frequency, 10-Bit resolution	
Analog Output:	±2% of full scale, 10-Bit resolution

ITEM 746L

Specifications	PowerFlex 523	PowerFlex 525
Performance		
V/Hz (Volts per Hertz):	±1% of base speed across a 60:1 speed range	
SVC (Sensorless Vector):	±0.5% of base speed across a 100:1 speed range	
SVC Economizer:	±0.5% of base speed across a 100:1 speed range	
	(Applicable to PowerFlex 525 drives only)	
VVC (Velocity Vector Control):	±0.5% of base speed across a 60:1 speed range	
PM Motor(1):	±0.5% of base speed, up to a 20:1 speed range	
Performance with Encoder	(Applicable to PowerFlex 525 drives only)	
SVC (Sensorless Vector):	±0.1% of base speed across a 100:1 speed range(2)	
SVC Economizer:	±0.1% of base speed across a 100:1 speed range(2)	
VVC (Velocity Vector Control):	±0.1% of base speed across a 1000:1 speed range(2)	
PM Motor (iPM motor, 10 HP rating and below)(1):	±0.1% of base speed, up to a 60:1 speed range	
Output Voltage Range:	0V to rated motor voltage	
Output Frequency Range:	0...500 Hz (programmable)	
Efficiency:	97.5% (typical)	
Stop Modes:	Multiple programmable stop modes including – Ramp, Coast, DC-Brake, and Ramp-to-Stop	
Accel/Decel:	Four independently programmable accel and decel times. Each time may be programmed from 0...600 s in 0.01 s increments.	
Intermittent Overload		
Normal Duty:	110% Overload capability for up to 60 s, 150% for up to 3 s Applies for power rating above 15 kW (20 HP) only. Based on 480V drive rating.	
Heavy Duty:	150% Overload capability for up to 60 s, 180% for up to 3 s (200% programmable)	

(1) For details on specific motor performance, see Knowledge Base article "PowerFlex 525 PM Motor Performance Testing Summary".

(2) For more information, see the PowerFlex 520-Series Adjustable Frequency AC Drive User Manual, publication 520-UM001.

KCC	Korean Registration of Broadcasting and Communications Equipment Compliant with the following standards: Article 58-2 of Radio Waves Act, Clause 3	
EAC	Standards applied: Low Voltage TP TC 004/2011 EMC TP TC 020/2011	
AC 156	Tested by Trentec to be compliant with AC156 Acceptance Criteria for Seismic Qualification Testing of Nonstructural Components and 2003 International Building Code for worst-case seismic level for USA excluding site class F	
SEMI F47	Electric Power Research Institute Certified compliant with the following standards: SEMI F47 IEC 61000-4-11 IEC 61000-4-34	
Lloyds Register	(Applicable to PowerFlex 525 drives only) Lloyd's Register Type Approval Certificate 12/10068(E1)	
RoHS	Compliant with the European "Restriction of Hazardous Substances" Directive	

The drive is also designed to meet the appropriate portions of the following specifications:

NFPA 70 - US National Electrical Code

NEMA ICS 7.1 - Safety standards for Construction and Guide for Selection, Installation and Operation of Adjustable Speed Drive Systems.

(1) A non-filtered drive is not available for 380...480V AC 25 HP (18.5 kW) and 30 HP (22.0 kW) ratings. Filtered drives are available, however you must verify that the application will support a filtered drive.

DRAFT

ITEM 746L

Drive Dimensions and Weight

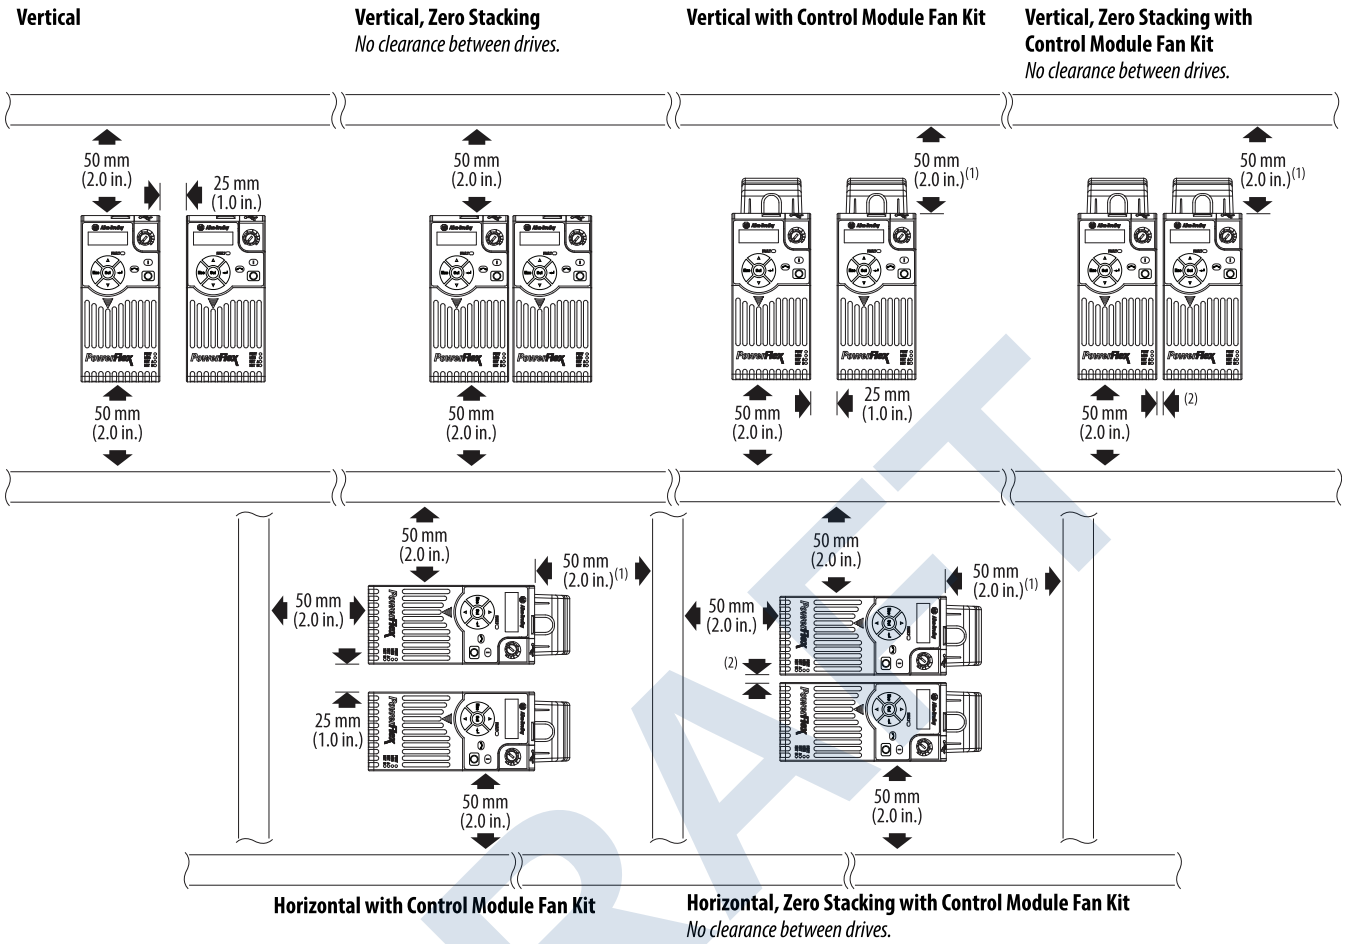
Dimensions are in mm and (in.). Weights are in kg and (lb).

Frame Size	A	B	C	D	E	Weight
A	72.0 (2.83)	152.0 (5.98)	172.0 (6.77)	57.5 (2.26)	140.0 (5.51)	1.1 (2.4)
B	87.0 (3.43)	180.0 (7.09)	172.0 (6.77)	72.5 (2.85)	168.0 (6.61)	1.6 (3.5)
C	109.0 (4.29)	220.0 (8.66)	184.0 (7.24)	90.5 (3.56)	207.0 (8.15)	2.3 (5.0)
D	130.0 (5.12)	260.0 (10.24)	212.0 (8.35)	116.0 (4.57)	247.0 (9.72)	3.9 (8.6)
E	185.0 (7.28)	300.0 (11.81)	279.0 (10.98)	160.0 (6.30)	280.0 (11.02)	12.9 (28.4)

Design Considerations

Mounting Considerations

- Mount the drive upright on a flat, vertical and level surface.



Frame	Screw Size	Screw Torque
A	M5 (#10...24)	1.56...1.96 Nm (14...17 lb-in.)
B	M5 (#10...24)	1.56...1.96 Nm (14...17 lb-in.)
C	M5 (#10...24)	1.56...1.96 Nm (14...17 lb-in.)
D	M5 (#10...24)	2.45...2.94 Nm (22...26 lb-in.)
E	M8 (5/16 in.)	6.0...7.4 Nm (53...65 lb-in.)

- Protect the cooling fan by avoiding dust or metallic particles.
- Do not expose to a corrosive atmosphere.
- Protect from moisture and direct sunlight.

DRAFT

Minimum Mounting Clearances

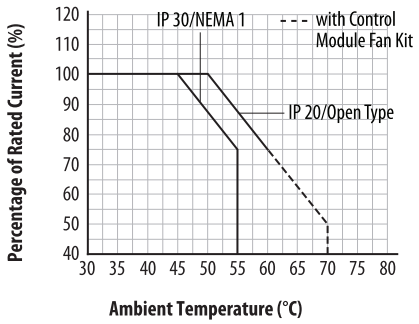
See Dimensions and Weights on page 14 for mounting dimensions.

(1) For Frame E with Control Module Fan Kit only, clearance of 95 mm (3.7 in.) is required.
(2) For Frame E with Control Module Fan Kit only, clearance of 12 mm (0.5 in.) is required.

Ambient Operating Temperatures

See Accessories and Dimensions on page 32 for option kits.

Mounting	Enclosure Rating[1]	Ambient Temperature			
		Minimum	Maximum (No Derate)	Maximum (Derate)[2]	Maximum with Control Module Fan Kit (Derate)[3][5]
Vertical	IP 20/Open Type	-20 °C (-4 °F)	50 °C (122 °F)	60 °C (140 °F)	70 °C (158 °F)
	IP 30/NEMA 1/UL Type 1		45 °C (113 °F)	55 °C (131 °F)	–
Vertical, Zero Stacking	IP 20/Open Type		45 °C (113 °F)	55 °C (131 °F)	65 °C (149 °F)
	IP 30/NEMA 1/UL Type 1		40 °C (104 °F)	50 °C (122 °F)	–
Horizontal with Control Module Fan Kit[4][5]	IP 20/Open Type		50 °C (122 °F)	–	70 °C (158 °F)
Horizontal, Zero Stacking with Control Module Fan Kit[4][5]	IP 20/Open Type		45 °C (113 °F)	–	65 °C (149 °F)



(1) IP 30/NEMA 1/UL Type 1 rating requires installation of the PowerFlex 520-Series IP 30/NEMA 1/UL Type 1 option kit, catalog number 25-JBAx.
(2) For catalogs 25x-D1P4N104 and 25x-E0P9N104, the temperature listed under the Max. (Derate) column is reduced by 5 °C (9 °F) for all mounting methods.
(3) For catalogs 25x-D1P4N104 and 25x-E0P9N104, the temperature listed under the Max. with Control Module Fan Kit (Derate) column is reduced by 10 °C (18 °F) for vertical and vertical with zero stacking mounting methods only.
(4) Catalogs 25x-D1P4N104 and 25x-E0P9N104 cannot be mounted using either of the horizontal mounting methods.
(5) Requires installation of the PowerFlex 520-Series Control Module Fan Kit, catalog number 25-FANx-70C.

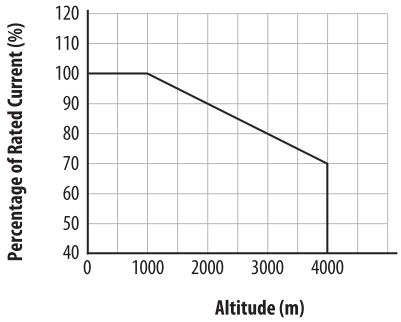
Derating Guidelines for High Altitude

The drive can be used without derating at a maximum altitude of 1000 m (3300 ft).
If the drive is used above 1000 m (3300 ft):

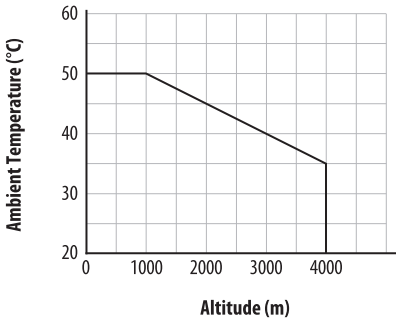
- Derate the maximum ambient temperature by 5 °C (9 °F) for every additional 1000 m (3300 ft), subject to limits listed in the Altitude Limit (Based on Voltage) table below.

  Or

- Derate the output current by 10% for every additional 1000 m (3300 ft), subject to limits listed in the Altitude Limit (Based on Voltage) table below.



Altitude Limit (Based on Voltage)



Drive Rating	Center Ground (Wye Neutral)	Corner Ground, Impedance Ground, or Ungrounded
100...120V 1-Phase	6000 m	6000 m
200...240V 1-Phase	2000 m	2000 m
200...240V 3-Phase	6000 m	2000 m
380...480V 3-Phase	4000 m	2000 m
525...600V 3-Phase	2000 m	2000 m

DRAFT

ITEM 746L

High Altitude

Debris Protection

Take precautions to prevent debris from falling through the vents of the drive housing during installation.

Storage

- Store within an ambient temperature range of -40...85 °C(1).
- Store within a relative humidity range of 0...95%, noncondensing.
- Do not expose to a corrosive atmosphere.

(1) The maximum ambient temperature for storing a Frame E drive is 70 °C.

AC Supply Source Considerations

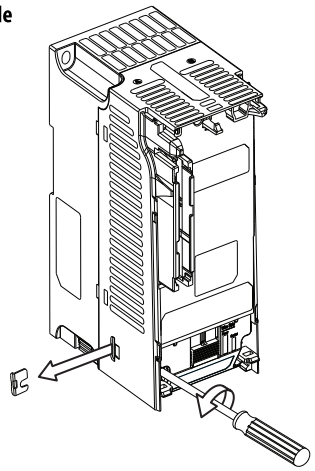
Ungrounded Distribution Systems

ATTENTION: PowerFlex 520-Series drives contain protective MOVs that are referenced to ground. These devices must be disconnected if the drive is installed on an ungrounded or resistive grounded distribution system.

ATTENTION: Removing MOVs in drives with an embedded filter will also disconnect the filter capacitor from earth ground.

Disconnecting MOVs

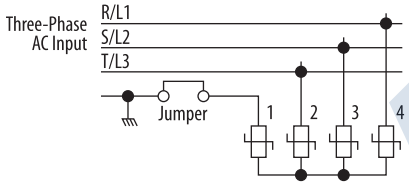
To prevent drive damage, the MOVs connected to ground shall be disconnected if the drive is installed on an ungrounded distribution system (IT mains) where the line-to-ground voltages on any phase could exceed 125% of the nominal line-to-line voltage. To disconnect these devices, remove the jumper shown in the diagrams below.



1. Turn the screw counterclockwise to loosen.
2. Pull the jumper completely out of the drive chassis.
3. Tighten the screw to keep it in place.

DRAFT

ITEM 746L



Jumper Location (Typical)

Power Module

IMPORTANT Tighten screw after jumper removal.

Phase to Ground MOV Removal

Input Power Conditioning

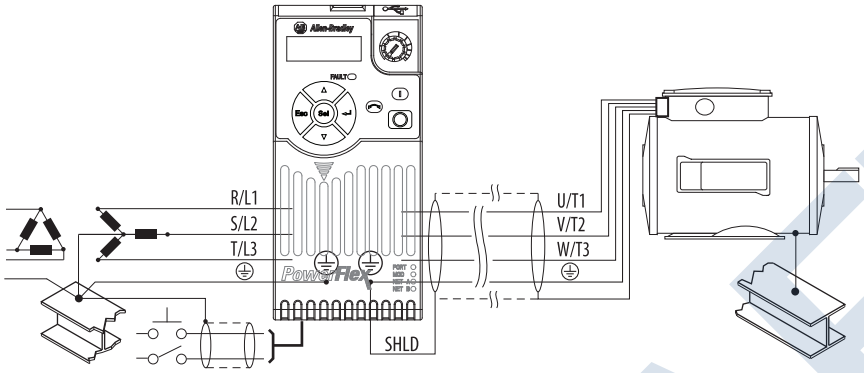
The drive is suitable for direct connection to input power within the rated voltage of the drive (see Input Power Conditions on page 20). Listed in the Input Power Conditions table below are certain input power conditions which may cause component damage or reduction in product life. If any of these conditions exist, install one of the devices listed under the heading Corrective Action on the line side of the drive.

IMPORTANT Only one device per branch circuit is required. It should be mounted closest to the branch and sized to handle the total current of the branch circuit.

Input Power Conditions

Input Power Condition	Corrective Action
Low Line Impedance (less than 1% line reactance)	• Install Line Reactor(2) • or Isolation Transformer
Greater than 120 kVA supply transformer	
Line has power factor correction capacitors	• Install Line Reactor(2) • or Isolation Transformer
Line has frequent power interruptions	
Line has intermittent noise spikes in excess of 6000V (lightning)	
Phase to ground voltage exceeds 125% of normal line to line voltage	• Remove MOV jumper to ground. • or Install Isolation Transformer with grounded secondary if necessary.
Ungrounded distribution system	
B-phase grounded distribution system	
240V open delta configuration (stinger leg)(1)	• Install Line Reactor(2)

DRAFT



(1) For drives applied on an open delta with a middle phase grounded neutral system, the phase opposite the phase that is tapped in the middle to the neutral or earth is referred to as the "stinger leg," "high leg," "red leg," etc. This leg should be identified throughout the system with red or orange tape on the wire at each connection point. The stinger leg should be connected to the center Phase B on the reactor. See Bulletin 1321-3R Series Line Reactors on page 37 for specific line reactor part numbers.

(2) See Accessories and Dimensions on page 32 for accessory ordering information.

General Grounding Requirements

The drive Safety Ground - (PE) must be connected to system ground. Ground impedance must conform to the requirements of national and local industrial safety regulations and/or electrical codes. The integrity of all ground connections should be periodically checked.

Typical Grounding

Ground Fault Monitoring

If a system ground fault monitor (RCD) is to be used, only Type B (adjustable) devices should be used to avoid nuisance tripping.

Safety Ground - ⏚ (PE)

This is the safety ground for the drive that is required by code. One of these points must be connected to adjacent building steel (girder, joist), a floor ground rod or bus bar. Grounding points must comply with national and local industrial safety regulations and/or electrical codes.

Motor Ground

The motor ground must be connected to one of the ground terminals on the drive.

Shield Termination - SHLD

Either of the safety ground terminals located on the power terminal block provides a grounding point for the motor cable shield. The **motor cable** shield connected to one of these terminals (drive end) should also be connected to the motor frame (motor end). Use a shield terminating or EMI clamp to connect the shield to the safety ground terminal. The earthing plate or conduit box option may be used with a cable clamp for a grounding point for the cable shield.

When shielded cable is used for **control and signal wiring**, the shield should be grounded at the source end only, not at the drive end.

DRAFT

ITEM 746L

RFI Filter Grounding

Using a drive with filter may result in relatively high ground leakage currents. Therefore, the **filter must only be used in installations with grounded AC supply systems and be permanently installed and solidly grounded** (bonded) to the building power distribution ground. Ensure that the incoming supply neutral is solidly connected (bonded) to the same building power distribution ground. Grounding must not rely on flexible cables and should not include any form of plug or socket that would permit inadvertent disconnection. Some local codes may require redundant ground connections. The integrity of all connections should be periodically checked.

Power Wiring

ATTENTION: National Codes and standards (NEC, VDE, BSI, etc.) and local codes outline provisions for safely installing electrical equipment. Installation must comply with specifications regarding wire types, conductor sizes, branch circuit protection and disconnect devices. Failure to do so may result in personal injury and/or equipment damage.

ATTENTION: To avoid a possible shock hazard caused by induced voltages, unused wires in the conduit must be grounded at both ends. For the same reason, if a drive sharing a conduit is being serviced or installed, all drives using this conduit should be disabled. This will help minimize the possible shock hazard from "cross coupled" power leads.

Motor Cable Types Acceptable for 100...600 Volt Installations

A variety of cable types are acceptable for drive installations. For many installations, unshielded cable is adequate, provided it can be separated from sensitive circuits. As an approximate guide, allow a spacing of 0.3 m (1 ft) for every 10 m (32.8 ft) of length. In all cases, long parallel runs must be avoided. Do not use cable with an insulation thickness less than 15 mils (0.4 mm/0.015 in.). Do not route more than three sets of motor leads in a single conduit to minimize "cross talk". If more than three drive/motor connections per conduit are required, shielded cable must be used.
UL installations above 50 °C ambient must use 600V, 90 °C wire.
UL installations in 50 °C ambient must use 600V, 75 °C or 90 °C wire.
UL installations in 40 °C ambient should use 600V, 75 °C or 90 °C wire.

Use copper wire only. Wire gauge requirements and recommendations are based on 75 °C. Do not reduce wire gauge when using higher temperature wire.

Unshielded

THHN, THWN or similar wire is acceptable for drive installation in dry environments provided adequate free air space and/or conduit fill rates limits are provided. Any wire chosen must have a minimum insulation thickness of 15 mils and should not have large variations in insulation concentricity.

ATTENTION: Do not use THHN or similarly coated wire in wet areas.

DRAFT

Shielded/Armored Cable

Shielded cable contains all of the general benefits of multi-conductor cable with the added benefit of a copper braided shield that can contain much of the noise generated by a typical AC Drive. Strong consideration for shielded cable should be given in installations with sensitive equipment such as weigh scales, capacitive proximity switches and other devices that may be affected by electrical noise in the distribution system. Applications with large numbers of drives in a similar location, imposed EMC regulations or a high degree of communications / networking are also good candidates for shielded cable.

Shielded cable may also help reduce shaft voltage and induced bearing currents for some applications. In addition, the increased impedance of shielded cable may help extend the distance that the motor can be located from the drive without the addition of motor protective devices such as terminator networks. Refer to Reflected Wave in "Wiring and Grounding Guide, (PWM) AC Drives," publication DRIVES-IN001.

Consideration should be given to all of the general specifications dictated by the environment of the installation, including temperature, flexibility, moisture characteristics and chemical resistance. In addition, a braided shield should be included and be specified by the cable manufacturer as having coverage of at least 75%. An additional foil shield can greatly improve noise containment.

A good example of recommended cable is Belden® 295xx (xx determines gauge). This cable has four (4) XLPE insulated conductors with a 100% coverage foil and an 85% coverage copper braided shield (with drain wire) surrounded by a PVC jacket.

Other types of shielded cable are available, but the selection of these types may limit the allowable cable length. Particularly, some of the newer cables twist 4 conductors of THHN wire and wrap them tightly with a foil shield. This construction can greatly increase the cable charging current required and reduce the overall drive performance. Unless specified in the individual distance tables as tested with the drive, these cables are not recommended and their performance against the lead length limits supplied is not known.

Recommended Shielded Wire

Location	Rating/Type	Description
Standard (Option 1)	600V, 90 °C (194 °F) XHHW2/RHW-2 Anixter B209500-B209507, Belden 29501-29507, or equivalent	• Four tinned copper conductors with XLPE insulation. • Copper braid/aluminum foil combination shield and tinned copper drain wire. • PVC jacket.
Standard (Option 2)	Tray rated 600V, 90 °C (194 °F) RHH/RHW-2 Anixter OLF-7xxxxx or equivalent	• Three tinned copper conductors with XLPE insulation. • 5 mil single helical copper tape (25% overlap min.) with three bare copper grounds in contact with shield. • PVC jacket.
Class I & II; Division I & II	Tray rated 600V, 90 °C (194 °F) RHH/RHW-2 Anixter 7V-7xxxx-3G or equivalent	• Three bare copper conductors with XLPE insulation and impervious corrugated continuously welded aluminum armor. • Black sunlight resistant PVC jacket overall. • Three copper grounds on #10 AWG and smaller.

Reflected Wave Protection

The drive should be installed as close to the motor as possible. Installations with long motor cables may require the addition of external devices to limit voltage reflections at the motor (reflected wave phenomena). Refer to Reflected Wave in "Wiring and Grounding Guide, (PWM) AC Drives," publication DRIVES-IN001.

The reflected wave data applies to all carrier frequencies 2...16 kHz.

For 240V ratings and lower, reflected wave effects do not need to be considered.

DRAFT

Output Disconnect

The drive is intended to be commanded by control input signals that will start and stop the motor. A device that routinely disconnects then reapplies output power to the motor for the purpose of starting and stopping the motor should not be used. If it is necessary to disconnect power to the motor with the drive outputting power, an auxiliary contact should be used to simultaneously disable drive (Aux Fault or Coast-to-Stop).

Power Terminal Block Wire Specifications

Frame	Maximum Wire Size(1)	Minimum Wire Size(1)	Torque
A	5.3 mm^2 (10 AWG)	0.8 mm^2 (18 AWG)	1.76...2.16 Nm (15.6...19.1 lb-in.)
B	8.4 mm^2 (8 AWG)	2.1 mm^2 (14 AWG)	1.76...2.16 Nm (15.6...19.1 lb-in.)
C	8.4 mm^2 (8 AWG)	2.1 mm^2 (14 AWG)	1.76...2.16 Nm (15.6...19.1 lb-in.)
D	13.3 mm^2 (6 AWG)	5.3 mm^2 (10 AWG)	1.76...2.16 Nm (15.6...19.1 lb-in.)
E	26.7 mm^2 (3 AWG)	8.4 mm^2 (8 AWG)	3.09...3.77 Nm (27.3...33.4 lb-in.)

(1) Maximum/minimum sizes that the terminal block will accept – these are not recommendations.

Common Bus/Precharge Notes

If drives are used with a disconnect switch to the common DC bus, then an auxiliary contact on the disconnect must be connected to a digital input of the drive.

I/O Wiring

Motor Start/Stop Precautions

ATTENTION: A contactor or other device that routinely disconnects and reapplies the AC line to the drive to start and stop the motor can cause drive hardware damage. The drive is designed to use control input signals that will start and stop the motor. If used, the input device must not exceed one operation per minute or drive damage can occur.

ATTENTION: The drive start/stop control circuitry includes solid-state components. If hazards due to accidental contact with moving machinery or unintentional flow of liquid, gas or solids exist, an additional hardwired stop circuit may be required to remove the AC line to the drive. When the AC line is removed, there will be a loss of any inherent regenerative braking effect that might be present - the motor will coast to a stop. An auxiliary braking method may be required. Alternatively, use the drive's safety input function.

Important points to remember about I/O wiring:

- Always use copper wire.
- Wire with an insulation rating of 600V or greater is recommended.
- Control and signal wires should be separated from power wires by at least 0.3 m (1 ft).

IMPORTANT I/O terminals labeled "Common" are not referenced to the safety ground (PE) terminal and are designed to greatly reduce common mode interference.

ATTENTION: Driving the 4-20 mA analog input from a voltage source could cause component damage. Verify proper configuration prior to applying input signals.

DRAFT

Signal and Control Wire Types

Recommendations are for 50 °C ambient temperature.
75 °C wire must be used for 60 °C ambient temperature.
90 °C wire must be used for 70 °C ambient temperature.

Recommended Signal Wire

Signal Type/Where Used	Belden Wire Type(s)*(or equivalent)*(1)	Description	Min. Insulation Rating
Analog I/O & PTC	8760/9460	0.750 mm^2 (18 AWG), twisted pair, 100% shield with drain(2)	300V, 60 °C (140 °F)
Remote Pot	8770	0.750 mm^2 (18 AWG), 3 conductor, shielded	
Encoder/Pulse I/O	9728/9730	0.196 mm^2 (24 AWG), individually shielded pairs	

(1) Stranded or solid wire.
(2) If the wires are short and contained within a cabinet which has no sensitive circuits, the use of shielded wire may not be necessary, but is always recommended.

Recommended Control Wire for Digital I/O

Type	Wire Type(s)	Description	Min. Insulation Rating
Unshielded	Per US NEC or applicable national or local code	–	300V, 60 °C (140 °F)
Shielded	Multi-conductor shielded cable such as Belden 8770 (or equivalent)	0.750 mm^2 (18 AWG), 3 conductor, shielded.	

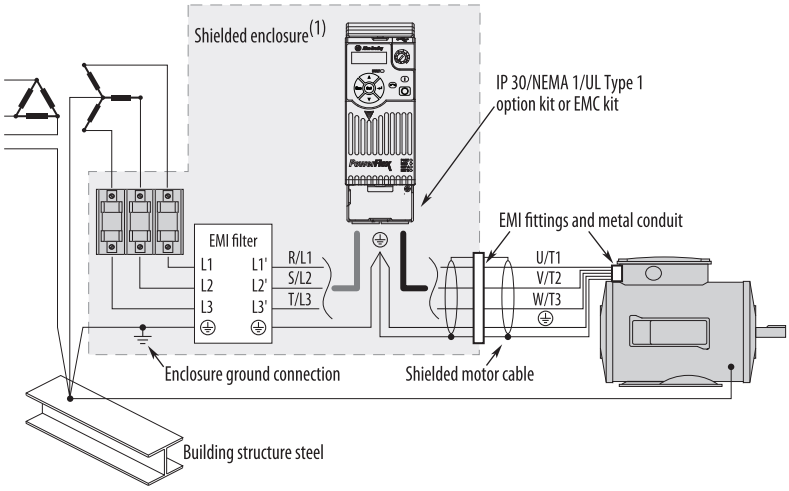
Maximum Control Wire Recommendation

Do not exceed control wiring length of 30 m (100 ft). Control signal cable length is highly dependent on electrical environment and installation practices. To improve noise immunity, the I/O terminal block Common may be connected to ground terminal/protective earth. If using the RS485 (DSI) port, I/O Terminal C1 should also be connected to ground terminal/protective earth. Additionally, communication noise immunity can also be improved by connecting I/O Terminal C2 to ground terminal/protective earth.

Control I/O Terminal Block Wire Specifications

Frame	Maximum Wire Size(1)	Minimum Wire Size(1)	Torque
A...E	1.3 mm^2 (16 AWG)	0.13 mm^2 (26 AWG)	0.71...0.86 Nm (6.2...7.6 lb-in.)

(1) Maximum/minimum sizes that the terminal block will accept – these are not recommendations.



Machinery Directive (2006/42/EC)

- EN ISO 13849-1 – Safety of machinery – Safety related parts of control systems -Part 1: General principles for design.
- EN 62061 – Safety of machinery – Functional safety of safety-related electrical, electronic and programmable electronic control systems.
- EN 60204-1 – Safety of machinery – Electrical equipment of machines - Part 1: General requirements.
- EN 61800-5-2 – Adjustable speed electrical power drive systems - Part 5-2: Safety requirement – Functional.

DRAFT

ITEM 746L

Connections and Grounding

(1) Some installations require a shielded enclosure. Keep wire length as short as possible between the enclosure entry point and the EMI filter.

PowerFlex 520-Series RF Emission Compliance and Installation Requirements

	Standard/Limits		
Filter Type	**EN61800-3 Category C1 EN61000-6-3 CISPR11 Group 1 Class B**	**EN61800-3 Category C2 EN61000-6-4 CISPR11 Group 1 Class A (Input power ≤ 20 kVA)**	**EN61800-3 Category C3 (I ≤ 100 A) CISPR11 Group 1 Class A (Input power > 20 kVA)**
Internal	–	10 m (33 ft)	20 m (66 ft)
External(1)	30 m (16 ft)	100 m (328 ft)	100 m (328 ft)

(1) See Accessory Dimensions on page 39 for more information on optional external filters.

DRAFT

Fuses and Circuit Breaker Ratings

The PowerFlex 520-Series drive does not provide branch short circuit protection. This product should be installed with either input fuses or an input circuit breaker. National and local industrial safety regulations and/or electrical codes may determine additional requirements for these installations.

The tables on pages 28...31 provide drive ratings and recommended AC line input fuse and circuit breaker information. Both types of short circuit protection are acceptable for UL and IEC requirements. Sizes listed are the recommended sizes based on 40 °C (104 °F) and the U.S. N.E.C. Other country, state or local codes may require different ratings.

Fusing

The recommended fuse types are listed in the tables found on pages 28...31. If available current ratings do not match those listed in the tables provided, choose the next higher fuse rating.

- IEC – BS88 (British Standard) Parts 1 & 2(1), EN60269-1, Parts 1 & 2, type GG or equivalent should be used.
- UL – UL Class CC, T, RK1, or J should be used.

(1) Typical designations include, but may not be limited to the following;
Parts 1 & 2: AC, AD, BC, BD, CD, DD, ED, EFS, EF, FF, FG, GF, GG, GH.

Circuit Breakers

The "non-fuse" listings in the tables found on pages 28...31 include inverse time circuit breakers, instantaneous trip circuit breakers (motor circuit protectors) and 140M self-protected combination motor controllers. If one of these is chosen as the desired protection method, the following requirements apply:

- IEC – Both types of circuit breakers and 140M self-protected combination motor controllers are acceptable for IEC installations.
- UL – Only inverse time circuit breakers and the specified 140M selfprotected combination motor controllers are acceptable for UL installations.

Bulletin 140M (Self-Protected Combination Controller)/UL489 Circuit Breakers

When using Bulletin 140M or UL489 rated circuit breakers, the guidelines listed below must be followed in order to meet the NEC requirements for branch circuit protection.

- Bulletin 140M can be used in single motor applications.
- Bulletin 140M can be used up stream from the drive **without** the need for fuses.

(1) Normal and Heavy Duty ratings are available for this drive

(2) When the drive is controlling motors with lower amp ratings, refer to the drive nameplate for drive intput current rating.

(3) The AIC ratings of the Bulletin 140M Motor Protector Circuit Breakers may vary. See Bulletin 140M Motor Protection Circuit Breakers Application Ratings.

(4) Bulletin 140M with adjustable current range should have the current trip set to the minimum range that the device will not trip.

(5) Manual Self-Protected (Type E) Combination Motor Controller, UL listed for 480Y/277 and 600Y/347 AC input. Not UL listed for use on 480V or 600V Delta/Delta, corner ground, or high-resistance ground systems.

(6) When using a Manual Self-Protected (Type E) Combination Motor Controller with this drive power rating, the drive must be installed in a ventilated or non-ventilated enclosure with the minimum volume specified in this column. Application specific thermal considerations may require a larger enclosure.

(7) Circuit breaker selection is not available for this drive rating.

(1) Normal and Heavy Duty ratings are available for this drive

(2) When the drive is controlling motors with lower amp ratings, refer to the drive nameplate for drive intput current rating.

(3) The AIC ratings of the Bulletin 140M Motor Protector Circuit Breakers may vary. See Bulletin 140M Motor Protection Circuit Breakers Application Ratings.

(4) Bulletin 140M with adjustable current range should have the current trip set to the minimum range that the device will not trip.

(5) Manual Self-Protected (Type E) Combination Motor Controller, UL listed for 480Y/277 and 600Y/347 AC input. Not UL listed for use on 480V or 600V Delta/Delta, corner ground, or high-resistance ground systems.

(6) When used with the 140M circuit breaker, the 25A-E9P9104 must be installed in a ventilated or non-ventilated enclosure with the minimum size of 457.2 x 457.2 x 269.8 mm (18 x 18 x 10.62 in.).

(7) When using a Manual Self-Protected (Type E) Combination Motor Controller with this drive power rating, the drive must be installed in a ventilated or non-ventilated enclosure with the minimum volume specified in this column. Application specific thermal considerations may require a larger enclosure.

(8) Circuit breaker selection is not available for this drive rating.

(1) The resistors listed in this tables are rated for 5% duty cycle.

(2) Use of Rockwell Automation resistors is always recommended. The resistors listed have been carefully selected for optimizing performance in a variety of applications. Alternative resistors may be used, however, care must be taken when making a selection. See the PowerFlex Dynamic Braking Resistor Calculator, publication PFLEX-AT001.

(3) Requires two resistors wired in parallel.

(4) Requires three resistors wired in parallel.

EMC Plates

Item	Description	Frame Size	Catalog No.
EMC Plate	Optional grounding plate for shielded cables.	A	25-EMC1-FA
		B	25-EMC1-FB
		C	25-EMC1-FC
		D	25-EMC1-FD
		E	25-EMC1-FE

Human Interface Modules (HIM) Option Kits and Accessories

Item	Description	Catalog No.
LCD Display, Remote Panel Mount	Digital speed control CopyCat capable IP 66 (NEMA Type 4X/12) indoor use only Includes 2.9 meter cable	22-HIM-C2S
LCD Display, Remote Handheld	Digital speed control Full numeric keyboard CopyCat capable IP 30 (NEMA Type 1) Includes 1.0 m cable Panel mount with optional Bezel Kit	22-HIM-A3
Bezel Kit	Panel mount for LCD Display, Remote Handheld unit, IP 30 (NEMA Type 1) Includes 2.0 m DSI cable	22-HIM-B1
DSI HIM Cable (DSI HIM to RJ45 cable)	1.0 m (3.3 ft)	22-HIM-H10
	2.9 m (9.51 ft)	22-HIM-H30

IP 30/NEMA 1/UL Type 1 Kit

Item	Description	Frame Size	Catalog No.
IP 30/NEMA 1/UL Type 1 Kit	Field installed kit. Converts drive to IP 30/NEMA 1/UL Type 1 enclosure. Includes conduit box with mounting screws and plastic top panel.	A	25-JBAA
		B	25-JBAB
		C	25-JBAC
		D	25-JBAD
		E	25-JBAE

Control Module Fan Kit

Item	Description	Frame Size	Catalog No.
Control Module Fan Kit	For use with drive in environments with ambient temperatures up to 70 °C or horizontal mounting.	A...D	25-FAN1-70C
		E	25-FAN2-70C

Incremental Encoder Input Option

Item	Description	Catalog No.
Incremental Encoder	Incremental encoder input option board.	25-ENC-1

WARNING: Only the 25-ENC-1 Encoder will work properly in the PowerFlex 525 drive. Installing an incorrect encoder card, such as the PowerFlex 527 25-ENC-2 will cause damage to the PowerFlex 525 drive.

DRAFT

Bulletin 160 to PowerFlex 520-Series Mounting Adapter Plate

Item	Description	B160 Frame Size	Catalog No.
Mounting Adapter Plate	For use with drive when replacing Bulletin 160 drives in existing installations to a PowerFlex 520-Series drive. Select the catalog number based on the frame size of your Bulletin 160 drive.	A	25-MAP-FA
		B	25-MAP-FB

Replacement Parts

PowerFlex 520-Series Power Module

Item	Description
PowerFlex 520-Series Power Module	Replacement power module for use with PowerFlex 520-Series drives. Includes: • Power Module • Power Module Front Cover • Power Terminal Guard • Heatsink Fan

Communication Option Kits and Accessories

Item	Description	Catalog No.
Communication Adapters	Embedded communication options for use with the PowerFlex 520-Series drives: • DeviceNet • Dual Port EtherNet/IP • PROFIBUS DP-V1	25-COMM-D 25-COMM-E2P 25-COMM-P
Compact I/O Module	Three channel	1769-SM2
Universal Serial Bus™ (USB) Converter Module	Provides serial communication via DF1 protocol for use with Connected Components Workbench software. Includes: • 2m USB cable (1) • 20-HIM-H10 cable (1) • 22-HIM-H10 cable (1)	1203-USB
Serial Converter Module (RS485 to RS232)	Provides serial communication via DF1 protocol for use with Connected Components Workbench software. Includes: • DSI to RS232 serial converter (1) • 1203-SFC serial cable (1) • 22-RJ45CBL-C20 cable (1)	22-SCM-232
DSI Cable	2.0 m RJ45 to RJ45 cable, male to male connectors.	22-RJ45CBL-C20
Serial Cable	2.0 m serial cable with a locking low profile connector to connect to the serial converter and a 9-pin sub-miniature D female connector to connect to a computer.	1203-SFC
Splitter Cable	RJ45 one to two port splitter cable (Modbus only)	AK-U0-RJ45-SC1
Terminating Resistors	RJ45 120 Ohm resistors (2 pieces)	AK-U0-RJ45-TR1
Terminal Block	RJ45 Two position terminal block (5 pieces)	AK-U0-RJ45-TB2P
Connected Components Workbench Software (Download or DVD-ROM)	Windows-based software packages for programming and configuring Allen-Bradley drives and other Rockwell Automation products. Compatibility: Windows XP, Windows Vista and Windows 7	http://ab.rockwellautomation.com/programmable-controllers/connected-components-workbench-software

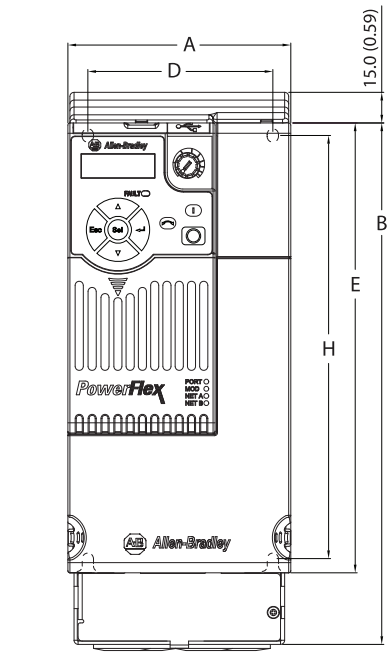
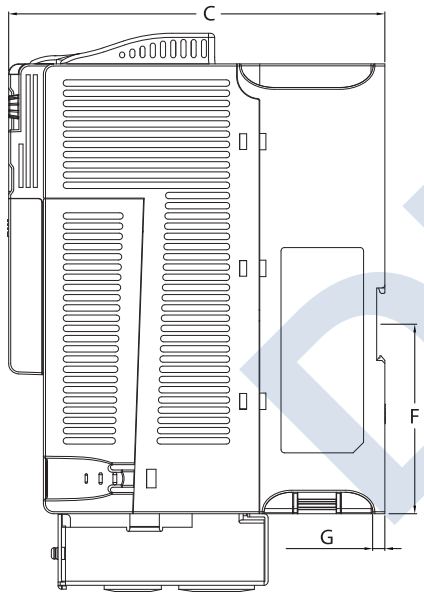
(1) Normal Duty and Heavy Duty ratings for 15 HP (11 kW) and below are identical except for 200...240V 3-Phase 15 HP (11 kW) drive.

(2) Standard 3-phase reactors can be used for 1-phase applications by routing each of the two supply conductors through an outside coil and leaving the center open.



(3) Catalog numbers listed are for 3% impedance. 5% impedance reactor types are also available. See 1321 Power Conditioning Products Technical Data, publication 1321-TD001.



(4) Input line reactors were sized based on the NEC fundamental motor amps. Output line reactors were sized based on the VFD rated output currents.

Safe-Torque-Off Function

The PowerFlex 525 Safe-Torque-Off function, when used with other safety components, helps provide protection according to EN ISO 13849 and EN62061 for safe-off and protection against restart. The PowerFlex 525 Safe-Torque-Off function is just one component in a safety control system. Components in the system must be chosen and applied appropriately to achieve the desired level of operator safeguarding.

PowerFlex 525 Safe-Torque-Off Overview

The PowerFlex 525 Safe-Torque-Off function:

- Provides the Safe-Torque-Off (STO) function defined in EN IEC 61800-5-2.
- Blocks gate-firing signals from reaching the Insulated Gate Bipolar Transistor (IGBT) output devices of the drive. This prevents the IGBTs from switching in the sequence necessary to generate torque in the motor.
- Can be used in combination with other safety devices to fulfill the requirements of a system "safe torque off" function which satisfies Category 3 / PL (d) according to EN ISO 13849-1 and SIL CL2 according to EN 62061, IEC 61508, and EN 61800-5-2.

IMPORTANT The function is suitable for performing mechanical work on the drive system or affected area of a machine only. It does not provide electrical safety.

EC Type Examination Certification

TÜV Rheinland has certified the PowerFlex 525 Safe-Torque-Off function compliant with the requirements for machines defined in Annex I of the EC Directive 2006/42/EC, and that it complies with the requirements of the relevant standards listed below:

- EN ISO 13849-1 Safety of machinery – Safety related parts of control systems – Part 1: General principles for design. (PowerFlex 525 STO achieves Category 3 / PL(d))
- EN 61800-5-2 Adjustable speed electrical power drive systems – Part 5-2 Safety requirements – Functional. (PowerFlex 525 STO achieves SIL CL 2)
- EN 62061 Safety of machinery – Functional safety of safety-related electrical, electronic and programmable electronic control systems.
- IEC 61508 Part 1-7 Functional safety of electrical/electronic/programmable electronic safety-related systems – Parts 1-7.

TÜV also certifies that the PowerFlex 525 STO may be used in applications up to Category 3/ PL(d) according to EN ISO 13849-1 and SIL 2 according to EN 62061 / EN 61800-5-2 / IEC 61508.

The TÜV Rheinland certificate may be found at http://www.rockwellautomation.com/products/certification/.

DRAFT

ITEM 746L

Safety Concept

The PowerFlex 525 Safe-Torque-Off function is suitable for use in safety applications up to and including Category 3 / PL(d) according to EN ISO 13849-1 and SIL 2 according to EN 62061 / EN 61800-5-2 / IEC 61508.

In addition, the PowerFlex 525 STO function may be used together with other components in a safety application to achieve an overall Category 3 / PL(e) according to EN ISO 13849-1 and SIL 3 according to EN 62061 and IEC 61508. This is illustrated in Example 3 on page 46.

Safety requirements are based on the standards current at the time of certification.

The PowerFlex 525 STO function is intended for use in safety-related applications where the de-energized state is considered to be the safe state. All of the examples shown here are based on achieving de-energization as the safe state for typical Machine Safety and Emergency Shutdown (ESD) systems.

PFD and PFH Data

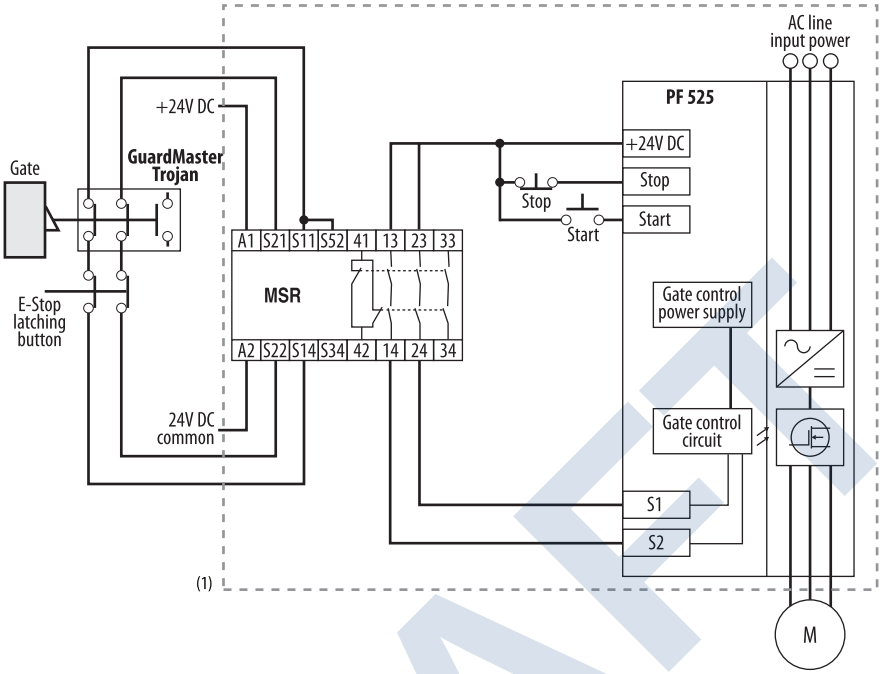
PFD and PFH calculations are based on the equations from Part 6 of EN 61508.

This table provides data for a 20-year proof test interval and demonstrates the worst-case effect of various configuration changes on the data.

PFD and PFH for 20-year Proof Test Interval

Attribute	Value
PFD	6.62E-05 (MTTF = 3593 years)
PFH_D	8.13E-10
SFF	83%
DC	62.5%
CAT	3
HFT	1 (1oo2)
PTI	20 YEARS
Hardware Type	Type A

Safety Reaction Time



The safety reaction time from an input signal condition that triggers a safe stop, to the initiation of the configured Stop Type, is 100 ms (maximum).

DRAFT

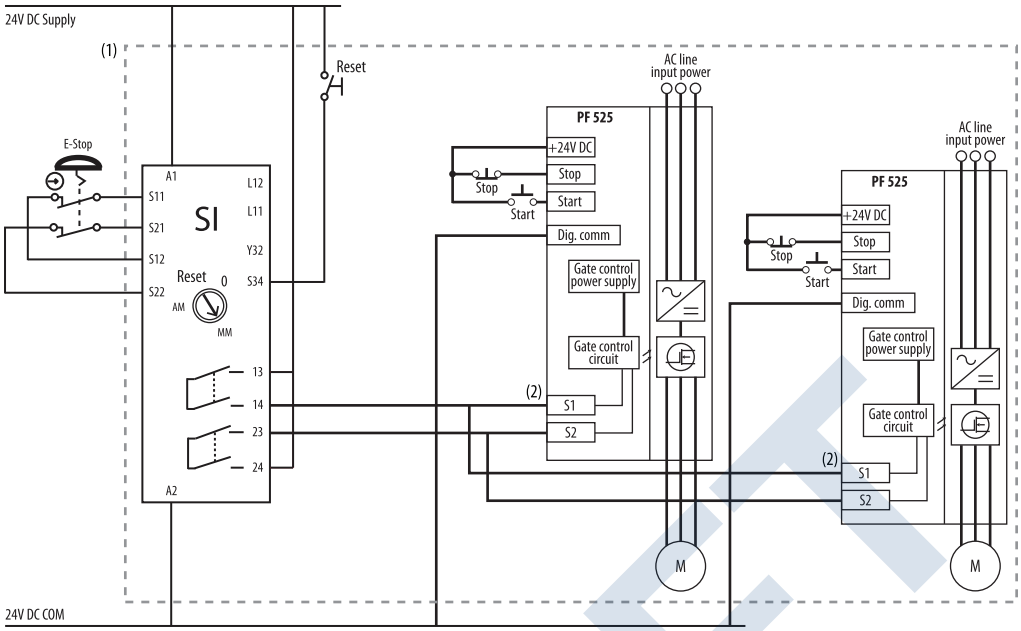
Connection Examples

Example 1 – Safe-Torque-Off Connection with Coast-to-Stop Action, SIL 2/PL d

Stop Category 0 – Coast



(1) Enclosure Recommended. Note: External wiring failure modes must be considered as described in EN ISO 13849-2. Enclosure or other measure to exclude these failure modes should be used.

(2) In some situations, a safety relay is not required if both the switch and PowerFlex 525 are installed in the same enclosure.

DRAFT

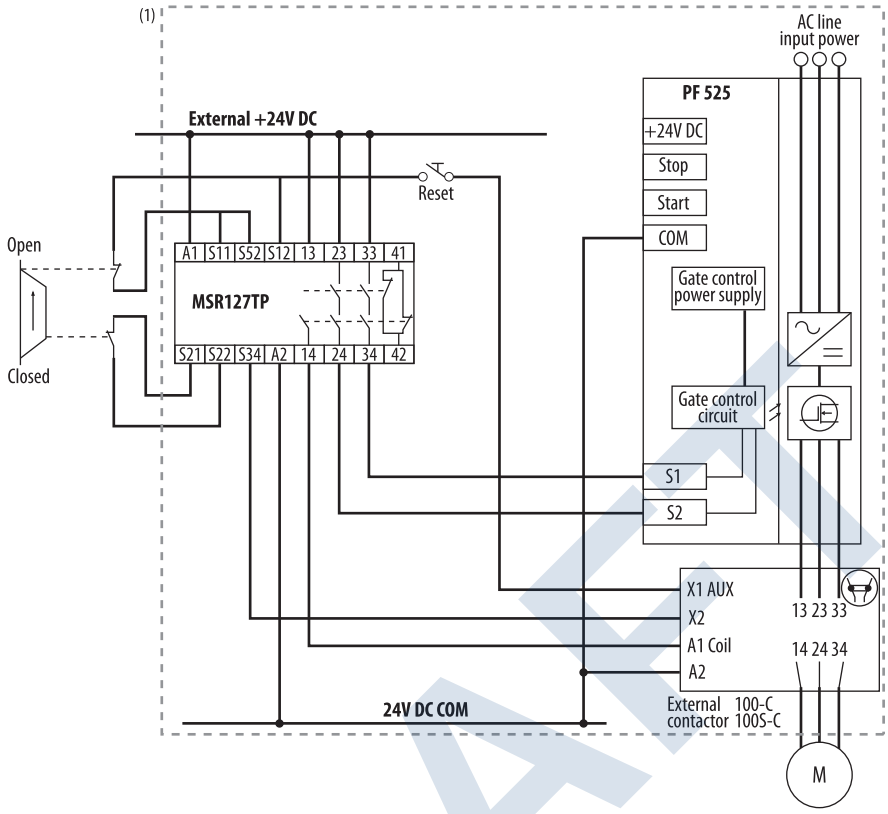
Stop Category 0 – Coast with Two PowerFlex 525 Drives

(1) Enclosure Recommended. Note: External wiring failure modes must be considered as described in EN ISO 13849-2. Enclosure or other measure to exclude these failure modes should be used.
(2) Each safety input draws 6 mA from the supply.

Example 2 – Safe-Torque-Off Connection with Controlled Stop Action, SIL 2/PL d

Stop Category 1– Controlled



(1) Enclosure Recommended. Note: External wiring failure modes must be considered as described in EN ISO 13849-2. Enclosure or other measure to exclude these failure modes should be used.

DRAFT

Example 3 – Safe-Torque-Off Connection with Coast-to-Stop Action Using External +24V supply, SIL 3/PL e

Stop Category 0 – Coast

(1) Enclosure Recommended. Note: External wiring failure modes must be considered as described in EN ISO 13849-2. Enclosure or other measure to exclude these failure modes should be used.

Important Information

Solid-state equipment has operational characteristics differing from those of electromechanical equipment. Safety Guidelines for the Application, Installation and Maintenance of Solid State Controls (publication SGI-1.1 available from your local Rockwell Automation sales office or online at http://www.rockwellautomation.com/literature/) describes some important differences between solid-state equipment and hard-wired electromechanical devices. Because of this difference, and also because of the wide variety of uses for solid-state equipment, all persons responsible for applying this equipment must satisfy themselves that each intended application of this equipment is acceptable.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this publication are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc., is prohibited.

Documentation Feedback

Your comments will help us serve your documentation needs better. If you have any suggestions on how to improve this document, complete this form, publication RA-DU002, available at http://www.rockwellautomation.com/literature/.

SHOP DRAWING REVIEW

Project: **San Luis East WWTP Improvements**

Submittal No. **#46 73 63.23_001 – FKC Dewatering System**

Date Received: **04/30/2025**

Job #: **B777**

Comments:

No Exceptions Taken..... ☐
Submit Specific Item ..... ☒
Accepted with Corrections Noted..... ☒
Revise and Resubmit..... ☐
Rejected ..... ☐

Note:
Review is only for general conformance with the design concept of the project and general compliance with the information included in the Contract Documents. Any action shown is subjected to the requirements of the drawings and the specifications. Contractor is responsible for correlating and confirming dimensions at the job site, choice of fabrication processes and techniques of construction: coordination of his work with that of other trades; and performing the work in a safe satisfactory manner.

DATE: 5/23/25 BY: NT/DDO

Contractor to Note:

Contractor to provide 1.5" non-shrink grout under all equipment per FKC recommendations.

Contractor to provide anchor bolts for screw press and equipment as indicated/required by FKC.

Submittal Comments:

General:

1. Submit Specific Item:
    - FKC to provide P&IDs and Flow Diagrams as part of Control Panel submittal or as separate submittal.
    - FKC to provide sealed and signed seismic, structural, and anchoring calculations by a Registered Professional Engineer in the State of Arizona.

