NOTICE OF REGULAR COUNCIL MEETING

In accordance with § 38-431.02 of the Arizona Revised Statutes of the State of Arizona, notice is hereby given to the Members of City Council and to the general public that the Mayor and Council of the City of San Luis, Arizona will hold a Regular City Council meeting at 6:00 p.m., Wednesday, June 10, 2026. The meeting will take place at the City Council Chambers, located at 1090 E. Union Street, San Luis, Arizona, 85349. The public is invited to attend the open meeting.

In accordance with the Americans with Disabilities Act (ADA) and Section 504 of the Rehabilitation Act of 1973, the City of San Luis does not discriminate on the basis of disability in the admission of or access to, or treatment or employment in its programs, activities, or services. For information regarding rights and provisions of the ADA or Section 504, or to request reasonable accommodations for participation in City programs, activities, or services contact: ADA/Section 504 Coordinator, City of San Luis Human Resources Department, 1090 E. Union Street, San Luis, Arizona, 85349; (928) 341-8520.

Notice is hereby given that pursuant to A.R.S. § 1-602.A.9, subject to certain specified statutory exceptions, parents have a right to consent before the State or any of its political subdivisions make a video or audio recording of a minor child. Meetings of the City Council are audio and/or video recorded, and, as a result, proceedings in which children are present may be subject to such recordings. Parents in order to exercise their rights may either file written consent with the City Clerk to such recordings or take personal action to ensure that their child or children are not present when a recording may be made. If a child is present at the time a recording is made, the City will assume that the rights afforded parents pursuant to A.R.S. § 1-602.A.9 have been waived.

THIS NOTICE IS GIVEN BY:

/s/ Sonia Cornelio, City Clerk

AVISO DE JUNTA REGULAR

De acuerdo con los Estatutos del Estado de Arizona A.R.S. § 38-431.02, se le informa a los miembros del Cabildo y al público en general que el Alcalde y el Cabildo, tendrán una Junta Regular a las 6:00 p.m., el día Miercoles, 10 de Junio del 2026. La junta se llevará a cabo en la Sala del Cabildo, ubicada en el 1090 E. Union Street, San Luis, Arizona, 85349. El público está invitado a la junta.

De acuerdo con el Acta de Americanos con Discapacidades y la Sección 504 del Acta de Rehabilitación del 1973, la Ciudad de San Luis, Arizona no discrimina por causa de discapacidad la admisión y acceso a sus programas, actividades, servicios o en el trato en cuanto a empleo. Para más información referente a derechos y provisiones del Acta de Americanos con Discapacidades o Sección 504, o para solicitar adaptaciones que sean razonables para la participación en programas, actividades o servicios de la Ciudad, contactar al: Coordinador del Acta de Americanos con Discapacidades/Sección 504, Departamento de Recursos Humanos de la Ciudad de San Luis, Arizona, ubicado en el 1090 E. Union Street, San Luis, Arizona, 85349; (928) 341-8520.

Por medio de este aviso y de acuerdo con los Estatutos del Estado de Arizona A.R.S § 1-602.A.9, sujeto a ciertas excepciones reglamentarias, los padres de familia tienen el derecho de dar el consentimiento ante el Estado o cualquiera de sus subdivisiones políticas para hacer una grabación de audio o video de su hijo menor de edad. Las juntas del Cabildo se graban en audio y/o video y como resultado, el hecho de que haya menores presentes puede ser sujeto a que sean grabados. Para que los padres de familia puedan ejercer sus derechos pueden dar el consentimiento por escrito con la Secretaria de la Ciudad a tal grabación, o tomar acción personal para asegurarse que su hijo menor no esté presente cuando la grabación se lleve a cabo. Si un menor de edad está presente en el momento de la grabación, la Ciudad asumirá que los padres de familia están cediendo los derechos sobre una posible grabación de acuerdo con los Estatutos del Estado de Arizona A.R.S. § 1-602.A.9.

ESTE AVISO ES DADO POR:

/f/ Sonia Cornelio, Actuaria de la Ciudad

AMENDED AGENDA 6/8/2026
REMOVED PREVIOUSLY ITEM NO. 9 AND
RE-NUMBERED ACCORDINGLY

AGENDA
Regular Meeting
San Luis City Council
Council Chambers
1090 E. Union Street
San Luis, AZ 85349
June 10, 2026
6:00 p.m.

PLEASE TAKE NOTICE THAT MEMBERS OF THE CITY COUNCIL WILL ATTEND EITHER IN PERSON, TELEPHONE, OR VIDEO CONFERENCE COMMUNICATION. THE MAYOR OR ACTING MAYOR FOR THIS MEETING MAY CHANGE THE ORDER OF THE ITEMS; IF AUTHORIZED BY LAW AND BY A MAJORITY VOTE OF A QUORUM OF CITY COUNCIL MEMBERS PRESENT, AN EXECUTIVE SESSION WILL BE HELD IMMEDIATELY FOLLOWING THE VOTE IN ACCORDANCE WITH A.R.S. § 38-431.03(A) AND THE MEETING WILL BE TEMPORARILY RECESSED WHILE THE CITY COUNCIL RETIRES TO EXECUTIVE SESSION WHICH WILL NOT BE OPEN TO THE PUBLIC.

TENGA EN CUENTA QUE LOS MIEMBROS DEL CABILDO DE LA CIUDAD ASISTIRÁN EN PERSONA, TELÉFONO O COMUNICACIÓN POR VIDEO CONFERENCIA. LA ALCALDESA O ALCALDE INTERINO DE ESTA REUNIÓN PUEDE CAMBIAR EL ORDEN DE LOS TEMAS; SI ESTÁ AUTORIZADO POR LA LEY Y POR MAYORÍA DE VOTOS DE UN QUÓRUM DE MIEMBROS DEL CABILDO PRESENTES, SE LLEVARÁ A CABO UNA SESIÓN EJECUTIVA INMEDIATAMENTE DESPUÉS DE LA VOTACIÓN DE ACUERDO CON LOS ESTATUTOS DEL ESTADO DE ARIZONA A.R.S. § 38-431.03 (A) Y LA REUNIÓN SERÁ TEMPORALMENTE RECESADA MIENTRAS EL CABILDO DE LA CIUDAD SE RETIRE A UNA SESIÓN EJECUTIVA QUE NO ESTARÁ ABIERTA AL PÚBLICO.

1. CALL TO ORDER/ROLL CALL

2. PLEDGE OF ALLEGIANCE

3. INVOCATION

Any opening invocation that is offered before the official start of the Council meeting shall be the voluntary offering of a private person, to and for the benefit of the Council. The views or beliefs expressed by the invocation speaker have not been previously reviewed or approved by the City Council or the city staff. The city is not allowed by law to endorse the religious or non-religious beliefs or views of such speakers. Any invitation to stand during the Pledge of Allegiance or invocation shall not be construed as a demand, order, or any other type of command. No person in attendance at the meeting shall be required to participate in any Pledge of Allegiance or an opening invocation that is offered.

Toda invocación inicial que se ofrezca antes del inicio oficial de la sesión del Cabildo será una ofrenda voluntaria de una persona particular, para beneficio del Cabildo. Las opiniones o creencias expresadas por quien haga la invocación no han sido revisadas ni aprobadas previamente por el Cabildo ni por el personal de la ciudad. La ley no permite a la ciudad respaldar las creencias o puntos de vista religiosos o no religiosos de dichos oradores. Cualquier invitación a ponerse de pie durante el Juramento a la Bandera o la invocación no se interpretará como una exigencia, orden ni ningún otro tipo de mandato. Ninguna persona presente en la sesión estará obligada a participar en el Juramento a la Bandera ni en ninguna invocación inicial que se ofrezca.

4. **CALL TO THE PUBLIC**

This is the time for the public to comment. Under A.R.S. § 38-431.01(I), Members of the City Council shall not discuss or take legal action on matters raised during an open call to the public that are not properly noticed on this agenda for discussion and legal action. At the conclusion of an open call to the public, individual Members of the City Council may respond to criticism made by those who have addressed the City Council, may ask staff to review a matter, or may ask that a matter be put on a future agenda.

5. **PROCLAMATIONS**

5. A. Proclamation on Waste and Recycling Workers Week June 15-20, 2026

5. B. Proclamation on Juneteenth Day - June 19, 2026

6. **CONSENT AGENDA**

All matters are considered to be routine by the City Council and will be enacted by one motion. If discussion is desired, that item will be removed from the Consent Agenda and will be considered separately.

6. A. **MINUTES OF**

- Regular Council meeting held May 13, 2026

6. B. **DISBURSEMENTS**

From May 20, 2026 to June 03, 2026

Total $2,465,679.94 (Two Million, Four Hundred Sixty-Five Thousand, Six Hundred Seventy-Nine Dollars and Ninety-Four Cents)

7. **DISCUSSION AND POSSIBLE ACTION ITEMS:**

7. A. Discussion and possible action on any and all matters regarding the Fiscal Year 2026-2027 for the 4FrontED annual contribution. **(Jenny Torres, City Manager)**

7. B. Discussion and possible action on any and all matters regarding the award of a construction contract to Filanc Construction Company, Inc. for the West Wastewater Treatment Plant Expansion project. **(Eulogio Vera, Director of Public Works)**

7. C. Discussion and possible action on any and all matters regarding the electrical distribution and streetlight services from Arizona Public Service (APS) for the Sidewinder Road Streetlight Project - Project No. 2026051. **(Manuel Hernandez, Assistant Director of Public Works)**

Proclamation

OFFICE OF THE
MAYOR
CITY OF SAN LUIS

Proclamation

WASTE AND RECYCLING WORKERS WEEK
June 15 - 20, 2026

WHEREAS, the citizens of San Luis recognize the often thankless job of waste and recycling workers; and

WHEREAS, John Arwood, second-generation owner of Arwood Site Services, began the annual observance of National Garbage Man Day on June 17, 2012, which was renamed to Waste and Recycling Workers Week in 2020; and

WHEREAS, the people employed by local refuse collection and hauling companies contracted by the City of San Luis make significant contributions to the safety, health, and welfare of our citizens; and

WHEREAS, according to the Centers for Disease Control and Prevention, the eradication of many diseases in the Western World is due in large part to higher public sanitation standards resulting from effective garbage disposal; and

WHEREAS, the City of San Luis values and celebrates our local sanitation industry employees for their commitment to our residents and businesses in keeping our neighborhoods and streets safe and clean.

NOW, THEREFORE, BE IT RESOLVED, that I, Nieves Riedel, Mayor of the City of San Luis, do hereby proclaim June 15-20, 2026, as **"Waste and Recycling Workers Week"** and invite everyone to recognize and celebrate men and women in the waste and recycling industry as front-line responders.

DATED this **10th** day of **June 2026**.

Proclamation

OFFICE OF THE
MAYOR
CITY OF SAN LUIS

Proclamation

JUNETEENTH DAY
June 19th, 2026

WHEREAS, the Civil War was fought to ensure that America's founding principles of freedom and justice for all were shared by all Americans; and

WHEREAS, on January 1, 1863, President Abraham Lincoln signed the Emancipation Proclamation, which granted freedom to all enslaved, although freedom did not become a reality for the enslaved people of Texas; and

WHEREAS, on June 19, 1865, Major General Gordon Granger led Union soldiers into Galveston, Texas, to enforce the Emancipation Proclamation and freed all remaining enslaved people in the state of Texas; and

WHEREAS, Juneteenth is the oldest celebration of the ending of slavery in the United States of America and is also known as Emancipation Day, Freedom Day, Jubilee Day, and Juneteenth Independence Day; and

WHEREAS, on March 17, 2016, Governor Doug Ducey signed HB2226, sponsored by Representative Reginald Bolding, recognizing June 19 as Juneteenth Day in Arizona, making Arizona the 45th State to recognize Juneteenth as a state holiday or special day of observance; and

WHEREAS, Juneteenth celebrations take place annually throughout Arizona and the nation, consisting of readings of the Emancipation Proclamation, prayer and worship services, cultural performances, community service events, ceremonial observances, food, and more.

NOW, THEREFORE, BE IT RESOLVED, that I, Nieves Riedel, Mayor of the City of San Luis, do hereby proclaim June 19th, 2026, as **"Juneteenth Day"** and encourage all San Luis residents to reflect upon the value of freedom and join in Juneteenth celebrations across Arizona.

DATED this **10th** day of **June 2026**.

Brian De La Hoya, Resident
Christian Cuevas, Meeting Interpreter
Fabher Sanchez, Resident
James Allen Jr., Resident
Luisa Arreola, Resident
Mark Concha Jr., Resident
Nicole Kulpepper, APS Public Affairs
Octavio Ramirez, Resident
Perla De La Hoya, Resident

2. PLEDGE OF ALLEGIANCE

Council Member Esteban C. Rosales led the Pledge of Allegiance.

3. INVOCATION

The invocation was performed by Ms. Elida Valenzuela – Police Chaplain.

Mayor Nieves Riedel extended her sincere appreciation to Ms. Valenzuela for graciously agreeing to deliver the invocation, noting that this responsibility has become an increasingly significant burden.

4. CALL TO THE PUBLIC

Mr. James Allen Jr., 1549 E. Babbitt Lane, San Luis, AZ, asked about the purpose of plots of land. Isn't there a perimeter or buffer area that sets the distance between houses and the state prison? He would like to find out how close it is and whether it is being monitored as the building goes up. He also asked when the last environmental study was conducted in the City of San Luis. As they may know, probably one has the highest rate of incidence of children and adults with disabilities, which can be targeted through either pollution, water contamination, or a lot of other things. He asked the Mayor and the City Council to look into conducting a study to determine whether these things are true, so that appropriate steps could be taken to protect the citizens. Lastly, he commented on when someone desires to run for office, he followed the letter of the law. He noted that many people's signs were already out before this Monday, which marked the start of political sign posting. He thinks that if they are going to do things, they need to do them decently and in order and follow the rule of law. If they are not going to follow the rule of law, there should be a price for those who do not.

Ms. Angelica Roldan, Director of Parks & Recreation, announced that the City of San Luis was the only city in the county selected to receive community beautification funding from Arizona Public Service (APS) as part of their 140th Anniversary celebration. This investment will allow the Parks & Recreation Department to make important improvements at Joe Orduño Park.

She further noted that the funding will help replace the metal shade structure at F1 Baseball Field and restore the tennis courts. She introduced Ms. Nicole Kulpepper from APS.

Ms. Kulpepper mentioned that they were happy to offer this grant to the Parks & Recreation Department for the beautification project, as they chose to give back in ways that serve the communities that have grown up with them.

Mr. Jose F. Garcia, a Yuma resident, commented that on the 20th of last month, he had to go to see the doctor in San Luis, Mexico, and that he parked in a handicap space on Main Street in San Luis, Arizona. Upon his return, he found a yellow envelope on the windshield of his vehicle, which resulted in a citation for parking in a handicap space, even though he held his handicap placard. He called the court to inquire about the citation and was informed that the fine is $150.00 and that, if he wanted a payment plan, an additional $20.00 would be added. He is unsure if it only happens in San Luis or in other places in the United States, where a handicapped person gets a ticket for parking in a handicap space.

Mayor Nieves Riedel asked Mr. Garcia to come to City Hall the following day, as she is interested in meeting with him to discuss this issue, which is very interesting and requires attention.

5. PROCLAMATION

5. A. Proclamation on National Public Works Week - May 17-23, 2026

Ms. Melissa Lopez, Deputy City Clerk, read the proclamation by title only.

6. CONSENT AGENDA

6. A. MINUTES OF
- Regular Council meeting held April 8, 2026

6. B. DISBURSEMENTS
From April 15, 2026 to May 4, 2026
Total $1,713,964.91
(One Million, Seven Hundred Thirteen Thousand, Nine Hundred Sixty-Four Dollars and Ninety-One Cents)

MOTION: Council Member Tadeo Azael De La Hoya/Vice Mayor Javier Vargas to approve the Consent Agenda as presented. The motion passed unanimously.

The vote was as follows:

Council Member Luis E. Cabrera	Aye
Council Member Maria Cecilia Cruz	Aye
Council Member Tadeo Azael De La Hoya	Aye
Council Member Esteban C. Rosales	Aye
Council Member Lizeth Servin	Aye
Vice Mayor Javier Vargas	Aye
Mayor Nieves Riedel	Aye

7. DISCUSSION AND POSSIBLE ACTION ITEMS:

7. A. Discussion and possible action on any and all matters regarding the purchase of a new Zoll Cardiac Monitor. (Angel Ramirez, Fire Chief)

Mr. Angel Ramirez, Fire Chief, stated that he is requesting authorization to purchase a Zoll Cardiac monitor, one of the most expensive pieces of equipment they must use daily. 80% of their calls are EMS calls, and they probably use this equipment on every single call. They do not have a spare cardiac monitor as they are very expensive, and are trying to upstaff another vehicle, as discussed during the budget retreat. This item was budgeted for this fiscal year. Staff would like to use Zoll Cardiac, as they are a sole source company and as allowed through the Procurement Code Section 3.05.020.

MOTION: Vice Mayor Javier Vargas/Council Member Tadeo Azael De La Hoya to approve the purchase of a new cardiac monitor through Zoll Medical Corporation for the amount of $53,191.70, as presented. The motion passed unanimously.

The vote was as follows:

Council Member Luis E. Cabrera	Aye
Council Member Maria Cecilia Cruz	Aye
Council Member Tadeo Azael De La Hoya	Aye
Council Member Esteban C. Rosales	Aye
Council Member Lizeth Servin	Aye
Vice Mayor Javier Vargas	Aye
Mayor Nieves Riedel	Aye

7. B. Discussion and possible action on any and all matters regarding the City of San Luis Business Center Electrical Service and Exhaust Project. (Eulogio Vera, Director of Public Works)

Mr. Eulogio Vera, Director of Public Works, explained that this contract adds electrical service and an exhaust system to half the building that lacks power, where the Call Center is located near San Luis Plaza Drive. Approximately half of that building, 20,000 square feet, is used by the city for storage by several departments and is currently a safety issue.

He pointed out that, with this project, there will be lighting, making it more useful for continued storage. The project was advertised, bids were received and Merrill Development was the lowest bidder at $104,00.00. This project will be completed before the end of the fiscal year.

MOTION: Council Member Luis E. Cabrera/Council Member Tadeo Azael De La Hoya to award the contract to Merrill Development, Inc., for the San Luis Business Center Electrical Project in the amount of $104,464.50 and approve the budget transfer as presented in the fiscal impact of this item. The motion passed unanimously.

The vote was as follows:

Council Member Luis E. Cabrera	Aye
Council Member Maria Cecilia Cruz	Aye
Council Member Tadeo Azael De La Hoya	Aye
Council Member Esteban C. Rosales	Aye
Council Member Lizeth Servin	Aye
Vice Mayor Javier Vargas	Aye
Mayor Nieves Riedel	Aye

7. C. Discussion and possible action on any and all matters regarding the approval of Amendment No. 1 to the Intergovernmental Agreement (IGA) between the City of San Luis and the Arizona Department of Transportation (ADOT) for the US 95 Raised Median Project. (Manuel Hernandez, Assistant Director of Public Works)

Mr. Manuel Hernandez, Assistant Director of Public Works, stated that Amendment No. 1 to the Intergovernmental Agreement (IGA) with the Arizona Department of Transportation (ADOT), approved in February 2024, is for the US Highway 95 raised median project. The amendment revises the project limits from the original segment from County 20 ½ Street to County 22nd Street, which was 1.5 miles, to the revised segment from County 21st Street to County 22nd Street, reducing it to approximately 1.1 miles. The adjustment was necessary because the final design cost estimate exceeded the programmed federal HSIP funding. The total project cost and funding structure remain unchanged, including the city's match. Additionally, all other terms of the original agreement remain the same.

MOTION: Council Member Esteban C. Rosales/Council Member Tadeo Azael De La Hoya to approve Amendment No. 1 to the Intergovernmental Agreement with the Arizona Department of Transportation for the US 95 Raised Median Project. The motion passed unanimously.

The vote was as follows:

Council Member Luis E. Cabrera	Aye
Council Member Maria Cecilia Cruz	Aye
Council Member Tadeo Azael De La Hoya	Aye
Council Member Esteban C. Rosales	Aye
Council Member Lizeth Servin	Aye
Vice Mayor Javier Vargas	Aye
Mayor Nieves Riedel	Aye

7. D. Discussion and possible action on any and all matters regarding the approval of additional funding for ADOT project administrative fees and right of way and environmental clearances for the Los Alamos Street & 10th Avenue Curve Realignment Project (ADOT Project No. T044201D/03D). (Manuel Hernandez, Assistant Director of Public Works)

Mr. Manuel Hernandez, Assistant Director of Public Works, requested approval of $37,456.00 in additional funding for the Los Alamos Street and 10th Avenue curve realignment project to cover Arizona Department of Transportation's (ADOT) administrative fees, third-party right-of-way services and environmental clearances. This important safety improvement project was originally approved by the Mayor and City Council in 2023 via an intergovernmental agreement (IGA) with ADOT. As design progressed, additional right-of-way requirements and environmental coordination have extended the timeline and increased cost beyond the original estimates. ADOT invoiced the city $37,456.00 to cover the necessary project advancement costs. Per the IGA, the city is responsible for all costs that exceed the initial estimates. The environmental clearance is to be completed by July 2026; the stage 4 submittal is due at the end of July, which is approximately 95% of the design. They expect to complete the entire design by December. The December right-of-way clearances are scheduled for completion by March 2027, at which point ADOT will begin bidding.

MOTION: Vice Mayor Javier Vargas/Council Member Tadeo Azael De La Hoya to approve $37,456.00 for ADOT project administrative fees and clearances for the Los Alamos curve realignment project and authorize a budget transfer as described in the fiscal impact statement. The motion passed unanimously.

The vote was as follows:

Council Member Luis E. Cabrera	Aye
Council Member Maria Cecilia Cruz	Aye
Council Member Tadeo Azael De La Hoya	Aye
Council Member Esteban C. Rosales	Aye
Council Member Lizeth Servin	Aye
Vice Mayor Javier Vargas	Aye
Mayor Nieves Riedel	Aye

7. E. Discussion and possible action on any and all matters regarding the award of a contract to DPE Construction, Inc. for Lakin Drive Subsidence Issue - Road Improvement Construction project. (Tomas Sanchez, City Engineer)

Mr. Tomas Sanchez, City Engineer, indicated that staff is seeking approval to award the construction contract to DPE Construction for the Lakin Drive subsidence roadway improvement construction project. He provided some background, adding that this project was advertised and two (2) bids were received by local contractors, DPE Construction and Gutierrez Canales Engineering. Bids were evaluated, and after review, DPE Construction was determined to be the lowest responsible bidder, capable of performing the work for $371,800.00. This will impact two (2) fiscal years, with $200,000.00 this fiscal year and approximately $175,000.00 next fiscal year to complete the project. The project's duration will be approximately three (3) months, and the contractor will mobilize as soon as the notice to proceed is given.

MOTION: Council Member Luis E. Cabrera/Council Member Tadeo Azael De La Hoya to approve the contract with DPE Construction, Inc., for the Lakin Drive subsidence issue-road improvement construction project in the amount of $371,800.00, as presented. The motion passed unanimously.

The vote was as follows:

Council Member Luis E. Cabrera	Aye
Council Member Maria Cecilia Cruz	Aye
Council Member Tadeo Azael De La Hoya	Aye
Council Member Esteban C. Rosales	Aye
Council Member Lizeth Servin	Aye
Vice Mayor Javier Vargas	Aye
Mayor Nieves Riedel	Aye

7. F. Discussion and possible action on any and all matters regarding the award of a contract to Kimley Horn and Associates, Inc. for environmental professional services for the 10th Avenue Widening Project - Cesar Chavez Boulevard to County 22nd Street. (Tomas Sanchez, City Engineer)

Mr. Tomas Sanchez, City Engineer, explained that the Engineering Department is seeking approval to award a contract to Kimley Horn and Associates for professional environmental services for the 10th Avenue widening project from Cesar Chavez Boulevard to County 22nd Street. He briefly described the scope of work, noting that these environmental studies are required by the bureau's regulations as part of the right-of-way acquisition process for the 10th Avenue road widening project and are not necessary to advance the project through the federal environmental review and right-of-way approval processes. Kimberly Horn will take approximately four (4) months from notice to proceed to complete these studies and submit them to the Bureau of Reclamation. Staff recommended approval of this contract to Kimley Horn in the amount of $89,500.00.

Questions, answers and discussion ensued amongst the City Council and Mr. Sanchez.

Mr. Sanchez stated that the reason the environmental assessments are needed is due to the entity required to work with the Bureau of Land Management (BLM) or the Bureau of Reclamation (BOR) when the city wants to obtain the right of way from federal land and to protect the environment, the owls, make sure one will not disturb archaeological sites and protect the flat horn lizard.

MOTION: Council Member Luis E. Cabrera/Vice Mayor Javier Vargas to approve the Professional Environmental Services Contract with Kimley Horn and Associates, Inc. for the 10th Avenue widening project in the amount of $89,500.00, as presented. The motion passed unanimously.

The vote was as follows:

Council Member Luis E. Cabrera	Aye
Council Member Maria Cecilia Cruz	Aye
Council Member Tadeo Azael De La Hoya	Aye
Council Member Esteban C. Rosales	Aye
Council Member Lizeth Servin	Aye
Vice Mayor Javier Vargas	Aye
Mayor Nieves Riedel	Aye

7. G. Discussion and possible action on any and all matters regarding Resolution No. 2398. A Resolution of the Mayor and City Council of the City of San Luis, Arizona, a Municipal Corporation of Arizona, authorizing the submission of an application for additional financial assistance from the Water Infrastructure Finance Authority of Arizona (WIFA) through the Clean Water State Revolving Fund program to support the expansion of the West Wastewater Treatment Plant. (Roula Encinas, Director of Finance)

Ms. Roula Encinas, Director of Finance, stated that in October 2024, the City Council authorized staff to apply for funding from the Water Infrastructure Finance Authority of Arizona (WIFA) to expand the west wastewater treatment plant. In December 2025, the city was approved for approximately $26.2 million through the Clean Water State Revolving Fund Program. After the project entered the bidding phase, the lowest responsive and responsible bid came in significantly higher than originally estimated at approximately $41 million. Due to increased construction costs, staff is requesting authorization to apply for approximately $12 million in additional WIFA funding to help close the remaining funding gap. The remaining $3 million balance would be funded from the wastewater utility reserve. This project remains a critical infrastructure investment for the city, supporting current and future wastewater capacity, regulatory compliance, and continued community growth. Additionally, the WIFA program continues to offer one of the most cost-effective financing options, with low interest rates and favorable repayment terms.

She mentioned that staff is requesting approval of Resolution No. 2398, which authorizes the submission of an application for additional financial assistance from WIFA. Final loan terms will be brought back to the City Council for approval at a future meeting.

Questions, answers, and discussion followed amongst the City Council, Ms. Encinas, and Mr. Eulogio Vera, Director of Public Works.

MOTION: Council Member Esteban C. Rosales/Council Member Tadeo Azael De La Hoya to approve and adopt Resolution No. 2398. The motion passed unanimously.

The vote was as follows:

Council Member Luis E. Cabrera	Aye
Council Member Maria Cecilia Cruz	Aye
Council Member Tadeo Azael De La Hoya	Aye
Council Member Esteban C. Rosales	Aye
Council Member Lizeth Servin	Aye
Vice Mayor Javier Vargas	Aye
Mayor Nieves Riedel	Aye

Mayor Nieves Riedel declared a conflict of interest on Items No. 7.H. and 7.I.

Ms. Melissa Lopez, Deputy City Clerk, stated that the applicant has requested that Items No. 7.H. and 7.I. be continued to the Regular Council meeting scheduled for August 12, 2026.

7. H. Public hearing followed by discussion and possible action on any and all matters regarding Minor Amendment Case No. 2026-0062 - Colibri Townhomes and Resolution No. 2397. A Resolution of the Mayor and City Council of the City of San Luis, Arizona, amending the 2040 General Plan to change the land use designation of lots 32 through 36 of the Plaza Colibri Commercial Subdivision totaling 6.71 acres from Commercial (C) to Medium Density Residential (MDR); Repealing any conflicting provisions; and providing for severability. (Jose A. Guzman, Director of Development Services)

A. Staff presentation
B. Open Public Hearing
C. Call to the public on this item
D. Close Public Hearing
E. Action on Resolution No. 2397

Mr. Joe D. Estes, Interim City Attorney, indicated to the Vice Mayor and City Council that a vote is needed to continue the items to the August 12th meeting as requested by the applicant.

Council Member Luis E. Cabrera asked whether there was a reason the applicant requested that the items be moved to the August 12th meeting and if it took staff time to prepare for this item to be posted on the agenda.

Mr. Jose Guzman, Director of Development Services, responded that staff received an email requesting that the items be continued and did not receive a reason for it. He added that staff had advertised the public hearing.

MOTION: Council Member Tadeo Azael De La Hoya/Council Member Maria Cecilia Cruz to continue the item as requested by the applicant. The motion passed with five (5) Ayes, one (1) Nay by Council Member Lizeth Servin, and one (1) Abstention by Mayor Nieves Riedel.

The vote was as follows:

Council Member Luis E. Cabrera	Aye
Council Member Maria Cecilia Cruz	Aye
Council Member Tadeo Azael De La Hoya	Aye
Council Member Esteban C. Rosales	Aye
Council Member Lizeth Servin	Nay
Vice Mayor Javier Vargas	Aye
Mayor Nieves Riedel	Abstained

7. I. Public Hearing followed by discussion and possible action on any and all matters regarding Rezoning Case No. 2026-0063 - Colibri Townhomes and Ordinance No. 483. An Ordinance of the Mayor and City Council of the City of San Luis, Arizona, amending the Official Zoning Map of the City of San Luis by changing the zoning classification of lots 32 through 36 of the Plaza Colibri Commercial Subdivision totaling 6.71 acres from Community Commercial (C-2) to Medium-High Density Residential (R-2); repealing any conflicting provisions; and providing for severability. (Jose A. Guzman, Director of Development Services)

A. Staff presentation
B. Open Public Hearing
C. Call to the public on this item
D. Close Public Hearing
E. Action on Ordinance No. 483 by title only
F. Action on Ordinance No. 483

MOTION: Council Member Tadeo Azael De La Hoya/Council Member Esteban C. Rosales to continue the item as requested by the applicant. The motion passed with six (6) Ayes and one (1) Abstention by Mayor Nieves Riedel.

The vote was as follows:

Council Member Luis E. Cabrera	Aye
Council Member Maria Cecilia Cruz	Aye
Council Member Tadeo Azael De La Hoya	Aye
Council Member Esteban C. Rosales	Aye
Council Member Lizeth Servin	Aye
Vice Mayor Javier Vargas	Aye
Mayor Nieves Riedel	Abstained

8. SUMMARY OF CURRENT EVENTS

Council Member Javier Vargas reported that this morning, he, along with Council Members Luis E. Cabrera, Maria Cecilia Cruz, and Lizeth Servin, attended the city's groundbreaking ceremony for the Merrill Avenue improvement project. He thanked all those involved in this project, adding that it will help with traffic, specifically with the construction of the new hospital. He asked the community for patience during this process as the construction is expected to continue through September 2026.

Mayor Nieves Riedel also thanked those involved in this project and apologized for missing it due to health issues.

Council Member Lizeth Servin reported that she saw a post on Facebook from a citizen thanking a city employee for returning her son's wallet. Although the employee's identity is unknown, she recognized and thanked the employee, as well as the citizen who thanked the employee. She also reminded citizens that if any households need utility assistance, Arizona Public Service (APS) will be at Comite De Bienestar on Friday, May 15, 2026, from 9:00 a.m. to 4:00 p.m. with its APS Assistance Program. More information ca be obtained from Chicanos Por La Causa.

Council Member Luis E. Cabrera commented that the community will have the opportunity to attend the "Conversations With The City Council" event on June 6, 2026. At least one (1) Council Member will be present to listen to the community's concerns. More information will be posted on the city's social media website for that event. He also mentioned that there is an opening on the Somerton School District board due to a resignation for those who live on the east side of the city. More information can be obtained from the Yuma County Superintendent's Office on this.

9. EXECUTIVE SESSION:

Discussion and possible action to hold an executive session pursuant to A.R.S. § 38-431.03(A)(1), (3) and (4) on any and all matters relating to the position of Magistrate to discuss or consider employment, assignment, appointment, including possible discussion of confirmation of appointment and/or discussion of approval of terms and/or conditions pursuant to San Luis City Code § 34.20, and consultation with the City Attorney or City's attorneys regarding the same. (Joe Estes, Interim City Attorney)

MOTION: Mayor Nieves Riedel/Council Member Tadeo Azael De La Hoya to go into executive session at approximately 7:12 p.m. The motion passed unanimously.

The vote was as follows:

Council Member Luis E. Cabrera	Aye
Council Member Maria Cecilia Cruz	Aye
Council Member Tadeo Azael De La Hoya	Aye
Council Member Esteban C. Rosales	Aye
Council Member Lizeth Servin	Aye
Vice Mayor Javier Vargas	Aye
Mayor Nieves Riedel	Aye

10. MOTION TO GO BACK TO REGULAR SESSION

MOTION: Mayor Nieves Riedel/Council Member Esteban C. Rosales to go back to regular session at approximately 7:28 p.m. The motion passed unanimously.

The vote was as follows:

Council Member Luis E. Cabrera	Aye
Council Member Maria Cecilia Cruz	Aye
Council Member Tadeo Azael De La Hoya	Aye
Council Member Esteban C. Rosales	Aye
Council Member Lizeth Servin	Aye
Vice Mayor Javier Vargas	Aye
Mayor Nieves Riedel	Aye

11. DISCUSSION AND POSSIBLE ACTION ITEM:

11. A. Discussion and possible action on any and all matters regarding an employment contract for a City Magistrate. (Jenny Torres, City Manager)

Ms. Jenny Torres, City Manager, mentioned that staff would like to recommend some changes to the contract to modify the retirement and salary as discussed and proposed.

MOTION: Council Member Esteban C. Rosales/Vice Mayor Javier Vargas to appoint Amanda M. Watlington as Magistrate and approve and adopt the proposed contract for magistrate, as presented. The motion passed unanimously.

The vote was as follows:

Council Member Luis E. Cabrera	Aye
Council Member Maria Cecilia Cruz	Aye
Council Member Tadeo Azael De La Hoya	Aye
Council Member Esteban C. Rosales	Aye
Council Member Lizeth Servin	Aye
Vice Mayor Javier Vargas	Aye
Mayor Nieves Riedel	Aye

12. ADJOURNMENT

MOTION: Mayor Nieves Riedel/ Council Member Esteban C. Rosales to adjourn the Regular Council meeting at approximately 7:29 p.m. The motion passed unanimously.

The vote was as follows:

Council Member Luis E. Cabrera	Aye
Council Member Maria Cecilia Cruz	Aye
Council Member Tadeo Azael De La Hoya	Aye
Council Member Esteban C. Rosales	Aye
Council Member Lizeth Servin	Aye
Vice Mayor Javier Vargas	Aye
Mayor Nieves Riedel	Aye

APPROVED:

AGENDA ITEM REVIEW FORM

Regular City Council Meeting **7. A.**

Meeting Date: 06/10/2026
Department Head: Joe Estes, City Attorney, Attorney's Office
Submitted By: Justin Neuman, Paralegal, Attorney's Office
Action Requested: Motion

ITEM:

Discussion and possible action on any and all matters regarding the Fiscal Year 2026-2027 for the 4FrontED annual contribution. **(Jenny Torres, City Manager)**

SUMMARY:

IGA Organizational Structure: 4FrontED was created through an Intergovernmental Agreement ("IGA") that includes Yuma County and the municipalities within it. The Board consists of the mayors of each municipality in the county and a county supervisor. The staff is each community's economic development staff or designee. 4FrontED hires an Executive Director. The City of Yuma is the Fiscal Agent. The IGA was set to expire on February 13, 2024, but it was automatically renewed when the participating entities elected not to give thirty (30) days' notice.

Service: 4FrontED provides a binational program focused on education, economic development, infrastructure, and tourism in the U.S.-Mexico Border region, collaborating with California, Baja California Norte, Sonora, and Arizona to mutually uplift the region's economy.

Amount: 4FrontED Requested a contribution of $17,722.35 for FY 2026-2027 per $0.45 per capita for San Luis.

RECOMMENDATION / SUGGESTED MOTION:

I MOVE NOT TO APPROVE THE CONTRIBUTION TO 4FRONTED FOR THE FISCAL YEAR 2026-2027.

I MOVE TO APPROVE THE CONTRIBUTION TO 4FRONTED IN THE AMOUNT OF $_____ FOR THE FISCAL YEAR 2026-2027

Fiscal Impact

IS THERE FISCAL IMPACT ASSOCIATED WITH THIS ITEM:	Yes
CITY/STATE/FEDERAL FUNDS:	City
TOTAL:	$17,722.35
BUDGETED AMOUNT:	$0.00
AVAILABLE AMOUNT TO TRANSFER:	N/A

ACCT NAME & GL#/REMAINING BALANCE BEFORE PURCHASE: 100-110-80000 - Contractual Services

FISCAL IMPACT STATEMENT (IF THIS IS A BUDGET TRANSFER, YOU MUST ATTACH THE BUDGET ADJUSTMENT FORM):

This annual contribution was not included in the preliminary budget of FY 2026- 2027. A contribution would need to be allocated in the Council's contractual services for the FY 2026-2027.

4FRONTED Funding Request

4FRONTED IGA

A Testament to Regional Leadership & Global Transformation

To: Honorable Mayor and Members of the City Council of San Luis, AZ

From: Dr. Victor Remigio Martínez Cantú, Executive Director, 4FrontED

Date: May 6, 2026

Subject: FY 2026-2027 Support Request: San Luis as a Premier Global Border Community

Executive Overview: A Landmark of Binational Cooperation

San Luis, Arizona, its community, elected representatives, and public servants have performed a transcendent task in consolidating sustained growth that now positions the city as the primary benchmark for binational synergy within the "Two Nations, Four States" mega-region.

The coordinated efforts of the City Council, the City Administration, and the Department of Economic Development have transformed this jurisdiction into an extraordinary example of how a young and vibrant community can achieve world-class standards in security and education through a strategic international commitment. Under this leadership, San Luis has successfully transformed one of its most critical assets: its border crossings.

The modernization of the San Luis I Port of Entry is not merely an infrastructure project; it is a milestone that redefines the City's vocation toward a prosperous and resilient community. We recognize that current technological and political conditions have evolved with unprecedented intensity, generating challenges where traditional industries give way to higher-value proposals. In this juncture, San Luis must not spare resources to maintain its pace of innovation and secure its social license to operate on the global stage.

Furthermore, it is essential to highlight the leading role the City plays in the social construction of the region. Through activities that foster coexistence, such as the **International Mayors' Bike Ride**—which celebrates a decade of success this year—the authorities of San Luis provide a clear example of political will and of how to build a safe and harmonious border between Mexico and the United States. This **paradiplomacy** effort is the foundation upon which 4FrontED continues to build a favorable and predictable business environment for all our strategic partners.

Milestone Success: The San Luis I Port Modernization

The City of San Luis stands as the prime example of effective relations with Mexican partners. The San Luis I Port of Entry Modernization—expanding from 8 to 16 lanes—is one of the most significant regional milestones in recent history. This facility optimizes the flow of binational talent and specialized services, serving as the logistics backbone that allows our integrated productive ecosystem to thrive.

Orderly Growth and Social License

The City's expertise in managing rapid, orderly growth while maintaining high safety and educational standards is a testament to its social license to operate. Through our advocacy in regional media and high-level political circles, 4FrontED has consistently highlighted San Luis as a "Safe Harbor" for international capital and a leader in workforce cultivation.

Strategic Continuity for FY 2026-2027

Driving Future Synergy: Moving forward, 4FrontED seeks to leverage the expertise of San Luis to drive our upcoming **Private Sector Regional Synergy Reunion**. This initiative will showcase your community's unique ability to bridge the gap between high-tech industrial requirements and a culturally agile workforce.

Fiscal Responsibility and Support Request: In recognition of the City's commitment to fiscal discipline and the ongoing regional budget constraints, 4FrontED is proposing a **zero-increase budget for FY 2026-2027**. We believe this approach demonstrates the same professional precision and coherence that defines the San Luis administration.

The total requested contribution remains at **$98,090.10**, with the specific allocation for your jurisdiction as follows:

Jurisdiction	**Contribution Rate**	**Proposed FY 2026-2027 Support**
City of San Luis	**$0.45 per capita**	**$17,722.35**

A Shared Binational Legacy

Your continued support of the 4FrontED initiative ensures that San Luis remains the permanent link to Mexico's industrial heartland. We are honored to serve as your strategic gateway, helping to project the expertise of San Luis across the border to ensure our mega-region remains a global leader in innovation and production.

Thank you for your time, your leadership, and your continued collaboration.

Best regards,

Dr. Victor Remigio Martínez Cantú

Executive Director, 4FrontED

CAPTION HEADING:

Resolution No. 2063

For the continued support of Economic Development in the Greater Yuma Region

OFFICE OF THE
MAYOR
CITY OF SAN LUIS

Resolution

No. 2063

A RESOLUTION OF THE MAYOR AND CITY COUNCIL OF THE CITY OF SAN LUIS, ARIZONA AUTHORIZING AND DIRECTING THE ENTERING INTO THE 4FRONTED BINATIONAL PROGRAM THROUGH AN AMENDED AND RESTATED INTERGOVERNMENTAL AGREEMENT WITH THE TOWN OF WELLTON, THE CITIES OF SOMERTON AND YUMA, AND YUMA COUNTY FOR THE CONTINUED SUPPORT OF ECONOMIC DEVELOPMENT OF THE GREATER YUMA REGION.

BE IT RESOLVED by the Mayor and City Council of the City of San Luis, Arizona, as follows:

Section 1. That it is deemed in the best interest of City of San Luis and its residents that the city enter into an Amended and Restated Intergovernmental Agreement with the Town of Wellton, the cities of Somerton and Yuma, and Yuma County for the continued support of economic development of the greater Yuma region;

Section 2. That a true copy of said Intergovernmental Agreement is incorporated herein as though fully set forth again in full;

Section 3. That the Mayor or City Manager and his designee are hereby authorized and directed to execute this Amended and Restated Intergovernmental Agreement on behalf of the City of San Luis and to take any and all actions as may be necessary to put the agreement into effect; and

Section 4. That the San Luis City Clerk and her designee are authorized and directed to maintain this Amended and Restated Intergovernmental Agreement in the official files of the City Clerk and to deliver it to the other Parties to said Agreement.

PASSED, ADOPTED and APPROVED by the Mayor and City Council of the City of San Luis, Yuma County, Arizona this 13th day of February 2019.

Gerardo Sanchez, Mayor

ATTEST:

Sonia Cornelio, City Clerk

APPROVED AS TO FORM:

Kay Marion Macuil, City Attorney

AMENDED AND RESTATED
INTERGOVERNMENTAL AGREEMENT OF THE
4FRONTED BINATIONAL PROGRAM
TO SUPPORT
ECONOMIC DEVELOPMENT IN THE GREATER YUMA REGION

This Amended and Restated Agreement (this "Agreement") is made as of the date of the last governing agencies' signature below, this 13th day of February, 2019, (the "Agreement Date").

This Agreement is made among the following governmental agencies:

City of San Luis, an Arizona municipal corporation
1090 East Union Street
San Luis, Arizona 85349 ("San Luis");

City of Somerton, an Arizona municipal corporation
110 North State Avenue
Somerton, Arizona 85350 ("Somerton");

Town of Wellton, an Arizona municipal corporation
28634 Oakland Avenue
Wellton, Arizona 85356 ("Wellton");

City of Yuma, an Arizona municipal corporation with Charter
One City Plaza
Yuma, Arizona 85364 ("Yuma") and

County of Yuma, a body corporate and politic of the State of Arizona
198 West Main Street
Yuma, Arizona 85364 (the "County").

The above governmental agencies may be referred to individually as a "Party," and collectively as the "Parties" or as the "Cities and County." The governmental agencies which are municipalities may be referred to collectively as the "Cities." The Cities and County comprise a funding committee of the area inside Yuma County for the sole purposes of this Agreement.

RECITALS

A. The Parties entered into an Intergovernmental Agreement dated September 19, 2016, to promote economic development of the Region (the "Original Agreement").

B. The County and the Cities joining in this Agreement wish to continue to have a formalized

multilateral relationship to promote growth and expand economic opportunities in Yuma County, Arizona, U.S.A.; Imperial County, California, U.S.A.; San Luis Rio Colorado, Sonora, Mexico; and regions within Baja California, Mexico.

C. Yuma County is authorized to participate in Economic Development activities pursuant to A.R.S. §§11-251(21), 11-254, and 11-254.04. The Cities are authorized to participate in Economic Development pursuant to A.R.S. §9-500.11.

D. The County and the Cities support the 4FrontED Binational Program objectives which include but are not limited to the following:

Binational Cluster Development

1. Identify, map, and define binational regional business clusters such as advanced manufacturing opportunities. Establish and strengthen relationships with companies in northern Mexico in aerospace, automotive, electronic, agribusiness, and electrical devices, and promote the Region's logistics/distribution and cost competitive advantages for potential advanced manufacturing opportunities. Sustain the momentum with the University of Arizona cluster work and the North American Research Partnership cluster mapping.

- Engage the Region's manufacturers in RevAZ (Arizona Commerce Authority's Manufacturing Extension Partnership program), particularly with the ExporTech Boot Camp.

- Further leverage the economic benefit of the agriculture trade moving through the San Luis II Port of Entry. Maintain and grow agribusiness trade by addressing binational infrastructure and transportation improvements from major growing regions in Mexico and strengthening relationships throughout western Mexico. Continue to expand value-added produce opportunities in packaged food.

- Work to attract foreign direct investment (FDI) projects within the transportation, tourism, and economic development sectors. Leverage the international and foreign investment partners working with the University of Arizona Yuma Center of Excellence for Desert Agriculture to develop a larger footprint in the Region.

- Focus on manufacturing industries to provide higher average wages, create more indirect economic activity for the Region, impact the regional tax base, and attract new revenues to the Region resulting in an expanded economy

through the following manufacturing sectors: perishable prepared food, storage battery, fluid milk, aircraft, fabricated structural metals, metal stamping, truck trailer, sign, unmanned vehicle and computerized numerical control machining.

- Continue to implement the Investing in Manufacturing Communities Partnership (IMCP) strategy working collaboratively to develop and promote advanced manufacturing.

- Work with existing industries to improve access and attract a supply chain of businesses to the 4FrontED Region.

- Actively engage the private sector and regional businesses to assist in the implementation of the 4FrontED initiative.

2. Strengthen Binational Workforce Development.

- Broaden the educational exchange among the Region's institutions and Mexico by establishing a binational education task force to ensure a stronger regional labor force that meets the current and future needs of regional businesses.

- Collaborate with Arizona Western College, Northern Arizona University, Arizona State University, University of Arizona and other institutions of higher learning to target advanced degrees to maquila managers or leadership.

3. Develop binational tourism.

- Work collaboratively to leverage existing tourism assets and further develop visitor destinations within the binational Region. Create and actively implement a binational tourism development and marketing program with a focus on recreation and culture.

- Implement a strategy to develop and attract medical tourism to the 4FrontED Region.

- Develop and promote a binational calendar of events.

4. Leverage port of entry and border infrastructure investments.

- Aggressively promote the San Luis commercial port of entry, San Luis II Port of Entry.

- Continue to pursue improvements to the ports of entry.

- Pursue increased ports of entry staffing to improve efficiencies of border crossings.

- Build cross-border public transportation, bicycling and pedestrian improvements.

5. Spur innovation and entrepreneurism.

- Leverage the San Luis Business Incubator to foster business growth in manufacturing, machining, distribution, and support businesses.

- Make the 4FrontED binational Region an entrepreneurial hub by leveraging the U.S. entrepreneurial visa program that can promote new business start-ups and innovation.

6. Maximize developable industrial land.

- Move forward with economic development strategies to ensure that the industrial border land is ready for manufacturing facilities. Focus on project readiness of industrial sites.

7. Continue to improve regional infrastructure.

- The Cities of San Luis, San Luis Rio Colorado, Somerton, Wellton, Yuma and Yuma County are committed to building a rail connection between the City of San Luis Rio Colorado and Yuma to support economic development.

- Work to implement project priorities identified in the Border Master Plans (2013)

- Prioritize regional infrastructure projects to support economic development efforts and pursue grant funding.

AGREEMENT

NOW, THEREFORE, in consideration of the foregoing introduction and recitals, and the mutual promises contained herein, the receipt and sufficiency of which are hereby acknowledged, the Parties hereby agree as follows:

SECTION ONE. DEFINITION OF TERMS

The following terms and expressions as used in this Agreement, unless the context clearly shows otherwise, shall have the following meaning:

1.1 "Binational Program" means the 4FrontED Binational Program for attracting businesses for

regional economic development and growth as described in this Agreement.

1.2 "Region" means Yuma County, Arizona, U.S.A.; Imperial County, California, U.S.A.; San Luis Rio Colorado, Sonora; and regions within Baja California, Mexico.

SECTION TWO. GENERAL PROVISIONS

2.1 San Luis is the "Fiscal Agent" responsible for administering the funds for the Binational Program. The Fiscal Agent is the Finance Director for the City of San Luis. San Luis shall only use the funds for the objectives stated in this Agreement's recitals, and the funds expended, shall not exceed the one-year budget as set forth in Exhibit A, attached hereto and incorporated herein by reference. The Fiscal Agent shall not distribute and expend any funds without the prior authorization from the Executive Director and or at least one other Party. The Fiscal Agent is responsible for the engagement of the services of the Executive Director, as defined in this section, along with the rest of the Cities and the County, and for preparing and providing expenses and budget reports to the other Cities and the County on a quarterly basis. The reports shall be prepared in accordance with generally accepted accounting principles.

2.2 Through their respective budgeting processes, the Parties shall budget for and contribute to the funding of services for a bilingual and bi-cultural executive director ("Executive Director") and related economic activities. Each Parties funding amount shall be based on twenty cents (20¢) per capita and using the Parties' 2017 population estimates from the Arizona Department of Revenue, attached hereto as a part of Exhibit A, and incorporated herein by reference. The 2017 population estimates and respective Parties contribution is as follows:

Location	Population	Contribution
San Luis, AZ	35,289	$ 7,058.00
Somerton	17,103	$ 3,421.00
Wellton	3,171	$ 634.00
Yuma City	101,620	$ 20,324.00
Yuma County[1]	64,465	$ 12,893.00
Total	**221,648**	**$ 44,330.00**

[1] Yuma County population only includes population not within an incorporated area.

The contributions shall be adjusted on an annual basis based on the Arizona Department of Revenue population estimates and on the recommendation of the 4FrontED staff and the approval of all of the Parties through their respective budgeting and procurement procedures.The funds should be submitted to the Fiscal Agent by August 1st of each year.

2.3 The County and the Cities may, through the Fiscal Agent, engage the services of an Executive Director to manage the Binational Program. The Executive Director responsibilities include, but are not limited to, maintaining websites and social media accounts for 4FrontED, preparing and giving presentations to large groups, promoting the binational Region and being the main link between organizations on both sides of the border.

2.4 The County and the Cities shall, through the Fiscal Agent, contract with any other contractor(s) or entity/entities to meet the goals as stated in this Agreement.

2.5 The County and the Cities shall work with San Luis Rio Colorado, Sonora, Mexico and other cities in Mexico as deemed appropriate.

SECTION THREE. FORCE MAJEURE

If by reason of force majeure any Party to this Agreement shall be rendered unable wholly or in part to carry out its obligations under this Agreement, then if such Party shall give notice and full particulars of such force majeure in writing to the other Parties within a reasonable time after occurrence of the event or cause relied on, the obligation of the Party giving such notice, so far as it is affected by such force majeure, shall be suspended during the continuance of the inability then claimed, but not for any longer period. Any such Party shall diligently endeavor to remove or overcome such inability with all reasonable dispatch. If a Party cannot remove or overcome its force majeure, then such Party may terminate its participation in this Agreement by providing 30 days of written notice to the other Parties. The term "force majeure" as used in this Agreement shall mean acts of God, strikes, lockouts, or other industrial disturbances, acts of public enemy, orders of any kind of the Government of the United States or the State of Arizona, or any civil or military authority, insurrection, riots, epidemics, landslides, lightning, earthquake, fires, hurricanes, storms, floods, washouts, droughts, arrests, restraint of government and people, civil disturbances, explosions, breakage or accidents to machines, pipelines or canals, and inability on the part of the County or the Cities to provide services under this Agreement on account of any other causes not reasonably within the control of the Party.

SECTION FOUR. TERM OF AGREEMENT; EXTENSION; RENEWAL

4.1 Original Agreement: The term of the Original Agreement was from September 19, 2016, to September 19, 2017. The Original Agreement is attached hereto at Exhibit B.

4.2 Extension: This Agreement extends the term of the Original Agreement retroactively. The term of Original Agreement shall terminate as of the Agreement Date of this Agreement.

4.3 Effective: This Agreement shall be effective upon the Agreement Date. The Agreement Date is the date the last Party signs this Agreement. There shall be no gap in time between the extension of the Original Agreement and the Agreement Date.

4.4 Term: The term of this Agreement shall be from the Agreement Date for a period of five years and shall automatically renew for up to five successive one-year terms (the "Renewal Terms") unless terminated by all of the Parties pursuant to the terms of this Subsection 4.6 below.

4.5 Termination by Individual Party: With or without cause, a Party may terminate its participation in this Agreement upon providing all the other Parties written notice of termination a minimum of thirty (30) days prior to the termination date. Following termination of participation by one or more Parties, this Agreement shall remain in full effect with respect to the remaining participating Parties. If an individual Party terminates its participation in the Agreement, such Party shall not receive a reimbursement of the funds it contributed pursuant to this Agreement except as set forth in Section 4.9.

4.6 Termination of Entire Agreement: If all Parties terminate this Agreement, this Agreement shall terminate within 30 days of termination. The Agreement terminates upon all but one of the Parties electing to terminate their participation in this Agreement pursuant to Section 4.5 above.

4.7 Termination by Failure to Contribute: If a Party fails to contribute the amount required pursuant to Subsection 2.2 above, the Fiscal Agent may request said contribution from the Party in breach. If within twelve months from the date of the request for contribution, the Party has not cured its breach, then the breaching Party shall be deemed to have terminated its participation in this Agreement. A Party may reinstate its participation in this Agreement by making its contribution pursuant to Subsection 2.2 above, in the amount applicable to the year the Party wishes to reinstate.

4.8 Continuation Subject to Appropriation: Each Party is obligated only to pay its obligations set forth in this Agreement as may lawfully be made from funds appropriated and budgeted for that purpose during such Party's then current fiscal year. Each Party's obligations under this Agreement are current expenses subject to the "budget law" and the unfettered legislative discretion of the Party concerning budgeted purposes and appropriations of funds. Should any Party elect not to appropriate and budget funds to pay its obligations, this Agreement shall be deemed terminated at the end of the then-current fiscal year term for which such funds were appropriated and budgeted for such purpose, and such Party shall be relieved of any subsequent obligation under this Agreement. The Parties agree that each Party has no obligation or duty of good faith to budget or appropriate the payment of the Party's obligations set forth in this Agreement in any budget in any fiscal year other than the fiscal year in which this Agreement is executed and delivered. Each Party shall be the sole judge and authority in determining the availability of funds for its obligations under this Agreement. The Parties shall keep each other informed as to the availability of funds for this Agreement. The obligation of any Party to make any payment pursuant to this Agreement is not a general obligation or indebtedness of such Party. The Parties hereby waive any and all rights to bring any claim against each other from or relating in any way to any Party's termination of this Agreement pursuant to Subsection 4.7.

4.9 Disposition of Funds: Upon termination or expiration of this Agreement, the Fiscal Agent shall return any and all remaining unexpended funds to the Cities and the County in a pro-rata proportion of the amounts originally contributed by each Party.

SECTION FIVE. SEVERABILITY

The Parties to this Agreement specifically agree that if any one or more of the sections, paragraphs, provisions, clauses, or words of this Agreement or the application of such section, paragraph, provision, clause or word to any situation or circumstance should be, or should be held to be, for any reason, invalid or unconstitutional, under the laws or constitutions of Arizona or the United States of America, or in contravention of any such laws or constitutions, then such invalidity, unconstitutionality, or contravention shall not affect any other section, paragraph, provision, clause or word of this Agreement or the application of such section, paragraph, provision, clause or word to any other situation or circumstance. It is intended that this Agreement shall be severable and shall be construed and applied as if any such invalid or unconstitutional section, paragraph, provision, clause or word had not been included in this Agreement. The rights and obligations of the Parties to this Agreement shall be construed and remain in force accordingly.

SECTION SIX. COUNTERPARTS

This Agreement may be executed in counterparts, and the counterparts may be exchanged by electronic transmission (including by email), each of which shall be deemed to be an original, but all of which together constitute one and the same instrument.

SECTION SEVEN. WORKERS' COMPENSATION

For purposes of workers' compensation, an employee of a Party to this Agreement, who works under the jurisdiction or control of, or who works within the jurisdictional boundaries of another Party pursuant to this Agreement, is deemed to be an employee of both the Party who is his primary employer and the Party under whose jurisdiction or control or within whose jurisdictional boundaries he is then working, as provided in A.R.S. § 23-1022(D). The primary employer Party of such employee shall be solely liable for payment of workers' compensation benefits for the purposes of this section. Each Party herein shall comply with the provisions of A.R.S. § 23-1022(E) by posting the public notice required.

///

///

SECTION EIGHT. INDEMNIFICATION

To the extent permitted by law, each Party to this Agreement agrees (as indemnitor) to indemnify, defend, and hold harmless every other Party (as indemnitee) from and against any and all claims, losses, fines, penalties, damages, judgments, liabilities, costs, or expenses (including reasonable attorney fees) (collectively, "Claims") arising out of bodily injury of any person (including death) or property damage, but only to the extent that such Claims are caused, in whole or in part, by the negligent acts, directives, errors, omissions, or misconduct, or other fault of the Indemnitor may be legally liable. The Indemnitee and Indemnitor shall cooperate with each other in fulfilling their obligations under this section. Within ten (10) day after indemnitee receives a notice of claim that is likely to become subject to this indemnity provision, such Party shall provide written notice to the indemnitor(s) ("Claim Notice"). Indemnitee's failure to provide a Claim Notice to indemnitor does not relieve indemnitor of any liability that indemnitor may have to indemnitee, but in no event shall indemnitor be liable for any Claims that result from a delay in providing a Claim Notice. Each Claim Notice must contain a description of the third-party claim and the nature and amount of the related Claims (to the extent that the nature and amount of the Claims are known at the time). Indemnitee shall furnish promptly to indemnitor copies of all papers and official documents received in respect of any Claims. The obligations under this Section Eight shall survive a Party's individual termination of its participation and the termination of this Agreement as a whole.

SECTION NINE. INSURANCE COVERAGE

The Parties shall have for the duration of their participation in this Agreement insurance coverage in the U.S. Dollar amounts listed in the below table, and shall provide proof to any other Party upon request. If a Party carries out the terms of this Agreement in Mexico, that Party shall obtain Mexican Insurance in sufficient amount to cover those activities.

General Liability per Occurrence	$2,000,000
General Liability in the Aggregate	$6,000,000
Auto combined single limit	$2,000,000
Workers' Compensation	Arizona Statutory Limits
All Workers' Compensation Employer Liability	$1,000,000

SECTION TEN. MISCELLANEOUS PROVISIONS

10.1 Compliance with the Law: The Parties agree to comply with all federal, state, and local statutes, laws, ordinances, rules, and regulation including but not limited to

conflicts of interest at A.R.S. § 38-511 and e-verify at A.R.S. §41-4401 and 23-214. The Parties certify by signing this Agreement that they do not participate in and agrees not to participate in during the term of this Agreement a boycott of Israel under A.R.S. § 35-393.01.

10.2 Notices: All notices to be given under this Agreement, or which may be given by any Party to the other Parties, shall be considered validly given and fully received when made in writing and delivered or refused delivery by means of prepaid service by: (i) deposit in the United States Postal Service by certified mail, return receipt requested, and postage prepaid, (ii) personal delivery by a process server or (iii) sent by a nationally recognized courier (e.g., Federal Express, UPS) and addressed to the City Manager and City Attorney or County Administrator and County Attorney of each respective Party at their official addresses.

10.3 Waiver: No delay in exercising any right or remedy shall constitute a waiver thereof, and no waiver by the Parties of the breach of any provision of this Agreement shall be construed as a waiver of any preceding or succeeding breach of the same or of any other provision of this Agreement.

10.4 Headings: The descriptive headings of the paragraphs of this Agreement are inserted for convenience only, and shall not control or affect the meaning or construction of the provisions of the Agreement.

10.5 Authority: The undersigned represent to each other that they have full power and authority to enter into this Agreement and that all necessary actions have been taken to give full force and effect to this Agreement.

10.6 Amendment of the Agreement: No changes or additions are to be made to this Agreement except by written amendment executed by all of the Parties.

10.7 Governing Law: The laws of the State of Arizona shall govern the interpretation and enforcement of this Agreement.

10.8 Venue:The Parties agree that venue for any action commenced in connection with this Agreement shall be proper only in a court of competent jurisdiction in Yuma County, Arizona or in the United State District Court for the District of Arizona at the election of the plaintiff in such legal action and the Parties waive any right to object to such venue. Nothing in this paragraph will be deemed to have authorized the bringing of any legal action in a court which does not otherwise have jurisdiction to adjudicate the legal action.

10.9 No Third-Party Beneficiaries: There are no third-party beneficiaries to this Agreement, and no person or entity not a Party shall have any right or cause of action under this Agreement.

10.10 No Agency Created: It is not intended by this Agreement to, and nothing contained in this Agreement shall create any partnership, joint venture or other similar arrangements among the Parties.

10.11 No Personal Liability: No member, official, or employee of the Parties shall be personally liable for any breach of this Agreement.

10.12 Time is of the essence: Time is of the essence in this Agreement.

10.13 Entire Agreement: This Agreement, including its Exhibits, which are incorporated herein by this reference, constitutes the entire Agreement among the Parties pertaining to the subject matter hereof. All prior and contemporaneous agreements, representations, and understandings of the Parties, oral or written, are superseded and merged in this Agreement.

The Parties have executed this Agreement in Yuma County, Arizona as of the date of their respective signatures set forth below.

EXHIBIT B
TO
AMENDED AND RESTATED
INTERGOVERNMENTAL AGREEMENT OF THE
4FrontED BINATIONAL PROGRAM
TO SUPPORT
ECONOMIC DEVELOPMENT IN THE GREATER YUMA REGION

[Original Agreement]

INTERGOVERNMENTAL AGREEMENT OF THE
4FrontED BINATIONAL PROGRAM
TO SUPPORT
ECONOMIC DEVELOPMENT IN THE GREATER YUMA REGION

This AGREEMENT is made on this 25th day of October 2017 (the "Agreement Date"), among the following governing Agencies of the State of Arizona and in or of the County of Yuma:

the City of San Luis, an incorporated city under the laws of Arizona and having its administrative offices at
1090 East Union Street
San Luis, Arizona 85349 ("San Luis");

the City of Somerton, an incorporated city under the law of Arizona and having its administrative offices at
110 North State Avenue
Somerton, Arizona 85350 ("Somerton");

the Town of Wellton, an incorporated town under the laws of Arizona and having its administrative offices at
28634 Oakland Avenue
Wellton, Arizona 85356 ("Wellton");

the City of Yuma, a charter city under the laws of Arizona and having its administrative offices at
One City Plaza
Yuma, Arizona 85364 ("Yuma") and

the County of Yuma, a body corporate and politic of the State of Arizona and having its administrative offices at
198 South Main Street
Yuma, Arizona 85364 (the "County").

The above-listed cities are known collectively as (the "Cities" and" the "County"). The County and Cities comprise a funding committee of the Yuma area for the sole purposes of this Agreement.

RECITALS

A. The County and the Cities joining in this Agreement wish to formalize a bilateral relationship to promote growth and expand economic opportunities in Yuma County, Arizona, U.S.A.; regions within the State of California, U.S.A.; San Luis Rio Colorado; regions within Baja California, Mexico.

B. Yuma County is authorized to participate in Economic Development activities pursuant to A.R.S. §§11-251(21), 11-254, and 11-254.04. The Cities are authorized to participate in Economic Development pursuant to A.R.S. §9-500.11

C. The County and the Cities support the 4FrontED Binational Region program objectives which include but are not limited to the following:

Binational Cluster Development

- Identify, map, and define binational regional business clusters such as advanced manufacturing opportunities. Establish and/or strengthen relationships with companies in northern Mexico in aerospace, automotive, electronic, agribusiness, and electrical devices, and promote the region's logistics/distribution and cost competitive advantages for potential advanced manufacturing opportunities. Sustain the momentum with the University of Arizona cluster work and the North American Research Partnership cluster mapping.
- Engage the region's manufacturers in RevAZ(Arizona Commerce Authority's Manufacturing Extension Partnership program), particularly with the ExportTech Boot Camp.
- Further leverage the economic benefit of the agriculture trade moving through the San Luis Port of Entry. Maintain and grow agribusiness trade by addressing binational infrastructure and transportation improvements from major growing regions in Mexico and strengthening relationships throughout western Mexico. Continue to expand value-add produce opportunities in packaged food.
- Work to attract foreign direct investment (FDI) projects within the transportation, tourism, and economic development sectors. Leverage the international and foreign investment partners working with the University of Arizona Yuma Center of Excellence for Desert Agriculture to attract a larger footprint in the region.
- Focus on manufacturing industries to provide higher average wages, create more indirect economic activity for the region, impact the regional tax base, and attract new revenues to the region resulting in an expanded economy through the following manufacturing sectors: perishable prepared food, storage battery, fluid milk, aircraft, fabricated structural metals, metal stamping, truck trailer, sign, unmanned vehicle and computerized numerical control machining.

- Continue to implement the IMPC strategy working collaboratively to develop and promote advanced manufacturing.
- Work with existing industries to improve access and attract a supply chain of businesses to the 4FrontED region.
- Actively engage the private sector and regional businesses to assist in the implementation of the 4FrontED initiative.

Strengthen Binational Workforce Development

- Broaden the educational exchange between the region's institutions and Mexico by establishing a binational education task force to ensure a stronger regional labor force that meets the current and future needs of regional businesses.
- Collaborate with Arizona Western College, Northern Arizona University and other institutions of higher learning to target advanced degrees to maquila managers or leadership.

Develop Binational Tourism

- Work collaboratively to leverage existing tourism assets and further develop visitor destinations within the binational region. Create and actively implement a binational tourism development and marketing program with a focus on recreation and culture.
- Implement a strategy to develop and attract medical tourism to the 4FrontED region.
- Develop and promote a binational calendar of events.

Leverage Port of Entry and Border Infrastructure Investments

- Aggressively promote the San Luis commercial port of entry.
- Continue to pursue improvements to the port of entry.
- Pursue increased port of entry staffing to improve efficiencies of border crossings.
- Build cross-border public transportation, bicycling and pedestrian improvements.

Spur Innovation and Entrepreneurism

- Leverage the San Luis Business Incubator to foster business growth in manufacturing, machining, distribution, and support businesses.
- Make the 4FrontED binational region an entrepreneurial hub by leveraging the U.S. entrepreneurial visa program that can promote new business start-ups and innovation.

Maximize Developable Industrial Land

- Move forward with development strategies to ensure that the border industrial land is ready for manufacturing facilities. Focus on project readiness of industrial sites.

Continue to Improve Regional Infrastructure

- The cities of San Luis, San Luis Rio Colorado, Somerton, Wellton, and Yuma are committed to building a rail connection between the city of San Luis Rio Colorado and Yuma to support economic development.
- Work to implement project priorities identified in the Border Master Plans (2013)
- Prioritize regional infrastructure projects to support economic development efforts and pursue grant funding.

NOW THEREFORE, the parties agree as follows:

SECTION ONE. DEFINITION OF TERMS

The following terms and expressions as used in this Agreement, unless the context clearly shows otherwise, shall have the following meanings:

"Region" means Yuma County, Arizona, U.S.A.; San Luis Rio Colorado, Sonora, Mexico and regions within Baja California Norte, Mexico bordering the municipality of San Luis Rio Colorado, Sonora, Mexico and Yuma County, Arizona, U.S.A.

SECTION TWO. GENERAL PROVISIONS

A. The City of San Luis, Arizona is the fiscal agent responsible for administering the funds for the binational program. San Luis shall only use the funds for the objectives stated in the recitals, and the funds expended, not exceed the one-year budget as set forth in Exhibit A, attached and incorporated by reference to this Agreement. The fiscal agent will require at least one City and/or, County to approve expenses in writing. The fiscal agent will be responsible for the engagement of the services of the coordinator along with the rest of the Cities, expenses and budget reports to the other Cities.

B. The County and Cities shall contribute to the funding of services for a bi-lingual/bi-cultural coordinator and related economic activities based on twenty cents (20¢) per capita and using the Parties' 2015 population estimates as follows:

Location	Population	Contribution
San Luis, AZ	34,001	$ 6,800.00
Somerton	15,759	$ 3,152.00
Wellton	3,101	$ 620.00
Yuma City	97,950	$ 19,590.00
Yuma County[1]	64,180	$ 12,836.00
Total	**214,991**	**$ 42,998.00**

[1] Yuma County population only includes population not within an incorporated area.

C. The Binational program shall meet the goals in the border business case incorporated in this Agreement.

D. The County and the Cities shall, through the fiscal agent, engage the services of a bi-lingual/bi-cultural coordinator to manage the Binational program.

E. The County and the Cities shall, through the fiscal agent, contract with any other contractor (s) or entity to meet the goals as stated in this Agreement.

F. The County and the Cities shall work with San Luis Rio Colorado, Sonora, Mexico and other Mexico cities as deemed appropriate.

G. The recitals set forth in this Agreement, by this reference, are incorporated and deemed part of this Agreement.

SECTION THREE. FORCE MAJEURE

If by reason of force majeure any party to this Agreement shall be rendered unable wholly or in part to carry out its obligations under this Agreement, then if such party shall give notice and full particulars of such force majeure in writing to the other party within a reasonable time after occurrence of the event or cause relied on, the obligation of the party giving such notice, so far as it is affected by such force majeure, shall be suspended during the continuance of the inability then claimed, but not for any longer period, and any such party shall endeavor to remove or overcome such inability with all reasonable dispatch. The term "force majeure" as used in this Agreement shall mean acts of God, strikes, lockouts, or other industrial disturbances, acts of public enemy, orders of any kind of the Government of the United States or the State of Arizona, or any civil or military authority, insurrection, riots, epidemics, landslides, lightning, earthquake, fires, hurricanes, storms, floods, washouts, droughts, arrests, restraint of government and people, civil disturbances, explosions, breakage or accidents to machines, pipelines or canals, and inability on the part of the County or the Cities to provide services under this Agreement for any reason, or on account of any other causes not reasonably within the control of the party claiming such liability.

SECTION FOUR. TERM OF AGREEMENT; RENEWAL

This Agreement shall be effective as of the 25th day of October 2017 and shall have a term of one year, ending the 25th day of October 2018 unless a party provides the other parties with written notice of termination a minimum of 30 days prior to terminating. This Agreement may be terminated by any party with or without cause, provided that such party provides written notice of termination to all other parties as set forth above.

If this Agreement is terminated prior to the expiration date, the fiscal agent shall return any and all remaining unexpended funds to the Cities and the County in proportion to the amounts originally disbursed by each party.

SECTION FIVE. SEVERABILITY

The parties to this Agreement specifically agree that if any one or more of the sections, paragraphs, provisions, clauses, or words of this Agreement or the application of such section, paragraph, provision, clause or word to any situation or circumstance should be, or should be held to be, for any reason, invalid or unconstitutional, under the laws or constitutions of Arizona or the United States of America, or in contravention of any such laws or constitutions, then such invalidity, unconstitutionality, or contravention shall not affect any other section, paragraph, provision, clause or word of this Agreement or the application of such section, paragraph, provision, clause or word to any other situation or circumstance, and it is intended that this Agreement shall be severable and shall be construed and applied as if any such invalid or unconstitutional section, paragraph, provision, clause or word had not been included in this Agreement, and the rights and obligations of the parties to this Agreement shall be construed and remain in force accordingly.

SECTION SIX. COUNTERPARTS

This agreement may be executed in counterparts, any of which shall be deemed to be an original.

AGENDA ITEM REVIEW FORM

Regular City Council Meeting **7. B.**

Meeting Date: 06/10/2026

Department Head: Eulogio Vera, Director of Public Works, Public Works Department

Submitted By: Jorge Perez, Assistant Director of Public Works, Public Works Department

Action Requested: Motion

ITEM:

Discussion and possible action on any and all matters regarding the award of a construction contract to Filanc Construction Company, Inc. for the West Wastewater Treatment Plant Expansion project.
(Eulogio Vera, Director of Public Works)

SUMMARY:

The Department of Public Works provided an update to the City Council in January 2026, including the status of the project design and the efforts undertaken to procure a construction contractor. At that time, the city determined that a traditional design-bid-build delivery method would be utilized for the project.

During March and April 2026, city staff conducted a formal bidding process for the construction of the West Wastewater Treatment Plant Expansion Project, which had a budget of $26 million. Bids were received on April 9, 2026, from two (2) qualified contractors: Filanc Construction Company, Inc., and PERC Water Corporation. Both bids exceeded the established project budget, with Filanc Construction Company, Inc. submitting the lowest responsive and responsible bid in the amount of $41,163,578.00.

Prior to bidding, the city secured $26 million in funding through the Water Infrastructure Finance Authority of Arizona (WIFA). In efforts to keep the project moving forward, staff is currently working with Pacific Advanced Civil Engineering, Inc. (PACE), the city's engineer of record, to evaluate value engineering options aimed at reducing overall project costs. Concurrently, staff submitted a second application to WIFA for an additional $12 million in funding to support the project, with an anticipated completion of the WIFA review and approval process in August 2026.

Staff is requesting the City Council's approval to award a construction contract to Filanc Construction Company, Inc. for the West Wastewater Treatment Plant Expansion Project in the amount of $41,163,578.00 and authorize staff to proceed with contract execution. Staff further recommends that the City Council approve Change Order No. 1, negotiated with Filanc Construction Company, Inc., with a scope and cost reduction totaling $4,292,201.00, resulting in a revised contract amount of $36,871,377.00.

RECOMMENDATION / SUGGESTED MOTION:

I MOVE TO AWARD A CONSTRUCTION CONTRACT TO FILANC CONSTRUCTION COMPANY, INC. FOR THE WEST WASTEWATER TREATMENT PLANT EXPANSION PROJECT IN THE AMOUNT OF $41,163,578.00, AND TO APPROVE CHANGE ORDER NO. 1 AS PRESENTED BY STAFF.

Fiscal Impact

IS THERE FISCAL IMPACT ASSOCIATED WITH THIS ITEM:	No
CITY/STATE/FEDERAL FUNDS:	N/A
TOTAL:	$41,163,578
BUDGETED AMOUNT:	$26,000,000
AVAILABLE AMOUNT TO TRANSFER:	N/A
ACCT NAME & GL#/REMAINING BALANCE BEFORE PURCHASE:	N/A

FISCAL IMPACT STATEMENT (IF THIS IS A BUDGET TRANSFER, YOU MUST ATTACH THE BUDGET ADJUSTMENT FORM):

Staff recommends award of the construction contract utilizing secured funding in the amount of $26 million from the Water Infrastructure Finance Authority of Arizona (WIFA). Concurrently, staff has submitted a second application to WIFA requesting an additional $12 million in funding to support the project.

Staff has also worked with the contractor to achieve a cost reduction of $4,292,201.00 through value engineering efforts and scope adjustments. The project is anticipated to have a construction duration of 27 months. Staff anticipates that the review and approval process for the second WIFA funding application will be completed by August 2026.

ADVERTISEMENT FOR BIDS

CITY OF SAN LUIS, ARIZONA
WEST WWTP 3.0 MGD MBR
2025-050

NOTICE IS HEREBY GIVEN THAT sealed bids will be received in the Office of the City Clerk, City Hall, 1090 E. Union Street, City of San Luis, Arizona until 3:00 P.M. Arizona Time on Thursday, April 9, 2026, for furnishing all labor, materials, equipment, tools and performing all services required for the construction of the **City of San Luis — West Wastewater Treatment Plant (WWTP) 3.0 MGD MBR** project and work incidental thereto. Bids will then be publicly opened and read aloud. Each Bid should be submitted on the Bid Form and be accompanied by a certified or cashiers check or bid bond in the amount of ten (10%) percent of the total amount of the bid.

The proposed work is located within the city limits of the City of San Luis, Arizona at its West Wastewater Treatment Plant site. Work consists of, but is not limited to, construction upgrades and conversion of the existing 1.5 MGD SBR treatment process to a 3.0 MGD Membrane Bioreactor (MBR) treatment process. Upgrades will include modifications to the headworks, secondary process, tertiary, disinfection, sludge storage & digestion, sludge dewatering, odor control, plant drains, and plant reuse & distribution processes, along with associated civil, mechanical, structural, and electrical/ Instrumentation & Controls works and all incidentals required by the project as specified in the Contract Document and Project Plans. Integration of Instrumentation and Controls shall be performed by the City.

Bidding Documents can be downloaded at www.questcdn.com under an individual login for a non-refundable charge of $22.00. Quest CDN Project number is 10050750. Registration with Quest CDN is required to be on plan holders list and receive project communications. Please contact QuestCDN.com at (952) 233-1632 or info@questcdn.com for assistance in free membership registration, downloading, and working with this digital project information. Any questions about obtaining documents can be forwarded to Andrea Jaycox at ajaycox@pacewater.com.

A mandatory Pre-Bid Conference will be held at the City of San Luis Pedro Julian Conference Room in City Hall on Thursday, March 5, 2025, at 10:00 AM Arizona Time to discuss requirements. A site visit to the WWTP will follow this pre-bid conference. The Pre-bid conference may also be attended virtually via the following link:

Instructions for Bidders

City of San Luis

Project Name: City of San Luis
West WWTP 3.0 MGD MBR Upgrade

To be considered, bids must be made in accordance with these Instructions to Bidders.

ARTICLE 1 - DEFINITIONS

1.1 All definitions set forth in the General Conditions are applicable to these Instructions to Bidders.

1.2 Bidding Documents include the Advertisement for Bids, Instructions to Bidders, Bid Form, Bid Bond Form, and the proposed Contract Documents, including any addenda issued prior to the receipt of bids.

1.3 Addenda are written or graphic instructions issued prior to the execution of the contract which modify or interpret the Bidding Documents, including Drawings, conditions of the Contract and Specifications, by additions, deletions, clarifications or corrections. Addenda will become part of the Contract Documents when the Construction Contract is executed.

1.4 The term "Owner" or "City" shall be interpreted to mean City of San Luis, Arizona.

ARTICLE 2 - BIDDER'S REPRESENTATION

2.1 Before submitting a bid, bidders shall carefully examine the Drawings, Bidding Requirements, Bid Document Contract Forms, General Conditions, Specifications, and Related Documents, visit the site of the work, and fully inform themselves as to all existing conditions and limitations and shall include in the bid a sum sufficient to cover the cost of all items included in the Contract. The Bidder, if awarded the Contract, shall not be allowed any extra compensation by reason of any matter or thing concerning the Project, which said Bidder might have fully informed himself prior to the building.

ARTICLE 3 - BIDDING DOCUMENTS

3.1 Bidders may obtain copies of the bidding Documents at:

Bidding Documents can be downloaded at www.questcdn.com under an individual login for a non-refundable charge of $22.00. Quest CDN Project number is 10050750. Registration with Quest CDN is required to be on plan holders list and receive project communications. Please contact QuestCDN.com at (952) 233-1632 or info@questcdn.com for assistance in free membership registration, downloading, and working with this digital project information. Any questions about obtaining documents can be forwarded to Andrea Jaycox at ajaycox@pacewater.com or (602) 502-9683.

ARTICLE 4 - INTERPRETATION OF BIDDING DOCUMENTS

4.1 Should a Bidder find discrepancies, inconsistencies, or obscurities in, or omissions from the bidding documents, or should he be in doubt as to their meaning, he shall, at once, notify the Engineer in writing via email, who will issue a written Addendum, clarifying the intent of the documents. Any such item not brought to the Engineer's attention during the bidding period shall be done in accordance with the Engineer's interpretation for the good of the work in accordance with the intent and meaning of the Contract

Documents. Neither owner nor Engineer will be responsible for oral instruction or information. Addenda may not be issued less than 5 Working Days before the time specified for receipt of bids. Questions received after the deadline noted in section 4.4 below cannot be answered in writing. Should any discrepancies not be clarified by Addendum, the Contractor shall use the most expensive condition shown or specified in bid.

4.2 Prior to the receipt of bids, each person or firm recorded by the Engineer as having received the bidding documents will be notified of any addendum. Addenda will also be available for Inspection wherever the bidding documents are made available for that purpose.

4.3 All Addenda issued by the Engineer during the time of bidding are to be included in the bid and shall become a part of the bidding documents (bidder's responsibility to check for addendums). Acknowledge receipt of Addenda on the Bid form in space provided.

4.4 Point of Contact for questions is: Nathan Tesch, PACE, ntesch@pacewater.com. The deadline for questions is Thursday, March 12, 2026.

ARTICLE 5 - SUBSTITUTIONS

5.1 When a specific manufacturer, trade name or material is specified, or indicated, it is to establish a standard of quality and shall not be construed as limiting competition. However, components of electrical systems shall be standard items and/or interchangeable with specified manufacturer to facilitate repairs and upkeep by the Owner.

5.2 It shall be the Contractor's responsibility to provide materials of equal standards to those specified. The Engineer shall be the sole judge as to whether or not the products meet the established standards. The Contractor MUST request written approval of equal materials from the Engineer prior to the bid date.

ARTICLE 6 - OWNER FURNISHED EQUIPMENT

6.1 The OWNER has pre-purchased several items of treatment process equipment. One piece of equipment is onsite, and two others need to be delivered. The Contractor shall be responsible for planning delivery of pending equipment in order to meet the construction schedule. All treatment process equipment will become the CONTRACTOR'S responsibility. The CONTRACTOR shall coordinate delivery and confirm that the shipments are complete and accurate for all equipment. Contract shall provide safe and secure storage, provide transportation from onsite storage to install location, install per the construction documents and manufacturer's requirements, and schedule the manufacturer's representative for construction, installation certification, start up, operational training, etc.

The following pieces of Equipment have been pre-purchased by the OWNER:

6.1.1 Membrane Bioreactor, (MBR) (Kubota) to include membranes, mixers, pumps, blowers, diffusers and control panels. See Appendices B & C of the Specifications for more complete information and shop drawings. Contractor must plan and coordinate delivery to meet the contractor schedule. Contractor will be required to pay the storage fees; allowance has been provided. The delivery date is to be scheduled directly with Kubota.

6.1.2 Sludge Dewatering Screw Press (KFC). Screw Press, Sludge Pump, polymer dosing flocculation tank, conveyors and control panels. See Appendices B & C of the Specifications for more complete information. (**On-site**)

6.1.3 Headworks Screen, grit removal and control panels (Hydro-Dyne) - Manufacturing completed and being stored at Hydro-Dyne, a waiting Contractor coordination for delivery. Contractor must plan and coordinate delivery to meet the contractor schedule. Contractor will be required to pay the storage fees; allowance has been provided. See Appendices B & C of the Specifications for complete information.

ARTICLE 7 - BIDDING PROCEDURES

7.1 A bid is invalid if it has not been deposited at the designated location prior to the time and date for receipt of bids indicated in the Invitation to Submit Proposals, or prior to any extension thereof issued to the bidders. No bid will be acceptable unless the entire PROPOSAL PAMPHLET is submitted with the appropriate forms provided and completed. [NO SUBSTITUTE FORMS SHALL BE SUBMITTED].

7.2 All bids must be prepared on the "Bid Form" with all blank spaces filled, the signature in longhand, and without alterations or erasures. Blank spaces requiring dollar amounts must be filled in with dollar amounts. If a line unit price is left blank the price will be considered as zero [$0.00] and extended as such. The total base bid amount must be in words as well as figures. Should any difference in words and figures occur, the amount stated in words shall govern. The form must be executed in either ink or type written. Where bidder is a corporation, the Bid Form must be signed by the legal name of the corporation followed by the name of state of incorporation, date of incorporation and the legal signature of an officer authorized to bind the corporation to a contract.

7.3 Bids shall be submitted as follows:

7.3.1 Submit one (1) original and one (1) copy in a ***sealed*** envelope. This is to be put inside a shipping envelope or box that is clearly marked “City of San Luis – Lift Station 300 Influent Sewer Force” on the outside and addressed as indicated immediately below:

- If submitter is sending the proposal by US Mail, the proposal package should be sent only to:

  Sonia Cornelio
  Office of City Clerk
  City of San Luis
  P.O. Box 1170
  San Luis, AZ 85349

- If submitter is sending the proposal package via a delivery service or hand delivered, the proposal should be sent only to:

  Sonia Cornelio
  Office of City Clerk
  City of San Luis
  City Hall
  1090 E. Union St.
  San Luis, AZ 85349

Deadline for receipt of proposals is at 3:00 P.M. Arizona Time on Thursday, April 9, 2026. Late proposals will be returned unopened.

FAX and Internet submissions are NOT acceptable and will be rejected.

7.3.2 The Bid envelope shall also contain the following:

- Bid Security
- Subcontractors list form

7.3.3 Bidders Contact Information - It is important that the City of San Luis keeps accurate records of potential bidders. It is the bidder's responsibility to complete registration with Quest CDN per the Advertisement for Bids to be on plan holders list, download bid package and receive project communications.

7.4 Bid Security:

7.4.1 Each bidder is required to submit, with his bid, a certified or cashier's check upon a solvent bank, or a surety bond for ten percent (10%) of the amount of the Base Bid made payable to the Owner.

7.4.1.1 If more than one proposal is submitted, only one Bid Security is required for the largest base Bid amount, however, this Bid Security shall apply to any and/or all bids submitted.

7.4.2 The Bid Security shall be given as a guarantee that the bidder will enter into a contract to perform the work, if awarded to him, and provide a satisfactory Performance Bond, Payment Bond, and Warranty Bond as required under the provisions of Title 34, Chapter 2, Article 2, Arizona Revised Statutes. Bid Security shall be declared forfeited as liquidated damages if the bidder refuses to enter into said contract upon request to do so by the Owner.

7.4.3 Bid Security will be returned to the unsuccessful bidders, and to the successful bidder upon the execution of a satisfactory Performance Bond, Payment Bond and Warranty Bond, and Construction Contract.

7.4.4 Bidders may withdraw their bid at any time prior to bid opening but may not resubmit them. No bid may be modified or withdrawn after the bid opening for a period of 120 days.

7.5 A mandatory Pre-Bid Conference will be held at the City of San Luis Pedro Julian Conference Room in City Hall on Thursday, March 5, 2026, at 10:00 AM Arizona Time to discuss specifications and any questions Bidders may have. The Pre-bid conference may also be attended virtually via the following link:

Pre-Bid Meeting West WWTP 3.0 MGD MBR - 2025-050
Meeting Link
MS Teams Meeting ID: 250 960 197 877 88
Passcode: 26Pp3km6

ARTICLE 8 - SUBCONTRACTOR LIST FORM

8.1 Complete the Subcontractor List Form, listing a single company, firm, or organization name only for each branch of the work.

8.2 If a change occurs in the list, brought about by the exercising of ANY of the alternates (if applicable) involved in the bidding, the bidder must show said changes on the list. If no name appears other than those listed under the Base Bid, adherence to those names shall be mandatory, no matter which alternate, if any, is exercised.

8.3 The competency and responsibility of bidders and their proposed subcontractors will be considered in making the award.

8.4 The Contractor shall pay the cost of all permits, changes, meters, connections, fees, etc., directly to governmental agencies having jurisdiction to comply with the law of the place of the Project in order to complete the work. The bidders' attention is directed to the fact that all applicable state laws, municipal ordinances, and the rules and regulations of all authorities having jurisdiction shall apply to the Contract.

ARTICLE 9 - REJECTION OF BIDS

9.1 The Bidder acknowledges the right of the Owner to reject any or all bids, to waive any informality or irregularity in any bid received, or to withhold the award for any reason he determines. In addition, the Bidder recognizes the right of the Owner to reject a bid if the Bidder failed to furnish any required Bid Security or to submit the data required by the Bidding Documents, or if the bid is in any way incomplete or irregular. Bidders shall understand that the Owner will not be responsible for any errors or omissions in the preparation of the bid.

ARTICLE 10 - AGREEMENT

10.1 The form of Agreement which the successful Bidder will be required to execute in four (4) original counterparts.

Progress payments will be made to the Contractor by the Owner in an amount equal to 90% of that due until substantial completion of the project. Payment of 95% of the due will be made upon substantial completion of the project. Payment of full payment due will be made upon Final Completion and acceptance of the project.

ARTICLE 11 - WARRANTY

11.1 The Contractor certifies by submitting his bid that he has familiarized himself with all specified products, materials, and systems which are proposed for inclusion in the required work, and that said materials, products, and systems are appropriate for the use(s) intended. He additionally certifies by submitting this bid that he shall, in fact, install said materials, products, and systems in the work properly and in rigid compliance with the terms and conditions of the Contract Documents, and shall issue his written warranty applicable to the work as required by the applicable General Conditions. If the Bidder determines that the proposed materials, products, and/or systems are not appropriate for the use(s) intended, he shall submit his written exceptions attached to the Bid Form.

The Contractor, by entering into this Contract, guarantees the Work against defective workmanship or materials for a period of two (2) years from the date established by the date of Substantial Completion.

ARTICLE 12 - PERFORMANCE, PAYMENT AND WARRANTY BONDS

12.1 The Contractor is hereby required to provide and pay for Performance, Payment and Warranty Bonds. Bonds shall secure the faithful performance (100%) of the Contract and the payment of all obligations (100%) arising there under, in such form as the Owner may prescribe and with such sureties that the Owner may approve. Bonds shall be active and held by the Owner for duration of the guaranty (warranty).

ARTICLE 13 - CONTRACTOR LICENSE LAW, ELIGIBILITY & PREFERENCE

13.1 The Contractor shall comply with and require all subcontractors to comply with State of Arizona and City Contractor's License Laws. Contractor shall comply with the provisions of "an Act to Regulate the Business of Contracting", Title 32, Chapter 10, Arizona Revised Statutes with latest adopted revisions and ‘Contractor's License Laws and Regulations" dated July, 1981, published by the Arizona State Registrar of

Contractors, or the latest revision thereof adopted under the provision of AIRS title 32, chapter 10, Articles 2 and 3.

The prime Contractor shall have a State of Arizona Classification "A" Contractor's license to perform the work. A bid submitted by any Contractor not properly licensed at the time of bid opening shall be considered non-responsive and will be rejected.

ARTICLE 14 - NONDISCRIMINATION

14.1 In connection with the performance of work under this Contract, the Contractor agrees (as prescribed in A.R.S. Section 23-373) not to discriminate against any employee or applicant for employment because of race, sex, religion, color, or national origin. The aforesaid provision shall include, but not be limited to, the following: employment upgrading, demotion, or transfer, recruitment or recruitment advertising, layoff or termination, rates of pay or other forms of compensations and selection for training, including apprenticeship. The Contractor agrees to post hereafter in conspicuous places, available for employees and applicants for employment, notices setting forth the provisions of the nondiscrimination clauses. The contractor further agrees to insert the foregoing provision in all subcontracts hereunder, except subcontracts for standard commercial supplies or raw materials.

ARTICLE 15 - COPIES OF DOCUMENTS FURNISHED

15.1 The Contractor shall be furnished three (3) sets of appropriate Construction Documents free of charge at the Pre-Construction meeting.

Additional copies may be obtained from the Engineer by paying cost of reproduction of same.

ARTICLE 16 - INSURANCE

16.1 The Contractor is required to provide and pay for insurance as provided for in the Contract Documents. Contractor shall file, with the Performance, Payment and Warranty Bonds, all required Certificates of Insurance outlined in the Contract.

16.2 The Contractor shall not commence work under this Contract until the Contractor has obtained all the insurance required under this paragraph and such insurance has been approved by the Owner, nor shall the Contractor allow any Subcontractor to commence work on a subcontract until the insurance require of the subcontractor has been so obtained and approved.

16.3 The Contractor shall procure and maintain during the life of this contract, Workmen's Compensation Insurance as required by applicable State or Territorial Law for all of his employees to be engaged in work at the site of the project under this Contract, and in any such work sublet, the Contractor shall require all Subcontractors similarly to provide Workmen's Compensation Insurance for all of the latter's employees to be engaged in such work unless such employees are covered by the protection afforded by the Contractors Workmen's Compensation Insurance. In case any class of the employees engaged in hazardous work on the project under this contract are not protected under the Workmen's Compensation Statute, the Contractor shall provide and shall cause each subcontractor to provide adequate employer's liability insurance for the protection of such of his employees as are not otherwise protected.

ARTICLE 17 - ADDITIONAL SERVICES

17.1 Contractor agrees to pay for additional testing services, additional Engineering services, and any similar related additional costs as designated in the Contract Documents.

ARTICLE 18 - SUMMARY OF THE WORK

18.1 Refer to the Project Overview & Scope of Work for description of the work.

ARTICLE 19 - SUBSTANTIAL COMPLETION

19.1 Substantial Completion will be accomplished no later than 488 days from dated letter "Notice to Proceed".

ARTICLE 20 - LIQUIDATED DAMAGES

20.1 The liquidated damages for this project shall be determined by the Schedule of Liquidated Damages in City of San Luis Supplemental to the MAG Uniform Standard Specifications. Provisions for liquidated damages, if any, for failure to timely attain a completion milestone, Substantial Completion, or completion of the Work in readiness for final payment, are set forth in the Contract and General Conditions.

ARTICLE 21 - EVALUATION AND AWARD

21.1 Bid opening will take place immediately after the close of the bidding.

21.2 City staff will convene in the Pedro Julian Conference Room at the San Luis City Hall, open the proposals, and read the bids into the record.

21.3 Award will be made to the lowest qualified responsive bidder.

21.4 Formal award of contract is intended to be at a City Council meeting within 120 days of the close of bidding.

ARTICLE 22 - PROTESTS

22.1 All responders will receive notification via e-mail regarding their status vis-a-vis the proposed contract award. Responders not selected have 5 days from e-mail sent date to initiate protest proceedings. To do this, a dissatisfied party must lodge a protest with Melissa Lopez, via receipted e-mail (mlopez@sanluisaz.gov) or by certified mail (Attn: Melissa Lopez/City of San Luis/P.O. Box 1170/San Luis, AZ 85349). In the absence of a successful protest, the contract will be awarded to the most responsive qualified bidder.

Project Overview & Scope of Work

City of San Luis

PROJECT NAME

The name of this project is **CITY OF SAN LUIS WEST WWTP 3.0 MGD MBR UPGRADES**. All correspondence and documents are to reference "CITY OF SAN LUIS WEST WWTP 3.0 MGD MBR UPGRADES".

OVERVIEW

This PROPOSAL PAMPHLET contains the bid documents necessary to respond to the Request for Bid for **CITY OF SAN LUIS WEST WWTP 3.0 MGD MBR UPGRADES**. This project is being undertaken by the City of San Luis, Arizona funds. This bid pertains to those activities described herein under the Scope of Work.

It is especially important that bidders are aware of the following:

1. This solicitation is open to general contractors and subcontractors licensed to operate in the State of Arizona.
2. Davis-Bacon wage rates **DO** apply.

SCOPE OF WORK

Scope of Work, **CITY OF SAN LUIS WEST WWTP 3.0 MGD MBR UPGRADES**.

The proposed work is located within the city limits of the City of San Luis, Arizona at its West Wastewater Treatment Plant site. The work consists of, but is not limited to, construction upgrades and conversion of the existing 1.5 MGD SBR treatment process to a 3.0 MGD Membrane Bioreactor (MBR) treatment process. Upgrades will include modifications to the headworks, secondary process, tertiary, disinfection, sludge storage & digestion, sludge dewatering, odor control, plant drains, and plant reuse & distribution processes, along with associated civil, mechanical, structural, and electrical/ Instrumentation & Controls works and all incidentals required by the project as specified in the Contract Document and Project Plans. Integration of Instrumentation and Controls shall be performed by the City.

_____

Bid Item 1 - Mobilization / Demobilization

Payment shall be made for mobilization and demobilization to and from the site, for bonds and insurance. CONTRACTOR shall provide all the necessary mobilization requirements for the proper construction activities, include providing all the necessary accommodations for personnel and equipment as describe in these Specifications.

Bid Item 2 – Earthworks for Grading, Cut, Fill, and Export

Payment shall be made for the work associated with earthworks grading, cut, fill, and export of any excess material. Fill shall include screening, placement, and compaction of native material to meet the requirements of the Contract Documents. Excess material shall be screened and exported to a dedicated site per the contract. Excess material shall be spread evenly within the dedicated site by the CONTRACTOR. Screened material greater than 4" shall be disposed by the CONTRACTOR offsite. Payment shall be based on actual quantity and the unit price shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 3 – Asphalt Pavement

Payment shall be made for asphalt road pavement as described in the Contract Documents. This includes the labor, equipment, material for the preparation and placement of the hot-mix asphalt, binder, base course, etc. where required. Quantities shown are estimated. Payment shall be based on actual quantity and the unit price shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 4 – Yard Piping

Payment shall be made for site work associated with the installation of the yard piping as described in the Contract Documents. The work shall include all pipes, fitting, and associated labor and materials required for the proper trenching, installation, and backfill of the pipes. This shall also include any potholing, pavement restoration, wire tracing and surveying of the required work. Measurement and payment shall be made for each type of process yard pipe based on linear feet of pipe installed and the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 5 – Headworks Upgrades

Payment shall be made for the furnish and mechanical installation of the Headworks and associated appurtenances as shown on the drawings, specified in the contract documents. The Headworks Equipment is a pre-purchased item by the City. This bid item is only to include items, components and equipment not supplied by the City. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 6 – FEB Conversion in SBR 4

Payment shall be made for the furnish and mechanical installation associated with the conversion of SBR 4 to the new Flow Equalization Basin (FEB) with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 7 – Secondary Process Conversion in SBR 3 and Digesters 3&4

Payment shall be made for the furnish and mechanical installation associated with the conversion of SBR 3 and Digesters 3 & 4 into the new Secondary Treatment Process with associated appurtenances as shown on the drawings, specified in the contract documents. The Secondary Process contains equipment that are pre-purchased by the City. This bid item is only to include items, components and equipment not supplied by the City. Payment

shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 8 – Installation of Feed Forward Pumps and Channel

Payment shall be made for the furnish and mechanical installation associated with the installation of the Feed Forward Pumps and Channel with associated appurtenances as shown on the drawings, specified in the contract documents. The Feed Forward Pumps System contains equipment that are pre-purchased by the City. This bid item is only to include items, components and equipment not supplied by the City. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 9 – MBR Conversion in SBRs 1 & 2 and Blower Gallery

Payment shall be made for the furnish and mechanical installation associated with the conversion of SBRs 1 & 2 into the new MBR Basins and construction of the Blower Gallery with associated appurtenances as shown on the drawings, specified in the contract documents. The MBR Process and Blowers contain equipment that are pre-purchased by the City. This bid item is only to include items, components and equipment not supplied by the City. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 10 – Chemical Building Upgrades

Payment shall be made for the furnish and mechanical installation associated with the upgrades to the chemical storage and metering within the existing Chemical Building along with associated appurtenances as shown on the drawings, specified in the contract documents. The chemical metering contains equipment that are pre-purchased by the City. This bid item is only to include items, components and equipment not supplied by the City. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 11 – Plant Drain Pump Station Upgrades

Payment shall be made for the furnish and mechanical installation associated with the Plant Drain Pump Station with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 12 – Sludge Dewatering

Payment shall be made for the furnish and mechanical installation associated with the installation of the Sludge Dewatering System along with associated appurtenances as shown on the drawings, specified in the contract documents. The Sludge Dewatering System contains equipment that are pre-purchased by the City. This bid item is only to include items, components and equipment not supplied by the City. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 13 – Odor Control

Payment shall be made for the furnish and mechanical installation associated with the Odor Control System with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 14 – Plant Process Water Booster Station

Payment shall be made for the furnish and mechanical installation associated with the Plant Process Water Booster Station with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 15 - Installation of 24" PVC C900 Reuse Distribution Pipeline , Valves, Fittings and Appurtenances

Payment shall be made for the civil and mechanical work associated with the installation of the new 24" Reuse Distribution Pipeline as described in the Contract Documents. The work shall include all pipes, fitting, and associated labor and materials required for the proper trenching, installation, and backfill of the pipes. This shall also include all incidentals including potholing, pavement restoration, wire tracing, surveying, etc. of the required work. Quantities shown are estimated. Payment shall be based on actual quantity and the unit price shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 16 – Headwork Fabric Canopy

Payment shall be made for the furnish and mechanical installation associated with the Headworks Fabric Canopy with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 17 – MBR Crane and Structure

Payment shall be made for the furnish and mechanical installation associated with the MBR Crane and Structure with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 18 – MBR FRP Covers

Payment shall be made for the furnish and mechanical installation associated with the MBR FRP Covers with associated appurtenances as shown on the drawings, specified in the contract documents. Quantities shown are estimated. Payment shall be based on actual quantity and the unit price shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 19 – Handrails and Guardrails

Payment shall be made for the furnish and mechanical installation associated with handrails and guardrails along with associated appurtenances as shown on the drawings, specified in the contract documents. Quantities shown are estimated. Payment shall be based on actual quantity and the unit price shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 20 – Walkway Grating

Payment shall be made for the furnish and mechanical installation associated with walkway grating (both open metal grating and closed FRP grating) along with associated appurtenances as shown on the drawings, specified in the contract documents. Quantities shown are estimated. Payment shall be based on actual quantity and the unit price shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 21 – Metal Stairways

Payment shall be made for the furnish and mechanical installation associated with metal stairways along with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 22 – Structural Canopies

Payment shall be made for the furnish and mechanical installation associated with Structural Canopies along with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 23 – Transition SBR 4 to Intensification Process

Payment shall be made for the furnish and mechanical installation associated with the intensification of SBR 4 using World Water Works Migrate MBC media along with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on monthly lease agreement with World Water Works and on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 24 – Electrical

Payment shall be made for the furnish and electrical installation associated with the all electrical components along with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 25 – Concrete and Concrete Structures

Payment shall be made for the furnish and structural installation associated with all concrete components and concrete structures along with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 26 – Coating and Painting

Payment shall be made for the furnish and application associated with the all coating and painting along with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 27 – Aerobic Digesters 1 & 2 Upgrades

Payment shall be made for the furnish and mechanical installation associated with the upgrades of Digesters 1 & 2 with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 28 – Base Lump Sum

Payment shall be made for the work associated with the portion of the project not specifically included in the above bid schedule but required to be completed as part of the project as shown on the drawings, specified in the contract documents, and as required by the District. This may include, but not limited, to general conditions, testing, startup and training, survey, construction management, equipment rental, safety, overhead, etc. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 29 – Hydro-Dyne Storage Allowance

Hydro-dyne equipment package is 100% complete and ready to ship, it is being stored at Hydr-dyne's headquarters in Florida on behalf of the city. The City chose to delay delivery to ensure it would align with the contractor's schedule. The Contractor will be responsible for coordinating delivery and paying Hydro-dyne a storage fee of $3,860 a month. This storage is intended to be no longer than 10 months.

BID SURETY BOND

Project Name: City of San Luis West WWTP 3.0 MGD MBR

For: City of San Luis, Arizona

KNOW ALL MEN BY THESE PRESENTS:

That we, _____, as Principal, (hereinafter called the Principal),

and the _____ , a corporation duly organized under the laws of the State of

_____ and duly licensed and possessing a certificate of authority to transact surety business in the State of Arizona, as Surety, (hereinafter called the Surety), are held and firmly bound unto City of San Luis, Arizona [hereinafter called City] as Obligee, in the sum of ten percent (10%) of the total amount of the bid of Principal, submitted by him to the City for the work described below, for the payment of which sum, well and truly to be made, the said Principal and the said Surety, bind ourselves, our heirs, executors, and administrators, successors, and assigns, jointly and severally, firmly by these presents, and in conformance with Arizona Revised Statutes [ARS].

WHEREAS, the said Principal is herewith submitting its PROPOSAL for the City of San Luis West WWTP 3.0 MGD MBR

NOW, THEREFORE, if the City shall accept the PROPOSAL of the Principal and the Principal shall enter into a CONTRACT with the City in accordance with the terms of the PROPOSAL and give the Bonds and Certificates of Insurance as specified in the Standard Specifications with good and sufficient Surety for the faithful performance of the CONTRACT and for the prompt payment of labor and materials furnished in the prosecution of the CONTRACT, or in the event of the failure of the Principal to enter into the CONTRACT and give the Bonds and Certificates of Insurance, if the Principal pays to the City the difference not to exceed the penalty of the bond between the amount specified in the PROPOSAL and such larger amount for which the Obligee may in good faith contract with another party to perform the work covered by the PROPOSAL then this obligation is void. Otherwise it remains in full force and effect provided, however, that this bond is executed pursuant to the provisions of Section 34-201, ARS, and all liabilities on this bond shall be determined in accordance with the provisions of the section to the extent as if it were copied at length herein.

PROJECT DESCRIPTION:	City of San Luis, West WWTP 3.0 MGD MBR Upgrades
PROJECT LOCATION:	West WWTP on Cesar Chavez Blvd in San Luis, Arizona

ARTICLE 2 - CONTRACT DOCUMENTS

The Contract between the City and the Contractor shall consist of the following items, collectively the "Contract Documents:"

1. this Contract;
2. Change Orders (if any);
3. Performance bond and payment bond (required by A.R.S. § 41-2574, also known as contract bond and labor & materials bond), bid bond, and other bonds;
4. Project General Requirements and Technical Specifications;
5. Construction Plans;
6. General Conditions of the Contract;
7. Bid documents {including but not limited to the advertisement for bids, bid schedule, addenda (if any), additive bid items (if any)}, and the Proposal;
8. 2016 City of San Luis Supplemental to the 2015 MAG Uniform Standard Specifications and Details for Public Works Construction and City of Yuma Construction Standard Detail Drawings, MAG Uniform Standard Specifications and Details for Public Works Construction, City of Yuma Construction Standard Detail Drawings – Edition 2019; and

9. Certificates of Insurance.

By this reference, the above Contract Documents are made a part of this Contract to the same extent as if set forth in full here.

In the event of a conflict of language between the items, the documents shall govern in the order listed above. The Contract Documents shall govern in all other matters not otherwise specified by the Contract between the Parties. All previous contracts (if any) between the Contractor and City are not applicable to this Contract or other resultant contracts.

ARTICLE 3 - DESIGN PHASE SERVICES

The Contractor is not required to provide design phase services to the City in relation to this Project.

ARTICLE 4 - CONSTRUCTION SERVICES

4.1 General.

4.1.1 The Contractor agrees, at its own cost and expense, to do all Work necessary and required to fully, timely, and properly complete the construction of the Project in strict accordance with the Contract Documents in a good and workmanlike manner, free and clear of all claims, liens, and charges whatsoever, in the manner and under the conditions specified, within the Project Schedule.

4.1.2 The Contractor shall provide all the labor and materials and perform the Work in accordance with Division 01 - General Requirements of the Specifications and Section 4 of the General Conditions. Below are some but not all of the major components of the construction services and the corresponding subsections of Division 01 - General Requirements of the Specifications and Section 4 of the General Conditions.

4.1.3 At all times relevant to this Contract and performance of the Work, the Contractor shall fully comply with all laws, regulations, or legal requirements applicable to the City, the Project, and the Contract, including, without limitation, those set forth in the General Conditions.

4.1.4 The Contractor shall perform the Work under this Contract using only those firms, team members, and individuals designated by Contractor consistent with the Contractor's accepted Bid, or otherwise, approved by the City pursuant to the General Conditions. No other entities or individuals may be used without the prior written approval of the Project Manager.

4.1.5 The Contractor shall comply with all terms and conditions of the General Conditions and the requirements of the Specifications.

4.1.6 The terms of this Contract shall control in the event of a conflict between it and the General Conditions, General Requirements of the Specifications, or any exhibit to the Contract or appendix to the General Conditions.

4.1.7 For purposes of this provision, "Work Product" shall include all designs, drawings, plans, specifications, ideas, renderings, and other information or matter in whatever form created (e.g., electronic or printed) and in all media now known or in the future created. All Work Product shall be considered Work Made for Hire as defined in the United States Copyright Act 17 U.S.C. § 101 (Copyright Act). If, for any reason, any such Work is found not to be a Work Made for Hire, the Contractor, by entering into this Contract, transfers and assigns ownership of the copyright in such

Work to the City. Notwithstanding anything to the contrary in this Contract, all Work Product prepared or otherwise created in connection with the performance of this Contract, including the Work, are to be and remain the property of the City. The rights in this Section are exclusive to the City in perpetuity.

4.2 The Contractor's Pre-Contract and Pre-Work Deliverables. The Contractor shall provide the deliverables in accordance with Division 01 - General Requirements of the Specifications and Section 4.2 of the General Conditions.

4.3 Pre-Construction Conference. The Contractor shall attend the pre-construction conference in accordance with Division 01 - General Requirements of the Specifications and Section 4.3 of the General Conditions.

4.4 Performance of the Work (Including Field Measurements, Subcontractors, and Suppliers). The Contractor shall control and maintain the Project site in accordance with Section 4.4 of the General Conditions and Division 01 - General Requirements of the Specifications.

4.5 Control of the Project Site. The Contractor shall control and maintain the Project site in accordance with Division 01 - General Requirements of the Specifications and Section 4.5 of the General Conditions.

4.6 Project Safety. The Contractor shall implement and enforce Project safety in accordance with Section Division 01 - General Requirements of the Specifications and 4.6 of the General Conditions.

4.7 Materials Quality, Substitutions, and Shop Drawings. The Contractor shall provide materials testing and submit substitute materials and shop drawings in accordance with Division 01 - General Requirements of the Specifications and Section 4.7 of the General Conditions.

4.8 Project Record Documents. The Contractor shall maintain and make available the Project Record Document in accordance with Division 01 - General Requirements of the Specifications and Section 4.8 of the General Conditions.

4.9 Warranty and Correction of Defect Work. The Contractor shall provide warranties and correct defective Work in accordance with Division 01 - General Requirements of the Specifications and Section 4.9 of the General Conditions.

4.10 The OWNER has pre-purchased several items of treatment process equipment. One piece of equipment is onsite, and two others need to be delivered. The Contractor shall be responsible for planning delivery of pending equipment in order to meet the construction schedule. All treatment process equipment will become the CONTRACTOR'S responsibility. The CONTRACTOR shall coordinate delivery and confirm that the shipments are complete and accurate for all equipment. Contract shall provide safe and secure storage, provide transportation from onsite storage to install location, install per the construction documents and manufacturer's requirements, and schedule the manufacturer's representative for construction, installation certification, start up, operational training, etc.

The following pieces of Equipment have been pre-purchased by the OWNER:

4.10.1 Membrane Bioreactor, (MBR) (Kubota) to include membranes, mixers, pumps, blowers, diffusers and control panels. See Appendices B & C of the Specifications for more complete information and shop drawings. Contractor must plan and coordinate delivery to meet the contractor schedule. Contractor will be required to pay the storage fees; allowance has been provided. The delivery date is to be scheduled directly with Kubota.

4.10.2 Sludge Dewatering Screw Press (KFC). Screw Press, Sludge Pump, polymer dosing flocculation tank, conveyors and control panels. See Appendices B & C of the Specifications for more complete information. (**On-site**)

4.10.3 Headworks Screen, grit removal and control panels (Hydro-Dyne) - Manufacturing completed and being stored at Hydro-Dyne, a waiting Contractor coordination for delivery. Contractor must plan and coordinate delivery to meet the contractor schedule. Contractor will be required to pay the storage fees; allowance has been provided. See Appendices B & C of the Specifications for complete information.

ARTICLE 5 - CITY'S RESPONSIBILITIES

5.1 The City shall have the responsibilities and provide the information specified in, and subject to, the conditions set forth in Section 5 of the General Conditions and Division 00 – Procurement and Contracting Requirements of the Specifications.

ARTICLE 6 - CONTRACT TIME

6.1 Contract Time.

The Contract Time shall start with the Notice to Proceed (NTP) and end with Final Acceptance, as set forth in Article 6.3 below. The Notice to Proceed cannot be issued prior to the City's approval and acceptance of the Bid.

6.1.1 The Contract Time shall be as set forth in the Project Schedule. The Contractor agrees that it will commence the performance of the Work and complete the Project within the Contract Time.

6.1.2 Time is of the essence of this Contract, for the Project, and for each phase and designated milestone of the Contract.

6.1.3 Failure on the part of the Contractor to adhere to the approved Project Schedule will be deemed a material breach and sufficient grounds for the City to terminate this Contract.

6.2 Project Schedule. The Project Schedule, as required by Division 01 - General Requirements of the Specifications and Section 6.2 of the General Conditions, shall be updated and maintained throughout the Contractor's performance under this Contract in accordance with Division 01 - General Requirements of the Specifications and Section 6.2 of the General Conditions.

6.3 Completion Milestones.

6.3.1 **Substantial Completion.** The Work will be substantially complete within **four hundred eighty-eight (488) calendar Days after the Notice to Proceed** when the Contract Times commence. The Contractor, by entering into this Contract, guarantees the Work against defective workmanship or materials for a period of two (2) years from the date established by the date of Substantial Completion.

6.3.2 **Final Completion**. Following established Substantial Completion date, Contractor must address punch list items to the City's satisfaction within **forty-five (45) calendar days.** The City and/or Engineer shall perform a Final Completion inspection for verification.

6.3.3 **Final Acceptance**. At **month twenty-three (23)** of the Warranty Period, the City and/or Engineer shall perform a Final Acceptance inspection to verify all warranty items have been addressed to the City's satisfaction. The City will then provide a written Final Acceptance notice.

6.4 Liquidated Damages.

6.4.1 The Contractor acknowledges and agrees that if the Contractor fails to obtain **Substantial Completion** or **Final Completion** of the Work within the Contract Time, the City will sustain extensive damages and serious loss as a result of such failure.

The Contractor agrees to commence Work within ten (10) Days of the date of the Notice to Proceed from the City and to achieve **Substantial Completion** within **four hundred eighty-eight (488) calendar Days after the Notice to Proceed.** The Contractor agrees to pay liquidated damages, the sum of $1,190.00, for each consecutive calendar Day thereafter.

6.4.2 The City may deduct liquidated damages described in Subsection 6.4.1 above from any unpaid amounts then or thereafter due to the Contractor under this Contract. Any liquidated damages not so deducted from any unpaid amounts due the Contractor shall be payable to the City at the demand of the City, together with interest from the date of the demand at the highest lawful rate of interest payable by the Contractor.

6.4.3 Nothing in this Contract shall be deemed to constitute a waiver of any other remedy available to the City in the event of the Contractor's default under this Contract prior to full performance of the Work, including, as applicable, specific performance or completion of the Work on behalf of the Contractor, the cost and expense of which shall be offset against any monies then or thereafter due to Contractor (if any) and otherwise immediately reimbursed to City by the Contractor.

ARTICLE 7 - CONTRACT PRICE

7.1 Contract Price.

7.1.1 In exchange for the Contractor's full, timely, and acceptable performance and construction of the Work under this Contract, and subject to all of the terms of this Contract, the City will pay the Contractor the Contract Price, which is $_____

7.1.2 The Contract Price is all-inclusive and specifically includes all fees, costs, insurance and bond premiums, and taxes of any type necessary to fully, properly, and timely perform and construct the Work.

ARTICLE 8 - PAYMENT

Payments shall be made to the Contractor in accordance with Division 01 - General Requirements of the Specifications and Article 8 of the General Conditions.

ARTICLE 9 - CHANGES TO THE CONTRACT

Changes to the Contract may be made in strict accordance with Division 01 - General Requirements of the Specifications and Section 9 of the General Conditions.

ARTICLE 10 - TERMINATION

The Contract may be terminated in accordance with Section 10 of the General Conditions.

ARTICLE 11 - INSURANCE AND BONDS

11.1 The Contractor shall provide Insurance as provided in the Insurance Requirements and in accordance with Section 11.1 of the General Conditions. The Contractor shall provide proof of such insurance and all required endorsements in forms acceptable to the City prior to commencing any Work under this Contract.

11.2 The Contractor shall provide performance, payment and warranty bonds to the City in accordance with Section 11.2 of the General Conditions and A.R.S. § 34-222.

11.3 The Contractor's failure to provide proof of insurance and the required endorsements, or the required bonds, in forms acceptable to the City will be a material breach and grounds for termination for cause under this Contract.

ARTICLE 12 - INDEMNIFICATION

The Contractor shall have and assume the indemnity obligations set forth in Section 12 of the General Conditions.

ARTICLE 13 - DISPUTE RESOLUTION

Any claims or disputes relating to this Contract shall be resolved according to the dispute resolution process set forth in Section 13 of the General Conditions.

ARTICLE 14 - MISCELLANEOUS PROVISIONS

The miscellaneous provisions set forth in Section 14 of the General Conditions shall apply to this Contract.

ARTICLE 15 - COUNTERPARTS

This Contract may be executed in one or more counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument. The signature pages from one or more counterparts may be removed from such counterparts. Such signature pages may all be attached to a single instrument so that the signatures of all Parties may be physically attached to a single document.

ARTICLE 16 - AUTHORITY

Each Party represents and warrants to the other Party: (i) that such Party is duly organized and validly existing under the laws of the State of Arizona and has full corporate power and authority to enter into this AGREEMENT and to carry out the provisions of this AGREEMENT; (ii) such Party is duly authorized to execute and deliver this AGREEMENT and to perform its obligations under this AGREEMENT; (iii) the person executing this AGREEMENT on such Party's behalf has been duly authorized to do so by all requisite corporate action, and (iv) this AGREEMENT is a legal and valid obligation binding upon the Parties and enforceable in accordance with its terms.

The Parties have executed this Contract in Yuma County, Arizona, on the day and year set forth above, which is the day the last Party signed this Contract. The original Contract will be filed with the City of San Luis Clerk.

BOND NO. PREMIUM NO.

WARRANTY BOND

(City of San Luis, Arizona)

West WWTP 3.0 MGD MBR

WHEREAS, the City of San Luis, Arizona (hereafter "City") and

_____ (hereafter "Principal") have entered into an

agreement ("Agreement") dated _____, 20____, whereby Principal agreed to install and complete certain designated public improvements as a condition of contract, relating to the project known as West WWTP 3.0 MGD MBR Upgrades, at Principal's own expense and which Agreement is hereby referred to and made a part hereof; and

WHEREAS, Principal is required under the terms of the Agreement to furnish warranty security for the Work performed and equipment supplied and installed pursuant to the Agreement in the amount of one hundred percent percent (100%) of the amount to be paid by City to Principal to guarantee replacement and repair of the improvements as described in the Agreement for a period of two years following substantial completion of said improvements.

NOW, THEREFORE, we, Principal, and _____

("Surety"), are held and firmly bound unto City in the penal sum of _____dollars ($_____) lawful money of the United States, for the payment of which we bind ourselves, our heirs, successors, executors, and administrators, jointly and severally. The condition of this obligation is such that if Principal shall indemnify City for all loss that City may sustain by reason of any defective materials, equipment, components, or workmanship which become apparent during the period of two years from and after substantial completion of the improvements, as provided by the terms of the Agreement, then this obligation shall be null and void; otherwise, this obligation shall remain in full force and effect.

As a part of the obligation secured hereby and in addition to the face amount specified, costs and reasonable expenses and fees shall be included, including reasonable attorneys' fees incurred by City in successfully enforcing the obligation, all to be taxed as costs and included in any judgment rendered.

Surety shall provide City with thirty (30) days' written notice of Principal's default prior to Surety terminating, suspending or revoking the bond.

CONTRACTOR'S AFFIDAVIT REGARDING SETTLEMENT OF CLAIMS

(City of San Luis, Arizona)

PART 100, SECTION 109, GENERAL CONDITIONS

Project Name: City of San Luis
West WWTP 3.0 MGD MBR Project

To: City of San Luis, Arizona

Whom it may concern:

This is to certify that all lawful claims for materials, rental of equipment and labor used in connection with the construction of the above PROJECT, whether by subcontractor or claimant in person, have been duly discharged.

The undersigned, for the consideration of $_____ , as set out in the final pay estimate, as full and complete payment under the terms of the CONTRACT, hereby waives and relinquished any and all further claims or right of lien under, in connection with, or as a result of the above described PROJECT. The undersigned further agrees to indemnify and save harmless the City of San Luis, Arizona against any and all liens, claims of liens, suits, actions, damages, charges and expenses whatsoever, which said City may suffer arising out of the failure of the undersigned to pay for all labor performance and materials furnished for the performance of said installations.

MY COMMISSION EXPIRES _____

GENERAL CONDITIONS OF THE CONTRACT

These terms will be the General Conditions for the Contract and are incorporated therein and shall be fully binding upon the Contractor.

ARTICLE 1 - SCOPE OF THESE GENERAL CONDITIONS

These General Conditions encompass provisions that apply and are incorporated into all construction contracts entered into by the City of San Luis unless otherwise specifically excluded in the executed Contract. Sections 2 through 14 of these General Conditions apply to all construction contracts, in whatever form, including without limitation, Fixed Price, Unit Price, Construction Manager at Risk (CM@Risk), Guaranteed Maximum Price (GMP) Cost-Based, and Job Order Contracts (JOC).

ARTICLE 2 - GENERAL DEFINITIONS

2.1 The Definitions in the Invitation for Bid (IFB), the Request for Proposals (RFP), the Request for Qualifications (RFQ), and/or the JOC Solicitation (JOC) giving rise to the Contract shall apply to these General Conditions and the Contract for the Project.

2.2 **Change Order –** A written instrument issued after execution of the Contract Documents signed by City and Contractor, stating their agreement upon all of the following: the addition, deletion, or revision in the scope of services or deliverables; the amount of the adjustment to the Contract Price, the extent of the adjustment to the Contract Time, or modifications of other contract terms. Only a Change Order allows the Contract Price or the Contract Time or both to be changed.

2.3 **City –** City of San Luis, Arizona, a municipal corporation, with whom the Contractor has entered into the Contract and for whom the Services and/or Work are to be provided pursuant to the Contract(s).

2.4 **Contract -** The written agreement executed between the City and Contractor, including all of the Contract Documents**.**

2.5 **Contract Documents -** The documents which together form the Contract between City and Contractor, as identified in Article 2 of the Contract, or are otherwise incorporated into the Contract, including the Contract, the exhibits and attachments to it, these General Conditions, any Notice to Proceed, and any Job Order (if applicable), the Plans and Specifications, Project Schedule, written and properly executed Change Orders, and any other documents so designated in the Contact.

2.6 **Contract Price -** The agreed-upon price to be paid to the Contractor for full, timely, and acceptable completion of the Services or Work under the terms of the Contract.

2.7 **Contract Time(s) -** The number of days or the dates related to the Completion Milestones as stated in Contract Documents. The Contract Time is set forth in the Contract and is based upon the Project Schedule agreed to by the City in writing.

2.8 **Contractor -** The person or corporation with whom the City has entered into a contract for construction-related work or services related to the Project at issue.

2.9 **Contractor Payment Request** - The form that is accepted by the City and used by the Contractor in requesting progress payments or final payment and which shall include such supporting documentation as is required by the Contract Documents and/or City.

2.10 **Construction Documents** - The plans, specifications, and drawings prepared and issued by the Design Professional and approved by the City for construction, meaning the documents are sealed by the Contractor (as required), acceptable for permitting, and incorporated into the Contract by reference. All amendments and modifications to the Construction Documents must be approved in writing by the City prior to incorporation into the Contract.

2.11 **Critical Path** - The critical path is the sequence of Project network activities that add up to the longest overall duration. Once established in the Project Schedule, the Critical Path for the Project shall not be changed without prior written approval of the City.

2.12 **Day** - Calendar day(s) unless otherwise specifically stated in the Contract Documents.

2.13 **Final Acceptance** - The written notice from the City to the Contractor that Final Acceptance has occurred following the end of the Warranty Period. At month twenty-three (23) of the Warranty Period, the City and/or Engineer shall perform a Final Acceptance inspection to verify all warranty items have been addressed to the City's satisfaction. The City will then provide a written Final Acceptance notice.

2.14 **Final Completion** - Following established Substantial Completion date, Contractor must address punch list items to the City's satisfaction. The City and/or Engineer shall perform a Final Completion inspection for verification. The date when, in the opinion of the City, all items of the Work, including punch list items, have been completed to the City's satisfaction in accordance with the Contract Documents, and delivery of all Close-Out Documents required by the Contract Documents and this Contract have been received by the City. The Final Completion date is the date on which the Warranty period commences.

2.15 **Float** - The number of Days by which an activity can be delayed without lengthening the Critical Path and extending the Contract Time. Unless otherwise expressly agreed in writing, all Float belongs to City.

2.16 **MAG Specifications** – The latest edition adopted by the City of the Uniform Standard Specifications for Public Works Construction published by Maricopa Association of Governments ("MAG"), or the latest revision published by MAG.

2.17 **MAG Standard Details** – The latest edition adopted by the City of the Uniform Standard Details for Public Works Construction published by Maricopa Association of Governments ("MAG"), or the latest revision published by MAG.

2.18 **Notice to Proceed (NTP)** - A written notice given by the City to the Contractor fixing the date on which the Contractor will start to perform the Contractor's obligations under the Contract. The Notice to Proceed shall not be issued until the Contract Price is approved and accepted by the City.

2.19 **Project** – The Project specified in the Contract (including the Job Order).

2.20 **Project Manager** - The Project Manager designated in Article 1 of the Contract, or any successor Project Manager the City designates. The Project Manager has the authority to act on behalf of the City, as delineated and limited by the Contract Documents and applicable law. The City shall communicate with the Contractor through the Project Manager. However, the Project Manager has no authority to bind the City or City Council in contravention of any City code, State or Federal statute or regulation, or these General Conditions.

2.21 **Project Schedule** - The schedule for the completion of the Project agreed to and/or required by the City and incorporated into the Contract.

2.22 **Project Specific Provisions** - Additional conditions that apply to the specific Project and/or Scope of Work.

2.23 **Proposal** - A Proposal submitted to the City by a Contractor in response to an Invitation for Bid (IFB), Request for Qualifications (RFQ), a Request for Proposals (RFP), or other solicitation or request by the City. Bids may be Fixed Price, Guaranteed Maximum Price (GMP), Unit Price, or other form as required or requested by the City in the Bid Schedule.

2.24 **Requests for Information (RFIs)** - Formal written request from the Contractor to the City and/or Contractor for the Project seeking clarification or additional information needed for the Contractor to properly complete the Work and/or Services under the Contract. The City may require RFI's to be submitted on a specific form or in a specified format.

2.25 **Schedule of Values (SOV)** - The specified document prepared by the Contractor and approved and accepted by the City, which divides the Contract Price into pay items, such that the sum of all pay items equals the Contract Price for the construction phase Work, or for any portion of the Work having a separate specified Contract Price.

2.26 **Scope of Work** - The scope of work agreed to and/or required by the City and incorporated into the Contract as set forth in the IFB and/or an Exhibit to the Contract.

2.27 **Subconsultant** - A person, firm, or corporation having a Contract with a Consultant/Contractor to furnish services required as its independent professional associate or consultant with respect to the Project.

2.28 **Subcontractor** - An individual or firm having a direct contract with the Contractor or any other individual or firm having a contract with the aforesaid contractors at any tier, who undertakes to perform a part of the pre-construction services or construction phase Work at the site for which Contractor is responsible. Subcontractors shall be selected through the Subcontractor selection process described in the Contract Documents, if any.

2.29 **Substantial Completion** - The Work will be substantially complete within the number of calendar days after the Notice to Proceed when the Contract Times commence according to Article 6.3 of the Contract. Substantial Completion shall be the date on which the construction services for the Work, or an agreed upon portion thereof, has progressed to the point where, in the opinion of the City, as evidenced by a Certificate of Substantial Completion and/or Certificate of Occupancy, such construction services are sufficiently complete in accordance with the Contract Documents so that the Work (or specified part) can be utilized for the purposes for which it is intended, without any outstanding concurrent Work at the site, except as may be required to complete or correct Punch List items. If no such certificate is issued, Substantial Completion takes place when the construction services Work or a Construction Phase is complete and ready for final payment as evidenced by the City's written recommendation of final payment. The terms "substantially complete" and "substantially completed" as applied to all or part of the construction Work refers to Substantial Completion thereof.

2.30 **Supplier -** Any person or entity providing materials or property for the Project.

2.31 **Total Float**. The number of Days by which the pre-construction services or construction phase Work or any part of the same may be delayed without necessarily extending a pertinent Contract Time or schedule milestone in the Project Schedule.

2.32 **Work** - The entire completion of construction or the various separately identifiable parts thereof, required to be furnished during the construction phase. Work includes and is the result of:

2.32.1 performing or furnishing labor;

2.32.2 furnishing and incorporating materials, resources, and equipment into the construction; and

2.32.3 performing or furnishing services and documents as required by the Contract Documents for the construction phase.

2.33 **Working Days** - Days exclusive of Saturday, Sunday and City recognized legal holidays.

ARTICLE 3 - STANDARD SPECIFICATIONS AND DETAILS

3.1 The City operates under the 2016 City of San Luis Supplement to the 2015 MAG Uniform Standard Specifications for Public Works Construction.

3.2 The City also operates under the 2009 City of Yuma Construction Standard Detail Drawings.

3.3 The City also operates under the 2006 Yuma County Public Works Standards – Volume III – Storm Drainage Facilities.

3.4 The above standard specifications and details may be viewed and downloaded at the City of San Luis website: https//www.sanluisaz.gov/DocumentCenter/Index/268.

3.5 The City may require particular sections of the revisions of the MAG Specifications and Standard Details after the 2015 revision that the City adopted.

3.6 Current and Historical MAG Specifications and Standard Details may be viewed at the Maricopa Association of Governments website at https://azmag.gov/Programs/Public-Works/Specifications-and-Details.

3.7 The MAG Specifications and Standard Details and the City's amendments to them are incorporated into the Contract.

ARTICLE 4 - CONTRACTOR'S RESPONSIBILITIES FOR CONSTRUCTION SERVICES

4.1 General

4.1.1 The Contractor shall construct the Work in accordance with the Contract Documents and as outlined in the Contract Documents to the satisfaction of the City, exercising the degree of professional care, skill, diligence, quality, and judgment that a professional Contractor engaged, experienced, and specializing in the construction of facilities of similar scope, function, size, quality, complexity, and detail in urban areas throughout the United States comparable to the City would exercise at such time, under similar conditions. The Contractor shall, at all times, perform the Work in conformance with sound and generally accepted engineering principles and construction management and construction contracting practices.

4.1.2 The Contractor shall comply with, and require all Subcontractors to comply with, the Arizona Contractors' license laws, including all requirements with respect to being duly registered and licensed.

4.1.3 Pursuant to A.R.S. §41-4401, the Contractor warrants to the City that the Contractor and all its Subcontractors are in compliance and will comply with all Federal Immigration laws and regulations that relate to their employees and with the E-Verify Program under A.R.S. § 23-214(A). The Contractor acknowledges that a breach of this warranty by the Contractor or any of its Subcontractors is a material breach of this Contract subject to penalties up to and including termination of the Contract or any subcontract. The City retains the legal right to inspect the papers of any employee related to this statute and of the Contractor or any Subcontractor who works on this Contract to ensure compliance with this warranty. The City may conduct random verification of the Contractor's employment records and any of its Subcontractors' employment records to ensure compliance with this warranty. The City will not consider the Contractor or any of its Subcontractors in material breach of the foregoing warranty if the Contractor and its Subcontractors establish that they have complied with the employment verification provisions prescribed by 8 USCA §1324(a)

and (b) of the Federal Immigration and Nationality Act and the e-verify requirements prescribed by Arizona Revised Statutes §23-214(A). The provisions of this Section must be included in any agreement the Contractor enters into with its Subcontractors who provide services under this Contract or any subcontract. “Services” are defined as furnishing labor, time, or effort in the State of Arizona by a contractor or Subcontractor. Services include construction or maintenance of any structure, building, or transportation facility or improvement to real property. Breach of this warranty shall constitute a material breach of the contract and shall subject the Contractor to penalties, including termination of the Contract at the sole discretion of the City.

4.1.4 The Contractor further understands and acknowledges the applicability of the Americans with Disabilities Act, the Immigration Reform and Control Act of 1986, and the Drug-Free Workplace Act of 1989 to the Contract. The Contractor understands and acknowledges that it must also comply with A.R.S. § 34-301, “Employment of Aliens on Public Works Prohibited,” and A.R.S. § 34-302, as amended, “Residence Requirements for Employees,” and A.R.S. § § 12-2701 through .12-704 “Immigration and Nationality Law Practice Act” as amended.

4.2 Contractor’s Pre-Contract and Pre-Work Deliverables

4.2.1 Before beginning any Work under the Contract, the Contractor shall execute the Contract and deliver to the City the items listed in Section 4.2.2 below within seven (7) days after the award of the Contract, and the City must execute the Contract. Failure to do so will be a material breach of the Contract, entitling the City to terminate the Contract for Cause.

4.2.2 When the Contractor delivers the executed Contract to the City, the Contractor shall also deliver to the City such bonds and certificates of insurance with endorsements in such amounts (and other evidence of insurance requested by the City) required under Article 11 of these General Conditions, and as the Contract requires.

4.2.3 The Contractor shall obtain all necessary permits for the Work and pay all applicable fees unless otherwise noted on the plans and in the specifications. The City has obtained the required ADEQ Aquifer Protection Permit. The City does not require a building, grading, or encroachment permit for the WWTP scope of work. The city does require a business license.

4.2.4 Copies of all permits and the associated notices must be provided to the City prior to starting the permitted activity.

4.3 Pre-Construction Conference

4.3.1 Prior to the commencement of any Work, the City may schedule a Pre-Construction Conference.

4.3.2 Prior to the Pre-construction Conference, the Contractor shall provide the Project Manager with a Schedule of Values reflecting the subcontracts and other categories that will be used to submit pay applications for the Work. The total amount of the Schedule of Values shall not be greater than the Contract Price. The Schedule of Values shall be reviewed at the Pre-Construction Conference and revised in response to comments and questions from the City. Once accepted by the City in writing, the Schedule of Values for the Project will not be changed without the City’s prior written approval.

4.4 Performance of the Work (Including Field Measurements, Subcontractors, and Suppliers)

4.4.1 Unless otherwise provided in the Contract Documents to be the responsibility of the City or a separate Contractor, the Contractor shall provide through itself or its Subcontractors the necessary

supervision, labor, inspection, testing, start-up, material, equipment, machinery, temporary utilities, and other temporary facilities to permit Contractor to complete the Work consistent with the Contract Documents.

4.4.2 The Contractor's Superintendent shall be present at the Project site at all times that material Work under this Contract is taking place. The Contractor's Superintendent or designee shall be present at the Project site at all times any other Work under this Contract is taking place. All elements of the Work shall be under the direct supervision of a foreman or his designated representative on the Project site, who shall have the authority to take actions required to carry out that particular element of the Work properly.

4.4.3 Before ordering materials or doing work, the Contractor and each Subcontractor shall verify measurements at the Project site and shall be responsible for the correctness of such measurements. No extra charge or compensation will be allowed because of differences between the actual dimensions and the dimensions indicated on the Contract Documents, including the drawings.

4.4.4 If the Contractor observes errors, discrepancies, or omissions in the Contract Documents, it shall promptly notify the Contractor and City and request clarification. The Contractor shall be liable to the City for damages resulting from errors, inconsistencies, or omissions in the Contract Documents or for differences between field measurements or conditions in the Contract Documents. If the Contractor, with the exercise of reasonable care, should have recognized such error, inconsistency, omission, or difference and fails to report it to the City, and if the Contractor proceeds with the Work affected by such observed errors, discrepancies, or omissions, without receiving such clarifications, it does so at its own risk.

4.4.5 In all cases of interconnection of its Work with existing or other work, the Contractor shall verify at the Project site all dimensions relating to such existing or other work. Any errors due to the Contractor's failure to so verify all such grades, elevations, locations, or dimensions shall be promptly rectified by the Contractor without any increase in the Contract Price. Any design errors or omissions noted by the Contractor during this review shall be reported promptly to the City.

4.4.6 The Contractor shall be responsible for the proper performance of the Work of Subcontractors and any acts and omissions in connection with such performance. Nothing in the Contract Documents is intended or deemed to create any legal or contractual relationship between the City and any Subcontractor or Sub-Subcontractor, including but not limited to any third-party beneficiary rights.

4.4.7 The Contractor will not substitute or change any Subcontractor or Supplier without the City's prior written approval. Any substitute or replacement Subcontractor or Supplier shall be required to meet the same qualifications and selection criteria and process as the original Subcontractor or supplier. If a Subcontract or Supplier selection plan has been approved by the City, the Contractor will follow that plan unless otherwise approved by the City in writing.

4.4.8 The Contractor shall not change or replace the Contractor's Project Manager or Superintendent on this Project without an explanation for the change being given to the City and receiving prior written approval of the change from the City, which approval will not be unreasonably withheld.

4.4.9 Subcontractors whose scope of work has a value greater than fifteen percent (15%) of the total Contract Price may be required to furnish performance and payment bonds to the Contractor if directed in writing by the City.

4.4.10 Owner Furnished Equipment - The OWNER has pre-purchased several items of the process equipment. One piece of equipment is onsite, and two others need to be delivered. The Contractor is responsible for planning delivery in order to meet the construction schedule. All the equipment will become the CONTRACTOR'S responsibility. The CONTRACTOR shall coordinate delivery and confirm that the shipments are complete and accurate for all equipment. Contract shall provide safe and secure storage, provide transportation from onsite storage to install location, install per the construction documents and the manufacture's requirements, and schedule manufacturer's representative for construction, installation certification, start up, operational training, etc. Specific equipment and details are noted in Article 4.10 of the Contract.

4.5 Control of the Project Site

Throughout all phases of construction, including suspension of Work, the Contractor shall keep the Project site reasonably free from debris, trash, and construction wastes to permit the Contractor to perform its construction services efficiently, safely, and without interfering with the use of adjacent land areas. Prior to the Final Acceptance of the Work, or a portion of the Work, the Contractor shall remove all debris, trash, construction wastes, materials, equipment, machinery, and tools arising from the Work or applicable portions thereof to permit the City to occupy the Project or a portion of the Project for its intended use.

4.5.1 The Contractor shall take whatever steps, procedures, or means necessary to prevent dust nuisance due to construction operations. The dust control measures shall be maintained at all times to the satisfaction of the City and in accordance with the requirements of the Yuma County dust control regulations.

4.5.2 The Contractor shall be responsible to the City for the acts and omissions of the Contractor's employees, Subcontractors and their agents and employees, and any other person performing any of the Work under a contract with Contractor, or claiming by, through, or under Contractor, for all damages, losses, costs, and expenses resulting from such acts or omissions.

4.6 Project Safety

4.6.1 The Contractor is responsible for the safety of the job site for the Contractor's employees as well as for members of the general public and others who may drive or walk through or be at the Project site.

4.6.2 The Contractor assumes responsibility for implementing and monitoring all safety precautions and programs related to the performance of the Work.

4.6.3 The Contractor shall provide a "competent person" as required by O.S.H.A. regulations. The "competent person" shall be identified at the Pre-Construction Conference, and the City will be advised in writing of any changes.

4.6.4 The Contractor and Subcontractors shall comply with all legal and regulatory requirements relating to safety, as well as any City-specific safety requirements set forth in the Contract Documents, provided that such City-specific requirements do not violate any applicable legal and regulatory requirements.

4.6.5 As between the City and the Contractor, the Contractor is responsible to the City for any and all the safety issues relating to the Work on the Project. The Contractor shall administer and manage the safety program. The safety program will include, but not necessarily be limited to, reviews of the safety programs of each Subcontractor. The Contractor shall monitor the establishment and

execution of compliance with all applicable regulatory and advisory agency construction safety standards.

4.6.6 The Contractor shall maintain and have sole responsibility for safety on the job site.

4.7 Materials Quality, Substitutions, and Shop Drawings

4.7.1 All construction materials to be used or incorporated in the Project are subject to inspection, quality control and quality assurance testing, and approval or rejection by the City. Any material rejected by the City shall be removed immediately and replaced in an acceptable manner to the City at no additional cost to the City. When quality control and quality assurance tests indicate noncompliance with the Contract Documents, retesting shall be performed by the same testing laboratory that performed the tests that indicated noncompliance.

4.7.2 A schedule of shop drawing submissions shall be submitted with the Project Schedule for City approval that avoids bulk submissions to the extent reasonably possible. Unless otherwise noted, shop drawings will not be required for items specified or detailed in the Uniform Standard Specifications and Details or the Technical Specifications. The schedule of shop drawing submissions shall include all of the items for which shop drawings are required by the Contract Documents, including the specifications.

4.7.3 Long Lead Time Items. The Contractor shall submit shop drawings, as required by the Project Engineer, on all long lead items to be furnished and installed as part of the Project within ten (10) days after execution of the Contract. In addition, the Contractor shall order all long lead items to be furnished and installed as part of this Project within (3) days after receiving approved shop drawings. For all long lead times for which shop drawings are not required, the Contractor shall order said long lead items within fifteen (15) days after execution of the Contract. Within two (2) days after ordering long lead items, the Contractor shall supply copies of all purchase orders, along with an accurate delivery schedule from the supplier.

4.8 Project Record Documents

The Contractor shall ensure that any and all changes or modifications done as a result of field changes are accurately reflected in red-lined markings. At the completion of construction, all red lines and markings shall be compiled to aid in the creation of “as-built” plans.

4.9 Warranty and Correction of Defect Work

4.9.1 The Contractor warrants to the City that the construction of the Work shall be of good and workmanlike quality and completed in strict conformance with all applicable laws, rules, and regulations and the plans and specifications and all other terms and conditions of the Contract Documents, including all materials and equipment furnished as part of the construction, shall be new unless otherwise specified in the Contract Documents, of good quality, in conformance with the Contract Documents and free of defects in materials and workmanship.

4.9.2 The date of **Final Completion** shall be the beginning of the Warranty Period, regardless of early completion by some Subcontractors of their work.

4.9.3 Unless otherwise specified in the Contract Documents, the Contractor and Subcontractors shall provide to the City all of the following written warranties that apply to the Work in a form acceptable to the City.

(i) General Warranty — Two (2) years

(ii) Mechanical Contractor — Two (2) years

(iii) Plumbing Contractor — Two (2) years

(iv) Electrical Contractor — Two (2) years

(v) Caulking — One (1) year

(vi) Steel Joists, Certificate of Manufacturer

(vii) Exterior Metal Wall System — Five (5) years

(viii) Painting — One (1) year

(ix) Termite — Five (5) years

(x) Sheet Metal: Zinc coating thickness on hot-dipped galvanized Metals — One (1) year

4.9.4 Nothing in the warranties contained in the Contract Documents are intended to limit any manufacturer's warranty, which provides the City with greater warranty rights than set forth in this Section or the Contract Documents. The Contractor will provide the City with all manufacturers' warranties prior to Final Acceptance.

4.9.5 A progress payment, or partial or entire use or occupancy of the Project by the City, shall not constitute Acceptance of Work not in accordance with the Contract Documents.

4.9.6 Without limiting the foregoing or anything in these General Conditions or the Contract to the contrary, the Contractor shall obtain and provide to the City all warranties for any portion of the Project offered by the manufacturer, installer, or provider thereof. The City and the user of the facility shall have the right to the full value and benefit of all such warranties. The Contractor will ensure all such warranties are fully transferrable to facilitate the full value of this Section.

ARTICLE 5 - CITY'S RESPONSIBILITIES

5.1 **City Project Manager** The Project Manager is responsible for providing City-supplied information and approvals in a timely manner to assist the Contractor to fulfill its obligations under the Contract Documents.

5.2 **Contract Services** The City may contract separately with one or more contractors to provide construction administration of the Project. The Contractor's Contract, as well as other firms hired by the City, shall be furnished to the Contractor. The contractor shall not have the right to limit, restrict, or reject any Contract modifications that are mutually acceptable to the City and the Contractor.

ARTICLE 6 - CONTRACT TIME

6.1 Contract Time

6.1.1 The Contract Time shall start with the Notice to Proceed ("NTP") and end with Final Completion, as set forth in Article 6.3 below.

6.1.2 The Contract Time shall be as set forth in the Project Schedule. The Contractor agrees that it will commence the performance of the Work and complete the Project within the Contract Time.

6.1.3 Time is of the essence of this Contract, for the Project, for the Work, and for each phase and/or designated milestone of the Project.

6.2 Project Schedule

6.2.1 The Project Schedule shall be updated and maintained throughout the Contract Time.

6.2.2 The Project Schedule shall be revised as required by conditions and progress of the Work. However, such revisions shall not relieve the Contractor of its obligations to complete the Work within the Contract Time, as adjusted in accordance with the Contract Documents. No modification to the Contract Documents or the Contract Time shall be effective unless approved in advance by the City.

6.2.3 An updated Project Schedule shall be submitted monthly to the City as part of the Payment Request.

6.2.4 The Contractor shall provide the City with a monthly status report with each Project Schedule detailing the progress of the Work, including:

6.2.5 Acceptance of a submitted schedule by the City should in no way be construed as an affirmation or admission that the schedule is reasonable or workable by the Contractor. The responsibility for completing the Work on the Project within the Contract Time remains the obligation of the Contractor. The City's review shall not relieve the Contractor from compliance with the requirements of the Contract Documents or be construed as relieving the Contractor of its complete and exclusive control over the means, methods, sequences, and techniques for executing the Work.

6.2.6 Critical Path Method (CPM)

6.2.6.1 Unless otherwise specified in the Contract, the Project Schedule shall include a Critical Path Method (CPM) diagram schedule showing the sequence of activities, the interdependence of each activity, and identifying the Critical Path.

6.2.6.2 The CPM diagram schedule shall be in calendar Days and indicate duration, earliest and latest start and finish dates for all activities, and total Float Times for all activities except critical activities. The CPM diagram shall be presented in a time-scaled graphical format for the Project as a whole.

6.2.7 Float Time

6.2.7.1 The total Float time within the overall schedule is for the exclusive use of the City. However, the City may approve the Contractor's use of Float time as needed to meet contract milestones and the Project completion date.

6.2.7.2 The Contractor shall not be allowed to sequence, hide, or reallocate Float time through such strategies as extending activity duration estimates to consume available Float, using preferential logic, or using extensive crew or resource sequencing. No time extensions will be granted nor delay damages paid until a delay occurs which extends the Work beyond the Contract Time.

6.2.7.3 Rain-Related Delays. In preparing the Project Schedule, The Contractor is required to take into account all relevant weather conditions, including normal rainfall and distribution. No

additional Compensation shall be given for any rain-related delays or impacts on the Work or the Project Schedule. The burden of documenting normal rainfall, excessive rainfall, and the impact on Critical Path activities is on the Contractor.

6.3 Final Completion and Final Acceptance

6.3.1 Unless otherwise expressly agreed to in writing by the City, Final Completion must be obtained by no later than **four hundred eighty-eight (488)** calendar days after the date of Notice to Proceed. Failure to timely obtain Final Completion will be a material breach of the Contract.

6.3.2 Upon receipt of written notice that the Work is ready for final inspection and Acceptance, the City and the Contractor will jointly inspect to verify that the remaining items of Work have been completed. There shall be no partial acceptance. Final Completion shall not occur until all items of Work, including punch list items, have been completed to the City's satisfaction as reflected in the written Final Completion notice.

6.3.3 Final Payment under Section 8.2 below shall not be due, owing, or paid by the City until the Final Completion is obtained.

6.4 Liquidated Damages

6.4.1 Liquidated Damages. The Contractor acknowledges and agrees that if the Contractor fails to obtain Final Completion of the Work within the Contract Time, the City will sustain extensive damages and serious loss as a result of such failure. The exact amount of such damages will be extremely difficult to ascertain. Therefore, the City and the Contractor agree that if Contractor fails to achieve Final Completion of the Work within the Contract Time, the City shall be entitled to retain or recover from the Contractor, as liquidated damages and not as a penalty, the applicable dollar sum amount in the Table 108-1 Schedule of Liquidated Damages in the 2016 City of San Luis Supplement to MAG Standard Specification and to City of Yuma Standard Details per calendar day, commencing from the Milestone Completion Dates required under Article 6.4 of the Contract.

6.4.2 The City may deduct liquidated damages described in this Section 6.4 from any unpaid amounts then or thereafter due Contractor under this Contract. Any liquidated damages not so deducted from any unpaid amounts due to the Contractor shall be payable to the City at the demand of the City, together with interest from the date of the demand at the highest lawful rate of interest payable by the Contractor.

6.4.3 Nothing herein shall be deemed to constitute a waiver of any other remedy available to the City in the event of Contractor's default under this Contract prior to the full performance of the Work, including, as applicable, specific performance or completion of the Work on behalf of Contractor, the cost and expense of which shall be offset against any monies then or thereafter due to Contractor (if any) and otherwise immediately reimbursed to City by Contractor.

ARTICLE 7 - CONTRACT PRICE

7.1 **Fixed Price Contracts** The Contract Price shall be the amount set forth in the Contract.

7.2 **City Sales Tax** The Contractor is required to pay Sales Taxes on any contracting activity done for the City, and this cost shall be included in all Contract Prices.

ARTICLE 8 - PAYMENT

8.1 Payment for Construction Services

8.1.1 Monthly progress payments for certified work and material delivered to the Project site for the preceding month shall be paid on or before fourteen (14) business days after the estimate of the Work is certified and approved. The submittal estimate shall be deemed certified and approved for payment after seven (7) days from the date of submission unless the City's Project Manager issues a written finding setting forth items not approved for payment.

8.1.2 The City shall retain ten percent (10%) of all progress payments, until **Substantial Completion** is achieved, as insurance of proper performance of the Contract or, at the option of the Contractor, a substitute security may be provided by the Contractor in an authorized form approved by the City.

8.1.3 Upon request of Contractor, and subject to the approval of the City in its sole discretion, the 10% retained by the City under this Article may be substituted for an irrevocable letter of credit issued by an approved financial institution equal to the amount that would otherwise be retained.

8.1.4 Unless the City Project Manager delivers specific written findings of deficiencies and expected cost to cure, any retention shall be paid, or substitute security shall be returned to the Contractor within sixty (60) Days after Final Completion and Acceptance of Work under the Contract. The City may withhold an amount from the progress payment sufficient to pay the expenses the City's Project Manager reasonably expects to incur in correcting the deficiency set forth in the written finding.

8.1.5 The Contractor, and all Subcontractors, shall pay to Subcontractors or material Suppliers within seven (7) days of receipt of each progress payment unless otherwise agreed in writing by the parties, the respective amounts allowed the Contractor or Subcontractor on account of the Work performed or materials delivered to the extent of each such Subcontractor's or material Supplier's interest therein. No agreement for construction may materially alter the rights of any Contractor, Subcontractor, or material Supplier to receive prompt and timely payment as provided under this Section. These monthly progress payments to Subcontractors or material Suppliers shall be passed on payments received pursuant to this Section. Any diversion by the Contractor or Subcontractor of payments received for Work performed or failure to reasonably account for the application or use of such payments constitutes grounds for disciplinary action by the Registrar of Contractors. The Subcontractor or material Supplier shall notify the Registrar of Contractors and the City in writing of any payment less than the amount or percentage approved for the class or item of work as set forth in this Section. The Subcontractor may notify the City's Project Manager in writing, requesting that the City notify the Subcontractor in writing within five (5) days from payment of each progress payment made to the Contractor. The Subcontractor's request remains in effect for the duration of the Subcontractor's work on the Project.

8.1.6 Nothing in this Section 8.1 prevents the Contractor at the time of application/certification to the City from withholding application or certification to the City for payment to the Subcontractor or material Supplier for unsatisfactory job progress, defective work, or materials not remedied, disputed work or materials, third party claims filed or reasonable evidence that claim will be filed, failure of a Subcontractor to make timely payment for labor, equipment and materials, the Subcontract.

8.2 **Final Payment** Subject to all of the City's rights to withhold or offset payment and other rights under the Contract, Final Payment, including remaining retainage, shall be paid only after:

8.2.1 The Work has been fully completed (including completion of all incorrect or incomplete work items), and the City has issued the written Final Completion notice and the required Warranty Bond has been submitted to the City;

8.2.2 necessary operating manuals, any excess materials and supplies necessary for matching materials and supplies incorporated into the Work, and complete "as-built" drawings (including the Building Information Model, if required by the Contact Documents), plans, and specifications have been delivered to City;

8.2.3 full and unconditional lien waivers and releases by Contractor and any person performing labor or supplying material, machinery, fixtures, or tools for the Work have been delivered to the City;

8.2.4 all conditions and requirements imposed by the City or any financing entity for the corresponding disbursement have been met; and

8.2.5 the Contractor delivers to the City a Contractor Payment Request Form requesting Final Payment.

8.3 **The City's Right to Withhold Payment** The City may withhold payment to such extent as may be necessary in the City's opinion to protect the City from loss for which the Contractor is responsible, including, without limitation:

8.3.1 Defective Work not remedied;

8.3.2 Third-party claims filed or reasonable evidence indicating probable filing of such claims unless Contractor provides security acceptable to the City;

8.3.3 Failure of Contractor to make payments properly to Subcontractors or for labor, materials, or equipment;

8.3.4 Reasonable evidence that the Work cannot be completed for the unpaid balance of the Contract Price;

8.3.5 Damage to the City or another Contractor or any third party for which the Contractor may have an obligation under Article 12 of the General Conditions;

8.3.6 Reasonable evidence that the Work will not be completed within the Contract Time and that the unpaid balance would not be adequate to cover actual or liquidated damages for the anticipated delay; or

8.3.7 Persistent failure to carry out the Work in accordance with the Contract Documents.

8.4 **Joint/Direct Checks** Payments to the Contractor may be made by checks payable jointly to the Contractor and its employees, agents, Subcontractors, and Suppliers, or any of them. When in the sole opinion of the City, it is advisable, payments may be made directly to the Contractor's Subcontractors. Any amount so paid shall be deducted from the amounts owed to the Contractor under this Contract.

8.5 **Payment Not A Waiver** No payment (nor use or occupancy of the Project by the City) shall be deemed Acceptance or approval of the Work or as a waiver of any claims, rights, or remedies of the City.

8.6 **Liens and Bond Claims** The Contractor shall make all payments, in the time required, of all labor and materials furnished to the Contractor in the course of the Work and shall promptly furnish evidence of such payments as the City may require. The Contractor shall pay when due all claims arising out of the

performance of the Work covered by this Contract for which a lien may be filed either against the real estate or leasehold interest of City, or against payments due from City to Contractor, or for which a claim may be made against any payment or performance bond or both. To the fullest extent permitted by law, Contractor agrees that no liens or other claims in the nature of a lien against the real estate, leasehold, or other interest of City, against payment due from City to Contractor, or against any payment or performance bond, shall be filed or made in connection with the Work by any party who has supplied professional services, labor, materials, machinery, fixtures, tools, or equipment used in or in connection with the performance of this Contract. The Contractor agrees to remove or to cause to be removed any such liens or claims in the nature of a lien or bond claim within ten (10) days upon receiving notice or obtaining actual knowledge of the existence of such liens or claims. In addition, the Contractor agrees to defend, indemnify, and hold harmless the City from and against any and all such liens and claims. This paragraph does not apply to claims and liens of Contractor due to non-payment for work performed by Contractor. The obligations under this Article 8.4 survive termination of this Contract.

8.7 Financial Record Keeping and City's Audit Right

8.7.1 Records for all Contracts between the City and the Contractor shall, upon reasonable notice, be open to inspection and subject to audit, scanning, and/or reproduction during normal business working hours. The City or its designee may conduct such audits or inspections throughout the term of this Contract and for a period of three years after Final Payment or longer if required by law.

8.7.2 The City, its authorized representative, and/or the appropriate agency reserve the right to audit the Contractor's records in compliance with local, state, or federal policies, statutes, or at the City's discretion within three (3) years of Final Acceptance of the Work.

ARTICLE 9 - CHANGES TO THE CONTRACT

9.1 Extra Work/Changes in the Work

9.1.1 The City reserves the right to make such changes in the plans and specifications for the Work as it may deem appropriate. Any such change as set forth in a written Change Order or Extra Work Order shall be deemed a part of this Contract as if originally incorporated into this Contract.

9.1.2 Not used

9.1.3 The Contractor shall not be entitled to payment for additional work unless a written Change Order or Extra Work Order, in form and content prescribed by the City, has been executed by the City prior to starting the additional work.

9.1.4 Any agreement that modifies the terms of the Contract (including Change Orders) shall be approved in writing by the Project Manager and approved by the San Luis City Council if necessary. Once properly executed by both Parties, these modifications to the Contract shall have the same effect as if they had been included in the original Contract.

9.2 **Accuracy of Change Order Pricing Information** Signature by the contracting Parties shall constitute full accord and satisfaction between the City and the Contractor for all costs, damages, and expenses of whatever kind of nature, including delay, impact, or acceleration damages, which may be occasioned by a Change Order or other modification of the Contract, the Parties agreed to in writing.

ARTICLE 10 - TERMINATION

10.1 Termination by the City for Cause

10.1.1 If, for any reason, the Contractor fails to fulfill in a timely and proper manner its obligations under the Contract Documents, or if the Contractor violates any of the covenants, agreements, or stipulations of this Contract, the City shall thereupon have the right to terminate the Contract by giving written notice to the Contractor of such termination and specifying the effective date of the termination. In such event, all finished or unfinished site or structural improvements, as well as all materials or equipment acquired or stored by the Contractor under this Contract, shall, at the option of the City, become the City's property. The Contractor shall be entitled to receive just and equitable compensation for any Work satisfactorily completed under this Contract.

10.1.2 Notwithstanding Section 10.1.1, the Contractor shall not be relieved of liability to the City for damages sustained by the City by virtue of any breach of this Contract by the Contractor, and the City may withhold any payments to the Contractor for the purpose of set-off until such time as the exact amount of damages due the City from the Contractor is determined.

10.2 **Termination by the City for Convenience** The City may also terminate the Contract at any time for its convenience upon seven (7) business days' written notice to the Contractor specifying the termination date. In the event of termination, which is not the fault, in whole or in part, of the Contractor, the City shall pay to the Contractor only such compensation, including reimbursable expenses, due for Work properly performed on the Project prior to the termination date. Upon any termination of the Contract, no further payments shall be due from the City to the Contractor.

10.3 **A.R.S. § 38-511 and Other Statutory Requirements** This Contract is subject to and may be terminated by the City in accordance with the conflict provisions of A.R.S. § 38-511. The Contractor certifies, to the extent permitted by law, that it is not currently engaged in and agrees that for the duration of this Contract, it will not engage in a boycott of Israel, as that term is defined in A.R.S. § 35-393. The Contractor certifies, to the extent permitted by law, that it does not currently, and agrees for the duration of this Contract, it will not use the forced labor of the ethnic Uyghurs in the People's Republic of China, nor use any goods or services produced by them, nor use any contractors, Subcontractors, or Suppliers that use them. If the Contractor becomes aware during the term of this Contract that the Contractor is not in compliance with this certification, it shall follow the notice procedures in A.R.S. § 35-393.

10.4 **Non-Appropriation** The City is a government agency that relies upon the appropriation of funds by its governing body to satisfy its obligations. If the City determines that it does not have funds to meet its obligations under the Contract, the City shall have the right to terminate the Contract without penalty on the last day of the fiscal period for which funds were legally available for the Project.

10.5 **Limited Liability** Under no circumstances shall the City have any liability for any costs, expenses, overhead, or profits in relation to any work not actually performed or for any future or anticipated profits, recovery, damages, expenses, or losses.

ARTICLE 11 - INSURANCE AND BONDS

11.1 Insurance Requirements

11.1.1 **Contractor's Obligation**: The Contractor shall secure and maintain, at the Contractor's expense, until the Final Completion of the Project, general liability and property insurance as shall protect the Contractor and the City from claims for bodily injury, personal injury, and property damage which may arise because of the nature of the work or from operations under this Contract. The Contractor's insurance coverage shall be primary insurance with respect to all other available

sources. Any coverage maintained by the City shall not contribute to any claims arising from the Contractor's performance of this Contract. The Contractor shall file these certificates with OWNER's Public Works Department within ten (10) days of execution of this Contract and prior to engaging in any operation or activities set forth in this AGREEMENT. The foregoing insurance policies shall provide that no cancellation, major change in coverage, or expiration by the insurance company or the insured.

11.1.2 **General Liability Coverage**: Contractor shall have general liability coverage on a per occurrence, and in comprehensive form. General liability coverage shall include Products, Completed Operations, Products Liability, Explosion, Underground and Collapse Hazard, Premises, Operations, Contractual, Independent Contractors, Broad Form Property Damage and Personal Injury. General Liability coverage shall include and eliminate the exclusion for property under the care, custody, and control of the Contractor.

11.1.3 **Coverage Amounts**: Contractor shall provide general liability and excess general liability coverage in the following amounts, at a minimum:

Employer's Liability	
a. Each Accident	$100,000
b. Disease for Each Employee	$100,000
c. Disease Policy Limit	$250,000
Contractors General Liability	
a. General Aggregate	$6,000,000
b. Products-Completed Operations Aggregate	$2,000,000
c. Each Occurrence (Bodily Injury and Property Damage)	$6,000,000
d. Personal Injury and Advertising Injury	$2,000,000
Property Damage liability insurance will provide Explosion, Collapse, and Underground coverages.	
Automobile Liability	
a. Bodily Injury:	
Each Person	$1,000,000
Each Accident	$1,000,000
b. Property Damage	
Each Accident	$1,000,000
c. Combined Single Limit	$1,000,000
Contractual Liability	
a. Bodily Injury:	
Each Accident	$2,000,000
Annual Aggregate	$2,000,000
b. Property Damage:	
Each Accident	$2,000,000
Annual Aggregate	$2,000,000
Each Accident	$2,000,000
Annual Aggregate	$2,000,000
Professional Liability Errors and Omissions	$1,000,000

11.1.4 Additional Provisions:

11.1.5 Additional Insured: Contractor shall name the **City of San Luis, Arizona (an Arizona municipal corporation) and its elected officials, officers, agents, and Pacific Advanced Civil Engineering, Inc. (a California Corporation registered in Arizona) as "Additional Insureds**" on all insurance policies, except Worker's Compensation and Errors and Omissions, and this shall be reflected on the Certificate(s) of Insurance, with corresponding endorsement relative to the additionally insured indemnification. Contractor shall name the City of San Luis as certificate holder.

11.1.6 Cancellation Notice of Material Change of Coverage: The Contractor shall keep all policies in force for the duration of the Contract and any possible extension thereof. Contractors' required insurance shall be endorsed to provide that the policies will not be canceled, reduced, discontinued, or otherwise materially altered during the period of performance without thirty (30) days prior written notice to the City of San Luis Public Workers Department.

11.1.7 Certificate(s) of Insurance: Certificates of Insurance shall be Project-specific. Prior to commencing work under the Contract, Certificates of Insurance shall be submitted and approved by the City. Contractor is responsible for obtaining Certificates of Insurance, establishing that the Contractor and all subcontractors have complied with insurance requirements previously stated. Copies of Certificates of Insurance shall be forwarded to the City Risk Manager for review and filing. Failure of the City to demand such Certificate or other evidence of full compliance with these insurance requirements or failure of the City to identify a deficiency from the evidence that is provided shall not be construed as a waiver of the Contractor's obligation to maintain such insurance. City shall have the right, but not the obligation, to prohibit Contractor or any of its subcontractors from entering the Project Site until such certificates or other evidence that insurance has been placed in complete compliance with these requirements is received and approved by City.

11.1.8 Rating of Insurance Companies: Any and all insurance companies supplying coverage to the Contractor shall be approved to write insurance in the State of Arizona and must possess no less than an "A" rating in accordance with the A.M. Best rating guide.

11.1.9 Deductible: Contractor shall be solely responsible to satisfy any deductible or self-insured retention with respect to any of the coverages required by the Contract Documents. Such deductibles or self-insured retention shall not be applicable with respect to the policy limits provided to the City of San Luis. The City of San Luis, at its option, may require the Contractor to secure payment of such deductible or self-insured retention by a surety bond or irrevocable and unconditional Letter of Credit.

11.1.10 Rental Equipment: In the event that rental of equipment is undertaken to complete and/or perform the Work, the Contractor agrees that it shall be solely responsible for such rental equipment. Such responsibility shall include, but not be limited to, theft, fire, vandalism, and use by unauthorized persons.

11.1.11 Personal Property: In the event that materials or any other type of personal property are acquired for the Project or delivered to the Project site, the Contractor agrees that it shall be solely responsible for such property until it becomes a fixture on the Project, or otherwise is installed and incorporated as a final part of the Project. Such responsibility shall include, but not be limited to, theft, fire, vandalism, and use by unauthorized persons. Contractor shall maintain "all risk" insurance on a replacement cost basis, covering loss or damage to personal property (for which it has title and/or risk of loss), which is to become a final part of the Project, during any time such personal property is in transit and while stored or worked upon away from the Project site. City and

its officials, officers, employees, and agents shall be named as additional insured under such insurance.

11.1.12 Waiver of Subrogation: City and Contractor waive all rights against each other and Architect/Engineer, and separate contractors for damages caused by fire or other perils covered by Builder's Risk or any other property insurance, except such rights as they may have to the proceeds of such insurance.

11.1.13 Right to Require Higher Limits: City reserves the right, in its sole discretion, to require higher limits of liability coverage if, in the City's opinion, operations by or on behalf of the Contractor create higher-than-normal hazards and to require the Contractor to name additional parties in interest to be Additional Insureds.

11.1.14 Waiver of Requirements: The City Manager, in consultation with the City Risk Manager and/or City Attorney, reserves the right to waive or reduce insurance requirements should it be in the best interest of the City.

11.2 Bonds and Other Performance Security

11.2.1 Prior to the execution of the Contract, the Contractor shall provide a Performance Bond and a Payment Bond, each in an amount equal to the full amount of the Contract Price.

11.2.2 Each such bond shall be executed by a surety company or companies holding a Certificate of Authority to transact surety business in the State of Arizona, issued by the Director of the Arizona Department of Insurance. A copy of the Certificate of Authority shall accompany the bonds.

11.2.3 The bonds shall be made payable and be acceptable to the City. The bond forms for the performance and payment bonds shall be in the forms required under A.R.S. § 34-221, et seq.

11.2.4 All bonds submitted for this Project shall be provided by a company that has been rated AM Best rating of B++6 or better for the prior four (4) quarters by the latest edition of the *Results Best's Key Rating Guide (Property/Casualty)*" published by the A.M. Best Company.

11.2.5 Personal or individual bonds are not acceptable.

11.2.6 Warranty Bond. Unless the surety issuing the Performance Bond specifically includes language that such bond covers the entire warranty period, Contractor shall provide a separate Warranty Bond for the Warranty Period. The Warranty Bond shall be in a minimum penal sum of 25% of the Contract Price.

ARTICLE 12 - INDEMNIFICATION

12.1 To the fullest extent permitted by law, the Contractor, its successors, and assigns shall defend, indemnify, and hold harmless the City and its agents, representatives, officers, elected officials, and employees from all demands, proceedings, suits, actions, claims, damages, or losses relating to, arising out of, resulting from or alleged to have resulted from the performance of the Work or failure to comply with Contractor's obligations under the Contract Documents or any laws, regulations, or legal requirements. The Contractors' duty to defend, indemnify, and hold harmless the City and its agents, representatives, officers, elected officials, and employees shall arise in connection with all demands, proceedings, suits, actions, claims, workers' compensation claims, unemployment claims, damages, losses or expenses (including but not limited to attorney's fees, expert fees, court costs, and the cost of appellate proceedings) that are attributable to personal or bodily injury, sickness, disease, death or injury to, impairment or destruction of

property including loss of use resulting therefrom, caused by any act or omission of Contractor, a Subcontractor, anyone directly or indirectly employed by them or anyone for whose acts they may be liable.

12.2 The Contractor shall also defend, indemnify, and hold harmless the City, any jurisdiction or agency issuing permits for any work involved in the Project and their consultants and each of their officers, officials, employees, representatives, directors, and agents from and against all losses, expenses, damages (including damages to the Work itself), attorney's fees and other costs including costs of defense, which any of them may incur with respect to the failure, neglect, or refusal of Contractor to faithfully perform the Work and all of the Work and all of Contractor's obligations under the Contract. Such costs, expenses, and damages shall include all costs, including attorney's fees, incurred by the indemnified parties in any lawsuit to which they are a party.

12.3 The indemnified party shall have the right to approve the legal counsel selected by the Contractor or the insurer of the liability, which approval shall not be unreasonably withheld.

12.4 The defense, indemnification, hold harmless provisions, and City's Liability Insurance set forth herein shall survive any termination of the Contract.

ARTICLE 13 - DISPUTE RESOLUTION

13.1 **Informal Dispute Resolution** The Parties to the Contract agree that time is of the essence in relation to the performance of the Contract and completion of the Project. Therefore, any and all disputes in relation to the Contract will initially be referred to the City Project Manager and Contractor Project Manager, as applicable to the dispute, for immediate resolution. If, after good faith efforts to reach a resolution, none is reached, any party to the dispute may submit the dispute to the Dispute Resolution Representative ("DRR") process set forth below, which is intended to be an expedited process.

13.2 Dispute Resolution Representative (DRR) Process

13.2.1 The Parties under the Contract agree that all claims and disputes in relation to the Project that are not resolved in the ordinary course of the Project ("Claim or Claims") shall, as a prerequisite to any mediation or litigation of the Claim, first be submitted for resolution between the designated Dispute Resolution Representatives of the Parties as set forth herein (the "DRR Process").

13.2.2 The DRR Process shall be initiated through the service of a DRR Notice as set forth below:

(xi) For claims by the Contractor, the DRR Process shall be initiated by the party asserting the claim serving written notice on the City setting forth in detail:

(a) the basis for the claim;

(b) the effect of the Claim upon the construction of, and/or Project Schedule for, the Project;

(c) the specific relief requested, the amount thereof, and how such was calculated;

(d) the parties involved in the Claim and how they are involved;

(e) the specific contract provisions in the Contract Documents (including, if applicable, drawings and specifications) which apply; and

(f) efforts made to date to resolve the Claim.

(xii) For claims by the City, the DRR process will be initiated by the City providing written notice to the other parties of the basis and amount of its claim, the parties involved in the Claim, and how they are involved, the provisions in the Contract Documents that apply, and the relief requested.

(xiii) The DRR Notice shall be hand-delivered and e-mailed to the other parties' designated Dispute Resolution Representatives.

13.2.3 The other parties shall respond in writing to the DRR Notice ("DRR Response") within ten (10) calendar days of receipt of the DRR Notice, setting forth those items set forth in the DRR Notice that they agree with, dispute, and/or have questions concerning. The DRR Response shall be hand-delivered and e-mailed to the other parties' Dispute Resolution Representatives.

13.2.4 The designated Dispute Resolution Representatives for the parties to the claim shall then meet as soon as possible and, in any event, within twenty (20) calendar Days of submission of the DRR Notice (regardless of whether a DRR Response has been submitted by all parties involved in the dispute), at a mutually agreed upon time and place, to attempt to resolve the Claim based upon the DRR Notice and DRR Response.

13.2.5 At any time after the first meeting required above, either party may terminate the DRR Process by written notice to the other party.

13.2.6 The parties may agree, in writing, to extend or modify the time limits or other provisions of the DRR process in relation to a specific pending Claim.

13.2.7 Unless otherwise designated in a written notice to the other parties, the Project Manager, the representatives of the Contractor, and of the Design Professional shall act as the parties' designated Dispute Resolution Representatives.

13.2.8 If a resolution of the Claim is reached, that resolution shall be set forth in writing. The resolution shall be signed by the Parties' designated Dispute Resolution Representatives. If the resolution involves a change in any Contract Documents, the Contract Price, the Project Schedule, or any other change requiring a written Change Order or Amendment, the parties shall execute an appropriate written Change Order or Amendment pursuant to the terms of the Contract Documents.

13.3 Mediation

13.3.1 Unless extended by written agreement of the parties involved in the dispute, any Claim not resolved through the DRR process set forth above within five (5) calendar days after the meeting required under 13.2.4 or after the DRR is terminated pursuant to 13.2.5 above, whichever is earlier, shall be submitted to mediation as a condition precedent to litigation by either party.

13.3.2 The mediation shall be commenced by written demand upon the other party for mediation. If the parties cannot agree upon a mediator within ten (10) calendar Days of the written demand, either party may make a request to the Civil Presiding Judge of the Yuma County Superior Court to appoint a mediator. The mediation shall occur within forty (40) calendar Days of the written demand for mediation unless the parties agree, in writing, to a longer period of time.

13.3.3 The qualifications for the mediator shall be that the mediator be:

(xiv) an experienced mediator, arbitrator, or litigator of construction disputes; and

(xv) having engaged a significant portion of their time involving and/or resolving construction disputes for at least the past five (5) years.

13.3.4 Each party shall provide to the other party and the mediator all of the information and documentation required under 13.2.2 and 13.2.3 above, together with any additional information and documentation that the party believes relevant. In addition, the parties shall exchange and provide to the mediator such additional memoranda, information, and/or documentation, as the mediator may request, and in the form and at such times as the mediator may direct.

13.3.5 The parties shall share the mediator's fee and any filing fees equally. The mediation shall be held in San Luis, Arizona unless another location is mutually agreed upon. Agreements reached in mediation shall be specifically enforceable in any court having jurisdiction over the dispute.

13.4 Arbitration

13.4.1 If the mediation is unsuccessful, the parties shall submit the dispute and/or claim to be resolved through binding arbitration conducted according to the then-current Construction Industry Arbitration Rules of the American Arbitration Association ("AAA") but not administrated or conducted by the AAA. The arbitration shall be held in Yuma County, Arizona, utilizing a single arbitrator selected by the parties unless the parties agree, in writing, to an alternative arbitration procedure.

13.4.2 If: (a) the parties cannot agree on a single arbitrator within two (2) weeks of the demand for arbitration; or (b) the parties at any time prior to the arbitrator being appointed or before the arbitrator has accepted the appointment, cannot agree upon any significant aspect of the arbitration, not already addressed herein, either party may submit the Claim directly to the AAA to select the arbitrator, and thereafter the arbitration shall be administered by the AAA.

13.4.3 The arbitrator shall be an attorney with at least fifteen (15) years of experience in construction-related practice and whose practice, for at least the last five (5) years, consists of at least 50% construction law.

13.4.4 At the request of either party, the arbitration may include as parties, through joinder, consolidation, or otherwise, additional persons or entities involved in the Project, involving claims and/or disputes with common issues and/or facts. The arbitrator shall promptly rule upon any request for joinder or consolidation.

13.4.5 In relation to claims in which the amount in controversy is less than $250,000, no discovery other than the exchange of documents, designation of witnesses, and detailed disclosure of claims and defenses (including specifically a detailed basis for calculating all claims) and no more than three (3) depositions and one (1) expert per issue per side, shall be allowed, subject to disclosure of such other information as approved by the arbitrator. Otherwise, discovery shall be allowed and/or limited as decided by the arbitrator.

13.4.6 The prevailing party in any arbitration or court proceeding under this Contract shall be entitled to an award of its attorneys' fees, costs, and expenses (including expert witness fees) incurred.

13.4.7 A demand for arbitration shall be made within the time limits specified in the Contract Documents as applicable, and in other cases within a reasonable time after the Claim has arisen, and in no event shall it be made after the date when the applicable statute of limitations would bar institution of legal or equitable proceedings based on such Claim.

13.4.8 The Parties agree to participate as a party, by joinder and/or consolidation, in any arbitration, litigation, or other dispute resolution involving as an issue, claim, or defense, any action, inaction, or service provided under this Contract or in relation to the Project or the Work, or any defect or deficiency in the Work.

13.4.9 The party filing a notice of demand for arbitration, or a counterclaim, must assert in the demand or counterclaim all Claims then known to that party on which arbitration is permitted to be demanded.

13.4.10 Any award by the arbitrator shall not include any consequential or punitive damages.

13.4.11 The award entered by the arbitrator shall be a reasoned award.

13.4.12 The award entered by the arbitrator shall be final, and judgment may be entered upon the award in the Arizona Superior Court.

ARTICLE 14 - MISCELLANEOUS PROVISIONS

14.1 **Assignment** Neither the Contractor nor the City shall, without the written consent of the other, assign, transfer, or sublet any portion of this Contract or part of the Work or the obligations required by the Contract Documents. Any such assignment will be void, will transfer no rights to the purported assignee, and would be a material breach of the Contract.

14.2 **Governing Law and Venue.** In the performance of the Contract, Contractor shall abide by and conform to any and all laws of the United States, State of Arizona, Yuma County, and the City, including but not limited to federal and state executive orders providing for equal opportunities, the Federal Occupational Safety and Health Act and any other federal, state, county, or local laws applicable to the Contract. This Contract shall be governed by and construed in accordance with the substantive and procedural laws of the State of Arizona, including choice of law and conflict of laws and principles. Exclusive jurisdiction and venue for any action brought to enforce or construe any provision of this Contract shall be proper in the Superior Court of Yuma County, Arizona. Both Parties consent to jurisdiction and venue in such court for such purposes. The Party prevailing in any such action or other proceeding to resolve a dispute shall be paid all reasonable costs, reasonable expert services fees, and reasonable attorney's fees by the other Party. In the event any judgment is secured by said prevailing Party, all such costs, expert fees, and attorney's fees shall be included in the judgment, such fees to be set by the court and not by jury.

14.3 **San Luis Business License** The Contractor shall obtain a San Luis Business License before commencing Work.

14.4 **Survival** All warranties, representations, and indemnifications by Contractor shall survive the completion or termination of this Contract.

14.5 **No Waiver** The failure of either Party to enforce any of the provisions of the Contract Documents or to require the performance of the other Party of any of the provisions under this Contract shall not be construed to be a waiver of such provisions, nor shall it affect the validity of the Contract Documents or any part them, or the right of either Party to thereafter enforce each and every provision. Unless otherwise specifically agreed to in writing by both Parties, any consent to delay in the Contractor's performance of its

obligation is applicable only to the particular transaction to which it relates and is not applicable to any other obligation or transaction.

14.6 Project Communications

14.6.1 All communications concerning the performance of the Work or the Project shall be provided to the designated Project Manager and Contractor's Representative set forth in Article 1 of the Contract.

14.6.2 Project communications may be exchanged by e-mail upon the written agreement of the Project Manager and Contractor Representative. However, e-mail communications are not binding upon the City. E-mail communications cannot change the terms of the Contract or the scope of work or effectuate any change that requires a written change order. The use of e-mails is for information only, and e-mails will have no legal or binding effect.

14.7 **Independent Contractor** The parties intend that this Contract will create an independent contractor relationship and not an employer-employee relationship. The City is interested only in the results to be achieved, and the conduct and control of the performance of the services contemplated under this Contract will be solely with the Contractor. Contractor's employees, agents, and Subcontractors shall not be considered to be employees or agents of the City for any purpose. They shall not be entitled to any of the benefits the City provides for its employees. The Contractor shall furnish at its own expense all materials and equipment necessary to carry out the terms of this Contract.

14.8 **No Partnership** Nothing in this Contract constitutes a partnership, joint venture or similar arrangement between the Parties. Neither Party is the principal or agent of the other.

14.9 **No Third-Party Beneficiaries** There are no third-party beneficiaries to this Contract and no person or entity, not a Party, shall have any right or cause of action under this Contract.

14.10 ***Force Majeure*** If the Contractor or the City or both are prevented or materially restricted from performing any of their obligations under this Contract by an event of *force majeure*, then the obligations of each Party shall be suspended or reduced to the extent made necessary by the event. As used in this section, "*force majeure*" means any act or cause not reasonably within the control of the Party whose ability to perform is impaired and which that Party could not have prevented by the exercise of reasonable diligence. *Force majeure* events include but are not limited to natural disasters, fire, flood, explosions, strikes (or labor disputes) over which the affected Party has no control, sabotage, riots, civil commotion, acts of civil or military authority, wars, public health emergencies, or material changes in applicable business laws (including but not limited to through statutes, regulations, executive orders, or. emergency declarations and proclamations).

14.11 **Notices** The notices under this Contract shall be validly given and fully received when in compliance with all of the following:

- In writing,
- Delivered or refused delivery,
- By personal delivery, or by major commercial delivery courier service which requires a signature of the recipient, or by registered or certified United States Postal Service mail, return receipt requested with the signature of the recipient, postage prepaid to the addresses in the first paragraph of this Contract.

14.11.1 Either Party may designate in writing and deliver notice of a different address in the same way as above. Any such change of address notice shall be delivered at least ten (10) Days before the date on which the change is to become effective.

14.11.2 Notices for delivery to the City shall be to the attention of the Public Works Director, copies to the City Manager, City Attorney, and City Clerk.

14.12 **Severability** If any terms, parts, or provisions of this Contract are for any reason invalid or unenforceable, the remaining terms, parts, or provisions are nevertheless valid and enforceable.

14.13 **Entire Agreement** This Contract (including the incorporated documents) contains the entire agreement between the Parties, and no oral or written statement, promise, or inducement made by either Party or its agents not contained or specifically referred to in this Contract is valid or binding. All modifications to this Contract must be in writing, signed, and endorsed by the Parties.

14.14 **Headings** The headings of this Contract are solely for the convenience of the Parties and shall not be used to explain, modify, simplify, or aid in the interpretation of the provisions of this Contract.

14.15 **Further Acts** Each of the Parties shall execute and deliver all such documents and perform all such acts as reasonably necessary, from time to time, to carry out the matters contemplated by this Contract.

NOTICE OF AWARD

Date of Issuance:	June 24, 2026		
Owner:	City of San Luis	Owner's Project No.:	2025-050
Engineer:	PACE	Engineer's Project No.:	B777
Project:	West WWTP 3.0 MGD MBR Upgrades		
Contract Name:	West WWTP 3.0 MGD MBR Upgrades		
Bidder:	Filanc		
Bidder's Address:	740 North Andreasen Drive, Escondido, California 92029		

You are notified that Owner has accepted your Bid dated **April 9, 2026** for the above Contract, and that you are the Successful Bidder and are awarded a Contract for: **West WWTP 3.0 MGD MBR Upgrades**

The Contract Price of the awarded Contract is **$41,163,578.00** Contract Price is subject to adjustment based on the provisions of the Contract, including but not limited to those governing changes, Unit Price Work, and Work performed on a cost-plus-fee basis, as applicable. This awarded Contract will be subject to the Change Order No. 1, deducting the Contract price by **$4,292,201.00** with the outlined reduction in scope, bringing the final Contract price to **$36,871,377.00**.

1 electronic copy of the unexecuted counterparts of the Agreement accompany this Notice of Award, and one copy of the Contract Documents accompanies will be transmitted or made available to Bidder electronically.

☒ Drawings will be delivered separately from the other Contract Documents.

You must comply with the following conditions precedent within 15 days of the date of receipt of this Notice of Award:

1. Deliver to Owner **1 electronic copy of the** counterparts of the Agreement, signed by Bidder (as Contractor).
2. Deliver with the signed Agreement(s) the Contract security and insurance documentation, as specified in the Instructions to Bidders and in the Contract.
3. Other conditions precedent (if any): **Include submittal of your pay application schedule of values and schedule.**

Failure to comply with these conditions within the time specified will entitle Owner to consider you in default, annul this Notice of Award, and declare your Bid security forfeited.

Within 10 days after you comply with the above conditions, Owner will return to you one fully signed counterpart of the Agreement, together with any additional copies of the Contract Documents as indicated in Paragraph 2.02 of the General Conditions.

Owner: **City of San Luis**

CHANGE ORDER REQUEST

TO:	City of San Luis 1090 East Union Street San Luis, Arizona 85349	**FROM:**	Filanc 740 North Andreasen Drive Escondido California, 92029
PCO NUMBER/REVISION:	001 / 0	**PROJECT:**	WEST WWTP 3.0 MGD MBR UPGRADES
REQUEST RECEIVED FROM:	Eulogio Vera – City of San Luis	**CREATED BY:**	Klete Rogers - Filanc
STATUS:	In Review	**REFERANCE:**	
		TOTAL AMOUNT:	**($4,292,201)**

Below is our proposal to complete the following changes to our contract work:

CHANGE ORDER TITLE: Potential Scope Adjustment Options

CHANGE REASON: Owner / Engineer Request

CHANGE ORDER DESCRIPTION: *(The Contract Is Changed As Follows)*

This Change Order Request contains proposed scope and sequencing adjustments for the WEST WWTP 3.0 MGD MBR Upgrades project, developed in response to Owner and Engineer direction. The revisions include targeted reductions to electrical, civil/demolition, structural, process/equipment, and project controls scope, along with resequencing intended to maintain plant operations and improve overall project efficiency. The following items are provided below for the City's review and consideration.

Electrical Scope Revisions ($1,007,711)

The electrical scope shall be revised as follows:
- Remove rebar for conduit encasement per Details A-W, Plan Sheets E11.5, E11.20 through E11.24. No rebar shall be provided in any duct bank encasement as a result.
- Remove electrical work associated with the MBR overhead crane, including but not limited to conduit, wire, breakers, disconnects, and control instrumentation.
- Electrical scope shall be re-sequenced in conjunction with the changes made in the Process / Equipment and Sequencing Revisions.

See Attachment A for clarification and indication of electrical changes for the overhead crane.

Civil / Demolition Scope Revisions ($150,000)

The civil and demolition scopes shall be revised as follows:
- Remove from scope: Install 3" DG over compacted native per specifications on the road leading to the sludge beds (see Sheet C3.0, Note 8)
- Remove from scope: Contractor to demo all structures above concrete pads for abandoned DAF unit (See Attached D1.1)
- Remove from scope: Demo existing sludge pumps. Remove all above grade equipment, piping, and appurtenances of the Existing Sludge Pump. (See Attached D1.1)
- Remove from scope: Demo old odor control system (West unit). Remove all above grade structures, equipment, piping, and appurtenances. (See Attached D1.1)
- City shall provide total sufficient fill import to within 300 feet of the site entrance. City will coordinate with contractor on scheduling of fill.

See Attachment A for clarification and indication of civil and demo scope changes. Any specification requirements pertinent to the scope changes above shall be amended shall also be amended accordingly.

Structural Scope Revisions ($831,326)

The structural scope shall be revised as follows:
- Remove from scope: MBR FRP covers over the MBR basins shown on Sheet M2.0, Note 2.
- Remove from scope: MBR overhead crane structure shown on Sheet M2.3 (Note 1) and S2.2. Footing shall be provided as detailed in the structural plans for future overhead crane.
- Remove from scope: MBR overhead crane shown on Sheet M2.0 M2.3, M2.4
- Provide additional handrail in lieu of FRP covers at the MBR basins. Handrail to match other new handrailing provided in other areas as specified in project specifications and Sheet W11.0 Detail D.
- Remove from scope: Structural submittal requirements associated with the deleted structural scope items above.

See Attachment A for clarification and indication of structural scope changes. Any specification requirements pertinent to the scope changes above shall be amended shall also be amended accordingly.

PCO # 001
Potential Scope Adjustment Options

Process / Equipment and Sequencing Revisions ($776,000)

The original sequence required the indensification process to be completed and operational prior to removing SBR 1, 2, and 3 from service, which would require indensifying for the entire duration of the project. Filanc has resequenced the work to reduce the intensification duration from 24 months to 12 months. This approach allows the project to begin with work at the headworks and Basins 1 and 2 while Basins 3 and 4 remain in service. Filanc will then complete the intensification installation and commissioning sequence in a manner that maintains operations and supports an overall reduction in project duration.

The detailed steps of the sequencing are as follows:

1) Headworks will be relocated and brought online
2) Basins 1 and 2 will be isolated and Basins 3 and 4 will continue to operate
3) Filanc will complete the work in Basins 1 and 2, the new headworks, and as much of the MLSS channel as possible.
4) Concurrently we will make all necessary modifications, install, and startup the indesification unit To be operational prior to begining work in basin 3
5) Once indensification is complete Filanc will complete work in basin 3 and begin the commissioning process of the headworks, basins 1, 2, and 3, MLSS Channel, and all other support systems making the MBR operationally complete.
6) Upon completion of MBR commissioning Filanc will remove indensification system and complete the modifications of Basin 4 to an Equalization Basin. Completing the project.