General Bill of Materials (Page 6 of 335)

2. Accepted with Corrections noted:

DRAFT

- Fastening hardware in wetted location to be 316 SS per Construction/Fabrication Materials section of Exhibit C provided within submittal package.

Screw Press (Page 14 of 335)

3. Accepted with Correction Noted:
    - Please provide maximum expected discharge flowrate (in gpm) through filtrate flange.

Flocculation Tank (Page 29 of 335)

4. Accepted with Corrections noted:
    - Access ladder to flocculation tank is not included in Aluminum Structure BOM nor Flocculation Tank BOM, FKC to confirm access ladder is included in their scope of supply.
    - FKC to note that the model number of the motor listed as Item #201 on the BOM does not match the Model number provided on sheet 34 of 335. (Y154SDSR47A-P versus Y154SDSR42A-P) Please verify model number and adjust to match on any subsequent submittals or O&M Manuals provided.
    - FKC to note that the SEW Eurodrive Gearmotor and Gear Reducer is marked as Item #102 on page 37 of 335 and marked as Item #202 per BOM. Please verify and adjust in any future submittals or O&M Manuals provided.
    - FKC to verify that the flocculation tank inlet flange is 4” and the polymer injection ring is 6”. Confirm that contractor is responsible for providing 6” x 4” reducer between the polymer injection ring and flocculation tank inlet flange or revise and resubmit with 6” inlet flange.

Polymer Injection Ring (Page 32 of 335)

5. Accepted with Corrections:
    - “Manifold to be mounted vertically as shown or horizontal”, please provide mounting information/details/requirements. Confirm maximum distance between manifold and injection ring.
    - Please provide unique numbering throughout Bill of Materials. Items #401-407 are included in both Polymer Injection Ring BOM and Polymer System BOM.

Conveyor Equipment Submittal (Page 46 of 335)

6. Accepted with Corrections:
    - FKC to note that model #s of gear reducer and motor (BOM Items #309 and #310) do not match model #s provided on Page 53 & 62 of submittal. Please verify and adjust in any future submittals or O&M Manuals provided.

DRAFT

- Compact limit switches shown on Page 75 of 335 are marked as Item #314, 414, 513, and 606. These items appear to be missing from the BOM or incorrectly marked, please verify.

- No drain line is marked on the conveyor detail sheet (Page 48 of 335), please confirm if a drain line is provided. If a drain line is provided, please provide location and connection type/size.

Polymer System Equipment Submittal (Page 78 of 335)

7. Accepted with Corrections:
    - Please verify if "Thickener 1 Control Panel" shown on the Wiring Diagrams is the FKC Dewatering Control Panel for the provided screw press.

    - Please verify which equipment will require field wiring by the contractor. E.G. Will the contractor be responsible for the field wiring between the polymer pump and VFD as shown on page 300 of 335?

    - FKC to note that the Polymer Mixer motor is marked as 1/2 HP on the Power Distribution Diagram (Page 300 of 335) and marked as 1/3 HP within the BOM, please verify.

    - Please confirm that the control panel is suitable for installation in a partially shaded outdoor area with a high ambient temperature. It appears that an Air Conditioning unit is shown on Polymer System Detail Sheet 81 of 335, please confirm and add to BOM if it does exist.

    - FKC to provide 316 SS mixing blades as mentioned in: A. Proposed Equipment FKC Polymer Systems section of submittal.

Aluminum Structure Equipment Submittal (Page 314 of 335)

8. No Exceptions Taken.

Sludge Pump Equipment Submittal (Page 321 of 335)

9. Accepted with Corrections:
    - FKC to confirm inlet and outlet of sludge pumps are 6" Class 150 flanges as stated on Page 323.

    - FKC to confirm if sludge flow meter is included in their Scope of Supply.

Control Panel Preliminary Submittal (Page 329 of 335)

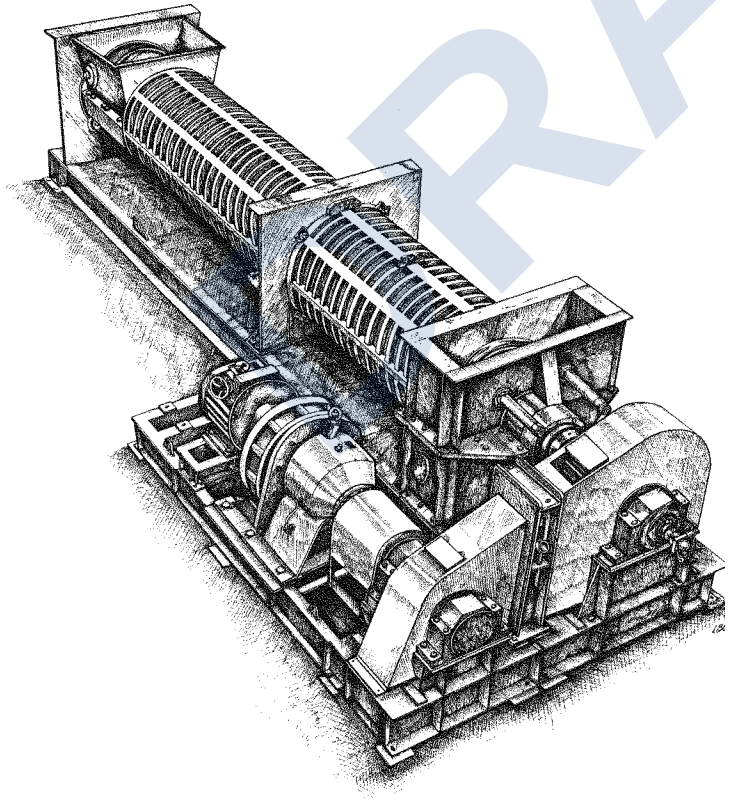
10. Submit Specific Item:

DRAFT

- Control Panel Submittal under different cover. Please include all electrical equipment included within the provided BOM that does not include manufacturer cutsheets. (E.G. Item #208)

Performance Guarantee (Page 333 of 335)

11. No Exceptions Taken.



Warranty Certificate (Page 335 of 335)

12. No Exceptions Taken.

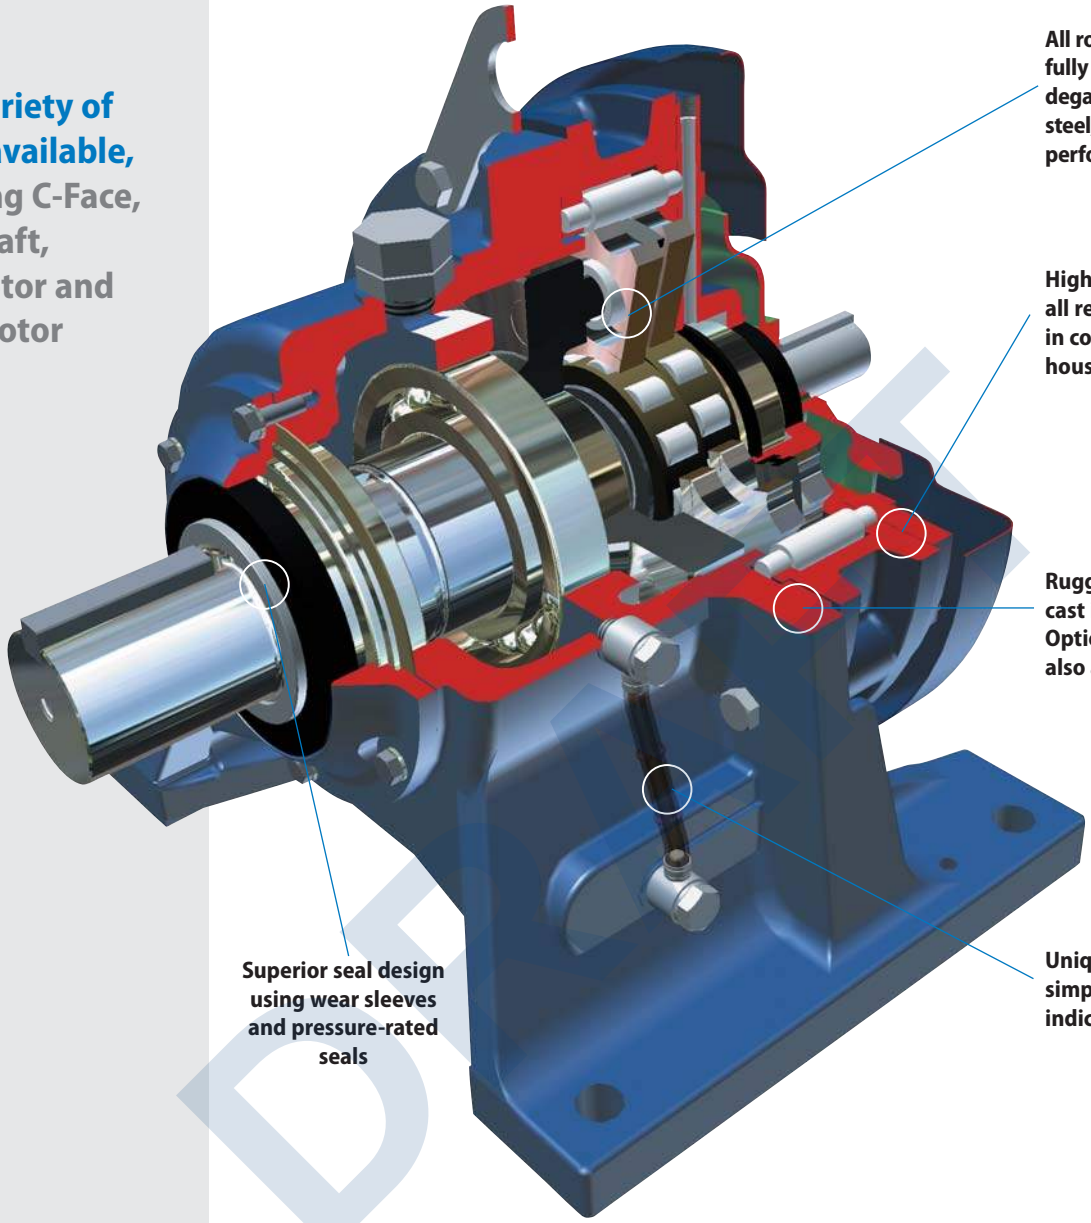
Sumitomo Drive Technologies

Always on the Move

Cyclo® 6000



► Highly Reliable, Torque Dense Cycloidal Speed Reducers and Gearmotors

Cyclo® 6000

Highly Reliable, Torque Dense, Cycloidal Speed Reducers and Gearmotors

- **Wide variety of inputs available,** including C-Face, Free-Shaft, Gearmotor and Brakemotor

All rotating components are fully hardened, vacuum degassed bearing grade steel, for consistent, reliable performance

High power density, all reduction contained in compact ring gear housing

Rugged, shock-resistant cast iron housing. Optional ductile iron also available

Superior seal design using wear sleeves and pressure-rated seals

Unique oil sight gauge for simple, visible lubrication indication

Unmatched Reliability, Exceptional Performance

- Cyclo® speed reducers and gearmotors are **designed to withstand shock loads exceeding 500%** of their ratings

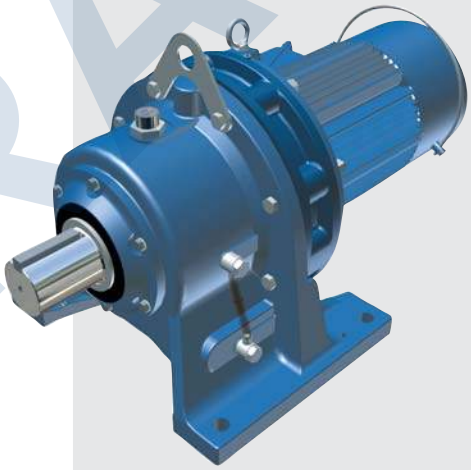
Product Description

Sumitomo Cyclo® speed reducers and gearmotors are the **premier in-line drives**. The revolutionary Cyclo® design provides **quiet, efficient and reliable performance** exceeding that of involute tooth gear designs. The key to Cyclo®'s matchless performance and reliability is that 67% of the reduction components are in contact at all times, compared to geared designs that use only limited tooth contact. Unlike geared designs, the Cyclo®'s reduction components operate in compression rather than shear, which results in **exceptionally rugged and shock resistant performance.** The Cyclo® technology coupled with innovative product options and accessories offer the most extensive range of application solutions available.

Features & Benefits

- **Cycloidal speed reduction technology**
  - ~ Quiet, efficient and reliable operation with high torque density and compact size
- **Modular design**
  - ~ Interchangeable cast iron housings in foot, flanged or face mount configurations
- **Universal mounting arrangements**
  - ~ Available free-shaft, quill hollow shaft, C-face, shovel base, and top-mount inputs
- **Internal components manufactured from hardened, vacuum-degassed, bearing grade steel**
  - ~ Minimal vibration, low noise, low backlash and extended operational life
- **The best product warranty**
  - ~ The 24 month warranty backs up the superb Cyclo® product reputation

Specifications



Sizes:	23 sizes (5lbs to 5000lbs)
Torque Rating:	55 to 603,000 lb in
HP Rating:	.10 to 235 HP
Ratio Range:	3:1 to 119:1 (single) 121:1 to 7569:1 (double) 8041:1 to 658,503:1 (triple)
Mounting:	Foot, Flange, Face Mount
Motor Standards:	NEMA, IEC, JIS, UL, CSA, CE

Sumitomo's Cyclo® is a highly reliable, torque dense, cycloidal speed reducer and gearmotor

Reducer

- Simple, Compact Design
- Rugged Forged Output Shaft
- Universal Mounting
- C-Face, Shovel Base & Top Mount Options

Gearmotor

- Rugged forged output shaft
- Direct acting brake option
- Unmatched durability

Applications

- Conveyors
- Food Machinery
- Mixers
- Automotive Plants
- Recycling Machines
- Poultry Plants
- Sawmills and Wood Mills
- Wastewater Treatment
- Steel Mills
- Construction Equipment
- Paper Mills
- Processing Plants

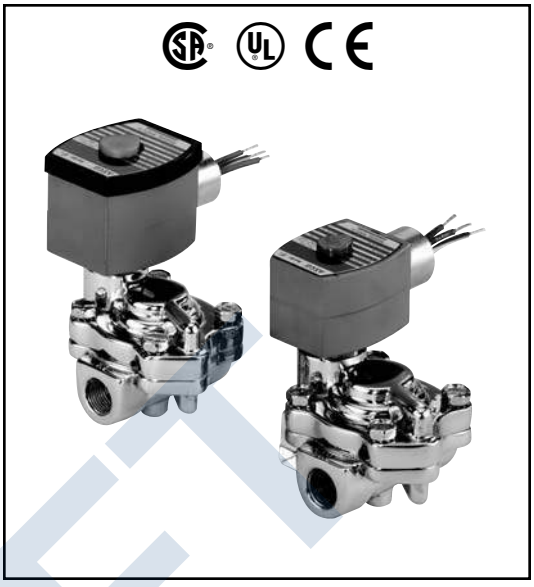
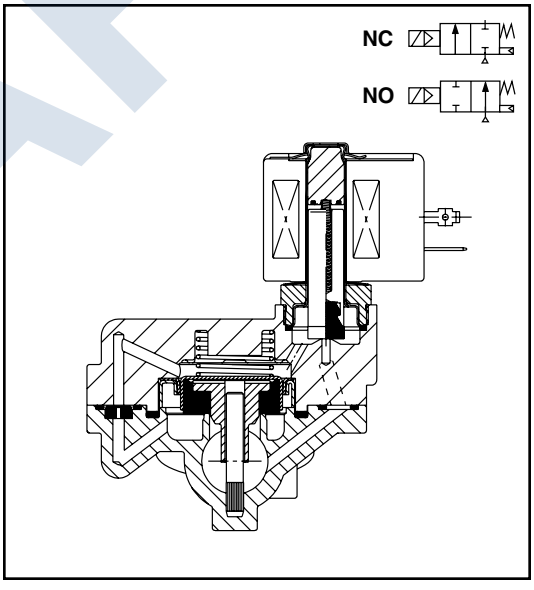
Item # 104

ASCO® RedHat

Pilot Operated
Slow Closing Solenoid Valves
Brass Body • 3/8" to 2 1/2" NPT



2/2 SERIES 8221



2-WAY

Features

- Pilot operated, normally open or normally closed
- Snubber slows disc closing speed to protect system against water hammer damage more effectively than other techniques
- Pressure spike due to water hammer is reduced to a point eliminating the need for suppressors or other controls in most water systems
- Fluid Controls Institute Inc. evaluations have classified these valves:

Pipe Sizes	FCI-82-1 Class
3/8", 1/2", 3/4"	CC
1", 1 1/4", 1 1/2", 2", 2 1/2"	BB

Construction

Valve Parts in Contact with Fluids	
Body	Brass
Disc	NBR
Seals	PTFE & NBR
Core Tube	305 Stainless Steel
Core and Plugnut	430F Stainless Steel
Springs	302 Stainless Steel
Piston	Stainless Steel or Brass
Shading Coil	Copper

Electrical

Standard Coil and Class of Insulation	Watt Rating and Power Consumption				Spare Coil Part No.			
		AC			General Purpose		Explosionproof	
	DC Watts	Watts	VA Holding	VA Inrush	AC	DC	AC	DC
F	11.6	6.1	16	30	238210	238710	238214	238714
F	16.8	16.1	35	95	272610	97617	272614	97617
F	22.6	-	-	-	-	238710	-	238714

Standard Voltages: 24, 120, 240, 480 volts AC, 60 Hz (or 110, 220 volts AC, 50 Hz). 6, 12, 24, 120, 240 volts DC. Must be specified when ordering.
Other voltages are available when required.

Solenoid Enclosures

Standard: RedHat II - Watertight, Types 1, 2, 3, 3S, 4, and 4X; RedHat - Type I.

Optional: RedHat II - Explosionproof and Watertight, Types 3, 3S, 4, 4X, 6, 6P, 7, and 9; RedHat - Explosionproof and Raintight, Types 3, 7, and 9. (To order, add prefix "EF" to catalog number.)

See Optional Features Section for other available options.

Nominal Ambient Temp. Ranges:

RedHat II/
RedHat AC: 32˚F to 125˚F (0˚C to 52˚C)
RedHat II DC: 32˚F to 104˚F (0˚C to 40˚C)
RedHat DC: 32˚F to 77˚F (0˚C to 25˚C)
(104˚F/40˚C occasionally)

Refer to Engineering Section for details.

Approvals:

CSA certified. UL listed, General Purpose Valves.
RedHat II meets applicable CE directives.

Refer to Engineering Section for details.

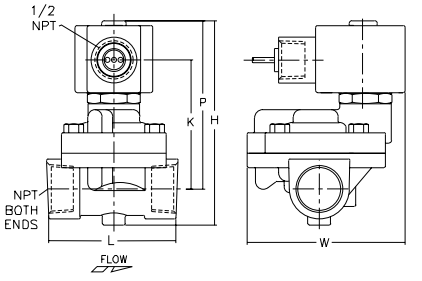
① Valves require a 5 psi Minimum Pressure Differential to open. Once open, they remain open with 3 psi differential pressure.
② Refer to Steam/Hot Water Valve Series for Hot Water constructions.
③ On 50 hertz service, the watt rating for the 6.1/F solenoid is 8.1 watts.



DRAFT

Notes:
1. Material of Construction Tank: 304L S.S.
2. Material of Construction Access Ladder 6061 AL
3. Equipment Weight: 1350 Lbs.
4. Operating Weight: 6000 Lbs.
5. Agitator Drive: SEW SAF67AMS145 46.4:1 Ratio
6. 1.5 Hp 1750 RPM Motor 145TC Frame.
7. Agitator Speed 3.8~38.0 RPM
8. Speed is adjusted via VFD.
9. FKC recommends the polymer inlet to be within 10' of Floc Tank.
10. FKC recommends piping a drain into the Floc Tank feed piping.
11. FKC recommends 1-1/2" grout under all equipment foot pads.

Gearmotors and Gear Reducers

OPERATING INSTRUCTIONS

01 805 52 US

GENERAL
These operating instructions are intended to help you install and operate the drive. For trouble free service, proper installation and operation are essential. Additionally, these instructions contain important recommendations on maintenance.

Before shipment, every SEW-Eurodrive gear unit is tested, checked and properly packed. However, please inspect the drive immediately upon arrival for shortage or transit damage. Note the damage or shortage on the freight bill of lading and file a claim with the carrier. Also, notify SEW-Eurodrive of the shortage or damage.

LUBRICANTS
All gearmotors and gear reducers are supplied with the correct grade and quantity of lubricating oil for the specified mounting position. Exceptions include reducers shipped without input assemblies. The recommended lubricants are found on page 2.

LONG TERM STORAGE
If the drive is not installed immediately, it should be stored in a dry, protected area. If the drive is to be stored for an extended period of time and was not ordered from SEW for long term storage, contact your nearest SEW assembly plant for information on Long Term Storage.

Drives which are used for standby service should be stored as a sealed gearcase.

INSTALLATION OF COMPONENTS ON DRIVE SHAFTS
Do not hammer on the shafts. Hammering can cause brinelling of the reducer's bearings shortening the bearing life. We recommend heating the components to approximately 175°F (when possible) and sliding them on the shaft. This will reduce possible damage to the reducer's bearings.

For both standard and metric SEW shaft tolerances, refer to the SEW Catalog.

Shaft couplings should be properly aligned to prevent vibration, coupling wear, and premature failure of the shaft bearings.

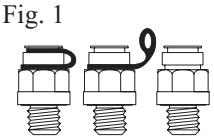
To prevent the output shaft and bearings from being subjected to excessive loads, the maximum overhung load, as shown in SEW-Eurodrive catalogs, should not be exceeded. Please consult our engineering department if the load may exceed the recommended figure given or where there are combined radial and axial loads. In such cases, the exact operating conditions must be stated including speed, direction of rotation, position, magnitude and direction of the external radial and axial loads being applied.

SHAFT MOUNTED REDUCERS
SEW-Eurodrive supplies the recommended hollowshaft mounting paste with every hollowshaft reducer. The mounting paste is to be applied on the keyed output shaft. The mounting paste is to aid in the prevention of rusting and fretting corrosion between the reducer hollowshaft and the shaft of the driven machine. The mounting paste will aid in shaft removal when necessary.

Warning! Always ensure exposed, rotating parts are properly covered to ensure safety.

For additional information on shaft mounted reducers, drive shaft configuration and tolerances, refer to the SEW-Eurodrive Catalog.

INSTALLATION AND OPERATION
The drive installation site should be selected to ensure:



- Ambient temperatures below 40°C (104°F).
- Unimpeded flow of air to the motor and variable speed units.
- Accessibility to the drain, level and breather plugs.
- Adequate space for the removal of brakemotor fanguard for brake adjustment and maintenance.

The drive unit should be mounted on a flat, vibration damping, and torsionally rigid structure. Careful alignment is critical. Mounting to an uneven surface will cause housing distortion. The flatness tolerance of the supporting surface should not exceed:

- For gear units size 80 and smaller — 0.004 inch.
- For gear units above size 80 — 0.008 inch.

For transportation, the units are supplied with the breather plug already mounted. After the unit is installed, the black rubber seal located on the breather MUST BE REMOVED (Fig. 1). In addition, the oil level should be checked. Remove the plated (non-painted) oil level plug. The oil level is correct when the surface of the oil is level with the lowest point of that tapped hole, the exception is S37. Units W10, W20 and W30 are sealed in any position.

Fig. 1

After installation, the actual mounting position should be confirmed against the mounting postion shown on the gear reducer nameplate. Adequate lubrication is only guaranteed if the unit is mounted in the specific nameplated mounting position.

Refer to the SEW Catalog if a specific mounting position diagram is needed.

MAINTENANCE
Warning! Always ensure equipment is secure and electrical power is off before removing or performing maintenance on the drive assembly. Oil levels and oil quality should be checked at regular intervals, determined by usage and the environment. Grease and oil should be changed per the recommendations on page 2. Check coupling alignment, chain or belt tension, and mounting bolt torque periodically. Keep the drive relatively free of dust and dirt.

CLP	=	Mineral oil	**1)**	Helical-worm gear units with PG oil: Please contact SEW-EURODRIVE
CLP PG	=	Polyglycol (W gear units, conforms to USDA-H1	**2)**	Special lubricant for Spiroplan® gear units only
CLP HC	=	Synthetic hydrocarbons	**3)**	Recommendation: Select SEW $f_B \geq 1.2$
E	=	Ester oil (water pollution danger category WGK 1)	**4)**	Pay attention to critical starting behavior at low temperatures!
HCE	=	Synthetic hydrocarbons + ester oil (USDA - H1 certification)	**5)**	Low-viscosity grease
HLP	=	Hydraulic oil	**6)**	Ambient temperature
	=	Synthetic lubricant (= synthetic anti-friction bearing grease)		Lubricant for the food industry (food grade oil)
	=	Mineral lubricant (= mineral-based anti-friction bearing grease)		Biodegradable oil (lubricant for use in agriculture, forestry and water resources)

Oil levels and oil quality should be checked at frequent intervals, depending on usage. Oil changes are required at intervals of 10,000 operating hours or every two years, whichever comes first. If a synthetic oil lubricant is used, then this period can be extended to 20,000 operating hours or every four years, whichever comes first. In applications where hostile operating conditions exist, such as high humidity, corrosive environment, or large temperature changes, the lubricant should be changed at more frequent intervals.

The gear units W10, W20 and W30 are supplied with a synthetic oil which is good for the life of the reducer, independent of the mounting position.

Grease packed bearings should be cleaned and regreased every 10,000 hours or 20,000 hours for synthetic grease. Input (high speed) bearings should not be overgreased. They should be filled with grease not to exceed 1/3 of the bearing's free volume. For output bearings and bearings with replaceable grease shields, fill to 2/3 of their free volume.

ATTENTION

When the recommended lubricant is not avilable, it is permissible to use a lubricant having equivalent characteristics but we do not recommend that lubricants of different brands be mixed. Under no circumstances should synthetic lubricants be mixed with one another or with one having a mineral base.

DRAFT

LUBRICANTS

The approximate lubricant in US gallons and liters per mounting position is as follows:

Gear Unit	Mounting Position											
	M1		M2		M3 [1]		M4		M5		M6

[1] Standard level (increased oil level) - The larger gear unit of a multi-stage unit must be filled with the larger oil volume.

The approximate lubricant in US gallons and liters for ALL mounting positions for the W-Series is as follows

Gear Unit	Gallons	Liters
W/WF/WA/WAF10	0.042	0.116
W/WF/WA/WAF20	0.065	0.24
W/WF/WA/WAF30	0.11	0.40

Note: The Spiroplan® series gear units are mounting position indepedent of oil filling.

For additional information on S-Series mounting positions, refer to the SEW Catalog.

SEW-EURODRIVE GmbH & Co KG Postfach 3023. D-76642 Bruchsal Tel. (07251) 75-0. Fax (07251) 75-1970. http://www.sew.de

Item Number

The *item number* identifies each part of an SEW product. The item number ties the cross-sectional drawing to the description nomenclature. For example: Item # 7 of any reducer parts list is an output shaft. There may be several options (inch, metric, stainless steel, etc.) for a particular item number. The item number and description remain consistant throughout all SEW parts lists.

Description

The *description* identifies the part. For example: Item #9 is an oil seal.

Additional Specifications

The *additional specifications* provide further information on the part. For example: IOP units require stainless steel components. There are two possible breather valves (Item #20) for an R27. The additional specification determines the proper breather valve selection.

SEW Standard Label

The *SEW standard label* provides part size and design standard. For example: Item #41, a 26 x 1.2 circlip, meets the DIN472 standard.

Part Number

SEW assigns a number to each part. This number is not an industry standard. SEW requires this *part number* for inventory control. For example: Item #59 has a unique part number of 0011426X.

Quantity

Sometimes, a unit requires multiple parts during assembly. For example: Item #101 on an R27 requires a *quantity* of 8 hex head screws.

PRODUCTFOCUS

SEW EURODRIVE

F-Series (theSnuggler®)
Parallel Helical Gearmotors

SEW-EURODRIVE's F-Series parallel helical gearmotor is the ideal drive for tight spaces. This compact drive, with its multiple mounting configurations and shaft designs, is a rugged alternative to right-angle gearmotors.

Product Range

- Power ratings from 0.05 to 336 HP
- Ratios from 3.77 to 29,211
- Output torques to 159,300 lb-in

Reducer

- Efficiency = 97% (2-stage) or 95.5% (3-stage)
- Gears manufactured from certified steel, heat treated to a case hardness of 58-62 Rockwell C for infinite fatigue strength
- Finished ground or shaved gear teeth to assure minimum noise, minimum heat, and maximum mechanical efficiency (approximately 1.5% loss/stage)
- Anti-friction bearings for optimum load capacity and long life
- Captured keys on input and output shafts
- F37-F157 gear housing contains high strength cast iron, SAE Class 30 or equivalent (GG20)
- F27 housing contains high strength pressure-cast aluminum
- O-ring on flange to prevent oil leakage when mounted on a surface that is not totally flat
- High cross-section modulus design, rugged monobloc design for maximum rigidity
- Center tapped holes on output shafts to aid the installation of shaft components
- Exclusive interlocking 2-piece seal design consisting of a patented bi-helix FKM inner seal and a double-lip Nitrile (Buna N) outer seal – provides three sealing surfaces against contaminants
- Metric or Inch dimension output shafts
- Removable inspection cover
- Shock capacity meets or exceeds AGMA 6009-A00

Motor

- Inverter duty
- Connection terminals
- Low rotor inertia for high cycling and tight control
- EISA (IE3) "Premium" available
- 50Hz, 60Hz, or 50/60Hz global motor
- CE for shipment into Europe

Mounting

- Built-in torque arm for shaft mounting
- B14 or B5 flange with centering tenon
- Tapped rail holes for foot mounting
- Can be ordered for any mounting orientation

Optional Features

- C-Face or IEC motor adapter
- TorqLOC® taper hollow shaft
- Heavy duty taper roller bearings (FA67-FA127)
- FKM seals instead of NBR
- Corrosion and/or long term storage protection
- High cycling fail-safe brake
- Forced cooling fan for low frequency operation
- Thermostat or thermistor protection
- Plug connectors for quick motor replacement
- Two-speed motor
- Motor encoder - built-in or externally mounted
- CSA hazardous location and ATEX rated motors

PRODUCTFOCUS

Screw Conveyor Drive
Compact, Flexible, and Removable

NEW for 2020! SEW's enhanced screw conveyor drive takes superior performance to the next level. It's four individual sealing areas provide unprecedented protection against contaminants and abrasives. Plus, its taper bearings provide maximum thrust load capacity required for screw conveyors.

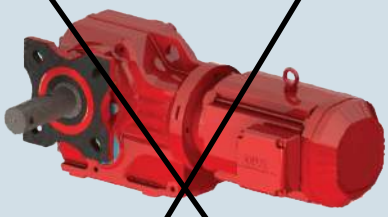
During re-greasing, the expulsion port provides a channel for grease to the V-ring and oil seal as well as a path for excess grease to purge freely. This unique design prevents high pressure that can destroy seals. In addition, SEW's shaft removal tool makes it easy to separate the shaft and flange independently from the gear unit, eliminating the need for trough access or screw removal.

Various motor inputs, two gear unit styles, and numerous ratios provide maximum flexibility and eliminate the need for belts and sheaves. The SEW compact screw conveyor drive is truly the ultimate solution for bulk material handling.

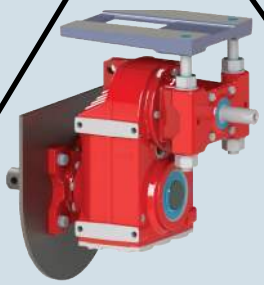
Standard Features

- Four (4) separate sealing components:
  - Labyrinth seal on output shaft formed by V-ring and flange
  - Double-lip seal in flange
  - Nilos steel disc seal (LSTO) for extra protection against abrasive dusts, including grain, flour, coal, and salt
  - Double-lip seal on gear unit output shaft
- Grease nipple with expulsion port to prevent seal damage
- Inspection port to determine seal condition
- Heavy-duty taper bearings for maximum thrust load capacity
- CEMA 2 or 3-hole shaft (optional stainless steel)
- Shaft removal kit for trouble-free disassembly of solid shaft, even in extreme environments
- Removable gear unit - driveshaft and flange remain on trough

Mounting Styles



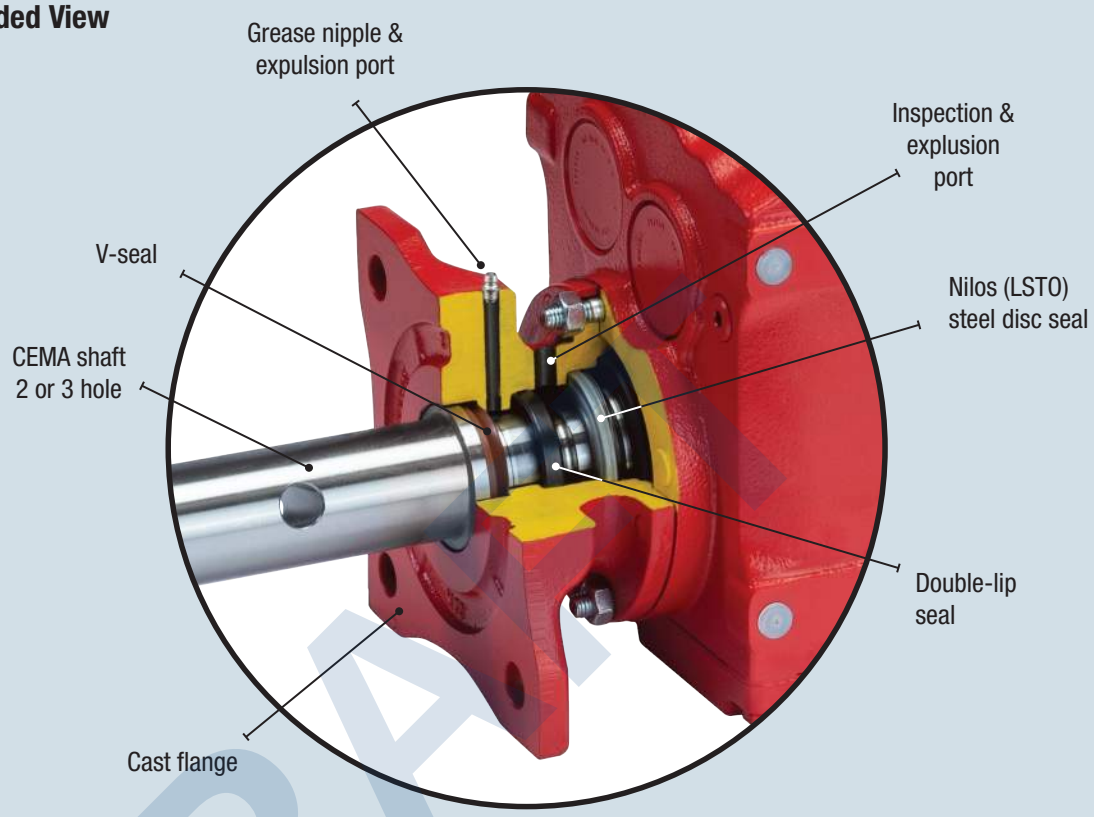
- Integral SEW motor
- Adapter for IEC motor or NEMA C-Face motor
- Platform mounting for use with footed motor
- Helical-parallel (FAF) or Helical-bevel right angle (KAF)



Helical-parallel style (FAF) with SEW C-face motor and jaw/spider coupling

SEW shaft removal tool provides easy disassembly; gear unit can be removed independent of shaft and flange

Helical-bevel right angle style (KAF) with integral motor



Platform style - provides base for footed motor

About SEW-EURODRIVE...

Our product is motion. Our focus is solutions. As a worldwide supplier of innovative gearing, motor, and electronic drive technology, we have been solving problems in large and small applications within virtually every industry since 1931.

Locally in the US, we have 5 assembly centers where we provide final assembly, custom modifications, and assistance with project planning, startup, and training. All products are backed by our industry-leading 24/7 support program.

ER6022

For full product information, visit www.sti.com. Use the SpeedSPEC Code for quick access to the specific web age.

Rope Pull Emergency Stop Switch

- Rope spans up to 80 m (262 ft.) means fewer number of switches required per application
- Tension indicator makes system setup and rope tension maintenance easy
- Contact arrangements of 2 N/C + 1 N/O, 3 N/C + 1 N/O or 2 N/C + 2 N/O
- IP67 (NEMA 6) enclosure enables the ER6022 switch to withstand water washdown cleaning
- Reset button—the blue reset button must be pushed in order to return to "machine run" condition following switch actuation by a pulled or slacked rope
- Indicator beacon—the optional dual indicator beacon, available in 24 VDC or 120 VAC, can be wired to flash red to indicate a tripped switch or glow a constant green to indicate a properly reset switch
- E-stop button—the ER6022 has two mounting positions where the optional E-stop button may be installed; the E-stop button may be added or replaced in the field
- Rubber bellows contain UV inhibitor making the switches suitable for outdoor applications

Conforms to IEC947-5-1, IEC947-5-5, EN418, UL508, BS5304
UL and C-UL listed, TUV certified

Specifications

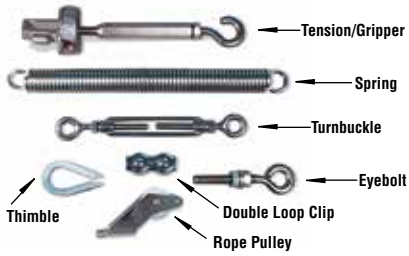
Electrical	All Models
Contact Configurations:	2 N/C + 1 N/O, 3 N/C + 1 N/O, 2 N/C + 2 N/O
Safety Contacts:	2 N/C, 3 N/C
Switching Ability	AC: 240 V–3 A, 120 V–6 A, Inductive, DC: 24 V–2.5 A, Inductive
Auxiliary Contacts:	1 N/O, 2 N/O
Max Switching Current/Volt/Amp:	240 V/720 VA
Minimum Current:	5 V 5 mA DC
Electrical Life:	1 x 10^6 minimum
Mechanical	
LED Indicator Beacon:	24 VDC, 120 VAC
Mechanical	1 million minimum
Mounting:	Any position
Mounting Hardware:	4 x M5 screws
Max Rope Span:	80 m (262 ft.)
Operation Force:	< 125 N (28 lb.)
Tensioning Force to Run Position:	130 N (23 lb.) typical
Case Material:	Die-cast aluminum alloy
Eye Nut Material:	Stainless Steel
Stainless Accessory Items:	304 Stainless Steel
Wiring Entry:	3 x M20 or 3 x 0.5 in. NPT
Weight:	880 g (31 oz.)
Color:	Yellow
Mechanical Life:	1 x 10^6 minimum
Environmental	
Protection:	IP67 (NEMA 6)
Operating Temperature:	-25 to 80°C (-13 to 176°F)
Cleaning:	Water washdown
Compliance	
Standards:	IEC947-5-1, IEC947-5-5, EN418, UL508, BS5304
Approvals/Listings:	CE marked for all applicable directives, UL and C-UL, TUV

Specifications are subject to change without notice.

Note: The safety contacts of the STI switches are described as normally closed (N/C)—i.e., with the rope properly tensioned and the machine able to be started.

DRAFT

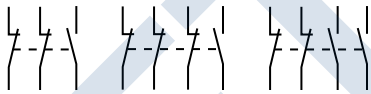
Operation



Blue Reset Knob
A blue reset button is provided to easily return the unit back to its machine-run position after actuation.

Emergency Push Button
The emergency push button may be installed or repositioned in the field. The ER6022 has two possible mounting positions for the emergency stop button.

Installation Hardware Available



Installation Hardware
Individual hardware items may be purchased for specific installation requirements.

RK Rope Tension Kit
The RK Rope Tension Kit comes with all of the required hardware for most installations. A spring is required as shown in the installation example below.
For up to 50 m rope span, one rope end is terminated with a thimble, permanent clamp, and quick link attached.
For over 50 m rope span, 2 Tension/Gripper assemblies are supplied (no quick link.)

DRAFT

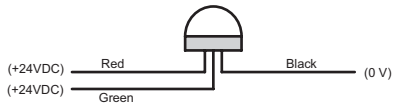
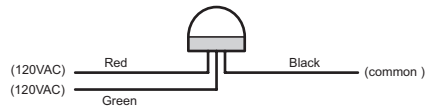
Safety Precautions



Operating instructions

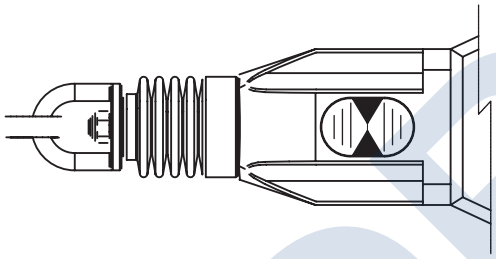
Installation must be in accordance with the following steps and stated specifications and should be carried out by suitably competent personnel. Adherence to the recommended maintenance instructions forms part of the warranty.

⚠ WARNING Do not defeat, tamper, remove or bypass this unit. Severe injury to personnel could result.



Optional 24 VDC Indicator Beacon

When +24VDC is applied to the **red** wire, the beacon will illuminate red and flash.
When +24 VDC is applied to the **green** wire, the beacon will illuminate green.



Optional 120 VAC Indicator Beacon

When +120VAC is applied to the **red** wire, the beacon will illuminate red and flash.
When +120 VAC is applied to the **green** wire, the beacon will illuminate green.

Tension Indicator

Indicator shown with steel rope properly adjusted.

⚠ WARNING

1. Installation of all Safety Rope Switch systems must be in accordance with a risk assessment for the individual application. Installation must only be carried out by competent personnel and in accordance with these instructions.
2. Rope support eyebolts must be fitted at 2.5 m. min. to 3 m. max. intervals along all rope lengths between switches. The rope must be supported no more than 500 mm from the switch eyebolt or Safety Spring (if used). It is important that this first 500 mm is not used as part of the active protection coverage.
3. M5 mounting bolts must be used to fix the switches. Tightening torque for mounting bolts to ensure reliable fixing is 4 Nm. Tightening torque for the lid screws, conduit entry plugs and cable glands must be 1.5 Nm to ensure IP seal. Only use correct sizing glands for conduit entry and cable outside diameter.
4. Tensioning of rope is achieved by use of tensioner / gripper assemblies. Upon installation, tension to mid-position as indicated by the red arrows in the viewing window of each switch. Check operation for all switches and the control circuits by puling the rope at various locations along the active protection area and resetting each switch by depressing the Blue Reset button. Ensure each time that the switches latch off and require manual resetting by depressing the Blue Reset button. Increase the system tension further, if required, depending upon the checks along the active length of coverage. If fitted with a Mushroom type E-Stop button (Red) then test and reset each switch to ensure function of control circuits. Typical operational conditions for successful operation of system is less than 75 N. pulling force and less than 150 mm deflection of rope between eyebolt supports. If the optional LED is fitted but is not used, ensure that the conductors remain coiled and tied to the tie hole in the LED flange.
5. Every week: Check correct operation of system at locations along all coverage length. Check for nominal tension setting, re-tension rope if necessary. Every 6 months: Isolate power and remove cover. Check screw terminal tightness and check for signs of moisture ingress. Never attempt to repair any switch.

DRAFT

Terms and Conditions of Sale

1. Offer; Acceptance. These terms and conditions (these "Terms") are deemed part of all quotes, agreements, purchase orders, acknowledgments, price lists, catalogs, manuals, brochures and other documents, whether electronic or in writing, relating to the sale of products or services (collectively, the "Products") by Omron Electronics LLC and its subsidiary companies ("Omron"). Omron objects to any terms or conditions proposed in Buyer's purchase order or other documents which are inconsistent with, or in addition to, these Terms.
2. Prices; Payment Terms. All prices stated are current, subject to change without notice by Omron. Omron reserves the right to increase or decrease prices on any unshipped portions of outstanding orders. Payments for Products are due net 30 days unless otherwise stated in the invoice.
3. Discounts. Cash discounts, if any, will apply only on the net amount of invoices sent to Buyer after deducting transportation charges, taxes and duties, and will be allowed only if (i) the invoice is paid according to Omron's payment terms and (ii) Buyer has no past due amounts.
4. Interest. Omron, at its option, may charge Buyer 1-1/2% interest per month or the maximum legal rate, whichever is less, on any balance not paid within the stated terms.
5. Orders. Omron will accept no order less than $200 net billing.
6. Governmental Approvals. Buyer shall be responsible for, and shall bear all costs involved in, obtaining any government approvals required for the importation or sale of the Products.
7. Taxes. All taxes, duties and other governmental charges (other than general real property and income taxes), including any interest or penalties thereon, imposed directly or indirectly on Omron or required to be collected directly or indirectly by Omron for the manufacture, production, sale, delivery, importation, consumption or use of the Products sold hereunder (including customs duties and sales, excise, use, turnover and license taxes) shall be charged to and remitted by Buyer to Omron.
8. Financial. If the financial position of Buyer at any time becomes unsatisfactory to Omron, Omron reserves the right to stop shipments or require satisfactory security or payment in advance. If Buyer fails to make payment or otherwise comply with these Terms or any related agreement, Omron may (without liability and in addition to other remedies) cancel any unshipped portion of Products sold hereunder and stop any Products in transit until Buyer pays all amounts, including amounts payable hereunder, whether or not then due, which are owing to it by Buyer. Buyer shall in any event remain liable for all unpaid accounts.
9. Cancellation; Etc. Orders are not subject to rescheduling or cancellation unless Buyer indemnifies Omron against all related costs or expenses.
10. Force Majeure. Omron shall not be liable for any delay or failure in delivery resulting from causes beyond its control, including earthquakes, fires, floods, strikes or other labor disputes, shortage of labor or materials, accidents to machinery, acts of sabotage, riots, delay in or lack of transportation or the requirements of any government authority.
11. Shipping; Delivery. Unless otherwise expressly agreed in writing by Omron:
    a. Shipments shall be by a carrier selected by Omron; Omron will not drop ship except in "break down" situations.
    b. Such carrier shall act as the agent of Buyer and delivery to such carrier shall constitute delivery to Buyer;
    c. All sales and shipments of Products shall be FOB shipping point (unless otherwise stated in writing by Omron), at which point title and risk of loss shall pass from Omron to Buyer; provided that Omron shall retain a security interest in the Products until the full purchase price is paid;
    d. Delivery and shipping dates are estimates only; and
    e. Omron will package Products as it deems proper for protection against normal handling and extra charges apply to special conditions.
12. Claims. Any claim by Buyer against Omron for shortage or damage to the Products occurring before delivery to the carrier must be presented in writing to Omron within 30 days of receipt of shipment and include the original transportation bill signed by the carrier noting that the carrier received the Products from Omron in the condition claimed.
13. Warranties. (a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied. (b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty. See http://www.omron247.com or contact your Omron representative for published information.
14. Limitation on Liability; Etc. OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY. Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.
15. Indemnities. Buyer shall indemnify and hold harmless Omron Companies and their employees from and against all liabilities, losses, claims, costs and expenses (including attorney's fees and expenses) related to any claim, investigation, litigation or proceeding (whether or not Omron is a party) which arises or is alleged to arise from Buyer's acts or omissions under these Terms or in any way with respect to the Products. Without limiting the foregoing, Buyer (at its own expense) shall indemnify and hold harmless Omron and defend or settle any action brought against such Companies to the extent based on a claim that any Product made to Buyer specifications infringed intellectual property rights of another party.
16. Property; Confidentiality. Any intellectual property in the Products is the exclusive property of Omron Companies and Buyer shall not attempt to duplicate it in any way without the written permission of Omron. Notwithstanding any charges to Buyer for engineering or tooling, all engineering and tooling shall remain the exclusive property of Omron. All information and materials supplied by Omron to Buyer relating to the Products are confidential and proprietary, and Buyer shall limit distribution thereof to its trusted employees and strictly prevent disclosure to any third party.
17. Export Controls. Buyer shall comply with all applicable laws, regulations and licenses regarding (i) export of products or information; (iii) sale of products to "forbidden" or other proscribed persons; and (ii) disclosure to non-citizens of regulated technology or information.
18. Miscellaneous. (a) Waiver. No failure or delay by Omron in exercising any right and no course of dealing between Buyer and Omron shall operate as a waiver of rights by Omron. (b) Assignment. Buyer may not assign its rights hereunder without Omron's written consent. (c) Law. These Terms are governed by the law of the jurisdiction of the home office of the Omron company from which Buyer is purchasing the Products (without regard to conflict of law principles). (d) Amendment. These Terms constitute the entire agreement between Buyer and Omron relating to the Products, and no provision may be changed or waived unless in writing signed by the parties. (e) Severability. If any provision hereof is rendered ineffective or invalid, such provision shall not invalidate any other provision. (f) Setoff. Buyer shall have no right to set off any amounts against the amount owing in respect of this invoice. (g) Definitions. As used herein, "including" means "including without limitation"; and "Omron Companies" (or similar words) mean Omron Corporation and any direct or indirect subsidiary or affiliate thereof.

Certain Precautions on Specifications and Use

1. Suitability of Use. Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases but the following is a non-exhaustive list of applications for which particular attention must be given:
   (i) Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this document.
   (ii) Use in consumer products or any use in significant quantities.
   (iii) Energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installations subject to separate industry or government regulations.
   (iv) Systems, machines and equipment that could present a risk to life or property. Please know and observe all prohibitions of use applicable to this Product.
   NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON'S PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.
2. Programmable Products. Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.
3. Performance Data. Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.
4. Change in Specifications. Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.
5. Errors and Omissions. Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

Motion Detector

DRAFT

Item # 312

Cost-effective equipment protection

SITRANS WM100 motion sensor

DRAFT

Accurate monitoring in harsh conditions
SITRANS WM100 is a heavy-duty zero-speed alarm switch. This non-contacting unit provides cost-effective equipment protection even in the harshest conditions. It is suitable for heavy industries such as mining, aggregates or cement. The WM100 monitors the absence of motion on moving or rotating equipment. Key applications include tail pulleys, driven pulleys, motor shaft sensing, screw conveyor flights, and bucket elevators.

Design
Lightweight yet rugged, SITRANS WM100 is compact and easy to install. With its rugged cast aluminum housing, it is suitable for outdoor installation.

Mode of operation
Process protection devices act as early warning systems to avoid costly process interruptions and equipment breakdowns. Located outside of the process, Sitrans WM100 accurately detects operating conditions without wear on the sensor. Sitrans WM100 can be mounted up to 100 mm (4") from the ferrous target. The robust motion sensor provides the contacts to shutdown machinery whenever zero speed is detected. On belt, drag, and screw conveyors, or on bucket elevators, fans and pumps, the zero speed alarm option can warn instantly of equipment malfunctions. It alarms to minimize spillage, prevent extensive damage or even fire caused by belt slippage at the head pulley and warn against conveyor malfunction.

Siemens probes work on the principle of Faraday's Law of Electromagnetic Induction. When a ferromagnetic object enters the probe's permanent magnetic field, it distorts the flux, causing its coil windings to generate a voltage. This voltage is proportional to the strength of the magnet and the number of wire turns in the coil (constant in the probes) and the speed at which the ferrous target passes through the flux. The generated voltage is also inversely proportional to the square of the distance between the target and the probe.

SITRANS WM100

Non-contacting motion sensors detect changes in motion and speed of conveying, reciprocating and rotating machinery. The sensors are located outside of the process, accurately detecting conditions without wear on the sensor. Motion sensors can warn of equipment malfunction and shut down machinery in case of slowdown or failure. They are rugged and perform even in harsh conditions. On belt, drag, and screw conveyors, or on bucket elevators, fans, and pumps, the speed alarm option can warn instantly of equipment problems.

- Up to 100 mm (4") gap between SITRANS WM100 and targets
- Non-contacting design eliminates the need for lubricating, cleaning, and part replacement
- Visual indication of target triggered pulse
- Rugged, low maintenance suitable for tough environments
- 1 SPDT Form C relay contact
- Provides cost-effective protection

	SITRANS WM100
Mode of operation	
Measuring principle	Disruption of a magnetic field by ferrous target
Typical applications	Monitors absence or presence of motion in harsh conditions
Output	
Contact	1 SPDT Form C dry relay contact, rated 5A at 250 V AC, fail-safe operation
Time delay	Start up: 10 to 14 seconds (5 to 7 seconds with 12 ppm jumper installed)
Zero Speed (selected via a common jumper)	• 5 seconds ±1 (minimum speed 10 to 15 ppm) or • 10 seconds ±2 (minimum speed 5 to 7.5 ppm)
Rated operating conditions	
Operating temperature	• -40 to 60 °C (-40 to 140 °F)
Design	
Probe body	Aluminum
Process mounting	2" NPSL
Connection box	Aluminum, ¾" NPT conduit entrance, 5 screw terminals plus grounding terminal for electrical connection, max. 12 AWG (3.30 mm^2) wire size
Gasketing	Neoprene
Display	Red LED for verification of pulses
Enclosure rating	Type NEMA 4X, 6, IP67
Dynamic range	
	• Minimum 6 or 12 pulses per minute • Maximum 3000 pulses per minute
Shipping weight	
	2 kg (4 lbs)
Power supply	
	• 115 V AC/50 to 60 Hz, 7 VA • 230 V AC/50 to 60 Hz, 7 VA • ±10 % of rated voltages
Certificates and approvals	
	• $CSA_{US/C}$, CE, C-TICK

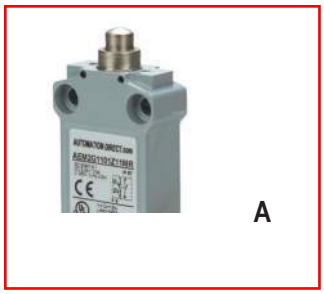
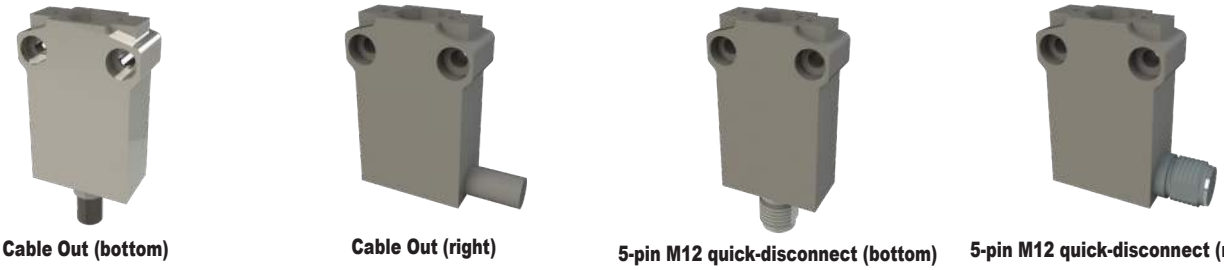
Compact Limit Switches Item # 314, 414, 513, 606



AEM2G Series (Metal Plunger Actuator)



- Die-cast metal housings
- 3m cable/5-pin M12 quick-disconnect (center and right)
- 1 N.O. and 1 N.C. contact on all units
- Compact size with standard 25mm hole spacing
- Wide offering of head actuators
- Epoxy resin-filled for IP67 rating
- Both snap-action (Z11) and slow-make/slow-break (X11) contacts available
- N.C. contacts are positive-opening operated unless otherwise noted.

Compact Limit Switches

Compact Limit Switches Specifications		
Environmental		
Degree of Protection		IP67 according to IEC 60529
Temperature Range		Storage: -40 to 70°C (-40 to 158°F). Operating: -25 to 70°C [-13 to 158°F]
Mechanical Ratings		
Mechanical Life		10 million operations. Models G16, G92, G93: 5 million operations.
Enclosure Material		ZAMAK (zinc alloy)
Contact Blocks Rating		
Positive Opening		Yes, except G61, G92, G93
Electrical Ratings	***AC15***	Make: 100A @ 24VAC; 60A @ 120VAC; 30A @ 240VAC Break: 10A @ 24VAC; 6A @ 120VAC; 3A @ 240VAC
	DC13	2.8 A @ 24VDC; 0.55 A @ 125VDC; 0.27 A@250VDC
Maximum Switching Frequency		Contact blocks: all one cycle per second
Repeat Accuracy		0.05 mm on the operating points at 1 million operations
Short-Circuit Protection		10A @ <500V
Contact Resistance		25mΩ
Recommended Minimum Operating Speed		With slow-action contacts: 500mm per minute
Rated Insulation Voltage		B300, R300 according to UL508; 400V (degree of pollution: 3) according to IEC 60947-1
Connection Type		Cable: 3m PVC cable, 5 x 0.75mm^2 (18 AWG). Overall cable diameter: 8.20 mm (0.32 in.) Connector: 5-pin M12 quick-disconnect
Wiring Terminal Markings		According to CENELEC EN50013
Electrical Protection		Class I according to IEC60536-1
Contact Blocks Performance		
Operation Frequency		3600 ops/h
Electrical Durability (according to IEC 947-5-1)		Utilization categories AC-15 and DC-13; load factor of 0.5.
Torque		All: 0.5 N•m [0.8 Nm max]
Approvals		UL file E191072, CE

ECCN	EAR99

Made of Buna-N, these O-rings resist grease, hydraulic oil, and motor oil—plus mild chemicals and water. However, Buna-N is not for use with brake fluid. These O-rings are commonly used to create multidirectional seals between two parts in power transmission assemblies, hydraulic cylinders, and pneumatic cylinders. With a round profile, they resist compression and tearing to keep their shape over time, so they're reusable. All have shelf life, cure date, and a traceable lot number printed on the bag. Many meet ASTM D2000 and SAE J200, international standards for rubber products.

Inch O-rings have a dash number and are sized to the SAE standard AS568.

Product Description

Stainless steel washdown AC motors have exterior components of 300 series stainless steel to provide maximum corrosion resistance in severe-duty and washdown environments. The motors' exterior is completely paint- and coating-free and sealed against moisture and condensation to protect internal components.

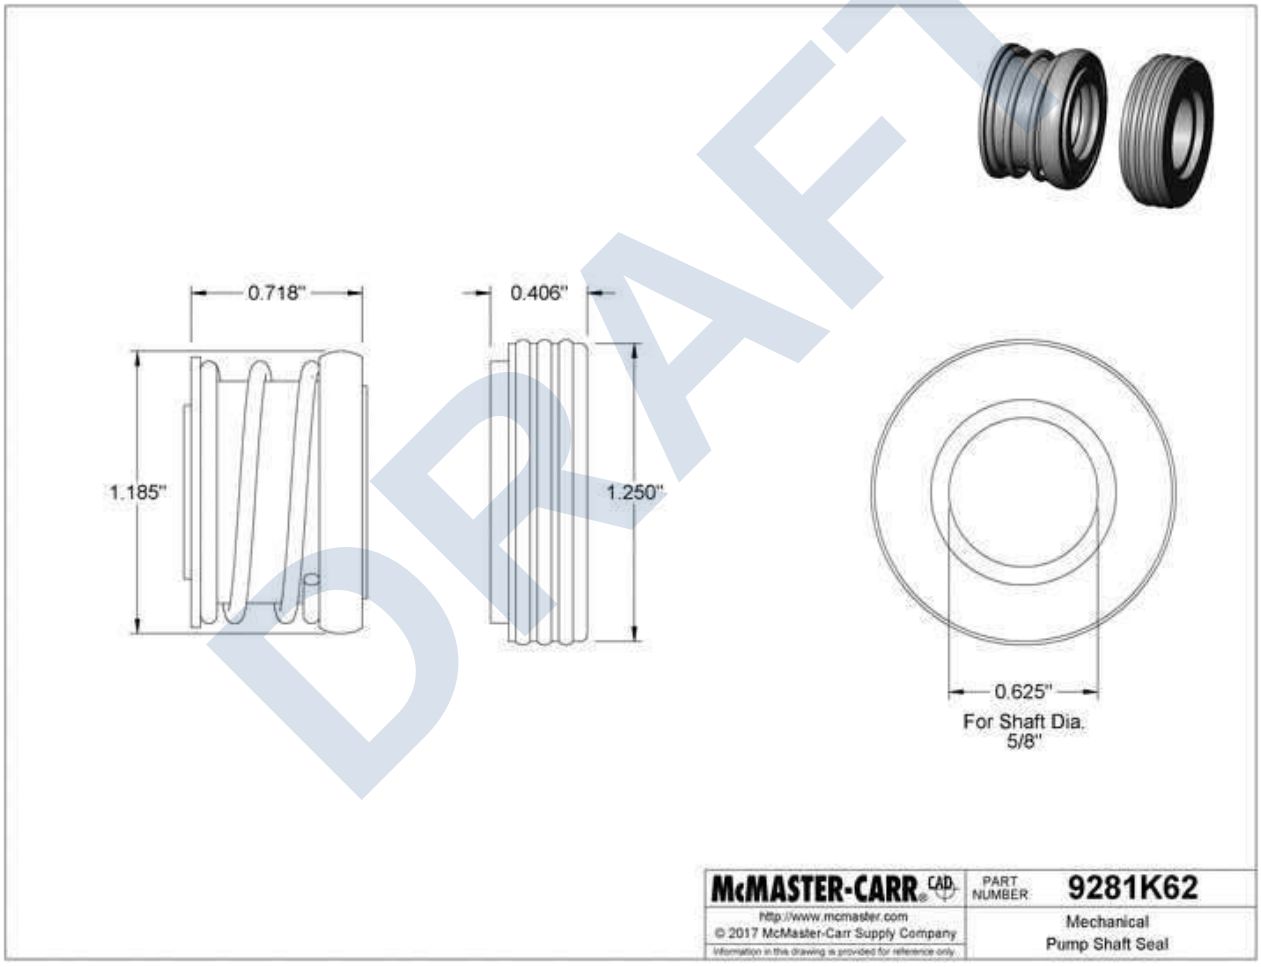
Item # 405

Mechanical Pump Shaft Seal with Extended Spring

Mechanical Pump Shaft Seal, Trade No. 200V & 516V

For Motion Type	Rotary, Oscillating
For Sealing	Shafts
For Shaft Diameter	5/8"
Trade Number	200V, 516V
Manufacturer/ Brand Equivalent	John Crane Type 6 Pac-Seal Type 16 Sealol Type 60L
Seal	
ID	0.625"
OD	1.185"
Width	0.718"
Seat	
ID	0.625"
OD	1.250"
Width	0.406"
Material	
Case	304 Stainless Steel
Spring	304 Stainless Steel
Diaphragm	Viton® Fluoroelastomer Rubber
Washer	Phenolic Plastic
Seat	Ceramic
Gasket	Viton® Fluoroelastomer Rubber
Maximum Speed	
For Rotary Motion	3,600 rpm
For Oscillating Motion	83.3 feet/sec.
Maximum Pressure	150 psi
Temperature Range	0° to 400° F
Diaphragm Hardness	Durometer 70A (Hard)
For Use With	Animal Oils Butyl Alcohol Ethylene Glycol Glycerin Grease Hydraulic Oils Isopropyl Alcohol Methanol Mineral Oils Motor Oils Oils Petroleum Fluids Phosphoric Acid Sodium Bicarbonate Transmission Fluids Vegetable Oils
System of Measurement	Inch



DRAFT

RoHS	Not Compliant

Commonly used in well, sump, and displacement pumps, these seals have a two-piece spring-loaded design that keeps the sealing surfaces in contact as the material wears. Seals come furnished as two pieces—the seal and the seat. The seal is comprised of the case, spring, diaphragm, and washer, which come locked together as one piece. The seat is comprised of the seat and the gasket.

Viton® fluoroelastomer diaphragms and gaskets resist a wider range of chemicals than Buna-N.

Note: Maximum performance values cannot be achieved simultaneously; for example, speed is affected by pressure, temperature, and other operating conditions.

Item # 406

Item # D532T1-2M, Popoff Valves

List Price −

QUOTE

Features

- Popoff or inline valves
- Adjustable crack pressure
- Zero leakage
- Optional factory preset
- Accurate set pressure
- Wide range of cracking pressure
- Tamper-proof adjustment
- 100% seat leakage tested
- PED certifications and CE marking available for most models

Note: Proper filtration is recommended to prevent damage to sealing surface.

'D' Variation: Prefixed part number is supplied with a cap which diverts high pressure blasts from personnel and instruments, and serves as a rain and dust shield.

Specifications | Leakage | Applications | Safety

Specifications −

Series	500
Variation	Popoff with deflector cap
Body Material	316 Stainless Steel

Seal Material[1]	Viton®
Valve Size	1/4 in
End Connection	Pipe Thread Male
Operating Pressure	0.5 to 150 psig 0 to 10 bar
Cracking Pressure	0.5 to 150 psig
Cracking Pressure Tolerance	±5%
Operating Temperature	-20 to 400 ºF
Proof Pressure	400 psig
Rated Burst Pressure	500 psig
Dim. L	1.38 in
Dim. L1	1.20 in
Hex	5/8 in
Dia. D (max.)	0.90 in
Weight	.05 lbs
Optional Body Material	303 stainless steel 316 Stainless Steel Aluminum Brass
Optional End Connections	M - Male NPT S - British Taper Pipe (Male) X - British Taper Pipe (Female)

Leakage −

Leakage, Ascending Pressure
Standard seals: 0 to 95% of cracking pressure
Silicon & EPR: 0 to 80% of cracking pressure
Teflon®:
Cracking pressures up to 2.4 psi: 4cc/min at 0 to 50% of cracking pressure Cracking pressures 2.5 psi and higher: 1cc/min at 0 to reseat pressure, 10cc/min from reseat to 90% of cracking pressures

Leakage at Reseat Pressure
All elastomeric seals: Zero
Teflon®: 1cc/min for cracking pressures 2.5 psi and higher

DRAFT

Applications

- System overpressure protection
- Storage tanks
- Freon® recovery systems
- Medical equipment
- Refrigeration & heating equipment
- Measuring & dispensing pumps
- Communications equipment
- Process control instruments
- R&D pilot plants
- Vacuum pump safety

Safety

For Your Safety
It is solely the responsibility of the system designer and user to select products suitable for their specific application requirements and to ensure proper installation, operation, and maintenance of these products. Material compatibility, product ratings and application details should be considered in the selection. Improper selection or use of products described herein can cause personal injury or property damage.

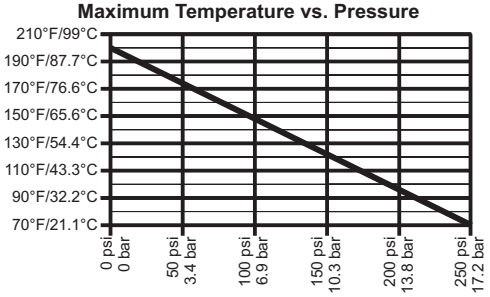
Panel Mount

Needle Valve Adjustment

Features:

- **Durable, highly polished, one piece meter body.**
- **Bulkhead nuts attach directly to inside panel.**
- **Direct reading permanent scale.**
- **White back reflector for easy reading.**
- **Optional flow control needle-type adjustment valve.**
- **316 stainless, PTFE or Hastelloy floats and float guides.**
- **Acceptable in direct sunlight applications.**



Materials of Construction:

Meter Body:.....Cast Acrylic Sheet
Adapters/valve:.....Polypropylene
O-ring seals:.....Viton ® (optional EP)
Bulkhead Nuts (non wet):.....Polypropylene
Float:.....316SS, Hastelloy or PTFE (per model)
Guide Rod:
Standard Series.....316 Stainless Steel
K- Series.....Hastelloy C-276

Specifications:

Max. working pressure:.....250 PSI (17.2 bar) @ 70℉ (21 ℃)
Max. fluid temperature:.....200 ℉ (93 ℃) @ 0 PSI
Full scale accuracy:.....+/- 5%
Calibration fluid:.....Water, specific gravity 1.0
Scale length:.....4" (100mm) approx.
Environment:.....Acceptable for direct sunlight exposure.
Approximate shipping wt: ...2 lb. (.91 kg)

Blue-White® Industries, Ltd.

Variable Area Flow Meters

Installation Requirements:

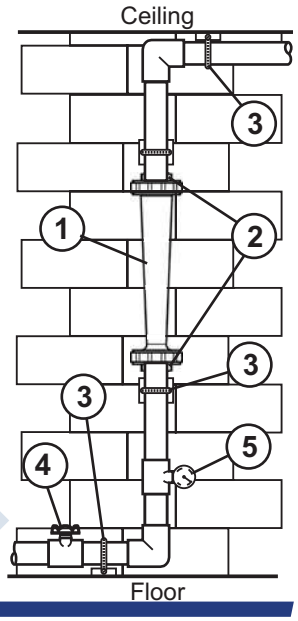
1. Misalignment will damage the meter!

Flowmeter must be installed in an exact vertical plane to ensure accuracy. Be certain of proper plumbing alignments. Misalignment may cause the o-ring seals to leak.

2. Pipe dope and glue will damage the meter!

Use only PTFE® tape on the threaded adapters. The meter body and plastic fittings cannot tolerate PVC Glue and/or pipe dope. Even fumes can cause severe damage. If you are installing your flowmeter to a glued pipe configuration, install the flowmeter *after* all glued fittings are dried and lines are purged of all fumes. **Never** hold the meter body with pliers or like tools. Union nuts should be hand tightened only. **DO NOT OVER-TIGHTEN!**

3. Vibration and heavy loads will damage the meter!



Wall, panel, floor and ceiling mounts and supports must be carefully aligned with the meter body and sturdy enough to support the plumbing and prevent vibration. Never allow the flowmeter or flowmeter adapter fittings to support the weight of related piping.

4. Solenoid valves will damage the meter!

Avoid a system that will impose a sudden burst of flow to the meter. Such a burst will cause the float to impact the float stop with destructive force. Solenoid valves, or other quick opening valves cannot be used unless meter is protected against sudden bursts of flow.

5. High pressures and temperatures will damage the meter!

The maximum acceptable temperature and pressure is interdependent. The maximum acceptable working pressure is dependant on the actual fluid temperature. The maximum acceptable fluid temperature is dependant on the actual working pressure. (see Temperature Vs. Pressure chart).

Flow Range and Model Options:

Standard Series - *Equipped with 316 SS guide rod*

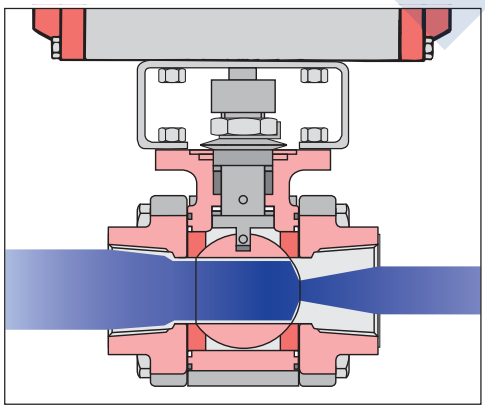
Flow-Tek®
Subsidiary of BRAY INTERNATIONAL, Inc.

Advanced V-Control Ball Valves, 1/4"-12"

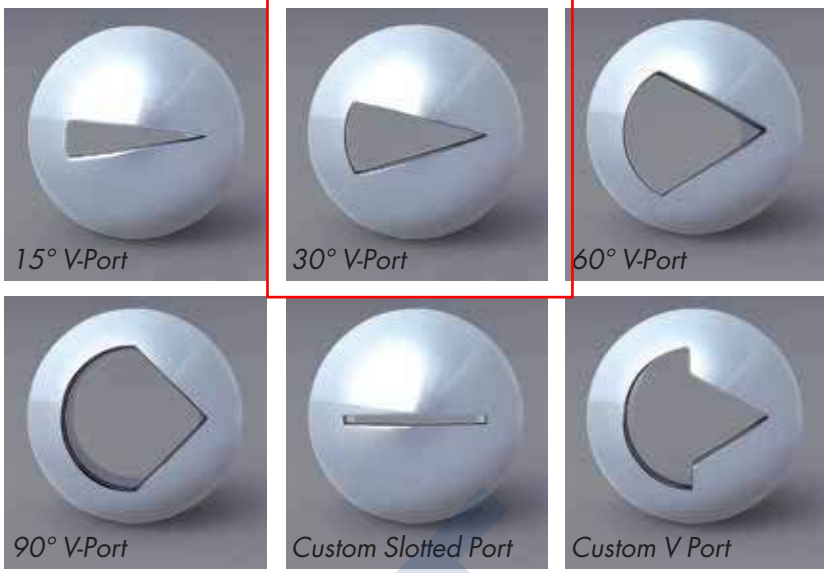
Pneumatic, Electro-Pneumatic & Electric Controls

Threaded, Socket Weld, Butt Weld &
Flanged End Valves



V-Control Ball Valves with Pneumatic, Electro-Pneumatic and Electric Actuation

A BUBBLE TIGHT SHUT OFF VALVE AND PRECISION CONTROL VALVE COMBINED IN ONE



Standard round ported ball valves have been used, and continue to be used, for many control applications such as services involving moderate pressure drops. Now, with the development of Flow-Tek's characterized V-balls, a full range of control applications is available with superior flow control. These 1/4 turn control ball valves are more compact, lighter weight and much less expensive than comparably sized globe valves and segmented control valves offered by other companies. Flow-Tek control valves offer fast response times to control signals due to advanced digital control of actuation and the inherent strengths of ball valves. These valves exceed Class VI offering bubble tight shut off with zero leakage. Other features include superior rangeabiltiy and repeatability, high flow capacity, the ability to function with fluids containing solids and fibers, ease of maintenance and exceptional interface with PLCs and computer command signals. Flow-Tek high quality pneumatic and electric control actuators are very durable and efficient.

Increased Linear Response

Due to the in-line design inherent with characterized control ball valves, line media flows linearly through the piping system. The direct pattern provides increased media control and rapid response times to controller commands.

Media Flow entering valve from the left. Installing the V downstream is preferred.

Exceptional Characterized Control

Flow-Tek's characterized balls provide predictable and accurate control of downstream flow rates. These precision cut balls match the control performance of globe valves while offering the economy, features and reduced size and weight of ball valves. Flow-Tek offers a wide range of V-Port and Slotted Port characterized balls. The standard characterized balls and an example of a custom ball are shown above. The 90° and 60° balls, like standard round hole balls, offer an equal percentage inherent flow characteristic. A slotted ball and a V-Port ball with a small angle opening, such as a 15° ball, furnish a linear inherent flow characteristic. Medium angle V-Port valves such as a 30° ball furnish a modified equal percentage inherent flow characteristic. Custom ports are also available to meet special control requirements. Designed with flexibility in process conditions in mind, the C_V and control characteristics are easily changed by simply changing the ball.

High Rangeability

The characterized ball delivers controllable flow characteristics from the nearly closed to the fully open position of the valve. Though port type and valve size affects the rangeability, Flow-Tek characterized balls have a minimum rangeability of 200 to 1 and can exceed 800 to 1. Flow rates are highly repeatable within the normal 20% – 80% range of travel.

High Flow Capacity

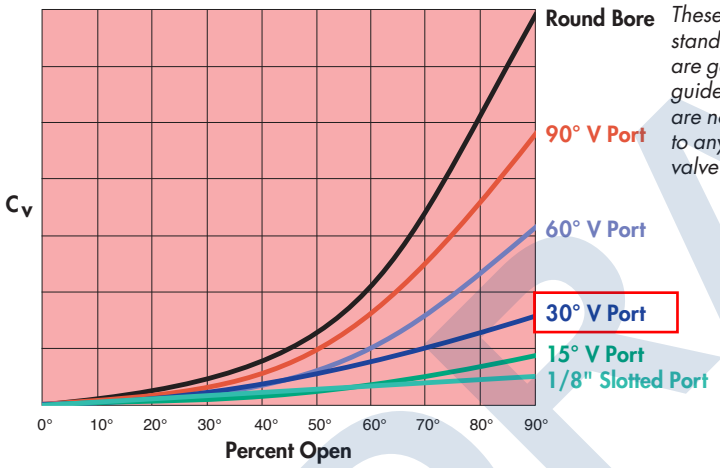
Flow-Tek's control ball valves have been designed to offer maximum flow characteristics that are substantially higher than comparably sized globe valves. The inherent flow pattern of ball valves increases flow rates and in many applications valves smaller than pipeline size can be used. The self-cleaning action of the ball against the seat makes the ball valve acceptable for slurry and high fiber media services.

High Pressure Drops

Engineered to withstand high pressure drops while providing leak free operation, the V-Control Series delivers the precision control required by today's process industries. The ΔP limit for liquids is up to 500 psi and steam is up to 300psi. Please consult the factroy or your distributor for information on control valve sizing and pressure drop limitations.

Bidirectional Bubble Tight Shut Off

V-Control Series ball valves offer bidirectional bubble tight Class VI shut off in compliance with FCI 70-2 standards.



DRAFT

Ball Design

All Flow-Tek valves offer a precision machined, mirror finished, solid stainless steel ball. As with standard Flow-Tek round hole balls, the critical edges of the V-Port and slotted balls have blended curvatures to reduce seat wear and provide a high cycle life. Flow-Tek control valves have the cut in the ball instead of the seat — offering advantages of improved flexibility, durability and serviceability.

Flexibility: selection from the various standard balls and seats based on the application. Converting from a standard valve to a V-Port control valve is simply a matter of replacing the ball, all other valve parts remain the same. **Durability:** the pressure drop in a control valve is taken over the edges of the control element. Focusing the actual pressure drop at the edges of a V in the ball instead of in a soft seat material provides for a more durable product. **Serviceability:** when seat replacement is necessary, the center section of a Flow-Tek 3-piece valve can easily swing out for servicing. Competitors' valves, with the cut in the seat, require special end caps with a recess to accommodate the special seats. These end caps cannot swing out, requiring the valve to be completely removed from the line for servicing. Flow-Tek valves utilize standard end caps and seats for enhanced serviceability.

Characterized Control

These curves of standard ports are general guidelines and are not specific to any particular valve size.

Hysteresis

Flow-Tek control valve packages are inherently designed to eliminate any measurable amount of hysteresis. This is a very important feature in throttling control. Flow-Tek valves were designed with a tight connection between ball and stem, and the large stem diameter increases the connection surface. Both ball and stem connections are precision machined to tight tolerances limiting hysteresis. The Flow-Tek design does not require hand matching of balls and stems to insure a tight connection. Standard valves can be converted to V-Port control valves in the field. Heavy duty brackets and couplers connect valves to actuators. Pneumatic actuator pistons have standard guide bearings to minimize side movement within the actuator body. All connections are manufactured to tight tolerances throughout the control valve package.

Stem Seals & Seats

Leak-free protection is achieved by Flow-Tek's stem packing design, live-loaded self-adjusting stem seals and superior seat construction. In combination with the long lasting service capabilities of Flow-Tek actuators, V-Control Series ball valves have a much higher cycle life than most control valves. With a low coefficient of friction and high resistance to erosion and corrosion, Flow-Tek valves are built to last.

Seat Selection

A wide range of seat materials are offered to meet most applications. Seats include RPTFE, TFM 1600, Stainless Steel/PTFE (50/50), UHMWPE, PEEK and Tek-Fil® seats offering high temperature and high pressure capabilities. Metal and other seats are available, please consult the factory.

Applications

Temperature Control With shut off meeting Class VI requirements, these valves are ideal for steam/temperature control.

Flow Control The high flow capacity and predictable rangeability and repeatability of the V-Control Series valves make this the ideal choice for flow control services.

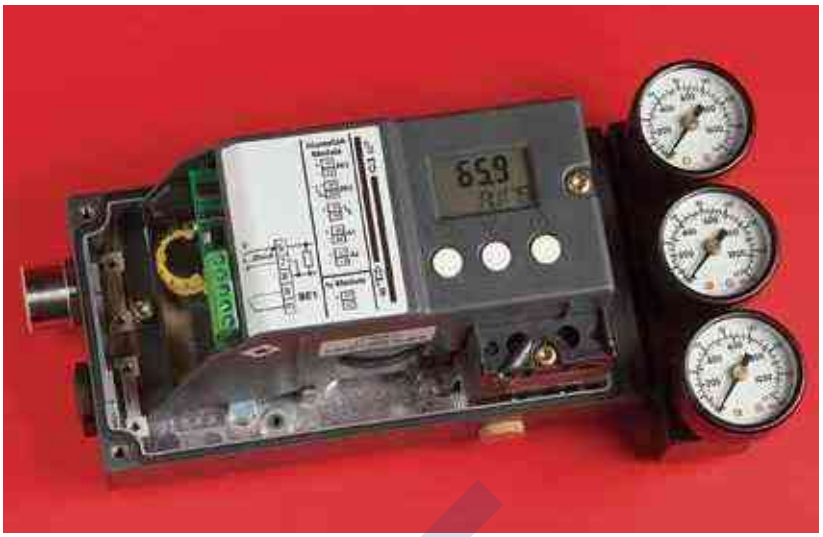
Steam Control The V-Control Series provides tight shutoff and utilizes Flow-Tek's live loaded Smart Stem design to eliminate typical problems of downstream leakage and stem leakage associated with globe style steam control valves.

Level Control & PH Service A combination of Flow-Tek control actuation and standard round hole balls are the ideal package for these applications.

Media Containment Units Extended stem sealing units are designed to prevent costly downtime and provide double stem sealing. A button-head check valve for injection of a sealing agent can be added.

DRAFT

Digitally Controlled Ball Valves



For Precision Pneumatic Control Of Flow

The Flow-Tek Automator Pneumatic Control Actuator is equipped with advanced electro-pneumatic or pneumatic positioners for precise valve positioning. In combination with Flow-Tek's V-control balls, the Automator offers superior flow control. Series 6A electro-pneumatic positioners feature advanced communication and enhanced diagnostics. The Automator Series pneumatic actuators are rack and pinion, opposed-piston actuators designed with innovative, high performance features in a compact, rugged and reliable modular product line.

Automator Series Pneumatic Control Actuators offer many design features including:

- Double Acting and Spring Return units.
- Manual override.
- Highly visible valve status display.
- Externally adjustable bidirectional travel stops.
- Valve mounting to ISO 5211 standards without external piping. NAMUR standard mounting of accessories.
- Spring return units with spring cartridge system offers safety, simplicity and reduced space requirements. Spring return units have the same dimension as the double acting.
- Supply air pressure to 140 psi (10 bar).
- Size 48 actuators have 1/8" NPT pneumatic air connections. Larger sizes have 1/4" NPT connections.
- Permanently lubricated piston guides, rings and output shaft bearings.
- Interchangeable modular positioner units and accessories.
- Low hysteresis through tight tolerance ball, stem and shaft connections.

Intelligent Electro-Pneumatic Positioners

Flow-Tek's Series 6A Electro-Pneumatic Positioners are microprocessor controlled, delivering all the benefits of digital electronics to a pneumatic actuator. The microprocessor constantly compares the command signal to the actual valve position and makes precise, on-line adjustments until the two measurements match within the user-selectable deadband. These positioners can accept an analog 4-20 mA, HART, Foundation Fieldbus or PROFIBUS PA input command signal. Utilizing proven technolgy, Series 6A electro-pneumatic positioners feature rugged reliability, high quality components and outstanding performance.

Minimal Air Consumption Series 6A positioners offer the lowest air consumption on the market today, <0.00035 scfm at 80 psi. Air supply within the unit is controlled by Piezo valve technology, resulting in reduced air consumption during operation and zero bleed during steady state. The energy savings alone can pay for the cost of the unit within a year. In addition, the power conservation and decreased noise are beneficial to the environment. Maximum supply air pressure is 102 psi (7 bar).

Diagnostics Flow-Tek's intelligent positioners feature corrective and preventative maintenance self-diagnostic checks. Corrective maintenance dignositics aid in finding the cause of a problem. Preventative maintenance dignositics checks reduce operating costs by identifying potential problems as they occur. Diagnostic results are indicated both via a PC connection and the local LCD. All diagnostics run constantly. The data may be continually monitored and recorded via a PC.

Enclosures Flow-Tek waterproof positioners meet NEMA 4, 4x and IP66 specifications. The waterproof enclosure is constructed of a durable, lightweight polymer, providing excellent chemical and corrosion resistance.

Waterproof/Explosion Proof enclosures meet NEMA 4, 4x, 7 & 9 specifications. These enclosures are constructed of die cast aluminum with an epoxy coating for chemical and corrosion protection.

A waterproof stainless steel enclosure is available upon request.

Position Indicator In addition to an LCD display, valve position is clearly shown over a distance by a yellow indicator. Made of ABS plastic material, the pointer is located between Flow-Tek pneumatic actuators and the Series 6A housing.

Accessories An externally mounted Gauge Manifold is offered with up to 3 gauges to measure air supply and the actuator input and output pressures. Volume Boosters increase air volume output and decrease response time. Filters & Regulators condition the incoming air supply.

DRAFT

LCD Display & Keypad

Flow-Tek's Series 6A LCD Display provides visual confirmation of valve position, operating status and keypad entries. With the housing cover on, the Display clearly shows actual valve position in precise one degree increments. The positioner operating mode (automatic or manual) and alarm messages are also shown.

With the housing cover removed, the keypad push buttons are accessible to perform a variety of functions, including automatic calibration, confirmation of the setpoint and progress to the setpoint, potentiometer alignment, diagnostic checks, and error messages. Additional parameters are available, please consult the factory for more information. The LCD Display shows the information entered in the keypad.

Auto Calibration

Series 6A calibration push buttons are accessible under the housing cover. Calibration is easily performed by entering only three parameters into keypad push buttons. The LCD Display provides visual confirmation of parameter values. The calibration process automatically determines the position of the travel limit stops, then measures and records the parameters for both the open and close positions. The settings are stored in nonvolatile memory to prevent loss in the event of power failure. After performing the calibration procedure, which normally takes less than 5 minutes, the Series 6A is ready for operation.

Adaptive Control

Unique to the industry, the Series 6A delivers on-line adaptive control. During the calibration process, the positioner characterizes the profile of the valve load and automatically adjusts the output air volume to an appropriate value. During operation, the unit continually optimizes control behaviors and travel times in response to changes in line media pressure. The benefits are product efficiency, reduced maintenance, increased service life and lower operational costs. This unique on-line adaptation continually optimizes field performance and sets the Series 6A apart from any competitor.

Bus Intelligence

Flow-Tek offers Series 6A Intelligent Electro-Pneumatic Positioners with serial bus network flexibility. HART, Foundation Fieldbus and Profibus PA protocols are available. Flow-Tek's bus intelligent positioners offer all Series 6A features plus increased network communication and remote access to positioner parameters and diagnostics.

Bus networks greatly reduce plant engineering and installation costs and allow for future flexibility. Adding units is easily done by just connecting the appropriate bus cable. Series 6A bus intelligent positioners can be configured from Windows based HMI and a bus modem. These units may provide a variety of detailed information on the history and operating state of the actuators, such as number of cycles, ambient temperature limits, and any air leakage. They also log every alarm message.

Optional Boards

Retransmission Module indicates valve position to the control room.

Programmable Electronic Switches can be set to activate at various travel position. 2 semiconductor switch outputs and 1 alarm output, plus 1 digital input are included.

Limit Switches provide cam activated indication of travel limits – mechanical switches or intrisically safe inductive proximitiy switches are offered.

All optional boards can be easily installed in the field.

Explosion Proof Positioners

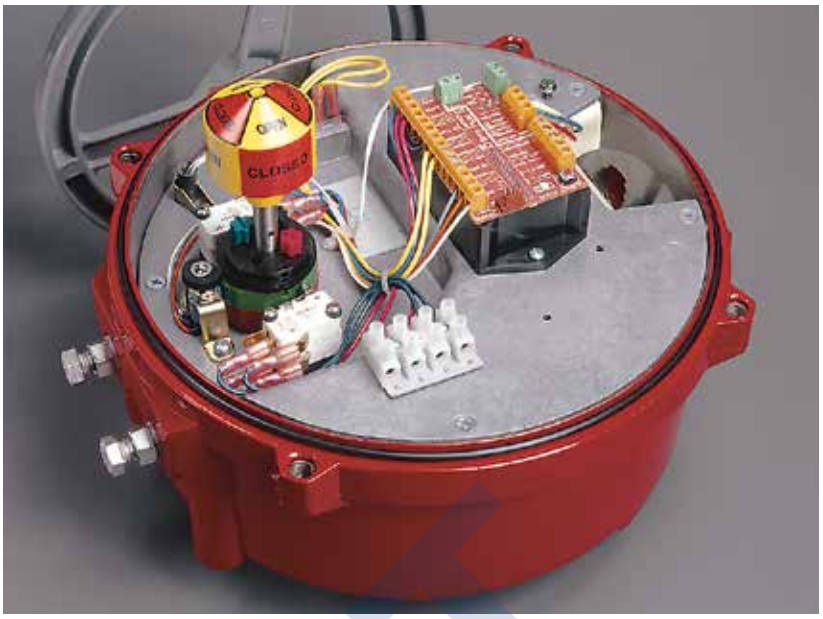
Designed for hazardous and severe applications, Flow-Tek's Series 6A explosion proof positioners offer all the features of the waterproof units in a flameproof enclosure. Non-intrinsically safe boards may be placed inside. These rugged, heavy duty units meet EExd IIC T4/T5/T6 specifications. The Automatic Calibration keypad in the explosion proof units are externally mounted and easily accessible. The units can be controlled locally, even during operation, without removing the housing cover. The LCD display is viewed from behind an explosion proof window.

Pneumatic Positioners

Flow-Tek's Pneumatic Positioner automatically positions the output shaft to precise valve angles between 0° and 90°. The standard input signal is 3-15 psi. It can function as double acting or spring return and is adaptable for applications where reversible or split range is required.

DRAFT

Digitally Controlled Ball Valves



For Precision Electric Control Of Flow

The Flow-Tek Series 70 Electric Actuator is equipped with a digital Servo for precise valve positioning. In combination with Flow-Tek's V-control balls, the Series 70 offers superior flow control. Two digital versions are offered – an analog input unit and *Bus*Smart units with serial bus protocols. The Servo consists of a circuit board and a feedback potentiometer assembly, which both fit entirely within the standard Series 70 actuator housing. The circuit board has a screw-type terminal for ease of customer field wiring. Other terminals for internal connections to the actuator components are wired at the factory. The feedback potentiometer is driven by a gearset connected to the output drive.

Flow-Tek's unique digitally controlled Electric Actuators have many design advantages over present industry standards including:

- Simple and unique manual override handwheel system
- Lowest profile and lightest weight actuator on the market
- Simple finger or screw driver adjustment of travel limit cams without interference from other components
- Highly visible valve status display
- Externally adjustable travel stops
- Optional Torque Limiting Switching System: Switches independently respond to predetermined loads in both the open and closed directions by sensing the movement of the worm gear shaft, then interrupt the electrical power to the motor. The switches can operate at any point of actuator travel.
- Optional anticondensation Heater
- Optional Local Control Box.

The die-cast aluminum cover and base are waterproof (NEMA 4,4X, IP 65) and high-quality polyester powder coated for exceptional corrosion, wear, impact and ultra-violet resistance.
An Explosion Proof unit with the same features as the waterproof unit is available in some sizes. This unit is designed to meet NEMA 4,4X,7,9.

Digitally Controlled Analog Electric Actuators

The Series 70 with Servo Plus II delivers all the benefits of digital electronics to an actuator that responds to analog signals. The unit positions the valve in response to an analog command signal and produces an analog output signal of actual valve position. A microprocessor constantly compares the command signal to the actual valve position and makes precise adjustments until the two measurements match within the user-selectable deadband.

Features

The Servo Plus II features self-diagnostic checks which run constantly. The self-diagnostic results are visually indicated by locally flashing LEDs or graphically on a PC through the Configuration Tool Software. Self-diagnostics reduce operating and maintenance costs by identifying problems as they occur. Self-diagnostics include status indication operation, control signal & feedback pot calibrations, reverse acting & split range warnings, calibration in progress, handwheel engagement, command signal failure, feedback pot failure, travel limit switch failure, open & closed torque limit reached, feedback pot wired in reverse, and calibration invalid.

The Servo Plus II can be used with either 110 or 220 VAC actuators without changing jumpers or switches. User adjustable parameters include tailored bidirectional motor speed control & range, deadband, fail position upon loss of command signal, and run through protection by instant reverse delay.

Autocalibration

The Servo Plus II electric actuator offers ***one touch*** calibration. Complicated potentiometer and switch settings are eliminated. A signal generator is not required since the microprocessor already understands a 4-20 mA command signal. With the touch of a button, the auto calibration routine moves the actuator to the open and closed positions until the travel limit switches are reached. The settings are then stored in non-volatile memory to survive power outages. If limit switches are adjusted later, the autocalibration can be simply repeated.

Configuration Tool (OPTIONAL)

An optional Servo Plus Access Cable connects the Servo Plus II module to a personal computer running the Configuration Tool software. The program visually presents in highlighted text actuator operational conditions and parameter settings, and allows the user to easily make configuration adjustments.

DRAFT

Typical installation of Series 70 DeviceNet Actuator

BusSmart Electric Actuators

The Flow-Tek *Bus*Smart DeviceNet Servo is microprocessor controlled and serial bus connected using firmware specifically designed to complement the capabilities of the Automator Series 70 Electric Actuator. The microprocessor continually responds to commands from the process controller or PLC, supplying information such as valve position, limit switch positions, and other parameters through a single network address, or MAC ID. The *Bus*Smart Servo is fully ODVA (Open DeviceNet Vendor Association) compliant and can be configured, monitored and controlled over a single DeviceNet cable.

Features

The *Bus*Smart Servo has the following features: **LED Indicators** – Power, Network/Module Status, Motor Running Open, Motor Running Closed and Calibration Status; **Network Adjustable Parameters** – Command Signal, Speed Control, Instant Reverse Delay, Service Notes, Reset, Restore Default Settings and Remote Autocalibration; **Network Viewable Parameters** – Actual Position, Motor Temperature, Motor Current and Serial Number.

Operation

The *Bus*Smart Servo is easy to install and configure, similar to connecting a printer to a personal computer. Network communication wiring is accomplished through a single DeviceNet standard five-pin connector cable, and power to drive the actuator motor is brought to a terminal strip inside the actuator. Installation costs are greatly reduced. Configuration of features is made with Electronic Data Sheets (EDS) files and commercially available software. Calibration is a simple automatic process accomplished without complicated potentiometer and switch settings, and may be made with or without connection to the network. All configuration settings are stored in non-volatile memory and will survive power outages.

Electronic Data Sheet (EDS)

Flow-Tek's EDS simplifies installation, commissioning and monitoring. Configuration of features is made with EDS files and commercially available software that uses the EDS to present a clear graphic user interface for remote viewing and control. Similar to a spreadsheet, the EDS describes the various supported features of the *Bus*Smart Servo.

DeviceNet

An economical internationally recognized fieldbus network, DeviceNet is used to connect devices such as sensors and actuators while providing access to the intelligence present in those devices. Polled messages exchange data many times per second. Each scanner card in a PLC allows up to 64 devices to communicate with each other over a single cable. PLCs may use multiple scanners to connect as many devices as required.

DeviceNet Advantages

The DeviceNet fieldbus network greatly increases plant operation flexibility, efficiency and maintenance, and reduces installation and engineering costs.

Flexibility A wide variety of devices, such as control valves, sensors, motor controllers, pump controls, scanners, etc., can be installed along the DeviceNet trunk line by means of tap connectors. Devices can be removed or replaced while the network is operational. Additional devices can be added by simply connecting them to the existing bus line.

Efficiency The two way communication capacity of the network allows devices to provide information back to the controller, as well as respond to commands. Precise actuator position control and modification of parameters, such as valve travel limits and actuator speeds, can be easily performed. The entire plant can be controlled and monitored from a remote location.

Maintenance Diagnostic information such as motor temperature and current can be easily accessed from both local and remote locations over the network. Therefore, maintenance schedules can be planned and modified based on live information.

Installation Traditionally, plant controllers require one to two wires per function, per device. These wires must be physically run and identified throughout the plant. The labor, material, engineering and record keeping for any control system is time consuming and expensive. The DeviceNet fieldbus network eliminates these costs, delivering tremendous overall savings and enhanced performance.

* Limited to ASME pressure rating for Class 150 valves.

3-Piece Valves

Triad Series Valves

Triad Series ball valves are designed for heavy duty, high pressure applications and feature a redundant body seal.

7000/8000 Series Valves

7000/8000 Series ball valves are available in a wide range of end connections and seat materials.

Flanged Valves

F15/F30/RF15/RF30 Series Valves

Flow-Tek Flanged ball valves are ideal for industrial applications. Larger F15/F30 valves feature ball suport.

For more detailed information please refer to valve brochures in the Product Manual.

Stem Assemblies

Flow-Tek features heavy duty, high quality stem designs with double "D" connections to ball and operator mounting. This connection simplifies mounting and indicates direction of flow. Stems are mated with the ball to ensure positive contact. All Flow-Tek stems are internal entry and blowout proof for maximum safety.

Smart Stem Valve Sizes 1/4" through 2-1/2"

Flow-Tek's control valves feature strong, large diameter stems with live-loaded, self-adjusting sealing utilizing belleville washers that automatically adjust to compensate for changes in temperature and wear. Manual adjustments that can cause damage to the seal are not required. The assembly is secured by a saddle-type lock washer that prevents stem nuts from unthreading in high cycle automation applications.

Stem Design: Valve Sizes 3" through 12"

The stem is guided by the valve body and the gland, ensuring smooth operation even in high torque service. The independent packing gland can be easily adjusted without removing mounting hardware or actuator. The user-friendly packing gland and gland sleeve are V-slotted to more equally distribute the load in the event one side is over tightened. All stems are polished to reduce torque. For severe applications, optional belleville washers can be added for a self-adjusting live load, providing a continuous compression seal.

Fire Safe Valves

Flow-Tek 3-Piece and Flanged valves are available as non-fire safe and Fire Safe to API 607 4th Edition standards. Flow-Tek's standard fire safe design features metal to metal ball to body contact during and after a fire, graphite stem packing, thrust bearings of stainless steel/PTFE, and graphite body seals. **Anti-Static Protection:** All Flow-Tek stems feature anti-static grounding devices as standard. These devices ensure electrical continuity between valve ball, stem and body, thus eliminating the possibility of static electric charges creating sparks within the valve.

Actuator Mounting

All V-Control Series ball valves feature Flow-Tek's Secure Mount actuator top plate mounting. The mounting is designed in accordance with ISO 5211 standards.

Pipe Connection Type	Threaded
Thread Type	NPT
Gender	Female
Maximum Pressure	250 psi
Outlet	
Pipe Size	1
Location	Side
Connection Type	Pipe
Pipe Connection Type	Threaded
Thread Type	NPT
Gender	Female
Pressure Range	25 to 90 psi
Pressure Adjustment Method	Dial
Gauge Port	
Number of Ports	2
Pipe Size	1/4
Location	Side
Connection	NPT Female
Accuracy	±4%
Pressure Range Adjustment	10 psi

DRAFT

Increment	
Temperature Range	33° to 140° F
Material	
Body	Bronze
Seal	EPDM
Diaphragm	Buna-N
End-to-End Length	6 1/16"
Flow Coefficient (Cv)	30
Features	Internal Strainer, Union Fittings
Specifications Met	CSA Certified
Valve Type	Pressure Regulator

Change outlet pressure without using a gauge—turn the dial to adjust the outlet pressure in 10 psi increments. All valves automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. They have two gauge ports and an internal strainer to trap debris. Union fittings on both ends of these valves disassemble for easy valve installation and removal. Body is bronze for durability and a long service life.

The information in this 3-D model is provided for reference only.

Item # 411

PVC Inline Pipe Mixer

with 6 Blades, 1 NPT Male

In stock
$128.26 Each
35385K24

Pipe Size	1
Thread Type	NPT
Pipe Connection Type	Threaded
Gender	Male
Connection Type	Pipe
Length	11"
Number of Blades	6
Reynolds Number	1,000 and Above
Blade Material	PVC Plastic
Body	
Material	PVC Plastic
Opacity	Clear
Fitting Material	PVC Plastic
For Use With	Chlorine, Water
Mount Type	Thread In

Use for pH control and chlorination. These mixers are more chemical resistant than nylon mixers. Also known as static mixers, they install in your pipeline and mix liquid as it passes over fixed spiral blades. They have no moving parts and require no external power source.

Number of Blades—Follow these steps to determine your Reynolds number, which indicates if you need a mixer with 6 or 12 blades.

1. Multiply flow rate (gpm) by 3,157

2. Multiply specific gravity by total of Step 1

3. Multiply viscosity (cp) by pipe ID (inches)

4. Divide total of Step 2 by total of Step 3

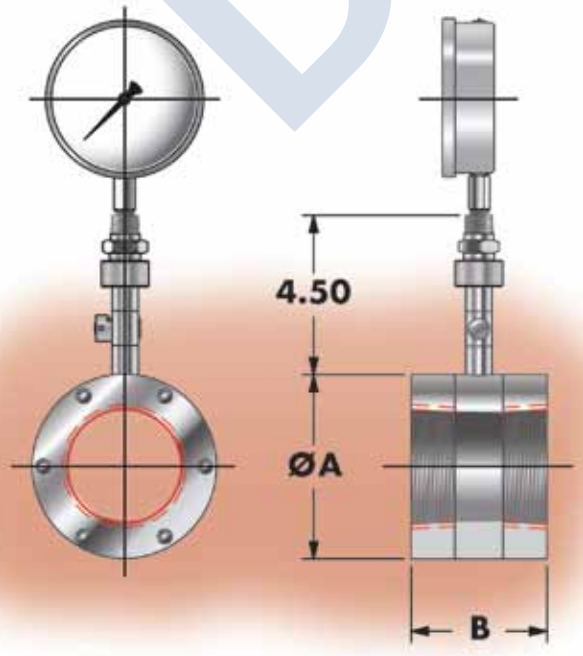
PSS

Item # 412

The Onyx Isolator Ring provides a simple, method to measure pressure of slurries and corrosive fluids. The PSS series is compatible with threaded pipe connections.

Onyx ultra-deep vacuum filling insures the highest accuracy in the industry. The patented "Module Seal" - standard on all Onyx Isolator Rings - allows instruments to be or replaced or calibrated with minimum down time.



Materials of Construction

Center Section:	Carbon Steel	316 Stainless Steel	
End Plates: 316 Stainless Steel	Acetal Titanium	Kynar Carpenter-20	UHMW-PE
Elastomer: (Available with optional Teflon coatings)	Nitrile (Buna-N) EPDM (Nordel) Neoprene Viton Hypalon	-30°F →220°F -40°F →300°F -20°F →220°F -15°F →375°F -10°F →250°F	
Fill Fluid:	Silicone Fluid Food Grade Silicone	-40°F →400°F -20°F →400°F	
Module Seal Stinger Fitting:	Brass	316 Stainless Steel	
Pipe Fittings:	Carbon Steel	316 Stainless Steel	
Pressure Range:	Vacuum to 200 psi	The Onyx Isolator ring has been tested by an independent lab to 250 psi.	

Benefits:

- Low-Cost
- Superior accuracy compared to diaphragm seals
- Instruments can be replaced without removing the isolator ring from the pipe
- Immune to errors caused by ambient temperature fluctuations
- Integral snubber eliminates gauge fluctuations at no additional cost
- Silicone oil fill fluid is safe, non-toxic, non-corrosive, and stable from -40°F to +400°F

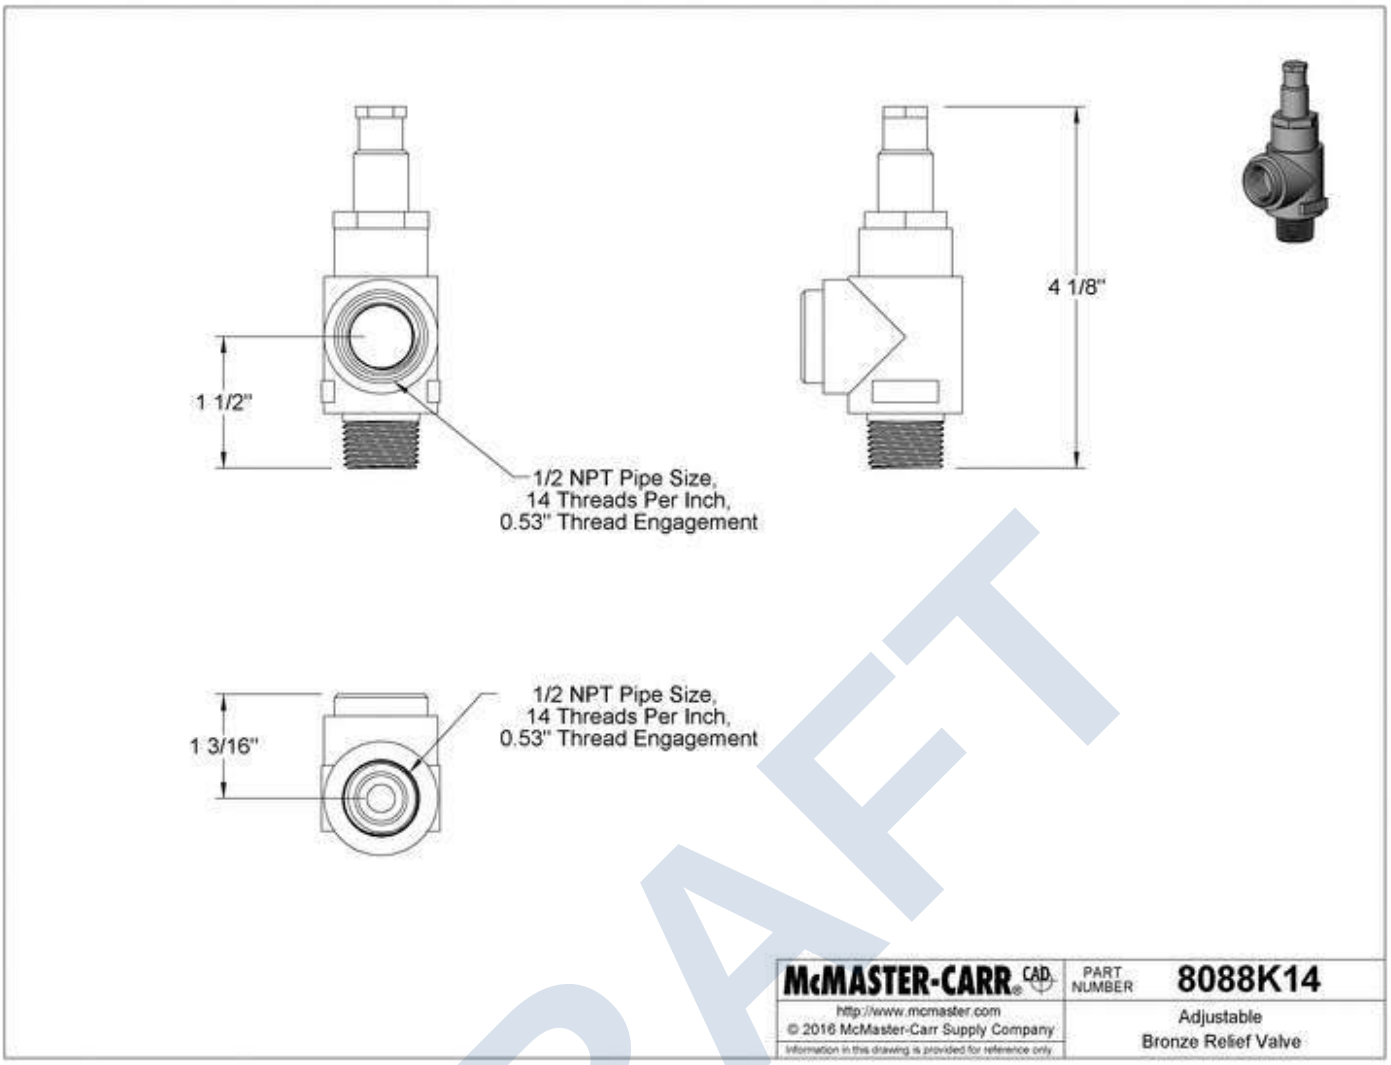
Precision-Adjustment Pressure-Relief Valve

for Water, 1/2 NPT, 25 to 175 PSI Set Pressure Range

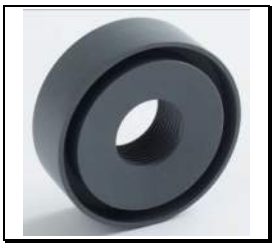
In stock
$36.68 Each
8088K14



Item # 413

Valve Function	Pressure Relief
For Use With	Water
Activation	Pressure Driven
Inlet	
Pipe Size	1/2
Connection Type	Pipe
Pipe Connection Type	Threaded
Connection	NPT Male
Location	Bottom
Relief Port	
Pipe Size	1/2
Connection Type	Pipe
Pipe Connection Type	Threaded
Connection	NPT Female
Location	Side
Set Pressure	
Range	25 to 175 psi
Accuracy	±3%
Configuration	Adjustable
Adjustment Increment	25 psi
Adjustment Method	External Adjustment Screw
Temperature Range	33° to 200° F
Shape	Elbow
Overall Height	4 1/8"
Material	
Body	Bronze
Seal	Silicone
Valve Type	Relief
Flow Coefficient (Cv)	Not Rated
ASME Code Section	Not Rated

Change set pressure without guesswork—the adjustment screw is marked in 25 psi increments for making pressure adjustments without a gauge. These valves are commonly used with thermal-expansion protection systems and low-capacity pumps. They begin opening at the set pressure and fully open at about 10% over the set pressure. Valves begin closing as pressure drops and fully close when the system pressure is restored below the set pressure. Body is bronze for durability and a long service life.

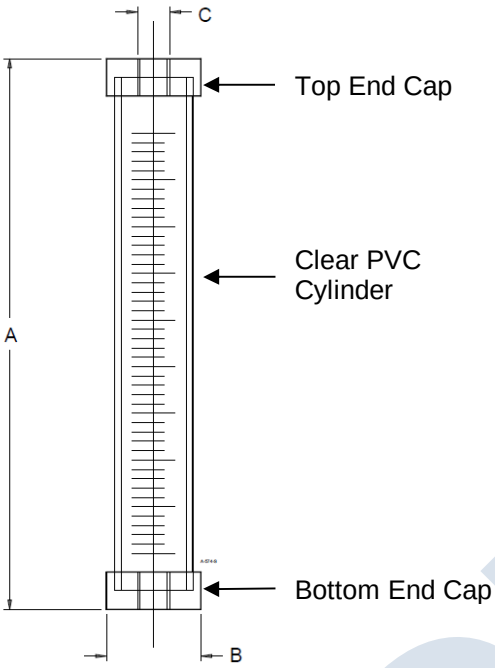


DRAFT

DRAFT

The information in this 3-D model is provided for reference only.

Description of models:



Sealed:
Top is glued to cylinder and contains a vent or overflow connection. (FNPT). Used in applications where there is a positive suction head and a permanent installation is desired.

Loose Cap: (Avail. up to 20,000 mL)
Top is loose and does not have a connection in the top. Dust cover only. Used in applications where there is no positive suction head and the cylinder must be filled from the top.

EZ-Clean: (Avail. 100 – 7000 mL only)
Top is sealed with an O-ring and has a vent connection, but removable for easy cleaning. Used in applications where frequent cleaning is required such as polymer, alum, ferric chloride or chlorine.