The resequencing work reduces the indensifer duration to 12 months in duration. The monthly rental of the indensification equipment is $48,000 per month for a total of $576,000. The remaining balance of $200,000 is a reduction in the overall schedule because of the resequencing. Any changes that require the equipment rental duration to be changed will be addressed through the change order process in accordance with the contract documents.

Project Controls Revisions Calculated Below

The project contingency has been reduced to reflect the current maturity of the project and the reduced level of remaining risk. The design is now substantially complete, and the major construction considerations, sequencing concerns, and constructability issues have been reviewed and addressed. In addition, a significant portion of the major equipment has already been purchased or committed, which further reduces exposure to future pricing volatility, procurement uncertainty, and scope development risk. Based on these factors, we suggest the remaining contingency be adjusted to 2.5%, a level more appropriate for the current stage of the project. The original contract scope total was $39,203,408 with a 5% contingency of $1,960,170 for a total bid price of $41,163,578. The new contract scope total is $35,972,075 making the 2.5% contingency $899,302 for a total contingency reduction of ($1,060,868).

Summary and Total

Subtotal of Scope Changes	($2,765,037)
Contractor Markup 10%	($276,504)
Sales Tax 6.24%	($189,792)
TOTAL SCOPE CHANGES	($3,231,333)
Contingency Reduction to 2.5% of Revised Contact Value	($1,060,868)
TOTAL DEDUCTION	**($4,292,201)**
CURRENT CONTRACT VALUE	$41,163,578
REVISED CONTRACT VALUE	**$36,871,377**

Clarifications and Conditions

This Change Order is based on the following clarifications:

- The deductive pricing is based on acceptance of the above scope revisions as a complete package. Partial acceptance may require repricing.
- Deleted work is excluded from the Contract Documents after execution of this Change Order. Any future requirement to restore, redesign, reinstall, or otherwise perform deleted work shall be treated as a separate change.
- City-provided fill import shall be suitable, available, and delivered to within 300 feet of the site entrance in a manner that does not delay Contractor's work.
- Final implementation of the scope revisions is subject to approval by the City and the design professional, including any required drawing, specification, permit, or regulatory revisions.
- Except as expressly modified by this Change Order, all other terms and conditions of the Contract remain unchanged.
- Process Equipment resequencing is subject to Engineer and owner approval as outlined above. Any additional rental of indensification system and associated costs, due to no fault of the contractor are subject to change order

FINAL PLANS ISSUED FOR BID

W:\B777 Engineering\B777 - 3MGD Exp\3MGD FINAL DS\Arkitekts\B777 - DEMOLITION.dwg - Tab: D1.2 - by wwright on 02/02/26 at 4:35:19 PM

SUGGESTED SEQUENCE OF CONSTRUCTION FOR MAIN WWTP CONVERSION

STAGE 1 :
- a. COMPLETE INTENSIFICATION PROCESS IN SBR 4 (SEE D1.0)
- b. OPERATE EFFLUENT DISCHARGE AND EFFLUENT PUMP STATION AS IS
- c. ALL WASTE ACTIVATED SLUDGE WILL BE WASTED TO SLUDGE DRYING BEDS

STAGE 2 :
- a. REDUCE FLOW TO 1 MGD BY DIVERTING EXCESS FLOW TO EAST WWTP
- b. PROVIDE TEMPORARY PIPING FROM PLANT DRAIN PUMP STATION TO SCREENS 5-8
- c. INSTALL TEMPORARY CATCH BASIN AND SUMP PUMP AT SCREENS 5-8 WITH DRAIN LINE FROM EXISTING SCREEN

STAGE 3 :
- a. DIVERT ALL FLOW TO SCREENS 5-8 AND ONLY OPERATE SBR 4 (WITH INTENSIFICATION)

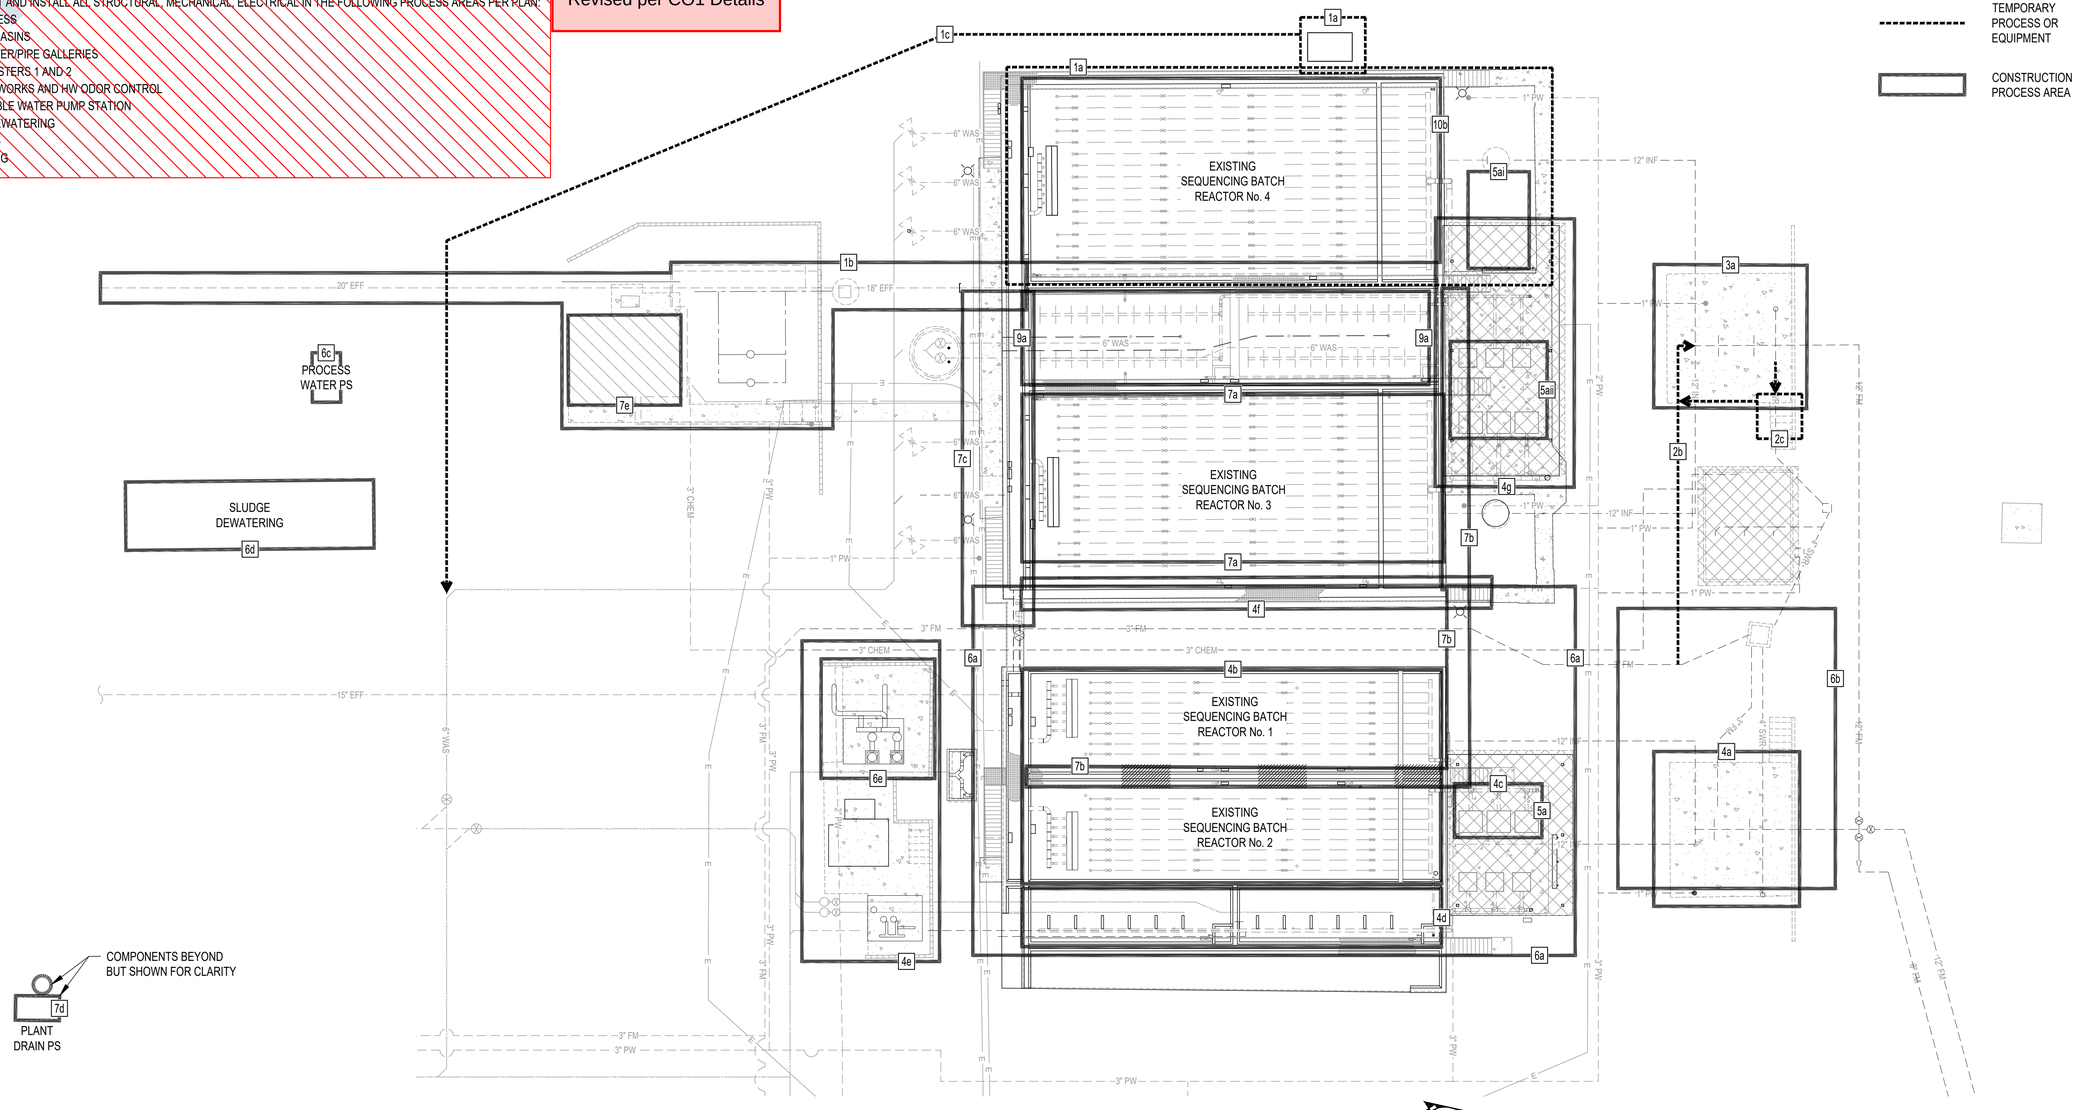
STAGE 4 : DEMO AND/OR REMOVE THE FOLLOWING:
- a. SCREENS 1-4
- b. SBRs 1 AND 2
- c. SBRs 1 AND 2 AERATION BLOWERS
- d. DIGESTERS 1 AND 2
- e. SLUDGE PUMPS, ODOR CONTROL, AND OLD EFFLUENT PUMPS
- f. EASTERN WALKWAY AND HANDRAIL ON SBR 3
- g. DEMO SBRs 3 AND 4 AERATION BLOWER CANOPY
- h. CLEAN OUT SBR3 AND DIGESTERS 3 &4 BUT KEEP AS EMERGENCY STORAGE WITH TEMPORARY TRANSFER PUMPS UNTIL STAGE 7

STAGE 5 :
- a. MOVE SBRs 1 AND 2 AERATION BLOWER AND INSTALLED AT FEB BASIN LOCATION PER PLAN
  - i. CONNECT NEW FEB BLOWER TO SBR 4 AIR MANIFOLD
  - ii. DEMO SBR AND DIGESTER PROCESS BLOWERS

STAGE 6 : CONSTRUCT AND INSTALL ALL STRUCTURAL, MECHANICAL, ELECTRICAL IN THE FOLLOWING PROCESS AREAS PER PLAN:
- a. MBR PROCESS
  - i. MBR BASINS
  - ii. BLOWER/PIPE GALLERIES
  - iii. DIGESTERS 1 AND 2
- b. NEW HEADWORKS AND HW ODOR CONTROL
- c. NON-POTABLE WATER PUMP STATION
- d. SLUDGE DEWATERING
- e. FEB PUMPS
- f. YARD PIPING

STAGE 7 :
- a. IMPROVEMENTS TO SBR 3 FOR CONVERSTION TO PROCESS TRAINS 1 AND 2
- b. CONSTRUCT MLSS CHANNEL
- c. CONSTRUCT AND INSTALL FEED FORWARD CHANNEL AND EQUIPMENT
- d. PLANT DRAIN PUMP STATION (DIVERT TEMPORARY WAS FROM INTENSIFICATION TO SLUDGE DEWATERING UNIT)
- e. IMPROVE CHEMICAL BUILDING AND CIP PIPING
- f. KEEP DIGESTERS 3 & 4 AS EMERGENCY STORAGE UNTIL STAGE 9

STAGE 8 : START UP MBR PROCESS
- a. SEEDING PROCESS TRAINS 1 AND 2
  - i. DIVERT PARTIAL INFLUENT FLOW TO NEW HEADWORKS AND PROCESS TRAINS 1 AND 2
  - ii. USE INTENSIFICATION WAS TO SEED PROCESS
    1. SEED MUST BE TEMPORARY PIPE TO NEW HEADWORKS SCREEN TO ENSURE SEED IS CLEAN FROM TRASH
  - iii. START MBR PROCESS - AS PROCESS MATURES, DIVERT MORE FLOW TO MBR PROCESS



STAGE 9
- a. IMPROVEMENTS TO DIGESTERS 3 AND 4
- b. REUSE DISTRIBUTION PIPE

STAGE 10 :
- a. REMOVE INTENSIFICATION PROCESS EQUIPMENT ONCE MBR PROCESS IS FULLY OPERATIONAL
- b. CONVERT SBR 4 TO FEB BASIN
- c. COMPLETE ALL REMAIN SCOPE INCLUDING ALL SITE WORK, DEMO, AND ALL UPGRADES REQUIRED BY THE CONTRACT DOCUMENTS

SUGGESTED ELECTRICAL SEQUENCE OF CONSTRUCTION

1. INSTALL TEMPORARY INTENSIFICATION PACKAGED PLANT SKID, ROUTE TEMPORARY 500W MULTICONDUCTOR CABLE PROTECTED IN HEAVY DUTY CABLE PROTECTOR (POWER RAMP) FROM MCC-N1 TO POWER SKID-MTD. MOTOR CONTROL PANEL. ALTERNATIVELY, USE A SPARE CONDUIT TO TEMPORARILY ROUTE THE FEEDER CABLE AND REMOVE THE CABLE ONCE THE INTENSIFICATION IS COMPLETED.
2. INSTALL FIELD PULLBOXES, DUCT BANKS, CONDUITS, CONDUCTORS, AND ALL FIELD PANELS/EQUIPMENT.
3. INSTALL NEW MCC-1, ACTIVE HARMONIC FILTER, XFMR-EA, PANEL-EA, MBR PLC PANEL, AND MAIN PLC PANEL INSIDE THE EXISTING ELECTRICAL ROOM.
4. REPLACE PANEL H1.
5. INSTALL AND COMMISSION NEW SERVICE ENTRANCE SECTION.
6. DECOMMISSION AND REMOVE EXISTING STANDBY GENERATOR 1.
7. RELOCATE EXISTING STANDBY GENERATOR, INSTALL TEMPORARY POWER CABLES FROM THE STANDBY GENERATOR 2 TO THE EXISTING ATSs/MTSs.
8. INSTALL THE AUTOMATIC TRANSFER SWITCH AND MAIN SWITCHGEAR.
9. INSTALL AND COMMISSION (2) NEW 500 KW STANDBY GENERATORS SOUTHWEST OF ELECTRICAL ROOM.
10. DECOMMISSION AND REMOVE EXISTING STANDBY GENERATOR 2.
11. RE-ROUTE FEEDER POWER FOR PANEL H1 FROM MCC-E2 TO MCC-1.
12. REPLACE EXISTING AC UNITS AT ELECTRICAL ROOM, POWER NEW AC UNITS FROM PANEL-EA.
13. DECOMMISSION AND REMOVE EXISTING MCC-E2 ONCE EXISTING LOADS HAVE BEEN DECOMMISSIONED AND RETURN TO CITY. INSTALL NEW MCC-2.
14. COMMISSION ALL NEW LOADS ON MCC-1 AND MCC-2.
15. DECOMMISSION AND REMOVE MCC-E1 AND MCC-N1.
16. REMOVE EXISTING SERVICE ENTRANCE SECTION, ATS #1/2, MTS #1/2, AND CONTROL PANELS INSIDE ELECTRICAL ROOM AND RETURN TO CITY.

W:\B777\Engineering\B777 - 3MGD Exp\3MGD FINAL DSN\sheets\B777 - DEMOLITION.dwg - Tab: D1.4 - by wwright on 02/02/26 at 4:35:19 PM

CONSTRUCTION NOTES:

1. OVERHEAD CRANE FOOTING, SEE STRUCTURAL PLANS
2. INSTALL MBR FRP COVER (3'-0" WIDTH MAX) SEE SPECIFICATIONS
3. INSTALL 10" Ø SCH 10 STEEL MBR SCOUR AIR PIPE
4. INSTALL 3" Ø 304 SS MBR SCOUR AIR PIPE
5. INSTALL 3" LUG STYLE BUTTERFLY VALVE, SEE DETAIL: C / M11.3 (PROVIDED BY MBR VENDOR)
6. INSTALL 24" Ø DIP BLIND FLANGE
7. FUTURE MBR SCOUR AIR PIPE (SHOWN FOR REFERENCE)
8. INSTALL 3" Ø SCH 10 STEEL AIR PIPE AND FITTINGS FROM REGENERATIVE BLOWERS BELOW
9. INSTALL 3" Ø SCH 10 SS AIR PIPE
10. INSTALL 3" Ø 304 SS DROP AIR PIPE (PROCURED THROUGH DIFFUSER VENDOR)
11. INSTALL 2-1/2" THICK ALUMINUM OPEN GRATING (3FT WIDE PANELS) SEE SPECS
12. INSTALL NEW HANDRAIL WITH KICK PLATE PER DETAIL D / M11.0 (TYP.)
13. EXISTING 8" Ø STEEL DIGESTER AIR PIPE
14. INSTALL 6" Ø 304 SS DROP AIR PIPE WITH ISOLATION BFV
15. REPLACE EXISTING PVC SUPERNATANT PIPE WITH 3" Ø DIP
16. INSTALL 18" Ø SCH 10 STEEL MBR SCOUR AIR PIPE AND FITTINGS
17. INSTALL 10" BUTTERFLY VALVE
18. INSTALL 8" SCH. 10 STEEL WELDED TEE WITH 6" Ø BRANCH FLANGE ON EXISTING BLOWER PIPING
19. EXISTING TELESCOPING VALVE AND MOTORIZED VALVE (P.I.P.)
20. INSTALL 6" Ø DIP WAS PIPING FROM MLSS CHANNEL TO EXISTING DIGESTERS
21. INSTALL 24" Ø SCH. 10 COATED STEEL AIR PIPE AND FITTINGS
22. FUTURE 18" AIR PIPING LAYOUT - FOR FUTURE EXPANSION
23. INSTALL 3" LUGGED BUTTERFLY VALVE
24. INSTALL ELECTRICALLY ACTUATED 24" BUTTERFLY VALVE (LUGGED)
25. INSTALL 6" FLANGED MOTORIZED PLUG VALVE (PROVIDED BY MBR VENDOR)
26. CORED HOLE FOR PIPE PENETRATION, SIZE PER PLAN, SEE DETAIL: A / M11.1
27. INSTALL 6" DUCK BILL CHECK VALVE
28. CONTRACTOR TO INSTALL EVAP COOLER WITH CURB. VERIFY DISCHARGE OPENING TO BLOWER ROOM BELOW. CONNECT POTABLE WATER LINE WITH ISOLATION VALVE.
29. INSTALL PORTION OF REMOVABLE POST GUARD RAIL FOR MBR PASS THROUGH
30. INSTALL 6" PLUG VALVE (FLANGED)
31. INSTALL 6" MAG FLOW METER (PROVIDED BY MBR VENDOR)
32. INSTALL SS WEIR PLATE PER DETAIL A / M11.3 (TYP. OF 12)

Overhead Crane Footing to be provided for future overhead crane installation, Crane and structure to be removed from scope. (Typ)

Remove MBR FRP Covers from scope

Handrail to be provided around MBR basins where FRP Covers have been removed from scope. (Typical) Handrail to match other new handrail provided

PROPOSED MBR TRAIN 1
PROPOSED MBR TRAIN 2
PROPOSED MBR TRAIN 3
(FUTURE) MBR TRAIN 4
(FUTURE) MBR TRAIN 5
(FUTURE) MBR TRAIN 6
DIGESTER 1
DIGESTER 2
10" Ø DIP FROM F.E.B. SEE M8.0
RELOCATE EXISTING STAIRS (SHIFT TO EDGE OF BASIN)
10" Ø MBR AIR SCOUR HEADER SEE DETAIL F / M11.3 (TYP.)
43 MLSS CHANNEL FINE BUBBLE DIFFUSER ASSEMBLY (TYP)
HANDRAIL WITH REMOVABLE POSTS. SEE DETAIL A, SHEET M11.0
6'-0" (CENTER W/ MLSS CHANNEL)
NEW ROOF EXHAUST FAN (TYP. OF 4)
SEE M1.1 FOR STAIRWAY AND RETAINING WALL
INSTALL EXHAUST FAN 106
EXISTING OVERHEAD SHADE STRUCTURE
O2 SENSOR FOR EXHAUST FAN - TYPICAL
DIGESTER BLOWER CANOPY POST MODIFICATION PER STRUCTURAL DETAIL: 217 / S12.2
18 EXISTING DIGESTER SUPERNATANT PUMP
24 EXISTING DIGESTER BLOWERS AND PIPING - PROTECT IN PLACE (TYP)
26 DIGESTER FINE BUBBLE DIFFUSER ASSEMBLY

MBR SECTION - 1

SCALE: 1/4" = 1'-0"

MBR SECTION - 2

SCALE: 1/4" = 1'-0"

CONSTRUCTION NOTES:

1. CONSTRUCT OVERHEAD CRANE BEAM AND SUPPORT COLUMN PER STRUCTURAL PLANS.
2. INSTALL 24" Ø SCH. 10 STEEL AIR PIPE AND FITTINGS
3. INSTALL 18" Ø SCH. 10 STEEL AIR PIPE AND FITTINGS
4. INSTALL 10" Ø SCH 10 STEEL PRE-AIR BLOWER DISCHARGE PIPE
5. INSTALL 10" BUTTERFLY VALVE LUGGED CONNECTION
6. INSTALL 10" Ø SCH. 10 STEEL AIR PIPE AND FITTINGS
7. INSTALL 36" x 20" DIP TEE
8. INSTALL 20" Ø D.I. PIPE AND FITTINGS FOR MBR FEED
9. INSTALL PRESSURE TRANSMITTER PER DETAIL: B/M11.1 (PROVIDED BY MBR VENDOR)
10. INSTALL 24" Ø DIP MBR PERMEATE/EFFLUENT PIPE AND FITTINGS W/ MECH. RESTRAINTS (TYP.)
11. INSTALL 12" BUTTERFLY VALVE WITH ELECTRIC ACTUATOR (PROVIDED BY MBR VENDOR)
12. INSTALL 12" MAG FLOW METER (PROVIDED BY MBR VENDOR)
13. INSTALL 12" Ø DIP MBR PERMEATE PIPE AND FITTINGS
14. INSTALL 6" Ø DIP CIP DRAIN PIPE AND FITTINGS (TYP)
15. INSTALL 16" Ø 304 SS PERMEATE PIPE MANIFOLD AND ALL REQUIRED FITTINGS AND APPURTENANCES (TYP.) SEE DETAIL: B/M11.3
16. INSTALL 12" LUG STYLE BUTTERFLY VALVE
17. INSTALL 3" TRANSITION COUPLING PVC TO ACRYLIC PIPE
18. INSTALL 3" Ø MBR PERMEATE LINE MINIMUM OF 2.5 FT. BELOW THE OUTLET TO BE CLEAR ACRYLIC PVC PIPING
19. INSTALL 1" Ø SCH. 80 PVC TEE
20. INSTALL 6" Ø C900 PVC FOR CIP PIPE AND FITTINGS
21. INSTALL 20" WITH SPOOL AND BLIND FLANGE
22. FRP OPEN GRATING ABOVE MLSS CHANNEL, SEE SPECIFICATIONS
23. INSTALL 6" BUTTERFLY VALVE (FLG'D)
24. INSTALL 8" SCH. 10 STEEL WELDED TEE W/ 6" BRANCH FLANGE ON EX. BLOWER PIPING
25. INSTALL 8" Ø 304 SS DROP PIPE AND FITTINGS (PROCURED THROUGH DIFFUSER VENDOR)
26. CONCRETE BEAM FOR MBR GUIDE RAIL SUPPORT
27. INSTALL PROCESS AIR FLOW METER (PROVIDED BY MBR VENDOR)
28. INSTALL 10" MODULATING BUTTERFLY VALVE (PROVIDED BY MBR VENDOR)
29. INSTALL 10" Ø SCH. 10 STEEL MBR AIR SCOUR HEADER AND PIPING, SEE DETAIL: C/M11.3
30. INSTALL 3" Ø 304 SS STEEL AIR DROP PIPE WITH ISOLATION BF VALVE
31. INSTALL PIPE SUPPORT (MIN. SPACING AS REQUIRED) PER DETAIL: S13/M10.4
32. INSTALL KNEE BRACE PIPE SUPPORT (MIN. SPACING AS REQUIRED) PER DETAIL: S5/M10.4
33. INSTALL OXYGEN SENSOR ATI TOXIC GAS SENSOR, MODEL D-12-F-G OR APPROVED EQUAL
34. INSTALL 3" DIP PIPE AND FITTINGS (TYP.) FOR DIGESTER SUPERNATANT LINE
35. INSTALL 3" SWING CHECK VALVE (FLG'D)
36. INSTALL 3" PLUG VALVE (FLG'D)
37. INSTALL TRANSITION FLANGE FROM STAINLESS STEEL TO SCH 80 PVC
38. INSTALL 6" DIP WAS PIPING FROM MLSS CHANNEL TO EXISTING DIGESTERS
39. INSTALL WEIR PLATES PER DETAIL: A/M11.3
40. NEW CONCRETE FOOTING TIED INTO EXISTING STRUCTURES
41. INSTALL TURBIDITY METER AND CONTROLLER TYPICAL PER DETAIL: A/M11.5 36"H ABOVE GRATING (PROVIDED BY MBR VENDOR)
42. INSTALL METAL LADDER TO ACCESS LEVEL BELOW
43. INSTALL 2" GROUT LAYER UNDER MBR EQUIPMENT
44. INSTALL 2-1/2" THICK ALUMINUM OPEN GRATING (3FT WIDTH MAX PANELS)
45. INSTALL 6" 304 SS 90° ELBOW (FLANGED AT VALVE CONNECTION)
46. INSTALL 6" 304 SS 45° ELBOW (FLANGED AT DROP PIPE CONNECTION)
47. INSTALL 20" DIP SPOOL (FLG x PE)
48. INSTALL EVAP COOLER PER SPECS, SEE ALSO ELECTRICAL PLANS
49. INSTALL 1" PERMEATE VENT WITH 1" SS BALL VALVE W/ ELECTRIC ACTUATOR (PROVIDED BY MBR VENDOR)
50. INSTALL 8" Ø SCH. 10 STEEL MBR BLOWER DISCHARGE PIPE
51. INSTALL 8" BUTTERFLY VALVE LUGGED CONNECTION
52. INSTALL OUTSIDE AIR INTAKE FILTER (PROVIDED BY BLOWER VENDOR) (TYP OF 5)
53. INSTALL PIPE PENETRATION SEAL (WET), SIZE PER PLAN, PER DETAIL: A/M11.1
54. INSTALL TRANSITION BUSHING FROM 3" TO 1"
55. INSTALL 10" BUTTERFLY VALVE. (LUGGED)
56. INSTALL 1/2" PIPE TAP PER DETAIL: C/M11.1 CONNECT 1/2" PVC SCH 40 PVC DRAIN PIPE FROM TURBIDITY METER PER DETAIL: A/M11.5
57. INSTALL 12" BUTTERFLY VALVE. (FLG'D)
58. INSTALL 20" PLUG VALVE WITH WORM GEAR AND HANDWHEEL ACTUATOR

MBR SECTION - 3
SCALE: 1/4" = 1'-0"

CONSTRUCTION NOTES:

1. INSTALL 10" Ø SCH 10 STEEL AIR PIPE AND FITTING
2. INSTALL 12" Ø DIP MBR PERMEATE PIPE AND FITTINGS
3. INSTALL 6" Ø DIP CIP DRAIN PIPE AND FITTINGS
4. INSTALL 3" LUG STYLE BUTTERFLY VALVE
5. INSTALL 3" Ø MBR PERMEATE LINE MINIMUM OF 2.5 FT. BELOW THE OUTLET TO BE CLEAR ACRYLIC PVC PIPING
6. INSTALL 1" PERMEATE VENT WITH 1" SS BALL VALVE W/ ELECTRIC ACTUATOR (PROVIDED BY MBR VENDOR)
7. INSTALL 3" Ø SCH. 80 PVC CIP PIPE AND FITTINGS
8. INSTALL 20" BLIND FLANGE FOR FUTURE MBR EXPANSION
9. INSTALL 3" Ø 304 SS AIR DROP PIPE (PROVIDED BY AERATION VENDOR)
10. CONCRETE BEAM FOR MBR GUIDE RAIL SUPPORT, SEE STRUCTURAL PLANS
11. INSTALL PIPE SUPPORT (MIN. SPACING AS REQUIRED) PER DETAIL: S4 / M11.4
12. INSTALL KNEE BRACE PIPE SUPPORT (MIN. SPACING AS REQUIRED) PER DETAIL: S5 / M11.4
13. INSTALL 6" x 4" REDUCING TEE TIE-IN TO EXISTING CONCRETE ENCASED FLOOR DRAIN LINE
14. SAW CUT AND EXTEND EXISTING 6" FLOOR DRAIN LINE TO CENTER OF PIPE GALLERY 4
15. INSTALL 6" x 4" REDUCING ELBOW MJ CONNECTION
16. INSTALL 4" FLOOR DRAIN CONCRETE ENCASED
17. CAP AND ABANDON EXISTING FLOOR DRAIN
18. INSTALL 3" SS BUTTERFLY VALVE
19. INSTALL MLSS AERATION MANIFOLD (PROVIDED BY AERATION VENDOR)
20. INSTALL 3" Ø SCH 10 STEEL AIR PIPE FROM REGENERATIVE BLOWERS
21. INSTALL STEPPED FOOTING RETAINING WALL PER STRUCTURAL DETAILS
22. INSTALL HAND RAIL PER DETAIL: B / M11.3
23. INSTALL SHADE STRUCTURE AND ROOF OVERHANG PER STRUCTURAL DETAIL
24. CONTRACTOR TO INSTALL MBR MODULES WITH SUPPORT, GUIDES, AND APPURTENANCES PER MBR VENDOR'S REQUIREMENTS. SEE DETAIL ON M12.0 FOR EQUIPMENT DIMENSIONS
25. INSTALL 2-1/2" THICK ALUMINUM OPEN GRATING (3 FT WIDE MAX.) SEE SPECIFICATIONS
26. POINT OF CONNECTION OF MBR AIR SCOUR LINE
27. 1/2" SAMPLING PORT WITH BALL VALVE AND FITTINGS ON 3" Ø PERMEATE LATERAL PIPE
28. INSTALL 10" Ø MBR AIR SCOUR MANIFOLD PER DETAIL: F / M11.3
29. INSTALL 3" LUG STYLE BUTTERFLY VALVE
30. INSTALL 10" Ø DIP SPOOL
31. INSTALL 10" D.I. TEE
32. INSTALL 10" D.I. 90° ELBOW
33. INSTALL 24" LUGGED BUTTERFLY VALVE W/ ELECTRIC ACTUATOR
34. INSTALL 1" PVC DRAIN LINE TO MBR BASIN
35. INSTALL 14" Ø STEEL EXHAUST DUCTING (18 GAUGE MIN.)
36. INSTALL RECTANGULAR DUCT MOUNTED GRILL
37. INSTALL PIPE SUPPORT (MIN. SPACING AS REQUIRED) PER DETAIL: S6 / M11.4
38. INSTALL EXHAUST FAN WITH TRANSITION BASE FOR PIPE CONNECTION

BLOWER ROOM SECTION - 4

CONSTRUCTION NOTES:

1. DISTRIBUTION PANELBOARD (DP-2), 480V, 1000A BUS, 1000A MAIN, 3Ø-3W, 60 HZ, NEMA 12, 65 KAIC, PAD-MTD.
2. SURGE PROTECTION DEVICE, INTEGRAL WITH DP. CIRCUIT PROTECTION DEVICE TO BE 200 KA/PH MINIMUM.
3. GROUND AND BOND EQUIPMENT TO GROUND SYSTEM PER GROUNDING PLAN AND MANUFACTURER REQUIREMENTS.
4. PROVIDE LOCKABLE E-STOP LOCALLY AT BLOWERS.
5. COMBINATION FVNR MOTOR STARTER, WITH H-O-A SELECTOR SWITCH, NEMA 12, MF'R: EATON, TYPE FREEDOM FULL VOLTAGE CONTROLS (OR EQUAL).
6. VARIABLE FREQUENCY DRIVE WITH FUSED DISCONNECT SWITCH, 480V, 3PH, NEMA 12, WALL-MTD., MF'R: DANFOSS, PN: FC202 AQUA DRIVE (OR APPROVED EQUAL).
7. FUSED DISCONNECT SWITCH, 60A, 35A FUSES, NEMA 4X, EATON OR EQUAL.
8. PROVISION FOR FUTURE CIRCUIT BREAKERS (TYP 2).
9. CIRCUIT BREAKER EQUIPPED WITH ENERGY REDUCING MAIN SWITCH WITH LOCAL STATUS INDICATORS PER NEC 240.87(B)(3).

NOTES:

1. CONTRACTOR SHALL LABEL EQUIPMENT FOR ARC-FLASH HAZARD WARNINGS IN ACCORDANCE WITH NEC 110.16(A).
2. CONTRACTOR SHALL LABEL SERVICE ENTRANCE EQUIPMENT WITH AVAILABLE FAULT CURRENT IN ACCORDANCE WITH NEC 110.16 (B) AND 110.24 (A) (B).
3. GROUND AND BOND ALL ENCLOSURES PER GROUNDING PLANS AND MANUFACTURER/ CODE REQUIREMENTS.
4. NOT ALL EQUIPMENT AND WIRING IS SHOWN ON THIS DIAGRAM. REFERENCE DRAWINGS IN THE ELECTRICAL SET AND ENTIRE PROJECT TO COMPLETELY UNDERSTAND THE ELECTRICAL SCOPE OF WORK.
5. DRAWINGS ARE DIAGRAMMATIC AND DO NOT REFLECT ACTUAL ROUTING. CONTRACTOR SHALL INSTALL PULLPOINTS WHERE REQUIRED FOR PULLING TENSION AND MAINTAINING LESS THEN (4) 90 DEGREE BENDS.
6. CONTRACTOR SHALL PERFORM SAFE WORK IN ACCORDANCE WITH NFPA 70E STANDARDS.
7. WHEN REQUIRED CONTRACTOR SHALL PROVIDE STRUCTURAL DESIGN CALCULATIONS FOR MOUNTING AND ANCHORING OF FABRICATED ASSEMBLIES AND SUPPORT STRUCTURES, SIGNED AND SEALED BY A REGISTERED PROFESSIONAL ENGINEER (CIVIL/STRUCTURAL) CURRENTLY LICENSED IN THE SAME STATE AS THE FINAL INSTALLATION. CALCULATIONS SHALL INCLUDE SEISMIC CONSIDERATIONS FOR THE LOCATION OF INSTALLATION.
8. VFD'S SHALL MEET ALL REQUIREMENTS OF IEEE 519 WITH USE OF EQUIPMENT. SEE SPECIFICATIONS FOR FURTHER INFORMATION.

DRAFT

CONTRACT

for the Construction of

CITY OF SAN LUIS WWTP
WEST WWTP 3.0 MGD MBR UPGRADES

This agreement ("Contract") is made and entered into this 27th day of May 2026, by and between:

Contractor Name and Address. Filanc 740 North Andreasen Drive Escondido, California 92029 An Arizona for-profit corporation ("Contractor") and	City of San Luis 1090 East Union Street (Physical Address) P.O. Box 3750 (Mailing Address) San Luis, Arizona 85349 An Arizona municipal corporation ("City")

The Contractor and City may be referred to individually as the "Party" and collectively as the "Parties."

WHEREAS, the scope of work requires the Contractor to furnish any and all labor, materials, equipment, transportation, utilities, services, and facilities required to perform all work for the City of San Luis – West WWTP 3.0 MGD MBR Upgrades ("Project"), per the Contractor's bid of 2025-050, ("Proposal"). and to completely and totally remove and install the materials therein for the City, in a good and workmanlike and substantial manner and to the satisfaction of the City through its engineers ("ENGINEERS"), or his properly authorized agents and strictly pursuant to and in conformity with the plans and specification prepared by the ENGINEERS, and with such modifications of the same and other documents that the OWNER may make through the ENGINEERS or his properly authorized agents, as provided herein; and

WHEREAS, San Luis City Council, at a properly noticed open meeting, awarded the Bid to the Contractor on 24th day of June 2026; and

WHEREAS, at the same meeting, San Luis City Council directed staff to finalize an agreement with Filanc;

NOW, THEREFORE, the above recitals are incorporated into this Contract. In consideration of the City paying the sum of $41,163,578.00 to the Contractor and the Contractor constructing an influent force main with appurtenances and other work incidental in the manner and at the time provided in this Contract, and in consideration of the other mutual benefits and obligations contained in this Contract the Parties agree as follows:

DRAFT

ARTICLE 2 - CONTRACT DOCUMENTS

The Contract between the City and the Contractor shall consist of the following items, collectively the "Contract Documents:"

1. this Contract;
2. Change Orders (if any);
3. Performance bond and payment bond (required by A.R.S. § 41-2574, also known as contract bond and labor & materials bond), bid bond, and other bonds;
4. Project General Requirements and Technical Specifications;
5. Construction Plans;
6. General Conditions of the Contract;
7. Bid documents {including but not limited to the advertisement for bids, bid schedule, addenda (if any), additive bid items (if any)}, and the Proposal;
8. 2016 City of San Luis Supplemental to the 2015 MAG Uniform Standard Specifications and Details for Public Works Construction and City of Yuma Construction Standard Detail Drawings, MAG Uniform Standard Specifications and Details for Public Works Construction, City of Yuma Construction Standard Detail Drawings – Edition 2019; and
9. Certificates of Insurance.

DRAFT

By this reference, the above Contract Documents are made a part of this Contract to the same extent as if set forth in full here.

In the event of a conflict of language between the items, the documents shall govern in the order listed above. The Contract Documents shall govern in all other matters not otherwise specified by the Contract between the Parties. All previous contracts (if any) between the Contractor and City are not applicable to this Contract or other resultant contracts.

ARTICLE 3 - DESIGN PHASE SERVICES

The Contractor is not required to provide design phase services to the City in relation to this Project.

ARTICLE 4 - CONSTRUCTION SERVICES

4.1 General.

4.1.1 The Contractor agrees, at its own cost and expense, to do all Work necessary and required to fully, timely, and properly complete the construction of the Project in strict accordance with the Contract Documents in a good and workmanlike manner, free and clear of all claims, liens, and charges whatsoever, in the manner and under the conditions specified, within the Project Schedule.

4.1.2 The Contractor shall provide all the labor and materials and perform the Work in accordance with Division 01 - General Requirements of the Specifications and Section 4 of the General Conditions. Below are some but not all of the major components of the construction services and the corresponding subsections of Division 01 - General Requirements of the Specifications and Section 4 of the General Conditions.

4.1.3 At all times relevant to this Contract and performance of the Work, the Contractor shall fully comply with all laws, regulations, or legal requirements applicable to the City, the Project, and the Contract, including, without limitation, those set forth in the General Conditions.

4.1.4 The Contractor shall perform the Work under this Contract using only those firms, team members, and individuals designated by Contractor consistent with the Contractor's accepted Bid, or otherwise, approved by the City pursuant to the General Conditions. No other entities or individuals may be used without the prior written approval of the Project Manager.

4.1.5 The Contractor shall comply with all terms and conditions of the General Conditions and the requirements of the Specifications.

4.1.6 The terms of this Contract shall control in the event of a conflict between it and the General Conditions, General Requirements of the Specifications, or any exhibit to the Contract or appendix to the General Conditions.

4.1.7 For purposes of this provision, "Work Product" shall include all designs, drawings, plans, specifications, ideas, renderings, and other information or matter in whatever form created (e.g., electronic or printed) and in all media now known or in the future created. All Work Product shall be considered Work Made for Hire as defined in the United States Copyright Act 17 U.S.C. § 101 (Copyright Act). If, for any reason, any such Work is found not to be a Work Made for Hire, the Contractor, by entering into this Contract, transfers and assigns ownership of the copyright in such Work to the City. Notwithstanding anything to the contrary in this Contract, all Work Product prepared or otherwise created in connection with the performance of this Contract, including the

DRAFT

Work, are to be and remain the property of the City. The rights in this Section are exclusive to the City in perpetuity.

4.2 The Contractor's Pre-Contract and Pre-Work Deliverables. The Contractor shall provide the deliverables in accordance with Division 01 - General Requirements of the Specifications and Section 4.2 of the General Conditions.

4.3 Pre-Construction Conference. The Contractor shall attend the pre-construction conference in accordance with Division 01 - General Requirements of the Specifications and Section 4.3 of the General Conditions.

4.4 Performance of the Work (Including Field Measurements, Subcontractors, and Suppliers). The Contractor shall control and maintain the Project site in accordance with Section 4.4 of the General Conditions and Division 01 - General Requirements of the Specifications.

4.5 Control of the Project Site. The Contractor shall control and maintain the Project site in accordance with Division 01 - General Requirements of the Specifications and Section 4.5 of the General Conditions.

4.6 Project Safety. The Contractor shall implement and enforce Project safety in accordance with Section Division 01 - General Requirements of the Specifications and 4.6 of the General Conditions.

4.7 Materials Quality, Substitutions, and Shop Drawings. The Contractor shall provide materials testing and submit substitute materials and shop drawings in accordance with Division 01 - General Requirements of the Specifications and Section 4.7 of the General Conditions.

4.8 Project Record Documents. The Contractor shall maintain and make available the Project Record Document in accordance with Division 01 - General Requirements of the Specifications and Section 4.8 of the General Conditions.

4.9 Warranty and Correction of Defect Work. The Contractor shall provide warranties and correct defective Work in accordance with Division 01 - General Requirements of the Specifications and Section 4.9 of the General Conditions.

4.10 The OWNER has pre-purchased several items of treatment process equipment. One piece of equipment is onsite, and two others need to be delivered. The Contractor shall be responsible for planning delivery of pending equipment in order to meet the construction schedule. All treatment process equipment will become the CONTRACTOR'S responsibility. The CONTRACTOR shall coordinate delivery and confirm that the shipments are complete and accurate for all equipment. Contract shall provide safe and secure storage, provide transportation from onsite storage to install location, install per the construction documents and manufacturer's requirements, and schedule the manufacturer's representative for construction, installation certification, start up, operational training, etc.

The following pieces of Equipment have been pre-purchased by the OWNER:

4.10.1 Membrane Bioreactor, (MBR) (Kubota) to include membranes, mixers, pumps, blowers, diffusers and control panels. See Appendices B & C of the Specifications for more complete information and shop drawings. Contractor must plan and coordinate delivery to meet the contractor schedule. Contractor will be required to pay the storage fees; allowance has been provided. The delivery date is to be scheduled directly with Kubota.

4.10.2 Sludge Dewatering Screw Press (KFC). Screw Press, Sludge Pump, polymer dosing flocculation tank, conveyors and control panels. See Appendices B & C of the Specifications for more complete information. (**On-site**)

DRAFT

4.10.3 Headworks Screen, grit removal and control panels (Hydro-Dyne) - Manufacturing completed and being stored at Hydro-Dyne, a waiting Contractor coordination for delivery. Contractor must plan and coordinate delivery to meet the contractor schedule. Contractor will be required to pay the storage fees; allowance has been provided. See Appendices B & C of the Specifications for complete information.

ARTICLE 5 - CITY'S RESPONSIBILITIES

5.1 The City shall have the responsibilities and provide the information specified in, and subject to, the conditions set forth in Section 5 of the General Conditions and Division 00 – Procurement and Contracting Requirements of the Specifications.

ARTICLE 6 - CONTRACT TIME

6.1 Contract Time.

The Contract Time shall start with the Notice to Proceed (NTP) and end with Final Acceptance, as set forth in Article 6.3 below. The Notice to Proceed cannot be issued prior to the City's approval and acceptance of the Bid.

6.1.1 The Contract Time shall be as set forth in the Project Schedule. The Contractor agrees that it will commence the performance of the Work and complete the Project within the Contract Time.

6.1.2 Time is of the essence of this Contract, for the Project, and for each phase and designated milestone of the Contract.

6.1.3 Failure on the part of the Contractor to adhere to the approved Project Schedule will be deemed a material breach and sufficient grounds for the City to terminate this Contract.

6.2 Project Schedule. The Project Schedule, as required by Division 01 - General Requirements of the Specifications and Section 6.2 of the General Conditions, shall be updated and maintained throughout the Contractor's performance under this Contract in accordance with Division 01 - General Requirements of the Specifications and Section 6.2 of the General Conditions.

6.3 Completion Milestones.

6.3.1 **Substantial Completion.** The Work will be substantially complete within **four hundred eighty-eight (488) calendar Days after the Notice to Proceed** when the Contract Times commence. The Contractor, by entering into this Contract, guarantees the Work against defective workmanship or materials for a period of two (2) years from the date established by the date of Substantial Completion.

6.3.2 **Final Completion**. Following established Substantial Completion date, Contractor must address punch list items to the City's satisfaction within **forty-five (45) calendar days.** The City and/or Engineer shall perform a Final Completion inspection for verification.

6.3.3 **Final Acceptance**. At **month twenty-three (23)** of the Warranty Period, the City and/or Engineer shall perform a Final Acceptance inspection to verify all warranty items have been addressed to the City's satisfaction. The City will then provide a written Final Acceptance notice.

6.4 Liquidated Damages.

DRAFT

6.4.1 The Contractor acknowledges and agrees that if the Contractor fails to obtain **Substantial Completion** or **Final Completion** of the Work within the Contract Time, the City will sustain extensive damages and serious loss as a result of such failure.

6.4.2 The Contractor agrees to commence Work within ten (10) Days of the date of the Notice to Proceed from the City and to achieve Substantial Completion within four hundred eighty-eight (488) calendar Days after the Notice to Proceed. The Contractor agrees to pay liquidated damages, the sum of $1,190.00, for each consecutive calendar Day thereafter.

6.4.3 The City may deduct liquidated damages described in Subsection 6.4.1 above from any unpaid amounts then or thereafter due to the Contractor under this Contract. Any liquidated damages not so deducted from any unpaid amounts due the Contractor shall be payable to the City at the demand of the City, together with interest from the date of the demand at the highest lawful rate of interest payable by the Contractor.

6.4.4 Nothing in this Contract shall be deemed to constitute a waiver of any other remedy available to the City in the event of the Contractor's default under this Contract prior to full performance of the Work, including, as applicable, specific performance or completion of the Work on behalf of the Contractor, the cost and expense of which shall be offset against any monies then or thereafter due to Contractor (if any) and otherwise immediately reimbursed to City by the Contractor.

ARTICLE 7 - CONTRACT PRICE

7.1 Contract Price.

7.1.1 In exchange for the Contractor's full, timely, and acceptable performance and construction of the Work under this Contract, and subject to all of the terms of this Contract, the City will pay the Contractor the Contract Price, which is $41,163,578.00.

7.1.2 The Contract Price is all-inclusive and specifically includes all fees, costs, insurance and bond premiums, and taxes of any type necessary to fully, properly, and timely perform and construct the Work.

ARTICLE 8 - PAYMENT

Payments shall be made to the Contractor in accordance with Division 01 - General Requirements of the Specifications and Article 8 of the General Conditions.

ARTICLE 9 - CHANGES TO THE CONTRACT

Changes to the Contract may be made in strict accordance with Division 01 - General Requirements of the Specifications and Section 9 of the General Conditions.

ARTICLE 10 - TERMINATION

The Contract may be terminated in accordance with Section 10 of the General Conditions.

ARTICLE 11 - INSURANCE AND BONDS

11.1 The Contractor shall provide Insurance as provided in the Insurance Requirements and in accordance with Section 11.1 of the General Conditions. The Contractor shall provide proof of such insurance and all required endorsements in forms acceptable to the City prior to commencing any Work under this Contract.

DRAFT

11.2 The Contractor shall provide performance, payment and warranty bonds to the City in accordance with Section 11.2 of the General Conditions and A.R.S. § 34-222.

11.3 The Contractor's failure to provide proof of insurance and the required endorsements, or the required bonds, in forms acceptable to the City will be a material breach and grounds for termination for cause under this Contract.

ARTICLE 12 - INDEMNIFICATION

The Contractor shall have and assume the indemnity obligations set forth in Section 12 of the General Conditions.

ARTICLE 13 - DISPUTE RESOLUTION

Any claims or disputes relating to this Contract shall be resolved according to the dispute resolution process set forth in Section 13 of the General Conditions.

ARTICLE 14 - MISCELLANEOUS PROVISIONS

The miscellaneous provisions set forth in Section 14 of the General Conditions shall apply to this Contract.

ARTICLE 15 - COUNTERPARTS

This Contract may be executed in one or more counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument. The signature pages from one or more counterparts may be removed from such counterparts. Such signature pages may all be attached to a single instrument so that the signatures of all Parties may be physically attached to a single document.

ARTICLE 16 - AUTHORITY

Each Party represents and warrants to the other Party: (i) that such Party is duly organized and validly existing under the laws of the State of Arizona and has full corporate power and authority to enter into this AGREEMENT and to carry out the provisions of this AGREEMENT; (ii) such Party is duly authorized to execute and deliver this AGREEMENT and to perform its obligations under this AGREEMENT; (iii) the person executing this AGREEMENT on such Party's behalf has been duly authorized to do so by all requisite corporate action, and (iv) this AGREEMENT is a legal and valid obligation binding upon the Parties and enforceable in accordance with its terms.

The Parties have executed this Contract in Yuma County, Arizona, on the day and year set forth above, which is the day the last Party signed this Contract. The original Contract will be filed with the City of San Luis Clerk.

BOND NO. PREMIUM NO.

WARRANTY BOND

(City of San Luis, Arizona)

West WWTP 3.0 MGD MBR

WHEREAS, the City of San Luis, Arizona (hereafter "City") and

_____(hereafter "Principal") have entered into an

agreement ("Agreement") dated _____, 20____, whereby Principal agreed to install and complete certain designated public improvements as a condition of contract, relating to the project known as West WWTP 3.0 MGD MBR Upgrades, at Principal's own expense and which Agreement is hereby referred to and made a part hereof; and

WHEREAS, Principal is required under the terms of the Agreement to furnish warranty security for the Work performed and equipment supplied and installed pursuant to the Agreement in the amount of one hundred percent percent (100%) of the amount to be paid by City to Principal to guarantee replacement and repair of the improvements as described in the Agreement for a period of two years following substantial completion of said improvements.

NOW, THEREFORE, we, Principal, and _____

("Surety"), are held and firmly bound unto City in the penal sum of _____dollars ($_____) lawful money of the United States, for the payment of which we bind ourselves, our heirs, successors, executors, and administrators, jointly and severally. The condition of this obligation is such that if Principal shall indemnify City for all loss that City may sustain by reason of any defective materials, equipment, components, or workmanship which become apparent during the period of two years from and after substantial completion of the improvements, as provided by the terms of the Agreement, then this obligation shall be null and void; otherwise, this obligation shall remain in full force and effect.

As a part of the obligation secured hereby and in addition to the face amount specified, costs and reasonable expenses and fees shall be included, including reasonable attorneys' fees incurred by City in successfully enforcing the obligation, all to be taxed as costs and included in any judgment rendered.

Surety shall provide City with thirty (30) days' written notice of Principal's default prior to Surety terminating, suspending or revoking the bond.

DRAFT

GENERAL CONDITIONS OF THE CONTRACT

These terms will be the General Conditions for the Contract and are incorporated therein and shall be fully binding upon the Contractor.

ARTICLE 1 - SCOPE OF THESE GENERAL CONDITIONS

These General Conditions encompass provisions that apply and are incorporated into all construction contracts entered into by the City of San Luis unless otherwise specifically excluded in the executed Contract. Sections 2 through 14 of these General Conditions apply to all construction contracts, in whatever form, including without limitation, Fixed Price, Unit Price, Construction Manager at Risk (CM@Risk), Guaranteed Maximum Price (GMP) Cost-Based, and Job Order Contracts (JOC).

ARTICLE 2 - GENERAL DEFINITIONS

2.1 The Definitions in the Invitation for Bid (IFB), the Request for Proposals (RFP), the Request for Qualifications (RFQ), and/or the JOC Solicitation (JOC) giving rise to the Contract shall apply to these General Conditions and the Contract for the Project.

2.2 **Change Order –** A written instrument issued after execution of the Contract Documents signed by City and Contractor, stating their agreement upon all of the following: the addition, deletion, or revision in the scope of services or deliverables; the amount of the adjustment to the Contract Price, the extent of the adjustment to the Contract Time, or modifications of other contract terms. Only a Change Order allows the Contract Price or the Contract Time or both to be changed.

2.3 **City –** City of San Luis, Arizona, a municipal corporation, with whom the Contractor has entered into the Contract and for whom the Services and/or Work are to be provided pursuant to the Contract(s).

2.4 **Contract -** The written agreement executed between the City and Contractor, including all of the Contract Documents**.**

2.5 **Contract Documents -** The documents which together form the Contract between City and Contractor, as identified in Article 2 of the Contract, or are otherwise incorporated into the Contract, including the Contract, the exhibits and attachments to it, these General Conditions, any Notice to Proceed, and any Job Order (if applicable), the Plans and Specifications, Project Schedule, written and properly executed Change Orders, and any other documents so designated in the Contact.

2.6 **Contract Price -** The agreed-upon price to be paid to the Contractor for full, timely, and acceptable completion of the Services or Work under the terms of the Contract.

2.7 **Contract Time(s) -** The number of days or the dates related to the Completion Milestones as stated in Contract Documents. The Contract Time is set forth in the Contract and is based upon the Project Schedule agreed to by the City in writing.

2.8 **Contractor -** The person or corporation with whom the City has entered into a contract for construction-related work or services related to the Project at issue.

DRAFT

2.9 **Contractor Payment Request** - The form that is accepted by the City and used by the Contractor in requesting progress payments or final payment and which shall include such supporting documentation as is required by the Contract Documents and/or City.

2.10 **Construction Documents** - The plans, specifications, and drawings prepared and issued by the Design Professional and approved by the City for construction, meaning the documents are sealed by the Contractor (as required), acceptable for permitting, and incorporated into the Contract by reference. All amendments and modifications to the Construction Documents must be approved in writing by the City prior to incorporation into the Contract.

2.11 **Critical Path** - The critical path is the sequence of Project network activities that add up to the longest overall duration. Once established in the Project Schedule, the Critical Path for the Project shall not be changed without prior written approval of the City.

2.12 **Day** - Calendar day(s) unless otherwise specifically stated in the Contract Documents.

2.13 **Final Acceptance** - The written notice from the City to the Contractor that Final Acceptance has occurred following the end of the Warranty Period. At month twenty-three (23) of the Warranty Period, the City and/or Engineer shall perform a Final Acceptance inspection to verify all warranty items have been addressed to the City's satisfaction. The City will then provide a written Final Acceptance notice.

2.14 **Final Completion** - Following established Substantial Completion date, Contractor must address punch list items to the City's satisfaction. The City and/or Engineer shall perform a Final Completion inspection for verification. The date when, in the opinion of the City, all items of the Work, including punch list items, have been completed to the City's satisfaction in accordance with the Contract Documents, and delivery of all Close-Out Documents required by the Contract Documents and this Contract have been received by the City. The Final Completion date is the date on which the Warranty period commences.

2.15 **Float** - The number of Days by which an activity can be delayed without lengthening the Critical Path and extending the Contract Time. Unless otherwise expressly agreed in writing, all Float belongs to City.

2.16 **MAG Specifications** – The latest edition adopted by the City of the Uniform Standard Specifications for Public Works Construction published by Maricopa Association of Governments ("MAG"), or the latest revision published by MAG.

2.17 **MAG Standard Details** – The latest edition adopted by the City of the Uniform Standard Details for Public Works Construction published by Maricopa Association of Governments ("MAG"), or the latest revision published by MAG.

2.18 **Notice to Proceed (NTP)** - A written notice given by the City to the Contractor fixing the date on which the Contractor will start to perform the Contractor's obligations under the Contract. The Notice to Proceed shall not be issued until the Contract Price is approved and accepted by the City.

2.19 **Project** – The Project specified in the Contract (including the Job Order).

2.20 **Project Manager** - The Project Manager designated in Article 1 of the Contract, or any successor Project Manager the City designates. The Project Manager has the authority to act on behalf of the City, as delineated and limited by the Contract Documents and applicable law. The City shall communicate with the Contractor through the Project Manager. However, the Project Manager has no authority to bind the City or City Council in contravention of any City code, State or Federal statute or regulation, or these General Conditions.

DRAFT

2.21 **Project Schedule** - The schedule for the completion of the Project agreed to and/or required by the City and incorporated into the Contract.

2.22 **Project Specific Provisions** - Additional conditions that apply to the specific Project and/or Scope of Work.

2.23 **Proposal** - A Proposal submitted to the City by a Contractor in response to an Invitation for Bid (IFB), Request for Qualifications (RFQ), a Request for Proposals (RFP), or other solicitation or request by the City. Bids may be Fixed Price, Guaranteed Maximum Price (GMP), Unit Price, or other form as required or requested by the City in the Bid Schedule.

2.24 **Requests for Information (RFIs)** - Formal written request from the Contractor to the City and/or Contractor for the Project seeking clarification or additional information needed for the Contractor to properly complete the Work and/or Services under the Contract. The City may require RFI's to be submitted on a specific form or in a specified format.

2.25 **Schedule of Values (SOV)** - The specified document prepared by the Contractor and approved and accepted by the City, which divides the Contract Price into pay items, such that the sum of all pay items equals the Contract Price for the construction phase Work, or for any portion of the Work having a separate specified Contract Price.

2.26 **Scope of Work** - The scope of work agreed to and/or required by the City and incorporated into the Contract as set forth in the IFB and/or an Exhibit to the Contract.

2.27 **Subconsultant** - A person, firm, or corporation having a Contract with a Consultant/Contractor to furnish services required as its independent professional associate or consultant with respect to the Project.

2.28 **Subcontractor** - An individual or firm having a direct contract with the Contractor or any other individual or firm having a contract with the aforesaid contractors at any tier, who undertakes to perform a part of the pre-construction services or construction phase Work at the site for which Contractor is responsible. Subcontractors shall be selected through the Subcontractor selection process described in the Contract Documents, if any.

2.29 **Substantial Completion** - The Work will be substantially complete within the number of calendar days after the Notice to Proceed when the Contract Times commence according to Article 6.3 of the Contract. Substantial Completion shall be the date on which the construction services for the Work, or an agreed upon portion thereof, has progressed to the point where, in the opinion of the City, as evidenced by a Certificate of Substantial Completion and/or Certificate of Occupancy, such construction services are sufficiently complete in accordance with the Contract Documents so that the Work (or specified part) can be utilized for the purposes for which it is intended, without any outstanding concurrent Work at the site, except as may be required to complete or correct Punch List items. If no such certificate is issued, Substantial Completion takes place when the construction services Work or a Construction Phase is complete and ready for final payment as evidenced by the City's written recommendation of final payment. The terms "substantially complete" and "substantially completed" as applied to all or part of the construction Work refers to Substantial Completion thereof.

2.30 **Supplier -** Any person or entity providing materials or property for the Project.

2.31 **Total Float**. The number of Days by which the pre-construction services or construction phase Work or any part of the same may be delayed without necessarily extending a pertinent Contract Time or schedule milestone in the Project Schedule.

DRAFT

2.32 **Work** - The entire completion of construction or the various separately identifiable parts thereof, required to be furnished during the construction phase. Work includes and is the result of:

2.32.1 performing or furnishing labor;

2.32.2 furnishing and incorporating materials, resources, and equipment into the construction; and

2.32.3 performing or furnishing services and documents as required by the Contract Documents for the construction phase.

2.33 **Working Days** - Days exclusive of Saturday, Sunday and City recognized legal holidays.

ARTICLE 3 - STANDARD SPECIFICATIONS AND DETAILS

3.1 The City operates under the 2016 City of San Luis Supplement to the 2015 MAG Uniform Standard Specifications for Public Works Construction.

3.2 The City also operates under the 2009 City of Yuma Construction Standard Detail Drawings.

3.3 The City also operates under the 2006 Yuma County Public Works Standards – Volume III – Storm Drainage Facilities.

3.4 The above standard specifications and details may be viewed and downloaded at the City of San Luis website: https//www.sanluisaz.gov/DocumentCenter/Index/268.

3.5 The City may require particular sections of the revisions of the MAG Specifications and Standard Details after the 2015 revision that the City adopted.

3.6 Current and Historical MAG Specifications and Standard Details may be viewed at the Maricopa Association of Governments website at https://azmag.gov/Programs/Public-Works/Specifications-and-Details.

3.7 The MAG Specifications and Standard Details and the City's amendments to them are incorporated into the Contract.

ARTICLE 4 - CONTRACTOR'S RESPONSIBILITIES FOR CONSTRUCTION SERVICES

4.1 General

4.1.1 The Contractor shall construct the Work in accordance with the Contract Documents and as outlined in the Contract Documents to the satisfaction of the City, exercising the degree of professional care, skill, diligence, quality, and judgment that a professional Contractor engaged, experienced, and specializing in the construction of facilities of similar scope, function, size, quality, complexity, and detail in urban areas throughout the United States comparable to the City would exercise at such time, under similar conditions. The Contractor shall, at all times, perform the Work in conformance with sound and generally accepted engineering principles and construction management and construction contracting practices.

4.1.2 The Contractor shall comply with, and require all Subcontractors to comply with, the Arizona Contractors' license laws, including all requirements with respect to being duly registered and licensed.

DRAFT

4.1.3 Pursuant to A.R.S. §41-4401, the Contractor warrants to the City that the Contractor and all its Subcontractors are in compliance and will comply with all Federal Immigration laws and regulations that relate to their employees and with the E-Verify Program under A.R.S. § 23-214(A). The Contractor acknowledges that a breach of this warranty by the Contractor or any of its Subcontractors is a material breach of this Contract subject to penalties up to and including termination of the Contract or any subcontract. The City retains the legal right to inspect the papers of any employee related to this statute and of the Contractor or any Subcontractor who works on this Contract to ensure compliance with this warranty. The City may conduct random verification of the Contractor's employment records and any of its Subcontractors' employment records to ensure compliance with this warranty. The City will not consider the Contractor or any of its Subcontractors in material breach of the foregoing warranty if the Contractor and its Subcontractors establish that they have complied with the employment verification provisions prescribed by 8 USCA §1324(a) and (b) of the Federal Immigration and Nationality Act and the e-verify requirements prescribed by Arizona Revised Statutes §23-214(A). The provisions of this Section must be included in any agreement the Contractor enters into with its Subcontractors who provide services under this Contract or any subcontract. "Services" are defined as furnishing labor, time, or effort in the State of Arizona by a contractor or Subcontractor. Services include construction or maintenance of any structure, building, or transportation facility or improvement to real property. Breach of this warranty shall constitute a material breach of the contract and shall subject the Contractor to penalties, including termination of the Contract at the sole discretion of the City.

4.1.4 The Contractor further understands and acknowledges the applicability of the Americans with Disabilities Act, the Immigration Reform and Control Act of 1986, and the Drug-Free Workplace Act of 1989 to the Contract. The Contractor understands and acknowledges that it must also comply with A.R.S. § 34-301, "Employment of Aliens on Public Works Prohibited," and A.R.S. § 34-302, as amended, "Residence Requirements for Employees," and A.R.S. § § 12-2701 through .12-704 "Immigration and Nationality Law Practice Act" as amended.

4.2 Contractor's Pre-Contract and Pre-Work Deliverables

4.2.1 Before beginning any Work under the Contract, the Contractor shall execute the Contract and deliver to the City the items listed in Section 4.2.2 below within seven (7) days after the award of the Contract, and the City must execute the Contract. Failure to do so will be a material breach of the Contract, entitling the City to terminate the Contract for Cause.

4.2.2 When the Contractor delivers the executed Contract to the City, the Contractor shall also deliver to the City such bonds and certificates of insurance with endorsements in such amounts (and other evidence of insurance requested by the City) required under Article 11 of these General Conditions, and as the Contract requires.

4.2.3 The Contractor shall obtain all necessary permits for the Work and pay all applicable fees unless otherwise noted on the plans and in the specifications. The City has obtained the required ADEQ Aquifer Protection Permit. The City does not require a building, grading, or encroachment permit for the WWTP scope of work. The city does require a business license.

4.2.4 Copies of all permits and the associated notices must be provided to the City prior to starting the permitted activity.

4.3 Pre-Construction Conference

4.3.1 Prior to the commencement of any Work, the City may schedule a Pre-Construction Conference.

DRAFT

4.3.2 Prior to the Pre-construction Conference, the Contractor shall provide the Project Manager with a Schedule of Values reflecting the subcontracts and other categories that will be used to submit pay applications for the Work. The total amount of the Schedule of Values shall not be greater than the Contract Price. The Schedule of Values shall be reviewed at the Pre-Construction Conference and revised in response to comments and questions from the City. Once accepted by the City in writing, the Schedule of Values for the Project will not be changed without the City's prior written approval.

4.4 Performance of the Work (Including Field Measurements, Subcontractors, and Suppliers)

4.4.1 Unless otherwise provided in the Contract Documents to be the responsibility of the City or a separate Contractor, the Contractor shall provide through itself or its Subcontractors the necessary supervision, labor, inspection, testing, start-up, material, equipment, machinery, temporary utilities, and other temporary facilities to permit Contractor to complete the Work consistent with the Contract Documents.

4.4.2 The Contractor's Superintendent shall be present at the Project site at all times that material Work under this Contract is taking place. The Contractor's Superintendent or designee shall be present at the Project site at all times any other Work under this Contract is taking place. All elements of the Work shall be under the direct supervision of a foreman or his designated representative on the Project site, who shall have the authority to take actions required to carry out that particular element of the Work properly.

4.4.3 Before ordering materials or doing work, the Contractor and each Subcontractor shall verify measurements at the Project site and shall be responsible for the correctness of such measurements. No extra charge or compensation will be allowed because of differences between the actual dimensions and the dimensions indicated on the Contract Documents, including the drawings.

4.4.4 If the Contractor observes errors, discrepancies, or omissions in the Contract Documents, it shall promptly notify the Contractor and City and request clarification. The Contractor shall be liable to the City for damages resulting from errors, inconsistencies, or omissions in the Contract Documents or for differences between field measurements or conditions in the Contract Documents. If the Contractor, with the exercise of reasonable care, should have recognized such error, inconsistency, omission, or difference and fails to report it to the City, and if the Contractor proceeds with the Work affected by such observed errors, discrepancies, or omissions, without receiving such clarifications, it does so at its own risk.

4.4.5 In all cases of interconnection of its Work with existing or other work, the Contractor shall verify at the Project site all dimensions relating to such existing or other work. Any errors due to the Contractor's failure to so verify all such grades, elevations, locations, or dimensions shall be promptly rectified by the Contractor without any increase in the Contract Price. Any design errors or omissions noted by the Contractor during this review shall be reported promptly to the City.

4.4.6 The Contractor shall be responsible for the proper performance of the Work of Subcontractors and any acts and omissions in connection with such performance. Nothing in the Contract Documents is intended or deemed to create any legal or contractual relationship between the City and any Subcontractor or Sub-Subcontractor, including but not limited to any third-party beneficiary rights.

4.4.7 The Contractor will not substitute or change any Subcontractor or Supplier without the City's prior written approval. Any substitute or replacement Subcontractor or Supplier shall be required to meet

DRAFT

the same qualifications and selection criteria and process as the original Subcontractor or supplier. If a Subcontract or Supplier selection plan has been approved by the City, the Contractor will follow that plan unless otherwise approved by the City in writing.

4.4.8 The Contractor shall not change or replace the Contractor's Project Manager or Superintendent on this Project without an explanation for the change being given to the City and receiving prior written approval of the change from the City, which approval will not be unreasonably withheld.

4.4.9 Subcontractors whose scope of work has a value greater than fifteen percent (15%) of the total Contract Price may be required to furnish performance and payment bonds to the Contractor if directed in writing by the City.

4.4.10 Owner Furnished Equipment - The OWNER has pre-purchased several items of the process equipment. One piece of equipment is onsite, and two others need to be delivered. The Contractor is responsible for planning delivery in order to meet the construction schedule. All the equipment will become the CONTRACTOR'S responsibility. The CONTRACTOR shall coordinate delivery and confirm that the shipments are complete and accurate for all equipment. Contract shall provide safe and secure storage, provide transportation from onsite storage to install location, install per the construction documents and the manufacture's requirements, and schedule manufacturer's representative for construction, installation certification, start up, operational training, etc. Specific equipment and details are noted in Article 4.10 of the Contract.

4.5 Control of the Project Site

Throughout all phases of construction, including suspension of Work, the Contractor shall keep the Project site reasonably free from debris, trash, and construction wastes to permit the Contractor to perform its construction services efficiently, safely, and without interfering with the use of adjacent land areas. Prior to the Final Acceptance of the Work, or a portion of the Work, the Contractor shall remove all debris, trash, construction wastes, materials, equipment, machinery, and tools arising from the Work or applicable portions thereof to permit the City to occupy the Project or a portion of the Project for its intended use.

4.5.1 The Contractor shall take whatever steps, procedures, or means necessary to prevent dust nuisance due to construction operations. The dust control measures shall be maintained at all times to the satisfaction of the City and in accordance with the requirements of the Yuma County dust control regulations.

4.5.2 The Contractor shall be responsible to the City for the acts and omissions of the Contractor's employees, Subcontractors and their agents and employees, and any other person performing any of the Work under a contract with Contractor, or claiming by, through, or under Contractor, for all damages, losses, costs, and expenses resulting from such acts or omissions.

4.6 Project Safety

4.6.1 The Contractor is responsible for the safety of the job site for the Contractor's employees as well as for members of the general public and others who may drive or walk through or be at the Project site.

4.6.2 The Contractor assumes responsibility for implementing and monitoring all safety precautions and programs related to the performance of the Work.

DRAFT

4.6.3 The Contractor shall provide a “competent person” as required by O.S.H.A. regulations. The “competent person” shall be identified at the Pre-Construction Conference, and the City will be advised in writing of any changes.

4.6.4 The Contractor and Subcontractors shall comply with all legal and regulatory requirements relating to safety, as well as any City-specific safety requirements set forth in the Contract Documents, provided that such City-specific requirements do not violate any applicable legal and regulatory requirements.

4.6.5 As between the City and the Contractor, the Contractor is responsible to the City for any and all the safety issues relating to the Work on the Project. The Contractor shall administer and manage the safety program. The safety program will include, but not necessarily be limited to, reviews of the safety programs of each Subcontractor. The Contractor shall monitor the establishment and execution of compliance with all applicable regulatory and advisory agency construction safety standards.

4.6.6 The Contractor shall maintain and have sole responsibility for safety on the job site.

4.7 Materials Quality, Substitutions, and Shop Drawings

4.7.1 All construction materials to be used or incorporated in the Project are subject to inspection, quality control and quality assurance testing, and approval or rejection by the City. Any material rejected by the City shall be removed immediately and replaced in an acceptable manner to the City at no additional cost to the City. When quality control and quality assurance tests indicate noncompliance with the Contract Documents, retesting shall be performed by the same testing laboratory that performed the tests that indicated noncompliance.

4.7.2 A schedule of shop drawing submissions shall be submitted with the Project Schedule for City approval that avoids bulk submissions to the extent reasonably possible. Unless otherwise noted, shop drawings will not be required for items specified or detailed in the Uniform Standard Specifications and Details or the Technical Specifications. The schedule of shop drawing submissions shall include all of the items for which shop drawings are required by the Contract Documents, including the specifications.

4.7.3 Long Lead Time Items. The Contractor shall submit shop drawings, as required by the Project Engineer, on all long lead items to be furnished and installed as part of the Project within ten (10) days after execution of the Contract. In addition, the Contractor shall order all long lead items to be furnished and installed as part of this Project within (3) days after receiving approved shop drawings. For all long lead times for which shop drawings are not required, the Contractor shall order said long lead items within fifteen (15) days after execution of the Contract. Within two (2) days after ordering long lead items, the Contractor shall supply copies of all purchase orders, along with an accurate delivery schedule from the supplier.

4.8 Project Record Documents

The Contractor shall ensure that any and all changes or modifications done as a result of field changes are accurately reflected in red-lined markings. At the completion of construction, all red lines and markings shall be compiled to aid in the creation of “as-built” plans.

4.9 Warranty and Correction of Defect Work

DRAFT

4.9.1 The Contractor warrants to the City that the construction of the Work shall be of good and workmanlike quality and completed in strict conformance with all applicable laws, rules, and regulations and the plans and specifications and all other terms and conditions of the Contract Documents, including all materials and equipment furnished as part of the construction, shall be new unless otherwise specified in the Contract Documents, of good quality, in conformance with the Contract Documents and free of defects in materials and workmanship.

4.9.2 The date of **Final Completion** shall be the beginning of the Warranty Period, regardless of early completion by some Subcontractors of their work.

4.9.3 Unless otherwise specified in the Contract Documents, the Contractor and Subcontractors shall provide to the City all of the following written warranties that apply to the Work in a form acceptable to the City.

(i) General Warranty — Two (2) years

(ii) Mechanical Contractor — Two (2) years

(iii) Plumbing Contractor — Two (2) years

(iv) Electrical Contractor — Two (2) years

(v) Caulking — One (1) year

(vi) Steel Joists, Certificate of Manufacturer

(vii) Exterior Metal Wall System — Five (5) years

(viii) Painting — One (1) year

(ix) Termite — Five (5) years

(x) Sheet Metal: Zinc coating thickness on hot-dipped galvanized Metals — One (1) year

4.9.4 Nothing in the warranties contained in the Contract Documents are intended to limit any manufacturer's warranty, which provides the City with greater warranty rights than set forth in this Section or the Contract Documents. The Contractor will provide the City with all manufacturers' warranties prior to Final Acceptance.

4.9.5 A progress payment, or partial or entire use or occupancy of the Project by the City, shall not constitute Acceptance of Work not in accordance with the Contract Documents.

4.9.6 Without limiting the foregoing or anything in these General Conditions or the Contract to the contrary, the Contractor shall obtain and provide to the City all warranties for any portion of the Project offered by the manufacturer, installer, or provider thereof. The City and the user of the facility shall have the right to the full value and benefit of all such warranties. The Contractor will ensure all such warranties are fully transferrable to facilitate the full value of this Section.

ARTICLE 5 - CITY'S RESPONSIBILITIES

5.1 **City Project Manager** The Project Manager is responsible for providing City-supplied information and approvals in a timely manner to assist the Contractor to fulfill its obligations under the Contract Documents.

DRAFT

5.2 **Contract Services** The City may contract separately with one or more contractors to provide construction administration of the Project. The Contractor's Contract, as well as other firms hired by the City, shall be furnished to the Contractor. The contractor shall not have the right to limit, restrict, or reject any Contract modifications that are mutually acceptable to the City and the Contractor.

ARTICLE 6 - CONTRACT TIME

6.1 Contract Time

6.1.1 The Contract Time shall start with the Notice to Proceed ("NTP") and end with Final Completion, as set forth in Article 6.3 below.

6.1.2 The Contract Time shall be as set forth in the Project Schedule. The Contractor agrees that it will commence the performance of the Work and complete the Project within the Contract Time.

6.1.3 Time is of the essence of this Contract, for the Project, for the Work, and for each phase and/or designated milestone of the Project.

6.2 Project Schedule

6.2.1 The Project Schedule shall be updated and maintained throughout the Contract Time.

6.2.2 The Project Schedule shall be revised as required by conditions and progress of the Work. However, such revisions shall not relieve the Contractor of its obligations to complete the Work within the Contract Time, as adjusted in accordance with the Contract Documents. No modification to the Contract Documents or the Contract Time shall be effective unless approved in advance by the City.

6.2.3 An updated Project Schedule shall be submitted monthly to the City as part of the Payment Request.

6.2.4 The Contractor shall provide the City with a monthly status report with each Project Schedule detailing the progress of the Work, including:

6.2.5 Acceptance of a submitted schedule by the City should in no way be construed as an affirmation or admission that the schedule is reasonable or workable by the Contractor. The responsibility for completing the Work on the Project within the Contract Time remains the obligation of the Contractor. The City's review shall not relieve the Contractor from compliance with the requirements of the Contract Documents or be construed as relieving the Contractor of its complete and exclusive control over the means, methods, sequences, and techniques for executing the Work.

6.2.6 Critical Path Method (CPM)

6.2.6.1 Unless otherwise specified in the Contract, the Project Schedule shall include a Critical Path Method (CPM) diagram schedule showing the sequence of activities, the interdependence of each activity, and identifying the Critical Path.

6.2.6.2 The CPM diagram schedule shall be in calendar Days and indicate duration, earliest and latest start and finish dates for all activities, and total Float Times for all activities except critical activities. The CPM diagram shall be presented in a time-scaled graphical format for the Project as a whole.

DRAFT

6.2.7 Float Time

6.2.7.1 The total Float time within the overall schedule is for the exclusive use of the City. However, the City may approve the Contractor's use of Float time as needed to meet contract milestones and the Project completion date.

6.2.7.2 The Contractor shall not be allowed to sequence, hide, or reallocate Float time through such strategies as extending activity duration estimates to consume available Float, using preferential logic, or using extensive crew or resource sequencing. No time extensions will be granted nor delay damages paid until a delay occurs which extends the Work beyond the Contract Time.

6.2.7.3 Rain-Related Delays. In preparing the Project Schedule, The Contractor is required to take into account all relevant weather conditions, including normal rainfall and distribution. No additional Compensation shall be given for any rain-related delays or impacts on the Work or the Project Schedule. The burden of documenting normal rainfall, excessive rainfall, and the impact on Critical Path activities is on the Contractor.

6.3 Final Completion and Final Acceptance

6.3.1 Unless otherwise expressly agreed to in writing by the City, Final Completion must be obtained by no later than **four hundred eighty-eight (488)** calendar days after the date of Notice to Proceed. Failure to timely obtain Final Completion will be a material breach of the Contract.

6.3.2 Upon receipt of written notice that the Work is ready for final inspection and Acceptance, the City and the Contractor will jointly inspect to verify that the remaining items of Work have been completed. There shall be no partial acceptance. Final Completion shall not occur until all items of Work, including punch list items, have been completed to the City's satisfaction as reflected in the written Final Completion notice.

6.3.3 Final Payment under Section 8.2 below shall not be due, owing, or paid by the City until the Final Completion is obtained.

6.4 Liquidated Damages

6.4.1 Liquidated Damages. The Contractor acknowledges and agrees that if the Contractor fails to obtain Final Completion of the Work within the Contract Time, the City will sustain extensive damages and serious loss as a result of such failure. The exact amount of such damages will be extremely difficult to ascertain. Therefore, the City and the Contractor agree that if Contractor fails to achieve Final Completion of the Work within the Contract Time, the City shall be entitled to retain or recover from the Contractor, as liquidated damages and not as a penalty, the applicable dollar sum amount in the Table 108-1 Schedule of Liquidated Damages in the 2016 City of San Luis Supplement to MAG Standard Specification and to City of Yuma Standard Details per calendar day, commencing from the Milestone Completion Dates required under Article 6.4 of the Contract.

6.4.2 The City may deduct liquidated damages described in this Section 6.4 from any unpaid amounts then or thereafter due Contractor under this Contract. Any liquidated damages not so deducted from any unpaid amounts due to the Contractor shall be payable to the City at the demand of the City, together with interest from the date of the demand at the highest lawful rate of interest payable by the Contractor.

DRAFT

6.4.3 Nothing herein shall be deemed to constitute a waiver of any other remedy available to the City in the event of Contractor's default under this Contract prior to the full performance of the Work, including, as applicable, specific performance or completion of the Work on behalf of Contractor, the cost and expense of which shall be offset against any monies then or thereafter due to Contractor (if any) and otherwise immediately reimbursed to City by Contractor.

ARTICLE 7 - CONTRACT PRICE

7.1 **Fixed Price Contracts** The Contract Price shall be the amount set forth in the Contract.

7.2 **City Sales Tax** The Contractor is required to pay Sales Taxes on any contracting activity done for the City, and this cost shall be included in all Contract Prices.

ARTICLE 8 - PAYMENT

8.1 Payment for Construction Services

8.1.1 Monthly progress payments for certified work and material delivered to the Project site for the preceding month shall be paid on or before fourteen (14) business days after the estimate of the Work is certified and approved. The submittal estimate shall be deemed certified and approved for payment after seven (7) days from the date of submission unless the City's Project Manager issues a written finding setting forth items not approved for payment.

8.1.2 The City shall retain ten percent (10%) of all progress payments, until **Substantial Completion** is achieved, as insurance of proper performance of the Contract or, at the option of the Contractor, a substitute security may be provided by the Contractor in an authorized form approved by the City.

8.1.3 Upon request of Contractor, and subject to the approval of the City in its sole discretion, the 10% retained by the City under this Article may be substituted for an irrevocable letter of credit issued by an approved financial institution equal to the amount that would otherwise be retained.

8.1.4 Unless the City Project Manager delivers specific written findings of deficiencies and expected cost to cure, any retention shall be paid, or substitute security shall be returned to the Contractor within sixty (60) Days after Final Completion and Acceptance of Work under the Contract. The City may withhold an amount from the progress payment sufficient to pay the expenses the City's Project Manager reasonably expects to incur in correcting the deficiency set forth in the written finding.

8.1.5 The Contractor, and all Subcontractors, shall pay to Subcontractors or material Suppliers within seven (7) days of receipt of each progress payment unless otherwise agreed in writing by the parties, the respective amounts allowed the Contractor or Subcontractor on account of the Work performed or materials delivered to the extent of each such Subcontractor's or material Supplier's interest therein. No agreement for construction may materially alter the rights of any Contractor, Subcontractor, or material Supplier to receive prompt and timely payment as provided under this Section. These monthly progress payments to Subcontractors or material Suppliers shall be passed on payments received pursuant to this Section. Any diversion by the Contractor or Subcontractor of payments received for Work performed or failure to reasonably account for the application or use of such payments constitutes grounds for disciplinary action by the Registrar of Contractors. The Subcontractor or material Supplier shall notify the Registrar of Contractors and the City in writing of any payment less than the amount or percentage approved for the class or item of work as set forth in this Section. The Subcontractor may notify the City's Project Manager in writing, requesting that the City notify the Subcontractor in writing within five (5) days from payment

DRAFT

of each progress payment made to the Contractor. The Subcontractor's request remains in effect for the duration of the Subcontractor's work on the Project.

8.1.6 Nothing in this Section 8.1 prevents the Contractor at the time of application/certification to the City from withholding application or certification to the City for payment to the Subcontractor or material Supplier for unsatisfactory job progress, defective work, or materials not remedied, disputed work or materials, third party claims filed or reasonable evidence that claim will be filed, failure of a Subcontractor to make timely payment for labor, equipment and materials, the Subcontract.

8.2 **Final Payment** Subject to all of the City's rights to withhold or offset payment and other rights under the Contract, Final Payment, including remaining retainage, shall be paid only after:

8.2.1 The Work has been fully completed (including completion of all incorrect or incomplete work items), and the City has issued the written Final Completion notice and the required Warranty Bond has been submitted to the City;

8.2.2 necessary operating manuals, any excess materials and supplies necessary for matching materials and supplies incorporated into the Work, and complete "as-built" drawings (including the Building Information Model, if required by the Contact Documents), plans, and specifications have been delivered to City;

8.2.3 full and unconditional lien waivers and releases by Contractor and any person performing labor or supplying material, machinery, fixtures, or tools for the Work have been delivered to the City;

8.2.4 all conditions and requirements imposed by the City or any financing entity for the corresponding disbursement have been met; and

8.2.5 the Contractor delivers to the City a Contractor Payment Request Form requesting Final Payment.

8.3 **The City's Right to Withhold Payment** The City may withhold payment to such extent as may be necessary in the City's opinion to protect the City from loss for which the Contractor is responsible, including, without limitation:

8.3.1 Defective Work not remedied;

8.3.2 Third-party claims filed or reasonable evidence indicating probable filing of such claims unless Contractor provides security acceptable to the City;

8.3.3 Failure of Contractor to make payments properly to Subcontractors or for labor, materials, or equipment;

8.3.4 Reasonable evidence that the Work cannot be completed for the unpaid balance of the Contract Price;

8.3.5 Damage to the City or another Contractor or any third party for which the Contractor may have an obligation under Article 12 of the General Conditions;

8.3.6 Reasonable evidence that the Work will not be completed within the Contract Time and that the unpaid balance would not be adequate to cover actual or liquidated damages for the anticipated delay; or

8.3.7 Persistent failure to carry out the Work in accordance with the Contract Documents.

DRAFT

8.4 **Joint/Direct Checks** Payments to the Contractor may be made by checks payable jointly to the Contractor and its employees, agents, Subcontractors, and Suppliers, or any of them. When in the sole opinion of the City, it is advisable, payments may be made directly to the Contractor's Subcontractors. Any amount so paid shall be deducted from the amounts owed to the Contractor under this Contract.

8.5 **Payment Not A Waiver** No payment (nor use or occupancy of the Project by the City) shall be deemed Acceptance or approval of the Work or as a waiver of any claims, rights, or remedies of the City.

8.6 **Liens and Bond Claims** The Contractor shall make all payments, in the time required, of all labor and materials furnished to the Contractor in the course of the Work and shall promptly furnish evidence of such payments as the City may require. The Contractor shall pay when due all claims arising out of the performance of the Work covered by this Contract for which a lien may be filed either against the real estate or leasehold interest of City, or against payments due from City to Contractor, or for which a claim may be made against any payment or performance bond or both. To the fullest extent permitted by law, Contractor agrees that no liens or other claims in the nature of a lien against the real estate, leasehold, or other interest of City, against payment due from City to Contractor, or against any payment or performance bond, shall be filed or made in connection with the Work by any party who has supplied professional services, labor, materials, machinery, fixtures, tools, or equipment used in or in connection with the performance of this Contract. The Contractor agrees to remove or to cause to be removed any such liens or claims in the nature of a lien or bond claim within ten (10) days upon receiving notice or obtaining actual knowledge of the existence of such liens or claims. In addition, the Contractor agrees to defend, indemnify, and hold harmless the City from and against any and all such liens and claims. This paragraph does not apply to claims and liens of Contractor due to non-payment for work performed by Contractor. The obligations under this Article 8.4 survive termination of this Contract.

8.7 Financial Record Keeping and City's Audit Right

8.7.1 Records for all Contracts between the City and the Contractor shall, upon reasonable notice, be open to inspection and subject to audit, scanning, and/or reproduction during normal business working hours. The City or its designee may conduct such audits or inspections throughout the term of this Contract and for a period of three years after Final Payment or longer if required by law.

8.7.2 The City, its authorized representative, and/or the appropriate agency reserve the right to audit the Contractor's records in compliance with local, state, or federal policies, statutes, or at the City's discretion within three (3) years of Final Acceptance of the Work.

ARTICLE 9 - CHANGES TO THE CONTRACT

9.1 Extra Work/Changes in the Work

9.1.1 The City reserves the right to make such changes in the plans and specifications for the Work as it may deem appropriate. Any such change as set forth in a written Change Order or Extra Work Order shall be deemed a part of this Contract as if originally incorporated into this Contract.

9.1.2 Not used

9.1.3 The Contractor shall not be entitled to payment for additional work unless a written Change Order or Extra Work Order, in form and content prescribed by the City, has been executed by the City prior to starting the additional work.

DRAFT

9.1.4 Any agreement that modifies the terms of the Contract (including Change Orders) shall be approved in writing by the Project Manager and approved by the San Luis City Council if necessary. Once properly executed by both Parties, these modifications to the Contract shall have the same effect as if they had been included in the original Contract.

9.2 **Accuracy of Change Order Pricing Information** Signature by the contracting Parties shall constitute full accord and satisfaction between the City and the Contractor for all costs, damages, and expenses of whatever kind of nature, including delay, impact, or acceleration damages, which may be occasioned by a Change Order or other modification of the Contract, the Parties agreed to in writing.

ARTICLE 10 - TERMINATION

10.1 Termination by the City for Cause

10.1.1 If, for any reason, the Contractor fails to fulfill in a timely and proper manner its obligations under the Contract Documents, or if the Contractor violates any of the covenants, agreements, or stipulations of this Contract, the City shall thereupon have the right to terminate the Contract by giving written notice to the Contractor of such termination and specifying the effective date of the termination. In such event, all finished or unfinished site or structural improvements, as well as all materials or equipment acquired or stored by the Contractor under this Contract, shall, at the option of the City, become the City's property. The Contractor shall be entitled to receive just and equitable compensation for any Work satisfactorily completed under this Contract.

10.1.2 Notwithstanding Section 10.1.1, the Contractor shall not be relieved of liability to the City for damages sustained by the City by virtue of any breach of this Contract by the Contractor, and the City may withhold any payments to the Contractor for the purpose of set-off until such time as the exact amount of damages due the City from the Contractor is determined.

10.2 **Termination by the City for Convenience** The City may also terminate the Contract at any time for its convenience upon seven (7) business days' written notice to the Contractor specifying the termination date. In the event of termination, which is not the fault, in whole or in part, of the Contractor, the City shall pay to the Contractor only such compensation, including reimbursable expenses, due for Work properly performed on the Project prior to the termination date. Upon any termination of the Contract, no further payments shall be due from the City to the Contractor.

10.3 **A.R.S. § 38-511 and Other Statutory Requirements** This Contract is subject to and may be terminated by the City in accordance with the conflict provisions of A.R.S. § 38-511. The Contractor certifies, to the extent permitted by law, that it is not currently engaged in and agrees that for the duration of this Contract, it will not engage in a boycott of Israel, as that term is defined in A.R.S. § 35-393. The Contractor certifies, to the extent permitted by law, that it does not currently, and agrees for the duration of this Contract, it will not use the forced labor of the ethnic Uyghurs in the People's Republic of China, nor use any goods or services produced by them, nor use any contractors, Subcontractors, or Suppliers that use them. If the Contractor becomes aware during the term of this Contract that the Contractor is not in compliance with this certification, it shall follow the notice procedures in A.R.S. § 35-393.

10.4 **Non-Appropriation** The City is a government agency that relies upon the appropriation of funds by its governing body to satisfy its obligations. If the City determines that it does not have funds to meet its obligations under the Contract, the City shall have the right to terminate the Contract without penalty on the last day of the fiscal period for which funds were legally available for the Project.

DRAFT

10.5 **Limited Liability** Under no circumstances shall the City have any liability for any costs, expenses, overhead, or profits in relation to any work not actually performed or for any future or anticipated profits, recovery, damages, expenses, or losses.

ARTICLE 11 - INSURANCE AND BONDS

11.1 Insurance Requirements

11.1.1 The Contractor shall obtain, maintain, and provide verification of insurance coverage set forth in the City's Insurance Requirements set forth on Attachment 1 of the Contract.

11.1.2 In the Contract Documents, the City may designate additional insured(s) along with the City (and their respective employees, members, representatives, agents, and affiliates) on all required insurance policies and all coverage applicable to the City under this Section 11.1 and the Insurance Requirements shall apply to such designated additional insured(s) as well.

11.1.3 Failure to maintain the insurance policies as required by this Contract or to provide evidence of renewal is a material breach of this Contract.

11.1.4 Subcontractors. The Contractor's certificate(s) of insurance and policy endorsements shall include all Subcontractors as additional insureds under its policies, or the Contractor shall furnish to the City separate certificates and endorsements for each Subcontractor. All coverages for Subcontractors shall be subject to the minimum requirements set forth in the Contract Documents, including the City Insurance Requirements.

11.2 Bonds and Other Performance Security

11.2.1 Prior to the execution of the Contract, the Contractor shall provide a Performance Bond and a Payment Bond, each in an amount equal to the full amount of the Contract Price.

11.2.2 Each such bond shall be executed by a surety company or companies holding a Certificate of Authority to transact surety business in the State of Arizona, issued by the Director of the Arizona Department of Insurance. A copy of the Certificate of Authority shall accompany the bonds.

11.2.3 The bonds shall be made payable and be acceptable to the City. The bond forms for the performance and payment bonds shall be in the forms required under A.R.S. § 34-221, et seq.

11.2.4 All bonds submitted for this Project shall be provided by a company that has been rated AM Best rating of B++6 or better for the prior four (4) quarters by the latest edition of the *Results Best's Key Rating Guide (Property/Casualty)*" published by the A.M. Best Company.

11.2.5 Personal or individual bonds are not acceptable.

11.2.6 Warranty Bond. Unless the surety issuing the Performance Bond specifically includes language that such bond covers the entire warranty period, Contractor shall provide a separate Warranty Bond for the Warranty Period. The Warranty Bond shall be in a minimum penal sum of 25% of the Contract Price.

ARTICLE 12 - INDEMNIFICATION

12.1 To the fullest extent permitted by law, the Contractor, its successors, and assigns shall defend, indemnify, and hold harmless the City and its agents, representatives, officers, elected officials, and employees from

DRAFT

all demands, proceedings, suits, actions, claims, damages, or losses relating to, arising out of, resulting from or alleged to have resulted from the performance of the Work or failure to comply with Contractor's obligations under the Contract Documents or any laws, regulations, or legal requirements. The Contractors' duty to defend, indemnify, and hold harmless the City and its agents, representatives, officers, elected officials, and employees shall arise in connection with all demands, proceedings, suits, actions, claims, workers' compensation claims, unemployment claims, damages, losses or expenses (including but not limited to attorney's fees, expert fees, court costs, and the cost of appellate proceedings) that are attributable to personal or bodily injury, sickness, disease, death or injury to, impairment or destruction of property including loss of use resulting therefrom, caused by any act or omission of Contractor, a Subcontractor, anyone directly or indirectly employed by them or anyone for whose acts they may be liable.

12.2 The Contractor shall also defend, indemnify, and hold harmless the City, any jurisdiction or agency issuing permits for any work involved in the Project and their consultants and each of their officers, officials, employees, representatives, directors, and agents from and against all losses, expenses, damages (including damages to the Work itself), attorney's fees and other costs including costs of defense, which any of them may incur with respect to the failure, neglect, or refusal of Contractor to faithfully perform the Work and all of the Work and all of Contractor's obligations under the Contract. Such costs, expenses, and damages shall include all costs, including attorney's fees, incurred by the indemnified parties in any lawsuit to which they are a party.

12.3 The indemnified party shall have the right to approve the legal counsel selected by the Contractor or the insurer of the liability, which approval shall not be unreasonably withheld.

12.4 The defense, indemnification, hold harmless provisions, and City's Liability Insurance set forth herein shall survive any termination of the Contract.

ARTICLE 13 - DISPUTE RESOLUTION

13.1 **Informal Dispute Resolution** The Parties to the Contract agree that time is of the essence in relation to the performance of the Contract and completion of the Project. Therefore, any and all disputes in relation to the Contract will initially be referred to the City Project Manager and Contractor Project Manager, as applicable to the dispute, for immediate resolution. If, after good faith efforts to reach a resolution, none is reached, any party to the dispute may submit the dispute to the Dispute Resolution Representative ("DRR") process set forth below, which is intended to be an expedited process.

13.2 Dispute Resolution Representative (DRR) Process

13.2.1 The Parties under the Contract agree that all claims and disputes in relation to the Project that are not resolved in the ordinary course of the Project ("Claim or Claims") shall, as a prerequisite to any mediation or litigation of the Claim, first be submitted for resolution between the designated Dispute Resolution Representatives of the Parties as set forth herein (the "DRR Process").

13.2.2 The DRR Process shall be initiated through the service of a DRR Notice as set forth below:

(xi) For claims by the Contractor, the DRR Process shall be initiated by the party asserting the claim serving written notice on the City setting forth in detail:

(a) the basis for the claim;

(b) the effect of the Claim upon the construction of, and/or Project Schedule for, the Project;

(c) the specific relief requested, the amount thereof, and how such was calculated;

(d) the parties involved in the Claim and how they are involved;

(e) the specific contract provisions in the Contract Documents (including, if applicable, drawings and specifications) which apply; and

(f) efforts made to date to resolve the Claim.

(xii) For claims by the City, the DRR process will be initiated by the City providing written notice to the other parties of the basis and amount of its claim, the parties involved in the Claim, and how they are involved, the provisions in the Contract Documents that apply, and the relief requested.

(xiii) The DRR Notice shall be hand-delivered and e-mailed to the other parties' designated Dispute Resolution Representatives.

13.2.3 The other parties shall respond in writing to the DRR Notice ("DRR Response") within ten (10) calendar days of receipt of the DRR Notice, setting forth those items set forth in the DRR Notice that they agree with, dispute, and/or have questions concerning. The DRR Response shall be hand-delivered and e-mailed to the other parties' Dispute Resolution Representatives.

13.2.4 The designated Dispute Resolution Representatives for the parties to the claim shall then meet as soon as possible and, in any event, within twenty (20) calendar Days of submission of the DRR Notice (regardless of whether a DRR Response has been submitted by all parties involved in the dispute), at a mutually agreed upon time and place, to attempt to resolve the Claim based upon the DRR Notice and DRR Response.

13.2.5 At any time after the first meeting required above, either party may terminate the DRR Process by written notice to the other party.

13.2.6 The parties may agree, in writing, to extend or modify the time limits or other provisions of the DRR process in relation to a specific pending Claim.

13.2.7 Unless otherwise designated in a written notice to the other parties, the Project Manager, the representatives of the Contractor, and of the Design Professional shall act as the parties' designated Dispute Resolution Representatives.

13.2.8 If a resolution of the Claim is reached, that resolution shall be set forth in writing. The resolution shall be signed by the Parties' designated Dispute Resolution Representatives. If the resolution involves a change in any Contract Documents, the Contract Price, the Project Schedule, or any other change requiring a written Change Order or Amendment, the parties shall execute an appropriate written Change Order or Amendment pursuant to the terms of the Contract Documents.

13.3 Mediation

13.3.1 Unless extended by written agreement of the parties involved in the dispute, any Claim not resolved through the DRR process set forth above within five (5) calendar days after the meeting required under 13.2.4 or after the DRR is terminated pursuant to 13.2.5 above, whichever is earlier, shall be submitted to mediation as a condition precedent to litigation by either party.

13.3.2 The mediation shall be commenced by written demand upon the other party for mediation. If the parties cannot agree upon a mediator within ten (10) calendar Days of the written demand, either

DRAFT

party may make a request to the Civil Presiding Judge of the Yuma County Superior Court to appoint a mediator. The mediation shall occur within forty (40) calendar Days of the written demand for mediation unless the parties agree, in writing, to a longer period of time.

13.3.3 The qualifications for the mediator shall be that the mediator be:

(xiv) an experienced mediator, arbitrator, or litigator of construction disputes; and

(xv) having engaged a significant portion of their time involving and/or resolving construction disputes for at least the past five (5) years.

13.3.4 Each party shall provide to the other party and the mediator all of the information and documentation required under 13.2.2 and 13.2.3 above, together with any additional information and documentation that the party believes relevant. In addition, the parties shall exchange and provide to the mediator such additional memoranda, information, and/or documentation, as the mediator may request, and in the form and at such times as the mediator may direct.

13.3.5 The parties shall share the mediator's fee and any filing fees equally. The mediation shall be held in San Luis, Arizona unless another location is mutually agreed upon. Agreements reached in mediation shall be specifically enforceable in any court having jurisdiction over the dispute.

13.4 Arbitration

13.4.1 If the mediation is unsuccessful, the parties shall submit the dispute and/or claim to be resolved through binding arbitration conducted according to the then-current Construction Industry Arbitration Rules of the American Arbitration Association ("AAA") but not administrated or conducted by the AAA. The arbitration shall be held in Yuma County, Arizona, utilizing a single arbitrator selected by the parties unless the parties agree, in writing, to an alternative arbitration procedure.

13.4.2 If: (a) the parties cannot agree on a single arbitrator within two (2) weeks of the demand for arbitration; or (b) the parties at any time prior to the arbitrator being appointed or before the arbitrator has accepted the appointment, cannot agree upon any significant aspect of the arbitration, not already addressed herein, either party may submit the Claim directly to the AAA to select the arbitrator, and thereafter the arbitration shall be administered by the AAA.

13.4.3 The arbitrator shall be an attorney with at least fifteen (15) years of experience in construction-related practice and whose practice, for at least the last five (5) years, consists of at least 50% construction law.

13.4.4 At the request of either party, the arbitration may include as parties, through joinder, consolidation, or otherwise, additional persons or entities involved in the Project, involving claims and/or disputes with common issues and/or facts. The arbitrator shall promptly rule upon any request for joinder or consolidation.

13.4.5 In relation to claims in which the amount in controversy is less than $250,000, no discovery other than the exchange of documents, designation of witnesses, and detailed disclosure of claims and defenses (including specifically a detailed basis for calculating all claims) and no more than three (3) depositions and one (1) expert per issue per side, shall be allowed, subject to disclosure of such other information as approved by the arbitrator. Otherwise, discovery shall be allowed and/or limited as decided by the arbitrator.

DRAFT

13.4.6 The prevailing party in any arbitration or court proceeding under this Contract shall be entitled to an award of its attorneys' fees, costs, and expenses (including expert witness fees) incurred.

13.4.7 A demand for arbitration shall be made within the time limits specified in the Contract Documents as applicable, and in other cases within a reasonable time after the Claim has arisen, and in no event shall it be made after the date when the applicable statute of limitations would bar institution of legal or equitable proceedings based on such Claim.

13.4.8 The Parties agree to participate as a party, by joinder and/or consolidation, in any arbitration, litigation, or other dispute resolution involving as an issue, claim, or defense, any action, inaction, or service provided under this Contract or in relation to the Project or the Work, or any defect or deficiency in the Work.

13.4.9 The party filing a notice of demand for arbitration, or a counterclaim, must assert in the demand or counterclaim all Claims then known to that party on which arbitration is permitted to be demanded.

13.4.10 Any award by the arbitrator shall not include any consequential or punitive damages.

13.4.11 The award entered by the arbitrator shall be a reasoned award.

13.4.12 The award entered by the arbitrator shall be final, and judgment may be entered upon the award in the Arizona Superior Court.

ARTICLE 14 - MISCELLANEOUS PROVISIONS

14.1 **Assignment** Neither the Contractor nor the City shall, without the written consent of the other, assign, transfer, or sublet any portion of this Contract or part of the Work or the obligations required by the Contract Documents. Any such assignment will be void, will transfer no rights to the purported assignee, and would be a material breach of the Contract.

14.2 **Governing Law and Venue.** In the performance of the Contract, Contractor shall abide by and conform to any and all laws of the United States, State of Arizona, Yuma County, and the City, including but not limited to federal and state executive orders providing for equal opportunities, the Federal Occupational Safety and Health Act and any other federal, state, county, or local laws applicable to the Contract. This Contract shall be governed by and construed in accordance with the substantive and procedural laws of the State of Arizona, including choice of law and conflict of laws and principles. Exclusive jurisdiction and venue for any action brought to enforce or construe any provision of this Contract shall be proper in the Superior Court of Yuma County, Arizona. Both Parties consent to jurisdiction and venue in such court for such purposes. The Party prevailing in any such action or other proceeding to resolve a dispute shall be paid all reasonable costs, reasonable expert services fees, and reasonable attorney's fees by the other Party. In the event any judgment is secured by said prevailing Party, all such costs, expert fees, and attorney's fees shall be included in the judgment, such fees to be set by the court and not by jury.

14.3 **San Luis Business License** The Contractor shall obtain a San Luis Business License before commencing Work.

14.4 **Survival** All warranties, representations, and indemnifications by Contractor shall survive the completion or termination of this Contract.

14.5 **No Waiver** The failure of either Party to enforce any of the provisions of the Contract Documents or to require the performance of the other Party of any of the provisions under this Contract shall not be construed to be a waiver of such provisions, nor shall it affect the validity of the Contract Documents or any

DRAFT

part them, or the right of either Party to thereafter enforce each and every provision. Unless otherwise specifically agreed to in writing by both Parties, any consent to delay in the Contractor's performance of its obligation is applicable only to the particular transaction to which it relates and is not applicable to any other obligation or transaction.

14.6 Project Communications

14.6.1 All communications concerning the performance of the Work or the Project shall be provided to the designated Project Manager and Contractor's Representative set forth in Article 1 of the Contract.

14.6.2 Project communications may be exchanged by e-mail upon the written agreement of the Project Manager and Contractor Representative. However, e-mail communications are not binding upon the City. E-mail communications cannot change the terms of the Contract or the scope of work or effectuate any change that requires a written change order. The use of e-mails is for information only, and e-mails will have no legal or binding effect.

14.7 **Independent Contractor** The parties intend that this Contract will create an independent contractor relationship and not an employer-employee relationship. The City is interested only in the results to be achieved, and the conduct and control of the performance of the services contemplated under this Contract will be solely with the Contractor. Contractor's employees, agents, and Subcontractors shall not be considered to be employees or agents of the City for any purpose. They shall not be entitled to any of the benefits the City provides for its employees. The Contractor shall furnish at its own expense all materials and equipment necessary to carry out the terms of this Contract.

14.8 **No Partnership** Nothing in this Contract constitutes a partnership, joint venture or similar arrangement between the Parties. Neither Party is the principal or agent of the other.

14.9 **No Third-Party Beneficiaries** There are no third-party beneficiaries to this Contract and no person or entity, not a Party, shall have any right or cause of action under this Contract.

14.10 ***Force Majeure*** If the Contractor or the City or both are prevented or materially restricted from performing any of their obligations under this Contract by an event of *force majeure*, then the obligations of each Party shall be suspended or reduced to the extent made necessary by the event. As used in this section, "*force majeure*" means any act or cause not reasonably within the control of the Party whose ability to perform is impaired and which that Party could not have prevented by the exercise of reasonable diligence. *Force majeure* events include but are not limited to natural disasters, fire, flood, explosions, strikes (or labor disputes) over which the affected Party has no control, sabotage, riots, civil commotion, acts of civil or military authority, wars, public health emergencies, or material changes in applicable business laws (including but not limited to through statutes, regulations, executive orders, or. emergency declarations and proclamations).

14.11 **Notices** The notices under this Contract shall be validly given and fully received when in compliance with all of the following:

- In writing,
- Delivered or refused delivery,
- By personal delivery, or by major commercial delivery courier service which requires a signature of the recipient, or by registered or certified United States Postal Service mail, return receipt requested with the signature of the recipient, postage prepaid to the addresses in the first paragraph of this Contract.

DRAFT

14.11.1 Either Party may designate in writing and deliver notice of a different address in the same way as above. Any such change of address notice shall be delivered at least ten (10) Days before the date on which the change is to become effective.

14.11.2 Notices for delivery to the City shall be to the attention of the Public Works Director, copies to the City Manager, City Attorney, and City Clerk.

14.12 **Severability** If any terms, parts, or provisions of this Contract are for any reason invalid or unenforceable, the remaining terms, parts, or provisions are nevertheless valid and enforceable.

14.13 **Entire Agreement** This Contract (including the incorporated documents) contains the entire agreement between the Parties, and no oral or written statement, promise, or inducement made by either Party or its agents not contained or specifically referred to in this Contract is valid or binding. All modifications to this Contract must be in writing, signed, and endorsed by the Parties.

14.14 **Headings** The headings of this Contract are solely for the convenience of the Parties and shall not be used to explain, modify, simplify, or aid in the interpretation of the provisions of this Contract.

14.15 **Further Acts** Each of the Parties shall execute and deliver all such documents and perform all such acts as reasonably necessary, from time to time, to carry out the matters contemplated by this Contract.

Clean Water Revolving Fund
Drinking Water Revolving Fund

CONTRACT PACKET for Governmental Borrowers

This packet lists required contract conditions that apply to all Clean Water and Drinking Water Revolving Fund projects and contains forms that must be used in the procurement process. Please review this packet prior to bidding.

PLEASE NOTE

- **This packet, in its entirety, must be physically included in all bidding, solicitation and contract documents.**
- Use of American Iron and Steel (AIS) applies to this project.:
    - AIS includes the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials.
- Federal Davis-Bacon prevailing wages apply to this project.
    - Payment of the wages, fringe benefits and overtime rates is required.
    - The appropriate Federal (Davis-Bacon) Prevailing Wage Decision must be physically incorporated into the bidding and contract documents.
    - The construction category of Heavy (excluding dam construction) should typically be applied to all projects funded by WIFA. If you believe that a different category of wages, such as Building, should be applied to your project or portions of your project, please contact WIFA in advance.
    - Weekly certified payroll submittal is required under the Federal Davis-Bacon laws.
- Compliance with the Civil Rights Act and Equal Employment Opportunity is required.
- Promotion of Small, Minority and Women-owned Businesses and participation in EPA's Disadvantaged Business Enterprise (DBE) Program is required.
- Prohibition on Certain Telecommunication and Video Surveillance Services or Equipment.

Water Infrastructure Finance Authority of Arizona
Clean Water Revolving Fund
Drinking Water Revolving Fund

Required Contract Conditions

This project is being financed in whole or in part by the Water Infrastructure Finance Authority of Arizona through the Clean Water or Drinking Water Revolving Fund. The loan recipient is required to comply with the following federal and state laws, rules and regulations and must ensure that their contractor(s) also comply(ies) with these regulations, laws and rules.

1. (i) Title VI of the Civil Rights Act of 1964 (Pub. L. 88-352, 42 U.S.C. Sec. 2000d), (ii) the Rehabilitation Act of 1973 (Pub. L. 93-1123, 87 Stat. 355, 29 U.S.C. Sec. 794), (iii) the Age Discrimination Act of 1975 (Pub. L. 94-135 Sec. 303, 89 Stat. 713, 728, 42 U.S.C. Sec. 6102), (iv) Section 13 of the Federal Water Pollution Control Act (Pub. L. 92-500, 33 U.S.C. Sec. 1251), and subsequent regulations, ensures access to facilities or programs regardless of race, color, national origin, sex, age or handicap.

2. Equal Employment Opportunity (Executive Order 11246, as amended by Executive Orders 11375 and 12086 and subsequent regulations). Prohibits employment discrimination on the basis of race, color, religion, sex or national origin. Inclusion of the seven clauses in Section 202 of Executive Order 11246 as amended by Executive Orders 11375 and 12086 are required in all project related contracts and subcontracts over $10,000.

3. (i) Promoting the use of Small, Minority, and Women-owned Businesses (Executive Orders 11625, 12138 and 12432), (ii) Small Businesses Reauthorization & Amendment Act of 1988 (Section 129 of Pub. L. 100-590), (iii) Department of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations Act, 1993 (Pub. L. 102-389, 42 U.S.C. Sec. 437d), and (iv) Title X of the Clean Air Acts Amendments of 1990 (Pub. L. 101-549, 42 U.S.C. Sec. 7601 note) ("EPA's 10% statute"). Encourages recipients to award construction, supply and professional service contracts to minority and women's business enterprises (MBE/WBE) and small businesses and requires recipients to utilize affirmative steps in procurement.

4. Participation by Disadvantaged Business Enterprises in Procurement under Environmental Protection Agency (EPA) Financial Assistance Agreements (40 C.F.R. Part 33).

5. Debarment and Suspension (Executive Order 12549). Prohibits entering into contracts or sub-contracts with individuals or businesses who are debarred or suspended. Borrowers are required to check the status of all contractors (construction and professional services) and must require contractors to check the status of subcontractors for contracts expected to be equal to or over $25,000 via this Internet address: https://www.sam.gov/SAM/.

DRAFT

6. E-Verify (A.R.S. § 41-4401). A governmental entity shall not award a contract to any contractor or subcontractor that fails to comply with A.R.S. § 23-214(A). Every government entity shall (i) ensure that every government entity contractor and subcontractor complies with the federal immigration laws and regulations that relate to their employees and A.R.S. § 23-214(A); (ii) require that every government entity contract include the required provisions listed under A.R.S. § 41-4401(A); and (iii) establish procedures to conduct random verification of the employment records of government entity contractors and subcontractors.

DRAFT

Water Infrastructure Finance Authority of Arizona
Clean Water Revolving Fund
Drinking Water Revolving Fund

Use of American Iron and Steel

Public Law 113-76, enacted January 17, 2014

SEC. 436. (a)(1) None of the funds made available by a State water pollution control revolving fund as authorized by title VI of the Federal Water Pollution Control Act (33 U.S.C. 1381 et seq.) or made available by a drinking water treatment revolving loan fund as authorized by section 1452 of the Safe Drinking Water Act (42 U.S.C. 300j–12) shall be used for a project for the construction, alteration, maintenance, or repair of a public water system or treatment works unless all of the iron and steel products used in the project are produced in the United States.

(2) In this section, the term ''iron and steel products'' means the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials.

(b) Subsection (a) shall not apply in any case or category of cases in which the Administrator of the Environmental Protection Agency (in this section referred to as the ''Administrator'') finds that—

(1) applying subsection (a) would be inconsistent with the public interest;

(2) iron and steel products are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality; or

(3) inclusion of iron and steel products produced in the United States will increase the cost of the overall project by more than 25 percent.

(c) If the Administrator receives a request for a waiver under this section, the Administrator shall make available to the public on an informal basis a copy of the request and information available to the Administrator concerning the request, and shall allow for informal public input on the request for at least 15 days prior to making a finding based on the request. The Administrator shall make the request and accompanying information available by electronic means, including on the official public Internet Web site of the Environmental Protection Agency.

(d) This section shall be applied in a manner consistent with United States obligations under international agreements.

(e) The Administrator may retain up to 0.25 percent of the funds appropriated in this Act for the Clean and Drinking Water State Revolving Funds (CWSRF and DWSRF) for carrying out the provisions described in subsection (a)(1) for management and oversight of the requirements of this section.

(f) This section does not apply with respect to a project if a State agency approves the engineering plans and specifications for the project, in that agency's capacity to approve such plans and specifications prior to a project requesting bids, prior to the date of the enactment of this Act.

DRAFT

Highlights from EPA Guidance on Use of American Iron and Steel

Complete document available at http://water.epa.gov/grants_funding/aisrequirement.cfm

What is considered American Iron and Steel?

What is an iron or steel product?

For purposes of the CWSRF and DWSRF projects that must comply with the AIS requirement, an iron or steel product is one of the following made primarily of iron or steel that is permanently incorporated into the public water system or treatment works: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials.

What is a 'construction material' for purposes of the AIS requirement?

Construction materials are those articles, materials, or supplies made primarily of iron and steel, that are permanently incorporated into the project, not including mechanical and/or electrical components, equipment and systems. Some of these products may overlap with what is also considered "structural steel". This includes, but is not limited to, the following products: wire rod, bar, angles, concrete reinforcing bar, wire, wire cloth, wire rope and cables, tubing, framing, joists, trusses, fasteners (i.e., nuts and bolts), welding rods, decking, grating, railings, stairs, access ramps, fire escapes, ladders, wall panels, dome structures, roofing, ductwork, surface drains, cable hanging systems, manhole steps, fencing and fence tubing, guardrails, doors, and stationary screens.

What is NOT considered American Iron and Steel?

What is NOT considered a 'construction material' for purposes of the AIS requirement?

Mechanical and electrical components, equipment and systems are NOT considered construction materials. Mechanical equipment is typically that which has motorized parts and/or is powered by a motor. Electrical equipment is typically any machine powered by electricity and includes components that are part of the electrical distribution system. The following examples (including their appurtenances necessary for their intended use and operation) are NOT considered construction materials: pumps, motors, gear reducers, drives (including variable frequency drives (VFDs)), electric/pneumatic/manual accessories used to operate valves (such as electric valve actuators), mixers, gates, motorized screens (such as traveling screens), blowers/aeration equipment, compressors, meters, sensors, controls and switches, supervisory control and data acquisition (SCADA), membrane bioreactor systems, membrane filtration systems, filters, clarifiers and clarifier mechanisms, rakes, grinders, disinfection systems, presses (including belt presses), conveyors, cranes, HVAC (excluding ductwork), water heaters, heat exchangers, generators, cabinetry and housings (such as electrical boxes/enclosures), lighting fixtures, electrical conduit, emergency life systems, metal office furniture, shelving, laboratory equipment, analytical instrumentation, and dewatering equipment.

Drinking Water Revolving Fund

Use of American Iron and Steel - De Minimis Waiver

Every water infrastructure project involves the use of thousands of miscellaneous, generally low-cost components that are essential for, but incidental to, the construction and are incorporated into the physical structure of the project. For many of these incidental components, the country of manufacture and the availability of alternatives is not always readily or reasonably identifiable prior to procurement in the normal course of business; for other incidental components, the county of manufacture may be known but the miscellaneous character in conjunction with the low cost, individually and (in total) as typically procured in bulk, mark them as properly incidental.

Examples of incidental components could include small washers, screws, fasteners (i.e., nuts and bolts), miscellaneous wire, corner bead, ancillary tube, etc.

Example of items that are clearly not incidental include significant process fittings (i.e., tees, elbows, flanges, and brackets), distribution system fittings and valves, force main valves, pipes for sewer collection and/or water distribution, treatment and storage tanks, large structural support structures, etc.

EPA has established a public interest waiver for de minimis incidental components. This action permits the use of products when they occur in de minimis incidental components of such projects.

- Funds used for such de minimis incidental components cumulatively may comprise no more than a total of 5% of the total cost of the materials used in and incorporated into a project.
- The cost of an individual item may not exceed 1% of the total cost of the materials used in and incorporated into a project.

Assistance recipients who wish to use this waiver should in consultation with their contractors determine the items to be covered by this waiver and must retain relevant documentation (i.e., invoices) as to those items in their project files.

Davis-Bacon Contract Conditions (Federal Prevailing Wages)

PLEASE NOTE: Federal Davis-Bacon prevailing wages apply to this project. Payment of the wages, fringe benefits and overtime rates is required.

The "subrecipient" referred to throughout the Davis-Bacon contract conditions is the WIFA Borrower.

"WIFA" is the Water Infrastructure Finance Authority of Arizona, State Capitalization Grant recipient, recipient, or the Authority.

DRAFT

Wage Rate Requirements
(Also referred to as Attachment 6)

Preamble

With respect to the Clean Water and Drinking Water State Revolving Funds, EPA provides capitalization grants to each State which in turn provides subgrants or loans to eligible entities within the State. Although EPA and the State remain responsible for ensuring subrecipients' compliance with the wage rate requirements set forth herein, those subrecipients shall have the primary responsibility to maintain payroll records as described in Section 3(3)(ii)(A) below and for compliance as described in Section 5.

Requirements for Subrecipients That Are Governmental Entities:
The following terms and conditions specify how recipients will assist EPA in meeting its Davis-Bacon (DB) responsibilities with respect to State recipients and subrecipients that are governmental entities. If a subrecipient has questions regarding when DB applies, obtaining the correct DB wage determinations, DB provisions, or compliance monitoring, it may contact the State recipient. If a State recipient needs guidance, the recipient will contact EPA. The recipient or subrecipient may also obtain additional guidance from DOL's web site at https://www.dol.gov/agencies/whd/government-contracts/construction.

1. Applicability of the Davis-Bacon prevailing wage requirements.
Davis-Bacon prevailing wage requirements apply to the construction, alteration, and repair of treatment works carried out in whole or in part with assistance made available by a Clean Water Revolving Fund and to any construction project carried out in whole or in part by assistance made available by a Drinking Water Revolving Fund. If a subrecipient encounters a unique situation at a site that presents uncertainties regarding DB applicability, the subrecipient must discuss the situation with the State recipient before authorizing work on that site.

2. Obtaining Wage Determinations.

(a) Subrecipients shall obtain the wage determination for the locality in which a covered activity subject to DB will take place prior to issuing requests for bids, proposals, quotes or other methods for soliciting contracts (solicitation) for activities subject to DB. These wage determinations shall be incorporated into solicitations and any subsequent contracts. Prime contracts must contain a provision requiring that subcontractors follow the wage determination incorporated into the prime contract.

(i) While the solicitation remains open, the subrecipient shall monitor https://beta.sam.gov/ weekly to ensure that the wage determination contained in the solicitation remains current. The subrecipient shall amend the solicitation if DOL issues a modification more than 10 days prior to the closing date (i.e. bid opening) for the solicitation. If DOL modifies or supersedes the applicable wage determination 10 days or less prior to the closing date, the subrecipient may request a finding from the State recipient that there is not a reasonable time to notify interested contractors of the modification of the wage determination. The State recipient will provide a report of its findings to the subrecipient.

(ii) If the subrecipient does not award the contract within 90 days of the closure of the solicitation, any modifications or supersedes DOL makes to the wage

determination contained in the solicitation shall be effective unless the State recipient, at the request of the subrecipient, obtains an extension of the 90 day period from DOL pursuant to 29 CFR 1.6(c)(3)(iv). The subrecipient shall monitor https://beta.sam.gov/ on a weekly basis if it does not award the contract within 90 days of closure of the solicitation to ensure that wage determinations contained in the solicitation remain current.

(b) If the subrecipient carries out activity subject to DB by issuing a task order, work assignment or similar instrument to an existing contractor (ordering instrument) rather than by publishing a solicitation, the subrecipient shall insert the appropriate DOL wage determination from https://beta.sam.gov/ into the ordering instrument. Typically, the appropriate wage determination would be the one in effect on the date the task order, work assignment or similar instrument is awarded.

(c) Subrecipients shall review all subcontracts subject to DB entered into by prime contractors to verify that the prime contractor has required its subcontractors to include the applicable wage determinations.

(d) As provided in 29 CFR 1.6(f), DOL may issue a revised wage determination applicable to a subrecipient's contract after the award of a contract or the issuance of an ordering instrument if DOL determines that the subrecipient has failed to incorporate a wage determination or has used a wage determination that clearly does not apply to the contract or ordering instrument. If this occurs, the subrecipient shall either terminate the contract or ordering instrument and issue a revised solicitation or ordering instrument or incorporate DOL's wage determination retroactive to the beginning of the contract or ordering instrument by change order. The subrecipient's contractor must be compensated for any increases in wages resulting from the use of DOL's revised wage determination.

3. Contract and Subcontract provisions.

The recipient shall insure that the subrecipient(s) shall insert in full in any contract in excess of $2,000 which is entered into for the actual construction, alteration and/or repair, including painting and decorating, of a treatment work under the CWSRF or a construction project under the DWSRF financed in whole or in part from Federal funds or in accordance with guarantees of a Federal agency or financed from funds obtained by pledge of any contract of a Federal agency to make a loan, grant or annual contribution (except where a different meaning is expressly indicated), and which is subject to the labor standards provisions of any of the acts listed in 29 CFR § 5.1, the following clauses:

(1) Minimum wages.

(i) All laborers and mechanics employed or working upon the site of the work will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics.

DRAFT

Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of paragraph (a)(1)(iv) of this section; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in 29 CFR § 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: provided that the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under paragraph (a)(1)(ii) of this section) and the Davis-Bacon poster (WH-1321) shall be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can be easily seen by the workers.

Subrecipients may obtain wage determinations from the U.S. Department of Labor's web site, https://beta.sam.gov/.

(ii)(A) The subrecipient(s), on behalf of EPA, shall require that any class of laborers or mechanics, including helpers, which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The State award official shall approve a request for an additional classification and wage rate and fringe benefits therefore only when the following criteria have been met:

(1) The work to be performed by the classification requested is not performed by a classification in the wage determination; and

(2) The classification is utilized in the area by the construction industry; and

(3) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

(B) If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the subrecipient(s) agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), documentation of the action taken and the request, including the local wage determination shall be sent by the subrecipient(s) to the State award official. The State award official will transmit the request, to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, DC 20210 and to the EPA DB Regional Coordinator concurrently. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification request within 30 days of receipt and so advise the State award official or will notify the State award official within the 30-day period that additional time is necessary.

(C) In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives, and the subrecipient(s) do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the award official shall refer the request and the local wage determination, including the views of

DRAFT

all interested parties and the recommendation of the State award official, to the Administrator for determination. The request shall be sent to the EPA DB Regional Coordinator concurrently. The Administrator, or an authorized representative, will issue a determination within 30 days of receipt of the request and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(D) The wage rate (including fringe benefits where appropriate) determined pursuant to paragraphs (a)(1)(ii)(B) or (C) of this section, shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.

(iii) Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.

(iv) If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, provided that the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.

(2) Withholding. The subrecipient(s), shall upon written request of the EPA Award Official or an authorized representative of the Department of Labor, withhold or cause to be withheld from the contractor under this contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by the contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the site of the work, all or part of the wages required by the contract, the recipient may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

(3) Payrolls and basic records.

(i) Payrolls and basic records relating thereto shall be maintained by the contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work. Such records shall contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in section 1(b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in section 1(b)(2)(B) of the Davis-Bacon Act, the

DRAFT

contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs.

(ii)(A) The contractor shall submit weekly, for each week in which any contract work is performed, a copy of all payrolls to the subrecipient, that is, the entity that receives the sub-grant or loan from the State capitalization grant recipient. Such documentation shall be available on request of the State recipient or EPA. As to each payroll copy received, the subrecipient shall provide written confirmation in a form satisfactory to the State indicating whether or not the project is in compliance with the requirements of 29 CFR 5.5(a)(1) based on the most recent payroll copies for the specified week. The payrolls shall set out accurately and completely all of the information required to be maintained under 29 CFR 5.5(a)(3)(i), except that full social security numbers and home addresses shall not be included on the weekly payrolls. Instead the payrolls shall only need to include an individually identifying number for each employee (e.g., the last four digits of the employee's social security number). The required weekly payroll information may be submitted in any form desired. Optional Form WH-347 is available for this purpose from the Wage and Hour Division Web site at www.dol.gov/whd/forms/wh347instr.htm or its successor site. The prime contractor is responsible for the submission of copies of payrolls by all subcontractors. Contractors and subcontractors shall maintain the full social security number and current address of each covered worker, and shall provide them upon request to the subrecipient(s) for transmission to the State or EPA if requested by EPA, the State, the contractor, or the Wage and Hour Division of the Department of Labor for purposes of an investigation or audit of compliance with prevailing wage requirements. It is not a violation of this section for a prime contractor to require a subcontractor to provide addresses and social security numbers to the prime contractor for its own records, without weekly submission to the subrecipient(s).

(B) Each payroll submitted shall be accompanied by a "Statement of Compliance," signed by the contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

(1) That the payroll for the payroll period contains the information required to be provided under § 5.5 (a)(3)(ii) of Regulations, 29 CFR part 5, the appropriate information is being maintained under § 5.5 (a)(3)(i) of Regulations, 29 CFR part 5, and that such information is correct and complete;

(2) That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations, 29 CFR part 3;

(3) That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of work performed, as specified in the applicable wage determination incorporated into the contract.

DRAFT

(C) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by paragraph (a)(3)(ii)(B) of this section.

(D) The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under section 1001 of title 18 and section 231 of title 31 of the United States Code.

(iii) The contractor or subcontractor shall make the records required under paragraph (a)(3)(i) of this section available for inspection, copying, or transcription by authorized representatives of the State, EPA or the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, the Federal agency or State may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

(4) Apprentices and trainees -

(i) Apprentices. Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship Training, Employer and Labor Services, or with a State Apprenticeship Agency recognized by the Office, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Office of Apprenticeship Training, Employer and Labor Services or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice. The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in the contractor's or subcontractor's registered program shall be observed. Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the Apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination. In the event the Office of Apprenticeship Training, Employer and Labor Services, or a State Apprenticeship Agency

DRAFT

recognized by the Office, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(ii) Trainees. Except as provided in 29 CFR 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration. The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(iii) Equal employment opportunity. The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR part 30.

(5) Compliance with Copeland Act requirements. The contractor shall comply with the requirements of 29 CFR part 3, which are incorporated by reference in this contract.

(6) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses contained in 29 CFR 5.5(a)(1) through (10) and such other clauses as the EPA determines may by appropriate, and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in 29 CFR 5.5.

(7) Contract termination; debarment. A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.

(8) Compliance with Davis-Bacon and Related Act requirements. All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR parts 1, 3, and 5 are herein incorporated by reference in this contract.

DRAFT

(9) Disputes concerning labor standards. Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and subrecipient(s), the State recipient, EPA, the U.S. Department of Labor, or the employees or their representatives.

(10) Certification of eligibility.

(i) By entering into this contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

(ii) No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

(iii) The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 U.S.C. 1001.

4. Contract Provision for Contracts in Excess of $100,000.

(a) Contract Work Hours and Safety Standards Act. The subrecipient shall insert the following clauses set forth in paragraphs (a)(1), (2), (3), and (4) of this section in full in any contract in an amount in excess of $100,000 and subject to the overtime provisions of the Contract Work Hours and Safety Standards Act. These clauses shall be inserted in addition to the clauses required by Item 3 above or 29 CFR 4.6. As used in this paragraph, the terms laborers and mechanics include watchmen and guards.

(1) Overtime requirements. No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such work to work in excess of 40 hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of 40 hours in such workweek.

(2) Violation; liability for unpaid wages; liquidated damages. In the event of any violation of the clause set forth in paragraph (a)(1) of this section the contractor and any subcontractor responsible therefore shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in paragraph (a)(1) of this section, in the sum of $10 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of 40 hours without payment of the overtime wages required by the clause set forth in paragraph (a)(1) of this section.

DRAFT

(3) Withholding for unpaid wages and liquidated damages. The subrecipient**,** upon written request of the EPA Award Official or an authorized representative of the Department of Labor, shall withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in paragraph (b)(2) of this section.

(4) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses set forth in paragraph (a)(1) through (4) of this section and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in paragraphs (a)(1) through (4) of this section.

(b) In addition to the clauses contained in Item 3 above, in any contract subject only to the Contract Work Hours and Safety Standards Act and not to any of the other statutes cited in 29 CFR 5.1, the subrecipient shall insert a clause requiring that the contractor or subcontractor shall maintain payrolls and basic payroll records during the course of the work and shall preserve them for a period of three years from the completion of the contract for all laborers and mechanics, including guards and watchmen, working on the contract. Such records shall contain the name and address of each such employee, social security number, correct classifications, hourly rates of wages paid, daily and weekly number of hours worked, deductions made, and actual wages paid. Further, the subrecipient shall insert in any such contract a clause providing that the records to be maintained under this paragraph shall be made available by the contractor or subcontractor for inspection, copying, or transcription by authorized representatives of the recipient and the Department of Labor, and the contractor or subcontractor will permit such representatives to interview employees during working hours on the job.

5. Compliance Verification

(a) The subrecipient shall periodically interview a sufficient number of employees entitled to DB prevailing wages (covered employees) to verify that contractors or subcontractors are paying the appropriate wage rates. As provided in 29 CFR 5.6(a)(6), all interviews must be conducted in confidence. The subrecipient must use WIFA's interview form, Department of Labor's Standard Form 1445, or equivalent documentation to memorialize the interviews. WIFA's interview form and instructions are included with this packet.

(b) The subrecipient shall establish and follow an interview schedule based on its assessment of the risks of noncompliance with DB posed by contractors or subcontractors and the duration of the contract or subcontract. Subrecipients must conduct more frequent interviews if the initial interviews or other information indicated that there is a risk that the contractor or subcontractor is not complying with DB. Subrecipients shall immediately conduct interviews in response to an alleged violation of the prevailing wage requirements. All interviews shall be conducted in confidence.

(c) The subrecipient shall periodically conduct spot checks of a representative sample of weekly payroll data to verify that contractors or subcontractors are paying the appropriate

DRAFT

wage rates. The subrecipient shall establish and follow a spot check schedule based on its assessment of the risks of noncompliance with DB posed by contractors or subcontractors and the duration of the contract or subcontract. At a minimum, if practicable, the subrecipient should spot check payroll data within two weeks of each contractor or subcontractor's submission of its initial payroll data and two weeks prior to the completion date the contract or subcontract. Subrecipients must conduct more frequent spot checks if the initial spot check or other information indicates that there is a risk that the contractor or subcontractor is not complying with DB. In addition, during the examinations the subrecipient shall verify evidence of fringe benefit plans and payments thereunder by contractors and subcontractors who claim credit for fringe benefit contributions.

(d) The subrecipient shall periodically review contractors and subcontractors use of apprentices and trainees to verify registration and certification with respect to apprenticeship and training programs approved by either the U.S Department of Labor or a state, as appropriate, and that contractors and subcontractors are not using disproportionate numbers of laborers, trainees and apprentices. These reviews shall be conducted in accordance with the schedules for spot checks and interviews described in Item 5(b) and (c) above.

(e) Subrecipients must immediately report potential violations of the DB prevailing wage requirements to the EPA DB contact listed below and to the appropriate DOL Wage and Hour District Office listed at www.dol.gov/whd.

Equal Employment

Inclusion of these seven clauses (excerpt from Executive Order No. 11246, Section 202 as amended by Executive Order 11375 and 12086) is required in all CWRF and DWRF project related contracts and subcontracts over $10,000:

During the performance of this contract, the contractor agrees as follows:

(1) The contractor will not discriminate against any employee or applicant for employment because of race, color, religion, sex or national origin. The contractor will take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their race, color, religion, sex, or national origin. Such action shall include, but not be limited to the following: employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the contracting officer setting forth the provisions of this nondiscrimination clause.

(2) The contractor will, in all solicitations or advertisements for employees placed by or on behalf of the contractor, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, or national origin.

(3) The contractor will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding, a notice, to be provided by the agency contracting officer, advising the labor union or worker's representative of the contractor's commitments under Section 202 of Executive Order No. 11246 of September 24, 1965, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

(4) The contractor will comply with all provisions of Executive Order No. 11246 of Sept. 24, 1965, and all of the rules, regulations, and relevant orders of the Secretary of Labor.

(5) The contractor will furnish all information and reports required by Executive Order No. 11246 of Sept. 24, 1965, and by the rules, regulations and orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records, and accounts by the contracting agency and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders.

(6) In the event of the contractor's noncompliance with the nondiscrimination clauses of this contract or with any of such rules, regulations, or orders, this contract may be cancelled, terminated or suspended in whole or in part and the contractor may be declared ineligible for further Government contracts in accordance with procedures authorized in

DRAFT

Executive Order No. 11246 of Sept. 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order No. 11246 of Sept. 24, 1965, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.

(7) The contractor will include the provisions of paragraphs (1) through (7) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to Section 204 of Executive Order No. 11246 of Sept. 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. The contractor will take such action with respect to any subcontract or purchase order as may be directed by the Secretary of Labor as a means of enforcing such provisions including sanctions for noncompliance: provided, however, that in the event the contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction, the contractor may request the United States to enter into such litigation to protect the interests of the United States.

Disadvantaged Business Enterprises (DBE)

Good Faith Efforts

Borrowers and their prime contractors must follow, document, and maintain documentation of their good faith efforts as listed below to ensure that Certified Disadvantaged Business Enterprises* (DBEs) have the opportunity to participate in the project by increasing DBE awareness of procurement efforts and outreach.

1. Ensure DBEs are made aware of contracting opportunities to the fullest extent practicable through outreach and recruitment activities; including placing DBEs on solicitation lists and soliciting them whenever they are potential sources.
2. Make information on forthcoming opportunities available to DBEs and arrange time frames for contracts and establish delivery schedules, where the requirements permit, in a way that encourages and facilitates participation by DBEs in the competitive process. This includes, whenever possible, posting solicitation for bids or proposals for a minimum of 30 calendar days before the bid or proposal closing date.
3. Consider in the contracting process whether firms competing for large contracts could be subcontracted with DBEs. This will include dividing total requirements when economically feasible into smaller tasks or quantities to permit maximum participation by DBEs in the competitive process.
4. Encourage contracting with a consortium of DBEs when a contract is too large for one of these firms to handle individually.
5. Use the services and assistance of the Small Business Administration and the Minority Business Development Agency of the U. S. Department of Commerce.
6. If the prime contractor awards subcontracts, require the prime contractor to take the steps in numbers 1 through 5 above.

Required Contract Conditions

These conditions must be included in all procurement contracts entered into by the Borrower for all DWRF and CWRF projects:

1. The prime contractor must pay its subcontractor for satisfactory performance no more than 30 days from the prime contractor's receipt of payment from the owner.
2. The prime contractor must notify the owner in writing prior to the termination of any Disadvantaged Business Enterprise subcontractor for convenience by the prime contractor.
3. If a Disadvantaged Business Enterprise contractor fails to complete work under the subcontract for any reason, the prime contractor must employ the six good faith efforts if soliciting a replacement contractor.
4. The prime contractor must continue to employ the six good faith efforts even if the prime contractor has achieved its fair share objectives.

DRAFT

5. A Borrower must ensure that each procurement contract it awards contains the following terms and conditions:

> The contractor shall not discriminate on the basis of race, color, national origin or sex in the performance of this contract. The contractor shall carry out applicable requirements of 40 CFR Part 33 in the award and administration of contracts awarded under EPA financial assistance agreements. Failure by the contractor to carry out these requirements is a material breach of this contract which may result in the termination of this contract or other legally available remedies.

** A DBE is a Disadvantaged, Minority, or Woman Business Enterprise that has been certified by an entity from which EPA accepts certifications as described in 40 CFR 33.204-33.205 or certified by EPA. EPA accepts certifications from entities that meet or exceed EPA certification standards as described in 40 CFR 33.202.*

*** More information about DBE requirements can be found at https://www.epa.gov/grants/frequently-asked-questions-disadvantaged-business-enterprises*

Prohibition on Certain Telecommunication and Video Surveillance Equipment

Public Law 115-232, enacted August 13, 2020

WIFA borrowers must comply with regulations at 2 CFR 200.216, *Prohibition on certain telecommunication and video surveillance services or equipment*, implementing section 889 of Public Law 115-232. The regulation prohibits the use of Federal funds to procure (enter into, extend, or renew contracts) or obtain equipment, systems, or services that use "covered telecommunications equipment or services" identified in the regulation as a substantial or essential component of any system, or as critical technology as part of any system. Prohibitions extend to the use of Federal funds by recipients and subrecipients to enter into a contract with an entity that "uses any equipment, system, or service that uses covered telecommunications equipment or services" as a substantial or essential component of any system, or as critical technology as part of any system. Certain equipment, systems, or services, including equipment, systems, or services produced or provided by entities subject to the prohibition are recorded in the System for Award Management exclusion list (*https://sam.gov/SAM/*).

As described in section 889 of Public Law 115-232, covered telecommunications equipment or services includes:

- **Telecommunications equipment produced by Huawei Technologies Company or ZTE Corporation (or any subsidiary or affiliate of such entities).**
- For the purpose of public safety, security of government facilities, physical security surveillance of critical infrastructure, and other security purposes, **video surveillance and telecommunications equipment produced by Hytera Communications Corporation, Hangzhou Hikvision Digital Technology Company, or Dahua Technology Company (or any subsidiary or affiliate of such entities).**
- Telecommunications or video surveillance services provided by such entities or using such equipment.
- Telecommunications or video surveillance equipment or services produced or provided by an entity that the Secretary of Defense, in consultation with the Director of the National Intelligence or the Director of the Federal Bureau of Investigation, reasonably believes to be an entity owned or controlled by, or otherwise connected to, the government of a covered foreign country.

There is no exhaustive list of components and services that fall under the prohibition. Borrowers and contractors should be particularly mindful of project components with internet or cellular connections. For example, automatic meter reading (AMR) technology and advanced metering infrastructure (AMI), instrumentation control systems (e.g. process control systems, distributed control systems and programmable logic controls), and security cameras and other electronic security measures. Items included in the prohibition are not eligible costs, and WIFA cannot reimburse borrowers for these costs.

WIFA Project Number:	Project County:

Work Classification	Basic Hourly Rate	Fringe Benefits	Total Hourly Wage Rate

Additional Classifications Needed (DOL Form SF-1444)

Work Classification	Basic Hourly Rate	Fringe Benefits	Total Hourly Wage Rate	Date of WIFA Submission to DOL	Date of DOL Approval

DRAFT

SF 1444 Instructions
Request for Additional Classification and Wage Rate Form

Attached is a copy of the federal standard form 1444, Request for Authorization of Additional Classification and Wage Rate. This form must be submitted when a wage classification is not listed on the applicable wage decision. The classification and wage rate submitted on the form should bear a reasonable likeness to similar skill classifications listed in the federal wage determination.

The prime contractor is responsible for the completion and submission of this form. The following are the procedures for the completion and submission of the form:

1.	Check "Construction Contract" in the upper right-hand corner.
Box 2.	Insert the following information: **Water Infrastructure Finance Authority of Arizona** **(WIFA) 100 N. 7th Ave., Ste. 130** **Phoenix, AZ 85007**
Box 3.	Prime contractor's name.
Box 4.	Date the prime contractor submitted the form to WIFA.
Box 5.	Contract number.
Box 6.	Date the bid was opened, if applicable.
Box 7.	Date the contract was awarded.
Box 8.	Actual date the contractor will be starting or started work.
Box 9.	(This box is not applicable.)
Box 10.	List all subcontractors that will utilize the labor classification listed in box 13a. If none, enter "N/A."
Box 11.	Project title and a brief description of the project.
Box 12.	Include both the city and county, as well as Arizona.
Box 13.	Federal "General Decision Number" (e.g. AZ00009) and the date.
Box 13a.	List all classifications not covered by the federal wage determination, which are utilized by either the prime or the subcontractor(s).
Box13b.	The wage rate should bear a reasonable likeness to the category classification wage rates (equipment operators, laborers, truck drivers, etc.) listed in the federal wage determination.
Box 13c.	The fringe rate should bear a reasonable likeness to the category classification fringe rates (equipment operators, laborers, truck drivers, etc.) listed in the federal wage determination.
Box 14.	If there is a subcontractor listed on line 10, its representative signs on this line.
Box 15.	The prime contractor's representative must sign on this line.
Box 16.	If the contractor has a specific employee who will be performing the labor classification(s) listed in box 13a, or if the employees' have legal representation (union, etc.), they should sign this line and include their title. If no specific employee is identified to perform work under the listed classification(s), then write "unknown" in the box. The "Agree" or "Disagree" boxes are checked by anyone signing in boxes 14, 15, and 16.

The contractor will make a copy of the completed signed form and submit the original to WIFA (not required to be in quadruplicate).

WIFA will complete the section below the heavy line TO BE COMPLETED BY CONTRACTING OFFICER and submit it to DOL and EPA. Typically DOL responds in 30 days. WIFA will send the borrower a copy of the approved wage classification.

EMPLOYEE RIGHTS

UNDER THE DAVIS-BACON ACT

FOR LABORERS AND MECHANICS EMPLOYED ON FEDERAL OR FEDERALLY ASSISTED CONSTRUCTION PROJECTS

DRAFT

PREVAILING WAGES

You must be paid not less than the wage rate listed in the Davis-Bacon Wage Decision posted with this Notice for the work you perform.

OVERTIME

You must be paid not less than one and one-half times your basic rate of pay for all hours worked over 40 in a work week. There are few exceptions.

ENFORCEMENT

Contract payments can be withheld to ensure workers receive wages and overtime pay due, and liquidated damages may apply if overtime pay requirements are not met. Davis-Bacon contract clauses allow contract termination and debarment of contractors from future federal contracts for up to three years. A contractor who falsifies certified payroll records or induces wage kickbacks may be subject to civil or criminal prosecution, fines and/or imprisonment.

APPRENTICES

Apprentice rates apply only to apprentices properly registered under approved Federal or State apprenticeship programs.

PROPER PAY

If you do not receive proper pay, or require further information on the applicable wages, contact the Contracting Officer listed below:

Water Infrastructure Finance Authority of Arizona
100 N. 7th Ave. Suite 130
Phoenix, AZ 85007

Tel: (602) 364-1310
Fax: (602) 364-1327

or contact the U.S. Department of Labor's Wage and Hour Division.

DERECHOS DEL EMPLEADO
BAJO LA LEY DAVIS-BACON

PARA OBREROS Y MECÁNICOS EMPLEADOS EN PROYECTOS DE CONSTRUCCIÓN FEDERAL O CON ASISTENCIA FEDERAL

SALARIOS PREVALECIENTES

No se le puede pagar menos de la tasa de pago indicada en la Decisión de Salarios Davis-Bacon fijada con este Aviso para el trabajo que Ud. desempeña.

SOBRETIEMPO

Se le ha de pagar no menos de tiempo y medio de su tasa básica de pago por todas las horas trabajadas en exceso de 40 en una semana laboral. Existen pocas excepciones.

CUMPLIMIENTO

Se pueden retener pagos por contratos para asegurarse que los obreros reciban los salarios y el pago de sobretiempo debidos, y se podría aplicar daños y perjuicios si no se cumple con las exigencias del pago de sobretiempo. Las cláusulas contractuales de Davis-Bacon permiten la terminación y exclusión de contratistas para efectuar futuros contratos federales hasta tres años. El contratista que falsifique los registros certificados de las nóminas de pago o induzca devoluciones de salarios puede ser sujeto a procesamiento civil o criminal, multas y/o encarcelamiento.

APRENDICES

Las tasas de aprendices sólo se aplican a aprendices correctamente inscritos bajo programas federales o estatales aprobados.

PAGO APROPIADO

Si Ud. no recibe el pago apropiado, o precisa de información adicional sobre los salarios aplicables, póngase en contacto con el Contratista Oficial que aparece abajo:

While completion of Form WH-347 is optional, it is mandatory for covered contractors and subcontractors performing work on Federally financed or assisted construction contracts to respond to the information collection contained in 29 C.F.R. §§ 3.3, 5.5(a). The Copeland Act (40 U.S.C. § 3145) contractors and subcontractors performing work on Federally financed or assisted construction contracts to "furnish weekly a statement with respect to the wages paid each employee during the preceding week." U.S. Department of Labor (DOL) regulations at 29 C.F.R. § 5.5(a)(3)(ii) require contractors to submit weekly a copy of all payrolls to the Federal agency contracting for or financing the construction project, accompanied by a signed "Statement of Compliance" indicating that the payrolls are correct and complete and that each laborer or mechanic has been paid not less than the proper Davis-Bacon prevailing wage rate for the work performed. DOL and federal contracting agencies receiving this information review the information to determine that employees have received legally required wages and fringe benefits.

Public Burden Statement

We estimate that is will take an average of 55 minutes to complete this collection, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. If you have any comments regarding these estimates or any other aspect of this collection, including suggestions for reducing this burden, send them to the Administrator, Wage and Hour Division, U.S. Department of Labor, Room S3502, 200 Constitution Avenue, N.W. Washington, D.C. 20210

WATER INFRASTRUCTURE FINANCE AUTHORITY OF ARIZONA

EMPLOYEE INTERVIEW FOR DAVIS-BACON LABOR STANDARDS INSTRUCTIONS

The Davis-Bacon Act requires interviews to determine if the contractor is complying with the Federal Davis-Bacon prevailing wages. Interviewers must use WIFA's interview form, Department of Labor's Standard Form 1445, or equivalent documentation. WIFA's form may be downloaded from WIFA's website: www.azwifa.gov/resources/contract-packet. See Section 5: Compliance Verification of the WIFA Contract Packet for the interview requirements.

Interviews should be conducted in the following manner:

Interviewer: Each borrower is required to conduct interviews. The interviewer must be someone unaffiliated with the contractors and on site regularly (i.e., project manager, or consultant, etc.).

Purpose: The purpose of the interview is to ensure that the work actually being done by construction workers and mechanics is consistent with the corresponding job titles and wages being reported on the certified payrolls. The payroll checker must compare the interviews to the payrolls to identify inconsistencies. Any inconsistencies must be addressed. Keep in mind that both the interview and the information on the interview form are considered confidential. Interviews should be conducted individually and in private. All employees on the work site should be available for an interview if requested by the interviewer; however, the employee's participation is voluntary.

Number of Interviews: A representative sample of interviews is required. The interviewer must interview at least one person from every contractor and subcontractor company on the job site.

Timing: Interviews should be done, at minimum, on two different occasions. One should be within the first two weeks after construction begins and whenever a new subcontractor begins work on the project. The second round should be done closer to substantial completion while workers are still on site. Additional interviews should be done when issues or discrepancies arise and should be targeted at the contractor in question.

Records: Interview forms should be kept by the borrower with the rest of the project records at least three years after the contract is completed. The interview forms have employee information that should be kept confidential from contractors generally, but the project folders must be available for inspection by WIFA, EPA, or Department of Labor upon request.

Item	**INTERVIEW**
2b. - 2c.	This information is required in case it is necessary to follow up with the employee.
3a.	The interviewer should make it clear to the employee that these items relate only to work on this project, not necessarily to other projects.
3b.	Employees should be encouraged (but not required) to produce pay stubs or pay envelopes which document the wages received.
5. - 6.	If the employee does not know where the wage rate decision and Davis-Bacon poster are posted, the interviewer should inform the person of the location(s) and encourage them to look at the documents.
8.	Many employees will not be familiar with the term "fringe benefits." The interviewer should explain to the employee that fringe can be paid as part of their hourly rate, or can be in the form of benefits such as vacation, medical, etc.
9a. -9c.	The interviewer should make it clear to the employee that these items relate only to work on this project, not necessarily to other projects.

DRAFT

11. - 13.	Be certain that the employee's responses are specific. The employee may not be familiar with the classifications used on the wage determination and thus may use a term which may not be found on the determination. The answers to questions 12 and 13 should elicit enough information to identify the appropriate wage classification. Confirm the presumed wage classification with the employee.

INTERVIEWER'S COMMENTS	
16.	This represents some of the most important information gathered while conducting on-site interviews. Be specific about the duties the employee was observed performing. It may be easiest to make these observations before the interview. Comments in this section should include whether observed duties and tools used were the same as those described by the employee during the interview.
19. - 20.	This refers to the wage decision and date as posted on the job site. This information should be consistent with the contract documents.

FOR USE BY PAYROLL CHECKER	
21. - 22.	The payroll checker can be the same person as the interviewer. If not, it should be someone familiar with the wage rate decision, labor standards provisions and the construction project. This part of the form is completed *after* receipt of the payroll reports covering the week during which the interview was conducted. It is important that the payroll reports are received in a timely manner so that the payroll checker can compare and verify the interview information and investigate discrepancies. Once the corresponding payroll reports are received, the information on the interview form must be compared to the payroll reports. Specifically, the payroll checker must check that: • the payroll report is consistent with the dates and hours the employee worked (Items 9a.-9c.). • the payroll report indicates that the employee's job classification is the same as that indicated by the employee in Items 11 - 13. • the payroll report indicates that the employee received the wages as s/he stated in Item 3a. • the payroll report indicates that the employee received the fringe benefits in the amount and as stated in Item 8. • the wages/fringes paid agree with the wage rate decision in the contract and any additional classification requests approved by DOL (SF1444). Any discrepancies noted between the interview form and payroll reports shall be reported in Item 22. <u>If discrepancies are noted, follow-up actions to resolve the discrepancies must be taken</u>. For example, if the payroll indicates that the employee worked a different number of hours than the employee indicated, the payroll checker must: a) contact the employee and ask for clarification; and b) request the contractor's actual time records. This should be done without revealing the identity of the employee, e.g. by asking for all employee records for one work week.

==========

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the

DRAFT

Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at https://www.dol.gov/agencies/whd/government-contracts.

Note: Executive Order 13658 generally applies to contracts subject to the Davis-Bacon Act that were awarded on or between January 1, 2015 and January 29, 2022, and that have not been renewed or extended on or after January 30, 2022. Executive Order 13658 does not apply to contracts subject only to the Davis-Bacon Related Acts regardless of when they were awarded. If a contract is subject to Executive Order 13658, the contractor must pay all covered workers at least $13.30 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in 2025. The applicable Executive Order minimum wage rate will be adjusted annually. Additional information on contractor requirements and worker protections under Executive Order 13658 is available at www.dol.gov/whd/govcontracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (iii)).

The body of each wage determination lists the classifications and wage rates that have been found to be prevailing for the type(s) of construction and geographic area covered by the wage determination. The classifications are listed in alphabetical order under rate identifiers indicating whether the particular rate is a union rate (current union negotiated rate), a survey rate, a weighted union average rate, a state adopted rate, or a supplemental classification rate.

DRAFT

Union Rate Identifiers

A four-letter identifier beginning with characters other than ""SU"", ""UAVG"", ?SA?, or ?SC? denotes that a union rate was prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2024. PLUM is an identifier of the union whose collectively bargained rate prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. The date, 07/01/2024 in the example, is the effective date of the most current negotiated rate.

Union prevailing wage rates are updated to reflect all changes over time that are reported to WHD in the rates in the collective bargaining agreement (CBA) governing the classification.

Union Average Rate Identifiers

The UAVG identifier indicates that no single rate prevailed for those classifications, but that 100% of the data reported for the classifications reflected union rates. EXAMPLE: UAVG-OH-0010 01/01/2024. UAVG indicates that the rate is a weighted union average rate. OH indicates the State of Ohio. The next number, 0010 in the example, is an internal number used in producing the wage determination. The date, 01/01/2024 in the example, indicates the date the wage determination was updated to reflect the most current union average rate.

A UAVG rate will be updated once a year, usually in January, to reflect a weighted average of the current rates in the collective bargaining agreements on which the rate is based.

Survey Rate Identifiers

The ""SU"" identifier indicates that either a single non-union rate prevailed (as defined in 29 CFR 1.2) for this classification in the survey or that the rate was derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As a weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SUFL2022-007 6/27/2024. SU indicates the rate is a single non-union prevailing rate or a weighted average of survey data for that classification. FL indicates the State of Florida. 2022 is the year of the survey on which these classifications and rates are based. The next number, 007 in the example, is an internal

DRAFT

number used in producing the wage determination. The date, 6/27/2024 in the example, indicates the survey completion date for the classifications and rates under that identifier.

?SU? wage rates typically remain in effect until a new survey is conducted. However, the Wage and Hour Division (WHD) has the discretion to update such rates under 29 CFR 1.6(c)(1).

State Adopted Rate Identifiers

The ""SA"" identifier indicates that the classifications and prevailing wage rates set by a state (or local) government were adopted under 29 C.F.R 1.3(g)-(h). Example: SAME2023-007 01/03/2024. SA reflects that the rates are state adopted. ME refers to the State of Maine. 2023 is the year during which the state completed the survey on which the listed classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. The date, 01/03/2024 in the example, reflects the date on which the classifications and rates under the ?SA? identifier took effect under state law in the state from which the rates were adopted.

WAGE DETERMINATION APPEALS PROCESS

1) Has there been an initial decision in the matter? This can be:

a) a survey underlying a wage determination
b) an existing published wage determination
c) an initial WHD letter setting forth a position on a wage determination matter
d) an initial conformance (additional classification and rate) determination

On survey related matters, initial contact, including requests for summaries of surveys, should be directed to the WHD Branch of Wage Surveys. Requests can be submitted via email to davisbaconinfo@dol.gov or by mail to:

Branch of Wage Surveys
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

Regarding any other wage determination matter such as conformance decisions, requests for initial decisions should be

DRAFT

directed to the WHD Branch of Construction Wage Determinations. Requests can be submitted via email to BCWD-Office@dol.gov or by mail to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2) If an initial decision has been issued, then any interested party (those affected by the action) that disagrees with the decision can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Requests for review and reconsideration can be submitted via email to dba.reconsideration@dol.gov or by mail to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210.

END OF GENERAL DECISION"

Bid Kit

City of San Luis

West WWTP 3.0 MGD MBR Upgrades

DRAFT

BID FORM

TO: City of San Luis, Arizona
1090 East Union Street
P.O. Box 1170
San Luis, Arizona 85349

BIDDER: **Filanc**
740 North Andreasen Drive
Escondido, CA 92029

Project Name: City of San Luis West WWTP 3.0 MGD MBR Upgrades

In compliance with the ADVERTISEMENT FOR BIDS:

Having examined the CONTRACT DOCUMENTS, site of work, and being familiar with the conditions to be met, hereby submits the following BID for furnishing the material, equipment, labor and everything necessary for the completion of the work listed and agrees to execute the CONTRACT DOCUMENTS and furnish the required CONTRACT AND LABOR AND MATERIAL SURETY BONDS and CERTIFICATES OF INSURANCE for the completion of said work, at the locations and for the prices set forth on the inside pages of this form;

Understands that construction of this PROJECT shall be in accordance with all applicable Maricopa Association of Governments (MAG) Uniform Standard Specifications and Details for Public Works Construction as adopted by the City of San Luis, the City of Yuma Construction Standard Detail Drawings – 2019 edition [details], the City of San Luis Supplemental to the MAG Uniform Standard Specifications and Details for Public Works Construction and the City of Yuma Construction Standard Detail Drawings, except as otherwise required by the PLANS, TECHNICAL SPECIFICATIONS and GENERAL CONDITIONS;

Understands that this BID for construction of this PROJECT shall be submitted with a proposal guarantee of cash, certified check, cashier's check or BID SURETY BOND for an amount not less than 10 percent of the amount bid;

Agrees that upon receipt of NOTICE OF AWARD, from the City of San Luis, Arizona, Bidder will execute the CONTRACT DOCUMENTS within ten (10) calendar days;

Understands that the work shall commence on day 1 of the Contract Time and be completed within **488 calendar days.**

Hereby acknowledges receipt of and agrees Bidder's PROPOSAL is based on the following Addenda listed by number and date issued):

Number	Date	Number	Date
Addendum #1	February 19, 2026		
Addendum #2	March 11, 2026		
Addendum #3	March 18, 2026		
Addendum #4	March 25, 2026		
Addendum #5	April 1, 2026		

(List any additional addenda on the back of this sheet)

And hereby submits the following BID SCHEDULE of units and quantities as a part of this BID KIT:

TOTAL BASE BID AMOUNT IN WORDS, forty one Million, Nine hundred Sixty three thousand, five hundred seventy eight

DRAFT

Bid Item 1 - Mobilization / Demobilization

Payment shall be made for mobilization and demobilization to and from the site, for bonds and insurance. CONTRACTOR shall provide all the necessary mobilization requirements for the proper construction activities, include providing all the necessary accommodations for personnel and equipment as describe in these Specifications.

Bid Item 2 – Earthworks for Grading, Cut, Fill, and Export

Payment shall be made for the work associated with earthworks grading, cut, fill, and export of any excess material. Fill shall include screening, placement, and compaction of native material to meet the requirements of the Contract Documents. Excess material shall be screened and exported to a dedicated site per the contract. Excess material shall be spread evenly within the dedicated site by the CONTRACTOR. Screened material greater than 4" shall be disposed by the CONTRACTOR offsite. Payment shall be based on actual quantity and the unit price shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 3 – Asphalt Pavement

Payment shall be made for asphalt road pavement as described in the Contract Documents. This includes the labor, equipment, material for the preparation and placement of the hot-mix asphalt, binder, base course, etc. where required. Quantities shown are estimated. Payment shall be based on actual quantity and the unit price shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 4 – Yard Piping

Payment shall be made for site work associated with the installation of the yard piping as described in the Contract Documents. The work shall include all pipes, fitting, and associated labor and materials required for the proper trenching, installation, and backfill of the pipes. This shall also include any potholing, pavement restoration, wire tracing and surveying of the required work. Measurement and payment shall be made for each type of process yard pipe based on linear feet of pipe installed and the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 5 – Headworks Upgrades

Payment shall be made for the furnish and mechanical installation of the Headworks and associated appurtenances as shown on the drawings, specified in the contract documents. The Headworks Equipment is a pre-purchased item by the City. This bid item is only to include items, components and equipment not supplied by the City. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 6 – FEB Conversion in SBR 4

Payment shall be made for the furnish and mechanical installation associated with the conversion of SBR 4 to the new Flow Equalization Basin (FEB) with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 7 – Secondary Process Conversion in SBR 3 and Digesters 3&4

Payment shall be made for the furnish and mechanical installation associated with the conversion of SBR 3 and Digesters 3 & 4 into the new Secondary Treatment Process with associated appurtenances as shown on the drawings, specified in the contract documents. The Secondary Process contains equipment that are pre-purchased by the City. This bid item is only to include items, components and equipment not supplied by the City. Payment

DRAFT

shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 8 – Installation of Feed Forward Pumps and Channel

Payment shall be made for the furnish and mechanical installation associated with the installation of the Feed Forward Pumps and Channel with associated appurtenances as shown on the drawings, specified in the contract documents. The Feed Forward Pumps System contains equipment that are pre-purchased by the City. This bid item is only to include items, components and equipment not supplied by the City. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 9 – MBR Conversion in SBRs 1 & 2 and Blower Gallery

Payment shall be made for the furnish and mechanical installation associated with the conversion of SBRs 1 & 2 into the new MBR Basins and construction of the Blower Gallery with associated appurtenances as shown on the drawings, specified in the contract documents. The MBR Process and Blowers contain equipment that are pre-purchased by the City. This bid item is only to include items, components and equipment not supplied by the City. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 10 – Chemical Building Upgrades

Payment shall be made for the furnish and mechanical installation associated with the upgrades to the chemical storage and metering within the existing Chemical Building along with associated appurtenances as shown on the drawings, specified in the contract documents. The chemical metering contains equipment that are pre-purchased by the City. This bid item is only to include items, components and equipment not supplied by the City. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 11 – Plant Drain Pump Station Upgrades

Payment shall be made for the furnish and mechanical installation associated with the Plant Drain Pump Station with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 12 – Sludge Dewatering

Payment shall be made for the furnish and mechanical installation associated with the installation of the Sludge Dewatering System along with associated appurtenances as shown on the drawings, specified in the contract documents. The Sludge Dewatering System contains equipment that are pre-purchased by the City. This bid item is only to include items, components and equipment not supplied by the City. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 13 – Odor Control

Payment shall be made for the furnish and mechanical installation associated with the Odor Control System with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

DRAFT

Bid Item 14 – Plant Process Water Booster Station

Payment shall be made for the furnish and mechanical installation associated with the Plant Process Water Booster Station with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 15 - Installation of 24" PVC C900 Reuse Distribution Pipeline , Valves, Fittings and Appurtenances

Payment shall be made for the civil and mechanical work associated with the installation of the new 24" Reuse Distribution Pipeline as described in the Contract Documents. The work shall include all pipes, fitting, and associated labor and materials required for the proper trenching, installation, and backfill of the pipes. This shall also include all incidentals including potholing, pavement restoration, wire tracing, surveying, etc. of the required work. Quantities shown are estimated. Payment shall be based on actual quantity and the unit price shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 16 – Headwork Fabric Canopy

Payment shall be made for the furnish and mechanical installation associated with the Headworks Fabric Canopy with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 17 – MBR Crane and Structure

Payment shall be made for the furnish and mechanical installation associated with the MBR Crane and Structure with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 18 – MBR FRP Covers

Payment shall be made for the furnish and mechanical installation associated with the MBR FRP Covers with associated appurtenances as shown on the drawings, specified in the contract documents. Quantities shown are estimated. Payment shall be based on actual quantity and the unit price shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 19 – Handrails and Guardrails

Payment shall be made for the furnish and mechanical installation associated with handrails and guardrails along with associated appurtenances as shown on the drawings, specified in the contract documents. Quantities shown are estimated. Payment shall be based on actual quantity and the unit price shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 20 – Walkway Grating

Payment shall be made for the furnish and mechanical installation associated with walkway grating (both open metal grating and closed FRP grating) along with associated appurtenances as shown on the drawings, specified in the contract documents. Quantities shown are estimated. Payment shall be based on actual quantity and the unit price shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

DRAFT

Bid Item 21 – Metal Stairways

Payment shall be made for the furnish and mechanical installation associated with metal stairways along with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 22 – Structural Canopies

Payment shall be made for the furnish and mechanical installation associated with Structural Canopies along with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 23 – Transition SBR 4 to Intensification Process

Payment shall be made for the furnish and mechanical installation associated with the intensification of SBR 4 using World Water Works Migrate MBC media along with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on monthly lease agreement with World Water Works and on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 24 – Electrical

Payment shall be made for the furnish and electrical installation associated with the all electrical components along with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 25 – Concrete and Concrete Structures

Payment shall be made for the furnish and structural installation associated with all concrete components and concrete structures along with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 26 – Coating and Painting

Payment shall be made for the furnish and application associated with the all coating and painting along with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

Bid Item 27 – Aerobic Digesters 1 & 2 Upgrades

Payment shall be made for the furnish and mechanical installation associated with the upgrades of Digesters 1 & 2 with associated appurtenances as shown on the drawings, specified in the contract documents. Payment shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.

BID SURETY BOND

Project Name: City of San Luis West WWTP 3.0 MGD MBR

For: City of San Luis, Arizona

KNOW ALL MEN BY THESE PRESENTS:

That we, Filanc, as Principal, (hereinafter called the Principal),

and the Travelers Casualty and Surety Company of America, a corporation duly organized under the laws of the State of Connecticut ~~California~~ and duly licensed and possessing a certificate of authority to transact surety business in the State of Arizona, as Surety, (hereinafter called the Surety), are held and firmly bound unto City of San Luis, Arizona [hereinafter called City] as Obligee, in the sum of ten percent (10%) of the total amount of the bid of Principal, submitted by him to the City for the work described below, for the payment of which sum, well and truly to be made, the said Principal and the said Surety, bind ourselves, our heirs, executors, and administrators, successors, and assigns, jointly and severally, firmly by these presents, and in conformance with Arizona Revised Statutes [ARS].

WHEREAS, the said Principal is herewith submitting its PROPOSAL for the City of San Luis West WWTP 3.0 MGD MBR

NOW, THEREFORE, if the City shall accept the PROPOSAL of the Principal and the Principal shall enter into a CONTRACT with the City in accordance with the terms of the PROPOSAL and give the Bonds and Certificates of Insurance as specified in the Standard Specifications with good and sufficient Surety for the faithful performance of the CONTRACT and for the prompt payment of labor and materials furnished in the prosecution of the CONTRACT, or in the event of the failure of the Principal to enter into the CONTRACT and give the Bonds and Certificates of Insurance, if the Principal pays to the City the difference not to exceed the penalty of the bond between the amount specified in the PROPOSAL and such larger amount for which the Obligee may in good faith contract with another party to perform the work covered by the PROPOSAL then this obligation is void. Otherwise it remains in full force and effect provided, however, that this bond is executed pursuant to the provisions of Section 34-201, ARS, and all liabilities on this bond shall be determined in accordance with the provisions of the section to the extent as if it were copied at length herein.

Signed and sealed this 9th day of April, 20 26.

Bryce Grissom, Senior Vice President

City of Hartford ss.

On this the **16th** day of **February, 2024**, before me personally appeared **Bryce Grissom**, who acknowledged himself to be the Senior Vice President of each of the Companies, and that he, as such, being authorized so to do, executed the foregoing instrument for the purposes therein contained by signing on behalf of said Companies by himself as a duly authorized officer.

IN WITNESS WHEREOF, I hereunto set my hand and official seal.

My Commission expires the **30th** day of **June, 2026**

ANNA P NOWIK NOTARY PUBLIC CONNECTICUT

_____
Anna P. Nowik, Notary Public

This Power of Attorney is granted under and by the authority of the following resolutions adopted by the Boards of Directors of each of the Companies, which resolutions are now in full force and effect, reading as follows:

RESOLVED, that the Chairman, the President, any Vice Chairman, any Executive Vice President, any Senior Vice President, any Vice President, any Second Vice President, the Treasurer, any Assistant Treasurer, the Corporate Secretary or any Assistant Secretary may appoint Attorneys-in-Fact and Agents to act for and on behalf of the Company and may give such appointee such authority as his or her certificate of authority may prescribe to sign with the Company's name and seal with the Company's seal bonds, recognizances, contracts of indemnity, and other writings obligatory in the nature of a bond, recognizance, or conditional undertaking, and any of said officers or the Board of Directors at any time may remove any such appointee and revoke the power given him or her; and it is

FURTHER RESOLVED, that the Chairman, the President, any Vice Chairman, any Executive Vice President, any Senior Vice President or any Vice President may delegate all or any part of the foregoing authority to one or more officers or employees of this Company, provided that each such delegation is in writing and a copy thereof is filed in the office of the Secretary; and it is

FURTHER RESOLVED, that any bond, recognizance, contract of indemnity, or writing obligatory in the nature of a bond, recognizance, or conditional undertaking shall be valid and binding upon the Company when (a) signed by the President, any Vice Chairman, any Executive Vice President, any Senior Vice President or any Vice President, any Second Vice President, the Treasurer, any Assistant Treasurer, the Corporate Secretary or any Assistant Secretary and duly attested and sealed with the Company's seal by a Secretary or Assistant Secretary; or (b) duly executed (under seal, if required) by one or more Attorneys-in-Fact and Agents pursuant to the power prescribed in his or her certificate or their certificates of authority or by one or more Company officers pursuant to a written delegation of authority; and it is

FURTHER RESOLVED, that the signature of each of the following officers: President, any Executive Vice President, any Senior Vice President, any Vice President, any Assistant Vice President, any Secretary, any Assistant Secretary, and the seal of the Company may be affixed by facsimile to any Power of Attorney or to any certificate relating thereto appointing Resident Vice Presidents, Resident Assistant Secretaries or Attorneys-in-Fact for purposes only of executing and attesting bonds and undertakings and other writings obligatory in the nature thereof, and any such Power of Attorney or certificate bearing such facsimile signature or facsimile seal shall be valid and binding upon the Company and any such power so executed and certified by such facsimile signature and facsimile seal shall be valid and binding on the Company in the future with respect to any bond or understanding to which it is attached.

I, **Kevin E. Hughes**, the undersigned, Assistant Secretary of each of the Companies, do hereby certify that the above and foregoing is a true and correct copy of the Power of Attorney executed by said Companies, which remains in full force and effect.

Dated this **9th** day of **April**, **2026**.

SECTION 00 7000 – SPECIAL CONDITIONS OF THE CONTRACT

PART 1 – GENERAL

1.01 CONTRACT DOCUMENTS

The Contract Documents which constitute the contract between the OWNER and the CONTRACTOR with regard to the subject matter as set forth in Section I of such contract ("Contract Agreement") and include the Contract Agreement, plans, drawings, and the technical specifications.

All terms and conditions established in the Contract Agreement shall supersede all general conditions of these specifications to be followed in the event of any conflict or discrepancies.

1.02 DEFINITIONS AND MEANINGS OF TERMS

Whenever in the Contract Documents the following terms or pronouns referring to them are used, the intent and meaning shall be interpreted as follows which shall be applicable to both the singular and plural thereof:

A. The Contract shall mean the Contract executed by the OWNER and the CONTRACTOR, of which these General Conditions form a part; the terms Contract and Agreement are synonymous.

B. The term OWNER shall mean the respective party to the Contract; the OWNER being the City of San Luis. The term OWNER may also mean consultants, engineers, or other professionals contracted by the OWNER to review, supervise, or consult on the project.

C. The term County shall mean Yuma County, AZ.

D. The term CONTRACTOR shall mean the respective party to the contract.

E. The term SUBCONTRACTOR shall mean any individual, partnership or corporation having a direct contract with the CONTRACTOR to perform any part of the WORK.

F. The term ENGINEER shall mean Pacific Advanced Civil Engineering, Inc. (PACE).

G. Addenda shall mean written or graphic instruments issued prior to the execution of the Agreement which modify or interpret the Contract Documents, Final Design Plans, by additions, deletions, clarifications, or corrections.

H. Bonds shall mean Performance and Payment Bonds and other instruments of security, furnished by the CONTRACTOR and its surety in accordance with the Contract Documents.

I. Change Order shall mean a written order to the CONTRACTOR authorizing an addition, deletion, or revision in the WORK within the general scope of the Contract Documents, or authorizing an adjustment in the Contract price or Contract time.

J. Contractual Agreement shall mean the signed agreement between the OWNER and the CONTRACTOR for the WORK intended.

K. Contract Documents shall have the meaning described in Section 1.01 herein.

L. Contract price shall mean the total monies payable to the CONTRACTOR under the terms and conditions of the Contract Documents.

M. Contract time in days shall mean the number of consecutive calendar days stated in the Contract Documents for the completion of the WORK.

N. Drawings shall mean the part of the Contract Documents, which show the characteristics and scope of the WORK to be performed and which have been prepared or approved by the ENGINEER.

DRAFT

O. Notice to proceed shall mean written communication issued by the OWNER to the CONTRACTOR authorizing him to proceed with the WORK and establishing the date of commencement of the WORK.

P. Project shall mean the undertaking to be performed as provided in the Contract Documents.

Q. Submittals shall mean all drawings, diagrams, illustrations, brochures, schedules, and other data which are prepared by the CONTRACTOR, a SUBCONTRACTOR, manufacturer, supplier, or distributor, which illustrate how specific portions of the WORK shall be fabricated or installed; the terms shop drawings and submittals are synonymous.

R. Specifications shall mean a part of the Contract Documents consisting of written descriptions of a technical nature of materials, equipment, construction systems, standards, and workmanship.

S. Substantial completion shall have the meaning defined in the Contract Agreement.

T. Suppliers shall mean any person, supplier or organization who supplies materials or equipment for the WORK, including that fabricated to a special design, but who does not perform labor at the site.

U. WORK shall mean all (1) obligations, responsibilities and duties undertaken by the CONTRACTOR in order to successfully construct, complete, and operate (for Startup Completion) the Project, including all labor, materials, equipment and other incidentals, and the furnishing thereof, (2) Design and Engineering Services, (3) Training Services, and (4) Initial Operations, pursuant to the Contract Documents.

V. Written notice shall mean any notice to any party of the Agreement relative to any part of this Agreement in writing and considered delivered and the service thereof completed, when posted by certified or registered mail to the said party at his last given address, or delivered in person to said party of his authorized representative on the WORK.

W. Engineering Supplemental Information (ESI) shall mean written communications issued by the ENGINEER to the CONTRACTOR providing the CONTRACTOR with additional clarifications of the Contract Documents that the ENGINEER deem necessary to ensure the design intent.

X. Request for Information (RFI) shall mean written communications issued by the CONTRACTOR to the ENGINEER requesting additional information or clarification regarding a specific item in the Contract Documents.

1.03 CONTRACTOR'S RESPONSIBILITY

A. General: It is the responsibility of the CONTRACTOR and each SUBCONTRACTOR to visit the site and satisfy himself as to the various existing conditions affecting the WORK as required.

B. The CONTRACTOR shall coordinate the WORK of all crafts, trades, and SUBCONTRACTORS engaged in the WORK, and he shall have final responsibility in regard to the Schedule, workmanship, and completeness of each and all parts of the WORK.

C. All crafts, trades and SUBCONTRACTORS shall cooperate with each other and with others, as they may be involved in the installation of WORK, which adjoins, incorporates, precedes, or follows the WORK of another. It shall be the CONTRACTOR's responsibility to point out areas of cooperation prior to execution of SUBCONTRACTORS Agreements and the assignment of the parts of the WORK. Each craft, trade, and SUBCONTRACTOR shall be responsible to the CONTRACTOR for furnishing embedded items, giving directions for doing all cutting and fitting, making all provisions for accommodating the

DRAFT

WORK, and for protecting, patching, repairing, and cleaning as required to satisfactorily perform the WORK.

D. The CONTRACTOR shall be responsible for supervising all cutting, digging and other action of his SUBCONTRACTORS and workers. Where such action impairs the safety or function of any structure or component of the Project as determined by the ENGINEER, the CONTRACTOR shall make such repairs, alterations, and additions as will bring said structure or component back to its original design condition at no additional cost to the OWNER.

E. The CONTRACTOR is expected to be familiar with the General Requirements and all Sections of the detailed Specifications for all other trades and to study all Drawings applicable to his WORK to the end that complete coordination between the trades will be affected. CONTRACTOR shall submit the Request for Information (RFI) to the ENGINEER if conflicts exist within the Contract Documents.

F. Underground Utilities: The information shown on the drawings was obtained from drawings furnished by the OWNER, and surveys furnished to the OWNER. The CONTRACTOR shall make such investigation as deemed necessary to be satisfied as to the actual location, size, type of material, buried depth, and other factors relating to these services.

1.04 HOURS OF WORK

A. The hour of WORK shall be as defined in the Contract Documents.

1.05 PERMITS, FEES, AND SALES TAX

A. The CONTRACTOR shall submit the required fees, drawings, and application for the applicable permits prior to commencement of WORK.

B. A summary of potential permits are as follows:
1. City of San Luis Building Permit
2. SWPPP – NOI, BMP Plan & Monitoring Plan (State)
3. Encroachment Permits (City.)
4. City of San Luis Business License

C. CONTRACTOR shall pay all sales tax applicable to the WORK.

1.06 PROTECTION OF WORK

A. CONTRACTOR shall provide all protection required to ensure that all WORK completed will not be harmed.

B. The CONTRACTOR may, at his option and expense, install any lawful security measures he deems necessary to protect his materials, equipment, or finished WORK. The type of security devices or quantity shall be the sole responsibility of the CONTRACTOR. The CONTRACTOR is to provide security and protect the project until the OWNER has occupied the space or the OWNER has accepted the space.

DRAFT

C. Protection:
   1. The CONTRACTOR shall be solely responsible for the protection of all materials and WORK.
   2. The CONTRACTOR shall include in his proposal the cost of any temporary partitions, sheathing, plastic covering, etc., as may be required to maintain affected areas. Remove all such temporary WORK at the proper time during the construction period and repair all damage related to same.
   3. The CONTRACTOR is solely responsible for the protection of the area in which WORK is being performed.
   4. Provide construction fencing as required in the Contract documents to secure the site.

1.07 PRIOR APPROVALS

A. If the CONTRACTOR wishes to use items of equipment and/or materials other than those identified in the drawings or specifications, a written request for approval shall be submitted to the ENGINEER prior to the confirmation of contract price. Any request submitted after this time are not under obligation to be accepted. Request from SUBCONTRACTORS will not be considered.

B. Proposed substitutions that have not received prior approval are undertaken at the CONTRACTOR's risk to be deemed equivalent during the construction submittal process.

C. Each request shall include all basic data and characteristics clearly legible. The specified item as well as the proposed item shall be formatted in such manner that a direct comparison can be readily made. ENGINEER shall not be required to perform research to accomplish the comparison. It is the bidder's responsibility to submit complete descriptive and technical information for the ENGINEER and OWNER to perform a complete and proper appraisal.
   a. For each equipment, the CONTRACTOR shall submit a Submittal Review Deposit, in the form of a certified bank check in the amount of $2,000 made payable to the OWNER. This deposit will be used for ENGINEER's review of substitute equipment. The ENGINEER's review time will be deducted at a rate of $170.00 per hour for reviewing substitution requests, regardless of whether the substitution is approved or rejected. The OWNER will return any unused funds to the petitioner within 30 days of the bid date.

D. If alternate manufacturers are accepted, the CONTRACTOR shall be responsible for any and all re-design or re-engineering required to accommodate alternate products. Wherever multiple acceptable products or manufacturers are listed in the Contract Documents, the first named product will constitute the design. Change order proposals that add cost to the project as the result of redesign requirements for alternate manufacturers, or as the result of alternate manufacturers that do not meet the requirements of the construction documents, will not be accepted.

1.08 FINAL DESIGN PLANS

A. The intent of the Final Design Plans is that the CONTRACTOR shall furnish all labor, materials, tools, equipment, and transportation necessary for the proper execution of the WORK in accordance with the Contract Documents and all incidental WORK necessary to complete the project in an acceptable manner, ready for use, occupancy, or operation by the OWNER.

B. The CONTRACTOR shall keep one set of the Final Design Plans on the site of the work. This set shall be kept current by the addition of all reviewed changes, addenda, and amendments thereto.

DRAFT

C. The Final Design Plans are intended to be explanatory to each other, but should any discrepancy appear or any misunderstanding arise as to the importance of anything contained in either, the CONTRACTOR shall obtain the necessary interpretation from the ENGINEER. Corrections of errors or omissions in the Final Design Plans may be made by the CONTRACTOR; when such corrections are necessary for the proper fulfillment of their intention. However, any changes or corrections to be performed after Notice to Proceed shall require the approval of both the ENGINEER and the CONTRACTOR.

D. All WORK or materials shown on the Plans and not mentioned in the Specifications, or any WORK specified and not shown on the Plans, shall be furnished, performed, and done by the CONTRACTOR as if same were both mentioned in the Specifications and shown on the Drawings. Conflicts or discrepancies within the plans and/or specifications and between the plans and specifications, the stricter interpretation shall apply unless approved by the ENGINEER of Record.

1.09 SUBMITTAL/SHOP DRAWINGS

A. See Section 01 3300 – Submittal Procedures

1.10 STANDARD SPECIFICATIONS

A. See Section 01 4219 – Reference Standards

1.11 SPECIFIC BRANDS, MAKERS OR MANUFACTURERS

A. Wherever in the Specifications one or more specific brands, makers or manufacturers are set out and qualified by the "or equal" clause, it is intended to denote the quality standard of the article desired, but unless otherwise noted does not restrict the CONTRACTOR to the specific brand, make or manufacturer.

1.12 "OR EQUAL" CLAUSE

A. Whenever the words "or approved equal," or "or equal," or "similar to," etc., appear in the Specifications, they shall be interpreted to mean an item of material or equipment that, in the opinion of the ENGINEER is similar to that named, suited to the same use, capable of performing the same function as that named, has a record of service equal to that named, and is equal in quality, capacity and/or efficiency to that named.

1.13 SAFETY

A. The CONTRACTOR shall take all necessary precautions and provide all necessary safeguards to prevent personal injury and property damage. The CONTRACTOR shall provide protection for all persons including but not limited to his employees and employees of other contractors or subcontractors; members of the public; and employees, agents, and representatives of the OWNER, and regulatory agencies that may be on or about the WORK. The CONTRACTOR shall provide protection for all public and private property including but not limited to structures, pipes, and utilities, above and below the ground.

B. The CONTRACTOR shall provide and maintain all necessary safety equipment such as fences, barriers, signs, lights, walkways, guards and fire prevention and fire-fighting equipment and shall take such other action as is required to fulfill his obligations under this Subsection and Contract documents.

C. The CONTRACTOR shall comply with all federal, state, and local laws, ordinances, rules and regulations and lawful orders of authorities having jurisdiction for the safety of persons and protection of property.

D. The CONTRACTOR shall designate a responsible member of his organization at the site whose duty shall be the prevention of accidents. This responsible person shall have the authority to take immediate action to correct unsafe or hazardous conditions and to enforce safety precautions and programs.

DRAFT

E. The CONTRACTOR shall submit a Construction Safety Plan as required by the Contract Documents.

1.14 MATERIALS REVIEW

A. Unless otherwise expressly provided on the Drawings or in any of the other Contract Documents, only new materials and equipment shall be incorporated in the WORK. All materials and equipment furnished by the CONTRACTOR to be incorporated in the WORK shall be subject to the review of the ENGINEER. No material shall be processed or fabricated for the WORK or delivered to the WORK site without prior concurrence of the ENGINEER.

B. Facilities and labor for the storage, handling, and inspection of all materials and equipment shall be the responsibility of the CONTRACTOR. Defective materials and equipment shall be identified to the ENGINEER and removed immediately from the site of the WORK.

C. If the ENGINEER so requires, either prior to or after commencement of the WORK, the CONTRACTOR shall submit samples of materials for such special tests, as the ENGINEER deems necessary to demonstrate that they conform to the Specifications.

1.15 FINAL CLEAN-UP

A. The WORK will not be considered as completed until all final clean-up has been done by the CONTRACTOR.

1.16 SEQUENCE OF CONSTRUCTION

A. See Section 01 1100 – Summary of Work.

1.17 SPECIAL TRAINING AND ACCESS REQUIREMENTS

A. Where required, the CONTRACTOR shall provide special training for employees and SUBCONTRACTORS working on the project within the limits of local jurisdiction or private entities.

PART 2 – PRODUCTS (Not Used)

PART 3 – EXECUTION (Not Used)

END OF SECTION

DRAFT

SECTION 01 1100 – SUMMARY OF WORK

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. The WORK to be performed under this Contract shall consist of furnishing parts, tools, equipment, materials, supplies and manufactured articles, and furnishing all labor, transportation, and services, including fuel, power, water, and essential communications, and performing all work or other operations required for the fulfillment of the Contract in strict accordance with the Contract Documents. The WORK shall require that all work, materials, and services not expressly indicated or called for in the Contract Documents, which may be necessary for the complete and proper construction of the WORK in good faith shall be provided.

B. The WORK will conform to 2016 City of San Luis Supplemental to the 2015 MAG Uniform Standard Specifications and Details for Public Works Construction; City of Yuma Construction Standard Detail Drawings; MAG Uniform Standard Specifications and Details for Public Works Construction; and the City of Yuma Construction Standard Detail Drawings – Edition 2019. The most stringent will govern.

1.02 WORK COVERED BY CONTRACT DOCUMENTS

A. The WORK of this Contract comprises construction, installation, and/or modifying the City of San Luis West Wastewater Treatment Plant (WWTP) and associated process. The modifications and improvements shall include, but are not limited to the following:

1. The work shall include civil, architectural, mechanical, structural, and electrical and control work shown in the construction documents.
2. All work on this project will be coordinated with the City's Engineering, Public Works, and the WWTP Operational staff;
3. Modifications and expansion of the City of San Luis West WWTP include increasing the treatment capacity from 1.5 MGD to 3.0 MGD by installing a Membrane Bioreactor (MBR) activated sludge treatment process. Major components of the WWTP 3 MGD MBR process upgrades include:
    - Site civil, including grading, trenching, shoring, drainage, and earthworks;
    - Site access and pavements;
    - Site yard piping and associated appurtenances;
    - All structural improvements, including process tanks, canopies, equipment slabs, access walkways, etc.;
    - Installation of new complete headworks system with 6mm fine screening, grit removal, and 2mm fine screening and associated equipment, controls, instrumentation and appurtenances;
    - Installation of headworks odor control system, piping, valves, and appurtenances;
    - Installation of the Intensification Process within SBR Basin 4 and provide all required intensification equipment and bypass line;
    - Conversion of Sequencing Batch Reactor (SBR) 4 to the new FEB;
    - Installation of new FEB pumps, process piping, valves, and appurtenances;
    - Conversion of the existing SBR 3 and digesters into MBR Secondary Process trains along with all the required structural modifications, equipment, process piping, controls and appurtenances;
    - Conversion of the existing SBRs 1 & 2 into the MBR Basins, along with installation of MBR basins and MBR Equipment. This include all the required

DRAFT

structural modifications, equipment, process piping, controls, and appurtenances;

- Process modification to the existing effluent pump station;
- Process modification to the chemical storage and cleaning in-place (CIP) chemical injection;
- Process modification to the existing aerobic digesters;
- Construction of new sludge dewatering system, associated equipment, controls, process piping, and appurtenances;
- Process pipe modification to the existing chlorination;
- Installation of a new onsite reuse pump station, process piping, controls, and appurtenances;
- Installation of new Reuse Pipeline within the WWTP site, including fitting, valves, and appurtenances;
- Modification and improvements to the existing plant drain lift station;
- Modification to the existing MCC and PLC;
- Installation of new electrical gears, panels, and appurtenances;
- Replacement and install electrical conductors/ wiring to existing and new equipment and process;
- Modification of the existing MCC building;
- Installation of new emergency generators;
- Construction of the new blower room and MBR galleries, including lighting, ventilation, and electrical;
- Installation of aeration blowers, process piping, valves, controls and appurtenances;
- Perform civil work for the construction of new Administration/Operations Building with all associated requirements. Construction of the new Administration/ Operation Building is under a separate contract and is not part of this scope;
- Providing all controls and instrumentation equipment with the exception of controls and instrumentation equipment provided by vendors;
- Install, wire, terminate and test all electrical and controls instrumentation equipment;
- Storm drain site work including curbs, piping, etc;
- Coordination of seeding process with operators for WWTP. This includes providing pump equipment and temporary piping to transfer seed sludge from SBR basins and for screening of the seed sludge;
- Provide all equipment and labor for all bypass work.
- Provide labor, equipment, pumps, piping, controls, etc. as required for draining and cleaning of the basins.
- Testing, commissioning, and start-up of the WWTP system and process equipment.