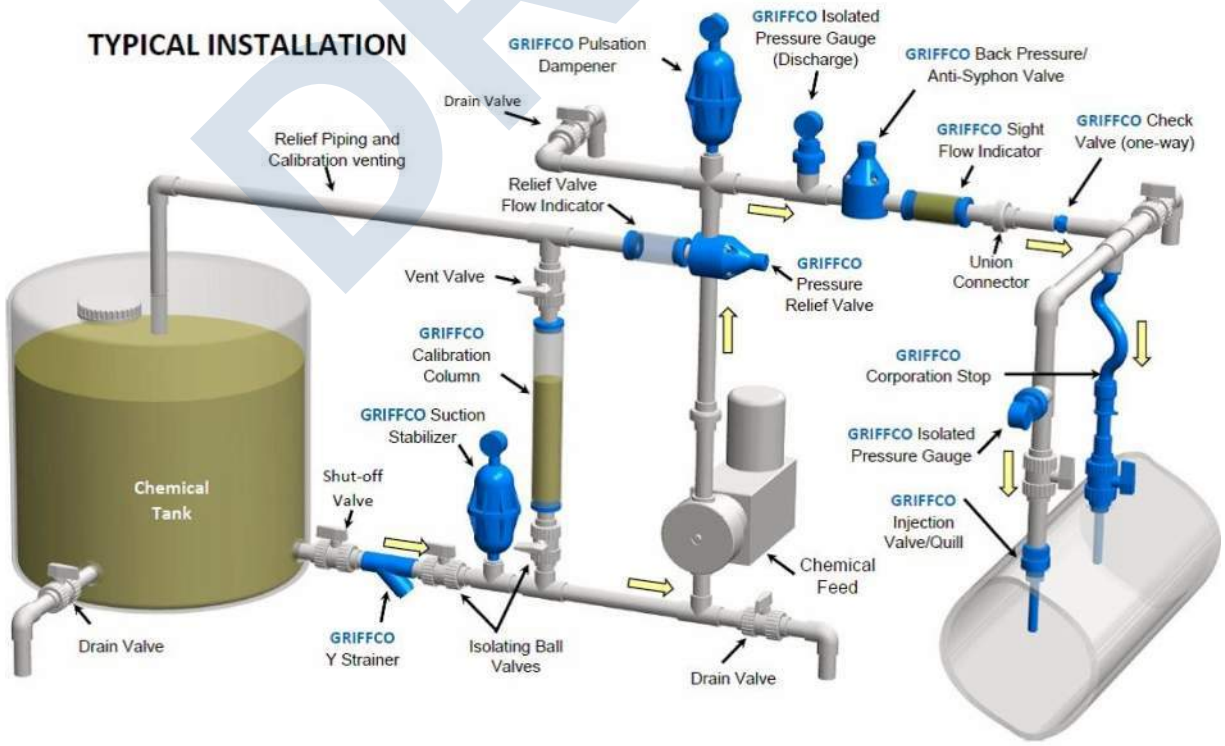
Item # 414

PVC CALIBRATION COLUMNS

Griffco calibration cylinders are designed to enhance the performance of chemical feed systems by providing a verification of the flow rate of the chemical feed pump. Robust construction of clear PVC with an easy to read graduation in mL and gph. Available in three models: EZ-Clean, Vented, and Open Top; and in 15 sizes: 100 mL through 40,000 mL as detailed here.

Features:

- **High Reliability / Low Cost**
- **High Contrast Graduation Markings**
- **Clear Easy-View Tube**
- **Robust Schedule 40 Pipe Construction**
- **Direct GPH Readout**
- **Sealed Top with Overflow Connection**
- **Optional EZ-Clean Model**
- **Optional Open Top with Dust Cap**



Operation:

Griffco calibration cylinders are installed in the suction line to the chemical metering pump. Two isolating valves, (not supplied) must be installed in the suction line as per the drawing below. The top of the cylinder should be vented back to the storage tank or to drain.

Fill the cylinder to the top mark then close the valve from the chemical tank. Switch on the chemical feed pump and draw down the chemical in the cylinder for 30 seconds. Switch the pump off. The reading on the right side of the cylinder is a direct readout of USgph. Alternatively, observe the volume withdrawn on the mL scale. To convert to LPH or GPH use this formula:

LPH = 3.6 x [mL] ÷ Time (sec)
GPH = 0.951 x [mL] ÷ Time (sec)

Note: Max. cylinder pressure is 15 psi.

Your Enclosure Source®

STAINLESS STEEL ENVIROLINE® SERIES WALL-MOUNT ENCLOSURES WITH 3-POINT HARDWARE

Application

Designed to house electrical and electronic controls, instrumentation and components in indoor or outdoor locations. For outdoor applications a drip shield is recommended. For installation information, consult our Installation Manual at www.saginawcontrol.com.

Construction

- 0.075" stainless steel Type 304 & 316/316L.
- Seams continuously welded and ground smooth.
- Flange trough collar around all sides of door opening.
- Collar studs provided for mounting optional sub-panels.
- Mounting holes in back of the enclosure for wall mounting.
- Mounting hardware, sealing washers and hole plugs included.
- Stainless steel concealed hinges.
- Removable and interchangeable doors.
- Black zinc die cast keylocking/padlocking handles.
- 3-point latching mechanism.
- Black quarter turn latches as required.
- Removable print pocket.
- Pour in place oil and water resistant gasket
- Ground stud on door and body.

Finish

#4 brushed finish on all exterior surfaces. Optional sub-panels powder coated white.

IS6 Industry Standards

NEMA Type 3R, 4, 4X, 12 & Type 13
UL Listed Type 3R, 4, 4X & 12
CSA Type 3R, 4, 4X & 12
IEC 60529 IP66

***To maintain Type 3R listing, Drainage is required. Install equally rated drainage device or drill a 1/8 to 1/4 inch hole in the bottom center of the enclosure, approximately 1 inch from the right, and 1 inch from the left for drainage, use listed rain-tight or wet location hubs. Drip shield over the door is recommended for all outdoor applications.

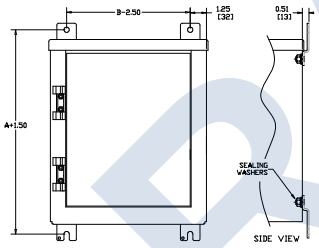
S.S. MOUNTING FOOT KIT



Made for use with all SCE Enviroline® Series enclosures and two-door wall-mount enclosures. Made of heavy gauge stainless steel type 316/316L with stainless steel stud. Available in kits of four.

TYPE 3R MOUNTING FOOT KIT

Designed for use on large wall-mount type 3R enclosures. Four mounting feet per kit, made of heavy gauge carbon steel and powder coated ANSI-61 gray. Hardware is included to fasten mounting foot kit to the enclosure. .

Provided with UL Recognized sealing washer to maintain Environmental Rating of the enclosure.

DRAFT

REMOTE DOOR SWITCHES

- The remote door switch can activate a light or other electrical component when the enclosure door is opened
- Mounts on enclosure frame and includes mounting hardware
- Mounting plate is 14 gauge steel with a plated finish
- Can be hard-wired to the PANELITE LED or Fluorescent light or connected via the PANELITE Door Switch Cable

BULLETIN: A80LT, P20

Catalog Number	Description
ALFSWD	Door switch assembly (order connection cable separately)
PLFSWD	Door switch assembly for PROLINE and PROLINE G2 (order connection cable separately)

TOUCH-SAFE UL LIGHT SWITCH

APPLICATION

The Touch-Safe light switch is designed to be used with Hoffman light kits (AC and DC). It provides a UL listed touch-safe switch that can be used on many enclosure types and includes hardware for most applications. The light switch maintains enclosure overall rating up to UL 508A Type 4X or 12.

FEATURES

- UL listed for a touch-safe wire connection
- Easily mounted to various enclosure types; common bracket and hardware included for many enclosure types (NEMA, CONCEPT/FUSION G7, PROLINE, Free-Stand Type 12)
- Cable PG compression hub
- Wide operating temperature range: -49°F to +158°F (-45°C to 70°C)
- Rugged die-cast anodized zinc construction
- Connection 3 cage clamps for solid and stranded wire AWG 20-14 (0.5-2.5mm²)
- Protection class I (grounded)

BULLETIN: A80LT

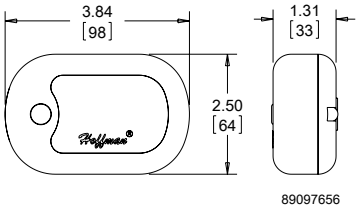
Catalog Number	Max. Cable Dia.	Max. Voltage
LDSWITCH	.375 in.	250 AC / 48 DC

MOUNTING BRACKET KIT FOR LIGHT PACKAGE

Kit simplifies mounting light package in Hoffman PROLINE disconnect enclosures. Includes brackets, all mounting hardware and complete instructions.

BULLETIN: A80LT

Catalog Number	Description
PDLFBRKT	Mounting Bracket Kit



LED PUCK LIGHT

The LED Puck Light is ideal for remote and darkened applications. This versatile light provides mounting flexibility; it can be magnetically attached to flat steel surfaces or can be hung with a swivel hook. This small form factor, light-weight LED light provides superior lighting performance with minimal power consumption. It can be used as a three-LED flashlight or as a 24-LED work light with operating temperature of 40 F to 120 F (4 C to 48 C). An on/off switch is incorporated in the light and three AAA batteries are included.

Description

Strip (Common: 2-ft; Actual: 2-ft)

- Energy saving LED uses 41% less electricity than a comparable 1-light T8 fluorescent light fixture
- LED lasts longer - rated to last 35,000 hours
- Produces 900 lumens of brightness using only 10 watts
- 10 watt integrated LED therefore no light bulbs will need to be replaced
- Easy to link up to thirty 24-inch, 1-light LED strip lights
- Gives off bright white light that is perfect for detailed tasks (4,000k CCT)
- UL rated for damp locations
- 3 year limited warranty
- White metal housing

Specifications

Type	Strip
Number of Bulbs Required (Count)	0
Bulb Length (Inches)	24
Ballast Grade	Residential/Commercial
ENERGY STAR Qualified	Yes
Maximum Fixture Wattage	10
Actual Fixture Length (Inches)	24
Actual Fixture Width (Inches)	1.61

Lens Type	Frosted acrylic

Color/Finish Family	White
Motion Activated	No
Hardwired or Plug-In	Hardwired
Title 24 Compliant	No
UL Safety Listing	Yes
CSA Safety Listing	No
ETL Safety Listing	No
Bulbs Included	Yes
Light Bulb Base Type	LED
Recommended Light Bulb Shape	LED

Collection Name	N/A
Bulb Type	LED

SAFETY INFORMATION

NOTICE

- This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on. The user is encouraged to try to correct the interference by one or more of the following measures:
  - Reorient or relocate the receiving antenna.
  - Increase the separation between the equipment and the receiver.
  - Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
  - Consult the dealer or an experienced radio/TV technician for help.

- This Class B digital apparatus complies with Canadian ICES-003.

Please be informed that the data shown in this PDF document is generated from our online catalog. Please find the complete data in the user documentation. Our general terms of use for downloads are valid.

Feed-through terminal block, nom. voltage: 1000 V, nominal current: 32 A, number of connections: 2, connection method: Screw connection, Rated cross section: 4 mm^2, cross section: 0.14 mm^2 - 6 mm^2, mounting type: NS 35/7,5, NS 35/15, color: gray

Your advantages

- The large wiring space enables the connection of solid and stranded conductors without ferrules, even above the nominal cross section
- As well as saving space, the compact design enables user-friendly wiring in a small amount of space
- Optimum screwdriver guidance through closed screw shafts
- The cable entry funnel enables the use of conductors with ferrules and plastic collars within the nominal cross section
- Tested for railway applications

Technical data

Product properties

Product type	Ground terminal block
Area of application	Railway industry
	Machine building
	Plant engineering
	Process industry
Number of connections	2
Number of rows	1

Insulation characteristics

Overvoltage category	III
Degree of pollution	3

Electrical properties

Rated surge voltage	8 kV
Maximum power dissipation for nominal condition	1.02 W

Connection data

Grounding foot	Yes
Number of connections per level	2
Nominal cross section	4 mm²

Level 1 above 1 below 1

Screw thread	M3
Note	Please observe the current carrying capacity of the DIN rails.
Tightening torque	0.6 ... 0.8 Nm
Stripping length	9 mm
Internal cylindrical gage	A4
Connection in acc. with standard	IEC 60947-7-2
Conductor cross section rigid	0.14 mm² ... 6 mm²
Cross section AWG	26 ... 10 (converted acc. to IEC)
Conductor cross section flexible	0.14 mm² ... 6 mm²
Conductor cross section, flexible [AWG]	26 ... 10 (converted acc. to IEC)
Conductor cross-section flexible (ferrule without plastic sleeve)	0.25 mm² ... 4 mm²
Flexible conductor cross section (ferrule with plastic sleeve)	0.25 mm² ... 4 mm²
Note	Note: Product releases, connection cross sections and notes on connecting aluminum cables can be found in the download area.

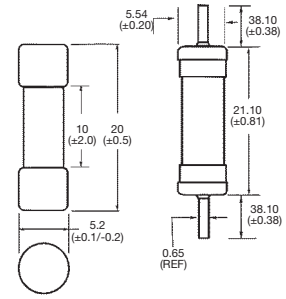
COOPER Bussmann

5 x 20mm, Fast-Acting, Glass Tube Fuses

S500 Series

Description

- Fast-acting, low breaking capacity
- Optional axial leads available
- 5 x 20mm physical size
- Glass tube with silver-plated (32-125mA) and nickel-plated (160mA-10A) endcaps
- Designed to IEC 60127-2 (160mA-10A)



Electrical Characteristics							
In	1.5 In min	2.1 In max	2.75 In min	2.75 In max	4 In min	4 In max	10 In max
32mA-125mA	60min	30min	–	–	–	–	–
160mA-6.3A	60min	30min	50ms	2sec	10ms	300ms	20ms
8A-10A	30min	30min	50ms	2sec	10ms	400ms	40ms

Agency Information

- cURus: File E19180, Guide JDYX2, JDYX8
- SEMKO Approval: File 913796
- VDE Approval: File 40014109
- BSI Approval: File KM55676
- IMQ Approval: File CA03.00097
- CCC Approval: File 2005010207155694
- PSE Approval File: JET1641-31003-1013, JET1641-31003-1014, JET1641-31003-1015, JET1641-31003-1016

Dimensions - mm

Drawing Not to Scale

- Ratings above 6.3A have a 0.8mm diameter lead
- With TR2 packaging code, lead wire length is 19.05mm

Ordering

Specify product code

- Insert packaging code prefix before part number. E.g., BK/S500-32-R

Specify option code if desired

- For axial leads, insert “V” between catalog series and amp rating. E.g., S500-V-100-R

Primary-switched TRIO POWER power supply for DIN rail mounting, input: 1-phase, output: 24 V DC/5 A

Product description

TRIO POWER power supplies with standard functionality
TRIO POWER is particularly suited to standard machine production, thanks to 1- and 3-phase versions up to 960 W. The wide-range input and the international approval package enable worldwide use.
The robust metal housing, the high electric strength, and the wide temperature range ensure a high level of power supply reliability.

Your advantages

- Use the third negative terminal block as a grounding terminal block and minimize installation costs
- Rugged design with metal housing and wide temperature range from -25 to +70°C
- Maximum operational reliability thanks to high MTBF (mean time between failures) of more than 500,000 hours and high dielectric strength of up to 300 V AC
- Compensation of voltage drops by means of output voltage that can be adjusted on the front

Technical data

Input data

AC operation

Nominal input voltage range	100 V AC ... 240 V AC
Input voltage range	85 V AC ... 264 V AC (Derating < 90 V AC: 2,5 %/V)
Derating	< 90 V AC (2.5 %/V)
Input voltage range AC	85 V AC ... 264 V AC (Derating < 90 V AC: 2,5 %/V)
Electric strength, max.	300 V AC
Voltage type of supply voltage	AC
Inrush current	< 15 A
Inrush current integral (I^2t)	1.1 A^2s
AC frequency range	45 Hz ... 65 Hz
Mains buffering time	> 20 ms (120 V AC)
	> 110 ms (230 V AC)
Current consumption	1.65 A (120 V AC)
	0.9 A (230 V AC)
Nominal power consumption	189 VA
Protective circuit	Transient surge protection; Varistor
Power factor (cos phi)	0.72
Typical response time	< 1 s
Input fuse	3.15 A (slow-blow, internal)
Permissible backup fuse	B6 B10 B16
Recommended breaker for input protection	6 A ... 16 A (Characteristics B, C, D, K)
Discharge current to PE	< 3.5 mA

Output data

Efficiency	89 % (for 230 V AC and nominal values)
Output characteristic	U/I
Nominal output voltage	24 V DC ±1 %
Setting range of the output voltage (U_{Set})	22.5 V DC ... 29.5 V DC (> 24 V DC, constant capacity restricted)
Nominal output current (I_N)	5 A (U_{OUT} = 24 V DC)
Derating	55 °C ... 70 °C (2.5 %/K)
Feedback voltage resistance	35 V DC
Protection against overvoltage at the output (OVP)	< 35 V DC
Max. capacitive load	unlimited
Active current limitation	approx. 10 A (for short-circuit)
Control deviation	< 1 % (change in load, static 10 % ... 90 %)
	< 2 % (change in load, dynamic 10 % ... 90 %)
	< 0.1 % (change in input voltage ±10 %)
Residual ripple	< 20 mV_{PP}
Output power	120 W
Peak switching voltages nominal load	< 30 mV_{PP}

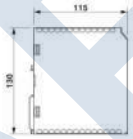
Insulation voltage input / PE	2 kV AC (type test)
	2 kV AC (routine test)



Product properties

Product type	Power supply
Product family	TRIO POWER
MTBF (IEC 61709, SN 29500)	> 2031000 h

Insulation characteristics

Protection class	I (with PE connection)
Overvoltage category	III
Degree of pollution	2

Dimensions

Dimensional drawing	
Width	40 mm
Height	130 mm
Depth	115 mm

Installation dimensions

Installation distance right/left	0 mm / 0 mm
Installation distance top/bottom	50 mm / 50 mm

Mounting

Mounting type	DIN rail mounting
Assembly instructions	alignable: horizontally 0 mm, vertically 50 mm
Mounting position	horizontal DIN rail NS 35, EN 60715
With protective coating	No

Material specifications

Housing material	Metal
Type of housing	Steel sheet, zinc-plated
Side element version	Aluminum

Environmental and real-life conditions

Ambient conditions

Degree of protection	IP20
Ambient temperature (operation)	-25 °C ... 70 °C (> 55° C derating : 2.5%/K)
Ambient temperature (storage/transport)	-40 °C ... 85 °C
Climatic class	3K3 (in acc. with EN 60721)
Max. permissible relative humidity (operation)	≤ 95 % (at 25 °C, non-condensing)

Control Circuit & Load Protection

LOGIC

Miniature Circuit Breakers 1489

- UL/CSA Listed for branch circuit protection
- Current limiting
- Reversible line and load connections
- Attachments available for Lockout/Tagout
- Trip curves: C and D

1489-M thermal-magnetic circuit breakers are approved for branch circuit protection in the United States and Canada, and are certified as Miniature circuit breakers for IEC applications.

These branch protectors are compatible with many accessories to meet diverse application needs, including UL 508 Listed bus bars for convenience in panel assembly, auxiliary contacts, signal contacts and shunt trips for versatility, and lockout attachments for safety during maintenance.

Type 2/3 surge protection, consisting of protective plug and base element, with integrated status indicator and remote signaling for single-phase power supply networks. Nominal voltage: 120 V AC/DC

Your advantages

- Surge protection family for universal use with optimum energy coordination from the lightning current arrester to the device protection
- Easy to maintain due to consistently pluggable protection modules
- Excellent level of information provided by mechanical/visual status indicator and remote indication contact
- Your preferred connection technology can be selected as both screw connection and Push-in connection are available
- Optimal additional protection of the industrial power supply for a longer service life and increased availability of the system
- 5-year warranty on your QUINT 4 power supply when installed together with PLT-SEC, see document in the download area

StructuredGround™ Universal Ground Bar System

PANDUIT®

SPECIFICATION SHEET

specifications

Provide a field wiring terminal for the connection of an equipment grounding conductor in each control panel and enclosure. The terminal shall be UL 467 Listed or CSA 22.2 certified. The equipment grounding conductor shall have electrical continuity with the enclosure or sub-panel. The field wiring terminal may also provide multiple locations or ports for terminating equipment ground conductors from devices inside the panel or enclosure, functioning as the ground bar within the panel or enclosure. The ground bar shall provide a means to attach and to identify the main equipment grounding conductor.

PATENT PENDING

technical information

Performance level:	UL 467 Listed and CSA 22.2 Certified for grounding and bonding an equipment grounding conductor up to 2/0 AWG; meets UL 508A requirements
Main:	Provides a location for the main equipment grounding conductor using a compression or mechanical connector
Wire ports:	Accept bare stripped copper wire from #14 to #4 AWG Accept wire ferrules from #14 AWG to #6 AWG Top of ground bar accepts ring terminals, compression connectors or mechanical connectors with a ¼" stud hole size and maximum width of 0.55"
Materials:	Ground bars and bonding stand-offs precision machined from 110 electrolytic copper with a 99.9% copper content and then tin-plated for additional corrosion resistance
Packaging:	Each part is provided with all fasteners required for terminating wires and for each mounting option

key features and benefits

Flexible design	Works with all types of wire termination methods including stripped wire, ferrules, terminals, and compression or mechanical connectors; compatible with over 140 Panduit connectors
Multiple mounting options	In addition to surface mounting, two mounting stand-off options are available, one that bonds to the mounting surface and one that isolates from the mounting surface; both options provide additional finger wiring space in tight places
Unique geometry	The unique shape of the universal ground bar allows more surface contact between the wire connectors and the ground bar

applications

The StructuredGround™ Universal Ground Bar System (UGB) offers multiple termination methods and mounting options making it ideal for any control panel or enclosure application. The UGB enables the end user to choose the method in which to terminate conductors with connectors of their choice or simply cut and strip the wires. The UGB system will help reduce the types of ground bars that a panel shop or distributor needs to keep in stock to meet the various applications and customer requirements.

Universal Ground Bar System

6-port ground bar:	UGB2/0-414-6
12-port ground bar:	UGB2/0-414-12
18-port ground bar:	UGB2/0-414-18
Isolation standoffs:	UGB-IN-SO
Bonding standoffs:	UGB-B-SO

Recommended Connectors for Main Equipment Ground Conductor, Maximum 2/0 AWG

Copper Mechanical with Anti-Rotation

#14 – 2/0 AWG:	CLMAR2/0-14-Q

Two-Hole Copper Compression, 1/4" Stud Hole with 5/8" Spacing; #14 to 2/0 AWG

#14 – 10 AWG:	LCA10-14A-L
#8 AWG:	LCD8-14A-L
#6 AWG:	LCD6-14A-L
#4 AWG:	LCD4-14A-L
#2 AWG:	LCD2-14A-Q
#1 AWG:	LCD1-14A-E
1/0 AWG:	LCD1/0-14A-X
2/0 AWG:	LCD2/0-14A-X

One-Hole Copper Compression, 1/4" Stud Hole; #14 to 2/0 AWG

#14 – 10 AWG:	LCA10-14-L
#8 AWG:	LCAS8-14-L
#6 AWG:	LCAS6-14-L
#4 AWG:	LCAS4-14-L
#2 AWG:	LCAS2-14-Q
#1 AWG:	LCAS1-14-E
1/0 AWG:	LCAS1/0-14-X
2/0 AWG:	LCAS2/0-14-X

One and two-hole copper compression connectors available for both code and flex conductors, with narrow tongue and bent tongue configurations.

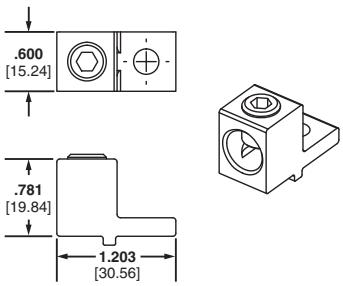
Recommended Connectors for Port Connections

Ring Terminals, ¼" Stud Hole, Maximum Width of 0.55"; #22 to #4 AWG

Ring terminals available with vinyl, nylon, KYNAR*, high-temp, or heavy duty insulation or non-insulated.

Compression Connectors, Maximum Width of 0.55"; up to #4 AWG Typical

Ferrules, Minimum Pin Depth of 12mm; #14 to #6 AWG



*KYNAR is a registered trademark of Atofina Chemicals, Inc.

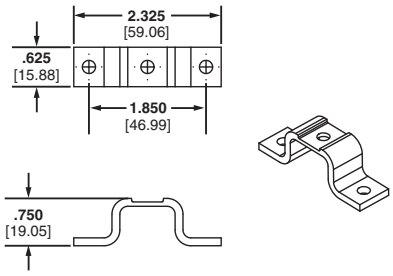
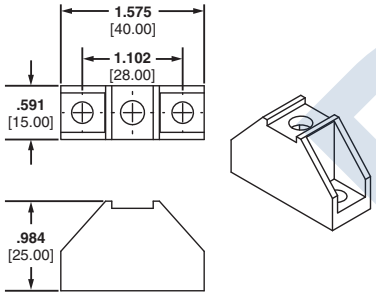
ITEM 260A

StructuredGround™ Universal Ground Bar System

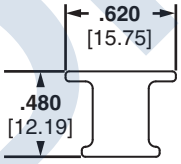


CLMAR2/0-14-Q: Tin-plated copper connector with anti-rotational feature.

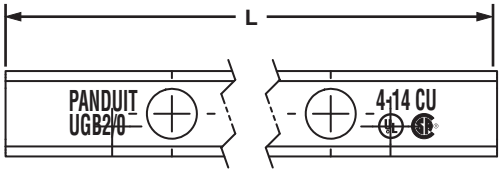
UGB2/0-414-18: 18-port UGB mounted directly to surface with the equipment grounding conductor terminated in an anti-rotational, copper mechanical connector.



UGB-B-SO: Bonding stand-off.



UGB2/0-414-12: 12-port UGB mounted on bonding stand-offs with the equipment grounding conductor terminated in a two-hole compression lug.



UGB-IN-SO: Isolation stand-off.

UGB2/0-414-6: 6-port UGB mounted on isolation stand-offs with the equipment grounding conductor terminated in an anti-rotational, copper mechanical connector.

Part Number	"L" Dim.
UGB2/0-414-6	4.92" (125mm)
UGB2/0-414-12	8.28" (210mm)
UGB2/0-414-18	11.64" (295mm)

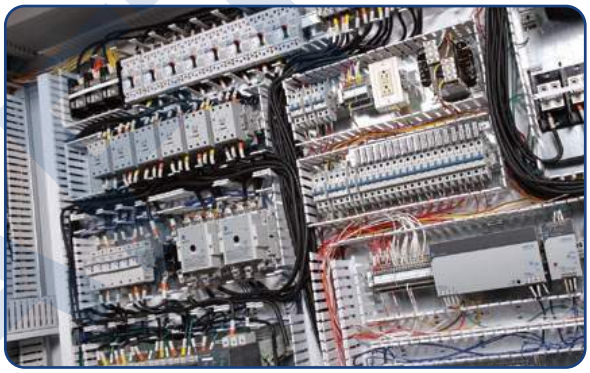
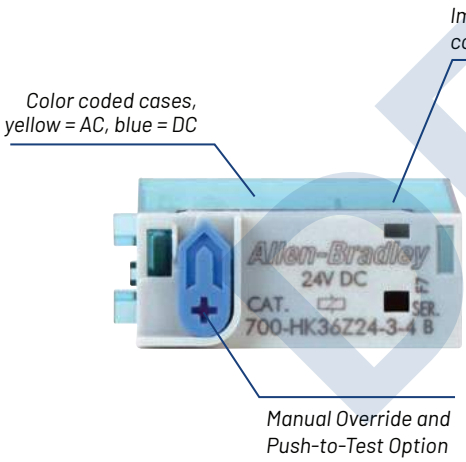
Relays & Timers



LOGIC



Slim Line Relays 700-HK

- 8 A (2-pole) or 16 A (1-pole) contact ratings
- DPDT or SPDT
- Blade-style
- ON/OFF flag indicator
- LED, push-to-test and manual override options
- Standard or gold-plated AgNi contacts
- Maximum duty version available
- Screw or push-in socket terminals

The 700-HK relays are designed for a variety of high-density isolation and interposing applications. Installation is easy and cost effective through the use of the 8-way jumper wiring system that requires only one wire connection to a coil, common or contact power distribution terminal. Optional gold contacts switch low-energy loads reliably as low as 5V, 10 mA, 50 mW.

Ideal Applications

- Provides longer life for PLC, saving money and increasing efficiency
- Switching currents or voltages too high for PLC outputs to handle
- Interfacing two or more system voltages – for example, 24V to 120V
- Multiplies PLC outputs by using relays to turn two devices on and off simultaneously
- Provides isolation from solid-state output leakage current

DRAFT

Product Selection

Slim Line Relay

Description	Contact Rating	Coil Voltage	Pkg. Qty.	Cat. No. [1, 2, 3]
SPDT 1-pole 1 form C AgNi contacts	16 A	24V AC	1	700-HK36A24
		120V AC		700-HK36A1
		240V AC		700-HK36A2
		12V DC		700-HK36Z12
		24V DC		700-HK36Z24
		110V DC		700-HK36Z1
DPDT 2-pole 2 form C AgNi contacts	8 A	24V AC	1	700-HK32A24
		120V AC		700-HK32A1
		240V AC		700-HK32A2
		12V DC		700-HK32Z12
		24V DC		700-HK32Z24
		110V DC		700-HK32Z1

1 LED option: Add suffix **-4** to the selected 700-HK relay catalog number; for the 240V AC units, add -**4L**.

2 Push-to-test and LED option: Add suffix **-3-4** to the selected 700-HK relay catalog number; for 240V AC units, add suffix **-3-4L**.

3 For AgNi contact with gold plating: Replace **3** with **X** in catalog number For example, catalog number 700-HK**3**6A1 becomes catalog number 700-HK**X**6A1.

FL SWITCH SFN 5TX - Industrial Ethernet Switch

2891152

https://www.phoenixcontact.com/us/products/2891152

Please be informed that the data shown in this PDF document is generated from our online catalog. Please find the complete data in the user documentation. Our general terms of use for downloads are valid.

Ethernet switch, 5 TP RJ45 ports, automatic detection of data transmission speed of 10 or 100 Mbps (RJ45), autocrossing function

Your advantages

- RJ45 ports support a transmission speed of 10/100 Mbps
- Fiber-optic ports support 100 Mbps
- QoS-prioritized (Quality of Service) messages
- Local diagnostic indicators with LEDs
- The switch also offers cable locking and port blocking

DRAFT

FL SWITCH SFN 5TX - Industrial Ethernet Switch

2891152

Technical data

Dimensions

Width	30 mm
Height	120 mm
Depth	70 mm

Material specifications

Housing material	Aluminum

Mounting

Mounting type	DIN rail mounting

Interfaces

Ethernet (RJ45)

Connection method	RJ45
Note on the connection method	Auto negotiation and autocrossing
Transmission speed	10/100 Mbps
Transmission physics	Ethernet in RJ45 twisted pair
No. of channels	5 (RJ45 ports)

Product properties

Product type	Switch
Product family	Unmanaged Switch SFN
Type	Block design
MTTF	192.9 Years (MIL-HDBK-217F standard, temperature 25°C, operating cycle 100%)

Insulation characteristics

Protection class	III (IEC 61140, EN 61140, VDE 0140-1)

Switch functions

Basic functions	Unmanaged switch / auto negotiation, complies with IEEE 802.3, store and forward switching mode
Status and diagnostic indicators	LEDs: U_S, link and activity per port
Additional functions	Autonegotiation

Security functions

Basic functions	Unmanaged switch / auto negotiation, complies with IEEE 802.3, store and forward switching mode

Electrical properties

Local diagnostics	US Supply voltage Green LED
	LNK/ACT Link status/data transmission Green LED
	100 Data transmission speed Yellow LED
Maximum power dissipation for nominal condition	2.16 W

DRAFT

FL SWITCH SFN 5TX - Industrial Ethernet Switch

2891152

https://www.phoenixcontact.com/us/products/2891152

Test section	500 V DC 1 min.
Transmission medium	Copper

Supply

Supply voltage (DC)	24 V DC
Supply voltage range	9 V DC ... 32 V DC
Power supply connection	Via COMBICON, max. conductor cross section 2.5 mm²
Residual ripple	3.6 V_{PP} (within the permitted voltage range)
Max. current consumption	205 mA (at 9 V DC)
Typical current consumption	90 mA (at U_S = 24 V DC)

Connection data

Connection technology

Connection name	Power supply
pluggable	yes

Power supply

Connection method	Screw connection
Conductor cross section, rigid	0.2 mm² ... 2.5 mm²
Conductor cross section, flexible	0.2 mm² ... 2.5 mm²
Conductor cross section AWG	24 ... 12
Stripping length	7 mm

Environmental and real-life conditions

Ambient conditions

Degree of protection	IP20
Ambient temperature (operation)	0 °C ... 60 °C
Ambient temperature (storage/transport)	-20 °C ... 70 °C
Permissible humidity (operation)	5 % ... 95 % (non-condensing)
Permissible humidity (storage/transport)	5 % ... 95 % (non-condensing)
Vibration (operation)	in acc. with IEC 60068-2-6: 5g, 150 Hz
Air pressure (operation)	86 kPa ... 5 kPa (up to 1500 m above sea level)
Air pressure (storage/transport)	66 kPa ... 108 kPa (up to 3500 m above sea level)
Resistance to gases that may endanger the functions, in acc. with DIN 40046-36, DIN 40046-37	Sulfur dioxide (SO_2) 10 ±0.3 cm^3/m^3, hydrogen sulfide (H_2S) 1 ±0.3 cm^3/m^3, at 25°C and 75% humidity and exposure of four days

Standards and regulations

Free from substances that could impair the application of coating	In acc. with VW specification

Approvals

Conformity/Approvals

Conformance	CE-compliant
UL, USA / Canada	Class I, Div. 2, Groups A, B, C, D, T4

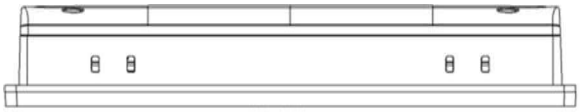
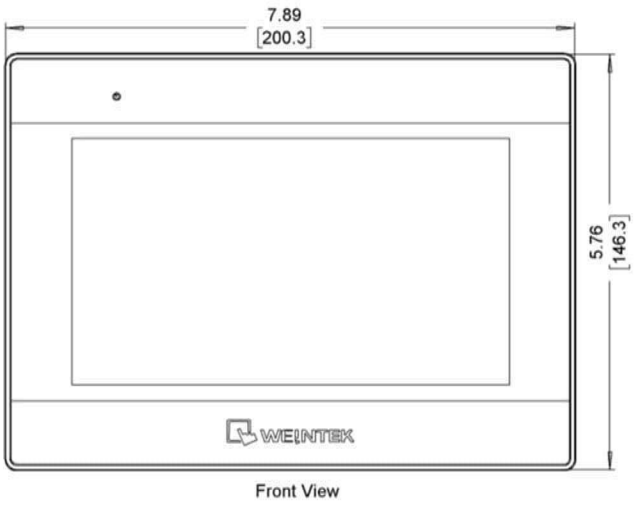
cMT2078X | Advanced HMI Series



7.0” Touchscreen HMI with IIoT Features

- High Speed Screen Update
- Dual Ethernet Ports
- Built-in Edge Gateway Function
- Enhanced Graphics & Security
- Email Alarm Notification and Recipe Functionality
- PDF Reader



System	**CPU**	Quad-Core 64-bit RISC, 1.5 GHz
	Memory (RAM)	1 GB
	Memory (Flash)	4 GB
	RTC	Built-in
I/O Ports	**Serial**	1 x DE9P COM1: RS-232, COM3: RS-232*
		1 x DE9S COM2: RS-485 2 or 4 wire, COM3: RS-485 2 wires
	LAN	2 x 10/100 Base-T RJ-45
	CANbus	N/A
	USB Host	1 x USB 2.0
	USB Client	N/A
	Audio	N/A
	Video	N/A
	Wi-Fi	N/A
	HDMI®	N/A
	SD Card Slot	N/A
Display	**Display Type**	7” TFT LCD
	Size (W x H)	6.02 x 3.39 inches [153 x 86 mm]
	Max. Resolution	800 x 480
	Max. Colors	16.7 M
	Luminance (cd/m²)	400
	View Angle (H°/V°)	160/140
	Contrast Ratio	800:1
	Backlight Lifetime (Hours)	30,000+
Touch Screen	**Type**	4-wire resistive touch
	Active Area Accuracy	Length (X) ±2%, width (Y) ±2%
Electrical	**Input Voltage**	24 ±20% VDC
	Input Current	820mA @ 24 VDC
	Input Power	19.7 W
	Power Isolation	Built-in
	Isolation Resistance	Exceed 50 MΩ at 500 VDC
Mechanical	**Enclosure**	Plastic, Black
	PCB Coating	Yes
	Dimensions (W x H x D)	7.89 x 5.76 x 1.38 inches [200.3 x 146.3 x 35 mm]
	Panel Cutout (W x H)	7.56 x 5.43 inches [192.0 x 138.0 mm]
	Net Weight	Approx. 1.32 lbs. [0.6 kg]
	Mounting	Panel mounting
Environmental	**Operating Temperature**	32° ~ 131°F [0° ~ 55°C]
	Storage Temperature	-4° ~ 140°F [-20° ~ 60°C]
	Relative Humidity	10% ~ 90% (non-condensing)
	Vibration Endurance	10 to 25 Hz (X, Y, Z direction, 2G, 30 minutes)
	Rating	UL Type 4X (indoor use only), NEMA 4, IP66 compliant front panel
	Certifications	cULus, CE, RoHS
Software	EBPro (v6.05.02 or later), EasyAccess 2.0 (optional), CODESYS (optional), IIoT Ready, MQTT, Sparkplug B, VNC, CMTViewer, Webview	
Notes	*Only Tx and Rx may be used for COM1 RS-232 while COM3 RS-232 is in use. MPI is not supported. Specifications subject to change without notice

Why Buy A Maple HMI

In addition to our powerful and affordable hardware, we'll also continue to support your company long after a sale. Wide product selection, large in-stock inventory, outstanding product warranty, free technical support and software, and in-house repairs with quick turnaround times, Maple Systems has your business covered.

Add Remote IO for PLC Functionality

Select Maple Advanced and High-Performance HMIs have a sleek hardware platform that runs both an HMI application created with our free HMI software and PLC logic programmed with CODESYS; each on its own dedicated processor. Unlike the typical multicore set up, where the operating system scheduler is responsible for allocating tasks to each processor, these HMIs have a hard separation between cores. One core is dedicated to the HMI application, the other to executing PLC logic of the CODESYS project. This ensures taxing graphics processing operations will not interfere with deterministic real time control tasks executing on the other processor.

After selecting your HMI, choose from a suite of easy to use powerful I/O modules to connect to your field equipment. We offer a complete set of I/O modules which can be combined with one of our communication couplers to create a remote I/O block.

Remote Access and the IIoT

Remote access is the ability to access an HMI or connected device, from another device, at any time, and from anywhere. With our free HMI software and supported hardware solutions, you have the freedom to access the HMI, and all its data and applications, from another device and control it as if you were standing in front of it. Our Advanced and High-Performance HMIs support cMT Viewer, WebView, Web Streaming, and EasyAccess 2.0 and are designed to make accessing your HMI and data fast and streamlined.

Let us serve as your guide, making it an easy process to join the next evolution of automated control. Our Advanced and High-Performance HMIs can act as an access point enabling operating equipment on the plant floor to connect to information technologies of the Industrial Internet of Things (IIoT). With our IIoT solutions, that are already included in the EBPro software, we can help you achieve better access to invaluable data and open a world of possibilities for your business. Read more about our IIoT solutions.

Build your SCADA

We offer all the components you need to create your own unique level of supervisory data acquisition and control, from the simplest stand-alone machine to sophisticated multi-device networked production line(s), all the way to enterprise-level operations and IIoT functionalities leveraging cloud connectivity.

Our products can help you standardize communications between devices, gluing different systems together for one source to your SCADA. No need to redesign your entire application. Keep the components that are already working for you, just add Maple Systems components to grow your abilities to supervise, control, and acquire data.

DRAFT

Incredible Functionality Out of the Box

- Easily and quickly create the project with functional objects including numeric object, lamp object, combo-button, alarms, and recipes
- Pick and place objects, pictures, and shapes
- Import/export recipes
- Create trend display, graphs, XY plots, and pie charts
- Add passwords and security levels
- Assign communication (PLC) drivers easily and more with our Free HMI software

Additionally our HMIs support remote access solutions with VNC, MQTT, and OPC UA. For additional features see our High-Performance HMI series.

User Friendly HMI Configuration Software

Because designing the layout of screens and user-interface (UI) of the HMI is typically where most of the development time is spent, we've made our Free HMI configuration software easy to use.

- Import tags feature
- Tools to diagnose and monitor PLC to HMI connection
- Debugging tools
- Pre-built libraries
- Off-line and on-line simulation

These are just a few of the ways our software makes creating your project easier. We also have controller information sheets, cable drawings, sample projects, Getting Started Guides, and videos/tutorials available in our support center 24/7.

Allen-Bradley ABB babcock
BALDOR Danfoss SIEMENS
MITSUBISHI Parker
TOSHIBA YASKAWA Koyo
Matsushita

Programmable Logic Controller (PLC) Connectivity

With over 300 PLC & Controller communication protocols, these HMIs will easily integrate with your preferred PLC brands, including:

Allen-Bradley
Siemens
Omron
Emerson
GE
Panasonic
Mitsubishi
...and many more

(1) If you are mounting a CompactLogix™ 5370 L1 controller on a EN 50 022 - 35 x 15 mm (1.38 x 0.59 in.) DIN rail, you must first adhere a bumper on the back of the controller. Failure to install the bumper before mounting the controller results in the system failing to meet this specification. For more information, see the CompactLogix 5370 Controllers User Manual, publication 1769-UM021.

(2) If you are mounting a CompactLogix 5370 L1 controller on a EN 50 022 - 35 x 15 mm (1.38 x 0.59 in.) DIN rail, the Shock, nonoperating specification = 30 g.

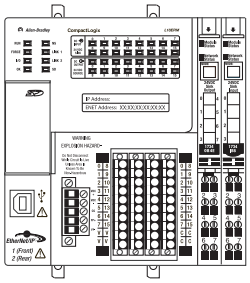
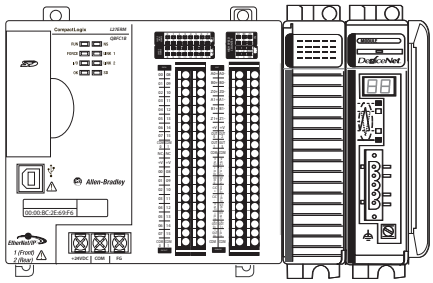
Conducted RF immunity IEC 61000-4-6	10Vrms with 1 kHz sine-wave 80% AM from 150 kHz…80 MHz					

(1) If you are mounting a CompactLogix 5370 L1 controller on a EN 50 022 - 35 x 15 mm (1.38 x 0.59 in.) DIN rail, you must first adhere a bumper on the back of the controller. Failure to install the bumper before mounting the controller results in the system failing to meet this specification. For more information, see the CompactLogix 5370 Controllers User Manual, publication 1769-UM021.



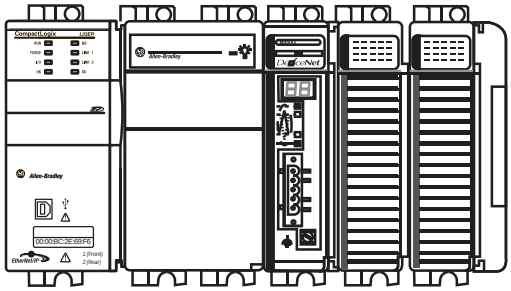
(2) If you are mounting a CompactLogix 5370 L1 controller on a EN 50 022 - 35 x 15 mm (1.38 x 0.59 in.) DIN rail, the Shock, nonoperating specification = 30 g.

DRAFT



ITEM 510K

CompactLogix 5370 Controllers



CompactLogix 5370 L1 Control System

CompactLogix 5370 L2 Control System

CompactLogix 5370 L3 Control System

CompactLogix 5370 controllers provide scalable controller solutions capable of addressing a wide variety of applications. All CompactLogix 5370 controllers provide the following functionality:

- Two EtherNet/IP ports
- One USB port
- Support for local expansion modules
- Control of local and distributed I/O modules
- Use of 1784-SD1 or 1784-SD2 Secure Digital (SD) card for nonvolatile memory
- Internal energy storage solution eliminating the need for a battery

Some CompactLogix 5370 controllers provide the following functionality:

- Built-in power supply
- Some combination of embedded digital, analog and high-speed counter modules
- Support for Integrated Motion over an EtherNet/IP network
- Access to DeviceNet networks

Table 2 - Features - CompactLogix 5370 Controllers

Feature	1769-L16ER-BB1B, 1769-L18ER-BB1B, 1769-L18ERM-BB1B	1769-L24ER-QB1B, 1769-L24ER-QBFC1B, 1769-L27ERM-QBFC1B	1769-L30ER, 1769-L30ER-NSE, 1769-L30ERM, 1769-L33ER, 1769-L33ERM, 1769-L36ERM
Controller tasks: • Continuous • Periodic	• 32 tasks • 100 programs/task		
Built-in communication ports	• Two EtherNet/IP ports - CompactLogix 5370 controllers have two EtherNet/IP ports to connect to an EtherNet/IP network. The ports carry the same network traffic as part of the controller's embedded switch. However, the controller uses only one IP address. • One USB port (for temporary connection only)		
Communication options	EtherNet/IP	• EtherNet/IP • DeviceNet via 1769-SDN scanner module	
EtherNet/IP node, max	• 1769-L16ER-BB1B: Up to four nodes • 1769-L18ER-BB1B, 1769-L18ERM-BB1B: Up to 8 nodes	• 1769-L24ER-QB1B, 1769-L24ER-QBFC1B: Up to 8 nodes • 1769-L27ERM-QBFC1B: Up to 16 nodes	• 1769-L30ER, 1769-L30ER-NSE, 1769-L30ERM: Up to 16 nodes • 1769-L33ER, 1769-L33ERM: Up to 32 nodes • 1769-L36ERM: Up to 48 nodes
Controller connections	256		
Embedded I/O modules	• 16 DC digital inputs • 16 DC digital outputs	All controllers: • 16 DC digital inputs • 16 DC digital outputs 1769-L24ER-QBFC1B and 1769-L27ERM-QBFC1B only: • 4 high-speed counters • 4 high-speed counter outputs • 4 universal analog inputs • 2 analog output points	None

Attribute	1769-L16ER-BB1B, 1769-L18ER-BB1B, 1769-L18ERM-BB1B	1769-L24ER-QB1B, 1769-L24ER-QBFC1B, 1769-L27ERM-QBFC1B	1769-L30ER, 1769-L30ER-NSE, 1769-L30ERM, 1769-L33ER, 1769-L33ERM, 1769-L36ERM
Weight, approx	0.66 kg (1.5 lb)	• 1769-L24ER-QB1B = 0.63 kg (1.39 lb) • 1769-L24ER-QBFC1B and 1769-L27ERM-QBFC1B = 0.9 kg (1.9 lb)	0.31 kg (0.68 lb)
Module width	100.00 mm (3.94 in.)	1769-L24ER-QB1B = 115.00 mm (4.53 in.) 1769-L24ER-QBFC1B and 1769-L27ERM-QBFC1B = 140 mm (5.51 in.)	55.00 mm (2.17 in.)
Module location	DIN rail mount	DIN rail or panel mount	
Panel-mounting screw torque	NA	1.1…1.8 N•m (10…16 lb•in) - use M4 or #8 screws	
Embedded power supply	24V DC input, non-isolated	24V DC Input, isolated	1769-PA2, 1769-PB2, 1769-PA4, 1769-PB4
Power supply distance rating	NA		• Controller and 1769-SDN: 4 • 1769 Compact I/O modules: 4…8, depending on module
Wire category(2)	1 - signal ports 1 - power ports 2 - communication ports		2 - communication ports
Wire type, Ethernet	RJ-45 connector according to IEC 60603-7, 2 or 4 pair Category 5e minimum cable according to TIA 568-B.1 or Category 5 cable according to ISO/IEC 24702		
Wire type, power terminals and embedded I/O connections	Copper		NA
Wire size, power terminals(3)	0.051…3.31 mm^2 (30…12 AWG) solid or stranded copper wire rated at 75 °C (167 °F), or greater, 1.2 mm (3/64 in.) insulation, max Each terminal accepts 1 or 2 wires	0.25…2.50 mm^2 (22...14 AWG) solid copper wire rated at 75 °C (167 °F), or greater 1.2 mm (3/64 in.) insulation, max Each terminal accepts only 1 wire	NA
Wire stripping length, power terminals(3)	10 mm (0.39 in)	8 mm (0.31 in)	NA
Screw torque, power terminals (3)	0.5…0.6 N•m (4.4…5.3 lb•in)	1.0…1.2 N•m (8.9…10.6 lb•in)	NA
Wire size, embedded I/O connections	0.205…1.31 mm^2 (24…16 AWG) solid or stranded copper wire rated at 75 °C (167 °F), or greater 1.2 mm (3/64 in.) insulation, max or 90 °C (194 °F) Each terminal accepts only 1 wire		NA
Wire stripping length, embedded I/O connections	10 mm (0.39 in)		NA
North American temperature code	T4A	T3C	T5
IEC temperature code	T4		T5
Enclosure type rating	None (open-style)		

(1) You can use up to the maximum number of local expansion modules with the CompactLogix 5370 L1 controllers listed as long as the total current drawn by the embedded I/O and local expansion modules does not exceed both the available POINTBus backplane current of 1 A and the field power current of 3 A. For more information on POINTBus backplane current and field power current considerations when installing local expansion modules, see page 9.

(2) Use this Conductor Category information for planning conductor routing. Refer to Industrial Automation Wiring and Grounding Guidelines, publication 1770-4.1 and the appropriate system-level installation manual.

(3) With respect to the CompactLogix 5370 L1 controllers, this specification applies to connecting wires to the power connector that is inserted in the controller. With respect to the CompactLogix 5370 L2 controllers, this specification applies to connecting wires to power terminals built into the controller.

DRAFT

ITEM 510K

Real-time Clock Accuracy

The following table lists the real-time clock accuracy specifications for the CompactLogix 5370 controllers.

Ambient Temperature	Accuracy
0° C (32° F)	-143…42 s/mo
25° C (77° F)	-78…91 s/mo
40° C (104° F)	-101…73 s/mo
60° C (140° F)	-204…-4.50 s/mo

Real-time Clock Hold-up Times

The following table lists the typical real-time clock hold-up specifications for the CompactLogix 5370 controllers.

IMPORTANT The values in the following table are typical and might vary with some CompactLogix 5370 control systems.

Ambient Temperature	Holdup Time, Typical
0 °C (32 °F)	40 days
25 °C (77 °F)	35 days
40 °C (104 °F)	28 days
60 °C (140 °F)	16 days

The I/O module support for CompactLogix 5370 controller systems varies by controller.

DRAFT

ITEM 510K

Table 7 - Embedded Power Supply

Attribute	1769-L16ER-BB1B, 1769-L18ER-BB1B, 1769-L18ERM-BB1B
Input voltage range	10…28.8V DC
Input voltage, nom	24V DC
Line requirement (VDC), min	50VA, Class 2/SELV
Available 5V DC POINTBus backplane current	1 A @ 5V DC
Inrush, max	15 A
Line loss ride through	10 ms…10 s
Output bus current capacity, max	0.1 …3 A @ 5V DC
Load current, min	300 mA
Short circuit protection	Internal fuse Not user replaceable
Overvoltage protection	Yes

I/O Module Support - CompactLogix 5370 L2 Controllers

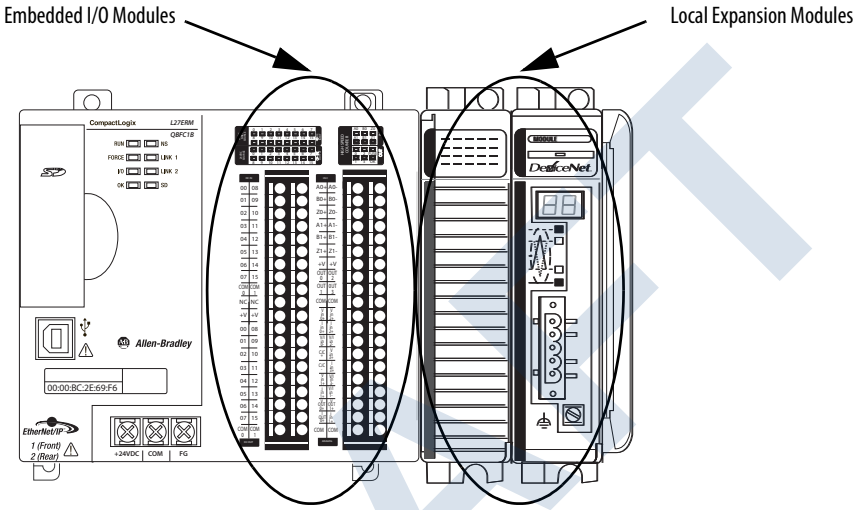
The CompactLogix 5370 L2 controllers offer embedded I/O modules and the option of using 1769 Compact I/O modules as local expansion modules. The following table describes theembedded I/O modules and local expansion modules supported by CompactLogix 5370 L2 controllers.

Cat. No.	Embedded I/O Module Support						Local Expansion Modules Support
	Sinking/Sourcing 24V DC Digital Input Points	Sourcing 24V DC Digital Output Points	High-speed Counters	High-speed Counter Output Points	Universal Analog Input Points	Analog Output Points	1769 Compact I/O Modules
1769-L24ER-QB1B	16	16	-	-	-	-	As many as 4 modules
1769-L24ER-QBFC1B			4	4	4	2	
1769-L27ERM-QBFC1B							

IMPORTANT Remember the following when using the embedded I/O modules on CompactLogix 5370 L2 controllers:

- 1769-L24ER-QB1B controller - The digital input points and digital output points are located on a single embedded I/O module. Therefore, the 1769-L24ER-QB1B controller is considered to have one embedded I/O module.

- 1769-L24ER-QBFC1B and 1769-L27ERM-QBFC1B controllers - The digital input points and digital output points are located on a single embedded I/O module. The high-speed counter input output points, universal analog input points, and analog output points are located on another single embedded I/O module. Therefore, the 1769-L24ER-QBFC1B and 1769-L27ERM-QBFC1B controllers are considered to have two embedded I/O modules.



DRAFT

ITEM 510K

You configure an RPI rate for the embedded I/O modules to establish specific time intervals at which data is transmitted between the controller and the embedded I/O modules. The embedded I/O modules' available RPI range is 0.5…750.0 ms and can be changed by 0.5 ms increments. The default setting is 20 ms.

To use 1769 Compact I/O modules as local expansion modules, keep in mind the following:

- Local expansion modules must be installed in the same system as the CompactLogix 5370 L2 controller.
- Local expansion modules are installed to the right of the embedded I/O modules.
- You must install a 1769-ECR Compact I/O end cap on the right side of control system. The end cap can be installed on the right side of the embedded I/O modules or, if local expansion modules are used, on the right side of 1769 Compact I/O module.

CompactLogix 5370 L2 Controllers' Local I/O Performance

The requested packet interval (RPI) defines the frequency at which the controller sends data to and receives data from I/O modules. In the programming software, you set an RPI rate for each I/O module in your system, including embedded I/O modules, local expansion modules, or distributed I/O modules over an EtherNet/IP network.

The CompactLogix 5370 L2 controllers always attempt to scan an I/O module at the configured RPI rate. The controller scans distributed I/O modules at the configured RPI rates.

With embedded I/O modules and local expansion modules, however, some specific system configuration parameters determine the actual rate at which the controller scans the modules. That is, the controller may be configured to scan an I/O module at one rate, but actually scan the module at a different rate.

For individual I/O modules, a Module RPI Overlap minor fault occurs if there is at least one I/O module that cannot be serviced within its RPI time.

DRAFT

ITEM 510K

The specific configuration parameters for a system determine the impact on actual RPI rates. These configuration factors can impact the effective scan frequency for any individual embedded or local expansion module:

- Rates at which embedded I/O modules' RPI values are set
- Number of embedded I/O modules used in the system
- Types of embedded I/O modules used in the system
- Rates at which 1769 Compact I/O modules' RPI values are set
- Number of 1769 Compact I/O modules in the system
- Types of 1769 Compact I/O modules in the system
- Application user task priorities

Table 8 describes RPI rate guidelines.

Table 8 - RPI Rate Guidelines

Type of Module	Guidelines
Digital and analog (any mix)	The following guidelines apply: • 1…2 modules can be scanned in 0.5 ms. • 3…4 modules can be scanned in 1 ms. • 5…6 modules can be scanned in 2 ms. • Some input modules have a fixed 8 ms filter, so selecting a faster RPI has no effect.
Specialty	The following conditions apply: • For every full-sized 1769-SDN module in the system, increase every other module's RPI by 2 ms. • For every 1769-HSC module in the system, increase every other module's RPI by 1 ms. • For every full-sized 1769-ASCII module system, increase every other module's RPI by 1 ms. • For every 1769-SM2 module in the system, increase every other module's RPI by 2 ms. For example, if the system includes four I/O modules configured with an RPI = 1 ms and you add a 1769-SDN module to the system, you should increase the RPI value for all four I/O modules by 2 ms. Therefore, when the 1769-SDN module is added to the system, the four I/O modules should use an RPI = 3 ms. If, in the same system, you add a second 1769-SDN module, the four I/O modules' RPI value should be increased to 5 ms.