4. Sequencing of Construction

CONTRACTOR shall submit a formal shop drawing review submittal for the Sequence of Construction Schedule to the OWNER & ENGINEER for their approval prior to the start of construction. The submittal shall indicate proposed methods and operations of all WORK, provide a detailed sequence of construction, expect number of working days to complete each sequence, and the required shut-off of existing equipment with the expected number of working days. The sequence of construction shall allow for the CONTRACTOR to conduct the WORK while ensure uninterrupted

DRAFT

operation of the existing facility. The sequence of construction shall be updated weekly and presented at the weekly construction meeting.

The CONTRACTOR shall incorporate the World Water Works–developed Activated Sludge Intensification Process into the construction sequencing to increase the treatment capacity of existing SBR Tank No. 4 from 0.5 MGD to 1.4 MGD. This enhancement will allow the remaining SBR tanks and associated treatment processes to be taken out of service during construction. The CONTRACTOR shall coordinate with World Water Works and shall furnish and install all required equipment and piping necessary to implement the intensification process. The CONTRACTOR will furnish the required equipment for the intensification as indicated on the plan. City Operations staff shall be responsible for operation of the intensification process. The CONTRACTOR shall coordinate closely with City Operations staff to ensure a smooth and effective transition. A suggested Sequence of Construction for the intensification process is provided in the Contract Documents.

5. Process Control programming and integration shall be performed by the City's Instrumentation and Control INTEGRATOR (I&C INTEGRATOR). The CONTRACTOR shall work and coordinate closely with the I&C INTEGRATOR. The CONTRACTOR shall furnish all field instrumentation and controls as identified and listed in the applicable Sections of Division 40 – Process Integration. The CONTRACTOR shall be responsible for the installation of conduits, wires, loop-testing, and all required tags. The CONTRACTOR shall also be responsible for the installation of the instruments and landing all field wiring to the instruments. All Vendor-provided equipment and packages shall be pre-wired, programmed, and factory tested.
6. The work shall include all construction sequencing to maintain operation of the existing treatment capacity, including all by-pass pumping for temporary or standby conditions.

B. The WORK includes obtaining any permits related or required by the Contract.

1.03 WORK BY OTHERS

A. Where two (2) or more Contracts are being performed at one time on the same Site or adjacent land in such manner that work under one (1) Contract may interfere with work under another, the sequence and order of the WORK in either or both Contracts to the agreement of both contracting entities shall be determined. When the Site of one (1) Contract is the necessary or convenient means of access for performance of work under another, the privilege of access or other reasonable privilege to the CONTRACTOR so desiring may be granted, to the extent, amount, and in manner and at a time that shall be determined. Conduct its operations to cause a minimum of interference with the work of such other contractors, and shall cooperate fully with such contractors to allow continued safe access to their respective portions of the Site, as required to perform work under their respective contracts.

B. Interference with Work on Utilities: Cooperate fully with all utility forces or forces of other public or private agencies engaged in the relocation, altering, or otherwise rearranging of any facilities, which interfere with the progress of the WORK, and shall schedule the WORK to minimize interference with said relocation, altering or other rearranging of facilities. Any delays, reduction in work efficiency or hardships incurred shall be identified and resolved to the satisfaction of both parties.

DRAFT

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION (NOT USED)

END OF SECTION

DRAFT

SECTION 01 1400 – WORK RESTRICTIONS

PART 1 – GENERAL

1.01 LAND FOR WORK AND STORAGE

A. The OWNER will provide the lands upon which the work under this Contract is to be done or the necessary easements over said lands to include sufficient space for the proper execution of the work, together with right of access to same. The OWNER will provide the CONTRACTOR with information, which delineates and describes the lands owned and rights-of-way acquired. The OWNER shall provide land required for storage of construction materials and for any temporary construction facilities for the storage of equipment. The CONTRACTOR will furnish his own power and water supply unless otherwise specifically set out herein or in the contract documents.

B. CONTRACTOR shall designate and arrange for the use, a portion of the property adjacent to the WORK for its exclusive use during the term of the Contract as storage and shop area for its construction operations relative to this Contract.

C. Use of the Site shall be limited to its construction operations, including on-site storage of materials, on-site fabrication facilities and field offices.

D. All or part of the existing Site may be utilized during the entire period of construction for the conduct of normal operations. Cooperate and coordinate to facilitate operations and to minimize interference with the operations at the same time. In any event, access to the site during the period of construction shall be allowed.

E. All access to the site by the CONTRACTOR, SUBCONTRACTORS, workmen, material/equipment suppliers, etc., shall be via approved access locations as designated by the OWNER. All vehicular or equipment activity shall be strictly confined to the construction limits as indicated by OWNER.

F. Remove all temporary construction and temporary facilities at close of the job or when no longer needed.

1.02 WORK ON "PRIVATE PROPERTY"

A. Private property is defined as property other than that belonging to the OWNER. Highway and railroad rights-of-way, public parks, school yards and other such properties shall be considered "private properties" for the purpose of this Paragraph.

B. In connection with water line, sewer line, gas line or similar work performed on "private property," the CONTRACTOR shall confine his equipment, the storage of materials and the operations of his workman to the limits indicated on the Drawings, or to lands and rights-of-way provided for the Project by the OWNER, and shall take every precaution to avoid damage to the buildings, grounds and facilities of the OWNER or private property.

C. Fences, walls, hedges, shrubs, etc., shall be carefully removed, preserved, and replaced when the construction is completed. Grassed areas, other than lawns, shall be graded, fertilized, and seeded when construction is completed and in accordance with the requirements of the Technical Specifications. Where ditches or excavations cross lawns, the sod shall be removed carefully and replaced when the backfilling has been completed. If sod is damaged or not handled properly, it shall be replaced with new sod equal to existing sod at the CONTRACTOR’s expense. When construction is completed, the facilities and grounds of the OWNER’s property shall be restored to as good or better condition than found as quickly as possible at the CONTRACTOR’s expense.

DRAFT

D. When directed by the OWNER, large trees or other facilities that cannot be preserved and replaced shall be removed by the CONTRACTOR. The OWNER will assume the responsibility for settling with the property OWNER for the loss of said trees or facilities. The CONTRACTOR shall be solely and entirely responsible for any damage to all other trees or facilities.

E. Foundations, adjacent to where an excavation is to be made below the bottom of the foundation, shall be supported by shoring, bracing or underpinning as long as the excavation shall remain open, or thereafter if required to insure the stability of the foundation and the CONTRACTOR shall be held strictly responsible for any damage to said foundations.

F. All excavated materials and equipment to be incorporated in the Work shall be placed so as not to injure any part of the Work or existing facilities and so that free access can be had at all times to all parts of the Work and to all public utility installations in the vicinity of the Work. Materials and equipment shall be kept neatly piled and compactly stored in such locations as will cause a minimum of inconvenience to public travel and adjoining OWNERs, tenants, and occupants.

1.03 EXISTING UTILITIES

A. Special precautions shall be taken by the CONTRACTOR to avoid damage to existing overhead and underground utilities owned and operated by the OWNER or by other public or private utility companies.

B. Before proceeding with the Work, the CONTRACTOR shall confer with all public or private companies, agencies or departments that own and operate utilities in the vicinity of the Construction WORK. The purpose of the conference, or conferences, shall be to notify said companies, agencies, or departments of the proposed construction schedule, verify the location of, and possible interference with, the existing utilities that are shown on the Drawings, arrange for necessary suspension of service, and arrange to locate and avoid interference with all utilities (including house and any building connections) that are not shown on the Drawings.

C. Where existing utilities or appurtenant structures, either underground or above-ground, are encountered, they shall not be displaced or molested unless necessary, and in such case shall be replaced in as good or better condition than found as quickly as possible. Relocation and/or replacement of all utilities and appurtenant structures to accommodate the construction work shall be at cost to the OWNER, unless such relocation and/or replacement is by statute or agreement the responsibility of the CONTRACTOR.

1.04 TRAFFIC CONTROL

A. Traffic Control Plan: Where work occurs on public streets, CONTRACTOR shall develop and a submit a Traffic Control Plan for the protection of traffic in public or private streets and ways, provide, place, and maintain all necessary barricades, traffic cones, warning signs, lights, and other safety devices.

1. Traffic Control Plan shall conform to County and ADOT requirements. Traffic control plans shall be approved by the OWNER and the governing agencies prior to construction commencement.

DRAFT

2. Take all necessary precautions for the protection of the WORK and the safety of the public. Barricades and obstructions shall be illuminated at night and all lights shall be kept burning from sunset until sunrise. Station guards or flaggers may be required by the public authorities within their respective jurisdictions in order to conform to such special safety regulations relating to traffic control Signs, signals and barricades shall conform to the requirements Subpart G, Part 1926, of the OSHA Safety and Health Standards for Construction.

B. HIGHWAY LIMITATIONS

Make investigation of the condition of available public and private roads and of clearances, restrictions, bridge load limits, and other limitations affecting transportation and ingress and egress to the site of the WORK.

C. TEMPORARY CROSSINGS

General: Continuous, unobstructed, safe, and adequate pedestrian and vehicular access shall be provided. Vehicular access to residential driveways shall be maintained to the property line.

D. STREET USE

Nothing herein shall be construed to entitle any entity to the exclusive use of any public street, alleyway, or parking area during the performance of the WORK hereunder, and it shall so conduct its operations as not to interfere unnecessarily with the authorized work of utility companies or other agencies in such streets, alleyways, or parking areas. No streets shall be closed to the public without first obtaining permission from the proper governmental authority. Where excavation is being performed in primary streets or highways, one lane in each direction shall be kept open to traffic at all times unless otherwise indicated. Toe boards shall be provided to retain excavated material if required by the ENGINEER or the agency having jurisdiction over the street or highway. Fire hydrants on or adjacent to the WORK shall be kept accessible to fire-fighting equipment at all times. Temporary provisions shall be made to assure the use of sidewalks and the proper functioning of all gutters, storm drain inlets and other drainage facilities.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION (NOT USED)

END OF SECTION

DRAFT

SECTION 01 2000 – PRICE AND PAYMENT PROCEDURES

PART 1 – GENERAL

1.01 SECTION INCLUDES

A. Requirements for preparation, format, and submittal of Schedule of Values.

B. Procedures for preparation and submittal of applications for progress payments.

C. Documentation of changes in Contract Price and Contract Time.

D. Change procedures.

E. Correlation of CONTRACTOR submittals based on changes.

F. Procedures for preparation and submittal of application for final payment.

1.02 SCHEDULE OF VALUES

A. Prepare Schedule of Values identifying costs of Major Items of WORK and other costs shown in sample included at end of this Section.

B. Divide the Work into following Major Items of WORK and subdivide the Major Items that will complement not only the scope of the work, but the progress of work as well.

C. Assign prices and unit price to Items of Work which aggregate the Contract Price. Separate all major items with unit prices. Total of Schedule of Values shall match total Contract Value.

D. Submit preliminary schedule of values for ENGINEER's approval.

E. Submit corrected schedule of values within 10 days upon receipt of reviewed Schedule of Values, but no later than 10 days prior to anticipated submittal of first Application for Payment.

1.03 APPLICATIONS FOR PROGRESS PAYMENTS

A. Submit template for progress payment for Engineer's approval.

B. Payment Period: Submit at intervals stipulated in the Agreement.

C. Electronic media printout including equivalent information will be considered in lieu of standard form specified; submit sample to ENGINEER for approval. Forms filled out by hand will not be accepted.

D. For each item, provide a column for listing each of the following:
   1. Item Number
   2. Description of WORK
   3. Scheduled Values
   4. Previous Applications
   5. Work in Place and Stored Materials under this Application
   6. Authorized Change Orders
   7. Total Completed and Stored to Date of Application
   8. Percentage of Completion
   9. Balance to Finish
   10. Retainage

E. Execute certification by signature of authorized officer.

F. Use data from approved Schedule of Values. Provide dollar value in each column for each line item for portion of work performed and for stored products.

G. List each authorized Change Order as a separate line item, listing Change Order number and dollar amount as for an original item of Work.

DRAFT

H. Submit three copies of each Application for Payment.

I. Include the following with the application:
   1. Transmittal letter as specified for Submittals in Section 01 3300 – Submittal Procedures.
   2. Construction progress schedule, revised and current as specified in applicable Sections of Division 01 – General Requirements.
   3. Current construction photographs specified in in applicable Sections of Division 01 – General Requirements.
   4. Partial release of liens from major SUBCONTRACTORS and vendors.
   5. Sustainable design documentation applicable to work for which application is being made.
   6. Project record documents as specified in in applicable Sections of Division 01 – General Requirements, for review by OWNER which will be returned to the CONTRACTOR.
   7. Affidavits attesting to off-site stored products.

J. When ENGINEER requires substantiating information, submit data justifying dollar amounts in question. Provide one copy of data with cover letter for each copy of submittal. Show application number and date, and line item by number and description.

1.04 MODIFICATION PROCEDURES

A. Submit name of the individual authorized to receive change documents and who will be responsible for informing others in CONTRACTOR's employ or SUBCONTRACTOR of changes to the Contract Documents.

B. For minor changes not involving an adjustment to the Contract Price or Contract Time, ENGINEER will issue instructions directly to CONTRACTOR.

C. For other required changes, ENGINEER will issue a document signed by OWNER instructing CONTRACTOR to proceed with the change, for subsequent inclusion in a Change Order.
   1. The document will describe the required changes and will designate method of determining any change in Contract Price or Contract Time.
   2. Promptly execute the change.

D. For changes for which advance pricing is desired, ENGINEER will issue a document that includes a detailed description of a proposed change with supplementary or revised drawings and specifications, a change in Contract Time for executing the change with a stipulation of any overtime work required and the period of time during which the requested price will be considered valid. CONTRACTOR shall prepare and submit a fixed price quotation within 14 days.

E. CONTRACTOR may propose a change by submitting a request for change to ENGINEER, describing the proposed change and its full effect on the Work, with a statement describing the reason for the change, and the effect on the Contract Price and Contract Time with full documentation and a statement describing the effect on WORK by separate or other contractors. Document any requested substitutions.

F. Computation of Change in Contract Amount: As specified in the Agreement and Conditions of the Contract.
   1. For change requested by ENGINEER for work falling under a fixed price contract, the amount will be based on CONTRACTOR 's price quotation.
   2. For change requested by CONTRACTOR, the amount will be based on the CONTRACTOR 's request for a Change Order as approved by ENGINEER.
   3. For pre-determined unit prices and quantities, the amount will be based on the fixed unit prices.

4. For change ordered by ENGINEER without a quotation from CONTRACTOR, the amount will be determined by ENGINEER based on the CONTRACTOR's substantiation of costs as specified for Time and Material work.

G. Substantiation of Costs: Provide full information required for evaluation.
   1. On request, provide following data:
      a. Quantities of products, labor, and equipment
      b. Taxes, insurance, and bonds
      c. Overhead and profit
      d. Justification for any change in Contract Time
      e. Credit for deletions from Contract, similarly documented
   2. Support each claim for additional costs with additional information:
      a. Origin and date of claim
      b. Dates and times that work was performed, and by whom
      c. Time records and wage rates paid
      d. Invoices and receipts for products, equipment, and subcontracts, similarly documented
   3. For Time and Material work, submit itemized account and supporting data after completion of change, within time limits indicated in the Conditions of the Contract.

H. Execution of Change Orders: ENGINEER will issue Change Orders for signatures of parties as provided in the Conditions of the Contract.

I. After execution of Change Order, promptly revise Schedule of Values and Application for Payment forms to record each authorized Change Order as a separate line item and adjust the Contract Price.

J. Promptly revise progress schedules to reflect any change in Contract Time, revise sub-schedules to adjust times for other items of work affected by the change, and resubmit.

K. Promptly enter changes in Project Record Documents.

1.05 APPLICATION FOR FINAL PAYMENT

A. Prepare Application for Final Payment as specified for progress payments, identifying total adjusted Contract Price, previous payments, and sum remaining due.

B. Application for Final Payment will not be considered until the following have been accomplished:
   1. All closeout procedures specified in in applicable Sections of Division 01 – General Requirements.

DRAFT

SCHEDULE OF VALUES (Sample Only – Modify per project needs)							
No.	**Item**	**Payment**	**Measurement**	Est. Qty	Unit	Unit $	Value
1	Mobilization/ Demobilization/Bond/ Insurance	Payment shall be made for mobilization and demobilization to and from the site, for bonds and insurance. CONTRACTOR shall provide all the necessary mobilization requirements for the proper construction activities, include providing all the necessary accommodations for personnel and equipment as describe in these Specification. Bonds and insurance requirements shall meet the requirements of the Contract Documents.	Based on Representative Opinion that the item is complete.	#	LS	$_____	$_____
2	Earthwork for Grading, cut, fill, and export	Payment shall be made for the work associated with earthworks grading, cut, fill, and export of any excess material. Fill shall include screening, placement, and compaction of native material to meet the requirements of the Contract Documents. Excess material shall be screened and exported to a dedicated site per the contract. Excess material shall be spread evenly within the dedicated site by the CONTRACTOR. Screened material greater than 4" shall be disposed by the CONTRACTOR offsite.	Measurement shall be based on a cubic yard basis of material placed or excavated as shown on the drawings, specified in the contract documents. Original delivery tickets shall be delivered to the Representative at the end of each day. The Representative will create a chronological spreadsheet of the quantities and reconcile them with the CONTRACTOR after each weekly progress meeting. Requests for payment shall only include quantities that have been reconciled.	#	CY	$_____	$_____

DRAFT

3	Yard Piping	Payment shall be made for site work associated with the installation of the yard piping as described in the Contract Documents. The work shall include all pipes, fitting, and associated labor and materials required for the proper trenching, installation, and backfill of the pipes. This shall also include any potholing, pavement restoration, wire tracing and surveying of the required work.	Measurement shall be made based on linear feet of pipe installed and the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.	#	LF	$_____	$_____
4	Asphalt Pavement	Payment shall be made for asphalt road pavement as described in the Contract Documents. This includes the preparation and place of the hot-mix asphalt, binder, and base course where required.	Measurement shall be based on a cubic yard basis of material placed or excavated as shown on the drawings, specified in the contract documents. Original delivery tickets shall be delivered to the Representative at the end of each day. The Representative will create a chronological spreadsheet of the quantities and reconcile them with the CONTRACTOR after each weekly progress meeting. Requests for payment shall only include quantities that have been reconciled.	#	CY or Ton	$_____	$_____
5	Headworks	Payment shall be made for the work associated with the installation of the Headworks, and associated appurtenances as shown on the drawings, specified in the contract documents. This bid item is only to include items, components and equipment not supplied by the HW manufacturer.	Measurement shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.	#	EA	$_____	$_____

DRAFT

6	MBR Process	Payment shall be made for the work associated with the installation of the MBR Equipment, blowers, and associated appurtenances as shown on the drawings, specified in the contract documents. This bid item is only to include items, components and equipment not supplied by the MBR manufacturer.	Measurement shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.	#	EA	$_____	$_____
7	Aerobic Digester	Payment shall be made for the work associated with the upgrading the aerobic digesters and associated appurtenances as shown on the drawings, specified in the contract documents.	Measurement shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.	#	EA	$_____	$_____
8	Sludge Dewatering	Payment shall be made for the work associated with the installation of the Sludge Dewatering and associated appurtenances as shown on the drawings, specified in the contract documents. This bid item is only to include items, components and equipment not supplied by the sludge dewatering manufacturer.	Measurement shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.	#	EA	$_____	$_____
9	Admin Building	Payment shall be made for the work associated with the construction of the Admin bldg and associated appurtenances as shown on the drawings, specified in the contract documents.	Measurement shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.	#	EA	$_____	$_____

DRAFT

10	Structural Tank Modifications	Payment shall be made for the work associated with the structural tank modification and associated appurtenances as shown on the drawings, specified in the contract documents.	Measurement shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.	#	EA	$_____	$_____
11	WWTP Operation during Construction	Payment shall be made for the work associated with by-passing, installation of temporary treatment facilities and equipment, and/ or any associated work needed to maintain operation and treatment capacity of the facility as specified in the contract documents.	Measurement shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.	#	EA	$_____	$_____
12	Influent Force Main Replacement	Payment shall be made for site work associated with the installation of the new influent FM as described in the Contract Documents. The work shall include all pipes, fitting, and associated labor and materials required for the proper trenching, installation, and backfill of the pipes. This shall also include any potholing, pavement restoration, wire tracing and surveying of the required work.	Measurement shall be made based on linear feet of pipe installed and the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.	#	LF	$_____	$_____
13	Electrical and Controls	Payment shall be made for the work associated with the furnish, installation and wiring of the electrical and controls component of the project as shown on the drawings, specified in the contract documents. This includes all electrical and controls equipment and components, as well as all field instrumentation with the exception of the electrical and instrumentation to be provided by the tank manufacturer.	Measurement shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.	#	LS	$_____	$_____

DRAFT

		Programming of the PLC and system controls integration shall be a separate bid item if required by the contract documents.					
14	Base Lump Sum	Payment shall be made for the work associated with the portion of the project not specifically included in the above bid schedule but required to be completed as part of the project as shown on the drawings, specified in the contract documents, and as required by the District. This includes all general conditions, civil, mechanical, structural, architectural, and electrical & controls work.	Measurement shall be made based on the breakdown shown on the CONTRACTOR's schedule of values as the items are completed and accepted by the Representative.	#	LS	$_____	$_____
15	**Total Lump Sum**						**$_____**

DRAFT

SECTION 01 3216 – CONSTRUCTION PROGRESS SCHEDULES

PART 1 – GENERAL

1.01 SUMMARY

A. **Section Includes**: Preparation, submittal and maintenance of computerized progress schedule and reports, contract time adjustments and payment requests, including the following:

1. Preliminary Schedule
2. Baseline Schedule
3. Schedule Updates
4. Schedule Revisions

1.02 PRECONSTRUCTION SCHEDULING MEETING

A. General: Before issuance of Notice to Proceed, a pre-construction meeting shall be held at the location, date and time designated by ENGINEER and OWNER. This meeting shall be conducted by the ENGINEER and OWNER. Attendees shall include the ENGINEER, OWNER's representatives, General CONTRACTOR's project manager and field superintendent, and representatives from each subcontractor for the project as appropriate.

B. At the meeting, scheduling requirements shall be reviewed with CONTRACTOR. These include schedule preparation, reporting requirements, updates, revisions, and schedule delay analysis. CONTRACTOR shall present their schedule methodology, planned sequence of operations, and present their proposed activity coding structure.

1.03 CONSTRUCTION PROGRESS MEETINGS AND SCHEDULES

A. Weekly Progress meetings shall be held by the CONTRACTOR. All matters bearing on progress and performance of the work since preceding progress meeting shall be discussed and resolved including, without limitation, any previously unresolved matters, deficiencies in the work or methods being employed for the work, and problems, difficulties, or delays which may be encountered. CONTRACTOR shall keep records of the meetings and distribute to all party.

B. CONTRACTOR shall submit a Baseline Construction Schedule for ENGINEER and OWNER approval 14 days after Notice to Proceed. CONTRACTOR shall maintain a progress schedule based on the approved Baseline Construction Schedule that is updated weekly and shows progress and execution of work.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION (NOT USED)

END OF SECTION

DRAFT

SECTION 01 3300 – SUBMITTAL PROCEDURES

PART 1 – GENERAL

1.01 WORK INCLUDED

A. Shop Drawing, Descriptive Literature, Project Data, and Samples (specifically, when Samples are requested) for all manufactured or fabricated items shall be Submitted by the CONTRACTOR. CONTRACTOR shall examine and review the Submittal to ensure that the information is in the form and in the manner required by the ENGINEER. The review of the Submittal by the ENGINEER shall not be construed as a complete check or approval, but will only indicate that the general method of construction and detailing is satisfactory. Review of such Submittal will not relieve the CONTRACTOR of the responsibility for any errors, which may exist. The CONTRACTOR shall be responsible for the dimensions and design of adequate connections, details and satisfactory of all WORK.

1.02 DEFINITIONS

A. The term "Submittals" shall mean shop drawings, manufacturer's drawings, catalog sheets, brochures, descriptive literature, diagrams, schedules, calculations, material lists, performance charts, test reports, office and field samples and items of similar nature, which are normally Submitted for the ENGINEER's review for conformance with the Design Concept and compliance with the Contract Documents.

1.03 GENERAL CONDITIONS

A. Review by the ENGINEER of shop drawings or submittals of material and equipment shall not relieve the CONTRACTOR from the responsibilities of furnishing proper dimension, size, quantity, materials, and all performance characteristics to, efficiently perform the Requirements and intent of the Contract Documents. Review shall not relieve the CONTRACTOR responsibility for errors of any kind on the shop drawings. Review is intended only to assure conformance with the design concept of the Project and compliance with the information given in the Contract Documents. Review of shop drawings shall not be construed as releasing the CONTRACTOR from the responsibility of complying with the Contract Documents.

B. Do not consider Submittals as Contract Documents. Purpose of Submittals is to demonstrate how CONTRACTOR, to conform to the design concepts.

1.04 GENERAL REQUIREMENTS FOR SUBMITTALS

A. Shop drawings shall be prepared by a qualified detailer. Details shall be identified by reference to sheet and detail numbers shown on Contract Documents. Where applicable, show fabrication, layout, setting and erection details. Shop drawings are defined as original drawings prepared by the CONTRACTOR, SUBCONTRACTOR, vendor, suppliers, or distributors performing WORK under this Contract. Shop drawings illustrate some portion of the WORK and show fabrication, layout, setting or erection details of equipment, materials, and components. Shop drawings shall be folded to an approximate size of 8½-inch x 11-inch and in such manner that the title block will be located in the lower right-hand corner of the exposed surface.

B. Project data shall include manufacturer's standard schematic drawings modified to delete information, which is not applicable to the Project and shall be supplemented to provide additional information applicable to the Project. Each copy of descriptive literature shall be clearly marked to identify pertinent information as it applies to the Project.

DRAFT

C. Where samples are required, they shall be adequate to illustrate materials, equipment, or workmanship and to establish Standards by which completed WORK is judged. Provide sufficient size and quantity to clearly illustrate functional characteristics of product and material, with integrally related parts and attachment devices, along with a full range of color samples.

D. The CONTRACTOR shall review and check Submittals, indicating his review by initials and date.

E. If the Submittals deviate from the Contract Drawings and/or Specifications, the CONTRACTOR shall clearly identify the deviation and state any reasons for the deviation. The ENGINEER may approve a change. Any costs resulting from a change will be the responsibility of the CONTRACTOR.

F. Additional information on particular items, such as special drawings, schedules, calculations, performance curves and material details, shall be provided when specifically requested by the Technical Specifications.

G. Submittals for all electrically operated items (including instrumentation and controls) shall include complete wiring diagrams showing lead, runs, number of wires, wire size, color coding, all terminations and connections and coordination with related equipment.

H. Equipment shop drawings shall indicate all factory or shop paint coatings applied by suppliers, manufacturers, and fabricators; the CONTRACTOR shall be responsible for insuring the compatibility of such coatings with the field applied paint products and systems.

I. Fastener Specifications of manufacturer shall be indicated on equipment shop drawings.

J. No material shall be fabricated or shipped unless the applicable drawings or Submittals have been reviewed and approved by the CONTRACTOR and ENGINEER.

K. All bulletins, brochures, instructions, parts lists, and warranties packaged with and accompanying materials and products delivered to and installed in the Project shall be saved and transmitted to the ENGINEER for safe keeping and preparations of the Operation &Maintenance Manuals.

L. Quantity of the Vendor's Submittals shall be as required by the CONTRACTOR. At a minimum, a Vendor shall provide one (1) electronic PDF copy to the CONTRACTOR.

1.05 SUBCONTRACTOR or VENDOR RESPONSIBILITIES

A. Verify field measurements, field construction criteria, catalog numbers and similar data.

B. Coordinate each Submittal with requirements of WORK and Contract Documents.

C. Quantity of the SUBCONTRACTOR or Vendor's Submittals shall be as required by the CONTRACTOR. At a minimum, one (1) electronic PDF copy shall be provided to the CONTRACTOR.

1.06 CONTRACTOR RESPONSIBILITIES

A. Submit complete listing of all required shop drawing submittals by Specification Section to the ENGINEER.

B. Submit shop drawings, product data, samples, and other pertinent information in sufficient detail to show compliance with specified requirements.

C. Check, verity and revise Submittals as necessary to bring them into conformance with Contract Documents and actual field conditions.

1. Determine and verify quantities, dimensions, specified design and performance criteria, materials, catalog numbers and similar data.

DRAFT

2. Determine and verify that the equipment or product meets all aspect of the contract documents.
3. Coordinate Submittal with other Submittals and with the requirements of the Contract Documents.

D. After completion of checking, verification and revising, stamp, sign and date Submittals indicating review and approval and submit to ENGINEER.
1. Attach a copy of the corresponding specifications for the equipment or product and identify all deviations from the specifications, along with proposed corrective actions, clarifications, exemptions, etc. Submittals without accompanying specifications shall be rejected.
2. Stamp and signature indicate CONTRACTOR has satisfied shop drawing review responsibilities and constitutes written review of shop drawing with general conformance with the Contract Documents.
3. Shop drawings without CONTRACTOR written reviewed stamp and signature will be returned for resubmission.

E. **Shop Drawings:** Submit one electronic copy in PDF format. A PDF copy of the submittal will be returned with reviewer's comments.

F. **Product Data and Manufacturer's Instructions:** Submit on electronic copy in PDF format. Excise or cross out non-applicable information and clearly mark applicable information with citations to and terminology consistent with Contract Documents.
1. A PDF copy will be returned with reviewer's comments.

G. **Samples:** Submit two (2) samples labeled with reference to applicable Contract Documents. Label will be returned with reviewer's selection when appropriate, comments and stamp. Samples will not be returned unless return is requested in writing and additional samples are submitted.

H. **Special Samples:** Submit one (1) sample labeled with reference to applicable Contract Documents. Sample and one (1) label will be returned for installation in the WORK.

I. Assume risk expense and delays when proceeding with WORK related to required Submittals without review and acceptance.

J. **Deferred Submittals:** Submit any and all requested deferred submittals as required by the project or regulatory agencies. The deferred submittals shall include layout, design, performance data, design and structural calculations with registered engineer's stamp, , and all other relevant information required for review.

Deferred submittal shall be required for the following in addition to those identified in the Contract Documents:

- Guardrails and handrails
- Grating and covers
- Anchoring and seismic bracing
- Shoring and formwork
- Metal stairs
- Pipe supports
- Pre-fab metal building or structures
- Precast concrete structures
- Tanks
- Specialty Equipment

1.07 ENGINEER'S RESPONSIBILITY

DRAFT

A. ENGINEER's review of shop drawings, samples or test procedures will be only for conformance with design concepts and for compliance with information given in Contract Documents.
   1. ENGINEER's review does not extend to:
      a. Accuracy of dimensions, quantities or performance of equipment and systems designed by CONTRACTOR, subcontractor, or Vendor.
      b. CONTRACTOR or SUBCONTRACTOR means, methods, techniques, sequences, or procedures, except when specified, indicated on the Drawings, or required by Contract Documents.
      c. Safety precautions or programs related to safety, which shall remain the sole responsibility of the CONTRACTOR and the SUBCONTRACTOR.

B. Except as may be provided in subsequent Specifications, a submittal will be returned within 30 days. When a Submittal cannot be returned within that period, ENGINEER will, within a reasonable time after receipt of the Submittals, give notice of the date by which that submittal will be returned.

C. For Submittals returned No Exceptions Taken – Submittal is considered in conformance with the design concept.

D. For Submittals returned Accepted with Correction Noted – Make Correction Noted/See all Comments, CONTRACTOR shall incorporate all review comments into the WORK, but resubmittal of an amended Submittal is not required.

E. For Submittals returned Submit Specific Item – CONTRACTOR shall develop a new Submittal package with materials, equipment, methods, etc. that meet the requirements of the Contract Documents for that specific item.

F. For Submittals returned Revised and Resubmit – Make Corrections Note/See All Comments, CONTRACTOR shall incorporate the review comments into a complete revised package and resubmit it for review.

G. For Submittals returned Rejected – See All Comments, CONTRACTOR shall develop a new Submittal package with materials, equipment, methods, etc. that meet the requirements of the Contract Documents.

H. For Submittals returned Submittal Not Reviewed, Filed for Record, no further action is required by the CONTRACTOR for this Submittal.

I. ENGINEER will be entitled to rely upon the accuracy or completeness of designs, calculations or certification made by licensed professionals accompanying a particular Submittal whether or not a stamp or seal is required by Contract Documents or Laws and Regulations.

J. Costs incurred by the ENGINEER, as a result, of additional reviews of a particular Submittal after the second time it has been reviewed shall be borne by CONTRACTOR. Reimbursement to ENGINEER will be made by issuance of a Change Order.

1.08 MINOR OR INCIDENTAL PRODUCTS AND EQUIPMENT SCHEDULES

A. Shop Drawings of minor or incidental fabricated products will not be required, unless requested.

B. Submit tabulated lists of minor or incidental products showing the names of the manufactures and catalog numbers, with Product Data and Samples, as required to, determine acceptability.

1.09 SUBMITTALS FOR INFORMATION OR RECORD ONLY

A. Submit three (3) copies of each. None will be returned.

B. **Mill Test Reports**:

DRAFT

1. Submit three (3) certified copies of factory and mill test reports for record only. No copies will be returned.
2. Do not incorporate Products in the WORK, which have not passed testing and inspection satisfactorily.
3. Pay for mill and factory tests.

C. **Reinforcing Steel**:
1. Submit reinforcing steel fabrication and setting drawings for information or record only. No copies will be returned.
2. Note deviations and variations as specified for shop drawings.

PART 2 – PRODUCTS (Not Used)

PART 3 – EXECUTION (Not Used)

END OF SECTION

DRAFT

SECTION 01 3529 – HEALTH, SAFETY, AND EMERGENCY RESPONSE PROCEDURES

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes: Development and maintenance of a Construction Safety Plan.

1.02 REFERENCES

A. OSHA.

1.03 CONSTRUCTION SAFETY PLAN

A. Detail the Methods and Procedures to comply with Federal, State, and Local Health and Safety Laws, Rules and Requirements for the duration of the Contract Times. Include the following:
   1. Identification of the Certified or Licensed Safety Consultant who will prepare, initiate, maintain and supervise safety programs, and procedures.
   2. Procedures for providing workers with an awareness of safety and health hazards expected to be encountered in the course of construction.
   3. Safety equipment appropriate to the safety and health hazards expected to be encountered during construction. Include warning devices, barricades, safety equipment in public right-of-way and protected areas, and safety equipment used in multi-level structures.
   4. Methods for minimizing employees' exposure to safety and health hazards expected during construction.
   5. Procedures for reporting safety or health hazards.
   6. Procedures to follow to correct a recognized safety and health hazard.
   7. Procedures for investigation of accidents, injuries, illnesses and unusual events that have occurred at the construction site.
   8. Periodic and scheduled inspections of general work areas and specific work stations.
   9. Training for employees and workers at the jobsite.
   10. Methods of communication of safe working conditions, work practices and required personal protection equipment.

B. Assume responsibility for every aspect of Health and Safety on the jobsite, including the health and safety of SUBCONTRACTORS, suppliers, and other persons on the jobsite.
   1. Forward available information and reports to the Safety Consultant who shall make the necessary recommendations concerning worker health and safety at the jobsite.
   2. Employ additional health and safety measures specified by the Safety Consultant, as necessary, for workers in accordance with OSHA guidelines.

C. Transmit to OWNER and ENGINEER copies of reports and other documents related to accidents or injuries encountered during construction.

DRAFT

SECTION 01 4219 – REFERENCE STANDARDS

PART 1 – GENERAL

1.01 GENERAL

A. Titles of Sections and Paragraphs: Titles and Subtitles accompanying Specification Sections and paragraphs are for convenience and Reference only and do not form a part of the Specifications.

B. Applicable Publications: Whenever in these Specifications References are made to Published Specifications, Codes, Standards or other Requirements, it shall be understood that wherever no date is specified, only the latest Specifications, Standards or Requirements of the respective issuing agencies, which have been published as of the date that the Contract shall apply; except to the extent that said Standards or Requirements may be in conflict with applicable Laws, Ordinances or Governing Codes. No Requirements set forth in the Specifications or shown on the Drawings will be waived because of any provision of, or omission from, said Standards or Requirements.

C. Specialists, Assignments: In certain instances, Specification text requires (or implies) that specific WORK is to be assigned to specialists or expert entities, who must be engaged for the performance of that WORK. Such assignments shall be recognized as Special Requirements. These Requirements shall not be interpreted so as to conflict with the enforcement of Building Codes and similar Regulations Governing the WORK; also, they are not intended to interfere with Local Union Jurisdiction Settlements and similar conventions. Such assignments are intended to establish which party or entity involved in a specific unit of work is recognized as "Expert" for the indicated construction processes or operations. Nevertheless, the final responsibility for fulfillment of the entire set of Contract Requirements remains.

1.02 REFERENCE SPECIFICATIONS, CODES AND STANDARDS

A. Construct the WORK in accordance with the Contract Documents and the referenced portions of those Referenced Codes, Standards and Specifications.

B. Verify the following references agree with the plans and local requirements. All references listed are to the most recently approved and published edition.

References herein to "Building Code" shall mean International Building Code (IBC). Similarly, references to "Mechanical Code" or "International Mechanical Code," "Plumbing Code" or "Uniform Plumbing Code," "Fire Code" or "International Fire Code," shall mean International Mechanical Code (IMC), Uniform Plumbing Code (UPC) and International Fire Code (IFC). "Electric Code" or "National Electric Code (NEC)" shall mean the National Electric Code of the National Fire Protection Association (NFPA). The latest edition of the codes as approved by the Municipal Code and used by the local agency as of the date that the WORK is advertised for bids, as adopted by the agency having jurisdiction, shall apply to the WORK herein, including all Addenda, Modifications, Amendments, or other Lawful changes thereto.

C. In case of conflict between Codes, Reference Standards, Drawings, and the other Contract Documents, the most stringent Requirements shall govern. All conflicts shall be brought to the attention of the ENGINEER for clarification and directions prior to ordering or providing any materials or furnishing labor through the RFI process. The most stringent Requirements may be bid on.

D. All equipment and materials used on this project shall comply with the standards set forth in the American Iron and Steel Institute (AISI).

DRAFT

E. References herein to "OSHA Regulations for Construction" shall mean Title 29, Part 1926, Construction Safety and Health Regulations, Code of Federal Regulations (OSHA), including all changes and amendments thereto.

F. References herein to "OSHA Standards" shall mean Title 29, Part 1910, Occupational Safety and Health Standards (OSHA), Code of Federal Regulations, including all changes and Amendments thereto.

G. Applicable Standard Specifications: References in the Contract Documents to "Standard Specifications" or SSPWC shall mean the Standard Specifications for Public Works Construction.

1.03 REGULATIONS RELATED TO HAZARDOUS MATERIALS

A. Responsibility for all work included in the Contract Documents, regardless if shown or not, shall comply with all EPA, OSHA, RCRA, NFPA, and any other Federal, State, and Local Regulations governing the storage and conveyance of hazardous materials, including petroleum products.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION (NOT USED)

END OF SECTION

DRAFT

SECTION 01 4333 – MANUFACTURER'S FIELD SERVICES

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. General: Provide a qualified service representative from each equipment company manufacturing or supplying equipment to perform the duties herein described and as required by the various Sections of the Specifications. All costs to perform these services shall be included in the supplier's proposal in accordance with the scope of work.

B. Supervision of Installation: The supplier shall provide direct and/or indirect supervision of the workers and ENGINEER, in accordance with the scope of work, to ensure that proper procedures are followed during equipment installation.

1.01 EQUIPMENT CHECK OUT:

A. After installation of the equipment has been completed and the equipment is presumably ready for operation but before it is operated by others, the representative shall inspect, operate, test and adjust the equipment. The inspection shall include but shall not be limited to, the following points as applicable:

1. Soundness (without cracked or otherwise damaged parts)
2. Completeness in all details as specified
3. Correctness of setting, alignment and relative arrangement of various parts
4. Adequacy and correctness of packing, sealing and lubricants
5. Completeness in electrical and controls
6. The operation, testing and adjustment shall be as required to prove that the equipment has been installed properly and is capable of satisfactory operation under the conditions specified. On completion of his WORK, the CONTRACTOR, manufacturer or supplier's representatives shall submit a complete signed report of the result of his inspection, operation, adjustments and tests. The report shall include descriptions of the points inspected, tests and adjustments made, quantitative results obtained if such are specified and suggestions for precautions to be taken to ensure proper maintenance. The report also shall include a certificate that the equipment conforms to the requirements of the Contract Documents and is ready for permanent operation and that nothing in the installation will render the manufacturer's warranty null and void.

B. Field Tests: As required by the individual Specification Sections, the manufacturer's representative shall be present when the field tests are made.

C. Operator Training: As required by the individual Specification Sections, the manufacturer's representative shall provide hands-on training to maintenance personnel in the proper operation and maintenance of the equipment prior to placing the equipment in full operation.

D. Post-startup Services: As required by the individual Specification Sections, the manufacturer's representative shall provide services beyond the startup of the equipment. Services may include assistance in the calibration, tuning and troubleshooting, plus any additional training, which may be required during the agreed time after the equipment, is accepted.

E. The CONTRACTOR shall be the supplier for items not specifically included in the supplier's scope of work.

DRAFT

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION

3.01 EXECUTION

A. The CONTRACTOR shall submit one (1) electronic copy and two (2) hard copies of all equipment field service certification documents and certificates of warranty to the ENGINEER in accordance with applicable Sections of Division 01 – General Requirements.

END OF SECTION

DRAFT

SECTION 01 4500 – QUALITY CONTROL

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. The Specific Quality Control Requirements for the WORK are indicated throughout the Contract Documents. The Requirements of this Section are primarily related to performance of the WORK beyond furnishing of manufactured products. The term "Quality Control" includes pre-activity inspection, follow up meetings, sampling and testing, and associated requirements.

B. All materials to be incorporated into the work shall be subject to sampling, testing, and approval as required by specifications.

1.02 INSPECTION AT PLACE OF MANUFACTURE

A. Unless otherwise indicated, all products, materials, and equipment shall be subject to inspection by the ENGINEER at the place of manufacture.

B. Unless noted otherwise, the presence of the ENGINEER at the place of manufacturer is not required; however, this shall not relieve responsibility for providing products, materials and equipment that comply with all requirements of the Contract Documents.

1.03 SAMPLING AND TESTING

A. Unless otherwise specified, samples and tests shall be made in accordance with either: The Standard Methods of AASHTO, ASTM, and/or ASME, which were in effect and published at the time of advertising for bids. The laboratory responsible for the test(s) shall furnish at least one copy of the test results to the CONTRACTOR, the ENGINEER, and to the appropriate material supplier.

1.04 INSPECTION AND TESTING SERVICE

A. Independent inspection and testing laboratory service shall comply with the following:
   1. Unless noted otherwise by the Specifications, an independent firm will be appointed and employed by the CONTRACTOR to perform inspection and testing, including soils and concrete testing.
   2. Perform inspections, testing, and other services as required.
   3. Submit Reports of Testing to the ENGINEER, CONTRACTOR and OWNER if required in duplicate, indicating observations and results of tests, and indicating compliance or non-compliance with Contract Documents.
   4. CONTRACTOR to notify 48 hours prior to the expected time for operations requiring inspection and laboratory testing services is required.
   5. The same independent firm on instructions shall perform retesting required because of non-conformance to requirements.
   6. For tests and samples required, arrangements shall be made with an independent firm for payment and scheduling of testing. Responsibility shall be taken for the cost of sampling and testing.
   7. Provide an overall report on inspection and test results for project closeout.
   8. All materials and/or equipment not conforming to the requirements of the Specifications, whether in place or not, will be rejected. Rejected materials and/or equipment shall be removed immediately from the site of work unless otherwise permitted by the ENGINEER. No rejected material and/or equipment, the defects of which have been subsequently corrected, shall be used until approved in writing by the ENGINEER. CONTRACTOR shall be responsible for re-testing of all rejected materials.

DRAFT

1.05 SPECIAL INSPECTION

A. Various categories for special inspection/ observation of work progress during the course of construction are listed, but not limited to specifications and notes in the drawings. The OWNER requires on-site observation of the work at these various stages prior to covering the work. A list of such special inspections will be reviewed at the Pre-Construction Conference and subsequent job meetings, and it is understood that the CONTRACTOR will not cover work until such observation has been completed. The OWNER and OWNER representatives will be responsible for reasonable cooperation with CONTRACTOR requests for observation of the work. The CONTRACTOR shall include anticipated observation requests at weekly update of scheduled activities. OWNER shall be responsible for retaining the services of an independent testing agency for special inspections.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION

3.01 INSTALLATION

A. Inspection: Inspect materials or equipment upon arrival on the job site, prior to installation and reject damaged and defective items.

B. Measurements: Verify measurements and dimensions of the WORK, as an integral step of starting each installation.

C. Manufacturer's Instructions: Where installations include manufactured products, compliance with manufacturer's applicable instructions and recommendations for installation, to whatever extent these are more explicit or more stringent than applicable requirements indicated in Contract Documents is required.

END OF SECTION

DRAFT

SECTION 01 5626 – TEMPORARY FENCING

PART 1 – GENERAL

1.01 SUMMARY

A. CONTRACTOR shall determine temporary fence type, layout, and location of gates. Construction and maintenance of temporary fencing shall be provided by the contractor.

B. In general, the overall site of the existing Wastewater Facility is already fenced. It will be the CONTRACTOR's responsibility to determine there needs to secure there yard/staging areas as well as any and all construction sites or activities within the project. It is the OWNERS opinion that the plastic orange fence will be sufficient to provide safety and security surrounding the work activities; however, it is the contractor's responsibility to make the final determination. The OWNER will not be responsible in any manner for any missing, stolen, or damaged to any and all contractor property, yard, equipment or construction activity, this is the contractor's responsibility.

1.02 SUBMITTALS

A. Submit in accordance with Section 01 3300 – Submittal Procedures.
   1. Shop drawing indicating layout of temporary fencing, location and size of gates, existing pavement and roads, access to fire hydrants and hose connections, and other site-specific conditions. Prepare drawing after site observation and verification of existing conditions.

PART 2 – PRODUCTS

2.01 TEMPORARY CHAIN LINK FENCING

A. Unless otherwise indicated, type of temporary chain link fencing shall be CONTRACTOR's option. Following types are acceptable:
   1. New Materials or previously used salvage chain link fencing in good condition.
   2. Posts: Galvanized steel pipe of diameter to provide rigidity. Post shall be suitable for setting in concrete footings, driving into ground, anchoring with base plates, or inserting in precast concrete blocks.
   3. Fabric: Woven galvanized steel wire mesh. Provide in continuous lengths to be wire tied to fence posts or prefabricated into modular pipe-framed fence panels.

B. Gates: Provide personnel and vehicle gates of the quantity and size required for functional access to site.
   1. Fabricate of same material as used for fencing
   2. Vehicle gates:
      a. Minimum width: 20 feet to allow access for emergency vehicles
      b. Capable of manual operation by one person.

2.02 PLASTIC MESH FENCING

A. Where required to provide visual warning and control, provide plastic mesh fencing supported by steel posts driven into ground or set in precast concrete blocks

B. Height: 36 inches minimum

C. Color: Safety orange

DRAFT

PART 3 – EXECUTION

3.01 LAYOUT

A. Access: Provide gates for personnel, delivery of materials, and access by emergency vehicles.

3.02 INSTALLATION

A. Plastic mesh fencing: Space steel support posts to ensure mesh remains vertical and at proper height. Securely tie mesh to posts.

3.03 MAINTENANCE AND REMOVAL

A. Maintain fencing in good condition. If damaged, immediately repair.

B. Remove temporary fencing upon completion of Work or when no longer required for security or control. Backfill holes and compact. Holes in pavement shall be surfaced to match existing paving. Repair damage caused by installation of temporary fencing.

END OF SECTION

DRAFT

SECTION 01 5713 – TEMPORARY EROSION AND SEDIMENT CONTROL

PART 1 – GENERAL

1.01 SECTION INCLUDES

A. Prevention of erosion due to construction activities.

B. Prevention of sedimentation of waterways, open drainage ways, and storm and sanitary sewers due to construction activities.

C. Restoration of areas eroded due to insufficient preventive measures.

1.02 REFERENCE STANDARDS: Most recently approved and published editions of:

ASTM D4355	Deterioration of Geotextiles by Exposure to Light, Moisture, and Heat in a Xenon Arc Type Apparatus
ASTM D4491	Water Permeability of Geotextiles by Permittivity
ASTM D4533	Trapezoid Tearing Strength of Geotextiles
ASTM D4632	Grab Breaking Load and Elongation of Geotextiles
ASTM D4751	Determining Apparent Opening Size of a Geotextile
ASTM D4873	Identification, Storage, and Handling of Geosynthetic Rolls and Samples
EPA (NPDES)	National Pollutant Discharge Elimination System (NPDES), Construction General Permit
FHWA FLP-94-005	Best Management Practices for Erosion and Sediment Control; Federal Highway Administration
USDA TR-55	Urban Hydrology for Small Watersheds; USDA Natural Resources Conservation Service

1.03 PERFORMANCE REQUIREMENTS

A. Perform all work and take all measures necessary to control soil erosion resulting from construction operations to prevent the flow of sediment from the site, to contain construction materials (including excavation and backfill), and to stabilize soil banks from erosion caused by stormwater flood zones so as to prevent damage to the adjacent water courses and to the project site.

B. Do not employ any construction method that violates a rule, regulation, guideline, or procedure established by Federal, State, or local agencies having jurisdiction over the environmental effects of construction.

C. Pollutants such as chemicals, fuels, lubricants, bitumen, raw sewage, and other harmful waste shall not be discharged into or alongside of any body of water or into natural or man-made channels leading thereto.

D. Prepare and submit a Stormwater Pollution Prevention Plan (SWPPP) to the ENGINEER for his records in accordance with ADEQ and with the plans as provided within the Construction Documents. The CONTRACTOR is responsible for all aspects of this plan, its monitoring, maintaining of the reports and keeping a copy of documents on site as required by ADEQ.

E. Prepare and submit a monitoring program and reporting plan to the ENGINEER for his records in accordance with ADEQ. Submit to the ENGINEER for his records on a monthly basis copies of the monitoring reports taken throughout the month.

F. Prepare and submit the Notice of Intent (NOI) as required by ADEQ. Submit Copy of NOI to the ENGINEER for his records.

DRAFT

G. Comply with all requirements of US Environmental Protection Agency for erosion and sedimentation control, as specified for the National Pollutant Discharge Elimination System (NPDES), Phases I and II, under requirements for the Construction General Permit (CGP), whether the project is required by law to comply or not.

H. Timing: Put preventive measures in place as soon as possible after disturbance of surface cover and before precipitation occurs.

I. Storm Water Runoff: Control increased storm water runoff due to disturbance of surface cover due to construction activities for this project.
   1. Prevent runoff into storm and sanitary sewer systems, including open drainage channels, in excess of actual capacity or amount allowed by authorities having jurisdiction, whichever is less.
   2. Anticipate runoff volume due to the most extreme short term and 24-hour rainfall events that might occur in 25 years.

J. Erosion on Site: Minimize wind, water, and vehicular erosion of soil on project site due to construction activities for this project.
   1. Control movement of sediment and soil from temporary stockpiles of soil.
   2. Prevent development of ruts due to equipment and vehicular traffic.
   3. If erosion occurs due to non-compliance with these requirements, restore eroded areas at no cost to OWNER.

K. Erosion Off Site: Prevent erosion of soil and deposition of sediment on other properties caused by water leaving the project site due to construction activities for this project.
   1. Prevent windblown soil from leaving the project site.
   2. Prevent tracking of mud onto public roads outside site.
   3. Prevent mud and sediment from flowing onto sidewalks and pavements.
   4. If erosion occurs due to non-compliance with these requirements, restore eroded areas at no cost to OWNER.

L. Sedimentation of Waterways on Site: Prevent sedimentation of waterways on the project site, including rivers, streams, lakes, ponds, open drainage ways, storm sewers, and sanitary sewers.
   1. If sedimentation occurs, install or correct preventive measures immediately at no cost to OWNER; remove deposited sediments; comply with requirements of authorities having jurisdiction.
   2. If sediment basins are used as temporary preventive measures, pump dry and remove deposited sediment after each storm.

M. Sedimentation of Waterways Off Site: Prevent sedimentation of waterways off the project site, including rivers, streams, lakes, ponds, open drainage ways, storm sewers, and sanitary sewers.
   1. If sedimentation occurs, install or correct preventive measures immediately at no cost to OWNER; remove deposited sediments; comply with requirements of authorities having jurisdiction.

N. Open Water: Prevent standing water that could become stagnant.

O. Maintenance: Maintain temporary preventive measures until permanent measures have been established.

1.04 SUBMITTALS

A. See Section 01 3300 – Submittal Procedures.

B. Stormwater Prevention Plan:
   1. Submit not less than 30 days prior to anticipated start of clearing, grading, or other work involving disturbance of ground surface cover.

DRAFT

2. Include:
    a. Site plan identifying soils and vegetation, existing erosion problems, and areas vulnerable to erosion due to topography, soils, vegetation, or drainage.
    b. Site plan identifying soils and vegetation, existing erosion problems, and areas vulnerable to erosion due to topography, soils, vegetation, or drainage.
    c. Site plan showing grading; new improvements; temporary roads, traffic accesses, and other temporary construction; and proposed preventive measures.
    d. Where extensive areas of soil will be disturbed, include storm water flow and volume calculations, soil loss predictions, and proposed preventive measures.
    e. Schedule of temporary preventive measures, in relation to ground disturbing activities.
    f. Other information required by law.
    g. Format required by law is acceptable, provided any additional information specified is also included.
    h. Obtain the approval of the Plan by authorities having jurisdiction.
    i. Obtain the approval of the Plan by OWNER.

C. Certificate: Mill certificate for silt fence fabric attesting that fabric and factory seams comply with specified requirements, signed by legally authorized official of manufacturer; indicate actual minimum average roll values; identify fabric by roll identification numbers.

D. Inspection Reports: Submit report of each inspection; identify each preventive measure, indicate condition, and specify maintenance or repair required and accomplished.

E. Maintenance Instructions: Provide instructions covering inspection and maintenance for temporary measures that must remain after Substantial Completion.

PART 2 – PRODUCTS

2.01 MATERIALS

A. Mulch: Use one of the following:
1. Straw or hay
2. Wood waste, chips, or bark
3. Erosion control matting or netting
4. Cutback asphalt
5. Polyethylene film, where specifically indicated only

B. Grass Seed for Temporary Cover: Select a species appropriate to climate, planting season, and intended purpose. If same area will later be planted with permanent vegetation, do not use species known to be excessively competitive or prone to volunteer in subsequent seasons.

C. Bales: Air dry, rectangular straw bales.
1. Cross Section: 14 by 18 inches, minimum.
2. Bindings: Wire or string, around long dimension.

D. Bale Stakes: One of the following, minimum 3 feet long:
1. Steel U- or T-section, with minimum mass of 1.33 lb. per linear foot.
2. Wood, 2 by 2 inches in cross section.

E. Silt Fence Fabric: Polypropylene geotextile resistant to common soil chemicals, mildew, and insects; non-biodegradable; in longest lengths possible; fabric including seams with the following minimum average roll lengths:
1. Average Opening Size: 30 US Std. Sieve, maximum, when tested in accordance with ASTM D4751.
2. Permittivity: 0.05 sec^-1, minimum, when tested in accordance with ASTM D4491.

DRAFT

3. Ultraviolet Resistance: Retaining at least 70 percent of tensile strength, when tested in accordance with ASTM D4355 after 500 hours exposure.
4. Tensile Strength: 100 lb-f, minimum, in cross-machine direction; 124 lb-f, minimum, in machine direction; when tested in accordance with ASTM D4632.
5. Elongation: 15 to 30 percent, when tested in accordance with ASTM D4632.
6. Tear Strength: 55 lb-f, minimum, when tested in accordance with ASTM D4533.
7. Color: Manufacturer's standard, with embedment and fastener lines preprinted.
8. Manufacturers:
   a. TenCate: www.tencate.com.
   b. North American Green: www.nagreen.com.
   c. Propex Geosynthetics: www.geotextile.com

F. Silt Fence Posts: One of the following, minimum 5 feet long:
1. Steel U- or T-section, with minimum mass of 1.33 lb per linear foot.
2. Softwood, 4 by 4 inches in cross section.
3. Hardwood, 2 by 2 inches in cross section.
4. Bank stabilization shall be durable UV resistant high performance turf reinforcement mats (HP TRMs). Tensile strength of 4000 lb/ft meets US EPA definition of a high performance TRM. Acceptable products are Pyramat or ENGINEER-approved equal.

PART 3 – EXECUTION

3.01 EXAMINATION

A. Examine site and identify existing features that contribute to erosion resistance; maintain such existing features to greatest extent possible.

3.02 PREPARATION

A. Schedule work so that soil surfaces are left exposed for the minimum amount of time.

3.03 SCOPE OF PREVENTIVE MEASURES

A. In all cases, if permanent erosion resistant measures have been installed temporary preventive measures are not required.

B. Construction Entrances: Traffic-bearing aggregate surface.
1. Width: As required; 20 feet, minimum.
2. Length: 50 feet, minimum.
3. Provide at each construction entrance from public right-of-way.
4. Where necessary to prevent tracking of mud onto right-of-way, provide wheel washing area out of direct traffic lane, with drain into sediment trap or basin.

C. Linear Sediment Barriers: Made of silt fences.
1. Provide linear sediment barriers:
   a. Along downhill perimeter edge of disturbed areas, including soil stockpiles.
   b. Along the top of the slope or top bank of drainage channels and swales that traverse disturbed areas.
   c. Along the toe of cut slopes and fill slopes.
   d. Perpendicular to flow across the bottom of existing and new drainage channels and swales that traverse disturbed areas or carry runoff from disturbed areas; space at maximum of 200 feet apart.
   e. Across the entrances to culverts that receive runoff from disturbed areas.
   f. Space sediment barriers with the following maximum slope length upslope from barrier:
      1) Slope of Less Than 2 Percent: 100 feet.
      2) Slope Between 2 and 5 Percent: 75 feet.

DRAFT

3) Slope Between 5 and 10 Percent: 50 feet.
4) Slope Between 10 and 20 Percent: 25 feet.
5) Slope Over 20 Percent: 15 feet.

D. Storm Drain Curb Inlet Sediment Trap: Protect each curb inlet using one of the following measures:
1. Filter fabric wrapped around hollow concrete blocks blocking entire inlet face area; use one piece of fabric wrapped at least 1-1/2 times around concrete blocks and secured to prevent dislodging; orient cores of blocks so runoff passes into inlet.
2. Straw bale row blocking entire inlet face area; anchor into pavement.

E. Storm Drain Drop Inlet Sediment Traps: As detailed on drawings.

F. Temporary Splash Pads: Stone aggregate over filter fabric; size to suit application; provide at downspout outlets and storm water outlets.

G. Soil Stockpiles: Protect using one of the following measures:
1. Cover with polyethylene film, secured by placing soil on outer edges.
2. Cover with mulch at least 4 inches thickness of pine needles, sawdust, bark, wood chips, or shredded leaves, or 6 inches of straw or hay.

H. Mulching: Use only for areas that may be subjected to erosion for less than 6 months.
1. Wood Waste: Use only on slopes 3:1 or flatter; no anchoring required.
2. Asphalt: Use only where no traffic, either vehicular or pedestrian, is anticipated.

I. Temporary Seeding: Use where temporary vegetated cover is required.

3.04 INSTALLATION

A. Traffic-Bearing Aggregate Surface:
1. Excavate minimum of 6 inches.
2. Place geotextile fabric full width and length, with minimum 12 inch overlap at joints.
3. Place and compact at least 6 inches of 1.5 to 3.5 inch diameter stone.

B. Silt Fences:
1. Store and handle fabric in accordance with ASTM D4873.
2. Where slope gradient is less than 3:1 or barriers will be in place less than 6 months, use nominal 16 inch high barriers with minimum 36-inch-long posts spaced at 6 feet maximum, with fabric embedded at least 4 inches in ground.
3. Where slope gradient is steeper than 3:1 or barriers will be in place over 6 months, use nominal 28-inch-high barriers, minimum 48-inch-long posts spaced at 6 feet maximum, with fabric embedded at least 6 inches in ground.
4. Where slope gradient is steeper than 3:1 and vertical height of slope between barriers is more than 20 feet, use nominal 32-inch-high barriers with woven wire reinforcement and steel posts spaced at 4 feet maximum, with fabric embedded at least 6 inches in ground.
5. Install with top of fabric at nominal height and embedment as specified.
6. Embed bottom of fabric in a trench on the upslope side of fence, with 2 inches of fabric laid flat on bottom of trench facing upslope; backfill trench and compact.
7. Do not splice fabric width; minimize splices in fabric length; splice at post only, overlapping at least 18 inches, with extra post.
8. Fasten fabric to wood posts using one of the following:
a. Four ¾-inch diameter, 1-inch long, 14-gauge nails.
b. Five 17-gauge staples with ¾-inch-wide crown and ½-inch legs.
c. Fasten fabric to steel posts using wire, nylon cord, or integral pockets.

DRAFT

d. Wherever runoff will flow around end of barrier or over the top, provide temporary splash pad or other outlet protection; at such outlets in the run of the barrier, make barrier not more than 12 inches high with post spacing not more than 4 feet.

C. Straw Bale Rows:
1. Install bales in continuous rows with ends butting tightly, with one bale at each end of row turned uphill.
2. Install bales so that bindings are not in contact with the ground.
3. Embed bales at least 4 inches in the ground.
4. Anchor bales with at least two stakes per bale, driven at least 18 inches into the ground; drive first stake in each bale toward the previously placed bale to force bales together.
5. Fill gaps between ends of bales with loose straw wedged tightly.
6. Place soil excavated for trench against bales on the upslope side of the row, compacted.

D. Mulching Over Large Areas:
1. Dry Straw and Hay: Apply 2-1/2 tons per acre; anchor using dull disc harrow or emulsified asphalt applied using same spraying machine at 100 gallons of water per ton of mulch.
2. Wood Waste: Apply 6 to 9 tons per acre.
3. Asphalt: Apply at 1200 gallons per acre.
4. Erosion Control Matting: Comply with manufacturer's instructions.

E. Mulching Over Small and Medium Areas:
1. Dry Straw and Hay: Apply 4 to 6 inches depth.
2. Wood Waste: Apply 2 to 3 inches depth.
3. Pine Needles: Apply 2 to 3 inches depth.
4. Asphalt: Apply ¼-gallon per square yard.
5. Erosion Control Matting: Comply with manufacturer's instructions.

F. Temporary Seeding:
1. When hydraulic seeder is used, seedbed preparation is not required.
2. When surface soil has been sealed by rainfall or consists of smooth undisturbed cut slopes, and conventional or manual seeding is to be used, prepare seedbed by scarifying sufficiently to allow seed to lodge and germinate.
3. If temporary mulching was used on planting area but not removed, apply nitrogen fertilizer at 1 pound per 1000 sq. ft.
4. On soils of very low fertility, apply 10-10-10 fertilizer at rate of 12 to 16 pounds per 1000 sq. ft.
5. Incorporate fertilizer into soil before seeding.
6. Apply seed uniformly; if using drill or cultipacker seeders place seed 1/2 to 1 inch deep.
7. Irrigate as required to thoroughly wet soil to depth that will ensure germination, without causing runoff or erosion.
8. Repeat irrigation as required until grass is established.

3.05 MAINTENANCE

A. Inspect preventive measures weekly, within 24 hours after the end of any storm that produces 0.5 inches or more rainfall at the project site, and daily during prolonged rainfall.

B. Repair deficiencies immediately.

DRAFT

C. Silt Fences:
   1. Promptly replace fabric that deteriorates unless need for fence has passed.
   2. Remove silt deposits that exceed one-third of the height of the fence.
   3. Repair fences that are undercut by runoff or otherwise damaged, whether by runoff or other causes.

D. Straw Bale Rows:
   1. Promptly replace bales that fall apart or otherwise deteriorate unless need has passed.
   2. Remove silt deposits that exceed one-half of the height of the bales.
   3. Repair bale rows that are undercut by runoff or otherwise damaged, whether by runoff or other causes.

E. Clean out temporary sediment control structures weekly and relocate soil on site.

F. Place sediment in appropriate locations on site; do not remove from site.

3.06 CLEAN UP

A. Remove temporary measures after permanent measures have been installed, unless permitted to remain by ENGINEER.

B. Clean out temporary sediment control structures that are to remain as permanent measures.

C. Where removal of temporary measures would leave exposed soil, shape surface to an acceptable grade and finish to match adjacent ground surfaces.

END OF SECTION

DRAFT

SECTION 01 5719 – TEMPORARY ENVIRONMENTAL CONTROLS

PART 1 – GENERAL

1.01 EXPLOSIVES AND BLASTING

A. The use of explosives on the WORK will not be permitted.

1.02 RUBBISH CONTROL

A. During the progress of the WORK, the CONTRACTOR shall keep the Site and other areas used by it in a neat and clean condition, and free from any accumulation of rubbish. Dispose of all rubbish and waste materials of any nature occurring at the Site, and shall establish regular intervals of collection and disposal of such materials and waste. Keep its haul roads free from dirt, rubbish and unnecessary obstructions resulting from its operations. Disposal of all rubbish and surplus materials shall be off the Site in accordance with local codes and ordinances governing locations and methods of disposal, and in conformance with all applicable safety laws, and to the particular requirements of Part 1926 of the OSHA Safety and Health Standards for Construction.

1.03 SANITATION

A. The CONTRACTOR shall provide adequate sanitary facilities for the use of those employed on the WORK. Such facilities shall be made available when the first employees arrive on the site of the WORK, shall be properly secluded from public observation, and shall be constructed and maintained during the progress of the Work in suitable numbers and at such points and in such manner as may be required.

B. The CONTRACTOR shall maintain the sanitary facilities in a satisfactory and sanitary condition at all times and shall enforce their use. He shall rigorously prohibit the committing of nuisances on the site of the WORK, on the lands of the OWNER, or on adjacent property.

C. Toilet Facilities: The CONTRACTOR shall provide fixed or portable chemical toilets wherever needed for the use of employees. Toilets at construction job sites shall conform to the requirements of Part 1926 of the OSHA Standards for Construction.

D. Sanitary and Other Organic Wastes: The CONTRACTOR shall establish a regular daily collection of all sanitary and organic wastes. All wastes and refuse from sanitary facilities provided or organic material wastes from any other source related to operations shall be disposed of away from the Site in accordance with all laws and regulations pertaining thereto.

1.04 CHEMICALS

A. All chemicals used or furnished by the CONTRACTOR for or during project construction, whether defoliant, soil sterilant, herbicide, pesticide, disinfectant, polymer, reactant or of other classification, shall show approval of either the U.S. Environmental Protection Agency or the U.S. Department of Agriculture. Use of all such chemicals and disposal of residues shall be in strict accordance with the printed instructions of the manufacturer.

1.05 CULTURAL RESOURCES

A. Attention is directed to the National Historic Preservation Act of 1966 (16 USC 470) and 36 CFR 800, which provides for the preservation of potential historical architectural, archaeological, or cultural resources (hereinafter called "cultural resources").

B. Conform to the applicable requirements of the National Historic Preservation Act of 1966 as it relates to the preservation of cultural resources.

DRAFT

C. In the event potential cultural resources are discovered during subsurface excavations at the site of construction, the following procedures shall be instituted:
   1. The CONTRACTOR shall issue a Field Order directive to cease all construction operations at the location of such potential cultural resources find.
   2. Such Field Order shall be effective until such time as a qualified archaeologist can be called to assess the value of these potential cultural resources and make recommendations to the State Historic Preservation Office.

D. If the archaeologist determines that the potential find is a bona fide cultural resource, at the direction of the State Historic Preservation Office, WORK shall be suspended at the location of the find under the provisions for changes contained in the Contractual Agreement.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION (NOT USED)

END OF SECTION

DRAFT

SECTION 01 5726 – SITE WATERING FOR DUST CONTROL

PART 1 – GENERAL

1.01 DUST ABATEMENT

A. Preventative measures to limit the production of dust in amounts damaging to property, cultivated vegetation or domestic animals, or causing a nuisance to persons living in or occupying buildings in the vicinity shall be taken in to account. Responsibility for any damage resulting from dust originating from its operations shall be the CONTRACTOR's. The dust abatement measures shall be maintained at all times during construction of the project, in accordance with the requirements of Yuma County.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION

3.01 GENERAL

A. The CONTRACTOR shall take necessary measures to control any and all dust related to or as a result of construction activities under this Contract. The water necessary for the dust control operation will be Owner furnished, beyond that the CONTRACTOR shall be responsible to provide whatever means necessary to accomplish the task of Dust Control. The CONTRACTOR shall be responsible for any damage resulting from dust originating from construction activities under this Contract.

END OF SECTION

DRAFT

SECTION 01 7113 – MOBILIZATION

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Mobilization shall include verification by the CONTRACTOR that all permits have been obtained; moving onto the site of all plant and equipment; furnishing and erecting plants, temporary buildings, and other construction facilities; and implementing security requirements; all as required for the proper performance and completion of the WORK. Mobilization shall include the following principal items:

1. Moving onto the site all materials and equipment required for first month operations
2. Installing temporary construction power, wiring and lighting facilities if applicable
3. Establishing a fire protection system as required.
4. Developing a construction water supply as required.
5. Providing field office trailers, complete with all specified furnishings and office supplies, including printer, scanner, and copying machine
6. Providing all on-site communication facilities including internet services with a minimum of 50 Mbps download and 5 Mbps upload speed.
7. Providing on-site sanitary facilities and potable water facilities
8. Arranging for and erection of work and storage yard
9. Obtaining all required permits for the project.
10. Comply with all OSHA required notices and establish a safety program
11. Having the superintendent or authorized representatives at the job site as required for execution of the work
12. Provide and implement an on-site Dust Control Plan.
13. Upon start of construction, the CONTRACTOR shall furnish and install a Project Identification Sign. The sign shall be painted by a professional experienced in sign painting. The paint used shall resist weathering and fading for the scheduled construction project duration. Two, 4”X4”X8’ supports shall be supplied by the CONTRACTOR. The project identification sign shall be securely bolted to the supports and shall be installed and located as directed by the OWNER. The CONTRACTOR shall repair the sign structure and supports as necessary for the duration of the project. The sign and supports shall be maintained in a neat and clean condition. The CONTRACTOR shall remove and properly dispose of the sign upon completion of the project. Costs associated with supplying, erecting, and maintaining the project identification sign shall be considered incidental to the contract and no separate payment will be allowed.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION (NOT USED)

END OF SECTION

DRAFT

SECTION 01 7123 – FIELD ENGINEERING

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes: Field engineering to establish lines and grades for the WORK.

1.02 THE REQUIREMENT

A. The CONTRACTOR shall provide the surveying and staking control for the project. In addition, the CONTRACTOR shall provide the staking of the property and easement limits, clearing limits, influent and effluent lines, utilities, and excavation limits staking of structure corners with offsets as necessary for construction.

B. The CONTRACTOR shall provide all necessary staking following the OWNER initial staking as completed during the design of this project, as required to construct all items included in the plans and Scope of Work.

C. The CONTRACTOR shall survey the location of any underground utility line that the CONTRACTOR installs prior to backfilling. This shall include all joints, valves, structure, hydrants and services.

1.03 QUALITY ASSURANCE

A. Qualifications of Surveyor or Engineer: Registered civil engineer or land surveyor in state where Project is located.

B. Accuracy of stakes, alignments, and grades may be checked randomly by ENGINEER.
   1. Notice of when checking will be conducted will be given.
   2. When notice of checking is given, postpone parts of the Work affected by stakes, alignments or grades to be checked until checked.
   3. Do not assume that ENGINEER's check substitutes or complements required field quality control procedures.

1.04 CONSTRUCTION STAKES, LINES, AND GRADES

A. Execute the Work in accordance with the lines and grades indicated.

B. Make distances and measurements on horizontal planes, except elevations and structural dimensions.

1.05 SURVEY REFERENCE POINTS

A. Basic reference line, a beginning point on basic reference line, and a bench mark will be provided, by OWNER as defined in the Contract.

B. From these reference points, establish other control and reference points as required to properly lay out the Work.

C. Locate and protect control points prior to starting sitework, and preserve permanent reference points during construction.
   1. Make no changes or relocations without prior written notice.
   2. Replace Project control point, when lost or destroyed, in accordance with original survey control.

D. Set monuments for principal control points and protect them from being disturbed and displaced.
   1. Re-establish disturbed monuments.
   2. When disturbed, postpone parts of the Work that are governed by disturbed monuments until such monuments are re-established.

DRAFT

1.06 PROJECT SURVEY REQUIREMENTS

A. Assume responsibility for accuracy of stakes, alignments, and grades by performing verifications and checking in accordance with standard surveying practice.

B. Locate all utilities installed within the project prior to backfilling. Make a complete survey at the line, hub, or joint locations.

1.07 RECORD DOCUMENTS

A. Once the CONTRACTOR has reached substantial completion the CONTRACTOR will survey the site in preparation of Record Documents in conjunction with the CONTRACTORS supplied as-built as specified in the applicable Sections of Division 01 – General Requirements.

B. Carefully note all deviations or changes from the original drawings and maintain complete, accurate log of control points and survey.

C. Submit all utility locate information and surveyed information in hard copy and AutoCAD format.

D. Affix civil engineer's or land surveyor's signature and registration number to Record Drawing to certify accuracy of information shown.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION

3.01 GENERAL

A. The CONTRACTOR shall provide the initial surveying and staking control for the project. In addition, the CONTRACTOR shall provide the initial staking of the property and easement limits, clearing limits, influent and effluent lines, utilities, and excavation limits staking of structure corners with offsets as necessary for construction.

B. The CONTRACTOR shall provide all required field survey as necessary to complete the work as defined in the contract.

END OF SECTION

DRAFT

SECTION 01 7700 – CLOSEOUT PROCEDURES

PART 1 – GENERAL

1.01 SUBSTANTIAL COMPLETION

A. Substantial completion is based on the guideline established in the Contract Documents.

B. CONTRACTOR shall submit written certification that the project construction phase is entering the substantial completion phase.

C. CONTRACTOR to submit all applicable certification and test results, including but not limited to:
   1. Hydrostatic Test for Concrete Structures
   2. Pipe line pressure tests
   3. Geotechnical test
   4. Concrete Tests
   5. Equipment Field Service Installation, Certification, Certificate of Warranty, and Evidence of Training per applicable sections of Division 01 – General Requirements
   6. Certifications of all special inspections
   7. Clean water testing
   8. Electrical testing and inspection certification
   9. Equipment and process instrumentation program testing and certification
   10. And any applicable test required by the contract documents

D. Submit list of major items to be completed or corrected but will not impact substantial completion.

E. Engineer will inspect within seven days after receipt of certification, together with a representative.

F. Should ENGINEER consider that work is substantially complete:
   1. Prepare, and submit to ENGINEER, a list of the items to be completed or corrected, as determined by on-site observation.
   2. Engineer will prepare and issue a Certificate of Substantial Completion, containing:
      a. Date of Substantial Completion.
      b. List of items to be completed or corrected, verified, and amended.
      c. The time required to complete or correct work of listed items.
      d. Responsibilities for:
         1) Insurance
         2) Utilities
         3) Operation of mechanical, electrical, and other systems
         4) Maintenance and cleaning
         5) Security
      e. Signatures of: ENGINEER
   3. Complete work listed for completion or correction, within designated time.

G. Should ENGINEER consider that work is not substantially complete:
   1. He shall immediately notify, in writing, stating reasons.
   2. Complete work, and send second written notice to ENGINEER, certifying that Project, or designated portion of project of substantially complete.
   3. ENGINEER will re-review work.

1.02 FINAL INSPECTION

A. Submit written certification that:
   1. Contract Documents have been reviewed.

DRAFT

2. Project has been inspected for compliance with Contract Documents.
3. Work has been completed in accordance with Contract Documents.
4. Equipment and systems have been tested in presence of ENGINEER and are operational.
5. Project is completed and ready for final inspection.

B. ENGINEER will make final on-site observation/review within seven (7) days after receipt of certification.

C. Should ENGINEER consider that work is finally complete in accordance with requirements of Contract Documents, he shall prepare and issue the following:
1. Certificate of Completion;
2. Complete sets of As-Builts received; and
3. A Request to make Project Closeout submittals.

D. Should ENGINEER consider that work is not finally complete:
1. He shall notify, in writing, stating reasons.
2. Take immediate steps to remedy the stated deficiencies, and send second written notice to ENGINEER certifying that work is complete.
3. ENGINEER will re-review the work.

1.03 FINAL CLEANING UP

A. The work will not be considered as completed and final payment made until all final cleanup has been done in a satisfactory manner. Reference applicable sections of Division 01 – General Requirements.

1.04 CLOSEOUT SUBMITTALS

A. Submit the following Closeout Submittals upon completion of the Work and at least 7 days prior to submitting Application for Final Payment:
1. Evidence of Compliance and Closeout with Requirements of Governing Authorities
2. Project Record Documents (As-built Drawings and Documentation)
3. Operation and Maintenance Manuals
4. Warranties and Bonds
5. Keys and Keying Schedule
6. Evidence of Payment and Release of Liens as outlined in Conditions of the Contract
7. Release of claims as outlined in Conditions of the Contract
8. Certificate of Final Completion

1.05 EVIDENCE OF COMPLIANCE WITH REQUIREMENTS OF GOVERNING AUTHORITIES

A. Submit the following:
1. Authorization of Construction (by OWNER)
2. APP Permit (by OWNER)
3. 4.01 Permit (by OWNER)
4. Yuma County Building Permit

1.06 PROJECT RECORD DOCUMENTS

A. Deliver record documents with the transmittal letter containing date, Project title, list of documents, and signature of the CONTRACTOR.

1.07 WARRANTIES AND BONDS

A. Provide executed Warranty or Guaranty Form if required by Contract Documents.

B. Provide specified additional warranties, guarantees, and bonds form manufacturers and suppliers.

DRAFT

1.08 CERTIFICATE OF FINAL COMPLETTION

A. When 7-day operational test has been successfully completed, ENGINEER will certify that new facilities are operationally complete. ENGINEER will submit a list of known items (punch list) still to be completed or corrected prior to contract completion.

B. List of items to be completed or corrected will be amended as items are resolved by Contractor.

C. When all items have been completed or corrected, submit written certification that the entire work is complete in accordance with the Contract Documents and request final inspection.

D. Upon completion of final inspection, ENGINEER will either prepare a written acceptance of the entire work or advise the Contractor of work not complete. If necessary, inspection procedures will be repeated.

1.09 FINAL APPLICATION FOR PAYMENT

A. Submit final applications in accordance with requirements of Contractual Agreement.

1.10 FINAL CERTIFICATE FOR PAYMENT

A. ENGINEER will issue final certificate in accordance with provisions of Contractual Agreement.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION (NOT USED)

DRAFT

SECTION 01 7823 – OPERATION AND MAINTENANCE DATA

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Compile product data and related information appropriate for maintenance and operation of equipment furnished under the Contract. Prepare Operating and Maintenance Manual as specified.

B. Instruct OWNER's personnel in the maintenance and operation of equipment and systems as outlined herein.

C. In addition to Operating and Maintenance Data, the Manufacturer's printed recommended Installation Practice shall be included. If not part of the Operating and Maintenance Manual, separate written installation instructions shall be provided, serving to assist the CONTRACTOR in equipment installation.

1.02 OPERATING AND MAINTENANCE MANUAL

A. Every piece of equipment furnished and installed shall be provided with complete maintenance and operations manuals, unless noted otherwise. These shall be detailed in instructions to the OWNER's personnel. After approval, the CONTRACTOR shall store all manuals until the completion of the project or until requested by the ENGINEER. The manuals will be stored and delivered to the OWNER in an organized format.

B. Provide two hard copies and one (1) electronic version in PDF format. The hard copy shall be delivered to the jobsite shipped with the equipment and one (1) copies shall be delivered to the CONTRACTOR's main office. The PDF copy shall be electronically delivered to the OWNER, the ENGINEER, and the CONTRACTOR.

1.03 SUBMITTALS

A. Submittals shall be made in accordance with Section 01 3300 – Submittal Procedures.

1.04 CONTENT OF MANUAL

A. Neatly typewritten table of contents for each volume, arranged in systematic order.
   1. CONTRACTOR, name of responsible principal, address and telephone number.
   2. A list of each product required to be included, indexed to the content of the volume.
   3. List, with each product, the name, address and telephone number of:
      a. Subcontractor or installer.
      b. Maintenance contractor, as appropriate.
      c. Identify the area of responsibility of each.
      d. Local source of supply for parts and replacement.
   4. Identify each product, by product name and other identifying symbols as set forth in Contract Documents.

B. Product Data:
   1. Include only those sheets, which are pertinent to the specific product. References to other sizes and types or models of similar equipment shall be deleted or lined out.
   2. Annotate each sheet to:
      a. Clearly identify the specific product or part installed.
      b. Clearly identify the data applicable to the installation.
      c. Provide a parts list for all new equipment items, with catalog numbers and other data necessary for ordering replacement parts.
      d. Delete references to inapplicable information.

DRAFT

3. Clear and concise instructions for the operation, adjustment, lubrication, and other maintenance of the equipment including a lubrication chart and maintenance schedule or frequency.

C. Drawings:
   1. Supplement product data with drawings as necessary to clearly illustrate:
      a. Relations of component parts of equipment and systems.
      b. Control and flow diagrams.
   2. Coordinate drawings with information in Project Record Documents to assure correct illustration of complete installation.

D. Written text, as required to supplement product data for the particular installation:
   1. Organize in a consistent format under separate headings for different procedures.
   2. Provide a logical sequence of instructions for each procedure.

E. Copy of each warranty, bond and service contract issued: Provide information sheet for OWNER's personnel.
   1. Proper procedures in the event of failure.
   2. Instances which might affect the validity of warranties or bonds.

F. The manuals must be approved by the OWNER before final payment on the equipment is made.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION (NOT USED)

END OF SECTION

DRAFT

SECTION 01 7839 – PROJECT RECORD DOCUMENTS

PART 1 – GENERAL

1.01 RECORD DRAWINGS

A. The CONTRACTOR and its Subcontractors at the start of the project shall provide a clean set of Drawings and mark on them, in large writing “As Built.” This set of drawings will be kept at the job site trailer and used to indicate with a red pencil, pen or marker the “As Built” conditions of the project. These drawings will be updated as the work progresses to reflect the “As Built” conditions.

B. The CONTRACTOR shall be responsible to ensure that the “As Built” drawings are being kept up to date.

C. Upon substantial completion the CONTRACTOR shall obtain all “As Built” drawings and review them for accuracy and completeness, this includes surveying of utilities as required by applicable Sections of Division 01 – General Requirements. After the CONTRACTOR has reviewed and confirmed accuracy and completeness of the “As Built” drawings the CONTRACTOR shall submit the drawings and survey information to the ENGINEER of record.

1. All survey as-built information shall be submitted to the ENGINEER in AutoCAD format.

D. Upon receipt of the “As Built” drawings the ENGINEER shall make all necessary changes to the documents and provide a Record Drawing set to the CONTRACTOR for their use and distribution as required for project closeout, as required by applicable Sections of Division 01 – General Requirements.

1.02 PHOTO DOCUMENTATION

A. Images must be created using only digital photographic equipment. Camera should be capable of utilizing a moderate wide-angle lens system and have electronic flash capable of properly illuminating a large interior space. Digital images shall be saved in JPEG format and properly labeled.

B. Digital copies shall be provided for OWNER and ENGINEER by CONTRACTOR at each weekly progress meeting.

C. Saved images shall include detailed photograph description along with month, day, and year and separated by treatment process.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION (NOT USED)

END OF SECTION

DRAFT

SECTION 01 7900 – DEMONSTRATION AND TRAINING

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Description of Work:
   1. The equipment vendor shall provide formal training of OWNER's personnel. Training shall commence after the successful installation and testing of the equipment.
      a. Training of OWNER's personnel shall commence within a period of 14 days after the equipment installation and startup as mutually agreed to by OWNER, Engineer, and Contractor.
      b. Training shall be completed within the time allocated in the Agreement.
      c. The Engineer shall document the time when the facilities are substantially unavailable for use by the equipment vendor to perform training due to circumstances beyond the control of the equipment vendor including but not limited to power outages, lack of feed water, inability to transfer product water or feed water due to factors beyond the control of the equipment vendor, not having adequate staff from the Contractor or OWNER. If in the sole opinion of the Engineer the facilities are substantially unavailable to the equipment vendor, equivalent additional time for training will be granted.
      d. Failure of the equipment vendor to complete the Training as required by this Section within the allocated time, shall constitute a failure of the equipment vendor to provide Special Services in accordance with the requirements of the Contract.
      e. Upon successful completion of the Training required by this Section, the OWNER will issue a "Notice of Completed Training".
      f. The equipment vendor shall maintain record of the individuals that have completed training and provide information required for the documentation of Professional Development Hours required for OWNER's personnel.
   2. The equipment vendor shall provide the services of factory-trained specialists to train OWNER's personnel in the recommended operation and the preventive maintenance procedures for all equipment provided by the Contract Documents.
   3. The equipment vendor shall coordinate training location and provide hands-on training as required for proper training.
   4. The equipment vendor shall be responsible for all costs associated with training and shall provide required materials, texts, and supplies.
   5. Training shall be conducted in normal eight (8) hour working days until conclusion of the training course.
   6. Training sessions may be videotaped by OWNER at OWNER's expense.
   7. Training material shall be provided to OWNER in written and/or electronic format.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION

3.01 OPERATOR TRAINING

A. Training: The instruction lesson plan shall include the following as a minimum:
   1. Equipment Operation:
      a. Describe equipment's operating (process) function. Describe equipment's fundamental operating principals and dynamics.
      b. Identify equipment's mechanical, electrical, and electronic components and features.

DRAFT

c. Identify all support equipment associated with the operation of subject equipment (e.g., valve actuators, motors).
d. Recommend standard operating procedures to address start-up, routine monitoring, and shutdown of the equipment.

2. Detailed Component Description:
   a. Identify and describe in detail each component's function.
   b. Group related components into subsystems, where applicable. Describe subsystem functions and their interaction with other subsystems.
   c. Identify and describe in detail equipment safeties and control interlocks.
3. Equipment Preventative Maintenance (PM):
   a. Describe PM inspection procedures required to:
      1) Perform an inspection of the equipment in operation.
      2) Spot potential trouble symptoms and anticipate breakdowns.
      3) Forecast maintenance requirements (predictive maintenance).
   b. Define the recommended PM intervals for each component.
   c. Provide lubricant and replacement part recommendations and limitations.
   d. Describe appropriate cleaning practices and recommend intervals.
   e. Identify and describe the use of special tools required for maintenance of the equipment.
   f. Describe component removal/installation and disassembly/assembly procedures.
   g. Perform "hands-on" demonstrations of preventive maintenance procedures.
   h. Describe recommended measuring instruments and procedures, and provide instruction on interpreting alignment measurements, as appropriate. Define recommended torque, mounting, calibration, and/or alignment procedures and settings, as appropriate.
   i. Describe recommended procedures to check/test equipment following a corrective repair.
4. Equipment Troubleshooting:
   a. Define recommended systematic troubleshooting procedures.
   b. Provide component specific troubleshooting checklists.
   c. Describe applicable equipment testing and diagnostic procedures to facilitate troubleshooting.

END OF SECTION

DRAFT

SECTION 02 0100 – MAINTENANCE OF EXISTING CONDITIONS

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. The WORK of this Section, as defined in the Contract, includes all work necessary to satisfactorily prepare the site as shown on the accepted drawings and as specified herein. Following this preparation, the site shall be in such a condition as to easily continue with the next operation whether it be excavating, backfilling, or any other operations that are a part of the project. Site preparation includes clearing, grubbing, grading, tree and shrub removal, native grass stripping and removing and disposing of all debris within the limits of the project and such other areas as may be indicated on the plans or required work, except such objects as are designated to remain or are to be removed in accordance with the plans. This work shall also include the preservation from injury or defacement of all vegetation and objects designated to remain.

B. Related Sections: The work shall conform to the applicable Sections of the Divisions in these Specifications:
   1. Division 01 – General Requirements
   2. Division 31 – Earthwork

C. Soils Report: This work shall conform to the requirements of the latest Geotechnical Evaluation.

1.02 SUBMITTALS

A. Submittals shall be made in accordance with Section 01 3300 – Submittal Procedures.

B. Shop Drawings: Submit clearing limits, staging, and site access plans and limits.

1.03 SITE SURVEY AND LAYOUT

A. The CONTRACTOR shall establish construction, and clearing limits by providing the initial site survey and field staking. The initial staking will include property line limits, casements and access points and structure locations with 100-ft. offsets. The OWNER shall provide the contractor the survey data for the project to include the survey control points, hubs, etc., and benchmarks for the site. The contractor shall layout required construction staking as defined in the applicable Sections of Division 01 – General Requirements.

1.04 PERMITS

A. Verify all required permits have been secured for this work. Comply with applicable local Air Pollution Control requirements. In the absence of specific ordinances, periodic watering shall be done to control dust throughout the work. Make all necessary arrangements for water required for this work.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION

3.01 PRIMARY SITE ACCESS

A. The CONTRACTOR shall provide clearing, grubbing, and stripping as defined in the contract.

B. The CONTRACTOR shall develop any necessary access to the Site, including access entrance barriers to prohibit entry of unauthorized persons as defined in the Contract. The contractor shall provide at the project site access barriers to prohibit entry of unauthorized persons as defined in the Contract.

DRAFT

C. Adequately support existing structures, sidewalks, slabs, pavements, utilities, and other facilities that may be affected by the proposed construction as defined in the Contract.

D. Utility Interference: Where existing utilities interfere with the WORK, notify the utility owner before proceeding in accordance with the General Conditions.

3.02 CLEARING, GRUBBING AND STRIPPING

A. The CONTRACTOR shall perform this work as defined in the Geotechnical Evaluation and or Soils Report.

B. Construction areas shall be cleared of grass and weeds to at least a depth of 1 inch and cleared of structures, pavement, sidewalks, concrete or masonry debris, trees, logs, upturned stumps, loose boulders, and any other objectionable material of any kind which would interfere with the performance or completion of the WORK, create a hazard to safety, or impair the subsequent usefulness of the WORK, or obstruct its operation. Trees and other natural vegetation outside the actual lines of construction shall be protected from damage during construction.

C. Within the limits of clearing, the areas below the natural ground surface shall be grubbed to a depth necessary to remove all stumps, roots, buried logs and all other objectionable material. Septic tanks, drain fields, and connection lines and any other underground structures, debris or waste shall be removed if found on the Site. All objectionable material from the clearing and grubbing process shall be removed from the Site and wasted in approved safe locations.

3.03 OVEREXCAVATION, REGRADING AND BACKFILL UNDER FILL AREAS

A. All grading and excavation shall conform to the requirements of the Geotechnical Evaluation and or Soils Report.

3.04 EXISTING UTILITY SERVICES

A. At start of work, CONTRACTOR shall locate and identify all utility services within the construction limits (both underground and overhead). Utilize underground utilities locating services as required, including potholing if necessary.

B. CONTRACTOR shall disconnect or reroute all existing services, where such services will be affected by construction operations. Comply with all instructions issued during the pre-construction conference regarding coordination, advance notice, emergency repairs, etc.

C. All DISCONNECTIONS OR TERMINATIONS SHALL BE PERFORMED IN SAFE MANNER, IN ACCORDANCE WITH APPLICABLE CODES AND REGULATIONS. PROVIDE ANY DISCONNECTS SWITCHES, VALVES, PLUGS, TEES, ETC., AS REQUIRED FOR THE VARIOUS LOCATIONS.

END OF SECTION

DRAFT

SECTION 02 4000 – DEMOLITION AND STRUCTURE MOVING

PART 1 – GENERAL

1.01 REQUIREMENT

A. Items required to be removed:
   1. Reference plans for existing items to be removed. Removable items may include, but are not limited to concrete paving, asphaltic concrete pavement, base courses, manholes, and pipes.

1.02 REGULATORY REQUIREMENTS

A. Conform to applicable codes for disposal of debris.

B. Coordinate removal work with utility companies or appropriate party.

PART 2 – PRODUCTS – NOT USED

PART 3 – EXECUTION

3.01 PREPARATION

A. Obtain advance approval from ENGINEER for dimensions and limits of removal work.

B. Identify known utilities below grade. Stake and flag locations.

3.02 PROTECTION

A. Protect following from damage or displacement:
   1. Adjacent public and private property.
   2. Trees, plants, and other landscape features designated to remain.
   3. Utilities designated to remain.
   4. Pavement and utility structures designated to remain.
   5. Bench marks, monuments, and existing structures designated to remain.

3.03 REMOVALS

A. Remove pavements and structures by methods that will not damage underground utilities. Do not use drop hammer near existing underground utilities.

B. Minimize amount of earth loaded during removal operations.

C. Where existing pavement is to remain, make straight saw cuts in existing pavement to provide clean breaks prior to removal. Do not break concrete pavement or base with drop hammer unless concrete or base has been saw cut to minimum depth of 2 inches.

D. When street and driveway saw cut location is greater than one-half of pavement lane width, remove pavement for full lane width or to nearest longitudinal joint as directed by ENGINEER.

E. Remove sidewalks and curbs to nearest existing dummy, expansion, or construction joint.

F. Unless noted otherwise or indicated in the Contract Documents, existing ends of pipe culverts or end of sewers which are to remain, shall have an 8-inch-thick masonry plug in pipe installed in the end of the pipe prior to backfill, with the backfill constructed in accordance with requirements of the applicable Sections of Division 31 – Earthwork.

3.04 BACKFILL

A. Backfill of removal areas shall be in accordance with requirements of these Specifications.

DRAFT

3.05 DISPOSAL

A. Inlet frames, grates, and plates; and manhole frames and covers, may remain City property. Disposal shall be in accordance with requirements these Specifications.

B. Remove from site, debris resulting from work under this section in accordance with requirements of these Specifications.

END OF SECTION

DRAFT

SECTION 03 0900 – WATER LEAKAGE TEST FOR CONCRETE STRUCTURES

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. The CONTRACTOR shall clean, flush, and test hydraulic structures and appurtenant piping, in accordance with ACI 350.1/350.1R Tightness Testing of Environmental Concrete Structures. However, if any local or state ordinances/regulations exist regarding this test procedure the ENGINEER should be notified immediately. The ENGINEER shall review the regulation and determine if it is applicable to the project prior to commencement of construction. Following the review, the most stringent will govern.

B. The ACI 350.1/350.1R standard hydrostatic test (HST) criteria for these hydraulic structures are expressed as the maximum allowable percent loss per day of the test water volume. The designation for these structures is HST-050 or 0.050% per day of volume loss for all the structures.

C. It is the intent of this specifications section to compliment the requirements of ACI 350.1/350.1R not to override them. All testing requirements shall be per Section 1.01A.

1.02 SUBMITTALS

A. Furnish per Section 01 3300 – Submittal Procedures.

B. Testing Plan, Methods & Schedule for preliminary & final testing

C. Testing Documentation Recording Forms for preliminary & final testing

D. Methods of leak repair and product information

E. Upon completion of the test submit the completed Testing Documentation Recording Form showing results of test, dates etc. as required by the form for preliminary & final testing.

PART 2 – PRODUCTS

2.01 MATERIALS REQUIREMENTS

A. Temporary valves, bulkheads, or other water control equipment and materials shall be as determined by the CONTRACTOR subject to the ENGINEER's review. No materials shall be used which would be injurious to the facility or its future function.

PART 3 – EXECUTION

3.01 GENERAL

A. The CONTRACTOR shall develop and submit for review a form that will be used to record and document the testing as required in this section. At a minimum, the form shall include the project name, tank description, tank size, width, height, max operating depth, total volume in gallons of water required for testing, calculating allowable loss without evaporation, recorded readings with applicable reading dates, daily weather conditions, water temperature at 18 inches, recorded evaporations and signature and date blocks for the person recording the readings and a witness. In addition, the preliminary testing form shall include space for documentation of the visual inspection of each tank wall, which shall describe any leaks. The description of the leaks shall define the type of leak and methods of resolution.

DRAFT

B. Water for testing will be furnished by the OWNER; however, the CONTRACTOR shall make all necessary provisions for conveying the water from the OWNER designated source to the points of use as per the Contract.

C. The initial filling of a new tank shall not exceed a rate of 4ft/hr. Filling shall be continued until the water surface is at the design maximum liquid level or 4 inches below any fixed overflow level, whichever is lower.

D. All hydraulic structures and appurtenant pressure piping shall be tested; those for potable water shall also be disinfected. Disinfection shall be accomplished by chlorination. All chlorinating and testing operations shall be done in the presence of the ENGINEER.

E. If industrial paint finishes or other protective coatings are to be applied to the interior surfaces of the hydraulic structure, such coatings shall be applied after all testing operations have been completed, unless approved by the ENGINEER. However, all construction joints in the tanks shall be caulked as per these Specifications.

3.02 PRELIMINARY HYDRAULIC TESTING

A. Preliminary hydraulic testing shall conform to the following procedure:
   1. All hydraulic structures shall be cleaned by thoroughly hosing down all surfaces with a high-pressure hose and nozzle of sufficient size to deliver a minimum flow of 50 GPM. All water, dirt and foreign material accumulated in this cleaning operation shall be discharged from the structure or otherwise removed.
   2. A thorough visual inspection of the tank foundation and walls for cracks shall be performed by the ENGINEER. Repairs shall be done in accordance with these Specifications.
   3. Testing shall be performed in accordance with ACI 350.1/350.1R and prior to structure backfilling. The test shall not be performed sooner than 14 days after all portions of structure walls have been completed or at least 85% of design strength for all concrete elements. All pressure relief valves and wall penetrations shall be properly plugged prior to the hydrostatic test as to prevent leakage through the valve during testing. The tank shall be filled to an appropriate level as specified by the ENGINEER and a visual inspection of the outside walls shall be performed to determine any leaks over a 72-hour period. All observation shall be documented and recorded on a daily basis as specified. If leaks are observed, remove all water, repair the necessary areas and retest. The tanks shall have failed the test if water is observed flowing or seeping from the tank or if moisture can be transferred from the exterior surface to the dry hand.

3.03 TESTING OF HYDRAULIC STRUCTURES

A. General: Testing shall conform to American Concrete Institute (ACI) Standard 350.1/350.1R Tightness Testing of Environmental Engineering Concrete Structures. Tank structure testing and backfilling shall not be performed sooner than 14 days after all associated tank structural roof systems have been completed or at least 85% of design strength for all concrete elements. All pressure relief valves and wall penetrations shall be properly plugged prior to the hydrostatic test as to prevent leakage through the valve during testing. The test shall consist of filling the structure with water to the maximum operating water surface.

B. Leakage Test and Repairs:
   1. After the structure has been filled to the test level, the water loss leakage test shall be performed as follows: an initial water level reading shall be made and recorded every 24 hours until the test has been completed. Concrete will be allowed to saturate for three days. After which the actual test shall begin. Measurements shall be taken every 24 hours at 2 separate locations if possible. The test period shall be at least the theoretical time required to lower the water surface 3/8 inches, assuming a loss of water at the maximum allowable rate. The test period need not be longer than five

DRAFT

days. In uncovered or well-ventilated covered tanks evaporation and precipitation shall be measured. At the end of the test period, the water surface, temperature, evaporation, and precipitation measurements shall be recorded at the previous locations. The structure shall be considered to have passed the test if the calculated change in water volume in the tank is less that or equal to the HST-050 criteria or 0.05% of the total volume of the tank. The volume loss if necessary can be corrected for evaporation, precipitation, and temperature. The tank has failed if the loss is greater than the required criteria.

2. A restart of the test shall be required when test measurement become unreliable due to unusual precipitation or other external factors.
3. The CONTRACTOR shall be permitted to immediately retest a tank failing the test when no visible leakage is exhibited. If the tank fails the second time then the CONTRACTOR shall take other methods to determine the probable area(s) of leakage. The tank shall only be retested after the most probable area(s) of leakage are repaired. Any cracks shall be repaired before each test in accordance with these Specifications. The tanks shall be retested until they meet the required criterion.

3.04 TESTING OF APPURTENANT PIPING

A. Piping appurtenant to hydraulic structures shall be tested in accordance with these Specifications.

END OF SECTION

DRAFT

SECTION 03 1500 – CONCRETE ACCESSORIES

PART 1 – GENERAL

1.01 SECTION INCLUDES

A. Provision of waterstops embedded in concrete and spanning control, expansion, and/or construction joints to create a continuous diaphragm to prevent fluid migration.

B. Provision of strip applied expanding waterstop, embedded in concrete and spanning pipe penetrations, to create a continuous diaphragm for prevention of fluid migration.

1.02 REFERENCES

A. PVC Waterstop:
   1. Corps of Engineers: CRD-C 572-74
   2. American Society for Testing Materials (ASTM)
   3. Bureau of Reclamation: C-902

B. Hydrophilic Waterstop: American Society for Testing Materials (ASTM)

C. Related Sections: Work shall conform to the applicable Sections of Division 03 – Concrete.

1.03 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

B. Product Data:
   1. Polyvinyl chloride waterstop: data of complete physical properties.
   2. Stripped applied waterstop: data of complete physical properties.

C. Samples:
   1. Polyvinyl chloride waterstop.
   2. Strip applied waterstop.

1.04 DELIVERY, STORAGE, AND HANDLING

A. PVC waterstops, Store waterstops under tarps to protect from oil, dirt, sunlight, and premature exposure to water.

B. Strip applied waterstop:
   1. Protect waterstops from exposure to moisture that may cause premature waterstop expansion.
   2. Store waterstops under cover to protect from oil, dirt, and sunlight.

PART 2 – PRODUCTS

2.01 PVC WATERSTOPS FOR JOINTS

A. Provide flexible PVC (polyvinyl chloride) ribbed waterstop with centerbulb. Use 6” waterstop for structures with hydrostatic pressure less than 65 ft, and 9” water stop for 65 ft and greater. Greenstreak or ENGINEER-approved equal.

B. The PVC waterstop shall be extruded from an elastomeric plastic material of which the basic resin is prime virgin polyvinyl chloride. The PVC compound shall not contain any scrapped or reclaimed material or pigment whatsoever.

DRAFT

C. Performance Requirements as Follows:

Property	Test Method	Required Limits
Water Absorption	ASTM D570	0.15% max
Tear Resistance	ASTM D624	200 lb./in (35kN/m) min
Ultimate Elongation	ASTM D638	350% min
Tensile Strength	ASTM D638	200 psi (13.78 Mpa) min
Low Temperature Brittleness	ASTM D746	No Failure @ -35°F (-37°C)
Stiffness in Flexure	ASTM D747	600 psi (4.13 Mpa) min
Specific Gravity	ASTM D792	1.45 max
Hardness, Shore A	ASTM D2240	79 +/- 3
Tensile Strength After Accelerated Extraction	CRD-C 572	1850 psi (11.03 Mpa) min
Elongation After Accelerated Extraction	CRD-C 572	300% min
Effect of Alkalis after 7 days:	CRD-C 572	
Weight Change		b/t -0.10% and +0.25%
Hardness Change		+/- 5 points

2.02 STRIP APPLIED WATERSTOP FOR CONCRETE CAST AGAINST EXISTING CONCRETE STRUCTURES

A. Provide strip applied expanding waterstop comprised of modified chloroprene rubber. Product shall be “HYDROTITE”, as supplied by Greenstreak, Inc. 3400 Tree Court Industrial Blvd., St. Louis, MO 63122, Phone: 800-325-9400, Fax: 800-551-5145, or ENGINEER-approved equal.

B. The waterstop shall be a combination of chloroprene rubber and chloroprene rubber modified to impart hydrophilic properties.

C. The waterstop shall have a delay coating to inhibit initial expansion due to moisture present in fresh concrete.

D. Performance Requirements as follows:

1. Chloroprene Rubber:

Property	Test Method	Required Limits
Tensile Strength	ASTM D412	1300 PSI min
Ultimate Elongation	ASTM D412	400% min
Hardness (Shore A)	ASTM D2240	50 +/- 5
Tear Resistance	ASTM D624	100 lb./in min

2. Modified Chloroprene (Hydrophilic) Rubber:

Property	Test Method	Required Limits
Tensile Strength	ASTM D412	350 PSI min
Ultimate Elongation	ASTM D412	600% min
Hardness (Shore A)	ASTM D2240	52 +/- 5
Tear Resistance	ASTM D624	50 lb./in
Expansion Ration	Volumetric Change-Distilled Water @ 70°F	3 to 1 min

2.03 ACCESSORIES

A. PVC Waterstops:

1. Provide factory made waterstop fabrications for all changes of direction, intersections, and transitions leaving only straight butt joint splices for the field.

DRAFT

2. Provide hog rings or grommets spaced at 12 inches on center along length of waterstop.
3. Provide Teflon coated thermostatically controlled waterstop splicing irons for field butt splices.

B. Strip Applied Waterstops:
1. Provide SWELLSTOP Primer Adhesive to continuously secure SWELLSTOP to concrete or ENGINEER-approved equal.
2. Provide concrete nails as required to secure SWELLSTOP and HYDROTITE in vertical or overhead applications or ENGINEER-approved equal.
3. On rough concrete surfaces apply LEAKMASTER to smooth surfaces and adhere to HYDROTITE.

PART 3 – EXECUTION

3.01 INSTALLATION

A. PVC Waterstop:
1. Refer to manufacturer installation recommendations.
2. Field butt splices shall be heat fused welded using a Teflon-covered thermostatically-controlled waterstop splicing iron at approximately 380°F. Follow approved manufacturer recommendations.
3. Lapping of waterstop, use of adhesives, or solvents shall not be allowed.
4. Center waterstop in joint and secure waterstop in correct position using hog rings or grommets spaced at 12” on centers along the length of the waterstop and wire tie to adjacent reinforcing steel.

B. Strip Applied Waterstop:
1. Refer to manufacturer installation recommendations.
2. Apply primer/adhesive to dry pipe or pipe sleeve surface, 2 inches wide continuously along the joint, maintaining a minimum of 2 inches clear cover to concrete face.
3. Primer adhesive shall be allowed to “dry to the touch” (typically 30 minutes to several hours; dependent on-site conditions) prior to application of waterstop.
4. Continuously adhere waterstop to pipe or pipe sleeve utilizing primer adhesive and maintaining a minimum of 2 inches clear cover to concrete face.
5. Apply waterstop the same day as primer adhesive.
6. Waterstop shall be butt spliced pressing ends together ensuring no separation or air pockets
7. Protect waterstop from moisture, dirt, oil, and sunlight during the progress of the work
8. Remove release paper from waterstop immediately prior to concrete placement.
9. Inspect waterstop for premature swelling, discontinuity, and debris contamination prior to concrete pour. Replace unacceptable waterstop.
10. Place and thoroughly vibrate concrete, taking care not to disturb or displace the waterstop. Do not allow vibrator to contact the waterstop.

END OF SECTION

DRAFT

SECTION 03 1516 – CONCRETE CONSTRUCTION JOINTS

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Construct all joints in concrete at the locations shown. Joints required in concrete structures are of various types and will be permitted only where shown, unless specifically accepted by the ENGINEER.

A. Commercial Standards (ASTM):

C920	Elastomeric Joint Sealants
D412	Rubber Properties in Tension
D624	Rubber Property - Tear Resistance
D638	Tensile Properties of Plastics
D746	Brittleness Temperature of Plastics and Elastomers by Impact
D747	Apparent Bending Modulus of Plastics by Means of a Cantilever Beam
D1056	Flexible Cellular Materials - Sponge or Expanded Rubber
D1752	Preformed Sponge Rubber and Cork Expansion Joint Fillers for Concrete Paving and Structural Construction
D2240	Rubber Property - Durometer Hardness
D2241	Poly (Vinyl Chloride) (PVC) Pressure-Rated Pipe (SDR-Series)

1.02 TYPES OF JOINTS

A. Construction Joints: Provide where shown on the plans. When fresh concrete is placed against a hardened concrete surface, the joint between the two (2) pours is called a construction joint. Unless otherwise specified, all joints in water bearing members shall be provided with a waterstop and sealant groove of the shape specified and shown. The space so formed shall be filled with a joint sealant material as specified in these Specifications.

B. Contraction Joints: Provide where shown on the plans. Contraction joints are similar to construction joints except that the fresh concrete shall not bond to the hardened surface of the first pour, which shall be coated with a bond breaker. The slab reinforcement shall be stopped 4½ inches from the joint; which is provided with a sleeve-type dowel, to allow shrinkage of the concrete of the second pour. Waterstop and/or sealant groove shall also be provided when specified or shown.

C. Expansion Joints: Provide where shown on the plans. To allow the concrete to expand freely, a space is provided between the two pours, the joint shall be formed as shown. This space is obtained by placing a filler joint material against the first pour, which acts as a form for the second pour. Unless otherwise specified, all expansion joints in water bearing members shall be provided with a waterstop as shown.

D. The space so formed shall be filled with a joint sealant material as specified in these Specifications. In order to keep the two (2) walls or slab elements in line the joint shall also be provided with a sleeve-type dowel as shown.

E. Control Joints: The function of the control joint is to provide a weaker plane in the concrete, where shrinkage cracks will probably occur. A groove, of the shape and dimensions shown, is formed or saw-cut in the concrete. This groove is afterward filled with a joint sealant material as specified in these Specifications.

1.03 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

DRAFT

B. Waterstops: Prior to production of the material required under this contract, qualification samples shall be submitted. Such samples shall consist of extruded or molded sections of each size or shape to be used, and shall be accomplished so that the material and workmanship represents in all respects the material to be furnished under this contract. The balance of the material to be used under this contract shall not be produced until after the ENGINEER has reviewed the qualification samples as defined in these Specifications.

C. Joint Location: Submit placement shop drawings showing the location and type of all joints for each structure, along with the associated pour sequence.

1.04 QUALITY ASSURANCE

A. Waterstop Inspection: It is required that all waterstop field joints shall be subject to rigid inspection, and no such work shall be scheduled or started without having made prior arrangements with the ENGINEER to provide for the required inspections. Not less than 24-hour notice shall be provided to the ENGINEER for scheduling such inspections.

B. All field joints in waterstops shall be subject to rigid inspection for misalignment, bubbles, inadequate bond, porosity, cracks, offsets, and other defects, which would reduce the potential resistance of the material to water pressure at any point. All defective joints shall be replaced with material, which shall pass said inspection, and all faulty material shall be removed from the site and disposed of at no additional cost.

C. The following waterstop defects represent a partial list of defects, which shall be grounds for rejection:
   1. Offsets at joints greater than 1/16-inch or 15% of material thickness, at any point, whichever is less.
   2. Exterior crack at joint, due to incomplete bond, which is deeper than 1/16-inch or 15% of material thickness, at any point, whichever is less.
   3. Any combination of offset or exterior crack which will result in a net reduction in the cross section of the waterstop in excess of 1/16-inch or 15% of material thickness at any point, whichever is less.
   4. Misalignment of joint, which result in misalignment of the waterstop in excess of ½-inch in 10 feet.
   5. Porosity in the welded joint as evidenced by visual inspection.
   6. Bubbles or inadequate bonding which can be detected with a penknife test. (If, while prodding the entire joint with the point of a pen knife, the knife breaks through the outer portion of the weld into a bubble, the joint shall be considered defective.)

D. Waterstop Samples: Prior to use of the waterstop material in the field, a sample of each size or shape of material to be used shall be submitted to the ENGINEER for review. These samples shall be fabricated so that the material and workmanship represent in all respects the fittings to be furnished under this contract. Field samples of fabricated fittings (crosses, tees, etc.) may be selected at random by the ENGINEER for testing by a laboratory at no additional expense to the ENGINEER. When tested, they shall have a tensile strength across the joints equal to at least 600 psi.

E. Construction Joint Sealant: As per these Specifications.

PART 2 – PRODUCTS

2.01 PVC AND HYDROPHILIC WATERSTOP

A. General: As defined in these Specifications.

DRAFT

2.02 BACKING ROD

A. Backing rod shall be an extruded closed-cell, polyethylene foam rod. The material shall be compatible with the joint sealant material used and shall have a tensile strength of not less than 40 psi and a compression deflection of approximately 25% at 8 psi. The rod shall be 1/8-inch larger in diameter than the joint width except that a 1-inch diameter rod shall be used for a ¾-inch wide joint.

2.03 BOND BREAKER

A. Bond breaker shall be Super Bond Breaker as manufactured by Burke Company, San Mateo, California; Select Cure CRB as manufactured by Select Products Co., Upland, California; or ENGINEER-approved equal. It shall contain a fugitive dye so that areas of application will be readily distinguishable. Provide where shown on the plans.

2.04 SLIP DOWELS

A. Slip dowels in joints shall be A36 smooth epoxy-coated bars, conforming to ASTM A775. Provide where shown on the plans.

PART 3 – EXECUTION

3.01 GENERAL

A. Waterstops of the type specified herein shall be embedded in the concrete across joints as shown. All waterstops shall be fully continuous for the extent of the joint. Splices necessary to provide such continuity shall be accomplished in conformance to printed instructions of manufacturer of the waterstops. Suitable precautions and means to support and protect the waterstops during the progress of the work and shall repair or replace at its own expense any waterstops damaged during the progress of the work shall be taken. All waterstops shall be stored so as to permit free circulation of air around the waterstop material.

B. When any waterstop is installed in the concrete on one side of a joint, while the other half or portion of the waterstop remains exposed to the atmosphere for more than 2 days, suitable precautions shall be taken to shade and protect the exposed waterstop from direct rays of the sun during the entire exposure and until the exposed portion of the waterstop is embedded in concrete.

3.02 SPLICES IN WATERSTOPS

A. When applicable, splices in waterstops shall be performed by heat-sealing the adjacent waterstop sections in accordance with the manufacturer's printed recommendations. It is essential that:
   1. The material not be damaged by heat sealing.
   2. The splices have a tensile strength of not less than 60 percent of the unspliced materials tensile strength.
   3. The continuity of the waterstop ribs and of its tubular center axis be maintained.

B. Butt joints of the ends of two (2) identical waterstop sections may be made while the material is in the forms.

C. All joints with waterstops involving more than two (2) ends to be jointed together, and all joints which involve an angle cut, alignment change, or the joining of two (2) dissimilar waterstop strips of waterstop material beyond the joint. Upon being inspected and approved, such prefabricated waterstop joint assemblies shall installed in the forms and the ends of the 24-inch sections shall be prefabricated prior to placement in the forms, allowing not less than 24-inch-long strips shall be butt welded to the straight run portions of waterstop in place in the forms.

DRAFT

D. Where a centerbulb waterstop intersects and is jointed with a non-centerbulb waterstop, care shall be taken to seal the end of the centerbulb, using additional PVC material if needed.

3.03 JOINT CONSTRUCTION

A. Setting Waterstops: In order to eliminate faulty installation that may result in joint leakage, particular care shall be taken of the correct positioning of the waterstops during installation. Adequate provisions must be made to support and anchor the waterstops during progress and to insure the proper placement and or embedment in the concrete. The symmetrical halves of the waterstops shall be equally divided between the concrete pours at the joints. The center axis of the waterstops shall be coincident with the joint openings. Maximum density and imperviousness of the concrete shall be insured by thoroughly working it near all joints.

B. In placing flat-strip hydrotite waterstops in the forms, means shall be provided to prevent them from being folded over by the concrete as it is placed. Unless otherwise shown, all hydrotite waterstops shall be held in place with light wire ties on 12-inch centers, which shall be passed through the edge of the hydrotite waterstop and tied to the curtain of reinforcing steel. Horizontal hydrotite waterstops, with their flat face in a vertical plane, shall be held in place with continuous supports to which the top edge of the hydrotite waterstop shall be tacked. In placing concrete around horizontal hydrotite waterstops, with their flat face in a horizontal plane, concrete shall be worked under the hydrotite waterstops by hand so, as to avoid the formation of air and rock pockets.

C. In placing centerbulb waterstops in expansion joints, the centerbulb shall be centered on the joint filler material.

D. Waterstop in vertical wall joints shall stop 6 inches from the top of the wall where such waterstop does not connect with any other waterstop and is not to be connected to for a future concrete placement.

E. Joint Location: Construction joints, and other types of joints, shall be provided where shown. When not shown, construction joints shall be provided at 25-foot maximum spacing for all concrete construction, unless noted otherwise. Where joints are shown spaced greater than 40-feet apart, additional joints shall be provided to maintain the 25-foot maximum spacing. The location of all joints, of any type, shall be submitted for acceptance by the ENGINEER.

F. Joint Preparation: Special care shall be used in preparing concrete surfaces at joints where bonding between two (2) sections of concrete is required. Unless otherwise shown, such bonding will be required at all horizontal joints in walls. Surfaces shall be prepared in accordance with the requirements of the applicable Sections of Division 03 – Concrete. Except on horizontal wall construction joints, wall to slab joints or where otherwise shown or specified, at all joints where waterstops are required, the joint face of the first pour shall be coated with a bond breaker as shown on the plans.

DRAFT

G. Construction Joint Sealant: Construction joints in water-bearing floor slabs, and elsewhere as shown, shall be provided with tapered grooves, which shall be filled with a construction joint sealant. The material used for forming the tapered grooves shall be left in the grooves until just before the grooves are cleaned and filled with joint sealant. After removing the forms from the grooves, all laitance and fins shall be removed, and the grooves shall be sandblasted. The grooves shall be allowed to become thoroughly dry, after which they shall be blown out; immediately thereafter, install the joint sealant per these Specifications, they shall be primed, bond breaker tape placed in the bottom of the groove, and filled with the construction joint sealant. The primer used shall be supplied by the same manufacturer supplying the sealant. No sealant will be permitted to be used without a primer. Care shall be used to completely fill the sealant grooves. Areas designated to receive a sealant fillet shall be thoroughly cleaned, as outlined for the tapered grooves, prior to application of the sealant.

END OF SECTION

DRAFT

SECTION 03 2000 – CONCRETE REINFORCING

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Furnish, fabricate, and place all concrete reinforcement steel, welded wire fabric, couplers, and concrete inserts for use in reinforced concrete construction and perform all appurtenant work, including installation of all the wires, clips, supports, chairs, spacers, and other accessories, all in accordance with the Contract Documents.

B. American Iron and Steel (AIS) requirement applies to this section. All iron and steel products used in this project must be produced in the United States.

1.02 REFERENCE SPECIFICATIONS, CODES AND STANDARDS

A. Codes: Codes: All codes, as referenced herein are specified in applicable Sections of Division 01 – General Requirements.

B. Commercial Standards:

ACI 315	Details and Detailing of Concrete Reinforcement
ACI 318	Building Code Requirements for Reinforced Concrete
CRSI MSP-1	Concrete Reinforcing Steel Institute Manual of Standard Practice
AWS D1.4	Structural Welding Code - Reinforcing Steel
ASTM A82	Steel Wire, Plain, for Concrete Reinforcement
ASTM A615	Deformed and Plain Billet-Steel Bars for Concrete Reinforcement
ASTM A775	Epoxy-Coated Reinforcing Steel Bars

1.03 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

B. Submittals shall include shop bending diagrams, placing lists, drawings of all reinforcement steel prior to fabrication and mill test reports.

C. Details of the concrete reinforcement steel and concrete inserts shall be submitted at the earliest possible date after receipt by the CONTRACTOR of the Notice to Proceed. Said details of reinforcement steel for fabrication and erection shall conform to ACI 315 and the requirements specified and shown. The shop bending diagrams shall show the actual lengths of bars, to the nearest inch measured to the intersection of the extensions (tangents for bars of circular cross-section) of the outside surface. The shop drawings shall include bar placement diagrams, which clearly indicate the dimensions of each bar splice.

D. Where mechanical couplers are required or permitted to be used to splice reinforcement steel, submit manufacturer's literature which contains instructions and recommendations for installation for each type of coupler used; certified test reports which verify the load capacity of each type and size of coupler used; and shop drawings which show the location of each coupler with details of how they are to be installed in the formwork.

E. If reinforcement steel is spliced by welding at any location, submit mill test reports, which shall contain the information necessary for the determination of the carbon equivalent as specified in AWS D1.4. Submit a written welding procedure for each type of weld for each size of bar which is to be spliced by welding; merely a statement that AWS procedures will be followed is not acceptable.

F. Submit all reinforcing product mill certificates.

DRAFT

1.04 QUALITY ASSURANCE

A. If requested by the ENGINEER, the CONTRACTOR shall provide samples from each heat of reinforcement steel delivered in a quantity adequate for testing. Costs of all tests will be paid by the CONTRACTOR.

B. If reinforcement steel is spliced by welding at any location, the CONTRACTOR shall submit certifications of procedure qualifications for each welding procedure used and certification of welder qualifications, for each welding procedure, and for each welder performing the work. Such qualifications shall be as specified in AWS D1.4.

C. If requested by the ENGINEER, the CONTRACTOR shall provide samples of each type of welded splice used in the WORK in a quantity and of dimensions adequate for testing. At the discretion of the ENGINEER, radiographic testing of direct butt-welded splices will be performed. The CONTRACTOR shall assist as necessary to facilitate testing. The CONTRACTOR shall repair any weld, which fails to meet the requirements of AWS D1.4. The costs of testing will be paid by the CONTRACTOR.

PART 2 – PRODUCTS

2.01 REINFORCEMENT STEEL

A. Reinforcement Steel for all cast-in-place reinforced concrete construction shall conform to the following requirements:
   1. Bar reinforcement shall conform to the requirements of ASTM A615 for Grade 60 Billet Steel Reinforcement or as otherwise shown.
   2. Welded wire fabric reinforcement shall conform to the requirements of ASTM A185 and the details shown; provided, that welded wire fabric with longitudinal wire of W4 size wire and smaller shall be either furnished in flat sheets or in rolls with a core diameter of not less than 10 inches; and provided further, that welded wire fabric with longitudinal wires larger than W4 size shall be furnished in flat sheets only.
   3. Spiral reinforcement shall be cold-drawn steel wire conforming to the requirements of ASTM A82.

B. Accessories:
   1. Accessories shall include all necessary chairs, slab bolsters, concrete blocks, tie wires, dips, supports, spacers, and other devices to position reinforcement during concrete placement. All bar supports shall meet the requirements of the CRSI Manual of Standard Practice including special requirements for supporting epoxy coated reinforcing bars. Wire bar supports shall be CRSI Class 1 for maximum protection with a 1/8-inch minimum thickness of plastic coating, which extends at least ½-inch from the concrete surface. Plastic shall be gray in color.
   2. Concrete blocks (dobies), used to support and position reinforcement steel, shall have the same or higher compressive strength as specified for the concrete in which it is located. Wire ties shall be embedded in concrete block bar supports.

C. Epoxy coating for reinforcing and accessories, where specified or shown, shall conform to ASTM A775.

2.02 MECHANICAL COUPLERS

A. Mechanical couplers shall be provided where shown and where approved by the ENGINEER. The couplers shall develop a tensile strength, which exceeds 125% of the yield strength of the reinforcement bars being spliced at each splice.

B. Where the type of coupler used is composed of more than one component, all components required for a complete splice shall be supplied. This shall apply to all mechanical splices, including those splices intended for future connections.

DRAFT

C. The reinforcement steel and coupler used shall be compatible for obtaining the required strength of the connection. Straight threaded type couplers shall require the use of the next larger size reinforcing bar or shall be used with reinforcing bars with specially forged ends which provide upset threads which do not decrease the basic cross section of the bar.

D. Couplers shall be Lenton Form Saver as manufactured by Erico Products; Dowel Bar Splicer System as manufactured by Richmond Screw Anchor Company; or ENGINEER-approved equal.

2.03 WELDED SPLICES

A. Welded splices shall be provided where shown and where approved by the ENGINEER. All welded splices of reinforcement steel shall develop a tensile strength, which exceeds 125% of the yield strength of the reinforcement bars, which are connected.

B. All materials required to conform the welded splices to the requirements of AWS D1.4 shall be provided.

2.04 EPOXY GROUT

A. Epoxy for grouting reinforcing bars shall be specifically formulated for such application, for the moisture condition, application temperature and orientation of the hole to be filled. Epoxy grout shall meet the requirements of these Specifications.

PART 3 – EXECUTION

3.01 GENERAL

A. All reinforcement steel, welded wire fabric, couplers and other appurtenances shall be fabricated, and placed in accordance with the requirements of the Building Code and the Supplementary Requirements specified herein.

3.02 FABRICATION

A. General:
1. Reinforcement steel shall be accurately formed to the dimensions and shapes shown, and the fabricating details shall be prepared in accordance with ACI 315 and ACI 318, except as modified by the Contract Drawings. Stirrups and tie bars shall be bent around a pin having a diameter not less than 1½-inch for No. 3 bars, 2-inch for No. 4 bars, and 2½-inch for No. 5 bars. Bends for other bars shall be made around a pin having a diameter not less than 6 times the bar diameter, except for bars larger than 1-inch, in which case the bends shall be made around a pin of 8 bar diameters. Bars shall be bent cold.
2. The CONTRACTOR shall fabricate reinforcement bars for structures in accordance with bending diagrams, placing lists, and placing drawings. Said drawings, diagrams and lists shall be prepared by the CONTRACTOR as specified under Section 01 3300 – Submittal Procedures.

B. Fabricating Tolerances: Bars used for concrete reinforcement shall meet the following requirements for fabricating tolerances:
1. Sheared length: +/- 1-inch
2. Depth of truss bars: + 0, - ½-inch
3. Stirrups, ties, and spirals: +/- ½-inch
4. All other bends: +/- 1-inch

DRAFT

3.03 PLACING

A. Reinforcement steel shall be accurately positioned as shown, and shall be supported and wired together to prevent displacement, using annealed iron wire ties or suitable clips at intersections. All reinforcement steel shall be supported by concrete, plastic or metal supports, spacers or metal hangers, which are strong and rigid enough to prevent any displacement of the reinforcement steel. Where concrete is to be placed on the ground, supporting concrete blocks (or dobies) shall be used, in sufficient numbers to support the bars without settlement, but in no case shall such support be continuous. All concrete blocks used to support, reinforcement steel shall be tied to the steel with wire ties, which are embedded in the blocks. For concrete over formwork, the CONTRACTOR shall furnish concrete, metal, plastic or other acceptable bar chairs and spacers.

B. Limitations on the use of bar support materials shall be as follows:
   1. Concrete Dobies: Permitted at all locations except where architectural finish is required.
   2. Wire Bar Supports: Permitted only at slabs over dry areas, interior dry wall surfaces and exterior wall surfaces.
   3. Plastic Bar Supports: Permitted at all locations except on grade.

C. Tie wires shall be bent away from the forms in order to provide the specified concrete coverage.

D. Bars additional to those shown which may be found necessary or desirable by the ENGINEER for the purpose of securing reinforcement in position shall be provided by the CONTRACTOR at its own expense.

E. Unless otherwise specified, reinforcement placing tolerances shall be within the limits specified in Section 7.5 of ACI 318 except where in conflict with the requirements of the Building Code.

F. Bars may be moved as necessary to avoid interference with other reinforcement steel, conduits, or embedded items. If bars are moved more than one bar diameter, or enough to exceed the above tolerances, the resulting arrangement of bars shall be as acceptable to the ENGINEER.

G. Accessories supporting reinforcing bars shall be spaced such that there is no deflection of the accessory from the weight of the supported bars. When used to space the reinforcing bars from wall forms, the forms and bars shall be located so that there is no deflection of the accessory when the forms are tightened into position.

3.04 SPACING OF BARS

A. The clear distance between parallel bars (except in columns and between multiple layers of bars in beams) shall be not less than the nominal diameter of the bars nor less than 1-1/3 times the maximum size of the coarse aggregate, nor less than 1-inch.

B. Where reinforcement in beams or girders is placed in two (2) or more layers, the clear distance between layers shall be not less than one inch.

C. In columns, the clear distance between longitudinal bars shall be not less than 1½ times the bar diameter, nor less than 1½ times the maximum size of the coarse aggregate, nor less than 1½ inches.

D. The clear distance between bars shall also apply to the distance between a contact splice and adjacent splices or bars.

DRAFT

3.05 SPLICING

A. General:
   1. Reinforcement bar splices shall only be used at locations shown. When it is necessary to splice reinforcement at points other than where shown, the character of the splice shall be as acceptable to the ENGINEER.
   2. Unless, otherwise indicated, dowels shall match the size and spacing of the spliced bar.

B. Splices of Reinforcement:
   1. The length of lap for reinforcement bars, unless otherwise shown shall be in accordance with ACI 318-89, Section 12.15.1 for a Class B splice.
   2. Splices in column spiral reinforcement, when necessary, shall be made by welding or by a lap of 1½ turns.

C. Bending or Straightening: Reinforcement shall not be straightened or re-bent in a manner, which will injure the material. Bars with kinks or bends not shown shall not be used. All bars shall be bent cold, unless otherwise permitted by the ENGINEER. No bars partially embedded in concrete shall be field-bent except as shown or specifically permitted by the ENGINEER.

D. Couplers, which are located at a joint face, shall be a type, which can be set either flush or recessed from the face. The couplers shall be sealed during concrete placement to completely eliminate concrete or cement paste from entering. Couplers intended for future connections shall be recessed a minimum of ½-inch from the concrete surface. After the concrete is placed, the coupler shall be plugged with plastic plugs, which have an O-ring seal and the recess filled with sealant to prevent any contact with water or other corrosive materials. Threaded couplers shall be plugged.

E. Unless noted otherwise, mechanical coupler spacing and capacity shall match the spacing and capacity of the reinforcing shown for the adjacent section.

3.06 CLEANING AND PROTECTION

A. Reinforcement steel shall at all times be protected from conditions conducive to corrosion until concrete is placed around it.

B. The surfaces of all reinforcement steel and other metalwork to be in contact with concrete shall be thoroughly cleaned of all dirt, grease, loose scale and rust, grout, mortar, and other foreign substances immediately before the concrete is placed. Where there is delay in depositing concrete, reinforcement shall be reinserted and, if necessary recleaned.

3.07 EMBEDMENT OF DRILLED REINFORCING STEEL DOWELS

A. Hole Preparation:
   1. The hole diameter shall be as recommended by the epoxy manufacturer but shall be no larger than 0.25-inch greater than the diameter of the outer surface of the reinforcing bar deformations.
   2. The depth of the hole shall be as recommended by the epoxy manufacturer to fully develop the bar but shall not be less than 12 bar diameters, unless noted otherwise.
   3. The hole shall be drilled by methods, which do not interfere with the proper bonding of epoxy.
   4. Existing reinforcing steel in the vicinity, of proposed holes shall be located prior to drilling. The location of holes to be drilled shall be adjusted to avoid drilling through or nicking any existing reinforcing bars.
   5. The hole shall be blown clean with clean, dry compressed air to remove all dust and loose particles.

DRAFT

6. Epoxy shall be injected into the hole through a tube placed to the bottom of the hole. The tube shall be withdrawn as epoxy is placed but kept immersed to prevent formation of air pockets. The hole shall be filled to a depth that insures that excess material will be expelled from the hole during dowel placement.
7. Dowels shall be twisted during insertion into the partially filled hole so as to guarantee full wetting of the bar surface with epoxy. The bar shall be inserted slowly enough to avoid developing air pockets.

END OF SECTION

DRAFT

SECTION 03 3000 – CAST-IN-PLACE CONCRETE

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Furnish all materials for concrete in accordance with the provisions of this Section and form, mix, place, cure, repair, finish, and do all other work as required to produce finished concrete, in accordance with the requirements of the Contract Documents.

B. Soils Report: This work shall conform to the requirements of the latest Geotechnical Evaluation and or Soils Report.

C. The following types of concrete are covered in this Section:
   1. Structural Concrete: Concrete to be used in all cases except where indicated otherwise in the Contract Documents.
   2. Sitework Concrete: Concrete to be used for curbs, gutters, catch basins, sidewalks, pavements, fence and guard post embedment, underground duct bank encasement and all other concrete appurtenant to electrical facilities unless otherwise indicated.
   3. Lean Concrete: Concrete to be used for thrust blocks, pipe trench cut-off blocks and cradles that are detailed on the Drawings as un-reinforced. Lean concrete shall be used as protective cover for dowels intended for future connection.

D. The term "hydraulic structure" used in these specifications means environmental engineering concrete structures for the containment, treatment or transmission of water, wastewater, or other fluids.

E. American Iron and Steel (AIS) requirement applies to this section. All iron and steel products used in this project must be produced in the United States.

1.02 REFERENCE SPECIFICATIONS, CODES AND STANDARDS

A. The work shall conform to the requirements of the applicable Sections of these Specifications Divisions:
   1. 01 – General Requirements
   2. 03 – Concrete

B. Commercial Standards:

ACI 117	Concrete Construction and Materials
ACI 214	Evaluation of Strength Test Results of Concrete
ACI 301	Structural Concrete for Buildings
ACI 306.1	Cold Weather Concreting
ACI 309	Consolidation of Concrete
ACI 315	Details and Detailing of Concrete Reinforcement
ACI 318	Building Code Requirements for Reinforced Concrete
ACI 350R	Environmental Engineering Concrete Structures
ASTM C31	Making and Curing Concrete Test Specimens in the Field
ASTM C33	Concrete Aggregates
ASTM C39	Compressive Strength of Cylindrical Concrete Specimens
ASTM C94	Ready-Mixed Concrete
ASTM C136	Sieve Analysis of Fine and Coarse Aggregates
ASTM C143	Slump of Hydraulic Cement Concrete
ASTM C150	Portland Cement
ASTM C156	Water Retention by Concrete Curing Materials
ASTM C157	Length Change of Hardened Hydraulic Cement Mortar and Concrete

DRAFT

ASTM C192	Making and Curing Concrete Test Specimens in the Laboratory
ASTM C260	Air-Entraining Admixtures for Concrete
ASTM C309	Liquid Membrane-Forming Compounds for Curing Concrete
ASTM C494	Chemical Admixtures for Concrete
ASTM C1077	Laboratories Testing Concrete and Concrete Aggregates for use in Construction & Criteria for Laboratory Evaluation
ASTM D175	Preformed Expansion Joint Fillers for Concrete Paving and Structural Construction (Non-extruding and Resilient Bituminous Types)
ASTM D448	Sizes of Aggregate for Road and Bridge Construction
ASTM D2419	Sand Equivalent Value of Soils and Fine Aggregate
ASTM E119	Fire Tests of Building Construction and Materials

1.03 SYSTEM DESCRIPTIONS

A. Performance Requirements:

1. General:
   a. Except as otherwise specified, provide concrete composed of Portland cement, aggregate, and water so proportioned and mixed as to produce plastic, cohesive workable mixture in accordance with requirements as specified in this Section and suitable to specific conditions of placement.
   b. Due to the corrosivity of the soil and recommendations from the Geotechnical Evaluation, concrete shall be made with cement that provides sulfate resistance and that has a maximum water-cementitious materials ratio and minimum compressive strength set forth in 2006 IBC and ACI 318. See also the Geotechnical Evaluation.
   c. Proportion fine and coarse aggregates in a manner such as not to produce harshness in placing nor honeycombing in structures.
2. Water tightness of Concrete Work: It is intent of this Section to secure for every part of the Work concrete and grout of homogeneous structure, which when hardened will have required strength, water tightness, and durability. As provided in ACI 350.1/350.1R Concrete for Environmental Structures.
   a. It is recognized that some surface hairline cracks and crazing will develop in concrete surfaces.
   b. Construction, contraction, and expansion joints have been positioned in structures as indicated on the Drawings, and curing methods specified, for purpose of reducing number and size of these expected from specified concrete mixes.
   c. Watertight: Repair cracks as described in this Section which develop in walls or slabs and repair cracks which show any signs of leakage until all leakage is stopped.
   d. If patching does not stop the leakage and at the engineer's discretion the installing CONTRACTOR shall pressure inject visible cracks, other than hairline cracks and crazing, in following areas with epoxy as specified in applicable Sections of Division 03 – Concrete.
      1) Floors and walls of water bearing structures.
      2) Walls and overhead slabs of passageways or occupied spaces, outsides of which are exposed to weather or may be washed down and are not specified to receive separate waterproof membrane.
      3) Other Items Not Specified to Receive Separate Waterproof Membrane: Slabs over water channels, wet walls, reservoirs, and other similar surfaces.

DRAFT

3. Workmanship and Methods: Provide concrete work, including detailing of reinforcing, conforming with best standard practices, and as set forth in ACI 318, Manuals, and Recommended Practices.

1.04 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

B. Product Data: Submit data completely describing products.

C. Information on Heating Equipment to Be Used for Cold Weather Concreting: Submit information on type of equipment to be used for heating materials and/or new concrete in process of curing during excessively cold weather.

D. For conditions that promote rapid drying of freshly placed concrete such as low humidity, high temperature, and wind: Submit corrective measures proposed for use prior to placing concrete.

E. Copies of Tests of Concrete Aggregates: Submit certified copies in triplicate of commercial laboratory tests not more than 90 days old of all samples of concrete aggregates.
   1. Fine Aggregate:
      a. Clay lumps
      b. Reactivity
      c. Shale and chert
      d. Soundness
      e. Color
      f. Decantation
   2. Coarse Aggregate:
      a. Clay lumps and friable particles
      b. Reactivity
      c. Shale and chert
      d. Soundness.
      e. Abrasion loss
      f. Coal and lignite
      g. Materials finer than 200 sieve

F. Sieve Analysis: Submit sieve analysis of fine and coarse aggregates being used in triplicate at least every 3 weeks and at any time there is significant change in grading of materials.

G. Concrete Mixes: Submit full details, including mix design calculations for concrete mixes proposed for use for each class of concrete.
   1. Include information on correction of batching for varying moisture contents of fine aggregate.
   2. Submit source quality test records with mix design submittal.

H. If There is Change in Aggregate Source, Aggregate Quality from Same Source: Submit new set of design mixes covering each class of concrete.

I. If Either Fine or Coarse Aggregate Is Batched from More than One Bin: Submit analyses for each bin, and composite analysis made up from these, using proportions of materials to be used in mix.

J. Cement Mill Tests: Include alkali content, representative of each shipment of cement for verification of compliance with specified requirements.

DRAFT

K. Pozzolan Certificate of Compliance: Identify source of pozzolan and certify compliance with requirements of ASTM C618.

L. Information on mixing equipment.

M. Drying shrinkage test data.

N. Packing and Shipping:
   1. Deliver, store, and handle concrete materials in manner as to prevent damage and inclusion of foreign substances.
   2. Deliver and store packaged materials in original containers until ready for use.
   3. Deliver aggregate to mixing site and handle in such a manner that variations in moisture content will not interfere with steady production of concrete of specified degree of uniformity and slump.

O. Acceptance at Site: Reject material containers or materials showing evidence of water or other damage.

P. Test Batch Test Data:
   1. Submit data for each test cylinder.
   2. Submit data that identifies mix and slump for each test cylinder.

Q. Sequence of Concrete Placing: Submit proposed sequence of placing concrete showing proposed beginning and ending of individual placements.

R. Ties to be used and the tie hole patching procedure and methods and materials.

S. Curing Compound Other than Specified Compound: Submit complete data on proposed compound.

T. Repair of Defective Concrete: Submit mix design for grout or product data if mixed onsite.

U. Acceptance of Method of Concrete Repair: Make no repair until the ENGINEER has accepted method.

1.05 QUALITY ASSURANCE

A. General
   1. Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C94/C94M requirements for production facilities and equipment.
   2. Tests for compressive strength and shrinkage of concrete shall be performed as indicated herein. Test for determining slump will be in accordance with the requirements of ASTM C143.
   3. The cost of all laboratory tests on concrete will be borne by the CONTRACTOR. The laboratory will meet or exceed the requirements of ASTM C1077.
   4. Concrete for testing shall be supplied by the CONTRACTOR at no additional cost to the OWNER, and the CONTRACTOR shall assist the ENGINEER in obtaining samples, and disposal and cleanup of excess material.

B. Field Testing of Concrete:
   1. During progress of construction, the CONTRACTOR will have tests made to determine whether the concrete, as being produced, complies with requirements specified.
   2. Tests will be performed in accordance with ASTM C31, ASTM C39, and ASTM C172.
   3. The testing company will make and deliver test cylinders to the laboratory and testing expense will be borne by the CONTRACTOR.

DRAFT

4. Required Number Cylinders:
    a. Not less than 3 cylinder specimens, 6 inches in diameter by 12 inches long, will be tested for each 150 cubic yards of each class of concrete placed and not less than 3 specimens for each half day's placement.
    b. One cylinder will be broken at 7 days and 2 at 28 days.
5. The Testing Agency shall:
    a. Test slump of concrete using slump cone in accordance with the requirements of ASTM C143.
    b. Furnish test equipment.
    c. Do not use the concrete that does not meet specification requirements in regards to slump, but remove such concrete from project site.
    d. Test slump at the beginning of each placement, as often as necessary to keep slump within the specified range, and when requested to do so by the ENGINEER.
    e. Make provisions for and furnish concrete for test specimens, and provide manual assistance to the ENGINEER in preparing said specimens.
    f. Assume responsibility for care of and providing of curing conditions for test specimens in accordance with ASTM C31.

C. Enforcement of Strength Requirement:
1. Concrete is expected to reach higher compressive strength than that which is indicated on the drawings and herein as specified compressive strength f'c.
2. Strength Level of Concrete: Will be considered acceptable if the following conditions are satisfied.
    a. Average of all sets of 3 consecutive test results is greater or equal to specified compressive strength f'c.
    b. No individual strength test (average of 2 cylinders) falls below specified compressive strength f'c by more than 500 pounds per square inch.
    c. Whenever one, or both, of 2 conditions stated above is not satisfied, provide additional curing of affected portion followed by cores taken in accordance with ASTM C42 and ACI 318 and comply with the following requirements.
        1) If additional curing does not bring average of 3 cores taken in affected area to at least specified compressive strength f'c, designate such concrete in affected area as defective.
        2) The ENGINEER may require the CONTRACTOR to strengthen defective concrete by means of additional concrete, all at the CONTRACTOR's expense.

D. Construction Tolerances: The CONTRACTOR shall set and maintain concrete forms and perform finishing operations to ensure that the completed WORK is within tolerances. Surface defects and irregularities are defined as finishes and are to be distinguished from tolerances. Tolerance is the permissible variation from lines, grades, or dimensions indicated on the Drawings. Where tolerances are not stated in the specifications, permissible deviations will be in accordance with ACI 117.

DRAFT

1. The following construction tolerances apply to finished walls and slab unless otherwise indicated:

Item	Tolerance
Variation of the Constructed Linear Outline from the Established Position in Plan	In 10 feet: ¼ in. In 20 feet or more: ½ in.
Variation from the Level or from the Grades Shown	In 10 feet: ¼ in. In 20 feet or more: ½ in.
Variation from the Plumb	In 10 feet: ¼ in. In 20 feet or more: ½ in.
Variation in the Thickness of Slabs and Walls	Minus ¼ in. Plus ½ in.
Variation in the Locations and Sizes of Slabs and Wall Openings	Plus or minus ¼ in.
Variation in Weirs Hydraulic Control Structures	Max deviation in elevation ¼ in. (total)

1.06 PROJECT CONDITIONS

A. Environmental Requirements:
   1. Hot weather concreting:
      a. When Ambient Air Temperature Is Above 90°F: Prior to placing concrete, cool forms and reinforcing steel by water cooling to below 90°F.
      b. Temperature of Concrete Mix at Time of Placement: Keep temperature below 90°F by methods which do not impair quality of concrete.
   2. Cold Weather Concreting:
      a. Concrete placed below ambient air temperature of 45°F and falling or below 40°F: Make provision for heating water.
      b. If materials have been exposed to freezing temperatures to degree that any material is below 35°F: Heat such materials.
      c. Heating Water, Cement, or Aggregate Materials:
         1) Do not heat in excess of 160°F.
      d. Protection of Concrete in Forms:
         1) Protect by means of covering with tarpaulins, or other acceptable covering.
         2) Provide means for circulating warm moist air around forms in manner to maintain temperature of 50°F for at least 5 days.
   3. For conditions that promote rapid drying of freshly placed concrete such as low humidity, high temperature, and wind: Take corrective measures to minimize rapid water loss from concrete.
      a. Furnish and use sufficient number of maximum and minimum self-recording thermometers to adequately measure temperature around concrete.

1.07 SEQUENCING AND SCHEDULING

A. Schedule placing of concrete in such a manner as to complete any single placing operation to construction, contraction, or expansion joint.

DRAFT

PART 2 – PRODUCTS

2.01 CONCRETE MATERIALS

A. Aggregate
   1. General:
      a. Provide concrete aggregates that are sound, uniformly graded, and free of deleterious material in excess of allowable amounts specified.
      b. Grade aggregate in accordance with ASTM D75 and C136.
      c. Provide unit weight of fine and coarse aggregate which produces in place concrete with weight of not less than 140 pounds per cubic foot.

B. Fine Aggregate:
   1. Provide fine aggregate for concrete or mortar consisting of clean, natural sand or of sand prepared from crushed stone or crushed gravel.
   2. Do not provide aggregate having deleterious substances in excess of the following percentages by weight of contaminating substances. In no case shall total exceed percent listed.

Item	Test Method	Percent
Removed by Decantation (dirt, silt, etc.)	ASTM C117	3
Shale or Chert	ASTM C295	1
Clay Lumps	ASTM C142	1

   1. Except as otherwise specified, grade fine aggregate from coarse to fine in accordance with requirements of ASTM C33.

C. Coarse Aggregate:
   1. General: Provide coarse aggregate consisting of gravel or crushed stone made up of clean, hard, durable particles free from calcareous coatings, organic matter, or other foreign substances.
   2. Weight: Not exceeding 15 percent, for thin or elongated pieces having length greater than 5 times average thickness.
   3. Deleterious Materials: Not in excess of following percentages by weight, and in no case having total of all deleterious substances exceeding 2 percent.

Item	Test Method	Percent
Shale or Chert	ASTM C295	1
Coal and Lignite	ASTM C123	1/4
Clay Lumps and Friable Particles	ASTM C142	1/4
Materials Finer than Number 200 Sieve	ASTM C117	1/2*

NOTE: (*) Except when material finer than Number 200 sieve consists of crusher dust, maximum amount shall be 1 percent>

   4. Grading:
      a. Aggregate: As specified in ASTM C33, Size Number 57, except as otherwise specified or authorized in writing by the ENGINEER.
      b. Aggregate for Concrete for Encasement of Electrical Conduits:
         1) Graded as specified in ASTM C33, Size Number 8.
         2) Provide concrete utilizing this aggregate equal to 2500 psi concrete in all other respects, and is designated as Class CE.

D. Portland Cement:
   1. General: Conform to specifications and tests for ASTM C150, except as specified otherwise.
   2. Low Alkali Portland: Have total alkali containing not more than 0.60 percent, unless specified otherwise, and or where soil conditions permit such use.

DRAFT

3. Exposed Concrete in Any Individual Structure: Use only one brand of Portland cement.
4. Cement for Finishes: Provide cement from the same source and of same type as concrete to be finished.

E. Admixtures:
1. General:
   a. Do not use admixtures of any type, except as specified, unless written authorization has been obtained from the ENGINEER.
   b. Compatible with concrete and other admixtures.
   c. Do not use admixtures containing chlorides calculated as chloride ion in excess of 0.5 percent by weight.
   d. Use in accordance with manufacturer's recommendations and add each admixture to concrete mix separately.
2. Water Reducing Admixture:
   a. May be used at the CONTRACTOR's option.
   b. Conform to ASTM C494, Type A or Type D.
   c. Not contain air entraining agents.
   d. Liquid form before adding to the concrete mix.
   e. No decrease in cement is permitted as result of use of water reducing admixture.
3. Superplasticizers or Flyash: Are not to be used without acceptance by ENGINEER.

F. Water:
1. Water for Concrete, Washing Aggregate, and Curing Concrete: Clean and free from oil and deleterious amounts of alkali, acid, organic matter, or other substances.
2. Chlorides and Sulfate Ions:
   a. Water for Conventional Reinforced Concrete: Use water not containing more than 1,000 (mg/L) of chlorides calculated as chloride ion, no more than 1,000 (mg/L) of sulfates calculated as sulfate ion.
   b. Water for Pre-stressed or Post-tensioned Concrete: Use water not containing more than 650 (mg/L) milligrams per liter of chlorides calculated as chloride ion, nor more than 800 (mg/l) of sulfates calculated as sulfate ion.

G. Conduit Encasement Coloring Agent:
1. Color: Red color concrete used for encasement of electrical ducts, conduits, and similar type items.
2. Manufacturers: One of the following or ENGINEER-approved equal.
   a. Frank D, Davis Company, Red Oxide Number 117.
   b. I. Reiss Company, Inc., equivalent product.
3. Conduit Encasement Concrete: Mix into each cubic yard of concrete 10 pounds of coloring agent.

H. Keyway Material: Lumber.

I. All curing compounds shall be white pigmented and resin based conforming to ASTM C309, Type D. Sodium silicate compounds shall not be allowed. Concrete curing compound shall be Kurez by Euclid Chemical Company; MB-429 as manufactured by Mater Builders; L&M Cure R; or ENGINEER-approved equal. Water based resin curing compounds shall be used only where local air quality regulations prohibit the use of a solvent based compound. Water based curing compounds shall be Aqua-Cure by Euclid Chemical Company; Masterkure-W by Master Builders; L&M Cure R-2; or ENGINEER-approved equal.

J. Manufacturers: One of the following or ENGINEER-approved equal.
1. WR Meadows

DRAFT

2. CGM Incorporated

K. Plastic Membrane Curing: Use polyethylene film.
1. Color: White
2. Thickness: Minimum 6 mils.
3. Loss of Moisture: Not to exceed 0.055 grams per square centimeter of surface when tested in accordance with ASTM C156.

2.02 CONCRETE DESIGN REQUIREMENTS

A. General: Concrete shall be composed of cement, admixtures, aggregates, and water of the qualities indicated. The exact proportions in which these materials are to be used for different parts of the work will be determined during the trial batch. In general, the mix shall be designed to produce a concrete capable of being deposited so as to obtain maximum density and minimum shrinkage, and, where deposited in forms, to have good consolidation properties and maximum smoothness of surface. The aggregate gradations shall be formulated to provide fresh concrete that will not promote rock pockets around reinforcing steel or embedded items. The proportions shall be changed whenever necessary or desirable to meet the required results at no additional cost to the OWNER. All changes shall be subject to review by the ENGINEER.

B. Fine Aggregate Composition: In mix designs for structural concrete, the percentage of fine aggregate in total aggregate by weight, shall be as indicated in the following table.

Fineness Modulus	Maximum Percent
2.7 or less	41
2.7 to 2.8	42
2.8 to 2.9	43
2.9 to 3.0	44

For other concrete, the maximum percentage of fine aggregate of total aggregate, by weight, shall not exceed 50.

C. Water-Cement Ratio and Compressive Strength: Concrete shall have the following minimum properties unless noted otherwise on the plans:

Type of Work	Min 28-Day Compr. Strength (psi)	Max Size Aggregate (in)	Minimum Cement per cubic yard (lbs)	Non Air Max W/C Ratio (by weight)
Structural Concrete	5,000	1	564	*
	4,500	1	564	0.38
	4,000	1	564	0.45
Pea Gravel Mix	4,000	3/8	752	0.40
Sitework Concrete	3,000	1	470	0.50
Lean Concrete	2,000	1	376	0.60

*__NOTES__: W/C ratio shall be based upon the Geotechnical Evaluation and or Soils Report - Refer to the Evaluation for W/C, and other site dependent concrete recommendations. See the Structural Plan notes for strength application and location.

The CONTRACTOR is cautioned that the limiting parameters above are not a mix design. Additional cement or water reducing agent may be required to achieve workability required by the CONTRACTOR's construction methods and aggregates. The CONTRACTOR is responsible for providing concrete with the required workability.

For strengths above 4500 psi (non-air) concrete proportions shall be established from either existing field data or trial mixes. This information shall be submitted by the ready mix company through the CONTRACTOR for review by the ENGINEER before it will be

DRAFT

approved. The average compressive strength from the test record must equal or exceed the ACI 318 requirements for average compressive strength.

D. Adjustments to Mix Design: The mixes shall be changed whenever such change is necessary or desirable to secure the required strength, density, workability, and surface finish, and the CONTRACTOR shall be entitled to no additional compensation because of such changes.

2.03 CONSISTENCY

A. The quantity of water in a batch of concrete shall be just sufficient, with a normal mixing period, to produce a concrete which can be worked properly into place without segregation and which can be compacted by vibratory methods to give the desired density, impermeability, and smoothness of surface. The quantity of water shall be changed as necessary, with variations in the nature or moisture content of the aggregates, to maintain uniform production of a desired consistency. The consistency of the concrete in successive batches shall be determined by slump tests in accordance with ASTM C143. The slumps shall be as follows:

Part of Work	**Slump (in)**
All concrete, unless indicated otherwise	3 inches plus or minus 1 inch
With high range water reducer added	7 inches plus or minus 2 inches
Pea gravel mix	7 inches plus or minus 2 inches
Ductbanks	5 inches plus or minus 1 inch

2.04 MIXES

A. Measurements of Materials:
1. Measure materials by weighing, except as otherwise specified or where other methods are specifically authorized in writing by the ENGINEER.
2. Furnish apparatus for weighing aggregates and cement that is suitably designed and constructed for this purpose.
3. Accuracy of Weighing Devices: Furnish devices that have capability of providing successive quantities of individual material that can be measured to within one percent of desired amount of that material.
4. Measuring or Weighing Devices: Subject to review by the ENGINEER, and bear valid seal of the Sealer of Weights and Measures having jurisdiction.
5. Weighing Cement:
   a. Weigh cement separately.
   b. Cement in Unbroken Standard Packages (Sacks): Need not be weighed.
   c. Bulk Cement and Fractional Packages: Weigh such cement.
6. Mixing Water: Measured by volume or by weight.

B. Concrete Proportions and Consistency:
1. Concrete Consistency and Composition:
   a. Provide concrete that can be worked readily into corners and angles of forms and around reinforcement without excessive vibration and without permitting materials to segregate or free water to collect on surface.
   b. Prevent unnecessary or haphazard changes in consistency of concrete.
2. Ratio of Coarse Aggregate to Fine Aggregate: Not less than 1.0 nor more than 2.0 for all concrete Classes, with exception of Class CE.

DRAFT

3. Aggregate:
    a. Obtain aggregate from source which is capable of providing uniform quality, moisture content, and grading during any single day's operation.
4. Concrete Mix Water to Cement Ratio, Cement Content, and Slump Range: Conform to values specified in Section 2.02.C and per the Geotechnical Evaluation.
5. Concrete Batch Weighs: Control and adjust so as to secure maximum yield, and at all times maintain proportions of concrete mix within specified limits.
6. Mixture Modification: If required, by the ENGINEER, modify mixture within limits set forth in this Section.

C. Concrete Mixes:
1. Proportioning of Concrete Mix: Proportion mixes on required average on compressive strength f'c as defined in the contract documents.
2. Mixes:
    a. Adjusting of Water: After acceptance, do not change mixes without acceptance by ENGINEER, except that at all times adjust batching of water to compensate for free moisture content of fine aggregate.
    b. Total Water Content of Each Concrete Class: Not exceed those specified in Section 2.02.C, unless noted otherwise or specified in the Geotechnical Evaluation.
    c. Checking Moisture Content of Fine Aggregate: Furnish satisfactory means at batching plant for checking moisture content of fine aggregate.
3. Change in Mixes: Undertake new trial batch and test program as specified in this Section.

D. Hand Mixed Concrete:
1. Hand mix concrete only when acceptable to the ENGINEER.
2. Prepare hand mixed concrete on watertight, level platform in batches not to exceed 1/3 cubic yard each.
3. Aggregate:
    a. First spread required amount of coarse aggregate on platform in an even and uniform layer, and then over such aggregate spread proper proportion of fine aggregate.
    b. Combined Depth of Both Such Layers: Not be greater than one foot.
4. Cement:
    a. First evenly spread required quantity of cement over fine aggregate.
    b. Then turn entire batch with shovels at least twice before adding water.
5. Water:
    a. Then uniformly sprinkle or spray proper amount of water over batched materials.
    b. Then turn with shovels not less than three times before being removing from platform.

2.05 SOURCE QUALITY CONTROL

A. Tests:
1. Concrete Mixes:
    a. After concrete mixes have been accepted by ENGINEER, have trial batches of the accepted mix designs prepared by testing laboratory acceptable to the ENGINEER.
    b. Prepare trial batches by using specified cement and aggregates proposed to be use for the work.
    c. Trial Batches: Provide batches of sufficient quantity to determine slump, workability, consistency, and finishing characteristics, and to provide sufficient test cylinders.

DRAFT

d. Test Cylinders: Provide cylinders having six-inch diameter by 12-inch length and that are prepared in accordance with ASTM C31 for tests specified in this Section.
e. Determine slump in accordance with ASTM C143.
f. Test Cylinders from Trial Batch:
    1) Test 8 cylinders for compressive strength in accordance with ASTM C39.
        a) Test 4 cylinders at 7 days and 4 at 28 days.
        b) Establish ratio between 7-day and 28-day strength for mix. Seven-day strength may be taken as satisfactory indication of 28-day strength provided effects on concrete of temperature and humidity between 7-day and 28-day are considered.
    2) Average Compressive Strength of 4 Test Cylinders Tested at 28 Days: Equal to or greater than required average compressive strength f'c on which concrete mix design is based.
g. Drying Shrinkage:
    1) Prepare 5 drying shrinkage specimens in accordance with ASTM C157, except as modified herein.
    2) Remove drying shrinkage specimens from molds at age of 23 hours plus or minus 1 hour after trial batching, then immediately place them in water at 73°F plus or minus 3 degrees for at least 30 minutes and then measure specimens within 30 minutes thereafter to determine original length. Then submerge specimens in saturated lime water at 73°F plus or minus three degrees for moist curing.
    3) Make measurements to determine expansion expressed as percentage of original length at age 7 days. Use length at age 7 days as base length for drying shrinking calculations.
    4) Immediately store specimens in humidity controlled room maintained at 73°F plus or minus 3 degrees and 50 percent plus or minus 4 relative humidity for remainder of the test.
    5) Make and report measurements to determine shrinkage expressed as percentage of base length separately for 7, 14, 21, and 28 days of drying after 7 days of moist curing.
    6) Drying Shrinkage Deformation:
        a) Measure drying shrinkage deformation of each specimen as difference between base length and length after drying at each test age.
        b) Measure average drying shrinkage deformation of specimens to nearest 0.0001 inch at each test age.
        c) If drying shrinkage of any specimen departs from average of test age by more than 0.0004 inch, disregard results obtained from that specimen and test another specimen.
        d) Shrinkage of trial batch concrete at 28 days drying age shall not exceed 0.045 percent maximum.
h. If trial batch tests do not meet specified requirements for slump, strength, workability, consistency, drying shrinkage, and finishing, change concrete mix design proportions and, if necessary, source of aggregate. Make additional trial batches and tests until an acceptable trial batch is produced that meets requirements of this Section.
i. Perform test batches and tests required to establish trial batches and acceptability of materials without change in Contract Price.
j. Do not place concrete until the concrete mix design and trial batch have been accepted by ENGINEER.

DRAFT

2. Required Average Compressive Strength:
   a. Determine required average compressive strength (f'c) for selection of concrete proportions for mix design, for each class of concrete, using calculated standard deviation and its corresponding specified compressive strength f'c, in accordance with ACI 318, Part 3, Chapter 5.
   b. When test records of at least 30 consecutive tests that span period of not less than 45 calendar days are available, establish standard deviation as described in ACI 318, Part 3, Chapter 5 and as modified as follows herein.
   c. Provide test records from which to calculate standard deviation that represent materials, quality control procedures, and conditions similar to materials, quality control procedures, and conditions expected to apply in preparation of concrete for the Work.
   d. Provide changes in materials and proportions within test records that are more restricted than those for the Work.
   e. Specified Compressive Strength (f'c) of Concrete Used in Test Records: Within 1,000 pounds per square inch of that specified for the Work.
   f. When lacking adequate test records for calculation of standard deviation meeting requirements, determine required average compressive strength f'c from the following table.

Specified Compressive Strength f'c (pounds per square inch)	Required Average Compressive Strength f'c (pounds per square inch)
Less than 3,000	f'c + 1,000
3,000 to 5,000	f'c + 1,200
Over 5,000	f'c + 1,400

3. Pozzolan:
   a. Sampling and Testing:
      1) Sample and test pozzolan in accordance with ASTM C311.
      2) In Computing Water to Cement Ratio and Cement Content per Cubic Yard of Concrete: Consider cement weight to be weight of Portland cement plus 100 percent of weight of fly ash.
4. Aggregate:
   a. Testing of concrete aggregate is at CONTRACTOR's expense.
   b. Sieves:
      1) Use sieves with square openings for testing grading or aggregates.
      2) Sieve Analysis: If sieve analysis indicates significant change in materials, the ENGINEER may require that new mix design be submitted and accepted before further placing of concrete.
   c. Sample aggregate in accordance with ASTM D75 and C136.
   d. Fine Aggregate:
      1) Provide fine aggregate not containing strong alkali nor organic matter which gives color darker than standard color when tested in accordance with ASTM C40.
      2) Provide aggregate having soundness complying with requirements of ASTM C33 when tested in accordance with ASTM C88.
      3) Provide aggregate complying with reactivity requirements of ASTM C33 when tested in accordance with ASTM C289.
   e. Coarse Aggregate:
      1) Soundness when tested in accordance with ASTM C88: Have loss not greater than 10 percent when tested with sodium sulfate.

DRAFT

2) Abrasion Loss: Not exceed 45 percent after 500 revolutions when tested in accordance with ASTM C131.
3) Reactivity: Not exceed limits specified in Appendix of ASTM C33 when tested in accordance with ASTM C289.

f. Portland Cement:
1) Determination Alkali Content: Determine by method set forth in ASTM C114.

PART 3 – EXECUTION

3.01 PROPORTIONING AND MIXING

A. Proportioning: Proportioning of the mix shall conform to the requirements of Chapter 3 "Proportioning" of ACI 301.

B. Mixing: Mixing shall conform to the requirements of Chapter 7 of said ACI 301 Specifications.

C. Slump: Slumps shall be as indicated herein.

D. Retempering: Retempering of concrete or mortar which has partially hardened shall not be permitted.

3.02 PREPARATION OF SURFACES FOR CONCRETING

A. General: Earth surfaces shall be thoroughly wetted by sprinkling prior to the placing of any concrete, and these surfaces shall be kept moist by frequent sprinkling up to the time of placing concrete thereon. The surface shall be free from standing water, mud, and debris at the time of placing concrete.

B. Joints in Concrete: Concrete surfaces upon or against which concrete is to be placed, where the placement of the concrete has been stopped or interrupted so that, as determined by the ENGINEER, the new concrete cannot be incorporated integrally with that previously placed, are defined as construction joints. The surfaces of horizontal joints shall be given a compacted, roughened surface for good bonding. Except where the Drawings call for joint surfaces to be coated, the joint surfaces shall be cleaned of all laitance, loose or defective concrete, foreign material, and be roughened to a minimum ¼-inch amplitude. Such cleaning and roughening shall be accomplished by hydroblasting or sandblasting (exposing aggregate) followed by thorough washing. All pools of water shall be removed from the surface of construction joints before the new concrete is placed.

C. After the surfaces have been prepared, all approximately horizontal construction joints shall be covered with a 6-inch lift of a pea gravel mix. The mix shall be placed and spread uniformly. Wall concrete shall follow immediately and shall be placed upon the fresh pea gravel mix.

D. Placing Interruptions: When placing of concrete is to be interrupted long enough for the concrete to take a set, the working face shall be given a shape by the use of forms or other means, that will secure proper union with subsequent work; provided that construction joints shall be made only where acceptable to the ENGINEER.

DRAFT

E. Embedded Items: No concrete shall be placed until all formwork, installation of parts to be embedded, reinforcement steel, and preparation of surfaces involved in the placing have been completed and accepted by the ENGINEER at least 4 hours before placement of concrete. All surfaces of forms and embedded items that have become encrusted with dried grout from previous work shall be cleaned before the surrounding or adjacent concrete is placed.

F. All inserts or other embedded items shall conform to the requirements herein.

G. All reinforcement, anchor bolts, sleeves, inserts, and similar items shall be set and secured in the forms at locations indicated on the Drawings or shown by shop drawings and shall be acceptable to the ENGINEER before any concrete is placed. Accuracy of placement is the responsibility of the CONTRACTOR.

H. Casting New Concrete Against Old: Where concrete is to be cast against old concrete (any concrete which is greater than 180 days of age), the surface of the old concrete shall be thoroughly cleaned and roughened by hydro-blasting or sandblasting (exposing aggregate). The joint surface shall be coated with an epoxy bonding agent unless indicated otherwise by the ENGINEER.

I. No concrete shall be placed in any structure until all water entering the space to be filled with concrete has been properly cut off or has been diverted by pipes, or other means, and carried out of the forms, clear of the WORK. No concrete shall be deposited underwater nor shall the CONTRACTOR allow still water to rise on any concrete until the concrete has attained its initial set. Water shall not be permitted to flow over the surface of any concrete in such manner and at such velocity as will injure the surface finish of the concrete. Pumping or other necessary dewatering operations for removing ground water, if required, shall be subject to the review of the ENGINEER.

J. Corrosion Protection: Pipe, conduit, dowels, and other ferrous items required to be embedded in concrete construction shall be so positioned and supported prior to placement of concrete that there will be a minimum of 2 inches clearance between said items and any part of the concrete reinforcement. Securing such items in position by wiring or welding them to the reinforcement will not be permitted.

K. Openings for pipes, inserts for pipe hangers and brackets, and anchors shall, where practicable, be provided during the placing of concrete.

L. Anchor bolts shall be accurately set and shall be maintained in position by templates while being embedded in concrete.

M. Cleaning: The surfaces of all metalwork to be in contact with concrete shall be thoroughly cleaned of all dirt, grease, loose scale and rust, grout, mortar, and other foreign substances immediately before the concrete is placed.

3.03 HANDLING, TRANSPORTING, AND PLACING

A. General: Placing of concrete shall conform to the applicable requirements of Chapter 8 of ACI 301 and the requirements of this Section. No aluminum materials shall be used in conveying any concrete.

B. Non-Conforming Work or Materials: Concrete which during or before placing is found not to conform to the requirements indicated herein shall be rejected and immediately removed from the work. Concrete which is not placed in accordance with these Specifications, or which is of inferior quality, shall be removed and replaced by the CONTRACTOR at no additional cost to the OWNER.

C. Unauthorized Placement: No concrete shall be placed except in the presence of a duly authorized representative of the ENGINEER. The CONTRACTOR shall notify the ENGINEER in writing at least 24 hours in advance of placement of any concrete.

D. Placement in Wall and Column Forms: Concrete shall not be dropped through reinforcement steel or into any deep form, nor shall concrete be placed in any form in such a manner as to leave accumulation of mortar on the form surfaces above the placed concrete. In such cases, means such as hoppers and, if necessary, vertical ducts of canvas, rubber, or metal shall be used for placing concrete in the forms in a manner that it may reach the place of final deposit without separation. In no case shall the free fall of concrete exceed 4 feet in walls and 8 feet in columns below the ends of ducts, chutes, or buggies. Concrete shall be uniformly distributed during the process of depositing and in no case after depositing shall any portion be displaced in the forms more than 6 feet in horizontal direction. Concrete in wall forms shall be deposited in uniform horizontal layers not deeper than 2 feet; and care shall be taken to avoid inclined layers or inclined construction joints except where such are required for sloping members. Each layer shall be placed while the previous layer is still soft. The rate of placing concrete in wall forms shall not exceed 5 feet of vertical rise per hour. Sufficient illumination shall be provided in the interior of all forms so that the concrete at the places of deposit is visible from the deck or runway.

E. Casting New Concrete Against Old: Epoxy adhesive bonding agent shall be applied to the old surfaces according to the manufacturer's written recommendations. This provision shall not apply to joints where hydrotite waterstop is provided.

F. Conveyor Belts and Chutes: All ends of chutes, hopper gates, and all other points of concrete discharge throughout the CONTRACTOR'S conveying, hoisting, and placing system shall be designed and arranged so that concrete passing from them will not fall separated into whatever receptacle immediately receives it. Conveyor belts, if used, shall be of a type acceptable to the ENGINEER. Chutes longer than 50 feet will not be permitted. Minimum slopes of chutes shall be such that concrete of the indicated consistency will readily flow in them. If a conveyor belt is used, it shall be wiped clean by a device operated in such a manner that none of the mortar adhering to the belt will be wasted. All conveyor belts and chutes shall be covered.

G. Placement in Slabs: Concrete placed in sloping slabs shall proceed uniformly from the bottom of the slab to the top, for the full width of the placement. As the work progresses, the concrete shall be vibrated and carefully worked around the slab reinforcement, and the surface of the slab shall be screeded in an up-slope direction.

H. Temperature of Concrete: The temperature of concrete when it is being placed shall be not more than 90°F nor less than 55°F for sections less than 12 inches thick nor less than 50°For all other sections. Concrete ingredients shall not be heated to a temperature higher than that necessary to keep the temperature of the mixed concrete, as placed, from falling below the minimum temperature. When the temperature of the concrete is 85°F or above, the time between the introduction of the cement to the aggregates and discharge shall not exceed 45 minutes. If concrete is placed when the weather is such that the temperature of the concrete would exceed 90°F, the CONTRACTOR shall employ effective means, such as pre-cooling of aggregates and mixing water using ice or placing at night, as necessary to maintain the temperature of the concrete, as it is placed, below 90°F. The CONTRACTOR shall not be entitled to any additional compensation on account of the foregoing requirements.

I. Cold Weather Placement:
   1. Placement of concrete shall conform to ACI 306.1 - Cold Weather Concreting, and the following.
   2. Remove all snow, ice, and frost from the surfaces, including reinforcement, against which concrete is to be placed. Before beginning concrete placement, thaw the subgrade to a minimum depth of 6 inches. All reinforcement and embedded items shall be warmed to above 32°F prior to concrete placement.

DRAFT

3. Maintain the concrete temperature above 50°F for at least 5 days after placement.

3.04 PUMPING OF CONCRETE

A. General: If the pumped concrete does not produce satisfactory end results, the CONTRACTOR shall discontinue the pumping operation and proceed with the placing of concrete using conventional methods.

B. Pumping Equipment: The pumping equipment shall have two (2) cylinders and be designed to operate with one cylinder in case the other one is not functioning. In lieu of this requirement, the CONTRACTOR may have a standby pump on the site during pumping.

C. The minimum diameter of the hose conduits shall be in accordance with ACI 304.2R.

D. Pumping equipment and hose conduits that are not functioning properly shall be replaced.

E. Aluminum conduits for conveying the concrete shall not be permitted.

F. Field Control: Concrete samples for slump and test cylinders will be taken at the placement end of the hose.

3.05 ORDER OF PLACING CONCRETE

A. The order of placing concrete in all parts of the WORK shall be acceptable to the ENGINEER. In order to minimize the effects of shrinkage, the concrete shall be placed in units as bounded by construction joints at the indicated locations. The placing of units shall be done by placing alternate units in a manner such that each unit placed shall have cured at least 5 days for hydraulic structures and 2 days for all other structures before the contiguous unit or units are placed, except that the corner sections of vertical walls shall not be placed until the two (2) adjacent wall panels have cured at least 10 days for hydraulic structures and 4 days for all other structures.

B. The surface of the concrete shall be level whenever a run of concrete is stopped. To insure a level, straight joint on the exposed surface of walls, a wood strip at least ¾-inch thick shall be tacked to the forms on these surfaces. The concrete shall be carried about ½-inch above the underside of the strip. About one hour after the concrete is placed, the strip shall be removed and any irregularities in the edge formed by the strip shall be leveled with a trowel and all laitance shall be removed.

3.06 TAMPING AND VIBRATING

A. As concrete is placed in the forms or in excavations, it shall be thoroughly settled and compacted, throughout the entire depth of the layer which is being consolidated, into a dense, homogeneous mass, filling all corners and angles, thoroughly embedding the reinforcement, eliminating rock pockets, and bringing only a slight excess of water to the exposed surface of concrete. Vibrators shall be Group 3 per ACI 309, high speed power vibrators (8,000 to 12,000 rpm) of an immersion type in sufficient number and with at least one standby unit as required. Group 2 vibrators may be used only at specific locations when accepted by the ENGINEER.

B. Care shall be used in placing concrete around hydrotite waterstops. The concrete shall be carefully worked by rodding and vibrating to make sure that all air and rock pockets have been eliminated. Where flat-strip type hydrotite waterstops are placed horizontally, the concrete shall be worked under the hydrotite waterstops by hand, making sure that all air and rock pockets have been eliminated. Concrete surrounding the hydrotite waterstops shall be given additional vibration over and above that used for adjacent concrete placement to assure complete embedment of the hydrotite waterstops in the concrete.

DRAFT

C. Concrete in walls shall be internally vibrated and at the same time rammed, stirred or worked with suitable appliances, tamping bars, shovels, or forked tools until it completely fills the forms or excavations and closes snugly against all surfaces. Subsequent layers of concrete shall not be placed until the layers previously placed have been worked thoroughly. Vibrators shall be provided in sufficient numbers, with standby units as required, to accomplish the required results within 15 minutes after concrete of the prescribed consistency is placed in the forms. The vibrating head shall not contact the surfaces of the forms. Care shall be taken not to vibrate concrete excessively or to work it in any manner that causes segregation of its constituents.

3.07 FINISHING CONCRETE SURFACES

A. General: Surfaces shall be free from fins, bulges, ridges, offsets, honeycombing or roughness of any kind, and shall present a finished, smooth, continuous hard surface. Allowable deviations from plumb or level and from the alignment, profiles and dimensions shown are defined as tolerances and are indicated in Part 1, above. These tolerances are to be distinguished from irregularities in finish as described herein. Aluminum finishing tools shall not be used.

B. Formed Surfaces: No treatment is required after form removal except for curing, repair of defective concrete, and treatment of surface defects. Where architectural finish is required, it shall be as indicated. Surface holes larger than ½-inch in diameter or deeper than ¼-inch are defined as surface defects in basins and exposed walls and shall be patched per Section 3.11 Treatment of Surface Defects.

C. Unformed Surfaces: After proper and adequate vibration and tamping, all unformed top surfaces of slabs, floors, walls, and curbs shall be brought to a uniform surface with suitable tools. Immediately after the concrete has been screeded, it shall be treated with a liquid evaporation retardant. The retardant shall be used again after each work operation as necessary to prevent drying shrinkage cracks. The classes of finish specified for unformed concrete surfaces are designated and defined as follows:
   1. Finish U1 - Sufficient leveling and screeding to produce an even, uniform surface with surface irregularities not to exceed 3/8-inch. No further special finish is required.
   2. Finish U2 - After sufficient stiffening of the screeded concrete, surfaces shall be float finished with wood or metal floats or with a finishing machine using float blades. Excessive floating of surfaces while the concrete is plastic and dusting of dry cement and sand on the concrete surface to absorb excess moisture will not be permitted. Floating shall be the minimum necessary to produce a surface that is free from screed marks and is uniform in texture. Surface irregularities shall not exceed ¼-inch. Joints and edges shall be tooled where indicated or as determined by the ENGINEER.
   3. Finish U3 - After the finish U2 surface has hardened sufficiently to prevent excess of fine material from being drawn to the surface, steel troweling shall be performed with firm pressure such as will flatten the sandy texture of the floated surface and produce a dense, uniform surface free from blemishes, ripples, and trowel marks. The finish shall be smooth and free of all irregularities.
   4. Finish U4 - Trowel the Finish U3 surface to remove local depressions or high points. In addition, the surface shall be given a light hairbroom finish with brooming perpendicular to drainage unless otherwise indicated. The resulting surface shall be rough enough to provide a nonskid finish.

DRAFT

D. Unformed surfaces shall be finished according to the following schedule:

UNFORMED SURFACE FINISH SCHEDULE

Area	Finish
Grade slabs and foundations to be covered with concrete or fill material	U1
Water bearing slabs with slopes 10 percent and less	U3
Water bearing slabs with slopes greater than 10 percent	U4
Slabs not water bearing	U4
Top surface of walls	U3

3.08 CURING

A. General: All concrete shall be cured for not less than 7 days after placing, in accordance with the methods indicated below for the different parts of the WORK.

Surface to be Cured or Damp proofed	Method
Wall sections with forms removed	1
Construction joints between footings and walls, and between floor slab and columns	2
Encasement concrete and thrust blocks	1 or 2
All concrete surfaces not specifically indicated in this paragraph	1
Floor slabs on grade in hydraulic structures	1 or 2
Slabs not on grade	1 or 2

B. Method 1: The surface shall be sprayed with a liquid white pigmented curing compound.
1. It shall be applied in accordance with the manufacturer's printed instructions at a maximum coverage rate of 200 square feet per gallon and in such a manner as to cover the surface with a uniform film which will seal thoroughly.
2. Where the curing compound method is used, care shall be exercised to avoid damage to the seal during the 7-day curing period. If the seal is damaged or broken before the expiration of the curing period, the break shall be repaired immediately by the application of additional curing compound over the damaged portion.
3. Wherever curing compound has been applied by mistake to surfaces against which concrete subsequently is to be placed and to which it is to adhere, compound shall be entirely removed by wet sandblasting just prior to the placing of new concrete.
4. Curing compound shall be applied as soon as the concrete has hardened enough to prevent marring on unformed surfaces and within 2 hours after removal of forms. Repairs to formed surfaces shall be made within the 2-hour period; provided, however, that any such repairs which cannot be made within the said 2-hour period shall be delayed until after the curing compound has been applied. When repairs are to be made to an area on which curing compound has been applied, the area involved shall first be wet-sandblasted to remove the curing compound.
5. At all locations where concrete is placed adjacent to a panel which has been coated with curing compound, the panel shall have curing compound.

C. Method 2: This method applies to both walls and slabs.
1. The concrete shall be kept continuously wet by the application of water for a minimum period of at least seven (7) consecutive days beginning immediately after the concrete has reached final set or forms have been removed.
2. Until the concrete surface is covered with the curing medium, the entire surface shall be kept damp by applying water using nozzles that atomize the flow so that the surface is not marred or washed.
3. Curing blankets shall be used as a curing medium to retain the moisture during the curing period. The curing medium shall be weighted or otherwise held substantially in

contact with the concrete surface to prevent being dislodged by wind or any other causes. All edges shall be continuously held in place.

4. The curing blankets and concrete shall be kept continuously wet by the use of sprinklers or other means both during and after normal working hours.
5. Immediately after the application of water has terminated at the end of the curing period, the curing medium shall be removed, any dry spots shall be rewetted and curing compound shall be immediately applied in accordance with Method 4 above.
6. The CONTRACTOR shall dispose of excess water from the curing operation to avoid damage to the work.

3.09 PROTECTION

A. The CONTRACTOR shall protect all concrete against injury until final acceptance at the CONTRACTOR's own expense and at no additional cost to the OWNER

B. Fresh concrete shall be protected from damage due to rain, hail, sleet, or snow. The CONTRACTOR shall provide such protection while the concrete is still plastic and whenever precipitation is imminent or occurring.

3.10 CURING IN COLD WEATHER

A. The CONTRACTOR shall protect all concrete against injury from cold weather until final acceptance at the CONTRACTOR's own expense and at no additional cost to the OWNER.

B. Concrete cured by an application of curing compound will require no additional protection from freezing if the protection at 50°F for 72 hours is obtained by means of approved insulation in contact with the forms or concrete surfaces; otherwise the concrete shall be protected against freezing temperatures for 72 hours immediately following 5 days protection at 50°F. Concrete cured by water shall be protected against freezing temperatures for 3 days immediately following the 72 hours of protection at 50°F.

C. Discontinuance of protection against freezing temperatures shall be such that the drop in temperature of any portion of the concrete will be gradual and will not exceed 40°F in 24 hours. In the spring, when the mean daily temperature rises above 40°F for more than three (3) successive days, the specified 72-hour protection at a temperature not lower than 50°F may be discontinued for as long as the mean daily temperature remains above 40°F; provided, that the concrete shall be protected against freezing temperatures for not less than 48 hours after placement.

D. Where artificial heat is employed, special care shall be taken to prevent the concrete from drying. Use of un-vented heaters will be permitted only when unformed surfaces of concrete adjacent to the heaters are protected for the first 24 hours from an excessive carbon dioxide atmosphere by application of curing compound; provided, that the use of curing compound for such surfaces is otherwise permitted by these Specifications.

3.11 TREATMENT OF SURFACE DEFECTS

A. As soon as forms are removed, all exposed surfaces shall be carefully examined and any irregularities shall be immediately patched or ground in a satisfactory manner in order to secure a smooth, uniform, and continuous surface. Plastering or coating of surfaces to be smoothed will not be permitted. No repairs shall be made until after inspection by the ENGINEER. In no case will extensive patching of honeycombed concrete be permitted. Concrete containing minor voids, holes, honeycombing, or similar depression defects shall be repaired as indicated below. Concrete containing extensive voids, holes, honeycombing, or similar depression defects shall be completely removed and replaced. All repairs and replacements herein required shall be promptly executed at no increased cost to the OWNER.

B. Defective surfaces to be repaired shall be cut back from true line a minimum depth of ½-inch over the entire area. Feathered edges will not be permitted. Where chipping or cutting tools are not required in order to deepen the area properly, the surface shall be prepared for bonding by the removal of all laitance or soft material, plus not less than 1/32-inch depth of the surface film from all hard portions by means of an efficient sandblast. After cutting and sandblasting, the surface shall be wetted sufficiently in advance of shooting with shotcrete or with cement mortar so that while the repair material is being applied, the surfaces underneath will remain moist but not so wet as to overcome the suction upon which a good bond depends. The material used for repair proposed shall consist of a mixture of one sack of cement to 3 cubic feet of sand. For exposed walls, the cement shall contain such a proportion of Atlas white Portland cement as is required to make the color of the patch match the color of the surrounding concrete. In hydraulic structures the material used for repair shall be hydraulic cement as defined in this Section under Products.

C. Holes left by tie-rod cones shall be rubber stopped and grouted. Holes then shall be repaired in an approved manner with dry-packed cement grout. Holes left by form-tying devices having a rectangular cross-section and other imperfections having a depth greater than their least surface dimension shall not be reamed but shall be repaired in an approved manner with dry-packed cement grout.

D. All repairs shall be built up and shaped in such a manner that the completed work will conform to the requirements of this Section, as applicable, using approved methods which will not disturb the bond, cause sagging, or cause horizontal fractures. Surfaces of repairs shall receive the same kind and amount of curing treatment as required for the concrete in the repaired section.

E. Prior to filling any structure with water, all cracks that may have developed shall be "vee'd" as indicated in specs or in the field and filled with sealant conforming to the requirements of the applicable Sections of Division 03 – Concrete. This repair method shall be done on the water bearing face of members. Prior to backfilling, faces of members in contact with fill, which are not covered with a waterproofing membrane shall also have cracks repaired as indicated herein.

3.12 PATCHING HOLES IN CONCRETE

A. Patching Small Holes:
   1. Holes which are less than 12 inches in the least dimension and extend completely through concrete members shall be filled.
   2. Small holes in members which are water-bearing or in contact with soil or other fill material shall be filled with non-shrink grout or hydraulic cement in wet tanks. Where a face of the member is exposed to view, the non-shrink grout shall be held back 2 inches from the finished surface. The remaining 2 inches shall then be patched according to the Paragraph entitled "Treatment of Surface Defects."
   3. Small holes through all other concrete members shall be filled with non-shrink grout or hydraulic cement, with exposed faces treated as above.

B. Patching Large Holes:
   1. Holes which are larger than 12 inches in the least dimension shall have a keyway chipped into the edge of the opening all around, unless a formed keyway exists. The holes shall then be filled with concrete as indicated herein.

DRAFT

2. Holes which are larger than 24 inches in the least dimension and which do not have reinforcing steel extending from the existing concrete, shall have reinforcing steel set in grout in drilled holes. The reinforcing added shall match the reinforcing in the existing wall unless indicated otherwise.
3. Large holes in members which are water bearing or in contact with soil or other fill shall have a bentonite type hydrotite waterstop material placed around the perimeter of the hole in accordance with the applicable Sections of Division 03 – Concrete, unless there is an existing hydrotite waterstop in place.

3.13 CARE AND REPAIR OF CONCRETE

A. The CONTRACTOR shall protect all concrete against injury or damage from excessive heat, lack of moisture, over-stress, or any other cause until final acceptance. Particular care shall be taken to prevent the drying of concrete and to avoid roughening or otherwise damaging the surface. Any concrete found to be damaged, or which may have been originally defective, or which becomes defective at any time prior to the final acceptance of the completed WORK, or which departs from the established line or grade, or which, for any other reason, does not conform to the requirements of the Contract Documents, shall be satisfactorily repaired or removed and replaced with acceptable concrete at no additional cost to the OWNER.

END OF SECTION

DRAFT

SECTION 03 4100 – PRECAST CONCRETE UTILITY STRUCTURES

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. The CONTRACTOR shall furnish and install structural pre-cast concrete work in accordance with the Contract Documents.

B. This Section covers the design, fabrication, delivery, and installation of all pre-cast concrete units, including connections, complete, in place, as shown and specified.

C. American Iron and Steel (AIS) requirement applies to this section. All iron and steel products used in this project must be produced in the United States.

D. Soils Report: This work shall conform to the requirements of the latest Geotechnical Evaluation and / or Soils Report.

1.02 CODES AND STANDARDS

A. Referenced Documents:

1. ASTM Standards:

A82	Steel Wire, Plain, for Concrete Reinforcement
A184	Fabricated Deformed Steel Bar Mats for Concrete Reinforcement
A185	Steel Welded Wire, Fabric, Plain, for Concrete Reinforcement
A496	Steel Wire, Deformed, for Concrete Reinforcement
A497	Welded Deformed Steel Wire Fabric for Concrete Reinforcement
A615	Deformed and Plain Billet-Steel Bars for Concrete Reinforcement
A616	Rail-Steel Deformed and Plain Bars for Concrete Reinforcement
A617	Axle-Steel Deformed and Plain Bars for Concrete Reinforcement
A706	Low-Alloy Steel Deformed Bars for Concrete Reinforcement
C31	Making and Curing Concrete Test Specimens in the Field
C33	Concrete Aggregates
C39	Compressive Strength of Cylindrical Concrete Specimens
C42	Obtaining and Testing Drilled Cores and Sawed Beams of Concrete
C94	Ready-Mixed Concrete
C150	Portland Cement
C192	Making and Curing Concrete Test Specimens in the Laboratory
C231	Air Content of Freshly Mixed Concrete by the Pressure Method
C260	Air-Entraining Admixtures for Concrete
C330	Lightweight Aggregates for Structural Concrete
C478	Precast Reinforcement Concrete Manhole Sections
C494	Shear Fatigue of Sandwich Core Materials
C595	Blended Hydraulic Cements
C618	Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use as a Mineral Admixture in Concrete
C857	Minimum Structural Design Loading for Underground Precast Concrete Utility Structures

3. American Welding Society Standards:
   a. AWS-D1.4 Structural Welding Code Reinforcing Steel

DRAFT

1.03 SUBMITTALS

A. Submittals shall be made in accordance with Section 01 3300 – Submittal Procedures.

B. Shop Drawings:
   1. Shop drawings shall show structure dimensions and orientation and location of all applicable inflow and outflow penetrations, access hatches, and conduit sleeves.
   2. Shop drawings shall include design structural calculations, assuming the applicable seismic zone and project groundwater conditions, that are stamped and signed by a Professional Engineer registered in Arizona and shall be approved by the ENGINEER.
   3. Shop drawings shall indicate pre-cast unit identification marks, location of units in the WORK, elevations, fabrication details, joint details, reinforcement, connections, dimensions, interface with adjacent members, and special handling instructions in sufficient detail to cover manufacture, handling and erection. Shop drawings shall include erection drawings.