IMPORTANT When considering the number of I/O modules, remember that they can be the embedded I/O modules on the controller or 1769 Compact I/O modules used as local expansion modules.

Therefore, the consideration for using modules can be any of the following system configurations:

- Embedded I/O modules only
- 1769 Compact I/O modules only
- Some combination of embedded I/O modules and 1769 Compact I/O modules

You can set individual 1769 Compact I/O modules' RPI rates higher than those listed in Table 8. The RPI shows how quickly modules can be scanned, not how quickly an application can use the data. The RPI is asynchronous to the program scan. Other factors, such as program execution duration, affect I/O throughput.

Embedded HSC Temperature Derating

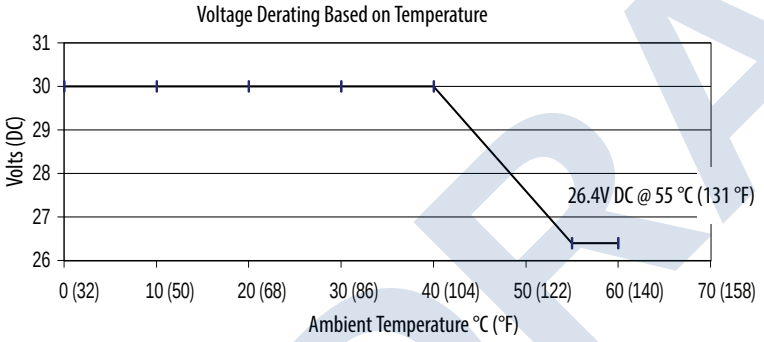

Figure 3 - Maximum Input Voltage - 24V DC Operation

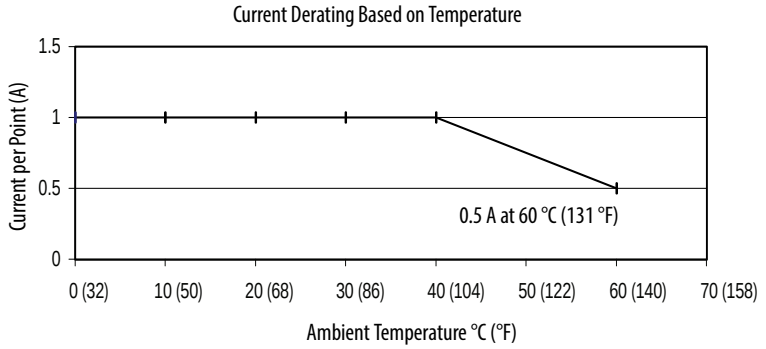
Temperature	Derated Voltage(1)
40 °C (104 °F)	30V DC
55 °C (131 °F)	26.4V DC
60 °C (140 °F)	5V DC

(1) Input voltage derating between 55 °C and 60 °C (131 °F and 140 °F) is achieved by using a dropping resistor.
For 24V DC input voltage, use a 2.4 kΩ, 1/2 W resistor.
For input voltages other than 24V DC, use a 1/2 W resistor with value: 125 x (V_{in} - 5V).

Figure 4 - Maximum Output Voltage - 24V DC Operation



Temperature	Derated Voltage
40 °C (104 °F)	30V DC
55…60 °C (131...140 °F)	26.4V DC

ITEM 510K

Controller Connections

A CompactLogix system uses the connection types to establish communication links between devices:

- Controller-to-local I/O modules or local communication modules
- Controller-to-remote I/O or remote communication modules
- Controller-to-remote I/O (rack-optimized) modules
- Produced and consumed tags
- Messages
- Controller access by the programming software
- Controller access by RSLinx® Classic software for HMI or other applications

You indirectly determine the number of connections the controller uses by configuring the controller to communicate with other devices in the system. The limit of connections may ultimately reside in the communication module you use for the connection. If a message path routes through a communication module, the connection related to the message also counts toward the connection limit of that communication module.

CompactLogix 5370 Controller Ethernet Node Limits and Connections

When designing a CompactLogix 5370 control system, you must consider the following:

- Maximum number of Ethernet nodes available for your controller's project
- Connections

The controller you select determines the number of Ethernet nodes available.

Cat. No.	Ethernet Nodes Supported
1769-L16ER-BB1B	4
1769-L18ER-BB1B	8
1769-L18ERM-BB1B	
1769-L24ER-QB1B	8
1769-L24ER-QBFC1B	
1769-L27ERM-QBFC1B	16
1769-L30ER	16
1769-L30ERM	
1769-L30ER-NSE	
1769-L33ER	32
1769-L33ERM	
1769-L36ERM	48

All CompactLogix 5370 controllers support 256 CIP connections and 120 TCP/IP connections.

Specifications

General Specifications

Specification	Value
Dimensions	118 mm (height) x 87 mm (depth) x 35 mm (width) height including mounting tabs is 138 mm 4.65 in. (height) x 3.43 in (depth) x 1.38 in (width) height including mounting tabs is 5.43 in.
Approximate Shipping Weight (with carton)	300g (0.65 lbs.)
Storage Temperature	-40°C to +85°C (-40°F to +185°F)
Operating Temperature	0°C to +60°C (32°F to +140°F)
Operating Humidity	5% to 95% non-condensing
Operating Altitude	2000 meters (6561 feet)
Vibration	Operating: 10 to 500 Hz, 5G, 0.030 in. peak-to-peak Relay Operation: 2G
Shock	Operating: 30G, 11 ms panel mounted (20G, 11 ms DIN rail mounted) Relay Operation: 7.5G panel mounted (5G DIN rail mounted) Non-Operating: 40G panel mounted (30G DIN rail mounted)
Agency Certification	• C-UL certified (under CSA C22.2 No. 142) • UL 508 listed • CE compliant for all applicable directives
Hazardous Environment Class	Class I, Division 2, Hazardous Location, Groups A, B, C, D (UL 1604, C-UL under CSA C22.2 No. 213)
Radiated and Conducted Emissions	EN50081-2 Class A
Electrical /EMC:	*The module has passed testing at the following levels:*
• ESD Immunity (IEC1000-4-2)	• 4 kV contact, 8 kV air, 4 kV indirect
• Radiated Immunity (IEC1000-4-3)	• 10 V/m , 80 to 1000 MHz, 80% amplitude modulation, +900 MHz keyed carrier
• Fast Transient Burst (IEC1000-4-4)	• 2 kV, 5kHz
• Surge Immunity (IEC1000-4-5)	• 1 kV galvanic gun
• Conducted Immunity (IEC1000-4-6)	• 10 V, 0.15 to 80MHz(1)

(1) Conducted Immunity frequency range may be 150 kHz to 30 MHz if the Radiated Immunity frequency range is 30 MHz to 1000 MHz.

Input Specifications

Specification	1769-IF4 (Series B or later)
Analog Normal Operating Ranges(1)	Voltage: ± 10V dc, 0 to 10V dc, 0 to 5V dc, 1 to 5V dc Current: 0 to 20 mA, 4 to 20 mA
Full Scale Analog Ranges(1)	Voltage: ± 10.5V dc, -0.5 to 10.5V dc, -0.5 to 5.25V dc, 0.5 to 5.25V dc Current: 0 to 21 mA, 3.2 to 21 mA
Number of Inputs	4 differential or single-ended
Bus Current Draw (max.)	120 mA at 5V dc 60 mA at 24V dc(6)
Heat Dissipation	2.52 Total Watts (The Watts per point, plus the minimum Watts, with all points energized.)
Converter Type	Delta Sigma
Response Speed per Channel	Input filter and configuration dependent. See your user's manual.
Resolution (max.)(2)	14 bits (unipolar) 14 bits plus sign (bipolar)
Rated Working Voltage(3)	30V ac/30V dc
Common Mode Voltage Range(4)	±10V dc maximum per channel
Common Mode Rejection	greater than 60 dB at 50 and 60 Hz with the 50 or 60 Hz filter selected, respectively.
Normal Mode Rejection Ratio	-50 dB at 50 and 60 Hz with the 50 or 60 Hz filter selected, respectively.
Input Impedance	Voltage Terminal: 220K Ω (typical) Current Terminal: 250 Ω
Overall Accuracy(5)	Voltage Terminal: ±0.2% full scale at 25°C Current Terminal: ±0.35% full scale at 25°C

(1) The over- or under-range flag will come on when the normal operating range (over/under) is exceeded. The module will continue to convert the analog input up to the maximum full scale range. The flag automatically resets when within the normal operating range.

(2) Resolution is dependent upon your filter selection. The maximum resolution is achieved with either the 50 or 60 Hz filter selected. For resolution with other filter selections, refer to the user manual, publication 1769-UM002A-EN-P.

(3) Rated working voltage is the maximum continuous voltage that can be applied at the input terminal, including the input signal and the value that floats above ground potential (for example, 10V dc input signal and 20V dc potential above ground).

(4) For proper operation, both the plus and minus input terminals must be within ±10V dc of analog common.

(5) Includes offset, gain, non-linearity and repeatability error terms.

(6) If the optional 24V dc Class 2 power supply is used, the 24V dc current draw from the bus is 0 mA.

DRAFT

Specification	1769-IF4 (Series B or later)
Accuracy Drift with Temperature	Voltage Terminal: ±0.003% per °C Current Terminal: ±0.0045% per °C
Optional 24V dc Class 2 Power Supply Voltage Range	20.4 V to 26.4 V dc(3)
Calibration	The module performs autocalibration on channel enable and on a configuration change between channels.
Non-linearity (in percent full scale)	±0.03%
Repeatability(1)	±0.03%
Module Error over Full Temperature Range (0 to +60°C [+32°F to +140°F])	Voltage: ±0.3% Current: ±0.5%
Input Channel Configuration	via configuration software screen or the user program (by writing a unique bit pattern into the module's configuration file). Refer to your controller's user manual to determine if user program configuration is supported.
Module OK LED	On: module has power, has passed internal diagnostics, and is communicating over the bus. Off: Any of the above is not true.
Channel Diagnostics	Over- or under-range by bit reporting
Maximum Overload at Input Terminals(2)	Voltage Terminal: ±30V dc continuous, 0.1 mA Current Terminal: ±32 mA continuous, ±7.6 V dc
System Power Supply Distance Rating	8 (The module may not be more than 8 modules away from the system power supply.)
Recommended Cable	Belden™ 8761 (shielded)
Input Group to Bus Isolation	500V ac or 710V dc for 1 minute (qualification test) 30V ac/30V dc working voltage (IEC Class 2 reinforced insulation)
Vendor I.D. Code	1
Product Type Code	10
Product Code	35

(1) Repeatability is the ability of the input module to register the same reading in successive measurements for the same input signal.

(2) Damage may occur to the input circuit if this value is exceeded.

(3) Failure to use a Class 2 power supply without regulation within these limits could result in improper module operation.

WARNING: To prevent electrical shock, disconnect from power source before installing or servicing. Install in suitable enclosure. Keep free from contaminants.

WARNUNG: Vor Installations- oder Servicearbeiten Stromversorgung unterbrechen, um Unfälle zu vermeiden. Die Geräte müssen in einem passenden Gehäus und gegen Verschmutzung geschützt werden.

AVERTISSEMENT: Avant le montage et la mise en service, couper l'alimentation secteur afn d'éviter tout accident. Prévoir une mise en coffret ou armoire Protéger le produit contre les environnements agressifs.

AVVERTENZA: Per prevenire infortuni, togliere tensione prima dell'installazione o manutenzione. Installare in custodia indonea. Tenere lontano da contaminanti.

ADVERTENCIA: Desconectar la alimentación eléctrica antes de realizar el montaje y la puesta en servicio, con el objeto de evitar accidentes. Instalado en un apropiado. Proteger el producto de los ambientes agresivos.

ПРЕДУПРЕЖДЕНИЕ: Во избежание поражения электрическим током, отсоединить от источника питания перед установкой или обслуживанием. Устанавливать в соответствующем корпусе. Предохранять от загрязнений.

警告：为了防止触电，在安装或维修之前必须先切断电源。安装在合适的设备箱内，防止接触污染物。

Standards compliance		IEC	IEC/EN 60947-2, IEC/EN 60947-4-1		
		cULus	UL 60947-4-1, CSA C22.2, No. 60947-4-1		
Certifications		Regional	cULus Listed (File No. E54612, NLRV(7); E205542, NKJH(7); E518407		
			CCC, EAC, CE, IEC, CB Scheme		CCC, EAC, CE
Rated Insulation Voltage U_i	IEC	[V]	690		
	UL/CSA	[V]	600		
Rated Impulse Withstand Voltage U_{imp}	Pollution degree		3		
	Main circuits U_{imp}/Overvoltage Category		6 kV/III, 8 kV (Disconnect)		
	Auxiliary circuits U_{imp} /Overvoltage Category		6 kV/III		
Rated Frequency		[Hz]	45-65		
Utilization Category	IEC 60947-2 (Circuit breaker)		A		
	IEC 60947-4-1 (Motor starter)		AC-3		
Life Span	Mechanical	[operations]	100,000		30,000
	Electrical (I_e max.)	[operations]	100,000		30,000
Switching Frequency		[operations/hour]	max. 25		
Ambient Temperature	Storage	[°C (°F)]	-40...+85 (-40...185)		
	Operation	[°C (°F)]	-25...+70 (-13...158)		
Climatic resistance	Operating Humidity/Moisture heat (60068-2-3)		5...95% Non-condensing		
Site Altitude		[m]	to 2000 N.N. (6561 ft)		
Protection Class			IP2X from all directions		
Resistance to Shock, Transport (60068-2-27)		ON	15 G/11 ms		
		OFF	30 G/11 ms		
Resistance to Vibration, Operation (60068-2-6)			5 G		
Rated Thermal Current I_{th}	up to 40 °C (104 °F) ambient temperature	[A]	0.1...32	0.63...40	6.3...45
	up to 60 °C (140 °F) ambient temperature	[A]	0.1...32	0.63...40	6.3...45
Rated Supply Current I_e		[A]	0.1...32	0.63...40	6.3...45
Dependence on Temperature	40 °C (104 °F)	[A]	no reduction		
	50 °C (122 °F)	[A]	no reduction		
	60 °C (140 °F)	[A]	no reduction		
	70 °C (158 °F)	[A]	15% current reduction of the upper rated current I_e		
Overload Protection Characteristics			IEC 60947-4-1 Motor protection (except Cat. Nos. 140MT-D9N, 140M-F9N)		
Ambient Temperature Compensation		[°C (°F)]	-25...+60 (-13...+140)		
Phase-loss Protection			Differential release		
Trip class			10 (except Cat. Nos. 140MT-D9N, 140M-F8N) fixed setting		
Magnetic Release			fixed setting		
Release current (±20%)	for E, N Version	[A]	14 x I_e max.(1)		13 x I_e max
	for E, N Version C36, C40	[A]	12 x I_e max.(1)		–
	for T Version	[A]	18...22 x I_e max.(2)		
Total Power loss P_v	Circuit Breaker at rated load/ operating temp.	[W]	4...11	4...14	7...22
Main Disconnect Switch Application			Yes, with accessories		
Application Conditions	140MT-D...C36, -C40: Suitable for continuous operation at 90% current rating at 480V only if used in a minimum enclosure size of 250 x 175 x 150 mm (10 x 7 x 6 in).				
	For utilization outside North America, assemblies (of products) shall comply to the IEC 61439-1 requirements				
	140M and 140MT manual motor starters are intended for use in closed areas without hazardous operating conditions such as dust or explosive or corrosive gases. Enclosures of appropriate manner need to be in place to protect devices in such environments. See Table 42.				

(1) I_e max. = maximum values of setting ranges fixed magnetic setting for 140MT-D9V; see ratings.
(2) I_e max. = maximum values of setting ranges; see ratings.

Time-Current Characteristic

Figure 10 - Motor Protection Circuit Breakers Time-Current Characteristic

140MT-C, -D, 140M-F Motor Protection Circuit Breakers (for 140MT-D9V, see ratings)

Thermal Release Trip Current

The adjustable current-dependent delayed bimetal release protects motors against overload. The curve shows the mean operating current at an ambient temperature of 20 °C (68 °F) starting from the cold state. Careful testing and setting ensures effective motor protection even in the case of single phasing. The overload characteristic is also valid for transformer protection.

Magnetic Release Trip Current

The instantaneous magnetic trip has a fixed operating current setting. This corresponds to 13...14 times the maximum value of the setting range. (Transformer protection up to 20 x I_e max.) At a lower setting, it is correspondingly higher.

Current Setting I_eF

The overload trip corresponds to a thermal overload relay in a motor starter conforming to IEC 60947-4-1. If a different value is prescribed (for example, reduced I_e for cooling medium having a temperature higher than 40 °C (104 °F) or a place of installation higher than 2000 m (6561 ft) above sea level), the setting current is equal to the reduced rated current I_e of the motor.

LISTEN. THINK. SOLVE.®

Product Overview

The PowerFlex® 520-Series AC drive delivers an innovative design that is remarkably versatile and can accommodate systems ranging from standalone machines to simple system integration. The PowerFlex 523 drive provides general purpose control for applications ranging up to 30 HP and 22 kW. The PowerFlex 525 drive provides maximum flexibility and performance ranging up to 30 HP and 22 kW.

By combining a variety of motor control options, communications, energy savings and standard safety features in a cost-effective drive, the PowerFlex 520-Series drive is suitable for a wide array of applications.

Maximize your system performance and productivity by taking advantage of the following key features offered in a PowerFlex 520-Series drive.

PowerFlex 520-Series AC Drives Feature

Modular Design

- Detachable control module and power module allow **simultaneous configuration and installation**.
- Each drive has **a standard control module** used across the entire power range.
- **MainsFree™ configuration** allows you to simply connect your control module to a PC with a standard USB cable and quickly upload, download, and flash the drive with new settings.
- **Support for accessory cards** without affecting footprint.
  (PowerFlex 523 drives support one, PowerFlex 525 drives support two)

Packaging and Mounting

- Installation can be quick and easy using the **DIN rail mounting** feature on A, B, and C frame drives. Panel mounting is also available, providing added flexibility.
- **Zero Stacking™** is allowed for ambient temperatures up to 45 °C, saving valuable panel space.
- **Integral filtering** is available on all 200V and 400V ratings, providing a cost-effective means of meeting EN61800-3 Category C2 and C3 EMC requirements. External filters provide compliance to EN61800-3 Category C1, C2, and C3 EMC requirements for all PowerFlex 520-Series ratings.
- An optional **IP 30, NEMA/UL Type 1 conduit box** is easily adapted to the standard IP 20 (NEMA Type Open) product, providing increased environmental ratings.

Optimized Performance

- **Removable MOV** to ground provides trouble-free operation when used on ungrounded distribution systems.
- A **relay pre-charge** limits inrush current.
- **Integral brake transistor**, available on all ratings, provides dynamic braking capability with simple low cost brake resistors.
- A jumper to switch between **24V DC sink or source control** for control wiring flexibility.
- **Dual Overload Rating** available for drives above 15 HP/11 kW. Normal duty: 110% overload for 60 seconds or 150% for 3 seconds. Heavy duty: 150% overload for 60 seconds or 180% overload (200% programmable) for 3 seconds provides robust overload protection.
- **Adjustable PWM frequency up to 16 kHz** ensures quiet operation.

DRAFT

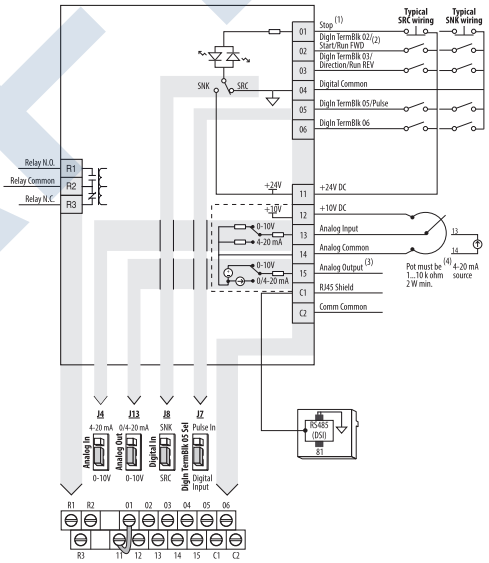
PowerFlex 520-Series AC Drive Advanced Features

Control Performance

- **Variety of motor control options, including:**
  - Volts per hertz (V/Hz)
  - Sensorless Vector Control (SVC)
  - Closed loop velocity vector control (PowerFlex 525 drives only)
  - Permanent Magnet motor control (PowerFlex 525 drives only)
- **Variety of Positioning Control, including:**
  - PointStop™ stops motor load in a consistent position without encoder feedback
  - Closed loop feedback with an optional encoder card (PowerFlex 525 drives only)
  - Point-to-point positioning mode (PowerFlex 525 drives only)
- **Integral PID** functionality enhances application flexibility (PowerFlex 523 drives have one PID loop, PowerFlex 525 drives have two PID loops)

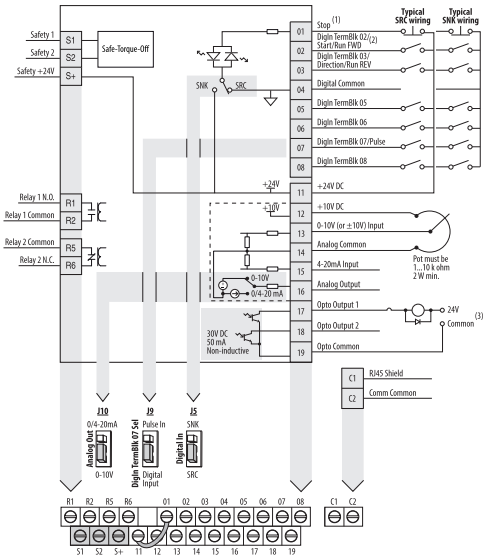


I/O Wiring

PowerFlex 523

- **One (1) Analog Input** (unipolar voltage or current) independently isolated from the rest of the drive I/O.
- **Five (5) Digital Inputs** (four programmable) provide application versatility.
- **One (1) Analog Output**(1) which is jumper selectable between either 0-10V or 0-20 mA. This scalable, 10-bit output is suitable for metering or as a speed reference to another device.
- **One (1) Relay Output** (form C) can be used to indicate various drive, motor or logic conditions.

(1) Analog output (terminal 15) is only available on PowerFlex 523 series B drive and requires firmware 3.001 and later to configure the analog output parameters.



PowerFlex 523 Series B Control I/O Wiring Block Diagram

PowerFlex 525

- **Two (2) Analog Inputs** (one unipolar and one bipolar) are independently isolated from the rest of the drive I/O. These inputs can be toggled via a digital input.
- **Seven (7) Digital Inputs** (six programmable) provide application versatility.
- **One (1) Analog Output** which is jumper selectable between either 0-10V or 0-20 mA. This scalable, 10-bit output is suitable for metering or as a speed reference to another drive.
- **Two (2) Opto Outputs and two (2) Relay Outputs** (one form A and one form B) can be used to indicate various drive, motor or logic conditions.

PowerFlex 525 Control I/O Wiring Block Diagram

DRAFT

Communications

- **Embedded EtherNet/IP™ port** allows easy configuration, control, and collection of drive data over the network. (PowerFlex 525 drives only)
- **Dual port EtherNet/IP option card** supports Device Level Ring (DLR) topologies, providing **fault-tolerant connectivity** for optimum drive availability.
- **Integral RS485/DSI communications** enable the drives to be used in a multi-drop network configuration.
- Optional communication cards such as **DeviceNet™**, and **PROFIBUS DP™** can improve machine performance.
- **Online EDS file creation** with RSNetWorx™ providing ease of set-up on a network.

Optimized for Common DC Bus Installations

Enhanced Control of Internal Pre-charge

Common DC Bus offers additional inherent breaking capabilities by utilizing all the drives/loads on the bus for energy absorption offering higher efficiency and cost savings. The PowerFlex 520-Series drive has been optimized for use in **Common DC Bus** or **Shared DC Bus installation**s.

- Configurable pre-charge control using digital inputs.
- Direct DC Bus connection to power terminal blocks.

Improved Ride Through

Operation Down to 1/2 Line Voltage

The PowerFlex 520-Series drive allows for the selection of **1/2 DC Bus operation**, for use in critical applications where continued drive output is desired even in the event of brown out or low voltage conditions. The PowerFlex 520-Series drive also supports **enhanced inertia ride through** for additional low voltage mitigation.

- Selectable 1/2 line voltage operation.
- Increased power loss ride through.

DRAFT

Additional Features of PowerFlex 525 Drives

Closed Loop Feedback

Encoder/Pulse Train Input

The PowerFlex 525 drive allows for configurable closed loop control with an optional encoder card for either speed or position feedback for improved speed regulation, basic position control, or other pulse inputs for motor control.

- Improved speed regulation
- Basic position control

Basic Position Control

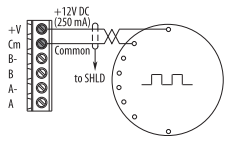
Local Position Control

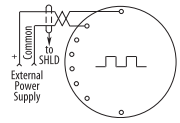
- Position regulator with StepLogic™
  - 8 positions (local logic)

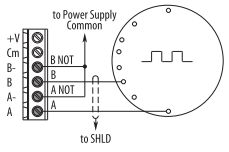
Outer Position Control Loop

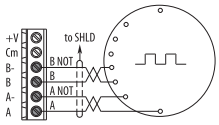
- **Analog input bipolar mode** offers improved zero-cross performance.
- **Simple motion control** applications with more complex position profiles.
- **Speed reference** supplied to drive via Analog Input or multiple field bus network options.
- **Speed ratio** available for simple draw applications.

Feedback Details









Line Driver Type Incremental Encoder Option Card

- Quadrature (dual channel) or Single Channel
- 5V/12V DC supply, 10 mA min per channel
- Single Ended or Differential (A, B Channel)
- Duty Cycle of 50%, +10%
- Input Frequency up to 250 kHz

Pulse Train Input

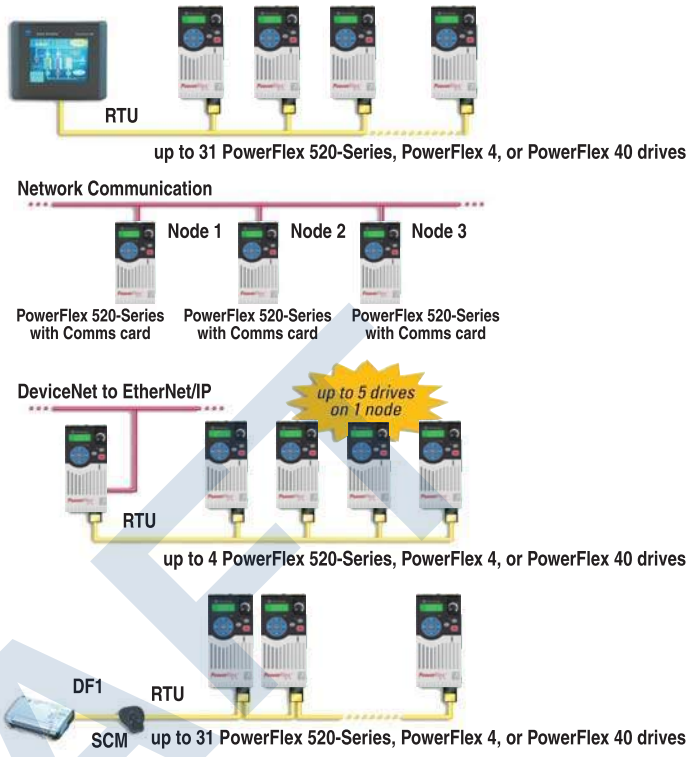
- Configurable Input Voltage 5V/12V/24V DC autodetect
- Input Frequency up to 100 kHz

Encoder Wiring Examples

I/O	Connection Example	I/O	Connection Example
Encoder Power – Internal Drive Power Internal (drive) 12V DC, 250 mA		**Encoder Power – External Power Source**	
Encoder Signal – Single-Ended, Dual Channel		**Encoder Signal – Differential, Dual Channel**	

Safety Inside using Safe-Torque-Off Function

Safe Torque-Off is a standard safety feature of the PowerFlex 525 drive to help protect personnel and equipment. Safe Torque-off allows you to restart your application faster after a safety-related situation.



- Safe Torque-Off functionality **removes rotational power without powering down the drive**.
- Embedded safety **reduces wiring and saves on installation space**.
- Meets ISO 13849-1 standards and provides safety ratings up to and including **SIL 2/PLd**.

DRAFT

Communications and Software

Versatile Programming and Network Solutions

- PowerFlex 520-Series drives are compatible with any device that acts as a **RTU Master** and supports standard 03 and 06 RTU commands.
- A network can be configured using PowerFlex 520-Series drives for **high performance and flexible configuration** capabilities.
  - Embedded port for EtherNet/IP (PowerFlex 525 drives only)
  - EtherNet/IP dual-port option card
  - DeviceNet option card
  - PROFIBUS DP option card
- A **multi-drive solution** can be reached using a single PowerFlex 520-Series drive, with the ability for up to five (5) drives to reside on one (1) node.
- **Integral RS485** communications enable the drives to be used in a multi-drop network configuration. A serial converter module (SCM) provides connectivity to any controller with a DF1 port. The SCM can be eliminated if the controller acts as a RTU Master.

PC Programming Software

Connected Components Workbench™

- Supports plug-and-play connectivity through a standard USB connection.
- AppView™ tool provides parameter groups for several of the most common applications.
- Create and save custom parameter groups using the CustomView™ tool.
- Supports PowerFlex drives, Micro800™ controllers and PanelView™ component graphic terminals.

Studio 5000™ Logix Designer

- Add-on profiles (AOPs) for PowerFlex 520-seriers AC drives provide seamless integration into the Logix environment.
- Configuration files from Studio 5000 Logix Designer(1) can be transferred directly to the PowerFlex 520-Series drive over EtherNet/IP.
- Automatic Device Configuration (ADC) uploads configuration parameters to a replaced drive, minimizing the need for a manual reconfiguration.

(1) The Logix Designer application is the rebranding of RSLogix 5000 software. You can also use RSLogix 5000 version 17 or greater.

Technical Specifications

Protection

Specifications	PowerFlex 523	PowerFlex 525
Bus Overvoltage Trip		
100...120V AC Input:	405V DC bus (equivalent to 150V AC incoming line)	
200...240V AC Input:	405V DC bus (equivalent to 290V AC incoming line)	
380...480V AC Input:	810V DC bus (equivalent to 575V AC incoming line)	
525...600V AC Input:	1005V DC bus (equivalent to 711V AC incoming line)	
Bus Undervoltage Trip		
100...120V AC Input:	190V DC bus (equivalent to 75V AC incoming line)	
200...240V AC Input:	190V DC bus (equivalent to 150V AC incoming line)	
380...480V AC Input:	390V DC bus (equivalent to 275V AC incoming line)	
525...600V AC Input		
P038 = 3 "600V":	487V DC bus (equivalent to 344V AC incoming line)	
P038 = 2 "480V":	390V DC bus (equivalent to 275V AC incoming line)	
Power Ride-Thru:	100 ms	
Logic Control Ride-Thru:	0.5 s minimum, 2 s typical	
Electronic Motor Overload Protection:	Provides class 10 motor overload protection according to NEC article 430 and motor over-temperature protection according to NEC article 430.126 (A) (2). UL 508C File 29572.	
Overcurrent:	200% hardware limit, 300% instantaneous fault	
Ground Fault Trip:	Phase-to-ground on drive output	
Short Circuit Trip:	Phase-to-phase on drive output	

Electrical

Specifications	PowerFlex 523	PowerFlex 525
Voltage Tolerance:	-15% / +10%	
Frequency Tolerance:	47...63 Hz	
Input Phases:	Three-phase input provides full rating. Single-phase input provides 35% rating on three-phase drives.	
Displacement Power Factor:	0.98 across entire speed range	
Maximum Short Circuit Rating:	100,000 Amps Symmetrical	
Actual Short Circuit Rating:	Determined by AIC Rating of installed fuse/circuit breaker	
Transistor Type:	Isolated Gate Bipolar Transistor (IGBT)	
Internal DC Bus Choke	Only for Frame E drive ratings	
200...240V AC Input:	11 kW (15 HP)	
380...480V AC Input:	15...18.5 kW (20...25 HP) – Heavy Duty	
525...600V AC Input:	15...18.5 kW (20...25 HP) – Heavy Duty	

Control

Specifications	PowerFlex 523	PowerFlex 525
Method	Sinusoidal PWM, Volts/Hertz, Sensorless Vector Control, Economizer SVC motor control, Closed Loop Velocity Vector Control, Surface Mount and Interior Permanent Magnet Motor (without encoder), Interior Permanent Magnet Motor (with encoder) (Closed Loop Velocity Vector Control and PM motor control are not applicable to PowerFlex 523 drives)	
Carrier Frequency	2...16 kHz, Drive rating based on 4 kHz	
Frequency Accuracy		
Digital Input:	Within ±0.05% of set output frequency	
Analog Input:	Within 0.5% of maximum output frequency, 10-Bit resolution	
Analog Output:	±2% of full scale, 10-Bit resolution

ITEM 746L

Specifications	PowerFlex 523	PowerFlex 525
Performance		
V/Hz (Volts per Hertz):	±1% of base speed across a 60:1 speed range	
SVC (Sensorless Vector):	±0.5% of base speed across a 100:1 speed range	
SVC Economizer:	±0.5% of base speed across a 100:1 speed range	
	(Applicable to PowerFlex 525 drives only)	
VVC (Velocity Vector Control):	±0.5% of base speed across a 60:1 speed range	
PM Motor(1):	±0.5% of base speed, up to a 20:1 speed range	
Performance with Encoder	(Applicable to PowerFlex 525 drives only)	
SVC (Sensorless Vector):	±0.1% of base speed across a 100:1 speed range(2)	
SVC Economizer:	±0.1% of base speed across a 100:1 speed range(2)	
VVC (Velocity Vector Control):	±0.1% of base speed across a 1000:1 speed range(2)	
PM Motor (iPM motor, 10 HP rating and below)(1):	±0.1% of base speed, up to a 60:1 speed range	
Output Voltage Range:	0V to rated motor voltage	
Output Frequency Range:	0...500 Hz (programmable)	
Efficiency:	97.5% (typical)	
Stop Modes:	Multiple programmable stop modes including – Ramp, Coast, DC-Brake, and Ramp-to-Stop	
Accel/Decel:	Four independently programmable accel and decel times. Each time may be programmed from 0...600 s in 0.01 s increments.	
Intermittent Overload		
Normal Duty:	110% Overload capability for up to 60 s, 150% for up to 3 s Applies for power rating above 15 kW (20 HP) only. Based on 480V drive rating.	
Heavy Duty:	150% Overload capability for up to 60 s, 180% for up to 3 s (200% programmable)	

(1) For details on specific motor performance, see Knowledge Base article "PowerFlex 525 PM Motor Performance Testing Summary".

(2) For more information, see the PowerFlex 520-Series Adjustable Frequency AC Drive User Manual, publication 520-UM001.

Control Outputs

Specifications		PowerFlex 523	PowerFlex 525
Relay	Quantity:	(1) Programmable Form C	(2) 1 Programmable Form A and 1 Programmable Form B
	Specification Resistive Rating: Inductive Rating:	 3.0 A @ 30V DC, 3.0 A @ 125V, 3.0 A @ 240V AC 0.5 A @ 30V DC, 0.5 A @ 125V, 0.5 A @ 240V AC	
Opto	Quantity:	–	(2) Programmable
	Specification:		30V DC, 50 mA Non-inductive
Analog	Quantity:	(1) Non-Isolated 0-10V or 4-20 mA[1]	
	Specification Resolution: 0-10V DC Analog: 4-20 mA Analog:	 10-bit 1 k ohm minimum 525 ohm maximum	

(1) Feature is not applicable to PowerFlex 523 series A drives.

Encoder

Specifications	PowerFlex 523	PowerFlex 525
Type:	–	Incremental, dual channel
Supply:		12V, 250 mA
Quadrature:		90°, ±27° @ 25 °C
Duty Cycle:		50%, +10%
Requirements:		Encoders must be line driver type, quadrature (dual channel) or pulse (single channel), 3.5...26V DC output, single-ended or differential and capable of supplying a minimum of 10 mA per channel. Allowable input is DC up to a maximum frequency of 250 kHz. The encoder I/O automatically scales to allow 5V, 12V and 24V DC nominal voltages.

DRAFT

Environmental Specifications

Specifications	PowerFlex 523	PowerFlex 525
Altitude	See Current Derating Curves on page 18 for derating guidelines.	
Without derating:	1000 m (3300 ft) max.	
With derating:	Up to 4000 m (13,200 ft) max., with the exception of 600V drives at 2000 m (6600 ft) max.	
Surrounding Air Temperature, max.	See Current Derating Curves on page 18 for derating guidelines.	
Without derating:	-20...50 °C (-4...122 °F)	
With derating:	-20...60 °C (-4...140 °F) or -20...70 °C (-4...158 °F) with optional Control Module Fan kit.	
Storage Temperature		
Frame A...D:	-40...85 °C (-40...185 °F)	
Frame E:	-40...70 °C (-40...158 °F)	
Atmosphere:	**IMPORTANT** Drive **must not** be installed in an area where the ambient atmosphere contains volatile or corrosive gas, vapors or dust. If the drive is not going to be installed for a period of time, it must be stored in an area where it will not be exposed to a corrosive atmosphere.	
Relative Humidity:	0...95% noncondensing	
Shock:	Complies with IEC 60068-2-27	
Vibration:	Complies with IEC 60068-2-6:1995	

Frame Size	Operating and Nonoperating		Nonoperating (Transportation)	
	Force (Shock/Vibration)	Mounting Type	Force (Shock/Vibration)	Mounting Type
A	15 g / 2 g	DIN rail or screw	30 g/ 2.5 g	Screw only
B	15 g / 2 g	DIN rail or screw	30 g/ 2.5 g	Screw only

(1) A non-filtered drive is not available for 380...480V AC 25 HP (18.5 kW) and 30 HP (22.0 kW) ratings. Filtered drives are available, however you must verify that the application will support a filtered drive.

DRAFT

ITEM 746L

Drive Dimensions and Weight

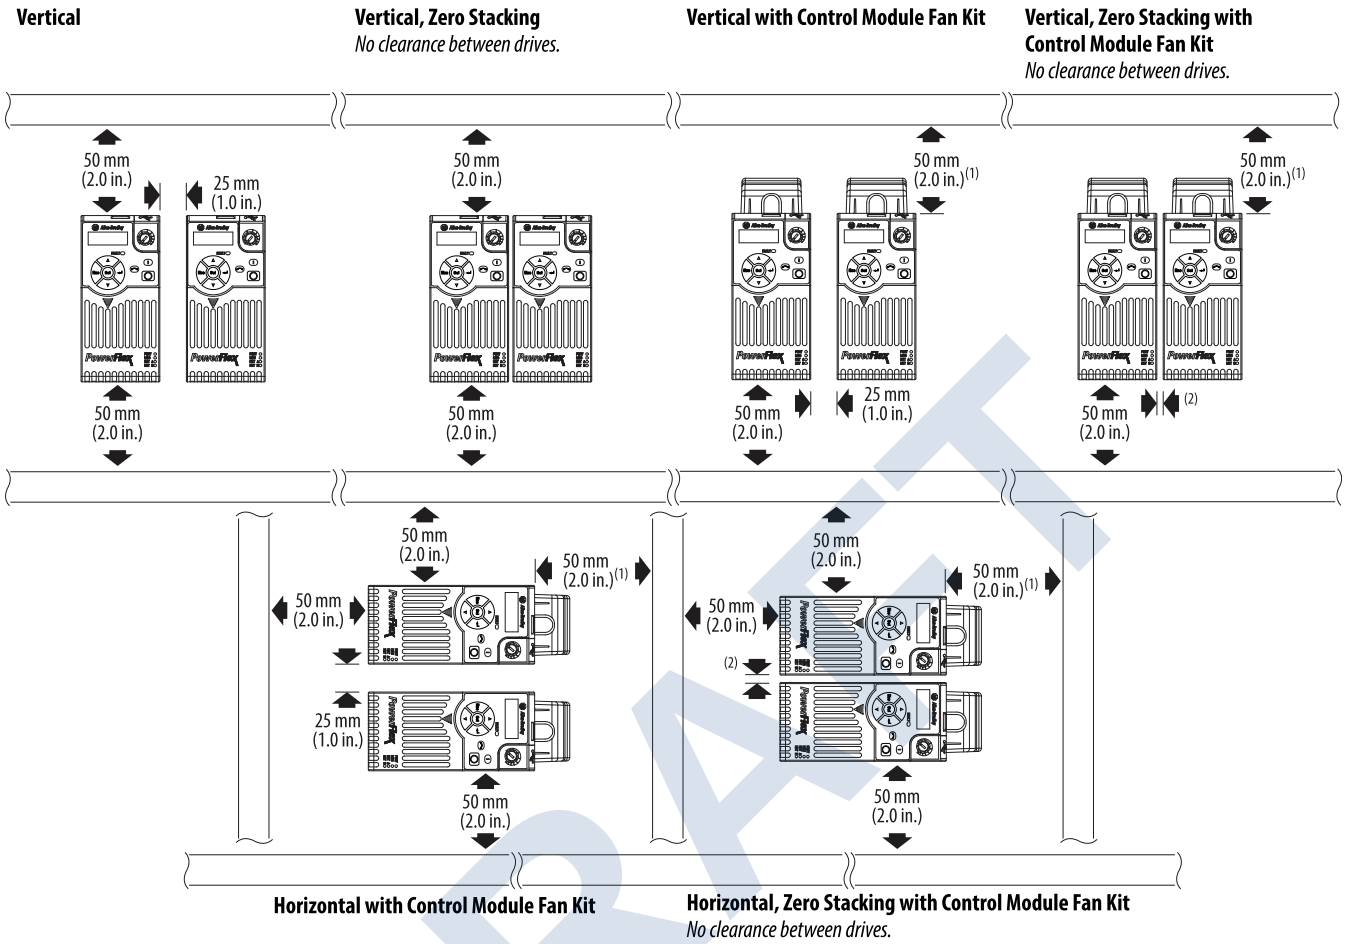
Dimensions are in mm and (in.). Weights are in kg and (lb).

Frame Size	A	B	C	D	E	Weight
A	72.0 (2.83)	152.0 (5.98)	172.0 (6.77)	57.5 (2.26)	140.0 (5.51)	1.1 (2.4)
B	87.0 (3.43)	180.0 (7.09)	172.0 (6.77)	72.5 (2.85)	168.0 (6.61)	1.6 (3.5)
C	109.0 (4.29)	220.0 (8.66)	184.0 (7.24)	90.5 (3.56)	207.0 (8.15)	2.3 (5.0)
D	130.0 (5.12)	260.0 (10.24)	212.0 (8.35)	116.0 (4.57)	247.0 (9.72)	3.9 (8.6)
E	185.0 (7.28)	300.0 (11.81)	279.0 (10.98)	160.0 (6.30)	280.0 (11.02)	12.9 (28.4)

Design Considerations

Mounting Considerations

- Mount the drive upright on a flat, vertical and level surface.



Frame	Screw Size	Screw Torque
A	M5 (#10...24)	1.56...1.96 Nm (14...17 lb-in.)
B	M5 (#10...24)	1.56...1.96 Nm (14...17 lb-in.)
C	M5 (#10...24)	1.56...1.96 Nm (14...17 lb-in.)
D	M5 (#10...24)	2.45...2.94 Nm (22...26 lb-in.)
E	M8 (5/16 in.)	6.0...7.4 Nm (53...65 lb-in.)

- Protect the cooling fan by avoiding dust or metallic particles.
- Do not expose to a corrosive atmosphere.
- Protect from moisture and direct sunlight.

DRAFT

Minimum Mounting Clearances

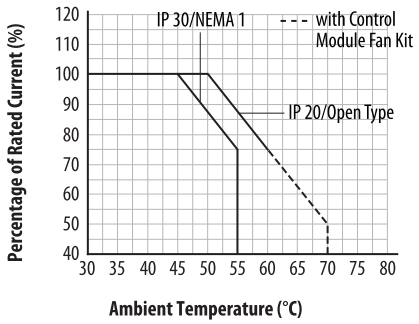
See Dimensions and Weights on page 14 for mounting dimensions.

(1) For Frame E with Control Module Fan Kit only, clearance of 95 mm (3.7 in.) is required.
(2) For Frame E with Control Module Fan Kit only, clearance of 12 mm (0.5 in.) is required.

Ambient Operating Temperatures

See Accessories and Dimensions on page 32 for option kits.

Mounting	Enclosure Rating[1]	Ambient Temperature			
		Minimum	Maximum (No Derate)	Maximum (Derate)[2]	Maximum with Control Module Fan Kit (Derate)[3][5]
Vertical	IP 20/Open Type	-20 °C (-4 °F)	50 °C (122 °F)	60 °C (140 °F)	70 °C (158 °F)
	IP 30/NEMA 1/UL Type 1		45 °C (113 °F)	55 °C (131 °F)	–
Vertical, Zero Stacking	IP 20/Open Type		45 °C (113 °F)	55 °C (131 °F)	65 °C (149 °F)
	IP 30/NEMA 1/UL Type 1		40 °C (104 °F)	50 °C (122 °F)	–
Horizontal with Control Module Fan Kit[4][5]	IP 20/Open Type		50 °C (122 °F)	–	70 °C (158 °F)
Horizontal, Zero Stacking with Control Module Fan Kit[4][5]	IP 20/Open Type		45 °C (113 °F)	–	65 °C (149 °F)



(1) IP 30/NEMA 1/UL Type 1 rating requires installation of the PowerFlex 520-Series IP 30/NEMA 1/UL Type 1 option kit, catalog number 25-JBAx.
(2) For catalogs 25x-D1P4N104 and 25x-E0P9N104, the temperature listed under the Max. (Derate) column is reduced by 5 °C (9 °F) for all mounting methods.
(3) For catalogs 25x-D1P4N104 and 25x-E0P9N104, the temperature listed under the Max. with Control Module Fan Kit (Derate) column is reduced by 10 °C (18 °F) for vertical and vertical with zero stacking mounting methods only.
(4) Catalogs 25x-D1P4N104 and 25x-E0P9N104 cannot be mounted using either of the horizontal mounting methods.
(5) Requires installation of the PowerFlex 520-Series Control Module Fan Kit, catalog number 25-FANx-70C.

Zero Stacking

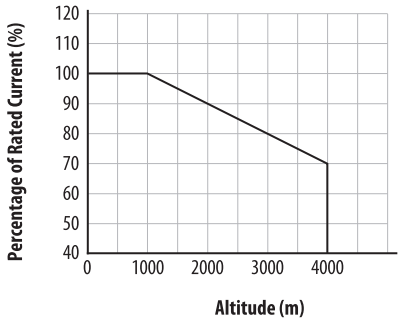
Derating Guidelines for High Altitude

The drive can be used without derating at a maximum altitude of 1000 m (3300 ft).
If the drive is used above 1000 m (3300 ft):

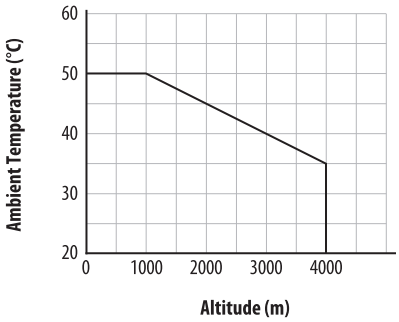
- Derate the maximum ambient temperature by 5 °C (9 °F) for every additional 1000 m (3300 ft), subject to limits listed in the Altitude Limit (Based on Voltage) table below.

  Or

- Derate the output current by 10% for every additional 1000 m (3300 ft), subject to limits listed in the Altitude Limit (Based on Voltage) table below.



Altitude Limit (Based on Voltage)



Drive Rating	Center Ground (Wye Neutral)	Corner Ground, Impedance Ground, or Ungrounded
100...120V 1-Phase	6000 m	6000 m
200...240V 1-Phase	2000 m	2000 m
200...240V 3-Phase	6000 m	2000 m
380...480V 3-Phase	4000 m	2000 m
525...600V 3-Phase	2000 m	2000 m

DRAFT

ITEM 746L

High Altitude

Debris Protection

Take precautions to prevent debris from falling through the vents of the drive housing during installation.

Storage

- Store within an ambient temperature range of -40...85 °C(1).
- Store within a relative humidity range of 0...95%, noncondensing.
- Do not expose to a corrosive atmosphere.

(1) The maximum ambient temperature for storing a Frame E drive is 70 °C.

AC Supply Source Considerations

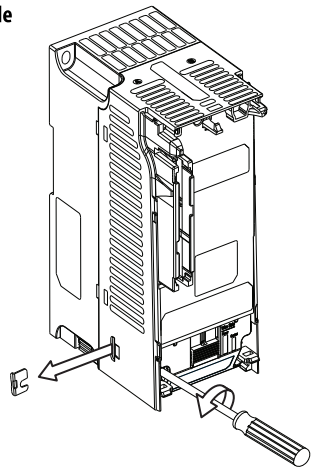
Ungrounded Distribution Systems

ATTENTION: PowerFlex 520-Series drives contain protective MOVs that are referenced to ground. These devices must be disconnected if the drive is installed on an ungrounded or resistive grounded distribution system.

ATTENTION: Removing MOVs in drives with an embedded filter will also disconnect the filter capacitor from earth ground.

Disconnecting MOVs

To prevent drive damage, the MOVs connected to ground shall be disconnected if the drive is installed on an ungrounded distribution system (IT mains) where the line-to-ground voltages on any phase could exceed 125% of the nominal line-to-line voltage. To disconnect these devices, remove the jumper shown in the diagrams below.



1. Turn the screw counterclockwise to loosen.
2. Pull the jumper completely out of the drive chassis.
3. Tighten the screw to keep it in place.

DRAFT

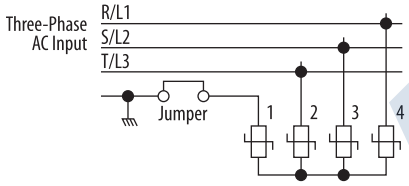
ITEM 746L



Jumper Location (Typical)

Power Module

IMPORTANT Tighten screw after jumper removal.

Phase to Ground MOV Removal

Input Power Conditioning

The drive is suitable for direct connection to input power within the rated voltage of the drive (see Input Power Conditions on page 20). Listed in the Input Power Conditions table below are certain input power conditions which may cause component damage or reduction in product life. If any of these conditions exist, install one of the devices listed under the heading Corrective Action on the line side of the drive.

IMPORTANT Only one device per branch circuit is required. It should be mounted closest to the branch and sized to handle the total current of the branch circuit.

Input Power Conditions

Input Power Condition	Corrective Action
Low Line Impedance (less than 1% line reactance)	• Install Line Reactor(2) • or Isolation Transformer
Greater than 120 kVA supply transformer	
Line has power factor correction capacitors	• Install Line Reactor(2) • or Isolation Transformer
Line has frequent power interruptions	
Line has intermittent noise spikes in excess of 6000V (lightning)	
Phase to ground voltage exceeds 125% of normal line to line voltage	• Remove MOV jumper to ground. • or Install Isolation Transformer with grounded secondary if necessary.
Ungrounded distribution system	
B-phase grounded distribution system	
240V open delta configuration (stinger leg)(1)	• Install Line Reactor(2)

DRAFT

(1) For drives applied on an open delta with a middle phase grounded neutral system, the phase opposite the phase that is tapped in the middle to the neutral or earth is referred to as the "stinger leg," "high leg," "red leg," etc. This leg should be identified throughout the system with red or orange tape on the wire at each connection point. The stinger leg should be connected to the center Phase B on the reactor. See Bulletin 1321-3R Series Line Reactors on page 37 for specific line reactor part numbers.

(2) See Accessories and Dimensions on page 32 for accessory ordering information.

General Grounding Requirements

The drive Safety Ground - (PE) must be connected to system ground. Ground impedance must conform to the requirements of national and local industrial safety regulations and/or electrical codes. The integrity of all ground connections should be periodically checked.

Typical Grounding

Ground Fault Monitoring

If a system ground fault monitor (RCD) is to be used, only Type B (adjustable) devices should be used to avoid nuisance tripping.

Safety Ground - ⏚ (PE)

This is the safety ground for the drive that is required by code. One of these points must be connected to adjacent building steel (girder, joist), a floor ground rod or bus bar. Grounding points must comply with national and local industrial safety regulations and/or electrical codes.

Motor Ground

The motor ground must be connected to one of the ground terminals on the drive.

Shield Termination - SHLD

Either of the safety ground terminals located on the power terminal block provides a grounding point for the motor cable shield. The **motor cable** shield connected to one of these terminals (drive end) should also be connected to the motor frame (motor end). Use a shield terminating or EMI clamp to connect the shield to the safety ground terminal. The earthing plate or conduit box option may be used with a cable clamp for a grounding point for the cable shield.

When shielded cable is used for **control and signal wiring**, the shield should be grounded at the source end only, not at the drive end.

DRAFT

ITEM 746L

RFI Filter Grounding

Using a drive with filter may result in relatively high ground leakage currents. Therefore, the **filter must only be used in installations with grounded AC supply systems and be permanently installed and solidly grounded** (bonded) to the building power distribution ground. Ensure that the incoming supply neutral is solidly connected (bonded) to the same building power distribution ground. Grounding must not rely on flexible cables and should not include any form of plug or socket that would permit inadvertent disconnection. Some local codes may require redundant ground connections. The integrity of all connections should be periodically checked.

Power Wiring

ATTENTION: National Codes and standards (NEC, VDE, BSI, etc.) and local codes outline provisions for safely installing electrical equipment. Installation must comply with specifications regarding wire types, conductor sizes, branch circuit protection and disconnect devices. Failure to do so may result in personal injury and/or equipment damage.

ATTENTION: To avoid a possible shock hazard caused by induced voltages, unused wires in the conduit must be grounded at both ends. For the same reason, if a drive sharing a conduit is being serviced or installed, all drives using this conduit should be disabled. This will help minimize the possible shock hazard from "cross coupled" power leads.

Motor Cable Types Acceptable for 100...600 Volt Installations

A variety of cable types are acceptable for drive installations. For many installations, unshielded cable is adequate, provided it can be separated from sensitive circuits. As an approximate guide, allow a spacing of 0.3 m (1 ft) for every 10 m (32.8 ft) of length. In all cases, long parallel runs must be avoided. Do not use cable with an insulation thickness less than 15 mils (0.4 mm/0.015 in.). Do not route more than three sets of motor leads in a single conduit to minimize "cross talk". If more than three drive/motor connections per conduit are required, shielded cable must be used.
UL installations above 50 °C ambient must use 600V, 90 °C wire.
UL installations in 50 °C ambient must use 600V, 75 °C or 90 °C wire.
UL installations in 40 °C ambient should use 600V, 75 °C or 90 °C wire.

Use copper wire only. Wire gauge requirements and recommendations are based on 75 °C. Do not reduce wire gauge when using higher temperature wire.

Unshielded

THHN, THWN or similar wire is acceptable for drive installation in dry environments provided adequate free air space and/or conduit fill rates limits are provided. Any wire chosen must have a minimum insulation thickness of 15 mils and should not have large variations in insulation concentricity.

ATTENTION: Do not use THHN or similarly coated wire in wet areas.

DRAFT

Shielded/Armored Cable

Shielded cable contains all of the general benefits of multi-conductor cable with the added benefit of a copper braided shield that can contain much of the noise generated by a typical AC Drive. Strong consideration for shielded cable should be given in installations with sensitive equipment such as weigh scales, capacitive proximity switches and other devices that may be affected by electrical noise in the distribution system. Applications with large numbers of drives in a similar location, imposed EMC regulations or a high degree of communications / networking are also good candidates for shielded cable.

Shielded cable may also help reduce shaft voltage and induced bearing currents for some applications. In addition, the increased impedance of shielded cable may help extend the distance that the motor can be located from the drive without the addition of motor protective devices such as terminator networks. Refer to Reflected Wave in "Wiring and Grounding Guide, (PWM) AC Drives," publication DRIVES-IN001.

Consideration should be given to all of the general specifications dictated by the environment of the installation, including temperature, flexibility, moisture characteristics and chemical resistance. In addition, a braided shield should be included and be specified by the cable manufacturer as having coverage of at least 75%. An additional foil shield can greatly improve noise containment.

A good example of recommended cable is Belden® 295xx (xx determines gauge). This cable has four (4) XLPE insulated conductors with a 100% coverage foil and an 85% coverage copper braided shield (with drain wire) surrounded by a PVC jacket.

Other types of shielded cable are available, but the selection of these types may limit the allowable cable length. Particularly, some of the newer cables twist 4 conductors of THHN wire and wrap them tightly with a foil shield. This construction can greatly increase the cable charging current required and reduce the overall drive performance. Unless specified in the individual distance tables as tested with the drive, these cables are not recommended and their performance against the lead length limits supplied is not known.

Recommended Shielded Wire

Location	Rating/Type	Description
Standard (Option 1)	600V, 90 °C (194 °F) XHHW2/RHW-2 Anixter B209500-B209507, Belden 29501-29507, or equivalent	• Four tinned copper conductors with XLPE insulation. • Copper braid/aluminum foil combination shield and tinned copper drain wire. • PVC jacket.
Standard (Option 2)	Tray rated 600V, 90 °C (194 °F) RHH/RHW-2 Anixter OLF-7xxxxx or equivalent	• Three tinned copper conductors with XLPE insulation. • 5 mil single helical copper tape (25% overlap min.) with three bare copper grounds in contact with shield. • PVC jacket.
Class I & II; Division I & II	Tray rated 600V, 90 °C (194 °F) RHH/RHW-2 Anixter 7V-7xxxx-3G or equivalent	• Three bare copper conductors with XLPE insulation and impervious corrugated continuously welded aluminum armor. • Black sunlight resistant PVC jacket overall. • Three copper grounds on #10 AWG and smaller.

Reflected Wave Protection

The drive should be installed as close to the motor as possible. Installations with long motor cables may require the addition of external devices to limit voltage reflections at the motor (reflected wave phenomena). Refer to Reflected Wave in "Wiring and Grounding Guide, (PWM) AC Drives," publication DRIVES-IN001.

The reflected wave data applies to all carrier frequencies 2...16 kHz.

For 240V ratings and lower, reflected wave effects do not need to be considered.

DRAFT

Output Disconnect

The drive is intended to be commanded by control input signals that will start and stop the motor. A device that routinely disconnects then reapplies output power to the motor for the purpose of starting and stopping the motor should not be used. If it is necessary to disconnect power to the motor with the drive outputting power, an auxiliary contact should be used to simultaneously disable drive (Aux Fault or Coast-to-Stop).

Power Terminal Block Wire Specifications

Frame	Maximum Wire Size(1)	Minimum Wire Size(1)	Torque
A	5.3 mm^2 (10 AWG)	0.8 mm^2 (18 AWG)	1.76...2.16 Nm (15.6...19.1 lb-in.)
B	8.4 mm^2 (8 AWG)	2.1 mm^2 (14 AWG)	1.76...2.16 Nm (15.6...19.1 lb-in.)
C	8.4 mm^2 (8 AWG)	2.1 mm^2 (14 AWG)	1.76...2.16 Nm (15.6...19.1 lb-in.)
D	13.3 mm^2 (6 AWG)	5.3 mm^2 (10 AWG)	1.76...2.16 Nm (15.6...19.1 lb-in.)
E	26.7 mm^2 (3 AWG)	8.4 mm^2 (8 AWG)	3.09...3.77 Nm (27.3...33.4 lb-in.)

(1) Maximum/minimum sizes that the terminal block will accept – these are not recommendations.

Common Bus/Precharge Notes

If drives are used with a disconnect switch to the common DC bus, then an auxiliary contact on the disconnect must be connected to a digital input of the drive.

I/O Wiring

Motor Start/Stop Precautions

ATTENTION: A contactor or other device that routinely disconnects and reapplies the AC line to the drive to start and stop the motor can cause drive hardware damage. The drive is designed to use control input signals that will start and stop the motor. If used, the input device must not exceed one operation per minute or drive damage can occur.

ATTENTION: The drive start/stop control circuitry includes solid-state components. If hazards due to accidental contact with moving machinery or unintentional flow of liquid, gas or solids exist, an additional hardwired stop circuit may be required to remove the AC line to the drive. When the AC line is removed, there will be a loss of any inherent regenerative braking effect that might be present - the motor will coast to a stop. An auxiliary braking method may be required. Alternatively, use the drive's safety input function.

Important points to remember about I/O wiring:

- Always use copper wire.
- Wire with an insulation rating of 600V or greater is recommended.
- Control and signal wires should be separated from power wires by at least 0.3 m (1 ft).

IMPORTANT I/O terminals labeled "Common" are not referenced to the safety ground (PE) terminal and are designed to greatly reduce common mode interference.

ATTENTION: Driving the 4-20 mA analog input from a voltage source could cause component damage. Verify proper configuration prior to applying input signals.

DRAFT

Signal and Control Wire Types

Recommendations are for 50 °C ambient temperature.
75 °C wire must be used for 60 °C ambient temperature.
90 °C wire must be used for 70 °C ambient temperature.

Recommended Signal Wire

Signal Type/Where Used	Belden Wire Type(s)*(or equivalent)*(1)	Description	Min. Insulation Rating
Analog I/O & PTC	8760/9460	0.750 mm^2 (18 AWG), twisted pair, 100% shield with drain(2)	300V, 60 °C (140 °F)
Remote Pot	8770	0.750 mm^2 (18 AWG), 3 conductor, shielded	
Encoder/Pulse I/O	9728/9730	0.196 mm^2 (24 AWG), individually shielded pairs	

(1) Stranded or solid wire.
(2) If the wires are short and contained within a cabinet which has no sensitive circuits, the use of shielded wire may not be necessary, but is always recommended.

Recommended Control Wire for Digital I/O

Type	Wire Type(s)	Description	Min. Insulation Rating
Unshielded	Per US NEC or applicable national or local code	–	300V, 60 °C (140 °F)
Shielded	Multi-conductor shielded cable such as Belden 8770 (or equivalent)	0.750 mm^2 (18 AWG), 3 conductor, shielded.	

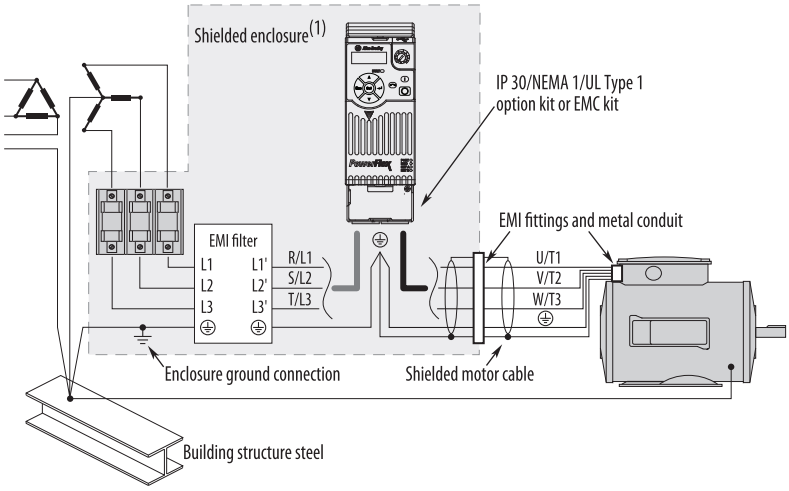
Maximum Control Wire Recommendation

Do not exceed control wiring length of 30 m (100 ft). Control signal cable length is highly dependent on electrical environment and installation practices. To improve noise immunity, the I/O terminal block Common may be connected to ground terminal/protective earth. If using the RS485 (DSI) port, I/O Terminal C1 should also be connected to ground terminal/protective earth. Additionally, communication noise immunity can also be improved by connecting I/O Terminal C2 to ground terminal/protective earth.

Control I/O Terminal Block Wire Specifications

Frame	Maximum Wire Size(1)	Minimum Wire Size(1)	Torque
A...E	1.3 mm^2 (16 AWG)	0.13 mm^2 (26 AWG)	0.71...0.86 Nm (6.2...7.6 lb-in.)

(1) Maximum/minimum sizes that the terminal block will accept – these are not recommendations.



Machinery Directive (2006/42/EC)

- EN ISO 13849-1 – Safety of machinery – Safety related parts of control systems -Part 1: General principles for design.
- EN 62061 – Safety of machinery – Functional safety of safety-related electrical, electronic and programmable electronic control systems.
- EN 60204-1 – Safety of machinery – Electrical equipment of machines - Part 1: General requirements.
- EN 61800-5-2 – Adjustable speed electrical power drive systems - Part 5-2: Safety requirement – Functional.

DRAFT

ITEM 746L

Connections and Grounding

(1) Some installations require a shielded enclosure. Keep wire length as short as possible between the enclosure entry point and the EMI filter.

PowerFlex 520-Series RF Emission Compliance and Installation Requirements

	Standard/Limits		
Filter Type	**EN61800-3 Category C1 EN61000-6-3 CISPR11 Group 1 Class B**	**EN61800-3 Category C2 EN61000-6-4 CISPR11 Group 1 Class A (Input power ≤ 20 kVA)**	**EN61800-3 Category C3 (I ≤ 100 A) CISPR11 Group 1 Class A (Input power > 20 kVA)**
Internal	–	10 m (33 ft)	20 m (66 ft)
External(1)	30 m (16 ft)	100 m (328 ft)	100 m (328 ft)

(1) See Accessory Dimensions on page 39 for more information on optional external filters.

DRAFT

Fuses and Circuit Breaker Ratings

The PowerFlex 520-Series drive does not provide branch short circuit protection. This product should be installed with either input fuses or an input circuit breaker. National and local industrial safety regulations and/or electrical codes may determine additional requirements for these installations.

The tables on pages 28...31 provide drive ratings and recommended AC line input fuse and circuit breaker information. Both types of short circuit protection are acceptable for UL and IEC requirements. Sizes listed are the recommended sizes based on 40 °C (104 °F) and the U.S. N.E.C. Other country, state or local codes may require different ratings.

Fusing

The recommended fuse types are listed in the tables found on pages 28...31. If available current ratings do not match those listed in the tables provided, choose the next higher fuse rating.

- IEC – BS88 (British Standard) Parts 1 & 2(1), EN60269-1, Parts 1 & 2, type GG or equivalent should be used.
- UL – UL Class CC, T, RK1, or J should be used.

(1) Typical designations include, but may not be limited to the following;
Parts 1 & 2: AC, AD, BC, BD, CD, DD, ED, EFS, EF, FF, FG, GF, GG, GH.

Circuit Breakers

The "non-fuse" listings in the tables found on pages 28...31 include inverse time circuit breakers, instantaneous trip circuit breakers (motor circuit protectors) and 140M self-protected combination motor controllers. If one of these is chosen as the desired protection method, the following requirements apply:

- IEC – Both types of circuit breakers and 140M self-protected combination motor controllers are acceptable for IEC installations.
- UL – Only inverse time circuit breakers and the specified 140M selfprotected combination motor controllers are acceptable for UL installations.

Bulletin 140M (Self-Protected Combination Controller)/UL489 Circuit Breakers

When using Bulletin 140M or UL489 rated circuit breakers, the guidelines listed below must be followed in order to meet the NEC requirements for branch circuit protection.

- Bulletin 140M can be used in single motor applications.
- Bulletin 140M can be used up stream from the drive **without** the need for fuses.

(1) Normal and Heavy Duty ratings are available for this drive

(2) When the drive is controlling motors with lower amp ratings, refer to the drive nameplate for drive intput current rating.

(3) The AIC ratings of the Bulletin 140M Motor Protector Circuit Breakers may vary. See Bulletin 140M Motor Protection Circuit Breakers Application Ratings.

(4) Bulletin 140M with adjustable current range should have the current trip set to the minimum range that the device will not trip.

(5) Manual Self-Protected (Type E) Combination Motor Controller, UL listed for 480Y/277 and 600Y/347 AC input. Not UL listed for use on 480V or 600V Delta/Delta, corner ground, or high-resistance ground systems.

(6) When using a Manual Self-Protected (Type E) Combination Motor Controller with this drive power rating, the drive must be installed in a ventilated or non-ventilated enclosure with the minimum volume specified in this column. Application specific thermal considerations may require a larger enclosure.

(7) Circuit breaker selection is not available for this drive rating.

(1) Normal and Heavy Duty ratings are available for this drive

(2) When the drive is controlling motors with lower amp ratings, refer to the drive nameplate for drive intput current rating.

(3) The AIC ratings of the Bulletin 140M Motor Protector Circuit Breakers may vary. See Bulletin 140M Motor Protection Circuit Breakers Application Ratings.

(4) Bulletin 140M with adjustable current range should have the current trip set to the minimum range that the device will not trip.

(5) Manual Self-Protected (Type E) Combination Motor Controller, UL listed for 480Y/277 and 600Y/347 AC input. Not UL listed for use on 480V or 600V Delta/Delta, corner ground, or high-resistance ground systems.

(6) When used with the 140M circuit breaker, the 25A-E9P9104 must be installed in a ventilated or non-ventilated enclosure with the minimum size of 457.2 x 457.2 x 269.8 mm (18 x 18 x 10.62 in.).

(7) When using a Manual Self-Protected (Type E) Combination Motor Controller with this drive power rating, the drive must be installed in a ventilated or non-ventilated enclosure with the minimum volume specified in this column. Application specific thermal considerations may require a larger enclosure.

(8) Circuit breaker selection is not available for this drive rating.

(1) The resistors listed in this tables are rated for 5% duty cycle.

(2) Use of Rockwell Automation resistors is always recommended. The resistors listed have been carefully selected for optimizing performance in a variety of applications. Alternative resistors may be used, however, care must be taken when making a selection. See the PowerFlex Dynamic Braking Resistor Calculator, publication PFLEX-AT001.

(3) Requires two resistors wired in parallel.

(4) Requires three resistors wired in parallel.

ITEM 746L

EMC Plates

Item	Description	Frame Size	Catalog No.
EMC Plate	Optional grounding plate for shielded cables.	A	25-EMC1-FA
		B	25-EMC1-FB
		C	25-EMC1-FC
		D	25-EMC1-FD
		E	25-EMC1-FE

Human Interface Modules (HIM) Option Kits and Accessories

Item	Description	Catalog No.
LCD Display, Remote Panel Mount	Digital speed control CopyCat capable IP 66 (NEMA Type 4X/12) indoor use only Includes 2.9 meter cable	22-HIM-C2S
LCD Display, Remote Handheld	Digital speed control Full numeric keyboard CopyCat capable IP 30 (NEMA Type 1) Includes 1.0 m cable Panel mount with optional Bezel Kit	22-HIM-A3
Bezel Kit	Panel mount for LCD Display, Remote Handheld unit, IP 30 (NEMA Type 1) Includes 2.0 m DSI cable	22-HIM-B1
DSI HIM Cable (DSI HIM to RJ45 cable)	1.0 m (3.3 ft)	22-HIM-H10
	2.9 m (9.51 ft)	22-HIM-H30

IP 30/NEMA 1/UL Type 1 Kit

Item	Description	Frame Size	Catalog No.
IP 30/NEMA 1/UL Type 1 Kit	Field installed kit. Converts drive to IP 30/NEMA 1/UL Type 1 enclosure. Includes conduit box with mounting screws and plastic top panel.	A	25-JBAA
		B	25-JBAB
		C	25-JBAC
		D	25-JBAD
		E	25-JBAE

Control Module Fan Kit

Item	Description	Frame Size	Catalog No.
Control Module Fan Kit	For use with drive in environments with ambient temperatures up to 70 °C or horizontal mounting.	A...D	25-FAN1-70C
		E	25-FAN2-70C

Incremental Encoder Input Option

Item	Description	Catalog No.
Incremental Encoder	Incremental encoder input option board.	25-ENC-1

WARNING: Only the 25-ENC-1 Encoder will work properly in the PowerFlex 525 drive. Installing an incorrect encoder card, such as the PowerFlex 527 25-ENC-2 will cause damage to the PowerFlex 525 drive.

DRAFT

Bulletin 160 to PowerFlex 520-Series Mounting Adapter Plate

Item	Description	B160 Frame Size	Catalog No.
Mounting Adapter Plate	For use with drive when replacing Bulletin 160 drives in existing installations to a PowerFlex 520-Series drive. Select the catalog number based on the frame size of your Bulletin 160 drive.	A	25-MAP-FA
		B	25-MAP-FB

Replacement Parts

PowerFlex 520-Series Power Module

Item	Description
PowerFlex 520-Series Power Module	Replacement power module for use with PowerFlex 520-Series drives. Includes: • Power Module • Power Module Front Cover • Power Terminal Guard • Heatsink Fan

PowerFlex 520-Series Control Module

Item	Description	Frame Size	Catalog No.
PowerFlex 523 Control Module	Replacement control module for use with PowerFlex 520-Series drives. Includes: • Control Module • Control Module Front Cover	A...E	25A-CTM1
PowerFlex 525 Control Module			25B-CTM1

Other Parts

Item	Description	Frame Size	Catalog No.
PowerFlex 523 Control Module Front Cover	Replacement cover for the control module I/O terminals, EtherNet/IP and DSI ports.	A...E	25A-CTMFC1
PowerFlex 525 Control Module Front Cover			25B-CTMFC1
PowerFlex 520-Series Power Module Front Cover	Replacement cover for the PowerFlex 520-Series power module.	B	25-PMFC-FB
		C	25-PMFC-FC
		D	25-PMFC-FD
		E	25-PMFC-FE

DRAFT

Other Parts

Item	Description	Frame Size	Catalog No.
PowerFlex 520-Series Power Terminal Guard	Replacement finger guard for power terminals.	A	25-PTG1-FA
		B	25-PTG1-FB
		C	25-PTG1-FC
		D	25-PTG1-FD
		E	25-PTG1-FE
PowerFlex 520-Series Heatsink Fan Kit	Replacement fan for drive power module.	A	25-FAN1-FA
		B	25-FAN1-FB
		C	25-FAN1-FC
		D	25-FAN1-FD
		E	25-FAN1-FE

Communication Option Kits and Accessories

Item	Description	Catalog No.
Communication Adapters	Embedded communication options for use with the PowerFlex 520-Series drives: • DeviceNet • Dual Port EtherNet/IP • PROFIBUS DP-V1	25-COMM-D 25-COMM-E2P 25-COMM-P
Compact I/O Module	Three channel	1769-SM2
Universal Serial Bus™ (USB) Converter Module	Provides serial communication via DF1 protocol for use with Connected Components Workbench software. Includes: • 2m USB cable (1) • 20-HIM-H10 cable (1) • 22-HIM-H10 cable (1)	1203-USB
Serial Converter Module (RS485 to RS232)	Provides serial communication via DF1 protocol for use with Connected Components Workbench software. Includes: • DSI to RS232 serial converter (1) • 1203-SFC serial cable (1) • 22-RJ45CBL-C20 cable (1)	22-SCM-232
DSI Cable	2.0 m RJ45 to RJ45 cable, male to male connectors.	22-RJ45CBL-C20
Serial Cable	2.0 m serial cable with a locking low profile connector to connect to the serial converter and a 9-pin sub-miniature D female connector to connect to a computer.	1203-SFC
Splitter Cable	RJ45 one to two port splitter cable (Modbus only)	AK-U0-RJ45-SC1
Terminating Resistors	RJ45 120 Ohm resistors (2 pieces)	AK-U0-RJ45-TR1
Terminal Block	RJ45 Two position terminal block (5 pieces)	AK-U0-RJ45-TB2P
Connected Components Workbench Software (Download or DVD-ROM)	Windows-based software packages for programming and configuring Allen-Bradley drives and other Rockwell Automation products. Compatibility: Windows XP, Windows Vista and Windows 7	http://ab.rockwellautomation.com/programmable-controllers/connected-components-workbench-software

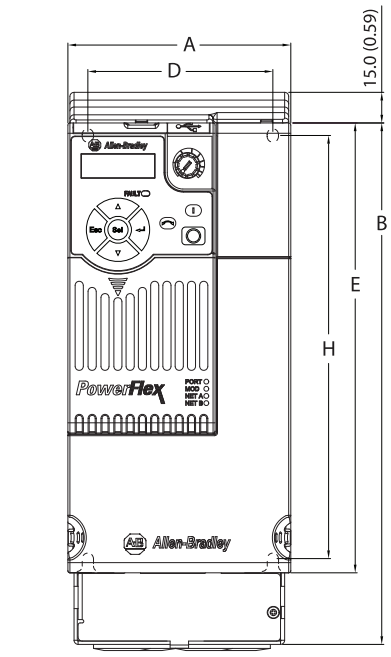
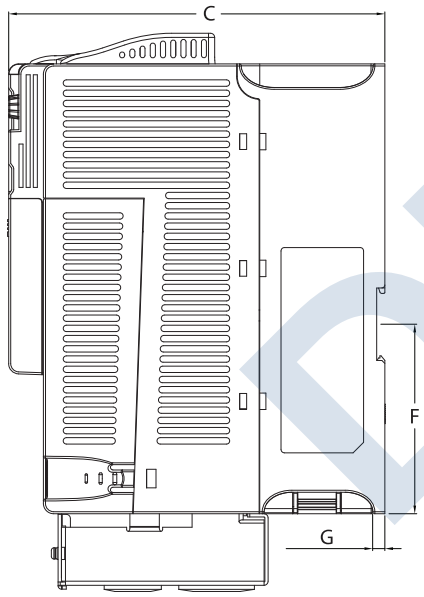
(1) Normal Duty and Heavy Duty ratings for 15 HP (11 kW) and below are identical except for 200...240V 3-Phase 15 HP (11 kW) drive.

(2) Standard 3-phase reactors can be used for 1-phase applications by routing each of the two supply conductors through an outside coil and leaving the center open.



(3) Catalog numbers listed are for 3% impedance. 5% impedance reactor types are also available. See 1321 Power Conditioning Products Technical Data, publication 1321-TD001.



(4) Input line reactors were sized based on the NEC fundamental motor amps. Output line reactors were sized based on the VFD rated output currents.

Safe-Torque-Off Function

The PowerFlex 525 Safe-Torque-Off function, when used with other safety components, helps provide protection according to EN ISO 13849 and EN62061 for safe-off and protection against restart. The PowerFlex 525 Safe-Torque-Off function is just one component in a safety control system. Components in the system must be chosen and applied appropriately to achieve the desired level of operator safeguarding.

PowerFlex 525 Safe-Torque-Off Overview

The PowerFlex 525 Safe-Torque-Off function:

- Provides the Safe-Torque-Off (STO) function defined in EN IEC 61800-5-2.
- Blocks gate-firing signals from reaching the Insulated Gate Bipolar Transistor (IGBT) output devices of the drive. This prevents the IGBTs from switching in the sequence necessary to generate torque in the motor.
- Can be used in combination with other safety devices to fulfill the requirements of a system "safe torque off" function which satisfies Category 3 / PL (d) according to EN ISO 13849-1 and SIL CL2 according to EN 62061, IEC 61508, and EN 61800-5-2.

IMPORTANT The function is suitable for performing mechanical work on the drive system or affected area of a machine only. It does not provide electrical safety.

EC Type Examination Certification

TÜV Rheinland has certified the PowerFlex 525 Safe-Torque-Off function compliant with the requirements for machines defined in Annex I of the EC Directive 2006/42/EC, and that it complies with the requirements of the relevant standards listed below:

- EN ISO 13849-1 Safety of machinery – Safety related parts of control systems – Part 1: General principles for design. (PowerFlex 525 STO achieves Category 3 / PL(d))
- EN 61800-5-2 Adjustable speed electrical power drive systems – Part 5-2 Safety requirements – Functional. (PowerFlex 525 STO achieves SIL CL 2)
- EN 62061 Safety of machinery – Functional safety of safety-related electrical, electronic and programmable electronic control systems.
- IEC 61508 Part 1-7 Functional safety of electrical/electronic/programmable electronic safety-related systems – Parts 1-7.

TÜV also certifies that the PowerFlex 525 STO may be used in applications up to Category 3/ PL(d) according to EN ISO 13849-1 and SIL 2 according to EN 62061 / EN 61800-5-2 / IEC 61508.

The TÜV Rheinland certificate may be found at http://www.rockwellautomation.com/products/certification/.

DRAFT

ITEM 746L

Safety Concept

The PowerFlex 525 Safe-Torque-Off function is suitable for use in safety applications up to and including Category 3 / PL(d) according to EN ISO 13849-1 and SIL 2 according to EN 62061 / EN 61800-5-2 / IEC 61508.

In addition, the PowerFlex 525 STO function may be used together with other components in a safety application to achieve an overall Category 3 / PL(e) according to EN ISO 13849-1 and SIL 3 according to EN 62061 and IEC 61508. This is illustrated in Example 3 on page 46.

Safety requirements are based on the standards current at the time of certification.

The PowerFlex 525 STO function is intended for use in safety-related applications where the de-energized state is considered to be the safe state. All of the examples shown here are based on achieving de-energization as the safe state for typical Machine Safety and Emergency Shutdown (ESD) systems.

PFD and PFH Data

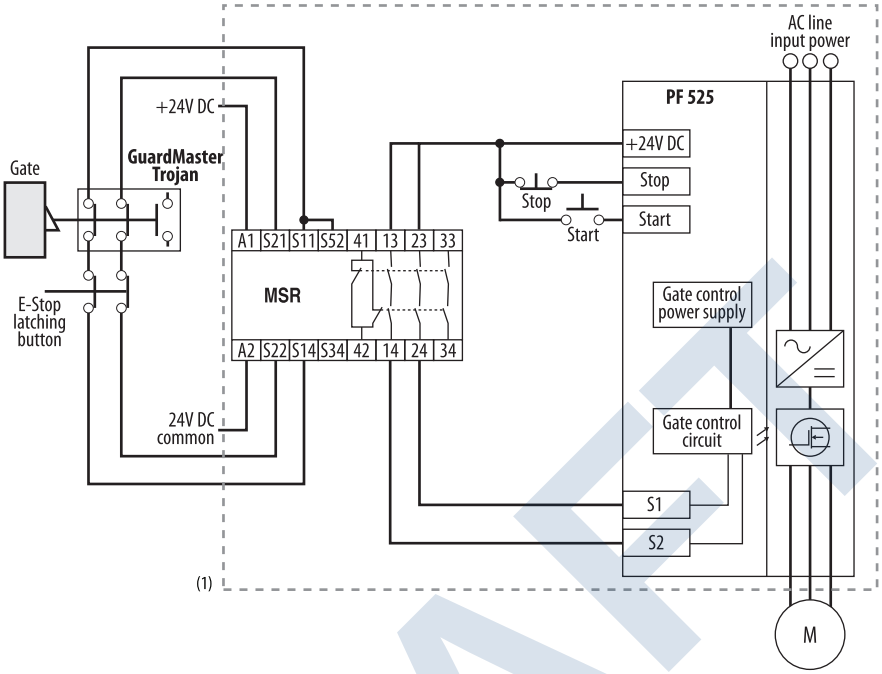
PFD and PFH calculations are based on the equations from Part 6 of EN 61508.

This table provides data for a 20-year proof test interval and demonstrates the worst-case effect of various configuration changes on the data.

PFD and PFH for 20-year Proof Test Interval

Attribute	Value
PFD	6.62E-05 (MTTF = 3593 years)
PFH_D	8.13E-10
SFF	83%
DC	62.5%
CAT	3
HFT	1 (1oo2)
PTI	20 YEARS
Hardware Type	Type A

Safety Reaction Time



The safety reaction time from an input signal condition that triggers a safe stop, to the initiation of the configured Stop Type, is 100 ms (maximum).

DRAFT

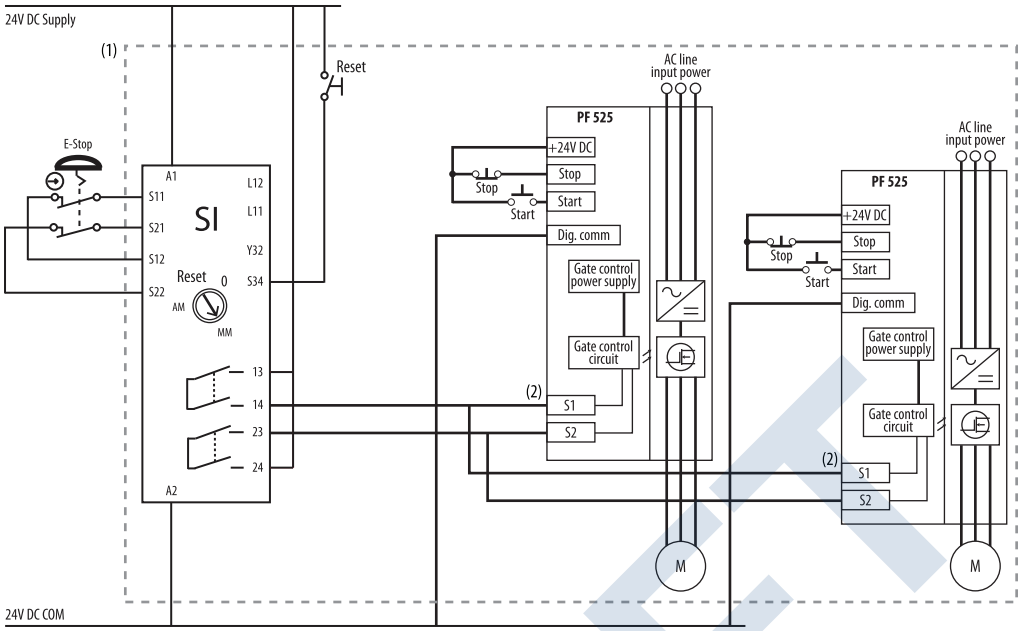
Connection Examples

Example 1 – Safe-Torque-Off Connection with Coast-to-Stop Action, SIL 2/PL d

Stop Category 0 – Coast



(1) Enclosure Recommended. Note: External wiring failure modes must be considered as described in EN ISO 13849-2. Enclosure or other measure to exclude these failure modes should be used.

(2) In some situations, a safety relay is not required if both the switch and PowerFlex 525 are installed in the same enclosure.

DRAFT

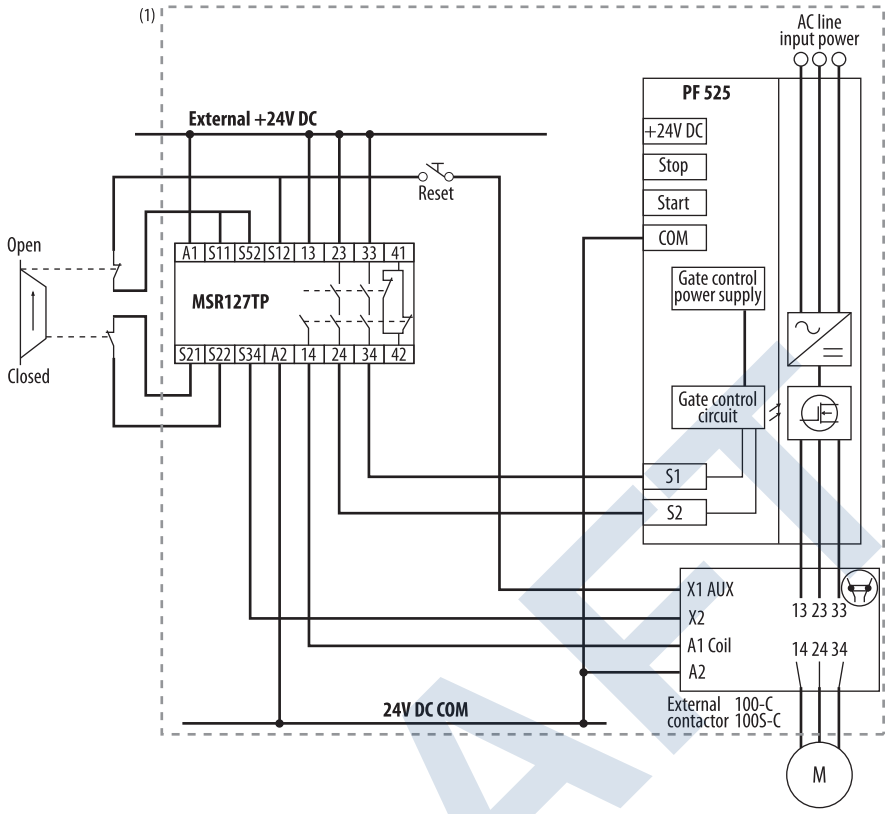
Stop Category 0 – Coast with Two PowerFlex 525 Drives

(1) Enclosure Recommended. Note: External wiring failure modes must be considered as described in EN ISO 13849-2. Enclosure or other measure to exclude these failure modes should be used.
(2) Each safety input draws 6 mA from the supply.

Example 2 – Safe-Torque-Off Connection with Controlled Stop Action, SIL 2/PL d

Stop Category 1– Controlled



(1) Enclosure Recommended. Note: External wiring failure modes must be considered as described in EN ISO 13849-2. Enclosure or other measure to exclude these failure modes should be used.

DRAFT

Example 3 – Safe-Torque-Off Connection with Coast-to-Stop Action Using External +24V supply, SIL 3/PL e

Stop Category 0 – Coast

(1) Enclosure Recommended. Note: External wiring failure modes must be considered as described in EN ISO 13849-2. Enclosure or other measure to exclude these failure modes should be used.

Important Information

Solid-state equipment has operational characteristics differing from those of electromechanical equipment. Safety Guidelines for the Application, Installation and Maintenance of Solid State Controls (publication SGI-1.1 available from your local Rockwell Automation sales office or online at http://www.rockwellautomation.com/literature/) describes some important differences between solid-state equipment and hard-wired electromechanical devices. Because of this difference, and also because of the wide variety of uses for solid-state equipment, all persons responsible for applying this equipment must satisfy themselves that each intended application of this equipment is acceptable.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this publication are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc., is prohibited.

Documentation Feedback

Your comments will help us serve your documentation needs better. If you have any suggestions on how to improve this document, complete this form, publication RA-DU002, available at http://www.rockwellautomation.com/literature/.

Item # 800

Alcoa Engineered Products

ALLOY 6061

Understanding Extruded Aluminum Alloys

Alloy 6061 is one of the most widely used alloys in the 6000 Series. This standard structural alloy, one of the most versatile of the heat-treatable alloys, is popular for medium to high strength requirements and has good toughness characteristics. Applications range from transportation components to machinery and equipment applications to recreation products and consumer durables. Alcoa produces 6061 for use in standard and custom shapes, rod and bar products, and seamless and structural pipe and tube.

Alloy 6061 has excellent corrosion resistance to atmospheric conditions and good corrosion resistance to sea water. This alloy also offers good finishing characteristics and responds well to anodizing; however, where cosmetic appearance is critical, consider the use of alloy 6063. The most common anodizing methods include clear, clear and color dye, and hardcoat.

Alloy 6061 is easily welded and joined by various commercial methods. (Caution: direct contact by dissimilar metals can cause galvanic corrosion.) Since 6061 is a heat-treatable alloy, strength in its -T6 condition can be reduced in the weld region. Selection of an appropriate filler alloy will depend on the desired weld characteristics. Consult the Material Safety Data Sheet (MSDS) for proper safety and handling precautions when using alloy 6061.

For screw machine applications, alloy 6061 has adequate machinability characteristics in the heat-treated -T6/-T6511 condition. With -T6/-T6511 mechanical properties, chips from machining (particularly turning and drilling) are difficult to break. Chip breakers are recommended, and special machining techniques (i.e. peck drilling) can improve chip formation. To enhance the machinability of its ECON-O-ROD®, ACC-U-ROD®, ECON-O-PLATE® and ACC-U-PLATE® products, Alcoa has developed a unique chemistry for alloy 6061, which conforms to industry specifications.

For minor bending applications, special forming tempers -T6S2, -T6S15, -T6S9 or -T6S10 may be sufficient to facilitate bending (dependent upon bend radius and degree of bend). When more severe bends are required, a softer temper condition such as -T1, -T4 or even -0 may be necessary to prevent cracking.

Alcoa offers alloy 6061 in a variety of standard tempers, as well as special tempers developed for unique applications. These are summarized below:

6061 Temper Designations and Definitions

Alcoa produces 6061 alloy with a wide selection of standard and special tempers. In the annealed condition (-O temper), 6061 is extremely ductile and well suited for severe forming applications. When solution heat-treated and naturally aged (-T4 condition), 6061 has good formability for bending. After artificial aging (precipitation heat-treating), 6061-T4 is capable of developing -T6 properties.

Standard Tempers	Standard Temper Definitions*
F	As fabricated. There is no special control over thermal conditions and there are no mechanical property limits.
O	Annealed. Applies to products that are annealed to obtain the lowest strength temper.
T1	Cooled from an elevated temperature shaping process and naturally aged. (See Note B.)
T4, T4511	Solution heat-treated and naturally aged. (See Notes C & D.)
T51	Cooled from an elevated temperature shaping process and artificially aged. (See Note B.)
T6, T6511	Solution heat-treated and artificially aged. (See Notes C & D.)
Alcoa Special Tempers**	**Alcoa Special Temper Definitions**
T4S6	For 6061 extrusions requiring maximum formability in the unaged condition and subsequently aged to -T6. May not meet -T4 minimum mechanical properties, but will meet -T6 minimum when properly aged. Test reports state -T6 properties to demonstrate heat treat capabilities, but extrusions are supplied unaged. (See Note A.)
T6S2, T6S15	For 6061 extrusions requiring good formability; meets standard 6061-T6 minimum properties.
T6S9, T6S10	For 6061 extrusions requiring improved forming characteristics not obtainable with -T6S2 and -T6S15 tempers. Lower minimum properties of 35.0 ksi tensile & 30.0 ksi yield guaranteed to enhance formability. (See Note A.)
T6S4	Applies to 6061 extrusions requiring maximum hardness for strength and good machinability. Same minimum tensile and yield strengths as standard -T6, but with lower minimum elongation of 6%. (See Note A.)
T6H, T6511H	Alcoa's "H" temper is offered for special applications requiring improved machinability and higher minimum mechanical properties than standard -T6 or -T6511. Minimum properties of 42 ksi tensile, 38 ksi yield, and 10.0% elongation are guaranteed. "H" temper is available for rod, bar, and certain solid profiles with a principle thickness of .500" or greater. (See Notes C & D.)
T6G, T6511G	Alcoa's "G" temper is available for applications requiring a uniform grain structure to enhance anodized appearance for rod and bar sizes with a thickness of 2.00" or greater. A minimal peripheral grain band may still be present, but it is greatly reduced compared to standard -T6/-T6511. Minimum mechanical properties are same as "H" tempers. (See Notes C & D.)
T6X, T6511X	Alcoa's "X" temper is available for special applications requiring a uniform recrystallized grain structure in extrusions less than 2" thickness to enhance anodizing appearance. Other benefits include improved machinability, same mechanical properties as 6061-T6/T6511. (See Notes C & D.)
T5S26	For 6061 press-quenched and over-aged extrusions requiring improved stamping characteristics. Minimum mechanical properties are 26.0 ksi tensile, 16 ksi yield, 16% elongation. (See Note A.)

*For further details of definitions, see Aluminum Association's Aluminum Standards and Data manual and Tempers for Aluminum and Aluminum Alloy Products. **Note A:** The specified special temper will not conform to Military, Federal, ASTM, ASME and AMS specifications. **Note B:** Applies to products that are not cold worked after cooling from an elevated temperature shaping process, or in which the effect of cold work in flattening or straightening may not be recognized in mechanical properties. **Note C:** Applies to products that are not cold worked after solution heat-treatment, or in which the effect of cold work in flattening or straightening may not be recognized in mechanical properties. **Note D:** Temper -T4511 and -T6511 apply to products that are stress-relieved by stretching.

**Alcoa Special Temper designations are unregistered tempers for reference only and provided for customer use to identify unique processing, material, or end use application characteristics.

① The mechanical property limits for standard tempers are listed in the "standards section" of the Aluminum Association's Aluminum Standards and Data manual. ② The thickness of the cross section from which the tension test specimen is taken determines the applicable mechanical properties. ③ For material of such dimensions that a standard test specimen cannot be taken, or for shapes thinner than 0.062", the test for elongation is not required. ④ For stress-relieved tempers, the characteristics and properties other than those specified may differ somewhat from the corresponding characteristics and properties of material in the basic temper. ⑥ D = Specimen diameter.

*Alcoa Special Temper designations are unregistered tempers for reference only and provided for customer use to identify unique processing, material, or end use application characteristics.

Sludge Pump

DRAFT

Offer No.: 500315890/1
Your reference: City of San Luis, AZ
Date: 20 November 2024

SEEPEX.
An Ingersoll Rand Business

Item: 10
Product group N
Standard Pump

CONVEYING CAPACITY
240 USGPM

PRESSURE
18 psi

SPEED
246 rpm

* typical image, design may differ

SEEPEX pumps from the BN range are used across all industries for pumping fluids that are free flowing up to more viscous products with or without solids. It has compact design featuring many ease of maintenance features designed by SEEPEX

BN

YOUR ADVANTAGES
• Compact, space-saving design with directly flange-mounted drive (block design)

• Reduced capital cost, as it has fewer parts associated with the drive

• Easy to maintain with the use of the plug-in-shaft connection between the rotating unit and drive

• Flexibility, it can be mounted vertically or horizontally and run in either direction

Multiple flange connection positions are possible

	pump to handle secondary waste activated
qty.: 2	**Progressive cavity pump**
	BN 70-6L / A1-C1-L8-F0-GA

Application data

Conveyed product	secondary waste activated
Flowability	flowable
Viscosity	low viscosity (< 500 cP/mPas)
Solids content	3.0% max.
Size of solids	not specified
Density	unknown, 1 kg/dm³ assumed
Product temperature	56°F - 86°F
Product temperature (norm.)	68°F
pH value	5-9
Kind of operation	continuous
Operating hours	8 h/day
Location	indoor, dry atmosphere
Altitude of installation	up to 1000 m assumed
Surrounding temperature	normal (32-104 °F)

Performance data

	Capacity	**Pressure**	**Speed**
	240 USGPM	18 psi	246 rpm
Starting torque	332 lb.ft		
Inlet pressure	flooded suction (up to 0,5bar)		

Tolerances according to SEEPEX standards.

Materials and executions

Installation	horizontal
Direction of rotation	counter clockwise (left)
Lantern - Design	with cover plates
Lantern - Material	EN-JL 1040 (gci-25)
Suction casing - Design	standard
Suction casing - Material	EN-JL 1040 (gci-25)
Pressure branch - Design	standard
Pressure branch - Material	EN-JL 1040 (gci-25)

Control Panel Submittal

Project: 524 – San Luis West WWTP
Project Engineer: Wesley Bond
Equipment Name: FKC Screw Press Dewatering System

The control panel for this project will be submitted under a separate cover. In an effort to get the Screw Press fabrication started (which is the long lead item), we need approval for the screw press before we could get the control panel submittal.

The panel will include the following:

Control Panel List

(Qty. 1) Screw Press Control Panel (60" x 49" x 18" NEMA 4X (316SS), Flange Mount Disconnect Enclosure) including:

-Allen Bradley 5069-L310ER Processor w/ Ethernet Connection Including:

- 32 Digital Inputs
- 16 Digital Outputs
- 8 Analog Inputs
- 8 Analog Outputs

-Maple Systems 9.7" OIT – w/ Sun Shield

-(Qty.1) Sludge Feed Pump VFD, 15 HP PowerFlex 525 w/ 3% Line Reactor & Ethernet Connection.

- HOA, running light, fail light & potentiometer.

-(Qty.1) Floc Tank Mixer VFD, 2 HP PowerFlex 525 w/ 3% Line Reactor & Ethernet Connection.

- HOA, running light, fail light & potentiometer.

-(Qty.1) Screw Press VFD, 7.5 HP PowerFlex 525 w/ 3% Line Reactor & Ethernet Connection.

- HOA, running light, fail light & potentiometer.

-(Qty.1) Conveyor VFD, 5 HP PowerFlex 525 w/ 3% Line Reactor & Ethernet Connection.

- HOA, running light, fail light & potentiometer.

-Process Stop, Power on Light on Panel Door

-UPS 1000VA

-Air Conditioner – 8000 BTU

-TVSS & 480/120 VAC Transformer - 120 VAC Power for 1 - Polymer System - Controls for 3 – Washwater Solenoids.

-Controls for 1 - Polymer System.

1.1 INSTRUMENTATION LIST

(Qty.1) Floc Tank Hi-Hi Level Switch (Warrick 316SS Probe w/ Electronics Module) (Qty.1) Headbox Level Transmitter (IFM 2" Sanitary Connection)

PERFORMANCE GUARANTEE

Project: 524 – San Luis West WWTP
Project Engineer: Wesley Bond
Equipment Name: FKC Screw Press Dewatering System

FKC's performance guarantee is as outlined in the bid document for the City of San Luis West WWTP. A summary of the guarantee is as follows in Tabel A.

Section A

Material to be dewatered:	Secondary Waste Activated (with minimal digestion)
Capacity:	11.928 BDST/Day (24-hours) or 994 Dry Lbs. / Hr.
Average Flowrate:	200 GPM @ 1.0%TS
Inlet Consistence:	0.75 – 1.2% or Higher
Outlet Consistency:	15% or Higher at 170 GPM or less Pass Paint Filter Test at 200 GPM
Maximum Polymer Dose:	30 Lbs. / Dry Ton (Active)
Capture Rate:	95% or Higher

In the event that performance is not met, FKC will provide all parts, engineering, and labor associated with the work necessary to bring the equipment into conformance with the performance guarantee.

WARRANTY CERTIFICATION

Project: City of San Luis West WWTP, AZ
Project Engineer: Wesley Bond
Equipment Name: FKC Screw Press and associated equipment

Conditions of Warranty:

A. General Warranty – the General Warranty shall cover all components of the system for a period of 24 months after component acceptance. It will cover all parts, labor and coating for repair or replacement of equipment that fails during the warranty period at no cost to the Owner.

B. This warranty includes meeting the performance requirements as outlined in the Guarantee tab in this bid proposal.

C. FKC will expend this warranty an additional 12 months (36 months total) for an additional US$12,500.00

SHOP DRAWING REVIEW

Project: **San Luis West WWTP Improvements**

Submittal No. **#46 21 58_001 – Hydro-Dyne Headworks**

Date Received: **06/02/2025**

Job #: **B777**

Comments:

No Exceptions Taken..... ☐
Submit Specific Item ..... ☐
Accepted with Corrections Noted..... ☒
Revise and Resubmit..... ☐
Rejected ..... ☐

Note:
Review is only for general conformance with the design concept of the project and general compliance with the information included in the Contract Documents. Any action shown is subjected to the requirements of the drawings and the specifications. Contractor is responsible for correlating and confirming dimensions at the job site, choice of fabrication processes and techniques of construction: coordination of his work with that of other trades; and performing the work in a safe satisfactory manner.

DATE: 06/13/2025 BY: NT, GT

Submittal Comments:

General

1. It is noted in many locations throughout the submittal that HDE will not provide anchors and anchoring systems. It is understood that HDE will provide all necessary anchors and anchoring systems. To reduce duplicated markups, this will be the sole comment regarding the stated supply.
2. Similar to the anchors and anchoring systems, the submittal mentions that HDE will not provide grit pumps and accessories. It is understood that HDE will provide grit pumps and grit pump accessories. To reduce duplicated markups, this will be the sole comment regarding the stated supply.
3. It is understood that HDE is responsible for supplying a complete and operable system as stated in the Certificate of Conformance within the Purchase Agreement.

Submittal Table of Contents:

Scope of Work

DRAFT

1. Stop logs AND grit baffles are not included as individual line items within Scope of Supply but are provided by HDE.
2. Clarifications #18 and #19 are assumed to be redacted as HDE Scope of Supply has changed

Equipment Specifications

1. Please see PACE review comments in submittal.

Equipment Drawings

1. Please see PACE review comments in submittal.

Controls Drawings

1. Please provide installation spacing requirements for main control panels.
2. Control Panels and Level Controller panels will be located outside of the classified spaces. No exception with these being NEMA 4X rated.
3. Page 299 of 513: Ethernet switches should include provisions for fiber connectivity (SFP ports) and be managed type to allow for connectivity to the fiber ring (Spanning Tree Protocol). See Network Diagram on plan sheet I0.1. Note each control panel should have provisions for an internal fiber patch panel.
4. Please provide EchoMax level sensors with 100m factory cable length to allow the relocation of Level Controller panel outside of classified area.

Control Component Specifications

1. No submittal comments.

Installation Procedures

1. No submittal comments. Contractor to note.

Accessory Catalog Cuts

1. Verify inlet and outlet size of cyclone. Unit marked as D10LB has 4” inlet and 5” overflow marked on page 438. Page 439 states 4” inlet and 6” overflow.

Drive Motors & Gear Reducers

1. All motors to be provided with NDS+ severe duty protection option.

Equipment Warranty

1. No submittal comments.

Misc.

1. No submittal comments.

DRAFT

Contractor to Note:

1. Verify structure conditions for the headworks and grit removal equipment installation. See submittal and submittal notes for specific dimension requirements (e.g., tolerance for floor/invert at screens).
2. Reference submittal for HDE supplied items on spray wash system. Note also, required sizes of connection at each occurrence.
3. All electrical conduits, spray wash feeds, and equipment drain lines shall be installed to minimize obstructions on the maintenance/working surface of the structure.
4. Coordinate installation of field instruments and control stations to allow for proper access and maintenance. All field instruments and control panels shall be installed as indicated in the submittal, and per respective manufacturer's installation requirements.
5. Contractor to install all HDE supplied equipment per manufacturer and submittal requirements.
6. Contractor to provide and install ¼" NPT vacuum breaker on grit line per Equipment Drawing Sheet 6/11.

2.8	Accessories ~~(not including concrete anchors)~~	1 lot

GRIT BAFFLE, STOP LOGS, GRIT PUMPS (AND ACCESSORIES), AND ANCHORS PROVIDED BY HDE

FREIGHT
F.O.B shipment point with freight costs included.

NOT INCLUDED
This scope of work is limited to the specification section(s) and addendum(s) referenced above. Any other documents are not included. Concrete work, installation, plumbing, wiring connections, valves, strainers, level sensor mounts, engineering certifications or seals, seismic/wind calculations and related PE stamps, and anything else not specifically detailed as included by the manufacturer in the

DRAFT

specification above will be construed as NOT INCLUDED, whether or not inclusion is specifically acknowledged.

This scope of work does not include supply of any type of bond unless specifically itemized in the table above.

COMPLIANCE WITH BIPARTISAN INFASTRUCTURE LAW (BIL Public Law 117-58)
and BUILD AMERICA, BUY AMERICA ACT (BABA)

Equipment supplied in this Scope of Work will comply with the Bipartisan Infrastructure Law's (BIL) Build America, Buy America (BABA) requirements for manufactured products. As defined in the Law, this means:
(i) the manufactured product was manufactured in the United States, and
(ii) the cost of the components of the manufactured product that are mined, produced, or manufactured in the United States is greater than 55 percent of the total cost of all components of the manufactured product.

VALIDITY

Price quoted is firm provided:

1. Purchaser agrees to timely review and approval of submittals. The Purchaser is permitted a maximum of thirty (30) calendar days for the review and return of initial submittals, and fourteen (14) calendar days for the review and return of any resubmittal. Purchaser is allowed no more than one (1) resubmittal. Any delays in the review and approval process or any resubmittals exceeding this limit may result in a price escalation, not to exceed 1.5% per calendar month of the total purchase price. Hydro-Dyne Engineering reserves the right to impose not only additional costs, but such delays may also affect the overall project timeline.
2. Purchaser agrees to accept shipment 26 weeks from date of receipt of approved drawings and authorization to proceed with manufacture. Shipments delayed by the purchaser or his agents will be escalated at a rate of 1-1/2% per calendar month, compounded, of the value of the unshipped portion.

PROJECT DELIVERY SCHEDULE

- Time required to generate an acceptable submittal for the Engineer's review – 6 weeks
- Time required to manufacture the equipment once the submittal has been approved by the Engineer and receipt of Notification to Proceed – 26 Weeks
- Time of delivery for O&M Manuals – Prelim - 8 weeks after approved submttals, Final – 16 weeks after submittal approval.
- Time of delivery of complete equipment systems –1 week after manufacture of equipment
- Schedule delay (for both shop drawing submittals preparation and equipment fabrication and delivery with O&M Manual) will result in liquidated damage of $500 per calendar day, starting two weeks after milestone due date, up to 50% of the contract value, only if Purchaser is assessed liquidated damages by the Owner as a result of Supplier's delay."

TAXES

Applicable sales or use taxes, fees, permits, and licenses are not included.

DRAFT

COMMISSIONING SERVICE & CUSTOMER TRAINING

- This service will not exceed three (3) trips and five (5) eight-hour working days.
- Each additional trip will be figured at $2,000 and each additional day onsite will be figured at $1,200. It is agreed and understood that all necessary utilities such as water, electric, air, etc. be connected and functional prior to the arrival of our servicemen.
- A complete job of checking, adjusting, etc. of the equipment and installation cannot be accomplished unless the plant is ready to operate at the time this service is to be performed.
- Our servicemen are non-union technicians and any extra cost for other assisting personnel as required by local union regulations is not included in this proposal.
- Advance notification of at least fifteen (15) working days prior to the date start-up service is required.

WARRANTY

The equipment and all appurtenances including, but not limited to: frame, supports, covers, and mechanisms manufactured by Hydro-Dyne Engineering are warranted for a period of 24 months against defects in materials and workmanship, starting upon beneficial use or 90 days after delivery, whichever occurs first. The Warranty covers repair or replacement of the defective components, but does not included labor to remove and install equipment or parts, or shipping and freight charges to and from the purchaser's job site. The Warranty shall also not apply to any parts, equipment, accessories or components that were either manufactured or were designed by any person or entity other than Hydro-Dyne Engineering itself. Hydro-Dyne will provide any pass-through warranty that is permitted to pass-through to Purchaser in connection with the portions of the Products that are not Warranted Parts.

PAYMENT TERMS

- 35% on approved submittal(s) – invoice for approved submittals to be submitted by 6/15/25
- 45% on delivery.
- 15% on start-up and training.
- 5% on delivery of final O&M Manual(s). Operation & Maintenance Manuals must be submitted and approved prior to shipping equipment to the jobsite.

- Past due balances will be subject to a service charge of 1-1/2% per month on the unpaid balance and services, including shipping and startup, will not be scheduled until account is current.

CLARIFICATIONS TO THE RFP

1. Hydro-Dyne's pricing is valid based on notification to proceed with manufacture by 6/9/25.
2. RFP 1.a.v - Hydro-Dyne is taking exception to the requirement to supply Volume in cubic yards of structural concrete required – Hydro-Dyne's design fits within a footprint of 27.0 ft x 63.2 ft, well within the 42 ft x 72 ft area identified in the RFP.
3. RFP 1.b. - There is no cost adder or schedule impact for providing a BABA compliant system.
4. RFP 1.e – Hydro-Dyne is willing to provide a Performance Bond in the amount of 100% through the end of warranty period. Hydro-Dyne is supplying a Letter of Bondability from our Surety in lieu of a letter in Hydro-Dyne letterhead.
5. RFP 1.e – Hydro-Dyne is taking exception to the requirement to provide a letter stating our willingness to provide a 100% performance guarantee for the duration of the warranty. Hydro-Dyne is excluding the Performance Guarantee from our offer. Hydro-Dyne will supply projected

DRAFT

headloss at 1MGD, 1.5MGD, 2.25MGD and 3MGD, and verify hydraulic performance during commissioning.