C. Test Reports: Tests for compressive strength of concrete shall be performed by the factory. Copies of test reports including all test data and all test results shall be submitted.

D. Certificates of Compliance: Certificates of compliance shall be submitted attesting that materials and products meet or exceed specified requirements.

1.04 QUALITY ASSURANCE

A. General Requirements: Design members under direct supervision of a Professional Engineer experienced in design of pre-cast concrete units, registered in the State of Arizona, and conforming to requirements of this specification.
   1. Manufacture, Transportation, and Installation: The Manufacturer shall specialize in providing pre-cast products and services normally associated with pre-cast concrete construction with high quality finishes similar to that indicated on drawings.

1.05 DELIVERY, STORAGE, AND HANDLING

A. General: Pre-cast members shall be handled to position consistent with their shape and design; they shall be lifted and supported from design incorporated support points and provided with strong backs and other devices as required. Lifting or handling equipment shall be capable of maintaining units during manufacture, storage, transportation, erection, and in position for fastening.

B. Blocking and supports, lateral restraints and protective materials during transport and storage shall be clean, non-staining, without causing harm to exposed surfaces, including temporary support to prevent bowing and warping. Lateral restraints shall be provided to prevent undesirable horizontal movement. Edges and exposed faces of members shall be protected to prevent straining, chipping, or spalling of concrete.

C. Units shall be marked with date of production and final position in structure in location not visible after erection.

D. Pre-cast units shall be stored off the ground in a manner to prevent warpage and they shall be protected from weather, marring, and overload.

E. Stainless Steel Hardware: Stainless steel hardware shall be transported, handled, stored, and protected in wood crates.

DRAFT

PART 2 – PRODUCTS

2.01 MATERIALS

A. Cement: ASTM C150 or ASTM C595.

B. Aggregates: ASTM C33 and ASTM C330, except that the requirements for grading shall not apply.

C. Admixtures: May be used provided such admixtures are not injurious to other products used in the concrete.

D. Chemical Admixtures: ASTM C494

E. Fly Ash and Pozzolanic Admixture: ASTM C618
   1. Water: Used for curing, washing, aggregate, or mixing concrete shall be clean and free of injurious amounts of oil, acids, alkalis, salts, organic materials, or other substances that may be incompatible with concrete or steel.

F. Steel Reinforcement:
   1. Wire ASTM A82 or ASTM A496
   2. Wire Fabric ASTM A185 or ASTM A497
   3. Bars ASTM A184, ASTM A615, ASTM A616, ASTM A617 or ASTM A706

2.02 DESIGN REQUIREMENTS

A. Design Method: The elastic method of structural design or the ultimate strength method of reinforced concrete design as outlined in ACI 318 shall be used to design the concrete sections, including the reinforcement required, when the structure is subjected to the loading conditions covered in Practice C857.

B. Access Openings: The structural design shall take into consideration the number, placement, and size of access openings.

C. Floors: The minimum floor thickness resulting from slope shall be considered as nominal floor thickness in the structure.

D. Terminators, Knockouts and Sumps: Duct terminators, knockouts and sumps shall be designed to carry the loads imposed upon them. The basic structure shall be designed to carry all imposed loads with knockouts removed.

E. Placement of Reinforcement: The design concrete cover for reinforcing bars, mats or fabric shall not be less than ¾-inch (19 mm) subject to the requirements of Section 2.02.

F. Concrete Strength: The minimum specified compressive strength for design shall be 4,000 psi (21 MPa) at 28 days of age. Compressive-strength tests should be made in accordance with Practices C31 and C192 and Test Methods C39 and C42.

G. Joints: Joints in sectional precast concrete structure shall be designed so as to be self-aligning when assembling sections of the structure.
   1. The manufacture shall provide a single joint design on all units of the same size and type to ensure interchangeability.

H. Lifting Devices: Design of embedded lifting devices shall conform to requirements as specified in 8.4 under Special Loading Considerations of Practice ASTM C890.

I. Pickup Points and Boxouts: Pickup points, boxouts and inserts on panel faces and surfaces to be exposed are prohibited except as approved.

J. Traffic Loads: Structure and access hatches shall be designed for HS-20-44 traffic wheel loads per AASHTO as last revised, including a 30% impact factor.

DRAFT

2.03 MANUFACTURE

A. Forms: Forms shall be accurately constructed and strong enough to maintain the structure's dimensions within the tolerances given in Section 2.4. Forms should be constructed in such a manner as to minimize the seepage of water. All casting surfaces shall be smooth nonporous material.

B. Cleaning and Oiling: Forms shall be cleaned before each use. New forms shall be free of paint or other protective coatings that might cling to the surface of the structure. Releasing agents applied to the form to aid in breaking the bond between the form and the concrete shall not be injurious to the concrete.

C. Reinforcement: Steel reinforcement shall conform to the requirements of this specification and shall be securely positioned in the form to maintain design concrete cover given in Section 2.2 during concrete placement. All chairs, bolsters, braces and spacers in contact with form and reinforcing rod shall be of material that will not deteriorate.

D. Mixture: The aggregates shall be sized, graded, proportioned, and thoroughly mixed in a batch mixer with proportions of cement and water as will produce a homogeneous concrete having the required specified compressive strength. If Ready-Mix concrete is used, it shall be in accordance with Specification C 94.

E. Concrete Placement: Concrete shall be deposited as nearly as practicable in its final position. Concrete shall be placed in the form at a rate such that the concrete is plastic at all times and flows readily into all parts of the form and around all reinforcement steel and embedded fixtures without segregation of materials. Concrete that has partially hardened or has been contaminated by foreign material shall not be deposited in the form.

F. Curing: Structures shall be cured by an accepted industry method that will develop the required 28-day compressive strength without affecting the long-term durability of the concrete.

2.04 PERMISSIBLE VARIATIONS

A. Dimensional Tolerances: The length, width, height, or diameter measurements of the structure when measured on the inside surface shall not deviate from the design dimensions more than the following:

Dimension	**Tolerance**
0 to 5-feet (0 to 1.5 m)	+/- 1/4 inch (+/- 6 mm)
5 to 10-feet (1.5 to 3.0 m)	+/- 3/8 inch (+/- 10 mm)
10 to 20 feet (3.0 to 6.1 m)	+/- 1/2 inch (+/- 13 mm)
20 feet (6.1 m) and over	as agreed upon between manufacturer and purchaser

B. Squareness Tolerance: The inside of the precast concrete component shall be square as determined by diagonal measurements. The difference between such measurements shall not exceed the following:

Measured Length	**Allowable Difference**
0 to 10 feet (0 to 0.3 m)	+/- 1/2 inch (+/- 13 mm)
10 to 20 feet (3.0 to 6.1 m)	+/- 3/4 inch (+/- 19 mm)
20 feet (6.1 m) and over	as agreed upon between manufacturer and purchaser

C. Joint Surfaces: The inside joint seam gap between two sections placed together without a joint sealant shall not exceed 3/8-inch (9.5 mm).

D. Insert Location: Insert locations for attachments in each component shall not deviate individually or cumulatively more than ± 1/8-inch (3.18 mm) from dimensions on specification drawings.

DRAFT

E. Reinforcement Location: With reference to thickness of wall or slab, reinforcement shall be within ± ¼-inch (6.3 mm) of the design location, but in no case shall the cover be less than ¾-inch (19 mm). The reinforcement spacing shall not vary more than one tenth of the designed bar spacing nor exceed 1½-inch (38 mm) in variation, except for welded wire mesh which shall conform to Specifications A185 or A497.

F. Slab and Wall Thickness: The slab and wall thickness shall not be less than that shown in the design by more than 5% or 3/16-inch (4.8 mm), whichever is greater. A thickness greater than that required in the design shall not be a cause for rejection.

2.05 REPAIRS

A. Precast concrete structures may be repaired. Repairs shall be performed by the manufacturer, in such a manner as to ensure that the repaired structure conforms to the requirements of this specification.

2.06 INSPECTION

A. The quality of material, process of manufacture, and the finished structure shall be subject to inspection at any time by the purchaser or his representative.

2.07 REJECTION

A. Precast concrete structures or sections of structures shall be subject to rejection upon failure to conform to any specified requirements contained herein, or if any of the following imperfections occur:
   1. Defects that indicate any imperfect concrete mixing and molding, or
   2. Surface defects indicated by honeycombed or open-texture and damaged areas where such defects would affect the structural adequacy.

2.08 CERTIFICATION

A. At the request of the purchaser, the manufacturer shall, prior to the actual delivery of a structure, furnish a statement giving the source and type of cement, the source and specific gravities of the aggregates, the concrete mix proportions, strength, type, amount, and name of admixtures and mill certificates for the reinforcement steel used in manufacture.

2.09 MARKING

A. The weight shall be marked on the outside of each component section.

B. The purchaser may request additional information to be marked on the component section when ordering.

C. The method of marking shall be agreed upon between the purchaser and the supplier prior to ordering.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Erection:
   1. The units shall be erected in accordance with approved shop/erection drawings without damage to shape or finish or adjacent work. Unless otherwise shown, members shall be erected level and plumb within allowable tolerances.
   2. The CONTRACTOR shall align and maintain uniform horizontal joints as erection progresses, provide approved shims and wedges as required, and when members required adjustment beyond design or tolerance criteria, discontinue affected work. Units shall be secured in place and field welds; scratches and otherwise damaged steel surfaces shall be touched up.

DRAFT

3. Pickup points, boxouts, inserts and bearing surfaces shown shall be grouted with non-shrink grout in accordance with these Specifications. The color and texture of concrete surfaces of adjacent areas shall be finished to match in the same plane.

3.02 PROTECTION

A. Adjacent surfaces shall be protected from damage during sealing and cleaning operations and against damage, disfiguration, or discoloration from subsequent operations. Noncombustible shielding shall be used during welding operations.

END OF SECTION

DRAFT

SECTION 03 6000 – GROUTING

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide and place grout in accordance with the Contract Documents.

B. Section Includes:
   1. Concrete Mortar
   2. Grout
   3. Dry-pack Mortar
   4. Non-shrink Grout
   5. Epoxy grout
   6. Non-shrink epoxy grout

C. Refer to the applicable Sections of Division 03 – Concrete.

1.02 REFERENCES

A. American Society for Testing and Materials (ASTM):

C109	Compressive Strength of Hydraulic Cement Mortars (using 2 inch or 50 millimeter cube specimens)
C230	Flow Table for Use in Tests of Hydraulic Cement
C531	Liner Shrinkage and Coefficient of Thermal Expansion of Chemical-Resistant Mortars, Grouts, Monolithic Surfacing and Polymer Concretes
C579	Compressive Strength of Chemical-Resistant Mortars and Monolithic Surfacing

C939	Flow of Grout for Preplaced-Aggregate Concrete (Flow Cone Method)
C1090	Measuring Change in Height of Cylindrical Specimens from Hydraulic-Cement Grout
C1107	Packaged Dry, Hydraulic-Cement Grout (non-shrink)
C1181	Compressive Creep of Chemical-Resistant Polymer Machinery Grouts

1.03 SUBMITTALS

A. Furnish submittals in accordance with Section 01 3300 – Submittal Procedures.

B. Grout: Submit manufacturer's Literature and certified test data prior to installation of any grout mixes.

1.04 DELIVERY, STORAGE, AND HANDLING

A. All materials shall be delivered to the jobsite in their original, unopened packages or containers, clearly labeled with the manufacturer's product identification and printed instructions.

B. All materials shall be stored in a cool dry place and in accordance with the manufacturer's recommendations.

C. All materials shall be handled in accordance with the manufacturer's instructions.

1.05 PROJECT/SITE CONDITIONS

A. Refer to manufacturer's literature or contact the manufacturer for any special physical or environmental limitations that may be required for use of products.

1.06 WARRANTIES

A. Non-shrink Grout: The manufacturer shall warranty that the non-shrink grout will never go below its initial placement volume when tested in accordance with ASTM C1107.

DRAFT

B. Non-shrink Epoxy Grout: The manufacturer shall warranty that the non-shrink epoxy grout will show negligible shrinkage or expansion when tested in accordance with ASTM C531.

PART 2 – PRODUCTS

2.01 MATERIALS

A. Concrete Mortar:
   1. General: Consist of concrete mixture with coarse aggregate removed and water quantity adjusted as required.
   2. At Exposed Concrete Surfaces Not to Be Painted or Submerged in Water: White Cement.

B. Grout: Consist of mixture of Portland cement and sand.

C. Dry-pack:
   1. Mortar consists of mixture of Portland cement and sand.
   2. Hydraulic Cement Manufacturers
      a. Aqua Plug
      b. Unitex Hydraulic Cement
      c. Thoro Water Plug

D. Non-shrink Grout:
   1. Manufacturers: One of the following or ENGINEER-approved equal:
      a. Five Star Products, Inc., Fairfield, CT, Five Star Grout.
      b. Master Builders, Inc., Cleveland, OH, Masterflow 928.
      c. L&M Construction Chemicals, Inc., Omaha, NE, CRYSTEX
   2. Non-shrink grout shall be a proportioned and prepackaged cement-based mixture. It shall contain no metallic particles such as aluminum powder and no metallic aggregate such as iron filings. It shall require only the addition of potable water.
   3. Potable water for pre-soaking, mixing, and curing shall be clean and free of oils, acids, alkalis, organics, and any other deleterious matter.
   4. Bleeding: Non-shrink grout shall be free from the emergence of mixing water from within or the presence of water on its surface.
   5. Non-shrink grout shall be in accordance with ASTM C1107.
   6. Consistency: Non-shrink grout shall remain at a minimum flowable consistency for at least 45 minutes after mixing at 45°F to 90°F when tested in accordance with ASTM C230. If at a fluid consistency, it shall be verified in accordance with ASTM C939.
   7. Dimensional Stability (height change): Non-shrink grout shall be in accordance with ASTM C1107, volume-adjusting Grade B or C at 45°F to 90°F. It shall show 90 percent or greater bearing area under bases or baseplates.
   8. Compressive Strength: Non-shrink grout shall show minimum compressive strengths at 45°F to 90°F in accordance with ASTM C1107 for various periods from the time of placement, including 5,000 pounds per square inch at 28 days when tested in accordance with ASTM C109 as modified by C1107.

E. Epoxy Grout:
   1. Consist of mixture of epoxy and sand.
   2. Sand: Clean, bagged, graded, and kiln dried silica sand.

F. Non-shrink Epoxy Grout:
   1. Manufacturers: One of the following or equal:
      a. Five Star Products, Inc., Fairfield, CT, Five Star Epoxy Grout.
      b. Master Builders, Inc., Cleveland, OH, Masterflow 648 CP Plus.
      c. L&M Construction Chemicals, Inc., Omaha, NE, EPOGROUT.

DRAFT

2. Non-shrink epoxy grout shall be a 100-percent-solids, pre-measured, prepackaged system containing a two-component thermosetting epoxy resin and inert aggregate
3. Consistency: Non-shrink epoxy grout shall maintain a flowable consistency for at least 45 minutes at 70°F.
4. Dimensional Stability (height change):
   a. Non-shrink epoxy grout shall have negligible shrinkage or expansion (less than 0.0006 in/in) when tested in accordance with ASTM C531.
5. Compressive Strength: Non-shrink epoxy grout shall show a minimum compressive strength of 10,000 pounds per square inch at 24 hours and 14,000 pounds per square inch at 7 days when tested in accordance with ASTM C579, Method B.
6. Compressive Creep: The compressive creep for non-shrink epoxy grout shall not exceed 0.0027 in/in when tested under a 400 pounds per square inch constant load at 140°F in accordance with ASTM C1181.
7. Thermal Capability: The coefficient of thermal expansion for non-shrink epoxy grout shall not exceed 0.000018 inches per inch per degree Fahrenheit when tested under ASTM C531, Method B.

2.02 MIXES

A. Concrete Mortar Mix:
   1. Use water-cement ratio that is no more than that specified for concrete being repaired.
   2. At Exposed Concrete Surfaces Not to Be Painted or Submerged in Water: Use sufficient white cement to make color of finished patch match that of surrounding concrete.

B. Grout Mix:
   1. For Concrete Repair: Mix in same proportions used for concrete being repaired, with only sufficient water to give required consistency for spreading.
   2. For Spreading over the Surfaces of Construction or Cold Joints: Mix with no more water used than allowed by water-cement ratio specified for concrete.
   3. For Other Applications: Mix in proportions by weight of one part cement to four parts of concrete sand.

C. Dry-pack Mortar and Hydraulic Cement Mix: Use only enough water so that resulting mortar will crumble to touch after being formed into a ball by hand.

D. Non-shrink Grout: Mix in accordance with manufacturer's installation instructions such that resulting mix has fluid or flowable consistency and is suitable for placing by pouring.

E. Epoxy grout: Mix in accordance with manufacturer's installation instructions for mixing.

F. Non-shrink Epoxy Grout: Mix in accordance with manufacturer's installation instructions.

PART 3 – EXECUTION

3.01 EXAMINATION

A. Inspect concrete surfaces to receive grout or mortar and verify that they are free of ice, frost, dirt, grease, oil, curing compounds, paints, impregnations and all loose material or foreign matter likely to affect the bond or performance of grout or mortar.

B. Inspect baseplate and anchor systems for rust, oil, and other deleterious substances that may affect the bond or performance of grout.

C. Confirm that newly placed concrete has been cured sufficiently to attain its design strength and limit further shrinkage.

DRAFT

D. Verify that temperature of cementitious or epoxy grout does not exceed manufacturer's recommendations.

3.02 PREPARATION

A. Surface Preparation:
   1. Roughen all concrete surfaces by heavy sandblasting, chipping, or other mechanical means to assure bond. Loose or broken concrete shall be removed.
   2. All grease, oil, dirt, curing compounds, laitance, and other deleterious materials that may affect bond that were identified in the inspection process shall be completely removed from concrete and bottoms of baseplates. All metal surfaces should have a 2- to 3-mil peak-to-valley profile for epoxy grouts.
   3. For cementitious mortars and grouts, concrete surfaces shall be saturated surface dry. Any standing water shall be removed prior to placing grouts.
   4. For epoxy grouts, do not wet concrete surfaces with water. Instead, where required, wet surfaces with epoxy for horizontal work or epoxy gel for vertical or overhead work prior to placing epoxy grouts.

B. Forms and Headboxes for Grouts (Cementitious or Epoxy):
   1. Forms for grouts shall be built of material with adequate strength to withstand the placement of grouts.
   2. Forms must be rigid and liquid tight. All cracks and joints shall be caulked with an elastomeric sealant. All forms shall be lined with polyethylene for easy grout release. Forms carefully waxed with two coats of heavy-duty paste wax shall also be acceptable.
   3. Forms shall be 4 to 6 inches higher than the baseplate on one side of the baseplate configuration when using head pressure for placement.
   4. A sufficient number of headboxes shall be built to facilitate placement of grouts.
   5. Air relief holes a minimum 1/8 inch in diameter shall be provided when required by a baseplate configuration to avoid entrapping air underneath.

3.03 APPLICATION

A. Cement Mortar and Grout:
   1. For Defective Concrete Repair:
      a. Filling: Filling of voids around items through the concrete.
      b. Grout Spreading: Spread over construction joints, cold joints, and similar type items.
   2. Concrete Surfaces: Apply epoxy bonding agent to clean, roughened, and dry surfaces before placing mortar or grout.
   3. Placing:
      a. Exercise particular care in placing Portland cement mortar or grout since they are both required to furnish structural strength or impermeable water seal or both.
      b. Do not use cement mortar or grout that has not been placed within 30 minutes after mixing.

B. Epoxy Grout:
   1. Apply in accordance with manufacturer's installation instructions.
   2. Use where specified herein or where indicated on the Drawings.

3.04 PLACEMENT

A. The CONTRACTOR shall arrange to have a grout manufacturer's representative present for a preconstruction meeting and during the initial grout placement. Grout shall only be installed after the final equipment alignment is correct and accepted by the ENGINEER.
   1. Grouts shall be mixed in accordance with the manufacturer's recommendations.

DRAFT

2. A mortar mixer with moving paddles shall be used for mixing grouts. For cementitious grouts, pre-wet the mixer and empty out excess water before beginning mixing.
3. Cementitious Grouts:
    a. Non-shrink cementitious grout shall be added to a pre-measured amount of water that does not exceed the manufacturer's maximum recommended water content.
    b. Mix cementitious grouts per manufacturer's instructions for uniform consistency.
    c. Grouts may be dry packed, flowed, or pumped into place. All baseplate grouting shall take place from one side of a baseplate to the other to avoid trapping air. Do not overwork grouts.
    d. Do not retemper grout by adding more water after stiffening.
    e. Hydrostatic head pressure shall be maintained by keeping the level of the grout in the headbox above the bottom of the baseplate. The headbox should be filled to maximum level and the grout worked down to top of baseplate.
4. Epoxy Grouts:
    a. Epoxy grouts shall be mixed in complete units. Do not vary the ratio if components or add solvent to change the consistency of the mix.
    b. Pour the hardener into the resin and mix for at least one minute and until each mixture is uniform in color. Pour the chemical components into the mortar mixer wheelbarrow and add the aggregate. Mix until aggregate is uniformly wetted. Overmixing will cause air entrapment in the mix.
    c. All epoxy grout shall be flowed into place using a headbox. All grouting shall take place from one side of a baseplate to the other in a continuous flow to avoid trapping air.
    d. Hydrostatic head pressure shall be maintained by keeping the level of grout in headboxes above the bottom of baseplates. Headboxes shall be filled to the maximum level and grout worked down to the bottom of the baseplates.
    e. Epoxy grouts shall not be cut back after setting. The final level of grout will be as installed with all chamfer edges built into the formwork.

3.05 CURING

A. Cementitious Grouts:
1. Grouts must be cut back to the lower edge of baseplates after reaching initial set. Provide a 45-degree angle cut back.
2. Clean equipment and tools as recommended by the grout manufacturer.
3. Cure Grouts in accordance with the manufacturer's specifications and recommendations. Keep grout moist for a minimum of 3 days. The method needed to protect grouts will depend on temperature, humidity, and wind. Wet burlap, a soaker hose, sun shading, ponding and in extreme conditions, a combination of methods shall be employed.
4. Grouts shall be maintained above 40°F until they have attained a compressive strength of 3,000 pounds per square inch or above 70°F for a minimum of 24 hours to avoid damage from subsequent freezing.

B. Epoxy Grouts:
1. Cure grouts in accordance with manufacturer's specifications and recommendations. Do not wet cure epoxy grouts.
2. Consult the manufacturer for appropriate cure schedule. In no case should any surface in contact with grout be allowed to fall below 50°F for a minimum of 48 hours after placement.
3. Equipment and tools shall be cleaned immediately with a strong liquid detergent and water solution before grout hardens.

DRAFT

3.06 FIELD QUALITY CONTROL

A. Non-shrink grouts shall be tested for 84 hour compressive strength in accordance with ASTM C109.

B. Non-shrink grouts shall be tested for 24 hour compressive strength in accordance with ASTM C579 (Method B).

END OF SECTION

DRAFT

SECTION 03 6423 – EPOXY INJECTION GROUTING

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes: Epoxy injection system.

1.02 REFERENCES

A. American Society for Testing and Materials (ASTM):

D638 Tensile Properties of Plastics.
D695 Compressive Properties of Rigid Plastics.
D790 Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials

1.03 SUBMITTALS

A. Furnish submittals in accordance with Section 01 3300 – Submittal Procedures.

B. Product Data: Submit manufacturer's data completely describing epoxy injection system materials.

C. Quality Control Submittals:
1. Certificates of Compliance
2. Manufacturer's Instructions

PART 2 – PRODUCTS

2.01 MATERIALS

A. Manufacturers: One of the following or ENGINEER-approved equal:
1. Master Builders, Inc., Concressive Standard LVI
2. Sika Chemical Corp.'s, Sikadur 35, Hi-Mod LV

B. Epoxy: Provide epoxy materials that are new and use them within shelf life limitations set forth by manufacturer. Water-insensitive, 2-part type, low viscosity epoxy adhesive material containing 100 percent solids and meeting or exceeding following characteristics when tested in accordance with standards specified:

Physical Characteristic	Test Method	Required Results
Tensile Strength	ASTM D638	8,000 pounds per square inch at 14 days and 77°F cure
Flexure Strength	ASTM D790	11,000 pounds per square inch at 14 days and 77°F cure
Compressive Strength	ASTM D695	16,000 pounds per square inch at 24 hours and 77°F cure
Bond Strength	--	Concrete shall fail before failure of epoxy
Gel Time in 5-Mil Film	--	Four hours maximum at 77°F
Elongation	ASTM D638	1 percent at 14 days and 77°F

DRAFT

2.02 EQUIPMENT

A. Pump Unit:
   1. Furnish unit to be used for injection that is positive displacement type with interlock to provide in-line mixing and metering system for 2-component epoxy.
   2. Furnish pressure hoses and injection nozzle of such design as to allow proper mixing of 2 components of epoxy.
   3. Presence of standby injection unit may be required.

2.03 MIXES

A. Epoxy Injection System Materials:
   1. Mix epoxy in accordance with manufacturer's installation instructions.
   2. Do not use solvents to thin epoxy system materials introduced into cracks or joints.

PART 3 – EXECUTION

3.01 PREPARATION

A. Surface Preparation:
   1. Epoxy Injection System:
      a. General: Before processing, sweep or clean area in vicinity of crack location to receive epoxy and leave in generally clean condition.
      b. Joints to Receive Epoxy: Clean in manner such that joints are free from dirt, laitance, and other loose matter.

3.02 INSTALLATION

A. Install and cure epoxy materials in accordance with manufacturer's installation instructions.

B. Perform and conduct work of this Section in neat orderly manner.

C. Epoxy Injection System:
   1. Apply adequate surface seal to crack or joint to prevent escape of epoxy.
   2. Establish entry points at distance along seal not less than thickness of cracked member.
   3. Force epoxy into crack at first port with sufficient pressure to advance epoxy to adjacent port.
   4. Seal original port and shift entry to port at which epoxy appears.
   5. Continue this manner of port-to-port injection until each joint has been injected for its entire length.
   6. For small amounts, or where excessive grout pressure developed by pump unit might further damage structure, premixed material and hand caulking gun may be used if acceptable to the ENGINEER.
   7. Seal ports, including adjacent locations where epoxy seepage occurs, as necessary to prevent drips or run out.

END OF SECTION

DRAFT

SECTION 05 1200 – STRUCTURAL STEEL FRAMING

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide structural steel for building construction including sub-framing units, which are part of the general framing system. Include anchors, bases, bearing plates, bracing, lintels when part of structural framing and detail fittings.

B. Modify existing structural steel systems and components to accommodate remodeling and new work.

1.02 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

1.03 QUALITY ASSURANCE

A. Comply with Governing Codes and Regulations. Provide products of acceptable manufacturers. Use experienced installers. Deliver, handle and store materials in accordance with manufacturer's instructions.

PART 2 – PRODUCTS

2.01 MATERIALS

A. Steel shapes plates and bars: ASTM A36 or ASTM A572, Grade 50

B. Steel pipe: ASTM A53

C. Anchor bolts: ASTM A307

D. High strength threaded fasteners: ASTM A325

E. Non-metallic shrinkage resistant grout; Euclid Euco NS, L&M Crystex, Sonneborn Sonnegrout or ENGINEER-approved equal. Compressive strength suited for Project Requirements.

F. Shop finish for structural steel in accordance to these Specifications.

G. Galvanized lintels: Hot dip galvanized ASTM A123

H. Welding: AWS D1.1

PART 3 – EXECUTION

3.01 INSTALLATION

A. Comply with AISC Codes and Specifications and with AWS "Structural Welding Code."

B. Employ a registered engineer to check elevations and plumb and level tolerances; certify that installed work is within AISC Standards. Testing/inspection agency may be employed to inspect welded and bolted connections.

C. Architecturally Exposed Steel: Fabricate with special care using materials carefully selected for best appearance. Store materials off ground and keep clean. Cut, fit, and assemble work with surfaces smooth, square, and with complete contact at joints. Set all cambers up. Weld all work continuously; grind smooth and flush to make seams invisible after priming. Prepare surfaces to comply with SSPC-SP6; apply prime coat within 24 hours after cleaning.

D. Touch-up field welds and abraded areas in accordance with these Specifications.

E. Provide all necessary bolt, fasteners, anchors, etc. to install or construct this scope of the WORK.

END OF SECTION

DRAFT

SECTION 05 3123 – METAL ROOF DECKING

PART 1 – GENERAL

1.01 DESCRIPTION

A. This section describes materials and installation of metal roof decking.

1.02 SUBMITTALS

A. Submit shop drawings in accordance with Section 01 3300 – Submittal Procedures.

B. Submit complete manufacturer's specifications and installation instructions in advance of fabrication. Include manufacturer's certification showing compliance with these specifications. Indicate on transmittal form to OWNER's Representative that a copy of each instruction has been distributed to the installer.

C. Submit detailed shop drawings showing layout of roof deck panels, anchorage details, and every condition requiring closure panels, supplementary framing, special jointing, or other accessories.

D. Submit current International Conference of Building Officials (ICBO) approval for deck diaphragm shear values for deck welds.

E. Fabrication: Prior to erection of metal decking, deliver to the OWNER's Representative a letter signed by an official of the manufacturer's firm certifying that the metal decking delivered for this WORK was fabricated in accordance with these specifications.

F. Erection: Upon completion of erection, deliver of the OWNER's Representative a letter signed by an official of the erector's firm certifying that metal decking installed in this WORK was installed in accordance with these specifications.

1.03 SUBMITTALS

A. Comply with the current editions of codes and regulations including current editions or revisions and supplements of the following reference standards: ICBO – Latest Edition.

AISI "Specification for the Design of Cold – Formed Steel Structural Members."

AWS "Code for the Welding in Building Construction." SDI "Steel Roof Deck Design Manual."

B. Performance Requirements:

1. Compute the properties of metal floor deck sections on the basis of the effective design width as limited by the provisions of the AISI specifications. Provide not less than the specified deck section properties shown including section modules and moment of inertia per foot of width.
2. Allowable Deflection: Design and fabricate deck for a maximum deflection of 1/360 of the clear span under the total uniform dead and live load.
3. Uplift Loading: Install and anchor roof deck units to resist a gross uplift loading of 30 psf (less dead load for roof areas).

C. Qualifications of Suppliers and Personnel: The erector shall have at least five years' continuous experience in the erection of metal decking.

D. Qualifications of Welding:

1. Quality welding processes and welding operators in accordance with AWS B3.0 "Welding Procedure and Performance Qualification."

DRAFT

2. Decking welded in place is subject to inspection and testing. Expense of removing and replacing any portion of decking for testing purposes will be borne by the OWNER if welds are found to be satisfactory. If any welds are found defective, the CONTRACTOR shall be responsible for the expense of testing and removal and replacing that portion of decking to the satisfaction of the OWNER's Representative.

PART 2 – PRODUCTS

2.01 MATERIALS

A. Form metal roof decking from steel conforming to ASTM A653 SS, Grade 50 min with G90.

B. Decking shall be galvanized.

C. Metal roof decking shall conform to the following properties:

Gauge:	As Shown (20 Min.)
Moment of Inertia:	0.219 in^4
Section Modulus:	+ 0.23 in^3 - 0.237 in^3
Weight per Square Foot:	2.3 (lbs.)
Depth of Corrugations:	1-1/2 inches

2.02 FABRICATION

A. Form deck units in lengths to span three or more support spacing with flush, telescoped, or nested 2-inch end laps and nesting side laps, unless otherwise shown or specified. Provide deck configurations complying with SDI "Basic Design Specifications."

B. Fabricate metal closure strips of painted sheet steel of the same quality as the deck units: not less than nominal 0.0359 inch (20-gauge) thick before coating. Form to the configuration required to provide tight-fitting closures at open ends and sides of decking.

C. Provide decking accessories, including welding washers, anchor washes with ear clips, closures, and filler strips. Provide closure plates and other attachments at openings through decking for ducts, shafts, and other penetrations. Where decking changes directions, and at perimeter, closures shall be of 18-gauge steel unless otherwise indicated.

D. Reinforce decking at openings per manufacturer's requirements.

PART 3 – EXECUTION

3.01 PRODUCT DELIVERY STORAGE AND HANDLING

A. When delivered to the jobsite, store the metal decking off the ground and cover to protect material from the elements. Slope to permit drainage.

B. In the event of damage, immediately make repairs and replacements. Replacements and repairs shall be at CONTRACTOR's expense.

3.02 INSTALLATION OF METAL ROOF DECKING

A. Place metal roof decking with edges up and flutes at right angles to supports. End laps shall always occur over supports, with a minimum end lap of 2 inches for welded attachment. Begin at corner of buildings to maintain alignment. Lap sheets one-half flute at side laps. Attach sheets to top chord of supports by plug welding through special welding washers. Fasten each end lap in the trough of the flutes at each corner (through four thickness of metal) and at center of end lap. Limit the spacing between adjacent points of attachment to 18 inches maximum over all supports. Attach placed sheets at the end of the workday. Metal connections shall be as indicated on plans.

DRAFT

3.03 PAINTING

A. For touch-up on decking, wire brush, clean, and paint scarred areas, welds, and rust spots on top and bottom surfaces of decking units and supporting steel members.

3.04 PROTECTION

A. Do not use deck units for storage or working platforms until permanently secured in position.

B. Assure that construction loads do not exceed carrying capacity of deck.

C. Do not use calcium chlorides or admixtures containing chloride salts in the concrete fill over the deck.

END OF SECTION

DRAFT

SECTION 05 5000 – METAL FABRICATIONS

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide all labor, materials, bolts, fasteners, equipment, and service necessary for fabrication and erection of structural steel and aluminum and for fabrication and installation of miscellaneous non-ferrous metals in accordance with the Contract Documents and not specifically included under other Sections of these Specifications.
   1. Erection
   2. Shop and Erection Drawings
   3. Shop Painting
   4. Galvanizing
   5. Aluminum Work Protection
   6. Cleaning Aluminum Work
   7. Miscellaneous Items
   8. Loose Lintels
   9. Sleeves and Inserts
   10. Aluminum Pipe Railing
   11. Plate Covers and Frames
   12. Guard Chains
   13. Lifting Hooks
   14. Cast Iron Wheel Guard
   15. Cast Aluminum Nosings
   16. Floor Hatches and Frames
   17. Access Doors

B. American Iron and Steel (AIS) requirement applies to this section. All iron and steel products used in this project must be produced in the United States.

1.02 REFERENCES

A. All work under this Section shall be governed by:
   1. Specifications for the design, fabrication, and erection of structural steel for buildings – American Institute of Steel Construction, current edition.
   2. Aluminum Construction Manual, Section 1, Specifications for Aluminum Structures – The Aluminum Association.
   3. All welding shall conform to the latest code of the American Welding Society.
   4. ANSI B94.12
   5. ASTM A12, A153, A384, A593 and A780
   6. ASTM A48
   7. ASTM A276
   8. ASTM A325
   9. ASTM F593, 294
   10. Federal Specification FF-S-325
   11. Federal Specification TT-V-51F
   12. SSPC SP-1, SP-2, SP3, SP-7

1.03 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

DRAFT

B. As required by the Specifications, submit for review completely detailed and certified shop and erection drawings of the miscellaneous metal work. All Coatings or other protection against corrosion to be applied at the shop or in the field shall be indicated on these drawings. The shop drawings for aluminum work shall show the alloys and tempers to be used, and the finish, if any to be applied.

C. Shop drawings, giving complete information necessary for fabrication, layout and installation of metal work shall be submitted to the ENGINEER for review prior to fabrication.

D. Preparation of shop drawings for fabricated metal items shall be coordinated with the manufacturers, of various equipment in order to comply with details, locations, openings, and arrangements required by the manufacturers, of various equipment in order to comply with details, locations, openings, and arrangements, required by the manufacturers.

E. Field measurements shall be made to verify all dimensions in the field, which may affect installation of work before shop drawings are made and/or fabrication is performed.

1.04 QUALITY ASSURANCE

A. The design, detail and workmanship of steel plates and structural steel shall conform to the AISC Specification for the Design, Fabrication and Erection of Structural Steel for Buildings.

B. Where welding is permitted or required, it shall conform to the current requirements of the American Welding Society for the type of work in question.

C. Aluminum work shall be fabricated in a shop where the quality of work is in accordance with the highest standards for work of this type. All work shall be executed by mechanics skilled in the fabrication of aluminum, and shall be true to detail with sharp, clean profiles, fitted with proper joints and intersections and with finishes as specified.

D. All miscellaneous metal work shall be formed to shape and size with sharp lines and angles. Shearing and punching shall leave clean true lines and surfaces.

1.05 RESPONSIBILITY FOR DIMENSIONS

A. The general design and dimensions of the miscellaneous metal work are indicated on the Drawings, correctness of the details and dimensions of the finished articles is required. Verification of conditions at the job before fabrication and coordination of the work with that of all other trades to prevent interference.

PART 2 – PRODUCTS

2.01 STEEL

A. Structural steel, plates, and shapes shall conform to the requirements of ASTM A36. Structural tubing, where used, shall conform to the requirements of ASTM A500, Grade B, and the ends of the tubing shall be properly sealed to protect the internal surfaces. Steel anchor bolts shall be ASTM A36 hot rolled threaded rod or bar stock, except where stainless steel is indicated on the Drawings.

B. Structural steel members as required shall conform to ASTM Standard shapes.

C. Base and bearing plates shall be provided where necessary to provide maximum bearing value of not more than 200 psi on solid concrete masonry units not more than 750 psi on concrete and shall be grouted in place.

DRAFT

D. Steel lintels shall be provided for all square head openings in masonry where shown and where other lintels are not indicated on the Drawings. Lengths of bearing at each end of lintels shall be not less than 1 inch per foot of span, but in no case less than 8 inches shall be increased or the lintels shall be fitted with bearing plates as required to provide unit pressures in pounds per square inch of not more than 200 on solid concrete masonry units and 625 on concrete. All new steel lintels shall be shop primed and ready to receive coatings and finish coats as specified in the applicable Sections of Division 09 – Finishes.

E. Sheet steel shall be cold rolled or hot rolled carbon sheet steel conforming to ASTM Standard Specification for Steel, Carbon, Cold Rolled Sheet, Commercial Quality, Designation A36 or ASTM Standard Specification for Steel, Carbon (0.15 maximum, percent), Hot Rolled Sheet and Strip, Commercial Quality, Designation A569, as appropriate.

F. Steel pipe shall conform to ASTM Standard Specifications for Pipe, Steel, Black and Hot Dipped, Zinc Coated, Welded and Seamless, Designation A53.

2.02 GALVANIZING

A. Items of miscellaneous iron work and steel work indicated on the Drawings or specified to be galvanized shall be zinc coated by the hot dip process in conformity with ASTM Standard Specification for Zinc (hot galvanized) Coatings on Products Fabricated from Rolled, Pressed, and Forged Steel Shapes, Plates, Bars, and Strip, Designation A123-78; or ASTM Standard Specifications for Zinc Coating (hot-dip) on Iron and Steel Hardware, Designation A153-78, as appropriate. Galvanizing is specified under Article 3.04, "Hot-Dip Galvanizing."

2.03 ALUMINUM

A. All structural and miscellaneous aluminum shall be Alloy 6061 (Alloy 6063 for extrusions), Temper T6, unless otherwise noted, indicated, or accepted by the OWNER. Where welding is necessary in fabrication, is shall be done in conformance with Section 7 "Welded Construction" of Specification for Aluminum Structures, referenced hereinbefore.

B. Aluminum work shall be fabricated of plates, rolled, or extruded shapes, sheets or casting conforming (unless otherwise permitted or indicated) to the following alloy and temper designations of the Aluminum Association:
   1. Structural rolled or extruded shapes 6061-T6
   2. Extruded shapes 6063-T5
   3. Plates 6061-T6
   4. Gratings (bearing bars) 6061-T6 (crimp bars) 6063-T6
   5. Castings 214
   6. Sheets 3003-F
   7. Bolts and nuts 2024-T4
   8. Pipe Railing 6063-T6

C. Aluminum surfaces which after erection would otherwise be in contact with concrete or brick masonry or with mortar, shall be protected from contact therewith by a coat of bitumastic super service black manufactured by the Koppers Company, Inc. Pittsburgh, PA; Tarmastic 100 manufactured by Porter Coating Division, Porter Paint Company, North Kansas City, MO; or an ENGINEER-approved equal. Areas where the paint has been damaged by abrasion or other cause shall be cleaned and repainted as directed so that the aluminum will have a complete protective paint film when brought into contact with the material against which it is being protected. Before application of coating, the surface shall be cleaned of all dirt, heavy deposits of grease or oil and other foreign

DRAFT

substances and shall be immersed in or swabbed with an acceptable solvent. Next the surfaces shall be rinsed with clear water and thoroughly dried.

D. Attention of the Specifications in regard to protection against electrolysis where aluminum is to be used in conjunction with dissimilar metals is required.

E. Where a shop coating of methacrylate lacquer has been specified on aluminum work to protect the surface from stain, the protective coating of lacquer worn off during handling or erection shall be replaced in the field by a new coating of lacquer of the same type.

F. During construction, care shall be taken to prevent damage to the aluminum work from splashing or the accumulation of paint, concrete, mortar, or other similar materials.

2.04 STAINLESS STEEL

A. Stainless steel shapes shall be ANSI Type 304 or 316 in accordance with ASTM A276. Miscellaneous bar stock products such as pipe straps shall be 300 Series stainless steel. Anchor bolts, nuts and washers shall be ANSI Series 300 stainless steel.

2.05 FASTENERS

A. Bolts, Nuts and Washers:
   1. Structural bolts shall be ANSI Type 300 Series stainless steel in accordance with ASTM F593, with ASTM F594 nuts. All bolts shall have hexagonal heads.
   2. Anchors and bolts including nuts and washers shall be provided where necessary for securing the work in place. Sizes, types and spacings of anchors and bolts not indicated or specified otherwise shall be as necessary for their purposes. Anchor bolts and anchors for the erection of structural steel shall be shall be stainless steel Type 316.
   3. Bolts and nuts shall be installed with anti-seize per Loctite, or ENGINEER-approved equal (or thread locker to be confirmed with WWTP Operations).

B. Expansion Anchors (In Concrete):
   1. Expansion anchors shall be of three (3) types:
      a. Stainless steel wedge type.
      b. Self-drilling plated type with stainless steel bolt and stainless-steel washer.
      c. Type of expansion anchor desired shall be noted on Drawings.
   2. Stainless steel wedge type anchors shall be ITW Ramset/Red Head or ENGINEER-approved equal of Type 316 stainless steel. Anchors shall meet or exceed latest Government GSA Federal Specifications FF-S-325, Group II, Type 4, Class 1. Anchor shall be used with 300 series stainless steel bolt and washer.
   3. Self-drilling plated anchors shall be ITW Ramset/Red Head of ENGINEER-approved equal. Anchors shall meet or exceed latest Government GSA Federal Specification FF-S-325, Group III, Type 1. Self-drilling anchors shall be electro-deposited zinc plated and chromate dipped, to meet or exceed the requirements of the latest Federal Specification QQ-Z-325, Type II, Class 3. Cutting teeth shall have minimum hardness of 82 Rockwell A scale.
   4. Steel expansion anchors shall be installed in accordance with manufacturer's recommendations.
   5. Self-drilling expansion anchors shall be installed in accordance with manufacturer's recommendations. To insure full development strength, all self-drilling expansion anchors shall be expanded over the plug in the final set, by using a bolt screwed into the female threads and impacted by hand with a suitable hammer. The final set shall not be accomplished by using the drilling tool.
   6. After installation, pull-out tests by the anchor manufacturer's representative may be requested by the ENGINEER. If so, the ENGINEER will specify the number and location of the tests.

DRAFT

2.06 MISCELLANEOUS ITEMS

A. Items of miscellaneous metal work not particularly specified hereinafter shall be of the shape, size, materials, and details indicated on the Drawings or suitable for the purpose intended.

2.07 LOOSE LINTELS

A. Furnish all loose lintels as indicated on the Drawings or required by the Work. The loose lintels shall be fabricated from structural steel shapes and plates. All loose lintels shall be shop primed and ready to receive coatings as specified in the applicable Sections of Division 09 – Finishes.

2.08 SLEEVES AND INSERTS

A. Attention is directed to the requirements of the Specifications regarding sleeves and inserts.

2.09 ALUMINUM PIPE RAILING

A. The aluminum pipe railing shall be the product of company normally engaged in the manufacture of pipe railing. Railing shall be shop assembled in lengths not to exceed 24 feet for field erection.

B. Handrails and stair rails shall be designed to withstand a 200-pound concentrated load applied in any direction at any point on the top rail. Handrails and stair rails shall also be designed to withstand a load of 50 pounds per foot applied horizontally to the top rail. The 200-pound load will not be applied simultaneously with the 50-pounds-per-foot load. In addition, the handrails shall be designed to withstand a load of 100 pounds per foot horizontal load. The 100-pounds-per-foot vertical load does not apply to stair rails.

C. The manufacturer shall submit calculations to the ENGINEER for approval. Testing of base castings or base extrusions by an independent lab or manufacturer's lab (if manufacturer's lab meets the requirements of the Aluminum Association) will be an acceptable substitute for calculations. Calculations will be required for approval of all other design aspects.

D. Post spacing shall be a maximum of 8 feet 0 inches, unless noted otherwise. Posts and railings shall be a minimum of 1½ inches Schedule 40 aluminum pipe alloy 6063-T6, ASTM B429 or ASTM B221. The handrail manufacturer shall show that their posts are of adequate strength, the manufacturer may reduce the post spacing or add reinforcing dowels or may do both in order to meeting loading requirements.

E. The handrail shall be made of pipes joined together with component fittings. Samples of all components, bases, toe plate and pipe must be submitted for approval. Components that are glued at the joints will not be acceptable. Handrail and components shall be Kee Clamp, Inc., Golden Railings, Speed-Rail, or ENGINEER-approved equal.

F. Posts shall not interrupt the continuation of the top rail at any point along the railing, including corners and end terminators.

G. The midrail at a corner return shall be able to withstand a 200-pound load without loosening.

H. Expansion bolts shall be spaced 10 diameters apart and 5-diameter edge distance for not reduction in pullout strength. A safety factor of four shall be used on expansion bolt pullout values published by the manufacturer.

DRAFT

I. Toe plate shall conform to OSHA Standards. Toe plate shall be a minimum of 4 inches high and shall be an extrusion that attaches to the posts with clamps, which allow for expansions and contraction between posts. Toe plates shall be set ¼-inch above the walking surface. Toe plates shall be provided on handrails as required by OSHA and/or as shown on Drawings. Toe plates shall be shipped loose in stock lengths with pre-manufactured corners for field installation.

J. Openings in the railing shall be guarded by a self-closing gate. Safety chains shall not be used unless specifically shown on the Drawings.

K. Finish shall be Aluminum Association M10-C22-A41 (215-R1). The pipe shall be plastic wrapped. The plastic wrap is to be removed after erection.

L. Aluminum surfaces in contact with concrete, grout or dissimilar metals will be protected with a coat of bituminous paint, (two (2) coats of Federal Specification TT-V51F Asphalt Varnish), mylar isolators, or other approved material.

2.10 PLATE COVERS AND FRAMES

A. The plate covers and frames shall be the sizes indicated on the Drawings. The frames shall be aluminum angles of the sizes indicated with welded strap anchors for securing the frames in the concrete. The frames shall have mitered corners with welded joints ground smooth where exposed.

B. The covers shall be ¼-inch thick aluminum tread plate having an acceptable nonskid surface and reinforced with aluminum bars welded to the underside of the cover in accordance with the details. Plate covers shall be capable of supporting a uniform superimposed load of 100 psf for the span with a deflection of less than ¼-inch based on allowable fiber stress of 16,000 psi. The covers shall be made to fit neatly and accurately in the frames.

C. Hinged covers shall be furnished with heavy-duty stainless steel, plain bearing hinges with stainless steel pins. The hinges shall be fastened to the covers and frames with stainless steel machine screws. The hinged covers shall be provided with flush lift handles fabricated from ½-inch diameter aluminum rod, alloy 6061-T6511.

D. A single leaf of hinged plate covers shall be no greater than 3 feet x 5 feet in size.

E. Removable plate covers shall have 1-inch diameters finger holes to facilitate removal. All edges of holes cut in the plate covers shall be ground smooth.

F. Removable plate covers shall be no greater than 14 square feet in size with the longer dimension no greater than 7 feet.

G. Gasket plate covers shall have continuous compressible neoprene seals between the cover and the frame at the perimeter. The covers shall be secured to the frames with countersunk, flathead, stainless steel machine screws spaced approximately 6 inches on centers.

2.11 GUARD CHAINS

A. Removable guard chains at openings in aluminum pipe railings shall be fabricated from wrought, non-welded aluminum chain having 12 links per foot. The chains shall be secured to aluminum eyes bolted or welded to pipe stanchion at one end of the opening. The free ends of the chains shall be provided with hooks formed from ¼-inch diameter solid aluminum rod for attaching to similar eyes in the pipe stanchion at the opposite end of the opening.

DRAFT

2.12 CAST IRON WHEEL GUARDS

A. Wheel guards where indicated on the Drawings shall be cast iron guards of the sizes and types indicated on the Drawings as herein specified and shall be manufactured by Neenah Foundry Company, Neenah, WI; Flockhart Foundry Company, Neward, NJ; McKinley Iron Work, Fort Worth, TX or ENGINEER-approved equal. Wheel guards shall be given one shop coat of rust inhibitive paint before shipment.

B. Wheel guards shall be heavy-duty concrete fill type, cast iron wheel guards, No., R-4983-C manufactured by Neenah Foundry Company Type 706A manufactured by Flockhart Foundry Company or ENGINEER-approved equal. The guards shall be set 2 inches into the pavement and shall be bolted to the masonry walls. The guards shall be filled with Class A concrete and the top of the fill sloped at a 15-degree angle from the building.

2.13 CAST ALUMINUM NOSINGS

A. The cast aluminum nosing shall be abrasive cast aluminum nosing securely fastened with stainless steel, flat head bolts and wing anchors set into the fresh concrete. The nosings shall be the products of Wooster Products, Inc., Wooster, OH; American Abrasive Metals Company, Irvington, NJ; Andco Building Specialties or ENGINEER-approved equal.

2.14 ACCESS DOORS

A. Doors shall be flush panel access doors as manufactured Inryco, Inc., Milwaukee, WI; Karp Associates, Inc., Maspeth, NY; BOICO, Birmingham, AL or ENGINEER-approved equal. Doors and frames to be steel with concealed hinge and flush screwdriver operated locks.

2.15 CASTINGS

A. All miscellaneous iron castings shall be of best quality materials free from flaws and unsightly defects. Gray cast iron shall be ASTM A48 Class 35 (35,000 psi tensile strength). Furnish and install in the locations indicated casting of the type and size shown on the Drawings.

2.16 CARPENTERS IRON WORK

A. Furnish bent or otherwise custom fabricated bolts, plates, anchors, hangers, dowels and other miscellaneous steel and iron shapes as required for framing and supporting woodwork and for anchoring or securing woodwork to concrete or other structures. Manufacture or fabricate items of sizes, shapes and dimensions required. Furnish malleable iron washers for head and nuts which bear on wood structural connections, elsewhere, furnish steel washers.

2.17 MISCELLANEOUS FRAMING AND SUPPORTS

A. Provide miscellaneous steel framing and supports as required to complete the work. Fabricate miscellaneous units to the sizes, shapes and profiles shown or if not shown, of the required dimensions to receive adjacent grating plates, louvers, vents, grilles, screens, or other work to be retained by the framing. Except as otherwise shown, fabricate from structural steel shapes and plates and steel bars of all welded construction using mitered corners, welded brackets and splice plates and a minimum number of joints for filed connection. Cut, drill, and tap units to receive hardware and similar items to be anchored to the work.

2.18 SHOP PAINTING

A. Painting of miscellaneous ferrous metal work is specified in the applicable Sections of Division 09 – Finishes.

DRAFT

PART 3 – EXECUTION

3.01 ANCHORAGE ITEMS

A. Furnish all bolts, nuts, shims, pins, screws, nails, and other anchors, which, may be required by the Drawings or job conditions to secure all items permanently in place whether or not specifically called for or shown on the Drawings.

3.02 FABRICATION AND INSTALLATION OF METAL WORK

A. General: All metal items shall be accurately fabricated and erected with exposed joints close fitting. All joints shall be such of character and so assemble that they will be as strong and rigid as adjoining sections. Joints shall be located where least conspicuous. Items shall have smooth finished surfaces except where otherwise shown or specified.

B. Built-In Items: Members or parts to be built-in with masonry or concrete shall be in a form affording a suitable anchorage or shall be provided with approved anchors, expansion shields or other approved means of securing members.

C. Dissimilar Metals: Ferrous and non-ferrous metals shall be insulated at all contacts with felt washer, mylar strips or sheets, bitumastic paints, or other acceptable means. All aluminum surfaces in contact with concrete shall be coated with two (2) coats of Federal Specification TT-V51F Asphalt Varnish or ENGINEER-approved equal.

D. Connections:
1. All required anchors, couplings, bolts, and nuts required to support miscellaneous metalwork should be furnished and installed as required.
2. Weights of connections and accessories shall be adequate to safely sustain and withstand stresses and strains to which they will be normally subjected.
3. Connections shall be bolted except where welding is called for in the Drawings. Bolts shall be ¾-inch diameter unless noted or required otherwise.

E. Expansions Anchors:
1. Expansions anchors shall be installed in holes drilled into concrete with carbide tipped drill bits conforming to ANSI B94.12-1977, using a rotary impact hammer for ½-inch and 3/8-inch anchors. Hole depth shall equal or exceed the anchor manufacturer's minimum recommended embedment. Should hole depth equal anchor manufacturer's minimum recommended embedment, hole shall be cleaned out by air pressure. The minimum hole depth shall be per anchor manufacturer's recommendations. Assure hole is perpendicular and conforms in size to anchor manufacturer's recommendation.
2. Washer and nut shall be assembled on anchor so that the top of the nut is flush with the top of the anchor. Then the anchor shall be driven into the hole through the work until the washer bears against the work. The anchor shall be expanded in accordance with the manufacturer's recommendations.
3. General: Provide stainless steel fasteners for exterior use or where built into exterior walls. Select fasteners for the type, grade and class required.
4. Bolts and Buts: Regular hexagon head type, stainless steel, Grade A (within tankage)
5. Lag Bolts: Stainless steel (within tankage)
6. Machine Screws: Stainless steel
7. Wood Screws: Stainless steel
8. Plain Washers: Stainless steel
9. Masonry Anchorage Devices: Stainless steel
10. Toggle Bolts: Stainless steel (within tankage)
11. Lock Washers: Stainless steel

DRAFT

12. Bolts, buts, lags, toggle bolts, and lock washers above and exterior to tankage shall be stainless steel

3.03 WELDING

A. Welding procedures, welders, and welding operators, both for shop and field welding, shall be qualified and certified in accordance with the requirements of AWS D1.1 “Welding in Building Construction” of the American Welding Society. Manufacturer’s and fabricator’s shop drawings shall clearly show complete information and all field welding shall be performed in conformance with this information regarding location, type, size, and length of all welds, all in accordance with AWS A2.0 “Standard Welding Symbols” of the American Welding Society. Special conditions shall be fully explained by notes and details.

3.04 HOT-DIP GALVANIZING

A. All fabrication, galvanizing and repair shall comply with ASTM Standards as they apply in accordance with the publication “ASTM Standard for Materials Hot-Dip Galvanized after Fabrication” issued by American Hot-Dip Galvanizers Association, Inc. In particular, the following specific standards shall apply to work under this contract: ASTM A123, A153, A384, A385, A563 and A780.

B. Items to be galvanized shall be fabricated in accordance with ASTM A385.

C. Galvanizing for fabricated steel items, shall conform to ASTM A123 and shall be done after fabrication. Steel assemblies shall be subject to safeguarding from warpage and distortion during galvanizing per ASTM A384.

D. Upon field erection, any damage measuring more than 1/10-inch wide shall be repaired with a zinc-based solder or zinc-rich paint in accordance with ASTM A780. Marred, damaged, or uncoated areas 4 square inches and less shall be patched with a zinc-based solder to a thickness of 5 milligrams; areas greater than 4 square inches shall be patched with an organic zinc-rich paint to a dry film, Devcon Z, LPS Instant Cold Galvanized or ENGINEER-approved equal. The resident project representative shall determine the extent of damage, which would require recoating.

E. Items subject to distortion during transit, such as thin, curved members, etc., shall be stacked on edge and/or blocked to prevent radius change or other distortion while in transit to and from the galvanizing plant.

3.05 PAINTING

A. Painting of miscellaneous ferrous metal work shall be in accordance to the Contract documents.

3.06 MISCELLANEOUS METAL FABRICATIONS

A. Rough Hardware:
1. Furnish bent or otherwise custom fabricated bolts, plates, anchors, hangers, dowels, and other miscellaneous steel and iron shapes as required for framing and supporting woodwork, and for anchoring or securing woodwork to concrete or other structure. Straight bolts and other stock rough hardware items shall be in accordance with these Specifications.

B. Fabricate items to sizes, shapes and dimensions required. Furnish malleable iron washers for heads and nuts, which bear on wood structural connections; elsewhere, furnish steel washers.

DRAFT

C. Miscellaneous Steel Trim:
   1. Provide shapes and sizes for profiles shown. Except as otherwise indicated, fabricate units from structural steel shapes and plates and steel bars, with continuously welded joints and smooth exposed edges. Use concealed field splices wherever possible. Provide cutouts, fittings and anchorages as required for coordination of assembly and installation with other work.
   2. Galvanize miscellaneous steel trim where indicated.

END OF SECTION

DRAFT

SECTION 05 5213 – PIPE AND TUBE RAILINGS

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Furnish and install handrails in accordance with these Specifications and Contract Documents.

1.02 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

PART 2 – PRODUCTS

2.01 MANUFACTURERS

A. Handrails manufacturer shall be Engineer approved.

2.02 MATERIALS

A. Rolled Plates and Shapes: ASTM A36

B. Steel Pipe: ASTM A53, Grade B, Type E or S, Schedule 40 unless otherwise noted.

C. Tubing: Cold formed shapes per ASTM A500 or hot-formed shapes per ASTM A501. Wall thickness for either category shall be in accordance with the thickness and tolerances specified in ASTM A501.

D. Bolts: ASTM A307, Grade A, with hexagon heads or nuts where exposed in the finish work, with flat heads for countersinking where flush bolting is specified or required.

E. Plastic Cover: Polyethylene Thermoplastic (HDPE) tubes having ultra-violet resistance and anti-static properties, nominal thickness 0.250 inches. Color shall be OSHA yellow unless otherwise noted. Size covers for pipe diameters.

F. Grout: Non-shrink, nonmetallic type per CE CRD-621 and ASTM C1107. Grout shall be premixed and factory-packaged. Formulation shall be non-staining, noncorrosive, nongaseous properties. Provide grout as recommended by grout manufacturer for interior or exterior application.

G. Anchor Bolts:
   1. Expansion Anchors: Threaded stud type with two independent expansion anchor wedges per Fed. Spec. FF-S-325, Group II, Type 4, Class 1 for concrete expansion anchors. Stud, wedges, washer, and nut shall be zinc-plated steel.
   2. Adhesive Anchor System: Self-contained glass vial containing pre-measured amounts of quartz sand, hardening agent, and polyester resin. Studs shall be threaded rod conforming to ASTM A307 with compatible washers and hexagon nuts furnished by the anchor manufacturer.

H. Concrete: Provide 3,000 psi, 28-day strength concrete unless noted otherwise. ASTM C94, slump of 4 inches ± 1 percent.
   1. Exterior Concrete: Include air-entrainment or 6 percent ± 1 percent.
   2. Cement: ASTM C150, Type 1.
   3. Aggregates: ASTM C33 normal weight, natural coarse aggregate, maximum ¾" diameter.
   4. Water: Potable

DRAFT

2.03 HAND RAIL SYSTEM

A. Structural Performance of Handrails and Railings: Provide handrails and railings capable of withstanding the following structural loads based on 2000 international building code, without exceeding allowable design working stresses of materials for handrails, railings anchors, and connections:
   1. Top Rail of Guards and hand rails: Capable of withstanding the following loads as indicated
      a. Concentrated load of 200 lbf (890 N) applied at any point and in any direction.
      b. Uniform load of 50 lbf/ft: (730 N/m) applied in any direction at the top and to transfer this load through the supports to the structure.
      c. Concentrated and uniform loads above need not be assumed to act concurrently.
   2. Intermediate rails, balusters, and filler panels: Capable of withstanding the following loads applied as indicated:
      a. Applied normal load of 50 pounds (0.22kN) on an area not to exceed 1 square foot including openings and space between rails.
      b. Reactions due to this loading are not required to be superimposed with the proceeding section.

B. Provide Handrail system complying with the following requirements
   1. Sleek system with internal connectors.
      a. Rails and Posts
         1) Extruded Aluminum Pipe ASTM B429, Aluminum alloy 6061-T6. Finish AA M10C22A41. Posts – 1½ inch IPS Schedule 80. Rails – 1½ inch IPS Schedule 40.
         2) Steel pipe scheduled 40. Posts and rails 1¼ inch, with high-density polyethylene thermoplastic coating, nominally 0.125 inch thick.
      b. Mechanical Connectors
         1) Post and handrail connector fittings
         2) Machined from solid aluminum bar stock of alloy 6063-T6 (ASTM B221) or austenitic stainless steel bar stock of alloy 303 (ASTM A582) or machined castings of high tensile aluminum-magnesium alloy 535.0 (ASTM B26) or castings from high purity ingot 535.2 (ASTM B179)
         3) Anodize finish 0.7 mil minimum thickness.
         4) Design – Fittings shall be the type which fastens externally with anodized aluminum, tubular rivet nut with socket head cap screw and stainless steel lock washer. Internal connections by means of an internal double tang, expanded by an internal/external, reverse knurl, cup point, hexagon socket set screw.
      c. Flanges
         1) Sand cast from high tensile aluminum-magnesium alloy 535.0
         2) Supplied with anodize finish – 7-mil minimum thickness.
         3) Design – Fittings shall be the type, which fastens directly to the pipe by means of an internal/external, reverse knurl, cup point, hexagon socket set screw.
         4) All anchoring hardware shall be 300 series stainless steel.
      d. Fasteners
         1) All fasteners to be 302 or 304 stainless steel.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Installation Options
   1. Core
   2. Base Mount

END OF SECTION

DRAFT

SECTION 05 5300 – METAL GRATINGS

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Furnish and install metal bar grating (solid top or open) were shown on the Drawings and in accordance with the Contract Documents.

1.02 REFERENCES

A. Design, fabrication, and installation of grating shall be in accordance with Standard Specifications and Voluntary Code of Practice in Metal Bar Grating Manual, most current published edition, published by National Association of Architectural Metal Manufacturers, Chicago, IL (ANSI A-202.1).

B. ASTM A36

C. ASTM A67

D. ASTM A569

E. ASTM B210

F. ASTM B221

G. ASTM 6061-T6 or 6063-T6

H. Federal Specification TT-V-51F

1.03 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

PART 2 – PRODUCTS

2.01 DESIGN CRITERIA

A. Support minimum uniform live load of 250 psf

B. Deflection not to exceed span of bearing bars (in inches) divided by 240

C. Meet H20 loading when noted in Contract Documents.

2.02 BASIC DESIGN

A. The gratings shall be 2½-inch metal that shall fit into the area shown on the mechanical plan.

B. The gratings shall be secured in place by at least four (4) acceptable removable-type fasteners per grating panel. The ends of each grating section shall be banded with bearing bars.

C. All openings for fixtures or pipes, which require the cutting of three main bars or more, shall be finished in a similar manner as the ends.

D. Gratings in concrete shall have coated aluminum or reinforced fiberglass angle frames with mitered corners and with welded joints ground smooth where exposed. The frames shall have welded anchors and shall be set in the concrete as it is placed.

E. Bearing and cross bars shall be flush at surface.

F. All free and supported bar ends around perimeter and around cutouts shall be banded.

G. Provide removable sections of grating with suitable end bearing where noted on the Drawings or otherwise required.

DRAFT

2.03 MATERIAL

A. Aluminum
   1. Bear Bars: ASTM B221, 6061-T6 or 6063-T6
   2. Cross Bars: ASTM B221 (extruded) or ASTM B210 (drawn)
   3. Maximum Fiber Stress: 12,000 psi
   4. Steel Fasteners: Stainless steel, when used with aluminum grating
   5. Finish: Aluminum mill finish (as fabricated)
   6. Anchors: Stainless Steel Saddle clips of manufacturer's standard design

B. Carbon Steel
   1. Bear Bars: ASTM A569
   2. Cross Bars: ASTM A569
   3. Maximum Fiber Stress: 18,000 psi
   4. Steel Fasteners: Stainless steel
   5. Finish: Mill finish (as fabricated)
   6. Anchors: Stainless Steel Saddle clips of manufacturer's standard design

C. Heavy-Duty Carbon Steel
   1. Bear Bars: ASTM A36
   2. Cross Bars: ASTM A36
   3. Maximum Fiber Stress: 20,000 psi
   4. Steel Fasteners: Stainless steel
   5. Anchors: Stainless Steel Saddle clips of manufacturer's standard design

D. Stainless Steel (304SS)
   1. Bear Bars: ASTM A167
   2. Cross Bars: ASTM A167
   3. Maximum Fiber Stress: 20,000 psi
   4. Steel Fasteners: Stainless steel
   5. Finish: Mill finish (as fabricated)
   6. Anchors: Stainless Steel Saddle clips of manufacturer's standard design

PART 3 – EXECUTION

3.01 INSTALLATION

A. CONTRACTOR shall provide submittals in accordance with Section 01 3300 – Submittal Procedures showing the layout of the grating where grating is called out in the Contract Documents.

B. Grating shall be set with full and uniform end bearing to preclude rocking; do not use wedges or shims.

C. Provide 1-inch minimum bearing with maximum erection clearance of ¼-inch all around.

D. Anchor grating with saddle clips in accordance with manufacturer's recommendations or as detailed on the Drawings.

E. Provide cutouts for the passage of pipe, valve and equipment operators, conduit, stems and similar work; cutouts for circular obstructions shall be at least 2 inches larger in diameter than the obstruction.

F. Protect all surfaces of angles and frames to be in contact with concrete or dissimilar metals with two (2) coats of Federal Specification TT-V-51F Asphalt Varnish.

END OF SECTION

DRAFT

SECTION 06 7413 – FIBERGLASS REINFORCED PLASTICS GRATING

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. The CONTRACTOR shall furnish, fabricate (where necessary), and install all fiberglass reinforced plastic (FRP) items, with all appurtenances, accessories and incidentals necessary to produce a complete, operable and serviceable installation as shown on the Contract Drawings and as specified herein, and in accordance with the requirements of the Contract Documents.

B. The CONTRACTOR shall furnish a complete structural design submittal, as part of the deferred submittal process. The structural design of the grating shall be provided by a registered engineer in the State of the Project.

1.02 REFERENCES

A. The publications listed below (latest revision applicable) form a part of this specification to the extent referenced herein. The publications are referred to within the text by the designation only.

1. AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM) Test Methods:
   a. ASTM D635 Rate of Burning and/or Extent and Time of Burning of Self-Supporting Plastics in a Horizontal Position
   b. ASTM E84 Surface Burning Characteristics of Building Materials

1.03 CONTRACTOR SUBMITTALS

A. The CONTRACTOR shall furnish shop drawings of all fabricated gratings and accessories in accordance with the provisions of this Section.

B. The CONTRACTOR shall furnish manufacturer's shop drawings clearly showing material sizes, types, styles, part or catalog numbers, complete details for the fabrication and erection of components including, but not limited to, layout, location, lengths, type and sizes of fasteners, clip angles, member sizes, and connection details.

C. The CONTRACTOR shall submit the manufacturer's published literature including structural design data, structural properties data, grating load/deflection tables, corrosion resistance tables, certificates of compliance, test reports as applicable, concrete anchor systems and their allowable load tables, and design calculations for systems not sized or designed in the contract documents.

D. The CONTRACTOR may be requested to submit sample pieces of each item specified herein for acceptance by the DESIGN/BUILDER as to quality and color. Sample pieces shall be manufactured by the method to be used in the WORK.

E. CONTRACTOR's Grating Manufacturer shall provide structural calculations for the proposed FRP grating system signed and stamped by a registered civil engineer in the State of the Project. The provided structural calculations shall cover all supplied structural members specifically the grating material, and its supports and anchors bolts.

1.04 QUALITY ASSURANCE

A. All items to be provided under this Section shall be furnished only by manufacturers having a minimum of ten (10) years' experience in the design and manufacture of similar products and systems. Additionally, if requested, a record of at least five (5) previous, separate, similar successful installations in the last five (5) years shall be provided.

B. Manufacturer shall offer a 3-year limited warranty on all FRP products against defects in materials and workmanship.

C. Manufacturer shall be certified to the ISO 9001-2008 standard.

DRAFT

D. Manufacturer shall provide proof of certification from at least two other quality assurance programs for its facilities or products (DNV, ABS, USCG, AARR).

1.05 PRODUCT DELIVERY AND STORAGE

A. Delivery of Materials: Manufactured materials shall be delivered in original, unbroken pallets, packages, containers, or bundles bearing the label of the manufacturer. Adhesives, resins and their catalysts and hardeners shall be crated or boxed separately and noted as such to facilitate their movement to a dry indoor storage facility.

B. Storage of Products: All materials shall be carefully handled to prevent them from abrasion, cracking, chipping, twisting, other deformations, and other types of damage. Adhesives, resins and their catalysts are to be stored in dry indoor storage facilities between 70 and 85 degrees Fahrenheit (21°C to 29°C) until they are required.

PART 2 – PRODUCTS

2.01 MANUFACTURER

A. McNichols Co. Inc.,

B. Fibergrate

C. Or ENGINEER-approved equal.

2.02 GENERAL

A. All FRP items furnished under this Section shall be composed of fiberglass reinforcement and resin in qualities, quantities, properties, arrangements and dimensions as necessary to meet the design requirements and dimensions as specified in the Contract Documents.

B. Load/Deflection: Grating shall meet manufacturers published safe recommended loadings with deflection not to exceed the following:

a. Uniform distributed load over a 66" span: 50 lbs per square foot

b. Concentration load: 1000 lbs over 2.5 ft x 2.5 ft area

c. Deflection limit: L/200 or 3/16”

C. Fiberglass reinforcement shall be a combination of continuous roving, continuous strand mat, and surfacing veil in sufficient quantities as needed by the application and/or physical properties required.

D. Resins shall be VINYL ESTER with chemical formulations as necessary to provide the corrosion resistance, strength and other physical properties as required.

E. All finished surfaces of FRP items and fabrications shall be smooth, resin-rich, free of voids and without dry spots, cracks, crazes or unreinforced areas. All glass fibers shall be well covered with resin to protect against their exposure due to wear or weathering.

F. All pultruded structural shapes shall be further protected from ultraviolet (UV) light with 1) integral UV inhibitors in the resin and 2) a synthetic surfacing veil to help produce a resin rich surface.

G. All FRP products shall have a tested flame spread rating of 25 or less per ASTM E84 Tunnel Test. Gratings shall not burn past the 25 mm reference mark and will be classified HB per ASTM D635.

H. All grating clips shall be manufactured of Type 316SS (stainless steel).

2.03 PROTRUDED FRP GRATING

A. Grating components shall be high strength and high stiffness pultruded elements having a maximum of 70% and a minimum of 60% glass content (by weight) of continuous roving

DRAFT

and continuous strand mat fiberglass reinforcements. The finished surface of the product shall be provided with a surfacing veil to provide a resin rich surface which improves corrosion resistance and resistance to ultraviolet degradation. Bearing bars shall be interlocked and epoxied in place with a two piece cross rod system to provide a mechanical and chemical lock. Cross rods should be below the walking surface of the grating. Gratings with cross rods that are flush with the walking surface are excluded.

For covered grating, the grating cover plate shall be attached to the completed panel of grating by chemical means to ensure integral action of the panel and plate. The panel and grating shall be uniformly clamped together to ensure that all contact surface remain in contact throughout the curing process.

B. Non-slip surfacing: Grating shall be provided with a quartz grit bonded and baked to the top surface of the finished grating product. Covered grating shall have a gritted surface.

C. Fire rating: Grating shall be fire retardant with a tested flame spread rating of 25 or less when tested in accordance with ASTM E84. Manufacturer may be required to provide certification of ASTM E84 test on grating panels from an independent testing laboratory. Test data shall be from full scale testing of actual production grating, of the same type and material supplied on the project. Test data performed only on the base resin shall not be acceptable.

D. Resin system: The resin system used in the manufacture of the grating shall be VEFR. Manufacturer may be required to submit corrosion data from tests performed on actual grating products in standard chemical environments. Corrosion resistance data of the base resin from the manufacturer is not a true indicator of grating corrosion resistance and shall not be accepted.

E. Color: Gray or Yellow (to be selected by Owner)

F. Depth: 2" deep load bars with a tolerance of plus or minus 1/32".

G. Mesh Configuration of grating: 2" load bar spacing, 6" tie bar spacing on centers

2.04 GRATING FABRICATION

A. Measurements: Grating supplied shall meet the dimensional requirements and tolerances as shown or specified. The Contractor shall provide and/or verify measurements in field for work fabricated to fit field conditions as required by grating manufacturer to complete the work. When field dimensions are not required, contractor shall determine correct size and locations of required holes or cutouts from field dimensions before grating fabrication.

B. Layout: Each covered grating section shall be tied down with appropriate anchors or clips. Manufacturer to provide openings and holes where located on the contract drawings. Grating openings which fit around protrusions (pipes, cables, machinery, etc.) shall be field cut or, when shop fabricated, discontinuous at approximately the centerline of opening so each section of grating is readily removable.

C. Sealing: All shop fabricated grating cuts shall be sealed to provide maximum corrosion resistance. All field fabricated grating cuts shall be coated similarly by the contractor in accordance with the manufacturer's instructions.

D. Hardware: Type 316 stainless steel hold-down clips shall be provided and spaced at a maximum of four feet apart with a minimum of four per piece of grating, or as recommended by the manufacturer.

DRAFT

PART 3 – EXECUTION

3.01 INSPECTION

A. The fabricator shall give ample notice to Contractor prior to the beginning of any fabrication work so that inspection may be provided, if requested by Owner. The grating shall be as free, as commercially possible, from visual defects such as foreign inclusions, delamination, blisters, resin burns, air bubbles and pits. The surface shall have a smooth finish (except for grit top surfaces).

3.02 INSTALLATION

A. Contractor shall install gratings in accordance with manufacturer's assembly drawings. Fasten grating panels securely in place with hold-down fasteners as specified herein. Field cut and drill fiberglass reinforced plastic products with carbide or diamond tipped bits and blades. Seal cut or drilled surfaces in accordance with manufacturer's instructions. Follow manufacturer's instructions when cutting or drilling fiberglass products or using resin products; provide adequate ventilation.

END OF SECTION

DRAFT

06 8316 – FIBERGLASS REINFORCED PLASTIC (FRP) PANELNG AND COVERS

PART 1 – GENERAL

1.01 WORK INCLUDED

A. This specification outlines the requirements for the design, fabrication, and installation of a fiberglass reinforced plastic (FRP) paneling or covers for used in wastewater treatment applications.

1.02 STANDARDS, SPECIFICATIONS AND CODES

A. Tanks, vessels, and equipment shall be designed, fabricated, inspected and delivered in accordance with the latest issue of the following standards:
   1. ASTM D3982 – Contact Molded Glass-Fiber-Reinforced Thermoset Resin Duct
   2. ASTM D2583 – Indentation Hardness of Rigid Plastics by Means of a Barcol Impresser
   3. ASTM D2584 – Ignition Loss of Cured Reinforced Resins
   4. ASTM D2563 – Classifying Visual Defects in Glass Reinforced Plastic Laminate Parts
   5. ASME/ANSI B16.1 – Cast Iron Pipe Flanges and Flanged Fittings
   6. ASME/ANSI B16.5 – Pipe Flanges and Flanged Fittings
   7. Occupational Safety and Health Act (OSHA) – Standards for Health and Safety

1.03 SUBMITTALS

A. Submittals shall be made in accordance with Section 01 3300 – Submittal Procedures. In addition, the following specific information shall be provided:
   1. Detailed description of the laminate and the type of reinforcing to be used shall be included in the design calculations and the fabrication drawings. When equipment service is chemical laminate description shall be accompanied by a letter from the resin manufacturer stating that the laminate and type of reinforcing material used in the liner will provide suitable chemical resistance for the service conditions provided in the tank data sheet.
   2. When required by the customer, design calculations stamped by a registered Professional Engineer. Calculations shall include, but are not limited to, the following: Dead Loads, Live Loads, Environmental Loads (seismic, wind and snow loads as applicable), Anchor Design, and Configuration Details.
   3. Detailed shop drawings showing layout, quantity, weights and dimensions, general arrangement all nozzles and hatches, wall thickness, bill of material and construction materials.
   4. Upon request:
      a. Standard colors are white, grey and tan. Custom colors are available upon request.
      b. Fabricator's Engineer's resume showing 5+ years' experience.
      c. Fabricator's Quality Control Manager's resume showing 5+ years' experience.
      d. Written or electronic fabrication schedule.

PART 2 – PRODUCTS

2.01 DESIGN REQUIREMENTS

   1. Design Temperature: 180°F maximum
   2. Design Pressure: 0.0 to ±1.0 psig maximum
   3. Load Rating:
      a. Minimum live uniform load: 25 psf;
      b. Minimum concentrate man load: 1300 lbs over 12 ft (distributed over a 1 ft x 2' area).

DRAFT

c. Maximum Deflection: L/180
d. Span requirement: per plan
e. Wind load: per ASCE 7
f. Seismic load: per ASCE 7
g. Snow load: per ASCE 7

2.02 MATERIALS

A. Resin System:
1. Type: Isophthalic polyester or vinyl ester resin.
2. UV-resistant additives and fire retardant to ASTM E84 Class I (if exposed).

B. Reinforcement:
1. E or ECR-glass chopped strand mat and woven roving.
2. Core materials (if sandwich construction): PVC foam or balsa (sealed).

C. Gel Coat (Optional):
1. Thickness: 15–20 mils.
2. Color: White or light grey for UV reflectance.

2.03 FABRICATION

A. Method:
1. Hand lay-up or spray-up, per ASTM C582, D3982 and ASTM D4097.
2. Use vacuum bagging (infusion) if required to increase glass content and reduce void content.

B. Laminate Schedule (Typical):
1. Surface veil
2. 2 layers chopped strand or mat
3. Structural layers:
   a. Chopped strand or mat
   b. 24 oz. 5x4 bi-directional woven roving fabric
   c. 15 oz. uni-directional roving fabric
4. Core (optional)
   a. For ribs – foam or poly plastic
   b. For panels – balsa wood
5. Repeat symmetrical layering
6. Minimum thickness: 1/4" (6.4 mm), thicker at mounting and load points.

C. Curing:
1. At ambient temperature with post-cure as needed.

D. Fasteners:
1. Stainless steel 316 or FRP-embedded inserts.
2. Gasketed joints with EPDM or neoprene.

E. Access hatches:
1. Non-skid FRP, gasketed, hinged hatch with lockable handles
2. FRP frame
3. 316 SS fasteners

2.04 MANUFACTURER

A. NOV

B. Enduro Composites

DRAFT

C. Or Engineer-approved Equal

PART 3 – EXECUTION

3.01 Installation:

A. Follow the manufacturer’s equipment installation instruction guidelines.

END OF SECTION

DRAFT

SECTION 07 6100 – SHEET METAL ROOFING

PART 1 – GENERAL

1.01 SECTION INCLUDES

A. Sheet metal roofing, associated flashings, and underlayment

B. Counterflashings

C. Gutters and downspouts

D. Snow guards

E. Integral Fasçias

1.02 REFERENCE STANDARDS

A. American Architectural Manufacturer's Association (AAMA): www.aamanet.org:
   1. AAMA 621 - Voluntary Specifications for High Performance Organic Coatings on Coil Coated Architectural Hot Dipped Galvanized (HDG) & Zinc-Aluminum Coated Steel Substrates.
   2. AAMA 809.2 - Voluntary Specification Non-Drying Sealants.

B. American Society of Civil Engineers (ASCE): www.asce.org/codes-standards:

E1680	Rate of Air Leakage Through Exterior Metal Roof Panel Systems
E1980	Calculating Solar Reflectance Index of Horizontal and Low-Sloped Opaque Surfaces

DRAFT

1.03 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene one week before starting work of this section.

1.04 SUBMITTALS

A. See Section 01 3300 – Submittal Procedures.

B. Shop Drawings: Indicate material profile, jointing pattern, jointing details, fastening methods, flashings, terminations, and installation details.

C. Product Data: Provide data on metal types, finishes, and characteristics.

1.05 QUALITY ASSURANCE

A. Perform work in accordance with SMACNA Architectural Sheet Metal Manual requirements and standard details, except as otherwise noted.
   1. Maintain one copy on project site.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Stack material to prevent twisting, bending, or abrasion, and to provide ventilation. Slope metal sheets to ensure drainage.

B. Prevent contact with materials that could cause discoloration or staining.

1.07 WARRANTY

A. Correct defective Work within a five year period after Date of Substantial Completion. Defective work includes degradation of metal finish.

PART 2 – PRODUCTS

2.01 SHEET MATERIALS

A. PBR Roof Panel
   1. PBR Panel: A through-fastened sidewall panel with 1-1/4 inch (32mm) ribs at 12 inches (305mm) on center. The area between the ribs is reinforced to minimize oil-canning. Reverse roll optional.
   2. Gauge: 26.
   3. Dimensions: 36 inches (915mm) wide by 1 1/4 inch (32mm) high.

B. Standing Seam Metal Roof
   1. Material: Steel conforming to ASTM A792.
      a. 24 Gauge: Yield strength 50,000 psi; with aluminum-zinc alloy coating conforming to ASTM A792, Class AZ50.
   2. Panel Width and Pattern:
      a. 12” or 16” panel width.
   3. Panel Seam Height: 1.25 - 2 inches.
   4. Panel Finish: Provide primer and top finish coat on exposed faces; provide primer and backer coat on concealed faces of panels.
      a. Panel Color: To be selected by Owner
   5. Seam Sealant: The factory applies high-grade butyl mastic sealant within the confines of the panel’s female leg, designed to seal against the adjacent male panel leg.
   6. Clips: Provide clip designed to allow panels to thermally expand and contract. Clip shall incorporate a self-centering feature to allow 1 inch of movement in both directions along panel length. Clip type shall be selected to meet positive and negative pressures as specified. Factory-installed sealant to provide continuity of seal at clip locations
   7. Bearing plate, if required, shall be designed with tabs to attached clip base to bearing plate on the ground, prior to installation.
   8. Fasteners: As recommended by manufacturer for performance indicated.

DRAFT

9. Trims and Flashings: Material, metal thickness, and finish to match panels. Profiles indicated in Drawings.
    a. Provide manufacturer's standard accessories and other items essential to completeness of standing seam roof installation.
    b. Panel Penetration Flashings: As recommended by panel manufacturer; designed to provide sufficient movement to prevent creation of points of fixity at penetrations.
10. Manufacturer: AEP Span-Lok, ABC Lokseam or ENGINEER-approved equal.

2.02 ACCESSORIES

A. Fasteners: Galvanized steel, with soft neoprene washers.

B. Underlayment: Synthetic non-asphaltic sheet, intended by manufacturer for mechanically fastened roofing underlayment without sealed seams.
    1. Type: Woven polypropylene with anti-slip polyolefin coating on both sides.
    2. Minimum Requirements: Comply with requirements of ICC-ES AC188 for non-self-adhesive sheet.
    3. Self Sealability: Passing nail sealability test specified in ASTM D1970.
    4. Flammability: Minimum of Class A, when tested in accordance with ASTM E108.
    5. Ultraviolet Resistance and Weatherability: Approved in writing by manufacturer for exposure to weather for minimum of 12 months.
    6. Low Temperature Flexibility: Passing test specified in ASTM D1970.
    7. Water Vapor Permeance: Vapor retarder; maximum of 0.1 perm, when tested in accordance with ASTM E96/E96M Procedure A (desiccant method).
    8. Fasteners: As specified by manufacturer and building code qualification report or approval, if any.

C. Underlayment: 6 mil polyethylene.

D. Slip Sheet: Rosin sized building paper.

E. Primer: Zinc molybdate type.

F. Protective Backing Paint: Zinc molybdate alkyd.

G. Sealant: As required by manufacturer.

H. Plastic Cement: ASTM D4586, Type I.

I. Eave Protection Sheet: Rubberized asphalt bonded to sheet polyethylene, 40 mil total thicknesses, with strippable treated release paper

J. Reglets: Surface mounted type, same material as roofing sheets; face and ends covered with plastic tape.

K. Solder: ASTM B32; Sn50 (50/50) type.

L. Splash Pads: Precast concrete type, of sizes and profiles indicated; minimum 3000 psi at 28 days, with minimum 5 percent air entrainment.

2.03 FABRICATION

A. Form sections true to shape, accurate in size, square, and free from distortion or defects.

B. Fabricate cleats of same material as sheet, same gage as roofing sheet.

C. Fabricate starter strips, interlockable with sheet.

D. Form pieces in longest practical lengths.

E. Hem exposed edges on underside ½-inch; miter and seam corners.

F. Form material with standing seams, except where otherwise indicated. At moving joints, use sealed lapped, bayonet-type or interlocking hooked seams.

DRAFT

G. Tin edges of copper sheet to be soldered. Solder shop formed metal joints. After soldering, remove flux. Wipe and wash solder joints clean. Weather seal joints.

H. Fabricate corners from one piece with minimum 18 inch long legs; seam for rigidity, seal with sealant.

I. Fabricate vertical faces with bottom edge formed outward 1/4 inch and hemmed to form drip.

J. Fabricate flashings to allow toe to extend 2 inches over roofing gravel. Return and brake edges.

K. Fabricate snow guards in accordance with SMACNA.

2.04 FACTORY FINISHING

A. Clear Anodized Finish: AAMA 611 AA-M12C22A41 Class I clear anodic coating not less than 0.7 mils thick.

B. Color Anodized Finish: AAMA 611 AA-M12C22A42/44 Class I integrally or electrolytically colored anodic coating not less than 0.7 mils thick.

C. Modified Silicone Polyester Coating: Pigmented Organic Coating System, AAMA 2603; baked enamel finish system.

D. Fluoropolymer Coating: High Performance Organic Finish, AAMA 2604; multiple coat, thermally cured fluoropolymer finish system.

E. PVDF (Polyvinylidene Fluoride) Coating: Superior Performance Organic Finish, AAMA 2605; multiple coat, thermally cured fluoropolymer finish system.

F. Color: As shown on drawings.

G. Primer Coat: On coated sheets, finish concealed side of sheet with primer compatible with finish system as recommended by finish system manufacturer.

PART 3 – EXECUTION

3.01 EXAMINATION

A. Inspect roof deck to verify deck is clean and smooth, free of depressions, waves, or projections, properly sloped to drains.

B. Verify deck is dry and free of snow or ice. Verify joints in wood deck are solidly supported and fastened.

C. Verify correct placement of wood nailers and insulation positioning between nailers.

D. Verify roof openings, curbs, pipes, sleeves, ducts, or vents through roof are solidly set, reglets are in place, and nailing strips located.

E. Verify roofing termination and base flashings are in place, sealed, and secure.

3.02 PREPARATION

A. Install starter and edge strips, and cleats before starting installation.

B. Install surface mounted reglets true to lines and levels. Seal top of reglets with sealant.

C. Back paint concealed metal surfaces and surfaces in contact with dissimilar metals with protective backing paint to a minimum dry film thickness of 15 mil.

D. Place eave edge metal flashings tight with fascia boards. Weather lap joints 2 inches and seal with plastic cement. Secure flange with nails per plan.

DRAFT

3.03 INSTALLATION - EAVE (ICE DAM) PROTECTION

A. Apply eave protection sheet in accordance with manufacturer's instructions.

B. Apply 4-inch-wide band of plastic cement over deck flange of eave edge flashings, and embed an 18-inch-wide strip of eave protection sheet. Place starter strip with eave edge flush with face of flashings. Secure in place. Lap ends minimum 6 inches.

C. Apply plastic cement at rate of approximately 1¼ gal/100 sq ft over starter strip.

D. Starting from lower edge of starter strip, lay additional 36-inch-wide strips of eave protection sheet in plastic cement, to produce a two ply membrane. Weather lap plies minimum 19 inches and nail in place. Lap ends minimum 6 inches. Stagger end joints of each consecutive ply.

E. Extend eave protection sheet minimum 4 feet upslope beyond interior face of exterior wall.

3.04 INSTALLATION - ROOFING

A. Apply underlayment over entire roof area.
   1. Apply in single layer laid perpendicular to slope; weather lap edges 2 inches and nail in place.
   2. Apply in 2 layers; the first layer laid parallel to slope with joints lapped 6 inches, second layer laid perpendicular to slope with 2-inch lapped edges.
   3. Minimize nail quantity.

B. Apply slip sheet in one layer, laid loose.

C. Cleat and seam all joints.

D. Use plastic cement for joints between metal and bitumen and for joints between metal and felts.

E. Provide formed metal pans for protrusions through roof. Fill pans watertight with plastic cement.

F. Provide gutters.

G. Solder lap joints. After soldering, wash metal clean with neutralizing solution, rinse with water.

H. Install snow guards as shown in drawings.

3.05 INSTALLATION – PBR ROOFING

A. Conform to SMACNA Architectural Sheet Metal Manual

B. Roof shall have a minimum pitch of 1/12.

C. Space seams as required.

D. Panel shall begin at gable end of roof opposite the prevailing rain-bearing wind.

E. Panel to be laid square the eave and ridge.

F. If end-lapping is required, the upper panel should lap over the lower panel. Place an overhang 2-3 inches to provide a drip edge (1 inch for gutter).

G. Butyl tape shall be applied above and beneath inside closure.

3.06 INSTALLATION - STANDING SEAM ROOFING

A. Conform to SMACNA Architectural Sheet Metal Manual

B. Space standing seams as required.

C. Lay sheets with long dimension perpendicular to eaves. Apply pans beginning at eaves.

DRAFT

D. Lock cleats into seams and flatten.

E. Stagger transverse joints of roofing sheets.

F. At eaves and gable ends, terminate roofing by hooking over edge strip.

G. Finish standing seams 1 inch high on flat surfaces

H. Finish standing seams 1/2 inch high on curved surfaces.

I. Bend up one side edge 1-1/2 inches and other edge 1-3/4 inches.

J. Make first fold 1/4 inch wide single fold and second fold ½-inch wide, providing locked portion of standing seam, 5 plies in thickness.

K. Fold lower ends of seams at eaves over at 45-degree angle.

L. Terminate standing seams at ridge and hips by turning down with tapered fold.

M. Form valleys of sheets not exceeding 10 feet in length. Lap joints 6 inches in direction of drainage.

N. Extend valley sheet minimum 6 inches under roofing sheets.

O. At valley, double fold valley and roofing sheets and secure with cleats spaced 18 inches on center.

3.07 INSTALLATION - BUILT-IN GUTTERS AND DOWNSPOUTS

A. Conform to SMACNA Architectural Sheet Metal Manual

B. Secure gutter lining to substrate with cleats spaced as shown in drawings.

C. Longitudinal joints not acceptable.

D. At roof edges, extend gutter lining under metal roofing 6 inches minimum and terminate in 3/4 inch folded edge secured by cleats. Hook lower end of roofing into lock strip to form 3/4 inch wide loose-lock seam.

E. Seal gutters watertight. Seal joint of gutter to drain.

F. Connect downspouts to downspout boots as shown in drawings.

G. Set splash pans under downspouts.

3.08 INSTALLATION - FLASHINGS

A. Conform to SMACNA Architectural Sheet Metal Manual

B. Insert flashings into reglets to form tight fit.
   1. Secure in place with lead wedges as required. Pack remaining spaces with lead wool.
   2. Seal flashings into reglets with sealant.

C. Secure flashings in place using concealed fasteners. Use exposed fasteners only where permitted.

D. Cleat and seam all joints.

E. Apply plastic cement compound between metal flashings and felt flashings.

F. Fit flashings tight in place. Make corners square, surfaces true and straight in planes, and lines accurate to profiles.

G. Seal metal joints watertight.

H. Solder metal joints for full metal surface contact. After soldering, wash metal clean with neutralizing solution and rinse with water.

DRAFT

3.09 PROTECTION

A. Do not permit traffic over unprotected roof surface.

END OF SECTION

DRAFT

SECTION 07 9200 – JOINT SEALANTS

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Furnish and install caulking and sealing as indicated these Specifications.

1.02 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

B. Indicate manufacturers and brand names, colors available and locations where each will be used.

1.03 QUALITY ASSURANCE

A. Comply with requirements of the general conditions except as noted below.

B. Guarantee all work of this Section for a period of 2 years.

C. Guarantee all work against water leaks, air infiltration, sagging and pulling loose.

D. Guarantee shall include replacement and/or repair of other work damaged by water leakage in caulking and sealant work.

1.04 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Deliver sealants in original sealed containers, each bearing manufacturer's name and product designation.

B. Do not retain at the job site material, which has exceeded the shelf life recommended by its manufacturer.

PART 2 – MATERIALS

2.01 SEALANTS

A. Types 1 to 4 Sealants: Polyurethane sealants conforming to Federal Specification TT-S-00227E Type II & ANSI A116.1.
   1. Type 1 Sealant: Two part 30-40 Shore A, non-sag
      a. Manufacture Sikaflex – 2C or ENGINEER-approved equal
   2. Type 2 Sealant: Two part, 35-45 Shore A, self-leveling.
   3. Type 3 Sealant: Two part, 20-35 Shore A, self-leveling.
   4. Type 4 Sealant: Two part, 20-35 Shore A, non-sag.

B. Type 5 Sealant: One component, elastomeric gun grade polyurethane sealant conforming to ASTM C920, Type S, Grade NS, Class 25. Use NT, M, A, G, and I Federal Specifications TT-S-00230C Type 2, Class A.
   1. Manufacturer: Sonneborn Sonolastic NP 1 or ENGINEER-approved equal.

2.02 ACCESSORIES

A. Primers: As specified by sealant manufacturer

B. Backup Materials: Closed cell polyethylene foam

C. Bond Breaker: Polyethylene film.

DRAFT

2.03 COLOR

A. Color for each location of use shall be as selected by OWNER and in accordance with the contract documents. Non-availability of a required color within a particular brand of otherwise approved material shall not act to relieve obligation to furnish material of required color and conforming to specifications.

B. Colors shall be selected to best blend with adjoining materials.

PART 3 – EXECUTION

3.01 LOCATIONS FOR SEALANT TYPES

A. Type 1 Sealant: Use for all interior and exterior construction, expansion joints, etc. associated with sealing the joints in the concrete tanks

B. Type 2 Sealant: Except as hereinafter specified, use for all interior and exterior horizontal joints subject to foot traffic.

C. Type 3 Sealant: Except as hereinafter specified, or where Type 1 sealant is required, use for all exterior horizontal joint.

D. Type 4 Sealant: Use for all exterior vertical surfaces.

E. Type 5 Sealant: Use for all interior work except where Type 1 sealant is required.

F. Caulk and seal all open joints, both interior and exterior; at junction of metal frames and walls; at other locations as noted on drawings.

G. Generally, expansion joints in exterior concreted flatwork on grade, curbs, and gutter for sitework, etc.; joint fillers will not require a joint sealant. Where sealant is noted on drawings for such joints, sealant shall be Type 1 and a bond breaker shall be installed along top of joint filler, full width of joint, to present contact between sealant and joint filler.

3.02 SEALANT AND JOINT DETAILS

A. Joint Sizes:
   1. Types 1, 2, 3 and 4 Sealants:
      a. Minimum joint size: ¼-inch x ¼-inch
      b. Depth to width ration of joint shall be a recommended by sealant manufacturer.
      c. Maximum width: Sealant manufacturer's recommended maximum.
   2. Type 4 Sealant: Maximum joint size shall be 3/8-inch x ½-inch.

B. Joints deeper than above shall have backup material installed to maintain specified depth.

C. With Types 1, 2, 3 and 4 sealants, a bond breaker shall be installed, unless backup material is used, so that sealant bonds only sides of joints.

3.03 SEALANT INSTALLATION

A. Carefully and thoroughly clean surfaces with cleaner, and in matter recommended by sealant manufacturer.

B. Prime surfaces where recommended by sealant manufacturer.

C. Apply sealants smoothly and uniformly. Mask surfaces each side of joints to protect adjacent surface and to form straight, even edges.

END OF SECTION

DRAFT

SECTION 08 1100 – METAL DOORS AND FRAMES

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Furnish and install steel doors, frames, and related items, complete, operable, including all finish hardware, and all appurtenant work, complete and operable, in accordance with the requirements of the Contract Documents.

1.02 REFERENCE SPECIFICATIONS, CODES AND STANDARDS

A. Commercial Standards:
   1. ASTM A366 – Specification for Steel, Carbon, Cold-Rolled Sheet, Commercial Quality
   2. ANSI A115 Series – Door and Frame Preparation
   3. UL – Underwriters Laboratories, Inc.

B. Trade Standards: National Association of Architectural Metal Manufacturers (NAAMM) or Steel Door Institute (SDI).

C. Manufacturers' Standards: In addition to the standards listed above, the steel doors and frames and their installation shall be in accordance with the manufacturer's published recommendations and specifications.

1.03 SUBMITTALS

A. Submittals shall be in accordance with Section 01 3300 – Submittal Procedures.

B. Shop Drawings: Shop drawings shall show details of the products and systems and connections to adjoining materials. Schedules showing sizes, types, and locations of door louvers and glass shall be submitted along with manufacturer's installation instructions.

1.04 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Doors and frames shall be shipped and stored with temporary stiffeners and spacers in place to prevent distortion.

B. Doors and frames shall be delivered in original, unbroken packages, containers or bundles bearing the name of the manufacturer.

C. Doors and frames shall be carefully stored on wood blocking in an area that is protected from the elements. Storage shall be in a manner that will prevent damage or marring of finish.

PART 2 – PRODUCTS

2.01 MATERIALS AND FABRICATION - GENERAL

A. Shop Fabrication and Assembly: All steel doors and frames shall be shop fabricated and shop assembled, where possible. Temporary stiffeners, spacers, and other accessories necessary to facilitate handling and accurate erection shall be provided. After fabrication, all tool marks and other surface imperfections shall be filled and ground smooth.

B. Fire Rating and Labeling: Doors and frames specified or shown as fire-rated shall bear a UL label indicating the type of rating for which certified. Designs and construction of such products shall have specific UL approval according to current procedures for the specified fire rating, either 3-hour, 1½-hour, ¾-hour or 20-minute as shown. Hollow steel doors and frames for fire-rated openings shall conform to UL listing and shall be UL labeled.

C. Materials for Doors and Frames: All hollow metal doors and frames shall be fabricated entirely from prime quality, commercial grade, cold-rolled steel conforming to ASTM A366, Type II or III.

DRAFT

D. Priming and Painting: Doors and frames shall be chemically treated to ensure maximum paint adhesion and shall have all exposed surfaces painted with a rust-inhibitive primer after fabrication.

E. Hardware: Doors and frames shall be reinforced and drilled or tapped for fully templated hardware; and shall be reinforced with plates for surface-mounted hardware, meeting ANSI A115 Series requirements. Hardware shall be as specified in these Specifications and/or as shown.

2.02 METAL FRAMES

A. Pressed Metal Frames: Pressed steel frames for doors and other openings shall be combination buckled frame and trim of type and sizes as shown. Metal shall not be lighter than 16-gauge steel. Frames shall be of the welded unit type. Special frames, oversized frames and frames with transom shall be provided where shown.

2.03 FRAME ANCHORS

A. Floor Anchors: Floor anchors shall be welded inside each frame jamb head, and holes shall be provided for floor anchorage. Minimum thickness of floor anchors shall be 14-gauge.

B. Anchors for Masonry/Concrete Installations: Frames for installation in masonry and/or concrete walls shall be provided with variable jamb anchors of the T-strap, stirrups and strap or wire type. The number of anchors provided per frame jamb and head shall be as follows:
   1. Frames up to 7 feet 6 inches in height: Three (3) anchors.
   2. Frames over 7 feet 6 inches to 8 feet 0 inches in height: Four (4) anchors.
   3. Frames over 8 feet 0 inches in height: One (1) anchor for each 2 feet 0 inches or fraction in height.
   4. Frame head anchors shall be not less than those required in these Specifications.

2.04 SILENCER HOLES

A. Appropriate holes for silencers shall be provided in the doorframes, which are not designated to receive weather stripping, seals, or sound seals.

2.05 STEEL DOORS

A. Design and Construction: Steel doors shall be of hollow metal construction and shall be of full flush design with no visible seams. Face sheets shall be not less than cold-rolled, stretcher-leveled, 18-gauge steel. All doors shall have flush seamless face sheets with continuously and fully welded seam edges. Doors shall be rigid and neat in appearance, and shall be free from warpage or buckle. Corner bends shall be true and straight and shall be of not less than the minimum radius for the gage of metal used. The door top and bottom shall be internally reinforced by steel members welded in place. Tops of exterior doors shall be provided with flush, water and weather tight, top enclosures.

B. Transom Panels: Transom panels shall be provided where shown and shall be of construction same as doors.

C. Door and Transom Cores: Doors and transom cores shall be water-resistant honeycomb with minimum R of four (4) mineral/fiberboard. Fire rated doors shall be solid or mineral fiberboard core doors as required to meet code and Reference Standard’s requirements.

DRAFT

D. Louvers (where applicable): Door louvers for steel doors shall be of steel of the type, which integrally frames the opening and can attach securely. Louvers shall be of the inverted "Y" blade type for exterior use and "V" blade for interior use. Exterior louvered openings shall be provided with removable type insect screens. Door louvers shall be uniformly located in doors and shall be of sizes shown. Louvers at labeled doors shall be equipped with concealed fusible links.

E. Double Doors: Double doors shall be provided with a "T" type steel astragal unless otherwise specified.

F. Manufacturers or ENGINEER-approved equal:
   1. Forderer Cornice Works
   2. Krieger Steel Products Co.
   3. Overly Manufacturing Co.
   4. Dean Steel Mfg.
   5. Curries

PART 3 – EXECUTION

3.01 CONSTRUCTION

A. General: All work shall be in accordance with manufacturer's published recommendations and specifications.

B. All work shall be coordinated with appropriate related subcontractor’s work to assure a proper installation. Field conditions and dimensions shall be verified prior to fabrication.

3.02 FRAME INSTALLATION

A. Frames shall be set plumb and square in a true plane, and be securely anchored to the adjoining construction. Steel shims shall be provided and shall be set tight and rigidly attached between frame anchors and structure. All finished metal frames shall be strong and rigid; neat in appearance and square, true, and free of defects, warp, or buckle.

B. Molded members, trims and stops, shall be clean cut, straight and shall be of a uniform profile throughout their lengths.

C. Corner joints shall have all contact edges tightly closed with all trim faces mitered, welded, and finished smooth. The use of gussets will not be permitted.

3.03 DOOR INSTALLATION

A. Doors shall be installed plumb, square, and level. Doors shall operate freely, but not loosely. They shall be free from rattling while in a closed position.

B. The door clearances shall be plus 3/32-inch or minus 1/32-inch and shall not exceed the limits specified in the manufacturers printed recommendations.

C. Any door that becomes warped more than 3/16-inch out-of-plane shall be replaced.

D. Doors and door's finish hardware shall have hardware protected prior to painting as specified.

3.04 FINISH HARDWARE

A. Finish hardware shall be installed in accordance with hardware manufacturer's standard templates and printed instructions. Operable parts shall be adjusted for correct function and operation.

DRAFT

3.05 EXISTING CONSTRUCTION

A. Frames that are dimpled for fasteners required for installation into previously placed (existing) concrete, masonry or steel structures shall have the fasteners and fastener frame dimples filled with auto putty or an ENGINEER-approved equal filler material. The fasteners and fillers at dimple holes shall be ground smooth (non-visible) before painting. Fastener locations shall not be visible after the painting work is finished.

END OF SECTION

DRAFT

SECTION 08 3113 – SAFETY ACCESS HATCHES

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Furnish and install safety hatches in accordance with the Contract Documents.

B. The safety hatches shall be designed to combine covering of the opening, fall through protection per OSHA standard 1910.23 and controlled confine space entry per OSHA standard 1910.146.

1.02 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

1.03 QUALITY ASSURANCE

A. Warranty: A ten-year warranty protects against defects in materials and workmanship from the date of purchase. Any part that fails in normal use will be furnished at no charge. The warranty is invalid if product is modified, changed, damaged, improperly installed or used in an application for which it is not designed.

PART 2 – PRODUCTS

2.01 MANUFACTURERS

A. Safety hatch manufacturer shall be EJ (Infrastructure Access Solutions for Asia-Pacific | EJ (ejco.com) or ENGINEER-approved equal.

2.02 EQUIPMENT

A. Hatches shall be rated for 300 PSF (Pedestrian Rated) at a minimum, unless noted otherwise.

B. Where noted in the Contract Documents, heavy duty H20 traffic rated hatches shall be rated for AASHTO H-20 wheel loads where not subject to high-density traffic. Deflection shall not exceed 1/150th of the span. AASHTO H-20 requirements dictate a 16,000-lb. load, on a single contact area of 10” x 20”.

C. Where noted in the Contract Documents, extra heavy duty “H30” traffic rated hatches shall have load capacity meeting a proof load of 24,000 lbs. applied to a 9” x 9” contact area. Units not conforming to Proof Load requirement will not be accepted as equal.

D. Each door shall be equipped with a stainless steel hold open arm. Door shall lock open in the 90-degree position. Hold open arm shall be fastened to the frame with a ½-inch grade 316 stainless steel bolt.

E. Covers to be lift assisted must comprise a two piece stainless steel inner and outer tube housing a stainless steel mechanical spring. Covers to rest open at 105˚. H-20 and H-30 rated hatches shall be provided with lift assist mechanism.

F. Angle frame shall be of extruded aluminum with a continuous 1½-inch anchor flange. H-30 frame shall be ductile iron. Exterior of frame (in contact with concrete) shall be supplied with a 3-mil thickness of “Tufcoat 3.5PR” Industrial Coating by Dupont. Application procedure shall be as recommended by Dupont. Isolation coatings shall not be substituted.

G. Hinges shall be of heavy-duty design. Material shall be grade 316 stainless steel. Each hinge shall have a 3/8-inch grade 316 stainless steel pin. Hinges shall be bolted to the angle frame and diamond plate, with grade 316 stainless steel bolts and ny-lock nuts. Aluminum hinges, or stainless steel hinges not utilizing a 3/8” stainless steel pin shall not

DRAFT

be considered equal. Dimensions and quantities for each hatch are provided in the construction plans.

H. Each hatch shall be supplied with a grade 316 stainless steel slam lock, with keyway protected by a threaded aluminum plug. Plug shall be flush with the top of the ¼-inch diamond plate. Slam lock shall be fastened with four grade 316 stainless steel bolts and washers. Slam locks that fasten with only two grade 316 stainless steel bolts and washers shall not be accepted. Any hinges or cut outs in hatch will be shown in the construction plans.

I. Each hatch shall be equipped with a stainless steel lift handle. The lift handle shall be flush with the top of the ¼-inch diamond plate.

J. The safety grate shall be made of 6061-T6 aluminum and designed per the "Specifications for Aluminum Structures," by the Aluminum Association, Inc., 5th Edition, Dec. 1986 for "Bridge Type Structures.

K. Where noted in the Contract Documents, for heavy duty hatches, grating shall be designed to withstand an H-20 or H-30 wheel load per AASHTO specifications. Safety Hatch type systems that utilize the H-20/H-30 reinforcement on the cover, and supplied with a 300 PSF (pedestrian rated) grate, as well as a safety net system shall not be acceptable.

L. Grate openings shall allow for visual inspection, limited maintenance and float adjustments while the safety grate fall through protection is left in place.

M. Design must assure that the fall through protection is in place before the doors can be closed, thereby protecting the next operator.

N. Each grate shall be provided with a separate hold open arm, which will lock the grate in the 90-degree position once opened.

O. Each grate supplied with a locking device (for owner's padlock) that will prevent unauthorized entry to the confined space. The grating system will allow anyone to make visual inspection and float adjustments without entering the confined space.

P. Grate shall be coated with an OSHA type safety orange color, promoting visual awareness of the hazard. The aluminum safety grates shall receive a two-coat powder coat system, applied by the electrostatic spray process. The base coat is a thermosetting epoxy powder coat finish with a minimum thickness of 2 - 4 mils. The top coat is a mar-resistant, TGIC polyester powder coating with a minimum thickness of 2 - 4 mils. Each coat shall be baked at 350°F - 375°F until cured.

Q. Welding shall be in accordance with ANSI/AWS D1.2-90 Structural Welding Code for Aluminum.

2.03 MATERIAL SPECIFICATIONS

A. Aluminum material shall be 6061-T6 aluminum for bars, angles and extrusions ¼-inch diamond plate shall be 5086 aluminum.

B. H-30 frame and cover shall be manufactured from ductile iron conforming to the requirements of ASTM A536, and AASHTO M105 and M306. Gray Iron/Gray Cast Iron shall not be accepted as equal.

PART 3 – EXECUTION (NOT USED)

END OF SECTION

DRAFT

SECTION 08 3300 – COIL DOORS

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Furnish and install coil doors in locations in accordance with the Contract Documents.

1.02 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

B. Product Data: Submit manufacturer's product data and installation instructions for each type of rolling door. Include both published data and any specific data prepared for this project.

C. Shop Drawings: Submit shop drawing for approval prior to fabrication. Include detailed plans, elevations, details of framing members, required clearances, anchors, and accessories. Include relationship with adjacent materials.

1.03 QUALITY ASSURANCE

A. Manufacturer: Rolling doors shall be manufactured by a firm with a minimum of five years experience in the fabrication and installation of rolling doors. Manufacturers proposed for use, which are not named in these specifications, shall submit evidence of ability to meet performance and fabrication requirements specified, and include a list of five projects of similar design and complexity completed within the past five years.

B. Installation of rolling doors shall be performed by the authorized representative of the manufacturer.

C. Single-Source Responsibility: Provide doors, guides, motors, and related primary components from one manufacturer for each type of door. Provide secondary components from source acceptable to manufacturer of primary components.

D. Pre-Installation Conference: Schedule and convene a pre-installation conference just prior to commencement of field operations, to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1.04 PRODUCT HANDLING

A. Deliver materials and products in labeled protective packages. Store and handle in strict compliance with manufacturers instructions and recommendations. Protect from damage from weather, excessive temperatures, and construction operations.

PART 2 – PRODUCTS

2.01 CURTAIN

Interlocking roll-formed galvanized steel slats, flat crown profile type CAW, 26-gauge for widths up to 12´4", 24-gauge for widths up to 14´4". End of each slat shall be locked from lateral movement by a staking lock system (Galvanized steel end locks).

2.02 FINISH

Curtain slats (and hood) shall be galvanized in accordance with ASTM A525 and receive rust-inhibitive, roll coating process, including bonderizing, 0.2 mils thick baked-on prime paint, and 0.6-mil thick baked-on polyester top coat. Non-galvanized exposed ferrous surfaces shall receive one coat of rust-inhibitive primer.

DRAFT

2.03 COLOR

White polyester top coat (Brown polyester top coat).

2.04 WEATHERSEALS

Vinyl bottom seal.

2.05 BOTTOM BAR

Extruded aluminum.

2.06 GUIDES

Roll-formed galvanized steel shapes attached to continuous galvanized steel wall angle.

2.07 BRACKETS

Galvanized steel to support counterbalance and curtain.

2.08 COUNTERBALANCE (Helical torsion spring type).

Counterbalance shall be housed in a steel tube or pipe barrel, supporting the curtain with deflection limited to 0.03 per foot of span. Spring tension shall be adjustable.

2.09 HOOD (Not Required)

24-gauge galvanized steel with intermediate supports as required

2.10 MANUAL OPERATION

Manual push up (chain hoist) for doors up to 100 sq. ft. Chain hoist for doors over 100 sq. ft.

2.11 ELECTRIC MOTOR OPERATION

Provide UL listed electric operator, size as recommended by manufacturer to move door in either direction at not less than 2/3 foot nor more than 1 foot per second.

A. Sensing Edge Protection: (Pneumatic sensing edge) (Electric sensing edge)

B. Operator Controls: Push-button (Key) (Push-button and key) operated control stations with open, close, and stop buttons for surface (flush) mounting, for interior (exterior) (both interior and exterior) location.

C. Special Operation: (Vehicle detector operation, radio control operation, card reader control, photocell operation, door timer operation, commercial light package, explosion- and dust-ignition-proof control wiring)

2.12 LOCKING

Interior bottom bar slide bolt. Exterior slide lock for manually operated mini-warehouse doors. Chain keeper locks for chain hoist operation. (Interior slide bolt lock for electric operation with interlock switch.) (Cylinder lock for electric operation with interlock switch.)

2.13 WALL MOUNTING CONDITION

Face-of-wall.

PART 3 – EXECUTION

3.01 PREPARATION

Take field dimension and examine conditions of substrates, supports, and other conditions under which this work is to be performed. Do not proceed with work until unsatisfactory conditions are corrected.

DRAFT

3.02 INSTALLATION

Strictly comply with manufacturer's installation instructions and recommendations. Coordinate installation with adjacent work to ensure proper clearances and allow for maintenance.

Instruct Owners personnel in proper operating procedures and maintenance schedule.

3.03 ADJUSTING AND CLEANING

Test rolling doors for proper operation and adjust as necessary to provide proper operation without binding or distortion.

Touch-up damaged coatings and finishes and repair minor damage. Clean exposed surfaces using non-abrasive materials and methods recommended by manufacturer of material or product being cleaned.

END OF SECTION

DRAFT

SECTION 08 9100 – LOUVERS

PART 1 – GENERAL

1.01 SECTION INCLUDES

A. Louvers, frames, and accessories.

1.02 REFERENCE STANDARDS

AAMA 611	Voluntary Specification for Anodized Architectural Aluminum; American Architectural Manufacturers Association
AAMA 2604	Voluntary Specification, Performance Requirements and Test Procedures for High Performance Organic Coatings on Aluminum Extrusions and Panels
AAMA 2605	Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels
AMCA 500-L	Laboratory Methods of Testing Louvers for Rating; Air Movement and Control Association International, Inc.
AMCA 511	Certified Ratings Program Product Rating Manual for Air Control Devices
ASTM A653/A653M	Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
ASTM A666	Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar
ASTM B209	Aluminum and Aluminum-Alloy Sheet and Plate
ASTM B209M	Aluminum and Aluminum-Alloy Sheet and Plate [Metric]
ASTM B221	Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes
ASTM B221M	Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes [Metric]

1.03 SUBMITTALS

A. See Section 01 3300 – Submittal Procedures.

B. Product Data: Provide data describing design characteristics, maximum recommended air velocity, design free area, materials, and finishes.

C. Shop Drawings: Indicate louver layout plan and elevations, opening and clearance dimensions, tolerances; head, jamb, and sill details; blade configuration, screens, blank-out areas required, and frames.

D. Samples: Submit two samples 2 by 2 inches in size illustrating finish and color of exterior and interior surfaces.

E. Test Reports: Independent agency reports showing compliance with specified performance criteria.

F. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

G. Maintenance Data: Include lubrication schedules, and adjustment requirements.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with minimum three years of documented experience.

DRAFT

1.05 WARRANTY

A. Provide twenty-year manufacturer warranty against distortion, metal degradation, and failure of connections.

PART 2 – PRODUCTS

2.01 MANUFACTURERS

A. Wall Louvers:
   1. Airolite Company, LLC
   2. American Warming and Ventilating
   3. Construction Specialties, Inc
   4. Pottorff
   5. Or ENGINEER-approved equal.

2.02 LOUVERS

A. Louvers: Factory fabricated and assembled, complete with frame, mullions, and accessories; AMCA Certified in accordance with AMCA 511.
   1. Wind Load Resistance: Design to resist positive and negative wind load of 25 psf without damage or permanent deformation.
   2. Intake Louvers: Design to allow maximum of 0.01 oz/sq. ft water penetration at calculated intake design velocity based on design air flow and actual free area, when tested in accordance with AMCA 500-L.
   3. Drainable Blades: Continuous rain stop at front or rear of blade aligned with vertical gutter recessed into both jambs of frame.
   4. Screens: Provide insect screens at intake louvers and bird screens at exhaust louvers.
   5. Hinged Units: Provide secondary frame to which louver frame is attached; non-ferrous hinges.

B. Stationary Louvers: Horizontal blade, extruded aluminum construction, with intermediate mullions matching frame.
   1. Free Area: 50 percent, minimum.
   2. Static Pressure Loss: 0.15 inch wg maximum per square foot of free area at velocity of 1000 fpm, when tested in accordance with AMCA 500-L.
   3. Blades: Straight.
   4. Frame: 4 inches deep, channel profile; corner joints mitered and, with continuous recessed caulking channel each side.
   5. Metal Thickness: Frame 0.081 inch; blades 0.081 inch.
   6. Finish: Color anodized; finish welded units after fabrication.
   7. Color: As scheduled.

C. Operable Louvers: Operable horizontal blades, extruded aluminum construction.
   1. Free Area: 50 percent, minimum.
   2. Static Pressure Loss: 0.15 inch wg maximum per square foot of free area at velocity of 1000 fpm, when tested in accordance with AMCA 500-L.
   3. Operation: Gravity balanced, 90-degree opening. with adjustment device to permit setting for varying differential static pressure.
   4. Operation: Actuator provided in HVAC control system.
   5. Movable Blades: Straight, pivoted at, with vinyl, rubber, or polyethylene blade edge and jamb seals; rattle-free linkage.
   6. Fixed Blades: Straight.
   7. Frame: 4 inches deep, channel profile; corner joints mitered and, with continuous recessed caulking channel each side.
   8. Metal Thickness: Frame 0.081 inch; blades 0.081 inch.

DRAFT

9. Finish: Color anodized; finish welded units after fabrication.
10. Color: As scheduled.

D. Acoustical Louvers: Horizontal blade, formed aluminum sheet construction.
1. Sound Attenuation: Minimum sound transmission loss of 10 db at 63 Hz, when tested in accordance with ASTM E90.
2. Free Area: 50 percent, minimum.
3. Static Pressure Loss: 0.15 inch wg maximum per square foot of free area at velocity of 1000 fpm, when tested in accordance with AMCA 500-L.
4. Blades: Straight, sloped at 45 degrees, with insulating material in cavity, lower surface covered with perforated sheet metal of same type as blades.
5. Metal Thickness: Frame 0.081 inch; blades 0.081 inch.
6. Finish: Color anodized; finish welded units after fabrication.

2.03 MATERIALS

A. Extruded Aluminum: ASTM B221 (ASTM B221M)
1. Color Anodizing: AAMA 611 Class I, AA-M12C22A42/44.
2. Clear Anodizing: AAMA 611 Class I, AA-M12C22A41.

B. Formed Aluminum: Formed sheet, ASTM B209 (ASTM B209M).
1. Color Anodizing: AAMA 611 Class I, AA-M12C22A42/44.
2. Clear Anodizing: AAMA 611 Class I, AA-M12C22A41.

C. Steel Sheet: Hot-dipped galvanized steel sheet, ASTM A653/A653M, with G90/Z275 coating.

D. Stainless Steel: ASTM A666 Type 304, soft temper, smooth surface, No. 4 finish.

E. Bird Screen: Interwoven wire mesh of steel, 0.063-inch diameter wire, ½-inch open weave, diagonal design.

F. Insect Screen: 18 x 16 size aluminum mesh.

G. Polyvinylidene Fluoride Coating: Minimum 70 percent Kynar 500/Hylar 500 resin, two-coat finish, complying with AAMA 2604.

H. Primer: Zinc chromate, alkyd type.

2.04 ACCESSORIES

A. Blank-Off Panels: Same material as louver, painted black on exterior side; provide where duct connected to louver is smaller than louver frame, sealing off louver area outside duct.

B. Screens: Frame of same material as louver, with reinforced corners; removable, screw attached; installed on inside face of louver frame.

C. Fasteners and Anchors: Galvanized steel.

D. Flashings: Of same material as louver frame, formed to required shape, single length in one piece per location.

PART 3 – EXECUTION

3.01 EXAMINATION

A. Verify that prepared openings and flashings are ready to receive work and opening dimensions are as indicated on shop drawings.

B. Verify that field measurements are as indicated.

3.02 INSTALLATION

A. Install louver assembly in accordance with manufacturer's instructions.

DRAFT

B. Coordinate with installation of flashings by others.

C. Install louvers level and plumb.

D. Align louver assembly to ensure moisture shed from flashings and diversion of moisture to exterior.

E. Secure louver frames in openings with concealed fasteners.

F. Install perimeter sealant and backing rod in accordance with manufacturer's instructions, unless instructed otherwise.

G. Coordinate with installation of mechanical ductwork.

H. Coordinate with installation of louver actuators.

3.03 ADJUSTING

A. Adjust operable louvers for freedom of movement of control mechanism. Lubricate operating joints.

3.04 CLEANING

A. Strip protective finish coverings.

B. Clean surfaces and components.

3.05 SCHEDULES

A. Aeration Building - South Wall: Intake acoustical louver, hinged bird screen, prefinished to match adjacent window frames.

END OF SECTION

DRAFT

SECTION 09 9100 – PAINTING

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide all labor, materials, equipment, and services required to do all painting (excluding items otherwise listed in the applicable Sections of Division 09 – Finishes), including preparation, priming and protection of finished surfaces. An extensive and comprehensive painting job will be required and shall include all surfaces which normally are painted.

B. The intent of these Specifications is to obtain the material and workmanship necessary to produce an adequate and acceptable job, and is intended to describe the requirements for both shop and field painting.

C. The intent of this Specification Section is to include all items which are to receive painting and have not been included otherwise in these Specifications.

D. The intent of this Specification shall be to paint all exposed structural steel, miscellaneous ferrous metal, lintels, equipment, piping, all exterior masonry walls, and all other work obviously required or noted to be painted unless otherwise specified (see Section 2.01). The omission of minor items in the schedule of work shall not relieve the obligation to include such items where they come within the general intent of the Specifications as stated herein. All interior surfaces and equipment which have been previously painted shall be repainted or recoated following the proper surface preparation as shown on the Drawings.

E. Review and examine all Divisions and Sections of these Specifications for any additional painting requirements and/or additional surfaces or items to be painted.

F. Apply specified finish coats of paint to all pre-primed work and complete finishing system for unprimed work required to be painted.

G. Backprime, with specified interior first coat material all surfaces of finish trim which will be concealed after installation.

H. Apply specified finish coats of paint to all prepainted surfaces which require only a finish coat. Otherwise, the complete system (as given in Section 2.1) shall be administered.

1.02 RELATED WORK

A. Wherever detailed painting requirements are covered under an equipment or product Specification, the Specifications herein other Sections, govern with respect to surface preparation, paint materials, coats, thicknesses, and coverage.

1.03 ITEMS NOT REQUIRING FIELD PAINTING

A. All new galvanized and stainless steel surfaces (except where noted on Drawings).

B. Valves, fittings, and appurtenances in small diameter plastic piping (less than 3 inches).

C. Prefinished items.

D. Plain copper (except as required for color coding) and stainless steel.

E. Aluminum except where otherwise designated and required to prevent corrosion at contact with dissimilar materials.

F. Concrete floors except where noted.

G. Exterior concrete surfaces except where noted.

H. Finish hardware.

DRAFT

I. Concealed from view items (except where required for color coding) and surfaces, except as specified herein or where previously painted.

J. Packing glands and other adjustable parts and nameplates of mechanical equipment.

K. Mechanical equipment (i.e. pumps, blowers, actuators, etc.)

1.04 DEFINITIONS

A. The term “paint” as used herein includes enamels, epoxy, paints, sealers, fillers, emulsions, and other coatings.

B. MDMTPC = Minimum dry mil thickness per coat.

C. MDFT = Minimum dry film thickness.

D. SSPC = Steel Structures Painting Council.

1.05 QUALITY ASSURANCE

A. Qualification of Painters: All painting shall be done by qualified, skilled, experienced craftsmen. In the acceptance or rejection of completed painting, no allowance will be made for lack of skills on the part of the craftsmen.

B. Paint Labels: Labels on paint containers shall include the following:
   1. Manufacturer's name
   2. Generic type of paint
   3. Manufacturer's stock number
   4. Color
   5. Instructions for thinning where applicable

C. Field Quality Control: Paint film thickness shall be subject to measurement by electrometer, wet film gauge, low or high voltage meter, and/or ENGINEER approved measuring instruments. If dry film thickness is found to be less than specified, or coverage is not uniform, apply additional paint to correct the thickness or appearance at no additional cost to the Owner.

D. Compatibility:
   1. Compatibility of all paints used is required. A compatible paint will be considered a paint which precludes adverse effects related to bonding, drying delamination, scaling, lifting, and bleeding.
   2. In cases where shop-applied primers and coatings on materials and equipment furnished by suppliers are products different from those described in the Specifications, compatibility shall be verified with the specified field-applied coating system.
   3. Where thinning is necessary, only the products of the manufacturer furnishing the paint, and products for thinning purposes only, will be allowed.

E. Thickness and Spreading Rates:
   1. Minimum dry mil thicknesses per coat (MDMTPC) and/or spreading rates in square feet per gallon shall be governed by the manufacturer's current data sheets or literature containing recommendations or instructions regarding these values. These recommended dry mil thickness and/or spreading rate values will be considered requirements to be met same as if set out herein these Specifications and Contract Documents. Do not exceed manufacturer's recommended coverage rates.
   2. The number of coats to be applied are specified herein and shall govern. Where the total dry film thickness is specified, this thickness shall govern over the MDMTPC.

DRAFT

1.06 PRODUCT DELIVERY, HANDLING AND STORAGE

A. Delivery: All materials shall be brought to the project site in the original sealed and labeled containers of the paint manufacturer. All labels shall be legible and intact at time of use.

B. Manufacturer's Instructions: Paint manufacturer's written instructions for proper surface preparation, mixing, thinning, application and drying shall be furnished with the paint, and strictly followed.

C. Storage of Materials:
   1. Store only acceptable materials on project site.
   2. Store only in a suitable and designated area restricted to the storage of paint materials and related equipment.
   3. Comply with all applicable health and fire regulations regarding the storage of paint materials.
   4. Storage of material shall comply with the manufacturer's specifications; however, storage shall be at a minimum temperature of 50°F.

D. Protection of Materials:
   1. Take all necessary precautions to ensure the safe storage and use of paint materials and the prompt and safe disposal of waste.
   2. Painting wastes shall be properly deposited in containers made for this purpose. Do not use plumbing fixtures for disposing of paints wastes.
   3. Take all necessary precautions to protect paint materials before, during and after application and to protect the finished work.

E. Replacement: In the event of damage to paint materials, immediately make all replacements necessary at no additional cost.

F. Product delivery, handling and storage shall be in accordance with Part 1 of this Specification.

1.07 JOB CONDITIONS

A. Environmental Requirements:
   1. Comply with manufacturer's recommendations as to the environmental conditions under which painting systems can be applied.
   2. Do not apply finish in areas where dust and/or mist is being generated.

B. Climatic Conditions: Paint shall not be applied if:
   1. The ambient temperature or temperature of the surface to be painted is below 50°F or below the temperature recommended by the paint manufacturer.
   2. The relative humidity is above 85 percent.
   3. The relative humidity is such that the paint will not dry properly in accordance with the manufacturer's instructions.

C. Projection:
   1. Protect with drop cloths, masking or other acceptable means all surfaces which could be damaged in function or appearance by paint, including surfaces not being painted concurrently and surfaces not to be painted.
   2. Hardware, accessories, fixtures, and similar items shall be removed and replaced after completion of painting.
   3. Spray painting will not be permitted when it will cause damage to adjacent of otherwise located surfaces.
   4. All paint splatters on glass shall be wiped off immediately.

DRAFT

PART 2 – PRODUCTS

2.01 PAINT SYSTEMS

A. General:
   1. All paints of a system shall be by one (1) manufacturer.
   2. "Lift" tests may be requested on various surfaces to be painted to assure bonding compatibility.
   3. Paints containing lead, or other "dangerous" materials, that surpass federal maximum levels shall not be allowed. Oil shall be pure boiled linseed oil.

2.02 COLORS

A. The manufacturer shall be able to furnish all paints for exposed surfaces in a wide range of colors including lighter and darker shades of these colors which may be selected on various surfaces, if not included in the following codes (also note, the below listed may be included in the requirements of the applicable Sections of Division 09 – Finishes):
   1. Safety Color Codes: Comply with Occupational Safety and Health Administration Standards, as applicable, regarding safety color codes.
   2. Piping Color Codes: Colors for process pipe coding shall be in accordance with these Specifications.

PART 3 – EXECUTION

3.01 INSPECTION

A. Examine surfaces scheduled to receive paint and/or coating finishes for conditions that will adversely affect application, permanence, or quality of work and which cannot be put into an acceptable condition through surface preparation.

B. Do not proceed with surface preparation or painting application until conditions are suitable.

C. If surfaces are not thoroughly dry or if they cannot be put in proper conditions to receive paint by customary cleaning methods, the painting applicators shall notify the ENGINEER in writing, requesting necessary corrections.

D. Review the specified or approved painting systems and bring any questions or doubts as to the proper performance to the ENGINEER. Otherwise, assume the responsibility for providing the desired results.

3.02 ACCEPTANCE OF SURFACES

A. The commencement of painting work in any area or space will be construed as acceptance of the surface as being satisfactory.

3.03 SURFACE PREPARATION

A. General:
   1. All surfaces shall be thoroughly cleaned and free of dust, rust, mill scale, loose paint, or oily materials.
   2. References to SSPC refer to Steel Structures Painting Council specifications.
   3. Surfaces shall be primed and/or treated, as specified, as soon after completion of surface preparation as practical, but in any event before any visible or detrimental corrosion or contamination can occur. A prepared surface, which becomes corroded or contaminated, shall be re-prepared before treating and/or priming.

B. Non-submerged Non-Galvanized Structural Steel: All new non-galvanized structural steel for non-submerged service shall have their surfaces prepared according to SSPC-SP6-63, Commercial Blast Cleaning.

DRAFT

C. Submerged Non-Galvanized Structural Steel: All new non-galvanized structural steel and fabricated metals for submerged service of high temperature service shall have their surfaces prepared according to SSPC-SP10-63T Near White Metal Blast Cleaning.

D. Unprimed Metal Surfaces: All unprimed metal surfaces and miscellaneous fabricated metals (exclusive of structural steel and galvanized metal) to be painted shall be thoroughly cleaned according to SSPC-SP2-63 Hand Tool Cleaning or SSPC-SP3-63 Power Tool Cleaning, unless specifically required elsewhere in these Specifications.

E. Non-Ferrous Metals: Non-ferrous metals surface preparation shall be not less than that required by the paint manufacturer.

F. Concrete and Masonry:
   1. All concrete and masonry surfaces shall be cleaned and free from loose particles.
   2. Concrete floors to be painted shall be etched with a 10 percent solution of muriatic acid. If the concrete surface is exceedingly dense, a greater strength acid or a second etching will be required. After etching for a minimum of 30 minutes, wash thoroughly with water to remove all traces of acid. Allow to thoroughly dry at least 72 hours.
   3. Submerged concrete to be coated shall have their surfaces prepared by a light sandblast (Brush Blast), to remove loose coating and provide a textured surface to enhance adherence of the new coating. No sandblasting shall be done on the job in areas containing pumps, motors or other equipment that could be damaged by infiltration of sand particles.

G. Wood Surfaces: Wood surfaces shall be thoroughly cleaned of all extraneous matter and all cracks, nail holes, and other defects properly filled and smoothed. Wood trim shall be sanded to fine finish and wiped clean of dust.

3.04 SHOP PRIMING

A. Shop priming shall be done with primers that are guaranteed by the equipment manufacturer to be compatible with the finish paints to be used.

B. The CONTRACTOR shall coordinate all paint materials supplied in the shop and field.

3.05 APPLICATION

A. On metal surfaces apply each coat of paint at the rate specified by the manufacturer to achieve the minimum dry mill thickness required. One gallon of paint as originally furnished by the manufacturer shall not cover a greater area when applied by spray gun than when applied un-thinned by brush. Deficiencies of film thickness shall be corrected.

B. On masonry, the application rates will vary according to surface texture; however, in no case shall the manufacturer's stated coverage rate be exceeded.

C. On porous surfaces, it shall be the painter's responsibility to achieve a protective and decorative finish either by decreasing the coverage rate of by applying additional coats of paint.

D. Evenly brush out each finish coat and permit to dry per manufacturer's recommendation before applying any subsequent coats.

E. All paints and catalogs shall be maintained at a minimum manufacturer's application temperature before applying.

F. Successive coats of paint shall be tinted so as to make each coat easily distinguishable from each other with the final undercoat tinted to a darker shade than the finish coat.

G. Finish surfaces shall not show brush marks or other irregularities. Undercoats shall be thoroughly and uniformly sanded with No. 00 sandpaper or equal to remove defects and provide a smooth even surface.

DRAFT

H. Painting shall be continuous and shall be accomplished in an orderly manner so as to facilitate inspection. Materials subject to weathering shall be prime coated as quickly as possible. Surfaces of exposed members that will be inaccessible after erection shall be cleaned and painted before erection.

I. All surfaces to be painted as well as the atmosphere in which painting is to be done shall be maintained at the conditions recommended by manufacturer by heating and ventilating, if necessary, until each coat of paint has hardened. Any defective paint shall be removed and the surface repainted.

J. Perform all required back priming work before items are installed.

3.06 REINSTALLATION OF REMOVED ITEMS

A. Following completion of painting in each space, promptly reinstall all items removed for painting, using only workmen skilled in the particular trade.

3.07 CLEANING

A. During the progress of Work, do not allow the accumulation of empty containers or other excess items except in areas specifically reserved for that purpose.

B. Take all precautions to prevent accidental spillage of paint materials. In the event of spilling, immediately remove all spilled materials and the waste and other equipment used to clean up the spill, and wash surfaces to their original undamaged condition.

C. Touch-up and restore finish where damaged.

D. Remove all trash and accumulated materials of a painting nature from premises at the completion of the Work.

E. Paint spots, oil or stains upon adjacent surfaces shall be removed. Any damage to Work of other trades or equipment caused from painting shall be made good at no additional expense.

F. Do not mark surface finish of items being cleaned.

G. Leave entire job clean (including paint storage space).

3.08 FINAL INSPECTION

A. Protect all painted surfaces against damage until the date of final acceptance of the Work.

B. Conduct a final inspection of all painting work and repaint or retouch any areas or surfaces found deficient in complying with these Specifications.

END OF SECTION

DRAFT

SECTION 09 9700 – SPECIAL COATINGS

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide all labor, materials, equipment, and services required for accomplishing special coatings on equipment, tanks, or piping in accordance with these Specifications and Contract Documents.

1.02 SPECIAL NOTICE

A. Because there exists in this project corrosive agents in the liquids and, in certain areas, in the atmosphere, special coatings for protecting the select equipment, structures, and appurtenances are required. The service requirements of the coatings are harsh and only products with an extended history of successful application will be acceptable.

B. Related Sections: Work shall conform to the requirements in applicable Sections of the following Divisions:

Division 01 – General Requirements
Division 05 – Metals
Division 09 – Finishes

C. Wherever detailed coating/painting requirements are covered under an equipment or product specification, the Specifications herein, shall govern over those coating requirements, with respect to surface preparation, coat materials, coats, thickness, and coverage with the exception of manufacturer's supplied coatings and protection. Determine if the manufacturer's supplied coatings are adequate.

1.03 ACCEPTABLE PRODUCTS

A. Specified products are specified as the standard of quality. Products are listed to establish a minimum standard of quality. Equivalent materials of other manufacturers may be submitted on written approval of the ENGINEER. As part of the proof of quality and performance equivalency, the ENGINEER will require at the cost of the CONTRACTOR, certified test reports from a nationally known, reputable, and independent testing laboratory conducting comparative tests as directed by the ENGINEER between the product specified and the requested substitution.

B. Requests for substitution shall include manufacturer's literature for each product giving name, product number, and generic type, descriptive information, solids by volume, recommended dry film thickness and certified lab test reports showing results to equal the performance criteria of the products specified herein. All materials must meet all local, state, and Federal regulations including and not limited to the Air Quality Management District. In addition, a list of five projects shall be submitted in which each product has been used and rendered satisfactory service.

1.04 ITEMS REQUIRING SPECIAL COATING

A. See Coating Schedules as listed in PART 2 – PRODUCTS.

1.05 ITEMS NOT REQUIRING SPECIAL COATING

A. The metal surfaces of stainless steel, chromium plate, galvanized and aluminum that are not now coated will not require field coating. Do not apply coating over any code-required labels, glass items, gauges, and name plates. It is also important not to coat any moving parts or operating units, valves or stems, or any mechanical and electrical parts such as valve and damper operators, linkages. It is the contactor's responsibility to protect any surface that is not to receive a coating.

DRAFT

1.06 QUALITY ASSURANCE

A. Qualification of Coaters: Qualification of Coaters: All coating shall be done by qualified, skilled, and experienced craftsmen. In the acceptance or rejection of completed coating, no allowance will be made for lack of skills on the part of the craftsmen.
   1. SSPC-QP-1 Certified - Field Application to Complex Industrial and Marine Structures
   2. SSPC-QP-3 Certified - Shop Painting Certification

B. Coating Labels: Labels on coating containers shall include the following:
   1. Manufacturer's name
   2. Generic type of coat
   3. Manufacturer's stock number
   4. Color
   5. Instructions for thinning where applicable

C. Field Quality Control: Coating film thickness shall be subject to measurement with electrometer, wet film gauge, low or high voltage meter and/or applicable measuring instruments acceptable to the ENGINEER. If dry film thickness is found to be less than specified, or coverage is not uniform, an additional coating to correct thickness or appearance at no additional cost shall be applied.

D. Compatibility:
   1. Compatibility of all coatings used shall be required. A compatible coating will be considered a coat, which precludes adverse effects related to bonding, drying delamination, scaling, lifting, and bleeding.
   2. In cases where shop-applied primers and coatings on materials and equipment furnished by suppliers are products different from those described in the Specifications, compatibility with the specified field-applied coating system shall be verified by the CONTRACTOR.
   3. Where thinning is necessary, only the products of the manufacturer furnishing the coating, and products for thinning purposes only, will be allowed.

E. Thickness and Spreading Rates:
   1. Minimum dry mil thickness per coat (MDMTPC) and/or spreading rates in square feet per gallon shall be governed by the manufacturer's current data sheets or literature containing recommendations or instructions regarding these values. These recommended dry mil thickness and/or spreading rate values will be considered requirements to be met same as if set out herein; these Do Not exceed manufacturer's recommended coverage rates.
   2. The number of coats to be applied are specified herein and shall govern. Where the total dry film thickness is specified, this thickness shall govern over the MDMTPC.

1.07 PRODUCT DELIVERY, HANDLING AND STORAGE

A. Delivery: All materials shall be brought to the job site in the original sealed and labeled containers of the coating manufacturer. All labels shall be legible and intact at time of use.

B. Manufacturer's Instruction: Coating manufacturer's written instructions for proper surface preparation, mixing, thinning, application and drying shall be furnished with the coating and strictly followed.

C. Storage of Materials:
   1. Store only acceptable materials on project site.
   2. Store only in a suitable and designated area restricted to the storage of coating materials and related equipment.

DRAFT

3. Comply with all applicable health and fire regulations regarding the storage of coating materials.
4. Storage of material shall comply with the manufacturer's specifications; however, storage shall be at a minimum temperature of 50°F.

D. Protection of Materials:
1. Take all necessary precautions to ensure the safe storage and use of coating materials and the prompt and safe disposal of waste.
2. Coating wastes shall be properly deposited in containers made for this purpose.
3. Take all necessary precautions to protect coating materials before, during and after application and to protect the finished work.

E. Replacement: In the event of damage to coating materials, immediately make all replacements necessary to the approval of the ENGINEER and at no additional cost.

F. Product delivery, handling and storage shall be in accordance with Part 1 of this Section and the manufacturer's recommendations.

1.08 JOB CONDITIONS

A. Environmental Requirements:
1. Comply with manufacturer's recommendations as to environmental conditions under which coatings and coating systems can be applied.
2. Do not apply finish in areas where dust and/or mist is being generated.

B. Climatic Conditions: Coating shall not be applied if:
1. The ambient temperature or temperature of the surface to be coated is below 50°F or below the temperature recommended by the coating manufacturer.
2. The relative humidity is above 85 percent.
3. The relative humidity is such that the coating will not dry properly in accordance with the manufacturer's instructions.

C. Protection:
1. Protect with drop cloths, masking or other acceptable means all surfaces which could be damaged in function or appearance by coating, including surfaces not being coated concurrently and surfaces not to be coated.
2. Hardware, accessories, fixtures, and similar items shall be removed and replaced after completion of coating.
3. Spray coating will not be permitted when it will cause damage to adjacent or otherwise located surfaces.
4. All coating splatters on glass shall be wiped off immediately.

PART 2 – PRODUCTS

2.01 COATING SYSTEMS FOR STEEL - STRUCTURAL, TANKS, ROOF DECKING, PIPE, AND EQUIPMENT

A. Exterior Exposed:
1. System Type: Aromatic Urethane Zinc-rich Primer/Epoxy/Polyurethane.
2. Surface Preparation: SSPC-SP 6.
3. Primer:
   a. Sherwin Williams Corothane Galvapac 2K @ 3.0 – 5.0 mils DFT 2K 100 for Low VOC
   b. Tnemec Series 90-97 Tneme Zinc @ 2.5-3.5 0 mils DFT. 94 H2O for Low VOC
4. Intermediate Coat:
   a. Sherwin Williams Macropoxy 646; 4.0 – 8.0 mils DFT. 100 for Low VOC
   b. Tnemec Series N69 Hi-Build Epoxoline II; 4.0 to 6.0 mils DFT. L69 for Low VOC

DRAFT

5. Finish Coat:
    a. Sherwin Williams Hi Solids Polyurethane @ 3.0 – 5.0 mils DFT. 250 or 100 for Low VOC
    b. Series 1075 Endura-Shield II; 2.5 to 3.5 mils DFT. 1095 for Low VOC
6. Total DFT: 9.5 to 14.5 mils.

B. Interior Exposed:
1. System Type: Epoxy.
2. Surface Preparation: SSPC-SP 6.
3. Primer:
    a. Sherwin Williams Macropoxy 646; 4 – 8 mils DFT. M646 100 for Low VOC
    b. Tnemec Series N69 Hi-Build Epoxoline II; 3.0 to 5.0 mils DFT. L69 for Low VOC
4. Finish Coat:
    a. Sherwin Williams Macropoxy 646; 4 – 8 mils DFT. M646 100 for Low VOC
    b. Tnemec Series N69 Hi-Build Epoxoline II; 4.0 to 6.0 mils DFT. L69 for Low VOC
5. Total DFT: 7.0 to 11.0 mils.

C. Immersion, Potable Water:
1. System Type: Epoxy.
2. Surface Preparation: SSPC-SP 10.
3. Primer:
    a. Sherwin Williams Macropoxy 5500; 4.0 – 8.0 mils DFT.
    b. Tnemec Series N140 Pota Pox Plus; 4.0 to 6.0 mils DFT. L140 for Low VOC
4. Intermediate Coat:
    a. Sherwin Williams Macropoxy 5500; 4.0 – 8.0 mils DFT
    b. Tnemec Series N140 Pota Pox Plus; 4.0 to 6.0 mils DFT. L140 for Low VOC
5. Finish Coat:
    a. Sherwin Williams Macropoxy 5500; 4.0 – 8.0 mils DFT
    b. Tnemec Series N140 Pota Pox Plus; 4.0 to 6.0 mils DFT. L140 for Low VOC
6. Total DFT: 12.0 to 18.0 mils.

Or

1. System Type: Ultra High Solids Epoxy.
2. Surface Preparation: Abrasive blast clean per SSPC-SP10, 2.5 – 4 mil profile
3. Primer:
    a. For stripe coat application to all welds and irregular surfaces.
    b. Sherwin Williams Macropoxy 5500; 4.0 – 6.0 mils DFT
    c. Tnemec Series N140 Pota Pox Plus; 4.0 to 6.0 mils DFT. L140 for Low VOC
4. Finish Coat:
    a. For finish coat application over all surfaces.
    b. Sherwin Williams Sherplate PW or Duraplate UHS; 20.0 – 30.0 mils DFT
    c. Tnemec Series 20 or 22; 20.0 - 30.0 mils DFT.
5. Total DFT: 20.0 to 30.0 mils

D. Interior/Immersion, Severe Exposure to H2S:
1. System Type: Modified Epoxy.
2. Surface Preparation: White Metal Blast SSPC-SP 5 with minimum 3.0-mil profile.
3. Primer/Finish (One or More Coats):
    a. Sherwin Williams Duraplate 6100 or Novaplate 325; 30.0 – 40.0 mils DFT
    b. Tnemec Series 435 Perma-Glaze; 30.0 to 36.0 mils DFT.
4. Total DFT: 30.0 to 36.0 mils.

DRAFT

E. Marginally Prepared Surfaces (Maintenance, Non-Immersion, Interior):
1. System Type: Mastic epoxy, solvent or water based.
2. Surface Preparation: In accordance with manufacturer's instructions.
3. Primer:
   a. Sherwin Williams Macropoxy 646; 4 – 8 mils DFT. M646 100 for Low VOC
   b. Tnemec Series 27 WB Typoxy 4.0 to 6.0 mils DFT.
4. Finish Coat:
   a. Sherwin Williams Macropoxy 646; 4 – 8 mils DFT. M646 100 for Low VOC
   b. Tnemec Series 27 WB Typoxy 4.0 to 6.0 mils DFT.
5. Total DFT: 8.0 to 12.0 mils.

F. Marginally Prepared Surfaces (Maintenance, Non-Immersion, Exterior):
1. System Type: Mastic Epoxy/Polyurethane.
2. Surface Preparation: In accordance with manufacturer's instructions.
3. Primer:
   a. Sherwin Williams Macropoxy 646; 4 – 8 mils DFT. M646 100 for Low VOC
   b. Tnemec Series 27 WB Typoxy 4.0 to 6.0 mils DFT.
4. Finish Coat (Exterior):
   a. Sherwin Williams Hi Solids Polyurethane; 3.0 – 5.0 mils DFT; 250 or 100 for Low VOC
   b. Series 1075 Endura-Shield II; 2.5 to 3.5 mils. DFT 1095 for Low VOC
5. Total DFT: 6.5 to 9.5 mils.

G. Below Ground Pipe (Heat Resistant to 375°F and Corrosion Resistant):
1. System Type: Moisture Cure Urethane Zinc Rich Primer/Inorganic Hybrid water borne Epoxy
2. Surface Preparation: Near White Metal Blast SSPC-SP-10 with an angular anchor profile of 1-2 mils.
3. Primer:
   a. Sherwin Williams Corothane Galvapac 2K; 3.0 – 5.0 mils DFT. 100 for low VOC.
   b. Tnemec Series 90E-92 Tneme Zinc; 2.5 to 3.5 mils DFT.
4. Intermediate Coat:
   a. Sherwin Williams N/A
   b. Tnemec Series 1224 Epoxoline WB @ 4.0 – 8.0 mils DFT
5. Finish Coat:
   a. Sherwin Williams Sherglass FF; 8.0 - 16.0 mils DFT.
   b. Series 1224 Epoxoline WB; 4.0 – 8.0 mils DFT
6. Total DFT: 10.5 to 19.5 mils.

Or

1. System Type: Reinforced Novolac Epoxy
2. Surface Preparation: Near White Metal Blast SSPC-SP-10 with an angular anchor profile of 1-2 mils.
3. Primer:
   a. Sherwin Williams Epo Phen HT Coating; 7.0 - 9.0 mils DFT.
4. Finish Coat:
   a. Sherwin Williams Epo Phen HT Coating; 7.0 - 9.0 mils. DFT
5. Total DFT: 14.0 to 18.0 mils.

DRAFT

2.02 COATING SYSTEMS FOR FACTORY PRIMED STEEL - DOORS, FRAMES, AND MISCELLANEOUS EQUIPMENT

A. Interior Exposed:
1. System Type: Acrylic
2. Surface Preparation: Clean and dry
3. Primer: Factory primed
4. Field Primer:
   a. Sherwin Williams ProCryl Universal Primer; 2.0 - 4.0 mils DFT
   b. Tnemec Series 115 Uni Bond DF; 2.0 to 3.0 mils DFT.
5. Finish Coat:
   a. Sherwin Williams Shercryl HPA; 2.0 – 4.0 mils DFT. Pro Industrial Acrylic for low VOC.
   b. Tnemec Series 1029 Enduratone; 2.0 - 3.0 mils. DFT
6. Total DFT: 4.0 to 6.0 mils (on top of shop primer).

B. Exterior Exposed:
1. System Type: Inorganic Hybrid Water Based Epoxy/Polyurethane
2. Surface Preparation: Clean and dry.
3. Primer: Factory primed.
4. Field Primer:
   a. Sherwin Williams Pro Industrial WB Cat Epoxy B73; 3.0 – 5.0 mils DFT
   b. Tnemec Series 27 Typoxy WB; 3.0 - 5.0 mils DFT.
5. Finish Coat:
   a. Sherwin Williams Pro Industrial WB Acrolon 100 B65; 2.0 – 4.0 mils DFT.
   b. Tnemec Series 1075 Endura-Shield II; 2.5 - 3.5 mils. DFT 1095 for Low VOC
6. Total DFT: 5.5 to 8.5 mils (on top of shop primer).

2.03 COATING SYSTEMS FOR GALVANIZED STEEL AND NONFERROUS METAL - PIPE AND MISCELLANEOUS FABRICATIONS

A. Interior Exposure:
1. System Type: Acrylic
2. Surface Preparation: In accordance with manufacturer's instructions and ASTM D6386
3. Primer:
   a. Sherwin Williams ProCryl Primer; 2.0 – 3.0 mils DFT
   b. Tnemec Series 115 Uni Bond DF; 2.0 - 3.0 mils DFT
4. Finish Coat:
   a. Sherwin Williams Shercryl HPA; 2.0 – 4.0 mils DFT. Pro Industrial Acrylic for low VOC.
   b. Tnemec Series 1029 Enduratone; 2 .0 - 3 .0 mils DFT.
5. Total DFT: 4 .0 to 6 .0 mils.

B. Exterior Exposure:
1. System Type: Acrylic
2. Surface Preparation: In accordance with manufacturer's instructions and ASTM D6386
3. Primer:
   a. Sherwin Williams ProCryl Primer; 2.0 – 3.0 mils DFT
   b. Tnemec Series 115 Uni Bond DF; 2 .0 to 3 .0 mils DFT.

DRAFT

4. Finish Coat:
    a. Sherwin Williams Shercryl HPA; 2.0 – 4.0 mils DFT. Pro Industrial Acrylic for low VOC.
    b. Tnemec Series 1029 Enduratone; 2.0 to 3.0 mils. DFT
5. Total DFT: 4.0 to 6.0 mils

2.04 COATING SYSTEMS FOR DUCTILE OR CAST IRON - PIPE, PUMPS, AND VALVES

A. Interior Exposure:
1. System Type: Epoxy
2. Surface Preparation: In accordance with manufacturer's instructions
3. Primer:
    a. Sherwin Williams Macropoxy 646; 4 – 8 mils DFT. M646 100 for Low VOC
    b. Series N69 Hi-Build Epoxoline II; 4.0 to 6.0 mils DFT. L69 for Low VOC
4. Finish Coat:
    a. Sherwin Williams Macropoxy 646; 4 – 8 mils DFT. M646 100 for Low VOC
    b. Series N69 Hi-Build Epoxoline II; 4.0 - 6.0 mils DFT. L69 for Low VOC
5. Total DFT: 8.0 to 12.0 mils.

B. Exterior Exposure:
1. System Type: Epoxy/Polyurethane.
2. Surface Preparation: In accordance with manufacturer's instructions.
3. Primer:
    a. Sherwin Williams Macropoxy 646; 4 – 8 mils DFT. M646 100 for Low VOC
    b. Tnemec Series N69 Hi-Build Epoxoline II; 4.0 - 6.0 mils DFT. L69 for Low VOC
4. Finish Coat:
    a. Sherwin Williams Hi Solids Polyurethane; 3.0 – 5.0 mils DFT. 250 or 100 for low VOC.
    b. Series 1075 Endura-Shield II; 2.5 - 3.5 mils DFT. 1095 for Low VOC
5. Total DFT: 6.5 to 9.5 mils

C. Below Ground:
1. System Type: Coal tar epoxy.
2. Surface Preparation: In accordance with manufacturer's instructions.
3. Prime/Finish Coat:
    a. Sherwin Williams Targuard Coal Tar Epoxy; 16 – 32 mils DFT. 100 for low VOC.
    b. Series 46H-413 Hi-Build Tneme-Tar; 14.0 - 20.0 mils DFT. Series 27 WB Typoxy for Low VOC.
4. Total DFT: 14.0 to 20.0 mils

D. Immersion, Potable Water:
1. System Type: Epoxy.
2. Surface Preparation: In accordance with manufacturer's instructions.
3. Primer:
    a. Sherwin Williams Macropoxy 5500; 4.0 – 6.0 mils DFT
    b. Series N140 Pota Pox Plus; 4.0 to 6.0 mils DFT. L140 for Low VOC
4. Intermediate Coat:
    a. Sherwin Williams Macropoxy 5500; 4.0 – 6.0 mils DFT
    b. Series N140 Pota Pox Plus; 4.0 - 6.0 mils DFT. L140 for Low VOC.
5. Finish Coat:
    a. Sherwin Williams Macropoxy 5500; 4.0 – 6.0 mils DFT
    b. N69 Hi-Build Epoxoline II; 4.0 - 6.0 mils DFT. L140 for Low VOC
6. Total DFT: 12.0 to 18.0 mils

DRAFT

Or

1. System Type: Ultra High Solids Epoxy.
2. Surface Preparation: Abrasive blast clean per SSPC-SP10, 2.5 – 4 mil profile
3. Primer:
   a. For stripe coat application to all welds and irregular surfaces.
   b. Sherwin Williams Macropoxy 5500; 4.0 – 6.0 mils DFT
   c. Tnemec Series N140 Pota Pox Plus; 4.0 to 6.0 mils DFT. L140 for Low VOC
4. Finish Coat:
   a. For finish coat application over all surfaces.
   b. Sherwin Williams Sherplate PW or Duraplate UHS; 20.0 – 30.0 mils DFT
   c. Tnemec Series 20 or 22; 20.0 - 30.0 mils DFT.
5. Total DFT: 20.0 to 30.0 mils

E. Immersion, Severe Exposure to H2S:

1. System type: Modified Polyamine Ceramic Epoxy
2. Surface preparation: In accordance with manufacturer's recommendation.
3. Primer/Finish (One or more coats):
   a. Sherwin Williams Duraplate 6100 or Novaplate 325; 30 – 40 mils DFT
   b. Tnemec Series 431 Perma Glaze; 30-40 mils DFT
4. Total DFT: 30-40 mils.

2.05 COATING SYSTEMS FOR PVC

A. Interior Exposure:

1. System Type: Epoxy.
2. Surface Preparation: Scarify
3. Primer:
   a. Sherwin Williams Macropoxy 646; 4.0 – 8.0 mils DFT. M646 100 for Low VOC
   b. Series N69 Hi-Build Epoxoline II; 4.0 to 6.0 mils DFT. L69 for Low VOC
4. Finish Coat:
   a. Sherwin Williams Macropoxy 646; 4.0 – 8.0 mils DFT. M646 100 for Low VOC
   b. Tnemec Series N69 Hi-Build Epoxoline II; 4.0 to 6.0 mils DFT. L69 for Low VOC
5. Total DFT: 8.0 to 12.0 mils.

B. Exterior Exposure:

1. System Type: Epoxy/Polyurethane.
2. Surface Preparation: Scarify.
3. Primer:
   a. Sherwin Williams Macropoxy 646; 4.0 – 8.0 mils DFT. M646 100 for Low VOC
   b. Series N69 Hi-Build Epoxoline II; 4.0 - 6.0 mils DFT. L69 for Low VOC
4. Finish Coat:
   a. Sherwin Williams Hi Solids Polyurethane; 3.0 – 5.0 mils DFT. 250 or 100 for low VOC.
   b. Series 1075 Endura-Shield II; 2.5 to 3.5 mils. DFT. 1095 for Low VOC
5. Coating provided shall contain UV inhibitor.

DRAFT

2.06 COATING SYSTEMS FOR PRECAST CONCRETE AND CAST-IN-PLACE CONCRETE (REQUIRE WHERE INDICATED IN PLANS)

A. Exterior Exposed:
   1. System Type: Acrylic
   2. Surface Preparation: SSPC-SP 13/NACE 6. Clean and dry
   3. Primer:
      a. Sherwin Williams Loxon XP; 4.0 – 8.0 mils DFT
      b. Tnemec Series 180 W.B. Tneme-Crete; 4.0 to 8.0 mils DFT.
   4. Finish Coat:
      a. Sherwin Williams Loxon XP; 4.0 – 8.0 mils DFT
      b. Tnemec Series 180 W.B. Tneme-Crete; 4.0 to 8.0 mils DFT.
   5. Total DFT: 8.0 to 16.0 mils.

B. Below Grade:
   1. System Type: Coal tar
   2. Surface Preparation: SSPC-SP 13/NACE 6. Clean and dry
   3. Primer:
      a. Sherwin Williams Targuard Coal Tar Epoxy; 8.0 – 16.0 mils DFT. 100 for low VOC
      b. Series 46-465 H.B. Tnemecol. DFT 8.0 to 12.0 mils.
   4. Finish Coat:
      a. Sherwin Williams Targuard Coal Tar Epoxy; 8.0 – 16.0 mils DFT. 100 for low VOC
      b. Tnemec Series 46-465 H.B. Tnemecol. DFT 8.0 to 12.0 mils.
   5. Total DFT: 16.0 to 24.0 mils.

C. Interior Exposed:
   1. System Type: Epoxy
   2. Surface Preparation: SSPC-SP 13/NACE 6. Abrasive Blast Cleaning
   3. Patching:
      a. Sherwin Williams Duraplate 2300 (as needed)
      b. Series 218 MortarClad (as needed)
   4. Primer:
      a. Sherwin Williams Macropoxy 646; 4.0 – 8.0 mils DFT. M646 100 for Low VOC
      b. Tnemec Series N69 Hi-Build Epoxoline II; 4.0 to 6.0 mils DFT. L69 for Low VOC
   5. Finish Coat:
      a. Sherwin Williams Macropoxy 646; 4.0 – 8.0 mils DFT. M646 100 for Low VOC
      b. Tnemec Series N69 Hi-Build Epoxoline II; 4.0 to 6.0 mils DFT. L69 for Low VOC
   6. Total DFT: 8.0 to 12.0 mils.

D. Severe Service – Immersion, H2S Exposure or Chemical Corrosion Protection (Light to Heavy Abrasion):
   1. System I (H2S less than 50 ppm, Light Abrasion)
      a. System Type: Modified Epoxy.
      b. Surface Preparation: SSPC-SP 13/NACE 6. Abrasive blast clean to ICRI 310.2, CSP 4 – 6. Surfacing and Patching:
         1) Sherwin Williams Duraplate 2300; 1/16 inch DFT
         2) Tnemec Series 218 MortarClad; 1/16 inch DFT (nominal 62.5 mils)
      c. Primer/Finish (One or More Coats):
         1) Sherwin Williams Duraplate 6100; 1/16 inch DFT
         2) Tnemec Series 435 Perma-Glaze; 20.0 to 30.0 mils DFT

DRAFT

2. System II (H2S less than 100 ppm, Moderate to Heavy Abrasion)
    a. System Type: Modified Epoxy Mortar
    b. Surface Preparation: SSPC-SP 13/NACE 6. Abrasive blast clean to ICRI 310.2, CSP 4 – 6. Patching:
        1) Sherwin Williams Duraplate 2300; As needed
        2) Tnemec Series 218 MortarClad; As Needed
    c. Series 434 Perma-Shield H2S; 1/8 inch DFT (nominal 125 mils)
3. System III (H2S more than 100 ppm, Moderate to Heavy Abrasion)
    a. System Type: Modified Epoxy Mortar.
    b. Surface Preparation: SSPC-SP 13/NACE 6. Abrasive blast clean to ICRI 310.2, CSP 4 – 6. Patching:
        1) Sherwin Williams Duraplate 2300
        2) Tnemec Series 218 MortarClad; As Needed
    c. Mortar:
        1) Sherwin Williams Duraplate 6100; 1/8 inch DFT (nominal 125 mils)
        2) Series 434 Perma-Shield H2S; 1/8 inch DFT (nominal 125 mils)
    d. Finish (One or More Coats):
        1) Sherwin Williams Duraplate 6100; 20.0 – 30.0 mils DFT
        2) Series 435 Perma-Glaze; 20.0 - 30.0 mils DFT
4. System IV (H2S more than 100 ppm, Moderate to Heavy Abrasion)
    a. System Type: Semi Structural Epoxy
    b. Surface Preparation: SSPC-SP 13/NACE 6. Abrasive blast clean to ICRI 310.2, CSP 4 – 6
    c. Surfacing:
        1) Sherwin Williams Duraplate 2300, ¼ inch DFT nominal 250 mils
    d. Finish (One or More Coats):
        1) Sherwin Williams Duraplate 6100; 125.0 – 150.0 mils DFT
5. Chemical Corrosion Protective Coating
    a. Surface Preparation: SSPC-SP 13/NACE 6. Abrasive blast clean to ICRI 310.2, CSP 4 – 6.
    b. Primer:
        1) Sherwin Williams Duraplate 235 PW, Phenalkamine Epoxy; 1-coat @ 4-8 mils DFT
    c. Finish (One or More Coats):
        1) Sherflex Elastomeric Urethane; Aromatic Hybrid Polyurethane; 1-coat @ 60-80 mils DFT

2.07 COATING SYSTEMS FOR CONCRETE BLOCK MASONRY

A. Exposed, indoors and outdoors, as shown.
    1. System: Acrylic, Concrete: High molecular weight acrylic coating material shall have a minimum solids content of 35 percent by volume. Prime coat shall be an acrylic filler and sealer for concrete surfaces.
        a. Prime coat (Filler/sealer), Tnemec 180 Tneme-Crete, Sanitile 100, or ENGINEER-approved equal.
        b. Finish coats (2 or more, DFT = 3 mils), Tnemec 180 Tneme- Crete, Carbocrylic 3359 MC (DFT = 6 mils) or ENGINEER-approved equal.

DRAFT

B. Submerged in wastewater, including all vertical masonry surfaces above waterline as shown.
   1. System: Epoxy Mortar: High-build, 3-componet amine cured epoxy mortar, shall have a solids content of 100 percent by volume, suitable for long-term immersion and atmospheric exposure to wastewater. Filler-resurfacer compound shall be a 3-component epoxy cementitious thin overlay material used to fill voids and rough areas and must feather-edge capable. Epoxy Glaze (finish) coat shall be a 100-percent-solids epoxy suitable for long-term immersion and atmospheric exposure to wastewater.
      a. Filler/Resurfacre thin Overlay (Thickness = minimum 1/16”), Tnemec 218 MortarClad, or ENGINEER-approved equal.
      b. Epoxy Mortar (DFT = 125 mils) Tnemec 434 Perma-Shield, or ENGINEER-approved equal.
      c. Finish coat (DFT = 15-20 mils), Tnemec 435 Perma-Glaze, or ENGINEER-approved equal.

C. Exterior surfaces, above grade.
   1. System: Waterproofing: Two coats of a clear, non-staining, silane-modified-siloxane masonry waterproofing material. The waterproofing system after application shall be provided with not less than a five-year warranty on the performance of the product.
      a. Where EPA Allows Solvents: Chemstop, "WB Heavy Duty”; Rainguard, "XS", Chemprobe / Prime a Pell H2O; or ENGINEER-approved equal.
      b. Where EPA Prohibits Solvents: Chemstop, "WB Regular / Heavy Duty"; Rainguard's "Blok-Lok"; Rainproof's "Chem-Trete #45", Chemprobe / Prime A Pell H2O; or ENGINEER-approved equal.
   2. Surfaces shall be cleaned with a chemical (approved by waterproofing manufacturer) cleaner and power wash. Surfaces shall be clean and dry before application of waterproofing. Method and rate of application shall be in accordance with manufacturer's published instructions. A manufacturer's representative shall be present during applications if necessary for warranty.

PART 3 – EXECUTION

3.01 INSPECTION

A. Examine surfaces scheduled to receive coating for conditions that will adversely affect application, permanence, or quality of work and which cannot be put into an acceptable condition through surface preparation.

B. Do not proceed with surface preparation or coating application until conditions are suitable.

3.02 ACCEPTANCE OF SURFACES

A. The commencement of coating work in any area or space will be construed as acceptance of the surface as being satisfactory.

3.03 PREPARATION AND APPLICATION

A. Preparation and application shall be in accordance with coating systems (PART 2).

3.04 FINAL INSPECTION

A. Protect all coated surfaces against damage until the date of final acceptance.

B. Conduct a final inspection of all coating work and recoat or retouch any areas or surfaces found deficient in complying with these Specifications.

DRAFT

3.05 PIPING IDENTIFICATION AND COLOR CODE

A. All piping identification and color coding shall follow the ANSI/ASME A13.1 Labeling guidelines, unless noted otherwise in the Contract Documents.

END OF SECTION

DRAFT

SECTION 10 7316.23 – FABRIC CANOPIES

PART 1 – GENERAL

1.01 SCOPE – Supply all labor, materials, equipment, and incidentals required to install and place into operation the fine and coarse screening system as shown on the Drawings and as specified herein.

1.02 REFERENCE STANDARDS – The properties of all materials, design, fabrication, and performance of the equipment to be furnished under this section shall be in accordance with the latest issue of applicable standard specifications. The governing authorities of these standards are listed below.

A. ACI, American Concrete Institute

B. AISC, American Institute of Steel Construction

C. ASCE, American Society of Civil Engineers

D. ASTM, American Society of Testing and Materials

E. AWS, American Welding Society

F. CRSI, Concrete Reinforcing Steel Institute

G. IBC, International Building Code

H. NFPA, National Fire Protection Association

1.03 SUBMITTALS – Submittals shall be provided to the ENGINEER that includes all the following information:

A. Certified shop drawings showing all important details of construction, dimensions, and anchor bolt locations.

B. Descriptive product literature.

C. Schematic support and foundation setup.

D. A complete bill of materials of all components.

1.04 DESIGN REQUIREMENTS

A. Design Load

1. The fabric canopy shall withstand 115 MPH under the 3-Sec. Gust, RISK CATEGORY II & EXPOSURE according to the basic wind speed maps of American Society of Civil Engineers (ASCE) 7-16. The wind load is equal to the allowable stress design wind speed of 90 MPH set by ASCE 7-05 and International Building Code (IBC) 2018 Equation 16-33.
2. The live load of the fabric canopy is 5 psf, and the snow load is 5 psf.

PART 2 – PRODUCTS

2.01 MANUFACTURER

A. The structure's materials are provided by USA Shade & Fabric Structures, Texas or ENGINEER-approved equal.

B. If submitted structure requires arrangement differing from that specified, prepare and submit for review complete structural, mechanical, and materials lists showing all necessary changes. Any changes are at no additional compensation and the Manufacturer will be responsible for all engineering costs of redesign by the ENGINEER, if necessary.

DRAFT

2.02 COMPONENTS

A. Structural Steel

1. All structural steel members in the project shall be cold-formed as hollow structural sections (HSS) per American Society of Testing Materials (ASTM) A500 GRADE C. The mechanical properties for square and rectangular HSS shall be 50,000 psi yield and 62,000 PSI tensile unless specified. The mechanical properties for round pipes shall be 46,000 psi yield and 62,000 psi tensile unless specified.
2. All galvanized steel tube products shall be manufactured per ASTM A500. The mechanical properties for galvanized round tubes shall be 45,000 psi yield and 48,000 psi tensile unless specified.
3. All plates shall comply with ASTM A572 Grade 50.
4. Structural steel needs to be detailed, fabricated, and erected per American Institute of Steel Construction (AISC) specifications.
5. All shop welds shall meet American Welding Society (AWS) D1.1 specifications during execution. All welds shall be continuous if length is not specified, noted, or shown on the drawing. All welds shall develop the full strength of the weaker member and be made using E70XX .045 wire.
6. All shop connections shall be welded unless specified. Field connections will be indicated on the drawings when required. All fillet welds shall be a minimum of 3/16" unless specified. Field welds are NOT ALLOWED.
7. All high strength bots shall comply with ASTM A325 Type 1 or A490 Type 1. All nuts need to comply with ASTM A563DH. All washers need to comply with ASTM F436.
8. All high strength bolds need to be tightened to a snug tight condition.
9. All stainless-steel bolts/studs shall comply with ASTM F593, Alloy Group 1 or 2. All stainless-steel nuts shall comply with ASTM F594 Alloy Group 1 or 2.

B. Fabric Specification

1. Fabric shall be made of a high-density polyethylene with ultraviolet additives, with monofilament and tape construction (giving a stable material and Rachel knitted to prevent unraveling if cut).
2. Fabric specifications shall be as follows:

	SOLID COLORS	STRIPE COLORS
Tear Strength	Warp 220.4622 lb Weft 462.9707 lb	Warp 182.9836 lb Weft 401.2413 lb
Burst Strength	37.7098 psia	33.0686 psia
Fading	Minimum fading after 5 years	
Life Expectancy	A minimum of 8 years of continuous exposure to the sun	

3. Fabric needs to pass the fire tests National Fire Protection Association (NFPA) 701 Test 2 and ASTM E84.
4. Thread-PTFE (Teflon) shall meet the following specifications: high strength, low shrinkage, wide temperature range, flex and abrasion resistance, and ultraviolet radiation immunity. Lockstitch is 1200 denier, and chainstitch is 2400 denier.

C. Aircraft Cable

1. Wire rope item 15A (60 ft of ½" galvanized steel cable) and 15B (45 ft of ½" steel galvanized cable) shall be 6x19 strand core wire rope with a breaking strength value of 20,500 lbs.
2. Wire rope item 15C (50 ft of 3/8" galvanized Keder cable) and 15D (6 ft of 3/8" Keder galvanized cable) shall be 7 x 19 strand core wire rope with a breaking strength value

DRAFT

of 14,400 lbs.

3. Cables shall be fed through the fabric sleeves around the perimeter of the canopy and tension until the fabric panels, which are purposely designed undersized, reach a taunt appearance. Retighten during maintenance to minimize the long-term cable sag.

D. Reinforced Concrete Notes

1. Concrete work shall be executed in accordance with the structural concrete ACI 301 and building code ACI 318. Concrete specifications are as follows: 28-day strength of 2500 psi, slump 3-5, Portland cement conform to ASTM C150, and aggregate conform to ASTM C33.
2. All reinforcement steel shall meet ASTM A615 Grade 60 and be detailed, fabricated, and placed to meet structural concrete ACI 301, ACI detailing manual, and CRSI manual of standard practice.
3. All anchor bolts set in new concrete shall comply with ASTM F1554 Grade 55 (galvanized).
4. All non-shrink grout shall have a minimum 28-day compressive strength of 5,000 psi and comply with ASTM C109, ASTM C939, ASTM C1090, and ASTM C1107 when applicable.
5. Soil parameters for footing analysis shall meet the IBC Table 1806.2, Class 5 for medium dense sand/sandy gravel.

2.03 SURFACE PREPARATION AND PAINTING

A. All steel tubing shall be coated with in-line electroplating coat process three times for rust protection. The internal coating shall be zinc and organic coatings to prevent corrosion as manufactured by Allied Tube & Conduit or approved equal.

B. All structural steels need to be painted with one-shot coat, 2.5 to 3.5 mils thick minimum. The coating is based on polyester TGIC as a weather-resistant power coating. Proper treatment and drying is required before coating to achieve optimum adhesion. Polyester TGIC specifications shall be pencil hardness per ASTM D3363, humidity ASTM D2247, and solvent resistance (PCI Method) – 50 DBL Rubs SL. Softness

PART 3 – EXECUTION

3.01 WARRANTY

A. The structural integrity of all supplied steel shall be warranted for ten years. If assembly is provided by the Manufacturer workmanship covering the labor for the removal, assembly, and cost of shipping will be covered for one year. All steel surface finishes are warranted for one year.

B. Shadesure™, Colourshade® FR, Extreme 32™, Commercial 95™, SaFRshade™ and Monotec 370™ fabrics all carry a ten-year limited manufacturer's warranty against failure from significant fading, deterioration, breakdown, outdoor heat, cold, or discoloration. Should the fabric need to be replaced under the warranty, the Manufacturer shall manufacture and ship a new replacement fabric at no charge for the first six years, thereafter pro-rated at 20% per year over the remaining four years.

C. The following are exceptions to the preceding warranty terms:

1. Shadesure™ fabrics in Red, Yellow, Atomic Orange, Electric Purple, Zesty Lime, Cinnamon, Olive, and Mulberry shall carry a five-year pro-rated warranty.
2. Fabrics attached to Coolbrella structures shall carry a three-year warranty.
3. Individual fabric tops measuring greater than 40' in length shall be covered by a non-prorated five-year warranty.
4. Precontraint 502™ waterproof material shall carry to an eight-year pro-rated warranty.

D. Sewing thread shall be warranted for ten years.

DRAFT

3.02 DELIVERY AND STORAGE

A. The fabric canopy shall be appropriately crafted and delivered to protect against damage during shipment.

B. An authorized representative of the Contractor shall inspect the fabric canopy on delivery to the jobsite and shall report any damage or missing components to the Manufacturer and the ENGINEER within 72 hours of receipt of the shipment.

3.03 INSTALLATION**:** The installation of the structure shall be as indicated on the drawings and in strict accordance with the Manufacturer's instructions and recommendations.

3.04 NOTICE

A. Fabric top shall be removed if snow exceeding 5 psf is anticipated.

B. Fabric top shall be removed if winds exceeding 115 mph are anticipated.

END OF SECTION

DRAFT

SECTION 13 4613 – LIGHTNING PROTECTION FOR STRUCTURES

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes: Air terminals, interconnecting conductors, grounding, and bonding for lightning protection.

1.02 SYSTEM DESCRIPTION

A. Description: Conductor system protecting for canopy and tank structures.

1.03 SUBMITTALS

A. Shop Drawings: Indicate layout of air terminals, grounding electrodes, and bonding connections to structure and other metal objects. Include terminal, electrode, and conductor sizes, and connection and termination details.

B. Product Data: Show dimensions and materials of each component, and include indication of listing according to UL 96.

C. Test Reports: Indicate procedures and results for specified factory and field testing and inspection.

D. Manufacturer's Certificate: Products meet or exceed specified requirements.

E. Certificate of Compliance: From inspector indicating approval of lightning protection systems.

1.04 CLOSEOUT SUBMITTALS

A. Project Record Documents: Record actual locations of air terminals, grounding electrodes, bonding connections, and routing of system conductors.

1.05 QUALITY ASSURANCE

A. Perform Work according to NFPA 780.

B. Perform Work according to UL 96A.

C. Perform Work according to LPI-175.

D. Manufacturer: Company specializing in lightning protection equipment with three years' experience and member of Lightning Protection Institute.

E. Installer: Authorized installer of manufacturer with three years' experience.

F. Inspection Agency: UL Lightning Protection Institute, Inc. (LPI) Electrical Testing Laboratories, Inc., or ENGINEER-approved equal.

1.06 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication, and indicate on Shop Drawings.

1.07 COORDINATION

A. Coordinate Work with roofing and exterior and interior finish installations.

DRAFT

PART 2 – PRODUCTS

2.01 COMPONENTS

A. Manufacturers:
   1. ABB, Eaton, Erico, or ENGINEER-approved equal.

B. Product Listing: UL 96.

C. Air Terminals:
   1. Material: Copper
   2. Configuration: Solid
   3. Use adhesive base for single-ply roof installations
   4. Air Terminal for Chimney: Lead-coated copper
   5. Decorations: Ball
   6. Grounding Rods: Solid copper
   7. Ground Plate: Copper
   8. Conductors:
      a. Material: Copper
      b. Configuration: Cable

D. Connectors and Splicers: Bronze

PART 3 – EXECUTION

3.01 EXISTING WORK

A. Remove exposed abandoned air terminals, interconnecting cable, and grounding electrodes, and other lightning protection components. Cut cable flush with walls, floors, and roof; patch surfaces.

B. Maintain access to existing grounding and bonding connections, and other installations remaining active and requiring access. Modify installation or install access panel.

C. Extend existing lightning protection installations using materials and methods compatible with existing installations and as specified.

D. Clean and repair existing remaining or reinstalled lightning protection components.

3.02 INSTALLATION

A. Install according to NFPA 780, UL 96A, and LPI-175.

B. Connect conductors using exothermic welding process. Protect adjacent construction elements and finishes from damage.

C. Conceal interior conductors within building finishes. Conceal exterior conductors where practical.

D. Bond exterior metal bodies on structure to lightning protection system.

3.03 FIELD QUALITY CONTROL

A. Perform inspection and testing according to UL 96A.

END OF SECTION

DRAFT

SECTION 22 0529 – HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide pipe supports, hangers, guides, and anchors, complete, in accordance with these Specifications and the Contract Documents.

B. American Iron and Steel (AIS) requirement applies to this Section. All iron and steel products used in this project must be produced in the United States.

1.02 SUBMITTALS

A. Submittals shall be in accordance with Section 01 3300 – Submittal Procedures.

B. Shop Drawings shall include the following information:
   1. Drawings of pipe supports, hangers, anchors, and guides
   2. Calculations for special supports and anchors.

PART 2 – PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Code Compliance: All piping systems and pipe connections to equipment shall be properly anchored and supported to prevent undue deflection, vibration, dislocation due to line pressures, and stresses on piping, equipment, and structures. All supports and parts thereof shall conform to the requirements of ANSI/ASME B31.1 - Power Piping, except as supplemented or modified in the tables within this Specification. Supports for plumbing piping shall be in accordance with the latest edition of the applicable plumbing code or local administration requirements.

B. Structural Members: Wherever possible, pipes shall be supported from structural members. Where it is necessary to frame structural members between existing members, such supplementary members shall be provided. All supplementary members shall be in accordance with the requirements of the building code and the American Institute of Steel Construction.

C. Pipe Hangers: Pipe hangers shall be capable of supporting the pipe in all conditions of operation, allowing free expansion and contraction of the piping, and preventing excessive stress on equipment. All hangers shall have a means of vertical adjustment after erection. Hangers shall be designed to prevent becoming disengaged by any movement of the supported pipe. Hangers subject to shock or thrust imposed by the actuation of safety valves, shall include hydraulic shock suppressors. All hanger rods shall be subject to tensile loading only.

D. Hangers Subject to Horizontal Movements: At hanger locations where lateral or axial movement is anticipated, suitable linkage shall be provided to permit such movement. Where horizontal pipe movement is greater than 1/2-inch, or where the hanger rod deflection from the vertical is greater than 4 degrees from the cold to the hot position of the pipe, the hanger rod and structural attachment shall be offset in such a manner that the rod is vertical in the hot position.

E. Spring-Type Hangers: Spring-type pipe hangers shall be provided for piping subject to vibration or vertical expansion and contraction, such as engine exhausts and similar piping. All spring-type hangers shall be sized to the manufacturer's printed recommendations and the loading conditions encountered. Variable spring supports shall be provided with means to limit misalignment, buckling, eccentric loading, or to prevent overstressing of the spring, and with means to indicate at all times the

compression of the spring. Supports shall be capable of accommodating at least 4 times the maximum travel due to thermal expansion.

F. Thermal Expansion: Wherever expansion and contraction of piping is expected, a sufficient number of expansion loops or joints shall be provided, together with the necessary rolling or sliding supports, anchors, guides, pivots, and restraints permitting the piping to expand and contract freely in directions away from the anchored points. All components shall be structurally suitable to withstand all loads imposed.

G. Heat Transmission: Supports, hangers, anchors, and guides shall be so designed and insulated, that excessive heat will not be transmitted to the structure or to other equipment.

H. Riser Supports: Where practical, risers shall be supported on each floor with riser clamps and lugs, independent of the connected horizontal piping.

I. Freestanding Piping: Free-standing pipe connections to equipment such as chemical feeders and pumps shall be firmly attached to steel frames fabricated from angles, channels, or I-beams anchored to the structure. Exterior, free-standing overhead piping shall be supported on fabricated pipe stands consisting of pipe columns anchored to concrete footings, with horizontal, welded steel angles and U-bolts or clamps securing the pipes.

J. Materials of Construction:
   1. General: All pipe support assemblies, including framing, hardware, and anchors, shall be steel construction, galvanized after fabrication, unless otherwise indicated.
   2. Submerged Supports: All submerged piping, as well as piping, conduits, and equipment in hydraulic structures within 24 inches of the water level, shall be supported with support, assemblies, including framing, hardware, constructed of Type 304 stainless steel, unless otherwise indicated. All bolts and nuts shall be 316 stainless steel conforming to ASTM A193, Grade B8M, for bolts and ASTM A194, Grade 8M, for nuts.

K. Point Loads: Any meters, valves, heavy equipment, and other point loads on PVC, FRP, and other plastic pipes, shall be supported on both sides, according to manufacturer's recommendations to avoid undue pipe stresses and failures. To avoid point loads, all supports on PVC, FRP, and other plastic piping shall be equipped with extra wide pipe saddles or galvanized steel shields.

L. Noise Reduction: To reduce transmission of noise in piping systems, all copper tubes in buildings and structures shall be wrapped with a 2-inch-wide strip of rubber fabric or similar, suitable material at each pipe support, bracket, clip, or hanger.

2.02 SUPPORT SPACING

A. Supports for piping with the longitudinal axis in approximately a horizontal position shall be spaced to prevent excessive sag, bending, and shear stresses in the piping, with special consideration given where components such as flanges and valves impose concentrated loads. Pipe support spacing shall not exceed the maximum spans in the tables on the following pages. For temperatures other than ambient temperatures, or those listed, and for other piping materials or wall thicknesses, the pipe support spacings shall be modified in accordance with the pipe manufacturer's recommendations. Vertical supports shall be provided to prevent the pipe from being overstressed from the combination of all loading effects.

DRAFT

1. Support Spacing for Schedule 40 and Schedule 80 Steel Pipe:

Normal Pipe Diameter (inches)	Maximum Span (feet)
1/2	6
3/4 and 1	8
1 1/4 to 2	10
3	12
4	14
6	17
8 and 10	19
12 and 14	23
16 and 18	25
20 and greater	30

2. Support Spacing for Welded Fabricated Steel Pipe:

   The support spacing shall be designed so that the stress on the pipe does not exceed 5,000 psi. Maximum deflection of pipe shall be limited to 1/360th of the span and shall be calculated by using the formula:

   $$L = (7500tD/(32t+D))1/2$$

   where:

   t=Thickness (inches)
   D=Diameter (inches)
   L=Maximum span (feet)

3. Support Spacing for Ductile-Iron Pipe:

Normal Pipe Diameter (inches)	Maximum Span (feet)
All diameters	Two supports per pipe length or 10 feet (one of the 2 supports located at joint)

4. Support Spacing for Copper Tubing:

Normal Pipe Diameter (inches)	Maximum Span (feet)
1/2 to 1 1/2	6
2 to 4	10
6 and greater	12

5. Support Spacing for Schedule 40 or 80 PVC Pipe:

Normal Pipe Diameter (inches)	Maximum Span (at 100°F) (feet)
1/2	4
3/4	4
1	5
1 1/4	5
1 1/2	5
2	6
3	7
4	8
6	10
8	11
10	12
12	13

DRAFT

2.03 MANUFACTURED SUPPORTS

A. Stock Parts: Where not specifically indicated, designs which are generally accepted as exemplifying good engineering practice and use stock or production parts, shall be utilized wherever possible. Such parts shall be locally available, new, of best commercial quality, designed and rated for the intended purpose.

B. Manufacturers, or ENGINEER-approved equal:
   1. TOLCO Inc.
   2. Bergen-Paterson Pipesupport Corp., Woburn, MA
   3. Grinnell Corp. (Supply Sales Company), Cranston, RI
   4. NPS Products, Inc., Westborough, MA
   5. Power Piping Company, Pittsburgh, PA
   6. ZSI

2.04 COATING

A. Galvanizing: Unless otherwise indicated, all fabricated pipe supports other than stainless steel or non-ferrous supports shall be blast-cleaned after fabrication and hot-dip galvanized in accordance with ASTM A123 - Specifications for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

B. Other Coatings: Other than stainless steel or non-ferrous supports, all supports shall receive protective coatings in accordance with the requirements of applicable Sections in Division 09 – Finishes.

PART 3 – EXECUTION

3.01 INSTALLATION

A. General: All pipe supports, hangers, brackets, anchors, guides, and inserts shall be fabricated and installed in accordance with the manufacturer's printed instructions and ANSI/ASME B31.1 - Power Piping. All concrete inserts for pipe hangers and supports shall be coordinated with the formwork.

B. Appearance: Pipe supports and hangers shall be positioned to produce an orderly, neat piping system. All hanger rods shall be vertical, without offsets, unless noted otherwise. Hangers shall be adjusted to line up groups of pipes at the proper grade for drainage and venting, as close to ceilings or roofs as possible, without interference with other work.

3.02 FABRICATION

A. Quality Control: Pipe hangers and supports shall be fabricated and installed by experienced welders and fitters, using the best welding procedures available. Fabricated supports shall be neat in appearance without sharp corners, burrs, and edges.

END OF SECTION

DRAFT

SECTION 22 1000 – PLUMBING PIPING

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Furnish all drainage and vent piping, cleanouts and access panels, floor drains, hot and cold water piping, valves, piping specialties and appurtenances, supports and anchors, and plumbing and piping insulation in accordance with the Contract Documents.

B. American Iron and Steel (AIS) requirement applies to this section. All iron and steel products used in this project must be produced in the United States.

1.02 SUBMITTALS

A. Furnish submittals in accordance with Section 01 3300 – Submittal Procedures.

B. Product data to be submitted:
   1. Materials list of items proposed to be provided under this Section.
   2. Manufacturer's specifications, catalog cuts, and other data needed to prove compliance with the specified requirements.
   3. Shop Drawings and other data as required indicating method of installing and attaching equipment, except where such details are fully shown on the Drawings.

C. Sterilization Certificate: Upon completion of water line sterilization, deliver to the ENGINEER two copies of an acceptable "Certificate of Performance" for that activity.

D. Cathodic Protection:
   1. Upon completion of the work of this Section, deliver to the ENGINEER sufficient data to prove that wrapping of steel piping has been tested and meets the specified requirements.
   2. Show date of inspection, voltages used, and name and address of the inspector.

1.03 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are thoroughly trained and experience in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section.

B. Codes and Regulations:
   1. In additions to complying with the specified requirements, comply with pertinent regulations of governmental agencies having jurisdiction.
   2. In the event of conflict between or among specified requirements and pertinent regulations, the more stringent requirement will govern when so directed by the Engineer.
   3. Plumbing Code Compliance: Comply with applicable portions of the Uniform Plumbing Code pertaining to selection and installation of plumbing materials and products.

PART 2 – MATERIALS

2.01 PIPE MATERIALS

A. Provide pipes and pipe fittings complying with the applicable Sections within Division 40 – Process Integration and in accordance with the following listings:

B. Cast Iron Soil Pipe and Fittings:
   1. Service weight cast iron conforming to ASTM A74, hubless type, asphaltic coated.
   2. Joints shall be made with cast iron mechanical couplings or stainless-steel sleeves with neoprene gaskets.

DRAFT

C. Galvanized or Black Steel Pipe:
   1. 3 inches and Smaller – ASTM A120. Schedule 40, black or hot-dipped galvanized, welded, or seamless steel pipe, threaded or coupled.
   2. 4 inches and Larger – ASTM A53. Grade A or B, Schedule 40, black or hot dipped galvanized, welded, or seamless steel pipe, threaded.
   3. Fittings: FS WW-P521, 150 psi, malleable iron. Black or hot dipped galvanized ASTM A153.
   4. Unions: FS WW-U-531, Type B, black or hot dipped galvanized, Class 2, 250 psi, malleable iron, ground joint and brass seat.
   5. Sealing Paste or Tape: Teflon.
   6. Corrosion Protective Wrap: Polyvinyl chloride or Polyethylene pressure sensitive tape, 20-mil nominal thickness (one layer 20 mil or two layers 10 mil).
   7. Primer: 3M “Scotchwrap Pipe Primer.”

D. Copper Pipe and Fittings:
   1. Pipe: Underground, ANSI/ASTM B88, Type K, hard temper, seamless water tube.
   2. Fittings: ANSI/ASME B16.22. wrought copper or brass solder-joint fittings.
   3. Solder: Lead-free, silver tin-antimony solder 95-5, or tin-silver solder 96.5-3.5, 95.5, or 94-6, with mildly corrosive liquid or petroleum-based past flux containing chlorides of zinc and ammonium.

E. ABS: (Acrylonitrile Butadiene Styrene) plastic, drain, waste and vent pipe.
   1. Pipe and Fittings: ASTM D2661; ASTM F628; CSA B181.1.
   2. Solvent Cement: As recommended by the pipe manufacturer.

F. Polypropylene Drain, Waste and Vent Pipe:
   1. Flame retardant polypropylene material conforming to ASTM D2146 and flammability based on ASTM D635.
   2. Pipe shall be produced to Schedule 40 Iron Pipe size dimensional standards, including wall
   3. Fitting design shall be based upon the laying length dimensions in ANSI B16-12 for case iron screwed drainage fittings. Fitting wall thicknesses shall be measured in accordance with ASTM D2122, Section 4, and interval diameters shall be measured in accordance with ASTM D2122, Section 7.
   4. In concealed locations, joints shall be made by the electrical fusion method. In exposed or easily accessible locations, mechanical joint polypropylene fittings and joints may be used.
   5. Pipe and fittings shall be GSR Fuseal, manufactured by R & G Sloane Co., or ENGINEER-approved equal.

G. Polyvinyl Chloride (PVC):
   1. General: PVC materials for pipe and fittings shall conform to ASTM D1784, Cell Classification 12454-B. Pipe and fitting materials shall be specially formulated with sufficient UV protection additives to provide for long term outdoor exposure with no deleterious effects. Flanges shall be one-piece solid design or two-part van stone type which utilize the tapered, serrated face and full face gasket technique for joining and are compatible with ANSIN16.5 Class 150 metal flanges. Unions shall be the O-ring type having interchangeable components with true union valves for maximum system versatility.
   2. Schedule 40, 80, and 120: Pipe in accordance with ASTM D1785. Schedule 80 PVC socket type fittings shall conform to ASTM D2467. Schedule 40 PVC fittings shall conform to ASTM D2466. PVC solvent weld cement for socket connections shall meet the requirement of ASTM D2564/ Schedule 80 PVC threaded fittings shall conform to ASTM D2464.

DRAFT

2.02 TRENCH DRAINS

A. Trench Drain Channels:
   1. Trench drain channels shall be made of pre-cast polymer concrete with a top width of 6.1 inches, radiused bottoms and nominal lengths of ½ of 1 meter. All channels shall interlock with tongue and groove connections with adjoining channels. Each channel shall have horizontal anchoring ribs to mechanically lock the channel into the floor slab or pavement.
   2. Channels shall have available vertical cut outs for 4-inch or 6-inch discharge and available 4-inch or 6-inch horizontal outlet end caps. Channels shall have a built-in bottom slope of 0.6 percent.

B. Channel Grates: Channel grates shall be for heavy duty service made of Vinylester FRP or ENGINEER-approved equal. Grates should be securely locked down with built-in channel lock blocks. Locking mechanism shall be designed so as to provide an obstruction-free trench for maintenance and cleaning as well as to prevent concrete from entering channels during installation. FRP gates should comply with the Contract Documents.

C. Catch Basins: Catch basins shall be pre-cast polymer concrete with FRP grates. Any trench drains entering catch basins shall interlock fully with tongue and groove connections.

D. Joint Sealers: To prevent leakage, joints between channels, catch basin connections, etc., shall be sealed with an adhesive recommended by the manufacturer.

E. Manufacturers: Trench drains shall be as manufactured by ACO Polymer Products, Inc., Chagrin Falls, OH; Polydrain ABT, Inc., Troutman, NC; or ENGINEER-approved equal.

2.03 PIPE HANGERS

A. Water Piping:
   1. Split ring hangers with supporting rods, Grinnel Fig. 108; Elcen Fig. 10, or ENGINEER-approved equal.
   2. Semco “trisolators” or ENGINEER-approved equal.
   3. Channel mounted clamping system, Cush-A-Clamp per ZSI, or ENGINEER-approved equal.

B. Soil and Waste Piping:
   1. Variable ring hangers with supporting rods, Grinnel Fig. 108; Elcen 10, or ENGINEER-approved equal.
   2. Riser clamps at each floor and as required, Grinnell Fig. 261; Elcen Fig. 39 or ENGINEER-approved equal.
   3. Channel mounted clamping system, Cush-A-Clamp per ZSI, or ENGINEER-approved equal.

C. Gas Piping: Split ring hangers with supporting rods, Grinnel Fig. 108; Elcen Fig. 10, or ENGINEER-approved equal.

2.04 PIPE INSULATION

A. Hot and Cold Water (Exposed to Freezing Conditions): Molded fiberglass insulation jacketed with PVC jacketing. Provide.016 mil embossed aluminum weather protective jacket for outdoor application. Insulation 2-inch thick for pipe sizes less than 6-inch. Flame spread rating of 25 or less and smoke developed ratings of 50 or less per ASTM E84-89a. Manville “Micro-Lok AP”; Owens/Corning Fiberglass “SSL-11,” or ENGINEER-approved equal.

DRAFT

2.05 VALVES: Valves: Isolation valves shall be bronze valves with ends to suit pipe. Valves shall be rated for a working pressure of 150 psi.

A. Bronze Ball Valve: Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following or ENGINEER-approved equal:
      a. American Valve, Inc.
      b. Conbraco Industries, Inc.; Apollo Valves
      c. Hammond Valve
      d. Milwaukee Valve Company
      e. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
   2. Description:
      a. Standard: MSS SP-110.
      b. SWP Rating: 150 psig (1035 kPa).
      c. CWP Rating: 600 psig (4140 kPa).
      d. Body Design: Two piece
      e. Body Material: Bronze
      f. Ends: Suit to pipe
      g. Seats: PTFE or TFE
      h. Stem: Bronze
      i. Ball: Chrome-plated brass
      j. Port: Full

B. Bronze Gate Valves: Class 150, Non-Rising Stem Bronze Gate Valves:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following ENGINEER-approved equal:
      a. Hammond Valve
      b. Milwaukee Valve Company
      c. Red-White Valve Corporation
      d. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
      e. Conbraco Industries, Inc.; Apollo Valves
   2. Description:
      a. Standard: MSS SP-80, Type 1.
      b. CWP Rating: 300 psig (2070 kPa).
      c. Body Material: ASTM B62, bronze with integral seat and union-ring bonnet.
      d. Ends: Suit to pipe
      e. Stem: Bronze
      f. Disc: Solid wedge; bronze
      g. Packing: Asbestos-free
      h. Handwheel: Malleable iron (bronze, or aluminum).

2.06 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, subject to the approval of the ENGINEER.

PART 3 – EXECUTION

3.01 SURFACE CONDITIONS

A. Examine the areas and conditions under which work of this Section will be performed. Correct conditions detrimental to timely and proper completion of the Work. Do not proceed until unsatisfactory conditions are connected.

DRAFT

3.02 PLUMBING SYSTEM LAYOUT

A. Lay out the plumbing system in careful coordination with the Drawings, determining proper elevations for all components of the system and using only the minimum number of bends to produce a satisfactorily functioning system.

B. Follow the general layout shown on the Drawings (where other work may interfere, consult with ENGINEER).

C. Lay out pipes to fall within partition, wall, or roof cavities, and to not require furring other than as shown on the Drawings.

3.03 TRENCHING AND BACKFILLING

A. Perform trenching and backfilling associated with the work of this Section in strict accordance with the provisions of applicable Sections of Division 31 – Earthwork.

B. Cut bottom of trenches to grade. Make trenches 12 inches wider than the greatest dimension of the pipe.

C. Bedding and Backfilling:
   1. Install piping promptly after trenching. Keep trenches open as short a time as practicable.
   2. Under the structures, install pipes on a 6-inch bed of damp sand. Backfill the bottom of slab with damp sand.
   3. Outside of the structures, install underground piping on a 6-inch bed of damp sand. Backfill to within 12-inch of finish grade with damp sand. Backfill remainder with native soil.
   4. Don not backfill until installation has been approved and until Project Record Documents have been properly annotated.

3.04 PIPE SCHEDULE: PIPE SIZES, SCHEDULE, AND MATERIAL TO BE INSTALLED PER DRAWINGS.

A. Interior and Exterior Water Piping and Compressed Air Piping:
   1. Pipe: Underground, ANSI/ASTM B88, Type K, hard temper, seamless copper water tube. Aboveground, ANSI/ASTM B88, Type L, hard drawn, seamless copper water tube.
   2. Fittings: ANSI/ASME B16.22, wrought copper or brass solder joint fittings.
   3. Solder: Lead-free, tin-antimony solder 95-5, or tin-silver solder 96.5-3.5, 95.5-5 or 94-6.

B. Above Ground Facility Drain Piping:
   1. Sizes 3-Inch and Smaller: PVC Schedule 40/80 or standard weight galvanized steel pipe, with black or galvanized cast iron fittings, drainage pattern and screwed joints, or provide service weight cast iron soil pipe and fittings.
   2. Sizes 4-Inch and Smaller: PVC Schedule 40/80 or service weight cast iron soil pipe, conforming to ASTM A74, hubless cast iron soil pipe fittings with cast iron mechanical couplings or stainless-steel sleeves with stainless steel bands and neoprene gaskets.

C. Above Ground Chemical Waste Piping: Schedule 40 flame retardant polypropylene, GSR Fuseal, or ENGINEER-approved equal, with electrical-resistance fusion joints and fittings, except that mechanical joints may be used in exposed or easily accessible location.

DRAFT

D. Vent Piping:
   1. Above Ground: Sizes 2-½ inches and smaller; Schedule 40 PVC or galvanized steel pipe ASTM A53, welded or seamless, with black or galvanized cast iron drainage fittings. Pipe sizes 3 inches or larger: PVC or Cast-iron soil pipe and fittings as specified above.
   2. Underground: PVC or Cast-iron soil pipes and fittings.

E. Underground Facility Drain Piping: Schedule 40/80 PVC or service weight cast iron soil pipe: Conforming to ASTM A74, bell and spigot cast iron soil pipe and cast iron bell and spigot fittings or hubless cast iron pipe with cast iron mechanical couplings or stainless steel sleeves with stainless steel bands and neoprene gaskets.

F. Underground Chemical Waste Piping: Schedule 40 flame retardant polypropylene pipe with electrical-resistance fusion joints, as specified above.

G. Facility Distribution Gas Piping: Schedule 40 black steel pipe with malleable iron threaded fittings.

3.05 INSTALLATION OF PIPING

A. General:
   1. Proceed as rapidly as the facility construction will permit.
   2. Thoroughly clean items before installation. Cap pipe openings to exclude dirt until fixtures are installed and final connections have been made.
   3. Cut pipe accurately and work into place without springing of forcing, properly clearing windows, doors, and other openings. Excessive cutting or other weakening of the structures will not be permitted.
   4. Remove cutting and threading burrs before assembling piping.
   5. Do not install defective piping of fittings. Do not use pipe with threads which are chipped, stripped, or damaged.
   6. Shoe no tool marks or threads on exposed plated, polished, or enameled connections from fixtures. Tape all finished surfaces to prevent damage during construction.
   7. Make changes in directions with fittings; make changes in main sizes with eccentric reducing fittings. Unless otherwise noted, install water supply and return piping with straight side of eccentric fittings at top of the pipe.
   8. Run horizontal sanitary and storm drainage piping at uniform grade of ¼-inch per foot, unless otherwise noted. Run horizontal water piping with an adequate pitch upwards in direction of flow to allow complete drainage.
   9. Provide sufficient swing joint, ball joints, expansion loops, and devices necessary for a flexible pipeline system, whether or not shown on the Drawings.
   10. Support piping independently at pumps, coils, tanks, and similar locations, so that weight of pipe will not be supported by the equipment.
   11. Pipe the drains from pump glands, drip pans, relief valves, air vents, and similar locations, to spill over an open sight drain, floor drain, or other acceptable discharge point, and terminate with a plain and unthreaded pipe 6 inches above the drain.
   12. Securely bolt all equipment, isolators, hangers, and similar items in place.
   13. Support each item independently from other pipes. Do not use wire for hanging or strapping pipes.
   14. Provide complete dielectric isolation between ferrous and non-ferrous metals.
   15. Provide union and shut off valves suitable located to facilitate maintenance and removal of equipment and apparatus.

DRAFT

B. Trapping and Venting of Fixtures:
   1. Trap and vent all plumbing fixtures in accordance with Uniform Plumbing Code adopted by the Western Plumbing Officials Association and local plumbing codes, whether or not shown on the Drawings. Strictly adhere to any local codes. Only exceptions to the above will be those fixtures which are especially noted herein or on the Drawings to be provided with special wastes.
   2. No vent shall intersect another vent at a point less than 6 inches above extreme overflow level of highest fixture served.
   3. Take vents off top half of horizontal runs and grade so as to free vents quickly of any water or condensation.

C. Installation of Compressed Air Piping: Run compressed air piping with pitch as shown, without pockets. Provide glove valve drips at low points. All branches shall be taken off tip of mains.

D. Equipment Access:
   1. Install piping, equipment, and accessories to permit access for maintenance. Relocate items as necessary to provide such access, and without additional cost to the Owner.
   2. Provide access doors where valves, motors, or equipment requiring access to maintenance are located in walls or chases or above ceilings. Coordinate location of access doors with other trades as required.

3.06 PIPE JOINTS

A. Copper Tubing
   1. Cut square, ream cut end and remove burrs, and clean inside of female fitting to a bright finish.
      a. Apply solder flux with brush to tubing.
      b. Apply flux to fitting socket.
      c. Remove internal parts of solder-end valves prior to soldering.
      d. Assemble.
      e. Remove excess flux.
      f. Apply heat and solder. Allow joint to cool.
   2. Provide dielectric unions at points of connection of copper tubing to ferrous piping and equipment.

B. Screwed Piping:
   1. Deburr cuts
      a. Do not ream exceeding internal diameter of the pipe.
      b. Thread to requirements of ANSI B2.1.
   2. Use Teflon tape on male thread prior to cleaning for air and oil piping.

C. Leaky Joints:
   1. Remake with new material.
   2. Remove leaky section and/or fitting as directed.
   3. Do not use thread cement or sealant to tighten joint.

3.07 INSTALLATION OF POLYPROPYLENE AND PVC PIPING

A. Install in strict accordance with the pipe manufacturer’s directions.

3.08 PIPE SUPPORTS

A. Support suspended piping with clevis or trapeze hangers and rods.

DRAFT

B. Space hangers and support for horizontal steel pipes according to the following schedule:

Pipe Size	Maximum Spacing on Centers
1 ¼" and smaller	8'–0"
1 ½" to 3"	10'-0"
4" to 5"	14'-0"

C. Space hangers and supports for horizontal copper tubing according to the following schedule:

Tube Size	Maximum Spacing on Centers
1" and smaller	6'-0"
1 1/2"	7'-0"
2"	8'-0"
2 1/2"	9'-0"
3" and larger	10'-0"

D. Provide sway bracing on hangers longer than 18 inches.

E. Support vertical piping with riser clamps secured to the piping and resting on the structures. Provide at each floor unless otherwise noted.

F. Provide insulation continuous through hangers and rollers. Protect insulation by galvanized steel shields.

G. Arrange pipe supports to prevent excessive deflection, and to avoid excessive bending stress.

H. Support piping from inserts or anchors in concrete slabs. Where practical, provide the inserts under this Section and arrange for the placing per the applicable Sections of Division 03 – Concrete.

I. Hubless Piping:
1. Provide hangers on the piping at each side of, and within 6 inches of, hubless pipe coupling so the coupling will bear no weight.
2. Do not provide hangers on couplings.
3. Provide hangers adequate to maintain alignment and to prevent sagging of the pipe.
4. Make adequate provision to prevent shearing and twisting of the pipe and the joint.

3.09 SLEEVES AND OPENINGS

A. Provide sleeves in place before concrete is placed.
1. Set pipe sleeves in place before concrete is placed.
2. For un-insulated pipe, provide sleeves two pipe sizes larger than the pipe passing through, or provide a minimum of ½-inch clearance between inside and outside of the pipe.
3. For insulated pipe, provide sleeves of adequate size to accommodate the full thickness of pipe covering, with clearance for packing and caulking.

B. Caulk the space between the sleeve and pipe or pipe covering, using a noncombustible, permanently plastic, waterproof, non-staining compound which leaves a smooth finished appearance, or pack with noncombustible fiberglass packing or fiberglass rope to within ½-incn of both wall faces, and provide the waterproof compound described above.

C. Finish and Escutcheons:
1. Smooth rough edges around sleeves with plaster or spackling compound.

DRAFT

2. Provide 1-inch-wide chrome or nickel-plated escutcheons on all pipes exposed to view where passing through walls, floors, partitions, ceiling, and similar locations.
   a. Size the escutcheons to fit pipe and covering.
   b. Hold escutcheons in place with set screw.

3.10 VALVES

A. Provide valves in water, air, and gas systems. Locate and arrange so as to give complete regulation of apparatus, equipment, and fixture.

B. Provide valves in at least the following locations:
   1. In branches and/or headers of water piping serving a group of fixtures.
   2. On both sides of apparatus and equipment.
   3. For shutoff of risers and branch mains.
   4. For flushing and sterilizing the system.
   5. Where shown on Drawings.

C. Locate valves for easy accessibility and maintenance.

3.11 CONCRETE

A. Provide concreted required for the work of this Section in strict accordance with pertinent provisions of Division 03 – Concrete.

3.12 DISINFECTION OF WATER SYSTEMS

A. Disinfect water systems in accordance with the applicable Sections of Division 33 – Utilities.
   1. Perform disinfection under the Engineer's observation. Notify the ENGINEER at least 48 hours prior to start of the disinfection process.
   2. Upon completion of disinfecting, secure and submit the Certificate of Performance required under Article 1.04 of this Section, stating system capacity, disinfectant used, time and rate of disinfectant applied and resultant residuals in ppm at completion.
   3. Use disinfectant method approved by the ENGINEER.

3.13 OTHER TESTING AND ADJUSTING

A. Provide personnel and equipment, and arrange for and pay the costs of all required tests and inspections required by governmental agencies having jurisdictions.

B. Where tests show materials or workmanship to be deficient, replace or repair as necessary, and repeat the tests until the specified standards are achieved.

C. Adjust the system to optimum standards of operations.

END OF SECTION

DRAFT

SECTION 23 0000 – VENTILATING, HEATING AND AIR CONDITIONING

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide ventilating, heating, and air conditioning systems, complete and operable, in accordance with the Contract Documents.

1.02 REFERENCE SPECIFICATIONS, CODES, AND STANDARDS

A. All work and materials shall be in full accordance with the latest rules and regulations or publications of the Health and Safety Rules (Air Conditioning Systems), the local Plumbing Code, the local Building Code, and all other local codes. Nothing in the Contract Documents shall be construed to permit work in violation of the above codes, rules, and regulations. In the absence of applicable codes, the installation and workmanship shall follow the standards set by the American Society of Heating, Refrigeration and Air Conditioning.

1.03 SUBMITTALS

A. Shop Drawings: Shop drawings shall be submitted in accordance with Section 01 3300 – Submittal Procedures.

B. Equipment Numbers: Equipment is identified by assigned numbers for reference and location purposes in the Contract Documents. The appropriate equipment numbers shall be included on the Shop Drawings and on other submittals.

1.04 WARRANTY

A. Air conditioners, and all fans and blowers, shall carry the manufacturer's standard warranty, and all such warranties shall be furnished upon final acceptance of the completed systems. All reciprocating refrigerant compressors shall carry a 5-year warranty by the manufacturers.

PART 2 – PRODUCTS

2.01 GENERAL

A. Quality: All mechanisms or parts shall be amply proportioned for the stresses which may occur during operation or for any other stresses which may occur during fabrication and erection. Individual parts that are alike in all units shall be alike in workmanship, design, and materials and shall be of the manufacturer's top line, industrial-commercial grade.

B. Supports: All equipment and appurtenances shall be firmly anchored or connected to supporting members. All supports required for the proper installation of the equipment, but not forming an integral part of the building structure, shall be provided by the heating and ventilating subcontractor, unless otherwise indicated. Equipment shall be supported on restrained spring-type vibration isolators.

C. Noise/Vibration Control: The system shall be free of any objectionable vibrations and noise. Flexible connections shall be provided in all ducts and piping connections to fans, compressors, and any other vibrating equipment.

D. Electric Motors: Electric motors shall be provided in accordance with Division 26 – Electrical.

2.02 DUCTWORK AND MISCELLANEOUS ACCESSORIES

A. Construction: Sheet metal ducts and plenums shall be constructed with airtight joints and seams in accordance with ASHRAE standards and SMACNA Duct Construction Manual. All joints on concealed ducts shall be taped with pressureless tape and adhesive, except

DRAFT

welded or soldered joints. Ductwork materials shall be galvanized steel or aluminum, unless otherwise indicated. Minimum duct gauges required are as follows:

Maximum Dimension of Duct (inches)	Galvanized Steel U.S Standard Gauge	Aluminum B and S Gauge
12 and less	26	24
13 through 30	24	22
31 through 54	22	20
55 through 84	20	18

B. Supports: Supports for horizontal ducts and plenums shall be galvanized steel angles with hanger rods. Supports for vertical ducts shall be band iron strap or angle bracket type. Inlet ducts shall be amply braced to withstand maximum negative pressure.

C. Insulation: The exterior of all ductwork inside of buildings downstream of air conditioning or heating units, other than ducts located in air conditioned spaces, shall be insulated with 2-inch thick flexible glass fiber insulation with a UL-labeled vapor barrier. All joints shall be taped to provide a continuous vapor seal. The insulation shall be attached to the ducts with adhesive applied in a 50 percent coverage. Insulation also shall be secured to the bottom of rectangular ducts over 24 inches wide with mechanical fasteners spaced 12 inches on centers. Ductwork to be internally lined will not require exterior insulation.

D. Lining: The interior of supply and return ducts and plenums within 10-feet distance from fans and all ductwork exposed to the weather shall be lined. Duct lining shall be 1-inch-thick fiberglass fastened to the inside of the ducts. Fastening shall be 100 percent coverage adhesive and mechanical fasteners 12 inches on center in both directions starting approximately 6 inches from ends of insulation. All exposed edges, ends, and rough surfaces shall be painted with adhesive or taped with 3-inch canvas tape dipped in adhesive.

E. Bird Screens: Removable bird screens shall be provided on all outside air intakes and exhaust air discharges to outside air. Screens shall be secured in frames of same metal as screens. Bird screens shall be ½-inch mesh stainless steel by 14-gauge.

F. Flexible Connectors: Flexible duct connections shall be made with banded or flanged 8-oz canvas, or reinforced plastic, or equal at each point where a blower unit is connected to a duct. A minimum clearance of 3 inches between the duct and source of vibration shall be maintained.

G. Diffusers, Grilles, and Registers: All supply air registers and diffusers, return air, and exhaust grilles shall be constructed with smooth corners, flanges, and sponge rubber gaskets and material as noted on the Diffuser Schedule in the Contract Documents. All supply and return air registers and diffusers shall have individually variable blades and volume control dampers as indicated. All ceiling or duct-mounted outlets shall be off-white. Wall-mounted outlets shall be factory prime-coated. Terminals shall be Titus; Metalaire; Krueger; or ENGINEER-approved equal.

H. Acoustic Louvers: Acoustic louvers shall be provided as indicated. Acoustic louvers shall have a minimum noise reduction of 14 dB at octave band No. 3. The CONTRACTOR shall submit certified data from a laboratory substantiating the acoustical performance. Static pressure drop shall not exceed 0.100 inches W.C. at 750 fpm.

I. Acoustic louvers shall be of galvanized formed steel construction with air foil blades. Frame and blade face shall be of 16 and 18-gauge, respectively. Air-side blades shall have perforations, and blades shall be packed with 3.5 lb. density fiber glass or with inert, vermin-and moisture-proof mineral fiber for better acoustical performance. Louvers shall be flush with exterior wall, with mounting frames caulked to provide weather-tight connections. All protruding inside edges shall be provided with smooth moldings. Acoustic

DRAFT

louvers shall be Ruskin, Industrial Acoustics Company; or ENGINEER-approved equal. Coat louvers in accordance with these Specifications.

J. Turning Vanes: Square-turn elbows shall be fitted with shop-fabricated double-blade turning vanes mounted inside rails. Construction shall be of the same material as the duct work and be rigid enough to prevent vibration at high air flow.

K. Air Extractors: An air extractor shall be provided on each take-off from main supply duct adjacent to any diffuser, register, or grille where a splitter is not used. Air extractors shall be Carnes; Tuttle and Bailey or ENGINEER-approved equal. Extractors shall have synchronized steel curved blades, heavy side rails, and screw operator.

2.03 CONTROLS

A. General: All cooling, ventilating, and air conditioning equipment shall be provided with manual and automatic control systems as indicated. The exhaust fan shall be interlocked with the air conditioner to prevent fan operation while the A/C unit is operating. The exhaust fan shall be controlled from a HAND-OFF-AUTOMATIC switch and line-voltage cooling thermostat, wall-mounted. Individual exhaust fans shall have manual switches for single or 2-speed motors as indicated.

B. Thermostats: Room thermostats shall be of the modulating electric type, except where 2-position action is required. Thermostats shall be located in air-conditioned spaces and shall have a range of 40°F to 100°F. All thermostats shall have exposed adjustment dials and a thermometer on the front face. Mounting height shall be 5 feet. An insulating back shall be provided where exterior wall mounting is shown. Guards shall be provided for room thermostats installed in areas other than administrative offices or control rooms.

C. Manufacturers: Control system components and thermostats shall be as manufactured by Honeywell; Johnson Controls Company; General Controls; or ENGINEER-approved equal.

2.04 PIPING

A. Piping in air conditioning systems shall be galvanized steel in accordance with these Specifications. Equipment drains shall be of Type "K" copper tube.

2.05 FANS

A. General: Location, type, capacity, and motor horsepower shall be as indicated. Fans shall be complete with motors, variable motor bases, variable drives, safety cages, belt guards, flexible connections to supply and/or suction ducts, vibration isolators, and necessary accessories. All fans shall be suitable for continuous operation.

B. Performance: Fans shall be guaranteed to deliver the quantities of standard air against the respective static pressure without deviating by more than 5 percent. Every fan wheel, regardless of size, shall be statically and dynamically balanced, and shall be free from objectionable vibration or noises.

2.06 VENTILATION FAN

A. Ventilation fan shall be remote mount, energy conserving type, with no less than 340 cfm as certified by the Home Ventilating Institute (HVI) at 0.2” static pressure in inches water gauge and no more than 1.7 sone as rated by manufacturer at 0.2” static pressure. Power consumption shall be no greater than 100 watts and energy efficiency rating shall be no less than 3.5 cfm/watt. Housing shall be insulated to reduce condensation. Duct diameter shall be no less than 6”. Fan shall be UL listed when used with GFCI branch circuit wiring. Brackets shall be provided for joist, truss, or suspension installations.

2.07 CENTRIFUGAL EXHAUST FAN

A. Exhaust fan shall be direct mounted, direct driven, propeller type. Fan blades shall be fabricated of aluminum. Propellers shall be statically and dynamically balanced in

DRAFT

accordance with ACMA standard 204. Motors shall be continuous duty ball bearing design, permanently lubricated, heavy duty type, matched to the fan load and furnished at the specified RPM, voltage, phase, and enclosure. Motor drive frame assemblies and fan panels shall be epoxy painted steel. Drive frame assemblies shall be welded wire or formed channels and fan panels shall have pre-punched mounting holes, formed flanges, and a deep formed inlet venturi. Motor shall meet the requirements of Division 26. Fan shall be certified for air and sound performance in accordance with ACMA.

B. Performance: Fans shall be guaranteed to deliver the quantities of standard air against the respective static pressure without deviating by more than 5 percent. Every fan wheel, regardless of size, shall be statically and dynamically balanced, and shall be free from objectionable vibration or noises. Fan performances indicated in the schedule shall be minimum.

C. Isolation Damper: The dampers shall be positive seal, butterfly isolation type. The blade shall be constructed of aluminum or stainless steel depending on requirements. Blade seal shall occur when the gasket seats against the inside of the housing wall. The damper shall be all weld design. Manual actuator shall be 1/4" turn worm gear with handwheel.

D. Fan manufacturers shall be Dayton, Greenheck, Penn Ventilation or ENGINEER-approved equal. Damper manufacturers shall be Arrow, Ruskin or ENGINEER-approved equal.

2.08 AIR CONDITIONER

A. Central Air conditioning unit shall be of the packaged, rooftop design as indicated. Heating and cooling capacity (BTU requirements) shall be as indicated on the plans. All air conditioning units shall have direct expansion coils and, where indicated, gas or electric heaters; filter compartments with access door and industrial type disposable filters mounted on steel frames; mixing boxes with return air, fresh air and relief dampers; mounting frame or curb and restrained spring-type vibration isolators. All units shall be controlled from cooling room-thermostats. Unless otherwise indicated, motorized dampers shall be controlled from outside air thermostats. All outdoor air conditioners shall have heavy galvanized or prime-coated steel cabinets of weather resistant design. All drain pans shall have galvanized steel or copper drain lines connected to the nearest floor sink or drain in accordance with the applicable Plumbing Code.

1. Air conditioners shall be as manufactured by Trane, Carrier, York, Lennox, or ENGINEER-approved equal.

B. Mini-Split Air conditioners shall be a ductless split unit and shall include an indoor wall-mounted air handler and outdoor floor or wall-mounted condenser. All air conditioning units shall have electric heaters (if indicated on plans); advanced filtration, multi-speed fan, and built-in thermostat. Heating and cooling capacity (BTU requirements) shall be as indicated on the plans. All drain lines connected to the nearest floor sink or drain in accordance with the applicable Plumbing Code.

1. Mini-Split Air conditioners shall be as manufactured by Mitsubishi, Pioneer, Panasonic, or ENGINEER-approved equal.

2.09 FILTERS

A. All air handling units and air conditioners shall be provided with filter compartments. The filters shall be of the disposable, high efficiency, industrial type, set into galvanized mounting frames with fastening clips for easy removal.

DRAFT

2.10 EVAPORATIVE COOLER

A. Evaporative cooler shall provide the required CFM and operating conditions as indicated in the plans and drawings. Material of construction shall be made of noncorrosive material capable of resisting corrosion and wear caused by moisture. Units shall operate on 120 VAC with outlet plug, unless noted. Furnished with fan, motor, enclosure with evaporative pads, controls, mounting hardware, roof curb and all appurtenances as required for proper operation. Excess water is to be removed from the bottom of the unit via a drain hose. The evaporative cooling system shall be controlled by a thermostat installed in the building. Manufacturer shall be Phoenix Manufacturing, or ENGINEER-approved equal.

2.11 HEAT PUMP

A. Heat pump shall be performance certified to ISO standard 13256-1 for water loop heat pump, ground water heat pump and ground loop heat pump applications. Units shall be UL listed for safety on all models. The units shall be designed to operate with entering fluid temperature between 50°F and 110°F in cooling and temperatures between 25°F and 80°F in heating.

B. The cabinet shall be fabricated from heavy-gauge steel finished with aluminum zinc alloy for additional corrosion protection. All units shall allow sufficient service access to replace the compressor without unit removal. A duct collar shall be provided on the supply air opening. A filter rack with 1” thick disposable filters and a 1”-return air duct collar shall be provided with each unit. Units shall have a stainless steel condensate drain pan.

C. All units shall contain a sealed refrigerant circuit including a hermetic compressor, bi-directional thermal expansion valve metering device, finned tube air-to refrigerant heat exchanger, refrigerant reversing valve and service ports. Compressor shall be high efficiency rotary or scroll type, designed for heat pump duty, quiet operation, and mounted on rubber vibration isolators. Compressor motors shall be equipped with overload protection.

D. The fan shall be direct drive centrifugal forward curved type with a dynamically balanced wheel. The fan motor shall be an ECM-2 microprocessor controlled DC type motor with internal programming factory set for the specific unit and featuring soft start/stop and a delay off feature for max efficiency and quiet operation.

1. Controls and safety devices will be factory wired and mounted within the unit. Controls shall include compressor contactor, 24V transformer, reversing valve coil and solid state lock-out controller (UPM). Tre EMC motor interface board shall provide a screw type terminal block for thermostat connection, LED to indicate thermostat status and air delivery

E. Supply, return water and condensate drain connections shall be brass female pipe thread fittings and mounted flush to cabinet exterior.

F. Heat pump shall be a Geotherm Model GS as manufactured by FHP Manufacturing, Model CCW as manufactured by McQuay Infinity, or Engineer approved equal.

PART 3 – EXECUTION

3.01 GENERAL

A. Roughing-In: It shall be ascertained that all inserts, chassis, shafts, and openings are correctly located; otherwise all new openings shall be cut at no additional expense.

B. Checking: Test and make tight all work, furnish all equipment necessary to carry out the tests and thoroughly clean the system before startup.

C. System Balancing: After completion of all required work, the system, as a whole, shall be checked and balanced. System balancing shall include the following:

1. Adjusting fans, dampers, diffusers, registers, valves, and other devices so that the quantities of air, water, and steam called for on the Drawings are supplied, returned, or exhausted.
2. Measuring and recording at least once the water and air temperatures delivered through each coil on full heating and full cooling: making all necessary adjustments to obtain the required conditions.
3. Measuring and recording current on each fan and motor, and checking for proper operation of all equipment.
4. Adjusting any variable blade registers to the correct setting to obtain the design conditions.

END OF SECTION

DRAFT

SECTION 26 0126 – MAINTENANCE TESTING OF ELECTRICAL SYSTEMS

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. The CONTRACTOR shall provide testing as specified herein.

1.02 REFERENCES

A. The following is a list of standards which may be referenced in this Section:

1.03 SUBMITTALS

A. Products shall be submitted for review in accordance with these Specifications and the Contract Documents.

B. Administrative Submittals: Submit 30 days prior to performing inspections or tests:
   1. Schedule for performing inspection and tests
      a. Include notification dates for special inspections.
   2. List of references to be used for each test
   3. Sample copy of equipment and materials inspection form(s)
   4. Sample copy of individual device test form
   5. Sample copy of individual system test form

C. Quality Control Submittals: Submit within 14 days after completion of test:
   1. Test or inspection reports and certificates for each electrical item tested

D. Contract Closeout Submittals:
   1. In accordance with Operation & Maintenance requirements specified elsewhere
   2. After test of inspection reports and certificates have been reviewed by ENGINEER and returned, insert a copy of each in operation and maintenance manual.

1.04 QUALITY ASSURANCE

A. Testing Firm Qualifications:
   1. Independent 3rd party organization functioning as an unbiased testing authority.
   2. Professionally independent of manufacturers, suppliers, and installers, of electrical equipment and systems being tested.
   3. Employer of engineers and technicians regularly engaged in testing and inspecting of electrical equipment, installations, and systems.
   4. Supervising engineer accredited as Certified Electrical Test Technologist by National Institute for Certification of Engineering Technologists (NICET), or International Electrical Testing Association and having a minimum of 5 years testing experience on similar projects.
   5. Technicians certified by NICET or NETA.
   6. Assistants and apprentices assigned to project at ratio not to exceed two certified to one non-certified assistant or apprentice.
   7. Registered Professional Engineer to provide comprehensive project report outlining services performed, results of such services, recommendations, actions taken, and opinions.

DRAFT

8. In compliance with OSHA Title 29, Part 1910.7 criteria for accreditation of testing laboratories.

B. Test equipment shall have an operating accuracy equal to, or greater than, requirements established by NETA ATS. Test instrument calibration shall be in accordance with NETA ATS.

1.05 SEQUENCING AND SCHEDULING

A. Perform inspection and electrical tests after equipment has been installed and certified by equipment manufacturer's representative.

B. Perform tests with apparatus de-energized whenever feasible.

C. Inspection and electrical tests on energized equipment are to be:
1. Scheduled with OWNER and ENGINEER prior to de-energization.
2. Minimized to avoid extended period of interruption to the operating equipment.

D. Notify OWNER and ENGINEER at least 72 hours prior to performing tests on energized electrical equipment.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION

3.01 GENERAL

A. Tests specified in this Section are to be performed in accordance with the requirements of manufacturer's minimum recommendations, as identified herein, and as detailed in specific equipment specifications.

B. Tests and inspection shall establish that:
1. Electrical equipment is operational within industry and manufacturer's tolerances.
2. Installation operates as designed and intended by the equipment manufacturer.
3. Equipment is suitable for energization.
4. Installation conforms to requirements of Contract Documents and NFPA 70, NFPA 70E, and ANSI C2.

C. Perform inspection and testing in accordance with NETA ATS, industry standards, and manufacturer's recommendations.

D. Adjust mechanisms and moving parts for free mechanical movement.

E. Adjust adjustable relays and sensors to correspond to operating conditions, or as recommended by manufacturer.

F. Verify nameplate data for conformance to Contract Documents.

G. Realign and shim equipment not properly aligned and correct out of alignment, plumb, or level condition.

H. Properly anchor electrical equipment found to be inadequately anchored.

I. Tighten accessible bolted connections, including wiring connections, with calibrated torque wrench to manufacturer's recommendations, or as otherwise specified.

J. Clean contaminated surfaces with cleaning solvents as recommended by manufacturer.

K. Provide proper lubrication of applicable moving parts.

L. Inform OWNER of working clearances not in accordance with NFPA 70.

M. Investigate and repair or replace:
1. Electrical items that fail tests.

DRAFT

2. Active components not operating in accordance with manufacturer's instructions.
3. Damaged electrical equipment.

3.02 ELECTRICAL ENCLOSURES

A. Remove foreign material and moisture from enclosure interior.

B. Vacuum and wipe clean enclosure interior.

C. Remove corrosion found on metal surfaces.

D. Repair or replace, as determined by OWNER, door and panel sections having dented surfaces.

E. Repair or replace, as determined by OWNER, poor fitting doors and panel sections.

F. Repair or replace improperly operating latching, locking, or interlocking devices.

G. Replace missing or damaged hardware.

H. Finish:
1. Provide matching paint and touch up scratches and mars.
2. If required due to extensive damage, as determined by OWNER, refinish the entire assembly.

I. Replace fuses and circuit breakers that do not conform to size and type required by the Contract Documents.

J. Grout, caulk, or seal around the base of enclosures to prevent the entrance of moisture, dust, and rodents.

3.03 DRY TYPE TRANSFORMERS

A. Visual and Mechanical inspection:
1. Physical and insulator damage
2. Proper winding connections
3. Bolt torque level in accordance with most recent publication of NETA ATS, unless otherwise specified by manufacturer.
4. Defective wiring
5. Removal of shipping brackets, fixtures, or bracing
6. Free and properly installed resilient mounts
7. Cleanliness and improper blockage of ventilation passages
8. Verify that tap-changer is set at correct ratio for rated output voltage under normal operating conditions.
9. Verify proper secondary voltage phase-to-phase and phase-to-ground after energization and prior to loading.

B. Electrical Tests:
1. Insulation Resistance Tests:
   a. Applied megohmmeter in accordance with most recent publication of NETA ATS, for each:
      1) Winding-to-winding
      2) Winding-to-ground
   b. 10-minute test duration with resistances tabulated at 30 seconds, 1 minute, and 10 minutes.
   c. Results temperature corrected in accordance with most recent publication of NETA ATS.
   d. Temperature corrected insulation resistance values equal to, or greater than, ohmic values established by manufacturer.

DRAFT

e. Insulation resistance test results to compare within 1 percent of adjacent windings.

2. Perform tests and adjustments for fans, controls, and alarm functions as suggested by manufacturer.

3.04 LOW VOLTAGE CABLES, 600 VOLTS MAXIMUM

A. Visual and Mechanical Inspection:

1. Inspect each individual exposed power cable No. 4 and larger for:
   a. Physical damage.
   b. Proper connections in accordance with Contract Drawings and approved submittals.
   c. Cable bends not in conformance with manufacturer's minimum allowable bending radius where applicable.
   d. Color coding conformance with NFPA 70 or specifications.
   e. Proper circuit identification.
2. Mechanical Connections For:
   a. Proper lug type for conductor material.
   b. Proper lug installation.
   c. Bolt torque level in accordance with most recent publication of NETA ATS, unless otherwise specified by manufacturer.
3. Shielded Instrumentation Cables (IC) for:
   a. Proper shield grounding.
   b. Proper terminations.
   c. Proper circuit identification.
4. Control Cables For:
   a. Proper termination.
   b. Proper circuit identification.
5. Cables Terminated Through Window Type CTs: Verify that neutrals and grounds are terminated for correct operation of protective devices.

B. Electrical Tests:

1. Insulation Resistance Tests:
   a. Applied megohmmeter in accordance with most recent publication of NETA ATS.
   b. Phase-to-phase and phase-to-ground for 1 minute on each pole.
   c. Insulation resistance values equal to, or greater than ohmic values established by manufacturer or listed in the most recent publication of NETA ATS.
2. Contact Resistance Tests:
   a. Contact resistance in microhms across each switch blade and fuse holder, 30 amps and larger.
   b. Investigate deviation of 50 percent or more from adjacent poles or similar switches.

3.05 MOLDED CASE CIRCUIT BREAKERS

A. General: Inspection and testing limited to circuit breakers rated 200 amperes and larger.

B. Visual and Mechanical Inspection:

1. Proper mounting
2. Proper conductor size
3. Feeder designation according to nameplate and one-line diagram
4. Cracked casings
5. Connection bolt torque level in accordance with the most recent publication of NETA ATS.
6. Operate frame size and trip setting with circuit breaker schedules or one-line diagram.
7. Compare frame size and trip setting with circuit breaker schedules or one-line diagram.
8. Verify that terminals are suitable for 75°C rated insulated conductors.

DRAFT

C. Electrical Tests:
   1. Insulation Resistance Tests:
      a. Utilize 1,000-volt megohmmeter for 480 and 600-volt circuit breakers.
      b. Pole-to-pole and pole-to-ground with breaker contacts opened for 1 minute
      c. Pole-to-pole and pole-to-ground with breaker contacts closed for 1 minute
      d. Test valves to comply with the most recent publication of NETA ATS.
   2. Contact Resistance Tests:
      a. Contact resistance in microhms across each pole
      b. Investigate deviation of 50 percent or more from adjacent poles and similar breakers.
   3. Primary Current Injection Test to Verify:
      a. Long-time minimum pickup and delay
      b. Short-time pickup and delay
      c. Ground fault pickup and delay
      d. Instantaneous pickup by run-up or pulse method
      e. Trip characteristics of adjustable trip breakers shall be within manufacturer's published time-current characteristic tolerance band, including adjustment factors
      f. Trip times shall be within limits established by the most recent publication of NEMA AB 4.
      g. Instantaneous pickup value shall be within values established by the most recent publication of NEMA AB 4.

3.06 INSTRUMENT TRANSFORMERS

A. Visual and Mechanical Inspection:
   1. Visually Check Current, Potential, and Control Transformers For:
      a. Cracked insulation
      b. Broken leads or defective wiring
      c. Proper connections
      d. Adequate clearances between primary and secondary circuit wiring
   2. Verify Mechanically that:
      a. Grounding and shorting connections have good contact.
      b. Withdrawal mechanism and grounding operation, when applicable, operate properly.
   3. Insulation resistance measurement on instrument transformer shall not be less than that shown in the most recent publication of NETA ATS.

3.07 METERING

A. Visual and Mechanical Inspection:
   1. Verify meter connections in accordance with appropriate diagrams.
   2. Verify meter multipliers.
   3. Verify that meter types and scales conform to Contract Documents.
   4. Check calibration of meters at cardinal points.
   5. Check calibration of electrical transducers.

DRAFT

3.08 GROUNDING SYSTEMS

A. Visual and Mechanical Inspection:
   1. Equipment and circuit grounds in motor control center and panelboard assemblies for proper connection and tightness.
   2. Ground bus connections in motor control center and panelboard assemblies for proper termination and tightness.
   3. Effective transformer core and equipment grounding.
   4. Accessible connections to grounding electrodes for proper fit and tightness.
   5. Accessible exothermic-weld grounding connections to verify that molds were fully filled and proper bonding was obtained.

3.09 AC INDUCTION MOTORS

A. General: Inspection and testing limited to motors rated 10 hp and larger.
B. Visual and Mechanical Inspection:
   1. Proper electrical and grounding connections.
   2. Shaft alignment.
   3. Blockage of ventilating air passageways.
   4. Operate Motor and Check for:
      a. Excessive mechanical and electrical noise.
      b. Overheating.
      c. Correct rotation.
      d. Check vibration detectors, resistance temperature detectors, or motor inherent protectors for function ability and proper operation.
      e. Excessive vibration.
   5. Check operation of space heaters.

C. Electrical Tests:
   1. Insulation Resistance Tests:
      a. In accordance with IEEE 43:
         1) Motors above 200 hp for 10-minute duration with resistances tabulated at 30 seconds, 1 minute, and 10 minutes.
         2) Motors 200 hp and less for 1-minute duration with resistances tabulated at 30 and 60 seconds.
   2. Insulation resistance values equal to, or greater than, ohmic values established by manufacturers.
   3. Calculate polarization index ratios for motors above 200 hp. Investigate index ratios less than 1.5 for Class A insulation and 2.0 for Class B insulation.
   4. Insulation resistance test on insulated bearings in accordance with manufacturer's instructions.
   5. Measure running current and voltage, and evaluate relative to load conditions and nameplate full-load amperes.
   6. Verify proper operation of motor moisture and winding temperature protection, and other ancillary devices.

3.10 MOTOR CONTROL CENTERS AND MOTOR CONTROLLERS

A. Visual and Mechanical Inspection:
   1. Proper barrier and shutter installation and operation.
   2. Proper operation of indicating and monitoring devices.
   3. Proper overload protection for each motor.
   4. Improper blockage of air-cooling passages.
   5. Proper operation of draw out elements.
   6. Integrity and contamination of insulation system.

DRAFT

7. Check door and device interlocking system by:
   a. Closure attempt of device when door is in OFF or OPEN position.
   b. Opening attempt of door when device is in ON or CLOSED position.
8. Check nameplates for proper identification of:
   a. Equipment title and tag number with latest Contract Drawings and approved submittals.
   b. Pushbuttons
   c. Control switches
   d. Pilot lights
   e. Control relays
   f. Circuit breakers
   g. Indicating meters
9. Verify that fuse and circuit breaker sizes and types conform to Contract Documents.
10. Verify that current and potential transformer ratios conform to Contract Documents.
11. Check bus connections for high resistance by low resistance ohmmeter and calibrated torque wrench applied to bolted joints:
    a. Ohmic value to be zero
    b. Bolt torque level in accordance with the most recent publication of NETA ATS, unless otherwise specified by manufacturer.
12. Check operation and sequencing of electrical and mechanical interlock systems by:
    a. Closure attempt for locked open devices.
    b. Opening attempt for locked closed devices.
13. Verify performance of each control device and feature famished as part of the motor control center or motor controller.
14. Control Wiring:
    a. Compare wiring to local and remote control, and protective devices with elementary diagrams.
    b. Check for proper conductor lacing and bundling.
    c. Check for proper conductor identification.
    d. Check for proper conductor lugs and connections.
15. Exercise active components.
16. Inspect contactors for:
    a. Correct mechanical operations.
    b. Correct contact gap, wipe, alignment, and pressure.
    c. Correct torque of all connections.
17. Compare overload rating with full-load current for proper size.
18. Compare fuse, motor protector, and circuit breaker with motor characteristics for proper size.
19. Perform phasing check on double-ended motor control centers to ensure proper bus phasing from each source.

B. Electrical Tests:
   1. Insulation Resistance Tests:
      a. Applied megohmmeter in accordance with the most recent publication of NETA ATS.
      b. Bus section phase-to-phase and phase-to-ground for 1 minute on each phase.
      c. Contactor phase-to-ground and across open contacts for 1 minute on each phase.
      d. Starter section phase-to-phase and phase-to-ground on each phase with starter contacts closed and protective devices open.
      e. Test values to comply with the most recent publication of NETA ATS.

DRAFT

2. Overpotential Tests:
    a. Maximum applied voltage in accordance with manufacturer's published values. If not available, in accordance with the most recent publication of NETA ATS.
    b. Phase-to-phase and phase-to-ground for 1 minute for each phase of each bus section.
    c. Test results evaluated on pass/fail basis.
3. Current Injection Through Overload Unit at 300 Percent of Motor Full-Load Current and Monitor Trip Time:
    a. Trip time in accordance with manufacturer's published data.
    b. Investigate values in excess of 120 seconds.
4. Control Wiring Tests:
    a. Apply secondary voltage to control power and potential circuits.
    b. Check voltage levels at each point on terminal boards and each device terminal.
    c. Insulation resistance test at 1,000 volts on control wiring except that connected to solid state components.
        1) Insulation resistance to be 1 megohm minimum.
5. Operational test by initiating control devices to affect proper operation.

3.11 LOW VOLTAGE SURGE ARRESTORS

A. Visual and Mechanical Inspection:
1. Adequate clearances between arrestors and enclosures.
2. Ground connections to ground bus.

B. Electrical Tests:
1. Varistor Type Arresters:
    a. Clamping voltage test.
    b. Rated RMS voltage test.
    c. Rated voltage test.
    d. Varistor arrester test values in accordance with ANSI C62.33, Sections 4.4 and 4.7.

END OF SECTION

DRAFT

SECTION 26 0500 – COMMON WORK RESULTS FOR ELECTRICAL

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. It is the intent of this part of the Contract Documents to cover the work and materials necessary for erecting a complete electrical system, tested and ready for continuous use. The system shall be constructed in accordance with the Contract Documents, and Federal, State, and Local codes and regulations.

1.02 RELATED WORK

A. The CONTRACTOR shall coordinate the work with other trades, and furnish and install the equipment in accordance with the manufacturers' requirements.

1.03 GENERAL PROVISIONS

A. Minimum sizes of equipment, and electrical devices, are indicated but it is not intended to show every offset and fitting, nor every structural or mechanical difficulty that will be encountered during the installation of the work.

B. Work indicated on the Plans is approximately to scale, but actual dimensions and detailed Plans should be followed as closely as field conditions permit. Field verification of scale dimensions on Plans is governed by field conditions. Installation of systems and equipment is subject to clarification as indicated in reviewed shop drawings and field coordination.

C. Discrepancies indicated on different Plans, between Plans and actual field conditions, or between Plans and Contract Documents shall be promptly brought to the attention of the ENGINEER for clarification, prior to purchasing and installing equipment.

D. The alignment of equipment and conduit shall be adjusted to accommodate architectural changes, or to avoid work of other trades, without extra expense to the OWNER.

E. The CONTRACTOR shall furnish and install the parts and pieces necessary to the installation of equipment, in accordance with the best practice of the trade, and in conformance with the requirements of these Contract Documents.

F. Items not specifically mentioned in these Contract Documents, or noted on the Plans, or indicated on reviewed shop drawings, but which are obviously necessary to make a complete working installation, shall be deemed to be included herein.

G. The CONTRACTOR shall lay out and install electrical work prior to placing floors and walls. Furnish and install sleeves and openings through floors and walls, required for installation of conduits. Sleeves shall be rigidly supported and suitably packed, or sealed, to prevent ingress of wet concrete. Spacers shall be installed in order to prevent conduit movement. Dimensions indicated for electrical equipment and their installation are restrictive dimensions.

H. The CONTRACTOR shall furnish and install inserts and hangers required to support conduits and other electrical equipment. If the inserts, hangers, sleeves, or other mounting hardware are improperly placed, or installed, the CONTRACTOR shall do necessary work, at their own expense, to rectify the errors.

I. Electrical equipment shall be capable of operating successfully at full-rated load, without failure, at an ambient air temperature of 60°C, and specifically rated for the altitude indicated on the Plans. Electrical equipment not rated for operation at that temperature shall be provided with air conditioning to meet the manufacturers' operating temperature.

J. If any contradictions, contrasts, non-homogeneity, or inconsistency appears, the stricter criteria noted and the collective requirements in any and all of the project documents shall apply.

DRAFT

K. The CONTRACTOR shall perform necessary saw cutting, core drilling, excavating, removal, shoring, backfilling, and other work required for the proper installation of conduits, whether inside, or outside of the buildings and structures. The CONTRACTOR shall repair and patch where demolition has taken place in a manner to match existing original structure.

1.04 REGULATIONS, CODES, AND STANDARDS

A. Electrical work, including connection to electrical equipment integral with mechanical equipment, shall be performed in accordance with the latest published regulations, codes, and standards, of the following:
   1. National Electrical Code (NEC)
   2. State and local codes
   3. Institute of Electrical and Electronic Engineers (IEEE)
   4. American National Standards Institute (ANSI)
   5. American Society for Testing and Materials (ASTM)
   6. Insulated Cable Engineers Association (ICEA)
   7. National Electrical Manufacturers Association (NEMA) Standards
   8. Federal Occupational Safety and Health Act (OSHA)
   9. National Fire Protection Association (NFPA)
   10. National Electrical Testing Association (NETA)

B. When applicable, the material used in the performance of the electrical work shall be listed by the Underwriters' Laboratories, Inc. (UL) for the class of service for which they are intended.

1.05 SUBMITTALS

A. It is the obligation of the CONTRACTOR to organize their work, so that a complete electrical, instrumentation, and control system for the facility will be provided, and will be supported by accurate shop and record drawings, and O&M manuals.

B. The CONTRACTOR shall submit detailed shop drawings and data prepared and organized by the suppliers. The quantity of submittal sets required shall be as specified in the Contract Documents.

C. The submittals shall be neatly grouped and organized by Specification Section number, and sub-section. Related information shall be highlighted, and the specific product shall be marked. All submittals shall be complete, and presented in one package. Incomplete submittals will be returned without review. If a portion of the project requires a fast track schedule, that portion may only be submitted earlier under a separate cover letter. The following shall be submitted to the ENGINEER and returned reviewed to the CONTRACTOR before fabrication is started.
   1. A complete list of the equipment and materials, including the manufacturer's name, product specification, descriptive data, technical literature, performance charts, catalog cuts, installation instructions, and spare part recommendations for each different item of the equipment specified. The above shall clearly show all the specified requirements as described in the Specifications including but not limited to specific UL and NEMA rating, technical capabilities, test result verifications, and acceptance letters.
   2. Drawings containing complete point to point wiring and schematic diagrams, control diagrams, and any other details required to demonstrate that the system has been coordinated and will operate as intended. Drawings for each panel, cabinet, or enclosure shall show a complete Bill of Materials, wire numbers for internal panel and field wiring, terminal block numbers, proposed internal layout with assembly details, anchoring, support, and appurtenances of equipment, and equipment relationship to other parts of the work including clearances for maintenance and operations.

DRAFT

3. Any exceptions to these Specifications, with the reasons for requesting such exceptions, with calculations and drawings for redesign of related components, including detail drawings showing internal and assembly details, with installation instructions. Proposed layout showing any modifications or exceptions to related work made necessary by this work, with calculations and drawings showing such modifications or exceptions.

D. Upon Project acceptance, the CONTRACTOR shall submit "Record Drawings" of the electrical, control, and instrumentation, along with step-by-step procedure manuals for the installation, operation start-up, and maintenance of the equipment. Each set shall include installation, operating, troubleshooting, and maintenance and overhaul instructions in complete detail. It shall also include possible breakdowns and repairs, and troubleshooting guides, as well as simplified wiring and control diagrams of the system installed. This shall provide the OWNER with comprehensive information on all systems and components to enable operation, service, maintenance and repair. Exploded or other detailed views of all equipment, devices, assemblies, and accessory components shall be included, together with complete parts lists and ordering instructions.

1. Record Drawings:
   a. The CONTRACTOR shall maintain a marked up set of Contract Document Plans showing actual installed circuit numbers, conduit sizes, cable tray routing, number of conductors, conductor sizes (larger than #12 AWG), and all other deviations from the design Plans.
   b. Underground conduit and concealed items shall be dimensioned on the Plans from permanent, visible, building features.
   c. The CONTRACTOR shall provide actual transformer kVA, disconnect switch rating, starter, and overload heater size (if applicable) along with all other protective equipment for all 480, 240, 208 and 120V devices as part of the one-line record drawings.
   d. The CONTRACTOR shall revise all conductor identification and panel schedules to indicate as-built conditions.

PART 2 – PRODUCTS

2.01 GENERAL MATERIALS AND METHODS

A. Materials, equipment, and parts comprising any unit, or part thereof, specified or indicated on the Plans, shall be new and unused, of current manufacture, and of highest grade consistent with the state of the art. Damaged materials, equipment, and parts, are not considered to be new and unused, and will not be accepted.

B. Field verification of scale dimensions on Plans is directed, since actual locations, distances, and levels will be governed by actual field conditions. The CONTRACTOR shall also review architectural, structural, yard, mechanical, and other Plans, and the accepted electrical and mechanical shop drawings, and shall adjust their work to conform to the conditions indicated therein.

C. The fabricator of major components, such as distribution panelboards, switchgear/switchboards, and motor control centers, shall also be the manufacturer of the major devices therein.

D. Refer to various Division Sections for individual equipment manufacturers. Indicated manufacturers are subject to strict compliance with the Specifications and complete project documents. The reference to a particular manufacturer does not relieve the CONTRACTOR from conforming to the specified requirements.

2.02 NAMEPLATES

A. Where indicated elsewhere in these Specifications, or on the Plans, the CONTRACTOR shall furnish and install nameplates, which shall be white laminate with black letters. The nameplates shall be fastened to the various devices with round head stainless steel screws. Each disconnecting means for service, feeder, branch, or equipment conductors, shall have nameplates indicating its purpose.

DRAFT

2.03 EQUIPMENT ASSEMBLIES

A. Equipment assemblies, such as Service Entrance Sections, Switchgear, Switchboards, Control and Distribution Panels, and other custom fabricated electrical enclosures shall bear a UL label as a complete assembly. The UL label on the individual components making up the assembly will not be considered sufficient to meet the present requirement. Whenever a generic UL label does not apply for the assembly, a serialized UL label shall be affixed to the assembly, and the serial number shall be submitted with the assembly record shop drawings.

B. Custom fabricated electrical control panels, and enclosures, shall bear a UL label affixed by a local UL inspector.

PART 3 – EXECUTION

3.01 UTILITY SERVICE AND EQUIPMENT

A. Electrical Utility: The CONTRACTOR shall be responsible for contacting and coordinating the electrical utility work with the electrical utility company:

PACIFIC GAS & ELECTRIC
877.743.7782 (Building and Renovation Customer Service)

B. The CONTRACTOR shall be responsible for furnishing and installing equipment and material required to bring electrical power service to the service location in conformance with the electrical utility requirements. The CONTRACTOR may have to provide the following for the electrical utility company's primary (from utility power line to the utility transformer) and secondary (from utility transformer to the service) electrical lines in accordance with the electrical utility company's specifications and requirements:

1. Conduits (verify quantity and sizes).
2. Trenching, backfill, and compacting (verify trench size(s), backfill material, and compaction percentage requirements).
3. Concrete pad(s) (for pad mounted transformer(s)).
4. Cable protection along the vertical drop at the utility company's pole (if pole mounted transformer(s).
5. Other items required by the power utility company's specifications.

B. The CONTRACTOR shall also submit copies of service entrance shop Drawings to the utility, per utility submittal requirements, prior to submittal to the ENGINEER. The CONTRACTOR shall obtain written approval from the power utility company that the service entrance equipment is acceptable prior to releasing the order to the supplier for fabrication. A copy of the approval letter from the utility shall be transmitted to the ENGINEER along with the submittal.

C. Internet Service: The CONTRACTOR shall be responsible for contacting the Internet Service Company to coordinate requirements to provide internet service, as called for on the Plans.

D. The CONTRACTOR shall provide trenching, conduit, and backfill for the Telephone Company's communication lines from their main distribution panel to the connection box at this project site, as required by the Telephone Company.

E. Electrical equipment such as switchboard, switchgear, panelboards, industrial control panels, and meter socket shall have an arc flash label in accordance with NEC 110.16(a).

3.02 INSTALLATION OF ELECTRICAL EQUIPMENT

A. Coordinate the installation of electrical equipment with other trades.

1. Arrange for the building-in of equipment during structure construction.
2. Where equipment cannot be built-in during construction, arrange for sleeves, box-outs, and other openings, as required to allow installation of equipment after structure construction is complete.

DRAFT

B. Verify that equipment will fit support layouts indicated.

C. Equipment Dimensions and Clearances:
   1. Do not use equipment that exceeds the indicated dimensions except as approved in writing by the ENGINEER.
   2. Do not use equipment or arrangements of equipment that reduce required clearances or exceed the space allocation.

D. Install equipment in accordance with the manufacturer's instructions.

E. Equipment Access:
   1. Install equipment so it is readily accessible for operation and maintenance.
   2. Equipment shall not be blocked or concealed.
   3. Do not install electrical equipment such that it interferes with normal maintenance requirements of other equipment.

F. Equipment shall be installed plumb, square and true with the building construction, and shall be securely fastened.

G. Outdoor wall-mounted equipment, and indoor equipment mounted on earth, or water bearing walls, shall be provided with corrosion-resistant spacers to maintain 1/4-inch separation between the equipment and the wall.

H. Screen or seal all openings into outdoor equipment to prevent the entrance of rodents and insects.

I. Equipment fabricated from aluminum shall not be imbedded in earth or concrete.

J. Provide all necessary anchoring devices and supports:
   1. Use supports as detailed on the Plans and as specified.
   2. Supports and anchoring devices shall be rated and sized based on dimensions and weights verified from approved equipment submittals.
   3. Hardware shall be stainless steel.
   4. Do not cut, or weld to, building structural members.
   5. Do not mount safety switches and external equipment to other equipment enclosures, unless enclosure mounting surface is properly braced to accept mounting of external equipment.

K. CONTRACTOR shall verify exact rough-in location and dimensions for connection to electrical items furnished by others.
   1. Shop drawings shall be obtained from those furnishing the equipment.
   2. Proceeding without proper information may require the CONTRACTOR to remove and replace work that does not meet the conditions imposed by the equipment supplied.
   3. Provide sleeves wherever openings are required through new concrete or masonry members. Place sleeves accurately and coordinate locations with the ENGINEER.
   4. Should any cutting and patching be required on account of failure of the CONTRACTOR to coordinate penetrations, such cutting and patching shall be done at the expense of the CONTRACTOR.
      a. The CONTRACTOR shall not endanger the stability of any structural member by cutting, digging, chasing, or drilling and shall not, at any time, cut or alter the work without the ENGINEER's written consent.
         1) Provide additional reinforcing if required.
         2) Cutting shall be done neatly using proper tools and methods.
      b. Subsequent patching to restore walls, ceilings, or floors to their original condition shall be done by the CONTRACTOR.

L. Provide concrete foundations or pads required for electrical equipment as indicated or specified.
   1. Floor-mounted equipment shall be mounted on a 4-inch concrete housekeeping pad. Pad shall be poured on top of the finished floor or slab.

DRAFT

3.03 TEMPORARY POWER

A. The CONTRACTOR shall furnish, install, and maintain, temporary power and lighting systems needed for construction. This temporary system shall include weatherproof panel(s) for the CONTRACTOR's main breakers and distribution system. Ground fault interrupting equipment shall be installed. Connections shall be watertight, with wiring done with Type SO portable cable. After construction is completed, the CONTRACTOR shall remove temporary power equipment and devices.

3.04 CUTTING AND REPAIRING

A. Where it becomes necessary to cut into existing work for the purpose of making electrical installations, core drills shall be used for making circular holes. Other demolition methods for cutting or removing shall be reviewed by the ENGINEER prior to starting the work.

B. The CONTRACTOR shall repair damage caused by construction, or demolition work, and restore damaged areas to original condition.

3.05 CORROSION PROTECTION

A. Wherever dissimilar metals (except conduit and conduit fittings) come in contact, the CONTRACTOR shall isolate these metals, as required, with neoprene washers, 9 mil polyethylene tape, or gaskets. Where fastening conduit, electro-plated or equivalent fasteners and stainless steel bolts shall be used.

B. Factory finishes damaged during shipping, or construction, shall be restored to original new condition. Rust shall be removed, and bare metal surfaces shall be primed and painted to match the original surrounding finish.

C. Electrical panels, switchgear, motor control centers, and other electrical equipment, shall be shipped in sealed dust and moisture proof plastic sheet enclosures, and the seal maintained until units are installed. Said units shall be new and free of any dirt, dust, water, grease, rust, damaged parts or components. Relays, starters, circuit breakers, switches, contacts, insulators, mechanisms, and buses shall be free of dust, dirt, oil, moisture, metal shavings, and other debris before testing and energizing.

D. Once equipment is installed, it shall be protected at all times with plastic sheet covers until the area is free of dirt, dust, paint spray, water, and other trades. Heat shall be provided to eliminate condensation.

3.06 COORDINATION OF THE ELECTRICAL SYSTEM

A. The CONTRACTOR shall verify actual equipment, and motor full-load, and locked-rotor current ratings. The necessary minimum equipment, wire, and conduit sizes are indicated on the Plans. If the CONTRACTOR furnishes equipment of different ratings, the CONTRACTOR shall coordinate the actual current rating of equipment furnished with the branch circuit conductor size, the overcurrent protection, the controller size, the motor starter, and the branch circuit overcurrent protection. The branch circuit conductors shall have a current carrying capacity of not less than 125 percent of the actual full-load current rating. The size of the branch circuit conductors shall be such that the voltage drop from the overcurrent protection devices, up to the equipment, shall not exceed 3 percent, when the equipment is running at full-load and rated voltage.

DRAFT

3.07 TESTING

A. The electrical work shall be free from improper grounds and short circuits. The correctness of the wiring shall be verified first by visual comparison of the conductor connections with connection diagrams. Next, individual circuit continuity checks shall be made by using electrical circuit testers. Last, the correctness of the wiring shall be verified by the actual electrical operation of the electrical and mechanical devices. Any deviation from the wiring indicated on the Plans, or accepted Drawings, shall be corrected and indicated on the record drawings.

B. Each conductor shall be identified as required by the Contract Documents. This identification shall be indicated on the record drawings to enable rapid and accurate circuit tracing by maintenance personnel.

3.08 SINGLE LINE DIAGRAMS

A. Single line diagrams, as indicated on the Drawings, show circuit voltages, circuit protection rating, and other pertinent data. Where conflicts exist on the Drawings, the single line diagrams shall take precedence. Grounding conductors are not necessarily indicated. See grounding requirements specified elsewhere herein.

END OF SECTION

DRAFT

SECTION 26 0519 – LOW-VOLTAGE ELECTRICAL POWER CABLES

PART 1 – GENERAL

1.01 DESCRIPTION

A. Scope:
1. Provide all labor, materials, equipment, and incidentals shown, specified, and required to furnish, install, test and terminate low-voltage cables.
2. If larger loads than indicated in the plans (such as larger motor horsepower) are required, revise the raceways, conductors, starters, variable speed drives, overload elements, and branch circuit protectors to comply with the national electrical code.
3. Types of cabling required include:
   a. Insulated cable for installation in raceways.

1.02 REFERENCES

A. Standards referenced in this Section are listed below:

ANSI/ NETA ATS	Acceptance Testing Specifications for Electrical Power Equipment and Systems
ASTM B3	Soft or Annealed Copper Wire
ASTM B8	Concentric-Lay-Stranded Copper Conductors, Hard, Medium-Hard or Soft
ASTM F2160	Solid Wall High Density Polyethylene (HDPE) Conduit Based on Controlled Outside Diameter (OD).
NEMA TC 7	Smooth Wall Coilable Electrical Polyethylene Conduit.
UL 44	Thermoset-Insulated Wires and Cables.
UL 1277	Standard for Electrical Power and Control Tray Cables with Optional Optical-Fiber Members.

1.03 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with the following:
1. NEC Article 300, Wiring Methods.
2. NEC Article 310, Conductors for General Wiring.
3. NEC Article 392, Cable Trays.

1.04 SUBMITTALS

A. Action Submittals: Submit the following:
1. Product Data:
   a. Manufacturer's literature, specifications, and engineering data for low volt insulated cable proposed for use.
   b. Manufacturer's cable pulling calculations for all cables (power and control) that are to be pulled through the jack and bore casing. Calculations shall indicate acceptability of the proposed cables with a proposed pulling setup. Calculations shall be made and submitted for review before ductbanks are installed.

B. Informational Submittals: Submit the following:
1. Field Quality Control Submittals:
   a. Written results of field insulation resistance tests.

PART 2 – PRODUCTS

2.01 MATERIALS

A. Insulated Cable in Raceways:

DRAFT

1. Application: Use for circuits located indoors and outdoors.
2. Manufacturers: Provide products of one of the following:
   a. Southwire
   b. The Okonite Company
   c. American Insulated Wire
   d. General Cable
   e. Or ENGINEER-approved equal
3. Material: Single or multiconductor type copper cable complying with ASTM B3 and ASTM B8 with flame-retardant, moisture- and heat-resistant insulation rated for 90°C in dry or wet locations, listed by UL.
4. Application: Use UL listed type XHHW-2 for AWG No. 12 and larger. Use UL listed type THHN/THWN-2 for AWG No. 12 and smaller.
5. Wire Sizes: Not smaller than AWG No. 12 for power and lighting and AWG No. 14 for 120-volt control circuits.
6. Stranding: 600-volt cable shall be stranded, except that solid cable, AWG No. 10 and AWG No. 12 may be used for lighting circuits and receptacle circuits.
7. Cables in Cable Trays shall be listed for cable tray use and be installed per NEC 392.

B. Cable Connectors, Solderless Type:
1. Products and Manufacturers: Provide products of one of the following:
   a. T&B Sta-Kon
   b. Burndy Hylug
   c. Or ENGINEER-approved equal
2. For wire sizes No. 4 AWG and above, use either compression type or bolted type with silver-plated contact faces.
3. For wire sizes up to and including No. 6 AWG, use compression type. Alarm and control wire shall be terminated using forked type connectors at terminal boards.
4. For wire sizes No. 250 KCMIL and larger, use connectors with at least two cable clamping elements or compression indents and provision for at least two bolts for joining to apparatus terminal.
5. Properly size connectors to fit fastening device and wire size. Connectors shall be rated for 90°C, 600 volts.

C. Cable Splices:
1. Products and Manufacturers:
   a. Compression-Type Splices: Provide one of the following:
      1) Burndy Hylink
      2) T&B Color-Keyed Compression Connectors
      3) Or ENGINEER-approved equal
   b. Spring Connectors: Provide one of the following:
      1) Buchanan B-Cap
      2) T&B Wire Connector
      3) Or ENGINEER-approved equal
2. For wire sizes No. 8 AWG and larger, splices shall be made up with compression type copper splice fittings. Splices shall be taped and covered with materials recommended by cable manufacturer to provide insulation equal to that on conductors.
3. For wire sizes No. 10 AWG and smaller, splices may be made up with pre-insulated spring connectors.

DRAFT

4. For wet locations, splices shall be waterproof. Compression type splices shall be waterproofed by sealant-filled, thick wall, heat shrinkable, thermosetting tubing or by pouring thermosetting resin into mold that surrounds the joined conductor. Spring connector splices shall be waterproofed with sealant filler.
5. Splices shall be suitably sized for cable, rated 90°C, and 600 volts.

D. Wire and Cable Markers:
1. Provide wire and cable markers in accordance with these Specifications.

E. Variable Frequency Drive Symmetrical Type Cable:
1. Power Conductors: Three (3) annealed, tinned, stranded copper per ASTM B8, coated per ASTM B33.
2. Insulation: Black cross-linked polyethylene (XLPE) per UL44.
3. Ground: Three (3) symmetrically placed bare annealed Class B stranded copper conductors per ASTM B3 and B8 whose cross-section areas shall add to equal the cross-section area of the power conductor size. The conductors shall be in direct contact with the shield and may be tinned or untinned.
4. Shield: Overall annealed 5 mil bare copper tape shield, 50% overlap for 100% coverage OR overall tinned copper braided shield and aluminum polymer tape for 100% coverage.
5. Jacket: Polyvinyl Chloride (PVC), oil resistant, per UL1277.
6. Voltage insulation: 2000V.
7. Cable size shall be as indicated on the Drawings.
8. Splices: Splices in VFD cables shall not be permitted.
9. Connections and Termination: cable and shield terminations and connections shall be in complete accordance with VFD, motor and cable manufacturers published requirements.
10. Manufacturers: General Cable CVTC-VFD; Southwire type TC VFD cable; or ENGINEER-approved equal.

2.02 SOURCE QUALITY CONTROL

A. Factory Tests:
1. Factory-test wire and cable in accordance with UL standards

PART 3 – EXECUTION

3.01 INSTALLATION

A. Install cables complete with proper terminations at both ends. Check and correct for proper phase sequence and proper motor rotation.

B. Pulling:
1. Use insulating types of pulling compounds containing no mineral oil.
2. Pulling tension shall be within limits recommended by wire and cable manufacturer.
3. Use dynamometer where mechanical means are used.
4. Cut off section subject to mechanical means.

C. Bending Radius: Limit to minimum of six times cable overall diameter and in accordance with manufacturer requirements.

D. Slack: Provide maximum slack at all terminal points.

E. Splices:
1. Where possible, install cable continuous, without splice, from termination to termination.
2. Where required, splice as shown and also where required for cable installation. Splices below grade, in manholes, handholes, and wet locations shall be waterproof.

DRAFT

3. Splices are not allowed in conduits.
4. Splices are not allowed in VFD cables.

F. Identification:
1. Identify conductors in accordance with applicable Sections of Division 26 – Electrical.
2. Identify power conductors by circuit number and phase at each terminal or splice location.
3. Identify control and status wiring using numeral tagging system.

G. Color-code power cables as follows:
1. No. 8 AWG and Smaller: Provide colored conductors.
2. No. 6 AWG and Larger: Apply general purpose, flame retardant tape at each end, wrapped in overlapping turns to cover an area of at least two inches.
3. Colors: Match color scheme in use at the Site. If the Site does not have an existing color scheme, use the following colors:

System	Conductor	Color
All Systems	Equipment Grounding	Green
240/120 Volts Single-Phase, Three-Wire	Grounded Neutral One Hot Leg Other Hot Leg	White Black Red
208Y/120 Volts Three-Phase, Four-Wire	Grounded Neutral Phase A Phase B Phase C	White Black Red Blue
480Y/277 Volts Three-Phase, Four-Wire	Grounded Neutral Phase A Phase B Phase C	Gray Brown Orange Yellow

3.02 FIELD QUALITY CONTROL

A. Site Tests:
1. Test each electrical circuit after permanent cables are in place, to demonstrate that circuit and equipment are connected properly and will perform satisfactorily, free from improper grounds and short circuits. Document each test performed.
2. Individually test 600-volt cable mechanical connections after installation and before they are put in service, with calibrated torque wrench. Values shall be in accordance with manufacturer's recommendations.
3. Individually test 600-volt cables for insulation resistance between phases and from each phase to ground. Test after cables are installed and before they are put in service, with Megger for one minute at voltage rating recommended by cable manufacturer or in accordance with ANSI/NETA ATS recommendations.
4. Insulation resistance for each conductor shall not be less than value recommended by cable manufacturer. Cables not meeting recommended value or that fail when tested under full load conditions shall be replaced with a new cable for full length.

END OF SECTION

DRAFT

SECTION 26 0523 – INSTRUMENTATION AND COMMUNICATION CABLES

PART 1 – GENERAL

1.01 DESCRIPTION

A. Scope:
1. Provide all labor, materials, equipment, and incidentals shown, specified, and required to furnish and install instrumentation and communication cables.

1.02 REFERENCES

A. Standards referenced in this Section are listed below:

ASTM A510/ A510M	Wire Rods and Coarse Round Wire, Carbon Steel and Alloy Steel
ASTM B633	Electrodeposited Coatings of Zinc on Iron and Steel
ANSI/TIA/ EIA-568	Commercial Building Telecommunications Cabling (requirements and restrictions of Technical Service Bulletins (TSBs) apply.)
RS-485	Electrical Characteristics of Generators and Receivers for Use in Balanced Digital Multipoint Systems (also known as TIA/EIA-485).
UL 13	Power-Limited Circuit Cables
UL 1581	Standard for Electrical Wires, Cables and Flexible Cords
UL VW-1	Vertical Wire Flame Test
UL 1666	Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts

1.03 QUALITY ASSURANCE

A. Regulatory Requirements:
1. NEC 725 – Class 1, Class 2, and Class 3 Remote-Control, Signaling and Power-Limited Circuits
2. NEC 727 – Instrumentation Tray Cable
3. NEC 800 – Communications Circuits

1.04 SUBMITTALS

A. Action Submittals: Submit the following:
1. Product Data: Manufacturer's technical information for instrumentation cables and communications cables proposed.
2. Provide pulling calculations for cables to be installed in the jack and bore ductbank.

B. Informational Submittals: Submit the following:
1. Field Quality Control Submittals: Written report of results of field quality control testing specified in this Section.

PART 2 – PRODUCTS

2.01. MATERIALS

A. Single and Multiple Shielded Pair Instrument Cable:
1. Bare, soft annealed copper, 7 strand, PVC insulated conductors, No. 16 AWG minimum (unless indicated otherwise on the drawings / conduit schedule), twisted with aluminum/mylar shield with 25 percent minimum overlap, stranded tinned 20 AWG copper drain wire and PVC outer jacket. Rated for 600 volts. Temperature rated 90°C in dry installations, rated 75°C in wet locations. UL Type TC, UL listed for cable tray use, sunlight resistant. The abbreviation "STP" or "TSP" is used for shielded twisted pair on the Drawings.

DRAFT

2. Product and Manufacturer: Provide shielded cable of the following:
    a. Alpha Wire Company.
    b. Or ENGINEER-approved equal.
3. Cable shall be plenum rated when all or part of the cable is not encased in conduit.
4. Multi pair instrument cable shall have individual pair shielding and overall shielding.

B. Cable Terminals:
1. Manufacturers: Provide products of one of the following:
    a. T&B Sta-Kon
    b. Burndy Insulug
    c. Or ENGINEER-approved equal
2. Fork type copper compression terminals with nylon insulation for termination of cable at terminal blocks.

C. Single Shielded Triad Instrument Cable:
1. Bare, soft annealed copper, 7-strand, PVC insulated conductors, No. 16 AWG minimum, twisted with aluminum/mylar shield with 25 percent minimum overlap, stranded tinned 20 AWG copper drain wire and PVC outer jacket. Rated for 600 volts. Temperature rated 90°C in dry installations, rated 75°C in wet locations. UL Type TC, UL listed for cable tray use, sunlight resistant. The abbreviation “STT” or “TST” is used for shielded twisted triad on the Drawings.
2. Product and Manufacturer: Provide shielded cable of the following:
    a. Alpha Wire Company
    b. Or ENGINEER-approved equal
3. Cable shall be plenum rated when all or part of the cable is not encased in conduit.

D. Shielded Ethernet Category 5e Premises Cable:
1. This cabling is for outdoor applications, process control interface (VFDs, PLCs, etc.), lighting control component interconnections, and anywhere network cables will be routed in the same ductbank, manhole, handhole, or other raceway as AC power cabling.
2. Furnish, install, and terminate from each field device to the network switch.
    a. Suitable Applications: Gigabit Ethernet, 100BaseTX, 100MHz Category 5e.
    b. Number of Pairs: 4
    c. Total Number of Conductors: 8
    d. AWG: 24
    e. Stranding: Solid
    f. Conductor Material: Bare Copper
    g. Color Code: EIA 568
    h. Shield: Double-shielded version with 100% coverage aluminum foil tape plus tinned copper braid
    i. Insulation Material: Polyolefin
    j. Outer Jacket Material: PVC, outdoor rated, sunlight resistant, oil resistant
    k. Outer Jacket Color: Blue.
    l. TIA/EIA Specification: 1005, 568B compliant
    m. UL Flame Test: UL 1666 Riser compliant
    n. Manufacturer: Belden, Model 7957A
    o. Use shielded RJ45 strain relief plug systems by L-com (TDS8PC5) with plug-boots (TDS8CVR-BK).

DRAFT

PART 3 – EXECUTION

3.01 INSPECTION

A. Examine conditions under which materials and equipment will be installed and notify OWNER in writing of conditions detrimental to proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected.

3.02 INSTALLATION

A. General:
   1. Install cables complete with proper terminations at both ends.
   2. Install in conduit separate from power cables, unless shown or indicated otherwise.
   3. Ground shield on shielded cables at the source end (PLC panel, etc.).
   4. Identify conductors in accordance with these Specifications.
   5. Install and terminate Supplier-furnished cable in accordance with equipment manufacturer requirements and cable manufacturer's recommendations.
   6. Install in accordance with Laws and Regulations, including NEC.
   7. Splicing of instrumentation and communication cables is not permitted unless approved by the ENGINEER of record.

3.03 FIELD QUALITY CONTROL

A. Site Tests:
   1. Test shielded instrumentation cable shields with ohmmeter for continuity along full length of cables, and for shield continuity to ground.
   2. Connect shielded instrumentation cables to calibrated 4 to 20 mA DC signal transmitter and receiver. Test at 4 and 20 mA DC transmitter settings.
   3. Replace with new cables the full length of cables that fail test.
   4. Test equipment shall be provided by CONTRACTOR.
   5. Test all Ethernet cables with a Fluke DSP100 Cable Meter (or equal) testing system. Each cable shall be tested from the connected data jack, control panel, VFD, UPS, etc., to the patch panels. A qualified factory-trained manufacturer's representative shall certify in writing that the network cabling system has been installed, adjusted, and tested in accordance with the cable manufacturer's recommendations and industry standards for performance testing. Certification shall bear the typewritten name and signature of the person responsible for the work. Certification shall state the unit has passed all tests and is ready to be placed into operation. Provide four (4) copies of the manufacturer's representative's certification.

END OF SECTION

DRAFT

SECTION 26 0526 – GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. A ground grid system consisting of the indicated configuration of copper wires, and ground rods, or concrete encased grounding electrodes ("UFERs") shall be provided to minimize station potential gradient irregularities and drain leakage and fault currents to earth.

B. Whether indicated on the Plans or not, neutral conductors, cable shields, metallic conduits, cable terminations, junction boxes, poles, surge arresters, and other non-current-carrying metallic parts of equipment shall be grounded.

1.02 SUBMITTALS

A. Products shall be submitted in accordance with Section 01 3300 – Submittal Procedures, and elsewhere in the Contract Documents prior to installation.

1.03 REFERENCES

A. National Electrical Code (NEC) Article 250

PART 2 – PRODUCTS

2.01 GENERAL REQUIREMENTS

A. A resistance of not greater than 25 ohms shall be provided, unless otherwise specified. Ground resistances shall be measured as herein described. Resistances of systems requiring separate ground rods, rather than a counterpoise, shall be measured separately before bonding below grade. The combined ground resistance of separate systems bonded together below grade may be used to meet the specified ground resistance, but the minimum number of rods indicated must still be provided.

2.02 GROUND RODS

A. Ground rods shall be copper-clad steel conforming to UL 467, 314 inch in diameter by 10 feet in length. Unless otherwise indicated, ground rods shall be driven into the ground until tops of rods are approximately 6 inches below finished grade. In counterpoise systems. Tops of ground rods shall be approximately at elevations of counterpoises. Where the specified ground resistance cannot be met with the indicated number of ground rods, additional ground rods, longer ground rods, or deep-driven sectional rods shall be installed and connected until the specified resistance is obtained, except that not more than three additional ground rods shall be required at any one installation. Ground rods shall be spaced as evenly as possible at least 6 feet apart and connected below grade.

2.03 CONNECTIONS

A. Connections above grade shall be made with bolted solderless connectors, and those below grade shall be made by a fusion-welding process. An embossing die code or other standard method shall provide visible indication that a connector has been adequately compressed on the ground wire.

DRAFT

2.04 GROUNDING ELECTRODE CONDUCTOR

A. Service entrance ground wires shall be sized in accordance with the most recent publication of NEC Table 250-66, unless otherwise indicated on the Plans. After being located to provide maximum physical protection, exposed ground wires shall be securely attached to structural supports at not more than 2-foot intervals with suitable fasteners. Bends greater than 45 degrees in ground wires are not permitted. Routing of ground conductors through concrete should be avoided, except where specifically called for in these Documents. When concrete penetration is necessary, nonmetallic conduit shall be cast flush with the points of concrete entrance and exit, so as to provide an opening for the ground wire. The opening shall be sealed with a suitable compound after installation of the ground wire.

2.05 EQUIPMENT GROUNDING CONDUCTOR

A. Neutral conductors shall be grounded where indicated. Equipment grounding conductors shall be sized in accordance with the most recent publication of NEC Table 250-122, unless otherwise indicated. Ground wires shall be protected by conduit, where such wires run exposed above grade in non-fence-enclosed areas, or are run through concrete construction. Where concrete penetration is necessary, nonmetallic conduit shall be cast flush with the points of concrete entrance and exit, so as to provide an opening for the ground wire. The opening shall be sealed with a suitable compound after installation of the ground wire. Bends greater than 45 degrees in ground wire connections to the ground rods, or counterpoises are not permitted.

2.06 EQUIPMENT GROUNDING

A. Equipment frames of motor housings, metallic tanks, metallic equipment enclosures, metal splicing boxes, chain-link fencing, and other metallic noncurrent-carrying metal items, shall be grounded. Connections to earth shall be made in the same manner as required for system grounding. Equipment or devices operating at less than 750 volts may be connected to secondary neutral grounding electrodes.

2.07 SURGE ARRESTER GROUNDING

A. Surge arresters shall be grounded. Resistance to ground for intermediate-class arresters shall be not more than 10 ohms and for distribution-class arresters shall be not more than 25 ohms. Ground wire connections shall be not less than No. 4 AWG for distribution arresters and No. 1/0 AWG for intermediate arresters. Connections to earth shall be made in the same manner as required for neutral conductors. Surge arrester grounds may use the same ground wires provided for equipment operating at more than 750 volts. Surge arrester and secondary neutral grounds shall be separate from and independent of each other but both grounds shall be bonded together below grade at the ground rods or may utilize a common counterpoise.

2.08 LIGHTING POLE GROUNDING

A. Base of lighting poles shall be connected to an adjacent ground rod as indicated on Plans. A ground connection from poles back to neutral ground points shall also be provided utilizing equipment grounding conductor.

2.09 METALLIC STRUCTURES

A. Metallic structures and buildings shall be grounded per NEC.

2.10 GROUNDING RINGS

A. When required, grounding rings shall be installed using bare copper cable with ground rods at least 25 feet intervals using thermoweld connecting means as indicated on Plans in accordance with NEC requirements.

DRAFT

PART 3 – EXECUTION

3.01 INSTALLATION

A. It is the intent of these Contract Documents that all device and equipment grounds shall be run as a separate conductor in the conduit from the equipment to the ground. Wireways and enclosures shall be properly bonded and grounded, and ground conductors shall be run for all circuits.

B. Equipment cases and devices shall be grounded. Ground rods shall be driven and concrete encased conduits installed before a building or structure is built and ground conductors brought through the concrete to accessible points for grounding equipment. These systems shall be installed at each structure, where transformers, switchboards, panelboards, and MCCs are installed.

C. Duct banks shall contain a concrete encased system bare copper ground conductor. The system ground conductors shall run continuously in duct banks, through handholes and other raceway boxes. The system ground shall be connected to the structure grounding systems to provide a continuous grounding system. Each metallic raceway, panel, switchboard, and other metallic devices associated with the electrical and control systems shall be bonded to this grounding system.

D. Ground rod shall be installed not less than 6 inches below grade. Equipment, neutral, and surge arrester ground wires shall be connected to the ground grid as indicated.

E. Make buried and concrete-encased cable-to-cable and cable-to-ground rod connections using exothermic welds by Cadweld, Thermoweld**,** or ENGINEER-approved equal.

F. Each raceway must have a separate grounding conductor independent from the raceway material.

G. Route the conductors inside the raceway.

H. Interconnect the secondary MCC, switchgear, or panelboard neutral bus to the ground bus in the secondary switchgear compartment only at the service entrance point or after a transformer.

3.02 TESTS

A. Pre-Energization Tests - Pre-energization tests shall include, but shall not be limited to tests that the equipment engineer is required to perform under paragraph "GENERAL REQUIREMENTS." No part of the electrical system shall be energized until all station grounding system components have been tested and demonstrated to comply with the requirements specified, and until associated test reports have been submitted and approved.

B. Operating Test - After the installation is completed, the CONTRACTOR shall conduct an operating test for approval. Equipment shall be demonstrated to operate in accordance with the requirements herein. Tests shall be performed in the presence of the ENGINEER. The CONTRACTOR shall furnish instruments and personnel required for the test.

C. Ground-Resistance Measurements - Ground-resistance measurements of each ground rod shall be taken and certified by the CONTRACTOR to the ENGINEER. No part of the electrical distribution system shall be energized prior to the resistance testing of that system's ground rods and grounding system and submission of test results to the ENGINEER. Test reports shall indicate the location of the ground rod and grounding system and the resistance and the soil conditions at the time the test was performed. When the building water service is used as a ground or part of the grounding system, ground-resistance measurements shall also be made of this connection. Ground-resistance measurements shall be made in normally dry weather, not less than 48 hours after rainfall, and with the ground under test isolated from other grounds. The resistance to ground shall

DRAFT

be measured using the fall-of-potential method described in IEEE Std 142 and Std 81.

3.03 TEST RESULTS

A. The CONTRACTOR shall perform the above tests and submit a certified test report prior to energizing the equipment.

END OF SECTION

DRAFT

SECTION 26 0529 – HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 – GENERAL

1.01 DESCRIPTION

A. This Section outlines the wiring requirements for the electrical work and forms a part of all other Sections of Division 26 unless otherwise specified.

1.02 SUBMITTALS

A. Submit for the OWNER's approval material lists, shop drawings, factory test reports, and technical data to the extent required in these Specifications.

PART 2 – PRODUCTS

2.01 GENERAL

A. Provide basic materials and all wiring installations as indicated, specified, and required.

2.02 SUPPORTS

A. Provide the galvanized and PVC coated metal channels, fittings, stanchions, clamps, hangers, and required hardware to support all conduit and equipment as required.

B. Channels shall be steel and cold rolled. One side of the channel shall have a continuous slot. On both sides of the slot, the edges turn inward and forms a guide for the spring nuts. The fittings shall be fabricated from steel and attached to the channel with bolts and spring nuts. The channel, fittings and hardware shall be hot-dipped galvanized and manufactured by Unistrut, GTE Products Co., Ideal Industries, Josyln Mfg. & Supply Co., or ENGINEER-approved equal.

C. One-Hole Clamps shall be malleable iron, galvanized for steel conduits and equipped with clamp-backs. The clamps shall be Efcor, Thomas and Betts, Appleton, or ENGINEER-approved equal.

D. Beam Clamps shall be malleable iron, galvanized, right angle and parallel types. The clamps shall be manufactured by Efcor, Thomas and Betts, Appleton, or ENGINEER-approved equal.

E. Spacers shall be plastic and provided to support underground conduits for concrete encasements. The spacers shall be Carlon, Johns-Manville, Underground Products, or ENGINEER-approved equal.

F. Steel Anchors shall be sleeve and stud types for securing equipment to concrete foundations, floors, and walls. The anchors shall be Phillips "Red Head", Diamond, or ENGINEER-approved equal. Concrete foundation to include 4" housekeeping pad.

G. Toggle Bolts shall be steel, spring wing type for securing equipment to hollow walls and ceilings. Toggle bolts shall be Phillips "Red-Head", Diamond, or ENGINEER-approved equal.

H. Conduit Hangers shall be heavy gauge formed steel, galvanized, and equipped with carriage bolts, 1/4-inch rods and nuts. The hangers shall be Efcor, Appleton, Ideal Industries, Josyln Mfg. & Supply Co., or ENGINEER-approved equal.

I. U-Bolts shall be heavy gauge steel, galvanized and equipped with two hexagon steel nuts. The U-bolts shall be Efcor, Kindorf, or ENGINEER-approved equal.

J. Hardware shall be provided to securely attach all equipment and materials.

DRAFT

PART 3 – EXECUTION

3.01 GENERAL

A. A. Provide the required labor and equipment, and all checking, adjusting, and testing operations on the electrical installations.

3.02 SUPPORTS

A. Install the required structural channels, brackets, stanchions, U-bolts, clamps, anchors, hangers, fittings, and other hardware to securely attach and support all the equipment and conduits.

B. Painting. Brackets, stanchions, and other unfinished steel supports shall be painted per requirements of these Specifications.

C. Operation Tests. Perform operation tests and observe that all loads operate satisfactorily.

3.03 CHECKING, ADJUSTING AND TESTING

A. Provide the required labor and equipment, and all checking, adjusting, and testing operations on the electrical installations.

END OF SECTION

DRAFT

SECTION 26 0533.13 – CONDUIT FOR ELECTRICAL SYSTEMS

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. Furnish and install conduits as required, and as shown on the Plans. Materials employed shall be as shown on the Plans.

1.02 SUBMITTALS

A. Submit product literature including manufacturer part number, model number, material, size, and specifications. Material shall not be installed until the ENGINEER has reviewed the submittal data.

B. Shop Drawings shall be submitted for review and acceptance showing routing, conduit size, and number and size of wires in each conduit before installation of conduit and any related work.

C. Proposed routing of conduits buried under floor slabs-on-grade.

D. Identify conduit by tag number of equipment served or by circuit schedule number.

E. Proposed routing and details of construction including conduit and rebar embedded in floor slabs, columns, etc. Identify conduit by tag number of equipment served or by circuit schedule number.

F. Proposed location and details of construction for openings in slabs and walls for raceway runs.

870	Wireways, Auxiliary Gutters, and Associated Fittings
884	Underfloor Raceways and Fittings
886	Outlet Boxes and Fittings for Use in Hazardous (Classified) Locations

PART 2 – PRODUCTS

2.01 RACEWAYS

A. Indoor exposed conduit shall be galvanized rigid steel (GRS) unless specifically indicated otherwise on the Plans. Exposed conduits outdoors or in a wet or corrosive area shall be PVC coated GRS unless otherwise indicated Underground and/or concrete encased conduits shall be PVC, unless otherwise indicated. All wiring, except as otherwise noted, shall be in conduit. Conduit size shall not be less than the National Electrical Code (NEC)

DRAFT

size required for the conductors therein and shall not be smaller than 3/4-inch. No underground conduit shall be less than one inch.

B. Condulet type fittings shall be Form 8, Crouse-Hinds, Appleton, or ENGINEER-approved equal with gasketed covers. All condulets located outdoors or in wet locations shall be weathertight.

C. In unclassified areas, flexible conduit shall be grounding type, weatherproof, corrosion resistant, and watertight. If indicated on the plans, liquidtight flexible conduit shall have an external bonding jumper. Connectors shall be as manufactured by OZ-Gedney, Type 4Q-L, or ENGINEER-approved equal.

D. Couplings, connectors, and fittings shall be standard types specifically designed and manufactured for the purpose. They shall be installed to provide a firm mechanical assembly and electrical conductivity throughout.

E. Expansion fittings shall be OZ type AX with jumper for exposed locations and type DX at structural expansion joints, Spring City, or ENGINEER-approved equal. Conduits shall have expansion fittings in accordance with NEC.

F. The conduits and fittings shall be supported per NEC requirements as a minimum.

2.02 GALVANIZED RIGID STEEL (GRS)

A. Conduit and couplings shall be hot-dipped galvanized with zinc coated threads and outer coating of zinc bichromate, in accordance with ANSI C80.1 standards, as manufactured by Jones & Laughlin Steel Corporation, Allied Tube & Conduit Corporation, Triangle PWC, Republic, Youngstown, or ENGINEER-approved equal.

B. Steel conduit shall not be buried in earth without concrete encasement and additional corrosion protection. A half-lapped rapping of 20 mil PVC based corrosion protection tape shall be used.

2.03 PVC COATED GALVANIZED RIGID STEEL (PVC-GRS)

A. PVC coated GRS conduit shall conform to NEMA RN-1 and ANSI C80.1 standards.

B. The zinc surface of the conduit shall remain intact and undisturbed on both the inside and the outside of the conduit throughout the preparation and application processing. A Polyvinyl Chloride (PVC) coating shall be bonded to the galvanized outer surface of the conduit. The bond between the PVC coating and the conduit surface shall be greater than the tensile strength of the plastic. The thickness of the PVC coating shall be a minimum of 0.040-inch (40 mil).

C. A loose coupling shall be furnished with each length of conduit. A PVC coating shall be bonded to the outer surface of the coupling and a PVC sleeve equal to the outside diameter of the uncoated conduit shall extend beyond both ends of the coupling approximately one pipe diameter or 1-1/2 inches, whichever is smaller. The wall thickness of the coating on the coupling and the sleeve shall be a minimum of 0.055-inch (55 mil).

D. A PVC coating shall be bonded to the inner and outer surface of all conduit bodies and fittings and a PVC sleeve shall extend from all hubs. The wall thickness of the coating on conduit bodies and fittings and the sleeve walls shall be identical to those on couplings in length and thickness. The covers on all conduit bodies shall be coated on both sides and shall be designed to be completely interchangeable. The inside of conduit bodies shall remain undisturbed in the processing.

DRAFT

E. Type 316 stainless steel screws shall be furnished and used to attach the cover to the conduit body. All coated material shall be installed and patched according to the manufacturer's recommended installation and patching instructions.

F. Conduit straps shall be PVC coated or 316 stainless steel.

G. PVC coated conduit and fittings shall be as manufactured by Plasti-Bond, Perma-Cote, Occidental Coating Company, Kor Kap, or ENGINEER-approved equal.

H. PVC coated flexible conduits shall be liquid and vaportight and manufactured in accordance with UL 360 standards.

2.04 RIGID NONMETALLIC - PVC

A. Where specifically indicated on the Plans, or elsewhere specified, conduit may be high density Schedule 40, 90°C, heavy-duty PVC. The conduit shall be manufactured from virgin polyvinyl chloride compound which meets ASTM D1784, NEMA TC-2, and UL 651 standards. Smoke emissions shall be limited to less than 6 grams per 100 grams of material tested.

B. Where conduit concrete encasement is indicated on the Plans, conduit supports shall be installed at five foot intervals. PVC conduit shall be manufactured by Carlon, Triangle Conduit & Cable, or ENGINEER-approved equal.

2.05 LIQUIDTIGHT FLEXIBLE METAL CONDUIT

A. Liquidtight flexible metal conduit shall be liquid and vaportight, oil and ultraviolet ray resistant and manufactured in accordance with UL 360 standards. Liquidtight flexible metal conduit shall be formed of a continuous, spiral wound, galvanized steel core with an extruded PVC jacket. The PVC jacket shall be rated for high ambient heat applications, 90°C.

B. For corrosive locations, liquidtight flexible metal conduit shall be formed of a continuous, spiral wound, aluminum core with an extruded PVC jacket. The PVC jacket shall be impervious to corrosive liquids and vapors.

C. An external bonding conductor shall be required for all flexible conduit connections. Flexible conduit and connectors shall be listed for grounding.

D. Connectors for liquidtight flexible conduit shall be galvanized, furnished with a sealing ring and locknut, and suitable for wet locations.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Conduit runs are schematic only, and shall be modified as required to suit field conditions, subject to review and acceptance by the ENGINEER.

B. Conduit shall run continuously between outlets and shall be provided with junction boxes where connections are made. Couplings, connectors, and fittings shall be acceptable types designed and manufactured for the purpose, and shall provide a firm mechanical assembly, and electrical conductivity throughout.

C. Conduit runs shall be straight and true. Elbows, offsets, and bends shall be uniform and symmetrical. Changes in direction shall be made with long radius bends, or with fittings of the condulet type.

D. Conduit runs in buildings and structures shall be exposed except as specifically noted, or accepted by the ENGINEER.

DRAFT

E. Conduit runs shall not interfere with the proper and safe operation of equipment, and shall not block or interfere with ingress or egress, including equipment removal hatches.

F. Exposed conduits shall be securely fastened with clamps, or straps, intended for conduit use. All exposed conduit shall be run on the walls and ceiling only and shall be parallel to the planes of the walls or ceiling. No diagonal runs will be permitted. Flexible conduit shall be used only for short lengths required to facilitate connections between rigid conduit to motors from junction boxes, or control equipment. The maximum length of flexible conduit shall be 3 feet.

G. Conduit runs on water-bearing walls shall be supported one inch away from the wall on an accepted channel. When channel galvanizing, or other coating, is cut or otherwise damaged, it shall be field coated to original condition. No conduit shall be run in water-bearing walls, unless specifically designated otherwise.

H. Conduit shall be thoroughly reamed to remove burrs. GRS shall be reamed during the threading process, and Rigid Nonmetallic PVC shall be reamed before applying fittings. A zinc rich cold galvanizing shall be used to restore corrosion protection on field cut threads. Bushings and lock nuts or hubs shall be used at conduit terminations. The total number of bends in any run between pull points shall not exceed 360 degrees. Junction boxes and pull boxes shall be installed at points acceptable to the ENGINEER. Conduit ends shall be plugged to prevent the entrance of moisture or debris during construction. All spare conduits shall be adequately capped and shall contain a suitable pull string.

I. Joints shall be set up tight. Hangers and fastenings shall be secure, and of a type appropriate in design, and dimensions, for the particular application.

J. Conduit runs shall be cleaned and internally sized (obstruction tested) so that no foreign objects, or obstructions remain in the conduit prior to pulling in conductors.

K. After installation of complete conduit runs 2 inches and larger, conduits shall be snaked with a conduit cleaner equipped with a cylindrical mandrel of a diameter not less than 85 percent of the nominal diameter of the conduit. Conduits through which the mandrel will not pass shall not be used.

L. Expansion fittings shall be installed across all expansion joints and at other locations where necessary to compensate for thermal expansion and contraction.

M. Provide trenching, backfill, and compaction for conduits installed underground.

N. Each conduit shall be provided with tags as specified on the plan details or with stainless steel identification tags affixed by means of stainless steel wire to the conduit's termination bushing. The minimum size of the identification tags shall be ¾-inch X 2-inches. The identification tag shall be embossed with the conduit number shown in the Plans. The letters and numbers on the tags shall, as a minimum, be ¼-inch high.

SECTION 26 0533.16 – BOXES FOR ELECTRICAL SYSTEMS

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Outlet, pull and junction boxes.

1.02 QUALITY ASSURANCE

A. Referenced Standards: As required in these Specifications.

1.03 SUBMITTALS

A. Shop Drawings: In accordance with Section 01 3300 – Submittal Procedures.

1.04 DELIVERY, STORAGE, AND HANDLING

A. In accordance with these Specifications and Contract Documents.

PART 2 – PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Subject to compliance with the Contract Documents, the following manufacturers are acceptable:
   1. Galvanized steel boxes:
      a. Appleton Electric Co.
      b. Steel City
      c. Raco
      d. Or ENGINEER-approved equal
   2. Sheet metal boxes for non-classified areas:
      a. Hoffman Engineering Co.
      b. Or ENGINEER-approved equal
   3. Corrosion-resistant boxes:
      a. Hoffman Engineering Co.
      b. Crouse-Hinds
      c. Or ENGINEER-approved equal
   4. Hazardous location boxes (Class I, II & III):
      a. Appleton Electric Co.
      b. Crouse-Hinds
      c. Killark
      d. O-Z/Gedney
      e. Or ENGINEER-approved equal
   5. Raintight and watertight boxes:
      a. Appleton Electric Co.
      b. Crouse-Hinds
      c. Or ENGINEER-approved equal
   6. Terminal boxes:
      a. Hoffman Engineering Co.
      b. Or ENGINEER-approved equal
   7. Boxes in sidewalk:
      a. Appleton Electric Co.
      b. Crouse-Hinds
      c. O-Z/Gedney

DRAFT

a. Or ENGINEER-approved equal.

8. Boxes in earth:
   a. Carlon Electric Products.
   b. Or ENGINEER-approved equal
9. Exposed switch and receptacle boxes:
   a. Appleton Electric Co.
   b. Crouse-Hinds
   c. Or ENGINEER-approved equal.

2.02 MATERIALS

A. Pull and Junction Boxes for Offices and other Dry Architecturally Finished Areas:
   1. Material: 14 GA, galvanized steel
   2. Concentric knockouts on all four sides
   3. Flat cover fastened with screws
   4. NEMA 1 classification
   5. UL listed

B. Pull and Junction Boxes for General Use Unclassified Areas Suitable for NEMA 12 Enclosures:
   1. Material: 14 GA galvanized steel with seams continuously welded, ground smooth and no knockouts
   2. Zinc-rich coating on all seams
   3. Stainless steel captivated cover screws threaded into sealed wells
   4. Flat door with oil resistant gasket
   5. NEMA 12 classification
   6. UL listed

B. Pull and Junction Boxes for Wet Areas:
   1. Material: 14 GA steel with polyester powder coating inside and out over phosphatized surfaces.
   2. Seams continuously welded, ground smooth, no knockouts
   3. Stainless steel clamps on four sides
   4. Flat cover with oil resistant gasket
   5. NEMA 4X classification
   6. UL listed

D. Pull and Junction Boxes for Corrosive Areas:
   1. Material: 14 GA steel with powdered epoxy resin coating inside and out or fiberglass-reinforced polyester material
   2. Steel boxes:
      a. Seams continuously welded, ground smooth, no knockouts
      b. Rolled lip around all sides
      c. Hinged door
      d. Captivated stainless steel door screws
      e. Flat door with oil-resistant gasket
   3. Fiberglass-reinforced polyester boxes:
      a. Hinged door with latch and lockout
      b. Neoprene door gasket
      c. Grounding bushing(s)
   4. NEMA 4X classification
   5. UL listed

DRAFT

E. Pull and Junction Boxes for Hazardous Areas:
   1. Material: Cast gray iron alloy or copper-free cast aluminum
   2. Drilled and tapped openings or tapered threaded hub equipped
   3. Flat bolted-down or threaded cover with neoprene gasket
   4. Stainless steel hex head screws
   5. Explosion proof, UL listed for Class 1 Groups C and D

F. Pull and Junction Boxes for Sidewalks:
   1. Cast-iron box and cover, hot-dip galvanized
   2. Flange for flush mounting
   3. Checkered cover with neoprene gasket, pry bar slots and stainless steel screws
   4. UL listed
   5. Drilled and tapped holes
   6. Watertight NEMA 4X classification

G. Large Pull and Junction Boxes (100 CU IN and larger):
   1. Located in offices and other dry architecturally finished areas where EMT is utilized:
      a. NEMA 1 gasketed without knockouts
   2. Located in general use areas:
      a. NEMA 12 construction:
         1) Welded steel
         2) Furnished with gray enamel inside and out over phosphatized surfaces
   3. Located in wet and corrosive areas:
      a. NEMA 4X with stainless steel screws.
   4. Constructed of 14 GA steel with seams continuously welded, ground smooth, no knockouts
   5. Rolled lip around all sides
   6. Rigid handles for covers larger than 9 sf or heavier than 25 lbs.
   7. Split covers when heavier than 25 lbs.

H. Terminal Boxes:
   1. Galvanized 16 GA steel box provided with plain blank screw cover, subpanel, and terminal points
   2. Refer to Drawing for dimensions and number of terminals
   3. Terminal blocks shall be screw-post barrier-type, white center marker strip
   4. Rated 20 ampere, minimum 600 V

I. Fiberglass Cable-Pulling Enclosure:
   1. Use: Access points to facilitate pulling of electrical cables in buried conduit runs.
   2. Size and quantity: As shown on Drawings
   3. Type: Rectangular fiberglass composite, suitable for direct burial pedestrian traffic on top, -50°F, chemical, sunlight, and weather resistant.
   4. Provide matching top with "ELECTRIC" logo.

J. Outlet Boxes:
   1. Use: Installation of wiring devices
   2. Boxes for exposed wiring:
      a. Cadmium plated, cast, ferrous metal, with threaded hubs
   3. Boxes for concealed wiring:
      a. Code gauge, hot-dip galvanized steel
      b. Include bar hangers for metal stud partitions
      c. Provide barriers between switches in boxes with 277 V switches on opposite phases

DRAFT

d. Use extension and plaster rings where required
e. Provide grounding screw.

PART 3 – EXECUTION

3.1 INSTALLATION

A. Use locknut and bushing for boxes in non-classified areas.

B. Use cast metal boxes with threaded conduit hubs in hazardous areas.

C. Use Type FS and FD boxes in wet areas and where exposed rigid steel conduit is required.

D. Use epoxy resin coated, stainless steel, cast aluminum or fiberglass boxes for corrosive areas.

E. Fill unused punched-out, tapped, or threaded hub openings with insert plugs.

F. Use outlet boxes sized to accommodate quantity of conductors enclosed.

G. Use boxes sized to accommodate conduit tying into box.

H. Install pull boxes or junction boxes in conduit runs where indicated or required to facilitate pulling of wires or making connections.
1. Make covers of boxes accessible.

I. Install pull boxes or junction boxes rated for the area classification.

J. Install rigid conduit squarely into boxes which do not have hubs or are drilled and tapped.
1. Install with locknut on the outside and bushing on inside.

K. Install conduit into boxes with hubs, or that are tapped, using thread lubricant.

L. Do not use back-to-back boxes on this Project.

M. Seal all points of conduit entry into fiberglass cable-pulling enclosures for a waterproof installation.

N. Support outlet boxes for incandescent fixtures and other ceiling-mounted devices in lay-in acoustical tile ceilings by bar hangers anchored to ceiling construction members which do not interfere with tile removal.

END OF SECTION

DRAFT

SECTION 26 0553 – IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. Electrical identification work specified in this section covers the following:
   1. Buried cable warnings
   2. Electrical power, control and communication conductors
   3. Operational instructions and warnings
   4. Danger signs
   5. Equipment/system identification signs

1.02 SUBMITTALS

A. Submittals to the ENGINEER shall include the following:
   1. Manufacturers data on electrical identification materials and products.
   2. Samples of each color, lettering style and other graphic representation required for each identification material or system.

1.03 MANUFACTURERS

A. Subject to compliance with requirements, manufacturers offering electrical identification products may be incorporated in the work include, but not limited to, the following:
   1. Brady, W.H. Co.
   2. Ideal Industries, Inc.
   3. Panduit Corp.
   4. or ENGINEER-approved equal

1.04 QUALITY COMPLIANCE

A. Comply with applicable requirements of UL Std. 969, "Marking and Labeling Systems", pertaining to electrical identification systems.

B. Comply with applicable requirements of NEMA Std. No's WC-1 and WC-2 pertaining to identification of power and control conductors.

C. Comply with the latest National Electrical Code

PART 2 – PRODUCTS

2.01 GENERAL

A. Except as otherwise indicated, provide manufacturer's standard products of categories and types required for each application. Where more than single type is specified for an application, selection is Installer's option, but provide single selection for each application.

2.02 COLOR CODED CONDUIT MARKERS

A. Provide manufacturer's standard pre-printed, flexible or semi-rigid, permanent, plastic-sheet conduit markers, extending 360 degrees around conduits; designed for attachment to conduit by adhesive, adhesive lap joint of marker, matching adhesive plastic tape at each end of marker, or pretensioned snap-on. Except as otherwise indicated, provide lettering that indicates voltage of conductor(s) in conduit. Provide 8" minimum length for 2" and smaller conduit, 12" length for larger conduit.

B. Unless otherwise indicated or required by governing regulations, provide white markers with black letters.

C. Conduit identification shall be via stainless-steel tags, and as required in these Specifications.

DRAFT

2.03 CABLE AND CONDUCTOR WIRE MARKERS

A. Cable and conductor wire markers shall be self-laminating vinyl on white background, printed using a Brady TLS2200 printer, Seton printer, or ENGINEER-approved equal. Handwritten wire markers are not acceptable.

2.04 SELF-ADHESIVE PLASTIC SIGNS

A. Provide manufacturer's standard, self-adhesive or pressure-sensitive, pre-printed, flexible vinyl signs for operational instructions or warnings; of sizes suitable for application areas and adequate for visibility, with proper wording for each application, e.g., 208V, EXHAUST FAN, RECTIFIER.

B. Unless otherwise indicated or required by governing regulations, provide white signs with black lettering.

C. Signs shall be attached with stainless-steel screws.

2.05 LETTERING AND GRAPHICS

A. Coordinate names, abbreviations and other designations used in electrical identification work, with corresponding designations shown, specified or scheduled. Provide numbers, lettering and wording as indicated or, if not otherwise indicated, as recommended by manufacturers or as required for proper identification and operation/maintenance of electrical systems and equipment. Comply with ANSI A13.1 pertaining to minimum sizes for letters and numbers.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Install electrical identification products as indicated, in accordance with manufacturer's written instructions, and requirements of NEC.

B. Where identification is to be applied to surfaces that require finish, install identification after completion of painting.

C. Comply with governing regulations and requests of governing authorities for identification of electrical work.

3.02 CONDUIT IDENTIFICATION

A. Where electrical conduit is exposed in spaces with exposed mechanical piping that is identified by a color-coded method, apply color-coded identification on electrical conduit in a manner similar to piping identification. Except as otherwise indicated, use white as coded color for conduit.

3.03 CABLE/CONDUCTOR IDENTIFICATION

A. Apply cable/conductor identification, including voltage, phase and feeder number, on each cable/conductor in each box/enclosure/cabinet where wires of more than one circuit or communication/signal system are present, except where another form of identification (such as color-coded conductors) is provided. Match identification with marking system used in panelboards, shop drawings, contract documents, and similar previously established identification for project's electrical work.

3.04 EQUIPMENT/SYSTEM IDENTIFICATION

A. Install engraved plastic-laminate sign on each major unit of electrical equipment in building; including central or master unit of each electrical system including communication-control-signal systems, unless unit is specified with its own self-explanatory identification or signal system. Except as otherwise indicated, provide single line of text, 1/2" high lettering on 1-1/2" high sign (2" high where 2 lines are required),

DRAFT

white lettering in black field. Provide text matching terminology and numbering of the contract documents and shop drawings. Provide signs for each unit of the following categories of electrical work:

1. Panelboards, electrical cabinets and enclosures.
2. Access panel/doors to electrical facilities.
3. Major electrical switchgear.

B. Install signs at locations indicated or, where not otherwise indicated, at location for best convenience of viewing without interference with operation and maintenance of equipment. Secure to substrate with brass or stainless-steel screws, except use adhesive where screws should not or cannot penetrate the substrate.

C. Identification signs shall be black lettering on a white field to match the Districts' standard.

3.05 CIRCUIT IDENTIFICATION

A. The neutral shall match the requirements of Section 26 0519. The 3-phase wires shall be identified at the switchgear, panelboards and motor control centers as Phases A, B, and C. At 277/480V, Phase A shall be brown, Phase B shall be orange, and Phase C shall be yellow.

B. In addition to color coding all conductors, each conductor shall be identified in each pull box, manhole, panelboard, cable tray, or termination with circuit identification markers. This identification is applicable to all power, control, alarm, and instrumentation conductors and these markings shall be recorded on the Record Documents. Markers shall be slip-on PVC sleeve type as manufactured by Brady, Seton, or equal.

C. Markers for other cabling shall be B-292 vinyl as manufactured by Brady, Seton, or ENGINEER-approved equal.

D. Exposed medium voltage conduits shall be labeled at 50-foot intervals with f-inch letters stating the voltage - example - "12,470 volts". Labels shall be vinyl plastic as manufactured by Brady, Seton, or ENGINEER-approved equal.

3.06 AUTOMATIC EQUIPMENT WARNING SIGNS

A. Permanent warning signs shall be mounted at all mechanical equipment that may be started automatically or from remote locations. Signs shall be in accordance with OSHA regulations and shall be suitable for exterior use. The warning signs shall be fastened with round head brass screws or bolts, located and mounted in a manner acceptable to the ENGINEER.

B. Warning signs shall be 7 inches high by 10 inches wide, colored yellow and black, on not less than 18 gauge vitreous enameling stock. Sign shall read:

CAUTION
THIS EQUIPMENT STARTS
AUTOMATICALLY
BY REMOTE CONTROL

3.07 HIGH VOLTAGE WARNING SIGNS

A. Permanent and conspicuous warning signs shall be mounted on all equipment, doorways to equipment rooms, pull boxes, manholes, where the voltage exceeds 600 volts.

B. Signs shall be in accordance with OSHA regulation, and shall be suitable for exterior use. The warning signs shall be fastened with round head brass screws or bolts, located and mounted in a manner acceptable to the ENGINEER.

DRAFT

C. Signs shall be 7 inches high by 10 inches wide, colored red and white, on not less than 18 gauge vitreous enameling stock. Sign shall read:

WARNING
HIGH VOLTAGE
KEEP OUT

3.08 CONDUCTOR FASTENERS

A. Glue-on type conductor fasteners shall not be used in any panels, panelboards, switchboards, switchgear, motor control centers, or other enclosures containing electrical devices and/or conductors.

END OF SECTION

DRAFT

SECTION 26 0583 – WIRING CONNECTIONS

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. This section covers terminal blocks for control and other wiring.

1.02 SUBMITTALS

A. Products shall be submitted in accordance with these Specifications and elsewhere in the Contract Documents prior to installation.

1.03 MANUFACTURERS

A. Terminal blocks shall be Entrelec, Phoenix Contact, Weidmuller, or ENGINEER-approved equal.

B. Surge protection blocks shall be TELEMATIC, Series SD, or ENGINEER-approved equal.

C. Power distribution blocks shall be Ilsco Corporation, or ENGINEER-approved equal.

PART 2 – PRODUCTS

2.01 TERMINAL BLOCKS

A. Terminal blocks shall mount on standard DIN rail, and be of the size required for conductors therein. A minimum of 25 percent spares shall be provided in each terminal box. No more than 2 conductors shall be allowed per termination. Jumper bar assemblies shall be installed for interconnecting terminal blocks, distributing power and signal commons. Terminal blocks shall be UL-rated for 600 Volts, and 30 Amps, minimum.

B. Grounding terminal blocks shall be provided for instrumentation cable shields. The terminal blocks shall have distinctive 2-color bodies, and shall be mounted to the DIN rail with metal screw down type clamps, providing a positive ground connection. One grounding terminal block shall be installed for every 2 instrument cables terminated. Grounding terminal blocks shall be UL-rated for 600 Volts, and 20 Amps, minimum.

C. Terminal blocks shall be available in a variety of colors, including red, green, blue, gray, black, yellow, and orange.

D. DIN mount fuse holders shall have blown fuse indicators for DC and AC circuits. Fuse holders shall be of the compression clamp type. Fuse holders shall be UL listed, and rated for 600 Volts. Fuse sizes shall not exceed the UL current rating for the fuse holders.

E. DIN rail shall be prepunched, zinc bichromate plated steel. Symmetrical DIN rail shall be 35mm X 7.5mm, minimum.

F. Terminal blocks for 4 to 20 milliamp signals shall have knife disconnect switches, and accessible test points for testing and measurement of current loop signals, without the need for removing wire terminations.

2.02 SURGE PROTECTION BLOCKS (SPB)

A. Analog inputs and outputs shall be terminated at surge protection blocks (SPB). The SPBs shall be designed for a working voltage of 32 volts, and shall be fused.

B. SPBs shall provide full hybrid line to line protection, and shall have a GDT rating of 10,000 A.

C. SPBs shall be UL94 V-2 listed.

DRAFT

2.03 POWER DISTRIBUTION BLOCKS (PDB)

A. PDBs shall be Electro tin-plated and manufactured from high strength 6061-T6 aluminum alloy.

B. PDBs shall be UL Recognized, rated 90°C, and CSA Certified.

C. PDBs shall provide flexibility in using the connector as an in-line splice or to reduce conductor size for taps.

D. PDBs shall be rated for 600 Volts and dual rated for Copper and Aluminum Conductors.

E. PDBs shall have the sizes and ratings as shown on the Plans.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Each terminal block and fuse holder shall be identified with the circuit number, or conductor number, corresponding to the identification appearing on the shop Drawings for the equipment, or system.

B. Terminal block and fuse holder markers shall be computer printed plastic-type, with permanent markings.

C. End clamps and end sections shall be installed on each terminal block and fuse holder assembly.

D. Terminal blocks for DC voltages shall be blue, and AC voltages shall be gray**.**

END OF SECTION

DRAFT

SECTION 26 0916 – ELECTRICAL CONTROLS AND RELAYS

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. This Section includes the following:
   1. Pushbutton and Selector Switches
   2. Relays
   3. Alarms
   4. Intrinsic Safety Barriers
   5. Wireways
   6. Watthour Transducers
   7. Elapsed Time Meters and Time Clocks

1.02 REFERENCES

A. NEMA ICS 1: General Standards for Industrial Control Systems.

B. NEMA ICS 2: Standards for Industrial Control Devices, Controllers and Assemblies.

C. NEMA ICS 6: Enclosures for Industrial Controls and Systems.

D. NEMA ST 1: Standard for Specialty Transformers (Except General purpose Type).

1.03 SUBMITTALS

A. Data: A complete list of equipment and material including manufacturer's descriptive data and technical literature, performance charts, catalog cuts and installation instructions, spare parts data for each different item of equipment specified. The data shall include a complete Bill of Materials.

B. Drawings: Containing complete wiring and schematic diagrams, control diagrams, and any other details required to demonstrate that the system has been coordinated and will properly function as a unit. Drawings shall show proposed layout, anchorage, support and appurtenances of equipment and equipment relationship to other parts of the work including clearances for maintenance and operations.

C. Submit shop drawings in accordance with the Contract Documents, and NEMA ICS 1 specifications indicating control panel layouts, wiring connections and diagrams, dimensions, support points.

1.04 PROJECT RECORD DOCUMENTS

A. Submit record documents in accordance with the Contract Documents.

B. Accurately record actual locations of control equipment. Revise diagrams included in Drawings to reflect actual control device connections.

1.05 OPERATION AND MAINTENANCE DATA

A. Submit operation data in accordance with the Contract Documents.

B. Include instructions for adjusting and resetting time delay relays, timers, and counters.

C. Submit maintenance data in accordance with the Contract Documents.

D. Include recommended preventative maintenance procedures and materials.

DRAFT

PART 2 – PRODUCTS

2.01 PUSHBUTTONS AND SELECTOR SWITCHES

A. Pushbuttons, pilot lights and selector switches shall be of the full size, heavy-duty industrial, oil tight, 120 volts, with interchangeable pilot lights, plug-in construction, double break silver contacts, chrome plated lock rings, with modular contacts, and NEMA rating equal to that of the enclosure on which devices are installed. All components shall be flush mounted on front of panel, unless otherwise noted.

B. Provide individual legend plates for indication of switch, pushbutton, and light function (e.g., Open, Closed, Hand-Off-Auto). A list shall be submitted for review and approval

C. Pilot lights shall be high intensity LED type. Pilot lights shall have clear lenses and LED lamps colored as shown on the Plans. Common, remote push-to-test circuitry shall be provided for each control panel to simultaneously test all indicating lights on the panel using a single pushbutton when there are 10 or more lights on the panel. Control panels with less than 10 lights shall utilize individual push-to-test lights and control circuitry.

D. Pushbuttons shall be maintained or momentary as required and as shown on the Drawings. Provide extended head pushbutton for all stop functions, mushroom head for emergency stop functions, and flush head pushbuttons for all other functions. Where indicated on the Drawings pushbuttons shall be illuminated type. Provide locking mechanism for all lock out functions. Selector switches shall have black knob operator, be maintained contact type unless noted otherwise, number and arrangement as required to perform intended functions specified but not less than one double pole, double throw, double break contact per switch. Contact rating shall be compatible with AC or DC throughput current of devices simultaneously operated by the switch contact but not less than 10 amperes resistive at 120 volts AC or DC continuous.

E. Potentiometers shall be provided with operators and resistive elements of the type and quantity indicated on the Drawings and as required with legend plates indicating percent of span.

F. The above devices shall be manufactured by Allen Bradley, General Electric, or ENGINEER-approved equal.

2.02 RELAYS

A. Timing relays shall be heavy duty, 120V AC, 10 amps, solid state design, poles as required per application, -10°C to +60°C, have timing repeatability of ±2.0% of setting, and be UL listed. The range shall be determined from the control descriptions and or schematic drawings. Provide mounting accessories, as required. The timing relays shall be manufactured by Allen Bradley, Cutler Hammer, or ENGINEER-approved equal.

B. Control relays shall be of the plug-in socket base type with dust-proof plastic enclosures, with silver-cadmium oxide contacts rated 120V AC, 10 amperes, with contact arrangement and operating coils of the proper voltage as required by the control circuit sequence. Relays shall have indicating lamp to show energized state. Each relay shall have a minimum of two double pole, double throw contacts, or as required. Control relays shall be Allen Bradley, Cutler Hammer, or ENGINEER-approved equal.

C. Alternating relays shall be UL listed, 120V AC, with contacts rated for 10 amperes at 120V AC, life expectancy of 100,000 operations, load indicating LEDs, and switch for load locking and load selecting options. Alternating relays shall be manufactured by TimeMark models 261, 271, and 471, and Diversified Electronics model ARA for duplex, triplex, and quadplex alternators.

DRAFT

2.03 ALARMS

A. Audible alarms shall be UL listed, 120V AC, with solid state circuitry, vibrating horn, non-metallic corrosion resistant housing, with required mounting hardware, suitable for outdoor use capable of producing 100 dB at 10 feet. The audible alarm shall be manufactured by Federal Signal model 350, Edwards model 870-EX, or ENGINEER-approved equal.

B. Beacons for interior and/or exterior locations shall be rated NEMA 4X, flashing type (90 times per minute, minimum) with a red lens. Beacons shall be as manufactured by Federal Signal, Model 225XL, or ENGINEER-approved equal.

2.04 INTRINSIC SAFETY BARRIERS

A. Intrinsic safety barriers shall permit connection of devices located in a hazardous area to other devices located in a safe area. Intrinsic safety barriers shall be EMC compliant, 10 to 35V DC, 35 mA output current, hazardous area terminals identified by blue labels, terminals accommodating conductors up to 12 AWG, ambient temperature rating of -20°C to +60°C. The intrinsic safety barriers shall be manufactured by Allen-Bradley Bulletin 937, or ENGINEER-approved equal.

2.05 WIREWAYS

A. Wireways shall be PVC, snap-in slot design, with non-slip cover. Safe area wireways shall be light gray and marked "Safe Area Wiring." Hazardous area wireways shall be intrinsic blue and marked "Hazardous Area Wiring." The wireways shall be manufactured by Panduit Corporation, or ENGINEER-approved equal.

2.06 WATTHOUR TRANSDUCERS

A. Watthour transducers for active or reactive power shall be DIN rail and surface mount, single-phase or three-phase with balanced or unbalanced load, electrically isolated input and output signals, 4 to 20 mA output signal, 0-10 mA to 0-10 A input current, 0-10 V to 0-600 VAC input voltage, 16-500 Hz selectable frequency. The watthour transducers shall be manufactured by Sineax model PQ502, or ENGINEER-approved equal.

2.07 ELAPSED TIME METERS AND TIME CLOCKS

A. Elapsed time meters shall be self-powered, non-reset, solid state counter which provides silent, accurate and noise immune operation. Elapsed time meters shall require no external power, five-year minimum battery life, rated for 120V AC power, accessories for panel mounting, nameplate below LCD display reading "HOURS", liquid crystal display with 6 digits approximately 2 inches high with 50,000-hour minimum display life and indication of sufficient battery power. The elapsed time meters shall be manufactured by Durant, Automatic Timing and Controls, or ENGINEER-approved equal.

B. Time clocks shall be microprocessor based, have 24-hour time control, up to 24 operations per day, programmable from panel face keys, skip-a-day feature allowing schedule to be skipped for one to seven days, SPDT switch contact rated at 15 amps at 120V AC, with battery carryover to maintain time and program during power outage for 275 hours. The time clocks shall be manufactured by Tork, Paragon Electric Company, or ENGINEER-approved equal.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Fasteners shall be type 316 stainless steel.

B. Install devices in strict accordance with NEC requirements and per manufacturers recommendation.

C. Coordinate with other trades as necessary during installation of these devices.

3.02 ACCEPTANCE

A. All installations are subject to evaluation in accordance with NEC requirements and manufacturers recommendations. CONTRACTOR shall remove the unacceptable work and correct work at no charge to OWNER.

END OF SECTION

DRAFT

SECTION 26 2100 – ELECTRICAL SERVICE ENTRANCE

PART 1 – GENERAL

1.01 DESCRIPTION

A. This Section outlines the electrical work for underground or overhead power service and power distribution.

B. Power Service: The underground or overhead service shall be complete and as shown on the Drawings. The service installation shall conform with the power company service requirements.

C. Distribution: The power distribution system shall include equipment installations and underground or overhead wiring installations as shown on the Drawings.

1.02 SUBMITTALS

A. Submit for the ENGINEER's approval material lists, shop drawings, factory test reports, and technical data to the extent required in these Specifications and contract documents.

PART 2 – PRODUCTS

2.01 GENERAL

A. Provide all the equipment and materials, and complete all of the power service, power distribution and grounding installations as indicated, specified and required. Sizes of equipment shown on the Drawings and space allowed for the equipment are based on equipment manufactured by only one of the listed acceptable manufacturers. The manufacturers and models listed in this Section of the Specifications are acceptable providing they conform to the Specifications and that the equipment and materials provided fit properly in the available space.

2.02 SERVICE EQUIPMENT

A. Provide the metal enclosed, service equipment as shown on the Drawings, and in accordance with the power company service requirements. The low voltage equipment shall be manufactured by Square D, Cutler Hammer, General Electric, Siemens, Allen Bradley, or ENGINEER-approved equal. Service equipment shall be part of the distribution panelboard as shown on the Drawings. All sections must meet Local Power Utility requirements.

B. Metering Section shall be equipped with meter sockets, copper busses, main circuit breaker and ground fault protection as indicated. The meter sockets shall be provided for the power company self contained meter or meters that shall be connected to instrument transformers as required. Must meet Local Power Utility requirements.

C. Pull Section shall be totally metal enclosed, and equipped with copper buses and connectors for the underground service conductors. Must meet Local Power Utility requirements.

D. A main circuit breaker shall be used as a service disconnect in the service equipment as shown on the Drawings.

E. Nameplates shall be provided for the service equipment as required in these Specifications.

F. Double hasp shall be attached on a gasketed hinged door of outdoor equipment for two padlocks.

G. Grounding shall meet the requirements of these Specifications.

DRAFT

H. Service equipment shall be labeled with available fault current in accordance with NEC 110.24(a).

PART 3 – EXECUTION

3.01 GENERAL

A. Provide all the equipment installations and wiring installations including connections and interconnections for the power service and distribution as indicated, specified and required. Assure proper fits for all equipment and materials in the spaces shown on the Drawings.

B. Earthwork, Concrete and Painting: The required work for excavations, backfills, concrete and painting shall be provided for the electrical installations.
   1. Earthwork shall be performed for handholes, pull boxes, underground conduits, poles, guys, grounding, equipment foundations and supports as indicated and specified.
   2. Concrete shall be provided for electrical equipment foundations and supports, and conduit encasements as indicated and specified in these Specifications.
   3. Painting shall be provided for all installations having unfinished surfaces as specified in. Field damaged factory finishes on equipment shall be touched-up with paint that is equal in quality and color to the original factory finish.

C. Handholes and Pull Boxes: Precast concrete handholes and pull boxes shall be installed in excavations as shown on the Drawings and as required.
   1. Accessories shall be installed, which include pull eyes and required hardware.
   2. Covers shall be installed on all handholes and pull boxes.

D. Service Equipment: Install the metal enclosed service equipment and wiring as indicated, specified and required.
   1. Equipment shall be installed level and securely attached to the concrete foundation with anchor bolts. The sections shall be joined together with bolts, washers and nuts to form a unit assembly.
   2. Wiring installations shall be complete and in accordance with the power company service requirements.
   3. Nameplates shall be laminated plastic and attached to clean surfaces of the metal enclosures with an adhesive or equal.

E. Grounding: Install all the equipment, materials and wiring to complete the equipment, structural, lightning and system grounding installations as shown on the Drawings, specified and required.

F. Panelboards and Switchboards: Install the metal enclosed panelboards and distribution switchboards as indicated, specified and required.
   1. Equipment shall be installed level and securely attached to the concrete foundations, floors and walls with anchor bolts.
   2. Wiring installations shall be complete, including all connections.
   3. Nameplates shall be laminated plastic, and attached to clean surfaces of the metal enclosures with an adhesive.

G. Automatic Transfer Switch: The Automatic Transfer Switch described in Specification Section 26 3600 shall be supplied with the Service Entrance equipment.

H. Checking, Adjusting and Testing: Provide all checking, adjusting and testing operations on equipment and complete installations as specified in these Specifications.

END OF SECTION

DRAFT

SECTION 26 2200 – LOW VOLTAGE TRANSFORMERS

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. This section covers dry type transformers used for low voltage, single and three phase, power distribution and lighting.

1.02 SUBMITTALS

A. Products shall be submitted in accordance with Section 01 3300 – Submittal Procedures and the Contract Documents prior to installation.

1.03 QUALITY ASSURANCE

A. IEEE C57.12.01, General Requirements for Dry-Type Distribution and Power Transformers

B. NEMA ST 20, Dry-Type Transformers for General Applications

C. UL 506, Standard for Specialty Transformers

PART 2 – PRODUCTS

2.01 DISTRIBUTION - LOW VOLTAGE LIGHTING AND POWER

A. Transformers shall be premium high efficiency quiet type, and shall be installed where indicated on the Plans. The primary winding of the transformers shall have two 2.5% taps above, and below normal.

B. The transformers shall have a BIL of 10 KV with a temperature class of 185°C for transformers up to 25 KVA, and a temperature class of 220°C for larger transformers.

C. The sound level shall not exceed 44 dBa measured at 5 feet from the transformer after installation. Core and coil assemblies 30 KVA and larger, shall be mounted on rubber vibration isolators, designed to reduce harmonics generated noise.

D. Transformers shall include primary and secondary circuit protection.

E. Transformers shall be types manufactured by Square-D, Eaton, ACME, or ENGINEER-approved equal.

2.02 FERRO RESONANT ISOLATION TRANSFORMERS

A. Ferro resonant isolation transformers shall be provided where indicated on the Plans. Regulation shall be +3 percent for an input range of +10 percent. Common mode noise rejection shall be better than 120 dB with transverse mode noise rejection better than 60 dB. Voltage spike attenuation shall be better than 250:1.

B. Isolation transformers shall be as manufactured by Shape Magnetronics, Control Concepts, Inc., or ENGINEER-approved equal.

C. Transformers 15 kVA and larger must meet the energy requirements of NEMA TP-1.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Transformers shall be installed as indicated on the Plans, and in accordance with the manufacturer's instructions and recommendations. CONTRACTOR shall provide painted metal wall brackets, when required.

B. Grounding shall be provided per NEC, and these Specifications.

DRAFT

C. A sign with 2”-high black letters on a white background shall indicate the exact (not the general) location of the transformer’s primary circuit disconnect switch.

END OF SECTION

DRAFT

SECTION 26 2413 – SWITCHBOARDS

PART 1 – GENERAL

1.01 SCOPE

A. The CONTRACTOR shall furnish and install, where indicated, a free-standing, dead-front type low-voltage distribution switchboard, utilizing group mounted circuit protective devices as specified herein, and as shown on the contract drawings.

1.02 REFERENCES

A. The low voltage distribution switchboards and all components shall be designed, manufactured and tested in accordance with the latest applicable following standards:
   1. NEMA PB-2
   2. UL Standard 891

1.03 SUBMITTALS

A. The following information shall be submitted to the ENGINEER for review:
   1. Master drawing index
   2. Front view elevation
   3. Floor plan
   4. Top view
   5. Single line
   6. Schematic diagram
   7. Nameplate schedule
   8. Component list
   9. Conduit entry/exit locations
   10. Assembly ratings including:
      a. Short-circuit rating
      b. Continuous current
      c. Voltage
   11. Major component ratings including:
      a. Voltage
      b. Continuous current
      c. Interrupting ratings
   12. Cable terminal sizes.
   13. Busway connection
   14. Connection details between close-coupled assemblies
   15. Composite floor plan of close-coupled assemblies
   16. Key interlock scheme drawing and sequence of operations.
   17. Calculation of flash protection boundary and require personal protective equipment

B. Submit copies of the following information for record purposes:
   1. Final as-built drawings and information for items listed in Section 01 3300 Submittal Procedures.
   2. Wiring diagrams
   3. Certified production test reports
   4. Installation information
   5. Seismic certification and equipment anchorage details

DRAFT

1.04 QUALIFICATIONS

A. The manufacturer of the assembly shall be the manufacturer of the circuit protective devices within the assembly.

B. For the equipment specified herein, the manufacturer shall be ISO 9000, 9001, or 9002 certified.

C. The manufacturer of this equipment shall have produced similar electrical equipment for a minimum period of five (5) years. When requested by the ENGINEER, an acceptable list of installations with similar equipment shall be provided demonstrating compliance with this requirement.

1.05 REGULATORY REQUIREMENTS

A. The low-voltage switchboard shall be UL labeled.

1.06 DELIVERY, STORAGE AND HANDLING

A. Equipment shall be handled and stored in accordance with manufacturer's instructions. One (1) copy of these instructions shall be included with the equipment at time of shipment.

1.07 OPERATION AND MAINTENANCE MANUALS

A. Copies of the equipment operation and maintenance manuals shall be provided. Operation and maintenance manuals shall include the following information:
   1. Instruction books and/or leaflets
   2. Recommended renewal parts list
   3. Drawings and information required by section 1.04.

PART 2 – PRODUCTS

2.01 MANUFACTURERS

A. Cutler-Hammer

B. General Electric

C. ENGINEER-approved equal

2.02 RATINGS

A. The assembly shall be rated to withstand mechanical forces exerted during short-circuit rating as indicated on the Plans.

B. Voltage rating to be as indicated on the Plans.

2.03 CONSTRUCTION

A. Switchboard shall consist of the required number of vertical sections bolted together to form a rigid assembly. The sides and rear shall be covered with removable bolt-on covers. All edges of front covers or hinged front panels shall be formed. Provide adequate ventilation within the enclosure.

B. All sections of the switchboard shall be rear aligned with depth as shown on the drawings. All protective devices shall be group mounted. Devices shall be front removable and load connections front accessible enabling switchboard to be mounted against a wall.

C. The assembly shall be provided with adequate lifting means.

D. The switchboard shall be equal to Cutler-Hammer type Pow-R-Line C utilizing the components herein specified and as shown on the drawings.

DRAFT

2.04 BUS

A. All bus bars shall be silver-plated copper. Main horizontal bus bars shall be mounted with all three phases arranged in the same vertical plane. Bus sizing shall be based on NEMA standard current density of 1000 amps per square inch.

B. Provide a full capacity neutral bus where a neutral bus is indicated on the drawings.

C. A copper ground bus (minimum ¼-inch x 2 inches), shall be furnished firmly secured to each vertical section structure and shall extend the entire length of the switchboard.

D. All hardware used on conductors shall be high-tensile strength and zinc-plated. All bus joints shall be provided with conical spring type washers.

2.05 WIRING/TERMINATIONS

A. Small wiring, necessary fuse blocks and terminal blocks within the switchboard shall be furnished as required. Control components mounted within the assembly, such as fuse blocks, relays, pushbuttons, switches, etc., shall be suitably marked for identification corresponding to appropriate designations on manufacturers wiring diagrams. Wiring diagrams shall contain terminal and wire numbers.

B. Mechanical-type terminals shall be provided for all line and load terminations suitable for copper or aluminum cable rated for 75°C of the size as indicated on the Plans.

C. Lugs shall be provided in the incoming line section for connection of the main grounding conductor. Additional lugs for connection of other grounding conductors shall be provided as indicated on the Plans.

D. All control wire shall be type SIS, bundled and secured with nylon ties. Insulated locking spade terminals shall be provided for all control connections, except where saddle type terminals are provided integral to a device. All current transformer secondary leads shall first be connected to conveniently accessible short-circuit terminal blocks before connecting to any other device. All groups of control wires leaving the switchboard shall be provided with terminals blocks with suitable numbering strips. Provide wire markers at each end of all control wiring.

2.06 MOLDED CASE PROTECTIVE DEVICES

A. Main and feeder protective devices shall be molded case circuit breakers with inverse time and instantaneous tripping characteristics and shall have ground fault protection where indicated, or as required by NEC.

B. Circuit breakers shall be operated by a toggle-type handle and shall have a quick-make/quick-break over-center switching mechanism that is mechanically trip-free. Automatic tripping of the breaker shall be clearly indicated by the handle position. Contacts shall be non-welding silver alloy, and arc extinction shall be accomplished by means of DE-ION arc chutes. A push-to-trip button on the front of the circuit breaker shall provide a local manual means to exercise the trip mechanism.

C. Circuit breakers shall have a minimum symmetrical interrupting capacity as indicated on the Drawings.

D. Where indicated on the Drawings, circuit breakers shall be UL listed for series application.

E. Where indicated on the Drawings, circuit breakers shall be current limiting.

F. Circuit breakers 400 ampere frame and below shall be thermal-magnetic trip units and inverse time-current characteristics. Circuit breakers 600-ampere through 1200-ampere frame shall be microprocessor-based RMS sensing trip units. Circuit breakers 1600-ampere through 2500-ampere frame shall be microprocessor-based RMS sensing trip units.

DRAFT

G. On circuit breakers 800 amps and larger, a trip button and integral current reading display shall be provided

H. Where indicated, provide circuit breakers UL listed for application at 100% of their continuous ampere rating in their intended enclosure.

I. Provide Lamicoid labels for feeder circuit breakers that provide a descriptive name, as identified on the Drawings, of the load being served. Include circuit number and circuit breaker trip rating.

2.07 ACCESSORIES

A. Provide shunt trips, bell alarms and auxiliary switches as shown on the contract drawings.

B. Circuit Breaker Energy Monitoring.

C. Centralized Local Monitoring.

D. Provide transient voltage surge suppression as required in these Specifications and indicated on the Plans.

2.08 MISCELLANEOUS DEVICES

A. Key interlocks shall be provided as indicated on the Plans or required for safe equipment operation.

B. Control power transformers with primary and secondary protection shall be provided, as indicated on the Plans, or as required for proper operation of the equipment.

C. Each section of the switchboard shall be provided with a space heater, thermostatically controlled. Power for the space heaters shall be obtained from a control power transformer within the switchboard. Supply voltage shall be 120 volts AC.

2.09 ENCLOSURES

A. Indoor NEMA 1 Enclosure

B. Outdoor NEMA 3R Enclosure

1. Outdoor enclosure shall be non-walk-in and meet applicable NEMA 3R UL requirements.
2. Enclosure shall have flat roof sloping roof downward toward rear.
3. Outer sections shall be the same widths as indoor structures, except each end of the outdoor assembly shall have an end trim.
4. The enclosure shall be provided with bolt-on rear covers for each section.
5. Doors shall have provisions for padlocking.
6. Ventilating openings shall be provided complete with replaceable fiber glass air filters.
7. Provide space heaters thermostatically controlled for each structure with adequate wattage to prevent the accumulation of moisture.
8. Power for space heaters, lights and receptacles shall be obtained from a control power transformer within the switchboard. Supply voltage shall be 120 volts AC.

2.10 NAMEPLATES

A. Engraved nameplates, mounted on the face of the assembly, shall be furnished for all main and feeder circuits as indicated on the Plans. Nameplates shall be laminated plastic, black characters on white background. Nameplates shall give item designation and circuit number as well as frame ampere size and appropriate trip rating. Furnish master nameplate giving switchboard designation, voltage ampere rating, short-circuit rating, manufacturer's name, general order number, and item number.

DRAFT

B. Control components mounted within the assembly, such as fuse blocks, relays, pushbuttons, switches, etc., shall be suitably marked for identification corresponding to appropriate designations on manufacturer's wiring diagrams.

2.11 FINISH

A. All exterior and interior steel surfaces of the switchboard shall be properly cleaned and provided with a rust-inhibiting phosphatized coating. Color and finish of the switchboard shall be ANSI 61 light gray.

PART 3 – EXECUTION

3.01 FACTORY TESTING

A. The following standard factory tests shall be performed on the equipment provided under this section. All tests shall be in accordance with the latest version of ANSI and NEMA standards.
   1. The switchboard shall be completely assembled, wired, adjusted, and tested at the factory. After assembly, the complete switchboard will be tested for operation under simulated service conditions to assure the accuracy of the wiring and the functioning of all equipment. The main circuits shall be given a dielectric test of 2200 volts for one (1) minute between live parts and ground, and between opposite polarities. The wiring and control circuits shall be given a dielectric test of 1500 volts for one (1) minute between live parts and ground.

B. The manufacturer shall provide certified copies of factory test reports.

3.02 INSTALLATION

A. The CONTRACTOR shall install all equipment per the MANUFACTURER'S instructions, Contract Documents, and National Electrical Code.

B. The assembly shall be provided with adequate lifting means and shall be capable of being moved into installation position and bolted directly to the floor without the use of floor sills provided the floor is level to 1/8-inch per 3-foot distance in any direction. All necessary hardware to secure the assembly in place shall be provided by the CONTRACTOR.

3.03 FIELD INSPECTION AND TESTS

A. Provide the services of an authorized representative of the equipment manufacturer to make site visits to supervise the field testing and installation to be performed by the CONTRACTOR. The manufacturer’s representative shall state in writing that the equipment has been correctly installed and tested.

B. Perform the following minimum tests and checks before energizing equipment:
   1. Megger terminals and busses for grounds after disconnecting devices sensitive to megger voltage.
   2. Inspect all mechanical and electrical interlocks for proper operation.

C. Perform any other tests recommended by the equipment manufacturer and other tests as described in this specification.

D. The manufacturer’s representative shall supply results of all factory and field tests in writing for submittal to the ENGINEER.

E. The manufacturer shall supply test results to confirm that the assembly design has been tested to substantiate conformance with the applicable ANSI and NEMA Standards.

F. Touch-up paint all chips and scratches with manufacturer supplied paint and leave remaining paint with OWNER.

DRAFT

G. The CONTRACTOR shall perform field adjustments of the protective devices as required to place the equipment in final operating condition. Necessary field settings of devices, adjustments, and minor modifications to equipment to accomplish operational condition shall be carried out by the CONTRACTOR at no additional cost to the OWNER.

END OF SECTION

DRAFT

SECTION 26 2416 – PANELBOARDS

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. This section covers electrical panelboards.

1.02 SUBMITTALS

A. Products shall be submitted in accordance with these Specifications and the Contract Documents prior to installation.

B. Panelboard submittal shall include:
   1. Layout and dimensions with alphanumeric designation
   2. Branch circuit breaker sizes and types
   3. AIC rating
   4. Bus sizes and ratings
   5. Cable terminal sizes
   6. Product sheets
   7. Installation information
   8. Seismic certification and equipment anchorage details

1.03 QUALITY ASSURANCE

A. NEMA PB-1, Panelboards

B. NEC

C. UL67, Panelboards

PART 2 – PRODUCTS

2.01 PANELBOARDS

A. Dead-front panelboards, including lighting distribution and control panels, shall be furnished and installed as indicated on the Plans. Buses shall be copper. Mounting and type of enclosures shall be as indicated on the Plans. Where not indicated, indoor enclosures shall be NEMA 12 and outdoor enclosures shall be NEMA 3R. The minimum interrupting capacity of any device shall be as indicated on the Plans.

B. Protective devices shall be replaceable without disturbing adjacent units. Wire connectors shall be suitable for wire sizes indicated. Branch circuits shall be numbered as indicated on the Plans, and a complete typed circuit schedule shall be furnished under a transparent cover, and affixed to the panel. Phase busing shall be full height without reduction. Full size neutral bars shall be included, and shall have suitable lug for each outgoing circuit requiring neutral connection. Spaces for future protective devices provided in lighting panels shall be bused for the maximum device that can be fitted into them.

C. Panelboards shall be finished with a primer, rust resistant phosphate undercoat and two coats of oven baked enamel with finish ANSI grey. Doors shall not uncover any live parts, and shall be hinged and have latches that require no tool to operate. Panelboard doors shall be lockable. Lock and two keys shall be furnished.

D. Each panelboard shall have, on the outside of the door, a lamicoid nameplate with ¾-inch letters as specified elsewhere in these Contract Documents.

E. Panelboards shall be manufactured by Cutler Hammer, General Electric, or ENGINEER-approved equal.

F. Panelboards shall be service entrance rated where required, and as shown on the Plans.

DRAFT

G. Panelboards shall be bolt-on type and provided with spare breakers as indicated on the Plans.

H. Panelboards shall include a typed circuit directory located inside the panel.

I. Surge Protective Devices (SPD)
   1. The SPD shall be per these Specifications.
   2. Surge Protective Devices (SPD) shall be designed to provide transient voltage protection for a service entrance panelboard.
   3. SPD shall be rated for the voltage and phase service of the panel at 120 kA per phase.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Panelboards shall be installed as indicated on the plans and according to manufacturer's instructions.

B. Provide grounding per NEC and these Specifications.

C. CONTRACTOR shall verify all NEC clearance requirements prior to installation.

END OF SECTION

DRAFT

SECTION 26 2716 – ELECTRICAL CABINETS AND ENCLOSURES

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. This specification includes enclosures to house electrical controls, instruments, terminal blocks, and/or serve as junction boxes where shown on the Plans.

1.02 SUBMITTALS

A. Products shall be submitted in accordance with these Specifications and elsewhere in the Contract Documents prior to installation.

1.03 MANUFACTURERS

A. Enclosures shall be manufactured by Hammond, Hoffman, Rittal, or ENGINEER-approved equal.

PART 2 – PRODUCTS

2.01 STEEL

A. Enclosures shall be fabricated from 14 gauge steel with seams that are continuously welded. Doors shall have full length piano hinges with the door removable by pulling the hinge pin.

B. A rolled lip shall be provided around three sides of the door and around all sides of the enclosure opening. The gasket shall be attached with oil-resistant adhesive and held in place with steel retaining strips. Exterior hardware, such as clamps, screws, and hinge pins, shall be of stainless steel for outdoor installations. A hasp and staple shall be provided for padlocking. Each enclosure shall have a print pocket. All wires entering or leaving the enclosure shall terminate on terminal strips. All wires and terminals shall be clearly identified as specified elsewhere in these specifications.

C. Finish shall be white enamel interior, light gray enamel, ANSI 61 exterior, over phosphatized surfaces. Special finishes and colors shall be furnished for wet locations. Plans should be checked for special conditions.

2.02 NEMA RATING

A. Unless otherwise indicated on the Plans, enclosures shall be NEMA 12 for indoors, NEMA 4X for corrosive areas, and NEMA 3R for outdoor installations. NEMA 4X enclosures shall be 316 stainless steel, unless noted otherwise. NEMA 4X enclosures shall also be used in wet or wash down areas.

2.03 FIBERGLASS ENCLOSURES (where indicated in plans)

A. Where called out in the Plans, fiberglass NEMA 3R or 4X enclosures shall be compression molded, fiberglass reinforced polyester, high impact, and heat resistant.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Enclosures shall be installed as indicated on the Plans, and according to manufacturer's instructions.

B. Enclosures shall be properly grounded, and shall include ground straps connected to hinged doors and accessories.

END OF SECTION

DRAFT

SECTION 26 2726 – WIRING DEVICES

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Light switches, receptacles, device plates, dimmers, plug-in strips, and tele-power poles.

1.02 QUALITY ASSURANCE

A. Device shall be UL-rated when applicable

1.03 SUBMITTALS

A. Shop Drawings: Refer to the Contract Documents and these Specifications.

PART 2 – PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Subject to compliance with the Contract Documents, the following manufacturers are acceptable:
   1. Light switches (except explosion proof):
      a. Hubbell
      b. Slater
      c. P&S
      d. Arrow Hart
      e. General Electric
      f. Leviton
      g. Or ENGINEER-approved equal
   2. Explosion proof light switches:
      a. Crouse-Hinds
      b. Appleton Electric Co.
      c. Killark
      d. Or ENGINEER-approved equal
   3. Door switches:
      a. General Electric
      b. Slater
      c. P&S
      d. Arrow Hart
      e. Micro-switch
      f. Or ENGINEER-approved equal
   4. Receptacles (except explosion proof):
      a. Hubbell
      b. Slater
      c. P&S
      d. Arrow Hart
      e. General Electric
      f. Leviton
      g. Or ENGINEER-approved equal
   5. Explosion proof receptacles:
      a. Crouse-Hinds
      b. Appleton Electric Co.

DRAFT

c. Killark
d. Or ENGINEER-approved equal

6. Welding receptacles:
   a. Crouse-Hinds
   b. Appleton Electric Co.
   c. Or ENGINEER-approved equal
7. Tele-power poles:
   a. Wiremold
   b. Walker
   c. Or ENGINEER-approved equal
8. Dimmers:
   a. Lutron
   b. General Electric
   c. P&S
   d. Or ENGINEER-approved equal
9. Plug-in strip:
   a. Wiremold
   b. Walker
   c. Or ENGINEER-approved equal

2.02 MATERIALS

A. Light Switches for Unclassified Areas:
   1. Toggle type, quiet action, specification grade with grounding terminal
   2. Back and side wired
   3. Solid silver cadmium oxide contacts
   4. One-piece switch arm rated 20 A, 120/277 V AC
   5. UL listed
   6. Color: Ivory
   7. Wall plate: Type 304 stainless steel
   8. Type: As indicated on Drawings

B. Receptacles for Unclassified Areas:
   1. Straight blade, grounding type, specification grade
   2. Back and side wired with wrap-around bridge
   3. Rated 20 A, 125 V AC
   4. UL listed
   5. Color:
      a. For use on normal power: Ivory
      b. For use on UPS systems: Red
      c. For use on isolated ground systems: Orange
   6. Wall plate: Type 304 stainless steel
   7. Type: As indicated on Drawings

C. Light Switches for Wet Areas:
   1. Presswitch type, quiet action, specification grade, with grounding terminal
   2. Back and side wired
   3. Solid silver cadmium oxide contacts
   4. One-piece switch arm rated 20 A, 120/277 V AC
   5. UL listed
   6. Color: Ivory
   7. Wall plate: Gray weatherproof presswitch type
   8. Type: As indicated on Drawings

DRAFT

D. Receptacles for Wet Areas:
   1. Straight blade, grounding type, specification grade
   2. Back and side wired with wrap around bridge
   3. Rated 20 A, 125 V AC
   4. UL listed
   5. Color: Ivory
   6. Wall plate: Weatherproof, cast aluminum, UL listed, WDL open and closed
   7. Type: As indicated on Drawings

E. Ground Fault Circuit Interrupter Receptacles:
   1. Straight blade, grounding type, specification grade
   2. Rated 20 A, 125 V AC
   3. UL listed
   4. Test and reset buttons
   5. Wall plate: Indoor or weatherproof as required
   6. Feed-through type

F. Light Switches for Corrosive Areas:
   1. Corrosion-resistant NEMA 4X enclosure with switch consisting of:
      a. Fiberglass reinforced polyester enclosure
      b. Fiberglass reinforced polyester gasketed wall plate with built-in toggle lever switch with stainless steel shaft
      c. Grounding bushing
      d. Rated 20 A, 125 V AC
      e. UL listed
      f. Type: As indicated on Drawings
      g. Color: Yellow
   2. Optional: Corrosion-resistant enclosure and switch consisting of:
      a. Cast copper-free aluminum "FS" or "FD" ridge type hub box
      b. Toggle type, quiet action, specification grade with grounding terminal
      c. Rated 20 A, 125 V AC with solid silver cadmium oxide contacts
      d. UL listed
      e. Neoprene gasket
      f. Cast aluminum cover with stainless steel screws and lever to activate switch
      g. Type: As indicated on Drawings
      h. Color: Yellow

G. Receptacles for Corrosive Areas:
   1. Corrosion-resistant straight blade, grounding type, specification grade
   2. Back and side wired with wrap-around bridge
   3. Rated 20 A, 125 V AC
   4. UL listed
   5. Color: Yellow
   6. Box: "FS" or "FD" ridge type cast hub box of copper-free aluminum
   7. Gasket: Neoprene
   8. Wall plate: Weatherproof, cast aluminum, UL listed, WDL open or closed
   9. Type: As indicated on Drawings

H. Explosion proof Light Switches for Use in Hazardous Areas:
   1. Explosion proof, UL listed for Class I, Division 1 and 2, Groups B, C, and D; and Class II, Division 1 and 2 areas, Groups E, F, and G.
   2. EDS factory sealed
   3. Malleable iron body and cover

DRAFT

4. Aluminum sealing chamber
5. Front operated handle with stainless steel shaft
6. Rated 20 A, 125 V AC
7. With grounding screw
8. Type: As indicated on Drawings

I. Explosion proof Receptacles for Use in Hazardous Areas:
1. Explosion-proof, UL listed for Class I, Division 1 and 2, Groups B, C, and D; and Class II, Division 1 and 2, Groups F and G.
2. Factory-sealed malleable iron receptacle with spring-loaded cover
3. Malleable iron mounting box
4. Rated 20 A, 125 V AC
5. "Dead-front" construction requiring plug to be inserted and rotated to activate receptacle
6. Type: As indicated on Drawings.

J. Welding Receptacles: 1. 60 A, 480 V, 3 pole, 4 wire, grounding type

K. Plug-In Strip: Surface steel raceway plug-in strip with single 15 A, 125 V, 3 wire grounding-type receptacles spaced 18 IN on center.
1. Prewired with two #12 TW and one #12 TW green insulated ground
2. Minimum 1-1/4 IN wide x 3/4 IN deep
3. Suitable fittings and snap-in cover
4. Finish:
   a. Stainless steel
5. Receptacle color:
   a. For use on normal power: Ivory
   b. For use on UPS systems: Red
   c. For use on isolated ground systems: Orange

PART 3 – EXECUTION

3.01 INSTALLATION

A. Mount devices where indicated on the Drawings and as scheduled in these Specifications.

B. Surface mount receptacles and light switches in concrete construction.

C. In masonry and metal stud construction, recess mount receptacles and light switches unless device precludes recessed mounting or unless otherwise noted on the Drawings.

D. Where more than one receptacle is installed in a room, they shall be symmetrically arranged.

E. Set switches and receptacles plumb and vertical to the floor.

F. Set recess-mounted switches and receptacles flush with face of walls.

G. Do not connect dimmers to loads in excess of 80 percent of the rating of the dimmer.

H. Provide blank plates for empty outlets.

END OF SECTION

DRAFT

SECTION 26 2813 – FUSES

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. This section covers the requirements for protective fusing on this project. The CONTRACTOR shall furnish and install fuses and fuse holders per the Drawings and equipment manufacturers recommendations.

B. This specification includes the general requirements for various types of fuses whether they are shown on the Drawings or not. If fusing is required by codes or manufacturers recommendations, but not shown on the Drawings, this specification shall apply to the type of fusing provided by the CONTRACTOR.

C. Types of fuses specified in this section include the following:
   1. Class L time-delay
   2. Class L fast-acting
   3. Class RK1 time-delay
   4. Class RK1 and Class J current-limiting
   5. Class RK5 time-delay
   6. Class K5 time-delay, noncurrent-limiting
   7. Class T current-limiting

1.02 QUALITY ASSURANCE

A. The fuse manufacturer's facilities shall be ISO 9001 certified.

1.03 CODES AND STANDARDS

A. UL Compliance and Labeling: Comply with applicable provisions of UL 198D, "High-Interrupting-Capacity Class K Fuses". Provide over-current protective devices which are UL-listed and labeled.

B. NEC Compliance: Comply with NEC as applicable to construction and installation of fusible devices.

C. ANSI Compliance: Comply with applicable requirements of ANSI C97.1 "Low-Voltage Cartridge Fuses 600 Volts or Less".

1.04 SUBMITTALS

A. Product Data: Submit manufacturer's technical product data on fuses, including specifications, electrical characteristics, installation instructions, furnished specialties and accessories in accordance with these Specifications and the Contract Documents. In addition, include voltages and current ratings, interrupting ratings, current limitation ratings, time-current trip characteristic curves, and mounting requirements.

1.05 MANUFACTURERS

A. Subject to compliance with requirements, manufacturers offering fusible devices which may be incorporated in the work include, but are not limited to, the following: Bussmann, Gould-Shawmut, Reliance, or ENGINEER-approved equal.

DRAFT

PART 2 – PRODUCTS

2.01 GENERAL

A. Except as otherwise indicated, provide fuses of types, sizes, ratings, and average time-current and peak let-through current characteristics indicated, which comply with manufacturer's standard design, materials, and constructed in accordance with published product information, and with industry standards and configurations.

2.02 CLASS L TIME-DELAY FUSES

A. Provide UL Class L time-delay fuses rated 600 volts, 60 Hz, with 200,000 RMS symmetrical interrupting current rating for protecting transformers, motors, and circuit-breakers.

2.03 CLASS L FAST-ACTING FUSES

A. Provide UL Class L fast-acting fuses rated 600 volts, 60 Hz, with 200,000 RMS symmetrical interrupting current rating for protecting service entrances and main feeder circuit-breakers.

2.04 CLASS RK1 TIME-DELAY FUSES

A. Provide UL Class RK1 time-delay fuses rated 600 volts, 60 Hz, with 200,000 RMS symmetrical interrupting current rating for protecting motors and circuit-breakers.

2.05 CLASS RK1 CURRENT-LIMITING FUSES

A. Provide UL Class RK1 current-limiting fuses rated 250 volts, 60 Hz, with 200,000 RMS symmetrical interrupting current rating for protecting circuit-breakers.

2.06 CLASS J CURRENT LIMITING FUSES

A. Provide UL Class J current-limiting fuses rated 600 volts, 60 Hz, with 200,000 RMS symmetrical interrupting current rating.

2.07 CLASS RK5 TIME-DELAY FUSES

A. Provide UL Class RK5 time-delay fuses rated 600 volts, 60 Hz, with 200,000 RMS symmetrical interrupting current rating for protecting motors.

2.08 CLASS K5 ONE-TIME FUSES

A. Provide UL Class K5 one-time fuses rated 250 volts, 60 Hz, with 100,000 RMS symmetrical interrupting current rating for protecting non-inductive loads.

2.09 CLASS T FUSES

A. Provide UL Class T fuses rated 600 volts, 60 Hz, with 200,000 RMS symmetrical interrupting current rating for protection of physically small devices.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Fuse types and sizes shall be as indicated on the Plans. Fuses shall be installed in accordance with the National Electric Code (NEC) requirements and the manufacturer's written instructions.

B. Install fuses in proper fuse holders.

C. Where fuses are installed in the motor starters, fuses shall be sized to match the actual motor full load current.

D. Where fuses are installed in disconnect switches at HVAC units, the fuse sizes shall be sized to meet the HVAC manufacturer's requirements.

DRAFT

E. Fuses for control transformers shall be sized in accordance with the National Electrical Code.

F. Fuses shall be installed with the labels clearly visible.

3.02 FIELD QUALITY CONTROL

A. Prior to energizing fusible devices, test devices for circuit continuity and for short-circuits.

3.03 SPARE PARTS

B. Furnish 3 spare fuses of each size and type.

END OF SECTION

DRAFT

SECTION 26 2816 – ENCLOSED SWITCHES AND CIRCUIT BREAKERS

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. The CONTRACTOR shall furnish and install, low voltage circuit breakers and enclosed disconnect switches, as indicated on the Drawings and specified herein.

1.02 SUBMITTALS

A. Products shall be submitted in accordance with these Specifications and elsewhere in the Contract Documents prior to installation.

1.03 QUALITY ASSURANCE

A. The breaker manufacturer's facilities shall be ISO 9001 certified.

PART 2 – PRODUCTS

2.01 GENERAL

A. Circuit breakers shall be manufactured by Cutler-Hammer, Allen-Bradley, General Electric, or ENGINEER-approved equal.

B. Circuit breaker frame, trip, short circuit, and interruption ratings shall be as indicated on the Drawings, except that they shall be coordinated with the ratings of the equipment actually furnished, and shall be modified where necessary to suit the equipment. Circuit breakers to be used in motor control centers shall be as indicated on the Drawings. Where no indication of type is given on the Drawings circuit breakers protecting motors shall be motor circuit protectors, and other circuit breakers shall be molded case type.

C. Circuit breaker for mounting in motor control centers, or for separate mounting shall be of the air-break type, quick-make and quick-break, 600 volt, with number of poles as indicated on the Drawings.

D. Each pole of the circuit breaker shall provide inverse time delay, and instantaneous circuit protection.

E. The breakers shall be operated by a handle, and shall have a switching mechanism that is mechanically trip free from the handle, so that the contacts cannot be held closed against short circuits, and abnormal currents. Tripping due to overload, or short circuit shall be clearly indicated by the handle automatically assuming a position between the manual ON and OFF positions. Latch surfaces shall be ground and polished. Poles shall be constructed so that they open, close, and trip simultaneously.

F. Breakers must be completely enclosed in a molded case. Non-interchangeable trip breakers shall have their covers sealed; interchangeable trip breakers shall have the trip unit sealed to prevent tampering. Ampere ratings shall be clearly visible. Contacts shall be non-welding silver alloy. Arc extinction must be accomplished by means of arc chutes. The minimum interrupting ratings of the circuit breakers shall be at least equal to the available short circuit current at the line terminals.

G. Circuit breakers shall conform to the applicable requirements of NEMA Standards Publication No. AB1.

DRAFT

H. Molded case circuit breakers shall be ambient temperature compensating that provides inverse time delay overload and instantaneous short circuit protection by means of a thermal-magnetic element. Compensation shall be accomplished by a secondary bi-metal that will allow the breaker to carry rated current between 25°C and 50°C with tripping characteristics that are approximately the same throughout this temperature range.

I. On breakers with interchangeable, thermal, adjustable magnetic trip, the accessibility and position of the adjustment knob shall not be changed from those on the standard breaker.

J. Unless mounted in a switchboard, or panelboard, circuit breakers shall be housed in a NEMA rated enclosure as described elsewhere in these specifications.

K. Provide circuit breakers with shunt trip mechanisms where shown on the Drawings.

2.02 DISCONNECT SWITCHES

A. Disconnect switches shall be heavy-duty safety switches with a quick-make, quick-break operating mechanism, full cover interlock, and indicator handle. Disconnect switches shall be furnished with fuses of the size indicated on the Plans. One set of spare fuses shall be furnished for each fused disconnect switch. Disconnect switches shall be NEMA type HD heavy duty construction, UL 98 listed.

B. Enclosures shall be rated NEMA 12 for indoor use, NEMA 4X for corrosive areas and for outdoor use, unless otherwise indicated on the Plans.

C. Disconnect switch handle shall be padlockable.

D. Disconnect switches in corrosive areas as indicated on the Plans, shall be NEMA 4X, 316 stainless steel.

E. Disconnect switches shall be manufactured by Square D, Cutler Hammer, Allen-Bradley, General Electric, Eaton, or equal.

F. Disconnect switches for motors shall be rated for 125% of the motor HP or as indicated on the plans.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Circuit breakers and disconnect switches shall be installed as indicated on the Drawings and per manufacturer's instructions.

END OF SECTION

DRAFT

SECTION 26 2913 – ENCLOSED MOTOR CONTROLLERS

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. A motor controller is any device or group of devices normally used to start and stop a motor by making and breaking the motor circuit current. The motor controller and devices that make up the motor controller shall be governed by items indicated on the Plans, or elsewhere within these specifications.

B. Types of motor controllers specified in this section include the following:
   1. Combination
   2. Fractional HP manual
   3. Solid-state reduced voltage starter (SSS)

C. This section applies to motor controllers rated 480 V and below.

1.02 CODE AND STANDARDS

A. Electrical Code Compliance: Comply with applicable local electrical code requirements of the authority having jurisdiction and NEC Articles 220, 250, and 430, as applicable to installation, and construction of motor controllers.

B. NFPA Compliance: Comply with applicable requirements of NFPA 70E, "Standard for Electrical Safety in the Workplace."

C. UL Compliance: Comply with applicable requirements of UL 486A and B, and UL 508, pertaining to installation of motor controllers. Provide controllers and components which are UL-listed and labeled.

D. NEMA Compliance: Comply with applicable requirements of NEMA Standard ICS 2, "Controllers, Contactors and Overload Relays" and Pub No. 250, "Enclosures for Electrical Equipment (1000 Volts Maximum)," pertaining to motor controllers and enclosures.

1.03 MAINTENANCE DATA

A. Submit maintenance data and parts list for each motor controller and component; including troubleshooting maintenance guide. Also, provide product data and shop drawings in a maintenance manual, in accordance with requirements of these Specifications and the Contract Documents.

1.04 SUBMITTALS

A. Product Data: Submit manufacturer’s data and installation instructions on motor controllers.

B. Shop Drawings: Submit shop drawings of motor controllers showing accurately scaled equipment locations and spatial relationships to associated motors and equipment.

C. Wiring Diagrams: Submit power and control wiring diagrams for motor controllers showing connections to electrical power panels, feeders, and equipment.

D. Submittal documents shall be provided in accordance with these Specifications and other requirements of the Contract Documents.

PART 2 – PRODUCTS

2.01 GENERAL

A. Except as otherwise indicated, provide motor controllers and ancillary components that comply with manufacturer's standard materials, design, and construction in accordance with published product information, and as required for a complete installation.

DRAFT

2.02 ELECTRONIC OVERLOAD RELAYS

A. Electronic overload relays shall be provided with the motor starters. The overload relay shall be a 3-pole solid state device that monitors all 3 phases of the motor current. The unit shall detect overcurrent, phase current imbalance, phase loss, and trip after an adjustable time from 3 seconds to 30 seconds.

B. The overload relays shall be field selectable to Class 10, 20, or 30, ambient temperature compensated, and shall have an LED trip indicator. The unit shall have a manual and automatic reset feature, and a normally closed contact for control.

C. Each module shall provide individual trip indication and reset for each trip condition, visible without opening the distribution panelboard compartment door. Provide a normally open auxiliary contact for remote trip indication.

D. Solid state circuits shall be completely protected from damage arising from line transients and voltage spikes.

E. Electronic Overload Relays shall be as manufactured by Allen-Bradley, Cutler Hammer, General Electric, or ENGINEER-approved equal.

2.03 MAGNETIC MOTOR STARTERS

A. Starters, Size 2 and larger, shall have arc quenchers on all load breaking contacts. Starters shall be suitable for the horsepower ratings specified. The CONTRACTOR shall verify the motor ratings, and coordinate the starter and overload trip ratings with the actual horsepower ratings of the motors installed. Extended overload reset buttons shall be mounted so as to be accessible for operation without opening the door of the enclosure.

B. Magnetic contactors shall be factory adjusted and shall be chatter free. Overload relays shall be electronic, as specified herein.

C. Starters shall be furnished complete with a 120-volt secondary control power transformer. Control circuit fuses shall be furnished both on the primary and secondary of the control circuit transformer. If there is no transformer, all live control power supply wires shall be fused.

D. Starters shall be designed to operate in ambient temperatures up to 600°C.

E. The minimum size starter shall be NEMA Size 1.

F. Magnetic Motor Starters shall be manufactured by Allen-Bradley, Square D, Cutler Hammer, General Electric, or ENGINEER-approved equal.

2.04 MANUAL STARTERS

A. Manual starters shall be rated for the motor load, and shall be equipped with built-in overloads.

B. Manual starters shall be provided with enclosures as indicated on the Plans, lockable handles that clearly indicate ON, OFF, and TRIPPED positions, pilot light, and positive, quick-make, quick break mechanisms.

C. Manual Starters shall be manufactured by Allen-Bradley, Cutler Hammer, General Electric, or ENGINEER-approved equal.

2.05 MOTOR PHASE FAILURE RELAY

A. The relay shall detect voltage values below an adjustable value, loss of phase, and phase reversal. The unit shall automatically de-energize the control circuits of the motors to be protected, when one or all three phase voltages drop below the set point. The unit shall have a nominal trip delay time of two seconds and a reset time of two seconds. The relay shall automatically reset upon restoration of the line voltage. Relays shall be MotorSaver,

DRAFT

Time Mark Corporation, or ENGINEER-approved equal.

2.06 MOTOR PROTECTION RELAY

A. The motor protection relay shall be capable of the following as a minimum:
   1. Phase loss
   2. Low voltage (adjustable)
   3. Phase reversal
   4. Phase unbalance

B. The motor protection relay shall be equipped with the following as a minimum:
   1. Adjustable trip delay (2 to 20 seconds)
   2. Automatic reset
   3. Transient protection (2,500 volts for 10 ms)

C. Motor protection relays shall be set during the project startup according to the individual motor characteristics and application parameters. The motor protection relays for the motors with variable frequency drives shall be set as to prevent low voltage tripping.

D. The motor protection relays shall be MotorSaver Model 350, Time Mark Model 264, or ENGINEER-approved equal.

2.07 SOLID STATE REDUCED VOLTAGE STARTER

A. Furnish and install a solid-state reduced voltage starter (SSS) to provide motor soft start and soft stop, where indicated on the Plans. The starter shall be capable of operating with any standard NEMA design motor of the specified horsepower. The unit shall be self-contained, house the logic board, power switches, heat sinks, motor overload protection, control power transformer, and applicable disconnect means in one enclosure.

B. Voltage rating to be 460V, 60Hz, 3 phase, +1- 20%.

C. SSS shall be supplied with a fused disconnect switch with the ability to be lockable in the open position.

D. Operating temperature shall be 0°C to 50°C, 5% to 95% relative humidity, non-condensing. De-rate 33% for each 10°C over 50°C to a maximum of 70°C.

E. Built in overload protection shall shut down and disable the starter until reset.

F. There shall be three pairs of inverse parallel SCRs. Each SCR shall be rated to block 2.5 times the nominal line to line voltage. The SCRs shall be sized to handle locked rotor current: 6 times full load current for 10 seconds on a cold start at 50°C.

G. The starter shall be installed as indicted on the Plans, and shall be supplied with properly sized input and bypass contactors, and controls as shown on the Plans.

H. Adjustments and indicators shall be accessible from a digital keypad with LCD panel. Indications shall include control power on, motor on, motor starting, overload, motor on bypass, and current.

I. Power poles and logic assemblies to be removable as one piece assemblies. One logic assembly shall work in any size unit of a given line voltage. The logic assembly shall be conformal coated. The gate drive circuit shall be optically coupled for noise immunity and long life. The logic assembly and SCRs shall be noise immune per NEMA showering arc test for solid-state contactors.

J. The soft start unit shall be capable of voltage or current control. The voltage limit shall be adjustable from 30% to 80% of line voltage and the current control shall be adjustable from 200% to 600% of FLA. In the voltage control mode, the ramp time shall be adjustable from 1 to 30 seconds, and the unit shall also have a soft stop feature.

DRAFT

K. The soft start shall have dry contact, form C, outputs available for internal faults, bypass contactor control, and run status.

L. Solid State reduced voltage starters shall be UL listed under UL508, and manufactured by Allen Bradley, Square D, Eaton, or ENGINEER-approved equal.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Install motor controllers in accordance with equipment manufacturer's written instructions, and with recognized industry practices. Comply with applicable requirements of NEC, UL, and NEMA standards, to ensure that products fulfill requirements.

B. Tighten connectors and terminals, including screws and bolts, in accordance with equipment manufacturer's published torque values for equipment connectors. Where manufacturer's torque requirements are not indicated, tighten connectors and terminals to comply with tightening torques specified in UL Standards 486A and B, and the National Electrical Code.

C. Install fuses, of sizes indicated, in each fusible disconnect switch, if any. The type and sizes of the fuses for SSS must be per the manufacturer’s recommendation.

D. Prior to energizing motor controller equipment, check with ground resistance tester, phase-to phase and phase-to-ground insulation resistance levels to ensure requirements are fulfilled.

E. Prior to energizing, check circuitry for electrical continuity.

F. Check rotation of each motor for proper direction.

G. Upon completion of installation of motor controller equipment and electrical circuitry, energize controller circuitry and demonstrate functioning of equipment in accordance with requirements. Where possible, correct malfunctioning units at site, then retest to demonstrate compliance; otherwise, remove and replace with new units, and retest to demonstrate compliance.

END OF SECTION

DRAFT

SECTION 26 2923 – VARIABLE FREQUENCY DRIVES

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. This section provides specification requirements for Variable Frequency Drives (VFD), and Variable Speed Drives (VSD) or herein identified as AC Drives for use with NEMA® Design B motors.

B. The CONTRACTOR shall furnish all labor, materials, equipment, appurtenances, and incidentals required to install, test, and operate the AC Drive systems specified herein, complete with all auxiliary items and accessories necessary to meet the highest standards for the type of service. Additionally, the CONTRACTOR shall provide for instruction of the regular operating personnel in the operation and maintenance of all systems and equipment supplied.

C. Where shown on the plans or specified herein, VFDs will be used to vary the operating speed of electric motors used to drive pumps, blowers, or other process equipment. The drives indicated on the plans are to be supplied by a single Manufacturer/Vendor, with the exception of the blower motor control units which will be supplied as part of a process equipment package.

D. The AC Drive supplier shall furnish, field test, adjust and certify all installed AC Drives for satisfactory operation. The supplier shall provide and have complete system responsibility for the adjustable frequency drives on the project. The supplier must confirm that his equipment is completely compatible with the facility's motors, controls, and electrical power system at each location. The supplier shall verify that the motor and adjustable speed equipment output speed, horsepower, and torque range agree with the driven motor requirements as determined and required by the process equipment supplier.

E. Any exceptions or deviations to this specification shall be indicated in writing and submitted to the ENGINEER for approval prior to commencement of work.

F. Start-up Services: The VFD supplier shall provide a start-up engineer for a minimum of two visits of one day each to perform commissioning services for the VFD equipment supplied. The VFD supplier shall confirm with the VFD manufacturer what amount of commissioning time is required for the VFD equipment for this project. The VFD supplier shall provide all required commissioning time of the start-up engineer at no extra cost to the OWNER. The start-up engineer shall supervise the final wiring of the VFD equipment.

1.03 QUALIFICATIONS

A. All of the AC Drives furnished under this Section shall be the product of a single manufacturer.

B. The Manufacturer of the AC Drive equipment shall provide equipment which is reliable, and designed and manufactured to assure compatibility of all components in both function and appearance.

C. Approved manufacturers shall be:
   1. Danfoss North America
   2. Or ENGINEER-approved equal

D. The Manufacturer of the AC Drives shall maintain a permanent fully factory trained and employed technical staff and an equipped service facility within a 400-mile radius of the project site having all personnel and all equipment required to maintain, repair, or overhaul the adjustable frequency drives and associated systems supplied herein.

1.04 SUBMITTALS

A. Submit complete material lists, shop drawings, and technical data for the ENGINEER's approval to the extent required in Section 01 3300 – Submittal Procedures and elsewhere in these Specifications.

B. The equipment supplied under this specification shall be pre-packaged and factory assembled and tested for conformance with these specifications and the project plans and documents.

C. Shop Drawings: The shop drawings shall be complete for the adjustable speed equipment as well as all other equipment furnished per this specification and shall include as a minimum the following items:
   1. Standard catalog sheets showing voltage, horsepower, maximum current ratings, and recommended replacement parts with part numbers shall be furnished for each different horsepower rated AC Drive shall be provided.
   2. Elevation drawings shall show the arrangement of all components. Positions on the front panel shall be identified with nameplates. Nameplates shall be in accordance with these Specifications.
   3. Dimensions for the equipment shall be shown on the Drawings.
   4. Weights for the equipment shall be shown on the Drawings.
   5. Diagrams shall show the equipment, equipment locations, wiring circuit schematics, voltage, wire numbers, and identified terminals.
   6. Settings of all protective devices and relays plus settings of all adjustable equipment parameters shall be provides as a typed list. This list shall include control network configuration parameters.
   7. Parts List: A complete list of parts that would be necessary to maintain and service the equipment shall be submitted to the ENGINEER with the shop drawings. The Manufacturer shall identify and furnish those spare parts required for one year of operation as part of this contract.

D. Installation and Operation Reports: Copies of the AC Drive supplier's Certified Reports for the equipment installation, testing and operation shall be submitted to the ENGINEER with the Operations and Maintenance Manuals.

DRAFT

E. Installation, Operations and Maintenance Manuals: Submit four (4) hardbound copies and one (1) electronic copy (pdf format) of the complete installation, operation, and maintenance manuals.
   1. Required operation and maintenance data includes, but is not limited to the following:
      a. Complete, detailed written operating instructions for each project or piece or equipment including: equipment function; operating characteristic; regulation and control; and shutdown. Manuals must be specific. General Manuals will not be accepted.
      b. Complete, detailed written preventative maintenance instruction.
      c. A complete inventory of all parts and components.
      d. Recommended spare parts lists and local sources of supply for parts.
      e. Written explanations of all safety considerations relating to operation and maintenance procedures.
      f. Name, address, and phone number of manufacturers, manufacturer's local service representative, or installer.
      g. A written explanation with illustrations for each preventative maintenance task.
      h. Trouble shooting instructions.

1.05 QUALITY ASSURANCE

A. The manufacturer of the AC Drive shall be a certified ISO 9001 facility.

B. The AC Drive and all associated optional equipment shall be UL Listed according to UL508C Power Conversion Equipment. A UL label shall be attached inside each enclosure as verification.

C. The AC Drive shall be designed constructed and tested in accordance with UL, CSA, NEMA and NEC standards.

D. Every power converter shall be quality assurance tested with an AC induction motor under load conditions and subjected to a hi-pot test with all enclosed devices mounted and wired, prior to shipment.

E. Quality Assurance documentation shall be furnished to verify successful completion upon written request of the ENGINEER.

1.06 WARRANTY

A. The CONTRACTOR, through the AC Drive Supplier, shall warranty the supplied equipment and installation for a period of 18 months from Acceptance of equipment or 12 months after Final Project Completion, whichever occurs first.

PART 2 – PRODUCTS

2.01 CONSTRUCTION

A. The AC Drive shall be installed within the allocated space within the MCC or control panel.

B. If the drive is mounted in a cabinet or compartment within the MCC or within a control panel, a means of cooling the interior of the space shall be provided to maintain the ambient temperature within the acceptable specified limits listed by the AC Drive manufacture.

C. Provisions shall be provided for locking all disconnects in the off position.

D. All AC drives (unless noted otherwise) shall be provided with an enclosure rated to IP65 protection (IP65 case).

E. All AC drives (unless noted otherwise) shall be provided with Ethernet I/P communication modules. All drives shall be capable of communicating to the Main PLC.

DRAFT

F. AC Drive Features: The AC Drive shall be provided with the following features per the Process & Information Diagrams (P&IDs):
   1. Provisions for 4 to 20 mA input speed reference signal
   2. Provisions for 4 to 20 mA output signal proportional to AC Drive output frequency
   3. Electrically isolated auxiliary contacts for ready, running, fault (alarm) status, HOA position (Auto), and Motor High Temperature.
   4. Adjustable minimum/maximum frequency limits
   5. Independent timed linear acceleration and deceleration
   6. Adjustable motor slip compensation based on motor current
   7. Terminal blocks for control and signal wires entering and leaving the controller
   8. Output transistors shall be insulated gate bipolar transistors (IGBT) type, or Darlington pair
   9. Current limit
   10. Programmable automatic restart
   11. Digital keypad, with configurable security password protection for configuration, programming, local control, and monitoring
   12. Microprocessor-based control for system logical sequencing functions
   13. Drives interface module to be installed on the door of the bucket/compartment.

G. Functional Requirements:
   1. Supply Power: The VFD shall operate continuously with supply power of 460 volts plus or minus 10 percent / 60 Hz plus or minus 3 percent.
   2. Ambient Conditions: The VFD's shall operate continuously as specified in an ambient temperature of minus 5°C to plus 50°C and an ambient humidity of 0 to 90 percent, non-condensing.
   3. Loads: The VFD system shall be capable of 110% continuous current overload. Variable torque inverters shall be capable of delivering 120 percent of the specified load for up to 60 seconds, and constant torque inverters shall deliver 150 percent overload current for 120 seconds.
   4. Power Factor: Displacement power factor shall not be less than 0.95 at rated full speed and load. Overall power factor, including harmonic distortion, shall be 0.85, or greater. Contractor shall provide power factor correction components as necessary to meet this requirement.
   5. Efficiency: Efficiency of VFD systems shall be at least 95percent at 60 Hz output driving the specified maximum load.
   6. Frequency and Voltage Regulation: VFD output frequency shall be regulated to within 0.6 Hz of the frequency set point. VFD output voltage shall be regulated to within =1.0 percent of that value which will provide minimum motor heating at any operating frequency within the specified range.
   7. Frequency Range: VFD shall be capable of continuous operation with the specified load at any frequency between 0.1 Hz and 60 Hz.
   8. Space: VFD system size shall not exceed the size allotments specified on the Plans, nor shall any portion of the VFD system exceed a height of 90 inches. VFD system shall be front accessible and shall not require rear access. The VFD equipment shall be suitable for mounting directly against the wall without any clearance for ventilation or other purposes. VFD units shall be arranged as required for entry of incoming line cables and as required for entry of load cables.
   9. Ambient Noise: Free field noise generated by the VFD shall not exceed 85dBA at 3 feet out from any point on the VFD cabinet under any normal operation condition.

DRAFT

H. Protection and Annunciation:
   1. Overcurrent Protection: The VFD system shall provide electronic current limit at 150 percent of motor nameplate current. Current limit shall be accurate to within 1.0 percent and shall smoothly limit motor speed at whatever value is necessary to limit motor current that value. The VFD shall also provide motor running overcurrent protection in compliance with NFPA 70.
   2. Short Circuit Protection: The VFD shall be fully protected against load faults. Bolted faults, phase to phase, or phase to ground shall not damage the unit. Any impedance or other current limiting necessary to meet this requirement shall be provided as part of the VFD system, and any losses caused by current limiting devices shall be included in efficiency calculation for the VFD system.
   3. Line Voltage: The VFD shall be protected against high and low line voltage on one or more phases.
   4. Internal Faults: The VFD shall incorporate an internal fault monitoring system to detect malfunctions. This system shall be designed to protect the VFD from transient and sustained faults, and to limit damage that may be caused by these faults.
   5. Over Temperature: Over temperature circuitry shall shut down the VFD upon overheating, and display an over temperature alarm, or message.
   6. Diagnostics: The VFD shall be provided with a fault diagnostics system that indicates the cause of any shutdown. The system shall store faults in memory and discard the oldest faults as new ones fill the memory. Faults shall be accessible via a digital keypad, also used for local control and programming.

I. External Control and Monitoring:
   1. All AC drives (unless noted otherwise) shall be provided with Ethernet I/P communication modules. All drives shall be capable of communicating to the MAIN PLC.
   2. In addition to network communication, the AC Drive shall also provide the following minimum external control and monitoring signalization capabilities:
      a. Speed Reference: The VFD shall accept a 4 to 20 milliampere direct current speed reference signal. Speed reference input shall be galvanically isolated and input resistance shall not exceed 250 ohms.
      b. Ready Signal: The VFD shall provide a contact closure that the controller line power supply is within acceptable tolerances, the control circuits are normal, and there are no internal or external fault conditions that have not been reset. Presence of this signal indicates that the controller should start normally.
      c. Running Signal: The VFD shall provide a contact closure which indicates that the controller is running.
      d. Fault Signal: Isolated normally open contacts for remote fault, annunciation shall be provided and wired to terminal blocks, which shall be labeled and identified. Contact shall close under fault conditions. Fault conditions that drive outputs shall be selectable from the digital keypad.
   3. The AC Drive control circuitry shall shut down the drive unit if the motor overheats. Motor winding temperature switches, or RTD's, shall be connected if provided by the motor manufacturer.

PART 3 – EXECUTION

3.01 INSPECTION

A. The AC Drive equipment shall be installed as shown on the Drawings in the existing limited spaces available. The AC Drive Supplier and CONTRACTOR shall verify that all equipment will fit into the space allocated for each as shown on the Drawings. AC Drives and all specified equipment shall be built in strict accordance with the overall sizing and component layouts as detailed on the drawings and no deviations in location or elevation

will be allowed without prior approval of the ENGINEER.