6. RFP 1.g. – Hydro-Dyne is taking exception to the escalation clause and is including an adder for cost escalation to extend bid validity an additional 12 months. Note bid validity is based on date Notice To Proceed is received.
7. Maintenance and Repair Contract – Hydro-Dyne is taking exception to the Full Maintenance and Repairs Contract provisions. Hydro-Dyne is including, as an adder, a 5-year service plan as part of our offer.
8. Guarantee - Hydro-Dyne is taking exception to the following "*Further, it shall state that required subsystems or appurtenances omitted will be provided by the vendor at no additional cost to the owner*."
9. Warranty – Hydro-Dyne is taking exception to the following *"The warranty shall include meeting the performance guarantee specified. Vendor shall bear 100% of any replacement costs or costs incurred due to upgrades required to meet the performance requirements during the lifetime of the warranty period and/or the duration of the Full Maintenance and Repair Contract."* Hydro-Dyne is providing our standard 2 year warranty.
   The equipment and all appurtenances including, but not limited to: frame, supports, covers, and mechanisms manufactured by Hydro-Dyne Engineering are warranted for a period of 24 months against defects in materials and workmanship, starting upon beneficial use or 90 days after delivery, whichever occurs first. The Warranty covers repair or replacement of the defective components, but does not included labor to remove and install equipment or parts, or shipping and freight charges to and from the purchaser's job site. The Warranty shall also not apply to any parts, equipment, accessories or components that were either manufactured or were designed by any person or entity other than Hydro-Dyne Engineering itself. Hydro-Dyne will provide any pass-through warranty that is permitted to pass-through to Purchaser in connection with the portions of the Products that are not Warranted Parts.
10. Equipment Performance, Layouts, and Specifications – Hydro-Dyne is taking exception to the following "*Performance data provided shall be guaranteed for the duration of the warranty period and/or Full Maintenance and Repair Contract*." (see#5)
11. Equipment/System Automation - Hydro-Dyne's system is designed for fully automatic operation with minimal operator attention. See Appendix "Typical Sequence Of Automatic Operation For Two Channel Integrated Headworks System", for detailed description of system's automatic operation.
12. Schedule Liquidated Damages - Hydro-Dyne can agree to liquidated damage provisions for late delivery as revised below: "Should Seller delay the Project, or any portion thereof, in any way, then Supplier's sole liability and Purchaser's sole remedy is assessment of liquidated damages of $500/day, starting 2 weeks after the contractual milestone date, up to 50% of the contract value, only if Purchaser is assessed liquidated damages by the Owner as a result of Supplier's delay."
13. RFP 1.2.D - Hydro-Dyne is quoting an upgraded enhanced washing compactor which exceeds the RFP requirement to produce dewatered screenings capable of passing the EPA Paint Filter Test as described in method 9095 of EPA Publication SW-486. Smaller opening (6mm and smaller) perforated plate screens may remove a high amount of organic solids which need to be thoroughly washed and returned to the channel by the washing compactor. The quoted washing compactor will meet the following specifications:
    - Weight reduction up to 80%
    - Screening volume reduction up to 85%
    - Organic removal up to 95%
    - Dewatered screenings dry solids content up to 40% (depending on material to be dewatered)

DRAFT

CLARIFICATIONS TO THE RFP (continued)

14. RFP 1.2.I - Details of electrical classification environments are not provided in the RFP. Hydro-Dyne is quoting C1D2 components (motors), Nema 4X (MCP and Hydro-ranger panels), Nema 4 (IP66) Sluice level Sensor with external probes, and C1D1 components (solenoids, LCS, ultra-sonic level sensors) and can supply C1D1 components for a cost adder, if the final design requires these to be placed in a C1D1 environment.
15. Exhibit C – Capital Cost Summary – Hydro-Dyne costing details are for information only as we are providing an integrated package. Pricing provided cannot be used to purchase selective line items.
16. Materials of Construction - Hydro-Dyne is supplying our standard paint coatings and is taking exception to the paint spec for gears, motors and bearings. We can provide an adder to supply spec compliant paint if requested. Hydro-Dyne will provide the following:

- All ferrous surfaces (except stainless steel) shall be coated with a pre-primer, primer, and an exterior top coating, or fusion bonded polyester coating suitable for humid/wet environments for superior corrosion protection.
- Motor(s) and gearbox(s) shall be surface prepared to withstand humid/wet environments for superior corrosion protection.

17. Hydro-Dyne proposal does not include engineering certifications or seals, seismic/wind calculations and related PE stamps. These can be provided for a cost adder upon request.
18. ~~Hydro-Dyne scope does not include supply of anchors or grit pumps and accessories.~~
19. Hydro-Dyne cannot re-use previously referenced seismic certification on grit pump anchorage, ~~grit pump supplied by others.~~
20. Hydro-Dyne proposal does include design to applicable ASCE-22 seismic standards and local San Luis codes, by re-using a previously certified more robust California design.

For additional information, please contact our local representative listed above or me personally.

Sincerely,
Randall Dow
Sales Director
Hydro-Dyne Engineering, Inc.

HDE TO PROVIDE ANCHORS, GRIT PUMPS & ACCESSORIES

DRAFT

GREAT WHITE CENTER FLOW SCREEN & WHITETIP SHARK WASHING COMPACTOR TECHNICAL SPECIFICATIONS

Part 1 GENERAL

1.1 SCOPE – Supply all labor, materials, equipment and incidentals required to install and place into operation the fine and coarse screening system as shown on the Drawings and as specified herein.

1.2 REFERENCE STANDARDS – The properties of all materials, design, fabrication and performance of the equipment to be furnished under this section shall be in accordance with the latest issue of applicable standard specifications. The governing authorities of these standards are listed below.

A. AISC, American Institute of Steel Construction
B. AISI American Iron and Steel Institute
C. ANSI, American National Standards Institute
D. ASCE, American Society of Civil Engineers
E. ASME, American Society of Mechanical Engineers
F. ASTM, American Society of Testing and Materials
G. AWS, American Welding Society
H. IBC, International Building Code
I. IEC, International Electric Code
J. IEEE, Institute of Electrical and Electronics Engineers
K. NEC, National Electrical Code
L. NEMA, National Electrical Manufacturers Association
M. Underwriters Laboratory (UL and cUL)

1.3 SUBMITTALS - Submittals shall be provided to the engineer that includes all the following information:

A. Certified shop drawings showing all important details of construction, dimensions and anchor bolt locations.
B. Descriptive product literature.
C. Schematic electrical wiring diagram and electrical controls information.
D. Complete motor and drive data.
E. The total weight of the equipment.
F. A complete bill of materials of all equipment.
G. A valid certificate of registration naming manufacturer, and supplier if equipment is relabeled, as ISO 9001:2015 certified.
H. A certificate from an industry recognized, independent testing facility verifying compliance with Screening Capture Ratio requirement.

1.4 QUALIFICATIONS

A. All the equipment specified under this Section shall be supplied by a single manufacturer whose Quality Management System is ISO 9001:2015 certified and applicable to the manufacture of water and wastewater treatment equipment.

DRAFT

B. If equipment is not manufactured by supplier, including welding and machining, the name and contact information of manufacturing facility must be supplied. If more than one manufacturer is used all companies and facilities must be provided.

C. If patents protecting equipment are not owned by supplier, then an affidavit must be supplied stating owner of design and expiration of licensing agreement.

D. All equipment specified under this Section shall comply with Bipartisan Infrastructure Law's (BIL Public Law 117-58) Build America, Buy America (BABA) requirements for manufactured products. As defined in the Law, this requires:
(i) the manufactured product was manufactured in the United States, and
(ii) the cost of the components of the manufactured product that are mined, produced, or manufactured in the United States is greater than 55 percent of the total cost of all components of the manufactured product.
Certifications attesting to compliance will be required prior to approval and shall be included with submittals and upon completion of manufacture.

1.5 DESIGN REQUIREMENTS

A. System Description

1. The fine screen will have a continuous stainless steel belt that automatically rotates within the internal guide system of the static frame.

2. The fine screen herein specified will be of the center flow type. The flow enters the inside of the continuous belt and exits through both sides and the bottom of the belt.

3. The screen shall have undergone performance testing by an industry recognized, independent testing facility. The results of this testing shall verify a Screening Capture Ratio of at least 84% (coarse screen)/ 93% (fine screen) for solids equal to or larger than the screen grid opening listed in System Performance below.

4. The screen will be installed into a widened chamber section of the channel as shown on the contract drawings to accommodate the flow pattern through the screen belt.

5. The solids will collect as a mat on the inside of the continuous belt. The belt will intermittently rotate and elevate the solids to the discharge point. Larger objects will be picked up by a series of hooks and/or trays placed at regular intervals.

6. The solids will be removed at the top of the screen by two spray bar headers positioned on the outside of the belt. The screenings will drop into an internal hopper and be fed to the screening handling system.

7. The continuous belt will be directly driven by drive sprockets that shall support and rotate the grid assembly.

8. The screen will be totally enclosed and have access covers that will be lightweight and easily removable for maintenance. Maintenance, inspection, access and lubrication points shall be no higher than 60 inches above grade level.

DRAFT

9. The Washing Compactor will be positioned next to the screening channels and will be fed by a sluice system.

10. The Washing Compactor will be adequately sized to handle all the screenings and wash water that will be generated by the screen at peak flow. The system will be required to wash the screenings to reduce the organic content and compact the remaining solids into a dry plug.

11. The Washing Compactor will generally comprise of a screw auger rotating within the washing and drainage trough, a wash water system, a compaction zone and an outlet chute arrangement.

12. All stainless steel (including frame, grid and drive components) mentioned below as stainless steel shall be T304 stainless steel. All hardware shall be T316 stainless steel.

B. System Performance – The fine screening system will be designed to meet the following design parameters:

COARSE SCREENS;

1. Number of screens	2
2. Peak flow per screen	7.5 MGD
3. Average flow to screen	3 MGD
4. Velocity through the grid	max 3.0 ft/s
5. Screen grid opening	6 mm
6. Head loss at peak flow	4.7 inches @ 50% blinding and 37 inches downstream water level
7. Structural design differential of frame/grid	48 inches minimum @ 100% blinding
8. Drive design differential (operating)	48 inches minimum
9. Screen grid supporting drive sprockets	2 minimum – all stainless steel
10. Channel width	18 inches
11. Channel Recess	36 inches
12. Channel height	66 inches
13. Number of Washing Compactors	2
14. Diameter of screw	8 inches
15. Minimum diameter of shaft	2.75 inches
16. Compactor discharge height above grade	48 inches
17. Screen wash water requirements	29 GPM @ 60 PSI each
18. Compactor wash water requirements	25 GPM @ 60 PSI each
19. Sluice wash water requirements	10-20 GPM @ 60 PSI intermittent

FINE SCREENS;

1. Number of screens	2
2. Peak flow per screen	7.5 MGD
3. Average flow to screen	3 MGD
4. Velocity through the grid	max 3.0 ft/s
5. Screen grid opening	2 mm

DRAFT

6. Head loss at peak flow	11.4 inches @ 65% blinding and 34 inches downstream water level
7. Structural design differential of frame/grid	48 inches minimum @ 100% blinding
8. Drive design differential (operating)	48 inches minimum
9. Screen grid supporting drive sprockets	3 minimum – all stainless steel
10. Channel width	18 inches
11. Channel Recess	36 inches
12. Channel height	102 inches
13. Number of Washing Compactors	2
14. Diameter of screw	6 inches
15. Minimum diameter of shaft	2.25 inches
16. Compactor discharge height above grade	48 inches
17. Screen wash water requirements	58 GPM @ 60 PSI each
18. Compactor wash water requirements	25 GPM @ 60 PSI each
19. Sluice wash water requirements	10-20 GPM @ 60 PSI intermittent

Part 2 PRODUCTS

2.1 MANUFACTURER

A. The equipment shall be the Center Flow Screen and Washing Compactor as provided by Hydro-Dyne Engineering, Inc., Clearwater, FL. Other than the named supplier, all manufacturers proposing equipment described herein, will provide a detailed submittal package, which will consist, at a minimum, of all information and details prescribed in section 1.3, 1.4 and Part 2 of this specification. All pre-qualification submittals will be submitted to the Engineer at least 15 days prior to the bid date.

B. If submitted equipment requires arrangement differing from that specified, prepare and submit for review complete structural, mechanical, and electrical drawings and equipment lists showing all necessary changes and embodying all special features of equipment proposed. Any changes are at no additional compensation and the Manufacturer will be responsible for all engineering costs of redesign by the Engineer, if necessary.

2.2 THE CENTER FLOW SCREEN

A. Perforated Plate - The Continuous Screening Belt

1. The Fine screenings belt will consist of panels manufactured from stainless steel plate that shall be punched with perforations of the specified opening. The stainless steel plate shall be reinforced with a stainless steel frame.

2. The Coarse screenings belt will consist of panels manufactured from 3/8” thick UHMWPE with perforations of the specified opening.

3. The perforated panels will be supported by 12 gauge stainless steel vertical mounted lifting hooks horizontally spaced a maximum of 3 inches apart preventing deflection. The lifting hooks shall support the screening grid and bear tension loads across the entire length and width of the screen belt. Grids that do not have stainless steel vertical

DRAFT

mounted lifting hooks horizontally spaced a maximum of 3 inches apart across the grid will not be acceptable.

4. The hooks on elements shall form horizontal lifting trays or shelves for removing large solids and rags every 8 inches around the entire screen grid.

5. The perforated panels will be connected by heavy duty stainless steel axles every 8 inches to form a continuous belt that will rotate within the frame's guide system. The axle design will allow the plates to pivot and create a seal between the perforated panels to prevent the passage of solids.

6. The axles will include Delrin spacers that will maintain the 3 inch space between the vertical support elements. Delrin spacers will also form a seal between each perforated panel with clearance not to exceed 0.5mm.

7. The axles will be extended to fix a UHMWPE guide link to the side of each perforated plate. These guides will interlock to create a continuous guide link system that will slide within the frame.

8. Guide links shall be precision machined from solid virgin UHMWPE. Injection molded links are not acceptable.

9. The heavy duty guide links will be minimum 2 inches thick to protect against undue wear from grit and will be specially machined to form a closure seal between the rotating belt and the static frame.

10. The seal shall be continuous from grade level through the water flow forming an uninterrupted closure between the traveling screen grid and the stationary frame. The seal shall be heavy gauge stainless steel, fixed to the screen frame and be adjustable so it will remain in contact with the rotating screen belt at all times.

11. Screen designs that have gaps and/ or tolerances greater than 0.5mm between the screens grid plates and between the sides of the grid and screen frame, including the chain, are not acceptable.

12. Screen's sealing materials are to consist of solid, non-flexible materials that will maintain the 0.5mm tolerance for the lifecycle of the screen.

13. Screen designs whose sealing materials will not last the lifecycle of the screen and require replacement by the owner/ operators, are not acceptable.

14. Guide systems that use rollers, stainless or hardened steel chains will not be acceptable.

15. Grid panel sealing systems that require the use of replaceable neoprene seals or stainless steel hinges will not be acceptable.

16. Grid to frame sealing systems that require the use of replaceable adjustable UHMWPE strips attached to the frame will not be acceptable.

DRAFT

B. The Frame

1. The continuous belt will rotate within a heavy duty stainless steel static support frame that shall be a rectangular box construction.

2. The guide link system will travel around a stainless steel guide wear track that is integral to the support frame. Top and bottom wear tracks shall be bolt in and field replaceable.

3. There shall be a removable inspection panel located directly beneath the drive allowing easy access to the grid drive sprockets, drive shaft and screenings collection hopper.

4. The design will ensure that the support frame meshes with the closure seal on each guide link to prevent passage of screening material and grit particles.

5. All components of the lower wear tracks shall be bolt in, field replaceable and manufactured from stainless steel.

6. The frame shall accommodate stainless steel protective covers designed to prevent leakage and contain spray wash. All maintenance and inspection access points shall have hinged and gasketed access covers. Screens with covers requiring neoprene, rubber or plastic seals are not acceptable.

7. To minimize odors and nuisance, the screen frame shall have flanged connections for odor control.

8. The screen manufacturer will supply stainless steel angled filler plates to connect from the upstream corners of the support frame to the channel walls.

9. The back-plate of the screen shall be furnished with a bypass gate that will allow manual removal for complete flow bypass.

C. The Offloading of Screenings

1. Two stainless steel spray wash headers will be located in the head space of the screen to offload the screenings from the continuous belt.

2. The spray bar will incorporate brass nozzles at 2 inch spaces that can easily be replaced or removed for cleaning.

3. The spray bars will be positioned behind the rotating belt and will backwash the solids into an internal hopper manufactured from stainless steel. The wash water will be used to continuously flush the screenings from the internal hopper into the extended sluice.

4. The addition of a rotating or static brush system to aid offloading will not be acceptable.

NO BYPASS GATE ON 2MM

REMOVABLE BYPASS ONLY ON 6MM

DRAFT

D. Screen Drive Mechanism

1. Each screen will have a maximum 0.75 hp (0.56KW, FLA 1.1), inverter duty electric motor suitable for a 460/3/60 supply and rated for a Class 1 Div. 2 environment. As a minimum, the motor will have an IP55 enclosure rating and will conform to NEMA MG-1 requirements. The motor will be located outside of the screen covers and above the top of the channel.

2. The gear reducer shall be directly coupled to a heavy duty shaft machined from solid stainless steel round bar.

3. The drive shaft shall be supported on both ends by grease filled roller bearings. Separate grease-filled self-contained cartridge seals shall be mounted on drive shaft between bearings and frame to eliminate spray wash from entering bearings or gear reducer.

4. The continuous belt will be supported and rotated around heavy duty stainless steel sprockets located on the drive shaft in the head space of the screen.

5. These sprockets will have removable bolted-on lugs that transmit torque directly from the gear reducer to notches on the underside of the UHMWPE guide links. The drive shall be sized so that a minimum of four lugs are engaging guidelinks at all times. Driving forces shall be transmitted to areas located behind the screen's grid to prevent solids from contacting drive surfaces.

6. Chain driven systems or screens with wheels submerged in the wastewater are not acceptable.

7. Drive systems that use an external track and pinion to drive or push the band against grid weight supporting wear tracks will not be acceptable. Drive shall lift, and be capable of bearing, the full weight of the grid.

2.3 WEIR

A. The manufacturer shall design and supply a stainless steel weir that will be installed by the contractor downstream of the screen.

B. The weir will be designed to maintain a downstream water depth that will increase screen performance during periods of high flow.

C. The weir will be anchored to the sides of the channel with no external horizontal supports across the channel to prevent the accumulation of solids.

2.4 THE SCREENINGS TRANSFER SLUICE

A. The manufacturer will design and supply a screenings launder sluice system that will collect screenings and wash water from the discharge hopper of the screen and transfer them into the washing compactors.

DETAILS TO BE PROVIDED IN O&M

DRAFT

1. Collected screenings will transfer through the sluice by means of gravity. Mechanically driven conveyors will not be acceptable.

2. The manufacturer shall supply a solenoid valve that will be plumbed in field into the back plate of the sluice. The contractor will connect to a local plant water supply, and the water supply will provide supplementary transport water.

3. The sluice will be manufactured from stainless steel. It shall comprise of U-shaped lengths of trough that will be flange connected to the desired overall length.

4. A change in direction will be achieved using long swept bends that will prevent blockages from occurring.

5. The sluice system will be designed with a splitter that diverts flow into 1 of 2 compactors. The splitter will be fitted with a manual removable gates to divert into any branch of the sluice

6. The sluice system will include the support leg structure manufactured from stainless steel as needed. The legs will be suitable for anchoring to a concrete floor.

7. Covers will be lightweight, no more than 6 feet long and bolted for easy removal by a single operator.

2.5 THE WASHING COMPACTOR WITH ENHANCED WASHING AND DEWATERING

A. The main body will be the washing trough that will receive screenings and wash water directly from the end of the screenings transfer sluice.

B. The washing trough will house the screw auger and provide a dedicated section to reduce organic content.

C. The stainless steel drainage section will be perforations with 2mm or 5mm openings and be adjustable to maintain auger alignment. This drainage section shall be removable and easily replaceable in the field with no special tools. The flights of the screw may be fitted with a stiff nylon brush that will maintain contact with the drainage section, preventing blockages. The replaceable brushes will be supplied in pre-coiled lengths with stainless steel removable clamps.

D. The underside of the washing trough will be a catch pan chute that will divert the water that passes through the drainage section, back to the influent flow with dual outlet plain end pipe connections. The unconnected pipe side will be capped with a rubber compression cap so that it can be removed and the drain piping can be cleaned if necessary. The catch pan will include a flushing connection point for washing and cleaning.

E. The catch pan will include a separate wash water supply to purge the area of accumulated solids. A single spray nozzle will direct water across the length of the pan toward the outlet. The frequency of cleansing cycles will be controlled through the main control panel.

DRAFT

F. The AR400 hardened steel screw auger will sit in the washing trough. Washing compactors with shaftless screws are not acceptable as a shaft is required to support the flight and provide necessary torque and compaction. Screw auger will be primer coated to inhibit corrosion. Screw augers not made out of AR-400 hardened steel will not be acceptable.

G. The auger will be a varied pitch screw aligned at the compaction end by AR400 hardened steel wear and anti-rotation bars designed to prevent the compacted screening from spinning within the compaction zone.

H. The screw will rotate allowing wash water and free organic/fecal material finer than trough openings to escape and return to the plant flow. The wash water will flush the separated organic material through the drainage section in solution or as small particles.

I. Washing of screenings shall be achieved through an enhanced washing module consisting of the following minimum requirements manufactured out of stainless steel:

1. Variable pitch flight for separate screening transport through the wash, dewatering and compaction zones.
2. Washing Module Zone
    a. Flanged connections and a stainless steel orifice plate or nozzle
    b. Hardened steel wear and anti-rotation bars
    c. Separately controlled high pressure washing to sheer and break-up organic and fecal material for return to the channel.
    d. Cleansing cycles moving the auger in forward and reverse direction are controlled through the main control panel and operator adjustable up to 9 cycles
3. Dewatering and Compaction Zone
    a. Stainless steel header feeding an external rinse shower
    b. Hardened steel wear and anti-rotation bars
    c. Full circumference perforations for dewatering and extrusion of organics and fecal material.
    d. Attached drainage catch pan with a separate wash water supply to purge the area of accumulated solids
    e. Removable covers for inspection access

J. Washing compactors that do not have a separate washing and rinse/dewatering zones will not be accepted.

K. The compacted screenings will be pushed through the compaction zone and pass through an elbow into an outlet chute. The outlet chute will provide for screening expansion and will elevate the dewatered screenings to discharge into a bagging system.

L. The outlet chute will terminate in a flange that will connect directly to a stainless steel discharge long radius elbow that will direct the compacted screenings downward into the screenings collection bag. The elbow will be designed to prevent bridging of solids and will be flanged for accessibility.

M. The outlet of the discharge elbow will be a stainless steel mounting assembly that will allow a 24” diameter circular screenings collection bag to slide into position.

DRAFT

N. The screenings collection bag will house one 230 feet long continuous bag that will be released under the weight of compacted screenings dropping from the outlet chute.

O. The plastic bag shall be capable of cutting and tying off into operator determined sizes to effectively capture odor and all remaining water in screenings.

P. Each Washing Compactor will have a maximum 3 hp(2.2KW, FLA 3.8), inverter duty electric motor suitable for a 460/3/60 supply and rated for a Class 1 Div. 2 environment. As a minimum, the motor will have an IP55 enclosure rating and will conform to NEMA MG-1 requirements.

2.6 SPARE PARTS - The manufacturer will supply the following spare parts, per screen supplied, with the equipment:

A. Ten (10) hook links and elements spacers
B. Two (2) grid axles
C. Two (2) guide links
D. Two (2) screen panels
E. One (1) center support link (fine screens only)
F. One (1) brush for each screw
G. Five (5) total screenings collection continuous bags

2.7 ACCESSORIES - The manufacturer will supply the following accessories, with the equipment:

A. Eight (8) 0.75" NEMA 7 brass body solenoid valve
B. Six (6) 1" NEMA 7 brass body solenoid valve
C. Two (2) 2" NEMA 7 brass body solenoid valve
D. Four (4) 2" wash water strainer
E. Eight (8) wash water pressure gauge
F. One (1) lot of PVC ball valves

SHEETS 10&11 SHOW
(8) 1" VALVES
(6) 3/4" VALVES
(2) 2" VALVES

HDE TO VERIFY & UPDATE SHEETS

ANCHORS BY HDE

2.8 ELECTRICAL CONTROLS AND ANCILLARY COMPONENTS

A. General Information - The manufacturer will supply two UL listed main control panels and fourteen local control stations that shall automatically control the equipment offered in this section.

B. The Main Control Panel – NEMA 4X stainless steel enclosure for outdoor installation – Each control panel shall consist of the following components for each screening system:

1 Enclosure, NEMA 4X, 304SS, 2-door, floor standing, 3-point latch with lighting fixture with door switch
1 Purge kit, exterior mount, leak compensation type
1 Main disconnect breaker with operating handle
1 480V surge suppressor
1 120V surge suppressor
1 Line filter

DRAFT

1 Control power transformer
1 ABB, ACS580 series VFD, 0.75HP, 480VAC/3Ph with fused protection (Coarse Screen)
1 Schneider, IEC starter, reversing type, 3HP, 480VAC/3Ph with circuit protection (Coarse Screen – WC)
1 ABB, ACS580 series VFD, 1.5HP, 480VAC/3Ph with fused protection (Fine Screen)
1 Schneider, IEC starter, reversing type, 1.5HP, 480VAC/3Ph with circuit protection (Fine Screen – WC)
1 Schneider, IEC starter, non-reversing type, 0.75HP, 480VAC/3Ph with circuit protection (Grit Trap)
1 Schneider, IEC starter, non-reversing type, 0.5HP, 480VAC/3Ph with circuit protection (Grit Classifier)
1 Schneider, IEC starter, non-reversing type, 5HP, 480VAC/3Ph with circuit protection (Grit Pump)
1 Allen Bradley, CompactLogix 5380L3 controller with standard I/O modules as required
1 Allen Bradley, PanelView Plus 7 series, 10'' HMI, standard model with window it
1 24VDC power supply
1 Unmanaged ethernet switch, 8-ports (10/100Mbps)
7 Hour meter
2 IS Barrier – Analog Signal (if required)
1 IS relay – 4 channels (for Float Switch)
1 Ethernet surge suppressor
1 APC, SMT1500C UPS, 120VAC with UPS maintenance bypass switch
1 Heater with thermostat
1 Vortex A/C enclosure cooler, hazardous location, 2500BTU
1 Ground bar
LOT of signal surge suppressors
LOT of timer relays
LOT of pilot lights as required
LOT of control relays, terminal blocks, fuse blocks, wire duct, supplementary circuit protection, UL label as required

VERIFY AND UPDATE TO 4,000 BTU AS PROVIDED ON PAGE 120

C. Ancillary Control Components -

PROVIDE FLOAT SWITCH DEPTH AND INSTALLATION LOCATION IN O&M

1. Float switch
2. Ultrasonic differential level system consisting of the following per screen:
   a. NEMA 4X enclosure with viewing window
   b. Milltronics Hydro-Ranger LT500 controller with real-time 4-20 mA output
   c. Two (2) NEMA 4X/7 transducers
3. Local Control Station – NEMA 7 - Each local station panel shall consist of the following components:
   a. NEMA 7 enclosure
   b. Hand/Off/Auto switch for each motor
   c. Forward/Off/Reverse switch for compactor motor
   d. Emergency stop
4. Sluice level limit switches (Nema 4, IP65)

Part 3 SURFACE PREPARATION AND PAINTING

DRAFT

A. The majority of stainless steel materials, flanges and piping shall be pickled by means of a four tank system that is in accordance with ASTMs A380. This process is for quality control, removal of heat affected discoloration, surface treatment for corrosive environments and to provide a uniform finish to stainless steel surfaces. Stainless steel components must be fully submerged in the tanks for complete coverage. Electro-chemical wanding is acceptable on weld finishes that cannot be submerged due to size. Sandblasting, pickling pastes and abrasive cleaners will not be accepted as forms of metal finishing. The drive and grid components do not require pickling.

   Tank 1 – Detergent bath for the removal of soils, greases, oils and dirt
   Tank 2 – Rinsing process to remove detergent and residual soils
   Tank 3 – Two part acid solution for the removal of tightly adhere oxide films
   Tank 4 – Final rinse process to remove all residual acid

   The four-tank pickling process must be conducted in-house at the manufacturer's own ISO 9001 certified manufacturing facility. Any screening equipment providers who are unable to perform this process in-house are not acceptable.

B. All ferrous surfaces (except stainless steel) shall be coated with a pre-primer, primer, and an exterior top coating, or fusion bonded polyester coating suitable for humid/wet environments for superior corrosion protection.

C. Motor(s) and gearbox(s) shall be surface prepared to withstand humid/wet environments for superior corrosion protection.

Part 4 EXECUTION

4.1 WARRANTY - The Manufacturer of the equipment supplied under this specification shall provide a warranty for a period of 2 years commencing on startup and /or acceptance by the Owner but no later than 90 days from the date of shipment by the Manufacturer. The Manufacturer shall guarantee that the equipment furnished is suitable for the purpose intended and free from defects in design, materials and workmanship. In the event that the equipment fails to perform as specified the Manufacturer shall, at his option, promptly repair, modify or replace the defective equipment.

4.2 FACTORY TESTING

A. The screening system and all components shall be factory assembled. Equipment is tested for a minimum of 4 hours prior to shipment. The equipment shall be shipped fully assembled and shall be capable of being set in place and field erected by the Contractor with minimal field assembly.

B. During the factory test period the screening system shall be adjusted as required assuring proper operation on completion of the field installation. The Manufacturer shall supply a certification of the completion of the factory testing of the assembled screening system and appurtenances and shall certify as to the equipment being in satisfactory operating condition at time of shipment. The Engineer and/or Owner may, at their own option and expense, witness the factory test.

DRAFT

4.3 DELIVERY AND STORAGE

A. The screening system shall be appropriately crated and delivered to protect against damage during shipment.

B. An authorized representative of the Contractor shall inspect the screens on delivery to the jobsite and shall report any damage or missing components to the Manufacturer and the Engineer within 72 hours of receipt of the shipment.

4.4 INSTALLATION - The installation of the equipment shall be as indicated on the drawings and in strict accordance with the Manufacturer's instructions and recommendations.

4.5 FIELD TESTS, ADJUSTMENTS AND COMMISSIONING

A. The equipment shall be shipped completely factory assembled. Contractor shall verify all access dimensions, channel dimensions, and any interior building dimensions to ensure equipment may be installed as factory assembled units.

B. After completion of the installation, the equipment shall be inspected and certified by an authorized representative of the Manufacturer as being in compliance with the Manufacturer's recommendations and requirements. At such time as the Manufacturer has deemed the installation to be acceptable, the Manufacturer's authorized service representative shall make any required adjustments and shall start the equipment to ensure proper operation.

C. The Manufacturer's authorized representative shall provide instruction to the plant personnel as to the operation and maintenance of the equipment including commissioning, shut down, on-line operations, lubrication and preventative maintenance.

D. Manufacturer shall state field service rates for a Service Engineer to Owner and Contractor. In the event that the field service time required by this section should not be sufficient to properly place the equipment into operation, and the requirement for additional time is beyond the manufacturer's responsibility, additional time shall be purchased by Contractor to correct deficiencies in installation, equipment, or material without additional cost to Owner.

E. The Contractor shall include in his bid, the cost of the above referenced authorized service representative for a minimum of three (3) trips totaling five (5) eight hour days onsite to complete the certifications and training described in this specification section.

End of Section

DRAFT

VORTEX GRIT REMOVAL AND HANDLING SYSTEM (PUMP)
TECHNICAL SPECIFICATIONS

Part 1 GENERAL

1.1 SCOPE – Supply all labor, materials, equipment and incidentals required to install and place into operation the grit system as shown on the Drawings and as specified herein.

1.2 REFERENCE STANDARDS – The properties of all materials, design, fabrication and performance of the equipment to be furnished under this section shall be in accordance with the latest issue of applicable standard specifications. The governing authorities of these standards are listed below.

A. AISC, American Institute of Steel Construction
B. AISI American Iron and Steel Institute
C. ANSI, American National Standards Institute
D. ASCE, American Society of Civil Engineers
E. ASME, American Society of Mechanical Engineers
F. ASTM, American Society of Testing and Materials
G. AWS, American Welding Society
H. IBC, International Building Code
I. IEC, International Electric Code
J. IEEE, Institute of Electrical and Electronics Engineers
K. NEC, National Electrical Code
L. NEMA, National Electrical Manufacturers Association
M. Underwriters Laboratory (UL and cUL)

1.3 SUBMITTALS – Submittals shall be provided to the engineer that includes all the following information:

A. Certified shop drawings showing all important details of construction, dimensions and anchor bolt locations.
B. Descriptive product literature.
C. Schematic electrical wiring diagram and electrical controls information.
D. Complete motor and drive data.
E. The total weight of the equipment.
F. A complete bill of materials of all equipment.
G. A valid certificate of registration naming manufacturer, and supplier if equipment is relabeled, as ISO 9001:2015 certified.

1.4 QUALIFICATIONS

A. All the equipment specified under this Section shall be supplied by a single manufacturer whose Quality Management System is ISO 9001:2015 certified and applicable to the manufacture of water and wastewater treatment equipment.

B. If equipment is not manufactured by supplier, including welding and machining, the name and contact information of manufacturing facility must be supplied. If more than one manufacturer is used all companies and facilities must be provided.

DRAFT

C. If patents protecting equipment are not owned by supplier then an affidavit must be supplied stating owner of design and expiration of licensing agreement.

D. All equipment specified under this Section shall comply Bipartisan Infrastructure Law's (BIL Public Law 117-58) Build America, Buy America (BABA) requirements for manufactured products. As defined in the Law, this requires:
(i) the manufactured product was manufactured in the United States, and
(ii) the cost of the components of the manufactured product that are mined, produced, or manufactured in the United States is greater than 55 percent of the total cost of all components of the manufactured product.
Certifications attesting to compliance will be required prior to approval and shall be included with submittals and upon completion of manufacture.

1.5 DESIGN REQUIREMENTS – VORTEX COLLECTOR

A. System Description

1. The Grit Trap will be a "vortex" style system designed to operate continuously.

2. The internal rotating mechanism will be installed into the circular concrete chamber as shown on the contract drawings. The chamber will consist of an upper separation chamber and a lower collection hopper.

3. The wastewater flow will enter the chamber tangentially, flow around the upper separation chamber and exit via an outlet channel running parallel to the inlet.

4. The grit solids will fall through the upper separation chamber to settle in the lower collection hopper. The transfer grit pump will regularly cycle and transport the grit particles to the de-watering Grit Classifier.

5. Consistent performance of the grit chamber throughout the flow ranges will be maintained by the motor driven impeller that continuously rotates within the upper separation chamber. The device will provide the ideal conditions to enhance grit settlement and maximize the ejection of light organic solids from the chamber.

6. The floor of the upper separation chamber must be sloped as shown on the contract drawings to prevent grit accumulation and allow the grit to fall be gravity into the collection hopper.

7. All stainless steel (including drive tube and impeller) mentioned below as stainless steel shall be T304 stainless steel. All hardware shall be T316 stainless steel.

B. System Performance

1. The Grit Trap will be designed to meet the following grit removal performance guarantee at all flows up to and including the peak flow. Grit is defined as silica sand; specific gravity = 2.65 g/cc:

a.	Grit greater than 50 mesh/297 micron	95%
b.	Grit greater than 60 mesh	90%
c.	Grit greater than 70 mesh/210 micron but not less than 50 mesh	85%

DRAFT

d. Grit greater than 100 mesh/149 micron but not less than 70 mesh 65%

2. The Grit Trap model will be selected to meet the following design parameters:

a.	Number of chambers required	1
b.	Peak flow per chamber	7.5 MGD
c.	Maximum allowable head loss at peak flow	1 inches
d.	Average flow	3 MGD
e.	Grit fluidizing water requirements	20gpm @ 40PSI

1.6 DESIGN REQUIREMENTS – GRIT PUMP (Shown as a reference only, Grit Pump ~~supplied by others)~~

BY HDE

A. System Description

1. The manufacturer shall supply a grit pump to transfer the grit and liquid from the collection hopper to the grit screw classifier system.

2. The grit pump shall be mounted as shown on the contract drawings.

3. The contractor shall supply the 4 inch pipe from the top of the suction pipe to the grit pump inlet and the grit pump outlet to the grit screw classifier.

4. System Performance – The grit pump will fully comply with the following criteria:

a.	Number of grit pumps	1
b.	Maximum pump capacity	250 GPM
c.	Minimum Motor HP rating	5 hp
d.	Inlet connection	4 inches
e.	Outlet connection	4 inches

1.7 DESIGN REQUIREMENTS – GRIT CLASSIFIER SYSTEM

A. System Description

1. The Grit Classifier system will be adequately sized to receive and process a mixture of grit and liquid regularly pumped at the maximum specified rate from the vortex grit chamber.

2. A cyclone mounted on top of the Grit Classifier will provide initial dewatering. The excess liquid will be immediately returned to the main flow.

3. The partially dewatered grit will be deposited into the main body of the Grit Classifier. The heavy grit will settle in the collection hopper while the excess liquid will overflow an internal weir and be returned to the main flow.

4. The grit will be elevated by a rotating screw to a discharge point above the internal water level. By this time the grit material will be free of any free-standing liquid.

5. All stainless steel (including Grit Classifier and grit cyclone) mentioned below as stainless steel shall be T304 stainless steel. All hardware shall be T316 stainless steel.

DRAFT

B. System Performance – The Grit Classifier system will fully comply with the following criteria:

1.	Number of cyclones	1
2.	Maximum capacity of cyclone:	250 GPM
3.	Inlet flanged spool piece connection	4 inches
4.	Overflow flanged spool piece connection	6 inches
5.	Apex	2 inches
6.	Maximum underflow to screw classifier	30 GPM Maximum
7.	Number of screw classifiers	1
8.	Maximum capacity of screw classifier	30 GPM
9.	Diameter of screw	12 inches
10.	Diameter of screw shaft	3 inches
11.	Minimum length of screw	8 feet
12.	Speed of screw	12 RPM
13.	Motor Size	1/2 HP

Part 2 PRODUCTS

2.1 MANUFACTURER

A. The equipment shall be the Grit Trap and the Grit Classifier as provided by Hydro-Dyne Engineering, Inc., Clearwater, FL. The grit pump shall be the Gorman Rupp T4A. Other than the named supplier, all manufacturers proposing equipment described herein, will provide a detailed submittal package, which will consist, at a minimum, of all information and details prescribed in section 2.2, including BABA compliance, of this specification. All pre-qualification submittals will be submitted to the Engineer at least 15 days prior to the bid date.

B. If submitted equipment requires arrangement differing from that specified, prepare and submit for review complete structural, mechanical, and electrical drawings and equipment lists showing all necessary changes and embodying all special features of equipment proposed. Any changes are at no additional compensation and the Manufacturer will be responsible for all engineering costs of redesign by the Engineer, if necessary.

2.2 THE VORTEX GRIT TRAP

A. General

1. The internal mechanism of the Grit Trap will consist of a gear motor, a drive head, a drive tube and a rotating impeller.

2. The grit chamber shall be a concrete structure provided by the contractor that must have inlet and outlet channels as shown on the drawings.

B. The Drive Head Assembly

1. The drive head will be a composite unit consisting of a heavy duty steel base and cover. The base section will support a nominal 20 inch turntable bearing that has a minimum

DRAFT

B-10 life of 20 years. The Contractor will be responsible for correctly mounting the drive head on the bridge.

2. The drive tube will be rotated at a nominal 15 RPM by a heavy duty spur tooth bull gear wheel securely bolted to the turntable bearing. This bull gear wheel will be driven by a steel drive pinion mounted on the output shaft of the helical gear motor. The pinion and the bull gear will have a service factor of 5.0 or greater at standard operating speeds.

3. The helical gear motor will be directly shaft mounted to the bull gear wheel. Each drive head will have a single 3/4 hp(0.56KW, FLA 1.1), continuous duty electric motor suitable for a 460/3/60 supply and rated for a Class 1 Div.2 environment. As a minimum, the motor will have an IP55 enclosure rating and will conform to NEMA MG-1 requirements.

4. The whole drive head assembly will be suitable for continuous operation.

C. The Rotating Mechanism

1. The drive tube will be 10 inch diameter pipe that will run down the center of the grit chamber. The drive tube will pass through an opening in bull gear wheel and terminate inside the drive head as an open pipe. This will allow passage for the suction pipe assembly detailed in 2.3 B1.

2. The impeller will be attached to the drive tube by means of a two piece collar. The impeller shall have four equally spaced blades fixed to a base plate. As the impeller rotates each blade will pass within 6 inches from the top of the collection hopper. The impeller blades will be set at 5 to 20 degrees to the vertical. The profile of the impeller blades will be designed to maximize grit capture and eject floating solids out of the chamber. The impeller will rotate at a nominal 15 RPM in the direction to the wastewater flow.

3. The rotating mechanism will be manufactured from stainless steel.

2.3 THE GRIT PUMP – TOP MOUNTED – Shown as reference only – ~~Grit Pump supplied by others~~ Ref. Gorman Rupp T4AS-B/F

A. General

1. The grit pump shall be supplied on a factory built fabricated steel base suitable for mounting as shown on the contract drawings.

B. The Internal Suction Pipe for Top Mounted Grit Pump

1. The grit pump suction arrangement will consist of a 4-inch diameter suction pipe and a parallel 1.5-inch fluidizing pipe that will run down the inside of the drive tube to within 4 inches off the bottom of the grit collection hopper floor. Both pipes will terminate immediately above the drive head. The manufacturer will supply a 1.0 inch solenoid valve and two manual PVC isolation valves that the Contractor will install at a convenient place in the fluidizing pipe above the drive head. The Contractor will bring and connect an air or water supply to the 1.5 inch pipe that will provide agitation of the grit before each pumping cycle.

DRAFT

2. The grit pump suction assembly will be manufactured from stainless steel.

3. The contractor will connect the fluidizing pipe to a water supply that will deliver a minimum pressure of 40 psig at the suction point. This will provide a blast of water that will agitate the grit prior to each pumping cycle.

4. The manufacturer will control the solenoid valve and hence the fluidizing cycle through the control panel

5. The Contractor will supply the pipe to the flanged connection of the center mounted 4 inch suction pipe that terminates above the drive head to the inlet of the grit pump.

6. The Contractor shall provide the 4 inch pipe from the outlet of the grit pump to the dewatering screw classifier.

7. The grit pump shall be designed to handle the passage of a 3-inch spherical solid.

C. Grit Pump Design ~~(Grit Pump and Grit Pump accessories supplied by others)~~

1. The foot supported pump casing will be designed to retain sufficient liquid for automatic re-priming between pumping cycles. It will allow a horizontal centerline suction and vertical discharge arrangement and incorporate a fill port with safety lock bar and Teflon gasket. A drain hole will be provided for connection to the drain kit. The kit shall contain 10' length of reinforced plastic hose with a female quick connect fitting at one end, and factory installed drain fittings in each pump. Fittings include a stainless steel pipe nipple, stainless steel bushing, stainless steel ball valve and aluminum male quick connect fitting.

2. A separate capped threaded port will be provided if a casing heater is required. If required thermostat control will be provided the main control panel.

3. The cover plate will be supplied with a removable wear liner. It will be sealed to the pump casing by two Buna-N O-rings. The cover plate also has a pressure relief valve to open at 75 PSI fitted with a handle pusher bolt capability.

4. The two vane impeller will be a semi open, non clog design that has integral pump-out vanes on the back shroud. The impeller will be threaded on to the pump shaft and secured with a lock screw.

5. The shaft bearings will be anti-friction ball or tapered roller type that will withstand loads associated with normal operation. A mechanical cartridge seal will seal the pump shaft against leakage. This seal will be double floating to prevent misalignment that might arise from vibration, deflection or general movement.

6. Separate oil filled cavities, vented to the atmosphere will be provided for the shaft seal and bearings. The cavities will be cooled by the pumped liquid. The bearing and seal cavities will have an oil level sight gauge and fill plug with vent. The oil will be prevented from leaking by a three lip seal arrangement.

D. Grit Pump Drive Motor (Mounted and tested with Grit Pump supplied by others)

DRAFT

1. The motor will 5 hp(3.7KW, FLA 6.5), minimum continuous duty electric motor suitable for a 460/3/60 supply and rated for a Class 1 Div.2, or Class 1 Div.1 environment. As a minimum, the motor will have an IP55 enclosure rating and will conform to NEMA MG-1 requirements.

2. The V-belt transmission will transfer the power from the motor to the pump. The V-belt will have two belts and safety factor of 1.5. The drive transmission will be supplied with removable guards with openings less than ½ an inch.

E. Grit Pump Construction

1. The materials of construction will be as follows:
   a. Casing – Gray Iron No. 30
   b. Suction flap – molded neoprene with steel reinforcement.
   c. Cover plate – Iron 30 with replaceable wear plate
   d. Impeller – Cast ADI (Austempered Ductile Iron) with minimum Brinell hardness of 400.
   e. Pump shaft – Alloy steel No. 4150
   f. Shaft sleeve – Alloy steel No. 4130
   g. Mechanical seal mating faces – Silicon Carbide
   h. Replaceable seal plate.

2.4 THE GRIT CLASSIFIER SYSTEM

A. The Grit Cyclone

1. The grit pump will pump the grit mixture directly to a flanged inlet connection situated on the side of the cyclone through a 4 inch delivery pipe, supplied by the contractor. The cyclone will be mounted on a support placed over the inlet hopper of the Grit Classifier.

2. The cyclone will be capable of receiving and processing pumped flow up to the maximum capacity per section 1.7.B.2. The excess water will be separated and returned to the main flow via a vortex finder and through a 6 inch flanged outlet connection situated on the top of the cyclone inlet head. The contractor will supply and install the return pipe with siphon break. The remaining concentrated grit mixture will be removed and directed via the cone and apex into Grit Classifiers inlet hopper. The apex will have a fixed neoprene rubber liner and include quick release toggle clamps.

3. The cyclone will be designed to remove at least 98% of grit entering the feed inlet that is larger than 100 micron and having a specific gravity of 2.65 or greater.

4. The cyclone will work on the constant centrifugal principle and have no moving parts. Pressure must be maintained above 5 psi.

5. The cyclone casing will be fabricated from carbon steel plate sections. All sections shall be constructed with replaceable neoprene rubber liners.

DRAFT

6. The inlet adapter will include a 1.25" pressure gauge connection and the manufacturer shall supply a pressure gauge assembly complete with protective diaphragm, 0-30 PSI dial.

7. Cyclones must be painted with one coat gray Primer – 2-3 mils nominal dry film thickness. Finish Coat will be one part enamel, color blue, 2-3 mils nominal dry film thickness.

B. The Grit Classifier

1. The partially de-watered grit mixture will fall by gravity from the underside of the cyclone into the main body of the Grit Classifier. The main body is comprised of an inlet hopper and a screw trough that will be manufactured from stainless steel plate.

2. The inlet hopper will have sloping side walls and a minimum pool area of $6ft^2$. The design will guarantee retention of 95% of 100-micron grit particles (silica sand with specific gravity of 2.65) at the maximum inflow without added internal baffle plates.

3. The grit particles will settle on the bottom of the inlet hopper. The excess liquid will spill over an internal weir within the inlet hopper and be returned to the sewage flow. The manufacturer will terminate with a flanged 4 inch pipe connection within 12 inches of the main body of the Grit Classifier.

4. The retained grit particles will be elevated from the inlet hopper by a rotating screw that runs the full length of the Grit Classifier. The full pitch screw will be installed at a nominal 16 degree angle to the horizontal.

5. The screw assembly will move the grit particles from the submerged inlet hopper to the "drying zone" section of the screw trough. The length of the "drying zone" must be no less than 2 feet to ensure adequate de-watering. The dry grit will discharge from an outlet at the end of the screw trough and be directed into the dumpster (supplied by others).

6. The screw assembly will be supported within the main body by a top and bottom bearing arrangement specially designed to avoid premature wear by abrasive grit particles. The bearing arrangement must support the entire length of the screw and maintain a 1/2 inch nominal clearance between the screw flights and the full length of the Grit Classifier main body. This will allow a permanent grit layer to accumulate and act as a natural wear liner protection.

7. The bottom bearing shall be mounted externally to the main body of the classifier. A 2" full port drain and flush valve will be mounted below the bottom drive shaft bearing on the main body of the classifier.

8. The bottom drive shaft bearing shall be mounted to the main body of the classifier and will consist of a (4) bolt flanged housing that is accessed externally to the hopper.

9. The entire Screw Classifier will be provided complete with the support legs suitable for mounting directly to the concrete floor.

DRAFT

10. The manufacturer shall provide lightweight minimum 16 gauge stainless steel covers that are easily removed for maintenance and totally enclose the Grit Classifier.

11. The motor shall be 1/2 hp(0.37KW, FLA 0.81), continuous duty electric motor suitable for a 460/3/60 supply and rated for a Class 1 Div.2 environment. As a minimum, the motor will have an IP55 enclosure rating and will conform to NEMA MG-1 requirements.

2.5 THE CONTROL PANEL

A. The manufacturer will supply two (2) UL listed main control panels and fourteen local control stations that shall automatically control the coarse and fine screen equipment and the grit system in this section. Details are included in the screening specification.

B. Sequence of operation and control:

1. The Grit Trap will run continuously.
2. The grit pump can be controlled manually but will normally operate automatically in timed on/off adjustable cycles as selected.
3. In automatic mode the grit pump cycle will be initiated by a 24 hour time clock.
4. The grit agitation cycle will start (0-5 minutes) and then stops.
5. The grit pump and screw classifier will then start immediately (0-10 minutes).
6. The signal is received to stop and the grit pump stops immediately.
7. The Screw Classifier initiates a run on cycle (0-5 minutes) and then stops.
8. End of cycle.

2.6 SURFACE PREPARATION AND PAINTING

A. The majority of stainless steel materials, flanges and piping shall be pickled by means of a four tank system that is in accordance with ASTMs A380. This process is for quality control, removal of heat affected discoloration, surface treatment for corrosive environments and to provide a uniform finish to the stainless steel surfaces. Stainless steel components must be fully submerged in the tanks for complete coverage. Electro-chemical wanding is acceptable on weld finishes that cannot be submerged due to size. Sandblasting, pickling pastes and abrasive cleaners will not be accepted as forms of metal finishing.

Tank 1 – Detergent bath for the removal of soils, greases, oils and dirt
Tank 2 – Rinsing process to remove detergent and residual soils
Tank 3 – Two part acid solution for the removal of tightly adhere oxide films
Tank 4 – Final rinse process to remove all residual acid

B. All ferrous surfaces (except stainless steel) shall be coated with a pre-primer, primer, and an exterior top coating, or fusion bonded polyester coating suitable for humid/wet environments for superior corrosion protection.

C. Motor(s) and gearbox(s) shall be surface prepared to withstand humid/wet environments for superior corrosion protection.

2.7 SPARE PARTS - The Grit Pump supplier (Grit pump and these spares by others) will supply the following spare parts:

DRAFT

A. One (1) rotating assembly O-Ring(s)
B. One (1) set of impeller clearance adjustment spacers
C. One (1) set of spare V-belts

2.8 ACCESSORIES – The manufacturer will supply the following accessories with the equipment:

A. Two (2) 1" explosion proof brass body solenoid valve (GT Fluidizing)
B. Four (4) 1" PVC manual isolation valve (GT Fluidizing)
C. Bagger system on Grit Classifier

Part 3 EXECUTIONS

3.1 WARRANTY – The Manufacturer of the equipment supplied under this specification shall provide a warranty for a period of twenty-four months commencing on acceptance and/or beneficial occupancy by the Owner but no later than 90 days from the date of shipment by the Manufacturer. The Manufacturer shall guarantee that the equipment furnished is suitable for the purpose intended and free from defects in design, materials and workmanship. In the event that the equipment fails to perform as specified the Manufacturer shall, at his option, promptly repair, modify or replace the defective equipment.

3.2 FACTORY TESTING

A. The grit removal system and all components shall be factory assembled and operationally tested prior to shipment. The equipment shall be shipped fully assembled and shall be capable of being set in place and field erected by the Contractor with minimal field assembly.

B. During the factory test period the grit removal system shall be adjusted as required assuring proper operation on completion of the field installation. The Manufacturer shall supply a certification of the completion of the factory testing of the assembled system and appurtenances and shall certify as to the equipment being in satisfactory operating condition at time of shipment. The Engineer and/or Owner may, at their own option and expense, witness the factory test.

3.3 DELIVERY AND STORAGE

A. The grit removal system shall be appropriately crated and delivered to protect against damage during shipment.

B. An authorized representative of the Contractor shall inspect the equipment on delivery to the jobsite and shall report any damage or missing components to the Manufacturer and the Engineer within 72 hours of receipt of the shipment.

3.4 INSTALLATION – The installation of the grit removal system shall be as indicated on the drawings and in strict accordance with the Manufacturer's instructions and recommendations.

3.5 FIELD TESTS, ADJUSTMENTS AND COMMISSIONING

DRAFT

A. The equipment shall be shipped completely factory assembled. Contractor shall verify all access dimensions, channel dimensions, and any interior building dimensions to ensure equipment may be installed as a factory assembled units.

B. After completion of the installation, the equipment shall be inspected and certified by an authorized representative of the Manufacturer as being in compliance with the Manufacturer's recommendations and requirements. At such time as the Manufacturer has deemed the installation to be acceptable, the Manufacturer's authorized service representative shall make any required adjustments and shall start the equipment to assure proper operation.

C. The Manufacturer's authorized representative shall provide instruction to the plant personnel as to the operation and maintenance of the equipment including commissioning, shut down, on-line operations, lubrication and preventative maintenance.

D. Manufacturer shall state field service rates for a Service Engineer to Owner and Contractor. In the event that the field service time required by this section should not be sufficient to properly place the equipment into operation, and the requirement for additional time is beyond the manufacturer's responsibility, additional time shall be purchased by Contractor to correct deficiencies in installation, equipment, or material without additional cost to Owner.

E. The Contractor shall include in his bid, the cost of the above referenced authorized service representative. See screen specification for trip and days supplied.

REVISIONS:

S1. INITIAL SUBMITTAL RELEASE - 06/02/2025

EQUIPMENT MATERIAL = SS304
(ALL FASTENERS TO BE 316SS)

ESTIMATED DRY WEIGHTS (NOT TO BE USED FOR LIFTING/LOADING/RIGGING):

COARSE SCREEN: 2,400 LBS

COARSE COMPACTOR: 1,000 LBS

FINE SCREEN: 3,700 LBS

FINE COMPACTOR: 800 LBS

GRIT TRAP: 1,400 LBS

GRIT CLASSIFIER: 1,600 LBS

GRIT PUMP: 700 LBS

GENERAL PROJECT NOTES-

1. MACHINERY SHOWN HERE AND THEIR ANCHORAGES HAVE BEEN DESIGNED FOR SEISMIC FORCES EQUIVALENT TO A PREVIOUS MOUNTAIN HOUSE, CA. JOB WITH SAME STYLE AND APPROXIMATE SIZE MACHINERY.
   1. SITE CLASS - D.
   2. MAPPED MCER SPECTRAL RESPONSE ACCEL. SHORT PERIOD S_S (g) - 1.59.
   3. MAPPED MCER SPECTRAL RESPONSE ACCEL. 1 SEC. PERIOD S_1 (g) - 0.53.
   4. SITE COEFFICIENT F_A - 1.0.
   5. SITE COEFFICIENT F_V - 1.5.
   6. MCER SPECTRAL RESPONSE ACCEL. AT SHORT PERIODS S_{MS} (g) -1.59 (USED IN ANCHOR CALCULATIONS).
   7. MCER SPECTRAL RESPONSE ACCEL. AT 1 SEC.T PERIODS S_{M1} (g) -0.79.
   8. DESIGN SPECTRAL RESPONSE ACCEL. AT SHORT PERIODS S_{DS} (G) -1.06 (USED IN ANCHOR CALCULATIONS).
   9. DESIGN SPECTRAL RESPONSE ACCEL. AT 1 SEC. PERIOD S_{D1} (G) -0.53.
   10. MAPPED MCE PEAK GROUND ACCELERATION (g) - 0.59.
   11. SITE COEFFICIENT F_{PGA} - 1.0.
   12. MCEG PEAK ADJUSTED FOR SITE - 0.59.
   13. LONG TRANSITION PERIOD T_L - 8 SEC.
   14. OCCUPANCY RISK / CATEGORY - III (USED IN ANCHOR CALCULATIONS).
   15. SEISMIC DESIGN CATEGORY - D (USED IN ANCHOR CALCULATIONS).
   16. RESPONSE AND AMPLIFICATION FACTORS PER ASCE 7-10 (DESIGN GUIDE IN ANCHOR CALCULATIONS).
   17. COMPONENT IMPORTANCE FACTOR I_P - 1.5 (USED IN ANCHOR CALCULATIONS).
   18. JOB SPECIFICATION SECTION TO WHICH STRUCTURAL CALCULATIONS MEET - SECTION 01610 SEISMIC, SECTION 01615 WIND.