B. Verify that the location is ready to receive work and the dimensions are as indicated. AC Drive equipment shall not be installed until the building environment can be maintained within the service conditions required by the drive manufacturer.

C. All AC Drive equipment shall be fully tested as a system with actual job motors at the point of installation.

3.02 PROTECTION

A. Before, during and after installation of the drive, the CONTRACTOR shall ensure that the AC Drive equipment is protected from site contaminants.

3.03 INSTALLATION

A. Installation shall comply with manufacturer's instructions, drawings, and recommendations.

B. The AC Drive manufacturer shall provide a certified technical service representative to supervise the contractor's installation, testing and start-up of the AC Drive(s) furnished under this specification for a minimum total of 3 days.

3.04 TESTING & TRAINING

A. Testing and training for this equipment shall be provided by the AC Drive Supplier and/or CONTRACTOR. Installation and performance testing shall be conducted as part of the associated motor tests.

B. Perform voltage and current harmonic tests with each AC Drive running at minimum and at maximum speed. Submit test results for each drive unit. Test shall be witnessed by the ENGINEER.

C. Four (4) hours of AC Drive training shall be provided for the Owner’s Operation and Maintenance Staff. Training shall cover AC Drive theory of operation, features and functions available, normal operation, troubleshooting, and routine maintenance. The CONTRACTOR shall submit a syllabus for the training session for approval, within 3 weeks of conducting the class. Provide each attendee with a class syllabus detailing each topic to be discussed.

END OF SECTION

DRAFT

SECTION 26 3213 – GENERATOR SET - DIESEL

PART 1 – GENERAL

1.01 SCOPE

A. Provide complete factory assembled generator set equipment with digital (microprocessor-based) electronic generator set controls, digital governor, and digital voltage regulator, as well as additional equipment as included in the project drawings.

B. Provide factory test, startup by a supplier authorized by the equipment manufacturer(s), and on-site testing of the system.

C. The generator set manufacturer shall warrant all equipment provided under this section, whether or not it is manufactured by the generator set manufacturer, so that there is one source for warranty and product service. Technicians specifically trained and certified by the manufacturer to support the product and employed by the generator set supplier shall service the generator sets.

D. The generator set supplier shall be responsible for complete compliance to all specification requirements for the entire on-site power supply system, including generator set.

E. Prototype testing, factory testing, site testing.

1.02 CODES AND STANDARDS

A. The generator set installation and on-site testing shall conform to the requirements of the following codes and standards, as applicable. The generator set shall include necessary features to meet the requirements of these standards.

1. ANSI S1.13-1971—Measurement of Sound Pressure Levels in Air
2. CSA 282, 1989 Emergency Electrical Power Supply for Buildings
3. IEEE446 – Recommended Practice for Emergency and Standby Power Systems for Commercial and Industrial Applications
4. NFPA 30 – Flammable and Combustible Liquids
5. NFPA 37 – Standard for the Installation and Use of Stationary Combustion Engines and Gas Turbines
6. NFPA 70 – National Electrical Code. Equipment shall be suitable for use in systems in compliance to Articles 700, 701, and 702.
7. NFPA 99 – Essential Electrical Systems for Health Care Facilities
8. NFPA 110 – Emergency and Standby Power Systems. The generator set shall meet all requirements for Level 1 systems. Level 1prototype tests required by this standard shall have been performed on a complete and functional unit, component level type tests will not substitute for this requirement.
9. IBC Certified for the jobsite installation requirements, and IBC 2000, 2003, 2006, 2009, and 2012.

B. The generator set and supplied accessories shall meet the requirements of the following standards:

1. NEMA MG1-1998 part 32: Alternator shall comply with the requirements of this standard.
2. UL1236: Battery Chargers
3. UL2200: The generator set shall be listed to UL2200 or submit to an independent third-party certification process to verify compliance as installed.

DRAFT

C. The control system for the generator set shall comply with the following requirements.
   1. EN50082-2, Electromagnetic Compatibility – Generic Immunity Requirements, Part 2: Industrial.
   2. EN55011, Limits and Methods of Measurement of Radio Interference Characteristics of Industrial, Scientific and Medical Equipment.
   3. FCC Part 15, Subpart B.
   4. IEC8528 part 4. Control Systems for Generator Sets

D. The generator set manufacturer shall be certified to ISO 9001 International Quality Standard and shall have third party certification verifying quality assurance in design/development, production, installation, and service, in accordance with ISO 9001.

1.03 ACCEPTABLE MANUFACTURERS

A. Equipment specifications for this project are based on microprocessor-based generator sets manufactured by Cummins Power Generation or approved equal. Equipment by other suppliers that meets the requirement of this specification are acceptable, if approved. Proposals must include a line by line compliance statement based on this specification. Modifications to the design resulting from equal equipment not specified shall be the responsibility of the Contractor.

1.04 SUBMITTALS

A. Shop drawings shall be submitted as specified in Section 01 3300 – Submittal Procedures and include the following:
   1. Installation Instructions
   2. Outline drawings of assembly
   3. One-line diagrams and wiring diagrams for assembly and components
   4. Interconnection wiring diagrams
   5. Submit names, experience level, training certifications, and locations for technicians that will be responsible for servicing equipment at this site.

B. Product data:
   1. Technical data on all major components. Technical data must include an alternator thermal damage curve, description and operating characteristics of the alternator protection device demonstrating alternator protection, and an alternator reactive capability curve.
   2. Certification of the emissions performance of the generator set engine by the engine manufacturer
   3. Seismic certification, demonstrating compliance to local requirement
   4. Sound test data, based on a free field requirement.
   5. Submit statement of compliance which states the proposed product is certified to the emission standards required by the location for EPA, stationary emergency application.

C. Project information:
   1. Test reports and certifications
   2. Factory test procedures

D. Contract closeout information:
   1. Operating and maintenance data

1.05 QUALIFICATIONS

A. The generation set manufacturer shall be certified to ISO 9001 International Quality Standard and shall have third party certification verifying quality assurance in design/development, production, installation, and service, in accordance with ISO 9001.

DRAFT

B. The manufacturer of this equipment shall have produced similar equipment for a minimum period of ten years. When requested by the Engineer, an acceptable list of installations with similar equipment shall be provided demonstrating compliance with this requirement.

1.06 REGULATORY REQUIREMENTS

A. The generator set shall be UL2200 listed and labeled.

B. The generator set overcurrent protection shall be UL listed as a utility grade protective device under UL category NRGU or CSA equivalent.

C. The generator set engine shall be EPA and SCAQMD Certified and shall comply will all applicable emissions standards at the date of installation, or per the requirements of the Air District Permit, which ever governs.

1.07 WARRANTY

A. The manufacturer shall warrant the material and workmanship of the generator set for a minimum of two (2) years from registered commissioning and start-up.

B. The warranty shall be comprehensive. No deductibles shall be allowed for travel time, service hours, repair parts cost, etc. shall be allowed during the minimum noted warranty period described in paragraph A above.

PART 2 – PRODUCTS

2.01 GENERATOR SET

A. Ratings

1. The generator set shall operate at 1800 rpm and at a voltage of: 208/120, 3-Phase, 4-wire, 60 Hz.
2. The complete generator set shall be rated per ISO8528 at KW-rating as indicated on the plans at 0.8 PF standby rating, based on site conditions of: Altitude (as indicated on the plans) in feet, ambient temperatures of 104°F, and relative humidity of 0 to 95 percent.
3. The generator set rating shall be based on emergency/standby service and marked as such per NFPA110.

B. Performance

1. Voltage regulation shall not exceed one percent for any constant load between no load and rated load for both parallel and non-parallel applications. Random voltage variation with any steady load from no load to full load shall not exceed plus or minus 0.5 percent.
2. Frequency regulation shall be isochronous from steady state no load to steady state rated load. Random frequency variation with any steady load from no load to full load shall not exceed plus or minus 0.25%.
3. Generator sets shall be designed to allow operation at full rated load in an ambient temperature under site conditions, based on highest ambient condition. Ambient temperature shall be as measured at the air inlet to the generator set for enclosed generator sets, and at the control of the generator set for machines installed in equipment rooms.
4. The engine-generator set shall be capable of single step load pick up of 100% nameplate kW and power factor, less applicable derating factors, with the engine-generator set at operating temperature.
5. Motor starting capability shall be a minimum of 3866 kVA in a single step. The generator set shall be capable of sustaining a minimum of 90% of rated no load voltage with the specified kVA load at near zero power factor applied to the generator set.

DRAFT

6. The alternator shall produce a clean AC voltage waveform, with not more than 5% total harmonic distortion at full linear load, when measured from line to neutral, and with not more than 3% in any single harmonic, and no 3rd order harmonics or their multiples. Telephone influence factor shall be less than 40.
7. The generator set shall be certified by the engine manufacturer to be suitable for use at the installed location and rating, and shall meet all applicable exhaust emission requirements according to the owners Air District Permit.
8. The generator set shall be tested by the manufacturer per ANSI S1.13. Data documenting performance shall be provided with submittal documentation.

C. Construction
1. The engine-generator set shall be mounted on a heavy-duty steel base to maintain alignment between components.
2. All switches, lamps, and meters in the control system shall be oil-tight and dust-tight. There shall be no exposed points in the control (with the door open) that operate in excess of 50 volts.
3. Rigging Information: Indicate location of each lifting attachment, generator-set center of gravity, and total package weight in submittal drawings

D. Connections
1. The generator set load connections shall be composed of silver or tin plated copper bus bars, drilled to accept mechanical or compression terminations of the number and type as shown on the drawings. Sufficient lug space shall be provided for use with cables of the number and size as shown on the drawings.
2. Power connections to auxiliary devices shall be made at the devices, with required protection located at a wall-mounted common distribution panel.
3. Generator set control interfaces to other system components shall be made on a common, permanently labeled terminal block assembly.

2.02 ENGINE AND ENGINE EQUIPMENT

A. The engine shall be diesel, radiator and fan cooled. Minimum displacement and number of cylinders shall be the same or greater than the equivalent rated unit by the manufacturer specified in Section 1.3. The horsepower rating of the engine at its minimum tolerance level shall be sufficient to drive the alternator and all connected accessories. Two cycle engines are not acceptable. Engine accessories and features shall include:
1. An electronic governor system shall provide automatic isochronous frequency regulation. The governing system dynamic capabilities shall be controlled as a function of engine coolant temperature to provide fast, stable operation at varying engine operating temperature conditions. The control system shall actively control the fuel rate and excitation as appropriate to the state of the generator set. Fuel rate shall be regulated as a function of starting, accelerating to start disconnect speed, accelerating to rated speed, and operating in various isochronous states.
2. Skid-mounted radiator and cooling system rated for full load operation in 40°C ambient as measured at the generator air inlet, based on 0.5 in H2O external static head. Radiator shall be sized based on a core temperature which is 10C higher than the rated operation temperature, or prototype tested to verify cooling performance of the engine/radiator/fan operation in a controlled environment. Radiator shall be provided with a duct adapter flange. The cooling system shall be filled with a 50/50 ethylene glycol/water mixture by the equipment manufacturer. Rotating parts shall be guarded against accidental contact.
3. Electric starter capable of three complete cranking cycles without overheating.
4. Positive displacement, mechanical, full pressure, lubrication oil pump.

DRAFT

5. Full flow lubrication oil filters with replaceable spin-on canister elements and dipstick oil level indicator.
6. Diesel engines shall include an engine driven, mechanical, positive displacement fuel pump and fuel filter(s) with replaceable spin-on canister element(s). Fuel cooler, suitable for operation of the generator set at full rated load in the ambient temperature specified shall be provided if required for operation due to the design of the engine and the installation.
7. Replaceable dry element air cleaner with restriction indicator.
8. Flexible supply and return fuel lines.
9. Engine mounted battery charging alternator, 35-ampere minimum, and solid-state voltage regulator.

B. Coolant heater
1. Engine mounted, thermostatically controlled, coolant heater(s) for each engine. Heater voltage shall be as shown on the project drawings. The coolant heater shall be UL499 listed and labeled.
2. The coolant heater shall be installed on the engine with SAEJ20 compliant materials. Steel tubing shall be used for connections into the engine coolant system wherever the length of pipe run exceeds 12 inches. The coolant heater installation shall be specifically designed to provide proper venting of the system. The coolant heaters shall be installed using isolation valves to isolate the heater for replacement of the heater element.
3. The coolant heater shall be provided with a 24VDC thermostat, installed at the engine thermostat housing. An AC power connection shall be provided for a single AC power connection to the coolant heater system.
4. The coolant heater(s) shall be sized as recommended by the engine manufacturer to warm the engine to a minimum of 40°C in a 15°C ambient, as a minimum, or the temperature required for starting and load pickup requirements of this specification.

C. Provide vibration isolators, spring type, EQ Certified, rating and quantity as recommended by the generator set manufacturer to be compatible with genset manufacturers CBC Seismic Certification. Isolators shall include seismic restraints as required by site location.

D. Starting and Control Batteries shall be lead acid type, 24 volt DC, sized as recommended by the engine manufacturer for compliance to NFPA110 starting requirements, complete with battery cables, connectors, and rack.

E. Provide flex connection for engine of size and type as recommended by the generator set manufacturer and connect to existing exhaust silencer. Utilize existing exhaust system installed in the facility by others according to the engine manufacturer's recommendations and applicable codes and standards.

F. Provide fully regulated, constant voltage, current limited, battery charger for each battery bank charger. The chargers shall be designed for heavy-duty industrial service, primarily to quickly recharge and maintain batteries that start internal combustion engines. Charger shall be rated a minimum of 10 amps, and be capable of operating in parallel with another like charger for reliability and added charging capacity.
1. Charger shall provide 4 distinct charge states: "dead battery", "bulk charge", "absorption", and "float". Charge rate shall be temperature compensated to provide proper charging in ambient conditions from –20°C to +55°C.
2. Provider LED indication of general charger condition, including charging, fault, and equalize. Provide a 2-line LCD display to indicate charge rate, battery voltage, faults, and provide for charger set up. Charger shall provide relay contacts for fault conditions as required by NFPA110.

DRAFT

3. The charger shall operate properly during fault conditions, including battery disconnection while charging, reversed battery polarity connections, and shorted battery.
4. The charger shall be compliant to the same RFI/EMI and voltage surge performance as are specified for the genset control.

2.03 LOW VOLTAGE AC ALTERNATOR

A. The AC alternator shall be; synchronous, four pole, 2/3 pitch, brushless, revolving field, drip-proof construction, single pre-lubricated sealed bearing, air cooled by a direct drive centrifugal blower fan, and directly connected to the engine with flexible drive disc. The alternator design shall prevent shaft current from flowing and eliminate the need for insulated bearings. All insulation system components shall meet NEMA MG1 requirements for Class H insulation systems. Actual temperature rise measured by resistance method at full load shall not exceed 125°C in a 408°C ambient. Alternator shall be provided with protection to prevent damage due to any external fault or overload condition, including short circuit, ground fault, or overload.

B. The alternator shall be capable of delivering rated output (kVA) at rated frequency and power factor, at any voltage up to 5 percent above or below rated voltage.

C. The alternator shall be supplied with a dedicated, independent power source for the voltage regulation system, which provides sufficient excitation for the alternator to supply 300% of rated output current for 10 seconds.

D. The subtransient reactance of the alternator shall not exceed 12 percent based on the standby rating of the generator set.

E. Provide an anti-condensation heater for the alternator for generator sets installed outdoors or in unheated environments or in coastal environments.

2.04 GENERATOR SET CONTROL AND PROTECTION

A. Generator
1. The generator set shall be provided with a microprocessor-based control system that is designed to provide automatic starting, monitoring, protection and control functions for the generator set. The control system shall also be designed to allow local monitoring and control of the generator set, and remote monitoring and control as described in this specification.
2. The control shall be mounted on the generator set. The control shall be vibration isolated and prototype tested to verify the durability of all components in the system under the vibration conditions encountered.
3. The generator set mounted control shall include the following features and functions:

B. Control Switches
1. Mode Select Switch. The mode select switch shall initiate the following control modes. When in the RUN or Manual position the generator set shall start, and accelerate to rated speed and voltage as directed by the operator. In the OFF position the generator set shall immediately stop, bypassing all time delays. In the AUTO position the generator set shall be ready to accept a signal from a remote device to start and accelerate to rated speed and voltage.
2. EMERGENCY STOP switch. Switch shall be Red "mushroom-head" push-button. Depressing the emergency stop switch shall cause the generator set to immediately shut down, and be locked out from automatic restarting. The switch shall include a lockout provision for use in safely disabling the generator set for necessary service.
3. RESET switch. The RESET switch shall be used to clear a fault and allow restarting the generator set after it has shut down for any fault condition.

DRAFT

4. PANEL LAMP switch. Operating the panel lamp switch shall cause the entire panel to be lighted with DC control power. The panel lamps shall automatically be switched off 10 minutes after the switch is operated, or after the switch is operated a second time.

C. Generator Set AC Output Metering. The generator set shall be provided with a metering set including the following features and functions:
   1. Analog voltmeter, ammeter, frequency meter, and kilowatt (KW) meter. Voltmeter and ammeter shall display all three phases. Ammeter and KW meter scales shall be color coded in the following fashion: readings from 0-90% of generator set standby rating: green; readings from 90-100% of standby rating: amber; readings in excess of 100%: red.
   2. Digital metering set, 0.5% accuracy, to indicate generator RMS voltage and current, frequency, output current, output KW, KW-hours, and power factor. Generator output voltage shall be available in line-to-line and line-to-neutral voltages, and shall display all three phase voltages (line to neutral or line to line) simultaneously.
   3. Both analog and digital metering are required. The analog and digital metering equipment shall be driven by a single microprocessor, to provide consistent readings and performance.

D. Generator Set Alarm and Status Display.
   1. The generator set shall be provided with alarm and status indicating lamps to indicate non-automatic generator status, and existing warning and shutdown conditions. The lamps shall be high-intensity LED type. The lamp condition shall be clearly apparent under bright room lighting conditions. The generator set control shall indicate the existence of all alarm, shutdown, and status conditions associated with the generator set, including all paralleling control functions and the engine ECM on an alphanumerical display on the genset. The following alarm, shutdown, and status conditions are required, as a minimum:

      low oil pressure (alarm)
      low oil pressure (shutdown)
      oil pressure sender failure (alarm)
      low coolant temperature (alarm)
      high coolant temperature (alarm)
      high coolant temperature (shutdown)
      engine temperature sender failure (alarm)
      low coolant level (alarm or shutdown--selectable)
      fail to crank (shutdown)
      fail to start/overcrank (shutdown)
      overspeed (shutdown)
      low DC voltage (alarm)
      high DC voltage (alarm)
      weak battery (alarm)
      low fuel-daytank (alarm)
      high AC voltage (shutdown)
      low AC voltage (shutdown)
      under frequency (shutdown)
      over current (warning)
      over current (shutdown)

DRAFT

short circuit (shutdown)
over load (alarm)
emergency stop (shutdown)

2. The generator set control shall annunciate all alarm and shutdown conditions from the engine electronic control.
3. Provisions shall be made for indication of four customer-specified alarm or shutdown conditions. Labeling of the customer-specified alarm or shutdown conditions shall be of the same type and quality as the above specified conditions. The non-automatic indicating lamp shall be red, and shall flash to indicate that the generator set is not able to automatically respond to a command to start from a remote location.

E. Engine Status Monitoring.
1. The following information shall be available from a digital status panel on the generator set control:

engine oil pressure (psi or kPA)
engine coolant temperature (degrees F or C)
engine oil temperature (degrees F or C)
engine speed (rpm)
number of hours of operation (hours)
number of start attempts
battery voltage (DC volts)

2. The control system shall also incorporate a data logging and display provision to allow logging of a minimum of the last 20 warning or shutdown indications on the generator set, the time of the last fault of each type, and the number of faults of each type, and total time of operation at various loads as a percent of the standby rating of the generator set.

F. Engine Control Functions.
1. The control system provided shall include a cycle cranking system, which allows for user selected crank time, rest time, and # of cycles. Initial settings shall be for 3 cranking periods of 15 seconds each, with 15-second rest period between cranking periods.
2. The control system shall include an engine governor control, which functions to provide steady state frequency regulation as noted elsewhere in this specification. The governor control shall include adjustments for gain, damping, and a ramping function to control engine speed and limit exhaust smoke while the unit is starting. The governor control shall be suitable for use in paralleling applications without component changes.
3. The control system shall include time delay start (adjustable 0-300 seconds) and time delay stop (adjustable 0-600 seconds) functions.
4. The control system shall include sender failure monitoring logic for oil pressure, and engine temperature which is capable of discriminating between failed sender or wiring components, and an actual failure conditions.
5. The control system shall include all interfaces necessary for proper operation with the paralleling equipment provided under this contract.

G. Alternator Control Functions:
1. The generator set shall include a full wave rectified automatic digital voltage regulation system that is matched and prototype tested by the engine manufacturer with the governing system provided. It shall be immune from mis-operation due to load-induced voltage waveform distortion and provide a pulse width modulated output to the alternator exciter. The voltage regulation system shall be equipped with three-phase line to neutral RMS sensing and shall control buildup of AC generator

DRAFT

voltage to provide a linear rise and limit overshoot. The system shall include a torque-matching characteristic, which shall reduce output voltage in proportion to frequency below an adjustable frequency threshold. Torque matching characteristic shall be adjustable for roll-off frequency and rate, and be capable of being curve-matched to the engine torque curve with adjustments in the field. The voltage regulator shall include adjustments for gain, damping, and frequency roll-off. Adjustments shall be broad range, and made via digital raise-lower switches, with an alphanumeric LED readout to indicate setting level. Rotary potentiometers for system adjustments are not acceptable.

2. Controls shall be provided to monitor the output current of the generator set and initiate an alarm (over current warning) when load current exceeds 110% of the rated current of the generator set on any phase for more than 60 seconds.
3. Controls shall be provided to individually monitor all three phases of the output current for 1, 2, or 3-phase short circuit conditions. The control/protection system shall monitor the current level and voltage. The controls shall shut down and lock out the generator set when output current level approaches the thermal damage point of the alternator (short circuit shutdown). This function shall be provided by equipment which is listed under UL category NRGU, or equivalent equipment that is CSA listed for applications installed in Canada.
4. Controls shall be provided to monitor the KW load on the generator set, and initiate an alarm condition (over load) when total load on the generator set exceeds the generator set rating for in excess of 5 seconds. Controls shall include a load shed control, to operate a set of dry contacts (for use in shedding customer load devices) when the generator set is overloaded.
5. An AC over/under voltage monitoring system that responds only to true RMS voltage conditions shall be provided. The system shall initiate shutdown of the generator set when alternator output voltage exceeds 110% of the operator-set voltage level for more than 10 seconds, or with no intentional delay when voltage exceeds 130%. Under voltage shutdown shall occur when the output voltage of the alternator is less than 85% for more than 10 seconds.
6. A battery monitoring system shall be provided which initiates alarms when the DC control and starting voltage is less than 16VDC or more than 32 VDC (24VDC nominal) or less than 8VDC or more than 16 VDC (12VDC nominal). During engine cranking (starter engaged), the low voltage limit shall be disabled, and if DC voltage drops to less than 14.4 volts for more than two seconds a "weak battery" alarm shall be initiated.

H. The generator set shall be provided with a network communication module to allow real time communication with the generator set control by remote devices. The control shall communicate all engine and alternator data; alarm, shutdown and status conditions; and allow starting and stopping of the generator set via the network in both test and emergency modes.

I. Control Interfaces for Remote Monitoring:
1. No field connections for control devices shall be made in the AC power output enclosure. Provide the following features in the control system:
2. Form "C" dry contact set rated 2A @ 30VDC to indicate existence of any alarm or shutdown condition on the generator set.
3. One set of contacts rated 2A @ 30VDC to indicate generator set is ready to load. The contacts shall operate when voltage and frequency are greater than 90% of rated condition.
4. A fused 10 amp switched 24VDC power supply circuit shall be provided for customer use. DC power shall be available from this circuit whenever the generator set is running.

DRAFT

5. A fused 20 amp 24VDC power supply circuit shall be provided for customer use. DC power shall be available from this circuit at all times from the engine starting/control batteries.
6. The control shall be provided with a direct serial communication link for the communication network interface as described elsewhere in this specification and shown on the drawings.

2.05 SOUND/WEATHER ENCLOSURE

A. The complete diesel engine generator set, including generator control panel, engine starting batteries and fuel oil tank, shall be enclosed in a factory assembled, sound attenuated enclosure mounted on the integral sub-base fuel tank. The sound attenuated enclosure shall be weather resistant to withstand outdoor exposure.

B. A sound attenuated enclosure of steel with electrostatically applied powder coated baked polyester paint. It shall consist of a roof, side walls, and end walls. Fasteners shall be either zinc plated or stainless steel. Handles shall be key lockable, all doors keyed alike, and hinges shall be zinc die cast or stainless steel. Access doors shall be hinged and can be lifted off after opening 90 degrees. Intake openings shall be screened to prevent the entrance of rodents or pests.

C. The sound enclosure shall meet Level II requirements listed below, unless noted otherwise on the plans (as measured at a distance of 7 meters).

Level I – Generator operates at 70 to 89 d(B)A
Level II – Generator operates at 63 to 78 d(B)A
Level III – Generator operates at 68 to 70 d(B)A

2.06 SUBBASE FUEL TANK

A. The package shall include a sub base fuel tank with a minimum of 12 hours of fuel storage while operating at full load. The fuel tank shall be constructed of heavy gauge welded steel and shall be double walled with a sealed, separately vented, integral fuel containment basin.

B. The fuel tank shall include a low fuel level switch and a leak detection rupture basin switch. The fuel tank shall be UL 142 listed, ULC-S601-07 listed and NFPA 37 compliant

C. The package shall include the manufacturer's standard accessory kit.

PART 3 – EXECUTION

3.01 PROTOTYPE TESTING ***(submit evidence of prototype testing; manufacturer's certificate, etc.)***

3.02 SUBMITTALS

A. For equals, within 10 days after award of contract, provide six sets of the following information for review:
1. Manufacturer's product literature and performance data, sufficient to verify compliance to specification requirements.
2. A paragraph by paragraph specification compliance statement, describing the differences between the specified and the proposed equipment.
3. Manufacturer's certification of prototype testing.
4. Manufacturer's published warranty documents.
5. Shop drawings showing plan and elevation views with certified overall dimensions, as well as wiring interconnection details.
6. Interconnection wiring diagrams showing all external connections required; with field wiring terminals marked in a consistent point to point manner.
7. Manufacturer's installation instructions.

DRAFT

3.03 FACTORY TESTING

A. The generator set manufacturer shall perform a complete operational test on the generator set prior to shipping from the factory. A certified test report shall be provided. All testing shall be performed with calibrated metering.

B. Generator set factory tests on the equipment shall be performed at rated load and rated power factor, as well as 1.0 power factor. Generator sets that have not been factory tested at rated power factor will not be acceptable. Tests shall include: run at full load, maximum power, voltage regulation, transient and steady-state governing, single step load pickup, and function of safety shutdowns.

C. A certified test report shall be provided documenting the results of these tests.

3.04 INSTALLATION

A. Equipment shall be installed by the contractor in accordance with final submittals and contract documents. Installation shall comply with applicable state and local codes as required by the authority having jurisdiction. Install equipment in accordance with manufacturer's instructions and instructions included in the listing or labeling of UL listed products.

B. Installation of equipment shall include furnishing and installing all interconnecting wiring between all major equipment provided for the on-site power system. The contractor shall also perform interconnecting wiring between equipment sections (when required), under the supervision of the equipment supplier.

C. Equipment shall be installed on concrete housekeeping pads or as indicated in the plans. Equipment shall be permanently fastened to the pad in accordance with manufacturer’s instructions and seismic requirements of the site.

D. Equipment shall be initially started and operated by representatives of the manufacturer. All protective settings shall be adjusted as instructed by the consulting engineer.

E. All equipment shall be physically inspected for damage. Scratches and other installation damage shall be repaired prior to final system testing. Equipment shall be thoroughly cleaned to remove all dirt and construction debris prior to initial operation and final testing of the system.

F. On completion of the installation by the electrical contractor, the generator set supplier shall conduct a site evaluation to verify that the equipment is installed per manufacturer’s recommended practice.

3.05 ON-SITE ACCEPTANCE TEST

G. The complete installation shall be tested to verify compliance with the performance requirements of this specification following completion of all site work. Testing shall be conducted by representatives of the manufacturer, with required fuel supplied by Contractor. The Engineer shall be notified in advance and shall have the option to witness the tests. The generator set manufacturer shall provide a site test specification covering the entire system. Tests shall include:

H. Prior to start of active testing, all field connections for wiring, power conductors, and bus bar connections shall be checked for proper tightening torque.

I. Installation acceptance tests to be conducted on-site shall include a "cold start" test, a two hour full load (resistive) test, and a one-step rated load pickup test in accordance with NFPA 110. Provide a resistive load bank and make temporary connections for full load test, if necessary.

DRAFT

J. Perform a power failure test on the entire installed system. This test shall be conducted by opening the power supply from the utility service, and observing proper operation of the system for at least 2 hours. Coordinate timing and obtain approval for start of test with site personnel.

3.06 TRAINING

A. The equipment supplier shall provide training for the facility operating personnel covering operation and maintenance of the equipment provided. The training program shall be not less than 4 hours in duration and the class size shall be limited to 5 persons. Training date shall be coordinated with the facility owner.

3.07 SERVICE AND SUPPORT

A. The generator set supplier shall maintain service parts inventory for the entire power system at a central location which is accessible to the service location 24 hours per day, 365 days per year. The inventory shall have a commercial value of $3 million or more. The manufacturer of the generator set shall maintain a central parts inventory to support the supplier, covering all the major components of the power system, including engines, alternators, control systems, paralleling electronics, and power transfer equipment.

B. The generator set shall be serviced by a local service organization that is trained and factory certified in generator set service. The supplier shall maintain an inventory of critical power system replacement parts in the local service location. Service vehicles shall be stocked with critical replacement parts. The service organization shall be on call 24 hours per day, 365 days per year. The service organization shall be physically located within 40 miles of the site.

C. The manufacturer shall maintain model and serial number records of each generator set provided for at least 20 years.

END OF SECTION

DRAFT

SECTION 26 3353 – STATIC UNINTERRUPTIBLE POWER SUPPLY

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. This section covers the requirements for uninterruptable power supplies (UPSs) to be provided as shown on the Plans.

1.02 SUBMITTALS

A. Products shall be submitted in accordance with these Specifications and the Contract Documents prior to installation.

1.03 REFERENCES

A. National Electrical Code (NEC) Article 250

PART 2 – PRODUCTS

2.01 GENERAL REQUIREMENTS

A. The UPS equipment shall be manufactured by Powerware, or equal.

B. The UPS shall be sized for a minimum of 30 minutes of backup power for its rated load. The rated load shall be equal to or greater than the connected load.

C. The UPS shall be a line-interactive type, consisting of a ferroresonant or linear transformer, battery charger, batteries, inverter, and microprocessor control. The batteries shall be maintenance free, premium type.

D. The UPS shall pass lightning and surge protection ANSI/IEEE C62.41 standards, Category A and B. The UPS shall be UL 1449 listed.

E. The output waveform shall be a pure sine-wave with less than 5% total harmonic distortion on the inverter.

F. The UPS shall have a digital display for load-dependent runtime, volts in, volts out, battery voltage, percent loading, and alarm codes.

G. The UPS shall operate between 0°C and 50°C, at a minimum of 95% efficiency on-line.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Install the UPS equipment in accordance with the manufacturers' recommendations.

B. The UPS shall be provided with a 2-year parts and factory service warranty.

END OF SECTION

DRAFT

SECTION 26 3623 – AUTOMATIC TRANSFER SWITCHES

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. Automatic transfer switch shall be furnished and installed, as indicated on the Drawings, with full load current and voltage ratings as indicated on the Drawings. The switch shall be capable of switching all classes of load, and shall be rated for continuous duty when installed in a non-ventilated enclosure. Withstand current rating shall be as indicated on the Drawings.

1.02 SUBMITTALS

A. CONTRACTOR shall submit shop drawings, manufacturer's data sheets, and a complete wiring diagram detailing all connections to the electrical system in accordance with these Specifications and other requirements of the Contract Documents.

PART 2 – PRODUCTS

2.01 AUTOMATIC TRANSFER SWITCH

A. The automatic transfer switch shall be of the time delay neutral, delayed transition, break-before-make type. The automatic transfer switch shall have the following capabilities:
   1. Adjustable time delay for generator start
   2. Adjustable time delay transfer to generator
   3. Adjustable time delay in "off" position
   4. Re-transfer to normal power position inhibit
   5. Adjustable time delay for generator stop
   6. The switches shall be capable of transferring successfully in either direction with 70 percent of rated voltage applied to the terminals.

B. The normal and standby contacts shall be positively interlocked mechanically and electrically to prevent simultaneous closing. Main contacts shall be mechanically locked in position in both the normal and standby positions without the use of hooks, latches, or magnets, and shall be silver alloy protected by arcing contacts, with magnetic blowouts on each pole. Parallel main contacts are not acceptable.

C. The transfer switch shall be equipped with a manual operator that is designed to prevent injury to personnel if the electrical operator should become energized during manual transfer.

D. The transfer switch, complete with all accessories, shall be listed by UL. Transfer switches installed outdoors shall be rated NEMA 3R unless noted otherwise in Plans. Transfer switches installed indoors shall be rated NEMA 1 unless noted otherwise in Plans.

E. The transfer switch shall be compatible with the standby generator, and shall be supplied with the generator.

F. The transfer switch operation shall be selectable by the Operator. In Manual mode, the Operator shall be able to transfer the load to the generator using a selector, toggle, or pushbutton switch. In Automatic mode, the internal logic shall sense loss or presence of utility power, and transfer the load to or from the generator.

G. Transfer switches shall be manufactured by CAT, ASCO, Zenith, Russelectric, or ENGINEER-approved equal.

DRAFT

2.02 ACCESSORIES

A. The transfer switch shall be equipped with the following:
   1. Nominal 0.5 to 6 second time delay to override momentary outages.
   2. Field adjustable 0 to 31 minutes time delay to retransfer to normal source with 5-minute unloaded running time of standby plant. A switch shall be provided to bypass this feature with transfer to normal source made manually. Time delay shall be nullified if standby power fails and normal power is available.
   3. Differential protection on 3 phases. Dropout and pickup.
   4. Test switch.
   5. Auxiliary contacts which close in normal position. Two sets of Form C contacts shall be provided.
   6. Auxiliary contacts which close with normal power available. Two sets of Form C contacts shall be provided.
   7. Auxiliary contacts which close in standby position. Two sets of Form C contacts shall be provided.
   8. Auxiliary contacts which close with standby power available. Two sets of Form C contacts shall be provided.
   9. Pilot lights: indicating normal and standby switch position.
   10. Manual and automatic selector switch.
   11. Manual and automatic pilot lights with push-to-test.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Transfer switch shall be installed, in accordance with the manufacturer's recommendations.

3.02 MANUFACTURER TESTING

A. When conducting temperature rise tests in accordance with UL, the manufacturer shall include post-endurance temperature rise tests to verify the ability of the switches to carry full rated current after completing the overload and endurance tests.

B. On completion of the installation, start-up shall be performed by a factory-trained service representative in the presence of the OWNER and the ENGINEER.

3.03 TESTING AND TRAINING

A. Testing and training for this equipment shall be provided in accordance with the Contract Documents. Installation and performance testing shall be conducted as part of the standby generator tests.

B. Four (4) hours of training shall be provided for the OWNER's Operations and Maintenance Staff. Training shall be certified on forms provided in the Contract Documents. Training shall cover theory of operation, features and functions available, normal operation, troubleshooting, and routine maintenance. The CONTRACTOR shall submit a syllabus for the training session for approval, within 3 weeks of conducting the class. Provide each attendee with a class syllabus detailing each topic to be discussed.

END OF SECTION

DRAFT

SECTION 26 4313
SURGE PROTECTIVE DEVICES FOR LOW-VOLTAGE ELECTRICAL POWER CIRCUITS

PART 1 – GENERAL

1.01 APPLICABLE STANDARDS AND TESTING

A. UL 1449 – Surge Protective Devices

B. UL 1283 – Electromagnetic Interference Filters

C. UL 67 – Panelboards (UL 67 listing for internal panelboard SPD)

D. NEC 2020 – (NEC Article 242 SPD Installation practice/NEC Article 250.53 Grounding)

E. NFPA 78 – Guide on Electrical Inspections

F. ISO 9001:2015 – Quality standard

G. IEEE C62.41.1 and C62.41.2 - (System shall be designed to meet American National Standards Institute/Institute of Electrical and Electronic Engineering Inc. C62.41)

H. IEEE C62.45 2002 – (System shall be tested to meet the C62.45)

I. Category A & B – (0.5 μSEC x 100 kHz Ring Wave)

J. Category B3 Biwave – (8 x 20 μSEC at 3,000 Amperes and 1.2 x 50 μSEC at 6,000 Volts)

K. Category C3 Biwave – (8 x 20 μSEC at 10,000 Amperes and 1.2 x 50 μSEC at 20,000 Volts)

L. The fusing elements must be capable of allowing the SPD's rated single impulse current to pass through the SPD at least one time without failure. The system shall be tested to 1,000 sequential ANSI/IEEE C62.41.1 and C62.41.2 Category C3 combination wave transients. The Category C3 combination wave is defined as a 1.2 x 50 microsecond wave at 20,000-volt open circuit voltage waveform and 8 x 20 microsecond wave at 10,000-ampere short circuit current waveform. In addition, the system components shall be tested repetitively 1,000 times testing based on an IEEE C62.33 (MOV test) and C62.35 (SAD test) without failure or degradation exceeding ±10%.

M. CBEMA (ITIC) and IEC - (Computer Business Equipment Manufacturers Association or Information Technology Industry Council and International Electrotechnical Commission define clamping voltage tolerance guidelines for sensitive equipment)

1.02 SUBMITTALS

A. Must have approval fifteen days prior to bidding on project. Request for submittal must be in writing with the following items.

B. Drawings: Electrical and mechanical drawings shall be provided by the manufacturer which show unit dimensions, weights, mounting provisions, connection notes, wire size and wiring diagram.

C. Equipment Manual: The manufacturer shall furnish an installation manual with installation notes, start-up, and operating instructions for the specified system. Installation instructions shall clearly state whether the system requires an external overcurrent device to maintain the system's UL 1449 listing.

D. National Electrical Code (NEC) 242 - Installation requirements for SPD.
   1. Section 242.8, An SPD shall be a listed device (UL 1449).
   2. Section 242.10, SPD shall be marked with a short-circuit current rating and shall not be installed at a point on the system (ex. service, distribution, or branch panels) where the available fault current (AIC rating) is in excess of that rating.

DRAFT

E. UL 1449 stipulation for fused SPD - The manufacturer's authorized representative is required to submit the following:
   1. Certify that the SPD system is UL 1449 listed (UL Card).
   2. Indicate the type of internal or external fusing that is incorporated in the SPD system and what impact the fusing has on the performance of the device with respect to surge capacity and clamping levels.

F. CBEMA (ITIC) & IEC - SVRS must meet voltage tolerance guidelines:
   1. SVR clamp levels for wye and single phase (L-N, L-G and N-G):
      a. 400-600V for 120V systems, 800-1200V for 277V systems and 1200-1500V for 347V systems
   2. SVR clamp levels for delta circuits (L-L and L-G):
      a. 1000-1200V for 240V systems, 1500-1800V for 480V systems and 1800-2000V for 600V systems

PART 2 – PRODUCTS

2.01 SERVICE ENTRANCE/SWITCHBOARD/SWITCHGEAR

A. Acceptable Manufacturers:
   1. Current Technology
   2. LEA International Inc.
   3. Liebert
   4. Phoenix Contact
   5. General Electric
   6. OR ENGINEER-approved equal

B. Equipment shall be a multi-stage parallel protector rated for 277/480VAC, 3 PHASE, 4 WIRE, plus ground. The equipment's minimum surge current capacity shall be 400 kA per phase (L-N plus L-G) and 200 kA per mode (L-N, L-G, L-L and N-G).

C. The system protection modules shall contain a technology that utilizes a symmetrical array of balanced metal oxide varistors (MOV). Each MOV will be individually coordinated to pass UL 1449.

D. All primary transient paths shall utilize copper wire, copper bus bar and lugs of equivalent capacity to provide equal impedance interconnection between phases. No plug-in module or components shall be used in surge carrying paths.

E. Each protection module shall have a visual indicator that signifies that the protection circuitry is on line. The unit shall not be taken off line to verify integrity of system. Redundant status indicators shall be mounted on the front of the door that monitors the system protection circuitry.

F. The system shall be modular with field replaceable modules. Modular units shall contain a minimum of one module per phase.

G. Each protection module shall have a capacitive filtering system connected in each Line to Neutral (L→N)(Wye) mode or Line to Line (L→L)(Delta) mode to provide EMI/RFI noise attenuation (UL 1283).

H. Protection modes: The SPD shall provide Line to Neutral (L→N)(Wye), Line to Ground (L→G)(Wye or Delta), Line to Line (L→L)(Delta) and Neutral to Ground (N→G)(Wye) protection.

DRAFT

I. Service Conditions: Rate surge protective device for continuous operation under the following conditions, unless otherwise indicated:
   1. MCOV: Maximum Continuous Operating Voltage of 125% or greater
   2. Operating Temperature: 30°F to 120°F
   3. Humidity: 0 to 85 percent, noncondensing
   4. Altitude: Less than 20,000 feet above sea level

2.02 BRANCH PANEL PROTECTION

A. Acceptable Manufacturers:
   1. Current Technology
   2. LEA International Inc.
   3. Liebert
   4. Phoenix Contact
   5. General Electric
   6. OR ENGINEER-approved equal

B. Device shall meet all specification requirements in section 2.1 except as follows:
   1. Equipment shall be a multi-stage parallel protector rated for 277/480VAC, 3 PHASE, 4 WIRE, plus ground. The equipment's minimum surge current capacity shall be 120 kA per phase (L-N plus L-G) and 200 kA per mode (L-N, L-G, L-L and N-G).

C. The system protection modules shall contain a technology that utilizes a symmetrical array of balanced metal oxide varistors (MOV). Each MOV will be individually coordinated to pass UL 1449.

PART 3 – EXECUTION

3.01 INSTALLATION

A. The specified service entrance/switchboard/switchgear system shall be installed with the shortest lead length possible not to exceed five (5) electrical feet from the power conductor(s) it is protecting, must have a grounding of 25 Ohms (per NEC Article 250.53(A)(2) Exception) or less and shall avoid any unnecessary or sharp bends. Utilize a 3-pole 15-amp breaker for connection means.

B. The specified branch panelboard system shall be installed with the shortest lead length possible not to exceed a foot and half (1.5) electrical feet from the power conductor(s) it is protecting, must have a grounding of 25 Ohms (per NEC Article 250.53(A)(2) Exception) or less and shall avoid any unnecessary or sharp bends.

3.02 WARRANTY AND QUALITY ASSURANCE

A. Manufacturer shall provide a product warranty for a period of not less than five (5) years from date of installation. Warranty shall cover unlimited replacement of SPD modules during the warranty period. Those firms responding to this specification shall provide proof that they have been regularly engaged in the design, manufacturing and testing of SPD for not less than twenty-five (25) years. Utilize a 3-pole 15-amp breaker for connection means.

3.03 ACCEPTANCE

A. Manufacturer's representative shall visit site, verify installation, and submit to Contracting Officer a letter stating that equipment and installation meets intent of Contract Documents and manufacturer's warranties and that guarantees are in effect.

END OF SECTION

DRAFT

SECTION 26 5000 – LIGHTING

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes: Luminaires, ballasts, poles and lamps.

1.02 SUBMITTALS

B. Submit manufacturer's data for the following:
   1. Luminaires with designation as indicated on the Drawings, for each one proposed.
   2. Luminaire ballasts, for each one proposed.
   3. Lamps (type, color, wattage, etc.), for each one proposed.
   4. Light pole with accessories, including foundation details. Area light pole foundations must be designed for 80mph wind loading with 100mph wind gusts.

C. Submit manufacturer's data demonstrating compliance with Specifications and the luminaires as indicated on the Drawings.

1.03 QUALITY ASSURANCE

D. Comply with the following Codes and Standards, as well as these Specifications and Contract Documents:
   1. UL-listed and -labeled
   2. NEMA
   3. NFPA 70 (NEC)
   4. IES

PART 2 – PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Magnetic Ballasts:
   1. Jefferson Electric (all types)
   2. Advance Transformer Co. (fluorescent)
   3. Universal Manufacturing Co. (fluorescent)
   4. Or ENGINEER-approved equal

B. Electronic Ballast:
   1. Motorola
   2. Advanced
   3. Magnetek
   4. Or ENGINEER-approved equal

C. Lamps:
   1. Sylvania
   2. Philips
   3. General Electric Co.
   4. Or ENGINEER-approved equal

DRAFT

2.02 MATERIALS

A. Luminaires shall be:
   1. Furnished with proper outlet boxes, hangers, hardware, supports, canopy extensions, etc. Wall mounted exterior luminaires shall be furnished with a flush {surface} mounted weatherproof box and be rated for outdoor use in wet locations.
   2. Furnished complete with lamps with wattage and voltage as indicated on the Drawings.
   3. Furnished complete with plaster frames and light tight gaskets when recessed in drywall or plaster ceilings or overhangs.
   4. Of the specified finishes and color.

B. Ballasts for luminaires with high pressure sodium lamps shall be:
   1. Autoregulator, constant wattage type (CWA) 90% pf, 18 percent maximum loss, low starting current).
   2. LPA “Peak Lead” auto transformer type, 90 percent pf, 20 percent loss, for two lamp fixtures, metallic vapor.
   3. UL listed and labeled for application.
   4. Sound rated 20 to 24db (free if magnetic hum).
   5. Isolated for vibration.
   6. Not exceed 90ºC operating temperature.
   7. Meet NEMA standards and be labeled.

C. Ballasts for luminaires with metal halide lamps shall be:
   1. Pulse start for 150-500W lamps, unless the ballast is greater than 88% efficient. All other metal halide ballasts may be of electronic, non-pulse start type, 90% pf, 20% maximum loss.
   2. UL listed and labeled for application.
   3. Isolated for vibration.
   4. Not exceed 90ºC operating temperature.
   5. Meet NEMA standards and be labeled.
   6. Meet the Federal Energy Independence and Security Act of 2007 (EISA) requirements.

D. Ballasts for fluorescent lighting luminaires shall be the electronic type and shall have the following minimum requirements:
   1. UL Listed Class P, Type 1
   2. Class A sound rating with no audible noise
   3. Operate at an input voltage of 108 to 132 (120 Volt Circuit) at an input frequency of 60 HZ. Light output shall remain constant for line voltage fluctuation of plus or minus 5 percent.
   4. Ballast shall be full rapid start and maintain full cathode heat during operation.
   5. No polychlorinated Byphenyls (PCB’S) contained in the Ballast.
   6. No potting compound, maximum ballast weight shall be 1.25 pounds.
   7. Total harmonic distortion shall be less than 10 percent.
   8. Third harmonic distortion shall be less than 8 percent.
   9. Power factor shall be greater than 0.95.
   10. Lamp flicker shall be less than 2 percent.
   11. Lamp current frequency shall be greater than 25 KHZ.
   12. Ballast shall be rated for T-8 lamps.

DRAFT

E. Lamps:
   1. Fluorescent lamps shall be pre-heat, rapid start or instant start type unless otherwise specified on the Drawings. Lamp types shall be as follows:
      a. Cool white, 3150 lumens
      b. Color Rendering Index (CRI): Lamps shall have a minimum CRI of 70 through the use of RE-70 or RE-80 rare earth phosphor coatings.
   2. Metal-halide lamps shall be “pulse-start” for 400 watts and below.

F. Lighting contactors:
   1. Lighting contactors shall be heavy-duty type with a 120 VAC operating coil.
   2. Unless otherwise indicated, the lighting contactor shall have a minimum of three 600V contacts with amperage rating no less than the maximum lighting circuit passing through the contactor.

G. Photocells:
   1. Photocells shall operate on 120VAC unless otherwise indicated and housed in a heavy-duty, weatherproof housing.
   2. Normally open contacts shall close at approximately 3 foot-candles and open at approximately 12 foot-candles.

H. Time clocks:
   1. Time clocks shall be 24-hour, electromechanical type with a synchronous motor and spring-driven reserve power. Power for the timeclock shall be 120VAC or as indicated on the Drawings. Contacts shall be rated 40A at 120VAC.

I. Area Lighting:
   1. Pole mounted area lights shall be furnished complete with pole, handhole, receptacle, gaskets, welded ground lug opposite the handhole, luminaire labeled approved for wet location. Luminaires shall have lamp bases coated with an inhibitor to prevent base from corroding to the socket and be solidly grounded.
   2. Where indicated, luminaires shall include a factory-installed photocell with the following features.
      a. Photocells shall operate on 120VAC unless otherwise indicated and housed in a heavy-duty, weatherproof housing.
      b. Normally open contacts shall close at approximately 3 foot-candles and open at approximately 12 foot-candles.

J. Light Poles:
   1. Light poles shall be constructed of square aluminum tubing with a flush-mounted receptacle and hinged pole base as indicated on the Drawings.

K. Exterior Lighting:
   1. Exterior luminaires shall be furnished complete with gaskets, cast aluminum weatherproof outlet boxes, labeled approved for outdoor locations, have lamp bases coated with an inhibitor to prevent base from corroding to the socket and be solidly grounded.

DRAFT

PART 3 – EXECUTION

3.01 INTERFERENCES

A. Contractor shall carefully examine the complete areas as well as each individual room where luminaires are to be installed, for interference with piping and other trades. Where such interferences occur, provide luminaires with proper type suspension to overcome such interferences.

3.02 INSTALLATION

A. Luminaires shall be installed parallel with walls and ground for a neat appearance. Where luminaires are indicated to be mounted on a perimeter wall, luminaires shall be installed on a flush mounted box at an elevation such that the top of fixture is flush with the top of wall.

B. Operate luminaires after installation and connection. Check for proper operation. Re-lamp luminaires that have failed lamps.

3.03 OPERATION

A. Area lights shall be controlled by a 3-position selector switch (On-Off-PC) located on the outdoor lighting control panel door.

B. Shade canopy lights shall be controlled by a light switch, location as indicated on the Drawings.

C. Lighting shall be controlled as indicated on the Drawings.

END OF SECTION

DRAFT

SECTION 31 0000 – EARTHWORK

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Perform all earthwork indicated and required for construction of the WORK, complete and operable in accordance with the Contract Documents and the latest Geotechnical Evaluation and or Soils Report.

1.02 SUBMITTALS

A. Submittals shall be made in accordance with Section 01 3300 – Submittal Procedures.
   1. Excavation Plan and stock pile storage sites.
   2. Backfill Plan

PART 2 – PRODUCTS

2.01 SUITABLE FILL AND BACKFILL MATERIAL REQUIREMENTS

A. General: All excavation or backfill shall conform to the requirements of the Geotechnical Engineer. Fill, backfill, and embankment materials shall be suitable selected or processed clean, fine earth, rock, or sand, free from grass, roots, brush, or other vegetation and approved by the Geotechnical Engineer.

B. Fill and backfill materials to be placed within 6 inches of any structure or pipe shall be free of rocks or unbroken masses of earth materials having a maximum dimension larger than 3 inches.

C. Suitable Materials: Materials not defined as unsuitable in the following Sections are defined as suitable materials and may be used in fills, backfilling and embankment construction subject to the indicated limitations. In addition, when acceptable to the ENGINEER, some of the material listed as unsuitable may be used when thoroughly mixed with suitable material to form a stable composite.

D. Suitable materials may be obtained from on-site excavations, or may be processed on-site materials. If the Geotechnical Engineer determines that excavated material is not suitable then additional compensation may be allowed on site processing or for import materials.

E. The following types of suitable materials are defined, unless otherwise specified in the project Geotechnical Evaluation and or Soils Report.
   1. Type A: Native soil excavated from the site after the site is stripped in accordance with these Specifications. This soil must be approved by the Geotechnical Engineer.
   2. Type B (sand backfill): Sand with 100% passing a 3/8-inch sieve, at least 90% passing a Number 4-sieve, and a sand equivalent value not less than 30.
   3. Type C (crushed rock): Crushed rock shall be imported material that consists of durable rock and gravel that is free of deleterious material and free from slaking or decomposition under the action of alternate wetting and drying. Crushed rock shall meet the following gradation requirements.

Sieve Size	Percentage Passing
1-inch	100
3/4 inch	90 - 100
No. 4	0 - 10
No. 200	0 - 2

      These materials should have a durability index of not less than 40.
   4. Type D (pea gravel or chat backfill): Crushed rock or gravel with 100% passing a ½-inch sieve and not more than 10% passing a Number 4-sieve.

DRAFT

5. Type E (coarse drain rock): Crushed rock or gravel with a Durability Index of not less than 40 meeting the following gradation requirements:

Sieve Size	Percentage Passing
2-inch	100
1½–inch	90 - 100
1-Inch	20 - 55
¾-inch	0 - 15
No. 200	0 - 3

6. Type F (aggregate base): Crushed rock/gravel aggregate base material shall be in accordance with MAG Standard Specification Section 702. Crushed rock and gravel shall conform to the following gradation as listed in MAG Standard Specification 702, Table 702-1:

Percentage by Weight Passing Sieve			
Select Material			
Sieve Size (Square Opening)	Type A	Type B	Aggregate Base
3-inch	100	-	-
1½–inch	-	100	-
1 1/4–inch	-	-	100
30-75	30-70	38-65	
20-60	20-60	25-60	
No. 30	10-40	10-40	10-40
No. 200	0-12	0-12	3-12

7. Type G (topsoil): Shall not be used.
8. Type H (cement-treated backfill): Material which consists of Type E material, which has been cement-treated so that the cement content of the material is not less than 5% by weight when tested in accordance with ASTM D2901 - Cement Content of Freshly Mixed Soil Cement. The ultimate compressive strength at 28 days shall be not less than 400 psi when tested in accordance with ASTM D1633 - Compressive Strength of Molded Soil - Cement Cylinders.
9. Type I (trench plug): Low permeable fill material, a non-dispersible clay material having a minimum plasticity index of 10.

2.02 UNSUITABLE MATERIAL

A. Unsuitable materials include the materials listed below:
   1. Soils defined as unsuitable in the Geotechnical Evaluation and or Soils Report or by the Geotechnical Engineer.
   2. Soils which, when classified under ASTM D2487 - Soils for Engineering Purposes (Unified Soil Classification System), fall in the Classifications of PT, OH, CH, MH, or OL.
   3. Soils, which cannot be compacted sufficiently to achieve the density specified for the intended use.
   4. Materials that contain hazardous or designated waste materials including petroleum hydrocarbons, pesticides, heavy metals, and any material which may be classified as hazardous or toxic according to applicable regulations.
   5. Soils that contain greater concentrations of chloride or sulfate ions, or have a soil resistivity or pH less than the existing on-site soils.
   6. Topsoil, except as allowed below.

DRAFT

2.03 USE OF FILL, BACKFILL AND EMBANKMENT MATERIAL TYPES

A. The types of materials as designated herein for all required fill, backfill and embankment construction hereunder shall be used.

B. Where these Specifications conflict with the requirements of any local agency having jurisdiction or with the requirements of a pipe material manufacturer, the ENGINEER shall be immediately notified. In case of conflict between types of pipe embedment backfills, the agency-specified backfill material if that material provides a greater degree of structural support to the pipe shall be used. In case of conflict between types of trench or final backfill types, the agency-specified backfill material, if that material provides the greater in-place density after compaction shall be used.

C. Fill and backfill types shall be used in accordance with the following provisions as approved by the Geotechnical Engineer:
   1. Embankment fills shall be constructed of Type A materials, as defined herein, or of primarily Type I mixed with lesser amounts of Type A through Type H materials.
   2. Pipe zone backfill, as defined in these Specifications.
   3. Aggregate base materials under pavements shall be Type F material constructed to the thicknesses indicated. For aggregate sub-base shall be Type H material.
   4. Backfill around structures shall be Type I material or Types F or H where indicated on the plans.
   5. Backfill materials beneath structures shall be defined by the Geotechnical Engineer or as follows:
      a. Drain rock materials under hydraulic structures or other water retaining structures with underdrain systems shall be Type C material or where shown.
      b. Under concrete hydraulic structures or other water retaining structures without underdrain systems, Types C or E shall be used. Undisturbed subgrade.
      c. Under structures where groundwater must be removed to allow placement of concrete, Type E material shall be used. Before the Type E material is placed, filter fabric shall be placed over the exposed foundation.
      d. Under all other structures, Type A or F materials shall be used.
   6. Filter fabric, if not specified on the plans, shall be Mirafi 140 N, Mirafi 700X or ENGINEER-approved equal.

2.04 MATERIALS TESTING

A. All soils testing of samples submitted will be done by a testing laboratory with the ENGINEER’s approval and at no additional expense. At its discretion, the ENGINEER may request that samples for testing of any material used in the work be supplied.

B. Particle size analysis of soils and aggregates will be performed using ASTM D422 - Particle-Size Analysis of Soils.

C. Determination of sand equivalent value will be performed using ASTM D2419 - Sand Equivalent Value of Soils and Fine Aggregate.

D. Unified Soil Classification System: References in this Section to soil classification types and standards shall have the meanings and definitions indicated in ASTM D2487. ASTM D2487 in the interpretation of soil classifications shall bind all applicable provisions.

PART 3 – EXECUTION

3.01 EXCAVATION

A. General: Except when specifically provided to the contrary, excavation shall include the removal of all materials of whatever nature encountered, including all obstructions of any nature that would interfere with the proper execution and completion of the WORK. The

DRAFT

removal of said materials shall conform to the lines and grades indicated or ordered. Unless otherwise indicated, the entire construction site shall be stripped of all vegetation and debris, and such material shall be removed from the site prior to performing any excavation or placing any fill. All supports and shoring that may be required for the sides of the excavations shall be furnished, placed and maintained. Excavations shall be sloped or otherwise supported in a safe manner in accordance with applicable State and OSHA safety requirements and the requirements of OSHA Safety and Health Standards for Construction (29CFR1926).

B. Removal and Exclusion of Water: Remove and exclude water, including stormwater, groundwater, irrigation water and wastewater, from all excavations as defined in the contract.

3.02 STRUCTURE, ROADWAY, AND EMBANKMENT EXCAVATION

A. Excavation Beneath Structures and Embankments: Except where otherwise indicated for a particular structure, excavation shall be carried to the grade of the bottom of the footing or slab and prepared in accordance with the Geotechnical Evaluation and or Soils Report.

B. Excavation Beneath Paved Areas: Excavation under areas to be paved shall extend to the bottom of the aggregate base and prepared in accordance with the Geotechnical Evaluation and or Soils Report.

3.03 PIPELINE AND UTILITY TRENCH EXCAVATION

A. As referenced in these Specifications.

3.04 OVER-EXCAVATION NOT ORDERED OR INDICATED

A. Any over-excavation carried below the grade ordered or indicated, shall be backfilled and compacted to the required grade with the indicated material, in accordance with the Geotechnical Engineer’s requirements.

3.05 DISPOSAL OF EXCESS EXCAVATED MATERIAL

A. Obtain OWNER approvals for disposal of excess excavated material in a designated wasting area, as defined in the contract.

3.06 BACKFILL - GENERAL

A. Backfill shall not be dropped directly upon any structure or pipe. Backfill shall not be placed around or upon any structure until the concrete has attained sufficient strength to withstand the loads imposed.

B. Except for drainrock materials being placed in over-excavated areas or trenches, backfill shall be placed after all water is removed from the excavation and the trench sidewalls and bottom have been dried to moisture content suitable for compaction.

C. Immediately prior to placement of backfill materials, the bottoms and sidewalls of trenches and structure excavations shall have all loose sloughing, or caving soil and rock materials removed. Trench sidewalls shall consist of excavated surfaces that are in a relatively undisturbed condition before placement of backfill materials.

3.07 PLACING AND SPREADING OF BACKFILL MATERIALS

A. Backfill materials shall be placed and spread evenly in layers. When compaction is achieved using mechanical equipment, the layers shall be evenly spread so that when each layer compacted shall not exceed 6 inches in thickness. The compaction lift depth may be adjusted at the direction of the Geotechnical Engineer.

B. During spreading, each layer shall be thoroughly mixed as necessary to promote uniformity of material in each layer. Pipe zone backfill materials shall be manually spread

DRAFT

around the pipe so when compacted the pipe zone backfill will provide uniform bearing and side support.

C. Backfill should be compacted within a water content range of 3 percent below to 3 percent above optimum.

3.08 COMPACTION OF FILL, BACKFILL AND EMBANKMENT MATERIALS

A. Each layer of Types A, B, F and G, backfill materials as defined herein, where the material is graded such that at least 10% passes a No. 4 sieve, shall be mechanically compacted to the indicated percentage of density. Equipment that is consistently capable of achieving the required degree of compaction shall be used and each layer shall be compacted over its entire area while the material is at the required moisture content.

B. Each layer of Type C, D and E backfill materials shall be compacted by means of at least 2 passes from a flat plate vibratory compactor. When such materials are used for pipe zone backfill, vibratory compaction shall be used at the top of the pipe zone or at vertical intervals of 24 inches, whichever is the least distance from the sub-grade.

C. Flooding, pending or jetting shall not be permitted.

D. Equipment weighing more than 10,000 pounds shall not be used closer to walls than a horizontal distance equal to the depth of the fill at that time. Hand operated power compaction equipment shall be used where use of heavier equipment is impractical or restricted due to weight limitations. Exception: With the written approval of the Structural Engineer.

E. Backfill around and over pipelines that is mechanically compacted shall be compacted using light, hand operated, vibratory compactors and rollers. After completion of at least 2 feet of compacted backfill over the top of pipeline, compaction equipment weighing no more than 8,000 pounds may be used to complete the trench backfill.

F. Compaction Requirements: The following compaction test requirements shall be in accordance with ASTM D1557 - Laboratory Compaction Characteristics of Soils Using Modified Effort (56,000 ft - lbf/ft3) (2,700 kN-m/m3) for Type A, B, C, E, F, and G materials and in accordance with ASTM D4253 - Maximum Index Density and Unit Weight of Soils Using a Vibratory Table, and D4254 - Minimum Index Density and Unit Weight of Soils and Calculation of Relative Density, for Type C, D, E and H materials. Where agency, utility company, or Geotechnical Evaluation and or Soils Report requirements govern, the highest compaction standards shall apply.

DRAFT

Location or Use of Fill	Percentage of Maximum Density
Final backfill, beneath paved areas or structures	95
Final backfill, not beneath paved areas or structures	90
Embankments and fills	90
Embankments and fills beneath paved areas or structures	90
Backfill beneath structures and hydraulic structures	95
Backfill and fill around structures on reservoir or structure roof	90
Topsoil (Type G material)	80
Aggregate base or sub-base (Type F or H material)	95

3.09 FILL AND EMBANKMENT CONSTRUCTION

A. The area where a fill or embankment is to be constructed shall be cleared, grubbed, and stripped in accordance with these Specifications. Embankment and fill material shall be placed and spread evenly in approximately horizontal layers. Each layer shall be thoroughly mixed and moisture conditioned, as necessary. Unless otherwise approved by the ENGINEER, each layer shall not exceed 6 inches of compacted thickness.

B. Base keys shall be provided at the toes of all fill slopes more than 5 feet high. The keys shall be cut into underlying undisturbed soil. Keys shall be a minimum of 12 feet wide and 4 feet deep measured at the downslope side of the key. Keys shall be sloped back toward the fill slope at a gradient of no less than 2%.

C. When an embankment or fill is to be made and compacted against hillsides or slopes steeper than 4:1, the slopes shall be horizontally benched to key the embankment or fill to the underlying ground. A minimum of 12 inches normal to the slope shall be removed and re-compacted as the embankment or fill is brought up in layers. Material thus cut shall be re-compacted along with the new material. Hillside or fill slopes 4:1 or flatter shall be prepared in accordance with Paragraph A, above.

D. Where embankment or structure fills are constructed over pipelines, the first 4 feet of fill over the pipe shall be constructed using light placement and compaction equipment that does not damage the pipe. Heavy construction equipment shall maintain a minimum distance from the edge of the trench equal to the depth of the trench until at least 4 feet of fill over the pipe has been completed.

E. All permanent fill slopes shall be overbuilt by at least 1 foot and then cut to final grade to provide adequate compaction.

3.10 GRADING

A. General: Uniformly grade areas to a smooth surface, free of irregular surface changes. Comply with compaction requirements and grade to cross-sections, lines, and elevations indicated.
   1. Provide a smooth transition between adjacent existing grades and new grades.
   2. Cut out soft spots, fill low spots, and trim high spots to comply with required surface tolerances.

B. Site Grading: Slope grades to direct water away from buildings/structures and to prevent ponding. Finish subgrades to required elevations within the following tolerances:
   1. Lawn or Unpaved Areas: Plus or minus 1 inch
   2. Walks: Plus or minus 1 inch
   3. Pavements: Plus or minus ½-inch

DRAFT

3.11 FIELD TESTING

A. General: All field soils testing shall be done by a testing laboratory as specified in the Contract Documents.

B. Where soil material is required to be compacted to a percentage of maximum density, the maximum density at optimum moisture content will be determined in accordance with Method C of ASTM D1557. Where cohesionless, free draining soil material is required to be compacted to a percentage of relative density, the calculation of relative density will be determined in accordance with ASTM D4253 and D4254. Field density in-place tests will be performed in accordance with ASTM D1556 - Density and Unit Weight of Soil in Place by the Sand-Cone Method, ASTM D2922 - Density of Soil and Soil-Aggregate in Place by Nuclear Methods (Shallow Depth), or by such other means acceptable to the ENGINEER.

C. In case the test of the fill or backfill show non-compliance with the required density, a remedy as may be required to insure compliance shall be accomplished. Subsequent testing to show compliance shall be performed by a testing laboratory.

D. Provide test trenches and excavations including excavation, trench support and groundwater removal for the ENGINEER's field soils testing operations. The trenches and excavations shall be provided at the locations and to the depths required by the ENGINEER.

END OF SECTION

DRAFT

SECTION 31 1000 – SITE CLEARING

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. CONTRACTOR shall furnish all tools, equipment materials and supplies and shall perform all labor to complete the WORK associated with removal of all natural and artificial objectionable material from the designated areas of WORK as indicated in the Contract Documents.

B. This WORK shall also include the protection from injury and preservation of existing improvements, adjacent property, utility vegetation and existing objects designated to remain.

C. Prior to commencing the WORK, obtain acceptance from the ENGINEER regarding methods to be used and disposal of removed materials.

1.02 REFERENCE SPECIFICATIONS, CODES AND STANDARDS

A. Comply with Standard Specifications for Public Works Construction (SSPWC) 7-8: Project Site Maintenance

1.03 QUALITY ASSURANCE

A. Comply with these Specifications and Contract Documents.

PART 2 – PRODUCTS

2.01 CLEARING

A. Clearing shall consist of removing all vegetable growth such as trees, roots, stumps, shrubs, brush, limbs, and other vegetative growth. Remove all evidence of their presence from the growth surface. Clearing shall also include the removal and disposal of trash piles, rubbish, and fencing.

2.02 PRESERVATION OF TREES, SHRUBS, AND OTHER VEGETATION

A. Protect trees, shrubbery, and other vegetation not designated for removal from damage resulting from the WORK. Cut and remove tree branches only where, in the opinion of the ENGINEER, such cutting is necessary to affect construction. Scars resulting from the removal of branches shall be treated with an approved tree sealant. The ENGINEER shall identify all trees for removal, relocation, or preservation

2.03 GRUBBING

A. Grubbing shall consist of the removal and disposal of wood, stumps or root matter a minimum of 36 inches below existing ground surface or bottom of subgrade, whichever is deeper, unless otherwise shown on the Drawings. Clearing shall include stumps, logs, roots, or root systems greater than 1.5 inches in diameter or thickness.

2.04 CLEARING AND GRUBBING FOR TRENCHING

A. The CONTRACTOR shall obtain ENGINEER'S approval before beginning excavation. The CONTRACTOR shall complete clearing and grubbing prior to the start of trenching. The CONTRACTOR shall not permit excavated materials to cover vegetation prior to disposal.

DRAFT

2.05 REMOVAL AND DISPOSAL OF CLEARING AND GRUBBING DEBRIS

A. General: All materials removed shall be disposed of outside of the Project Site. No accumulation of flammable material shall remain on or adjacent to the right-of-way. The roadway and adjacent areas shall be left with a neat and finished appearance.

B. Bituminous Pavement: Bituminous pavement removal shall be in conformance with SSPWC Section 300-1.3.2 (a). Estimated thickness of paving sections to be removed are shown on Contract drawings.

C. Concrete Pavement: Concrete pavement removal shall be in conformance with SSPWC Section 300-1.3.2 (b). Estimated thickness of paving sections to be removed are shown on Contract drawings.

D. Concrete Curb, Walk, Gutters, Cross Gutters, Driveways, and Alley Intersections: Concrete removal shall be in conformance with SSPWC Section 300-1.3.2 (c).

2.06 STRIPPING

A. Stripping shall include the removal and disposal of all organic sod, topsoil, grass and grass roots, and other objectionable material remaining after clearing and grubbing from the areas designated to be stripped. The depth of stripping shall be as shown on the Drawings and specified herein.

B. Topsoil from the strippings shall be stockpiled and used for the finished site grading. Excess topsoil will be placed in the waste disposal areas designated by the ENGINEER.

PART 3 – EXECUTION

3.01 CLEARING AND GRUBBING

A. Clearing and grubbing shall be in conformance with the SSPWC Section 300-1.

3.02 STRIPPING

A. Prior to beginning any excavation or fill, strip the topsoil to a depth sufficient to remove all organic material and stockpile for future use. In general, topsoil shall be removed where structures are to be built, trenches dug, and roads, parking lots, walks, and similar improvements constructed within the areas presently covered with topsoil. Topsoil shall be stored clear of the construction area. Take reasonable care to prevent the topsoil from becoming mixed with subsoil. In lieu of reusing stockpiled topsoil, use imported topsoil as required for final grading.

END OF SECTION

DRAFT

SECTION 31 2333 – TRENCHING AND BACKFILLING

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Section Includes: Trench excavation, fine grading, pipe bedding, backfilling, and compaction for the following, including requirements for ditch crossings:
   1. Pipe and electrical conduits.
   2. Manholes, valves, or other accessories.
   3. Potable and non-potable water pipe appurtenances.

B. Soils Report: This work shall conform to the requirements of the latest Geotechnical Evaluation.

1.03 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

B. Products Data: For all proposed bedding and backfill materials as defined in these Specifications.
   1. Material source
   2. Gradation
   3. Testing data

C. Submit shoring and/or bracing details for trench depths greater than 5 ft.

PART 2 – PRODUCTS

2.01 MATERIALS

A. General:
   1. The following types of suitable materials are defined, unless otherwise specified by the Geotechnical Evaluation.
   2. Provide material having maximum particle size not exceeding 2 inches and that is free of leaves, grass, roots, stumps, and other organic matter.
   3. Materials derived from processing demolished or removed asphalt concrete are not acceptable.

DRAFT

B. All products shall comply with applicable Sections of these Specifications, Section 31 0000 – Earthwork, including, but not limited to the following:
   Aggregate Base Course
   Gravel
   Native Material
   Sand
   Select Material

2.02 UNSUITABLE MATERIAL

A. Unsuitable materials include the materials listed below:
   1. Soils as defined unsuitable in the Geotechnical Evaluation or by the Geotechnical Engineer.
   2. Soils which, when classified under ASTM D2487 - Standard Classification of Soils for Engineering Purposes (Unified Soil Classification System), fall in the Classifications of PT, OH, CH, MH or OL.
   3. Soils, which cannot be compacted sufficiently to achieve the density specified for the intended use.
   4. Materials that contain hazardous or designated waste materials including petroleum hydrocarbons, pesticides, heavy metals, and any material which may be classified as hazardous or toxic according to applicable regulations.
   5. Soils that contain greater concentrations of chloride or sulfate ions, or have a soil resistivity or pH less than the existing on-site soils.
   6. Topsoil, except as allowed below.

2.03 USE OF FILL, BACKFILL

A. Where these Specifications conflict with the requirements of any local agency having jurisdiction or with the requirements of a pipe material manufacturer, the ENGINEER shall be immediately notified. In case of conflict between types of pipe embedment backfills, the agency-specified backfill material if that material provides a greater degree of structural support to the pipe shall be used. In case of conflict between types of trench or final backfill types, the agency-specified backfill material, if that material provides the greater in-place density after compaction shall be used.

B. Fill and backfill types shall be used in accordance with the following provisions:
   1. Pipe zone backfill shall consist of the following materials for each pipe material listed below.
      a. Mortar coated pipe, concrete pipe and un-coated ductile iron pipe shall be provided Type C or D pipe bedding and embedment backfill material.
      b. Coal tar enamel coated pipe, polyethylene encased pipe, tape wrapped pipe and other non-mortar coated pipe shall be backfilled with Type B bedding and embedment zone backfill material.
      c. Plastic pipe shall be backfilled with Type B, C, or D bedding and embedment zone backfill material.
      d. Where pipelines are installed on grades exceeding 4%, and where backfill materials are graded such that there is less than 10% passing a Number 4 sieve, trench plugs of Type H or I material shall be provided at maximum intervals of 200 feet unless indicated otherwise.
   2. Allowable trench backfill materials for pipelines as defined under the MAG Standards and Specifications.

2.04 MATERIALS TESTING

A. As defined in these Specifications.

DRAFT

PART 3 – EXECUTION

3.01 PREPARATION

A. General:
   1. All utility piping shall be field surveyed for location of pipe runs and joints prior to backfilling.
   2. Before laying pipes or electrical conduits in fill, place fill and compact it to not less than 1 ft above top of pipe or conduit.
   3. After placing and compacting fill, excavate through fill and fine grade as required in this Section.

3.02 EXCAVATION AND TRENCH PROTECTION:

A. Provide safe working conditions, to prevent shifting of material, to prevent damage to structures or other work, to avoid delay to the work, all in accordance with applicable safety and health regulations. Properly shore, sheet, and brace all excavations which are not cut back to the proper slope and where shown.
   1. Locate all underground utilities and take the required measures necessary to protect them from damage.
   2. Construction and shop drawings containing deviations from OSHA standards or special designs shall be sealed by a licensed Engineer retained by the CONTRACTOR.

B. Stabilize excavation through shoring, sheeting, and bracing as required by OSHA or local standards, whichever is more stringent.
   1. Code of Federal Regulations Title 29 CFR Part 1926, Subpart P, Excavations.
   2. Occupational Safety and Health Administration Document 2226.

3.03 EXCAVATION AND GRADING

A. Exploratory Excavation:
   1. Excavate and expose buried points of connection to existing utilities where indicated on the Drawings. Excavation shall be performed prior to preparation of Shop Drawings for connections and before fabrication of pipe, and the data obtained shall be used in preparing Shop Drawings.
   2. Data, including dates, locations excavated, and sketches, shall be submitted to the ENGINEER within one week of excavation.
   3. Damage to utilities from excavation activities shall be repaired at the CONTRACTOR's expense.

B. Trench Excavation:
   1. General Requirements:
      a. If, because of soil conditions, safety requirements or other reasons, trench width at top of pipe is increased beyond width specified in the MAG Standards and Specifications, upgrade laying conditions or install stronger pipe designed in conformance with the appropriate pipe Specification Section for the increased trench width, without additional cost.

DRAFT

b. Pipe and Electrical Conduits:
    1) Lay pipe or electrical conduits in open trench.
    2) If bottom of excavation is found to consist of rock or any material that by reason of its hardness cannot be excavated to provide uniform bearing surface, remove such rock or other material to a depth of not less than 4 inches below bottom of pipe and refill to grade with aggregate base course material or sand placed at uniform density, with minimum possible compaction, at no additional cost.
    3) If bottom of excavation is found to consist of soft or unstable material which is incapable of properly supporting pipe, remove such material to a depth and for the length required, as determined by the ENGINEER, and then refill trench to grade with aggregate base course or sand, compacted to 90 percent of maximum density.
    4) Where indicated on the Drawings, cradle pipe in concrete.
c. For Manholes, Valves, or Other Accessories:
    1) Provide excavations sufficient to leave at least 12 inches clear between their outer surfaces and embankment or shoring which may be used to hold banks and protect them.
    2) Do not backfill with earth under manholes, vaults, tanks, or valves.
    3) Fill any unauthorized excess excavation below elevation indicated on the Drawings for foundation of any structure with sand, aggregate base material, bedding material, or concrete at no additional cost.
    4) Backfilling of Manhole Excavation: Conform to backfilling requirements as specified for pipe and utility trench backfill in this Section.
d. Potable and Non-Potable Water Pipe Appurtenances:
    1) Lay in trenches separate from those used for sewers.
    2) Unless otherwise specified or indicated on the Drawings, lay in trenches having cover of not less than 3 feet below surface of ground and located at distance of not less than 6 feet from any parallel sewer trench, or as required by local requirements.
e. At Road Crossings or Existing Driveways:
    1) Make provision for trench crossings at these points, either by means of backfills, tunnels, or temporary bridges.

C. Trench Fine Grading:
1. For Pipes 16 Inches in Nominal Diameter and Under:
    a. Unless otherwise specified, accurately grade bottom of trench to provide uniform bearing and support for each section of pipe, on undisturbed soil at every point along pipe's entire length, except for portions of pipe where it is necessary to excavate for bells and for proper sealing of pipe joints.
2. For Pipe over 16 Inches in Diameter:
    a. Over-excavate bottom of trench by at least 4 inches, or 1/12 outside diameter of pipe, whichever is greater.
    b. Fill overcut with bedding material specified herein, and fine graded as specified above.
    c. Place bedding material at uniform density, with minimum possible compaction.
    d. Where trench excavation is below grade of bedding material, restore trench bottom to proper grade by backfilling and compacting backfill to 95 percent of maximum density, at no additional cost. Use bedding material as specified in this Section.

DRAFT

3. Bell or Coupling Holes:
   a. Dig holes after trench bottom has been graded.
   b. Provide holes of sufficient width to provide ample room for grouting, banding, or welding.
   c. Excavate holes only as necessary in making joints and to ensure that pipe rests upon prepared trench bottom and not supported by any portion of the joint.
4. Depressions for Joints, Other than Bell and spigot:
   a. Make in accordance with recommendations of joint manufacturer for particular joint used.

3.04 DISPOSAL OF EXCESS EXCAVATED MATERIAL

A. Obtain OWNER approvals for disposal of excess excavated material in designated wasting area, as defined in the contract.

3.05 BACKFILL - GENERAL

A. Backfill shall not be dropped directly upon any pipe. Backfill shall not be placed around or upon any structure until the concrete has attained sufficient strength to withstand the loads imposed.

B. Except for drainrock materials being placed in over-excavated areas or trenches, backfill shall be placed after all water is removed from the excavation and the trench sidewalls and bottom have been dried to moisture content suitable for compaction.

C. If a moveable trench shield is used during excavation, pipe installation and backfill operations, the shield shall be moved by lifting the shield free of the trench bottom or backfill and then moving the shield horizontally. No trench shields shall be dragged along the trench causing damage or displacement to the trench sidewalls, the pipe, or the bedding and backfill.

D. Immediately prior to placement of backfill materials, the bottoms and sidewalls of trenches and structure excavations shall have all loose sloughing, or caving soil and rock materials removed. Trench sidewalls shall consist of excavated surfaces that are in a relatively undisturbed condition before placement of backfill materials.

3.06 PLACING AND SPREADING OF BACKFILL MATERIALS

A. During spreading, each layer shall be thoroughly mixed as necessary to promote uniformity of material in each layer. Pipe zone backfill materials shall be manually spread around the pipe so when compacted the pipe zone backfill will provide uniform bearing and side support.

B. Where the backfill material moisture content is below the optimum moisture content, water shall be added before or during spreading until the moisture content is between optimum and 3% over the optimum.

C. Where the backfill material moisture content is too high to permit the specified degree of compaction the material shall be dried until the moisture content is between optimum and 3% over the optimum.

3.07 COMPACTION OF FILL, BACKFILL AND EMBANKMENT MATERIALS

A. Compaction Requirements: Backfill compaction requirements shall be per the Geotechnical Evaluation and or Soils Report and per MAG Standards and Specifications.

DRAFT

3.08 PIPE AND UTILITY TRENCH BACKFILL

A. Pipe Zone Backfill:
   1. The pipe zone is defined as that portion of the vertical trench cross-section lying between a plane below the bottom surface of the pipe and a plane at a point above the top surface of the pipe. The bedding is defined as that portion of pipe zone backfill material between the trench sub-grade and the bottom of the pipe. The embedment is defined as that portion of the pipe zone backfill material between the bedding and a level line.
   2. After compacting the bedding, perform a final trim using a laser or approved method for establishing grade, such that each pipe section when first laid will be continually in contact with the bedding along the extreme bottom of the pipe. Excavation for pipe bells and welding shall be made as required.
   3. The pipe zone shall be backfilled with the indicated backfill material. Care to prevent damage to the pipeline coating, cathodic bonds and the pipe itself during the installation and backfill operations shall be exercised.
   4. If a moveable trench shield is used during backfill operations, the shield shall be lifted to a location above each layer of backfill material prior to compaction of the layer. The pipe or backfill shall not be displaced while the shield is being moved.

B. Trench Zone Backfill: After the pipe zone backfills have been placed, backfilling of the trench zone may proceed. The trench zone is defined as that portion of the vertical trench cross-section lying as indicated between a plane above the top surface of the pipe and a plane at a point, 18 inches below the finished surface grade, or if the trench is under pavement, 18 inches below the roadway sub-grade.

C. Final Backfill: Final backfill is all backfill in the trench cross-sectional area within 18 inches of finished grade, or if the trench is under pavement, all backfill within 18 inches of the roadway sub-grade.

3.09 FIELD QUALITY CONTROL

A. Tests:
   1. Confirmation Tests:
      a. CONTRACTOR’s Responsibilities:
         1) Accomplish specified compaction of trench backfill.
         2) Control operations by confirmation tests to verify and confirm that compaction work complies, and is complying at all times, with requirements specified in this Section concerning compaction, control, and testing.
         3) All field soils testing will be done by a testing laboratory as specified in the Contract Documents.
         4) Copies of Confirmation Test Reports: Submit promptly to the ENGINEER.
      b. Frequency of Confirmation Testing:
         1) Perform testing not less than as follows:
            a) For Trenches: At each test location include tests for each type or class of backfill from bedding to finish grade.
            b) In Open Fields: Two every 1,000 linear feet.
            c) Along Dirt or Gravel Road or off Traveled Right-of-way: Two every 500 linear feet.
            d) Crossing Paved Roads: Two locations along each crossing.
            e) Under Pavement Cuts or Within 2 Feet of Pavement Edges: one location every 400 linear feet.

DRAFT

2. Compliance Tests:
    a. Frequency of Testing: Periodic compliance tests will be made by the
        1) ENGINEER to verify that compaction is meeting requirements previously specified.
    b. If Compaction Fails to Meet Specified Requirements: Perform remedial work by one of the following methods:
        1) Remove and replace backfill at proper density.
        2) Bring density up to specified level by other means acceptable to the ENGINEER.
    c. Retesting:
        1) Costs of Retesting: Costs of retesting required to confirm and verify that remedial work has brought compaction within specified requirements shall be borne by the CONTRACTOR.
        2) CONTRACTOR's Confirmation Tests During Performance of Remedial Work:
            a) Performance: Perform tests in manner acceptable to the ENGINEER.
            b) Frequency: Double amount specified for initial confirmation tests.
3. Leak Testing Pipe:
    a. After Bedding the Pipe, CONTRACTOR Has the Following Option To:
        1) Leak-test pipe.
        2) Backfill to surface, at his own risk, before leak water-testing pipe.
    b. If pipe does not pass test, uncover pipe, locate leaks, repair and retest, repeating until pipe section under test passes.

END OF SECTION

DRAFT

SECTION 32 1216 – ASPHALT PAVING

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Perform all WORK associated with Asphalt Concrete (AC) Pavement and base as shown and specified herein including all labor, materials, equipment supplies, and facilities associated with providing a finished product satisfying all the requirements of the Contract Documents.

B. Verify all requirements with latest Geotechnical Evaluation and Report and notify the Engineer immediately if discrepancies exist.

1.02 REFERENCE SPECIFICATIONS, CODES AND STANDARDS

A. Codes**:** All codes, as referenced herein.

B. References**:** These specifications refer to the State of Arizona Department of Transportation (ADOT) Standard Specifications, referred to herein as the Standard Specifications.

1.03 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

B. Submit, in writing, materials testing reports, mix designs and other pertinent information satisfactory to the ENGINEER demonstrating that materials and methods it proposes to utilize will comply with the referenced provisions of the Standard Specifications, in accordance Submittal Requirements.

PART 2 – PRODUCTS

2.01 DESCRIPTION

A. Asphaltic concrete shall consist of furnishing all materials, mixing, hauling, and placing a mixture of aggregates, mineral admixture, and bituminous material to form a pavement course or to be used for other specified purposes, in accordance with the details shown on the project plans and as directed by the Engineer.

B. The contractor may propose the use of a mix design that has been developed for a previous project. The CONTRACTOR shall provide evidence that the asphalt cement and mineral admixture type and source of supply, and the source and methods of producing mineral aggregate, have not changed since the formulation of the previous mix design. The CONTRACTOR shall also provide current test results for all specified characteristics of the mineral aggregate proposed for use. The ENGINEER will determine if the previously used mix design is suitable for the intended use. The Engineer will determine if the previously used mix design is suitable for the intended use. The ENGINEER will either approve or disapprove the proposed mix design. Should the ENGINEER disapprove the use of the previously used mix design, the contractor shall prepare and submit a new mix design proposal in accordance with the requirements of these specifications.

C. A previously used mix design older than two years from the date it was formulated, sealed, signed, and dated shall not be allowed for use. Any previously used mix design that is older than one year, but less than two years, shall not be allowed for use unless the contractor provides verification testing results. Such testing shall be a one-point verification at the design asphalt content utilizing the proposed mineral aggregate, asphalt cement, and mineral admixture. Once approved for use on a project, a mix design may be used for the duration of the project.

2.02 MATERIALS REQUIREMENTS

DRAFT

A. Mineral aggregate shall conform to the following requirements when tested in accordance with the applicable test methods

MINERAL AGGREGATE CHARACTERISTICS		
Characteristic	**Test Method**	**Requirement**
Combined Bulk Oven Dry Specific Gravity	Arizona Test Method 251	2.350 – 2.850
Combined Water Absorption	Arizona Test Method 251	0 – 2.5%
Sand Equivalent	AASHTO T 176 (After thoroughly sieving the sample, no additional cleaning of the fines from the plus No. 4 material is required)	Minimum 55
Fractured Coarse Aggregate Particles	Arizona Test Method 212	Minimum 70% (plus No. 4 material)

The gradation will be determined in accordance with Arizona Test Method 201 and shall conform to the requirements given below.

Mix Design Grading Limits				
Sieve Size	**Percent Passing**			
	Lift Thickness Less Than or Equal to Two Inches		**Lift Thickness Greater Than Two Inches**	
	Without Admixture	**With Admixture**	**Without Admixture**	**With Admixture**
1 inch	---	---	100	100
¾-inch	100	100	90-100	90-100
½-inch	90 – 100	90 - 100	---	---
3/8-inch	70 – 85	70 – 85	70 – 85	70 – 85
No. 8	41 – 51	42 – 52	41 – 51	42 – 52
No. 200	2.0 – 5.0	3.0 – 6.5	2.0 – 5.0	3.0 – 6.5

B. Bituminous Material

1. Asphalt cement shall be a performance grade (PG) asphalt binder conforming to the requirements of Section 1005 of the Standard Specifications. The type of asphalt binder shall be PG64-22.
2. The percent of asphalt cement used shall be based on the weight of total mix (asphalt cement, mineral aggregate, and mineral admixture).
3. The CONTRACTOR shall provide the laboratory mixing and compaction temperature ranges to the mix design laboratory for each PG asphalt binder used for mix design purposes. The laboratory mixing temperature range is defined as the range of temperatures where the un-aged asphalt binder has a rotational viscosity of 0.17 ± 0.02 Pascal seconds, measured in accordance with AASHTO T 316. The laboratory compaction temperature range is defined as the range of temperatures where the un-aged asphalt binder has a rotational viscosity of 0.28 ± 0.03 Pascal seconds, measured in accordance with AASHTO T 316. The testing required in AASHTO T 316 shall be performed at 275°F and 350°F, and a viscosity· temperature curve developed in accordance with ASTM D2493. The viscosity-temperature curve shall be included in the mix design report. For PG asphalt binders that have a maximum laboratory mixing temperature exceeding 325°F or a maximum laboratory compaction temperature exceeding 300°F the laboratory mixing and compaction temperature ranges shall be specified in writing by the asphalt binder supplier. The laboratory

DRAFT

mixing and compaction temperature ranges, as well as the actual laboratory mixing and compaction temperatures used, shall be reported in the mix design. The Contractor shall ensure that the asphalt binder supplier information required in this paragraph is provided to all appropriate parties in a timely manner, and that copies are included in the mix design report. The laboratory mixing and compaction temperatures are for mix design purposes only. Field mixing and compaction temperatures are specified in Subsection 2.03.

C. Mineral Admixture

1. Mineral admixture shall be either Portland cement, blended hydraulic cement, or hydrated lime conforming to the following requirements:

Material	Requirement
Portland Cement, Type I or II	ASTM C150
Blended Hydraulic Cement, Type IP	ASTM C595
Hydrated Lime	ASTM C1097

2. The mineral admixture content shall be 2.0 percent, by weight, of the mineral aggregate. However, a minimum of 1.0 percent mineral admixture may be used if the Contractor submits test information a lowered percentage of mineral admixture produces mix design results for Index of Retained Strength of at least 60 percent and a Minimum Wet Strength of 150 psi when tested in accordance with Arizona Test Method 802.

D. Mix Design

1. Utilizing mineral aggregate which has been crushed, processed, separated, and stockpiled, a mix design shall be formulated and submitted by the Contractor to the ENGINEER. The mineral aggregate samples used for mix design purposes shall be representative of aggregate materials to be used during production.
2. The mix design shall be based on the mix design criteria and other requirements specified herein, utilizing asphalt cement and mineral admixture of the type and from the sources proposed for use in the production of asphaltic concrete.
3. The mix design shall be prepared under the direct supervision of a professional engineer experienced in the development of mix designs and mix design testing. The mix design shall be provided in a format that clearly indicates all the mix design requirements and shall be sealed, signed, and dated by the mix design engineer.
4. The mix design shall be prepared by a mix design laboratory that has met the requirements of the Department's “System for the Evaluation of Testing Laboratories”. The requirements may be obtained from ADOT Materials Group, 1221 North 21st Avenue, Phoenix, Arizona 85009.
5. Test results used in the formulation of the mix design must be from testing performed no earlier than 45 days prior to the date the mix design is signed by the mix design engineer. Historical abrasion values may be supplied on sources provided the testing was conducted within the past two years.
6. The mix design shall be submitted to the ENGINEER under a cover letter signed by an authorized representative of the contractor.
7. The mix design shall be submitted to the ENGINEER for review a minimum of five working days prior to the start of production.
8. The mix design shall meet the following criteria when tested in accordance with the requirements of the following test methods:

DRAFT

Criteria	Requirement	Arizona Test Method
Voids in Mineral Aggregate: %, Range	14.5 – 18.5	815
Effective Voids: %, Range	5.5 – 6.5	815
Absorbed Asphalt: %, Range	0 – 1.0	815

9. The ENGINEER reserves the right to adjust the asphalt content during production from the mix design value without additional compensation to the contractor in order to obtain desirable effective voids. The ENGINEER may waive the requirements for a mix design if the intended use of the material is temporary in nature.

E. Sampling and testing the materials or mixture for quality control purposes shall be the Contractor's responsibility. The ENGINEER reserves the right to sample and test the materials and mixture when necessary to determine that they reasonably conform to the requirements specified herein.

2.03 CONSTRUCTION REQUIREMENTS

A. General

1. All courses of asphaltic concrete shall be compacted as required, smooth, and true to the required lines, grades, and dimensions.
2. The following smoothness requirements shall be met:
   a. The surface of the final lift of asphaltic concrete placed under this section of the specifications shall be tested and shall not vary by more than 1/8 inch from the lower edge of a ten-foot straightedge when it is placed in the longitudinal direction (including across transverse joints), and when it is placed in the transverse direction across longitudinal joints.
   b. The surface of any lift of asphaltic concrete placed under this section of the specifications, other than the final lift, shall be tested and shall not vary by more than 1/4 inch from the lower edge of a ten-foot straightedge when it is placed in the longitudinal direction (including across transverse joints), and when it is placed in the transverse direction across, longitudinal joints.
   c. All deviations exceeding the specified tolerances above shall be corrected by the contractor, to the satisfaction of the ENGINEER.
3. No fine material which has been collected in the dust collection system shall be returned to the mixture unless the collected fines are accurately and uniformly metered into the mixture.
4. The temperature of asphaltic concrete or mineral aggregate upon discharge from the drier shall not exceed 325°F, unless a higher temperature is recommended in writing by the asphalt binder supplier and approved by the ENGINEER.
5. The moisture content of the asphaltic concrete immediately behind the paver shall not exceed 0.5 percent. The moisture content will be determined in accordance with the requirements of Arizona Test Method 406.
6. Asphaltic concrete shall be placed only when the temperature of the surface on which the asphaltic concrete is to be placed is at least 65°F.
7. At any time, the ENGINEER may require that the work cease or that the work day be reduced in the event that weather conditions, either existing or expected, are anticipated to have an adverse effect upon the asphaltic concrete.
8. All wheels and tires of compactors and other equipment surfaces shall be treated when necessary with a product approved by the ENGINEER in order to prevent the slicking of asphaltic concrete.
9. Asphaltic concrete immediately behind the laydown machine shall be a minimum of 250°F.

DRAFT

10. Just prior to being placed, the asphaltic concrete shall be in a thoroughly mixed condition, free of lumps and crusts and at such a temperature as to be in a free flowing, workable condition.
11. All courses of asphaltic concrete shall be placed and finished by means of self-propelled paving machines except under certain conditions or at certain locations where the ENGINEER deems the use of self-propelled paving machines impractical.
12. Pavers shall be equipped with a screed for the full width being paved, heated if necessary, and capable of spreading and finishing all courses of asphaltic concrete.
13. Pavers shall be equipped with automatic screed controls with sensors for either or both sides of the paver, capable of sensing grade from an outside reference line, sensing the transverse slope of the screed, and providing the automatic signals which operate the screed to maintain the desired grade and transverse slope.
14. Failure of the control system to function properly shall be cause for the suspension of the placing of asphaltic concrete.
15. The base or subgrade upon which asphaltic concrete is to be placed shall be prepared and maintained in a firm condition until asphaltic concrete is placed. It shall not be frozen or excessively wet.
16. Before asphaltic concrete is placed, the surface to be paved shall be cleaned of objectionable material and tacked.
17. Longitudinal joints of each course shall be staggered a minimum of one foot with relation to the longitudinal joint of any immediate underlying course. Longitudinal joints shall be located within one foot of the center of a lane or within one foot of the centerline between two adjacent lanes.
18. The contractor shall schedule paving operations to minimize exposed longitudinal edges. Unless otherwise approved by the ENGINEER, the contractor shall limit the placement of asphaltic concrete courses, in advance of adjacent courses, to one shift of asphaltic concrete production. The contractor shall schedule paving operations in such a manner to eliminate exposed longitudinal edges over weekends or holidays.

B. Compaction

1. Compaction shall consist of an established sequence of coverage using specified types of compactors. A pass shall be defined as one movement of a compactor in either direction. Coverage shall be the number of passes as are necessary to cover the entire width being paved.
2. The rolling sequence, the type of compactor to be used, and the number of coverages required shall be as follows:

Rolling Sequence	**Type of Compactor**		**Number of Coverages**	
	Option No.1	**Option No.2**	**Option No.1**	**Option No.2**
Initial	Static Steel	Vibrating Steel	1	1
Intermediate	Pneumatic Tired	Vibrating Steel	2 – 6*	2 – 4*
Finish	Static	Static Steel	1 - 3	1 - 3
*Based on the roller pattern which exhibits the best performance.				

3. The ENGINEER shall select the option for compaction and, when pneumatic-tired compactors are used, will designate the tire pressure.
4. Steel wheel compactors shall not be used in the vibratory mode for courses of one inch or less in nominal thickness nor when the temperature of the asphaltic concrete falls below 180°F. Steel wheel compactors shall weigh not less than eight tons.

DRAFT

5. Initial and intermediate compaction shall be completed before the temperature of the asphaltic concrete falls below 200°F. All edges shall be rolled with a pneumatic tired compactor, or other methods approved by the ENGINEER, while the mixture is still hot.
6. Compaction will be deemed to be acceptable on the condition that the asphaltic concrete is compacted using the type of compactors specified, ballasted, and operated as specified and with the number of coverages of the compactors as specified.

C. Acceptance: Asphaltic concrete will be accepted complete in place if, in the judgment of the ENGINEER, the asphaltic concrete reasonably conforms to the requirements specified herein. Asphaltic concrete that is not acceptable and is rejected shall be replaced to the satisfaction of the ENGINEER and at no expense to the Owner.

2.04 METHOD OF MEASUREMENT

A. Asphaltic concrete will be measured by the ton for the mixture actually used, which will include the weight of mineral aggregate, bituminous material, and mineral admixture. Measurement will include any weight used in construction of intersections, turnout, curbs, spillways and spillway inlets, ditches, catch basin entrances, median strips, sidewalks or other miscellaneous items or surfaces.

PART 3 – EXECUTION

3.01 CONSTRUCTION REQUIREMENTS FOR NEW ROADWAY PAVEMENT

A. Subgrade Preparation shall comply with the Geotechnical Evaluation.

B. Aggregate Base: Aggregate base shall be provided where shown and to the thickness shown. Construction of the aggregate base course shall be as shown on the plans.

C. Asphalt Concrete:
1. AC paving shall be constructed as shown on the plans.
2. Alternate compacting equipment or substitution of a vibratory roller for a pneumatic-tired roller must be approved by the ENGINEER.
3. All mixtures shall be spread at a temperature of not less than 250°F. Base material compaction shall be completed before the mix reaches 200°F.

D. Pavement Marking: Application of the paint shall be in accordance with the paint manufacturer's instructions. Traffic markings obliterated by the WORK shall be repainted, unless otherwise directed by the ENGINEER.

3.02 CONSTRUCTION REQUIREMENTS FOR PAVEMENT REPAIR

A. Preparation of the site for pavement repair shall be in accordance with the Contract Drawings.

B. New pavement shall be placed according to the provisions of this Section and shall be of similar materials and pavement thickness as existing adjacent pavement except that the new pavement section surface shall be 1/8-inch higher than adjacent pavement.

C. Diamond saw cut joining pavement edges and tack coat edges.

END OF SECTION

DRAFT

SECTION 32 1600 – CURBS, GUTTERS, SIDEWALKS, AND DRIVEWAYS

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes: Concrete curbs, gutters, sidewalks, valley gutters, driveways, access ramps, and alley intersections.

1.02 SYSTEM DESCRIPTION

A. Performance Requirements: Construct various types of concrete curb, gutter, sidewalk, driveways, and alley intersections to dimensions and details indicated on the Drawings.

1.03 SUBMITTALS

A. Submittals shall be made in accordance with Section 01 3300 – Submittal Procedures.

B. Product Data: Submit data completely describing products.

C. Samples: Submit samples when requested.

PART 2 – PRODUCTS

2.01 MATERIALS

A. Concrete: 4000 psi, conforming to the applicable requirements of these Specifications.

B. Curb Finishing Mortar: 1 part Portland cement to two parts sand.

C. Form Release Material: Light oil or other releasing agent of type which does not discolor concrete or interfere with the application of finishing mortar to curb tops and faces.

D. Joint Materials:
   1. Expansion: Comply with requirements as specified in these Specifications.
   2. Construction: Steel dividers or plastic inserts.

PART 3 – EXECUTION

3.01 EXAMINATION

A. Verification of Conditions: Verify field conditions, including subgrade condition and interferences, before beginning construction.

3.02 PREPARATION

A. Surface Preparation:
   1. Subgrade:
      a. Construct and compact true to grades and lines indicated on the Drawings and requirements as specified in these Specifications.
      b. Remove soft or unsuitable material to depth of not less than 6 inches below subgrade elevation and replace with satisfactory material.
   2. Forms and Subgrade: Water immediately in advance of placing concrete.

3.03 INSTALLATION

A. Special Techniques:
   1. CONTRACTOR's Option:
      a. Construct concrete curbs and gutters by conventional use of forms, or by means of curb and gutter machine when acceptable to the ENGINEER.
      b. When use of machines designed specifically for work of this Section are accepted by the ENGINEER, results must be equal to or better than those produced by use of forms.

DRAFT

c. Applicable requirements of construction that apply to use of forms also apply to use of machines.
d. Discontinue use of machines when results are not satisfactory to the ENGINEER.

B. Forms:
1. Carefully set to line and grade and securely stake in position forms conforming to dimensions of items to be constructed.
2. Thoroughly clean prior to each use and coat with form releasing material.

C. Expansion and Contraction Joints:
1. Expansion Joints:
a. Construct vertically, and at right angles to centerline of street and match joints in adjacent pavement or sidewalks.
b. Constructed at radius points, driveways, alley entrances, and at adjoining structures.
c. Fill joints with expansion joint filler material.
2. Contraction Joints:
a. Constructed not more than 15 feet apart.
b. Make joints of construction joint material, scoring or saw cutting to depth of not less than 1-1/2 inches, and matching joints in adjacent pavement or sidewalk.

D. Concrete:
1. Placing:
a. Thoroughly spade concrete away from forms so that no rock pockets exist next to forms and so that no coarse aggregate will show when forms are removed.
2. Compacting:
a. Compact by mechanical vibrators accepted by the ENGINEER.
b. Continue tamping or vibrating until mortar flushes to surface and coarse aggregate is below concrete surface.
3. Form Removal:
a. Front Form Faces: Do not remove before concrete has taken initial set and has sufficient strength to carry its own weight.
b. Gutter and Rear Forms: Do not remove until concrete has hardened sufficiently to prevent damage to edges. Take special care to prevent damage.
4. Finishing and Curing: Comply with requirements of these Specifications, except as modified here:
a. As soon as curb face forms are stripped, apply finishing mortar to the top and face of curb and trowel to a smooth, even finish. Finish with fine haired broom in direction of work.
b. Where curb is installed without integral gutter, extend finish 2 inches below grade.
c. Edge concrete at expansion joints to 1/4-inch radius.
d. Flow lines of gutters shall be troweled smooth 4 inches out from curb face for integral curb and gutter and 4 inches on both sides of flowline for gutters without curbs.

E. Backfilling: Unless otherwise specified, backfill behind curbs, gutters, or sidewalks with soil native to area and to lines and grades indicated on the Drawings.

DRAFT

3.04 FIELD QUALITY CONTROL

A. Tests:
   1. Curbs, Gutters, and Valley Gutters:
      a. Test face, top, back, and flow line with 10-foot straight edge or curve template longitudinally along surface.
      b. Correct deviations in excess of ¼-inch.
   2. Gutters:
      a. Frequency of Testing: When required by the ENGINEER, where gutters have slope of 0.8 foot per hundred feet or less, or where unusual or special conditions cast doubt on capability of gutters to drain.
      b. Test Method: Establish flow in length of gutter to be tested by supplying water from hydrant, tank truck, or other source.
      c. Required Results:
         1) 1 hour after supply of water is shut off, inspect gutter for evidence of ponding or improper shape.
         2) In event water is found ponded in gutter to depth greater than 1/2 inch, or on adjacent asphalt pavement, correct defect, or defects in manner acceptable to the ENGINEER without additional cost to the Contract.

3.05 ADJUSTING

A. Repair portions of concrete damaged while stripping forms or, when damage is severe, replace such work at no additional cost to the Contract. Evidence of repairs shall not be noticeable in the finished product.

B. Remove and replace sections of work deficient in depth or not conforming to requirements indicated on the Drawings and specified in the Specifications at no additional cost to the Contract. Removal and replacement shall be the complete section between two joints.

END OF SECTION

DRAFT

SECTION 32 3113 – CHAIN LINK FENCES AND GATES

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. The CONTRACTOR shall furnish all tools, equipment, materials, and supplies and shall perform all labor required to complete the WORK as indicated on the Drawings and specified herein.

B. This Section covers the work necessary for the chain link fence and gate(s), including removal of a portion of existing fence and reinstalling the chain link fence and gate(s) as shown on the Drawings and specified in the Contract Documents.

C. American Iron and Steel (AIS) requirement applies to this Section. All iron and steel products used in this project must be produced in the United States.

1.02 REFERENCE SPECIFICATIONS, CODES, AND STANDARDS

A. Reference MAG Standard Details and Specifications.

B. All Work specified herein shall conform to or exceed the applicable requirements of the referenced portions of the following publications to the extent that the provisions thereof are not in conflict with other provisions of these Specifications.

C. Comply with the applicable editions of the following codes, regulations and standards.
   1. Industry Standards:
      a. ASTM F567: Installation of Chain-Link Fence
      b. SSPWC Section 206-6 “Green Book”: Standard Specifications for Public Works Construction, Chain Link Fence
      c. SSPWC Section 304-3 “Green Book”: Standard Specifications for Public Works Construction, Chain Link Fence

D. Comply with the MAG Standard Details and Specifications, SPPWC, Standard Plans for Public Works Construction, as referenced in this Specification.

1.03 CONTRACTOR SUBMITTALS

A. Submittals shall be made in accordance with the Section 01 3300 – Submittal Procedures.

1.04 QUALITY ASSURANCE

A. General
   1. Comply with the requirements specified herein and the applicable reference Specifications of the General Requirements.
   2. Contractor shall adhere to OSHA, state, and local safety guidelines, laws, rules, and regulations.

1.05 WARRANTY

A. Provide a minimum of a five-year warranty.

PART 2 – PRODUCTS

2.01 GENERAL

A. All materials and fittings shall be in conformance with MAG Standard Detail 160 and Specification Section 420, SSPWC Section 206-6 Chain Link Fence, or as otherwise shown on the Drawings.

DRAFT

B. Salvaged material from the existing fence shall be undamaged and acceptable to the ENGINEER prior to reuse or reinstallation. Any material not reused shall be removed as directed by the ENGINEER.

C. Like items of materials provided hereunder shall be the end products of one manufacturer in order to achieve standardization for appearance, maintenance, and replacement.

2.02 FABRIC

A. Galvanized Fabric:
   1. Chain link fabric shall conform to the requirements of SSPWC Section 206-6.3.1.

B. Polyvinyl Chloride (PVC)-Coated Fabric:
   1. PVC-coated chain link fabric shall be in conformance with SSPWC Section 206-6.3.2.

2.03 POSTS, RAILS AND BRACES

A. The materials for posts, rails, and braces shall be in conformance with SSPWC Section 206-6.2.

2.04 TENSION WIRES AND FABRIC TIES

A. Tension wires and ties used to fasten the fabric to posts, rails, and gate framed shall be in conformance with SSPWC Section 206-6.4.

2.05 TRUSS OR TENSION RODS

A. Truss or tension rod used in construction shall be in conformance with SSPWC Section 206-6.5.

2.06 FITTINGS

A. All required fittings and hardware shall be galvanized and in conformance with SSPWC Section 206-6.6.

2.07 BARBED WIRE

A. Barbed wire shall be in conformance with SSPWC Section 206-6.7.

2.08 REPAIR OF DAMAGED COATINGS

A. Repairs to abraded or otherwise damaged zinc coating shall be made in conformance with SSPWC Section 206-6.8.

2.09 GATES

A. Gates shall be swing or sliding as indicated, complete with latches, stops, keepers, hinges, or rollers and roller tracks.

B. Gate frames shall be constructed of tubular members welded at all corners or assembled with fittings. On steel, welds shall be painted with zinc-based paint. Where corner fittings are used, gates shall have truss rods of 5/16-inch minimum nominal diameter to prevent sag or twist. Gate leaves shall have vertical intermediate bracing as required, spaced so that no members are more than 8 feet apart. Gate leaves 10 feet or over shall have a horizontal brace or one 5/16-inch minimum diagonal truss rod. When fence has barbed wire top, the end members of the gate frames shall be extended 1 foot above the top horizontal member to which three strands of barbed wire, uniformly spaced, shall be attached by use of bands, clips, or hook bolts.

C. Fabricate frames of standard weight pipe 1.90 inches outside diameter, weight 2.72 pounds per linear foot.

DRAFT

D. Gate fabric shall be the same type as used in the fence construction. The fabric shall be attached securely to the gate frame at intervals not exceeding 15 inches.

E. Gate hinges shall be of adequate strength for gate and with large bearing surfaces for clamping in position. The hinges shall not twist or turn under the action of the gate. The gates shall be capable of being opened and closed easily by one person.

F. Gate latches, stops, and keepers shall be provided for all gates. Latches shall have a plunger-bar arranged to engage the center stop, except that for single gates of openings less than 10 feet wide a forked latch may be provided. Latches shall be arranged for locking with padlocks. Center stops shall consist of a device arranged to be set in concrete and to engage a plunger-bar of the latch of double gates. No stop is required for single gates. Keepers shall consist of a mechanical device for securing the free end of the gate when in the full open position.
   1. Double Gates: Size and configuration shall be as indicated. Provide gate stops for all double gates, consisting of mushroom type or flush plate with anchors. Set in concrete to engage the center drop rod or plunger bar. Provide locking device and padlock eyes as an integral part of the latch, requiring one padlock for locking both gate leaves.
   2. Sliding Gates: Provide manufacturer's standard heavy-duty track, ball-bearing hanger sheaves, overhead framing and supports, guides, stays, bracing, and accessories as required. All sliding gates shall be rolling, cantilever slide, or overhead (top) suspended, as indicated on Drawings.

G. Rolling gate track rollers shall be malleable iron or heavy pressed steel construction, with provision for regular grease lubrication. Ground rollers shall have malleable iron or heavy pressed-steel hubs with similar provision for lubrication. Gate track shall be Schedule 40 pipe, firmly attached to support posts on 7-foot-maximum centers. Gates more than 8 feet in height shall have three tracks. Rolling gate frames shall be constructed similar to swing gates except diagonal bracing shall reflect different support type.

H. Cantilever gate rollers shall have heavy malleable rollers, needle or ball bearings with fittings for regular lubrication. Maximum spacing of support posts is 10 feet. Additional weight-supporting posts with lower roller shall be provided on 10-foot-maximum centers. Support posts shall be 4 inches in diameter, Schedule 40, set at 36 inches minimum depth. Top and lower rails of gate shall be 2-3/8 inches in OD, Schedule 40 pipe. Vertical support posts shall be on 6-foot maximum spacing, 1-7/8-inch OD, Schedule 40 pipe, all diagonal bracing 1-5/8-inch OD, Schedule 40 pipe, all connections welded and painted.

I. Keeper: Provide keeper for all vehicle gates that automatically engages the gate leaf and holds it in the OPEN position until manually released.

2.10 REMOVABLE FENCE PANELS

A. Removable fence panels shall be provided as indicated on the Drawings. The total length of any removable fence section shall be divided into equal removable fence panels with panel length not to exceed 10 feet. The posts on either side of removable fence panels shall be hot-dip galvanized pipe, 3 inches OD, 5.71 pounds per linear foot.

2.11 CONCRETE

A. Materials as specified in these Specifications. Proportions shall be 1:2:4. Compressive strength shall not be less than 2,000 psi at 28 days.

DRAFT

PART 3 – EXECUTION

3.01 INSTALLATION

A. Installation of fencing shall meet the requirements of ASTM F567.

B. Fence construction shall be in conformance with MAG Standard Detail 160 and Specification Section 420, SSPWC Section 304-3.2

C. Installation of gates shall be in conformance with the manufacturer's installation instructions, MAG Standard Detail 160 and Specification Section 420, and SSPWC Section 304-3.3.

3.02 REMOVAL AND RESETTING OF EXISTING FENCE

A. All accessories shall be removed carefully and all materials stored in a safe place until required for resetting. The CONTRACTOR shall provide all new material necessary to replace lost or damaged material and as required for a complete and satisfactory installation. In general, the salvaged fencing shall be reinstalled as specified for new material. All concrete shall be removed from posts before they are reset. The CONTRACTOR may furnish all new materials, rather than salvage and reuse the existing fence.

3.03 CLEANUP

A. Upon completion of the fence installation, clean up all waste material resulting from the operation. The clean-up shall be subject to acceptance by the ENGINEER.

END OF SECTION

DRAFT

SECTION 32 3219 – REINFORCED CONCRETE BLOCK MASONRY

PART 1 – GENERAL

1.01 THE REQUIREMENT

Provide concrete masonry and other appurtenant work, complete and in place, in accordance with the Contract Documents.

1.02 REFERENCE SPECIFICATIONS, CODES AND STANDARDS

A Commercial Standards:

ANSI/ASTM C5	Quicklime for Structural Purposes
ASTM A615	Deformed and Plain Billet-Steel Bars for Concrete Reinforcement
ASTM C90	Load-Bearing Concrete Masonry Units
ASTM C129	Non load bearing Concrete Masonry Units
ASTM C140	Sampling and Testing Concrete Masonry Units
ASTM C144	Aggregate for Masonry Mortar
ASTM C150	Portland Cement
ASTM C207	Hydrated Lime for Masonry Purposes
ASTM C404	Aggregates for Masonry Grout
ASTM E447	Compressive Strength of Masonry Prisms
UBC 21-16	Field Test Specimens for Mortar

1.03 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

Samples:

1. Samples of concrete masonry unit colors with texture ranges indicated for selection of color. Full size samples of the blocks selected shall be submitted for final approval by the ENGINEER after color selection, if requested. If the specified product is a colored and textured unit, the samples shall be colored and textured units.
2. Samples of mortar colors for color selection
3. A 4-foot minimum square free standing sample panel shall be prepared for approval before starting masonry work if required. The panel shall remain at the Site for reference until all masonry work is completed.

Documentation:

1. Reports from testing Masonry units. Letter of certification that units meet ASTM standards. Recent test reports on units from independent testing company.
2. Reports from Mortar and Grout testing will be obtained from on site testing company.

Grout and Mortar Mix Design:

1. Proportions for all components
2. Mill Tests for Cement
3. Admixture Certification, include chloride ion content
4. Aggregate Graduation and Certification
5. Lime Certification

1.04 QUALITY ASSURANCE

A. Applicable Standards: Concrete masonry shall conform to the local Building Code, and other applicable codes and standards of governing authorities.

DRAFT

B. All work shall conform to the standard of quality established by the approved free-standing sample panel.

C. Concrete block masonry units and ready mix grout from the job site shall be sampled and tested in accordance with applicable ASTM standards by onsite testing company.

D. Inspection: Whenever required under the provisions of the Building Code, work hereunder will be subject to continuous inspection by a Special Inspector selected by the ENGINEER and approved by the local Building Official having jurisdiction. The Special Inspector will work under the supervision of the ENGINEER.

E. Weather Conditions: Concrete masonry units shall not be placed when air temperature is below 40°F (4°C) and shall be protected against direct exposure to the wind and sun when erected when the ambient air temperature exceeds 100°F (37°C) in the shade with relative humidity less than 50%. Cold weather installation shall be per code and Reference Standards and as approved by the ENGINEER.

F. Product Storage: Cement, lime and other cementitious materials shall be delivered and stored in dry, weather-tight sheds or enclosures, in unbroken bags, barrels, or other approved containers, plainly marked and labeled with the manufacturers' names and brands. Mortar and grout shall be stored and handled in a manner, which will prevent the inclusion of foreign materials and damage, by water or dampness. Masonry units shall be handled with care to avoid chipping and breakage, and shall be stored on wooden pallets. Materials stored on newly constructed floors shall be stacked in such manner that the uniformly-distributed loading does not exceed 50 psf. Masonry materials shall be protected from contact with the earth and exposure to the weather and shall be kept dry and clean until used.

PART 2 – PRODUCTS

2.01 CONCRETE MASONRY UNITS

A. Concrete masonry units shall conform to ASTM C90 and ASTM C140, 1,900 psi, Grade N, with normal weight unit with maximum linear shrinkage of 0.06%.

B. Concrete masonry units shall be modular size as shown or indicated on the drawings, with split-faces or smooth finish as indicated on the plans. Units shall be integrally-colored or standard unit color with painted exterior as indicated on the drawings with color selections from light and medium color range (white, black, and dark green not included in color range).

C. All bond beam, corner, lintel, sill, and other specially shaped blocks shall be provided where required or necessary. Specially shaped non-structural blocks may be constructed by saw cutting. Color and texture shall match that of adjacent units. No exposed grouted block cells will be allowed. All exposed masonry surfaces of openings and window and door openings such as sills, heads, and jambs shall be finish block surfaces, not formed surfaces, unless indicated otherwise. Closed bottom bond beam blocks shall be used at heads and sills.

D. Concrete masonry units hidden from view entirely may be natural color units the same size as other adjacent masonry units.

2.02 MATERIALS

A. Portland Cement shall be Type I or II, low alkali, conforming to ASTM C150. No masonry cement will be allowed.

B. Hydrated lime shall be Type S, conforming to ASTM C207. Pulverized quicklime shall conform to ANSI/ASTM C5, shall pass a No. 20 sieve, and 90% shall pass a No. 50 sieve.

C. Sand shall conform to ASTM C144. Coarse aggregate shall conform to ASTM C404.

D. Water for mixing shall be clear potable water.

E. Reinforcing steel shall be deformed bars conforming to ASTM A615, Grade 40 for #4 bars and smaller and ASTM A615, Grade 60 for #5 bars and larger.

F. Any admixtures must be pre-approved prior to usage. See Section 2.04 B.

G. Veneer ties shall be per local governing code and shall be Hot Dip Galvanized per ASTM A153-B2.

H. Horizontal Joint Reinforcement shall be Hot Dip Galvanized ladder-type per ASTM A153-B2

2.03 MORTAR

A. Mortar for concrete block masonry shall meet ASTM C270 and shall be Type S, with a minimum 28-day compressive strength of 2000 psi.

B. Mortar for use with colored masonry units shall have integral color as approved by the ENGINEER.

2.04 GROUT

A. Grout shall meet ASTM C476 and have a minimum 28-day compressive strength of 2000 psi. Where the grout space is less than 4 inches, pea gravel shall be omitted.

B. Admixtures may only be used when approved by the ENGINEER. When it has been approved for use, it shall be used in accordance with the manufacturer's published recommendations for the grout.

PART 3 – EXECUTION

3.01 GENERAL

A. Measurements for mortar and grout shall be accurately made. Mortar proportions shall be accurately controlled and maintained.

B. Work shall be performed in accordance with the provisions of the applicable code for reinforced concrete hollow-unit masonry.

C. Set or embed all anchors, bolts, reglets, sleeves, conduits, and other items as required.

D. All block cutting shall be by machine.

E. Reinforcing steel shall be cleaned of all loose rust and scale, and all oil, dirt, paint, laitance, or other substances, which may be detrimental to or reduce bonding of the steel and concrete.

F. Immediately before starting work, the concrete upon which the masonry will be laid shall be cleaned with water under pressure.

G. Full mortar bed for first course shall be provided.

H. Units shall be shoved tightly against adjacent units to assure good mortar bond.

I. All equipment for mixing and transporting the mortar and grout shall be clean and free from set mortar, dirt, or other foreign matter.

DRAFT

3.02 MIXING

A. Mortar shall be mixed according to ASTM C270. After all ingredients are in the mixer, they shall be mechanically mixed for not less than 5 minutes. Retempering shall be done on the mortar board by adding water within a basin formed within the mortar, and the mortar reworked into the water. Mortar, which is not used within 2½ hours, shall be discarded per ASTM requirements.

3.03 ERECTION OF CONCRETE BLOCK MASONRY

A. Masonry work shall be erected in-plane, plumb, level, straight, and true to dimensions and executed in accordance with acceptable practices of the trade.

B. Unless indicated otherwise, masonry shall be laid up in straight uniform courses with running bond.

C. All masonry shall be erected to preserve the unobstructed vertical continuity of the cells measuring not less than 3-inch x 3-inch in cross-section. Cross webs shall be full bedded in mortar, to prevent grout leakage. All head (or end) joints shall be solidly filled with mortar for a distance in from the face of the wall or unit not less than the thickness of the longitudinal face shells.

3.04 JOINTS

A. Vertical and horizontal joints shall be uniform and approximately 3/8-inch wide. Exterior joints and interior exposed block joints shall be concave-tooled to form dense surface. Special care shall be used in tooling joints so as to match existing construction. Interior or exterior non-exposed masonry and masonry behind plaster shall have flush joints.

3.05 CLEANOUTS

A. Cleanout openings shall be provided at the bottoms of all cells to be filled at each lift or pour of grout, where such lift or pour is over 4 feet in height. Any overhanging mortar larger than ½-inch or other obstructions or debris shall be removed from the insides of such cells. The cleanouts shall be sealed before grouting and after inspection. Cleanout openings shall match the finished wall in exposed masonry.

3.06 REINFORCEMENT

A. Bond beam blocks shall be used where horizontal reinforcing steel is embedded.

B. Knock-out openings shall have no steel or joint reinforcing running through the opening. Head, jambs, and sill blocks shall be used to provide an even finish surface to install window when blocks are removed. Joints at head, jambs and sills shall be stacked and continuous.

C. Vertical reinforcement shall be held in position at top and bottom and at intervals as defined on the drawings.

D. Horizontal joint reinforcing to 16” OC. in all masonry walls, unless noted otherwise.

E. Veneer ties shall be provided per Building Code and trade standards where veneered surfaces are indicated and shall be spaced no less than 16” OC each way.

3.07 GROUTING

A. All cells and bond beam containing reinforcement shall be filled solidly with grout. Grouting shall not be started until the wall has cured for 24 hours.

B. All grout shall be consolidated at time of pouring by vibrating. Where the grouting operation has been stopped for one hour or longer, horizontal construction joints shall be formed by stopping the grout pour 1½ inches below the top of the uppermost unit.

DRAFT

3.08 PROTECTION

A. Wall surfaces shall be protected from droppings of mortar or grout during construction.

3.09 FINISHING AND CLEANING

A. Masonry shall not be wet-finished unless exposed to extreme hot weather or hot wind and then only by using a nozzle-regulated fog spray sufficient only to dampen the face but not of such quantity to cause water to flow down over the masonry.

B. Finish masonry shall be cleaned and pointed in a manner satisfactory to the ENGINEER, based upon the approved sample panel.

C. All interior and exterior colored masonry work exposed to view shall be cleaned to remove all stains and other imperfections.

END OF SECTION

DRAFT

SECTION 33 0505.31 – PIPELINE HYDROSTATIC TESTING

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Perform all pipeline flushing and testing, complete, for piping system piping as specified herein and in accordance with the requirements of the Contract Documents.

B. Be responsible for providing conveyance of test water to the point of usage and also for disposal, as required, of water used in the testing operations.

1.02 REFERENCE SPECIFICATIONS, CODES, AND STANDARDS

A. Commercial Standards:

ANSI/AWWA B300	Hypochlorites
ANSI/AWWA B301	Liquid Chlorine
ANSI/AWWA C651	Disinfecting Water Mains
ASTM A746	Ductile Iron Gravity Sewer Pipe
ASTM F1417	Installation Acceptance of Plastic Gravity Sewer Lines Using Low-Pressure Air
NSF/ANSI 60	Drinking Water Treatment Chemicals – Health Effects
NSF/ANSI 61	Drinking Water System Components – Health Effects

1.03 SUBMITTALS

A. Submittals shall be made in accordance with Section 01 3300 – Submittal Procedures.

B. Proposed plans for testing of the sanitary sewer system. The methods used may be air or water as described herein. If water method is used then provide the water conveyance, control, and disposal. Advance written notice of its proposed testing schedule for review and concurrence of the ENGINEER shall be submitted.

PART 2 – PRODUCTS

2.01 MATERIALS REQUIREMENTS

A. Temporary valves, plugs, bulkheads, and other air pressure testing and water control equipment and materials shall be provided, subject to the ENGINEER's review. No materials shall be used which would be injurious to pipeline structure and future function. Air test gauges shall be laboratory-calibrated test gauges and shall be recalibrated by a certified laboratory at the CONTRACTOR’s expense prior to the leakage test, if required by the ENGINEER.

B. All test equipment, chemicals for chlorination, temporary valves, bulkheads, or other water control equipment and materials shall be selected and furnished, subject to the ENGINEER's review. No materials shall be used that would be injurious to the construction or its future function.

C. Chlorine for disinfection may be in the form of liquid chlorine, sodium hypochlorite solution, or calcium hypochlorite granules or tablets.

D. Liquid chlorine shall be in accordance with the requirements of ANSI/AWWA B301. Liquid chlorine shall be used only:
   1. In combination with appropriate gas flow chlorinators and ejectors;
   2. Under the direct supervision of an experienced technician;
   3. When appropriate safety practices are observed.

DRAFT

A. Sodium hypochlorite and calcium hypochlorite shall be in accordance with the requirements of ANSI/AWWA B300.

PART 3 – EXECUTION

3.01 GENERAL – PIPELINE HYDROSTATIC TESTING

A. Unless otherwise specified, water for testing will be furnished by OWNER; however, all necessary provisions for conveying the water from the designated source to the points of use shall be made by the CONTRACTOR.

B. Release of water from pipelines, after testing has been completed, shall be performed as reviewed by the ENGINEER.

C. All testing operations shall be performed in the presence of the ENGINEER.

3.02 TESTING OF SEWER PIPING

A. General: All gravity sewer pipes and service laterals shall be tested for exfiltration and/or infiltration and deflection, as specified. All manholes shall be tested for leakage, as specified. Manholes shall be tested prior to backfill placement. Reference applicable Sections of Division 31 – Earthwork, for pipe leak testing prior to backfill placement. All leakage tests shall be completed and approved prior to placing of permanent resurfacing. When leakage or infiltration exceeds the amount allowed by the Specifications, locate the leaks, and make the necessary repairs or replacements in accordance with the Specifications to reduce the leakage or infiltration to the specified limits. Any individually detectable leaks shall be repaired, regardless of the results of the tests.

B. Leakage Tests: Sanitary sewer systems shall be tested for leakage as follows:
   1. Gravity sewers 24 inches or less in diameter, where difference in elevation between inverts of adjacent manholes is 10 feet or less; water exfiltration test or water infiltration test as approved. The ENGINEER may allow substitution of an air pressure test for the water exfiltration test.
   2. Gravity sewers 24 inches or less in diameter, where difference in elevation between inverts of adjacent manholes is greater than 10 feet: air pressure test or water infiltration test, or as approved.
   3. Gravity sewers greater than 24 inches in diameter: air pressure test or water infiltration test, or as approved.
   4. Pressure sewers (force mains): water pressure test at 120% of maximum operating pressure or 150 psi (whichever is larger), measured at the lowest point of the pipeline section being tested.

C. Water Exfiltration Test: Each section of sewer shall be tested between successive manholes by closing the lower end of the sewer to be tested and the inlet sewer of the upper manhole with stoppers. The pipe and manhole shall be filled with water to a point 4 feet above the centerline of the sewer at the center of the upper manhole; or if ground water is present, 4 feet above the average adjacent ground water level, whichever is higher.
   1. The allowable leakage will be computed by the formula:

		$E = 0.000012\ LD\ (H)^{1/2}$
in which	E =	Allowable leakage in gallon per hour of sewer tested
	L =	Length of sewer and lateral connections tested, in feet
	D =	Internal diameter of the pipe in inches
	H =	Difference in elevation between the water surface in the upper manhole and the centerline of the pipe at the lower manhole; or if ground water is present above the centerline of the pipe in the lower manhole, the difference in elevation between the water surface in the upper manhole

DRAFT

		and ground water at the lower manhole.

D. Water Infiltration Test: If, in the opinion of the ENGINEER, excessive ground water is encountered in the construction of a section of the sewer, the exfiltration test for leakage shall not be used.
   1. The end of the sewer at the upper structure shall be closed sufficiently to prevent the entrance of water, and pumping of ground water shall be discontinued for at least 3 days, after which the section shall be tested for infiltration.
   2. The infiltration into each individual reach of sewer between adjoining manholes shall not exceed that allowed by the formula above, where H is the difference in the elevation between the ground water surface and the invert of the sewer at the downstream manhole.
   3. Unless otherwise specified, infiltration will be measured using measuring devices approved by the ENGINEER.

E. Air Pressure Test: Furnish all materials, equipment, and labor for making an air test. Air test equipment shall be approved by the ENGINEER.
   1. Conduct an initial air test of the sewer main line after densification of the backfill but prior to installation of the lateral connection sewers. Such tests will be considered to be for convenience and need not be performed in the presence of the ENGINEER.
   2. Each section of sewer shall be tested between successive manholes by plugging and bracing all openings in the main sewer line and the upper ends of all house connection sewers. Prior to any air pressure testing, all pipe plugs shall be checked with a soap solution to detect any air leakage. If any leaks are found, the air pressure shall be released, the leaks eliminated, and the test procedure started over again.
   3. The final leakage test of the sewer main line and branching lateral connection sewers, shall be conducted in the presence of the ENGINEER, and shall be performed in accordance with the procedures defined in ANSI/ASTM C828 and ASTM F1417, whichever is applicable.
   4. Joints may be air tested individually, joint by joint, with the use of specialized equipment. The joint testing procedure shall be submitted for the ENGINEER's review prior to testing.

F. Water Pressure Test: Preparatory to testing, the section of the pipeline to be tested shall be filled with water and placed under a slight pressure for at least 48 hours. The pipeline shall then be brought up to the test pressure specified and maintained on the section under test for a period of not less than 4 hours.
   1. Accurate means shall be provided for measuring the quantity of water required to maintain full pressure on the line for the test period, which volume shall not exceed:

		$L = \frac{CN\,D\,(P)^{1/2}}{1850}$
in which	L =	Maximum allowable leakage in gallons per hour for the section of pipeline tested
	N =	Number of joints in length tested
	D =	Diameter of pipe in inches
	P =	Test pressure in psi
	C =	1.0 for reinforced concrete pressure pipe with rubber ring joints, cylinder type
	C =	3.0 for reinforced concrete pressure pipe with rubber joints, non-cylinder type
	C =	0.50 for cast iron pipe with mechanical or rubber gasket joints and asbestos-cement pipe
	C =	1.0 for other type of cast iron joints (calked) and other types of pipe

DRAFT

G. Deflection Test: All flexible and semi-rigid main line pipe shall be tested for deflection, joint displacement, or other obstruction by passing a rigid mandrel through the pipe by hand, not less than 30 days after completion of the trench backfill, but prior to permanent resurfacing. The mandrel shall be a full circle, solid cylinder, or a rigid, non-adjustable, odd-numbered leg (9-leg minimum) steel cylinder, approved by the ENGINEER as to design and manufacture. The circular cross section of the mandrel shall have a diameter of at least 95% of the specified average inside pipe diameter of the pipe and the minimum length of the circular portion of the mandrel shall be equal to the nominal diameter of the pipe. Obstructions encountered by the mandrel shall be corrected.

3.03 GENERAL – PIPELINE HYDROSTATIC TESTING FOR POTABLE WATER

A. Unless otherwise indicated, water for testing and disinfecting water pipelines will be furnished by the OWNER; however, all necessary provisions for conveying the water from the designated source to the points of use shall be made by the CONTRACTOR.

B. All pressure pipelines shall be tested.

C. Disinfection shall be accomplished by chlorination. All chlorinating and testing operations shall be performed in the presence of the ENGINEER.

D. Disinfection operations shall be scheduled by as late as possible during the contract time period so as to assure the maximum degree of sterility of the facilities at the time the WORK is accepted.

E. HYDROSTATIC TESTING OF PIPELINES

Pressure testing may be performed before or after final backfilling. If the pipeline is properly and safely center-loaded, a visual inspection for leaks may be made along the pipeline, while the test section is under test pressure. Any visible leaks shall be repaired and a retest conducted. However, if mechanical compaction is to be used in the backfilling operations per AWWA C600 and C605, the pressure tests shall not be performed until final backfilling is 100% completed including compaction. Backfill and compaction shall be 100% complete for any restrained pipeline sections for the entire designated restrained distance prior to pressure testing. All pipe sections, stub laterals, fire hydrant laterals, blow-offs, and valves encompassed in the test section shall be verified to be open, water filled and pressurized. Actual hydrostatic monitor testing shall not begin until the pipeline has been filled entirely with water for at least 24 hours to allow for air venting and absorption.

1. **Pressure Testing**: Unless otherwise noted in the contract documents, the minimum prescribed test pressure shall be at least 200 psi for lines smaller than 16 inches and 150 psi for lines 16 inches or larger, not to exceed 5 psi over the minimum prescribed test pressure, as measured at the lowest end of the section under test. The duration of each pressure test shall be at least 2 hours, during which time the test section shall not drop below the minimum prescribed test pressure. If the pressure in the pipe test section has not stabilized by the end of the testing period, a hydrostatic retest will be required. Each section of a new line between sectionalizing valves or between the last sectionalizing valve and the end of the project shall be tested separately as required in AWWA C600 and C605, and/or as modified in these specifications, except that any such section less than 500 feet in length may be tested with the adjacent section, if both sections of line have the same pipe class rating. No section greater than 2,640 feet in total pipe length shall be tested without written permission of the ENGINEER. CONTRACTOR shall bleed all air out of new lines being tested. After all air has been determined to have been removed and the pressure has stabilized and maintained constant, the line shall be determined to be ready for testing. The CONTRACTOR shall furnish all necessary apparatus and assistance to conduct the testing.

DRAFT

2. **Testing Allowance / Makeup Water:** If a testing allowance is permitted by the Contracting Agency, the makeup water volume shall be determined after the pressure test has been satisfactorily completed and all backfilling and compaction has been completed to top of trench. The allowance shall be defined as the maximum quantity of additional water necessary to be supplied into the pipe section under test to restore the ending test pressure to the beginning test pressure, after the pipeline has been filled with water and all air expelled. The duration of each makeup water test shall be at least 2 hours. To pass the allowance testing, the quantity of makeup water from the pipeline shall not exceed the makeup water quantity allowed by the following formula:

$$\frac{A = LD\sqrt{P}}{148{,}000}$$

Where

A = testing allowance (makeup water), gallons per hour.

L = length of pipe tested, feet.

D = nominal diameter of pipe, inches.

P = test pressure, pounds/square inch.

If the pipeline under test contains sections of various diameters, the testing allowance will be the sum of the computed allowance for each size. Should the test on any section of the pipeline require more makeup water than allowed by the above formula, the CONTRACTOR shall locate and repair the defective pipe, fittings, or joint until the makeup water volume is within the specified allowance. All repairs and re-tests, if required, shall be made at the CONTRACTOR's expense

F. DISINFECTING PIPELINES

1. General**:** All potable water pipelines except those appurtenant to hydraulic structures shall be disinfected in accordance with the requirements of NSF/ ANSI 60 & 61 AND AWWA C651 (Latest Version) Standards.
2. Sampling Ports**:** Provide sampling ports along the pipeline as defined on AWWA C651. Taps may be made at man-ways and air valves to help facilitate the spacing requirement.
3. New water mains shall be physically isolated from active distribution systems until initial disinfection and satisfactory bacteriological results have been completed.
4. Disinfection**:** The method of chlorination used shall be approved by the Contracting Agency and must conform to NSF/ANSI 60 & 61 and the AWWA C651 (Latest Version) Standards. The OWNER/ENGINEER shall determine the number and locations for sample risers. The CONTRACTOR is responsible for supplying equipment to properly dose the new main with a chlorine concentration not less than 10 parts per million (ppm). The OWNER/ENGINEER will verify the chlorine level is at 10 ppm at time of dosing and verify that after 24 hours of high chlorine solution sitting in the pipes that the chlorine concentration is at 10 ppm or greater. All new valves, hydrants and other appurtenances shall be operated fully to ensure full disinfection from the chlorine solution. After 24-hour verification is complete, the water main shall be completely flushed of the high chlorine concentration. A chlorine neutralizing agent may be required during flushing discharge. Check with the OWNER/ENGINEER to confirm.
   a. Methods of Applying Chlorine: One of the following methods of application of chlorine shall be used, subject to the approval of the Contracting Agency.
      1) Liquid chlorine gas-water mixture.
      2) Calcium or sodium hypochlorite and water mixture.

DRAFT

b. Point of Application: The preferred point of application of the chlorinating agent is at the beginning of the pipeline extension or any valved section of it and through a corporation stop inserted in the top of the newly laid pipe. The water injector for delivering the chlorine-bearing water into the pipe should be supplied from a tap or other potable water source on the pressure side of the gate valve controlling the flow into the pipeline extension.

c. Rate of Application: Water from the existing distribution system or other approved potable water source of supply shall be controlled so the rate of flow shall not exceed 500 gpm, unless approved by the OWNER/ENGINEER, through a suitable measuring device into the newly laid pipeline during the application of chlorine. The rate of chlorine solution flow shall be in such proportion to the rate of water entering the pipe that the chlorine dose applied to the water entering the newly laid pipe shall produce at least 10 ppm of residual chlorine after 24 hours standing in the pipe. This may be expected with an application of 50 ppm, although some conditions may require more. On lines 12 inches in diameter or less, determination of the rate of flow of water into the line to be treated may be made by starting with the line full of water and measuring the rate of discharge at a hydrant located at the end of the pipe farthest away from the point of chlorine application. For lines larger than 12 inches in diameter, the disinfection operation is generally started with the line empty.

d. Retention Period: The highly chlorinated water shall be retained in the pipe long enough to destroy all non-spore-forming bacteria. This period should be at least 24 hours and no more than 48 hours. If the circumstances are such that less than a 24-hour retention period must be used and upon approval by the OWNER/ENGINEER, the chlorine concentration shall be increased to 100 ppm not to exceed 300 ppm and retained for at least 2 hours. Under these conditions, special care should be taken to avoid chemical attack on pipes, valves, hydrants, and other appurtenances.

e. Short Pipe Sections / Laterals / Stubs: For short sections of new pipelines of up to twenty feet or less in length and where the new line cannot be isolated for testing or installation of a temporary backflow and metering set-up is not possible or feasible, the following procedure may be used with OWNER/ENGINEER approval on a case-by-case basis. Various modifications may be necessary or required depending on specific circumstances. This does not apply to small diameter domestic copper water services of up to two inches.

   1) 100% of all new pipe materials/fittings used in the installation and tie-in from the existing main line to the backflow assembly on fire lines and up to the first meter, connection on domestic water lines shall be disinfected. Any new tie-in valves at the main line shall remain completely closed.
   2) All new pipe materials/fittings used in the installation and tie-in are to be disinfected by swabbing with a chlorine solution of at least 200 ppm using NSF/ANSI 60 and 61 approved equipment, materials, and chemicals. The chlorine solution shall be tested by the OWNER/ENGINEER or designated representative to ensure that it meets the strength requirements. Inspector shall witness the swabbing procedure and document results. A new swabbing device should be used for each new line.
   3) The new lines and fittings shall remain empty and closed to the atmosphere for 24 hours to allow the high chlorine treatment sufficient time to disinfect.

DRAFT

4) After the 24-hour period, the new valves shall be operated, and the ends of the lines shall be opened at the largest port available to allow initial flushing of the high chlorine solution. The Contracting Agency shall test this first flow of water to verify that at least 10 ppm of chlorine is still present. The line can then continue to be sufficiently flushed until the chlorine levels are below 2.0 ppm as verified by the Contracting Agency.
5) The new lateral valves at the main tie-in shall then be closed and remain closed after flushing; the new lateral line shall remain charged with water and allowed to sit for an additional 24 hours.
6) After 24 hours, the OWNER/ENGINEER shall check the chlorine residual levels and collect microbiological samples for lab testing as detailed herein.
7) The new lateral valves at the main tie-in shall remain closed until the OWNER/ ENGINEER receives the laboratory results that show a negative or "Absent" reading for both Total Coliform and E. Coli.

f. Final Flushing, Sampling and Testing**:** Following chlorination, all treated water in the newly laid pipeline shall be thoroughly flushed until the replacement water throughout the new pipeline can be proved, by laboratory testing, comparable in quality to the water served to the public from the existing water system. Prior to sampling for laboratory testing, the residual chlorine throughout the length of the pipeline shall be reduced to 2.0 ppm or less per Regulatory Agency allowances. Once the required residual chlorine level in the pipeline is achieved, bacteriological samples shall be taken as required by Regulatory Agency.

G. CONNECTIONS TO EXISTING SYSTEM

Any temporary air release blow-offs and test sampling risers shall be left exposed, accessible, and protected during backfill operations until all testing is complete. After all testing has been completed and passed acceptance, all temporary blow-offs and sampling risers shall be properly lowered and terminated. Connections to existing pipelines or existing valves shall not be made until after all new pipe main line or specific sections thereof, has satisfactorily passed all required hydrostatic and disinfection tests and the Regulatory Agency gives approval to make the final connections and put new water mainline into service.

END OF SECTION

DRAFT

SECTION 33 0519 – DUCTILE IRON PIPE

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide ductile iron pipe and perform all appurtenant work, complete in place, in accordance with the Contract Documents.

1.02 REFERENCE SPECIFICATIONS, CODES AND STANDARDS

A. Commercial Standards:

ANSI/AWWA	
C104/A21.4	Cement-Mortar Lining for Ductile-Iron Pipe and Fittings for Water
C105/A21.5	Polyethylene Encasement for Ductile-Iron Piping for Water and Other Liquids
C110/A21.10	Ductile-Iron and Gray-Iron Fittings, 3 inches through 48 inches for Water and Other Liquids
C111/A21.11	Rubber-Gasket Joints for Ductile-Iron and Gray-Iron Pressure Pipe and Fittings
C115/A21.15	Flanged Ductile-Iron and Gray-Iron Pipe with Threaded Flanges
C150/A21.50	Thickness Design of Ductile-Iron Pipe
C151/A21.51	Ductile-Iron Pipe, Centrifugally Cast in Metal Molds or Sand-Lined Molds, for Water or Other Liquids
C153/A21.53	Ductile-Iron Compact Fittings, 3 inches through 12 inches for Water and Other Liquids
AWWA	
C209	Cold-Applied Tape Coatings for the Exterior of Special Sections, Connections, and Fittings for Steel Water Pipelines
C214	Tape Coating Systems for the Exterior of Steel Water Pipelines
C600	Installation of Ductile Iron Water Mains and Their Appurtenances
ASTM	
A746	Ductile Iron Gravity Sewer Pipe
C150	Specification for Portland Cement

1.03 SUBMITTALS

A. Submittals shall be made in accordance with Section 01 3300 – Submittal Procedures.

B. Shop Drawings: Submit shop drawings of pipe and fittings in accordance with the requirements in Section 01 3300 – Submittal Procedures, the requirements of the referenced standards, and the following supplemental requirements as applicable:
   1. Dimensional drawings of all valves, fittings, and appurtenances.
   2. For pipe 24 inches in diameter and larger, line layout and marking diagrams which indicate the specific number of each fitting and the location and the direction of each fitting in the completed line. In addition, the line layouts shall include: the pipe station and invert elevation at all changes in grade or horizontal alignment; all elements of curves and bends, both in horizontal and vertical alignment; and the limits of each reach of restrained joints, or of concrete encasement.

1.04 QUALITY ASSURANCE

A. All pipe shall be subject to inspection at the place of manufacture in accordance with the provisions of the referenced standards, as supplemented by the requirements herein.

B. During the manufacture of the pipe, the ENGINEER shall be given access to all areas where manufacturing is in process and shall be permitted to make all inspections necessary to confirm compliance with the Specifications.

DRAFT

PART 2 – PRODUCTS

2.01 GENERAL

A. Mortar-lined ductile iron pipe shall conform to ANSI/AWWA C151, C104 and C105, subject to the following supplemental requirements. The pipe shall be of the diameter and class noted in the Contract Documents. The pipe shall be furnished complete with rubber gaskets, with all specials and fittings provided as required under the Contract Documents.

B. Markings: Legibly mark specials 24 inches in diameter and larger in accordance with the laying schedule and marking diagram. All fittings shall be marked at each end with top field centerline.

C. Handling and Storage: The pipe shall be handled by devices acceptable to the ENGINEER, designed and constructed to prevent damage to the pipe coating/exterior. The use of equipment that might injure the pipe coating/exterior will not be permitted. Stockpiled pipe shall be suitably supported and shall be secured to prevent accidental rolling. All other pipe handling equipment and methods shall be acceptable to the ENGINEER.

D. Laying Lengths: Maximum pipe laying lengths shall be 20 feet with shorter lengths provided as required by the Drawings.

E. Finish: The pipe shall have smooth, dense interior surfaces, and shall be free from fractures, excessive interior surface crazing, and roughness.

F. Closures and Correction Pieces: Closures and correction pieces shall be provided as required so that closures may be made due to different headings in the pipe laying operation and so corrections may be made to adjust the pipe laying to conform to pipe stationing shown on the Drawings. The locations of correction pieces and closure assemblies are shown on the Drawings. Any change in location or number of said items shall be acceptable to the ENGINEER.

2.02 PIPE DESIGN CRITERIA

A. General: Ductile iron pipe shall be designed in accordance with the requirements of ANSI/AWWA C150 as applicable and as modified in this Section.

B. Pipe Wall Thickness for Internal Pressure: The pipe shall be designed with a net thickness to withstand the design pressure in accordance with the hoop stress formula.

C. Pipe Wall Thickness for External Load: The pipe shall also be designed with a net thickness to withstand external loads using ANSI/AWWA C150 Design Equation (2) with the appropriate bending moment and deflection coefficients for Laying Condition Types 4 and 5 as applicable.

D. The pipe deflection shall be checked using ANSI/AWWA C150 Design Equation (3) and the coefficients stated above. The allowable deflection shall not exceed the manufacturer’s recommended amount.

DRAFT

E. In lieu of ANSI/AWWA C150 Design Equation (4), the earth loads will be computed using the following 2 equations for trench or embankment loading as applicable:

1. Trench Condition:

$$W_d = C_d w B_d^2$$

Where:
- W_d = Earth Load in pounds per linear foot
- C_d = Calculation Coefficient
- Ku' = [0.13]
- w = [120] lb/ft^3
- B_d = Trench width at top of pipe, feet

2. Positive Projecting Embankment Condition:

$$W_c = C_c w B_c^2$$

Where:
- W_c = Earth Load in pounds per linear foot
- C_c = Calculation Coefficient (based on $r_{sd}P$ of 0.25)
- Ku = [0.19]
- w = [120] lb/ft^3
- B_c = Outside diameter of pipe, feet

F. The above 2 formulas are based on a depth of cover of 10 feet or greater. For depths of cover of less than 10 feet, HS-20 live load shall be included. For depths of cover of 3 feet or less, HS-20 live load plus impact shall be included. The determination of live load and impact factors shall be as recommended by AASHTO in "Standard Specifications for Highway Bridges."

G. If the calculated deflection exceeds 0.0225 times the nominal diameter, the pipe class shall be increased.

H. Minimum Pipe Wall Thickness: In addition to the requirements of this Section, the minimum wall thickness shall be in accordance with Table 50.5 of ANSI/AWWA C150.

2.03 MATERIALS

A. Ductile Iron Pipe: Pipe materials shall conform to the requirements of ANSI/AWWA C151.

B. Cement: Cement for mortar lining shall conform to the requirements of ANSI/AWWA C104, provided, that cement for mortar lining shall be Type II or V. Cement shall not originate from kilns that burn metal-rich hazardous waste fuel, nor shall a fly ash or pozzolan be used as a cement replacement.

2.04 SPECIALS AND FITTINGS

A. Fittings for ductile iron pipe shall conform to the requirements of ANSI/AWWA C153/A21.53 for diameters 3 inches through 24 inches and shall have a minimum pressure rating of 350 psi. Ductile iron fittings larger than 24 inches shall conform to the above referenced standard with the necessary modifications for the larger size.

2.05 DESIGN OF PIPE

A. General: The pipe furnished shall be ductile iron pipe, with rubber-gasketed joints or as specified on the plans.

B. The pipe shall be designed, manufactured, tested, inspected, and marked according to applicable requirements previously stated and except as hereinafter modified, shall conform to ANSI/AWWA C151.

C. Pipe Dimensions: The pipe shall be of the diameter and class shown. The minimum wall thickness for each pipe size shall be as specified or shown.

DRAFT

D. Fitting Dimensions: The fittings shall be of the diameter and class shown.

E. Joint Design: Ductile iron pipe and fittings shall be furnished with mechanical joints, push-on joints, flanged joints, and restrained joints as required.
   1. Mechanical and push-on joints shall conform to ANSI/AWWA C111/A21.11.
   2. Mechanical and push on joints gaskets shall be “fast Grip” Gaskets by American Ductile Iron Pipe, or “Field Locks” Gaskets by U.S. Pipe, or equal.
   3. Restrained joints shall be "Lok-Ring" Restrained Joint by American Ductile Iron Pipe, "TR FLEX" Restrained Joint by U.S. Pipe, or ENGINEER-approved equal. Provide as indicated on the plans.
   4. Flanged joints shall conform to ANSI/AWWA C115/A21.15. Special ductile iron flanges to match up to 250 psi valve and equipment flanges shall meet ANSI/AWWA C110 and be specially drilled to ANSI/ASME B16.1 Class 250 standard dimensions with raised face.

F. For bell-and-spigot ends with rubber gaskets, the clearance between the bells and spigots shall be such that when combined with the gasket groove configuration and the gasket itself, will provide watertight joints under all operating conditions when properly installed. Require the pipe manufacturer to submit details complete with significant dimensions and tolerances and to submit performance data indicating that the proposed joint has performed satisfactorily under similar conditions. In the absence of a history of field performance, the results of a test program shall be submitted.

G. Shop-applied interior linings and exterior coatings shall be held back from the ends of the pipe as shown or as otherwise acceptable to the ENGINEER.

2.06 CEMENT-MORTAR LINING

A. Cement-Mortar Lining for Shop Application: Except as otherwise provided herein, interior surfaces of all ductile iron pipe, fittings and specials shown on the plans shall be cleaned and lined in the shop with cement-mortar lining applied centrifugally in conformity with ANSI/AWWA C104. During the lining operation and thereafter, the pipe shall be maintained in a round condition by suitable bracing or strutting. The lining machines shall be of a type that has been used successfully for similar work. Every precaution shall be taken to prevent damage to the lining. If lining is damaged or found faulty at delivery site, the damaged or unsatisfactory portions shall be replaced with lining conforming to these Specifications.

B. The minimum lining thickness shall be as follows:

Nominal Pipe Diameter (inches)	**Minimum Lining Thickness (inches)**
3 - 12	$^{1}/_{8}$
14 - 24	$^{3}/_{16}$
30 - 54	$^{1}/_{4}$

C. Protection of Pipe Lining/Interior: All shop-applied cement mortar lining shall be given a seal coat of asphaltic material in conformance with ANSI/AWWA C104.

2.07 EXTERIOR COATING OF PIPE

A. Exterior Coating of Exposed Piping: The exterior surfaces of pipe which will be exposed to the atmosphere inside structures or above ground shall be thoroughly cleaned and then given a shop coat of rust-inhibitive primer conforming to the requirements of these Specifications.

DRAFT

B. Exterior Coating of Buried Piping: The exterior coating shall be an asphaltic coating approximately 1mil thick. Where noted as required by the ENGINEER, pipe will be encased in polyethylene sleeves.

PART 3 – EXECUTION

3.01 INSTALLATION OF PIPE

A. Handling and Storage: All pipe, fittings, etc., shall be carefully handled and protected against damage, impact shocks, and free fall. All pipe handling equipment shall be acceptable to the ENGINEER. Pipe shall not be placed directly on rough ground but shall be supported in a manner that will protect the pipe against injury whenever stored at the trench site or elsewhere. No pipe shall be installed where the lining or coating show defects that may be harmful as determined by the ENGINEER. Such damaged lining or coating shall be repaired, or a new undamaged pipe shall be furnished and installed.

B. All pipe that is damaged prior to Substantial Completion shall be repaired or replaced.

C. Inspect each pipe and fitting prior to installation to ensure that there are no damaged portions of the pipe.

D. Before placement of pipe in the trench, each pipe or fitting shall be thoroughly cleaned of any foreign substance, which may have collected thereon, and shall be kept clean at all times thereafter. For this purpose, the openings of all pipes and fittings in the trench shall be closed during any interruption to the WORK.

E. Pipe Laying: The pipe shall be installed in accordance with ANSI/AWWA C600.

F. Pipe shall be laid directly on the bedding material. No blocking will be permitted, and the bedding shall be such that it forms a continuous, solid bearing for the full length of the pipe. Excavations shall be made as needed to facilitate removal of handling devices after the pipe is laid. Bell holes shall be formed at the ends of the pipe to prevent point loading at the bells or couplings. Excavation shall be made as needed outside the normal trench section at field joints to permit adequate access to the joints for field connection operations and for application of coating on field joints.

G. Each section of pipes 24 inches in diameter and larger shall be laid in the order and position shown on the laying schedule. In laying pipe, it shall be laid to the setline and grade, within approximately one inch plus or minus. On grades of zero slopes, the intent is to lay to grade.

H. Where necessary to raise or lower the pipe due to unforeseen obstructions or other causes, the ENGINEER may change the alignment and/or the grades. Such change shall be made by the deflection of joints, by the use of bevel adapters, or by the use of additional fittings. However, in no case shall the deflection in the joint exceed the maximum deflection recommended by the pipe manufacturer. No joint shall be misfit any amount that will be detrimental to the strength and water tightness of the finished joint.

I. Except for short runs that may be permitted by the ENGINEER, pipes shall be laid uphill on grades exceeding 10%. Pipe that is laid on a downhill grade shall be blocked and held in place until sufficient support is furnished by the following pipe to prevent movement. All bends shall be properly installed as shown.

J. Shallow buried pipes and pipes underneath structures shall be concrete encased where noted in the Contract Documents.

DRAFT

K. Cold Weather Protection: No pipe shall be installed upon a foundation into which frost has penetrated or at any time that there is a danger of the formation of ice or penetration of frost at the bottom of the excavation. No pipe shall be laid unless it can be established that the trench will be backfilled before the formation of ice and frost occurs.

L. Pipe and Specials Protection: The openings of all pipe and specials shall be protected with suitable bulkheads to prevent unauthorized access by persons, animals, water, or any undesirable substance. At all times, means shall be provided to prevent the pipe from floating.

M. Pipe Cleanup: As pipe laying progresses, the pipe interior shall be kept free of all debris. Completely clean the interior of the pipe of all sand, dirt, mortar splatter and any other debris following completion of pipe laying, pointing of joints and any necessary interior repairs prior to testing and disinfecting the completed pipeline.

3.02 RUBBER GASKETED JOINTS

A. Rubber Gasketed Joints: Immediately before jointing pipe, the bell end of the pipe shall be thoroughly cleaned, and a clean rubber gasket lubricated with an approved vegetable-based lubricant shall be placed in the bell groove. The spigot end of the pipe shall be carefully cleaned and lubricated with a vegetable-based lubricant. The spigot end of the pipe section shall then be inserted into the bell of the previously laid joint and telescoped into its proper position. Tilting of the pipe to insert the spigot into the bell will not be permitted.

3.03 INSTALLATION OF PIPE APPURTENANCES

A. Protection of Appurtenances: Where the joining pipe is tape-coated, buried appurtenances shall be coated with cold-applied tape in accordance with ANSI/AWWA C209, Type II. Where pipe is encased in polyethylene sleeves, buried appurtenances shall also be encased in polyethylene.

B. Installation of Valves: All valves shall be handled in a manner to prevent any injury or damage to any part of the valve. All joints shall be thoroughly cleaned and prepared prior to installation. Adjust all stem packing and operate each valve prior to installation to insure proper operation.

C. All valves shall be installed so that the valve stems are plumb and, in the location, shown.

END OF SECTION

DRAFT

SECTION 33 0531 – POLYVINYL CHLORIDE (PVC) PIPE

PART 1 – GENERAL

1.01 REQUIREMENT

A. Polyvinyl chloride pressure pipe for water distribution, in nominal diameters 4 inches through 60 inches.

B. Polyvinyl chloride sewer pipe for gravity sewers in nominal diameters 4 inches through 48 inches.

C. Polyvinyl chloride pressure pipe for sewers force mains in nominal diameters 4 inches through 60 inches.

D. Pipe 3 inch or smaller: Shall comply with these Specifications.

1.03 SUBMITTALS

A. Submittals shall be made in accordance with Section 01 3300 – Submittal Procedures.

B. Submit shop drawings showing design of new pipe and fittings indicating alignment and grade, laying dimensions, fabrication, fittings, flanges, and special details.

1.04 QUALITY CONTROL

A. Submit manufacturer's certifications that PVC pipe and fittings meet requirements of this Section and AWWA C900 and AWWA C909 for pressure pipe applications, or appropriate ASTM standard specified for gravity sewer pipe.

B. Submit manufacturer's certification that PVC pressure pipe for water lines and force mains has been hydrostatically tested at factory in accordance with AWWA C900, AWWA C909, and this Section.

C. When foreign manufactured material is proposed for use, have material tested for conformance to applicable ASTM requirements by certified independent testing laboratory located in United States. Certification from another source is not acceptable. Furnish copies of test reports to ENGINEER for review. Cost of testing paid by CONTRACTOR.

PART 2 – PRODUCTS

2.01 MATERIAL

A. Use PVC compounds in manufacture of pipe that contain no ingredient in amount that has been demonstrated to migrate into water in quantities considered to be toxic.

B. Furnish PVC pressure pipe manufactured from Class 12454-A or Class 12454-B virgin PVC compounds as defined in ASTM D1784. Use compounds pre-qualified for a 4,000 psi hydrostatic design basis, and a maximum hydrostatic design stress of 2,000 psi for water at 73°F per requirements of PPI TR3. Provide pipe which is homogeneous throughout, free of voids, cracks, inclusions, and other defects, uniform as commercially practical in color, density, and other physical properties. Deliver pipe with surfaces free from nicks and scratches with joining surfaces of spigots and joints free from gouges and imperfections which could cause leakage.

C. Fusible PVC pipes shall meet ASTM D2241/ D1785, CSA B137.3, AWWA C900, NFS 61 (potable water), and ASTM Cell Classification 12454.

D. PVC Solvent Weld Schedule Pipe shall meet:
1. PVC Schedule 40 and 80: ASTM D1785/ D2665 / D2241
2. Cellular Core PVC Sch 40: ASTM F891
3. PVC Schedule 30: ASTM D2949
4. PVC Perforated Drain Pipe: ASTM D2729
5. ABS Sch 40: ASTM D2661
6. Cellular Core ABS Sch 40: ASTM F628

E. Standard PVC laying length shall be 14 or 20 ft +/- 1”. Fusible PVC pipe shall be manufactured in a standard 40’ nominal length, or custom lengths as specified in the plans. Solvent Weld Pipe shall be manufactured in standard laying length of 10 ft and 20 ft.

F. Do not use PVC for offset sections with depth of cover greater than 20 feet or less than 4

DRAFT

feet, unless acceptable by manufacturer. Do not use PVC in potentially petroleum-contaminated areas.

G. PVC in areas exposed to direct sunlight shall be protected with UV-inhibitor coating.

2.02 Pipe Class and Working Pressures:

A. Pipe Pressure Class shall be as noted per plan and shall meet the requirements in the following Table 1.

Table 1 – Pipe Pressure Class

APPLICATION	ASTM or AWWA DESIGNATION	SDR (Max.)/ STIFFNESS (MIN.)	DIAMETER SIZE RANGE
PRESSURE/ GRAVITY	C900 C900 C900	DR 25/ Class 165 psi DR 18/ Class 235 psi DR 14/ Class 305 psi	4" to 60” 4" to 42 4” to 30”
GRAVITY	D3034 D3034	SDR 35/ 46 psi SDR 26/ 115 psi	4" to 15" 4" to 15"
GRAVITY	F679 F679	PS46/ 46 psi PS 115/ 115 psi	18” to 48” 18" to 48"
CORRUGATED GRAVITY	F949 F949	N/A / 46 psi N/A / 115 psi	4" to 48" 4" to 48"
CORRUGATED GRAVITY	F794 F794	N/A / 46 psi N/A / 115 psi	4" to 48" 8" to 15"

2.03 PRESSURE SERVICE PIPE

A. All potable water pipe shall bear National Sanitation Foundation Seal of Approval (NSF-PW) and meet the requirements of AWWA C900, ANSI/ NSF 61.

B. For PVC C900, pipeline curves and bend can be made by deflecting joints by no more than 1.5 deg. Do not exceed maximum deflection recommended by pipe and fitting manufacturer. Submit details of other methods of providing curves and bends for review by ENGINEER.

C. For PVC Solvent Weld Pipe (12” and smaller), pipeline curves can be made by bending the pipe within the limits of pipe curvature found in Table 2 below.

2.04 GRAVITY SEWER PIPE

A. When solid wall PVC pipe 18 inches to 27 inches in diameter is required in SDR 26, provide pipe conforming to ASTM F679, except provide wall thickness as required for SDR 26 and pipe strength of 115 psi.

B. No deflection at joint shall be allowed for pipe sizes 12” or smaller. Pipeline curves shall be accomplished through bending of the pipe within the limits of pipe curvature as shown in the following Table:

Table 2 – Pipe Bend Curvature

PIPE SIZE (IN)	MIN RADIUS (FT)	OFFSET/ 20 FT (IN)	OFFSET/ 14 FT (IN)
4	100	23.9	11.7
6	150	16	7.8
8	200	12	5.9
10	250	9.6	4.7
12	300	8	3.9

C. For pipes 15” – 36” maximum angular deflection at joint shall be 1.5 degrees or as

DRAFT

approved by pipe manufacturer.

D. For sewers up to 12 inches in diameter crossing over water lines, or crossing under water lines with less than 2 feet separation, provide minimum 150 psi pressure-rated pipe conforming to ASTM D2241 with suitable PVC adapter couplings. Pipes shall be encased in concrete, unless noted otherwise.

2.05 GASKETS

A. For pressure pipe, integral gasket bell and spigot “push-on” joint shall conform to ASTM D3139.

B. For gravity pipe, locked-in gaskets joints shall meet ASTM D3212 for joint tightness (22” Hg vacuum and a 25-ft head pressure test)

C. Gaskets shall meet the requirements of ASTM F477.

D. Flat Face Mating Flange: Full faces 1/8-inch-thick ethylene propylene (EPR) rubber.

E. Raised Face Mating Flange: Flat ring 1/8-inch ethylene propylene (EDR) rubber, with filler gasket between OD of raised face and flange OD to protect flange from bolting moment.

F. Lubricant for rubber-gasketed joints: Water soluble, non-toxic, non-objectionable in taste and odor imparted to fluid, non-supporting of bacteria growth, having no deteriorating effect on PVC or rubber gaskets.

G. Manufacturer shall test sample from each batch conforming to requirements ASTM D2444.

2.06 JOINTS AND FITTINGS:

A. Flanged or bolted mechanical joint or push-on joint ductile or gray iron fittings shall conform to ANSI/AWWA C110/A21.10 or C153/A21.53 and ANSI/ AWWA C111/A21.11. All iron fittings shall be cement mortar lined and tar (seal) coated in accordance with ANSI/AWWA C104/A21.4

B. PVC pipe fittings shall be full-bodied, either injection molded or factory fabricated, and shall meet AWWA C907. Saddle-type tee or wye fittings are not acceptable, unless noted otherwise.

C. Fusible PVC pipe lengths shall be assembled in the field with butt-fused joints. The Contractor shall follow the pipe supplier’s written guidelines for this procedure.

D. Solvent Weld PVC pipes shall utilize solvent weld on bell end, plain end, and socket type fittings and shall meet ASTM D2564.

E. Provide approved restrained joint fittings as required and as shown on plans. Restraining devices shall meet or exceed the requirements of ASTM F1674 or UNI-Bell B-13 "Recommended Standard Performance Specification for Joint Restrainers for Use with PVC Pipe."

F. Exterior Protection: Provide polyethylene wrapping of ductile-iron fittings.

2.07 Hydrostatic Test: AWWA C900, AWWA C909, ANSI A21.10 (AWWA C110); at point of manufacture; submit manufacturer's written certification.

PART 3 – EXECUTION

3.01 PROTECTION

A. Store pipe under cover out of direct sunlight and protect from excessive heat or harmful chemicals in accordance with manufacturer's recommendations.

DRAFT

3.02 INSTALLATION

A. Install PVC pipe in accordance with these Specifications, ASTM D2321 for Sewer Pipe, and manufacturer's recommendations.

B. Install PVC water service pipe to clear utility lines and have minimum depth of cover 48” below major streets, unless otherwise required by Drawings.

C. Avoid imposing strains that will overstress or buckle pipe when lowering pipe into trench.

D. Hand shovel pipe bedding under pipe haunches and along sides of pipe barrel and compact to eliminate voids and ensure side support.

F. Allow PVC pipe to cool to ground temperature before backfilling when assembled out of trench to prevent pullout due to thermal contraction.

3.03 PVC RESTRAINED MECHANISM

A. Do not apply lubricant to spline or pipe or coupling spline grooves.

B. Do not use excessive force while inserting the spline through coupling.

C. Insert spline until it is fully seated around circumference of pipe.

D. Field Cutting of Pipe Ends:
   1. Perform by workers certified by manufacturer.
   2. Use a PVC pipe cutter and provide square ends.
   3. Use manufacturer approved power routing and grooving tool to field fabricate required pipe groove.

END OF SECTION

DRAFT

SECTION 33 0536.13 – FIBERGLASS REINFORCED PLASTIC (FRP) DUCT

PART 1 – GENERAL

1.01 DESCRIPTION

A. The work of this section consists of furnishing and installing fiberglass reinforced plastic (FRP) duct for odor control, includes all labor, material, equipment, and accessories necessary to complete the ducting system.

1.02 QUALITY ASSURANCE REFERENCES

A. This section contains references to some or all of the following documents, most recent edition. They are a part of this section as specified and modified. In case of conflict between the requirements of this section and those of the listed documents, the requirements of this section shall prevail.

Reference	Title
ASTM D2996	Filament-Wound Glass-Fiber-Reinforced Thermosetting-Resin Pipe
ASTM D2997	Centrifugally Cast Glass-Fiber-Reinforced Thermosetting-Resin Pipe
ASTM D2412	Determination of External Loading Characteristics of Plastic Pipe by Parallel-Plate Loading
AWWA C950	Fiberglass Pressure Pipe
AWWA Manual M45	Fiberglass Pipe Design
PS 15-69, (NBS)	Voluntary Product Standard-Custom Molded Reinforced Polyester Chemical Resistant Process Equipment (Fittings and Rectangular Duct only)

1.03 DESIGN REQUIREMENTS

A. Temperature and Pressure
   1. All ductwork, fittings and appurtenances shall be suitable for the following conditions:
      a. Design temperature, °F
         (1) Minimum 20
         (2) Maximum 120
      b. Internal pressure, psig 25
      c. Internal vacuum, inches water column 20

1.04 SUBMITTALS

A. In accordance with Section 01 3300 – Submittal Procedures.

B. Manufacturer's data and descriptive literature for duct accessories.

C. Shop Drawings
   1. Duct layout
   2. Locations of duct anchors, guides and expansion joints
   3. Joint details

PART 2 – MATERIALS

2.01 MATERIALS

A. Resin
   1. Premium grade and corrosion resistant vinyl ester such as Derakane 411, Hetron 922, Corezyn 8300 or ENGINEER-approved equal.
   2. The exterior surface of all ductwork shall include UV inhibitor UV-9.
   3. Color: Use no dyes, pigments or colorants, except in the exterior gel coat.

DRAFT

4. The manufacturer shall warranty its products against the reduction of physical and corrosion ratings, due to ultra violet exposure, for a period of 15 years.

B. Duct

1. Round: FRP ductwork shall be manufactured by centrifugal casting process or filament wound process. Centrifugally cast reinforced shall conform to ASTM D2310 and D2997. The filament wound ductwork shall conform to ASTM D2310 and D2966. Internal pressure rating shall be based on long-term hydrostatic design stress per ASTM D2992.
2. Minimum Duct Wall Stiffness: The minimum duct wall stiffness, at 5 percent deflection, determined in accordance with ASTM D2412 and Section 3 or AWWA C950, shall not be less than the following:

Pipe Size (In.)	Nominal Duct Diameter Duct Stiffness (psi)
1-8	36
10	18
12-16	9
18 and larger, buried	10
18 and larger, other locations	5

3. The non-reinforced liner thickness shall be 50 mil for centrifugally cast FRP ductwork. The filament wound FRP ductwork shall have a 65 mil-reinforced liner.
4. Rectangular: FRP ductwork shall be of contact molded, per PS 15-69 or filament wound construction or a combination of these methods. Calculations for wall thickness determination shall be based on the structural fiberglass wall only. Rectangular FRP vacuum service: Fittings shall be factory manufactured to meet the specified design criteria and in accordance with approved submittals. Factory install reinforcing ribs as required to meet the specified deflection requirements and to provide a system free from pulsing, warpage, sagging and undue vibration. Provide forming vanes in all mitered rectangular elbows. Rectangular elbow turning vanes shall be of FRP construction, solid or double wall construction with an airfoil shaped profile. Corrosion liner shall be same as specified for round FRP duct.

C. Fittings and Flanges

1. The fittings and flanges shall be made using the same type of vinyl ester resin and suitable for the design temperature and pressure of 25 psi, and shall comply with PS 15-69, Table 5, at a design pressure of 25 psi and shall have ANSI/ASME B31.6 Class 25 diameter and drilling. Standard laterals shall be constructed at 45-degree angles. Standard elbows shall have a centerline radius of one and one-half times the pipe diameter. The length of the standard reducers and round to rectangular transition pieces shall be minimum of two and one-half times the difference in diameters (DI-D2). Wall thickness of reducers shall be the same as the required thickness of the larger pipe. Internal lining shall be of the same type of material and thickness as specified for the pipe. Transitions shall have connections compatible with the connecting pipe and equipment.
2. Compression molded or hand laid up socket fittings of manufacturers standard configuration are acceptable.

D. Fasteners

1. Bolts: ASTM A193-92, Type 3l6 Stainless Steel, ASA coarse thread series, Grade B 8M hex head or ENGINEER-approved equal.
2. Nuts: ASTM A194-92a, Type 316 Stainless Steel, Grade 8M or ENGINEER-approved equal.

E. Gaskets:

1. EPDM, 3/16-inch thick, full face 50-70 Durometer, Shore A Scale or ENGINEER-approved equal.

F. Butt Joints
1. Butt and wrap, resin bonded, PS 15-69, with pressure rating equal to the pipe.

G. Adhesive
1. Pipe manufacturer's standard.

2.02 DUCTWORK

A. Design Requirements
1. Conform to all listed standards.
2. Duct manufacturer's design for round and rectangular sections, including duct wall thickness and stiffeners (if required).
3 Consider expansion from ambient temperature variations.

B. Service Conditions
1. Odorous air collection, 100 ppm H2S maximum, 750 ppm NH3 maximum, 100 ppb maximum mercaptans, and 100 ppb organic sulfides maximum, in an air stream saturated with water vapor.
2. System Maximum Pressure: 14 inches of water column.
3. System Maximum Vacuum: 14 inches of water column.
4. Ambient Temperature: 0 to 110°F.
5. Location: Inside, Outside, Buried.

2.03 FABRICATION

A. Manufacturers
1. Fibercast, Ershigs, A. 0. Smith, Bondstrand, or ENGINEER-approved equal.

B. Mechanical Properties
1. Meet or exceed requirements of PS 15-69.
2. Squareness of ends, fittings, elbows, and butt joints shall meet or exceed requirements of PS 15-69.

C. Jointing Method
1. Shop fabricated assemblies should be provided to the maximum extent possible, to minimize the number of field joints.
2. Flanged joints shall be provided at each damper and item of equipment to facilitate disassembly, at each change in material, and where indicated on the drawings.
3. Field butt joints shall be made at locations at least 12 inches from any increasing or decreasing cross-section of duct where the duct to be jointed has the same diameter. Internal overlay shall be provided for butt joints in duct 20 inches or greater in diameter.
4. All bolts, nuts, washers and gaskets required for all connections of the ductwork system, including connections to equipment, shall be provided as specified herein.

D. Supports
1. Type: As shown on the Drawings.
2. Maximum Duct deflection: 1/2-inch at 110°F, including special sections at road crossings.
3. Support Spacing:
   a. 24-Inch Diameter and Larger: 20 feet, maximum.
   b. 20-Inch Diameter and Smaller: 15 feet, maximum.
4. At all supports, provide bearing plates or collars. Collar attachment shall be sufficient to resist all forces imposed by thermal expansion/contraction and/or duct weight, where applicable.

DRAFT

E. Isolation Dampers
   1. Butterfly type.
   2. Dampers shall be fiberglass reinforced plastic (FRP) body and disc with resin and valve construction suitable of operating in the service conditions above. When used in airflow control for system balancing, the valve shall be equipped with a shaft seal and full circumferential blade stop. When used for isolating a system with low leakage, the valve shall be equipped with a shaft seal, blade seal, and full circumferential blade stop.
   3. Damper End Connections:
      a. 12 inches and larger: Flanged, faced and drilled PS 15-69, Table 5, 25 psig design pressure, to match connecting ductwork.
      b. 10 inches and smaller: Fabricated into the duct section without the use of companion flanges.
   4. Construction: Dampers shall be of the single blade type complete with channel type frame. Dampers denoted for balancing service shall be equipped with a blade stop. Dampers denoted for isolation service shall be equipped with full circumference blade seal, angle type blade stop, and shaft seal.
   5. Dampers shall have a maximum leakage rate of 3 cubic feet per minute per square foot of damper area at minimum pressure rating.
   6. Damper operators shall be manually operated type in accordance with these Specifications. Provide chainwheel operators where required in these Specifications.
   7. Manufacturer shall be Belco or ENGINEER-approved equal.

F. FRP Ductwork Expansion Joints:
   1. Expansion joints shall be furnished and installed at the locations indicated on the drawings and at the other locations required for proper installation and operation of the system as recommended by the FRP duct manufacturer. Expansion joints shall be resistant to ultraviolet light and be suitable for the service conditions shown.
   2. Expansion joints shall be flange or slip on type. Flange type expansion joints shall have split Stainless Steel retaining rings with drilling pattern to match those shown in the FRP fittings requirements. Slip on type shall have Stainless Steel bands
   3. Expansion joints shall be designed to compress one inch and to elongate one inch with a maximum force to cause movement of 100 pounds or less. The joints shall also allow lateral deflections of up to one inch.

PART 3 – EXECUTION

3.01 INSTALLATION OF PIPE AND FITTINGS

A. General: In accordance with manufacturer's recommendations and these Specifications, whichever is more stringent.

B. Pipe and fittings shall be of the sizes indicated. Clean pipe interior of all foreign matter before installing. Pipe shall be square cut with fine tooth saw or other cutter or knife designed for use with plastic pipe. Remove burrs by smoothing edges with a knife, file, or sandpaper. Replace any section of pipe found to be defective or damaged with new acceptable pipe. Handle pipe carefully to prevent gouging or scratching. Any length of pipe have a gouge, scratch, or other permanent indentation more than 10 percent of the wall thickness in depth shall be rejected.

3.02 PREPARATION

A. Verify dimensions and conditions in the field.

B. Lay out routing in straight lines parallel to building lines.

C. Coordinate support locations with layout and joints.

DRAFT

D. All duct diameters shown on the drawings are inside diameters.

3.03 INSTALLATION

A. Duct shall be installed as specified and as indicated on the Drawings. All necessary provisions shall be taken in the fabrication and installation of ductwork to provide for expansion and contraction.

B. The ductwork shall be supported as indicated on the Drawings and in accordance with the requirements of the duct supports section.

C. The inside of duct, fittings, and transitions shall be smooth, clean, and free from blisters, when installed.

D. Adhesive Bonded Joints

1. All joints preparation, cutting, and jointing operations shall comply with the duct manufacturer's recommendations. Newly assembled joints shall be suitably blocked or restrained to prevent movement during the recommended curing period.

E. Flanged Joints

1. Flange bolts shall be tightened sufficiently to slightly compress the gasket and make a good seal, but not so tight as to distort the flanges. A flat washer, Type 316 stainless steel, shall be installed under each nut and bolt head.

F. Butt Joints

1. Butt joints shall be made in accordance with the manufacturer's recommendations and as specified herein. Twenty inch and larger duct shall be overlaid both inside (when accessible) and outside. Eighteen inch and smaller duct shall be overlaid on the outside only. The minimum width of the overlay shall be as specified in the following table. Inside overlaps shall be made to seal the joint but shall not be considered in meeting the strength requirements.

Pipe Size (in.)	Minimum Total-Width of Overlay (in.)
18-20	14
24-42	18

2. Finished joints shall be built up in successive layers, shall be as strong as the pieces being joined, and shall be as crevice-free as is commercially practicable, in accordance with ASTM D2563. The width of the first layer shall be at least 4 inches. Successive layers shall increase uniformly to provide the specified minimum total width of overlay which shall be centered on the joint. Crevices between jointed pieces shall be filled with resin, leaving a smooth inner surface. The interior of joints shall also be sealed by covering with not less than 0.100 inch of liner of the same material as the duct.
3. The inner surface shall be free of cracks and crazing, with a smooth finish, and with an average of not more than two pits per square foot, providing the pits are less than 1/8 inch in diameter, not more than 1/32 inch deep, and covered with sufficient resin to avoid exposure of inner surface fabric. Some waviness is permissible as long as the surface is smooth and free of pits. This surface may be reinforced with glass surfacing mat, synthetic fibers, or other material as usage requires.

3.04 FIELD TESTING

A. The DESIGN/BUILDER shall perform air balancing and testing of the complete odor control system in accordance with the requirements of these Specifications. Testing and balancing shall be performed with the odor control system in operation.

END OF SECTION

DRAFT

SECTION 33 0561 – CONCRETE MANHOLES

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes: Manholes for sanitary sewer system assemblies.

1.02 REFERENCES

A. Soils Report: This work shall conform to the requirements of the latest Geotechnical Evaluation.

B. American National Standards Institute (ANSI)

C. AASHTO: American Association of State Highway and Transportation Officials Standard Specification for Highway Bridges

D. American Society for Testing and Materials (ASTM):

A48	Gray Iron Castings
A193	Alloy Steel and Stainless Steel Bolting Materials for High-Temperature Service.
A615	Standard Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement
C14	Concrete Sewer, Storm Drain, and Culvert Pipe.
C387	Packaged, Dry, Combined Materials for Mortar and Concrete.
C478	Precast Reinforced Concrete Manhole Sections.

1.03 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

B. Shop Drawings:
1. Submit drawing of each manhole with plan and sections showing manhole dimensions and actual installation.
2. Submit testing plan, documentation methods, and proposed schedule.

PART 2 – PRODUCTS

2.01 MANHOLES

A. Manhole Bases: The base of all manholes shall be either cast-in-place concrete or precast concrete, except for manholes housing air and vacuum release valve assemblies.
1. Precast concrete bases shall have the base slab integral with the sidewalls. The base slab shall be 6 inches minimum thickness with No. 4 reinforcement steel bars at 8 inches on centers each way in the center of the slab. The base reinforcement steel shall be tied to the wall steel.
2. Bases for manholes housing air and vacuum release valve assemblies shall consist of a drain gravel base and precast or cast-in-place concrete ring foundation.

B. Precast Manhole Sections: Precast manhole sections conforming to ASTM C478 shall be either 48-inch, 60-inch, 72-inch, or 84-inch internal diameter with 5-inch minimum walls or as otherwise shown for special purposes. The top and bottom of all sections shall be parallel.

C. Eccentric Sections: Eccentric cones shall be provided for all manholes except as otherwise shown on the Drawings. Cones shall have the same wall thickness and reinforcement as the precast manhole section.

D. Manhole Grade Rings:
1. Manhole grade rings for extensions shall be a maximum 6 inches high. Extensions will be limited to 15 inches.

DRAFT

2. Finish grade for solid covers shall be ½-inch below flush in concrete or asphalt concrete paved areas, and 6 inches above finish grade in unpaved areas, except flush where gated covers are specified.
3. Grade rings shall have anchor bolt holes for bolt-down frames and covers.
4. Finish installation in accordance with MAG standard Detail 420-2

E. Factory Testing: Prior to delivery of precast manhole sections, yard tests shall be conducted at the point of manufacture. Precast sections to be tested shall be selected at random from stockpiled material to be supplied for the job. All test specimens shall be mat tested, and shall meet the permeability test requirements of ASTM C14.

F. Joints of Manhole Sections: Tongue-and-groove type sealed with either mortar or preformed plastic joint material.
1. Mortar: Standard premixed mortar conforming to ASTM C387 or proportion 1 part portland cement to 2 parts clean, well-graded sand which will pass a 1/8-inch screen. Admixtures may be used not exceeding the following percentages of weight of cement: Hydrated lime, 10 percent; diatomaceous earth or other inert materials, 5 percent. Consistency of mortar shall be such that it will readily adhere to the manhole section if using the standard tongue-and-groove type joint. Mortar mixed for longer than 30 minutes shall not be used.
2. Preformed Plastic Gaskets: Preformed plastic gaskets may be used in lieu of mortar type joints.
   a. Manufacturers:
      1) Kent-Seal No. 2, Hamilton Kent Manufacturing Company, Box 178, Kent, OH 44240;
      2) Ram-Nek, K. T. Snyder Company, Inc., Central National Bank Building, Houston, TX 77002;
      3) or ENGINEER-approved equal, meeting all requirements of Federal Specification SS-S-00210.

G. Pipe connections to manholes shall be as specified by the pipe manufacturer. Inlet and outlet pipes shall extend through the walls of the structures for a sufficient distance beyond the outside surface to allow for connections, but shall be cut off flush with the wall on the inside surface. For concrete structures, the mortar shall be placed around these pipes so as to form a tight, neat connection.

H. Manhole frames and covers shall be cast iron as detailed on the Drawings and elsewhere in these Specifications and Contract Documents.

1. Use castings for frames, grates, rings, and covers conforming to ASTM A48, Class 35B. Provide locking covers if indicated on Drawings.

2. Use clean castings capable of withstanding application of AASHTO M306 - 40,000-pound proof loading without detrimental permanent deformation.

3. Fabricate castings to conform to shapes, dimensions, and with wording or logos shown on Drawings. Standard dimensions for manhole covers are 32 inches in diameter.

4. Cast iron castings shall be tough, close-grained gray iron, sound, smooth, clean, free from blisters, blowholes, shrinkage, cold shuts, and all defects, and shall conform to ASTM A48, Class 30B. Plane or grind bearing surfaces to ensure flat, true surfaces.

5. Bolt-down covers shall be used on all electrical vaults and where indicated on Drawings.

DRAFT

6. Capscrews and washers shall be Type 316 stainless steel conforming to ASTM A193. Countersink bolt holes in cover so that the top of the capscrews are below the top plane of the cover. Frames for bolt-down covers shall be supplied with four ¾-inch-diameter Type 316 stainless steel anchor bolts, nuts, and washer as detailed on the Drawings.

7. Nominal inside opening of the frame shall be 24 inches, unless noted otherwise. Provide a blind pick hole or lifting lug in the cover. Do not provide lifting rings or vent holes in covers unless specifically required.

2.02 CLEANOUTS

A. Covers shall be true and seat within frame at all points.

B. Cleanout frames and covers shall be Pinkerton Foundry No. A-469 or D&L Supply No. H-8024, or ENGINEER-approved equal.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Manholes:
1. Concrete Base: Vibrate to densify poured in-place concrete and screed so that the first precast manhole section to be placed has a level, uniform bearing for the full circumference.
2. Deposit sufficient mortar on base to assure watertight seal between base and manhole wall or place the first precast section of manhole in concrete base before concrete has set. First section shall be properly located and plumb.
3. Carefully inspect precast manhole sections to be joined. Sections with chips or cracks in the tongue shall not be used. Clean ends of sections before assembly. Align manhole steps vertically.
4. Joints with preformed plastic gaskets shall be installed in strict conformance with the manufacturer's recommendations. Only pipe primer furnished by the gasket manufacturer will be approved.
5. For mortar joints, thoroughly wet joint with water prior to placing mortar. Place mortar on groove of lower section. Set next section in place. Fill joint completely with mortar of the proper consistency. Trowel interior and exterior surfaces smooth on standard tongue-and-groove joints. Prevent mortar from drying out, and cure by applying an approved curing compound or comparable approved method. Chip out and replace all cracked or defective mortar.

B. Construct manhole inverts with smooth transitions to ensure an unobstructed flow through manhole. Remove all sharp edges or rough sections which tend to obstruct flow. Do not lay pipe through manholes. Trowel all mortar surfaces smooth.

C. Install frames and covers. Frames shall be set in a bed of mortar with the mortar carried over the flange of the ring. Install bolt-down manholes as shown or as recommended by manufacturer. Provide a minimum of one 6-inch-high grade ring under the frame and cover. Extend anchor bolts through the grade ring to the frame. Hook the anchor bolt under the grade ring.

D. Manholes shall be tested as required by these Specifications and Contract Documents.

3.02 CLEANOUTS AND VAULTS

A. Construct in accordance with details as indicated on the Drawings.

DRAFT

3.03 CLEANING

A. Construction debris and other foreign matter shall be removed to the satisfaction of the ENGINEER.

B. Install cover drain pipe to minimum 12” x 12” x 12” drain rock approximately 10 feet from manhole on down slope.

C. Install top of manholes at 6 inches above finish grade or surface. Install surveyor markings to establish finish grade.

3.04 TESTING OF MANHOLES

A. All sewer manholes shall be hydrostatically tested for leakage after installation, but prior to being backfilled. Prior to hydrostatic testing, all manholes shall be visually inspected for leaks. All leaks or cracks shall be repaired, prior to hydrostatic testing, to the satisfaction of the ENGINEER. All pipes entering the manhole shall be sealed at a point outside the manhole walls so as to include testing of the pipe/manhole joints. The manhole shall be filled with water to a level 2 inches below the top of the frame. Safety lines shall be secured to all plugs utilized. After a period of at least one hour to allow the water level to stabilize, the manhole shall be refilled and the water level shall be checked. The water level shall again be checked after a period of 4 hours. If the water level is reduced by more than ¼-inch, the leakage shall be considered excessive, the required repairs shall be made and the manhole retested. The exterior of the manhole shall be inspected during this period for visible evidence of leakage. Visible moisture, sweating, or beads of water on the exterior of the manhole shall not be considered leakage, but any water running across the surface will be considered leakage and shall be repaired to the satisfaction of the ENGINEER regardless of the volume of water lost.

END OF SECTION

DRAFT

SECTION 40 0500.13 – COMMON WORK RESULTS FOR PROCESS PIPING

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide all piping systems indicated, complete and operable, in accordance with these Specifications and Contract Documents.

B. The mechanical drawings define the general layout, configuration, routing, method of support, pipe size and pipe type. The mechanical drawings are not pipe construction or fabrication drawings. Details for construction shall be developed as necessary to construct all mechanical piping systems, to accommodate the specific equipment provided, and to provide all spools, spacers, adapters, and connectors for a complete and functional system.

C. American Iron and Steel (AIS) requirement applies to this Section. All iron and steel products used in this project must be produced in the United States.

1.02 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

B. Shop Drawings shall contain the following information:

1. Drawings: Layout drawings including all necessary dimensions, details, pipe joints, fittings, specials, bolts and nuts, gaskets, valves, appurtenances, anchors, guides, and material lists. Fabrication drawings shall indicate all spool pieces, spacers, adapters, connectors, fittings and supports to accommodate the equipment and valves in a complete and functional system.

C. Certifications: All necessary certificates, test reports, and affidavits of compliance shall be obtained.

PART 2 – PRODUCTS

2.01 GENERAL

A. Extent of Work: Pipes, fittings and appurtenances shall be provided in accordance with the requirements of these Specifications and as indicated.

B. Pipe Supports: Pipes shall be adequately supported, restrained, and anchored in accordance with these Specifications, and as indicated.

C. Lining: Application, thickness and curing of pipe lining shall be in accordance with these Specifications, unless otherwise indicated.

D. Coating: Application, thickness and curing of pipe coating shall be in accordance with these Specifications, unless otherwise indicated. Pipes above ground or in structures shall be field-coated in accordance these Specifications.