2. NO COMPACTOR TO BE LEFT OFF FOR MORE THAN 48 HOURS WITH A FULL SNORKEL TO REDUCE SLUG HARDENING.

DRAFT

Included:

Schematics
Field Wiring Diagrams
Device Settings
Sequence of Operation
Ancillary Components
Panel Layout
Panel Bill of Materials

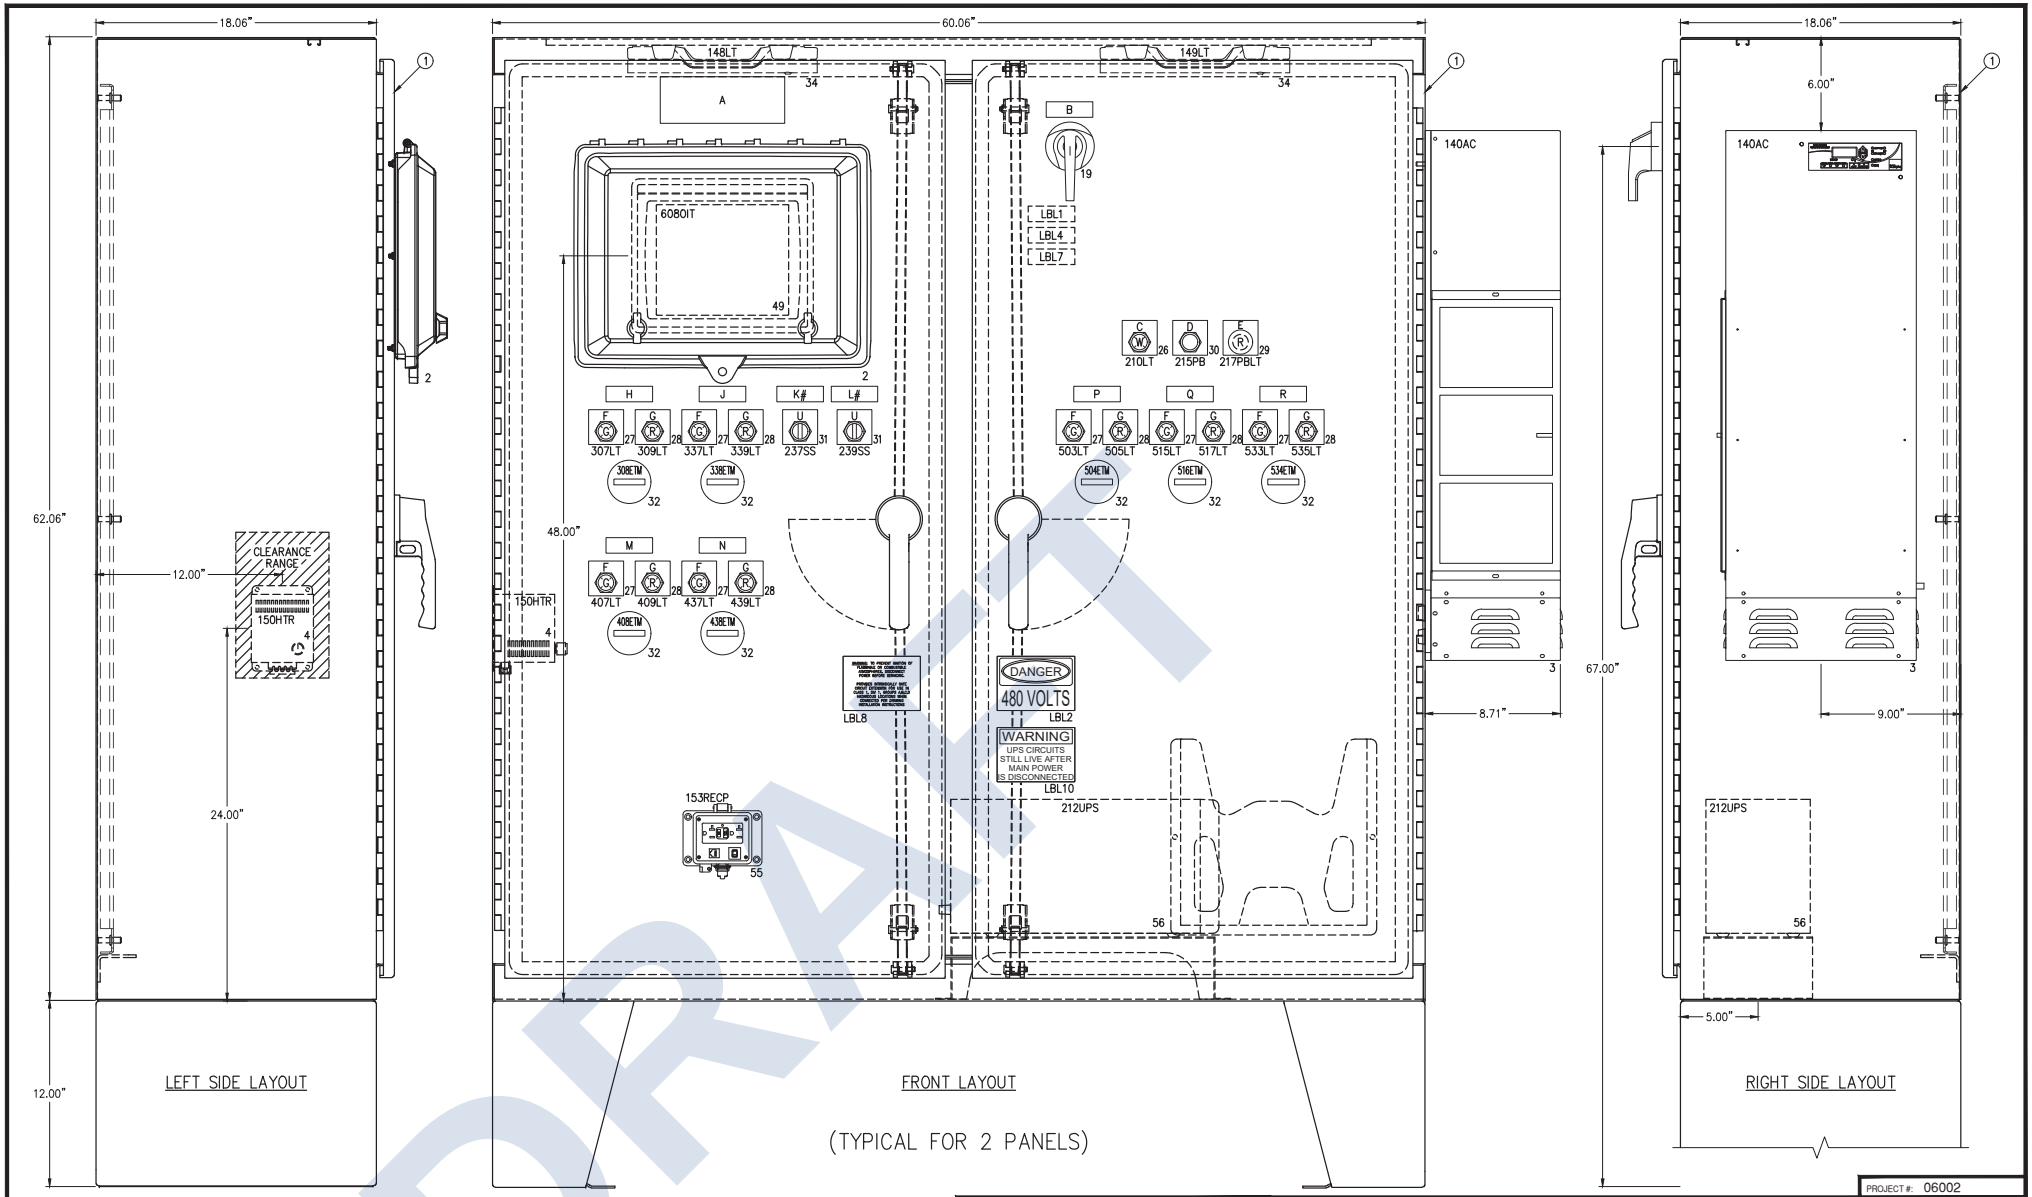
Date 05/23/25

Subject: San Luis, AZ (Project #06002)

Electrical Only Submittal Notes & Exceptions

1. **Deviation**: Point 1.2.I specifies that all electrical systems are located in a classified area. The submitted design assumes the main control panel and Level Controller panel are located outside of the classified area. Instrumentation and the local control stations are supplied for installation in classified areas with necessary NEMA ratings or intrinsically safe barriers as required.

2. **Deviation**: Point 1.5.A.4 specifies a home position sensor on the screen. Hydro-Dyne's screen system does not have a home position, with the sensor therefore being omitted from this design.



3. **Deviation**: Point 1.5.B.1.b.iii specifies Heresite coated heating elements. Per comment 1 above, the main enclosure is assumed to not be within a classified area and a standard enclosure condensation heater has been provided.

4. **Clarification**: Point 1.5.B.1.f specifies physical Hand/Off/Auto controls for the screen and grit system components. HOA controls are provided through the local control station with HMI Hand/Auto controls available at the main control panel.

5. **Clarification**: Point 1.5.B.1.f specifies a programmable control relay with minimum of 5 cycle timers. Programmable control is handled through the PLC in this system.

6. **Clarification**: Point 1.5.B.1.f specifies Ethernet TCP/IP communication with SCADA. Per Hydro-Dyne's request, the proposed design includes connections for direct communication between the two main control panels. In order to provide dedicated SCADA communications, we have included a CompactLogix 5380 PLC in both control panels with options for Dual IP Ethernet ports for network isolation. Port 1 on the PLC is reserved for SCADA network addressing. Please advise on any requirements for SCADA communication (IP addresses, preferred method of sending/receiving tags, etc.).

PROJECT #: 06002
SCREEN & GRIT CONTROL PANEL - SAN LUIS, AZ
DRAWING #: AF0297 | SHT.: 19/21 | REV.: 0
DRAWN BY/DATE: W. BARNETT 05/13/25 | SCALE: N.T.S.
CHECKED BY/DATE: E. CONN 05/13/25 | SIZE:

SEQUENCE OF OPERATIONS

SYSTEM OPERATION:

EMERGENCY STOP:
IF THE EMERGENCY STOP PUSHBUTTON IS PRESSED AT THE MAIN CONTROL, ALL ASSOCIATED EQUIPMENT WITH THE CONTROL PANEL WILL STOP IMMEDIATELY. IF AN EMERGENCY STOP PUSHBUTTON IS PRESSED AT A SCREEN OR COMPACTOR LOCAL CONTROL STATION, ALL SCREEN SYSTEM EQUIPMENT WILL STOP IMMEDIATELY. IF AN EMERGENCY STOP PUSHBUTTON IS PRESSED AT A GRIT SYSTEM LOCAL CONTROL STATION, ALL GRIT SYSTEM EQUIPMENT WILL STOP IMMEDIATELY. TO RESET, ENSURE THE E-STOP IS NOT ACTIVE AND PRESS THE RESET PUSHBUTTON ON THE PANEL.

LOSS OF POWER:
IF THE POWER TO THE PANEL IS INTERRUPTED, THE EQUIPMENT MAY CYCLE IMMEDIATELY ONCE THE POWER IS RESTORED. PRESSING THE RESET PUSHBUTTON AFTER A POWER OUTAGE WILL NOT BE REQUIRED.

FAULTS:
WHEN A FAULT CONDITION IS DETECTED, THE FAULTED EQUIPMENT WILL STOP IMMEDIATELY. ONCE THE ALARM CONDITIONS ARE CLEARED, PRESSING THE RESET PUSHBUTTON WILL RESUME OPERATION.

SCREEN MODE OF OPERATION (TYPICAL FOR COARSE & FINE):

HAND: WHEN THE SCREEN HAND-OFF-AUTO SELECTOR IS IN THE HAND POSITION, THE SCREEN WILL RUN CONTINUOUSLY. THE SCREEN WILL RUN AT HIGH SPEED (60 HZ) UNLESS PROGRAMMED OTHERWISE IN THE FIELD. HAND CONTROL IS AVAILABLE EXTERNAL TO THE PLC.
AUTO: WHEN THE SCREEN HAND-OFF-AUTO SELECTOR IS IN THE AUTO POSITION, THE SCREEN WILL RUN BASED ON THE REPEAT CYCLE TIMER OR LEVEL CONTROL MODE OUTLINED BELOW.

SCREEN REPEAT CYCLE TIMER:
IF THE SCREEN HAS NOT RUN FOR THE TIME SET IN THE CYCLE OFF TIMER, THE SCREEN WILL BE CALLED TO RUN FOR THE TIME SET IN THE CYCLE ON TIMER. ANY CALL TO RUN THE SCREEN WILL RESET THE CYCLE OFF TIMER.

DIFFERENTIAL LEVEL CONTROL MODE:
IN DIFFERENTIAL LEVEL CONTROL MODE, THE SCREEN WILL BE CALLED TO RUN WHEN THE DIFFERENTIAL LEVEL REACHES THE HIGH DIFFERENTIAL LEVEL ON SETPOINT FOR LONGER THAN THE SCREEN ON DELAY TIME. THE SCREEN SPEED WILL VARY PROPORTIONAL TO THE DIFFERENTIAL LEVEL. THE SCREEN WILL CONTINUE TO RUN UNTIL THE LEVEL FALLS BELOW THE HIGH DIFFERENTIAL LEVEL OFF SETPOINT. THE SCREEN WILL THEN CONTINUE TO RUN FOR THE SCREEN OFF DELAY TIME.
A HIGH-HIGH LEVEL CONDITION IS TRIGGERED IF THE UPSTREAM LEVEL OR DIFFERENTIAL LEVEL RISE ABOVE THE RESPECTIVE HIGH-HIGH LEVEL ON SETPOINTS, OR IF THE UPSTREAM FLOAT SWITCH IS TRIGGERED. DURING A HIGH-HIGH LEVEL CONDITION, THE SCREEN SPEED WILL RUN AT HIGH SPEED (60 Hz BY DEFAULT). THE SCREEN WILL CONTINUE TO RUN UNTIL THE LEVEL FALLS BELOW THE HIGH-HIGH DIFFERENTIAL LEVEL AND HIGH-HIGH UPSTREAM LEVEL OFF SETPOINTS. THE SCREEN WILL THEN CONTINUE TO RUN FOR THE SCREEN OFF DELAY TIME.

FLOW-BASED LEVEL CONTROL MODE:
IN FLOW-BASED LEVEL CONTROL MODE, THE SCREEN WILL RUN BASED ON THE LEVEL SETPOINTS SET IN THE FLOW CONTROL MODE LOOK-UP TABLE. THE LOOK-UP TABLE CONTAINS UP TO (20) FLOW SETPOINT INDEXES. EACH INDEX HAS ADJUSTABLE SETPOINTS FOR THE LEVEL ABOVE AND BELOW THE SETPOINT, AND THE SPEED SCALING AT LOW AND HIGH LEVELS. THE SCREEN SPEED WILL MODULATE PROPORTIONAL TO THE SCALING SETPOINTS TO MAINTAIN THE DESIRED LEVEL. IF THE FLOW RISES ABOVE THE ACTIVE INDEX FLOW SETPOINT OR FALLS BELOW THE PREVIOUS INDEX FLOW SETPOINT, THE SYSTEM WILL SWITCH TO THE NEXT INDEX AND CONTINUE OPERATION BASED ON THE NEW INDEX SETPOINTS.

SCREEN FAULTS:
THE SCREEN WILL FAULT AND STOP IMMEDIATELY BASED ON THE FOLLOWING CONDITIONS:

1. MOTOR OVER TEMPERATURE
2. VFD FAULT / HIGH CURRENT
3. FAIL TO START
4. EMERGENCY STOP

IF NO COMPACTOR IS AVAILABLE TO RUN WHEN A SCREEN IS CALLED TO RUN, AN ALARM WILL BE DISPLAYED ON THE OIT.

SCREEN WASH VALVE MODE OF OPERATION (TYPICAL FOR COARSE & FINE):

THE SCREEN WASH VALVE WILL BE CALLED TO OPEN ANY TIME THE SCREEN IS RUNNING. HAND CONTROLS FOR THE VALVE ARE AVAILABLE THROUGH THE OIT.

SLUICE TOP-END PURGE VALVE MODE OF OPERATION:

THE SLUICE TOP-END PURGE VALVE WILL BE CALLED TO OPEN AFTER AN ADJUSTABLE ON DELAY TIME WHEN ANY SCREEN IS RUNNING, AND WILL REMAIN OPEN FOR AN ADJUSTABLE OFF DELAY TIME AFTER ALL SCREENS HAVE STOPPED. THE VALVE WILL ALSO OPEN WHEN HIGH SLUICE LEVEL IS DETECTED. HAND CONTROL FOR THE VALVE IS AVAILABLE EXTERNAL TO THE PLC ON THE PANEL DOOR.

SLUICE Y-PURGE VALVE MODE OF OPERATION:

THE SLUICE Y-PURGE VALVE WILL BE CALLED TO OPEN AFTER AN ADJUSTABLE ON DELAY TIME WHEN ANY SCREEN IS RUNNING, AND WILL REMAIN OPEN FOR AN ADJUSTABLE OFF DELAY TIME AFTER ALL SCREENS HAVE STOPPED. HAND CONTROL FOR THE VALVE IS AVAILABLE EXTERNAL TO THE PLC ON THE PANEL DOOR.

BLOWDOWN VALVE MODE OF OPERATION (TYPICAL FOR 2, FUTURE OPTIONAL):

WHEN INSTALLED, THE BLOWDOWN VALVES WILL BE CALLED TO OPEN AFTER ANY SCREEN OR COMPACTOR HAS RUN FOR AN ADJUSTABLE ACCUMULATION TIME, AND WILL REMAIN OPEN FOR AN ADJUSTABLE OPEN TIME. HAND CONTROL FOR THE VALVE IS AVAILABLE THROUGH THE OIT.

COMPACTOR MODE OF OPERATION (TYPICAL FOR COARSE & FINE):

HAND: WHEN THE COMPACTOR HAND-OFF-AUTO SELECTOR IS IN THE HAND POSITION, THE COMPACTOR WILL RUN FORWARD OR REVERSE BASED ON THE FWD-OFF-REV SWITCH AT THE LOCAL CONTROL STATION. THE REVERSE POSITION WILL SPRING RETURN TO OFF WHEN NOT HELD. HAND CONTROL IS AVAILABLE EXTERNAL TO THE PLC.
AUTO: WHEN THE COMPACTOR HAND-OFF-AUTO SELECTOR IS IN THE AUTO POSITION, THE COMPACTOR WILL FOLLOW THE AUTO WASH CYCLE DETAILED BELOW.

COMPACTOR AUTO WASH CYCLE:
HOPPER FILL WAIT:

THE COMPACTOR WILL INITIATE A HOPPER PRE-WASH ONCE A SCREEN HAS RUN FOR THE HOPPER FILL WAIT TIME. DURING THE HOPPER FILL WAIT, ALL SOLENOIDS ASSOCIATED WITH THE COMPACTOR WILL BE CLOSED.

HOPPER PRE-WASH:

WHEN THE HOPPER PRE-WASH IS INITIATED, THE COMPACTOR WILL RUN REVERSE FOR THE HOPPER PRE-WASH CHURN TIME. THE RINSE SOLENOID WILL BE CLOSED DURING THE HOPPER PRE-WASH CHURN TIME. THE COMPACTOR WASH SOLENOID WILL BE OPEN DURING THE HOPPER PRE-WASH CHURN TIME.

ONCE THE HOPPER PRE-WASH CHURN TIME IS COMPLETE, THE COMPACTOR WILL RUN FORWARD FOR THE HOPPER PRE-WASH ADVANCE TIME. THE RINSE SOLENOID WILL REMAIN CLOSED, AND THE COMPACTOR WASH SOLENOID WILL REMAIN OPEN DURING THE PRE-WASH ADVANCE TIME.

WHEN THE HOPPER PRE-WASH ADVANCE TIME IS COMPLETE, THE COMPACTOR WILL CONTINUE RUNNING FORWARD FOR THE HOPPER PRE-WASH PRE-COMPRESS TIME. BOTH SOLENOIDS WILL BE CLOSED DURING THE PRE-WASH PRE-COMPRESS TIME.

RINSE CYCLE:

ONCE THE COMPACTOR HAS FINISHED THE HOPPER PRE-WASH SEQUENCE, A RINSE CYCLE WILL BE INITIATED.

THE COMPACTOR WILL RUN REVERSE FOR THE RINSE CYCLE REVERSE TIME. IT WILL THEN DWELL FOR THE DWELL TIME. THE COMPACTOR WILL THEN RUN FORWARD FOR THE RINSE CYCLE FORWARD TIME, AND ONCE AGAIN DWELL FOR THE DWELL TIME. THIS SEQUENCE WILL REPEAT FOR THE NUMBER OF CYCLES SET IN THE COMPACTOR RINSE CYCLE COUNTER. DURING THE RINSE CYCLE, THE COMPACTOR WASH SOLENOID WILL BE CLOSED AND THE RINSE SOLENOID WILL BE OPEN.

ONCE THE COMPACTOR RINSE CYCLE COUNTER IS COMPLETE, THE COMPACTOR WILL RUN FORWARD FOR THE EXTRUDE TIME. DURING THE EXTRUDE TIME, BOTH COMPACTOR SOLENOID VALVES WILL BE CLOSED.

ONCE THE EXTRUDE TIME IS COMPLETE, THE COMPACTOR WILL STOP AND THE WASH SOLENOID WILL REMAIN CLOSED WHILE THE RINSE SOLENOID OPENS FOR THE RINSE FLUSH TIME. ONCE THE RINSE FLUSH TIME IS COMPLETE, THE COMPACTOR WASH CYCLE IS COMPLETE AND THE SYSTEM WILL WAIT FOR ANOTHER CALL TO RUN. IF A SCREEN IS RUNNING OR FAULTS DURING THE RINSE FLUSH TIME, THE RINSE SOLENOID WILL REMAIN OPEN FOR THE REMAINING FLUSH TIME AFTER THE SCREEN HAS STOPPED.

FORWARD ONLY MODE:

IF THE HIGH-HIGH LEVEL CONDITIONS ARE DETECTED IN THE SCREEN OR HIGH SLUICE LEVEL IS DETECTED, THE COMPACTOR WILL PAUSE THE REVERSING SEQUENCE AND RUN IN FORWARD ONLY MODE UNTIL THE LEVEL CONDITION IS CLEARED. ON-DELAY AND OFF-DELAY TIMERS FOR FORWARD ONLY MODE ARE ADJUSTABLE THROUGH THE OIT.

JAM REVERSAL SEQUENCE:

IF THE COMPACTOR DETECTS HIGH CURRENT WHEN RUNNING FORWARD IN AUTO MODE, IT WILL INITIATE A JAM REVERSAL SEQUENCE. IT WILL PAUSE, THEN RUN IN REVERSE FOR THE JAM REVERSE TIME. AFTER ANOTHER PAUSE IT WILL CONTINUE RUNNING FORWARD. THE NUMBER OF JAM ATTEMPTS IS COUNTED, AND IF THE NUMBER OF ATTEMPTS EXCEEDS THE SETPOINT WITHIN THE JAM CLEAR TIME, THE COMPACTOR WILL FAULT.

IF A JAM OCCURS WHEN RUNNING IN HAND OR WHEN RUNNING REVERSE, THE COMPACTOR WILL FAULT IMMEDIATELY AND WILL NOT ATTEMPT A JAM REVERSAL SEQUENCE. THE JAM REVERSAL SEQUENCE CAN BE DISABLED THROUGH THE OIT.

COMPACTOR FAULTS:
THE COMPACTOR WILL FAULT AND STOP IMMEDIATELY BASED ON THE FOLLOWING CONDITIONS:

1. MOTOR OVER TEMPERATURE
2. MOTOR CIRCUIT PROTECTOR OVERLOAD
3. HIGH CURRENT IN HAND MODE
4. JAM ATTEMPTS EXCEEDED
5. FAIL TO START
6. EMERGENCY STOP

COMPACTOR WASH VALVE MODE OF OPERATION (TYPICAL FOR COARSE & FINE):

THE COMPACTOR WASH VALVE WILL BE CALLED TO OPEN BASED ON THE COMPACTOR AUTOMATIC WASH CYCLE IN AUTO. THE VALVE WILL OPEN CONTINUOUSLY WHEN THE COMPACTOR IS RUNNING IN HAND. HAND CONTROLS FOR THE VALVE ARE AVAILABLE THROUGH THE OIT.

COMPACTOR RINSE VALVE MODE OF OPERATION (TYPICAL FOR COARSE & FINE):

THE COMPACTOR RINSE VALVE WILL BE CALLED TO OPEN BASED ON THE COMPACTOR AUTOMATIC WASH CYCLE. THE VALVE WILL OPEN CONTINUOUSLY WHEN THE COMPACTOR IS RUNNING IN HAND. HAND CONTROLS FOR THE VALVE ARE AVAILABLE THROUGH THE OIT.

SEQUENCE OF OPERATIONS (CONTINUED)

GRIT CLASSIFIER MODE OF OPERATION:

HAND: WHEN THE GRIT CLASSIFIER HAND-OFF-AUTO SELECTOR IS IN THE HAND POSITION, THE CLASSIFIER WILL RUN CONTINUOUSLY. HAND CONTROL IS AVAILABLE EXTERNAL TO THE PLC.
AUTO: WHEN THE GRIT CLASSIFIER HAND-OFF-AUTO SELECTOR IS IN THE AUTO POSITION, THE CLASSIFIER WILL RUN BASED ON THE GRIT SYSTEM CYCLE.

GRIT CLASSIFIER FAULTS:
THE GRIT CLASSIFIER WILL FAULT AND STOP IMMEDIATELY BASED ON THE FOLLOWING CONDITIONS:

1. MOTOR OVER TEMPERATURE
2. MOTOR CIRCUIT PROTECTOR OVERLOAD
3. FAIL TO START
4. EMERGENCY STOP

GRIT PUMP MODE OF OPERATION:

HAND: WHEN THE GRIT PUMP HAND-OFF-AUTO SELECTOR IS IN THE HAND POSITION, THE PUMP WILL RUN CONTINUOUSLY. HAND CONTROL IS AVAILABLE EXTERNAL TO THE PLC.
AUTO: WHEN THE PUMP HAND-OFF-AUTO SELECTOR IS IN THE AUTO POSITION, THE PUMP WILL RUN BASED ON THE GRIT SYSTEM CYCLE.

GRIT PUMP FAULTS:
THE GRIT PUMP WILL FAULT AND STOP IMMEDIATELY BASED ON THE FOLLOWING CONDITIONS:

1. MOTOR OVER TEMPERATURE
2. MOTOR CIRCUIT PROTECTOR OVERLOAD
3. FAIL TO START
4. HIGH DIFFERENTIAL PRESSURE
5. EMERGENCY STOP

GRIT TRAP MODE OF OPERATION:

HAND: WHEN THE GRIT TRAP HAND-OFF-AUTO SELECTOR IS IN THE HAND POSITION, THE TRAP WILL RUN CONTINUOUSLY. HAND CONTROL IS AVAILABLE EXTERNAL TO THE PLC.
AUTO: WHEN THE GRIT TRAP HAND-OFF-AUTO SELECTOR IS IN THE AUTO POSITION, THE TRAP WILL RUN CONTINUOUSLY.

GRIT TRAP FAULTS:
THE GRIT TRAP WILL FAULT AND STOP IMMEDIATELY BASED ON THE FOLLOWING CONDITIONS:

1. MOTOR OVER TEMPERATURE
2. MOTOR CIRCUIT PROTECTOR OVERLOAD
3. FAIL TO START
4. EMERGENCY STOP

GRIT FLUIDIZING VALVE MODE OF OPERATION:

THE GRIT FLUIDIZING VALVE WILL BE CALLED TO OPEN BASED ON THE GRIT SYSTEM CYCLE. HAND CONTROLS FOR THE VALVE ARE AVAILABLE THROUGH THE OIT.

GRIT SYSTEM CYCLE:

THE GRIT SYSTEM WILL BE CALLED TO RUN PERIODICALLY BASED ON THE GRIT SYSTEM CYCLE TIMER. WHEN THE CYCLE TIMER IS COMPLETE, THE GRIT FLUIDIZING VALVE WILL OPEN FOR AN ADJUSTABLE OPEN TIME. ONCE THE GRIT FLUIDIZING VALVE OPEN TIME IS COMPLETE, THE GRIT PUMP AND GRIT CLASSIFIER WILL BE CALLED TO RUN. THE GRIT PUMP WILL RUN FOR AN ADJUSTABLE ON TIME. ONCE THE GRIT PUMP ON TIME IS COMPLETED, THE PUMP WILL SHUT OFF AND THE CLASSIFIER WILL RUN FOR AN ADJUSTABLE OFF DELAY TIME. THE GRIT TRAP WILL RUN CONTINUOUSLY AS LONG AS THE SYSTEM IS ACTIVE.

Controls Components Specifications

DRAFT

REVERE

4,000 BTU/hr AIR CONDITIONER TO BE PROVIDED. SPECS TO BE UPDATED (PAGE 19)

Date 05/12/25

Subject: San Luis, AZ (Project #06002)

Control Panel Heat Calculations

The control panel in the supplied submittal package utilizes a 4000 BTU/hr air conditioner. The calculations below show the cooling required for maintaining the maximum operating temperature in the panel with a 5% tolerance with solar gain included.

Item	QTY.	Dissipated Power (WATTS)	Extended Dissipated Power (WATTS)
VFD	1	13.2	13.2
Transformer	1	80	80
UPS	1	51.3	51.3
PLC & I/O	1	27	27
OIT	1	20	20
DC Power Supply	1	45	45
Ethernet Switch	1	4.1	4.1
Control Relay	59	0.01	0.59
Pilot Lights	15	0.05	0.75
Total Dissipated Heat			791.3
Solar Gain (5 watt/ft^2)			244.2
% Tolerance	5		**566.1**
Maximum Operating Temperature (deg. F)	**104**		
Max Outside Temp.	120	**Deg. F**	
Max Inside Temp.	104	**Deg. F**	
Delta Temp.	16	**Deg. F**	
Surface Area Allowing Heat Dissipation	56.3	**FT^2**	
Surface Area NOT Allowing Heat Transfer	25.8	**FT^2**	
Exposed Surface Area	48.8	**FT^2**	
Height	62	**IN.**

Depth	18	**IN.**	
Total Heat Transfer		**BTU/hr**	**3058.8**

DRAFT

Item 1ab

TWO-DOOR WITH 3-POINT LATCHES, TYPE 4X

INDUSTRY STANDARDS

UL 508A Listed; Type 3R, 4, 4X, 12; File No. E61997
cUL Listed per CSA C22.2 No 94; Type 3R, 4, 4X, 12; File No. E61997

NEMA Type 3, 3R, 4, 4X, 12, 13
IEC 60529, IP66
Meets NEMA Type 3RX requirements

APPLICATION

These two-door enclosures provide industry-leading protection for large components or complex mounting configurations in highly-corrosive environments. Three-point latching with the Hoffman POWERGLIDE padlocking handles and a foam-in-place gasket combine convenience with security. They are well-suited for use in petrochemical plants; pulp and paper processing; water treatment facilities; and food, pharmaceutical and packaging applications.

SPECIFICATIONS

- Manufactured from 12 gauge Type 304 or 316L stainless steel
- Backs are 10 or 12 gauge stainless steel with x-form stiffeners
- Seams continuously welded and ground smooth; no holes or knockouts
- Removable centerpost for easy panel installation
- Collar studs provided for mounting optional panels
- Panel supports included
- Heavy-duty lifting eyes are Type 316L stainless steel
- Heavy-duty 3-point latching mechanism operated by Type 316L stainless steel POWERGLIDE padlocking handles
- Body flange trough collar excludes liquids and contaminants
- Heavy-duty stainless steel continuous hinges support each door
- Bonding provision on doors; grounding studs on body
- Accessory mounting channel provided in enclosure top
- Data pocket is high-impact thermoplastic
- 12-in. (305-mm) removable floor stands are bolted to enclosure
- Seamless foam-in-place one-piece gasket provides oil-tight and dust-tight seal against contaminants
- External hardware manufactured of Type 316 stainless steel

FINISH

Enclosures are unpainted. Front, sides, top and back have smooth #4 brushed finish. Optional mild steel panels are painted white. Optional conductive panels are available.

ACCESSORIES

Industrial Corrosion Inhibitors
Electric Heater
Electrical Interlocks
PANELITE Enclosure Lights Overview
Panel Support Kit

MODIFICATION AND CUSTOMIZATION

Hoffman excels at modifying and customizing products to your specifications. Contact your local Hoffman sales office or distributor for complete information.

Zerust® Vapor Capsules

Zerust®/Excor® Vapor Capsules are portable capsules that contain patented Zerust® VCI technology. Use to protect metals in hard to reach areas of control panels, electrical cabinets and other enclosed spaces, even when they are in operation. Or use as a supplement to other Zerust® VCI packaging products for added protection.

Use Vapor Capsules to protect multiple metal types from corrosion in almost any enclosure or sealed packaging. Zerust® diffusers emit Vapor Corrosion Inhibitors (VCIs) that prevent oxidation of the metal surface that causes rust. They provide targeted corrosion protection in hard to reach spaces and additional protection to metals in Zerust® VCI packaging applications.

Zerust® capsules are quick and easy to install. Simply peel back the protective paper from the adhesive tape and install securely in desired location. Tightly seal the enclosure to trap protective vapor inside. Metals will be protected from rust and tarnish for up to one or two years depending on the capsule model and environment.

Benefits

Safe* and effective corrosion protection where traditional anti-corrosion methods can not be used.

Easy to install, economical to use.

Does not affect the circuit boards or sensitive components.

Suitable for new equipment and to protect the reliability of existing equipment.

Application Example

A Vapor Capsule protects an electronics enclosure from corrosion during operation. The capsule has been marked with the installation date so operators know when to replace it with a new capsule.

Application Type

Storage
Shipping
During Operation
May be used with Zerust® Packaging

*Safe for people. This product does not pose a health hazard to users due to its classification as an article according to UN GHS, US OSHA HazCom and CA WHMIS regulations. Check REACH SDS for classification in EU.

DRAFT

Zerust®

Specifications

Product Information	Zerust® Capsules are VCI (Vapor Corrosion Inhibitor) diffusers. The capsules are made from recycled PE materials.
Appearance	PE-plastic capsule and foam or protective foam containing active pellets.
Protection Volume	See table below
Protection Duration	See table below
Storage	Store in a cool, dry place and away from sunlight for up to 2 years from the date of shipment.
Protected Metal Types	Multimetal protection for steel, iron, zinc and galvanized steel, copper, brass, bronze, aluminum (and alloys), nickel, tin, solder.

Protection Capabilities*

Model	Product Dimensions** L x W x H	Protection Volume (Up to)	Protection Radius (Up to)	Protection Duration (Up to)
VC 1-1(s)	1 ¼" x 1" x ¾"	4 ft³ (0.12 m³)	1 ft (30 cm)	1 year
VC 1-1	2 ¼" x 1" x ¾"	4 ft³ (0.12 m³)	1 ft (30 cm)	1 year
VC 2-1	2 1/6" x 1 ¼" x 1"	35 ft³ (1 m³)	2 ft (60 cm)	1 year
VC 2-2	3" x 1¼" x 1"	35 ft³ (1 m³)	2 ft (60 cm)	2 years
VC 6-1	8" x 4" x 2"	900 ft³ (25 m³)	6 ft (200 cm)	1 year
VC 6-2	8" x 4" x 2"	900 ft³ (25 m³)	6 ft (200 cm)	2 years

* Protection ratings are based on the highest average tested protection properties and are not guaranteed. Results may vary according to usage environment and metal surface properties such as contaminants.
** Dimensions are +/- 10%

Availability

Zerust® Vapor Capsules are in stock for immediate delivery. Sold in cases.

Model	Units/Case
VC 1-1(s)	50
VC 1-1	50
VC 2-1	25
VC 2-2	10
VC 6-1	4
VC 6-2	4

Safety

- Safe for people. This product does not pose a health hazard to users due to its classification as an article according to UN GHS, US OSHA HazCom and CA WHMIS regulations. Check REACH SDS for classification in EU.
- Zerust® VCI chemistry is safe for sensitive electronics. No galvanic effects, residues or changes in the properties of metals. The protective molecules dissipate upon opening of package.

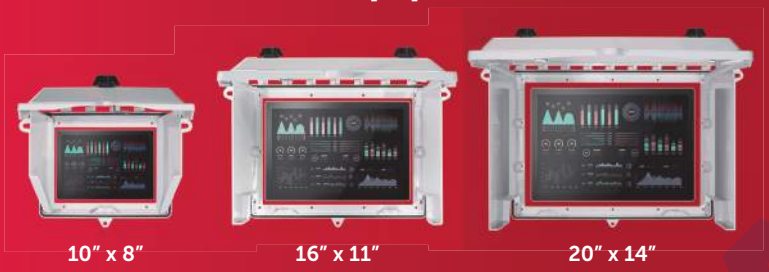
Item 2

SOLARSHIELD™ HMI COVER



STAHLIN®
A ROBROY Brand

The most innovative and durable non-metallic HMI cover for use with all enclosure material types — now available in patented opaque and clear configurations!

Choose from our expanded range of sizes — 10" x 8", 16" x 11", and 20" x 14" — to discover the ultimate HMI screen protection for your application!

SolarShield™ Opaque HMI Cover

10" x 8" 16" x 11" 20" x 14"

SolarShield™ Clear HMI Cover

10" x 8" 16" x 11" 20" x 14"

1. **Superior Protection**
SolarShield HMI covers protect HMI screens and electrical equipment from corrosion and damage due to UV*, water, oils, dirt, and sand and greatly reduce equipment replacement cost.

2. **Simple and Functional**
Easy to use, hinged design includes supporting inner doors* for hands-free use and better visibility of the HMI screens in the sun.

3. **Strong and Durable**
Impact resistant polycarbonate construction provides long dependable life in harsh conditions.

MARKETS AND INDUSTRIES

- Ideal for Non-Hazardous Industrial and Commercial OEM market segments
- Oil and gas, equipment manufacturing, industrial machines, water/wastewater, marine, food and beverage

APPLICATIONS

- Extremely tough and durable, **patented** SolarShield HMI Covers are used in both outdoor and indoor applications.
- Opaque configuration provides superior protection of Human Machine Interface (HMI) screens from the sun. Both Opaque and Clear configurations provide protection from wind-blown dust, water, oils, chemicals, grease, and other environmental conditions.

**Opaque configuration only – select Opaque if UV protection is required. Clear configuration offers protection from environmental conditions and debris while allowing for continual visibility of the screen; no additional UV protection.*

***The 10" x 8" HMICVR1008 only is UL Recognized under file #E64358 and maintains the NEMA Type 4/4X rating on a Type 4/4X enclosure when a Type 4X HMI Device is installed.*

INNOVATIVE FEATURES

- Patented design with non-metallic, hinged inner doors* to shield screen from the sun and allow for hands-free use
- Clear Cover configuration has no inner doors, allowing for excellent visibility of the HMI screen while cover is closed
- Broad, expanded size selection features options for most standard size HMI screens with dimensions up to 20"W x 14"H
- UL Listed NEMA 4/4X**
- Universal covers can be used with either non-metallic or metallic enclosures
- Lightweight, high-impact rated, UV resistant polycarbonate material construction
- Stainless steel hardware kit included
- Padlock-able for increased security
- Simple and easy installation with the use of common tools
- Installation instructions and drill template provided
- Color: Pantone 428C

DRAFT

MATERIALS

- Cover, Base, and Inner Doors: Polycarbonate with UV inhibitors
- Gasket: Robotically applied foam-in-place seamless polyurethane
- Hardware: Stainless Steel
- Twist Latch: Polyamide

RATINGS AND LISTINGS

- per file #E540056*
- UL 508 A
- UL Listed NEMA Type 4/4X*
- Operating Temperature Rating: -40°F to +248°F (-40°C to +120°C)
- Outdoor UV Exposure (UL 746C) (f1) Rated — UL's best rating; resin has passed test for UV exposure and water immersion

**The 10" x 8" HMICVR1008 only is UL Recognized under file #E64358 and maintains the NEMA Type 4/4X rating on a Type 4/4X enclosure when a Type 4X HMI Device is installed.*

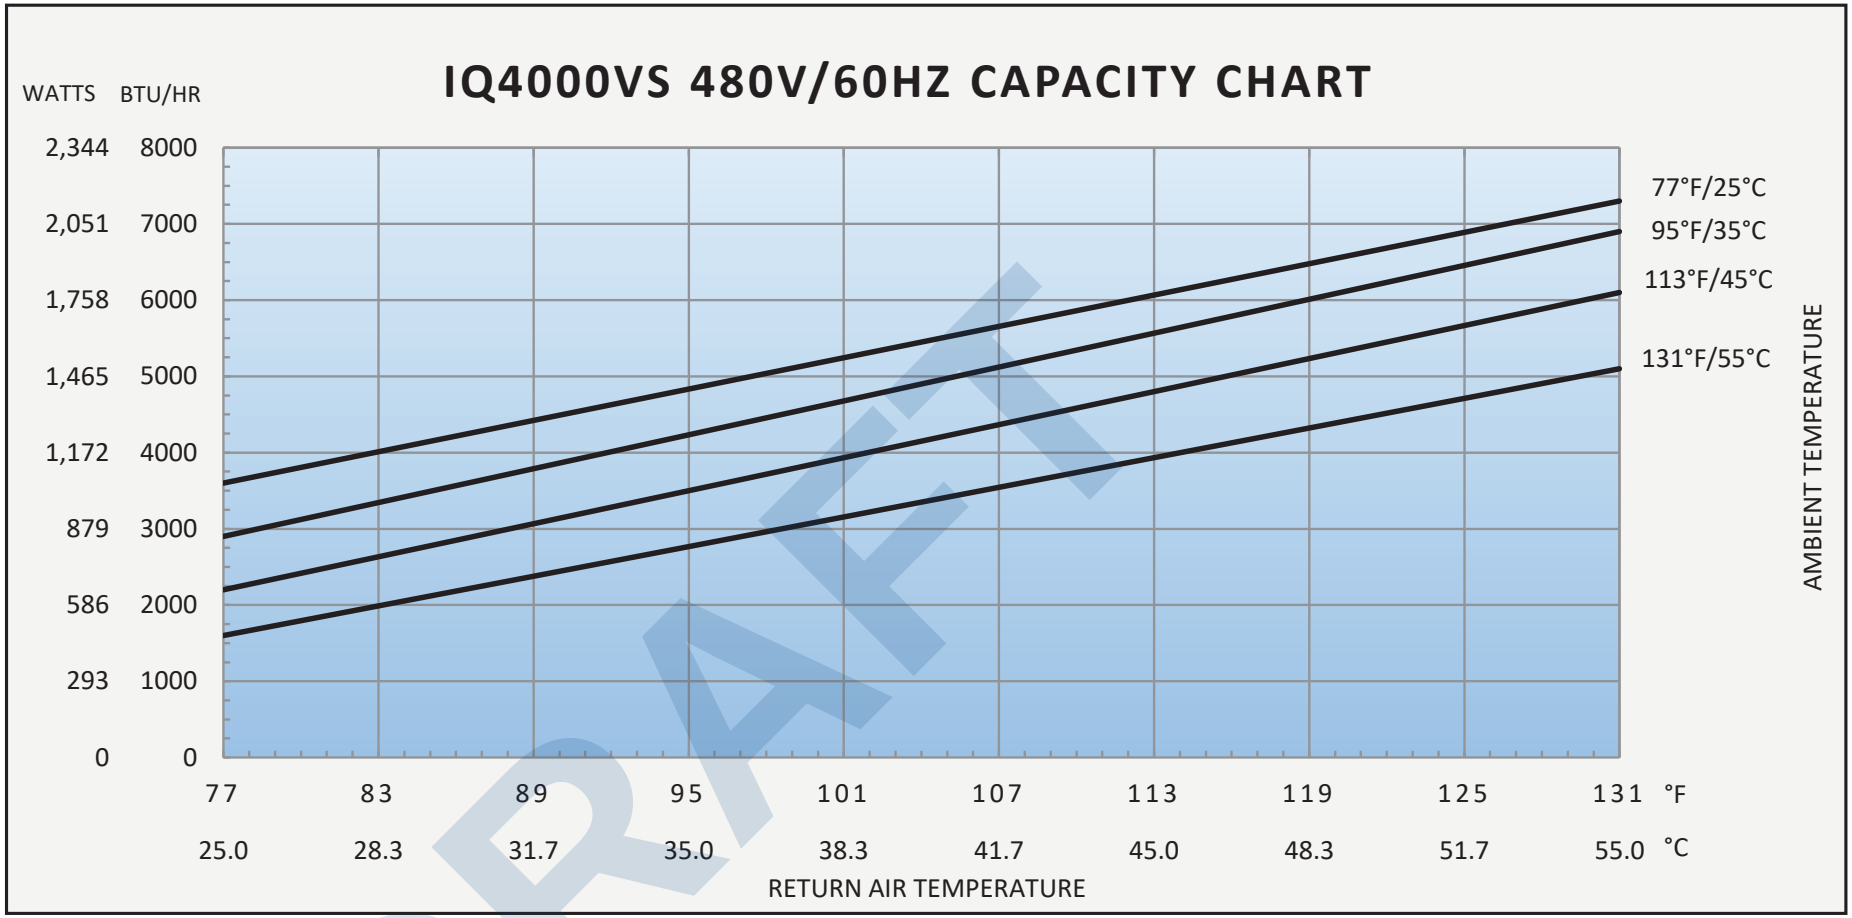
(O) OPTIONS [4]	
CP3	HARSH ENVIRONMENT PROTECTION AGAINST GAS, SALT SPRAY, AND MOISTURE. HIGH FREQUENCY COATED COILS, ALL BRAZED JOINTS AND COPPER TUBING COATED.
XO3	ALARM OUTPUT THAT PROVIDES BOTH A NORMALLY OPEN (CLOSED ON ALARM) AND A NORMALLY CLOSED (OPEN ON ALARM) SET OF DRY CONTACTS. THIS SIGNAL IS PROVIDED FROM A RELAY THROUGH A 3-CONDUCTOR CABLE.
IHO	INTERNALLY MOUNTED HEATER THAT PROVIDES HEAT WHEN REQUIRED. THE CONTROLLER HAS BUILT IN DEAD BAND PROGRAM THAT PREVENTS HEATING AND COOLING FROM OPERATING SIMULTANEOUSLY.
HOOD	AMBIENT EXHAUST HOODS FOR AIR DIRECTION, SECURITY, AND/OR WASHDOWN ENVIRONMENT. AVAILABLE IN ALL FINISHES.
EHO	EXTERNAL HEAT OUTPUT TO POWER AND CONTROL. EXTERNAL HEATER.
LA	LOW AMBIENT PACKAGE FOR LOW AMBIENT ENVIRONMENTS.
TEMP	FULL SCALE ENCLOSURE CUTOUT DRAWING TEMPLATE.
DOOR	ENCLOSURE DOOR SWITCH INTERFACE FOR CONNECTING AC TO DOOR SWITCHES.
RS	EXTRA-LONG ENCLOSURE TEMPERATURE SENSOR WIRE FOR MOUNTING EXTERNAL TO THE UNIT.
PWRC	POWER CORD SUPPLIED INSTEAD OF STANDARD OPTION OF HARD WIRING TO TERMINAL BLOCK.

(W) WARRANTY	
1 YEAR	STANDARD WARRANTY



FOOTNOTES

1. Must choose one from category.
2. Unit construction is paired to finish and NEMA Type.
3. The internal heat will range from 400W to 1800W, dependent on models.
4. Model specific.
5. 400V is not UL Listed.

1300 Watt

INDUSTRY STANDARDS

UL 508A Component Recognized; File No. E61997

CSA Certified, CSA File No. LR42186
CE

APPLICATION

Protect mechanical, electrical and electronic equipment from low temperatures, condensation and corrosion with this thermostatically controlled, fan-driven heater that maintains a stable enclosure temperature.
Fan draws cool air from the bottom of the enclosure and passes this air across the thermostat and heating element before being released into enclosure cavity. Heated air is discharged through the top of the heater unit.

SPECIFICATIONS

- Aluminum housing
- Thermostat range adjustable from 0 F to 100 F (-18 C to 38 C)
- Four 10-32 x self-tapping screws are included with each heater
- Ball bearing fan
- Terminal strip with clamp connector that accepts both solid and stranded wire

FINISH

- Brushed aluminum

⚠ CAUTION

These electric heaters are not designed for use in dusty, dirty, corrosive, or hazardous locations. Portions of the heater can get hot. Adequate protection must be taken to protect people from potential burns, and to protect other components from this heat. Pentair Technical Products recommends this heater only be installed in a totally-enclosed metal enclosure.

DO NOT INSTALL HEATERS ON WOOD PANELS.
Heat sensitive components should not be placed near the heater discharge area since this air can be quite warm. The clearance range defines the space that must be kept free of these components for proper and safe operation of the heater.

HAZARDOUS LOCATION HEATER

INDUSTRY STANDARDS

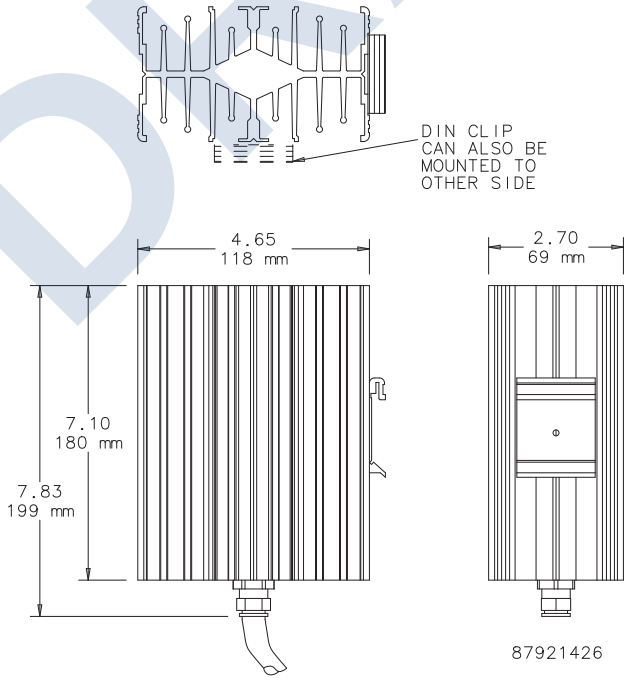
CE
Conformity Certificate LCIE (Laboratoire Central des Industries Electriques) LCIE 01 ATEX 6073
EEx d IIC T4/II 2 GD, IP6x T135°C
IEC 60529, IP65/I (grounded)

APPLICATION

Designed for use in hazardous locations where electronic components require protection from condensation and corrosion, sudden temperature drops and low temperatures.

FEATURES

- Maintenance-free
- High-performance heating cartridge (element)
- Large convection surface
- Extruded aluminum heat sink
- DIN clip for mounting
- Connection cable: Si HF-JZ 3 x AWG 18 x 3.3 ft. (0.75 mm² x 1 m)
- Operating voltage 110-120 VAC



FINISH

- Black anodized

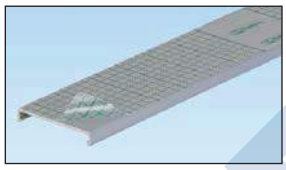
Panduct® Type F Narrow Slot Wiring Duct



- Narrow slot/finger design provides more slots to fit the spacing of high-density terminal blocks and other hardware
- Material: Lead-free PVC
- UL recognized continuous use temperature: 122°F (50°C)
- UL 94 flammability rating of V-0
- Conforms with NFPA 79-2007 section 13.3.1 requirement for flame retardant material
- Provided with mounting holes
- Base and cover length is 6 feet

Multiple slot restrictors present with 2" and greater duct wall height.

To order cover with protective film add "-F" to part number. 6" cover not available with film.

Pan-Lug™ LAM2A2/0-14-Q Al Mech,2/0,Tin Plt,1 hole,1/4"Stud,PK25

LAM2A2/0-14-Q

The LAM2A2/0-14-Q Tin-Plated Aluminum Mechanical Lug, one-hole, two barrel, is made from extruded aluminum alloy to provide premium electrical and mechanical performance for wide wire range-taking capability that helps minimize inventory requirements. The plated steel or aluminum set screw provides a durable electrical contract between conductor and Lug. UL Listed and CSA Certified for use up to 600 V and UL temperature rated 90 Degrees Celsius.

Specifications

Product Type	Mechanical Lug
Sub Brand	Pan-Lug™
Application	Stranded Aluminum or Copper Code Conductor
Base Material	Aluminum
Maximum Aluminum Conductor Size (AWG)	2/0
Minimum Aluminum Conductor Size (AWG)	14
Maximum Copper Conductor Size (AWG STR)	2/0
Minimum Copper Conductor Size (AWG STR)	14
Stud Hole Size (In.)	1/4
Stud Hole Size (mm)	6.35
Number of Holes	1
Number of Ports	2
Tongue Type	Straight Tongue
Tongue Angle	Straight
Tongue Length (In.)	0.85
Tongue Length (mm)	21.6
Tongue Thickness (In.)	0.19
Tongue Thickness (mm)	4.8
Tongue Width (In.)	1.2
Tongue Width (mm)	30.6
Overall Length (In.)	1.47
Overall Length (mm)	37.3

Specifications (continued)

Overall Width (In.)	1.2
Overall Width (mm)	30.5
Overall Height (In.)	0.8
Overall Height (mm)	19.9
Barrel Type	Two Barrel
Barrel Length (In.)	0.63
Barrel Length (mm)	16
Insulation Material	Non-Insulated
Finish/Coating	Tin-Plated
Standards Met	cULus Listed for use up to 600V & Temperature Rated to 90°C
CSA Temperature Rating (°C)	90
UL Temperature Rating (°C)	90
Maximum Voltage (V)	600
Hex Size (In.)	3/16
Hex Size (mm)	4.8
Wire Strip Length (In.)	0.62
Wire Strip Length (mm)	15.7

Product image

In some applications it is useful to protect the feed through connection with a separate fuse. Fuse terminal blocks are made up of one terminal block bottom section with a fuse insertion carrier. The fuses vary from pivoting fuse levers and pluggable fuse holders to screwable closures and flat plug-in fuses.

MDL

1/4" x 1 1/4" Time-delay glass tube fuses

RoHS

Product features

- Time-delay
- Optional axial leads available
- 1/4 x 1 1/4 (6.4 x 31.7mm) physical size
- Glass tube, nickel-plated brass endcap construction
- UL Listed product meets standard 248-14

Environmental data

- Shock: 1A thru 30A – MIL-STD-202, Method 207, (HI Shock)
- Vibration: 1/4A thru 30A – MIL-STD-202, Method 204, Test Condition C (Except 5g, 500HZ)

Agency information

- UL Listed Card: MDL 1/16 - 8A (Guide JDYX, File E19180)
- UL Recognized Card: MDL 9 - 30A (Guide JDYX2, File E19180)
- CSA Certification Card: MDL 1/16 - 8A (Class No. 1422-01)
- CSA Component Acceptance: MDL 9-30A (Class No. 1422-30)
- CE

Ordering

- Specify packaging code
- Insert packaging code prefix before part number. E.g., BK (or BK1)-MDL-5-R
- Specify option codes if desired
- For axial leads, insert "V" between catalog series and amp rating. E.g., BK-MDL-V-5-R
- For board washable, insert "B" between catalog series and amp rating. E.g., BK-MDL-B-5-R
- For axial leads and board washable, insert "B" then "V" between catalog series and amp rating. E.g., BK-MDL-BV-5-R