E. Pressure Rating: Piping systems shall be designed for the maximum expected pressure as defined in accordance with these Specifications, or as indicated on the Piping Schedule.

F. Inspection: Pipe shall be subject to inspection at the place of manufacture. During the manufacture of the pipe, the ENGINEER shall be given access to all areas where manufacturing is in progress and shall be permitted to make all inspections necessary to confirm compliance with requirements.

DRAFT

G. Tests: Except where otherwise indicated, materials used in the manufacture of the pipe shall be tested in accordance with the applicable specifications and standards. Welds shall be tested as indicated.

H. Welding Requirements: Welding procedures used to fabricate pipe shall be prequalified under the provisions of ANSI/AWS D1.1 - Structural Welding Code. Welding procedures shall be reviewed for longitudinal and girth or spiral welds for pipe cylinders, spigot, and bell ring attachments, reinforcing plates and ring flange welds, and plates for lug connections.

I. Welder Qualifications: Welding shall be done by skilled welders and welding operators who have had adequate experience in the methods and materials to be used. Welders shall be qualified under the provisions of ANSI/AWS D1.1 by an independent local, approved testing agency not more than 6 months prior to commencing work on the pipeline. Machines and electrodes similar to those used in the WORK shall be used in qualification tests. Qualification testing of welders and materials used during testing are part of the WORK.

2.02 PIPE FLANGES

A. General: Flanges shall have flat faces and shall be attached with bolt holes straddling the vertical axis of the pipe unless otherwise indicated. Attachment of the flanges to the pipe shall conform to the applicable requirements of ANSI/AWWA C207. Flange faces shall be perpendicular to the axis of the adjoining pipe. Flanges for miscellaneous small pipes shall be in accordance with the standards indicated for these pipes.

B. Pressure Ratings:
   1. 150 psi or less: Flanges shall conform to either ANSI/AWWA C207 - Steel Pipe Flanges for Waterworks Service--Sizes 4-inch. Through 144-inch, Class D, or ANSI/ASME B16.5 - Pipe Flanges and Flanged Fittings, 150-lb class.
   2. 150 psi to 275 psi: Flanges shall conform to either ANSI/AWWA C207 Class E or Class F, or ANSI/ASME B16.5 150-lb class.
   3. 275 psi to 700 psi: Flanges shall conform to ANSI/ASME B16.5, 300-lb class.
   4. Selection based on test pressure: AWWA flanges shall not be exposed to test pressures greater than 125 percent of rated capacity. For higher test pressures, the next higher rated AWWA flange or an ANSI-rated flange shall be selected.

C. Blind Flanges: Blind flanges shall be in accordance with ANSI/AWWA C207, or as indicated for miscellaneous small pipes.

D. Flange Coating: Machined faces of metal blind flanges and pipe flanges shall be coated with a temporary rust-inhibitive coating to protect the metal until the installation is completed.

E. Flange Bolts: Bolts and nuts shall conform to these Specifications. Bolts and nuts shall be installed with anti-seize per Loctite, or ENGINEER-approved equal (or thread locker to be confirmed with WWTP Operations). Studs and bolts shall extend through the nuts a minimum of ¼-inch. All-thread studs shall be used on all valve flange connections, where space restrictions preclude the use of regular bolts.

F. Insulating Flanges: Insulated flanges shall have bolt holes ¼-inch diameter greater than the bolt diameter.

G. Insulating Flange Sets: Insulating flange sets shall be provided where indicated or as needed. Each insulating flange set shall consist of an insulating gasket, insulating sleeves and washers and a steel washer. Insulating sleeves and washers shall be one piece when flange bolt diameter is 1½-inch or smaller and shall be made of acetal resin. For bolt diameters larger than 1½-inch, insulating sleeves and washers shall be 2-piece

DRAFT

and shall be made of polyethylene or phenolic material. Steel washers shall be in accordance with ASTM A325 - Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength. Insulating gaskets shall be full-face.

H. Flange Gaskets:
   1. Gaskets for flanged joints used in general water and wastewater service shall be full-faced type, with material and thickness in accordance with ANSI/AWWA C207. Blind flanges shall have gaskets covering the entire inside face of the blind flange and shall be cemented to the blind flange. Ring gaskets shall not be permitted, unless otherwise indicated.
   2. Gaskets for flanged joints used in chemicals, air, solvents, hydrocarbons, steam, chlorine, and other fluids shall be made of materials compatible with the service, pressure, and temperature.

2.03 THREADED INSULATING CONNECTIONS

A. General: Threaded insulating bushings, unions, or couplings, as appropriate, shall be used for joining threaded pipes of dissimilar metals and for piping systems where corrosion control and cathodic protection are involved.

B. Materials: Threaded insulating connections shall be of nylon, Teflon, polycarbonate, polyethylene, or other non-conductive materials, and shall have ratings and properties to suit the service and loading conditions.

2.04 MECHANICAL-TYPE COUPLINGS (GROOVED OR BANDED PIPE)

A. General: Cast mechanical-type couplings shall be provided where indicated. The couplings shall conform to the requirements of ANSI/AWWA C606 - Grooved and Shouldered Joints. Bolts and nuts shall conform to the requirements of these Specifications. Gaskets for mechanical-type couplings shall be compatible with the piping service and fluid utilized, in accordance with the coupling manufacturer's recommendations. The wall thickness of grooved piping shall conform with the coupling manufacturer's recommendations to suit the highest expected pressure. To avoid stress on equipment, equipment connections with mechanical-type couplings shall have rigid-grooved couplings or flexible type coupling with harness in sizes where rigid couplings are not available, unless thrust restraint is provided by other means. Mechanical-type couplings shall be bonded. The Subcontractor shall have the coupling manufacturer's service representative verify the correct choice and application of couplings and gaskets, and the workmanship, to assure a correct installation. To assure uniform and compatible piping components, all grooved fittings, couplings, and valves shall be from the same manufacturer.

2.05 SLEEVE-TYPE COUPLINGS

A. Construction: Sleeve-type couplings shall be provided where indicated, in accordance with ANSI/AWWA C219 - Standard for Bolted Sleeve-Type Couplings for Plain-End Pipe. Couplings shall be steel with steel bolts, without pipe stop. Couplings shall be of sizes to fit the pipe and fittings indicated. The middle ring shall be not less than ¼-inch thick or at least the same wall thickness as the pipe to which the coupling is connected. If the strength of the middle ring material is less than the strength of the pipe material, the thickness of the middle ring shall be increased to have the same strength as the pipe. The coupling shall be either 5 or 7 inches long for sizes up to and including 30 inches and 10 inches long for sizes greater than 30 inches, for standard steel couplings, and 16 inches long for long-sleeve couplings. The followers shall be single-piece contoured mill sections welded and cold-expanded as required for the middle rings, and of sufficient strength to accommodate the number of bolts necessary to obtain adequate gasket pressures without excessive rolling. The shape of the follower shall be of such

design as to provide positive confinement of the gasket. Bolts and nuts shall conform to the requirements of these Specifications. Buried sleeve-type couplings shall be epoxy-coated at the factory as indicated.

B. Pipe Preparation: Where indicated, the ends of the pipe shall be prepared for flexible steel couplings. Plain ends for use with couplings shall be smooth and round for a distance of 12 inches from the ends of the pipe, with outside diameter not more than 1/64-inch smaller than the nominal outside diameter of the pipe. The middle ring shall be tested by cold-expanding a minimum of one percent beyond the yield point, to proof-test the weld to the strength of the parent metal. The weld of the middle ring shall be subjected to air test for porosity.

C. Gaskets:
   1. Gaskets for sleeve-type couplings shall be rubber-compound material that will not deteriorate from age or exposure to air under normal storage or use conditions. Gaskets for wastewater and sewerage applications shall be Buna "N," Grade 60, or ENGINEER-approved equivalent suitable elastomer. The rubber in the gasket shall meet the following specifications:
      a. Color: Jet Black
      b. Surface: Non-blooming
      c. Durometer Hardness: 74 plus and minus 5
      d. Tensile Strength: 1000 psi Minimum
      e. Elongation: 175 percent Minimum
   2. The gaskets shall be immune to attack by impurities normally found in water or wastewater. All gaskets shall meet the requirements of ASTM D2000 - Classification System for Rubber Products in Automotive Applications, AA709Z, meeting Suffix B13 Grade 3, except as noted above. Where sleeve couplings are used in water containing chloramine or other fluids, which attack rubber materials, gasket material shall be compatible with the piping service and fluid utilized.

D. Insulating Couplings: Where insulating couplings are required, both ends of the coupling shall have a wedge-shaped gasket which assembles over a rubber sleeve of an insulating compound in order to obtain insulation of all coupling metal parts from the pipe.

E. Restrained Joints: Sleeve-type couplings on pressure lines shall be harnessed unless thrust restraint is provided by other means. Harnesses shall be designed by the pipe manufacturer in accordance with AWWA Manual M11, or as indicated. Harness sets shall be designed for the maximum test pressure of the pipe in which they are installed. Where harness sets are installed near the suction and discharge of the pump, harness bolts shall have zero elongation to prevent misalignment of the pump imparted by the thrust within the piping system.

2.06 DISMANTLING JOINTS

A. General: Dismantling joints shall be provided where indicated, and provide up to 5” of longitudinal adjustment and up to 2 degrees of misalignment in flanged piping systems. The flange spool shall meet the requirements of AWWA Class D Ring Flange, compatible with ANSI Class 125 and 150 bolt circles. The end and body ring shall meet the requirements of ASTM A536 ductile iron meeting or exceeding Grade 65-45-12 for 3” to 12” sizes and ASTM A36 Carbon Steel with AWWA C207 Class D flanges for 14” to 72” sizes. Dismantling joints shall be provided with gaskets compounded for water and sewer service in accordance with ASTM D2000. Dismantling joints shall have a fusion bonded epoxy coating. Bolts and nuts (including tie-rods) shall conform to these Specifications. Dismantling joints shall be per Romac Industries, or ENGINEER-approved equal.

2.07 EXPANSION JOINTS

A. Piping subject to expansion and contraction shall be provided with sufficient means to compensate for such movement without exertion of undue forces to equipment or structures. This may be accomplished with expansion loops, bellow-type expansion joints or sliding-type expansion joints. Expansion joints shall be of stainless steel, monel, rubber, or other materials best suited for each individual service.

2.08 PIPE THREADS

A. Pipe threads shall be in accordance with ANSI/ASME B1.20.1 - Pipe Threads, General Purpose (inch), and be made up with Teflon tape or chemical sealant unless otherwise indicated.

2.09 PIPE INSULATION

A. Pipe thermal insulation for exterior freeze protection shall be self-sealing, flexible, tubular polyolefin/ polyethylene foam insulation. The insulation shall have a low thermal conductivity (not to exceed 0.04 W/mK) and shall have a service temperature range between -330°F and 120°F. Minimum thickness shall be 1 inch. Insulation shall be acceptable for use with heat tracing/ heat tape.

B. Where called out in the Contract Documents, heat tape shall be provided for freeze protection. Heat tape shall be wrap-type cable with built-in thermostat for automatic heat control and energy efficiency. It shall be used in conjunction with foam insulation. The low wattage design shall utilize a 120-volt power with outlet plug. Heat tape shall be manufactured by Wrap-On Co., Inc., or ENGINEER-approved equal.

C. Where called out in the Contract Documents, Pipe insulation for personnel protection against high temperature shall be provided. Protective insulation shall be fiber glass bonded with a thermosetting resin with a jacket designed to protect personnel again accidental contact with hot pipes. The insulation shall be designed to be used on systems operating up to 1000°F. Minimum thickness shall be 1 inch.

2.10 GENERAL

A. Pipes, fittings, and appurtenances shall be installed in accordance with these Specifications.

B. Lined Piping Systems: The lining manufacturer shall take full responsibility for the complete, final product and its application. Pipe ends and joints of lined pipes at screwed flanges shall be epoxy-coated to assure continuous protection.

C. Core Drilling: Where core drilling is required for pipes passing through existing concrete, core drilling locations shall be determined by radiograph of concrete construction to avoid damage to embedded raceways and reinforcing bars.

D. Cleanup: After completion of the WORK, cuttings, joining and wrapping materials, and other scattered debris shall be removed from the Site. The entire piping system shall be handed over in a clean and functional condition.

PART 3 – EXECUTION

3.01 INSTALLATION OF PIPE

A. Piping shall be installed in accordance with manufacturers' recommendation and these Specifications.

END OF SECTION

DRAFT

SECTION 40 0519 – DUCTILE IRON PIPE

PART 1 – GENERAL

1.01 DESCRIPTION

A. Furnish and install all ductile iron pipe and fittings in accordance with this section.

1.02 REFERENCES

A. Standards of the following agencies are referenced herein: American National Standards Institute (ANSI), American Society for Testing and Materials (ASTM), American Water Works Association (AWWA), Ductile Iron Pipe Research Association (DIPRA).

B. Referenced standards shall be the latest revision.

In case of conflict with referenced standards, the provisions of this section shall prevail.

1.03 SUBMITTALS

A. In accordance with Section 01 3300 – Submittal Procedures.

B. Catalog data sheets naming each product to be used identified by manufacturer and type number and additional documentation as required to demonstrate full compliance with this specification.

PART 2 – MATERIALS

2.01 DUCTILE IRON PIPE

A. Pipe shall conform to the following standards as applicable:
1. AWWA C104: Cement-Mortar Lining for Ductile-Iron Pipe and Fittings for Water.
2. AWWA C111: Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings
3. AWWA C115: Flanges Ductile-Iron Pipe with Threaded Flanges
4. AWWA C150: Thickness Design of Ductile-Iron Pipe
5. AWWA C151: Ductile-Iron Pipe, Centrifugally Cast, for Water of Other Liquids
6. AWWA C606: Grooved and Shouldered Joints

B. Pipe wall thickness for push-on joint and mechanical joint pipe shall be Pressure Class 350 psi minimum, or as indicated in the Contract Documents.

C. Unless otherwise noted or required, all pipe shall have a cement mortar lining with asphaltic seal coat.

Nominal Pipe Diameter (inches)	Minimum Lining Thickness (inches)
3 - 12	$^1/_8$
14 - 24	$^3/_{16}$
30 - 54	$^1/_4$

2.02 FITTINGS AND SPECIALS

A. Fittings and specials shall be ductile iron and shall conform to the following standards as applicable:
1. AWWA C104: Cement-Mortar Lining for Ductile-Iron Pipe and Fittings for Water.
2. AWWA C110: Ductile-Iron and Gray Iron Fittings, 3 inches through 48 inches, for Water and Other Liquids.
3. AWWA C111: Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
4. AWWA C153: Ductile-Iron Compact Fittings, 3 inches through 24 inches and 54 inches through 64 inches for Water Service.

DRAFT

5. AWWA C606: Grooved and Shouldered Joints.

B. Unless otherwise noted or required, either standard or compact fittings may be used.

C. Unless otherwise noted, all fittings shall have a cement mortar lining with asphaltic seal coat.

D. Grooved and flanged fittings shall have center to end dimensions in accordance with AWWA C111, wall thickness in accordance with AWWA C153, and shall be Class 350 minimum, or as indicated in the Contract Documents.

2.03 GROOVED JOINT COUPLINGS

A. In accordance with ASSA C606, except as modified herein.

B. Coupling body shall be ductile iron, ASTM A536

C. All bolts and nuts shall be 316 stainless steel conforming to ASTM A193, Grade B8M, for bolts and ASTM A194, Grade 8M, for nuts.

2.04 TYPE OF JOINTS

A. Buried joints shall be push-on, mechanical joint, or flexible grooved joint unless otherwise shown or required for installation.

B. Exposed joints shall be flanged or rigid grooved unless otherwise shown or required for the installation.

2.05 RESTRAINED PUSH-ON JOINTS

A. Where specified, called for on the drawings, or otherwise required for thrust restraint, push-on joints shall be Flex-Ring as manufactured by American Ductile Iron Pipe, TR Flex as manufactured by US Pipe, or ENGINEER-approved equal. Restrained joint shall provide for joint deflection after assembly.

2.06 RESTRAINED MECHANICAL JOINTS

A. Where specified, called for on the drawings or otherwise required fro thrust restraint, mechanical joints shall be made using retainer glands with set screws or clamping lugs. Retainer glands shall be as manufactured by EBAA Iron; Tyler Pipe, or ENGINEER-approved equal.

2.07 FLANGE GASKETS

A. Full face or ring, except that ring gaskets shall be used for sizes 14-inch and greater. Gaskets shall be 1/8-inch thick synthetic rubber for test pressures up to 250 psi. For test pressures greater than 250 psi, provide suitable gasket as recommended by manufacturer.

2.08 FASTENERS EXCEPT GROOVED COUPLINGS

A. 316 stainless steel conforming to ASTM A193, Grade B8M, for bolts and ASTM A194, Grade 8M, for nuts. Bolts and nuts shall be installed with anti-seize per Loctite, or ENGINEER-approved equal (or thread locker to be confirmed with WWTP Operations).

B. Washers, where required, shall be of the same material as the nuts.

2.09 POLYETHYLENE ENCASEMENT

A. Buried pipe and fittings shall be protected by polyethylene encasement in accordance with AWWA C105.

2.10 GLASS LINING

A. Where specified or called for on the drawings, ductile iron pipe shall be glass-lined.

DRAFT

B. Glass lining shall consist of vitreous and inorganic material applied to the internal surfaces of pipe and fittings that have been prepared by blasting. The items shall be exposed to an appropriate maturing temperature (above 1400°F), at which point the vitreous and inorganic material fuses to the base metal, forming an integral molecular bond with the base metal. Subsequent coatings will be processed in a similar manner, forcing an integral molecular bond with the base coast. The entire coating shall be a minimum of 10 mils thick.

C. Lining shall have a hardness of 5 to 6 on the Mohs scale and a density of 2.5-3.0 g/cm³ measured by ASTM D792. The glass lining shall be capable of withstanding a thermal shock of 350°F without crazing, blistering, or spalling. It shall be resistant to corrosion between pH 3 and pH 10 at 125°F.

D. There shall be no visible loss of surface gloss on the lining after immersing a production run sample in an 8% sulfuric acid solution at 125°F for 15 minutes. When tested according to ASTM C283, it shall show a weight loss of not more than 3 mg/in².

E. Provide continuous coverage as tested by a low voltage wet sponge holiday detector. Only isolated voids due to casting anomalies and representing less than 0.1% of the total glassed surface shall be permitted.

F. Glass lining shall be Ferrock MEH-32 as provided by Fast Fabricators/Water Works Manufacturing, Vitco, or ENGINEER-approved equal.

2.11 Direct Tap

A. Ductile iron pipe shall have a minimum wall thickness allowed by ANSI/AWWA C151/A21.51.

B. The maximum direct tap sizes for 3 though 24-inch ductile iron pipe shall be per the following table.

Sizes (in)	Pressure Class				
	150	200	250	300	350
	Maximum Direct Tap Size (in)				
3	-	-	-	-	3/4
4	-	-	-	-	3/4
6	-	-	-	-	1
8	-	-	-	-	1
10	-	-	-	-	1
12	-	-	-	-	1 ¼
14	-	-	1 ¼	1 ½	1 ½
16	-	-	1 ½	2	2
18	-	-	2	2	2
20	-	-	2	2	2
24	-	2	2	2	2

DRAFT

C. All classes of ductile iron pipe 24 inches or larger in diameter can be direct tapped for 2-inch corporation stop.

PART 3 – EXECUTION

3.01 INSTALLATION OF PIPE

A. Handling and Storage: All pipe, fittings, etc., shall be carefully handled and protected against damage, impact shocks, and free fall. All pipe handling equipment shall be acceptable to the ENGINEER. Pipe shall not be placed directly on rough ground but shall be supported in a manner that will protect the pipe against injury whenever stored at the trench site or elsewhere. No pipe shall be installed where the lining or coating show defects that may be harmful as determined by the ENGINEER. Such damaged lining or coating shall be repaired, or a new undamaged pipe shall be furnished and installed.

B. All pipe that is damaged prior to Substantial Completion shall be repaired or replaced.

C. Inspect each pipe and fitting prior to installation to ensure that there are no damaged portions of the pipe.

D. Before placement of pipe in the trench, each pipe or fitting shall be thoroughly cleaned of any foreign substance, which may have collected thereon, and shall be kept clean at all times thereafter. For this purpose, the openings of all pipes and fittings in the trench shall be closed during any interruption to the WORK.

E. Pipe Laying: The pipe shall be installed in accordance with ANSI/AWWA C600.

F. Pipe shall be laid directly on the bedding material. No blocking will be permitted, and the bedding shall be such that it forms a continuous, solid bearing for the full length of the pipe. Excavations shall be made as needed to facilitate removal of handling devices after the pipe is laid. Bell holes shall be formed at the ends of the pipe to prevent point loading at the bells or couplings. Excavation shall be made as needed outside the normal trench section at field joints to permit adequate access to the joints for field connection operations and for application of coating on field joints.

G. Each section of pipes 24 inches in diameter and larger shall be laid in the order and position shown on the laying schedule. In laying pipe, it shall be laid to the setline and grade, within approximately one inch plus or minus. On grades of zero slopes, the intent is to lay to grade.

H. Where necessary to raise or lower the pipe due to unforeseen obstructions or other causes, the ENGINEER may change the alignment and/or the grades. Such change shall be made by the deflection of joints, by the use of bevel adapters, or by the use of additional fittings. However, in no case shall the deflection in the joint exceed the maximum deflection recommended by the pipe manufacturer. No joint shall be misfit any amount that will be detrimental to the strength and water tightness of the finished joint.

I. Except for short runs that may be permitted by the ENGINEER, pipes shall be laid uphill on grades exceeding 10%. Pipe that is laid on a downhill grade shall be blocked and held in place until sufficient support is furnished by the following pipe to prevent movement. All bends shall be properly installed as shown.

J. Shallow buried pipes and pipes underneath structures shall be concrete encased where noted in the Contract Documents.

K. Cold Weather Protection: No pipe shall be installed upon a foundation into which frost has penetrated or at any time that there is a danger of the formation of ice or penetration of frost at the bottom of the excavation. No pipe shall be laid unless it can be established that the trench will be backfilled before the formation of ice and frost occurs.

DRAFT

L. Pipe and Specials Protection: The openings of all pipe and specials shall be protected with suitable bulkheads to prevent unauthorized access by persons, animals, water, or any undesirable substance. At all times, means shall be provided to prevent the pipe from floating.

M. Pipe Cleanup: As pipe laying progresses, the pipe interior shall be kept free of all debris. Completely clean the interior of the pipe of all sand, dirt, mortar splatter and any other debris following completion of pipe laying, pointing of joints and any necessary interior repairs prior to testing and disinfecting the completed pipeline.

3.02 RUBBER GASKETED JOINTS

A. Rubber Gasketed Joints: Immediately before jointing pipe, the bell end of the pipe shall be thoroughly cleaned, and a clean rubber gasket lubricated with an approved vegetable-based lubricant shall be placed in the bell groove. The spigot end of the pipe shall be carefully cleaned and lubricated with a vegetable-based lubricant. The spigot end of the pipe section shall then be inserted into the bell of the previously laid joint and telescoped into its proper position. Tilting of the pipe to insert the spigot into the bell will not be permitted.

3.03 INSTALLATION OF PIPE APPURTENANCES

A. Protection of Appurtenances: Where the joining pipe is tape-coated, buried appurtenances shall be coated with cold-applied tape in accordance with ANSI/AWWA C209, Type II. Where pipe is encased in polyethylene sleeves, buried appurtenances shall also be encased in polyethylene.

B. Installation of Valves: All valves shall be handled in a manner to prevent any injury or damage to any part of the valve. All joints shall be thoroughly cleaned and prepared prior to installation. Adjust all stem packing and operate each valve prior to installation to insure proper operation.

C. All valves shall be installed so that the valve stems are plumb and, in the location, shown.

END OF SECTION

DRAFT

SECTION 40 0523 – STAINLESS STEEL PROCESS PIPE AND TUBING

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Furnish all materials, tools, equipment, transportation, labor, supervision, and incidentals required to supply, store, install, clean, and test the shop fabricated stainless steel pipe and fittings as shown on the drawings and as specified herein.

1.02 QUALIFICATIONS

A. All shop fabricated stainless steel pipe and fitting shall be furnished by a single manufacturer who is experienced, reputable, and qualified in the manufacture and fabrication of the items to be furnished. The pipe and fittings shall be shop fabricated and field installed in accordance with common industry wide practices and methods and shall comply with these specifications. Pipe and fittings shall be as manufactured and fabricated by Douglas Brothers, Portland, Maine or approved equal.

1.03 SUBMITTALS

A. Submit for review and approval piping layouts, schedules, shop fabrication drawings, specifications, catalog cuts and other data necessary to show conformance of the complete piping systems to the specifications. The submittal shall include dimensions, fittings, locations of equipment, valves, and appurtenances, joint locations and details, types and locations of supports, coordination with all other work and existing conditions, and all other pertinent technical specifications for the piping systems to be furnished.

B. Shop fabrication drawings shall show alloys, diameters, pipe wall thicknesses, flanges and other joint preparation details, dimensions, fittings and other appurtenances to be supplied.

PART 2 – PRODUCTS

2.01 PIPE AND FITTINGS

A. Pipe shall be manufactured from ASTM A240 annealed and pickled sheets and plates in accordance with ASTM A778 in type (304L and 316L) stainless steel. Pipe shall be manufactured to nominal pipe sizes as listed in ANSI B36.19, and shall have the following nominal wall thicknesses.

Pipe Size *(inches)*	Outside Diameter *(inches)*	Identification			Wall Thickness *- t - (inches)*	Inside Diameter *- d - (inches)*
		Steel		Stainless Steel Schedule No.

1. Standard wall - STD
2. Extra strong wall - XS
3. Double extra strong wall - XXS

B. Fittings shall be butt weld type manufactured in accordance with ASTM A774 of the same raw material and in the same thicknesses as the pipe. Long radius elbows up to 24 inches diameter shall be smoothflow; i.e., centerline to end of elbow equals 1.5 times the nominal pipe size. All short radius, special radius, and reducing elbows and long radius elbows greater than 24 inches diameter shall be of mitered construction with at least five (5) miter sections for 90 degree bends, three (3) mitered sections for 45- to 60-degree bends, and two (2) mitered sections for 30-degree and smaller bends. Reducers shall be straight tapered, cone type. Tees, crosses, laterals and wyes shall be shop fabricated from pipe.

C. The finish on the raw material, manufactured to ASTM A240 will be No. 1, HRAP (hot rolled annealed and pickled) or better. The finish on the completed pipe and fittings shall be as specified in ASTM A778 and A774, respectively.

DRAFT

2.02 FLANGES

A. Flanged pipe ends shall be made up of type (304L or 316L) stainless steel slip-on type rolled angle face rings drilled to ANSI 16.1 class 125 standard. The angle face ring thickness shall be equal to or greater than the wall of the pipe or fitting to which it is welded and it shall be continuously welded on both sides to the pipe or fitting. The angle leg shall not interfere with the flange bolt holes.

2.03 COUPLINGS

A. The piping will be shop prepared for pipe couplings where shown on the drawings or specified herein.
   1. Sleeve type couplings shall be of standard steel construction. Pipe shall be plain end with external weld beads ground smooth to insure proper gasket seating. For pressure pipe lines, sleeve coupling joints will be restrained by the use of harness rods connecting across the joint to flange lugs on adjacent flange joints. Where no adjacent flange joints exist, stainless steel harness lugs shall be welded to the pipe to receive the harness rods. All sleeve couplings, flange lugs, harness rods and hardware shall be provided.
   2. Arched band type couplings shall be stainless steel of equal of superior alloy and wall thickness as the pipe and will be Depend-O-Lok type as manufactured by Brico or equal. Couplings will be Fixed – FxF, Expansion – ExE, of Fixed by Expansion – FxE as noted on the drawings or as required. The pipe shall be plain end with external weld beads ground smooth and with S.S. restraining rings shop welded to the piping for fixed type couplings.
   3. Split type couplings shall be malleable iron or ductile iron. Gaskets shall be suitable for the service conditions. The pipe ends shall be roll grooved to the coupling manufacturers specifications. Where roll grooving is impractical, the pipe shall have heavy wall machine grooved pipe nipples or machined ring collars fully welded to the pipe or fitting. Nipples shall be taper or bored to the I.D. of the adjoining pipe to allow full weld penetration. Collars shall be welded on both sides to the piping.
   4. Expansion couplings shall be the flanged rubber arch type. Pipe flanges shall be provided for these couplings where shown on the drawing.

2.04 THREADED CONNECTIONS

A. Threaded pipe, gauge or instrument connections shall be made using stainless steel 150-pound threaded half couplings conforming to ASTM A182 or ASTM A276, shop welded to the pipe at the locations shown on the drawings.

2.05 JOINTS

A. Flanges shall be provided as a minimum at all flanged valves, meters, couplings, and other equipment. Couplings will be provided as shown on the drawings.

B. Pipe and fitting spools shall be shop fabricated to the fullest extent possible in 40’0” maximum lengths with 7’6” maximum widths for efficient commercial transport to the project site. Spools with fitting may exceed 40 ft so long as length allows commercial transport. Smaller pipe spools shall be provided with joints as shown on the drawings for special handling, installation and/or disassembly requirements.

C. All other joints required for shipping, handling and installation of the piping spools shall be (filed welds, flange joints, sleeve couplings, band couplings, or split couplings.)

2.06 BOLTING

A. The CONTRACTOR shall supply and install flange bolting.

DRAFT

PART 3 – EXECUTION

3.01 GENERAL

A. Welding of pipe spools shall be performed using welders and procedures qualified in accordance with ASME Section IX. Piping with wall thicknesses up to and including 11-gauge (0.125”) shall be welded with the TIG (GTAW) process. Heavier walls shall be beveled according to procedure, root pas welded with TIG (GTAW), and have subsequent weld passes performed using the TIG (GTAW), or Metallic Arc (SMAW) process. Filler metal of equal or superior ELC grades only shall be added to all welds to provide a cross section at the weld equal to or greater than the parent metal. Weld deposit shall be smooth and evenly distributed, weld reinforcement shall be as follows:

Wall Thickness	**Weld Reinforcement (Max)**	
	I.D.	O.D.
Up to 12 Ga. (0.109”)	1/16”	3/32”
11 Ga. (0.125”) to 3.16” Pl.	3/32”	1/8”
1/4” Plate & Larger	1/8”	3/16”

Concavity, undercut, cracks or crevices shall not be allowed. Butt welds shall have full penetration to the interior surface, and inert argon gas shielding shall be provided to the interior and exterior of the joint. Angle face rings shall be continuously welded on both sides to pipe or fitting. Exterior welds, such as the back side of face rings or flanges and structural attachments, may be welded by the MIG (GMAW) or Metallic Arc (SMAW) process; however, care must be taken to avoid melting through to the interior surface on very light walls. Excessive weld deposits, slag, splatter and projections shall be removed by grinding. Welds on gasket surfaces shall be ground smooth.

B. Spools shall be fabricated to the “Pipe Fabrication Institute” fabricating tolerances ES-3 (1981).

C. After shop fabrication into pip spools, exterior welds shall be manually scrubbed or brushed win non-metallic pads or stainless-steel wire brushes to remove weld discoloration, rinsed with clean water and allowed to air dry.

D. All fabricated piping shall have opening plugged and flanges secured for storage and/or transport after fabrication. All fabricated piping shall be piece marked with identifying number or codes which correspond to the layout and installation drawings. The marks will be located on the spools at opposite ends and 180 degrees apart.

E. Use extreme care to avoid the contact of any ferrous materials with the stainless-steel piping. All saws, drills, files, wire brushes, etc. shall be uses for stainless steel piping only. Pipe storage and fabrication racks shall be non-ferrous or stainless steel or rubber lined. Nylon slings or straps or ally chains or cable shall be used for handling stainless steel piping. After installation, wash and rinse all foreign matter from the piping surface. If rusting of embedded iron occurs, pickle the affected surface with Oakite Deoxidizer SS or ENGINEER-approved equal, scrub with stainless steel brushes, and rinse clean.

F. After installation, paint all steel or iron flange, couplings and appurtenances. Painting of the stainless steel is not required. Supply and install the stainless-steel piping with a consistently clean surface. Identifying spool piece marks shall be removed with paint thinner or solvents and the entire stainless-steel surface shall be washed with detergent and rinsed clean. Final marking of the pipeline will be in accordance with these Specifications

G. After installation, the piping system shall be tested according to these Specifications.

END OF SECTION

DRAFT

SECTION 40 0524 – STEEL PROCESS PIPING

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide steel pipe and appurtenances, complete and in place, in accordance with the Contract Documents.

PART 2 – PRODUCTS

2.01 PIPE MATERIAL

A. Water, Air, Fuel Gas, Oil, Steam, and Waste Service: Unless otherwise indicated, galvanized and black steel pipe shall conform to ASTM A53 – Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated Welded and Seamless or ASTM A106 – Specification for Seamless Carbon Steel Pipe for High Temperature Service, Grade B, and shall be Schedule 10, 20, 40 or 80, as indicated in the Plans. Galvanized steel pipe shall not be cement mortar lined unless so indicated.

2.02 PIPE JOINTS

A. Black steel pipe for general service shall have screwed ends with NPT threads, welded joints, or flanged joints. Screwed joints shall be made up with Teflon tape and welded joints may have butt-weld fittings, socket-weld fittings, or flanges. Where indicated, black steel pipe shall have grooved ends for shouldered couplings or plain ends for sleeve-type couplings.

B. Black steel pipe for chlorine or sulfur dioxide pressure service shall be socket-welded except where required to match mating fittings of vacuum regulator-check units, gas filters, valves, diaphragm units, gauges, and switches.

C. Galvanized steel pipe shall have screwed ends with NPT threads made up with Teflon tape. Where indicated, galvanized steel pipe shall have grooved ends for shouldered couplings or plain ends for sleeve-type couplings.

D. Where pressure conditions permit, black and galvanized steel pipe may have push-on joints for compression type fittings. For high-pressure service these joints shall be harnessed.

2.03 FITTINGS

A. Common Use: The following fittings shall be provided for galvanized or black steel pipe, as indicated in the Piping Schedule:

1. Pipe Fittings shall conform to ASTM A234/ A234M – Standard Specificaitons for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Service.
2. Threaded malleable iron fittings conforming to ANSI/ASME B16.3 - Malleable-Iron Threaded Fittings, Classes 150 and 300.
3. Threaded cast iron fittings conforming to ANSI/ASME B16.4 - Cast Iron Threaded Fittings, Class 125 and 250.
4. Forged steel socket welded fittings conforming to ANSI/ASME B16.11 - Forged Fittings, Socket - Welding and Threaded.
5. Butt welding fittings conforming to ANSI/ASME B16.9 - Factory-Made Wrought Steel Butt Welding Fittings, Schedule 10, 20, 40, 80, as indicated.
6. Threaded cast iron drainage fittings conforming to ANSI/ASME 16.12 - Cast Iron Threaded Drainage Fittings.
7. Flanged cast iron fittings conforming to ANSI/ASME B16.1 - Cast Iron Pipe Flanges and Flanged Fittings, Class 25, 125, 250 and 800.

DRAFT

8. Flanged steel fittings conforming to ANSI/ASME B 16.5 - Pipe Flanges and Flanged Fittings, Steel Nickel Alloy and Other Special Alloys.
9. Grooved ductile iron fittings with grooving dimensions conforming to ANSI/AWWA C606 - Joints, Grooved and Shouldered Type.
10. Compression-type steel fittings with armored Buna S gaskets for plain end pipe.

PART 3 – EXECUTION

3.01 INSTALLATION

A. General: All steel pipes shall be installed in a neat and workmanlike manner, properly aligned, and cut from measurements taken at the site, to avoid interferences with structural members, architectural features, openings, and equipment. Exposed pipes shall afford maximum headroom and access to equipment, and where necessary, all piping shall be installed with sufficient slopes for venting or drainage of liquids and condensate to low points.

B. Supports and Anchors: All piping shall be firmly supported with fabricated or commercial hangers or supports in accordance with these Specifications. Where necessary to avoid stress on equipment or structural members, the pipes shall be anchored or harnessed. Expansion joints and guides shall compensate for pipe expansion due to temperature differences.

C. Valves and Unions: Water, steam, condensate, gas, vacuum, and air supply piping to fixtures, groups of fixtures, and equipment shall be provided with a shutoff valve and union, unless the valve has flanged ends. Low points in water systems and drip legs in steam, gas, and air systems shall have drainage valves. Unions shall be provided at threaded valves, equipment and other devices requiring occasional removal or disconnection.

D. Branch Connections: Branch connections in horizontal runs of air and gas piping shall be made from the top of the pipe, to avoid drainage of condensate into the equipment.

3.02 PIPE PREPARATION

A. Prior to installation, each pipe length shall be carefully inspected, be flushed clean of any debris or dust and be straightened if not true. Ends of threaded pipes shall be reamed and filed smooth. All pipe fittings shall be equally cleaned before assemblage.

3.03 PIPE JOINTS

A. Threaded Joints: Pipe threads shall conform to ANSI/ASME B1.20.1 - Pipe Threads, General Purpose (inch), and shall be full and cleanly cut with sharp dies. Not more than three threads shall remain exposed after installation.

B. Welded Joints: Welded joints shall conform to the specifications and recommendations of ANSI/ASME B31.1 - Power Piping. All welding shall be done by skilled and qualified welders in accordance with these Specifications.

C. Grooved Joints: Grooves for grooved couplings and fittings shall be made with specially designed grooving tools to the Manufacturer's recommendations and conform to ANSI/AWWA C606. All grooves shall be clean and sharp without flaws, and the pipe ends shall be accurately cut at 90 degrees to the pipe axis.

D. Push on Joints: Push on joints and gasket installation shall be in accordance with the Manufacturer's recommendations and lubricants. Pipe ends shall be beveled to facilitate assembly. Lubricants shall be suitable for potable water service and shall be kept clean in closed containers.

DRAFT

3.04 INSPECTION AND FIELD TESTING

A. Inspection: All finished installations shall be carefully inspected for proper supports, anchoring, interferences and damage to pipe, fittings and coating. Any damage shall be repaired.

B. Field Testing: Prior to enclosure or burying, all piping systems shall be pressure tested as required in these Specifications, for a period of not less than one hour, without exceeding the tolerances listed. Where no pressures are indicated, the pipes shall be subject to 1-1/2 times the maximum working pressure. All test equipment, labor, materials and devices shall be furnished at no extra cost. For additional testing requirements, refer to applicable Sections of Division 33 – Utilities.

1. Leakage may be determined by loss of pressure, soap solution, chemical indicator, or other positive and accurate method. All fixtures, devices or other accessories which are to be connected to the lines and which would be damaged if subjected to the test pressure shall be disconnected and ends of the branch lines plugged or capped as required during the testing procedures.
2. All leaks shall be repaired and the system shall be re-tested until no leaks are found.

END OF SECTION

DRAFT

SECTION 40 0531 – PLASTIC PROCESS PIPING

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Furnish and install polyvinyl chloride, chlorinated polyvinyl chloride, polyethylene, and polypropylene pipe and fittings in accordance with the Contract Documents.

1.02 PIPE DESIGNATIONS:

A. The following plastic pipe designations are defined:

Designation	Definition
PVC	Polyvinyl Chloride
CPVC	Chlorinated polyvinyl chloride
PE	Polyethylene
PP	Polyproylene

1.03 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittals.

B. Submit materials list and catalogue data sheets naming each product to be used identified by manufacturer and type number.

1.04 QUALITY ASSURANCE REFERENCES

A. This section contains references to some or all of the following ASTM documents, most recent edition. They are a part of this section as specified and modified. In case of conflict between the requirements of this section and those of the listed documents, the requirements of this section shall prevail.

ASTM	Title
D1248	Polyethylene Plastics Molding and Extrusion Materials
D1784	Rigid Polyvinyl Chloride (PVC) Compounds and Chlorinated Poly Vinyl Chloride (CPVC) Compounds
D1785	Polyvinyl Chloride (PVC) Plastic Pipe, Schedules 40, 80, and 120
D2241	Polyvinyl Chloride (PVC) Pressure-Rated Pipe (SDR series)
D2464	Threaded Polyvinyl Chloride (PVC) Plastic Pipe Fittings, Schedule 80
D2466	Polyvinyl Chloride (PVC) Plastic Pipe Fittings, Schedule 40
D2467	Socket-Type Polyvinyl Chloride (PVC) Plastic Pipe Fittings, Schedule 80
D2564	Solvent Cements for Polyvinyl Chloride (PVC) Plastic Pipe and Fittings
D3034	Type PSM Polyvinyl Chloride (PVC) Sewer Pipe and Fittings
D4101	Propylene Plastic Injection and Extrusion Materials
F402	Practice for Safe Handling of Solvent Cements and Primers used for Joining Thermoplastic Pipe and Fittings
F437	Threaded Chlorinated Polyvinyl Chloride (CPVC) Plastic Pipe Fittings, Schedule 80
F438	Socket-Type Chlorinated Polyvinyl Chloride (CPVC) Plastic Pipe Fittings, Schedule 40
F439	Socket-Type Chlorinated Polyvinyl Chloride (CPVC) Plastic Pipe Fittings, Schedule 80
F441	Chlorinated Polyvinyl Chloride (CPVC) Plastic Pipe, Schedules 40 and 80
F477	Elastomeric Seals (Gaskets) for Joining Plastic Pipe
F493	Solvent Cements for Chlorinated Polyvinyl Chloride (CPVC) Plastic Pipe and Fittings

DRAFT

PART 2 – PRODUCTS

2.01 PVC PIPE

A. General: PVC materials for pipe and fittings shall conform to ASTM D1784, Cell Classification 12454-B. Pipe and fitting materials shall be specially formulated with sufficient UV protection additives to provide for long term outdoor exposure with no deleterious effects. Flanges shall be one-piece solid design or two-part van stone type which utilize the tapered, serrated face and full-face gasket technique for joining and are compatible with ANSIN16.5 Class 150 metal flanges. Unions shall be the O-ring type having interchangeable components with true union valves for maximum system versatility.

B. Schedule 40, 80, and 120: Pipe in accordance with ASTM D1785. Schedule 80 PVC socket type fittings shall conform to ASTM D2467. Schedule 40 PVC fittings shall conform to ASTM D2466. PVC solvent weld cement for socket connections shall meet the requirement of ASTM D2564/ Schedule 80 PVC threaded fittings shall conform to ASTM D2464.

2.02 POLYETHYLENE PIPE

A. Pipe shall meet the requirements of ASTM D3350, NSF14/61, and AWWA C901/C906.

2.03 POLYETHYLENE TUBING

A. Polyethylene tubing shall be extruded from high molecular weight resins and conform with ASTM D148 Type 1, Class A, Category 4, Grade E5. Stress crack resistance shall be per ASTM D1693. Tubing shall have a minimum working pressure of 120 psi. Fittings shall be polyethylene construction, same type as for polypropylene. All connections shall be leak proof.

2.04 POLYPROPYLENE TUBING

A. Polypropylene tubing shall be formulated of polypropylene conforming to ASTM D4101. Tubing shall have a working pressure of 300 psi. Fittings shall be FAST and TITE polypropylene fittings with SST grab ring and viton O-rings. PVC insert fittings and SST hose clamps may only be used as approved by the Engineer. All connections shall be leak proof.

2.05 BRAIDED VINYL TUBING

A. Install clear braided vinyl tubing for diluted polymer solution. A synthetic fiber braid shall be sandwiched between two layers of plasticized PVC. The nominal inside diameter shall be one (1) inch, wall thickness 5/32. Tubing shall be rated for a rated working pressure of 140 psi.

PART 3 – EXECUTION

3.01 INSTALLATION OF PIPE AND FITTINGS

A. General: In accordance with manufacturer's recommendations and these Specifications, whichever is more stringent.

B. Pipe and fittings shall be of the sizes indicated. Clean pipe interior of all foreign matter before installing. Pipe shall be square cut with fine tooth saw or other cutter or knife designed for use with plastic pipe. Remove burrs by smoothing edges with a knife, file, or sandpaper. Replace any section of pipe found to be defective or damaged with new acceptable pipe. Handle pipe carefully to prevent gouging or scratching. Any length of pipe has a gouge, scratch, or other permanent indentation more than 10 percent of the wall thickness in depth shall be rejected.

DRAFT

3.02 INSTALLATION OF SOLVENT WELD JOINT TYPE PIPE

A. In accordance with the recommendations of the pipe manufacturer and the following supplementary requirements:

1. Do not solvent weld joints if it is raining, if atmospheric temperature is below 40°F or above 90°F, if the pipe is exposed to direct sunlight.
2. Test fit dry pipe and fittings before applying cement. Pipe should enter socket without forcing at least one-third but not more than two-thirds the depth of socket. Fittings that are looser or tighter shall not be used. Thoroughly clean and dry the pipe end and socket of fitting with methyl, ethyl, ketone, acetone, or similar cleaner. Apply cement evenly to outside surface and end of pipe and inside surface of socket. Avoid excess application of cement but insure complete coverage of all bonding surfaces. Mark depth of socket on pipe to guide application of cement and insure full insertion of pipe. Insert pipe in socket, twisting pipe or fitting approximately ½ turn as pipe is being seated in socket. Make sure pipe is fully seated providing a bond between end of pipe and shoulder of socket. Immediately wipe excess cement from pipe leaving no more than a 1/8-inch fillet at fitting end. Hold assembled joint in place for approximately 15 seconds and allow to set for 30 minutes before moving. Avoid rough handling for 48 hours. Longer periods may be required in cold or wet weather.

3.03 INSTALLATION OF TUBING

A. Carefully slip tubing inside of PVC conduits without kinking or damaging the tubing. Tubing shall be continuous between boxes and equipment. No joints shall be allowed in conduits. Tubing shall be tested as specified in Section 40 0513 – Common Work Results for Process Piping for 72 hours with no visible leaks.

3.04 TESTING

A. In accordance with these Specifications.

END OF SECTION

DRAFT

SECTION 40 0551 – COMMON WORK RESULTS FOR PROCESS VALVES

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Furnish and install all valves, actuators, and appurtenances, complete and operable, in accordance with the Contract Documents. These specifications shall not apply to valves, actuators, and appurtenances to be provided by process equipment vendors as part of process systems or equipment already approved by the ENGINEER.

B. The provisions of this Section shall apply to all valves and valve actuators except where otherwise indicated. Valves and actuators in particular locations may require a combination of units, sensors, limit switches, and controls indicated in other Sections of the Specifications.

C. American Iron and Steel (AIS) requirement applies to this Section. All iron and steel products used in this project must be produced in the United States.

D. Where a valve is to be supported by means other than the piping to which it is attached, the CONTRACTOR shall obtain from the valve manufacturer a design for support and foundation that satisfies the criteria in the applicable Sections of Division 46 – Water and Wastewater Equipment. The design, including drawings and calculations sealed by an engineer, shall be submitted with the Shop Drawings. When the design is approved, the support shall be provided.

E. Unit Responsibility: A single manufacturer shall be made responsible for coordination of design, assembly, testing, and furnishing of each valve; however, the CONTRACTOR shall be responsible for compliance with the requirements of each valve section. Unless indicated otherwise, the responsible manufacturer shall be the manufacturer of the valve.

F. Single Manufacturer: Where two or more valves of the same type and size are required, the valves shall be furnished by the same manufacturer.

1.02 SUBMITTALS

A. General: Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

B. Shop Drawings: Shop Drawings shall contain the following information:
   1. Valve name, size, Cv factor, pressure rating and identification number (if any).
   2. Complete information on valve actuator, including size, Manufacturer, model number, limit switches, and mounting.
   3. Cavitation limits for all control valves.
   4. Assembly drawings showing part nomenclature, materials, dimensions, weights, and relationships of valve handles, handwheels, position indicators, limit switches, integral control systems, needle valves, and control systems.

C. Technical Manual: The Technical Manual shall contain the required information for each valve.

D. Spare Parts List: A Spare Parts List shall contain the required information for each valve assembly, where indicated.

1.03 QUALITY ASSURANCE

A. Valve manufacturer and model shall be as described in the Drawings or ENGINEER-approved equal.

1.04 SPARE PARTS

DRAFT

A. The CONTRACTOR shall furnish the required spare parts suitably packaged and labeled with the valve name, location, and identification number. The CONTRACTOR shall also furnish the name, address, and telephone number of the nearest distributor for the spare parts of each valve. Spare parts are intended for use by the OWNER after expiration of the correction of defects period.

PART 2 – PRODUCTS

2.01 PRODUCTS

A. General: Valves and gates shall be new and of current manufacture. Shut-off valves 6 inches and larger shall have actuators with position indicators. Buried valves shall be provided with valve boxes and covers containing position indicators and valve extensions. Manual shut-off valves mounted higher than 7 feet above working level shall be provided with chain actuators. Valves with no clear way to determine position shall be provided with position indicators. Stem extensions shall be provided on valves where operation of the valve cannot be easily accomplished from ground level.

B. Valve Actuators: Unless otherwise indicated, valve actuators shall be in accordance with these Specifications.

C. Valve Labeling: A label shall be provided on all shut-off valves and control valves except for hose bibs. The label shall be of 1/16-inch plastic or steel, minimum 2 inches by 4 inches in size and shall by permanently attached to the valve or on the wall adjacent to the valve as directed by the ENGINEER.

D. Valve Testing: As a minimum, unless otherwise indicated or recommended by the ENGINEER, valves 3 inches in diameter and smaller shall be tested in accordance with manufacturer's standard and 4 inches in diameter and larger shall be factory tested as follows:
   1. Hydrostatic Testing: Valve bodies shall be subjected to internal hydrostatic pressure equivalent to twice the water rated pressure of the valve. Metallic valves rating pressures shall be at 100°F and plastic valves shall be 73°F, or at higher temperature according to type of material. During the hydrostatic test, there shall be no leakage through the valve body, end joints, or shaft seals, nor shall any part of the valve be permanently deformed. The duration shall be sufficient time to allow visual examination for leakage. Test duration shall be at least 10 minutes.
   2. Seat Testing: Valves shall be tested for leaks in the closed position with the pressure differential across the seat equal to the water rated pressure of the valve. The duration of test shall be sufficient time to allow visual examination for leakage. Test duration shall be at least 10 minutes. Leakage past the closed valve shall not exceed 1 fluid ounce per hour per inch diameter for metal seated valves and drop-tight for resilient seated valves.
   3. Performance Testing: All valves shall be shop operated from fully closed to fully open position and reverse under no-flow conditions in order to demonstrate the valve assembly operates properly.

E. Valve Marking: Valve bodies shall be permanently marked in accordance with MSS SP25 - Standard Marking Systems for Valves, Fittings, Flanges, and Unions.

DRAFT

2.02 MATERIALS

A. General: Materials shall be suitable for the intended application. Materials not indicated shall be high-grade standard commercial quality, free from defects and imperfections that might affect the serviceability of the product for the purpose for which it is intended. Unless otherwise indicated, valve and actuator bodies shall conform to the following requirements:
   1. Cast Iron: Close-grained gray cast iron, conforming to ASTM A48 - Gray Iron Castings, Class 30, or to ASTM A126 - Gray Iron Castings for Valves, Flanges and Pipe Fittings.
   2. Ductile Iron: ASTM A536 - Ductile Iron Castings, or to ASTM A395 - Ferritic Ductile Iron Pressure-Retaining Castings for Use at Elevated Temperatures.
   3. Steel: ASTM A216 - Steel Castings, Carbon Suitable for Fusion Welding for High-Temperature Service, or to ASTM A515 - Pressure Vessel Plates, Carbon Steel, for Intermediate- and Higher-Temperature Service.
   4. Bronze: ASTM B62 - Composition Bronze or Ounce Metal Castings, and valve stems not subject to dezincification shall conform to ASTM B584 - Copper Alloy Sand Castings for General Applications.
   5. Stainless Steel: Stainless steel valve and operator bodies and trim shall conform to ASTM A351 - Steel Castings, Austenitic, for High-Temperature Service, Grade CF8M, or shall be Type 304 or 316 stainless steel.
   6. PVC: Poly Vinyl Chloride materials for valve body, flanges, and cover shall conform to Cell Classification 12454.
   7. CPVC: Chlorinated Poly Vinyl Chloride materials for valve body, flanges, and cover shall conform to Cell Classification 23447.
   8. NSF Standard 14 and 61: All materials shall be listed for use in contact with potable water, where applicable.

B. Bodies: Valve bodies shall be cast, molded (in the case of plastic valves), forged, or welded of the materials indicated, with smooth interior passages. Wall thicknesses shall be uniform in agreement with the applicable standards for each type of valve, without casting defects, pinholes, or other defects that could weaken the body. Welds on welded bodies shall be done by certified welders and shall be ground smooth. Valve ends shall be as indicated, and be rated for the maximum temperature and pressure to which the valve will be subjected.

C. Bonnets: Valve bonnets shall be clamped, screwed, or flanged to the body and shall be of the same material, temperature, and pressure rating as the body. The bonnets shall have provision for the stem seal with the necessary glands, packing nuts, or yokes. Below grade valves with above grade worm gear drives/handwheels or electric actuators shall include extended bonnets for mating up to the worm gear drives/handwheel or electric actuators.

D. Stems: Valve stems shall be of the materials indicated, or, if not indicated, of the best commercial material for the specific service, with variable stem packing, O-rings, Chevron V-type packing, or other suitable seal. Where subject to dezincification, bronze valve stems shall conform to ASTM B62, containing not more than 5 percent of zinc or more than 2 percent of aluminum, with a minimum tensile strength of 30,000 psi, a minimum yield strength of 14,000 psi, and an elongation of at least 10 percent in 2 inches. Where dezincification is not a problem, bronze conforming to ASTM B584 may be used, except that zinc content shall not exceed 16 percent.

E. Stem Guides: Stem guides shall be provided, spaced 10-feet on centers unless the manufacturer can demonstrate by calculation that a different spacing is acceptable. Submerged stem guides shall be 304 stainless steel.

DRAFT

F. Internal Parts: Internal parts and valve trim shall be as indicated for each individual valve. Where not indicated, valve trim shall be of Type 316 stainless steel or other best suited material.

G. Nuts and Bolts: Nuts and bolts on valve flanges and supports shall be in accordance with these Specifications.

H. Coatings: Valve coatings shall be in accordance with these Specifications, or as recommended by the valve manufacturer.

I. Environment: Submerged valves shall be of stainless-steel construction as recommended by the valve manufacturer or as approved by the ENGINEER.

2.03 VALVE ACCESSORIES

Valves shall be furnished complete with the accessories required to provide a functional system.

PART 3 – EXECUTION

3.01 VALVE INSTALLATION

A. General: Valves, actuating units, stem extensions, valve boxes, and accessories shall be installed in accordance with the Manufacturer's written instructions and as indicated. Gates shall be adequately braced to prevent warpage and bending under the intended use. Valves shall be firmly supported to avoid undue stresses on the pipe.

B. Access: Valves shall be installed with easy access for actuation, removal, and maintenance and to avoid interference between valve actuators and structural members, handrails, or other equipment.

C. Valve Accessories: Where combinations of valves, sensors, switches, and controls are indicated, the CONTRACTOR shall properly assemble and install such items so that systems are compatible and operating properly. The relationship between interrelated items shall be clearly noted on Shop Drawing submittals.

END OF SECTION

DRAFT

SECTION 40 0557 – ACTUATORS FOR PROCESS VALVES AND GATES

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide all valve and gate actuators and appurtenances, complete and operable, in accordance with the Contract Documents.

B. The provisions of this Section shall apply to all valves and gates, except where otherwise indicated in the Contract Documents.

C. Single Manufacturer: Where two or more valve or gate actuators of the same type or size are required, the actuators shall all be produced by the same Manufacturer.

1.02 SUBMITTALS

A. General: Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures and these Specifications. The shop drawing shall substantiate compliance with the Contract Documents requirements.

B. Shop Drawings: Shop Drawings of all actuators shall be submitted together with the valve and gate submittals as a complete package.

C. Operation & Maintenance Manuals: Operation and Maintenance Manual shall be furnished in accordance with these Specifications.

PART 2 – PRODUCTS

2.01 GENERAL

A. General: Unless otherwise indicated, all shut-off and throttling valves, and externally actuated valves and gates, shall be provided with manual or power actuators. All actuators shall be complete and operable with mounting hardware, motors, gears, controls, wiring, solenoids, hand wheels, levers, chains, and extensions, as applicable. All actuators shall be capable of holding the valve in any intermediate position between fully open and fully closed without creeping or fluttering.

B. Manufacturers: Where indicated, certain valves and gates may be provided with actuators manufactured by the valve or gate Manufacturer. Where actuators are furnished by different manufacturers, coordinate selection to have the fewest number of manufacturers possible.

C. Materials: All actuators shall be current models of the best commercial quality materials and liberally sized for the maximum expected torque. All materials shall be suitable for the environment in which the valve or gate is to be installed.

D. Mounting: All actuators shall be securely mounted by means of brackets or hardware specially designed and sized for this purpose and of ample strength. The word "open" shall be cast on each valve or actuator with an arrow indicating the direction to open in the counter-clockwise direction. All gear and power actuators shall be equipped with position indicators. Where possible, manual actuators shall be located between 48 and 60 inches above the floor or permanent working platform.

E. Standard: Unless otherwise indicated and where applicable, all actuators shall be in accordance with ANSI/AWWA C540 - AWWA Standard for Power-Actuating Devices for Valves and Sluice Gates.

F. Functionality: Electric, pneumatic, and hydraulic actuators shall be coordinated with the power requirements of these Specifications.

DRAFT

2.02 MANUAL ACTUATORS

A. General: Unless otherwise indicated, all valves and gates shall be furnished with manual actuators. Valves in sizes up to and including 8 inches shall have direct acting lever of the Manufacturer's best standard design. Larger valves and gates shall have gear-assisted manual handwheel actuators, with an operating pull of maximum 60 pounds on the rim of the handwheel. All buried and submerged gear-assisted valves, all gates, all gear-assisted valves for pressures higher than 250 psi, all valves 30 inches in diameter and larger, and where so indicated, shall have worm-gear actuators, hermetically-sealed and grease-packed, where buried or submerged. All other valves 10 inches to 24 inches in diameter may have traveling-nut actuators, worm-gear actuators, spur- or bevel-gear actuators, as appropriate for each valve.

B. Buried Valves: Unless otherwise indicated, all buried valves shall have extension stems (or bonnets where shown on the plans) to grade, with square nuts or floor stands, position indicators, and cast-iron or steel pipe extensions with valve boxes, covers and operating keys. Where so indicated, buried valves shall be in cast-iron, concrete, or similar valve boxes with covers of ample size to allow operation of the valve actuators. Covers of valve boxes shall be permanently labeled as requested by the OWNER, or the ENGINEER. Wrench-nuts shall comply with AWWA C500 - Metal Seated Gate Valves for Water Supply Service, and a minimum of 2 operating keys, or one key per 10 valves, whichever is greater, shall be furnished to the OWNER.

C. Buried and Submerged Actuators: Buried and submerged valve actuators and gear assemblies shall be provided with Type 304 and/or 316 stainless steel bolting and trim, and shall be rated for continuous submerged service. If buried, the valve actuator shall be suitable for a submerged service at a water depth of 10 feet (minimum). If submerged, the actuator shall be suitable for a submerged service at a water depth of 30 feet (minimum).

2.03 ELECTRIC ACTUATORS

A. General: The CONTRACTOR shall verify with the vendor/manufacturer that each electric actuator (supplied and installed) delivers the necessary torque requirements for opening and closing the corresponding valve that it is actuating, and provide supporting documentation to the ENGINEER. Electric actuators shall be suitable as specified on the plans for use on 115VAC, 1-phase, or 480 VAC, 3-phase, 60Hz power supply. The actuator shall include an internal high-torque reversible electric motor, terminal block, heat-treated alloy steel gearing, a minimum of two (2) 1/2" NPT conduit connections, reduction gearing, valve stem drive nut/bushing, position limit switches, mechanical overload torque switches, ductile iron gear case, automatic de-clutchable handwheel, and a two- (2-) year original manufacturer’s warranty. In order to maintain the integrity of the enclosure, setting of the torque levels, position limits and configuration of the indication contacts, etc. shall be carried out without the removal of any actuator covers over an Infrared interface. Sufficient commissioning tools shall be provided with the actuators and must meet the enclosure protection and certification levels of the actuators. Commissioning tools shall not form an integral part of the actuator and must be removable for secure storage/authorized release. In addition, provision shall be made for the protection of configured actuator settings by a means independent of access to the commissioning tool. The actuator shall include a device to ensure that the motor runs with the correct rotation for the required direction of valve travel irrespective of the connection sequence of the power supply.

DRAFT

B. Actuator Sizing: The actuator shall be sized to guarantee valve closure at the specified differential pressure and temperature. The safety margin of motor power available for seating and unseating the valve shall be sufficient to ensure torque switch trip at maximum valve torque with the supply voltage 10% below nominal. For linear operating valves, the operating speed shall be such as to give valve closing and opening at approximately 10-12 inches per minute unless otherwise noted. Actuator manufacturer/vendor shall confirm appropriate opening and closing times for the valve the actuator is operating.

C. Gears: Motor speed reduction shall be by means of a gear train consisting of hardened steel spur gears and self-locking worm and worm gear set. The worm shall be heat treated alloy steel and have worm thread surface rolled or ground. The worm gear shall be bronze. Non-metallic gears in the power train are not acceptable.

D. Environmental: Actuators shall be suitable for indoor and outdoor use. The actuator shall be capable of functioning in an ambient temperature ranging from -33°C (-27°F) to 70°C (158°F), up to 100% relative humidity. Actuators for hazardous area applications shall meet the area classification, gas group and surface temperature requirements specified in data sheet.

E. Rotating Components: All gearing and shafting shall be supported on anti-friction bearings. All thrust components shall be supported by use of tapered roller bearings.

F. Handwheel Drive: The actuator shall be furnished with a handwheel located in a 90-degree plane from the actuator output drive, with a maximum rim pull requirement of 60 pounds for valve travel loads. An external manual declutch lever shall be included to place actuator in the manual mode. The lever shall not require more than a 10-pound force to engage even when the valve has been tightly seated. The lever is to be padlockable in either handwheel or motor mode. Operation by motor shall not cause the handwheel to rotate, or operation of the handwheel shall not cause the motor to rotate. Handwheel shall operate in the clockwise direction to close.

G. Lubrication: All gearing and bearings shall be grease lubricated and suitable for year-round service based on prevailing ambient temperature conditions.

H. Electric Motors: The motor shall an integral part of the actuator, designed specifically for valve actuator applications. It shall be a low inertia high torque design, class F insulated with a class B temperature rise giving a time rating of 15 minutes at 40°C (104°F) at an average load of at least 33% of maximum valve torque. Temperature shall be limited by thermostats embedded in the motor end windings and integrated into its control. Electrical and mechanical disconnection of the motor should be possible without draining the lubricant from the actuator gear case.

I. Motor Protection: Protection shall be provided for the motor as follows:
   1. Stall – the motor shall be de-energized within 8 seconds in the event of a stall when attempting to unseat a jammed valve.
   2. Over temperature – thermostat will cause tripping of the motor. Auto-reset on cooling
   3. Single phasing – lost phase protection.
   4. Direction – phase rotation correction.

J. Limit Switches: Limit switches shall be geared to the drive mechanism and in step with actual valve position at all times, whether operation is by power or manual mode. Switches shall be activated by a rotor type design. Contacts shall be silver and have a rating of 10 amps at 120/230 VAC, a minimum of (3) N.O. and (3) N.C. contacts shall be provided for each direction of travel. Should auxiliary limit switch contacts for intermediate switch positions be required, please specify here. The limit switch gear mechanism shall be enclosed to prevent entrance of foreign matter or wire entanglement. Use of cams or screws to set switches or designs requiring battery back-up methods to ensure position

DRAFT

control in the event of a power failure, are unacceptable. Torque and turns limitation to be adjustable as follows:

1. Position setting range – multi-turn: 2.5 to 100,000 turns, with resolution to 15 deg. of actuator output.
2. Position setting range – direct drive part turn actuators: 90° +/-10°, with resolution to 0.1 deg. of actuator output.
3. Torque setting: 40% to 100% rated torque.

K. Torque Switches: The actuator shall include a variable torque switch to interrupt the motor power circuit when an obstruction is encountered in either direction of travel or when torque seating of valves is required for tight shut off. The torque switch shall have a calibrated dial for adjustment and have means to ensure maximum actuator rating is not exceeded. Contacts shall have the same construction and rating as the limit switch. Mechanical torque springs for load control shall be field replaceable without need of actuator dismantling or removal of the worm assembly. Torque control designs which do not employ mechanical torque springs are unacceptable.

L. Position Indication: Local position indication for quarter turn valves shall be by an indicator dial located on the gear operator and graduated in 25-degree increments. For rising stem multi-turn actuators, a dial window indicator shall be located on the limit switch compartment cover and labeled 0 to 100% open and graduated in 1% increments. Four contacts shall be provided which can be selected to indicate any position of the valve. Provision shall be made for the selection of a normally closed or open contact form. Contacts shall maintain and update position indication during hand wheel operation when all external power to the actuator is isolated. The contacts shall be rated at 5A, 250V AC, 30V DC. As an alternative to providing valve position any of the four above contacts shall be selectable to signal one of the following:

1. Valve opening, closing, or moving
2. Thermostat tripped, lost phase
3. Motor tripped on torque in mid travel, motor stalled
4. Remote selected
5. Actuator being operated by hand wheel
6. Provision shall be made in the design for an additional 4 contacts having the same functionality. Provision shall be made in the design for the addition of a contactless transmitter to give a 4-20mA analogue signal corresponding to valve travel for remote indication when required. The transmitter will auto range to the set limits.

M. Integral Starter and Transformer: The reversing starter, control transformer and local controls shall be integral with the valve actuator suitably housed to prevent breathing and condensation. The starter shall be suitable for 1,200 starts per hour (minimum) and of rating appropriate to motor size. The controls supply transformer shall be fed from two of the incoming three phases and incorporate overload protection. It shall have the necessary tappings and be adequately rated to provide power for the following functions:

1. Energization of the contactor coils.
2. 24V DC output for remote controls.
3. Supply for all the internal electrical circuits.

2.04 ELECTRICAL CONTROLS

A. At a minimum, the actuator shall be furnished with power and control terminal strips, limit switches, torque switches, all housed in a control compartment. The rectangular enclosure shall have a bonded O-ring seal and a hinged cover. Cover bolting shall be captive stainless hex head screws.

B. Controls shall be an integrated modular package, completely wired and be easily removable or replaceable, as a complete package, by removal of four (4) captive screws.

DRAFT

Motor leads and power supply leads will be terminated to the terminal strips located on the modular control package. Power supply terminals (5 points minimum) and control supply terminal (48 points minimum) shall be physically isolated from each other to protect against transient voltages. The terminal strips shall be completely shrouded with a high impact resistant plastic to avoid accidental terminal contact by personnel. The module is to include a snubber circuit to provide control voltage protection for switches and electronic modules for voltage surges. All electrical components of the modular package, such as reversing contactor, transformer, etc., shall be unidirectional plug connected to provide easy removal and replacement without concerns for proper wiring connections. All optional control requirements such as modulating control, 2-wire control, interposing relays, etc. shall be plug-in printed circuit type boards having gold plated contact connectors. Unless otherwise specified, all PC boards must be temperature rated -40°C to +70°C. Ease of replacement or upgrading shall be of paramount consideration.

2.05 OPEN-CLOSE SERVICE CONTROLS

A. Reversing Contactor: Control voltage shall be 120 volts, 50 or 60 Hz. N.O. Seal-in contacts for momentary contact pushbutton control and N.C. contacts for electrical interlock shall be supplied. The following options are available with the integral reversing starter: Motor Overload Relays, Auxiliary Starter Contacts, Phase Sentry.

B. Control Power Transformer: The transformer assembly shall provide 120, 18 and 12 Vac. It shall be epoxy impregnated and encapsulated to prevent moisture incursion and shall be completely wired as an assembly and plug connected to the modular package.

C. Pushbuttons: Each actuator shall be supplied with open-stop-close pushbuttons furnished integrally mounted. Pushbuttons shall be double O-ring sealed and include a protective silicone boot. Seal material shall be resistant to ozone and ultraviolet light. When integrally mounted pushbuttons are specified, the design shall permit operation of the buttons when the electrical enclosure cover is open.

D. Indicating Lights: The actuator shall include two (2) long life high intensity LED type pilot lights to indicate open, closed, and intermediate valve position (both lights on). Red shall indicate valve open and green shall indicate valve closed. An additional LED pilot light shall be furnished to indicate power is on. A fourth optional LED pilot light is available to indicate torque switch trip.

E. Selector Switch: The actuator shall include a 3-position selector switch, for local (hand)-off-remote (auto) control. If specified, the switch shall be padlockable in any position. A tumbler keylock option may be specified.

2.06 ACTUATORS FOR MODULATION DUTY

A. The starter shall be suitable for 1,200 starts per hour.

B. Control Module: For modulating applications, the control module shall be of the electronic solid-state type to control the position of an AC valve operator motor. Provide input/output per Contract Documents, including but not limited to: 4-20 mA analog input position control from PLC; 4-20 mA analog output position indication to PLC; and digital outputs to PLC for motor running, ready mode, remote mode, over torque condition and trouble. Position control shall be within +/- 2 percent of signal position.

Input Signal: The control unit shall be suited to receive an input set-point from an external 4-20 mA DC source or 120 VAC OPEN and CLOSE digital commands to remotely operate the motor in the forward and reverse directions, whichever is required for modulating purposes.

DRAFT

C. The controller shall compare the input signal with the feedback signal to produce an error signal. The controller shall cause the motor to move the valve or gate in a direction so as to reduce the magnitude of the error signal. The controller positioning accuracy shall be plus or minus 1.0 percent of travel or better. Operating speeds, unless otherwise stated, shall be 90 degrees per minute for rotary operators. It shall be possible to adjust Dead Band (0-9.9% of travel) and a Motion Inhibit Timer (2-99 secs), and select action upon loss of signal.

2.07 MANUFACTURERS

A. Beck, Rotork - IQT, or ENGINEER-approved equal.

PART 3 – EXECUTION

3.01 SERVICES OF MANUFACTURER

A. Field Adjustments: Field representatives of manufacturers of valves or gates with pneumatic, hydraulic, or electric actuators shall adjust actuator controls and limit-switches in the field for the required function.

B. Performance Test Certificate: Each actuator must be performance tested and individual test certificates shall be supplied free-of-charge. The test equipment should simulate a typical valve load and the following parameters should be recorded:
   1. Current at maximum torque setting
   2. Torque at maximum torque setting. Torque curves for both open and close strokes for each MOV shall be provided.
   3. Flash Test Voltage
   4. Actuator Output Speed or Operating Time; in addition, the test certificate should record details of specification, such as closing direction, and wiring diagram code number.

3.02 INSTALLATION

A. All valve and gate actuators and accessories shall be installed in accordance with these Specifications. Actuators shall be located to be readily accessible for operation and maintenance, without obstructing walkways. Actuators shall not be mounted where shock or vibrations will impair their operation, nor shall the support systems be attached to handrails, process piping, or mechanical equipment.

B. Coordinate all installation with the valve supplier. The supplier shall be responsible for fabrication, coordination, and assembly for a complete operating system.

C. Inspection, Startup, and Field Adjustment: An authorized representative of the Manufacturer shall visit the site and witness the following:
   1. Installation of the equipment for not less than 1 day.
   2. Inspection, checking, and adjusting the equipment for not less than 1 day.
   3. Startup and field-testing for proper operation for not less than 1 day.

END OF SECTION

DRAFT

SECTION 40 0560.10 – SLIDE, SLUICE, WEIR, AND CHANNEL STOP GATES

PART 1 – GENERAL

1.01 REQUIREMENTS

The CONTRACTOR shall provide sluice, slide, weir-type gates, stop logs, and appurtenances, complete and operable, in accordance with the Contract Documents. The contractor shall furnish all labor, materials, equipment and incidentals required to install and field test the gates shown on the Contract Drawings and specified herein.

1.02 REFERENCES

A. Definitions

Design Head: The maximum differential head that will be applied on the gate under worst case conditions, measured from the gate invert.

Seating Head: Head applied on a wall mounted gate, in the direction that pushes the gate against the wall it is installed on.

Unseating Head: Head applied on a wall mounted gate in the direction pulling the gate away from the wall it is installed on.

Operating Head: The highest differential head that is to be applied on the gate when it needs to be operated, measured from the gate invert.

B. Reference Standards

1.03 SUBMITTALS

A. Drawings

The slide gates manufacturer shall submit, for acceptance by the purchaser, general arrangement drawings of the equipment supplied under this section. Drawings must indicate all dimensions that will allow the contractor to ensure coordination with dimensions of the installation environment. Drawings will also show sufficient details to determine compliance with the requirements, including the stainless steel plate thickness used for all components. Drawings shall also include certification that the slide gates supplied meet all requirements of AWWA C561-12.

DRAFT

B. Design Calculations

The gate manufacturer shall submit, for acceptance by the purchaser, design calculations demonstrating compliance with the design requirements of these specifications and those of AWWA C561-12. In particular, calculations shall be submitted for the following gate components where applicable:

- Slide
- Seat contact pressure
- Frame
- Yoke
- Stem, stem connection
- Lifting nut
- Manual actuator operating force
- Electric actuator load
- Anchors

C. Factory Testing/ Test Reports

The gates shall be tested in the factory for leakage and for operating force. Leakage shall be measured at the unseating design pressure. Operating force shall be measured with the gate in vertical position, with and without the design pressure. Factory test reports shall be available on request for all gates supplied.

D. Cleaning

Before assembly, slide, frame, yoke, pedestal and all others welded parts shall be completely cleaned by abrasive blast using single-use glass bead or crushed glass, never recycled. All the surfaces of all parts shall be cleaned, in order to remove all contaminants and allow the stainless steel surface to passivate by spontaneously forming a chemically resistant surface when exposed to air. Cleaning only the welds by paste or other chemical means is not an acceptable method to remove all contaminants from the fabrication process and achieve the required level of passivation per ASTM A380

E. Installation, Operation and Maintenance Manual

The gate manufacturer shall provide a manual containing the instructions for installation, operation and maintenance of the slide gates. The manual shall also contain the detailed information on the terms of the 5-year warranty on the products.

1.04 QUALITY ASSURANCE

A. Qualifications

The gates supplied under this section shall be standard products of a manufacturer regularly engaged in the design and manufacturing of water control gates. The specifications are based on AQUANOX series S Slide Gates manufactured by ISE Metal Inc.

B. Standards and Certifications

The gates supplied under this section shall conform to all requirements of ANSI/AWWA C561-12. The slide gate manufacturer must maintain an ISO-9001 certification and also a company certification for its welding operations from the CWB or AWS.

1.05 DELIVERY

The manufacturer shall use due and customary care in preparing the gates and accessories for shipment. Self- contained frame gates shall be shipped assembled with stem and manual operator. When shipping several gates together, every item shipped separately must be clearly marked to the gate it belongs to.

DRAFT

1.06 WARRANTY

The slide gates and manual operating accessories shall be covered by a five (5) year warranty from the manufacturer against defects in materials, design and workmanship. The warranty period will start from the date of delivery of the equipment to the installation site.

PART 2 – PRODUCTS

2.01 SLIDE, SLUICE, CHANNEL AND WEIR GATES

A. Description

1. Slide gates shall be upwards opening of the 3 or 4 sides sealing type designed for submergence in water or wastewater applications. They shall have flow control capability by allowing only flow through the open area in partial opening situations. As specified in the Contract Documents, each gate shall be either open-frame or self-contained-frame design and either rising or non-rising stem configuration.
2. Sluice gates shall be upwards opening of the 4 sides sealing type designed for submergence in water or wastewater applications. They shall have flow control capability by allowing only flow through the open area in partial opening situations. As specified in the Contract Documents, each gate shall be either open-frame or self-contained-frame design and either rising or non-rising stem configuration.
3. Weir gates shall be downward opening with sealing on 3 sides, designed for water or wastewater applications. They shall have level control capability by allowing flow only over the top of the gate slide. As specified in the gate schedule, each gate shall be either open-frame or self-contained-frame design and either rising or non-rising stem configuration.
4. Channel gates shall be upwards opening of the 3 sides sealing type designed for water or wastewater applications. They shall have flow control capability by allowing only flow through the open area in partial opening situations. As specified in the gate schedule, each gate shall be either open-frame or self-contained-frame design and either rising or non-rising stem configuration.

B. General

1. Gates supplied under this section shall be manufactured by Fontaine-Aquanox, Golden Harvest, Rodney Hunt, Whipps, or ENGINEER-approved equal.
2. Gates shall be as specified herein and have the characteristics and dimensions shown on the Contract Drawings.
3. Leakage shall not exceed 0.05 gpm/ft of wetted seal perimeter in seating head and unseating head conditions.
4. The gate shall utilize self-adjusting seals. Due to the difficulty of accessing gates when they are in service, gates that utilize adjustable wedges, wedging devices or pressure pads are not acceptable.
5. All structural components of the frame and slide shall be fabricated of stainless steel having a minimum thickness of 1/4-inch and shall have adequate strength to prevent distortion during normal handling, during installation and while in service.
6. Gate frames shall be shipped fully assembled with the invert member welded to the side frames and the slide installed in the frame unless the overall width of the slide gate exceeds 96 inches or the overall height of the slide gate exceed 25 feet.
7. All welds shall be performed by welders with AWS D1.6 certification.
8. Finish: Mill finish on stainless steel. Welds shall be sandblasted to remove weld burn and scale. All iron and steel components shall be properly prepared and shop coated with a primer.
9. Materials:

C. Performance and Design

1. Slide

   The slide consisting of a flat plate with welded reinforcing ribs shall be designed to withstand the design head specified in the gate schedule with a maximum deflection of L/360 of the gate opening width or 1/16 in (1.6mm) whichever is less and with stresses in the slide limited to 25% of the ultimate tensile, compressive, and shear strength and 50% of the yield strength, whichever is less. Minimum material thickness of all members of the slide shall be ¼ in (6mm). Maximum deflection for weir gates shall be L/720 of the gate opening width.

2. Frame

   The gate frame and thimble shall be made of formed plates or structural members creating the clear opening of the specified dimensions in a rigid one-piece unit. The mounting and bolting flange of the frame to the wall shall be separate and independent from the seating and sealing plane of the slide. The bottom of the frame will be of the flush invert type. Stresses in the frame under design head shall not exceed 25% of the ultimate tensile, compressive, and shear strength and 50% of the yield strength, whichever is less. Wall thimbles shall be supplied as indicated on the Contract Document. Minimum material thickness of all members shall be ¼ in (6mm).

   For Channel Gates:

   a. In wall mounted instances (CW), the mounting and bolting flange of the frame to the wall shall be separate and independent from the seating and sealing plane of the slide.
   b. In the cases where the frame is mounted to the side walls of a channel (surface or embedded), the frame shall de designed in such a manner so that access is provided to the side seal retainer bolts.

3. Yoke

DRAFT

Gates specified as self-contained design shall include a yoke consisting of a beam made of formed plates or structural members mounted on top of the frame to permit mounting of the actuator with proper stem alignment by the use of slotted holes in both direction. The yoke shall be sized to limit deflection under the design load to a maximum of L/360 of the gate opening width. The yoke design load must be considered as the vertical thrust generated by a 40 lbs force on the crank or handwheel (for a manual actuator) or by the actuator in locked rotor condition (for an electric actuator). Per AWWA C561-12, the stresses in the yoke generated by the design load shall not exceed (for a manual actuator) 25% of the ultimate tensile, compressive, and shear strength and 50% of the yield strength, whichever is less, or (for an electric actuator) 2/3 of the yield strength.

4. Guiding and Seating

   The slide shall seat and travel on guides made of ultra high molecular weight polyethylene (UHMWPE) designed to perform for the life of the slide gate without replacement. The slide shall be kept in positive contact with the guides on both its upstream and downstream faces, all along its travel in the gate clear opening by an elastomeric cord. Above the gate clear opening, the guides shall extend high enough to ensure that the slide is supported on a minimum of 2/3 of its height when fully opened. The low friction guides shall be secured to the frame by bolted retainers allowing factory adjustment of the contact pressure with the slide. The surface of contact on the side seats shall be large enough to limit the stress under the design head to 600 psi (4137 KPa) without considering the top and bottom seats as load bearing.

5. Sealing

   The guides combined with the elastomeric cord will provide sealing on both sides of the opening. Sealing at the top section of the gate will also be achieved with a UHMWPE seat maintained in contact by an elastomeric cord. At the gate invert, the slide shall close on a flush invert rubber seat/seal secured in the bottom member of the gate frame. Under the design seating or unseating head specified in the gate schedule, the slide gates shall restrict leakage to a maximum of 0.05 gpm/ft of clear opening perimeter. Manufacturer shall be able to demonstrate that the sealing system will retain its performance even after 25,000 operating cycles.

6. Stem Connection

   In the case of gates with rising stems, the stem or its extension will be connected to the slide by means of a pinned connection. For gates with non-rising stems, the connection to the slide shall be by means of a threaded thrust nut matching the stem threads. Stem connection design shall limit the stress under the design load to a maximum of 25% of the ultimate tensile, compressive, and shear strength and 50% of the yield strength. The stem connection design load shall be the thrust and torque developed when a 40lbs efforts is applied the crank or handwheel (for a manual actuator), or 1.5 times the thrust and torque developed with the actuator in stalled condition (for electric motors).

7. Stem

   The stem configuration shall be rising or non-rising according to the type specified in the schedule. The threads shall be machine rolled ACME left hand threads with double entry to minimize the number of turns required for operation and provide gate opening by counterclockwise rotation of the manual actuator. Surface finish of the machined threads will be 32 micro inch (0.813 µm) or better. For manually operated gates with rising stem, the stem shall be equipped with an adjustable stop collar to prevent over-closing the gate and potentially damaging components.

   The stem shall be sized so that its critical buckling load (as determined by the Euler column formula) is higher than the design compression load, defined as the vertical force developed by a 40lbs effort applied on the crank or handwheel (for a manual

DRAFT

actuator), or 1.5 times the thrust and torque developed with the actuator in stalled condition (for electric motors).

8. Couplings
   The required stem extensions shall be joined together or to the threaded stem by means of a bolted connection, passing through both pipe and stem.
9. Stem guides
   Guides will be provided as required to meet the stem buckling design criteria and positioned per the manufacturer's recommendations to ensure that the length to radius of gyration ratio (L/R) does not exceed 200. The guides shall incorporate a UHMWPE bushing supported by a stainless steel wall bracket adjustable in both horizontal directions.

D. Manual Actuators

1. Operation
   Manual actuator of the proper type and mounting location, as listed in the gate schedule or shown on the drawings, shall be provided by the gate manufacturer. The effort required on the manual device to operate the gate under the maximum specified seating and unseating heads by using a maximum effort of 40 lb on the crank or handwheel, and shall be able to withstand, without damage, an effort of 80 lb. Indication of the opening direction of rotation shall be clearly marked in a permanent manner on the handwheel or crank.
2. Handwheels
   The handwheel shall be removable and have a minimum diameter of 16" (406mm). It shall drive the lift nut directly or via the extension pipe of self-contained gates or it shall engage the input shaft of the gearbox, when specified.
3. Crank Operated Gearboxes
   The gearbox, comprising a lift nut and thrust bearing assembly (as described below), shall be fully enclosed in a casted housing with seals around the lift nut and around the input pinion shaft. The input pinion shaft shall be supported on ball or tapered roller bearings. The removable crank, equipped with a revolving grip shall engage on the input shaft of the gearbox and have a minimum radius of 12" (305mm).
4. Square Nut Actuator
   The square nut shall be 2" x 2" (50mm x 50mm) designed for mounting in the floor box supplied by the contractor and designed to accommodate a standard T-wrench. T-Wrench shall be supplied by the gate manufacturer in the quantity required by the gate schedule.
5. Actuator Lift Nut and Thrust Bearings
   All gates shall include a thrust bearing assembly comprising a threaded bronze lift nut to engage the operating stem. This assembly must be enclosed in a machined stainless steel housing or be an integral part of the gearbox when supplied. Needle roller thrust bearings shall be provided above and below the lift nut to support the operating efforts in closing and opening the gate. The length of thread engagement shall be sufficient to ensure that the maximum pressure on the projected area of thread contact does not exceed 2000 psi (13,8 MPa) at normal maximum operating load and that the PV (pressure velocity) factor does not exceed 30,000. The PV factor is calculated by multiplying the pressure on the projected area of thread contact in psi by the surface velocity in ft/min at the pitch diameter of the threads. For non-rising stem gates, the actuator lift nut shall be keyed to prevent rotation relative to the threaded stem.
6. Mounting
   The thrust bearing assembly or the gearbox shall be mounted on the yoke of the gate for all gates specified as self-contained or on a pedestal for gates specified as non-self-contained. Pedestal height shall be such that the handwheel or input shaft of

DRAFT

the gearbox is located approximately 36” (900mm) above the operating floor. Where shown on the drawings or when specified, a wall bracket shall be supplied to support the pedestal. The pedestal wall bracket shall be designed and supplied by the gate manufacturer to ensure that it can resist to all operating efforts of the gate based on the same design calculation criteria used for the yoke.

7. Stem Cover
   All rising stem gates, weather manual or motorized shall be equipped with a clear stem cover with a closed top and ventilation hole. The cover shall bear graduation in both inches and centimeters to indicate the position of the gate.

E. Motorized Actuators

1. When required by the gate schedule or the drawings, motorized actuators shall be supplied in accordance with these Specifications.

F. Anchor Bolts

1. The quantity, size and location of anchor bolts shall be determined by the gate manufacturer and shown on the submittal drawings. The minimum required load capacity of the anchors used for design must also be indicated on the drawings.

2.02 STOP LOGS

A. Description

The logs shall be designed for level control in water or wastewater applications, by stacking separate elements (logs) inside a frame, up to the desired height.

B. Materials

Frame	Stainless Steel	ASTM A240, grade 316L or 304L
Logs	Stainless Steel or Aluminum	ASTM A240, grade 316L or 304L or Aluminum ASTM B308 - Alloy 6061-T6
Guide Bars	Ultra-High Molecular Weight Polyethylene (UHMWPE)	ASTM D4020
Side P-Seals	Ethylene Propylene (EPDM)	ASTM D2000
Bottom Lip Seal	Ethylene Propylene (EPDM)	ASTM D2000
Wall Gasket (if CW mount)	Ethylene Propylene (EPDM)	ASTM D2000
Bolts and Hardware	Stainless Steel	ASTM F593, grade 316

C. Performance and Design

1. Logs
   The logs consisting of a flat plate with welded reinforcing ribs shall be designed to withstand the design head specified in the gate schedule with a maximum deflection of L/360 of the gate opening width or 1/16-in (1.6mm) whichever is less and with stresses in the slide limited to 25% of the ultimate tensile, compressive, and shear strength and 50% of the yield strength, whichever is less. Minimum material thickness of all members of the slide shall be ¼-in (6mm).
2. Frame
   The stainless steel frame having a U-shaped form is acting as a guide for the logs. The frame shall be constructed of structural members or formed plate. The frame shall be suitable for mounting on a concrete wall (CW) at the end of a channel, embedded inside a channel (FE) or mounted on a channel surface (EC). The frame configuration

DRAFT

shall be of the flush-bottom type. The bottom of the frame will be of the flush invert type. Minimum material thickness of all members of the frame shall be ¼-in (6mm).

3. Leakage
   Leakage shall not exceed 0.1 U.S. gallon per minute per foot of seal periphery under the design head.
4. Guiding, Seating, and Sealing
   Side P-seals shall limit leakage. The side seals shall be retained to the slide using bolted UHMWPE guide bars. The guide bars acts as gliding seats in order to ease the positioning of the slide in the frame and to reduce friction. Seals shall limit the leakage rate below the maximum specified. The bottom lip seal is attached along the bottom of the logs with a stainless steel retainer and provides sealing against the top of the logs directly underneath or the bottom section of the frame.
5. Lifting Device
   A stainless steel lifting device shall be supplied for each different log width in the project. The lifting device shall be designed to slide into the stop logs frame, while being suspended by the owner's lifting equipment. All components of the lifting device are designed to resist the load required to lift one log under the head equal to the tallest log in the stack, with conservative safety factors.

   The design of the lifting device must allow it to attach the upper log of the stack as it is lowered on it in the guide frame. When lowering logs into the frame, releasing the logs once lowered shall be made possible by using a rope from the upper operating floor.

D. Anchor Bolts
   1. The quantity, size and location of anchor bolts shall be determined by the gate manufacturer and shown on the submittal drawings.

PART 3 – EXECUTION

3.01 INSTALLATION

A. It is the responsibility of the Contractor to handle, store and install the gates in strict accordance with the manufacturer's instructions and recommendations. The Contractor shall review the installation drawings and instructions before proceeding to the installation of the gates.

B. The gate assemblies must be installed on a true vertical plane, square and plumb. The operating stem shall be accurately aligned with the gate guides and properly greased.

3.02 FIELD TESTING

A. After installation, the gates must be field tested by the Contractor, in the presence of the Engineer and Owner, to ensure compliance with the requirements of these specifications. Each gate shall be operated on its complete open-close cycle to confirm operation without binding, scraping or distorting. Operating effort on the crank, handwheel or T-wrench shall be observed or measured. In the case of motorized actuators, the operating torque shall be noted, and the initial set-up of each actuator shall be done in accordance with the instructions in the manual.

B. Each gate shall be water tested by the Contractor and sealing performance shall be observed.

END OF SECTION

DRAFT

SECTION 40 0561 – GATE VALVES

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. The CONTRACTOR shall provide gate valves and appurtenances, complete and operable, in accordance with these Specifications and the Contract Documents.

B. American Iron and Steel (AIS) requirement applies to this section. All iron and steel products used in this project must be produced in the United States.

1.02 SUBMITTALS

A. Furnish submittals in accordance with Section 01 3300 – Submittal Procedures.

PART 2 – PRODUCTS

2.01 GATE VALVES (16-inch and smaller)

A. General. Gate valves for water service shall conform to the AWWA Standard for "Resilient-Seated Gate Valves" (AWWA C509, latest edition). Valves shall be of the resilient seated type with non-rising stem, closing in a clockwise direction. Sealing mechanism shall provide zero leakage at the water working pressure against line flow from either direction. The rubber covered gate shall not be wedged into a pocket nor slide across the seating surface to obtain a tight closure. Synthetic thrust washers shall be provided to minimize operating torque. Valves shall be flanged or have ends to match pipe and shall have solid bronze internal working parts.

B. Stems. Gate valve stems shall be of bronze containing not more than 5 percent of zinc nor more than 2 percent of aluminum, and shall have a minimum tensile strength of 60,000 psi, a yield strength of 35,000 psi, and an elongation of at least ten percent in 2-inches, as determined by a test coupon poured from the same ladle from which the valve stems to be furnished are poured. Seats. Resilient valve seats shall consist of styrene butadiene (SBR) rubber permanently bonded to a high-strength iron wedge gate. The gate shall be totally encapsulated. The bonding process shall meet the requirements of ASTM D429. Mechanically attached seats or seats attached to the valve body shall not be accepted.

C. Operators. Buried valves shall be provided with a 2-inch square operating nut, extension stems, and valve well, as required in Part 2.01. Unless otherwise shown on the drawings, valves in vaults or above grade shall be supplied with a cast iron handwheel and be rising stem. All buried gate valves shall be non-rising stem.

D. Pressure Rating and Testing. Valves shall be rated for a working water pressure of 200 psi and shall be seat tested at this pressure with no leakage. Shell test of 400 psi shall be applied to body with valve in the open position with no leakage through the metal, flanged joints, or stem seals.

E. Epoxy Coating. Valve and operator shall be epoxy coated as specified in part 2.01 of this Section, except coating shall have 12 mil thickness.

F. Spare Parts. Each valve shall be supplied with a spare set of upper and lower O-rings and weather seal.

G. Manufacturer. Resilient seat gate valves shall be manufactured by U.S. Pipe, American Darling CRS-80, ITT Kennedy, or ENGINEER-approved equivalent.

DRAFT

PART 3 – EXECUTION

3.01 GENERAL

A. Gate valves shall be installed in accordance with the provisions of these Specifications. Care shall be taken that valves in plastic lines are well-supported at each end of the valve.

END OF SECTION

DRAFT

SECTION 40 0562 – PLUG VALVES

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide plug valves and appurtenances, complete and operable, in accordance with the Contract Documents.

1.02 SUBMITTALS

A. Furnish submittals in accordance with Section 01 3300 – Submittal Procedures.

1.03 OPERATION AND MAINTENANCE MANUAL

A. Provide six (6) hard copies plus one (1) electronic version in PDF format.

B. Operation and Maintenance Manual shall be furnished in accordance with these Specifications.

1.04 QUALITY ASSURANCE

A. The manufacturer shall provide a 2-year equipment warranty.

1.05 SPARE PARTS

A. Spares shall be as requested by the ENGINEER. Payment for spares shall be made in accordance with the General Conditions.

B. A list of spare parts for each piece of equipment shall be obtained from the manufacturer and submitted at the same time as Shop Drawings. The name, address, and telephone number of the nearest distributor for each piece of equipment shall be furnished.

PART 2 – PRODUCTS

2.01 ECCENTRIC PLUG VALVES

A. General: Plug valves shall be of the quarter-turn, non-lubricated, eccentric type with resilient faced plug. Plug valves shall be designed for a working pressure of 175 psi for valves 12” and smaller, 150 psi for valves 14” and larger. Valves shall provide tight shut-off at rated pressure. Valves 20” and smaller shall have round port design. 24” and larger valves shall have rectangular port design. Minimum port area for all valves shall be 80% of corresponding pipe area.

B. Valve Body: The plug valve body shall be cast iron ASTM A126 Class B with welded-in overlay of greater than 90% nickel alloy content on all surfaces contacting the face of the plug. Sprayed, plated, nickel welded rings or seats screwed into the body are not acceptable. All cover bolts shall be corrosion resistant. The “SEAT END” of the valve shall be designated on the valve body.

C. Coating: Plug valves shall be coated in accordance with these Specifications.

D. Valve Plug: The valve plug shall be cast iron ASTM A126 Class B, with Buna N resilient seating surface to mate with the body seat.

E. Valve Connections: Flanged valves shall be drilled in compliance with ANSI B16.1, Class 125. Mechanical joint valves shall comply with AWWA C111. Threaded valves shall have NPT full size inlets with hexagonal wrench connection.

F. Valve Bearings: Plug valves shall be furnished with permanently lubricated sleeve type bearings conforming to AWWA C504. Bearings shall be of sintered, oil impregnated type 316 stainless steel ASTM A743 Grade CF-8M or bronze ASTM B127.

G. Valve Bonnet shall be in accordance with these Specifications.

DRAFT

H. Valve Shaft Seals: Valve shaft seals shall be of the “U” cup type, in accordance with AWWA C504. Seals shall be self-adjusting and repackable without removing the bonnet from the valve.

I. Valve Actuators: Valves 2.5” and smaller shall be provided with a hand lever. Valves 3” and larger shall be specified as equipped with either a handwheel or 2” square nut for direct quarter-turn operation.
   1. Where specified, a totally enclosed and sealed worm gear actuator with position indicator and externally adjustable open and closed stops shall also be included. The worm segment gear shall be ASTM A536 Grade 65-45-12 ductile iron with precision bore and keyway for connection to the valve shaft. All buried valves shall be provided with worm and gear actuators suited for the intended service. All gear actuators shall be designed to withstand, without damage, a rim pull of 200 lbs for handwheels and an input torque of 300 ft-lbs for nuts.
   2. Buried service actuators shall be packed with grease and sealed for temporary submergences to 20 feet of water. Exposed worm shafts shall be stainless steel.

J. Electric Actuators: When specified, electric actuators shall be in accordance with these Specifications.

K. Manufacturers:
   1. VAL-MATIC
   2 PRATT
   3. Dezurik
   4. ENGINEER-approved equal

PART 3 – EXECUTION

3.01 GENERAL

A. Valves shall be installed in accordance with provisions of these Specifications.

END OF SECTION

DRAFT

SECTION 40 0563 – BALL VALVES

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide ball valves and appurtenances, complete and operable, in accordance with the Contract Documents.

B. American Iron and Steel (AIS) requirement applies to this Section. All iron and steel products used in this project must be produced in the United States.

1.02 SUBMITTALS

A. Furnish submittals in accordance with Section 01 3300 – Submittal Procedures.

PART 2 – PRODUCTS

2.01 GENERAL

A. The ball valve type and its actuator shall be as indicated in the contract documents. All actuators shall be in accordance with these Specifications.

2.02 BALL VALVES (3- TO 12-INCH)

A. Construction: Ball valves shall be full bore with a design working pressure of 150 psig. Valve construction shall conform to the following:
   1. Top Flange shall be design for direct mounting of actuator and gear operators. Top flange shall provide easy access for adjustment of gland bolts. Design shall conform to EN ISO 5211.
   2. Valve Design shall conform to ASME B16.34-2004/ API 6D / BS EN ISO 17292 Class 150.
   3. Valve end-to-end dimensions shall be per ASME b16.10 / API 6D.
   4. Valve Body shall be flanged, two-piece design in cast construction and shall be coated with two-coat zinc-rich epoxy paint.
   5. Ball shall be floating design, stainless steel with superior finish and sphericity to ensure extended seat life and low operating torque.
   6. Stem shall be stainless steel, heavy duty construction with double “D” (sizes up to 4”) and round and keyed (sizes 6” and greater) configurations.
   7. Seat shall be contoured and be reinforced with PTFE seat.
   8. Body joint bolting shall conform to ASTM A193 B7/ ASTM A194 2H for carbon steel bodies and ASTM A193 GR.B8/ ASTM A194 GR.8 for stainless steel bodies.
   9. Actuators: Unless otherwise indicated, ball valves shall have manual hand lever or wheel actuators.

B. Manufacturers, or ENGINEER-approved equal:
   1. Apollo
   2. Nibco
   3. Valtorc

2.03 BALL VALVES (SMALLER THAN 3-INCH)

A. Construction: Ball valves, smaller than 3-inch, for general purpose use, shall be heavy-duty type for industrial service, with butt weld, grooved, threaded, or soldered ends to match the piping. The bodies shall be cast red bronze conforming to ASTM B584. The ball and threaded pack gland shall be brass with a reinforced PTFE seat ring. The stem shall be of silicon bronze. All valves shall have a pressure rating of minimum 125 psi steam, and 200 psi cold water, unless otherwise indicated.

DRAFT

B. Construction (Thermoplastic Ball Valves): PVC and CPVC ball valves, smaller than 3-inch, for general purpose use, shall be heavy-duty type for industrial service, with butt socket, threaded, or flanged ends to match the piping. The ball valves shall be true union type constructed from PVC Type I, ASTM D1784, or CPVC Type IV, ASTM D1784. All O-rings shall be EPDM or Viton. All ½" to 2" valves shall be pressure rated at 235 psi and all 2-1/2" to 3" valves shall be pressure rated at 150 psi, unless otherwise indicated.

C. Manufacturers, or ENGINEER-approved equal:
   1. Nibco
   2. Apollo
   3. Asahi
   4. Spears

2.04 CURB STOP BALL VALVES

A. Construction: Curb stop ball valves smaller than 3-inch shall be shall be heavy-duty type for industrial service, with butt socket, threaded, or flanged ends to match the piping. If Curb Stop ball valve is connecting to plastic piping, stainless steel insert stiffeners are required. Curb stop ball valve to be made of heavy cast bronze body, end piece to be epoxied into body. A fluorocarbon coated brass ball to eliminate corrosion and electrolysis associated with common plug type curb stops. Curb stops shall be 90-degree rotation for open/close, one-piece cap and stem, double Buna-N Stem O-rings to assure permanent water seal at top. Curb stop ball valves shall be designed and manufactured to conform to AWWA Standard C800-89 (ASTM B62-Index 115-85-5-5-5). Valves shall be individually inspected and tested by the manufacture for leaks by air pressure under water.

B. Manufacturers, or ENGINEER-approved equal:
   1. Ford
   2. Mueller Company
   3. Legend

PART 3 – EXECUTION

3.01 GENERAL

A. Ball valves shall be installed in accordance with the provisions of these Specifications. Care shall be taken that valves in plastic lines are well supported at each end of the valve.

END OF SECTION

DRAFT

SECTION 40 0564 – BUTTERFLY VALVES

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide butterfly valves and appurtenances, (air and water service) complete and operable, in accordance with the Contract Documents.

B. American Iron and Steel (AIS) requirement applies to this Section. All iron and steel products used in this project must be produced in the United States.

1.02 SUBMITTALS

A. Furnish submittals in accordance with Section 01 3300 – Submittal Procedures.

B. Complete Shop Drawings

C. Drawings of butterfly valves and actuators.

D. Drawings showing valve port diameter complete with dimensions, part numbers and materials of construction.

1.03 QUALITY ASSURANCE

A. Valves shall be subjected to performance, leakage, and hydrostatic tests in accordance with procedures and acceptance criteria established by AWWA C504.

PART 2 – PRODUCTS

2.01 RESILIENT SEATED BUTTERFLY VALVES

A. General: Butterfly valves steady-state water working pressures and steady-state differential pressure shall be as indicated on the plans.

B. Valves shall be of the body type, pressure class, end joint, and actuator type indicated on Contract Drawings.

C. Construction: Unless otherwise indicated, all materials of construction shall be suitable for the service, whether water or air. The seats shall be positively clamped or bonded into the disc or body of the valve.

Description	Material Standards (may differ for service application – water/air)
Valve Bodies	Cast Iron ASTM A126 Class B
Valve Stem	Stainless Steel 416
Valve discs	Aluminum or Bronze
Painting and coating	Refer to applicable Sections of Division 09 – Finishes

D. Manufacturers, or ENGINEER-approved equal:
1. Val-Matic
2. Keystone
3. Pratt

2.02 BURIED SERVICE BUTTERFLY VALVE

A. General: All butterfly valves shall be manufactured in accordance with the latest revision of AWWA C504 for Class 150B service. Valves in sizes 3-24” shall have 304 stainless steel trim as standard.

DRAFT

B. Valve body shall be constructed of cast iron ASTM A126 Class B and conform to AWWA C504 in terms of laying lengths and minimum body shell thickness. End connections shall be as specified on the plans.

C. Valve disc shall also be made from cast iron ASTM A126 Class B in sizes 20" and smaller. Sizes 24" and larger shall be built from ductile iron in conformance to ASTM A536. Disc shall be furnished with Type 316 stainless steel seating edge to mate with the rubber seat on the body.

D. Valve seat shall be Buna-N rubber located on the valve body. In sizes 20" and smaller, valves shall have bonded seats that meet test procedures outlined in ASTM D429 Method B. Sizes 24" and larger shall be retained in the valve body by mechanical means without use of metal retainers or other devices located in the flow stream.

E. The shaft shall be Type 304 stainless steel conforming to ASTM A276. Shaft seals shall be standard self-adjusting split V packing. Shaft seals shall be of a design allowing replacement without removing the valve shaft.

F. Bearings shall be sleeve type that is corrosion resistant and self-lubricating.

G. Actuators shall be fully grease packed and have stops in the open/close position. The actuator shall have a mechanical stop which will withstand an input torque of 450 ft. lbs. against the stop. The traveling nut shall engage alignment grooves in the housing. The actuators shall have a built-in packing leak bypass to eliminate possible packing leakage into the actuator housing.

H. The Valve Interior and Exterior Surfaces except for seating shall be coated with Ameron Amerlock 370 in accordance with AWWA C550 and C504. All internal and/or external surfaces shall be covered with a polyamide cured epoxy coating applied over a sand blasted “new white metal surface" per SSPC-SP10 to a minimum of 6 mils in compliance with AWWA C550.

I. Manufacturers, or ENGINEER-approved equal:
   1. Val-Matic
   2. Pratt

PART 3 – EXECUTION

3.01 INSTALLATION

A. All exposed butterfly valves shall be installed with a means of removing the complete valve assembly without dismantling the valve or operator. The installation shall be in accordance with these Specifications.

END OF SECTION

DRAFT

SECTION 40 0565 – VALVES FOR PUMP CONTROL AND CHECK SERVICE (CHECK VALVES)

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide check valves and appurtenances, complete and operable, in accordance with the Contract Documents.

B. The requirements of applicable Sections of Division 40 – Process Integration, apply to this Section.

C. American Iron and Steel (AIS) requirement applies to this Section. All iron and steel products used in this project must be produced in the United States.

1.02 SUBMITTALS

A. Furnish submittals in accordance with Section 01 3300 – Submittal Procedures.

PART 2 – PRODUCTS

2.01 SWING CHECK VALVES (3-INCH AND LARGER)

A. General: Swing check valves for water and wastewater service shall be a full body flange type, with a domed access cover and resilient disc. The valves shall meet ANSI/AWWA C508 - Swing-Check Valves for Waterworks Service, 3 in. through 24 in. NPS, unless otherwise indicated, and shall be with full-opening passages and designed for a water-working pressure of 250 psi. Check valves shall be fully operational in both the vertical and horizontal installation position.

B. Body: The valve body and cover shall be of cast iron conforming to ASTM A536 Grade 65-45-12 with flow area equal to the nominal pipe inside diameter throughout the valve. Seat shall be constructed on a 45-degree angle to reduce disc travel. The seat and internal body shall be fully coated with a two part thermosetting epoxy suitable for use in both potable water and wastewater applications.

C. Disc: The resilient disc shall be of one-piece construction, precision molded with an integral O-ring type seal surface and contain alloy steel and nylon reinforcement in the flexible hinge area. For pressure application 50 psig or greater, the resilient disc shall be a fully encapsulated steel pressure plate with integral molded O-ring on the face of the elastomer. Nylon reinforcements shall be provided in the flexible hinge area of the disc assembly.

D. Backflow Actuator: Check valves shall be provided with a screw-type backflow actuator to allow for the opening of the valve during no flow conditions. The backflow shall be a rising-stem type to indicate position. A stainless-steel T-handle shall be provided for ease of operations.

E. Position Indicator: Check valves shall be provided with a mechanical position indicator to indicate disc position.

F. Disc Accelerator Mechanism: Check valve shall be provided with a disc accelerator mechanism to assist in the rapid closure of the disc to minimize flow reversal. Accelerator mechanism shall be required in high head application of 50 psig or greater. Accelerator mechanism shall be a spring type, weighted type, or hinge type.

G. Valve manufacturer shall be Val-Matic, VSI, Pratt, or ENGINEER-approved equal.

DRAFT

2.02 SWING CHECK VALVES (2-1/2-INCH AND SMALLER)

A. General: Swing check valves for steam, water, oil, or gas in sizes 2-1/2-inch and smaller shall be suitable for a steam pressure of 150 psi and a cold water pressure of 300 psi. They shall have screwed ends, unless otherwise indicated, and screwed caps.

B. Body: The valve body and cap shall be of bronze conforming to ASTM B61 - Steam or Valve Bronze Castings, or ASTM B62 with threaded ends conforming to ANSI/ASME B1.20.1 - Pipe Threads, General Purpose (inch).

C. Disc: Valves for steam service shall have bronze or brass discs conforming to ASTM B16 – Free-Cutting Brass Rod, Bar, and Shapes for Use in Screw Machines, and for cold water, oil, and gas service replaceable composition discs.

D. Hinge Pin: The hinge pins shall be of bronze or stainless steel.

E. Position Indicator: Valves shall be provided with mechanical position (open/closed) indicators.

F. Valve manufacturer shall be as shown on the Drawings or ENGINEER-approved equal.

2.03 DOUBLE DISC CHECK VALVE

A. General: Check valve shall be of the double disc, wafer style with torsion spring induced closure. Valve shall be Wafer style for bolting between ANSI Class 125 flanges. Valves have a Ductile Iron body (ASTM A536 65-45-12) to fit inside 125# ANSI bolt circles, a two-piece Stainless-Steel disc (ASTM type 304), type 304 Stainless Steel dual shafts, ASTM A313, type 304 Stainless Steel torsion spring and have an integrally molded elastomer seat vulcanized to the body. Valve for horizontal flow shall be installed with the shafts in vertical position.

B. Valve manufacturer shall be Valmatic, Pratt or ENGINEER-approved equal.

2.04 GLOBE STYLE CHECK VALVE

A. General: Check valve shall be of the silent operating type and the same size as the entering pipe. Globe style thru 24 inches shall be rated 250PSI WOG, have a Ductile Iron body (ASTM A536 65-45-12), 125# ANSI Flat Face Flanges, ASTM A313 Type 304 Stainless Steel helical or conical spring, a Stainless Steel (ASTM type 304) seat and dual guided disc (top and bottom), 304 Stainless Steel guide bushing and type 304 Stainless Steel guide pins. Check valve to have a minimum open area in the body of 110% of the area of the entering or corresponding pipe. Valve is to operate silently in either vertical or horizontal positions, flow up or down.

B. Valve manufacturer shall be Valmatic, Pratt, or ENGINEER-approved equal.

2.05 WAFER SILENT CHECK VALVE

A. General: Check valve shall be of the silent wafer type and the same size as the entering pipe. Valves shall be the compact wafer style and have a pressure and temperature rating equal to or greater than the pipeline in which they are installed. Compact wafer-silent style check valves thru 12 inches shall be rated for 250PSI WOG for installation between ANSI Class 125 or Class 250 flanges, have a Ductile Iron body (ASTM A536 65-45-12), ASTM A313, Type 304 Stainless Steel helical or conical spring, a Stainless-Steel guide bushing and type 304 Stainless Steel guide pins. Valves are to operate silently in either vertical or horizontal positions, flow up or down.

B. Valve manufacturer shall be Val-Matic, Pratt, or ENGINEER-approved equal.

DRAFT

2.06 TILTING DISC CHECK VALVE

A. General: The tilting disc check valve shall consist of a circular disc with conical rim, hinged about a fixed pivot above its center-line and offset from the plane of the seat, sealing against a body seat clamped between the two sections of the valve body.

B. Body: The body shall be two-piece, consisting of an entrance and a discharge section bolted together at an angle with the pipeline. An O-ring seal in a groove between the body flanges shall be in place to prevent leakage between the flanges when bolted together. The valve shall be complete with ANSI class flanges to mate with adjacent equipment.

C. Disc and Seat: A body seat shall be clamped in place in a slot between the two body sections. The body seat shall have a conical finish to mate with the disc seat. There shall be an inspection port provided in both the entrance and discharge sections to provide visual access both upstream and downstream of the disc. An indicator shall be provided to show disc position for the full range of travel. Bosses shall be cast in both the entrance and discharge sections to allow for a top mounted oil dashpot for controlled opening and closing. All valve castings shall be ductile iron ASTM A536 Grade 65-45-12. The disc and body seat ring shall be Bronze B62. The hinge-pin shall be stainless steel ASTM A276 Type 304. The bearing sleeve shall be Bronze B62. Coating shall be NSF61 approved epoxy.

D. Backflow Actuator: If required, check valves shall be provided with a screw-type backflow actuator to allow for the opening of the valve during no flow conditions. The backflow shall be a rising-stem type to indicate position. A stainless-steel T-handle shall be provided for ease of operations.

E. Position Indicator: Check valves shall be provided with a mechanical position indicator to indicate disc position.

F. Valve manufacturer shall be Val-Matic, Pratt or ENGINEER-approved equal.

2.07 RUBBER FLEX DUCKBILL CHECK VALVE

A. General: Check valves are to be metal backed, rubber flanged for attaching directly to flanged-end connections. The check valve shall be made of Buna-N elastomer material. CONTRACTOR to verify the valve ID size and flange drilling dimensions.

B. Valve manufacture shall be Cla-Val, or ENGINEER-approved equal.

PART 3 – EXECUTION

3.01 GENERAL

A. Valves shall be installed in accordance with provisions of these Specifications.

END OF SECTION

DRAFT

SECTION 40 0567 – SPECIALIZED PRESSURE AND FLOW-CONTROL VALVES

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide all miscellaneous valves and appurtenances, complete and operable, in accordance with the Contract Documents.

B. American Iron and Steel (AIS) requirement applies to this Section. All iron and steel products used in this project must be produced in the United States.

1.02 SUBMITTALS

A. Furnish submittals in accordance with Section 01 3300 – Submittal Procedures.

1.03 OPERATION AND MAINTENANCE MANUAL

A. Provide two (2) hard copies plus one (1) electronic version in PDF format.

B. Operation and Maintenance Manual shall be furnished in accordance with these Specifications.

1.04 QUALITY ASSURANCE

A. Manufacturer and model shall be described on the Drawings or ENGINEER-approved equal.

B. The manufacturer shall provide a 2-year equipment warranty.

1.05 SPARE PARTS

A. Spares shall be as requested by the ENGINEER. Payment for spares shall be made in accordance with these Specifications and the Contract Documents.

B. A list of spare parts for each piece of equipment shall be obtained from the manufacturer and submitted at the same time as Shop Drawings. The name, address, and telephone number of the nearest distributor for each piece of equipment shall be furnished.

PART 2 – PRODUCTS

2.01 AIR-VACUUM AND AIR-RELEASE VALVES

A. Air and Vacuum Valves: Air and vacuum valves shall be capable of venting large quantities of air while pipelines are being filled, and allowing air to re-enter while pipelines are being drained. They shall be of the size indicated, with flanged or screwed ends to match piping. Bodies shall be of high-strength cast iron. The float, seat, and all moving parts shall be constructed of Type 316 stainless steel. Seat washers and gaskets shall be of a material insuring water tightness with a minimum of maintenance. Valves shall be designed for minimum 150 psi water-working pressure, unless otherwise indicated.

B. Air-Release Valves: Air-release valves shall vent accumulating air while system is in service and under pressure and be of the size indicated and shall meet the same general requirements as indicated for air and vacuum valves except that the vacuum feature will not be required. Valves shall be designed for a minimum water-working pressure of 150 psi, unless otherwise indicated.

DRAFT

C. Combination Air Valves: Combination air valves shall combine the characteristics of air and vacuum valves and air release valves by exhausting accumulated air in systems under pressure and releasing or re-admitting large quantities of air while a system is being filled or drained, respectively. Valves shall have the same general requirements as indicated for air and vacuum valves.

D. Valves shall be manufactured by ARI, or ENGINEER-approved equal, and designed for a minimum water-working pressure of 150 psi, unless otherwise indicated.

E. ARV valves shall be protected with a lockable cover. The cover shall be provided with air vents and a drain port. The cover shall be easily removed by the operator for maintenance purposes.

F. Where noted in plans, an underground air combination valve system shall be installed. The system shall feature the following:
   1. compact submerged vault assembly eliminating the need for human-assessible manholes.
   2. Integral gear box shut-off valve to allow above-ground operation of the valve and eliminate confine space entry.
   3. Air valve extraction with built-in safeguard for extraction under pressure.
   4. All connection fitted with quick connect/ release couplings.
   5. In traffic location, assembly shall be protected with H20-rated precast cover and manhole lid to eliminate direct traffic load on assembly.
   6. Underground valve system shall at a minimum consists of the following:
      a. Polyethylene chamber assembly and cover
      b. Sliding disc valve assembly for shutoff and operation
      c. Back-flushing assembly
      d. 316 SS Air combination valve meeting the requirements of these specifications
      e. Underground assembly shall be manufactured by ARI or approved equal.

2.02 PRESSURE RELIEF/PRESSURE SUSTAINING VALVES

A. Quality Assurance: The valve manufacturer shall warrant the valve to be free of defects in material and workmanship for a period of three years from date of shipment, provided the valve is installed and used in accordance with all applicable instructions. Electrical components shall have a one year warranty. Valves shall be subjected to performance, leakage, and hydrostatic tests in accordance with procedures and acceptance criteria established by AWWA C504

B. General: The pressure relief/sustaining valve shall maintain a constant upstream and/or downstream pressure regardless of changing flow rate and/or inlet pressure.

C. Main Valve: The valve shall be hydraulically operated, single diaphragm-actuated, globe pattern. The valve shall consist of three major components: the body, cover, and diaphragm assembly. The diaphragm shall be the only moving part and shall form a sealed chamber in the upper portion of the valve, separating operating pressure from line pressure. Packing glands and/or stuffing boxes are not permitted and there shall be no pistons operating the main valve or pilot controls.

D. Body: Valve body shall be ductile iron construction. Valve body shall be cast as one piece. No fabrication or welding shall be used in manufacturing.

E. Disc: The valve shall contain a resilient, synthetic rubber disc, with a rectangular cross-section contained on three and one-half sides by a disc retainer and forming a tight seal against a single removable seat insert. No O-ring type discs (circular, square, or quad type) shall be permitted as the seating surface. The disc guide shall be of the contoured type to permit smooth transition of flow and shall hold the disc firmly in place. The disc

retainer shall be of a sturdy one-piece design capable of withstanding opening and closing shocks. It must have straight edge sides and a radius at the top edge to prevent excessive diaphragm wear as the diaphragm flexes across this surface. No hourglass-shaped disc retainers shall be permitted and no V-type or slotted type disc guides shall be used.

F. Diaphragm: The diaphragm assembly containing a non-magnetic 303 stainless steel stem with sufficient diameter to withstand high hydraulic pressures shall be fully guided at both ends by a bearing in the valve cover and an integral bearing in the valve seat. No center guides shall be permitted. The stem shall be drilled and tapped in the cover end to receive and affix such accessories as may be deemed necessary. The diaphragm assembly shall be the only moving part and shall form a sealed chamber in the upper portion of the valve, separating operating pressure from line pressure.

G. The flexible, non-wicking, FDA approved diaphragm shall consist of nylon fabric bonded with synthetic rubber compatible with the operating fluid. The center hole for the main valve stem must be sealed by the vulcanized process or a rubber grommet sealing the center stem hole from the operating pressure. The diaphragm must withstand a Mullins Burst Test of a minimum of 600 psi per layer of nylon fabric and shall be cycle tested 100,000 times to insure longevity. The diaphragm shall not be used as the seating surface. The diaphragm shall be fully supported in the valve body and cover by machined surfaces which support no less than one-half of the total surface area of the diaphragm in either the fully opened or fully closed position.

H. Seat & Stem: The main valve seat and the stem bearing in the valve cover shall be removable. The lower bearing of the valve stem shall be contained concentrically within the seat and shall be exposed to the flow on all sides to avoid deposits. To insure proper alignment of the valve stem, the valve body and cover shall be machined with a locating lip. No “pinned” covers to the valve body shall be permitted. Cover bearing, disc retainer, and seat shall be made of the same material. All necessary repairs and/or modifications other than replacement of the main valve body shall be possible without removing the valve from the pipeline. Packing glands and/or stuffing boxes shall not be permitted and components including cast material shall be of North American manufacture.

I. Pilot System: Pilot tubing shall be 316 S.S. construction. The pressure relief pilot control shall be a direct-acting, adjustable, spring-loaded, normally open, diaphragm valve designed to permit flow when controlled pressure is less than the spring setting. The pilot control is held open by the force of the compression on the spring above the diaphragm, and it closes when the delivery pressure acting on the underside of the diaphragm exceeds the spring setting. The pilot control system shall include a fixed orifice. No variable orifices shall be permitted. The pilot system shall include an opening speed control on all valves. The pilot control shall have a second downstream sensing port which can be utilized to install a pressure gauge. A full range of spring settings shall be available in ranges of 20 to 200 psi.

J. Remote Sensing: Valves used for pressure relief or unloading functions in a bypass arrangement shall be provided with a remote pilot sensing. The pilot system shall provide a digital output via flow switch when the valve is actuated.

K. The valve manufacturer shall also provide a computerized cavitation chart which show flow rate, differential pressure, percentage of valve opening, Cv factor, system velocity, and if there will be cavitation damage.

L. Valve manufacturers shall be CLA-VAL, Singer, Wilkens, or ENGINEER-approved equal.

DRAFT

PART 3 – EXECUTION

3.01 INSTALLATION

A. Valves shall be installed in accordance with the manufacturer's printed recommendations, and with provisions of these Specifications.

END OF SECTION

DRAFT

SECTION 40 0573 – MISCELLANEOUS PROCESS VALVES

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide all miscellaneous valves and appurtenances, complete and operable, in accordance with the Contract Documents.

1.02 SUBMITTALS

A. Furnish submittals in accordance with Section 01 3300 – Submittal Procedures.

1.03 OPERATION AND MAINTENANCE MANUAL

A. Provide six (6) hard copies plus one (1) electronic version in PDF format.

B. Operation and Maintenance Manual shall be furnished in accordance with these Specifications.

1.04 QUALITY ASSURANCE

A. Manufacturer and model shall be described on the Drawings, as specified herein, or Engineer approved equal.

B. The manufacturer shall provide a 2-year equipment warranty.

1.05 SPARE PARTS

A. Spares shall be as requested by the ENGINEER. Payment for spares shall be made in accordance with the General Conditions.

B. A list of spare parts for each piece of equipment shall be obtained from the manufacturer and submitted at the same time as Shop Drawings. The name, address, and telephone number of the nearest distributor for each piece of equipment shall be furnished.

PART 2 – PRODUCTS

2.01 FLOAT VALVES (2-INCHES OR SMALLER)

A. General**:** This valve is heavy duty mechanical float valve for controlling high capacity water flow.

B. The valves have bronze body construction with machine flanges on the inlet side (sizes 1” to 2” (25 to 50mm) have female NPT pipe threaded inlet connections), and male straight-pipe threaded for locknut on the outlet side. The connectors have serrated arms for easy adjustment of water level, bronze long and short arms, replaceable seals, and no-jam single lever action.

C. Maximum working pressure shall be 165 psi. Maximum working temperature shall be 180°F.

D. Valve shall be equipped with brass float stem and plastic float designed to work with the valve. Stem shall be of sufficient length for proper operation of the valve and to maintain the required level in the storage reservoir. Floats shall be injection molded polyethylene construction.

E. Float Valves shall be Watts or approved equal.

2.02 FOOT VALVES

A. Foot Valves shall be of the type designed to provide silent operation, positive sealing, and full flow area.

DRAFT

B. Valves shall be flanged, 125 lb., ANSI standard and of the center-guided, poppet-type, having a linear stroke to provide silent operation. Guide shafts and bushings shall be of the same material as the seat and disc, i.e., bronze, or stainless steel. The Buna-N seal shall be so designed to provide an initial contact of bronze to Buna-N with final contact being metal to metal to prevent destruction of the Buna-N seal ring.

C. Flow area thru the valve, including valve stroke, shall be equal to pipe size.

D. Valve inlet shall be provided with stainless steel screening. The screening should in no way reduce the full flow area of the valve. The screening shall be in the shape of a basket with the bottom also screened.

E. Standard construction to be cast iron body, bronze trim with stainless steel basket screening.

F. Valves shall be manufactured by:
   1. Val-Matic
   2. ENGINEER-approved equal.

2.03 MUD VALVES

A. The Mud Valve shall be of the heavy duty flanged type designed to provide a positive seal under both seating and unseating head conditions. The valves shall be (non-rising, rising stem) stem style as detailed on the schedule or the plans. The frame, plug and yoke shall be cast iron (A126B) The valve operating stem and lift nut shall be bronze (B421) The seat ring shall be bronze (B62) with an accurately machined tapered seating face. The plug seat shall be a seamless molded, tapered resilient ring of BUNA-N designed to accurately mate with the seat ring for a positive seal.

B. Where required the manufacturer shall provide valve operating stems, Floor Stands and Stem Guides as specified in the valve schedule or plans.

C. The Mud Valves are to be coated using TNEMEC Pota Pox two part epoxy, NSF approved coating.

D. Valves shall be manufactured by:
   1. Troy Valve, Waterman
   2. ENGINEER-approved equal.

2.04 BACKFLOW PREVENTER

A. General**:** Backflow preventers shall be a pressure type or reduced pressure type backflow preventer unit and associated components shall be equal in quality and performance to a “Foundation for Cross-Connection Control and Hydraulic Research”. Backflow preventers shall be Febco, Watts, Wilkins, or ENGINEER-approved equal – Standard Orientation and include a fiberglass enclosure per Hot Box, appropriately sized for the backflow preventer. Enclosures shall protect against freezing down to -30°F. All backflow preventers shall be submitted for approval by the OWNER regardless of make or model.

2.05 TELESCOPING VALVE

A. General**:** Furnish and install manually-operated telescoping valves, complete and operable, as shown and specified, including appurtenances, operators, supports and accessories, in accordance with the requirements of the Contract Documents.

B. Valve Assembly: The telescoping valve assembly shall be of the rack and pinion type, of the size shown. The travel range shall be at least the amount shown. Assemblies shall consist of a handwheel pedestal (with offset if required) with handwheel operator, a rising stem, slip tube with flat weir crest skimming funnels, a tube guide collar with companion flange and gasket and a mounting bracket.

DRAFT

1. Slip Tube: The slip tube and skimming funnel shall be of Type 316, Schedule 40 stainless steel, with a seal to prevent leakage at the seam.
2. Stem: The stem shall be minimum 3/4-inch, Type 316 stainless steel, with a travel and height indicating device calibrated in 1-inch increments. A suitable stem lock shall be provided for holding the stem at the desired level.
3. Guide Collar: Guide collar shall include a neoprene gasket and cast iron companion flange for securing to the receiving pipe as shown.
4. Mounting Bracket: A cast iron bracket shall be provided for mounting the operator pedestal with stainless steel anchor bolts.
5. Fastening Hardware: All nuts and bolts and other fastening hardware shall be Type 316 stainless steel.
6. Coating: Coating of all ferrous surfaces shall be in accordance with these Specifications.

C. Valve shall be Troy Valve, Waterman, or ENGINEER-approved equal.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Valves shall be installed in accordance with the manufacturer's printed recommendations, and these Specifications.

END OF SECTION

DRAFT

SECTION 40 0597 – IDENTIFICATION FOR PROCESS PIPING

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. The CONTRACTOR shall furnish, paint, mark, and paint/install identification devices for all exposed piping and piping in accessible chases and areas above ceilings with panels, and valves using, lettering, flow direction arrows, and related permanent identification devices, and all appurtenant works, in accordance with the requirements of the Contract Documents.

1.02 REFERENCE SPECIFICATIONS, CODES AND STANDARDS

A. Comply with the reference specifications of the General Requirements.

1.03 CONTRACTOR SUBMITTALS

A. Submittals shall be made in accordance with Section 01 3300 – Submittal Procedures.

B. The CONTRACTOR shall submit samples of all types of identification devices to be used in the work.

C. QUALITY ASSURANCE (NOT USED)

PART 2 – PRODUCTS

2.01 IDENTIFICATION OF PIPING

A. All exposed piping and piping in accessible chases and areas above ceilings with panels, including stainless steel, galvanized steel, copper, CPVC, and Fiberglass RTR piping, shall be completely and totally painted for identification purposes. Piping all be identified with lettering or tags designating the service of each piping system, shall have flow directional arrows. All piping scheduled to be color-coded shall be completely painted or coated with the colors indicated in the schedule below.

B. Each pipe identification shall consist of color-coding in accordance with Subsection 3.04 IDENTIFICATION SCHEDULE, a painted label, and a directional flow arrow. Piping identification shall be located in accordance with Subsection 3.03 PIPE IDENTIFICATION LOCATION.

C. For cases where there are insulated lines wrapped with aluminum sheathing, stainless steel sheathing, or gray fabric, the background color shall be applied to a 24-inch length of pipe section and color band centered within the 24 inch field of background color.

D. Paint Colors: Paint colors shall conform to the following designations:

Color	**Mgf./No.**
Paper White	DuPont 40P-1031
	Tnemec F075-WH01A
	Dunn Edwards IP630-SY-1
Dark Brown	DuPont 40P-1039

Safety Yellow	DuPont 333-23663 Tnemec F075-S1167A Dunn Edwards IP630-UD9223

E. Lettering

1. Identification labels and directional arrows shall be painted directly on piping using stencils or makers.
2. Pipe identification markers shall be vinyl or polyester construction with an adhesive strip, coiled to wrap completely around the pipe (no straps) and have subsurface printing. Pipe less than six inches shall have lettering to meet ANSI A13.1 standards.
3. The size of the letters for identification labels shall be as follows:

PIPE OUTSIDE DIAMETER*	LETTER SIZE
5/8” to 1 1/4”	1/2” high
1 1/2” to 3”	1” high
Over 3”	2” high

*Outside pipe diameter shall include insulation and jacketing.

4. Identification markers shall have letters, directional arrows and colors as follows:

Influent Sewage	*White Letters on Gray Field*
Secondary	*White Letters on Brown Field*
RAS or WAS	*White Letters on Brown Field*
Sludge	*White Letters on Brown Field*
MBR Effluent/ Effluent	*White Letters on Green Field*

**Italics indicate customized field and may not meet ASME A13.1 color code*

PART 3 – EXECUTION

3.01 GENERAL

A. All labels shall be installed in accordance with the manufacturer's printed instructions, and shall be neat and uniform in appearance. All such tags or labels shall be readily visible from all normal working locations.

3.02 VALVE TAGS

A. Valve tags shall be permanently attached to the valve or structure as specified in the OCSD TAGGING PROCEDURES.

B. The wording on the valve tags shall describe the exact function of each valve, e.g., "HWR-BALANCING," "CLS THROTTLING", "RAS-PUMP SHUT-OFF," etc.

3.03 PIPE IDENTIFICATION LOCATION

A. Straight lines of pipe shall be identified at intervals of 20 feet maximum, and at least once in each room unless otherwise directed by the ENGINEER.

B. Piping shall also be identified at a point approximately within 2 feet of all turns, ells, valves, and the upstream side of all distribution fittings or branches and on both sides of each floor, wall, or barrier through which the line passes.

END OF SECTION

DRAFT

SECTION 40 4200 – PROCESS PIPING AND EQUIPMENT INSULATION

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. The CONTRACTOR shall furnish and install all pipe and equipment insulation, complete and operable, in accordance with the requirements of the Contract Documents. In addition to the insulation shown and specified, the CONTRACTOR shall insulate any cold or hot piping and exhausts that could be hazardous to plant personnel upon contact.

B. All steam and hot or chilled water piping shall be insulated with fiberglass metal jacketed insulation to form a watertight and weatherproof system.

C. Exposed process piping shall be heat taped and insulation against freezing as shown per the Contract Documents.

D. All air process piping within the blower building which passes through spaces above finished ceilings, or are suspended over equipment, electrical panels, or cabinets shall be insulated. Refer to the plans for insulation locations and requirements for air process piping.

E. All unions, flanges, mechanical joints, valves, strainers, steam traps, and other devices in insulated piping systems shall be insulated in the same manner as the adjacent piping. Operators, instruments, and other features requiring routine access shall not be covered. Insulation over removable devices shall be easily removable and replaceable.

F. Insulation on buried piping need not be jacketed.

1.02 REFERENCE SPECIFICATIONS, CODES AND STANDARDS

A. Comply with the reference specifications of the General Requirements.

B. Comply with the current provisions of the following Codes and Standards.
   1. Federal Specifications:
      a. HH-1-558B Insulation Blocks, Boards, Blankets, Felts, Sleeving (Pipe and Tube Covering), and Pipe Fitting Covering, Thermal (Mineral Fiber, Industrial Type)
   2. Commercial Standards:
      a. ASTM C547 Specification for Mineral Fiber Preformed Pipe Insulation
      b. ASTM E84 Test Method for Surface Burning Characteristics of Building Materials

1.03 SUBMITTALS

A. Shop Drawings: Shop drawings shall be submitted in accordance with Section 01 3300 – Submittal Procedures.
   1. The following submittals and specific information shall be provided.
      a. The CONTRACTOR shall submit complete shop drawings showing locations of placement of all thermal insulation, with manufacturer's data on materials, covering, jackets, and finish.

DRAFT

PART 2 – PRODUCTS

2.01 INSULATION

A. All components of the insulation, including covering, mastics and adhesives shall have a flame-spread rating of not over 25, and a smoke development rating of not over 50. Ratings shall be as established by tests in accordance with ASTM E84 and Federal Specification standards. The integrated insulation assemblies shall also conform to the above specifications. Insulation shall be applied in strict accordance with the manufacturer's instructions.

B. MATERIALS

1. Standard Insulation: This type of insulation shall be employed for process, cold-and hot water, steam, and condensate piping and equipment with surface temperatures up to 850°F. Pipe insulation shall be molded-type pipe covering, made of fibrous glass with a minimum k-factor of 0.23 at 75°F mean temperature. The insulation shall be oversized for installation over electric heating cable. Unless otherwise specified, the insulation thickness shall be as follows:

Pipe Insulation:

	Minimum Thickness of Insulation (Inches)
Hot and cold water (domestic)	
6 inches and smaller	1
Hot and chilled water process	
6 inches and smaller	1-1/2
8 inches and larger	2
Low pressure steam (50 psi and less)	
8 inches and less	2
Condensate, boiler blowdown, and boiler feed	
8 inches and less	1-1/2
Heated sludge and process piping	
6 inches and smaller	1
8 inches and larger	1-1/2
Heat traced piping	
3 inches and smaller	1
4 inches and larger	1-1/2
EQUIPMENT AND TANKS	
Boilers, heaters, and manufactured equipment	As recommended by manufacturer
Heat exchangers, tanks, and vessels	3
Blower Discharge, blow-off, and motor exhaust lines	3

2. Vapor barrier: Insulation shall have a factory-applied white fire-retardant vapor-barrier jacket of kraft paper and aluminum foil laminated together and reinforced with fiberglass yarn.
3. Insulation at Supports: Insulation shall be coordinated with the pipe hangers and supports and where insulation protection shields are provided the top half section of pipe insulation at support locations shall be of the same specified density, and the bottom half insulation segments provided between the pipe and the insulation protection shields shall have a density of not less than 6 lb./cu ft.

C. Manufacturers, or ENGINEER-approved Equal:

1. Manville, Micro-Loc AP-T; Owens-Corning FiberGlas Corp., Kaylo

DRAFT

D. High Temperature Insulation: This type of insulation shall be employed for engine exhaust pipes, flues, and similar pipes and equipment with surface temperatures up to 1200°F. The high temperature insulation shall consist of 4-inch thick calcium silicate or similar pre-molded blocks with a minimum k-factor of 0.14, in two layers of 2-inch thickness, each, with staggered joints, all applied over a 3/4-inch high metal rib lath. The inner layer shall be suitable for 1200°F, and the second layer for 1000°F. All bends, voids, joints, fittings, and other parts of the piping system shall be filled with insulating cement. Aluminum lagging with preformed aluminum fittings shall be banded to the insulation in a similar fashion as specified for standard insulation. Allowance shall be made for thermal expansion.

E. Metal Jacketing
   1. General: All insulation shall be covered with smooth aluminum weatherproof jacketing with a factory-attached moisture barrier.
   2. The jacket for the fittings shall consist of precision-formed smooth-sided sections and shall be sized to cover and protect the insulated fitting. Each section shall be manufactured from aluminum, and all joints shall be sealed with silicon mastic, to provide a continuous, air and weathertight joint. Strapping shall be 1/2-inch wide, Type 3003 aluminum or Type 304 stainless steel.
   3. The jacket at insulated valves shall fit over the removable insulation and be easily removed and re-installed. It shall be held in place by adjustable stainless-steel hose clamps.
   4. Metal jacketing shall be 0.016-inch thick, smooth finish aluminum sheet conforming to ASTM B209, alloy 5005, temper H16, with integral vapor barrier. Sheet metal screws shall be aluminum or stainless steel. Jackets shall be secured with 0.020 by ¾-inch Type 304 stainless steel expansion bands.

2.02 HEAT CABLE

A. Heating cable shall be self-regulating through the use of a thermostat for freeze protection. Heating cable shall be applicable to the type of pipe material being protected.

B. Heating cable shall utilize 120VAC and provide heating power of minimum of 5 watt/ft @ 50°F.

PART 3 – EXECUTION

3.01 INSTALLATION

A. All insulation and heat cables shall be installed by a qualified insulation CONTRACTOR in strict accordance with the manufacturer's recommendations and the requirements of these specifications.

B. Insulation shall be installed over heat cable where required.

C. Piping shall be tested and shall be approved by the ENGINEER prior to insulation installation.

D. All end joints of insulation shall be tightly butted.

E. All seams and joints shall be held by manufacturer's standard adhesive.

F. Jacket laps shall be neatly pasted in place.

G. All joints shall be pointed with insulating cement.

H. Fittings and valves shall be covered with the same material as the pipe, cut in segments to fit snugly without open spaces, held in place with copper wire or cement, and then covered with the same jacketing material as the pipe.

DRAFT

I. Insulation at valves and other devices shall be formed into two halves, easily removable for valve maintenance. The halves shall be constructed from segments cemented together to fit the valve and to extend over the adjacent piping insulation.

Insulated fittings adjacent to vapor-barrier insulation shall be sealed with acceptable vapor-barrier cement before installation of the finish jacket.

J. Pipe insulation and vapor-barrier shall be continuous through hangers and supports. Hangers shall permit insulation to pass through. Suitable saddles shall be provided to prevent the weight of the piping from being supported by the insulation.

END OF SECTION

DRAFT

SECTION 40 6700 – LOCAL CONTROL PANELS

PART 1 – GENERAL

1.01 REQUIREMENT

A. The CONTRACTOR shall furnish all tools, equipment, materials, and supplies, and shall perform all labor as required for installing Local Control Panel (LCP's) as indicated on the Drawings and as specified herein or in other Sections of the Specifications.

B. The following is a list of LCPs to be furnished under this Contract which are required to meet these specifications:

C. Water Filtration Control Panel (Furnished and installed by CONTRACTOR)

D. All LCP panels shall be designed and constructed to the following minimum standards using the following PLC / HMI platforms:

1. Allan Bradley – Compact Logics L43 or approved ENGINEER-approved equal
2. I/O Modules with minimum 15% open I/O
3. 12” Color Panel View Human Machine Interface (HMI) Terminal w/ 120VAC Power Supply
4. N-tron Industrial 5-port PoE Ethernet Switch – Model 105TX-POE
5. Redundant 24 VDC Power Supplies for Field Instrumentation
6. Sealed, mechanical cabinet cooling, if required, to maintain interior panel ambient temperatures below equipment stated operating conditions.
7. All inputs such as instruments, sensors and interfaces (switches, buttons, etc.) shall use 24 VDC
8. All external inputs shall be individually fused with blown-fuse indicators
9. All analog inputs shall be provided with loop isolation
10. All outputs shall be isolated with interposing relays with integrated indication lights and manual override buttons
11. All external connections into or out of the panel shall be made using UL listed terminal blocks
12. All spare I/O shall be wired out to terminal blocks
13. 30mm manual switches, buttons and lights shall be provided for each motor, gate or operator local to each machine.
14. Panels shall be UL508 listed.

1.02 RELATED WORK AND CONSTRUCTION STANDARDS

A. Each LCP shall be a UL 508A recognized panel assembler. All control panel components shall be UL Listed under the category "Industrial Control Equipment".

1.03 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

1.04 OPERATING AND MAINTENANCE MANUALS

A. Installation requirements and procedures.

B. Complete instructions regarding the operation and maintenance of equipment involved. Instructions and documentation not related to the equipment furnished must be removed or crossed out. O&M manuals must be individually tailored to the project and equipment as furnished

DRAFT

C. Bill of Materials, component data sheets, descriptive literature, product specification sheets, wiring diagrams and calibration procedures. O&M manuals must be individually tailored to the project and equipment as furnished

D. Complete nomenclature of replaceable parts, part numbers, current cost, name and address of nearest vendor of replacement parts. Information on equipment or components not related to equipment furnished must be removed or crossed out. O&M manuals must be individually tailored to the project and equipment as furnished

1.05 QUALITY ASSURANCE

A. Equipment to be furnished under this Section shall be the product of firms regularly engaged in the design and manufacture of this type of equipment. Manufacturer shall assume responsibility for, and guarantee performance of equipment furnished.

B. The manufacturer shall provide a 1-year equipment warranty.

C. Equipment shall be designed and installed to conform to Drawings, Specifications, engineering data, related equipment furnished by other suppliers and recommendations of the PLC manufacturer.

D. Comply with the following Codes and Standards:
1. NEMA (Testing Standards BU 1.3.03 or 1.304)
2. UL listing and labeling for materials.
3. NFPA-70
4. UL 508A

PART 2 – PRODUCTS

2.01 GENERAL

A. The CONTRACTOR shall furnish the LCP(s) to satisfy the functional requirements specified in the relevant mechanical equipment, and Instrumentation & Control Specification Sections and as indicated on the Drawings. All components shall be UL labeled or provided with proper ground fault protection as required by UL 508A.

B. LCP enclosures shall be 304 or 316 stainless steel NEMA 4X with hinged lockable doors. Freestanding enclosures shall have a 3-point latching handle. Outdoor enclosures with panel mounted devices shall contain a white interior swing panel.

C. Identification of panel-mounted devices, conductors, and electrical components shall meet the requirements specified herein.

2.02 TERMINAL BLOCKS

A. Each LCP shall be provided with identified terminal strips for the connection of all external conductors. There shall be sufficient terminal blocks for all external connections plus an additional 25 percent spare for future use. Terminal blocks shall be identified in accordance with approved shop drawings. Terminal blocks shall be individual, stacking, compression type, 600VAC, 30A minimum, suitable for wire sizes No. 10 - No. 18. A printed terminal block label shall be affixed to each terminal block for identification.

B. Each field-mounted device deriving power from the LCP 'shall be individually fused with a knife-blade or plug-in fused terminal block and blown fuse indicator.

C. Terminal blocks for analog signals shall include an indicator light that is illuminated when the signal is present. A grounding type terminal block shall be provided for termination of the analog signal cable shield/drain wire.

DRAFT

2.03 OPERATOR DEVICES

A. Pushbuttons, selector switches, and pilot lights shall be of the heavy-duty, oil-tight type, 30mm in size. Miniature style devices are not acceptable.

B. Pilot lights shall be push-to-test, LED style with LED and lens color as indicated on the Drawings.

C. START buttons shall have green cap and STOP buttons shall have red caps. All other button caps and selector switch operator handles shall be black.

D. Selector switches shall have the number of positions as indicated on the Drawings or as required to perform the intended function. Provide the number of 120VAC, 10A contacts as indicated on the Drawings or as required to perform the intended function.

E. Provide an engraved legend plate or provide laminated plastic nameplates as specified elsewhere for each device.

F. The operator devices shall have a NEMA rating equal to or more stringent than the control panel in which it is mounted.

G. Acceptable manufacturers:
   1. Cutler-Hammer 10250 series
   2. Square D 9001SK series
   3. Or ENGINEER-approved equal

2.04 CONTROL RELAYS

A. Relays shall be DPDT (minimum) plug-in type utilizing rectangular blades with an indicating LED, and sockets with screw-type terminals and hold-down clips. Operating coil voltage shall be as required or indicated on the Drawings.

B. Contacts shall be rated 10 Amps at 120 VAC. Contact material shall be silver-cadmium oxide except for signal switching circuits that shall be gold plated or other noble metal.

C. Acceptable manufacturers Square D Type K IDEC Type RH or ENGINEER-approved equal

2.05 TIMING RELAYS

A. Time delay relays shall be a combination on-delay and off-delay (selectable) with adjustable timing range from 1 sec to 10 hours. The timing relays shall include an LED indicator that is illuminated when the relay is timing out. Operating coil voltage rating shall be as indicated on the Drawings with DPDT, 120VAC, 10 amp rated contracts. Provide sockets with screw-type terminals and hold-down clips.

B. Reset Timers: Reset timers shall be synchronous motor. driven with a solenoid-operated clutch. The timing relays shall include an LED indicator that is illuminated when the relay is timing out. Voltage rating shall be as indicated on the Drawings with 120VAC, 10 amp rated contacts, and timing range as required or indicated on the Drawings.

C. Acceptable manufacturers:
   1. ATC
   2. DEC
   3. Or ENGINEER-approved equal

2.06 SIGNAL CONDITIONERS

A. Current-to-current converter/isolators shall be 4-20 mA input, 4-20 mA output. The INTEGRATION CONTRACTOR shall utilize signal isolators where necessary to boost or isolate signals for proper operation.

DRAFT

B. Pulse-to-current converters shall convert a square wave pulsed frequency to a proportional 4-20mA output and shall operate on 120 VAC.

C. Acceptable manufacturers:
   1. Moore Industries
   2. AGM
   3. Or ENGINEER-approved

2.07 POWER SUPPLIES

A. Power supplies shall be DIN-rail mounted and be of the solid-state circuitry type UL-1950 and CSA-1402C certified. Input power shall be 120VAC, +/- 10%, output voltage shall be as indicated on the Drawings or as required for proper operation of connected loads.

B. Power supplies shall be sized for 200% of the total connected load.

C. Line regulation shall be within +/- 0.05 percent with a 10 percent line change. Load regulation shall be within +/- 0.05 percent with a 50 percent load change. Output ripple shall not exceed 0.2 percent peak-to-peak:- Transient response shall be less than 50 microseconds for a 50 percent load change.

D. Power supplies shall be fully rated with an efficiency of at least 60 percent for a temperature range of 0 - 60°C or be oversized appropriately. Power supplies shall produce EMI/RR noise levels within the requirements of FCC Docket 20780.

E. Power supplies shall contain internal short circuit and overload protection. Output fusing shall be supplied on the positive terminal.

F. Acceptable manufacturers or ENGINEER-approved equal:
   1. Acopian
   2. Sola
   3. IDEC
   4. Phoenix Contact

2.08 UNINTERRUPTIBLE POWER SUPPLY (UPS)

A. The UPS shall be on-line, with automatic bypass switching upon failure, and with automatic bypass switching for maintenance. The UPS shall include built-in surge protection, rectifier/battery charger, batteries, inverter, static transfer switch, and solid-state controls to provide a true sine-wave output.

B. Input power 120VAC, +/-10%, 60Hz.

C. Output power shall be 120VAC +/- 5% 60Hz with a harmonic distribution at less than 5% (voltage).

D. UPS KVA ratings have been indicated on the Drawings for bidding purposes only. Actual KVA rating of each UPS shall be as required to operate all loads being served for a minimum of 20 minutes without input power. KVA in-rush rating shall not be less than 150% of connected load's in-rush current. UPS load calculations must be submitted with the UPS for approval.

E. Switching response time shall be less than 4 milliseconds.

F. Batteries shall be sealed, no maintenance type, designed for 5 years minimum service.

G. Display shall include: On-line or bypass operation, input power failure, UPS fault, UPS battery low.

H. Where indicated, the UPS shall be provided with dry contacts that close upon low battery alarm.

I. The UPS manufacture shall provide 1-year parts and labor warranty.

DRAFT

J. Acceptable manufacturers or ENGINEER-approved equal:
   1. APC
   2. Best

2.09 SPARE PARTS

A. Provide a minimum of 10 spare lamps.

B. Provide one control and one timing relay of each type utilized.

C. Provide one spare power supply of each size and type utilized.

D. Provide (3) spare fuses of each size and type utilized.

E. Refer to related Specification Sections for additional spare parts required.

PART 3 – EXECUTION

3.01 FABRICATION

A. LCP's shall contain components as indicated on the Drawings. The division of I/O between LCPs shall be provided per the Process and Instrumentation Diagrams (P&IDs).

B. All front accessible panel-mounted devices shall be mounted a minimum of 42-inches above finished floor elevation.

C. Where AC and DC signals must intercept each other, cross wires at 90-degree angles. Route AC and DC signals in separate wireways. Provide blank wireways for field wiring by the CONTRACTOR.

D. All internal wiring shall be contained in plastic raceways or troughs having removable covers. Wiring to door-mounted devices shall be extra flexible and anchored to doors using wire anchors cemented in place. Exposed terminals of door-mounted devices shall be guarded to prevent accidental contact with energized terminals.

E. Minimum control panel conductor size for power shall be No.12 AWG. Minimum conductor size for control wiring shall be No. 14 unless protected by a 10A overcurrent protective device or smaller, in which case it can be No.16 AWG (in PLC and operator interface cabinets only). Analog signal cables shall be 600V, No.16 AWG twisted shielded pair.

F. Wire markers shall be heat shrinkable, be a minimum of 3/8-inches in length and placed as near as possible to the end of the wire.

G. Identification of panel-mounted devices control equipment enclosure shall be engraved laminated plastic with black letters on white background. Use minimum 3/16-inch letters for identifying individual panel components. Use minimum 3/8-inch letters for identifying control equipment enclosure.

H. LCP enclosure doors that contain 120VAC devices shall be bonded to the enclosure grounding lug.

I. Each PLC I/O point connected to an external device shall be terminated at terminal blocks.

J. All analog signals shall be individually fused at the terminal block. See additional requirements as specified elsewhere in these specifications.

3.02 INSTALLATION

A. LCP(s) shall be installed as indicated on the drawings.

B. All front accessible panel-mounted devices shall be mounted a minimum of 42 inches above finished floor elevation.

C. LCP(s) shall be stored in an indoor, dry location at the jobsite to protect from condensation, damage, and the effects of weather.

DRAFT

D. LCP(s) interiors and exteriors shall be cleaned, and coatings shall be touched up to match original finish upon completion of the work.

END OF SECTION

DRAFT

SECTION 40 7000 – INSTRUMENTATION FOR PROCESS SYSTEMS

PART 1 – GENERAL

1.01 REQUIREMENT

A. This Section includes the general requirements for furnishing and installing the field instruments as indicated on the Drawings and specified in this Division of these specifications. Other instrumentation and control sections of this Division shall supplement this Section as necessary. These specifications shall not apply to instrumentation to be provided by process equipment vendors as part of the process systems or equipment already approved by the ENGINEER.

B. The field instrument schedule is attached to the end of this Specification Section but shall not be construed as a Bill of Materials or as a complete listing of all required devices. The I&C INTEGRATOR shall be responsible for all field instruments indicated in these Specifications and the Contract Documents.

C. The I&C INTEGRATOR shall provide all labor, materials, and incidentals as indicated, specified, and required to furnish, install, calibrate, adjust, test, document, start-up, and train for each field instrument furnished.

D. Labor, materials, apparatus, and components essential to the complete functioning of field instruments described and indicated herein, or which may be reasonably implied as essential, whether mentioned in the Contract Documents or not, shall be furnished and installed by the I&C INTEGRATOR. In case of doubt as to the work intended, or in the event of need for explanation thereof, the I&C INTEGRATOR shall refer to the ENGINEER for supplemental instructions.

E. For purposes of clarity and legibility, the Drawings are diagrammatic only. Construction Documents are not intended to show every fitting, junction, or component nor every difficulty that may be encountered during installation or coordination with different equipment manufacturers. The I&C INTEGRATOR shall refer to related data in all Contract Documents and shall verify this information on site.

1.02 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.
   1. Descriptive Data: Submit copies of complete descriptive literature, performance data, physical dimensions, power, and signal connections for each field instrument to be furnished. Provide name of manufacturer, style, and complete model number. Listing items "as specified" without both make and model or type designation is not acceptable.
   2. Component Data Sheets: Submit a component data sheet for each piece of instrumentation equipment similar to an ISA S20 form. Include equipment tag number, manufacturer's model number, location of service, materials of construction, size and scale range, calibrated range, set points, optional accessories, and any other useful information.
   3. Submit drawings and bill of materials for any sun shields that may be required. Drawings must clearly indicate how the sun shield will be fabricated and mounted.

1.03 OPERATING AND MAINTENANCE MANUALS

A. Installation requirements and procedures.

B. Complete instructions regarding the operation and maintenance of equipment involved. Instructions and documentation not related to the equipment furnished must be removed or crossed out. O&M manuals must be individually tailored to the project and equipment as furnished.

DRAFT

C. Bill of Materials, component data sheets, descriptive literature, product specification sheets, wiring diagrams and calibration procedures. O&M manuals must be individually tailored to the project and equipment as furnished.

D. Complete nomenclature of replaceable parts, part numbers, current cost, name and address of nearest vendor of replacement parts. Information on equipment or components not related to equipment furnished must be removed or crossed out. O&M manuals must be individually tailored to the project and equipment as furnished

E. Provide a copy of all instrument calibration reports.

F. Refer to Applicable Sections of Division 40 – Process Integration for additional requirements.

1.04 QUALITY ASSURANCE

A. Equipment to be furnished under this section shall be the product of firms regularly engaged in the design and manufacture of this type of equipment. Manufacturer shall assume responsibility for, and guarantee performance of equipment furnished. However, this shall not be construed as relieving the I&C INTEGRATOR from responsibility for the proper installation and functioning of the work.

B. The manufacturer shall provide a 2-year equipment warranty.

1.05 COORDINATION

A. The I&C INTEGRATOR shall coordinate with all other equipment manufacturer to ensure proper installation and operation of the field instruments.

B. The I&C INTEGRATOR shall coordinate with all other trades to avoid conflicts and interferences. No extra compensation will be allowed for changes made necessary due to conflicts between various equipment.

C. Any discrepancies noted in these contract documents or discrepancies between Drawings and actual field conditions shall be promptly brought to the ENGINEER for a decision. No extra compensation will be allowed for changes made by the I&C INTEGRATOR without ENGINEERs consent.

D. IDENTIFICATION TAGS (To be provided by Contractor, as per these Specifications.)

PART 2 – PRODUCTS

2.01 PROVIDE INSTRUMENTATION AS NOTED ON THE EQUIPMENT LIST.

2.02 MAGNETIC FLOWMETERS

A. General:

1. Magnetic flowmeters systems shall be of the low frequency electromagnetic induction type and produce a DC pulsed signal directly proportional to and linear with the liquid flow rate. Complete zero stability shall be an inherent characteristic of the flowmeter system. Each magnetic flowmeter system shall include a metering tube, signal cable, transmitter, and flowmeter grounding rings.
2. Flowmeter shall be for the appropriate type to measure water flow rate in water or wastewater as required by the Contract Documents.
3. Magnetic flowmeters and electronics shall be manufactured at facilities certified to the quality standards of ISO Standard 9001 - Quality Systems - Model for Quality Assurance in Design/Development, Production, Installation, and Servicing.
4. Flowmeters that are to be located on a submerged pipe shall be designed to operate in such conditions. Flowmeter display shall be located above water level and a connection cable of appropriate length shall be provided to allow connection to display location.

DRAFT

B. Metering Tube:
   1. Constructed of stainless steel with 150 lb. carbon or stainless steel ANSI B16.5 Class 150 flanged connection.
   2. Utilize a minimum of 2 bullet-nosed, self-cleaning electrodes.
   3. The liner shall be non-conductive and in conformance with the Manufacturer's recommended service.
   4. Electrodes constructed of materials that are in conformance with the Manufacturer's recommendation for the meter's intended service.
   5. Meter housing rated for accidental submergence.
   6. Two stainless steel grounding rings shall be furnished and installed in accordance with the manufacturer's bore and material recommendation for the meter's intended service. Installation shall be per flowmeter manufacturer's recommendations. Unless otherwise indicated, flowmeter grounding shall consist of a 3/4" x 10-foot copper clad ground rod bonded to the grounding rings with a No.6 bare copper conductor.

C. Transmitter: The transmitter shall be mounted on the flow-tube or remotely where indicated on the Drawings. The interconnecting cable shall be furnished by the flowmeter manufacturer of sufficient length to avoid splicing. Transmitters shall be housed in NEMA 4X enclosures suitable for mounting outdoors. The transmitter shall produce an electrically isolated 4-20mA DC output into a minimum load of 800 ohms linear to flow and a dry-contact, field adjustable, pulsed output for remote totalization.

D. Performance Requirements:
   1. Measuring Range: 0.33 to 33 ft/s
   2. Calibrated Range: 1.0 to 33 ft/s
   3. Time Constant: 0.01 to 100 seconds.
   4. Accuracy: ±0.2 percent of flow rate from 10 to 100 percent of full range over 1 ft. per second at 0 x D inlet run.
   5. Repeatability: 0.1 percent of full scale.
   6. Isolation: either galvanic or optic
   7. Empty pipe detection: The flow transmitter shall display "Empty Pipe" when the metering tube is not completely full.
   8. Power consumption: 30 watts max
   9. Power supply: 85 to 260 VAC
   10. Communication Protocol: Analog and Digital

E. Factory Testing: Each flowmeter shall be hydraulically calibrated at a facility that is traceable to the National Institute of Testing Standards using a 3-point (minimum) test. The calibrations procedures shall conform to the requirements of MIL-STD-45662A. A real-time computer-generated printout of the actual calibration data indicated apparent and actual flows for each flow test shall be submitted to the ENGINEER with final project documentation.

F. Acceptable Manufactures:
   1. Toshiba,
   2. Endress + Hauser,
   3. or ENGINEER-approved equal

2.03 LEVEL TRANSDUCER

A. Signal Output
   1. 4-20 MADC 2 wire twisted pair grounded shield cable @ 0.042 ohm/ft
   2. FM and CSA explosion-proof and intrinsically safe
   3. Unit meets EMI/RFI for Mil-Std 461/462 Rev. E
   4. Response time: <5ms

DRAFT

B. Accuracy
   1. Static Accuracy: 0.25% FSO BFSL
   2. 1-year Stability: 0.20% FSO
   3. Error Band: 0.90% BFSL FSO

C. Temperature
   1. Temp. Compensation: +35°F to +125°F
   2. Operating temp.: -20°F to +190°F
   3. Storage temp: -65°F to +250°F

D. Electrical Connection and Protection
   1. Vented, watertight, polyurethane-jacketed cable, 40 feet standard
   2. 10-30 VDC unregulated power
   3. Unit is FM explosion-proof and FM intrinsic safe.

E. Material
   1. Wetted Parts: 316 Stainless Steel Inconel Sensor
   2. Body: 300 Stainless Steel, explosion-resistant
   3. Cable: Polyurethane-jacketed cable
   4. Cable: 40 feet standard

F. Agency Approval Options
   1. Explosion-proof rated Class I, II, III, Division I, Groups A, B, C, D, E, F, G.

G. Ranges
   1. 5 psi higher than the high operating level, unless noted otherwise in plans

H. Acceptable Manufacturers:
   1. E&H
   2. Or ENGINEER-approved equal

2.04 LEVEL FLOATS

A. Float switches shall be used to sense liquid level in a tank, basin or other applications as indicated on the Drawings. Floats shall be mechanical activated switch contact, rated for 10A @240V for mechanical pump duty or 5A @ 240V for control duty. The float ball shall be constructed of 316 stainless steel or durable polypropylene material construction with solid polyurethane foam interior. It shall be leak proof, shock proof, and impact resistant. Switch shall be non-mercury type.

B. The switch contact configuration shall be normally open (N.O.) or normally closed (N.C.) as required to perform the proper operation as intended in these Contract documents. Actuation point shall be 1” above or below the horizontal. Power chord shall be chlorinated polyethylene material. Cord weight shall be zinc plated cast iron – 1.22 lb minimum with split-weight design for ease of adjustment.

C. Floats shall be installed such that the switch activation takes place at the liquid level as indicated or directed by the ENGINEER at time of construction. The float switch assembly shall include 1" schedule 80 PVC fastened to the tank/basin wall with 316 stainless steel anchors and clamps if required to secure the float(s) into place or as indicated on the Drawings. Float switch cables shall be secured to the cable or PVC pipe with weather-resistant, UV rated tie-wraps.

D. Acceptable Manufacturers:
   1. Connery
   2. Or ENGINEER-approved equal

DRAFT

2.05 GAS DETECTOR

A. General: Toxic gas transmitters for the monitoring of ambient oxygen levels shall be provided in areas as called out in the Contract Documents. Each gas transmitter shall consist of an explosion-proof electronic transmitter and close coupled sensor holder. Sensors shall be interchangeable and designed to easily fit into a sensor holder.

B. Gas transmitters shall measure gas concentrations in the installation area using smart electrochemical gas diffusion sensors, physically housed in a special socketed sensor holder. Sensor gas type, range, and calibration data shall store in the sensors' memory and be automatically read into the transmitter Sensors capable of remote calibration using a bench transmitter at a convenient location with the new calibration data stored in the sensor module memory.

C. The gas transmitter shall be housed in an explosion-proof enclosure with window and consist of an electronic board stack with LCD graphic display with magnetic function switches for non-intrusive access to all transmitter programming and display functions. The electronic board stack shall be designed to plug into a power supply board at the base of the transmitter enclosure and be easily removable for service or field wiring. The transmitter shall display gas concentrations on an LCD graphics display along with alarm indication and menus for setup and operating parameters.

D. Each gas transmitter shall be provided with three SPDT 5-Amp alarm relays that are assignable to any alarm setpoint or fault condition and fully programmable for setpoint, hysteresis and time delay.

E. Gas transmitters shall operate from power supplies of 12-30 VDC supply and shall be capable of driving external loads up of 675 ohms with a standard 24 VDC supply. Transmitter enclosure shall be rated explosion-proof for Class 1, Group B, C, & D.

F. Acceptable Manufacturer shall be ATI Series D12, 2-wire type with integral LCD or approved equal.

2.06 PRESSURE GAUGES

G. Pressure gages shall have the following features as a minimum:
   1. Housing: 4-1/2", aluminum case with plastic lens, white dial and black numbers/graduations/pointer
   2. Silicone oil filled
   3. Range: as indicated elsewhere
   4. Proof pressure: 150 percent of range psi minimum
   5. Accuracy: one percent of full scale
   6. Wetted material: 316 stainless steel
   7. Dial/pointer: stainless steel or aluminum
   8. Service: liquid, gas, or vapors as indicated on the Drawings
   9. Process connection: 1/4" NPT male
   10. Calibration: micro-adjustment screw
   11. Accessories: test cock, female outlets, and an isolation ball valve

H. An isolation ball valve shall be furnished and installed on each pressure gauge for ease of removal without disruption of service. The valve shall be sized as required for the process connection.

I. A diaphragm seal shall be furnished and installed to isolate each pressure gauge installed with a process connection other than potable water or clean air.

J. The I&C CONTRACTOR shall furnish and install all mounting hardware and support structures necessary for proper operation in accordance with the manufacturer's recommendations and the Contract Documents. Materials used for support structures

DRAFT

shall be suitable for the environment in which it is installed (corrosive - stainless steel, non-corrosive - galvanized steel; unless indicated otherwise).

K. Acceptable Manufacturers:
1. US Gauge (Ametek)
2. Ashcroft
3. Winters
4. Or ENGINEER-approved equal

2.07 PRESSURE TRANSMITTER

A. The pressure transmitter shall measure the pressure in the line and shall transmit a 4-20 mA output for process control. The unit shall have an LCD display for local readings.

B. Requirements
1. Accuracy: ±1% down to 10:1
2. Display: 4-character LCD
3. Output: 4-20 mA
4. Pressure: as noted in plans or 10% higher than the maximum operating pressure
5. Sensing Element: 316 SS diaphragm
6. Wetted Material: 316 SS
7. Process Connection: 1/4” NPT (F)
8. Power: 12 – 45 VDC
9. Enclosure: NEMA 4X

C. Acceptable Manufacturers:
1. Rosemount
2. Endress & Hauser
3. Or ENGINEER-approved equal

2.08 LEVEL TRANSMITTER – RADAR TYPE

A. General: Radar level transmitter is a continuous non-contact level measurement with 80 GHz technology radar with a measuring range of up to 10m (33ft) for basic applications in liquids and solids.

B. Requirements
1. Accuracy: Liquid ± 5mm (0.2”) / Solids ± 10mm (0.39”)
2. Supply/ Communication: 2-wire (4-20mA) – Bluetooth (Optional)
3. Supply Voltage: 12 to 30 VDC
4. Frequency : W-Band (~80 GHz)
5. Process Pressure: -14.5 to 43 psi
6. Ambient Temp: -40C to 60C
7. Wetted Material: PVDF, PBT/PC
8. Process Connection: 1” – 1.5” NPT
9. Max Measure Distance : 10 m (32 ft)

C. Acceptable Manufacturers:
1. Endress & Hauser Micropilot FMR10B

PART 3 – EXECUTION

3.01 INSTALLATION

A. The I&C INTEGRATOR shall furnish and install all mounting hardware and support structures for the instrumentation and the logic unit as required for proper operation in

DRAFT

accordance with the manufacturer's recommendations and the Contract Documents. Materials used for support structures shall be suitable for the environment in which it is installed (corrosive – PVC, Fiberglass or stainless steel, non-corrosive – stainless steel; unless indicated otherwise).

B. Inspect each instrument and piece of equipment for defects, damage, and correct operation before installation. Inspect work area and work involving other trades to verify readiness for installation.

C. Field instruments shall be installed per manufacturer's requirements. Verify that all mounting, process, and electrical connections are secure and tight before operating instrument.

D. Install field instrument identification tag as described above.

E. The I&C INTEGRATOR shall coordinate with the Mechanical I&C INTEGRATOR to verify process connection type and location.

F. Field instruments installed in hazardous (classified) locations shall be installed in approved enclosures or electrically connected through an intrinsically safe barrier and shall meet all other requirements of NFPA 70 Articles 500-503.

G. Furnish and install sun shields for all analog instruments installed outdoors in direct sunlight where recommended by the instrument manufacturer.

H. Additional installation supervision, calibration, testing, and start-up requirements are provided in these Specifications.

END OF SECTION

DRAFT

SECTION 41 2200 – CRANES AND HOISTS

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Provide permanent and/or portable lifting equipment and ancillary equipment as specified below.

1.02 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

B. Submittal shall also include base dimensions, footing requirements, and footing reaction forces.

1.03 WORK INCLUDES THE FOLLOWING:

A. Detailed design of completed crane system, including bridge, end trucks, trolley, hoists, cabling, controls, and all appurtenances specified hereinafter.

B. Shop drawings.

C. Fabrication of a complete crane.

D. Inspection and shop testing.

1.04 REFERENCES

A. Equipment furnished under this section shall comply in all respects with the requirements of the following standards:

1. OSHA Occupational Safety and Health Administration
2. CMAA Crane Manufacturer's Association of America
3. HMI Hoist Manufacturer's Institute
4. ANSI American National Standards Institute
5. NEMA National Electric Manufacturer's Association
6. NEC National Electric Code
7. AWS AWS D14.1 Specification for Welding Cranes

1.05 QUALITY ASSURANCE

A. CONTRACTOR shall adhere to OSHA, state, and local safety guidelines, laws, rules, and regulations.

B. CONTRACTOR shall be licensed in the state of Arizona and have a minimum of 10 years' experience in the manufacture, fabrication, and installation of bridge cranes.

C. CONTRACTOR shall conform to all applicable ANSI, CMAA, and HMI specifications and/or standards.

D. Comply with CMAA specification 74 or 70, as applicable.

E. Long lead items [hoist, end trucks, drives and controls] will be ordered by CONTRACTOR upon receipt of purchase order and credit approval. Steel will not be ordered until shop drawings and submittals have been approved by the customer.

F. All electric equipment shall be UL, CSA, or ETL labeled.

1.06 WARRANTIES

A. Provide one-year equipment warranty.

1.07 SERVICE AGREEMENT

A. Provide optional cost for two-year service agreement from local service organization.

DRAFT

PART 2 – PRODUCTS

2.01 BRIDGE CRANE SYSTEM

A. The bridge crane system shall include the designing, manufacturing, shipping, installing and field testing of a top running, single girder, overhead traveling bridge crane with one electric wire rope trolley hoist.

B. The following design conditions are required for the crane(s):

Bridge Crane		
Capacity	5 tons	
Duty Class	CMAA Class C	
Span	Per plan	
Steel	AISC Hot Rolled Steel Beams, A992	
Bridge Girder Deflection	L/888	
End Trucks	Dual drive with fixed axles. Motors shall include AC magnetic disc brakes per CMAA requirements. Wheelbase-to-span ratio shall not exceed 7:1	
Hoist	Electric wire rope hoist	
Lift	38’-1.5” above the operating floor with two wraps remaining on drum at lowest hook position.	
Trolley	Motor drive with two drive wheels and brakes per CMAA requirements	
Speeds	Bridge	0 to 100 fpm, VFD control
	Hoist	20 & 3.3 fpm, two speed control
	Trolly	0 to 65 fpm, VFD control
Voltage	460 v 3 Ph 60 Hz, 115 volt control	
Nominal HP	18 HP	
Bumpers	Rubber bumpers on end trucks and trolley per CMAA requirements	
Enclosures	NEMA 4, Minimum	

C. Crane Girder
1. Girders shall be designed to resist all vertical, horizontal and torsional forces.
2. Bridge girders shall be new, ASTM A992 Hot Rolled structural steel shapes or welded box girders designed to meet the requirements of CMAA.

D. End trucks
1. End trucks shall be constructed of structural steel tubes, providing a rigid structure. Design shall allow easy wheel removal and exchange.
2. End trucks shall be fitted with shock absorbing bumpers.
3. Crane wheels shall be high strength ductile iron, machined with double flanges and straight treads, flame hardened to 300 Bn. Wheels shall be sized to meet the minimum allowable wheel loads per CMAA. The wheel axle assembly shall rotate on dual high quality anti-friction, lifetime lubricated bearings having a minimum life of 5,000 hours.
4. The end truck to girder connection shall be bolted for easy removal of end truck. Bridge girder shall be coped to provide the highest possible positioning of the runway beams.

DRAFT

E. Bridge and Trolley Drives
   1. Bridge drives shall employ fixed rotating axles with totally enclosed motors. Trolleys shall employ two drive wheels.
   2. Motors shall be TENV, Class F insulated with a temperature activated switch in the windings, 30-minute rated, 1800 RPM.
   3. The gear reducers shall be fully enclosed with oil bath for gears.

F. Wire Rope Hoist
   1. Hoist Motor and Braking System
      a. Hoist motor shall develop sufficient power to lift the rated load at the specified speed. Motors shall be TENV, Class F insulated with a temperature activated switch, 30-minute rated, 1800 RPM. Hoist motor shall not be placed inside of hoist drum.
      b. The hoist shall have a DC rectified disc type motor brake. Brake material shall not contain asbestos.
   2. Hoist Gearing
      a. Hoist gearing shall be helical, heat treated alloy steel and shall operate in an oil bath.
   3. Hoist Drum and Rope
      a. The rope drum shall be welded construction, deep grooved and precision-machined to give maximum rope life. Drum shall be supported at each end by sealed anti-friction bearings.
      b. The hoisting rope shall be of a proper design and construction for hoist service. The rated capacity load divided by the number of parts of rope shall not exceed 20% of the breaking strength of the rope.
      c. Double wrapping of the rope shall not be permitted. A drum rope guide shall be provided. A minimum of two wraps shall remain on the drum with the hook in the lowest position.
      d. Bottom block shall have a totally enclosed housing fabricated of steel. The rope sheaves shall be supported on an anti-friction thrust bearing. Hook shall be a single barbed type hook and shall be equipped with a heavy spring safety latch.
      e. Hoist shall be equipped with upper and lower limit switches as well as a redundant block operated upper limit switch. The switches shall be adjustable to set the extreme upper and lower limits of hook travel.
      f. Hoist shall be equipped with an overload device to prevent lifting loads in excess of 125%.

G. Bridge Electrification and Controls
   1. Electrification
      a. To supply the electrical power across the crane for bridge, trolley and hoist motions, a flat cable festoon system shall be utilized. The flat cable shall be extra flexible with color coded wires according to NEMA standards. Wire shall be stranded copper per CMAA.
      b. The trolleys that carry the flat cable shall have steel wheels with sealed ball bearings. The c-track that the trolley operates in shall be a minimum of 14 gauge galvanized metal.
      c. Flat cable connectors shall be heat shrinkable, corrosion resistant and flame retardant
   2. Controls
      a. Bridge, trolley and hoist controls shall be mounted in NEMA 4 enclosures.
      b. A magnetic mainline contactor, controlled by momentary on/off switches on the pushbutton shall be included.
      c. A control transformer shall be provided with separate and isolated primary and secondary winding, all copper wound. Control voltage shall not exceed 120 volts.
      d. Hoist functions shall be controlled by magnetic contactor.

DRAFT

e. Bridge and trolley functions shall be controlled by separate variable frequency drives.
f. All controls shall be sized to meet ambient temperatures. A cooling system will be provided for each enclosure when the ambient temperature exceeds the maximum allowable operating temperature of the individual electrical components.

3. Pendant Station
   a. A NEMA 4, pendant station will be provided with a separate pushbutton for each direction. A red mushroom head "OFF" switch and a separate "ON" switch shall be supplied. Operators shall be two-speed.
   b. The enclosures shall have durable, clearly marked legend plates, guards to protect switches from damage or accidental actuation and shall allow for right or left hand operation. Arrangement shall be as used on other existing cranes in the facility.

H. PAINTING
1. All structural steel shall be cleaned of rust and mill scale with a minimum SSPC-6 "commercial blast" cleaning.
2. Cranes shall be painted with 2.0 mil DFT Primer & 2.5-3.0 mil DFT Safety Yellow Industrial Enamel.
3. Hoists shall be painted per the Hoist manufacturer's standard coating. Hooks shall not be painted.
4. Structural components shall be painted with 2.0 mil DFT Primer & 2.5-3.0 mil DFT Gray Industrial Enamel.

2.02 I-BEAM CRANE SYSTEM

A. The I-beam crane system shall be self-supporting and shall span the area as shown on the Drawings. The I-beam crane system construction shall allow the operators to lift equipment from anywhere within its span. Hoist shall be electric chain type or engineering approved equal.

B. The following design conditions are required for the crane(s):

I-Beam Crane	
System Capacity:	As noted in plans
Span:	As noted in plans
Overall Length:	As noted in plans
Trolley Type:	Push
Hoist speeds:	18/3 FPM, two speed
Hoist type:	Electric chain
Hoist lift required:	As noted in plans
Area Dimensions:	As noted in plans
Steel	AISC Hot Rolled Steel Beams, A-992
I-Beam Deflection	L/600
CMAA Classification:	Class C

C. The I-beam crane shall be equipped with an electric chain hoist and push trolley system. The hoist shall be capable of lifting the required system capacity and shall be supplied with a motor rated for 460V, 3-Phase, and 60-Hz.

D. The I-beam crane shall be primed and coated per Specifications Section 09 9700 – Special Coatings. A finish coat color per OWNER selection. CONTRACTOR shall submit color pallet to OWNER as part of the Submittal process.

DRAFT

E. Materials:

Components	**Material**
Runway beams	Steel ASTM A992
Trolley	Steel ASTM A36
Wheels	Heavy Duty Cast iron or steel
Hooks	Forged steel

F. EQUIPMENT

1. Hoist and Trolley
   a. Hoist shall be electric chain type with motorized trolley, to fit bridge beam.
   b. Hoist and trolley motors shall be as indicated in the table above, as applicable.
   c. Hoist shall be two speed
   d. Trolley shall push type
   e. Upper and lower limit switch shall be provided. Limit switch shall provide upper and lower limit stopping.
   f. Hoist motor shall be totally enclosed with equivalent to NEMA 4 rating and shall have minimum class F insulation.
   g. Hoist brake shall be DC type with adequate torque to stop and hold over 100% of the hoist rated load.
   h. Hoist control panel shall be at least equivalent to NEMA 3R rating.
   i. Safety latch shall be provided on hook.

2.02 DAVIT CRANE

A. Manufacturer: Davit crane shall be as manufactured by Thern, Inc., or ENGINEER-approved equal.

B. The following design conditions are required for the crane:

Pump Stations Davit Crane	
Lifting Capacity:	1,000 lbs Capacity at 81" (2,000 capacity)
Hook Reach:	74” (shortest position), 122” (fully extended)
Winch Operation:	Electric, 115 Volt, single phase
Boom Angle Adjustment:	Manual adjustment
Lift required:	30 Ft. (minimum)
Base Requirement:	Pedestal

C. Design Factor: yield design factor shall be a minimum of 1.5 under static conditions for all crane components including winch and base. Breaking strength safety factor shall be a minimum of 2.5 under static conditions. Comply with CMAA 70 or 74.

D. Hook Height: hook height shall be adjustable by moving the boom up or down between 5 degrees above horizontal and 45 degrees from vertical, with a minimum of 86 inches between the lowest position and the highest position with the boom fully extended.

E. Boom Angle: boom angle shall be adjustable at all times. Hand operated screw jack or ratchet-style screw jack shall be provided as required to raise or lower the boom between 5 degrees above horizontal and 45 degrees from vertical.

F. Boom Sheave: wire rope shall pass over a sheave at the end of the boom. Sheave shall have a bearing and shall be supported by a machined clevis pin which shall be keyed to the boom to keep the pin from rotating.

DRAFT

G. Clearance: minimum height of the boom shall be 36 inches between mounting surface and the underside of the boom in all base configurations.

H. Rotation: mast and boom shall rotate 360 degrees in the base, with a rotational handle attached to the mast to facilitate rotation. Crane shall include a bearing sleeve to support the mast at the top of the base.

I. Fastening Pins: crane components shall be fastened together using stainless steel clevis style pins, secured with lynch pins with lanyards fastening the lynch pins to primary structural components.

J. Portability: davit crane shall break down into portable components with no single component weighing more than 100 pounds. Carrying handles shall be welded to mast and boom.

K. Winch Location: lifting winches shall be located such that the center point of the drive shaft is behind the centerline of the mast.

L. Winch Mounting Bracket: crane shall be equipped with a winch mounting bracket that connects to the crane with a pin allowing the winch with bracket to be attached or removed without tools. Winch shall attach to the bracket using standard fasteners.

M. Nametag: davit crane shall be labeled with a non-corrosive metal identification plate labeled or imprinted with the manufacturer's name, model number, serial number, capacity rating, and other essential information.

N. Painting:
   1. Crane shall be factory painted per manufacturer's standards, with finish per OWNER's Selection.
   2. Crane shall be shop cleaned, primed, and painted as in accordance with these Specifications. The following items shall not be painted: Cable/Wire Rope

PART 3 – EXECUTION

3.01 SERVICES OF MANUFACTURER

A. Inspection, Startup, and Field Adjustment: The hoist systems shall be assembled and tested per the manufacturer's instructions and requirements. The test shall be performed using a load equal to ¾ of the load rating of the system and shall be demonstrated to the satisfaction of the ENGINEER prior to acceptance.

END OF SECTION

DRAFT

SECTION 43 1134 – REGENERATIVE ROTARY BLOWERS

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. The blower furnished shall be designed, constructed, and installed in accordance with the best practice and methods and shall operate satisfactorily when installed in accordance with the Contract Documents.

1.02 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures, and shall include the following:
   1. Performance data stating the anticipated capacity, brake horsepower demand, and the temperature differential, for the model selected at the design point conditions, and performance curves providing similar information for the full rated range of blower speed and differential pressure at standard inlet conditions.
   2. Descriptive literature, bulletins, and/or catalog cut sheets of the equipment which include complete manufacturer's specifications and materials of construction.
   3. Electrical connection diagrams for motors.
   4. Special handling instructions and requirements for storage and protection prior to installation.
   5. Operation & Maintenance Manuals
   6. Manufacturer's parts and unit warranty information.

PART 2 – PRODUCTS

2.01 GENERAL

A. The blower shall be manufactured by GAST, Republic, or approved equal and meet the following requirements:

Motor Enclosure	TEFC
HP	17
Voltage	480
Insulation Class	F
Operating Condition	260 CFM @ 3.5 psi

B. The blower shall:
   1. have oil-less operation
   2. be UL and CSA approved TEFC motor with permanently sealed ball bearings
   3. be IP54 rated enclosure on motors
   4. have cast aluminum dual impeller, blower housing and cover
   5. have the capability of mounting in any plane
   6. have internal muffling on inlet and outlet

2.02 BLOWER ACCESSORIES

A. The blowers are to be standard engineered designs of a manufacturer regularly engaged in the production of blowers to ensure single source accountability and shall include the following accessories:
   1. Pressure gauge
   2. Check valve
   3. Inlet filter (pressure)
   4. Pressure relief valve

DRAFT

PART 3 – EXECUTION

3.01 INSTALLATION

A. Installation of the blower shall be in accordance with the manufacturer's instructions and recommendations in the location shown on the Contract Documents.

END OF SECTION

DRAFT

SECTION 43 2313.19 – HORIZONTAL SELF-PRIMING CENTRIFUGAL PUMP

PART 1 – GENERAL

1.01 PERFORMANCE CRITERIA

A. The pump manufacturer must be ISO 9001:2008 revision certified, with scope of registration including design control and service after sales activities.

B. The pump manufacturer must be registered to the ISO 14001 Environmental Management System standard and as such is committed to minimizing the impact of its activities on the environment and promoting environmental sustainability by the use of best management practices, technological advances, promoting environmental awareness and continual improvement.

C. Pumps must be designed to handle raw, unscreened, domestic sanitary sewage. Pumps shall have 4” suction connection, and 4” discharge connection. Each pump shall be selected to perform under following operating conditions:

1. Capacity (GPM)	400
2. Total Dynamic Head (FT)	35
3. Total Dynamic Suction Lift (FT)	15
4. Maximum Repriming Lift (FT)	Between 17-23
5. Minimum TDH (FT)	Dependent on the water level
6. Maximum TDH (FT)	Dependent on the water level

D. Pump Performance Certifications

1. Solids Handling Capability
   a. All internal passages, impeller vanes, and recirculation ports shall pass a 1½” spherical solid. Smaller internal passages that create a maintenance nuisance or interfere with priming and pump performance shall not be permitted. Upon request from the engineer, manufacturer’s certified drawings showing size and location of the recirculation port(s) shall be submitted for approval.

E. Re-prime Performance

1. Consideration shall be given to the sanitary sewage service anticipated, in which debris is expected to lodge between the suction check valve and its seat, resulting in the loss of the pump suction leg, and siphoning of liquid from the pump casing to the approximate center line of the impeller. Such occurrence shall be considered normal, and the pump must be capable of automatic, unattended operation with an air release line installed.
2. During unattended operation, the pump shall retain adequate liquid in the casing to insure automatic re-priming while operating at its rated speed in a completely open system. The need for a suction check valve or external priming device shall not be required.
3. Pump must re-prime 15 vertical ft. at the specified speed and impeller diameter. Reprime lift is defined as the static height of the pump suction above the liquid, while operating with only one-half of the liquid remaining in the pump casing. The pump must reprime and deliver full capacity within five minutes after the pump is energized in the reprime condition. Reprime performance must be confirmed with the following test set-up:
   a. A check valve to be installed down stream from the pump discharge flange. The check valve size shall be equal (or greater than) the pump discharge diameter.

DRAFT

b. A length of air release pipe shall be installed between pump and the discharge check valve. This line shall be open to atmosphere at all times duplicating the air displacement rate anticipated at a typical pump station fitted with an air release valve.
c. The pump suction check valve shall be removed. No restrictions in the pump or suction piping will prevent the siphon drop of the suction leg. Suction pipe configuration for reprime test shall incorporate a 2 feet minimum horizontal run, a 90° elbow and vertical run at the specified lift. Pipe size shall be equal to the pump suction diameter.
d. Impeller clearances shall be set as recommended in the pump service manual.
e. Repeatability of performance shall be demonstrated by testing five consecutive reprime cycles. Full pump capacity (flow) shall be achieved within five minutes during each cycle.
f. Liquid to be used for reprime test shall be water.
g. Upon request from the engineer, certified reprime performance test results, prepared by the manufacturer, and certified by a registered professional engineer, shall be submitted for approval prior to shipment.

F. Manufacturer's Warranty
1. The pump manufacturer shall warrant the pump equipment to be of quality construction, free of defects in material and workmanship. A written warranty shall include specific details described below.
2. All equipment, apparatus, and parts furnished shall be warranted for sixty (60) months, excepting only those items that are normally consumed in service, such as oils, grease, packing, gaskets, O-rings, etc. The pump manufacturer shall be solely responsible for warranty of the pump equipment and all components.
3. Components failing to perform as specified by the engineer, or as represented by the manufacturer, or as proven defective in service during the warranty period, shall be replaced, repaired, or satisfactorily modified by the manufacturer.
4. It is not intended that the pump manufacturer assume liability for consequential damages or contingent liabilities arising from failure of any vendor supplied product or part which fails to properly operate, however caused. Consequential damages resulting from defects in design, or delays in delivery are also beyond the manufacturer's scope of liability.
5. This limited warranty shall be valid only when installation is made and use and maintenance is performed in accordance with manufacturer recommendations. The warranty shall become effective on the date of acceptance by the purchaser or the purchaser's authorized agent, or sixty (60) days after installation, or ninety (90) days after shipment from the factory, whichever occurs first.

PART 2 – PRODUCT

2.01 MANUFACTURER

A. The specifications and project drawings depict equipment and materials manufactured by The Gorman-Rupp Company, which are deemed most suitable for the service anticipated. It is not intended, however, to eliminate other products of equal quality and performance. Pump shall be Gorman-Rupp Model T4DS-B-4 or Engineer-approved equal.

DRAFT

B. After execution of the contract, the contractor may offer substitutions to the specified equipment for consideration. The equipment proposed for substitution must be superior in construction and performance to that specified in the contract, and the higher quality must be demonstrated by a list of current users of the proposed equipment in similar installations.

C. In event the contractor obtains engineer's approval for equipment substitution, the contractor shall, at his own expense, make all resulting changes to the enclosures, buildings, piping, or electrical systems as required to accommodate the proposed equipment. Revised detail drawings illustrating the substituted equipment shall be submitted to the engineer prior to acceptance.

D. It will be assumed that if the cost to the contractor is less for the proposed substitution, then the contract price shall be reduced by an amount equal to the savings.

2.02 PUMP DESIGN

A. Pumps shall be horizontal, self-priming centrifugal type, designed specifically for handling raw, unscreened, domestic sanitary sewage. Pump solids handling capability and performance criteria shall be in accordance with requirements listed under PART 1 – GENERAL of this section.

B. The pump manufacturer must be ISO 9001:2008 revision certified, with scope of registration including design control and service after sales activities.

C. Materials and Construction Features

1. Pump casing shall be cast iron Class 30 with integral volute scroll. Casing shall incorporate following features:
   a. Mounting feet sized to prevent tipping or binding when pump is completely disassembled for maintenance.
   b. Fill port coverplate, 3-1/2" diameter, shall be opened after loosening a hand nut/clamp bar assembly. In consideration for safety, hand nut threads must provide slow release of pressure, and the clamp bar shall be retained by detente lugs. A Teflon gasket shall prevent adhesion of the fill port cover to the casing.
   c. Casing drain plug shall be at least 1-1/4" NPT to insure complete and rapid draining.
   d. Liquid volume and recirculation port design shall be consistent with performance criteria listed under PART 1 – GENERAL of this section.
2. Coverplate shall be cast iron Class 30. Design must incorporate following maintenance features:
   a. Retained by hand nuts for complete access to pump interior. Coverplate removal must provide ample clearance for removal of stoppages, and allow service to the impeller, seal, wearplate or check valve without removing suction or discharge piping.
   b. A replaceable wearplate secured to the coverplate by weld studs and nuts shall be AISI 1015 HRS.
   c. In consideration for safety, a pressure relief valve shall be supplied in the coverplate. Relief valve shall open at 75-200 PSI.
   d. Two O-rings of Buna-N material shall seal coverplate to pump casing.
   e. Pusher bolt capability to assist in removal of coverplate. Pusher bolt threaded holes shall be sized to accept same retaining capscrews as used in rotating assembly.
   f. Easy-grip handle shall be mounted to face of coverplate.
3. Rotating assembly, which includes impeller, shaft, mechanical shaft seal, lip seals, bearings, seal plate and bearing housing, must be removable as a single unit without disturbing the pump casing or piping. Design shall incorporate following features:

DRAFT

a. Seal plate and bearing housing shall be cast iron Class 30. Separate oil filled cavities, vented to atmosphere, shall be provided for shaft seal and bearings. Cavities must be cooled by the liquid pumped. Three lip seals will prevent leakage of oil.
    1) The bearing cavity shall have an oil level sight gauge and fill plug check valve. The clear sight gauge shall provide easy monitoring of the bearing cavity oil level and condition of oil without removal of the fill plug check valve. The check valve shall vent the cavity but prevent introduction of moist air to the bearings.
    2) The seal cavity shall have an oil level sight gauge and fill/vent plug. The clear sight gauge shall provide easy monitoring of the seal cavity oil level and condition of oil without removal of the fill/vent plug.
    3) Double lip seal shall provide an atmospheric path providing positive protection of bearings, with capability for external drainage monitoring.
b. Impeller shall be ductile iron, two-vane, semi-open, non-clog, with integral pump out vanes on the back shroud. Impeller shall thread onto the pump shaft and be secured with a lock screw and conical washer.
c. Shaft shall be AISI 4140 alloy steel unless otherwise specified by the engineer, in which case AISI 17-4 pH stainless steel shall be supplied.
d. Bearings shall be anti-friction ball type of proper size and design to withstand all radial and thrust loads expected during normal operation. Bearings shall be oil lubricated from a dedicated reservoir. Pump designs which use the same oil to lubricate the bearings and shaft seal shall not be acceptable.
e. Shaft seal shall be cartridge oil lubricated mechanical type. The stationary and rotating seal faces shall be tungsten titanium carbide alloy. Each mating surface shall be lapped to within three light bands flatness (35 millionths of an inch), as measured by an optical flat under monochromatic light. The stationary seal seat shall be double floating by virtue of a dual O-ring design; an external O-ring secures the stationary seat to the seal plate, and an internal O-ring holds the faces in alignment during periods of mechanical or hydraulic shock (loads which cause shaft deflection, vibration, and axial/radial movement). Elastomers shall be viton; cage and spring to be stainless steel. Seal shall be oil lubricated from a dedicated reservoir. The same oil shall not lubricate both shaft seal and shaft bearings. Seal shall be warranted in accordance with requirements listed under PART 1 - GENERAL of this section.
f. Pusher bolt capability to assist in removal of rotating assembly. Pusher bolt threaded holes shall be sized to accept same capscrews as used for retaining rotating assembly.

4. Adjustment of the impeller face clearance (distance between impeller and wearplate) shall be accomplished by external means.
    a. Clearances shall be maintained by a four point external shimless coverplate adjustment system, utilizing a four collar and four adjusting screw design allowing for incremental adjustment of clearances by hand as required. Each of the four points shall be lockable to prevent inadvertent clearance increases or decreases due to equipment vibration or accidental operator contact. The four point system also allows for equal clearance gaps at all points between the impeller and wear plate. Requirement of realignment of belts, couplings, etc., shall not be acceptable. Coverplate shall be capable of being removed without disturbing clearance settings. Clearance adjustment systems that utilize less than four points will not be considered.
    b. There shall be provisions for additional clearance adjustment in the event that adjustment tolerances have been depleted from the coverplate side of the pump. The removal of stainless steel shims from the rotating assembly side of the pump shall allow for further adjustment as described above

DRAFT

c. Clearance adjustment which requires movement of the shaft only, thereby adversely affecting seal working length or impeller back clearance, shall not be acceptable.

5. Suction check valve shall be molded Neoprene with integral steel and nylon reinforcement. A blow-out center shall protect pump casing from hydraulic shock or excessive pressure. Removal or installation of the check valve must be accomplished through the coverplate opening, without disturbing the suction piping. Sole function of check valve shall be to save energy by eliminating need to reprime after each pumping cycle. Pumps requiring a suction check valve to assist reprime will not be acceptable.
6. Spool flanges shall be one-piece cast iron, class 30 fitted to suction and/or discharge ports. Each spool shall have one 1-1/4" NPT and one 1/4" NPT tapped hole with pipe plugs for mounting gauges or other equipment.

D. Serviceability
1. The pump manufacturer shall demonstrate to the engineer's satisfaction that consideration has been given to reducing maintenance costs.
2. No special tools shall be required for replacement of any components within the pump.

PART 3 – EXECUTION

3.01 EXAMINATION

A. Contractor shall off-load equipment at installation site using equipment of sufficient size and design to prevent injury or damage. Immediately after off-loading, contractor shall inspect complete pump and appurtenances for shipping damage or missing parts. Any damage or discrepancy shall be noted in written claim with shipper prior to accepting delivery. Validate all pump serial numbers and parts lists with shipping documentation. Notify the manufacturer’s representative of any unacceptable conditions noted with shipper.

3.02 INSTALLATION

A. Install, level, align, and lubricate pump(s) as indicated on project drawings. Installation must be in accordance with written instructions supplied by the manufacturer at time of delivery.

B. Suction pipe connections are vacuum tight. Fasteners at all pipe connections must be tight. Install pipe with supports and thrust blocks to prevent strain and vibration on pump piping. Install and secure all service lines (level control, air release valve or pump drain lines) as required in wet well.

C. Check motor and control data plates for compatibility to site voltage. Install and test the station ground prior to connecting line voltage to control panel.

D. Prior to applying electrical power to any motors or control equipment, check all wiring for tight connection. Verify that protective devices (fuses and circuit breakers) conform to project design documents. Manually operate circuit breakers and switches to ensure operation without binding. Open all circuit breakers and disconnects before connecting utility power. Verify line voltage, phase sequence and ground before actual start-up.

E. After all anchor bolts, piping and control connections are installed, completely fill the grout dam in the pump station base with non-shrink grout.

3.03 FIELD QUALITY CONTROL

A. Operational Test
1. Prior to acceptance by owner, an operational test of all pumps, drives, and control systems shall be conducted to determine if the installed equipment meets the purpose and intent of the specifications. Tests shall demonstrate that all equipment is

DRAFT

electrically, mechanically, structurally, and otherwise acceptable; it is safe and in optimum working condition; and conforms to the specified operating characteristics.

2. After construction debris and foreign material has been removed form the wet well, contractor shall supply clear water volume adequate to operate station through several pumping cycles. Observe and record operation of pumps, suction and discharge gage readings, ampere draw, pump controls, and liquid level controls. Check calibration of all instrumentation equipment, test manual control devices, and automatic control systems. Be alert to any undue noise, vibration, or other operational problems.

END OF SECTION

DRAFT

SECTION 43 2331.15 – PROCESS WATER PACKAGE BOOSTER PUMP SKID

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Furnish and install a process water package booster pump station in accordance with the Contract Documents.

1.02 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures.

B. Shop Drawings: Shop Drawings shall contain the following information:
   1. Pump name, identification number, and specification Section number.
   2. Performance data curves showing head, capacity, horsepower demand, NPSH required, and pump efficiency over the entire operating range of the pump. The equipment manufacturer shall indicate separately the head, capacity, horsepower demand, overall efficiency, and minimum submergence required at the design flow conditions and the maximum and minimum flow conditions.
   3. The manufacturer shall be required to indicate the limits on the performance curves recommended for stable operation without surge, cavitation, or excessive vibration. The stable operating range shall be as wide as possible based on actual hydraulic and mechanical tests.
   4. Assembly and installation drawings including shaft size, seal, coupling, bearings, anchor bolt plan, part nomenclature, material list, outline dimensions, and shipping weights.
   5. Data, in accordance with NEMA Standards, for the electric motor proposed for each pump.
   6. Wiring diagram of field connections with identification of terminations between Local Control Panels, junction terminal boxes, and equipment items.
   7. Complete electrical schematic diagram.
   8. Factory certification indicating the pump make and model has been tested satisfactorily to meet the specified performance criteria.

C. Spare Parts List: A list of spare parts for each piece of equipment shall be obtained from the manufacturer and submitted at the same time as Shop Drawings. The name, address, and telephone number of the nearest distributor for each piece of equipment shall be furnished. This list shall contain all data necessary to allow the OWNER to purchase spare parts as necessary.

1.03 WARRANTY

A. The booster system shall be warranted in writing against defects in materials or workmanship under normal use and service for a period of one year after date of original operation but not more than 18 months from date of shipment from the Company's factory when installed and used in accordance with good standard practice.

PART 2 – PRODUCTS

2.01 GENERAL

A. Furnish and install a packaged, multiple pump skid for process water application. The process water packaged booster system shall be manufactured by Multi W Systems, Inc. or ENGINEER-approved equal.

B. The complete Packaged Pumping System, including pumps, motors, control equipment, tank, valves, fittings, above-ground manifolds, and U.L. Listed. In addition to the system the control panel assembly must be separately listed under UL 508A (Industrial Control

DRAFT

Panels). For potable water application, the system components shall be NSF/ANSI 61 Certified.

2.02 COMPONENTS

A. Skid

1. The booster system shall be factory assembled on a steel skid including pumps, motors, valves, Type 304LSS above-ground discharge manifold with 300 LBS ANSI Flanges and Type 304L Stainless Steel cans with 150 LBS ANSI Flanges, and all interconnecting piping, wiring and controls. The underground suction manifold shall be provided by the Contractor.
2. Provide isolation valves and check valves on the discharge of each pump. The isolation valves shall be full port ball valves or lug style butterfly valves.
3. Skid shall be equipped with a pressure relief assembly connecting the discharge and suction headers.
4. Provide 2-1/2" ASME grade A gauges for indicating system discharge pressure. The skid and panel stand shall be factory finished in high quality enamel paint.
5. All SS system piping and components shall be left un-painted for serviceability and inspection by the Administration Having Jurisdiction (AHJ) over the installation of this equipment.
6. Individual pumps, motors, pressure regulating or check valves may be serviced with the booster system in operation and all components shall be suitable the maximum working pressure in the system.
7. Manufacturer: Multi-W Model or approved equal.

B. Pumps

1. System shall include vertical multi-stage stainless steel centrifugal pumps with ANSI flanged connections, along with piping provisions for future duty pumps, if required. The pump suction/discharge chamber, motor bracket and pump shaft coupling shall be constructed of cast iron. The impellers, pump shaft, diffuser chambers, outer discharge sleeve and impeller seal rings or seal ring retainers shall be constructed of 304 stainless steel. Intermediate and lower shaft bearings shall be silicon carbide and ceramic. Pumps shall be equipped with a mechanical seal assembly with silicon carbide/Carbon seal faces mounted in stainless steel seal components and Viton Elastomers. The pump motor shall be NEMA C face design mounted directly to the top of the pump.

Name	**Make/ Model**	**Design Parameters**	**Power**
Pump 1	Peerless or approved equal	275 GPM at 85PSI TDH	20 HP, VFD
Pump 2	Peerless or approved equal	275 GPM at 85PSI TDH	20 HP, VFD
Pump 3	Peerless or approved equal	275 GPM at 85PSI TDH	20 HP, VFD

C. Motors

1. Motors shall be by Teco-Westinghouse Series MAX-E1 Severe Duty, 460 Volt, 3 Phase, 60 Hz, TEFC, NEMA Premium Efficiency and manufactured in accordance with NEMA standards or approved equal. Motors shall be selected so that they do

DRAFT

not exceed name plate HP rating throughout the programmed sequence of pump operation. Motors MUST be inverter duty.

D. Variable Frequency Drives
   1. Provide and mount inside the control panel variable frequency drives of the PWM design suitable for variable torque applications using any standard NEMA Design B squirrel cage induction motor, along with space, electrical and controls provisions for future duty pumps' VFDs (if required). Variable frequency drives shall be sized for the maximum possible amp draw throughout the programmed sequence of pump operation. Each VFD shall have an individual lockable disconnect switch and protective fuses sized per the manufacturer's recommendations. Variable frequency drives shall be of the same manufacturer as the motors. Each VFD shall be equipped with a harmonic filter from the same manufacturer as the VFDs.
   2. Manufacturer: Teco-Westinghouse – Series EQ7 or ENGINEER-approved equal

E. Pressure Sensor/Transmitter
   1. Provide two pressure sensor/transmitter that provides a 4 to 20 mA DC analog output, compatible with the system controls, temperature, and pressure requirements. The pressure sensor/transmitter shall be encased in a cast aluminum NEMA 4X conduit housing. The wetted material shall be constructed of 316L stainless steel. Pressure sensor/transmitter shall have zero, span and damping devices with 1.0% accuracy. The transmitter shall be installed on the system discharge header and factory wired to the control panel via a conduit.
   2. Manufacturer: Dwyer Instruments or pre-approved equal.

F. Control Panel
   1. Provide, mount and wire on the skid a programmable logic controller (PLC) (Allen Bradley or approved equal) in a NEMA 3R enclosure to interface the signal from the pressure sensor to the VFD's and provide a stabilized response to speed up or slow down the pump or add the lag pump(s) to meet system requirements. The controller shall provide set point adjustment, timer adjustment, PID functions and both system and controller self-diagnostics via touch screen display. The touch screen display / human machine interface includes a 7" Color TFT LCD display, resistive analog touch, numerical system keyboard. All user interface set points are easily accessible via the password protected display screen. Normal system operation is tuned to eliminate hunting. Controller shall have Ethernet/IP communication for external monitoring and alarming for each pump and USB connectivity with optional SD Card slot. A Form C general alarm dry contact shall be provided for each pump.
   2. Each system shall include a UL listed enclosed industrial control panel in a NEMA 3R enclosure, factory mounted and wired on the steel skid. The panel shall be furnished with a main molded case circuit breaker disconnect with flanged mount handle and individual pump molded case circuit breaker disconnects with through the door handles, pump run lights, alarm indication lights and 115-volt fused control transformer. The control transformer shall be sized to meet the minimum requirement for the necessary low voltage equipment in the control panel. A bus bar system with insulation covers shall be provided to distribute power throughout the equipment in the enclosure. The enclosure bay containing the control equipment shall have a 115-volt GCFI outlet sufficient to provide adequate power for laptop use for programming the controller. The control panel shall feature a single point power connection for ease of field installation.
   3. Enclosures shall be NEMA type 3R. The VFD shall be mounted inside the enclosure to provide protection against the environment. If required, larger HP VFD shall be mounted in their individual enclosure bay and the smaller HP VFD will be mounted together inside one bay.
   4. Enclosure shall be climate-control with a closed-loop AC unit.

DRAFT

PART 3 – EXECUTION

A. START-UP:

1. The service of a factory trained representative shall be made available on the jobsite for start-up and instructing operating personnel.

END OF SECTION

DRAFT

SECTION 43 2358.23 – POSITIVE DISPLACEMENT ROTARY LOBE PUMPS

PART 1 – GENERAL

1.01 DESCRIPTION

A. Scope

1. The CONTRACTOR Furnish all material, equipment and incidentals required for positive displacement, rotary lobe pumps, motors and coordinated control systems as hereinafter specified. Furnish pumps, motor, motor controls and other equipment as show on the Drawings. The station shall be complete with pumps, motors, piping, valves, electrical work (including motor controls), structures, connections, and appurtenances, tested and ready for operations.

B. Type

1. The pumping units shall be of the positive displacement, HiFlo rotor type, specifically designed for pumping sludge's derived from the treatment of wastewater containing organic solids, small inorganic particles, and grit. The rotor lobes shall be of a convoluted design to provide uniform pulse-free flow throughout the entire operating range. The pump shall have not less than four rotor tips.

C. Performance Requirements

1. Equipment shall be designed and selected for continuous duty pumping of concentrated solids derived from the treatment of wastewater. Where specified, pumps shall operate at variable speed and shall be capable of running dry, for a short period of time, without damage to the pump and or drive unit. Pumps shall be suitable for exposure to mixed liquor and waste secondary sludge containing grit, small particles of wood, metal, industrial solvents, greases, detergents, petroleum products, dissolved ammonia and hydrogen sulfide, and organic particles in concentrations as great as 8 percent as is typical of municipal wastewater. The pumped fluids are expected to range in temperatures between 45°F and 100°F, and the pH may vary between 6 and 9.
2. The pumps, along with associated drive appurtenances, shall be mounted on a common fabricated steel adjustable baseplate for sheave drive adjustment. The baseplate shall be hot dip galvanized after fabrication.

1.02 QUALITY ASSURANCE

A. References

1. Design, manufacturing, and assembly of elements of the equipment herein specified shall be accordance with the standards of the below listed organizations. Where reference is made to a standard of one of the following or other organizations, the version of the standard in effect at the time of the bid opening shall apply.
   a. American Gear Manufacturing Association (AGMA)
   b. American Institute of Steel construction (AISC)
   c. American Iron and Steel Institute (AISI
   d. American Society of Mechanical Engineers (ASME)
   e. American National Standards Institute (ANSI)
   f. American Society for Testing Materials (ASTM)
   g. American Water Works Association (AWWA)
   h. American Welding Society (AWS)
   i. Anti-Friction Bearing MANUFACTURERS Association (AFBMA)
   j. Hydraulic Institute Standards
   k. Institute of Electrical and Electronics Engineers (IEEE)

DRAFT

l. National Electrical Code (NEC)
m. National Electrical MANUFACTURERS Association (NEMA)
n. Occupational Safety and Health Administration (OSHA
o. Steel Structures Painting Council (SSPC)
p. Underwriters Laboratories, Inc. (UL)

1.03 QUALIFICATION

A. To assure unity of responsibility, the pumps and motors shall be furnished and coordinated by the pump manufacturer (MANUFACTURER). The CONTRACTOR shall assume full responsibility for the satisfactory operation of the entire pumping systems including pumps, motors, and controls as specified.

B. The equipment covered by these Specifications shall be standard units of proven ability as manufactured by competent organizations having long experience in the production of such equipment. The pumps shall be the standard cataloged product of the MANUFACTURER. The pumps furnished shall be designed, constructed, and installed in accordance with the best practice and methods, and shall operate satisfactorily when installed. Pumps shall be manufactured in accordance with the Hydraulic Institute Standards, except as otherwise specified herein.

C. All Equipment furnished under this Specification shall be new and unused and shall be the standard product of MANUFACTURERS showing a successful record of manufacturing and servicing the equipment and systems specified herein for a minimum of five (5) years, and be ISO 9001 2000 compliant.

D. The MANUFACTURER shall be fully responsible for the design, arrangement, and operation of all connected rotating components of the assembled pumping unit to ensure that neither harmful nor damaging vibrations occur within the specified operating range. Design shall include fabricated steel base plate for mounting the units.

1.04 SUBMITTALS

A. Copies of all materials required establishing compliance with the specifications shall be submitted in accordance with the provisions of Section 01 3300 – Submittal Procedures. The submittal format shall be in the form of a booklet, suitably tabbed and divided to cover at least the areas noted below for each major equipment item. The submittal booklet shall include adequate detail and sufficient information for the ENGINEER to determine that all of the equipment proposed meets the detailed requirements of the Specifications. Incomplete or partial submittals will not be reviewed. Submittals shall include at least the following:

1. A copy of this specification section, with addendum updates included, and all referenced and applicable sections, with addendum updates included, with each paragraph check-marked to indicate specification compliance or marked to indicate requested deviations from specification requirements. Check marks (√) shall denote full compliance with a paragraph as a whole. If deviations from the specifications are indicated, and therefore requested by the CONTRACTOR, each deviation shall be underlined and denoted by a number in the margin to the right of the identified paragraph, referenced to a detailed written explanation of the reasons for requesting the deviation. The Engineer shall be the final authority for determining acceptability of requested deviations. The remaining portions of the paragraph not underlined will signify compliance on the part of the Contractor with the specifications. Failure to include a copy of the marked-up specification sections, along with justification(s) for any requested deviations to the specification requirements, with the submittal shall be sufficient cause for rejection of the entire submittal with no further consideration
2. Certified shop and erection drawings showing all, important details of construction, dimensions, and anchor bolt locations.

3. Descriptive literature, bulletins and/or catalogs of the equipment.
4. Data on the characteristics and performance of each pump. Data shall include guaranteed performance curves, based on actual shop tests of similar units, which show that they meet the specified requirements for head, capacity, and horsepower. Curves shall be submitted on 8 ½" by 11" sheets, at as large a scale as is practical. Catalog sheets showing a family of curves will not be acceptable.
5. A complete total bill of materials of all equipment (may be furnished with Operation and Maintenance manuals specified under paragraph 1.05).
6. A list of the MANUFACTURER'S recommended spare parts, in addition to those specified in paragraph 1.06. with the manufacturer's current price for each item, shall be supplied. Include gaskets, packing, etc. on the list. List bearings by the bearings manufacturer's numbers only.
7. Complete motor and control systems data.
8. Warranty as described in paragraph 1.08.

B. Test Reports
1. A schedule of the date of shop testing and delivery of the equipment to the job site.
2. Description of pump factory test procedures and equipment.
3. Copies of all tests results, as specified.

C. Complete operating and maintenance instructions shall be furnished for all equipment included under these specifications. The maintenance instructions shall include trouble shooting data and full preventative maintenance schedules and complete spare parts lists with ordering information.

D. Submit the MANUFACTURER'S Certificate of Installation, Testing and Instruction.

E. In the event that it is impossible to conform with certain details of the specifications due to different manufacturing techniques, describe completely all non-conforming aspects.

1.05 OPERATING INSTRUCTIONS

A. Operating and maintenance manuals shall be furnished. The manuals shall be prepared specifically for this installation and shall include all required cuts, drawings, equipment lists, descriptions, etc., that are required to instruct operation and maintenance personnel unfamiliar with such equipment.

B. A trained instructor, with complete knowledge of proper operation and maintenance for all major components, shall be provided for two days to instruct representatives of the OWNER and the ENGINEER on proper operation and maintenance. With the OWNER'S permission, this work may be conducted in conjunction with the inspection of the installation and test run as provided under PART 3. If there are difficulties in operation of the equipment due to the MANUFACTURER'S design or fabrication, additional service shall be provided at no cost to the OWNER.

1.06 TOOLS AND SPARE PARTS

A. One set of special tools shall be provided for servicing all pumps. In addition, the following spare parts shall be provided for each size and type of pump:
1. Two (2) sets cartridge mechanical seals
2. Two (2) spare rotor sets, as specified, for each size pump
3. Two (2) set of front and back wear plates.

B. Spare Parts shall be properly bound and labeled for easy identification without opening the packaging and suitably protected for long term storage.

C. In addition to spare parts required for pump maintenance and servicing, supply 2 rebuild kits per size of pump. The rebuild kits shall include:

• PBT.A021 - Cartridge Mechanical Seal

DRAFT

- DOR.021 - O-Ring
- PRS.102 - Strain Bolt
- DOR.052 - O-Ring
- NST.017 - Cover
- DOR.045 - O-Ring
- VUSA.0508 - Seal Kit Box 9x9x9
- VUSA.0509 - Seal Kit Box Foam
- PBA.A014.N1 - Installation Tool, Cartridge
- PBA.A001.T1 - Lobe Puller
- NSI.057 - Cylinder Head Bolt
- NSK.155 - Hexagon Head Bolt
- Spare Rotor Sets
- Front and Back Wear Plates
- Gaskets and O-rings

1.07 PRODUCT HANDLING

A. All parts shall be properly protected so that no damage deterioration will occur during a prolonged delay from the time of shipment until installation is completed and the units and equipment are ready for operation.

B. All equipment and parts must be properly protected against any damage during a prolonged period at the site. Pumps shall be rotated 2 revolutions every 30 days of storage time.

C. Factory assembled parts and components shall not be dismantled for shipment unless permission is received in writing from the ENGINEER.

D. Finished surfaces of all exposed pump openings shall be protected by wooden blanks, strongly built, and securely bolted thereto.

E. Finished iron or steel surfaces not painted shall be properly protected to prevent rust and corrosion.

F. After hydrostatic or other tests, all entrapped water shall be drained prior to shipment, and proper care shall be taken to protect parts from the entrance of water during shipment, storage, and handling.

G. Each box or package shall be properly marked to show its net weight in addition to its contents.

1.08 WARRANTY

A. The equipment shall be warranted to be free from defects in workmanship, design, and materials for a period of two (2) years. If any part of the equipment should fail during the warranty period, it shall be replaced in the machine(s) and the unit(s) restored to service at no expense to the OWNER.

B. The manufacturer of the positive displacement pump, shall provide a two year, 100% parts and labor warranty, including wear and tear to the pump. This warranty shall include, but not be limited too mechanical seals, wear plates, housing segments, and lobes. Non-manufacturer warranty will be unacceptable, and all warranties must be in writing, at the time of the bid.

C. The MANUFACTURER'S warranty period shall run concurrently with the CONTRACTOR'S warranty period. No exception to this provision shall be allowed.

DRAFT

PART 2 – PRODUCTS

2.01 ACCEPTABLE PRODUCTS

A. The Owner and Engineer believe the following candidate manufacturers are capable of producing equipment and/or products that will satisfy the requirements of this Section. This statement, however, shall not be construed as an endorsement of a particular manufacturer's products, nor shall it be construed that named manufacturers' standard equipment or products will comply with the requirements of this Section. Pump shall be Vogelsang Model VX186-260 or approved engineer-approved equal.

2.02 MATERIALS

Component	Material
Casting and casing cover plates	Grey Cast Iron ASTM A536, 230 to 260 Brinell hardness, 700 Brinell on end cover plate
Rotors	Cast iron core with Buna-N covering as specified
Shafts	Carbon steel, ASTM A293 60 mm Diameter
Shaft sleeve	Stellite coated stainless steel

2.03 EQUIPMENT

A. Operating Conditions

Primary Duty Point	1300 gpm
Differential Pressure	25 psi
Suction Conditions	Flooded
Medium	Screen WW
Maximum HP at Duty Condition	27 HP- VFD
Suction and Discharge Flange Size	8”
Maximum RPM shall be	475 RPM
Minimum number of lobe tips	4

B. Performance Requirements

1. There shall be no significant change in vibration and noise level over the entire listed range of operating conditions of operating conditions of the pumping system.
2. Maximum motor speed shall not exceed 1,800 rpm on in-line mounted units, and 1,200 RPM on overhead or piggy back mounts.
3. A motor sizing shall provide a minimum of 25% reserve HP as evidenced by specific requirements at maximum design condition on the certified performance curve.

C. Pumps

1. Each pump shall be of heavy duty, positive displacement rotary lobe design. The wet end shall be constructed of gray cast iron. The front cover shall be constructed of gray cast iron, with a minimum Brinell hardness of 230 – 260, and permit removal of the rotors without disturbing piping, bearings, and mechanical seals. The case shall also be machined to accept a reversible front and rear wear plate, constructed of Hardox, and coated with Hardox, to a finished hardened reversible surface of 700 Brinell. Pumps not equipped with a removable wear plate that use the front door for its wear surface or require bolts that are recessed below the lobe path, are not acceptable for any wearing surface.
2. The pump shall utilize HiFlo four-tip rotors, which are driven through positive timing gears running in oil. Solid grey cast iron cores of GG25 cast iron shall be covered with a layer of NBR 70, Durometer hardness 65-72. The geometry of the rotor core shall be the same as that of the finished rotor. Rotor vane geometry shall be convoluted to provide pressure-pulse free operation. Designs with rotor vanes parallel to the shaft

DRAFT

centerline will not be accepted. The convoluted rotor shall be specifically designed for pumping thickened waste, primary and secondary sludge and anaerobically digested sludge containing organic solids, small inorganic particles, and grit. Rotors shall be positioned to the shaft by replaceable hardened key ways, and secured to the shaft by internal/external expansion bolt and flush discs requiring no recesses in the end cover. Pumps utilizing lobe designs, with fewer than 4 tips will not be considered, due to the high potential for wear on the lobes, as a result of fewer sealing lines. Designs with replaceable lobe tips shall not be acceptable.

3. The shafts shall be of carbon steel ASTM A293 fitted with replaceable stainless steel sleeves where passing through the seal area. They shall be timed in their rotation by straight cut timing gears running in a separate oil chamber which also contains the ball and roller bearings for each shaft. Pumps requiring external re-timing in the event of blockage will not be considered. The shaft shall be a minimum of 60 mm in diameter where the rotors, bearings, and mechanical seals contact the shaft, to decrease the potential of torsional shaft fatigue. The use of step down, angular v-notch cut, or threaded, shafts will not be acceptable due to shaft fatigue and potential of breakage. The shaft sleeves where the mechanical seal rides, shall be removable through the front of the pump, when removing the cartridge mechanical seal, and without disturbing the surrounding piping. Maximum shaft deflection at operating pressure shall be .0034 inches.
4. Cartridge mechanical seals shall be provided of Blockring in TC / Duronite for each positive displacement pump. The seal shall include the mechanical seal faces, the seal holder and carrier, all applicable O-rings, the mechanical seal faces, and stainless steel shaft sleeve. The use of manual pre-load mechanical seals will not be accepted. A blocking chamber located behind the mechanical seal, and in front of the bearing housing lip seal shall be fitted into the cartridge seal of the pump to prevent contamination of the bearings on the event of a seal failure. This chamber shall be suitable for fill, from the top of the pump, and have an external pressurized oil bottle to review the status of the mechanical seals operation, mounted on the top of the pump, located in easy view of the operator. Pumps with open to air cavities located behind the mechanical seal housing, those that require water flush or quench, or those without oil bottles, will not be accepted, due to their potential for product spill failure on the surrounding areas of the pump, and the added maintenance and cost associated with mechanical seal water flushing systems.
5. Port connections shall be ANSI Class 150 raised face, 4-in. gooseneck designed flanges to reduce the chance of vapor locking, and increase the reliability, and suction lift capability, through its unique design. They shall be hot-dip galvanized steel, for long life and abrasion resistance.
6. The removable end cover shall be flush with no recesses or dead pockets where solids can accumulate. The cover shall be sealed with NBR 70 O-ring and provide complete access to the pump chamber without disconnecting pipe work glands or bearings. The removable front cover is to be mounted to the pump with 4 individual bolts, to provide unhindered access to the rotors to facilitate ease of maintenance and operator safety.
7. The pump and motor shall be mounted on a steel base plate complete with necessary, guards, and mounting hardware.
8. Pumps and motors shall operate at any point within their operating range without undue noise and vibration. Vibration at any point in the operating range shall not exceed the limits allowed by the Hydraulic Institute.
9. The top and bottom housing segments of the pump shall be constructed of gray cast iron, hardened to a minimum of 750 Brinell, and be adjustable based on wear. The adjustment shall be accomplished by simply moving steel shims from one hole to the next in the pump housing, allowing for the closing of tolerance around the rotors. This adjustment must be available a minimum of two times from factory tolerance. The use

DRAFT

of one-piece, block, cast housings or the use of radial wear plates will not be accepted; due to their ability to be hardened is limited and frequent replacement when a rebuild is required due to wear.

10. Bearings shall be B-10 Life, 100,000 hours. Bearings and timing gears for all pump sizes shall run in an oil chamber provided with a bolt to show the level with the centerline of the lower shaft.
11. The pump timing gears shall run in oil and shall be mounted in a gear case contiguous with the pump case. The gear case shall be fitted with oil fill and drain connections on the top and bottom. Designs that use side drains will not be acceptable, due to the inability to completely drain the fluids on the pump.
12. The manufacturer shall be ISO 9001:2015 compliant, as evidenced with a current ISO certificate at the time of bid. Manufacturers that are ISO compliant, but not certified to ISO 9001:2015 will not be considered.

2.04 MOTORS

A. General
   1. The motors shall be suitable for wash down and extreme outdoor duty.
   2. All motors shall be built in accordance with latest NEMA, IEEE, ANSI and AFBMA standards where applicable.
   3. Motors shall conform to all requirements stipulated in the motor section of this specification.
   4. The motors supplied shall be specifically designed for inverter duty to allow for the potential of future variable frequency drives. The motors shall be compatible with the pumps provided by the MANUFACTURER.

2.05 PUMP DISCHARGE GAUGES

A. Pump Suction and Discharge Gauges
   1. The CONTRACTOR shall furnish and install for each pump in tapped holes in the discharge and suction piping to accommodate the gauges which shall be supplied by the CONTRACTOR as shown on the Drawings.

2.06 PRESSURE RELIEF CONTROL

A. Pump Discharge Pressure Switch
   1. The CONTRACTOR shall furnish and install for each pump pressure switches on the pump discharge line. The pressure switches shall be set at the MANUFACTURE's recommendations.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Installation in strict accordance with the MANUFACTURER'S instruction s and recommendations in the locations shown on the Drawings. Installation shall include furnishing the required oil and grease for initial operation. The grades of oil and grease shall be in accordance with the MANUFACTURER's recommendations. Anchor bolts shall be set in accordance with the MANUFACTURER's recommendations.

B. Upon completion of the installation, the CONTRACTOR shall submit a certificate from the MANUFACTURER stating that the installation of the equipment is satisfactory, that the equipment is ready for operation, and that the operating personnel have been suitably instructed in the operation, lubrication and are of each unit.

DRAFT

3.02 SHOP PAINTING

A. Before exposure to weather and prior to shop painting all surfaces shall be thoroughly cleaned, dry and free from all mill-scale, rust, grease, dirt, and other foreign matter.

B. All exposed portions of the pumps and motors shall be shops primed, with primer compatible with field painting as specified.

C. All nameplates shall be properly protected during painting

3.03 FIELD PAINTING

A. Field painting is specified under Painting Section of this specification. The primer and paint used in the shop shall be products of the same MANUFACTURER as the field paint to assure compatibility.

B. All nameplates shall be properly protected during painting.

3.04 INSPECTION AND TESTING

A. General

1. The ENGINEER shall have the right to inspect, test or witness tests of all materials or equipment to be furnished under these specifications, prior to their shipment from the point of the manufacture.
2. The ENGINEER shall be notified in writing prior to initial shipment, in ample time so that arrangements can be made for inspection by the ENGINEER.
3. Field tests shall not be conducted until such time that the entire installation is complete and ready for testing.

B. Factory Pump Tests

1. Factory testing in accordance with the standards of the Hydraulic Institute shall be required for all pumps. All pumps shall be witness tested by the pump MANUFACTURER in the presence of the ENGINEER. All witness travel and out-of-pocket expenses shall be included in the CONTRACTOR'S bid price.
2. Certified pump performance curves shall be submitted, including head, capacity, and brake horsepower, for each pump supplied.
3. Prior to conducting a pump test, notification of such test and a list of test equipment and test procedures shall be forwarded to the Engineer at least ten working days before the schedule test date. All electronic transducers, meter, gauges, and other test instruments shall have been calibrated in accordance with the requirements of the Hydraulic Institute Standards. Copies of calibration data shall be provided.
4. All pumps shall be tested at full speed and complete staging through the specified range of flow, and head/capacity/efficiency curves plotted at maximum output speed. During each test, the pump shall be run at each head condition for sufficient time to accurately determine discharge, head, power input, and efficiency.
5. If any pump tested fails to meet any specification requirement it will be modified until it meets all specification requirements. If any pump tested fails to meet the efficiency requirements at any of the listed flow or head conditions listed and all reasonable attempts to correct the inefficiency are unsuccessful, the pump(s) shall be replaced with units(s) which meet the specified requirements.

C. Field Inspection and Owner Instruction

1. The CONTRACTOR shall furnish the services of the MANUFACTURER'S field service technician, who has complete knowledge of proper operation and maintenance of the equipment, for a period of not less than two (2) days to inspect the installed equipment, supervise the initial test run, and to provide instruction to the plant personnel. The first visit shall be checking and inspecting the equipment after it is installed. The second visit will be to operate and supervise the initial field test.

DRAFT

2. At least one (1) of the two (2) days shall be allocated solely to instruction of plant personnel in operation and maintenance of the equipment. The instruction period shall be scheduled at least 14 days in advance with the OWNER and shall take place prior to start up and acceptance by OWNER. The final copies of operation and maintenance manuals specified must be delivered to the ENGINEER prior to scheduling the instruction period with the OWNER with the permission of the ENGINEER, these services may be combined with those specified by Paragraph 1.05.

D. Field Pump Tests
1. In the presence of the ENGINEER such tests as necessary to indicate that the pumps and motors conform to the operating conditions specified shall be performed. A 30-day operating period of the pumps will be required before acceptance. If a pump performance does not meet the specified requirements, corrective measures shall be taken. All test procedures shall be in accordance with factory test procedures specified above and certified results of tests shall be submitted. Provide, calibrate, and install all temporary gauges and meters, make necessary tapped holes in the pipes, and install all temporary piping and wiring required for the field acceptance tests. Written test procedures shall be submitted to the ENGINEER for approval 30 days prior to testing.
2. Noise and vibration tests shall be conducted in conformance with the Hydraulics Institute Test Codes and OSHA Standards of Occupational Noise Exposure. Maximum allowable noise level, corrected for background sound, shall not exceed 85 dBA when measured at a horizontal distance of 3 meters from the equipment being tested, at a height of 3 meters above floor level. The actual natural frequency of the installed pumping units will be verified using industry accepted procedures.
3. All pumps operating settings, alarms, controls, and shutdown devices shall be calibrated and tested ruing the field tests.
4. The CONTRACTOR shall furnish all power, water, facilities, labor, materials, supplies and test instruments required to conduct field test.
5. Deliver to the ENGINEER, upon completion of satisfactory testing of the equipment, reports as specified in Part 1.

E. Field Electric Control System Tests
1. The electric control system shall be test operated for proper functioning prior to the pump mechanical test. The control system shall be checked out using simulated operating signals as per pump MANUFACTURER'S recommendations.
2. The CONTRACTOR shall check all drives for correct clearances, alignment, and lubrication in accordance with MANUFACTURER'S instructions. The CONTRACTOR shall check direction of rotation of all motors and reverse connections if necessary.
3. The CONTRACTOR shall meet all the testing requirements of these Specifications.

F. Field Alarm System Tests
1. Check each alarm and detection device for proper operation.

END OF SECTION

DRAFT

SECTION 43 2550.10 – SUBMERSIBLE HORIZONTAL PROPELLER PUMPS

PART 1 – GENERAL

1.01 SUBMITTALS

A. Furnish and install submersible horizontal propeller pumps per the Contract Documents. Each pump shall be equipped with a submersible electric motor connected for operation on a 480-Volt, 3-Phase, 60 Hz, 3-wire service, with 25 feet of properly-sized, factory-installed submersible cable. All cables shall be chlorinated polyethylene rubber jacketed. Each pump shall be supplied with a 304 stainless steel 16-inch discharge flange connection, two 12' sections of 2" sch. 40 stainless steel guide bar, and an upper guide bar support bracket. Each unit shall be fitted with 20 feet (minimum) of stainless steel lifting cable of adequate strength to permit raising and lowering the pump.

1.02 SUBMITTALS

A. Submittals shall be furnished in accordance with Section 01 3300 – Submittal Procedures, and elsewhere in these Specifications.

1.03 QUALITY ASSURANCE

A. The pumping equipment specified herein shall be the design and fabrication from a single manufacturer which shall have sole source responsibility for said equipment.

B. The manufacturer shall provide a 2-year equipment warranty.

1.04 SPARE PARTS

A. Provide all spare parts anticipated to be required for the first 2 years of operation. Manufacturer shall clearly define quantity, description of part and associated part numbers as part of manufacturer's scope of supply.

B. Spare parts shall be placed in a separate container clearly marked as "Spare Parts." All parts shall be identified and clearly labeled with applicable part numbers.

PART 2 – PRODUCTS

2.01 Operating conditions: the work of this Section shall be suitable for operation under the following conditions:

Pump Name	Design Flow Capacity (gpm)	Total Dynamic Head Required (ft)	Rated HP	VFD Service	Installation Type
Internal Recycle Pumps	2700	4	4	Yes	Flanged

DRAFT

2.02 EQUIPMENT

A. Pump Design: The pumps shall be capable of handling raw, screened sewage. The pumps shall be able to be raised and lowered and shall be easily removed for inspection or service without the need for personnel to enter the operating tank or sump. The pump, with its appurtenances and cable, shall be capable of continuous submergence under water without loss of watertight integrity to a depth of 130 Ft.

B. Pump Construction:
   1. Each pump shall be of the integral design, close coupled, submersible type. All components of the pump, including motor shall be capable of continuous underwater operation. In addition, all components of the pump shall be capable of continuous operation completely submerged.
   2. Major pump components shall be of 304 stainless steel or ASTM 316 construction. The lubricant housing cover plate shall be of corrosion resistant plastic. All exposed nuts and bolts shall be of stainless steel.
   3. All metal surfaces coming into contact with the pumped media, other than stainless steel, shall be protected by a factory applied powder coating of a polyester resin paint.

C. Motor: The multi-pole motor shall be directly connected to the propeller to produce a propeller speed of 855 RPM. The pump motor shall be squirrel cage, induction, shell type design, housed in an air filled, watertight chamber. The stator windings shall be insulated with moisture resistant Class H insulation rated for 180°C (356°F). The stator shall be insulated by the trickle impregnation method using Class H monomer-free polyester resin resulting in a winding fill factor of at least 95%. The motor shall be inverter duty rated in accordance with NEMA MG1, Part 31. The stator shall be heat-shrink fitted into the cast iron stator housing. The use of multiple step dip and bake-type stator insulation process is not acceptable. The use of bolts, pins or other fastening devices requiring penetration of the stator housing is not acceptable. The motor shall be designed for continuous duty, capable of sustaining a maximum of at least ten (10) evenly spaced starts per hour. The rotor bars and short circuit rings shall be made of aluminum.

D. Elastomers: All mating surfaces where watertight sealing is required shall be machined and fitted with Nitrile rubber or Viton O-rings. Fitting shall be such that sealing is accomplished by metal-to-metal contact between machined surfaces. This will result in controlled compression of the O-rings without requiring a specific torque limit. No secondary sealing compounds, rectangular gaskets, elliptical O-rings, grease, or other devices shall be used.

E. Propeller: The propeller shall be of 316 stainless steel, Factory balanced, non-clogging backward curved design. Each blade shall be laser cut and welded to the hub and tested to ensure that the propeller is properly balanced. The propeller shall be capable of handling solids, fibrous materials, heavy sludge, and other matter found in normal sewage applications. The propeller shall be a nominal 15 inches in diameter and have three blades, each at a blade angle of 9 degrees.

F. Cable Entry: The cable entry housing shall be an integral part of the back plate. The cable entry shall have a double set of elastomer grommets in order to ensure a redundant system in the event of a cable entry seal failure. Single sealing systems will not be deemed acceptable. The cable entry shall be comprised of two cylindrical elastomer grommets, each flanked by washers and a ferrule designed with close tolerance fit against the cable outside diameter and the entry inside diameter. This will provide a leak proof, torque-free seal at the cable entrance. The assembly shall bear against a shoulder in the stator casing opening and be compressed by a gland nut threaded into it. Interaction between the gland nut and the ferrule should move the grommet along the cable axially instead of with a rotary motion. The junction chamber and motor compartment shall be separated by a

DRAFT

terminal board which shall protect the motor interior from foreign material gaining access into the pump top. Connection between the threaded compressed type binding posts permanently affixed to the terminal board and thus perfectly leak proof.

G. Bearings: All bearings shall have a minimum L10 rated life of 100,000 Hrs. The outboard propeller bearing shall be an angular contact bearing. The motor shaft end shall be supported by two bearings. A roller bearing shall take up the radial loads while an angular contact bearing shall take up the axial loads.

H. Thermal Sensors: Thermal sensors shall be used to monitor stator temperatures. The stator shall be equipped with three (3) thermal switches embedded in the end coils of the stator winding. These shall be used in conjunction with, and supplemental to, external motor overload protection, and wired to the control panel.

I. Shroud Assembly: The pump assembly shall incorporate a bell shaped inlet shroud, 360 degrees around the propeller.

J. Lubricant Housing: The lubricant housing shall contain two compartments consisting of an inner and an outer section with four ports to connect and facilitate lubricant flow. In the event that the mixed media bypasses the outer seal, this design will allow the outer compartment to collect the heavier (denser) fluids by means of the simple process of gravity.

K. Mechanical Seals: Each pump shall be provided with two sets of lapped and face type mechanical seals running in lubricant reservoirs for cooling and lubrication. The mechanical seals shall contain both stationary and positively driven rotary tungsten carbide face rings unless otherwise specified. In order to avoid seal failure from sticking, clogging, and misalignment from elements contained in the mixed media. Only the seal faces of the outer seal assembly and its retaining clips shall be exposed to the mixed media. All other components shall be contained in the lubricant housing. All seal faces must be solid material capable of being re-lapped. The seals shall require neither maintenance nor adjustment, but shall be easy to check and replace. Shaft seals without positively driven rotating members shall **not** be considered acceptable or equal.

L. Cutting Rings:
   1. Each pump shall be equipped with self-cleaning cutting rings to protect the mechanical seal area, and to prevent the accumulation of debris around the propeller hub and motor shaft.
   2. The concentric cutting rings shall be made of AISI type 316L stainless steel, and shall consist of one (1) stationary ring and one (1) rotating ring. The rings shall be positioned between the propeller hub and mechanical seal area. The rotating ring shall be mounted to, and driven by, the motor shaft. The rotating ring shall incorporate sharpened threads to shear any long fibers or stringy debris that may accumulate at the propeller hub.
   3. The cutting rings shall be self-cleaning, and shall not require the use of externally-supplied flushing water. Pumps without self-cleaning cutting rings shall **not** be considered equal or acceptable.

PART 3 – EXECUTION

3.01 PUMP TEST

A. The pump manufacturer shall perform the following inspections and tests on each pump before shipment from the factory:
   1. Propellers, motor ratings, and electrical connections were checked for compliance to the purchase order.
   2. All pumps are vacuum tested to establish sealing integrity. All pumps are momentarily energized to determine correct rotation and current draw (prior to immersion).

3. All pumps are run dry and/or immersed to determine correct shaft rotation, thrust direction, and power consumption.
4. After immersion tests, all pumps are inspected for lubricant seepage and/or water infiltration, insulation defects, and resistance (Ohms).

B. Inspections and tests performed shall confirm the pumps listed have met all established quality assurance standards set for similar materials. All pumps shall be warranted against defects in design, workmanship, and material (with validation being the warranty cards shipped with the products.

C. A written report stating the foregoing steps has been done and may be required with each pump at the time of shipment (upon prior notice to the fabrication of the pumps).

3.02 SERVICES OF MANUFACTURER

A. Inspection, Startup, and Field Adjustment: The CONTRACTOR shall be present at the Site to furnish the field services required by these Specifications.

B. Upon completion of field services, the CONTRACTOR shall prepare and submit a report in accordance with the requirements of these Specifications.

3.03 INSTALLATION

A. CONTRACTOR shall install the equipment in accordance with installation requirements of these Specifications.

END OF SECTION

DRAFT

SECTION 44 3119 – PACKAGED BIOLOGICAL ODOR CONTROL SYSTEM

PART 1 – GENERAL

1.01 WORK INCLUDED

A. This section covers the work necessary to furnish, install, and test, complete, the odor control system for the wastewater treatment odor control.

B. The system shall be a packaged single-stage, biological trickling filter system. Equipment shall include fan and damper, biotower vessel, water control and recirculation system, nutrient storage and addition system, and controls, complete. The system Manufacturers shall supply all equipment and process components required for a complete, functional system.

C. The CONTRACTOR shall provide all required miscellaneous materials, as shown on the Drawings and in accordance with these Specifications to connect the odor control system to the treatment system exhaust ducts. The CONTRACTOR shall furnish all materials, whether specified or not, as necessary to complete all system connections.

1.02 REFERENCES

A. American Society for Testing and Materials:
   1. ASTM C582 – Contact-Molded Reinforced Thermosetting Plastic (RTP) Laminates for Corrosion-Resistant Equipment
   2. ASTM D4097 – Contact Molded Glass Fiber Reinforced Thermoset Resin Chemical Resistant Tanks

B. NEC: National Electric Code

C. ANSI: American National Standards Institute.

1.03 SUBMITTALS

A. The following submittals for construction shall be made in accordance with the project submittal requirements as described in the GENERAL CONDITIONS and Section 01300, SUBMITTALS.
   1. Drawings of system showing assemblies, arrangements, piping, electrical, mounting details, equipment outline dimensions, fitting size and location, motor data, and operating weights of all equipment. Plan and elevation views shall be supplied of all components, including the recirculation and nutrient feed systems.
   2. Manufacturer's catalog information, descriptive literature, specifications, and identification of materials of construction.
   3. Manufacturer's performance data and curves for fan, pumps, and auxiliary components.
   4. Materials of construction of all equipment and Manufacturer's information on the biological media.
   5. If required, a media sample no smaller than $1ft^3$ shall be shipped to the ENGINEER and OWNER for approval, demonstrating compliance with 2.05 E.
   6. Complete instrumentation, control, logic and power wiring diagrams in sufficient detail to allow installation of the instrumentation, controls, and electrical components.
   7. Electrical drawings including circuit schematics, interconnection diagrams, and all information necessary for connection of motors and electrical components. Also show all landings or connections that must be completed in the field.
   8. Information on hazards associated with the system and appropriate safety precautions.
   9. Installation, operation, and start-up procedures including lubrication requirements.

DRAFT

10. A list of spare parts that are supplied with the project.
11. Certifications: Qualifications cited herein.
12. Test Reports:
    a. Factory Acceptance Testing on fiberglass vessels
    b. Performance test reports
13. Calculations:
    a. Submit utility and nutrient use calculations

1.04 OPERATION AND MAINTENANCE MANUALS

A. Submit operations and maintenance manuals for the equipment in compliance with the Contract documents, 15 days prior to shipment. Provide one pdf copy of the manual and two hard copies.

B. Manuals shall include:
1. Contact name, address, and telephone number of the equipment manufacturer's Service Department and Parts Department.
2. Descriptive literature, including illustrations, covering the operational features of the equipment, specific for the particular installation, with all inapplicable information omitted or marked out.
3. Operating, maintenance and trouble-shooting information.
4. Complete maintenance parts list.
5. Complete connection, interconnecting and assembly diagrams.
6. Approved shop drawings including complete electrical information.

1.05 QUALITY ASSURANCE

A. Manufacturer Requirements
1. All equipment provided under this section shall be obtained from a single manufacturer, who shall:
    a. Assume full responsibility for the completeness and proper operation of the biological odor control system.
    b. Have experience; be reputable and qualified in designing and manufacturing biological odor control system equipment. The odor control system manufacturer shall show evidence of at least five (5) identical 1-stage design installations of the type specified in wastewater plants with specified non-proprietary biofiltration media.
    c. Supply units containing all necessary appurtenances and components for a complete and operating system conforming to this specification. The entire system shall be pre-assembled, piped, wired, and factory tested prior to shipment to facilitate installation and start-up at the jobsite, except for media for the unit; The media may be shipped loose to the jobsite for field installation by the CONTRACTOR. The overall system footprint, including the vessel, fan, nutrient tank, nutrient pump, water irrigation piping, water cabinet and accessories, control panel and appurtenances shall not exceed the dimensions shown on the contract drawings. The system equipment layout shall match site requirements. Any exception to this requirement is not acceptable.
    d. Supply units with inorganic biological odor control media. Provision of organic biological media shall not be acceptable. Systems using any proprietary media shall not be acceptable.
    e. The complete biological odor control system, including vessel, fan, media, nutrient tank, nutrient pump, water irrigation cabinet, piping and accessories, and controls shall be constructed to be a single piece of unitary construction, except for the media for the odor control system. Any exception to this requirement is not acceptable.

DRAFT

2. To ensure quality and complete unit responsibility, the complete system must be assembled and tested by the manufacturer at its facility and be a standard and regularly marketed product of that manufacturer, except for the media for the odor control system which may be ship loose to the jobsite. The manufacturer must have physical plant, technical and design staff, and fabricating personnel to complete the work specified.
3. The OWNER reserves the right to be present at the manufacturer's facility for visual inspection of equipment to be supplied and to witness factory functional testing.
4. All equipment furnished under this specification shall be new and unused and shall be the standard product of a recognized manufacturer having a successful record of at least 10 years' experience in operation, manufacturing, and servicing similar equipment and systems. An FRP manufacturer will not be considered an equal.

1.06 WARRANTY

A. CONTRACTOR shall warrant the entire system, both in material and workmanship for a period of eighteen (18) months from the date of final acceptance but no longer than 24 months from equipment delivery.

B. The equipment shall be warranted to be free from defects in workmanship, design and materials. If any part of the equipment should fail during the warranty period, it shall be repaired or replaced and the complete system restored to service at no expense to the OWNER.

C. The biological media, on which the biological culture is grown, shall be guaranteed for 15 years from the date of delivery.

1.07 EQUIPMENT GUARANTEE CERTIFICATION FORM

A. CONTRACTOR shall obtain and submit to the ENGINEER and OWNER certification from the odor control system Manufacturer that the system meets the requirements of the intended application and contract specifications. This certification shall be provided by way of the Equipment Guarantee Certification Form attached to this specification.

1.08 NFPA 820 DESIGN REQUIREMENT

A. The system shall be designed and fabricated in compliance with National Fire and Protection Agency Code 820. As a minimum, all equipment installed on the system shall be rated for Class 1, Division 2, Group D.

B. All motors and equipment within 3 feet of the airstream shall be rated for Class 1, Division 2, Group D.

C. The local control panel will be remote-mounted from the odor control vessel and will be shipped loose. The installation and wiring of the remote-mounted control panel to the fan, nutrient pump and solenoid valve shall be the responsibility of the CONTRACTOR.

PART 2 – PRODUCTS

2.01 GENERAL

A. The odor control system shall remove hydrogen sulfide, organic reduced sulfur compounds (RSC) and other odorous compounds from the foul air stream. The hydrogen sulfide shall be oxidized by autotrophic bacteria, and heterotrophic bacteria shall oxidize other organic odorous compounds. The media shall be intermittently irrigated using potable or secondary (non-chlorinated) effluent water. The drain water shall drain off to a designated site drain location.

B. The biological treatment stage shall utilize a high surface area biomedia to facilitate the bio treatment of odorous compounds. This media should be designed not to compact or plug for a period of 15 years. The biological treatment shall operate with an independently

controlled irrigation system to maintain optimum wetted conditions to support unique microbial growth for biological destruction of the odorous compounds and removal of toxic metabolites. Systems using any type of proprietary media shall not be acceptable.

C. The system shall comprise the following major components:
   1. Single or multi-stage biotrickling filter vessel. The FRP vessel shall be comprised of at least one main module and one top piece. The unit may contain additional modules as the design conditions require. Each media module shall house the media in series and contain a single water/nutrient injection spray system.
   2. Structured, engineered, synthetic plastic media or an inert, porous, mineral, expanded clay material media is acceptable to optimize mass transfer and facilitate the growth of bacteria necessary for biological oxidation of odorous compounds.
   3. An electric control panel housing a single programmable logic controller (PLC) system with Human Machine Interface (HMI) and other components required for the control and monitoring of the system. The control panel shall with alarm relays and/or Ethernet/IP communication for remote alarming.
   4. A water cabinet that houses all components necessary for the control and monitoring of the media irrigation system including an automatic flow control system.
   5. Odor control fan to move the odorous air from the source and be able to compensate for all pressure losses at the design airflow.

D. The system shall be designed for continuous, automatic operation and also be capable of manual operation. Access port/s shall be provided to allow access to the internals of the system. The system shall be designed to withstand ambient temperatures up to 120°F. The system and all accessories shall be factory mounted, piped, and wired to the maximum extent possible.

2.02 MANUFACTURERS

A. Materials, equipment, components, and accessories specified in this Section shall be products of:
   1. Eco Verde
   2. Integrity Municipal Systems, LLC
   3. ENGINEER-approved equal

2.03 SERVICE CONDITIONS

A. The order control system shall be designed to remove the odorous constituents from process air stream under the following operating conditions:

Process Parameter	Value
Elevation Above Sea Level	100 Feet
Location	Outdoors
Inlet Air Temperature	50°F to 120°F
Type of Containment	H_2S and reduced sulfur organic compounds and other odors typically associated with wastewater conveyance
H_2S at Inlet	Average 80 ppm; peak 500 ppm
Plant Water Characteristics	200 mg/l Hardness 450 mg/l TDS

B. The biological vessel design shall conform with the Plans and the following parameters:

Design Parameter	**Value**
Vessel Type	Single-stage tower
Material of Construction	FRP per ASTM D4097
Airflow	1,000cfm

DRAFT

Operational Pressure Drop across Vessel	<1 in. w. c.
Minimum Vessel Diameter	8 feet
Minimum Residence Time	19 seconds EBRT
Total height to top of stack	13 feet (max)

C. System Performance: The odor control system shall demonstrate following performance when operating under design flow conditions listed above:
   1. The system shall remove on average 99% of the inlet hydrogen sulfide or have an outlet concentration of <0.5 ppm, when H2S inlet is <20ppm.

D. All components of the system shall be compatible with the conditions and chemicals to which they will be subjected to during normal operation, which include but are not necessarily limited to:
   1. Hydrogen Sulfide
   2. Sulfuric Acid
   3. Carbon Disulfide and other Sulfides/Disulfides
   4. Mercaptans
   5. VOCs

2.04 MATERIALS OF CONSTRUCTION

A. Vessel Materials of Construction:
   1. The vessels and FRP accessories shall be contact molded manufactured in accordance with NBS PS 15-69, ASTM D3299, ASTM D4097 for contact molding. Any material of construction other than FRP with premium grade resin will not be allowed.
   2. Resin used in the system liners shall be a premium vinyl ester type such as Corezyn 8301, Hetron 922 by Ashland Chemicals, Derakane 411 by Dow Chemical, Vipel F010 by AOC, or ENGINEER-approved equal. The resin shall be reinforced with an inner veil of a suitable synthetic organic fiber such as Nexus 111-00010. The Structural build up shall be of a general purpose isophathlic. Outer surface shall be UV protected.
   3. Reinforcement: Glass fiber reinforcement used shall be commercial grade corrosion resistance borosilicate glass. All glass fiber reinforcement shall be Type C, chemical grade, Type E electrical grade. Surfacing veil shall be 10 mil Nexus 111-00010 or ENGINEER-approved equal. Mat shall be Type "E" (electrical grade) glass, 1 1/2 oz. per sq. ft with a nominal fiber length of 1.25 + 0.25-inches, with a silane finish and styrene soluble binder. Continuous glass roving, used in chopper gun spray-up applications shall be type "E" grade with chrome or silane coupling agent. Alternate layers of mat and woven roving used for reinforcement.
   4. Miscellaneous: Stainless Steel: Unless otherwise specified, all fasteners, and metal attachments, such as anchors, brackets etc. shall be ANSI Type 316 SS. Gaskets, unless otherwise specified shall be EPDM.

2.05 SYSTEM COMPONENTS

A. Identification:
   1. Major system components, including the fan, recirculation pump, nutrient pump, reactor vessel, etc., shall have the following information engraved on stainless steel nameplates of appropriate size for the equipment involved.
      a. Name of Manufacturer
      b. Manufacturer Serial Number
      c. Year Built
      d. Equipment Name, Model, and Serial Number
      e. As applicable: capacity, performance limitations

DRAFT

B. Biotrickling Filter Vessels:
   1. The reactor vessels shall be free standing, packaged or skid mounted. Vessels shall be constructed from fiberglass reinforced plastic (FRP) in accordance with ASTM D4097 and C582, treated to withstand UV light. Vessels shall be completely corrosion resistant.
   2. All gaskets shall be EPDM.
   3. All metal components shall be Type 316 stainless steel or better.

C. Accessories: Air inlet, air outlet, spray headers, baffles, media support, drain and all connections shown on the Contract Drawings shall be provided by the manufacturer. Tie down lugs shall be integrally molded into the walls of the vessels. All external bolts shall be Type 316 stainless steel and designed for the specified loads. Interior fasteners shall be of corrosion resistant materials such as PVC, FRP or 316 SS.

D. Neoprene Pad: A 1/4-inch thick, 60 durometer neoprene rubber sheet must be placed underneath each vessel.

E. Biotrickling Filter Media (Synthetic)
   1. The synthetic structured media shall be high porosity, chemically resistant, engineered synthetic porous material. Organic, carbon derived media, proprietary, and/or non-synthetic inorganic media materials will not be allowed.
   2. The biological media characteristics (available surface area, density, and pressure drop) shall be structured and uniform throughout the media bed.
   3. The synthetic, biological media shall have a minimum available specific surface area of 230ft2/ft3 and a void opening of at least 96%.
   4. Media shall resist compaction or swelling due to varying moisture levels and shall not degrade when subjected to low pH (i.e. pH<2) conditions.
   5. The uniform structure of the media shall minimize the potential for short circuiting and encourage a uniform water and air flow pattern over the entire media cross sectional area.
   6. Sufficient media shall be provided to ensure the performance requirements of this specification are met.

F. Biotrickling Filter Media (Inorganic Clay)
   1. An inorganic expanded clay biological media shall be used as the support substrate for selectively growing sulfur-oxidizing autotrophic bacteria. The media shall be randomly dumped in the vessel to allow a low pressure drop. The media is porous and is resistant to hydrogen sulfide (H2S) and acidic conditions. The media shall be non-proprietary and commercially available.

G. Irrigation System
   1. Each reactor shall be configured with an irrigation system which shall evenly distribute the irrigation water over the entire upper surface of the synthetic media layer.
   2. Each irrigation system shall be tested by the Manufacturer and a certificate of conformity supplied with the shop drawings to show that the nozzle has been tested and meets the Manufacturer's standards for uniform distribution.
   3. The irrigation system shall be supplied with a nutrient addition system to provide the nutrients, if required, for the bacteria for optimal metabolism of the odorous compounds being treated.

H. Odor Control Fan
   1. The fan shall be centrifugal PP or FRP with 316SS shaft and airstream components designed for corrosive environment. As manufactured by IPF, Texel-Seikow, or ENGINEER-approved equal. Fan shall be appropriately sized by the system Manufacturer to include losses through the entire system.

DRAFT

2. HOUSINGS: All housings shall be materials appropriate for exposure to sewage gases and low pH environment. All units shall be built with an adjustable discharge housing which can be field rotated to any of eight standard positions.
3. WHEELS: The wheel shall be of the radial bladed backplate or backward curved design, and shall be made of materials appropriate for exposure to sewage gases and low pH environment. Wheels shall be statically and dynamically balanced.
4. MOTORS: The fan motor shall be a TEFC electric motor for operation on 3/60/230-460V, as shown on the Electrical Drawings or as required, as manufactured by US Motors, Baldor, Reliance, Weg or ENGINEER-approved equal.
5. Motor bearings shall have a minimum L-10 life, as defined by AFBMA, of at least 40,000 hours (200,000 hours average life).
6. BALANCING: Prior to shipment all fans shall be completely assembled and test run as a unit at the operating speed. Final balance of the completed fan assembly shall be taken by electronic equipment. Records of the vibration readings in the axial, vertical, and horizontal planes shall be maintained and a written copy of this record shall be available upon request.
7. Fan noise shall be less than 75 dBA at 3 feet from the system or less than 50 dBA at 10 feet.

I. Control System

1. Electrical Control Panel (ECP)
   a. The ECP enclosure shall be NEMA 4X and constructed of FRP.
   b. The ECP shall house the necessary electronic components and an Allen Bradley PLC or pre-approved equal for the control and monitoring of the irrigation system. The system shall be controlled on the basis of time for the irrigation cycle and irrigation time shall be adjustable to sustain conditions appropriate to the activity of the bacteria. There shall be an allowance to manually operate the irrigation spray for the purpose of routine maintenance checks.
   c. The ECP shall require a single electrical connection as shown on the Electrical Drawings or as required.
   d. All electronic components shall be rated for Class 1, Division 2 environments.
2. Water Control Panel (WCP)
   a. The Water Control Panel shall be constructed of FRP, and be integral to the bioreactor vessel and be of the same material as vessel.
   b. The WCP shall contain, valves, motorized valves, strainers, metering pumps, nutrient controls, pressure gauges, flowmeters, instruments and piping, as needed, for the control of the irrigation system and shall operate from control signals from the ECP.
   c. The WCP shall allow for a single connection to a potable or reclaimed water source and a single connection for a recirculation pump.
   d. The WCP shall house the nutrient addition system and dosing control.
   e. All electronic components shall be rated for the proper NFPA classification.

2.06 SPARE PARTS

A. At a minimum, the following spare parts shall be supplied with the equipment:
1. One (1) set of fuses, one (1) for each fuse rating.
2. One (1) set of bearings.
3. One (1) motorized valve.

DRAFT

PART 3 – EXECUTION

3.01 FACTORY ACCEPTANCE TEST

A. FRP Vessels: FRP vessels shall be inspected prior to shipping for conformance to the following:
   1. Dimensions match those shown on submittal drawings and are within Manufacturer's specified tolerances.
   2. Flanges and connections between reactor parts fit securely without improper bending or stressing of parts.
   3. Damage or imperfections, including cracking/crazing are minimal and in accordance with this specification.
   4. Manufacturer shall keep a record of the quality control document for each reactor vessel that is available to the ENGINEER upon request.

B. Electrical Control Panel: Electrical control panel shall be inspected prior to shipping for conformance to the following:
   1. NEMA rating according to this specification
   2. PLC program shall be tested for proper communication and functionality.
   3. PLC digital and analog inputs shall be electrically tested to ensure input recognition in the proper area of the PLC program.
   4. All wiring between panel components and terminal strips shall be checked for proper labeling and connection.

C. Water Panel: All water panel piping and/or other pre-installed piping shall be tested prior to shipping for conformance to the following:
   1. System shall have no leaks when subjected to a pressure test at 80 psi for a minimum of 1 hour.
   2. All installed instruments, sensors, pumps, actuated valves, and other electrical components shall be tested for proper operation.
   3. All wiring from terminal strips to all electrical components shall be tested to ensure proper wiring.

D. Spray Nozzles: Irrigation system shall be factory tested to ensure compliance with Manufacturer standards for uniform distribution.

3.02 RECEIVING OF EQUIPMENT

A. The OWNER reserves the right to refuse delivery of any or all pieces of equipment found, upon inspection, to have any defects in workmanship or materials.

3.03 STORAGE AND HANDLING OF EQUIPMENT

A. The CONTRACTOR shall store and temporarily support equipment prior to installation in strict accordance with the Manufacturer's recommendations and instructions. Protect all exposed surfaces. Keep records of the storage parameters and the dates that storage procedures were performed. The CONTRACTOR shall be responsible for work, equipment and materials until inspected, tested and finally accepted.

B. Protect the equipment from being contaminated by dust, dirt, vibration and moisture.

C. The biological odor control system shall be shipped complete. The unit shall be erected in strict accordance with the instructions of the Manufacturer's field engineer.

3.04 FIELD PAINTING & CORROSION PROTECTION

A. If painted surfaces are damaged during shipment, off-loading or installation, as long as the damage is surface only and in no way affects the integrity of the equipment or its ability to perform, these blemishes, scratches or other imperfections shall be touched up by the

DRAFT

CONTRACTOR in accordance with instructions from the Manufacturer. Materials used shall me compatible with the original coating material in quality and color.

3.05 INSTALLATION

A. The equipment shall be installed properly to provide a complete working system.

B. To the extent possible, all equipment shall be pre-assembled prior to shipment to minimize the need for on-site assembly. Synthetic biological media should be pre-installed by the Manufacturer and certified to meet the specified performance requirements.

C. Installation of all equipment shall be in accordance with Manufacturer's written installation and startup instructions and by workers experienced in the handling of FRP vessels, electrical work, plumbing and instrumentation. The final installation must be certified by the Manufacturer as complete and correct.

D. The Manufacturer shall provide the CONTRACTOR with required clearances, tolerances and limitations, such as smoothness/flatness of concrete pad and shall be available to answer questions prior to and during the installation of the equipment.

E. CONTRACTOR shall install water supply with pressure regulator, gravity drain to wet well with a barometric P-trap, electrical service for all required equipment which may include, but is not limited to, blower, recycle pump, valves and controls, and all other accessories and appurtenances as may be required by the Manufacturer for a complete and operational system.

F. CONTRACTOR shall install the polishing media onsite as directed by the Manufacturer.

3.06 FIELD QUALITY CONTROL

1. Functional Test:
2. Upon completion of the installation each piece of equipment in each system shall be tested for satisfactory operation without excessive noise, vibration, overheating, etc. Compliance shall be based on equipment manufacturer specifications and all applicable codes and standards. All equipment must be adjusted and checked for misalignment, clearances, supports and adherence to safety standards.

3.07 SYSTEM STARTUP

A. General:

1. The CONTRACTOR shall be responsible for the successful startup, operation, and testing of each odor control system. The Manufacturer shall provide supervisory assistance, instrumentation and testing services required during this phase of the work.
2. Start-up shall commence following certification of the installation by the Manufacturer's technical representative.

B. The CONTRACTOR, with supervision from the Manufacturer, shall start the System to begin the biological acclimation period. This acclimation period shall take no longer than six (6) weeks but at any point during this startup period, at the discretion and direction of the Manufacturer, the CONTRACTOR shall switch the system over to normal operation. Any minor re-piping or plumbing required will be clearly detailed in the Manufacturer's installation and startup manual and will be performed by the CONTRACTOR.

C. CONTRACTOR must inspect the system daily and communicate operating parameters as measured to manufacturer. Manufacturer shall provide guidance to CONTRACTOR in operating parameter changes to obtain specified performance.

D. Any special tools or instruments required for this startup/acclimation period shall be provided by the Manufacturer.

DRAFT

E. After satisfactory startup and the corresponding switch over to normal operation, the CONTRACTOR shall, in the presence of the OWNER, conduct the performance test as detailed below.

3.08 PERFORMANCE TESTING:

A. Performance testing shall not commence until the Manufacturer and OWNER agree that the system has been satisfactorily started-up and sufficient time has been allowed for the acclimation of the bacteria.

B. After the odor control system has been satisfactorily started-up and switched to normal operation, the CONTRACTOR shall, in the presence of the OWNER, demonstrate that the system will perform as specified.

C. The CONTRACTOR, with the assistance of the manufacturer, shall provide the ENGINEER with a written test protocol and the performance testing may not be conducted until the test protocol has been reviewed and approved by the ENGINEER.

D. The CONTRACTOR shall supply, install and operate all equipment, sensors and instrumentation required to complete the performance testing.

E. H2S Testing Procedure:
   1. Measure airflow into each unit and adjust to the design airflow +/-10% if necessary. Airflow shall be measured at the beginning of the test period. The set position on the damper shall be marked or noted. Airflow shall not change as long as damper remains in position.
   2. Measure pressure drop across each biotrickling filter at beginning of test period.
   3. Measure temperature and relative humidity of the inlet, outlet and ambient air.
   4. Performance test period shall begin at a noted time and last for four (4) hours. H2S data from the common inlet location and from the outlet of each odor control system shall be measured and logged once every 10 minutes to demonstrate performance during the test period.
      a. The inlet H2S data shall be logged with a pre-calibrated OdaLog gas data logger with appropriate range and accuracy for the inlet air stream (0-1000 ppmv or 0-200 ppmv range, 1 ppm display resolution or 0.0-50.0 ppmv range, 0.1 ppmv display resolution).
      b. The outlet H2S data shall be logged with a pre-calibrated OdaLog gas data logger with appropriate range and accuracy for the outlet air stream (0.00-2.00 ppmv range, 0.01 ppmv display resolution or 0.0-50.0 ppmv range, 0.1 ppmv display resolution).

F. H2S Acceptance Criteria
   1. The system's H2S removal efficiency shall be determined by calculating the average inlet H2S concentration and the average outlet H2S concentration and using the following formula: H2S removal efficiency (%) = (1 – average inlet H2S concentration/average outlet H2S concentration) x 100. Data points that are greater than 2x the average will not be included in the calculation. The H2S removal efficiency must meet the criteria specified above for the system to be accepted.

3.09 MANUFACTURER'S SERVICES

A. In addition to being available by phone to assist the CONTRACTOR during the off-loading, installation, and startup of the equipment, the following Manufacturer's services shall be provided with the number of trips and days on site as a minimum:
   1. Installation Verification and Startup guidance: Manufacturer's factory trained engineer for one (1) trip, Two (2), Eight (8) hour day each trip.
   2. Training: Manufacturer's factory-trained engineer for one (1) separate trip, four (4) hours and includes both classroom and hands on training.

DRAFT

3. Supervision: Manufacturer's factory trained engineer for one (1) separate trip, four (4) hours 6 months after performance testing.

B. Notwithstanding the above, the Manufacturer shall continue to assist the CONTRACTOR with questions, issues and assistance until the system is properly installed, running satisfactorily and handed over to the OWNER.

END OF SECTION

DRAFT

SECTION 46 5143 – FINE BUBBLE MEMBRANE DIFFUSERS

PART 1 – GENERAL

1.01 SECTION INCLUDES

A. Work necessary to deliver to the job site, the fine bubble tube diffuser aeration equipment, complete and ready for installation by others.

1.02 GENERAL

A. It is the intent of the OWNER that the fine bubble membrane diffuser aeration equipment Supplier/Manufacturer (hereafter called the "Manufacturer"), shall furnish completely engineered systems suitable for the operating conditions as outlined in these Specifications. Fine bubble membrane diffuser aeration equipment features such as drop leg size, air manifold sizes, and spacing, air manifold and header supports and spacing, diffuser spacing, etc., required to comply with all requirements of this section shall be defined by the Manufacturer and be furnished complete.

1.03 DEFINITIONS

A. SCFM: Standard Cubic Feet per Minute is understood to be air at 68°F, 14.7 psia, and 36 percent relative humidity flowing at a rate of 1 cubic foot per minute.

B. SOTR: Standard Oxygen Transfer Rate is understood to be the rate of oxygen transferred to tap water (pounds of oxygen per hour) at standard conditions of 20°C, 0.0 mg/l residual dissolved oxygen concentration, and a barometric pressure of 760 mm Hg (dry air).

C. SOTE: Standard Oxygen Transfer Efficiency is understood to be the fraction of oxygen transferred to tap water under standard conditions of 20°C, 0.0 mg/l residual dissolved oxygen concentration, and a barometric pressure of 760 mm Hg (dry air).

D. Side water Depth: Side water depth is understood to be the interior dimensions from the structure base to the water surface.

1.04 SUBMITTALS

A. Shop drawings shall be submitted in accordance with Section 01 3300. In addition, the following information shall be submitted in accordance with Section 01 3300:

1. Complete description and materials listing of the fine bubble membrane diffuser aeration equipment including equipment data sheets, description literature and bulletins which shall include the drop pipes, connections to the air manifolds, air manifolds, air distribution headers, diffusers, drain system, supports, anchorage details, expansion joints, air manifold and header joints, gaskets, bolts, nuts and washers, and all materials used.
2. Detailed Drawings of the proposed fine bubble membrane diffuser aeration equipment layout, elevation, and appropriate cross sections for each basin, showing all air line sizes and lengths, distances between air distribution headers, and the location of all diffuser holders, diffusers, supports, and expansion joints.
3. Aeration system performance data including standard oxygen transfer efficiency by independent testing facility.
4. Diffuser, diffuser connector, and system head loss curves covering the range of airflow rates specified under PERFORMANCE REQUIREMENTS.
5. Addresses and phone numbers of nearest manufacturer's representative.
6. Complete test data including 3rd party independent certified oxygen transfer performance curves, sufficient to determine the oxygenation capacity of the fine bubble membrane strip diffuser aeration equipment proposed. SOTE test data form non-3rd party accredited and independent testing services are not permissible.
7. Complete headless calculations for the aeration system from the Manufacturer’s point

DRAFT

of responsibility.

1.05 QUALITY ASSURANCE

A. Provide equipment furnished by a single manufacturer qualified and experienced in the production of similar equipment

1.06 OPERATION AND MAINTENANCE MANUAL

A. Installation, Operation and Maintenance Manual for the equipment specified herein shall contain as a minimum the following items:
   1. Equipment Data Sheets
   2. Installation instructions
   3. Operation and maintenance instructions
      a. Aeration system monitoring and maintenance
      b. Startup and test operations
      c. Normal operations
      d. Shutdown procedures
      e. Parts list
   4. Aeration equipment shop drawings
   5. Customer contact

PART 2 – PRODUCTS

2.01 GENERAL

A. The fine bubble membrane aeration equipment furnished under this section shall be the end products of one Manufacturer in order to achieve standardization for operation, maintenance, spare parts, and Manufacturer's service.

2.02 MANUFACTURERS

A. Fine bubble membrane strip diffuser aeration equipment for this project shall be manufactured by JAEGER AERATION LLC or ENGINEER-approved equal.

2.03 PROJECT CONDITIONS

Parameter	Value
Project Location	San Luis, AZ
Wastewater Type	Municipal/ Residential
Elevation above Sea Level	100-feet
Ambient Temperature Range	35°F - 115°F
Exposure	Submerged, tank opens to ambient condition
Water Temperature Range	55°F - 80°F

Design Parameter	Value
Treatment Process	Mixing of Channel Aeration of Digester
Basin Nominal Floor Dimensions	See Plans
Basin Nominal Top Dimensions*	See Plans
Nominal Operating Water Depth**	See Plans
Air Flow Flux	1.13 – 6 SCFM/ft^2 of Active Area
Air Flow per Tube	3-16 SCFM
Air Flow for MLSS Channel	260 SCFM
Air Flow for Feed Forward Channel	60 SCFM
Air Flow for Digester (Each)	760 SCFM
Aeration Period	24-hr continuous operation

DRAFT

2.04 EQUIPMENT DESCRIPTION - (Membrane Tube Diffuser)

A. General:

1. The diffuser equipment system shall be a fixed grid diffuser system type, where the fine bubble membrane diffuser:
   a. Shall be approx. 2.07 m [82”] long x 65mm [2.5”] Ø tubular shaped diffuser.
   b. The flexible fine bubble diffuser membrane shall be constructed of Silicone rubber.
   c. Where the diffuser membrane shall act as a check valve
   d. Where there is a 2nd check valve shall be installed in the diffuser body acting independently of the diffuser membrane
   e. The diffuser assembly shall be anchored directly to the basin floor using 3x 2 1/2” Ø clamp brackets per diffuser assembly constructed of PP GF 30 material
   f. Where the diffuser assembly shall be attached to the air distribution piping with a flexible hose connection orientated perpendicular to the air distribution piping.
   g. Where up to 3x diffuser assemblies can be connected and mounted in line to each other.
   h. Where the assembly diffuser shall not be using the air distribution pipe for anchoring the diffuser to the tank bottom.
2. The diffuser equipment system shall be suitable for installation in the structures shown on the Drawings.
3. The locations and size of the drop pipes to each diffuser grid are shown on drawing. The diffuser equipment for each zone shall include, but not be limited to, a vertical section of drop pipe, a flexible connection to the drop pipe, an air manifold, air headers, diffusers, supports, expansion joints, air manifold and header joints, gaskets, bolts, nuts, and washers.
4. The design, fabrication, and installation of the diffuser equipment shall be such that, upon completion of installation, all diffusers are leveled to within ± 1/4 inch of a common horizontal plane.
5. The fine bubble membrane assembly aeration equipment shall be designed for easy installation and shall include provisions for level adjustment, rotational adjustment, and thermal expansion.
6. The entire system shall be designed to allow for expansion and contraction over a temperature range of up to 140°F when installed.
7. All welded pipe supports and assemblies shall be shop fabricated from Type 304L stainless steel with a 2D finish conforming to AISI 304L and ASTM A240-78a. Unless specified otherwise, all non-welded pipe supports and pieces shall be shop fabricated from sheets and plates of 304 stainless steel conforming to AISI 304 and ASTM A240-78a.

B. Drop Pipe, Air Manifold, and Headers:

1. The drop pipe shall be 304L stainless steel, schedule 10. The drop pipes shall transition to PVC Sched 40 below the water line. All PVC piping shall contain 1½ - 2 percent by weight titanium dioxide ultraviolet light inhibitor.

C. Purge System:

1. Each tube diffuser shall be equipped with an automatic moisture purge system; the diffuser air distribution header shall be mounted at a higher elevation than the tube diffusers so that the i.e. condensation in the air distribution system is purges through the diffuser bottom purge system.

D. Diffuser Assemblies:

1. Air diffuser assemblies shall be a tubular shaped cross-section, non-clog, fine bubble type with a flexible perforated air release membrane. The membrane shall be fixed with a stainless steel band clamp to the diffuser body. The perforations shall be die cut I-shaped slits. Disc diffusers, diffusers with welded or glued fixations of flexible

DRAFT

membranes to the diffuser body are not acceptable.

2. The diffuser membrane shall be constructed from extruded silicone rubber and be suitable for continuous or intermittent aeration. The membrane shall include UV inhibitor and compounds designed for resistance to chemical attack, weathering and aging.
3. The diffuser assemblies shall have double backflow prevention / check valves to prevent liquid from passing into the aeration header of which the first check valve is composed of the flexible perforated diffuser membrane, and the second check valve is composed of a flexible flapper / membrane located over the air inlet opening of the diffuser body to the air distribution chamber between the diffuser body and the diffuser flexible perforated membrane.
4. The diffuser assembly shall be shipped completely assembled to the job site. Diffusers which require field assembly are not acceptable.
5. The membrane exterior surface shall be smooth as to inhibit biological film growth. The membrane shall inflate during aeration and deflate when the airflow is discontinued, further restricting biological film growth. The membrane shall be cleanable in place with water from a high pressure wash. Acid or other chemical cleaning methods shall not be required to restore the diffuser to like-new performance conditions.
6. Diffuser supports - tube diffusers:
    a. Each diffuser assembly shall by mounted directly to the tank floor with suitable cradle support mounting brackets. It shall not rely on the air distribution header for anchoring to basin floor. Each bottom cradle mount shall be anchored threaded anchor, with mounting hardware, all constructed entirely of 304 Stainless Steel.

E. Diffuser Connections:

1. The connection between the air distribution header and the diffuser connector shall be a flexible hose line. This connection shall be a shock absorbent type that is unaffected by system vibration.

F. Supports:

1. Supports shall be fabricated of Type 304 stainless steel for non-welded and 304L for welded. The supports shall be designed to provide $\pm$ 1/2-inch lateral and $\pm$ 1-inch vertical adjustment of the header. Adjustment shall be continuous and possible without removing the air piping from the support. All pipe ends and joints shall be provided with a pipe support.
2. Air manifold piping shall have a maximum spacing between supports of 10 feet. Manifold supports shall be attached to the tank floor with anchor bolts and shall be designed for ten (10) times the normal uplift force.
3. Header supports, shall allow longitudinal movement of the header section to prevent stress buildup in the header due to thermal expansion/contraction forces. Maximum horizontal thrust of 20 pounds or less shall initiate movement of the header relative to the mechanism under full buoyant up-lift load.
4. Anchor bolts for fastening the supports to the aeration basin concrete slab and walls shall by Type 304 stainless steel. Minimum anchor bolt diameter to be used is 3/8 inch. Supports shall be located such that concrete anchors are not installed within 6 inches of any concrete expansion joint.

G. Header Joints:

1. Connections between sections of the air distribution header shall be special flanged joints. These joints shall be designed so that individual header sections can be rotated independently of adjacent header sections for alignment purposes. The flanged joints shall be structurally designed to transmit the longitudinal forces caused by expansion and contraction in the air distribution header. Slip joints shall be designed to allow for expansion and contraction of the air distribution header.

2. Expansion joints shall be capable of handling the expansion and contraction of the air distribution system over a temperature range of up to 140°F.

H. Miscellaneous: Nuts, bolts, washers, and other non-welded parts directly exposed to the wastewater shall be Type 304 or 18-8 stainless steel. Threaded assemblies shall be chemically treated or lubricated prior to assembling to prevent galling.

PART 3 – EXECUTION

3.01 FABRICATION

A. All assembly of the aeration equipment shall be completed in the factory.

B. Factory certified testing of pressure drop, leak free operation, and consistent air distribution at the specified flux rate range per diffuser model [SCFN/ft^2 of effective membrane area]. Factory testing data and cert shall be supplied with the shipping documents like bill of material as part of the project documentation.

C. All stainless steel welding shall be by the shielded arc, inert gas, MIG, or TIG method. Filler wire shall be added to all welds to provide a cross section of weld metal equal to, or greater than, the parent metal. Butt welds shall have full penetration to the interior surface, and gas shielding shall be provided to the interior and exterior of the joint.

D. Interior weld beads shall be smooth, evenly distributed, with an interior projection not exceeding 1/16 inch beyond the inner diameter of the air header or fitting.

E. All outside weld areas shall be wire-brushed to remove weld splatter. Brushes shall be of stainless steel and used only stainless steel.

F. Solvent weld of all PVC joints shall be completed in the factory.

3.02 PREPARATION FOR SHIPMENT

A. The fine bubble membrane strip diffuser aeration and air distribution lateral equipment shall be packaged and shipped by the Manufacturer ready for unloading, storage, and installation by the Installation Contractor. The OWNER will provide a suitable storage space for the aeration equipment.

3.03 MANUFACTURER'S CERTIFICATE

A. A Manufacturer's certificate of satisfactory installation and systems start up (sign-off sheet) is required for work under this section.

3.04 CLEAN WATER FUNCTIONAL TESTS

A. After installation of the fine bubble membrane panel / strip diffuser aeration equipment is complete, witness functional testing conducted by the Installation Contractor to check for leaks, uniformity of air release, and verification of level installation. Functional testing shall be performed with clean water at a depth over the diffusers as recommended by the aeration system Manufacturer. Any leaks in the headers, diffusers, pipes, or any part of the system shall be repaired by the Installation Contractor. The test shall be repeated until the installation is void of air leaks.

3.05 WARRANTY

A. The Manufacturer shall warrant all parts, including diffuser assemblies, distribution piping, and supports, free from defective material and workmanship for a period of 1 year (12 months) after the diffuser system contacts wastewater, system start-up, or 15 months after receipt of equipment at the job site of whatever comes first. Warranty shall be limited replacement of parts within the warranty period provided.

3.06 MANUFACTURERS' SERVICES

DRAFT

A. A technically-qualified Manufacturer's representative for the equipment specified herein shall be present at the job site and/or classroom designated by the OWNER for 2 minimum person-days for installation, testing, training, and assistance.

San Luis, Arizona 85349

Dear Mr. Do:

Geotechnical Testing Services is pleased to present the attached Geotechnical Investigation for the referenced project.

The purpose of our investigation was to evaluate the subsurface soil conditions at the proposed site in order to develop geotechnical recommendations to aid in the project design and construction.

Based on the results of our field and laboratory testing it is our opinion that the referenced project may be constructed provided that the recommendations presented in this report are incorporated.

We appreciate the opportunity to provide our services for the project. If you have any questions regarding this report or if we may be of any assistance, please contact me.

Sincerely,

Geotechnical **T**esting **S**ervices**, I**nc.

GTS Report No: 24-034-G

1. INTRODUCTION

1.1 General

This report presents the findings of our Geotechnical Investigation for the San Luis Wastewater Treatment Plant Improvements which is located at 101 Ceaser Chavez Blvd., in San Luis, Arizona (see Appendix A). The purpose of our investigation was to explore the subsurface conditions of the proposed site at various locations. This exploration was used to develop Geotechnical Engineering recommendation.

1.2 Project Description

It is our understanding that the proposed project will consist of various concrete structures and buildings. The building will be constructed out of masonry exterior walls, steel frame interior columns and a roof system and concrete slab on grade. The maximum uniform wall loads are expected to be approximately 4-6 kips per linear foot. The maximum column loads are expected to be approximately 10-15 kips. If any of the above design assumptions change during the final design stage, our office should be notified to review and possibly revise our recommendations.

2. FIELD EXPLORATION

Geotechnical Testing Services advanced seven (7) test bore holes within the proposed new project area to a depth of fifteen (15) feet below the existing grade (See Appendix A).

All the boreholes were advanced using a CME-55 drill rig. Samples were obtained from all the boring locations using either a split spoon or ring sampler or from the auger cuttings.

A staff engineer maintained logs of bore holes during the exploration. The final form of the subsurface logs was edited after reviewing the retrieved samples and the laboratory data. In addition, standard penetration tests were conducted at various holes and depths using 2.0-inch outside diameter split spoon sample. The split spoon was advanced using a 140-pound hammer falling a distance of 30 inches. The blow counts corresponding to the last 12 inches of penetration were recorded on the boring sheets.

All the soil that was encountered was sampled, logged, and visually classified in the field. These samples were re-evaluated in the laboratory after further testing and investigation. The soils were classified in accordance with the Unified Soils Classification System.

DRAFT

3. LABORATORY TESTING

The following laboratory tests were conducted on selected samples to assist in classifying and evaluating their engineering properties:

Schedule of Laboratory Tests

Test	ASTM Standards
Sieve Analysis	ASTM D-4318 & D1140
Atterberg Limits	ASTM D-4318
Moisture Density	ASTM D-698

*All the results of our laboratory testing can be found in Appendix B.

4. SITE CONDITIONS

4.1 Site Description

The proposed project site is located at 101 Cesar Chavez Boulevard. The site is currently the existing wastewater treatment plant. The north half of the site elevated approximately 5 - 6 feet above the south half.

4.2 Site Soil Conditions

The site soil typically consists of the following profile: The top fifteen (15) feet consists of a brown, moist, very soft, lean clay, (CL), and then changes to a brown, saturated, loose to medium dense, poorly graded sand with silt, (SP-SM). The clayey soils encountered have a plastic index that range from 5-15. These clayey soils have a moderate to high swell potential. Standard penetration tests were run at various holes and depth and ranged from 4 to 19 blows per foot.

During the exploration the ground water level was not encountered below the surface. There is a possibility that the ground water level varies seasonally in this area. According to the latest ground water map, the ground water level for this location is approximately 12 to 18 feet below the existing grade. The moisture content of the soil samples ranges from 1.0 to 20.0 percent.

DRAFT

4.3 Seismic Considerations

Based on our evaluation, several faults have the potential of generating earthquakes that will cause strong ground motions in the City of Yuma. The Yuma region is located within the area of greatest risk for earthquake ground shaking within the state, The Basin and Range Physiographic Province. Yuma is also in relatively close proximity to major active fault zones at the boundary of the North American and Pacific lithospheric plates in southern California and northern Mexico. The closest approach of the San Andreas system to Yuma is approximately 65 miles. Ground shaking hazard is also present from the San Jacinto system (65 miles), Imperial fault (28 miles) and the Cerro Prieto fault (49 miles). However, Basin and Range faults have relatively long and uncertain recurrence times, that is, the time between large earthquakes occurs on a scale of tens to hundreds of thousands of years.

Whereas large earthquakes occur on plate boundary faults on a scale of hundreds of years, or less. Strong ground measurements from the Northridge, Kobe and other large earthquakes have shown that ground motions are significantly greater near an earthquake source. The proposed site is located within a Seismic Risk Area and the design should include seismic provisions as included in the 2018 International Building Code.

Longitude	114°	35 Minutes	49 Seconds West
Latitude	32°	41 Minutes	47 Seconds North

*The site soil classification is Type 'D'.

4.4 Liquefaction

Since the ground water level is fairly shallow and there is potential for saturated sands, and therefore liquefaction is likely for this site. Liquefaction is the temporary loss of bearing strength due to the shear waves passing through the saturated granular soil layers. This causes the distortion of the granular structure which causes the particles to collapse. This collapse then increases the pore-water pressure.

It is understood that the site lies within an area of seismic risk. Therefore, it is recommended that suitable precautions be applied to the building design to help prevent major structural damage in the event of an earthquake. Earthquake resistant design parameters are recommended to be obtained from the 2018 International Building Code**.**

DRAFT

5. DISCUSSION AND RECOMMENDATIONS

5.1 Site Preparation

The following site recommendations should be followed within any building pad or foundation area. The foundation area included a five (5) foot perimeter outside of the footing outline. All soil containing any organic material or concrete materials should be stripped and removed entirely from the site. Any debris larger than three (3) inches in diameter on the proposed site at the time of construction should be removed.

5.2 Earthwork

A. Pad Preparation

The following steps should be followed within the building pad and foundation area.

A. Clean and grub the area as mentioned above in Section 5.1.
B. Remove and dispose enough of the existing clayey native soil to provide 48 inches of moisture conditioned and compacted imported fill below the bottom of any foundation.
C. Moisture condition and compact the bottom twelve (12) inches of excavation area to +/-2% of optimum and compact to 95% of ASTM D-698.
D. Replace the forty-eight (48) inches of over excavated soil with an aggregate base material meeting Yuma County Standards. Place the aggregate base in 12 inch loose maximum lifts. Moisture condition each lift to +/-2% of optimum and compact to a 95% per ASTM D-698.
E. The imported Aggregate base will meet the latest Yuma County standards for ABC.

Note: All imported fills must be approved by the Geotechnical Engineer before placing.

DRAFT

5.3 Foundation

Structural foundations that are reinforced can be used for the foundation system, while shallow spread footings and continuous wall footings are suitable to support the proposed structure if they are founded on properly prepared and compacted soil. The building foundation may be designed using a maximum bearing value of **2,800 PSF** for dead and live loads. The allowable soil pressure may be increased by one-third for short term loads induced by wind or seismic events.

All exterior wall footings should be embedded at a minimum of 24 inches below the compacted building pad or the lowest adjacent final grade. Interior footings should be embedded a minimum of 18 inches below the compacted building pad. Continuous wall footings should have minimum width of 18 inches. Spread footings should be designed by the Structural Engineer.

Flexible type connections such as a "Link Seal" should be used to connect exterior piping with any tanks.

5.4 Concrete Slab on Grade

The concrete slab in flat work should be designed by a Structural Engineer. The floor slab can either be monolithically placed with the foundation or doweled after footings have been placed. The compacted pad shall be moistened to within 2% of optimum moisture just prior to concrete placement.

Concrete slab and flatwork reinforcement recommendations should be provided by the Structural Engineer.

Contraction joints should be placed at 12 feet maximum on center each way for all concrete floor slabs. All joints should form approximately square patterns to help reduce randomly oriented crack. Saw cut the joints to a depth of ¼ the slab thickness. All joints should be thoroughly cleaned out and filled with semi-rigid caulking.

All exterior walkways and driveways should be placed on 12 inches of moistened and compacted native soil.

All Portland cement concrete will have a slump that does not exceed 5 inches. The concrete mix design should use Type II Portland cement. The aggregate for the mix should meet the requirements of ASTM C-33 for coarse and fine aggregates. The mix

DRAFT

design should be reviewed and approved by the Structural Engineer before any is placed. It is recommended that all concrete placement and curing operations be performed in accordance with the latest edition of the American Concrete Institute (ACI) Manuel. If moisture sensitive flooring is being used within the new building, a 10-mil vapor barrier should be placed below the concrete slab on grade. This barrier will need to be installed in accordance with the latest ACI standards.

5.5 Resistance to Lateral Loads

If free unrestrained walls are planned to retain level, predominantly granular, non-expansive soils, an active lateral soil pressure of 38 pounds per cubic foot equivalent fluid pressure may be used. For restrained retaining walls under the same conditions as stated above, an active lateral soil pressure of 58 pounds per cubic foot equivalent fluid pressure may be used. The passive soil resistance of properly compacted backfill against footings or stem walls is 270 pounds per cubic foot. The recommendation coefficient of friction is 0.30.

The lateral pressure stated above is ultimate value. Therefore, suitable factors of safety should be incorporated into the design. The Structural Engineer should also consider additional lateral loads induced by surcharged, adjacent footings or seismic activity.

5.6 Drainage

Positive drainage should be maintained away from the building pads and foundation. Water should not be allowed to drain or pond near or around the foundation. All roof drains should be directed away from all building foundation system.

If onsite retention basins are used, curbing should be used around these basins to help prevent erosion of the basin side slopes. All curbs should be extended to a minimum of 6 inches below the bottom of the subgrade to help prevent any water migration under the pavement. Maintenance of proper drainage is necessary to prolong the service life of the pavement.

Any landscaping used around the building should be kept to a minimum. This vegetation should be of the variety that does not require large amounts of water or that does not have

DRAFT

large root systems that could adversely affect the foundation system. All landscaping irrigation systems should be placed away from the foundation and should be maintained and serviced regularly.

5.7 Utilities

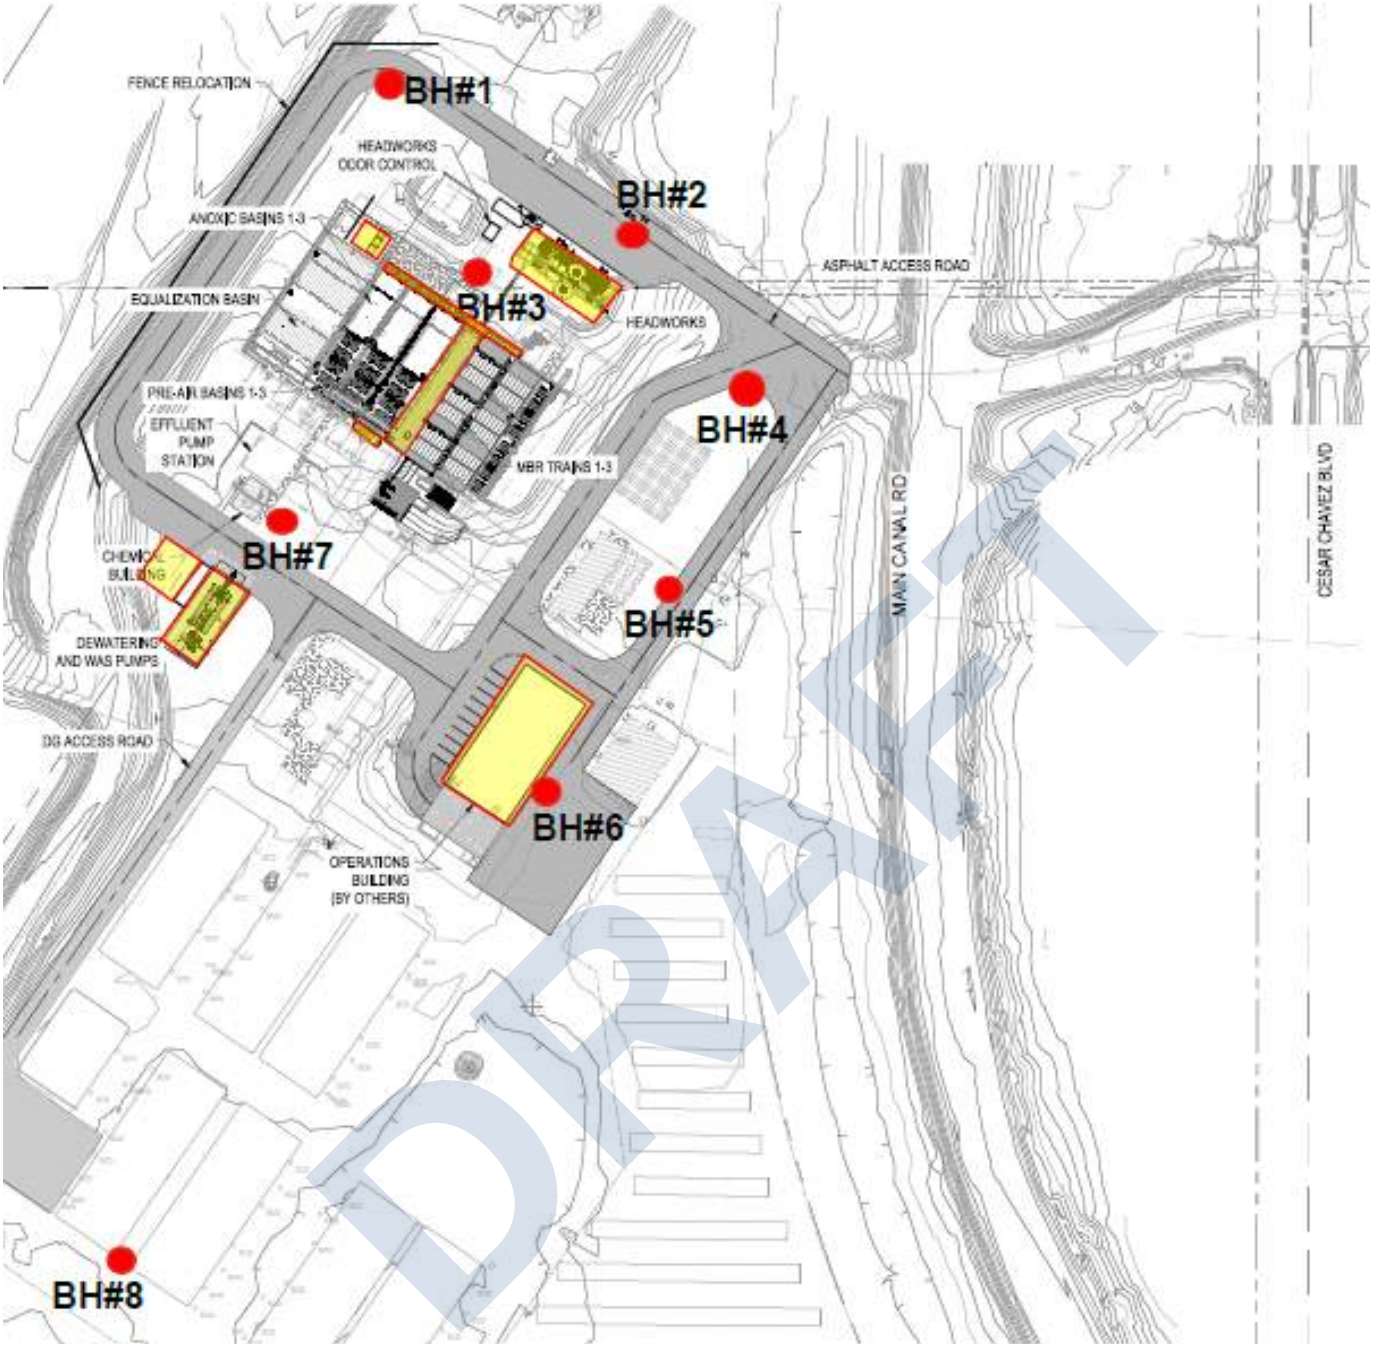
All underground utilities for this project should be installed in accordance with the required City of San Luis Standards details and specifications. The native sand can be used as backfill material and all clayey soil must be removed. All trenched will be backfilled in 12-inch lifts, moisture condition to +/-2 of optimum and compacted to 95% per ASTM D-698.

VI. CLOSURE

6.1 Limitations

The conclusions and recommendations in this report are based upon the proposed design parameters, subsurface findings, and the assumptions that the soil condition does not deviate appreciably from the test borings.

If there is any deviation of the soil condition or the design parameters, GTS should be notified and retained to review these changes and make the required recommendations. If changes are made or encountered and GTS is not contracted to review such changes, we will not be responsible for the impact of these changes on the structure or the site.



It is recommended that GTS be retained to observe and test the earthwork process to properly ensure that the recommendations are carried out. All testing for this project should be done in accordance with the latest City of San Luis Specifications.

This report has been prepared for the exclusive use of Pacific Advanced Civil Engineering, Inc. for the site specified within this report.

KEY TO SYMBOLS

Symbol	Description
Strata symbols	
	Silty sand
	Description not given for: "OS9"
	Description not given for: "90"
	Description not given for: "Z9S"
	Description not given for: "OS"
	Description not given for: "ZS"
	Low plasticity clay
	Description not given for: "ZO"
	Poorly graded sand with silt
Misc. Symbols	
	Drill rejection

DRAFT

Notes:

1. Exploratory borings were drilled on 03/27/25 using a CME-55 Drill Rig

2. Groundwater was encountered at approximately 16' below the existing grade at the time of drilling.

3. Boring locations were taped from existing features and elevations extrapolated from the final design schematic plan.

4. These logs are subject to the limitations, conclusions, and recommendations in this report.

5. Results of tests conducted on samples recovered are reported on the logs.

Attention: Mr. Duong Do

Reference: San Luis West WWTP Improvements – Report #24-03G Addendum #1
101 Cesar Chavez Boulevard
San Luis, Arizona 85349

Dear Mr. Do:

The following is additional information that will be part of above referenced Geotechnical Report.

Asphalt Vehicle Parking Pavement

The following steps need to be followed within any pavement area.

A. Subgrade

The areas to receive asphalt pavement should be free of all vegetation and debris per Section 5.1 of the referenced Geotechnical Report. The top 12 inches of native soil should be scarified and moisture condition to +/- 2% of optimum. The soil should then be compacted to 95% of ASTM D-698. The moisture content of the subgrade should be maintained prior to the aggregate base coarse placement.

B. Asphalt Pavement Section

Light Traffic Areas (light vehicle parking lots)
Use 3 inches of asphalt over 6-inches of aggregate base coarse.

Heavy Traffic Areas (Driveways)
Use 3 inches of asphalt over 8-inches of aggregate base coarse.

Note:

1. The asphalt will meet the current Yuma County Standards Specifications for a ¾" mix and compacted to 95% of ASTM D-1559. The aggregate base coarse will meet the current Yuma County Standard Specifications and must be compacted to 95% per ASTM D-698.
2. For areas subject to high dynamic loads, (driveways, aprons, or trash enclosure areas), use 6 inches of **4,000 psi** concrete over six inches of aggregate base, over 12-inches of compacted native soil. Compact the ABC to 95%, the subgrade to 95% and moisture condition per ASTM D-698.

DRAFT

Corrosion

Soils samples were taken and tested for water soluble sulfates, pH and resistivity in the soil. These soils exhibit moderate potential for soluble sulfate per ACI 3.8, Table 4.3.1. Therefore, any concrete placed must use a type II/V cement with a water-cement ratio of 0.45 and a minimum strength of 4,500psi per ACI 318 Table 4.3.1. The resistivity values were between 4,700-8,100 ohm-cm and the Ph between 9.0 - 10.0. These values indicate low to moderate corrosive potential per ADOT standards.

ADOT Guidelines Section 501-3.05 (A)	
Ph	
Metal Pipe	6.0 – 10.0
Aluminum Pipe	6.0 – 9.0
Concrete or Plastic Pipe	6.0 – 12.0
Resistivity	
Metal Pipe	Not less than 2,000 ohm-cm

Slopes and Cut Areas

A. Temporary Slopes/Cuts

For the excavation of utility trenches, temporary vertical cuts to a maximum depth of four (4) feet may be constructed in the natural soil however, due to possibility of non-cohesive characteristics of the on-site soil, temporary shoring measures will be required. Any temporary cuts beyond the above height mentioned, all trenches and cuts should be shored or further laid back following a 3:1 (horizontal; vertical) slope ratio and should not exceed a total height of fifteen (15) feet. Local safety measures should be enforced, and the contractor should follow the recommendation in The Construction Standards for Excavations by the Arizona Division of Occupational Safety & Health.

B. Temporary Shoring System

Due to the granular and non-cohesive characteristics of the on-site soil, a temporary shoring system may be required for deeper excavation, or whenever there is instability of the soil being excavated. Whenever the shoring systems are utilized, they should be designed by the Structural Engineer. Surcharge loads due to nearby structures or other live loads should be incorporated in the design of the shoring system.

Appendix B – City-Purchased Equipment

DRAFT

SECTION 41 1213.37 – SHAFTLESS SCREW CONVEYOR

PART 1 – GENERAL

1.01 WORK INCLUDED

A. There shall be furnished a shaftless screw conveyor including support legs and inlet hopper with drivers and features specified in this Section and scheduled below. All equipment shall be provided by a single manufacturer. The shaftless screw conveyor shall be capable of conveying dewatered municipal aerobically digested sludge.

1.02 REFERENCES

A. American Bearing Manufacturers Association (ABMA)

B. American Gear Manufacturers Association (AGMA)

C. American National Standards Institute (ANSI).

D. American Society of Mechanical Engineers (ASME)

E. American Welding Society (AWS) D1.1, Structural Welding Code.

F. Conveyor Equipment Manufacturer's Associations (CEMA).

G. National Electric Code (NEC).

H. National Electrical Manufacturers Association (NEMA).

1.03 SCREW PRESS DESCRIPTION

A. Shaftless screw conveyor CV-001 system shall be capable of conveying dewatered municipal anaerobically digested sludge.

B. Shaftless screw conveyor with components as specified in this Section and shown on the Drawings and as required for a complete and functional shaftless screw conveyor, including:
   1. Shaftless screw conveyor with all 304 stainless steel wetted parts
   2. Spiral Flight, Shaftless
   3. End Shaft
   4. Speed Reducer
   5. Motor
   6. Trough and Liners
   7. Covers, bolt-on
   8. Inlet chute
   9. Support Legs, 304 stainless steel
   10. Zero Speed Switch
   11. Emergency Stop Pull-Cords
   12. Anchor age/seismic support calculations.

C. Design Requirements:
   1. Shaftless screw conveyor shall be suitable for both intermittent and continuous loading and operation.
   2. Shaftless screw conveyor minimum performance requirements

Type of Biosolids	Aerobically Digested Sludge
Dewatered Biosolids, % total solids (TS)	16 to 18% total solids

DRAFT

Design Capacity @ 35% Trough Loading	1,600 dry pounds per hour 10,000 wet pounds per hour 160 cubic feet per hour

3. Motor Characteristics – as described in this Section.

1.04 SUBMITTALS

A. Submit as specified in Section 01 3300 – Submittal Procedures, and elsewhere in these Specifications.

B. Product Data:
   1. Submit data completely describing product including plan and section views and listings of materials of construction.

C. Shop Drawings:
   1. Complete manufacturer fabrication/assembly drawings including location of conveyor relative to locations of associated feed equipment, inlet chute and leg supports.
   2. Certified drawings showing dimensions, weights, loading information and location of all components.
   3. Wiring diagrams for all motors and electrical field instrumentation furnished.

D. Structural Calculations
   1. Structural calculations prepared, sealed, and signed by a registered professional structural engineer in the State of California.
      a. Structural anchor points to concrete foundation
      b. Seismic loads on frame and anchor bolts

E. Resume of Technician to perform conveyor adjustments, inspections, observations of test operations, supervision of functional and performance testing, and training.

F. Training Course Outline

G. Operating and Maintenance Manuals: Include complete lubrication, maintenance, and operation instructions, including initial start-up instructions, and unloading and handling methods.

H. Manufacturer's references.

I. Quality Control Submittals:
   1. Special shipping storage, protection, and handling instructions
   2. Manufacturer's Installation Instructions
   3. Factory Test Results

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Consideration will be given only to the equipment of Manufacturers who are regularly engaged in such work and thoroughly experienced in the design and manufacture of screw press equipment specifically manufactured for municipal, secondary treated, waste activated sludge. Manufacturer shall meet the requirements below:
   1. Have a minimum of 5 years of experience of producing substantially similar equipment, and show evidence of satisfactory operation in North America for conveying municipal wastewater treatment plant sludge.
   2. Must have a company-owned service and parts facility within the continental United States.

DRAFT

1.06 DELIVERY, STORAGE, AND HANDLING

A. CONTRACTOR shall unload, store, and handle the equipment per the manufacturer's instructions.

1.07 WARRANTY

A. Warranty shall extend for 12 months after start-up or 18 months after delivery, whichever comes first.

B. Warranty shall include all parts, labor, and coatings for repairing or replacing equipment that fails during the warranty period. Defects occurring within the warranty period shall be repaired or replaced by the manufacturer at no cost to the OWNER.

1.08 PROJECT CONDITIONS

A. Deliver shaftless screw conveyor as completely assembled as practical to minimize field assembly. CONTRACTOR shall be responsible for unloading and any necessary field assembly. CONTRACTOR shall contact manufacturer for screw press field assembly requirements during bid.

1.09 SEQUENCING AND SCHEDULING

A. Coordinate work with restrictions as specified.

PART 2 – PRODUCTS

2.01 MANUFACTURER

A. Manufacturer: FKC Co., LTD or engineer-approved equal
   1. Shaftless screw conveyor shall be provided by one (1) manufacturer.

2.02 MATERIALS

A. Wetted Parts: Stainless Steel, Type 304, unless otherwise indicated.
   1. Troughs and inlet chute: 10 gauge
   2. Covers: 10 gauge
   3. Drive and end plates: 3/8-inch minimum

B. Support Legs: 304 stainless steel.

C. Spiral Flights: Cold-formed flat hot-rolled carbon, spring steel bar, Brinell 220 minimum.
   1. For 9-inch diameter conveyor, use 3/4 x 2-1/2 inch
   2. For 12-inch diameter conveyor, use 1 x 3 inch

D. Drive Shaft: AISI 1045

E. Drive Unit: As scheduled

F. Wear Liners: UHMW, 1/2-inch thickness, 1 color

G. Other parts: Coated carbon steel

H. Miscellaneous hardware, including bolts, nuts, and washers in the wetted area: 18-8 Stainless steel

2.03 SPIRAL FLIGHTING

A. Design spiral flighting to convey material without a center shaft and designed with the stability to prevent distortion and jumping in the trough.

B. Connect spiral flighting to the drive shaft:
   1. For 9-inch conveyors, connection by welding the spirals to a 3-1/2 O.D. x 1/4-inch thick inner shaft sleeve. Shaft is inserted into sleeve and fastened by two cross bolts.

DRAFT

2. For 12-inch conveyors, connection by welding the spirals to a 5-1/2 O.D. x 3/8-inch thick inner shaft sleeve. 1/2-inch plate is welded to sleeve. Another 1/2-inch plate is welded to the drive shaft. The two 1/2-inch plates are fastened to each other by four 1/2-inch 304 stainless steel bolts, nuts, and washers.

C. Spiral Flights to be concentric to within 1/16-inch.

2.04 DRIVE SYSTEM

A. The drive units shall be hollow shaft-mounted, roller-bearing gear motor rated a minimum AFMA Class II, single or double reduction or triple reduction.

B. Drive finish shall be severe duty wash-down surface protection finish as provided by manufacturer.

C. Drive system shall consist of an electric motor as required to provide full load capacity and also to withstand the full starting torque of the system.

D. Screw speed shall be electronically controlled by means of a motor starter in a NEMA 4X enclosure. Motor starter shall be provided as part of the Dewatering Control Panel SP-VCP-001.

E. Maximum conveyor shall be 32 revolutions per minute or lower.

F. V-belt driven speed reducer, or chain driven reducers are not permitted.

G. Speed Reducer:
1. Speed reducer shall be SEW Eurodrive Reducer or ENGINEER-approved equal.

H. Shaftless Screw Conveyor Motor :
1. Provide inverter rated, severe duty motor, 1.15 SF, NEMA Premium Efficiency, cast iron frame with manufacturer's standard, corrosion resistant, epoxy finish.
2. Minimum screw press motor requirements of 3.0 HP, (480v/3 phase)

I. Motors shall be mounted at the end of the conveyors as shown in the contract plan drawings.

2.05 TROUGH AND LINERS

A. Construction shall be of U-trough design with gasketing at each trough flange. Trough sections in 8-foot lengths.

B. Trough end plates shall be 3/8-inch minimum, removable, with waste-pack seal at drive end.

C. Provide each conveyor with a 2-inch NPT drain outlet at the lowest end of the conveyor.

D. Liner sections in 4-foot lengths. Liners are 1/2-inch minimum plastimeric-type ultra-high molecular weight (UHMW) polyethylene, 1 color.

2.06 INLET CHUTE

A. Purpose: Convey the dewatered cake from the screw press discharge box to the inlet trough of the shaftless screw conveyor.

B. Fabricated and provided by the shaftless screw conveyor manufacturer.

C. Construct of 12-gauge wall and flange thickness for connection to conveyors.

D. Provide chute with external body reinforcing stiffeners as required.

E. Provide chute with both the interior and exterior surfaces smooth, free from sharp edges, burrs, and projections, and with all welds ground smooth and all edges and corners rounded.

F. The minimum incline angle of the chute is 60 degrees.

DRAFT

G. The chute shall not be supported by any element of the screw press frame.

H. No part of the chute shall come in contact with the screw press drive, screw, flight, nor interfere with normal operation of the screw press.

I. Bolt hole pattern for fastening to screw press to match pattern at bottom of screw press discharge box. Bolts and washers for this connection included with shaftless screw conveyor.

2.07 INSTRUMENTATION AND CONTROLS

A. All electrical equipment shall conform to applicable standard of NEMA and the NEC.
   1. Both power and control equipment shall be insulated for not less than 600 volts even though operating voltages may be lower.

B. Shaftless screw conveyor motor CV-M-001 shall have power control from a motor starter housed in the screw press vendor control panel SP-VCP-001.

C. Shaftless screw conveyor manufacturer shall provide motion sensor probe and control relay box as follows:
   1. Manufacturer: Siemens Milltronics MFA 4P or ENGINEER-approved equal:
      a. 100/115.200 VAC, 50/60 Hz, 15 VA.
      b. 2 relay outputs with S.P.D.T. fail-safe contracts operating in unison.
      c. 2 to 3,000 pulses per minute adjustment setpoint range.
      d. Polycarbonate NEMA 4/4X Enclosure for relay circuit board
      e. MSP-12 standard probe, cast aluminum body and zinc flange.

D. Shaftless screw conveyor manufacturer shall provide emergency pull-cords and safety switches as follows:
   1. Manufacturer: Omron STI or ENGINEER-approved equal:
      a. Housing: Heavy-duty painted zinc-based die-cast alloy
      b. Indicator: Glass-filled nylon
      c. Switch color: Yellow body, blue reset button
      d. Switch lockout on cable pulled and cable slack
      e. Cable-status indicator on switch lid.
      f. 6A @120 VAC, 3A @ 240 VAC
      g. 2 N.C. direct-operating safety contacts
      h. 1 N.O. direct-opening auxiliary contacts
      i. IP67 enclosure type for switches
      j. All cables, eyebolts, hooks, springs, and clips necessary to run pull cords down both sides of the conveyor.

2.08 ANCHOR BOLTS

A. Anchor bolts will be sized by the screw press Manufacturer and provided by the CONTRACTOR.

2.09 FINISHES

A. Motors and gearboxes for the screw press and flocculation tank shall be prepared and coated with the manufacturer’s standard surface preparation, prime coat and top coat for corrosion resistance.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. The CONTRACTOR shall provide all hardware and accessories required for installation.

DRAFT

C. Manufacturer's Field Services
   1. Include the following:
      a. Inspection, Functional / Operational Testing: Two trips for a total of 2 days, 8 hours per day.
   2. Additional trips resulting from failed tests shall be the sole responsibility of the manufacturer.

3.02 SHOP TESTING

A. Units shall be full assembled at the factory and test run for 15 minutes to check for equipment tolerances and proper operation.

B. Conveyors shall be corrected as necessary.

3.03 FIELD QUALITY CONTROL

A. Witnessing: All field testing shall be witnessed by the Engineer.

B. A representative of the screw press manufacturer shall be provided for the following:
   1. To inspect the equipment and installation
   2. To make any field adjustments to ensure proper equipment operation
   3. To furnish affidavit stating that the dewatering system has been tested and is ready for installation as specified.
   4. To inspect start-up

C. Manufacturer shall inspect system before initial start-up and certify that system has been correctly installed and prepared for start-up.

D. Training:
   1. Provide operator training for at least 1 day on-site by factory trained representative. Training can be coordinated and occur during same days as functional/operational testing. Operator training to include:
      a. Operations and inspection training
      b. Safety instruction
      c. Preventative maintenance instruction

END OF SECTION

DRAFT

SECTION 43 1133 – ROTARY LOBE POSITIVE DISPLACEMENT BLOWERS

PART 1 – GENERAL

1.01 SCOPE OF WORK

A. Furnish all labor, materials, equipment, and incidentals required new rotary positive displacement blowers and appurtenances, as shown on the Drawings and as specified herein.

B. The entire blower package and its components shall comply with all applicable safety and environmental regulations.

1.03 SUBMITTALS

A. Submit in accordance with Section 01 3300, copies of all materials required to establish compliance with this Section. Submittals shall include at least the following information:
   1. Certified general arrangement drawings showing materials, details of construction, dimensions, and connections.
   2. Complete Blower Performance Data including:
      a. RPM
      b. Capacity – scfm and icfm
      c. Discharge pressure
      d. dB(A) noise pressure level
      e. Maximum gear tip speed and rotor tip speed (fpm)
      f. HP required at rated capacity and pressure
      g. Rated maximum pressure rise of blowers
   3. List of recommended spare parts broken down into on hand parts and long term for 2 years operation and 3 to 5 years operation.
   4. Descriptive Brochures
   5. Performance Curves
   6. Motor Data
   7. Valves
   8. ISO-1217 Performance Test Results Slip test results are unacceptable as an alternate. Manufacturer must provide documented results for the purchased machines. Typical or average data is not acceptable.
   9. Declaration of Conformity, per Machinery Directive 2006/42/EC, Annex II, No.1 A.

B. Complete blower package operating and maintenance instructions professionally published, hard copy and electronic copy, shall be furnished for all equipment included under these specifications in accordance with Section 01 7823.

1.04 QUALITY ASSURANCE

A. Qualifications
   1. Package shall be Aerzen Generation 5 Delta Blower Model GM-Series or Engineer-approved equal. Regardless of manufacturer, the package will be produced by the manufacturer of the blower stage, to ensure single source responsibility for blower performance and compatibility of associated accessories. Packagers not permitted to bid.
   2. The equipment shall be designed, constructed, and installed in accordance with the best practices and methods and shall operate satisfactorily when installed as shown on the Drawings.
   3. The blower(s) shall be covered by a warranty for 24 months from date of

DRAFT

commissioning, or a maximum of 30 months from date of shipment.

4. The performance data and manufacturing methods shall achieve a Declaration of Conformity, per Machinery Directive 2006/42/EC, Annex II, No.1 A.

1.05 BLOWER PERFORMANCE CRITERIA

Project Location	San Luis, AZ
Quantity of Machines	Per Plan
Design Inlet Temperature	35 - 115 °F
Site Elevation	100 feet above sea level
Free Field Noise Guarantee	75 dB(A) at 1 meter (at design point)
Blower Process Name	Secondary Process Air
Design Flow	2125 scfm per machine
Design Discharge Pressure	10.5 psig
Motor Size	200 Hp (VFD)
Blower Process Name	MBR Process Air
Design Flow	767 scfm per machine
Design Discharge Pressure	10.5 psig
Motor Size	150 Hp (VFD)

1. Package BHP to include pressure loss through a clean inlet filter / silencer, pressure loss of the exhaust silencer and check valve.
2. Package Performance shall be guaranteed to ISO 1217 with a tolerance is +/- 5% on volume flow and +/- 5% on package horsepower. Manufacturer of blower must provide data for purchased machine.
3. Sound data shall be from an ISO 2151 method of measurement, in an ISO 3745 qualified test facility. Sound data shall be compliant with a Declaration of Conformity assessment standard.

1.06 DELIVERY, STORAGE AND HANDLING

A. All equipment shall be completely factory assembled, skid mounted, crated, and delivered to protect against damage during shipment.

B. All exposed flanges shall be covered and sealed with shrink-wrap to prevent the entrance of moisture. Finished iron or steel surfaces not painted shall be properly protected to prevent rust and corrosion.

C. All equipment delivered to the site shall be stored as specified in accordance with the manufacturer's instructions.

1.07 MAINTENANCE

A. Spare Parts

1. Furnish the following spare parts for each blower package specified:
   a. Complete set of matched V-belts
   b. One filter element
   c. Volume of oil change for first service interval
2. Spare parts shall be properly bound and labeled for easy identification without opening the packaging.

PART 2 – PRODUCTS

2.01 GENERAL

DRAFT

A. Blower packages shall be designed to minimize the life-cycle costs and maximize plant reliability. The design and the selection of the components shall be based on a minimum useful life of 15 years and a Mean Time Between Overhauls of 5 years of continuous operation. Bearing life must be submitted by manufacturer of service life, based on specified conditions.

B. No special foundations shall be required. The blower packages will be installed directly on a concrete slab without grouting the base frame. There shall only be 4 easily accessible anchor points.

C. Blower Casing:
   1. The blower casing shall be of one-piece construction, with separate side plates that are bolted and pinned to the housing.
   2. Materials shall be close-grained cast iron ASTM A48 suitably ribbed to prevent distortion under the specified operating conditions.
   3. Minimum blower casing pressure rating shall be 36 psig.
   4. Inlet and outlet shall be flanged connections.
   5. The casing shall incorporate a proven means of pulsation cancellation which achieves 90% of better reduction in vibration. Systems without a means of pulsation cancellation shall not be accepted.
   6. The vibration level as measured at the blower casing, in the X/Y planes of the bearings, shall not exceed ½ "/ sec RMS when operating at the specified maximum operating pressure and speed in the actual blower package.

D. Factory Testing:
   1. Each blower stage shall be factory tested in accordance with ISO 1217 performance test to verify flow and brake horsepower at blower maximum conditions. A slip test shall not be acceptable, nor is average data for the manufactured size.
   2. The acceptance criteria are +5% tolerance on power and –5% tolerance on flow regardless of the size of the machine.

E. Rotors:
   1. Each rotor shall be of the "stiff" design with first lateral critical speed at least 120% of the maximum allowable operating speed.
   2. The rotors shall be of the straight, three-lobe type, and shall operate without rubbing or liquid seals or lubrication.
   3. Rotor/shaft shall be one single piece. Cast, hollow rotors shall be capped, dust tight. Open rotors are not acceptable.
   4. The rotors shall be statically and dynamically balanced per ISO1940/ANSI S2.19 G6.3.

F. Bearings:
   1. Each rotor/shaft shall be supported by anti-friction bearings and fixed to control the axial location of the rotor/shaft in the unit.
   2. Regardless of theoretical bearing life calculations, the bearings shall be sized for a minimum expected life of 5 years between overhauls. Calculated bearing life shall be submitted, based on specified operating conditions.

G. Timing Gears:
   1. The rotors shall be timed by a pair of single helical AGMA 12 quality gears with hardened and ground teeth; minimum AGMA service factor of 1.70. Spur cut gears are unacceptable
   2. Gears shall be mounted on the shafts with a tapered interference fit and secured by a locknut. Pinned gears are unacceptable.

H. Seals:

DRAFT

1. Seal shall be designed to prevent lubricant from leaking into the air stream as well as to prevent oil from leaking out of the machine.
2. Four rotary piston ring shaft seals, an oil slinger and an O-ring seal shall be provided at the point where the shaft passes through the sideplates.
3. Further provision shall be made to vent the rotor side of the oil seal to atmosphere to eliminate any possible carry-over of lubricant into the air stream.

I. Lubrication:
1. The timing gears and the bearings shall be splash lubricated. Grease lubrication shall be not acceptable.

J. Oil Sight Glass:
1. A recessed oil sight glass must be provided on each oil sump.
2. Protruding sight glasses shall not be acceptable.

K. Painting:
1. Painting shall be per supplier's standard meeting the following criteria:
   a. Except for machined sealing and machined mounting surfaces, the package shall be painted dark blue.
   b. Aluminum, stainless steel, and brass shall not be painted.
   c. The supplied motor shall not be over sprayed and will be supplied with the motor manufacturer's standard protection and paint color.
   d. Painted Cast Iron and Carbon Steel shall be Alkyd Resin Primer and Final coat with a total dry film thickness of 70□m. Surface preparation SSPC10 or better.
   e. Sound enclosure shall be powder-coated polyester base total dry film thickness 80 mil.
   f. Galvanized components shall only be painted with appropriate surface preparation

2.02 BLOWER ACCESSORIES

A. Inlet Filter / Silencer:
1. Each package shall be supplied with one combination inlet filter silencer.
2. The inlet filter silencer shall be mounted directly to the inlet flange of the blower.
3. The filter media efficiency must meet the requirements of ASHRAE 52.2 MERV7 50-70% @3-10 microns corresponding to EN779 G4.
4. The silencer portion shall be located upstream of the inlet filter.
5. Filter and silencer performance losses shall be included in the blower performance calculation.
6. The filter element shall be designed to trap dirt on the inside so that upon changing, dirt does not fall into the machinery. Filters where dirt accumulates on the external surface of the filter will not be permitted.

B. Base Frame / Discharge Silencer:
1. Each package shall be supplied with one combination base frame / discharge silencer.
2. The silencer shall be a chamber type design for maximum sound attenuation and shall not use fibrous or absorption materials of any kind. Internal absorption material has been shown to degrade and internally foul diffusers and will not be permitted.
3. The silencer shall be fabricated of a single shell of pressure vessel quality steel with continuous welds.
4. The silencer shall be subject to a pressure test for tightness and strength at a minimum of 1.65 times the maximum blower operating pressure.
5. The silencer shall have a machined inlet connection where the discharge flange of the blower stage bolts directly to, with no intermediary pieces. Threaded connection

DRAFT

between the compressor stage and the discharge silencer is subject to leakage and misalignment and will not be permitted.

6. Discharge silencer performance losses shall be included by the blower vendor in the blower performance calculation. This is another reason why the blower accessories must be supplied by the manufacturer of the blower stage.
7. The base frame shall be constructed from welded carbon steel or cast iron that shall be designed to maintain alignment of the blower internal components and the drive during operation.
8. The base frame shall be designed to resist distortion while being installed on vibration isolating mounts.
9. The blower manufacturer shall supply a stainless-steel grounding lug fully welded to the base.

C. Flexible Connectors:

1. Each package shall be connected to the plant piping via flexible connector(s) located downstream of the discharge silencer and upstream of the inlet silencer.
2. Flexible connectors shall prevent the transmission of noise and vibrations from the blower package into the piping.
3. Flexible inlet connectors shall be a reinforced silicone sleeve secured by four (4) stainless steel clamps and terminating with a standard epoxy coated steel ANSI flange connection.
4. Flexible discharge connectors shall be a silicone rubber type pipe sleeve with stainless steel hose clamps, rated for 356°F at 17.4 psig.
5. Flexible discharge connectors shall be Proco Style 240, Type EE, EPDM, with a standard ANSI flange discharge connection, rated for 300°F at 20 psig.
6. Flexible discharge connectors shall be Proco Type KK, Silicone, with a standard ANSI flange discharge connection, rated for 392°F at 25 psig.
7. (GM 60S-DN200 & GM 150S-DN300) Flexible discharge connectors shall be a silicone reinforced sleeve secured with four (4) stainless steel sleeve clamps. The process connection will terminate with metal ANSI flange “stub pipe”, axially restrained by the external process piping (GM 60S-DN200 & GM 150S-DN300)

D. Electric Motor:

1. Each package shall be supplied with a WEG manufactured TEFC motor that shall operate on 460 Volts, 3 Phase, 60 Hertz current, 1800 /3600 RPM.
   a. Torque NEMA B
   b. Temperature Rise Class B
   c. Dust tight enclosures (Severe Duty)
   d. Class F inverter rated insulation with Class H applied varnish
   e. 3:1 constant torque
   f. All cast iron construction, including frame, end bells, conduit box and fan cover
   g. NPT threaded and gasketed F3 top mounted conduit box
   h. Copper windings
   i. Re-greaseable bearings, positive pressure lubrication system with automatic drawn plugs – pressure compensated (Frame sizes 254T and larger).
2. All frame sizes shall be NEMA standard, suitable for overhung belt drive and with the conduit box location on top of the motor. IEC frame motors shall not be allowed.
3. The motor shall be mounted on a pivoting base to provide automatic tensioning of the belts.
4. The motor nominal rating after any corrections for ambient conditions shall be 10% above the maximum operating bHp.
5. The motor shall have a 1.15 service factor.
6. Motor windings shall be supplied with a normally closed thermostat, one per phase, wired in series to form a fail-safe motor protection circuit for the external fault circuit

DRAFT

of the motor controller.

7. If the motor is VFD driven, the motors shall be equipped with an Aegis ring to mitigate the effects of stray motor currents. If the motor is 125 HP or greater than an insulated NDE bearing shall also be provided.
8. Blower manufacturer shall be responsible for coordinating the starting torque requirement of the blower and the motor.

E. V-Belt Drive:

1. Each package shall be supplied with a V-belt drive that shall be of the high-capacity type, oil and heat resistant. Drive shall be designed for a minimum service factor of 1.4 times operating power (bHp), or 1.1 times the motor nameplate Hp, whichever is larger to allow a minimum of 1.4-service factor based on the maximum blower bHp.
2. Belt tensioning shall be automatic without the use of any devices or interaction on the part of the operator. Neither slide rails nor load-adjusting springs shall be used.
3. Sheaves shall be dynamically balanced regardless of the operating speed.

F. Belt Guard:

1. The belt drive shall be guarded in compliance with OSHA regulations.
2. Portions of the guard shall be easily removable allowing for belt inspection and replacement.
3. Guard material shall be perforated carbon steel.

G. Vibration Isolators:

1. Each package shall be supplied with vibration isolating feet with a minimum efficiency of 80%.
2. Blower manufacture shall be responsible for attenuating noise and vibration in the blower package such that no special installation base shall be required, nor shall any additional measures be required to reduce vibrations from the blower package being transmitted to the base or the piping.

H. Pressure Safety Valve:

1. Each package shall be supplied with a single pressure safety valve on the discharge side of the blower mounted downstream of the discharge silencer and upstream of the check valve.
2. The safety valve shall be set to protect the blower from exceeding its maximum pressure rating and shall be sized to pass 100% of the design flow.
3. The safety valve shall be field adjustable, spring loaded, and have a certificate of conformity to PED.
4. The pressure relief valve shall be housed by the sound enclosure and shall relieve into a segmented section of the sound enclosure. Weighted relief valves inside in the enclosure are not permitted.
5. The valve shall be manufactured by Aerzen.

I. Check Valve:

1. Each package shall be supplied with one check valve that shall be installed on the discharge line.
2. The check valve shall be of the full-bore low pressure-drop, flapper type design with a steel body, and steel flap embedded in EPDM with full-contact seal.
3. The valve shall be removable without disturbing the piping. Pressure losses produced by the check valve shall be included in the blower performance calculation. Check valves requiring installation in the discharge piping shall not be considered unless installation cost of the external valve is included in supplier's proposal.
4. The valve shall be manufactured by Aerzen.

J. Instrumentation:

1. Each package shall be supplied with the following instrumentation:

DRAFT

a. Inlet Vacuum Gauge (4” Gauges)
   1) Aerzen standard gauge with 4” dial and scale from 0 to –40 inches of water column.
   2) Gauge to function as a filter maintenance indicator.
b. Inlet Vacuum Switch
   1) Ashcroft Model B4-64-B-XFS-XBP
   2) Type 400 pressure Switch in NEMA 4X enclosure
   3) DUAL general purpose 15A, 110-480V switches (2) SPDT snap-acting, NOT independently adjustable
   4) Buna-N Actuator Seal
   5) Factory set (-20-inches H20, decreasing)
   6) Mounting bracket
   7) Operating range of -30 to +30-inches H20.
c. Discharge Pressure Gauge (4” Gauges)
   1) Aerzen model 32-0053-02 with 4” dial and scale from 0 to 20 psig.
   2) The pressure gauge shall have a stainless-steel case.
   3) Gauge shall be dry (no fill) with no pulsation snubber required.
d. Discharge Pressure Switch
   1) Ashcroft Model B4-24-V-XRN-XJK-15 PSI
   2) Type 400 pressure Switch in NEMA 4X enclosure
   3) Single general purpose 15A, 110-480V switches (2) SPDT snap-acting, NOT independently adjustable
   4) Viton Actuator Seal
   5) Internal range scale and operating range of 0 to 15 PSIG.
e. Discharge Temperature Gauge / Switch (4” Gauges)
   1) Aerzen standard gauge with 4” dial and scale from 32°F to 397°F
   2) NEMA 4 enclosure, 5A @ 250volt, SA 28 SPDT microswitch
   3) UL & CSA approved.
f. E-Stop Switch
   1) Siemens model 52PX2V2
   2) Mounted on the face of the blower enclosure
   3) NEMA 4X rating
   4) Two (2) normally closed contacts
g. Terminal Strip
   1) The switches and motor thermostat shall be prewired to a labeled terminal junction box inside the blower enclosure.

K. Local Control Panel:
1. Each package shall be supplied with the following control functions and features:
   a. Intuitive TFT color touch screen display with NEMA 4X protective cover suitable for outdoor installation
   b. Display, monitoring, alarm, and shutdown of inlet pressure, discharge pressure, discharge temperature, enclosure cooling fan thermal overload, main drive motor thermal overload and oil temperature.
   c. Display run hours
   d. Log errors and first out indication
   e. Track and log maintenance
   f. E-Stop button mounted on front of blower enclosure
   g. Operation of enclosure cooling fan motor starter and oil demister
   h. Ability to transfer measured values, fault and status messages, as well as remaining times of the service intervals to the customer control system via

DRAFT

Modbus RTU or Ethernet IP. Controllers that use a non-industrial protocols such as CAN shall not be allowed.

i. Permissive control function of customer start and stop signals to a motor controller
j. Digital potentiometer
    1) LOCAL Operation: speed control of the VFD via the HMI screen.
    2) REMOTE Operation: transfer of VFD speed command from external controller to the VFD
    3) These signals can be communicated using either hard wire connection or the communication protocol
k. The local control panel shall be provided with the following digital outputs:
    1) Common alarm
    2) Common fault
    3) Ready to run
    4) Transfer of external start/stop command
    5) Status remote
    6) Maintenance required
    7) Alternatively, these outputs can be obtained using the communication protocol
l. The local control panel shall be provided with the following digital inputs:
    1) Remote start/stop
    2) Motor controller fault
    3) Customer E-stop
    4) Load/unload (if unloading valve solenoid is supplied)
    5) Alternatively, these inputs can be supplied using the communication protocol

2. Control Enclosure
    a. IP54 suitable for indoor/outdoor installation
    b. NEMA 4X
    c. NEMA 12
    d. Factory installed, integral to sound enclosure
3. Control Supply Power
    a. 460 VAC, 10 Amp feed with 24 VDC transformer
4. Monitoring Sensors
    a. Inlet Pressure Transducer
    b. Discharge Pressure Transducer
    c. PT 1,000 Discharge Temperature RTD
    d. PT 1,000 Oil Temperature RTD
    e. PT 1,000 Enclosure Temperature RTD
    f. Blower stage gear end vibration
    g. Blower stage drive end vibration
    h. System Pressure Transducer (downstream of check valve)
5. Local control panel shall be the Aerzen AERtronic Digital Controller

L. Each blower shall receive its initial oil filling at the factory, the synthetic oil shall be rated for a minimum of 16,000 hrs.

M. Acoustical Sound Enclosure:
1. Each package shall be supplied with a sound enclosure covering the entire blower package.
2. The enclosure shall provide suitable protection for outdoor installation under wind loads of 40 mph and snow loads of 25lbs/ft^2.
3. The enclosure shall be designed so as to be able to install them side-by-side with all maintenance done from the front or back of the package.
4. Details shall be as follows:

DRAFT

a. Panels shall be made of galvanized steel sheet, powder coated in a light reflecting, blue color per RAL 5001. The skid shall be of the same color.
b. The enclosure and the blower package shall both be mounted on a skid / oil-drip pan designed for meeting environment protection standards and for easy transportation and installation.
c. A grounding strap shall be installed between the blower base and the package skid to bypass any vibration isolating mounts.
d. Quick release panels, each less than 50 lb (as mandated by MSHA) must provide easy and quick access for routine maintenance of the blower and the package components.
e. Enclosure Cooling Fan:
    1) A high efficiency blower shaft driven ventilation fan shall provide ventilation and cooling integral to the sound enclosure.
    2) Cooling fan shall be sized for sufficient heat removal from the sound enclosure, even when the blower is operated with a VFD.
f. Electrical components, instrumentation and instrument connections shall not be mounted or interface with moving panels of the sound enclosure.
g. Both blower oil sumps shall be piped to a common fill and drain, located at the front of the package for easy maintenance. An oil level indicator shall be mounted on the outside of the enclosure, which gives an accurate oil level indication while the blower is in operation. All oil lines to be hydraulic hose with fittings. No plastic tubing with compression fittings is allowed.

N. External Inlet Silencer:
1. Each package shall include an external inlet silencer shipped loose for installation by the contractor on the building exterior.
2. The unit shall be finished with baked-on enamel and shall be equipped with an epoxy coated wire mesh element for the purpose of preventing large debris and wildlife from entering the inlet pipe connection. Final filtration of the process air will be accomplished local to the blower package.
3. The silencer shall be Endustra P09, with a standard ANSI flange discharge connection.

PART 3 – EXECUTION

3.01 INSTALLATION

A. The Manufacturer shall conduct a coordination conference call with the Contractor and Design Engineer to review the integration and installation requirements of the equipment after the Submittal documentation has been approved and prior to installation of the equipment.

B. The Contractor shall install the blowers in accordance with the Manufacturer’s written instructions.

C. The Contractor shall make all electrical and process connections to the blower package prior to the arrival of the manufacturer’s representative.

D. The Contractor shall complete and return the Manufacturer’s installation check list prior to having a Manufacturer’s representative come onsite.

E. Representatives of the blower manufacturer shall verify and adjust blower and motor alignment.

3.02 FIELD TESTING

DRAFT

A. After installation of all equipment has been completed and as soon as conditions permit, the manufacturer shall 1 trip for a total of (3) 8-hour days to verify the installation, conduct an acceptance test under actual operating conditions & training.
   1. The Manufacturer shall perform a physical check of the blower installation, perform safety checks, power up the equipment and perform functional testing.
   2. The functional test shall consist of 4 hours of operation of each blower with vibration, temperature, and pressure readings as well as motor amp readings taken and recorded at 60-minute intervals.
   3. The Manufacturer shall provide operations and maintenance training to the plant personnel. The training shall consist of 1 hour of classroom training using the Operation and Maintenance Manual for reference and 2 hours of hands-on training at the blower package.

B. If required, Contractor shall make any changes, at his own expense, to the installation that may be necessary to assure satisfactory operation. Contractor shall be held liable for changes needed in the installation.

C. Manufacturer shall provide a written field test / start up report after completion of testing.

D. The blower manufacturer shall have rental blower packages available that can be onsite within 24 hours.

END OF SECTION

DRAFT

SECTION 43 2413.33 – SUBMERSIBLE WASTEWATER PUMPS (AXIAL FLOW) – MBR FEED PUMPS

PART 1 – GENERAL

1.01 THE REQUIREMENT

A. Furnish and install submersible pumps with associated piping and appurtenances, complete and operable in accordance with the Contract Documents.

B. The Supplier shall examine the site conditions, intended application, and operation of the pump system and recommend the pump which will best satisfy the indicated requirements.

1.02 SUBMITTALS

A. Submittals shall be furnished in accordance with Sections 01 3300 – Submittals.

1.03 OPERATING AND MAINTENANCE MANUAL

A. Operation and Maintenance Manual shall be furnished in accordance with these Specifications.

1.04 QUALITY ASSURANCE

A. Pump manufacturer and model shall be as described on the Drawings or ENGINEER-approved equal.

B. The manufacturer shall provide a 2-year equipment warranty.

1.05 SPARE PARTS

A. Provide all spare parts anticipated to be required for the first 2 years of operation. Manufacturer shall clearly define quantity, description of part and associated part numbers as part of manufacturer's scope of supply.

B. Spare parts shall be placed in a separate container clearly marked as "Spare Parts." All parts shall be identified and clearly labeled with applicable part numbers.

PART 2 – PRODUCTS

2.01 GENERAL

A. Each pump shall be equipped with a submersible electric motor connected for operation on 460 volts, 3 phase, 60 Hz suitable for submersible pump applications.

B. Pumps shall be Flygt or approved equal.

C. Operating Conditions: The WORK of this Section shall be suitable for operation under the following conditions:

Pump Name	Quantity	Design Flow Capacity (gpm)	Total Dynamic Head Required (ft)	Rated HP	VFD Service
Feed Forward Pumps	3	6,800	6.5	26	Yes

DRAFT

2.02 AXIAL FLOW TYPE

A. Pump Design: The pumps shall be electrically operated submersible propeller pump/motor units. The pump/motor units shall be close coupled to form one integrated direct drive unit. The pump/motor unit shall be designed for installation into a discharge column onto a seat at the bottom of the column. The pump/motor unit shall be held in place by its own weight and the pumping head. Each pump/motor unit, hereafter called pumps or units, shall be equipped with a properly sized submersible electric motor connected for VFD operation on a 460 volt, 3-phase, 60 Hz service. The pumps shall be capable of delivering a minimum of the specified flow and head listed herein, and shall be non-overloading throughout the specified performance range.

B. Pump Installation: The vertical discharge columns (tubes) shall be permanently installed in a self-supported service application. The supplied columns/tubes shall be anchored into concrete via a collar/flange at the top portion of the tube discharge. The design shall include one column section, or several sections (joined via flanges), as needed, to provide a complete tube for the service depth noted in the plans. The design shall be such that the pump units will be automatically and firmly connected to the discharge tube when lowered into place. A locking device, located on the external surface of the pump housing and along the inner portion of the tube base assembly, shall prohibit rotational movement of the pump/motor units within the tubes. The pumps shall be easily removable for inspection or service with no need for personnel to enter the tube. The pumps shall not require any bolts, nuts, or fasteners for connection to the discharge column/tube. Stiffening and guiding webs shall be provided at the pump support seat to ensure concentric positioning of pump within the discharge column. An O-ring shall be provided on the bottom of the inlet (suction) bellmouth so that the weight of the pump unit, when acting on the O-ring, will provide an effective seal between pump and discharge column/tube.

C. Power Cables: The power cable shall be designed specifically for use with submersible pumps and shall be type SUBCAB (SUBmersible CABle). The cable shall be sized according to the National Electrical Code (NEC) and the Insulated Cable Engineers Association (ICEA). The outer jacket shall be lubricant resistant and the copper conductors shall be insulated. The filler and conductor separator materials shall be of non-wicking vulcanized rubber. The cable shall be rated for 600 volts and 90°C (194°F) with a 40°C (104°F) ambient temperature and shall be approved by Factory Mutual (FM). The cable length shall be adequate to reach the junction box without the need for splices. ENGINEER-approved cable protection and suspension system shall be provided on all installations with in-tube cable runs over 10 feet in length.

D. Cable Entry: The cable entry water seal design shall preclude specific torque requirements and ensure a watertight and submersible seal. The cable entry shall be comprised of one cylindrical elastomer grommet, flanked by two stainless steel washers, all having a close tolerance fit against the cable outside diameter and the cable entry inside diameter. This design shall provide the sealing function. The cable strain relief function shall be provided by a separate strain relief clamp located above the cable seal and acting independently from the sealing function. When the cable entry is mounted onto the junction box, the cable entry will be 100% watertight during immersion of 65 feet or greater, while providing sufficient strain relief to prevent the cable from pulling out when handling, installing, or operating the pump. The assembly shall bear against a shoulder in the pump top and direct the cable axially upwards. Epoxies, silicones, or other secondary sealing systems shall not be considered acceptable for the cable entry and sealing system.

DRAFT

E. Cable Junction Box: The junction chamber shall contain one terminal board, providing connections for both the power cables and signal wires. The terminal board shall be watertight and sealed from the motor by an elastomer compression seal (O-ring). Connection between the cable conductors and stator leads shall be made with threaded, compressed type binding posts, permanently affixed to the sealed terminal board and perfectly leakproof.

The junction box shall contain a collection cavity placed so that any leakage into the junction box shall terminate in the collection cavity. A mechanical float switch shall be mounted at the lowest point in the collection cavity. This sensor shall be wired to provide an alarm in the event of water intrusion into the cable junction box.

F. Electric Motor: The pump motor shall be specifically designed for submersible operation and be of a 3-phase, squirrel-cage induction, shell type design, housed in an air-filled, watertight chamber. The stator windings shall be insulated with moisture resistant Class H insulation rated for 180°C (356°F). The stator shall be insulated by the trickle impregnation method using Class H monomer-free polyester resin resulting in a winding fill factor of at least 95%. The motor shall be inverter duty rated in accordance with NEMA MG1, Part 31. The stator shall be heat-shrink fitted into the cast iron stator housing. The use of multiple step dip and bake-type stator insulation process is not acceptable. The motor shall be designed for continuous duty. The use of bolts, pins or other fastening devices requiring penetration of the stator housing is not acceptable.

Each unit shall be provided with an adequately designed cooling system. The motor shall be cooled by the pumped water flowing along the stator housing when the pump is working. A water jacket or any external cooling system shall not be considered acceptable designs.

Thermal switches shall be used to protect the stator windings from damage against high temperatures. The stator shall be equipped with three thermal switches embedded in the stator windings (one switch in each stator phase). This protection shall be used in conjunction with and supplemental to external motor overcurrent protection.

Each pump shall be equipped with a mechanical float switch in the stator housing. The float switch shall deactivate the pump, in the event of leakage, prior to liquid reaching the stator end coils, lubricants or the lower bearing assembly.

The motor/propeller shaft shall be a single piece of carbon steel ASTM A572 and shall be completely isolated from the pumped liquid. Units with multiple piece shafts or gearboxes are not acceptable.

G. Pump and Motor Bearing Arrangement: The motor shaft shall rotate on two grease-lubricated and sealed bearings. The upper motor bearing shall be a cylindrical roller bearing. The lower bearing arrangement shall consist of a double row angular contact ball bearing. The bearings shall have a minimum L10 bearing life of 100,000 Hrs.

The lower thrust bearing housing shall include a thermal sensor (RTD) of the platinum-100 type to monitor the temperature of the thrust bearing outer race during operation (optional).

H. Pump Construction: Major pump components shall be of gray cast iron, Class 35, with smooth surfaces devoid of blow holes and other irregularities. All exposed nuts and bolts shall be of stainless steel 304. The propeller shall be of a 3-bladed fixed pitch, grey cast iron. The blades shall be noticeably backward curved so that any clogging tendency is minimized. The fastening of the propeller to the shaft shall be made by a locking assembly.

All mating surfaces where watertight sealing is required shall be machined and fitted with nitrile rubber O-rings. Fitting shall be such that sealing is accomplished by metal-to-metal contact between machined surfaces. This will result in controlled compression of nitrile

DRAFT

rubber O-rings without requiring a specific torque limit. No secondary sealing compounds, rectangular gaskets, elliptical O-rings, grease, or other devices shall be used.

All metal surfaces coming into contact with the pumped media, other than stainless steel, shall be protected by a factory applied spray coating of acrylic dispersion zinc phosphate primer with a polyester resin paint finish on the exterior of the pump.

I. Mechanical Seals: Between the propeller and the motor there shall be a tandem mechanical rotating shaft seal system. Seals shall run in a lubricant reservoir. Lapped seal faces must be hydrodynamically lubricated at a constant rate. The lower seal unit, between the pump and lubricant chamber, shall contain one stationary and one positively driven rotating corrosion resistant tungsten carbide ring. The upper seal unit, between the lubricant reservoir and motor, shall contain one stationary corrosion resistant ring and one positively driven rotating corrosion resistant ring. Each interface shall be held in contact by its own spring system. The seals shall require neither maintenance nor adjustment, but shall be easily inspected and replaceable.

The following seal types shall not be considered acceptable nor equal to the dual independent seal specified.

- Seals with steels, carbon, or silicon carbide seal rings.
- Seals utilizing bellows type springs.
- Conventional double mechanical seals containing either a common single- or double-spring acting between the upper and lower units.

Each pump shall be provided with a lubricant chamber for the shaft sealing system. The lubricant chamber shall be designed for lubricant pressure compensation. The lubricant chamber drain and inspection plug, with positive anti-leak seal, shall be easily accessible from the outside.

Seal lubricant shall be FDA Approved, non-toxic.

J. Pump Monitoring: The pump manufacturer shall provide a self-contained pump control and status monitoring system that will supplement the pump control system by providing a single point within the control system for pump sensor output processing. This solid state module shall have inputs for the monitoring of water intrusion into the junction box (float switch), water intrusion into the stator housing (float switch), and stator overtemperature monitoring (thermal switches). Upon the detection of an alarm, the unit shall shut the pump down and annunciate the fault condition. The fault must be cleared before the unit allows pump restart.

2.03 PUMP CONTROLS

A. Pumps shall be controlled in accordance with these Specifications.

PART 3 – EXECUTION

3.01 SERVICES OF MANUFACTURER

A. Pump Test: The pump manufacturer shall perform the following inspections and tests on each pump before shipment from factory:
   1. Propeller, motor rating and electrical connections shall be checked for compliance to the customer's purchase order and the pump data plates.
   2. A motor and cable insulation test for insulation defects shall be made.
   3. Prior to submergence, the pump shall be run dry to establish correct rotation and mechanical integrity.

4. The pump shall be run for 30 minutes submerged.
5. A certified test curve (per HI standards) showing the performance of the pump shall be run and supplied to the ENGINEER upon request.
6. After operational test (4), the insulation test (2) is to be performed again.

The pump cable end shall be sealed with a high quality protective covering to make it impervious to moisture or water seepage prior to electrical installation.

B. Inspection, Startup, and Field Adjustment: The service representative of the Manufacturer shall be present at the Site to furnish the field services.

C. Services of manufacturer shall be in accordance with these Specifications.

D. Manufacturer shall define quantity of trips and days on site necessary to perform the specified services as a part of the manufacturer's scope of supply. Scope of supply shall be inclusive of travel and living expenses.

E. Site Tests: The pump shall be tested at startup. Voltage, current, and other significant parameters shall be measured and recorded. The manufacturer shall provide a formal test procedure and forms for recording data.

F. Upon completion of field services, representative of manufacturer shall prepare and submit a report in accordance with the requirements of these Specifications.

END OF SECTION

DRAFT

SECTION 46 2158 – HEADWORKS SCREEN (HYDRO DYNE)

PART 1 – GENERAL

1.01 SCOPE – Supply all labor, materials, equipment, and incidentals required to install and place into operation the fine and coarse screening system as shown on the Drawings and as specified herein.

1.02 REFERENCE STANDARDS – The properties of all materials, design, fabrication, and performance of the equipment to be furnished under this section shall be in accordance with the latest issue of applicable standard specifications. The governing authorities of these standards are listed below.

A. AISC, American Institute of Steel Construction

B. AISI American Iron and Steel Institute

C. ANSI, American National Standards Institute

D. ASCE, American Society of Civil Engineers

E. ASME, American Society of Mechanical Engineers

F. ASTM, American Society of Testing and Materials

G. AWS, American Welding Society

H. IBC, International Building Code

I. IEC, International Electric Code

J. IEEE, Institute of Electrical and Electronics Engineers

K. NEC, National Electrical Code

L. NEMA, National Electrical Manufacturers Association

M. Underwriters Laboratory (UL and cUL)

1.03 SUBMITTALS – Submittals shall be provided to the engineer that includes all the following information:

A. Certified shop drawings showing all important details of construction, dimensions, and anchor bolt locations.

B. Descriptive product literature.

C. Schematic electrical wiring diagram and electrical controls information.

D. Complete motor and drive data.

E. The total weight of the equipment.

F. A complete bill of materials of all equipment.

G. A valid certificate of registration naming manufacturer, and supplier if equipment is relabeled, as ISO 9001:2015 certified.

H. A certificate from an industry recognized, independent testing facility verifying compliance with Screening Capture Ratio requirement.

1.04 QUALIFICATIONS

A. All the equipment specified under this Section shall be supplied by a single manufacturer whose Quality Management System is ISO 9001:2015 certified and applicable to the manufacture of water and wastewater treatment equipment.

DRAFT

B. If equipment is not manufactured by supplier, including welding and machining, the name and contact information of manufacturing facility must be supplied. If more than one manufacturer is used all companies and facilities must be provided.

C. If patents protecting equipment are not owned by supplier, then an affidavit must be supplied stating owner of design and expiration of licensing agreement.

D. All equipment specified under this Section shall comply with Bipartisan Infrastructure Law's (BIL Public Law 117-58) Build America, Buy America (BABA) requirements for manufactured products. As defined in the Law, this requires:

1. The manufactured product was manufactured in the United States, and
2. The cost of the components of the manufactured product that are mined, produced, or manufactured in the United States is greater than 55 percent of the total cost of all components of the manufactured product.

Certifications attesting to compliance will be required prior to approval and shall be included with submittals and upon completion of manufacture.

1.05 DESIGN REQUIREMENTS

A. System Description

1. The fine screen herein specified will be of the center flow type. The flow enters the inside of the continuous belt and exits through both sides and the bottom of the belt.
2. The fine screen will have a continuous stainless steel belt that automatically rotates within the internal guide system of the static frame.
3. The screen shall have undergone performance testing by an industry recognized, independent testing facility. The results of this testing shall verify a Screening Capture Ratio of at least 80% (coarse screen)/ 90% (fine screen) for solids equal to or larger than the screen grid opening listed in System Performance below.
4. The screen will be installed into a widened chamber section of the channel as shown on the contract drawings to accommodate the flow pattern through the screen belt.
5. The solids will collect as a mat on the inside of the continuous belt. The belt will intermittently rotate and elevate the solids to the discharge point. Larger objects will be picked up by a series of hooks and/or trays placed at regular intervals.
6. The solids will be removed at the top of the screen by two spray bar headers positioned on the outside of the belt. The screenings will drop into an internal hopper and be fed to the screening handling system.
7. The continuous belt will be directly driven by drive sprockets that shall support and rotate the grid assembly.
8. The screen will be totally enclosed and have access covers that will be lightweight and easily removable for maintenance. Maintenance, inspection, access and lubrication points shall be no higher than 60 inches above grade level.
9. The Washing Compactor will be positioned next to the screening channels and will be fed by a sluice system.
10. The Washing Compactor will be adequately sized to handle all the screenings and wash water that will be generated by the screen at peak flow. The system will be required to wash the screenings to reduce the organic content and compact the remaining solids into a dry plug.
11. The Washing Compactor will generally comprise of a screw auger rotating within the washing and drainage trough, a wash water system, a compaction zone and an outlet chute arrangement.
12. All stainless steel (including frame, grid and drive components) mentioned below as stainless steel shall be T304 stainless steel. All hardware shall be T316 stainless steel.

DRAFT

B. System Performance – The fine screening system will be designed to meet the following design parameters:

COARSE SCREENS:

Number of screens	2
Peak flow per screen	7.5 MGD
Average flow to screen	3 MGD
Velocity through the grid	max 3.0 ft/s
Screen grid opening	6 mm
Head loss at peak flow	4.7 inches @ 50% blinding and 37 inches downstream water level
Structural design differential of frame/grid	48 inches minimum @ 100% blinding
Drive design differential (operating)	48 inches minimum
Screen grid supporting drive sprockets	2 minimum – all stainless steel
Channel width	18 inches
Channel Recess	36 inches
Channel height	66 inches
Number of Washing Compactors	2
Diameter of screw	8 inches
Minimum diameter of shaft	2.75 inches
Compactor discharge height above grade	48 inches
Screen wash water requirements	29 GPM @ 60 PSI each
Compactor wash water requirements	25 GPM @ 60 PSI each
Sluice wash water requirements	10-20 GPM @ 60 PSI intermittent

FINE SCREENS:

Number of screens	2
Peak flow per screen	7.5 MGD
Average flow to screen	3 MGD
Velocity through the grid	max 3.0 ft/s
Screen grid opening	2 mm
Head loss at peak flow	11.4 inches @ 65% blinding and 34 inches downstream water level
Structural design differential of frame/grid	48 inches minimum @ 100% blinding
Drive design differential (operating)	48 inches minimum
Screen grid supporting drive sprockets	3 minimum – all stainless steel
Channel width	18 inches
Channel Recess	36 inches
Channel height	102 inches
Number of Washing Compactors	2
Diameter of screw	6 inches
Minimum diameter of shaft	2.25 inches
Compactor discharge height above grade	48 inches
Screen wash water requirements	58 GPM @ 60 PSI each
Compactor wash water requirements	25 GPM @ 60 PSI each
Sluice wash water requirements	10-20 GPM @ 60 PSI intermittent

DRAFT

PART 2 – PRODUCTS

2.01 MANUFACTURER

A. The equipment shall be the Center Flow Screen and Washing Compactor as provided by Hydro-Dyne Engineering, Inc., Clearwater, FL or approved equal.

B. If submitted equipment requires arrangement differing from that specified, prepare and submit for review complete structural, mechanical, and electrical drawings and equipment lists showing all necessary changes and embodying all special features of equipment proposed. Any changes are at no additional compensation and the Manufacturer will be responsible for all engineering costs of redesign by the Engineer, if necessary.

2.02 THE CENTER FLOW SCREEN

A. Perforated Plate - The Continuous Screening Belt

1. The Fine screenings belt will consist of panels manufactured from stainless steel plate that shall be punched with perforations of the specified opening. The stainless steel plate shall be reinforced with a stainless steel frame.
2. The Coarse screenings belt will consist of panels manufactured from 3/8” thick UHMWPE with perforations of the specified opening.
3. The perforated panels will be supported by 12 gauge stainless steel vertical mounted lifting hooks horizontally spaced a maximum of 3 inches apart preventing deflection. The lifting hooks shall support the screening grid and bear tension loads across the entire length and width of the screen belt. Grids that do not have stainless steel vertical mounted lifting hooks horizontally spaced a maximum of 3 inches apart across the grid will not be acceptable.
4. The hooks on elements shall form horizontal lifting trays or shelves for removing large solids and rags every 8 inches around the entire screen grid.
5. The perforated panels will be connected by heavy duty stainless steel axles every 8 inches to form a continuous belt that will rotate within the frame’s guide system. The axle design will allow the plates to pivot and create a seal between the perforated panels to prevent the passage of solids.
6. The axles will include Delrin spacers that will maintain the 3 inch space between the vertical support elements. Delrin spacers will also form a seal between each perforated panel with clearance not to exceed 0.5mm.
7. The axles will be extended to fix a UHMWPE guide link to the side of each perforated plate. These guides will interlock to create a continuous guide link system that will slide within the frame.
8. Guide links shall be precision machined from solid virgin UHMWPE. Injection molded links are not acceptable.
9. The heavy duty guide links will be minimum 2 inches thick to protect against undue wear from grit and will be specially machined to form a closure seal between the rotating belt and the static frame.
10. The seal shall be continuous from grade level through the water flow forming an uninterrupted closure between the traveling screen grid and the stationary frame. The seal shall be heavy gauge stainless steel, fixed to the screen frame and be adjustable so it will remain in contact with the rotating screen belt at all times.
11. Screen designs that have gaps and/ or tolerances greater than 0.5mm between the screens grid plates and between the sides of the grid and screen frame, including the chain, are not acceptable.
12. Screen’s sealing materials are to consist of solid, non-flexible materials that will maintain the 0.5mm tolerance for the lifecycle of the screen.
13. Screen designs whose sealing materials will not last the lifecycle of the screen and require replacement by the owner/ operators, are not acceptable.

DRAFT

14. Guide systems that use rollers, stainless or hardened steel chains will not be acceptable.
15. Grid panel sealing systems that require the use of replaceable neoprene seals or stainless steel hinges will not be acceptable.
16. Grid to frame sealing systems that require the use of replaceable adjustable UHMWPE strips attached to the frame will not be acceptable.

B. The Frame

1. The continuous belt will rotate within a heavy duty stainless steel static support frame that shall be a rectangular box construction.
2. The guide link system will travel around a stainless steel guide wear track that is integral to the support frame. Top and bottom wear tracks shall be bolt in and field replaceable.
3. There shall be a removable inspection panel located directly beneath the drive allowing easy access to the grid drive sprockets, drive shaft and screenings collection hopper.
4. The design will ensure that the support frame meshes with the closure seal on each guide link to prevent passage of screening material and grit particles.
5. All components of the lower wear tracks shall be bolt in, field replaceable and manufactured from stainless steel.
6. The frame shall accommodate stainless steel protective covers designed to prevent leakage and contain spray wash. All maintenance and inspection access points shall have hinged and gasketed access covers. Screens with covers requiring neoprene, rubber, or plastic seals are not acceptable.
7. To minimize odors and nuisance, the screen frame shall have flanged connections for odor control.
8. The screen manufacturer will supply stainless steel angled filler plates to connect from the upstream corners of the support frame to the channel walls.

C. The Offloading of Screenings

1. Two stainless steel spray wash headers will be located in the head space of the screen to offload the screenings from the continuous belt.
2. The spray bar will incorporate brass nozzles at 2 inch spaces that can easily be replaced or removed for cleaning.
3. The spray bars will be positioned behind the rotating belt and will backwash the solids into an internal hopper manufactured from stainless steel. The wash water will be used to continuously flush the screenings from the internal hopper into the extended sluice.
4. The addition of a rotating or static brush system to aid offloading will not be acceptable.

D. Screen Drive Mechanism

1. Each screen will have a maximum 0.75 hp (0.56KW, FLA 1.1), inverter duty electric motor suitable for a 460/3/60 supply and rated for a Class 1 Div. 2 environment. As a minimum, the motor will have an IP55 enclosure rating and will conform to NEMA MG-1 requirements. The motor will be located outside of the screen covers and above the top of the channel.
2. The gear reducer shall be directly coupled to a heavy duty shaft machined from solid stainless steel round bar.
3. The drive shaft shall be supported on both ends by grease filled roller bearings. Separate grease-filled self-contained cartridge seals shall be mounted on drive shaft between bearings and frame to eliminate spray wash from entering bearings or gear reducer.
4. The continuous belt will be supported and rotated around heavy duty stainless steel sprockets located on the drive shaft in the head space of the screen.

DRAFT

5. These sprockets will have removable bolted-on lugs that transmit torque directly from the gear reducer to notches on the underside of the UHMWPE guide links. The drive shall be sized so that a minimum of four lugs are engaging guide links at all times. Driving forces shall be transmitted to areas located behind the screen's grid to prevent solids from contacting drive surfaces.
6. Chain driven systems or screens with wheels submerged in the wastewater are not acceptable.
7. Drive systems that use an external track and pinion to drive or push the band against grid weight supporting wear tracks will not be acceptable. Drive shall lift, and be capable of bearing, the full weight of the grid.

2.03 WEIR

A. The manufacturer shall design and supply a stainless steel weir that will be installed by the contractor downstream of the screen.

B. The weir will be designed to maintain a downstream water depth that will increase screen performance during periods of high flow.

C. The weir will be anchored to the sides of the channel with no horizontal supports across the channel to prevent the accumulation of solids.

2.04 THE SCREENINGS TRANSFER SLUICE

A. The manufacturer will design and supply a screenings launder sluice system that will collect screenings and wash water from the discharge hopper of the screen and transfer them into the washing compactors.
1. Collected screenings will transfer through the sluice by means of gravity. Mechanically driven conveyors will not be acceptable.
2. The manufacturer shall supply a solenoid valve that will be plumbed in field into the back plate of the sluice. The contractor will connect to a local plant water supply, and the water supply will provide supplementary transport water.
3. The sluice will be manufactured from stainless steel. It shall comprise of U-shaped lengths of trough that will be flange connected to the desired overall length.
4. A change in direction will be achieved using long swept bends that will prevent blockages from occurring.
5. The sluice system will be designed with a splitter that diverts flow into 1 of 2 compactors. The splitter will be fitted with a manual removable gates to divert into any branch of the sluice
6. The sluice system will include the support leg structure manufactured from stainless steel as needed. The legs will be suitable for anchoring to a concrete floor.
7. Covers will be lightweight, no more than 6 feet long and bolted for easy removal by a single operator.

2.05 THE WASHING COMPACTOR WITH ENHANCED WASHING AND DEWATERING

A. The main body will be the washing trough that will receive screenings and wash water directly from the end of the screenings transfer sluice.

B. The washing trough will house the screw auger and provide a dedicated section to reduce organic content.

C. The stainless steel drainage section will be perforations with 2mm or 5mm openings and be adjustable to maintain auger alignment. This drainage section shall be removable and easily replaceable in the field with no special tools. The flights of the screw may be fitted with a stiff nylon brush that will maintain contact with the drainage section, preventing blockages. The replaceable brushes will be supplied in pre-coiled lengths with stainless steel removable clamps.

DRAFT

D. The underside of the washing trough will be a catch pan chute that will divert the water that passes through the drainage section, back to the influent flow with dual outlet plain end pipe connections. The unconnected pipe side will be capped with a rubber compression cap so that it can be removed and the drain piping can be cleaned if necessary. The catch pan will include a flushing connection point for washing and cleaning.

E. The catch pan will include a separate wash water supply to purge the area of accumulated solids. A single spray nozzle will direct water across the length of the pan toward the outlet. The frequency of cleansing cycles will be controlled through the main control panel.

F. The AR400 hardened steel screw auger will sit in the washing trough. Washing compactors with shaftless screws are not acceptable as a shaft is required to support the flight and provide necessary torque and compaction. Screw auger will be primer coated to inhibit corrosion. Screw augers not made out of AR-400 hardened steel will not be acceptable.

G. The auger will be a varied pitch screw aligned at the compaction end by AR400 hardened steel wear and anti-rotation bars designed to prevent the compacted screening from spinning within the compaction zone.

H. The screw will rotate allowing wash water and free organic/fecal material finer than trough openings to escape and return to the plant flow. The wash water will flush the separated organic material through the drainage section in solution or as small particles.

I. Washing of screenings shall be achieved through an enhanced washing module consisting of the following minimum requirements manufactured out of stainless steel:
   1. Variable pitch flight for separate screening transport through the wash, dewatering and compaction zones.
   2. Washing Module Zone
      a. Flanged connections and a stainless steel orifice plate or nozzle
      b. Hardened steel wear and anti-rotation bars
      c. Separately controlled high pressure washing to sheer and break-up organic and fecal material for return to the channel.
      d. Cleansing cycles moving the auger in forward and reverse direction are controlled through the main control panel and operator adjustable up to 9 cycles
   3. Dewatering and Compaction Zone
      a. Stainless steel header feeding an external rinse shower
      b. Hardened steel wear and anti-rotation bars
      c. Full circumference perforations for dewatering and extrusion of organics and fecal material.
      d. Attached drainage catch pan with a separate wash water supply to purge the area of accumulated solids
      e. Removable covers for inspection access

J. Washing compactors that do not have a separate washing and rinse/dewatering zones will not be accepted.

K. The compacted screenings will be pushed through the compaction zone and pass through an elbow into an outlet chute. The outlet chute will provide for screening expansion and will elevate the dewatered screenings to discharge into a bagging system.

L. The outlet chute will terminate in a flange that will connect directly to a stainless steel discharge long radius elbow that will direct the compacted screenings downward into the screenings collection bag. The elbow will be designed to prevent bridging of solids and will be flanged for accessibility.

M. The outlet of the discharge elbow will be a stainless steel mounting assembly that will

DRAFT

allow a 24” diameter circular screenings collection bag to slide into position.

N. The screenings collection bag will house one 230 feet long continuous bag that will be released under the weight of compacted screenings dropping from the outlet chute.

O. The plastic bag shall be capable of cutting and tying off into operator determined sizes to effectively capture odor and all remaining water in screenings.

P. Each Washing Compactor will have a maximum 3 hp(2.2KW, FLA 3.8), inverter duty electric motor suitable for a 460/3/60 supply and rated for a Class 1 Div. 2 environment. As a minimum, the motor will have an IP55 enclosure rating and will conform to NEMA MG- 1 requirements.

2.06 SPARE PARTS – The manufacturer will supply the following spare parts, per screen supplied, with the equipment:

A. Ten (10) hook links and elements spacers

B. Two (2) grid axles

C. Two (2) guide links

D. Two (2) screen panels

E. One (1) center support link (fine screens only)

F. One (1) brush for each screw

G. Five (5) total screenings collection continuous bags

2.07 ACCESSORIES – The manufacturer will supply the following accessories, with the equipment:

A. Eight (8) 0.75” NEMA 7 brass body solenoid valve

B. Six (6) 1” NEMA 7 brass body solenoid valve

C. Two (2) 2” NEMA 7 brass body solenoid valve

D. Four (4) 2” wash water strainer

E. Eight (8) wash water pressure gauge

F. One (1) lot of anchor bolts.

G. One (1) lot of ball valves

2.08 ELECTRICAL CONTROLS AND ANCILLARY COMPONENTS

A. General Information - The manufacturer will supply two UL listed main control panels and fourteen local control stations that shall automatically control the equipment offered in this section.

B. The Main Control Panel – NEMA 4X stainless steel enclosure for outdoor installation – Each control panel shall consist of the following components for each screening system:

1 Enclosure, NEMA 4X, 304SS, 2-door, floor standing, 3-point latch with lighting fixture with door switch
1 Purge kit, exterior mount, leak compensation type
1 Main disconnect breaker with operating handle
1 480V surge suppressor
1 120V surge suppressor
1 Line filter
1 Control power transformer
1 ABB, ACS580 series VFD, 0.75HP, 480VAC/3Ph with fused protection (Coarse Screen)

DRAFT

1 Schneider, IEC starter, reversing type, 3HP, 480VAC/3Ph with circuit protection (Coarse Screen – WC)
1 ABB, ACS580 series VFD, 1.5HP, 480VAC/3Ph with fused protection (Fine Screen)
1 Schneider, IEC starter, reversing type, 1.5HP, 480VAC/3Ph with circuit protection (Fine Screen – WC)
1 Schneider, IEC starter, non-reversing type, 0.75HP, 480VAC/3Ph with circuit protection (Grit Trap)
1 Schneider, IEC starter, non-reversing type, 0.5HP, 480VAC/3Ph with circuit protection (Grit Classifier)
1 Schneider, IEC starter, non-reversing type, 5HP, 480VAC/3Ph with circuit protection (Grit Pump)
1 Allen Bradley, CompactLogix 1769-L33ER controller with standard I/O modules as required
1 Allen Bradley, PanelView Plus 7 series, 10'' HMI, standard model with window it
1 24VDC power supply
1 Unmanaged ethernet switch, 8-ports (10/100Mbps)
7 Hour meter
2 IS Barrier – Analog Signal
1 IS relay – 4 channels
1 Ethernet surge suppressor
1 APC, SMT1500C UPS, 120VAC with UPS maintenance bypass switch
1 Heater with thermostat
1 Vortex A/C enclosure cooler, hazardous location, 2500BTU
1 Ground bar
LOT of signal surge suppressors LOT of timer relays LOT of pilot lights as required
LOT of control relays, terminal blocks, fuse blocks, wire duct, supplementary circuit protection, UL label as required

C. Ancillary Control Components -
1. Float switch
2. Ultrasonic differential level system consisting of the following per screen:
   a. NEMA 4X enclosure with viewing window
   b. Milltronics Hydro-Ranger LT500 controller with real-time 4-20 mA output
   c. Two (2) NEMA 4X/7 transducers
3. Local Control Station – NEMA 7 - Each local station panel shall consist of the following components:
   a. NEMA 7 enclosure
   b. Hand/Off/Auto switch for each motor
   c. Forward/Off/Reverse switch for compactor motor
   d. Emergency stop
4. Sluice level limit switches

2.09 SURFACE PREPARATION AND PAINTING

A. The majority of stainless steel materials, flanges and piping shall be pickled by means of a four tank system that is in accordance with ASTMs A380. This process is for quality control, removal of heat affected discoloration, surface treatment for corrosive environments and to provide a uniform finish to stainless steel surfaces. Stainless steel components must be fully submerged in the tanks for complete coverage. Electro-chemical wanding is acceptable on weld finishes that cannot be submerged due to size. Sandblasting, pickling pastes and abrasive cleaners will not be accepted as forms of metal finishing. The drive and grid components do not require pickling.

DRAFT

Tank 1 – Detergent bath for the removal of soils, greases, oils, and dirt
Tank 2 – Rinsing process to remove detergent and residual soils
Tank 3 – Two part acid solution for the removal of tightly adhere oxide films
Tank 4 – Final rinse process to remove all residual acid

The four-tank pickling process must be conducted in-house at the manufacturer's own ISO 9001 certified manufacturing facility. Any screening equipment providers who are unable to perform this process in-house are not acceptable.

B. All ferrous surfaces (except stainless steel) shall be coated with a pre-primer, primer, and an exterior top coating, or fusion bonded polyester coating suitable for humid/wet environments for superior corrosion protection.

C. Motor(s) and gearbox(s) shall be surface prepared to withstand humid/wet environments for superior corrosion protection.

PART 3 – EXECUTION

3.01 WARRANTY - The Manufacturer of the equipment supplied under this specification shall provide a warranty for a period of 2 years commencing on startup and /or acceptance by the Owner but no later than 90 days from the date of shipment by the Manufacturer. The Manufacturer shall guarantee that the equipment furnished is suitable for the purpose intended and free from defects in design, materials, and workmanship. In the event that the equipment fails to perform as specified the Manufacturer shall, at his option, promptly repair, modify, or replace the defective equipment.

3.02 FACTORY TESTING

A. The screening system and all components shall be factory assembled. Equipment is tested for a minimum of 4 hours prior to shipment. The equipment shall be shipped fully assembled and shall be capable of being set in place and field erected by the Contractor with minimal field assembly.

B. During the factory test period the screening system shall be adjusted as required assuring proper operation on completion of the field installation. The Manufacturer shall supply a certification of the completion of the factory testing of the assembled screening system and appurtenances and shall certify as to the equipment being in satisfactory operating condition at time of shipment. The Engineer and/or Owner may, at their own option and expense, witness the factory test.

C.

3.03 DELIVERY AND STORAGE

A. The screening system shall be appropriately crated and delivered to protect against damage during shipment.

B. An authorized representative of the Contractor shall inspect the screens on delivery to the jobsite and shall report any damage or missing components to the Manufacturer and the Engineer within 72 hours of receipt of the shipment.

3.04 INSTALLATION **-** The installation of the equipment shall be as indicated on the drawings and in strict accordance with the Manufacturer's instructions and recommendations.

3.05 FIELD TESTS, ADJUSTMENTS AND COMMISSIONING

A. The equipment shall be shipped completely factory assembled. Contractor shall verify all access dimensions, channel dimensions, and any interior building dimensions to ensure equipment may be installed as factory assembled units.

B. After completion of the installation, the equipment shall be inspected and certified by an

DRAFT

authorized representative of the Manufacturer as complying with the Manufacturer's recommendations and requirements. At such time as the Manufacturer has deemed the installation to be acceptable, the Manufacturer's authorized service representative shall make any required adjustments and shall start the equipment to ensure proper operation.

C. The Manufacturer's authorized representative shall provide instruction to the plant personnel as to the operation and maintenance of the equipment including commissioning, shut down, on-line operations, lubrication, and preventative maintenance.

D. Manufacturer shall state field service rates for a Service Engineer to Owner and Contractor. In the event that the field service time required by this section should not be sufficient to properly place the equipment into operation, and the requirement for additional time is beyond the manufacturer's responsibility, additional time shall be purchased by Contractor to correct deficiencies in installation, equipment, or material without additional cost to Owner.

E. The Contractor shall include in his bid, the cost of the above referenced authorized service representative for a minimum of three (3) trips totaling five (5) eight hour days onsite to complete the certifications and training described in this specification section.

END OF SECTION

DRAFT

SECTION 46 2316 – VORTEX GRIT REMOVAL AND HANDLING SYSTEM (PUMP)

PART 1 – GENERAL

1.01 SCOPE – Supply all labor, materials, equipment, and incidentals required to install and place into operation the grit system as shown on the Drawings and as specified herein.

1.02 REFERENCE STANDARDS – The properties of all materials, design, fabrication, and performance of the equipment to be furnished under this section shall be in accordance with the latest issue of applicable standard specifications. The governing authorities of these standards are listed below.

A. AISC - American Institute of Steel Construction

B. AISI - American Iron and Steel Institute

C. ANSI - American National Standards Institute

D. ASCE - American Society of Civil Engineers

E. ASME - American Society of Mechanical Engineers

F. ASTM - American Society of Testing and Materials

G. AWS - American Welding Society

H. IBC - International Building Code

I. IEC - International Electric Code

J. IEEE - Institute of Electrical and Electronics Engineers

K. NEC - National Electrical Code

L. NEMA - National Electrical Manufacturers Association

M. Underwriters Laboratory (UL and cUL)

1.03 SUBMITTALS **–** Submittals shall be provided to the engineer that includes all the following information:

A. Certified shop drawings showing all important details of construction, dimensions and anchor bolt locations.

B. Descriptive product literature.

C. Schematic electrical wiring diagram and electrical controls information.

D. Complete motor and drive data.

E. The total weight of the equipment.

F. A complete bill of materials of all equipment.

G. A valid certificate of registration naming manufacturer, and supplier if equipment is relabeled, as ISO 9001:2015 certified.

1.04 QUALIFICATIONS

A. All the equipment specified under this Section shall be supplied by a single manufacturer whose Quality Management System is ISO 9001:2015 certified and applicable to the manufacture of water and wastewater treatment equipment.

B. If equipment is not manufactured by supplier, including welding and machining, the name and contact information of manufacturing facility must be supplied. If more than one manufacturer is used all companies and facilities must be provided.

DRAFT

C. If patents protecting equipment are not owned by supplier then an affidavit must be supplied stating owner of design and expiration of licensing agreement.

1.05 DESIGN REQUIREMENTS – VORTEX COLLECTOR

A. System Description

1. The Grit Trap will be a “vortex” style system designed to operate continuously.
2. The internal rotating mechanism will be installed into the circular concrete chamber as shown on the contract drawings. The chamber will consist of an upper separation chamber and a lower collection hopper.
3. The wastewater flow will enter the chamber tangentially, flow around the upper separation chamber and exit via an outlet channel running parallel to the inlet.
4. The grit solids will fall through the upper separation chamber to settle in the lower collection hopper. The transfer grit pump will regularly cycle and transport the grit particles to the de-watering Grit Classifier.
5. Consistent performance of the grit chamber throughout the flow ranges will be maintained by the motor driven impeller that continuously rotates within the upper separation chamber. The device will provide the ideal conditions to enhance grit settlement and maximize the ejection of light organic solids from the chamber.
6. The floor of the upper separation chamber must be sloped as shown on the contract drawings to prevent grit accumulation and allow the grit to fall be gravity into the collection hopper.
7. All stainless steel (including drive tube and impeller) mentioned below as stainless steel shall be T304 stainless steel. All hardware shall be T316 stainless steel.

B. System Performance

1. The Grit Trap will be designed to meet the following grit removal performance guarantee at all flows up to and including the peak flow. Grit is defined as silica sand; specific gravity = 2.65 g/cc:

a. Grit greater than 50 mesh/297 micron	95%
b. Grit greater than 60 mesh	90%
c. Grit greater than 70 mesh/210 micron but not less than 50 mesh	85%
d. Grit greater than 100 mesh/149 micron but not less than 70 mesh	65%

2. The Grit Trap model will be selected to meet the following design parameters:

a. Number of chambers required	1
b. Peak flow per chamber	7.5 MGD
c. Maximum allowable head loss at peak flow	1 inches
d. Average flow	3 MGD
e. Grit fluidizing water requirements	20gpm @ 40PSI

1.06 DESIGN REQUIREMENTS – GRIT PUMP

A. System Description

1. The manufacturer shall supply a grit pump to transfer the grit and liquid from the collection hopper to the grit screw classifier system.
2. The grit pump shall be mounted as shown on the contract drawings.
3. The CONTRACTOR shall supply the 4-inch pipe from the top of the suction pipe to the grit pump inlet and the grit pump outlet to the grit screw classifier.
4. System Performance – The grit pump will fully comply with the following criteria:

a. Number of grit pumps	1
b. Maximum pump capacity	250 GPM
c. Minimum Motor HP rating	5 hp
d. Inlet connection	4 inches

DRAFT

e. Outlet connection 4 inches

1.07 DESIGN REQUIREMENTS – GRIT CLASSIFIER SYSTEM

A. System Description

1. The Grit Classifier system will be adequately sized to receive and process a mixture of grit and liquid regularly pumped at the maximum specified rate from the vortex grit chamber.
2. A cyclone mounted on top of the Grit Classifier will provide initial dewatering. The excess liquid will be immediately returned to the main flow.
3. The partially dewatered grit will be deposited into the main body of the Grit Classifier. The heavy grit will settle in the collection hopper while the excess liquid will overflow an internal weir and be returned to the main flow.
4. The grit will be elevated by a rotating screw to a discharge point above the internal water level. By this time the grit material will be free of any free-standing liquid.
5. All stainless steel (including Grit Classifier and grit cyclone) mentioned below as stainless steel shall be T304 stainless steel. All hardware shall be T316 stainless steel.

B. System Performance – The Grit Classifier system will fully comply with the following criteria:

1.	Number of cyclones	1
2.	Maximum capacity of cyclone:	250 GPM
3.	Inlet flanged spool piece connection	4 inches
4.	Overflow flanged spool piece connection	6 inches
5.	Apex	2 inches
6.	Maximum underflow to screw classifier	30 GPM Maximum
7.	Number of screw classifiers	1
8.	Maximum capacity of screw classifier	30 GPM
9.	Diameter of screw	12 inches
10.	Diameter of screw shaft	3 inches
11.	Minimum length of screw	8 feet
12.	Speed of screw	12 RPM
13.	Motor Size	1/2 HP

PART 2 – PRODUCTS

2.01 MANUFACTURER

A. The equipment shall be the Grit Trap and the Grit Classifier as provided by Hydro-Dyne Engineering, Inc., Clearwater, FL. The grit pump shall be the Gorman Rupp T4A. Other than the named supplier, all manufacturers proposing equipment described herein, will provide a detailed submittal package, which will consist, at a minimum, of all information and details prescribed in section 2.2, including BABA compliance, of this specification. All pre-qualification submittals will be submitted to the ENGINEER at least 15 days prior to the bid date.

B. If submitted equipment requires arrangement differing from that specified, prepare, and submit for review complete structural, mechanical, and electrical drawings and equipment lists showing all necessary changes and embodying all special features of equipment proposed. Any changes are at no additional compensation and the Manufacturer will be responsible for all engineering costs of redesign by the ENGINEER, if necessary.

DRAFT

2.02 THE VORTEX GRIT TRAP

A. General

1. The internal mechanism of the Grit Trap will consist of a gear motor, a drive head, a drive tube, and a rotating impeller.
2. The grit chamber shall be a concrete structure provided by the CONTRACTOR that must have inlet and outlet channels as shown on the drawings.

B. The Drive Head Assembly

1. The drive head will be a composite unit consisting of a heavy duty steel base and cover. The base section will support a nominal 20-inch turntable bearing that has a minimum B-10 life of 20 years. The CONTRACTOR will be responsible for correctly mounting the drive head on the bridge.
2. The drive tube will be rotated at a nominal 15 RPM by a heavy duty spur tooth bull gear wheel securely bolted to the turntable bearing. This bull gear wheel will be driven by a steel drive pinion mounted on the output shaft of the helical gear motor. The pinion and the bull gear will have a service factor of 5.0 or greater at standard operating speeds.
3. The helical gear motor will be directly shaft mounted to the bull gear wheel. Each drive head will have a single 3/4 hp (0.56KW, FLA 1.1), continuous duty electric motor suitable for a 460/3/60 supply and rated for a Class 1 Div.2 environment. As a minimum, the motor will have an IP55 enclosure rating and will conform to NEMA MG-1 requirements.
4. The whole drive head assembly will be suitable for continuous operation.

C. The Rotating Mechanism

1. The drive tube will be 10-inch diameter pipe that will run down the center of the grit chamber. The drive tube will pass through an opening in bull gear wheel and terminate inside the drive head as an open pipe. This will allow passage for the suction pipe assembly detailed in 2.3 B1.
2. The impeller will be attached to the drive tube by means of a two piece collar. The impeller shall have four equally spaced blades fixed to a base plate. As the impeller rotates each blade will pass within 6 inches from the top of the collection hopper. The impeller blades will be set at 5 to 20 degrees to the vertical. The profile of the impeller blades will be designed to maximize grit capture and eject floating solids out of the chamber. The impeller will rotate at a nominal 15 RPM in the direction to the wastewater flow.
3. The rotating mechanism will be manufactured from stainless steel.

2.03 THE GRIT PUMP – TOP MOUNTED

A. General

1. The grit pump shall be supplied on a factory built fabricated steel base suitable for mounting as shown on the contract drawings.

B. The Internal Suction Pipe for Top Mounted Grit Pump

1. The grit pump suction arrangement will consist of a 4-inch diameter suction pipe and a parallel 1.5-inch fluidizing pipe that will run down the inside of the drive tube to within 4 inches off the bottom of the grit collection hopper floor. Both pipes will terminate immediately above the drive head. The manufacturer will supply a 1.0 inch solenoid valve and two manual PVC isolation valves that the CONTRACTOR will install at a convenient place in the fluidizing pipe above the drive head. The CONTRACTOR will bring and connect an air or water supply to the 1.5 inch pipe that will provide agitation of the grit before each pumping cycle.
2. The grit pump suction assembly will be manufactured from stainless steel.

DRAFT

3. The CONTRACTOR will connect the fluidizing pipe to a water supply that will deliver a minimum pressure of 40 psig at the suction point. This will provide a blast of water that will agitate the grit prior to each pumping cycle.
4. The manufacturer will control the solenoid valve and hence the fluidizing cycle through the control panel.
5. The CONTRACTOR will supply the pipe to the flanged connection of the center mounted 4-inch suction pipe that terminates above the drive head to the inlet of the grit pump.
6. The CONTRACTOR shall provide the 4-inch pipe from the outlet of the grit pump to the dewatering screw classifier.
7. The grit pump shall be designed to handle the passage of a 3-inch spherical solid.

C. Grit Pump Design

1. The foot supported pump casing will be designed to retain sufficient liquid for automatic re-priming between pumping cycles. It will allow a horizontal centerline suction and vertical discharge arrangement and incorporate a fill port with safety lock bar and Teflon gasket. A drain hole will be provided for connection to the drain kit. The kit shall contain 10' length of reinforced plastic hose with a female quick connect fitting at one end, and factory installed drain fittings in each pump. Fittings include a stainless steel pipe nipple, stainless steel bushing, stainless steel ball valve and aluminum male quick connect fitting.
2. A separate capped threaded port will be provided if a casing heater is required. If required thermostat control will be provided the main control panel.
3. The cover plate will be supplied with a removable wear liner. It will be sealed to the pump casing by two Buna-N O-rings. The cover plate also has a pressure relief valve to open at 75 PSI fitted with a handle pusher bolt capability.
4. The two vane impeller will be a semi-open, non-clog design that has integral pump-out vanes on the back shroud. The impeller will be threaded on to the pump shaft and secured with a lock screw.
5. The shaft bearings will be anti-friction ball or tapered roller type that will withstand loads associated with normal operation. A mechanical cartridge seal will seal the pump shaft against leakage. This seal will be double floating to prevent misalignment that might arise from vibration, deflection, or general movement.
6. Separate oil filled cavities, vented to the atmosphere will be provided for the shaft seal and bearings. The cavities will be cooled by the pumped liquid. The bearing and seal cavities will have an oil level sight gauge and fill plug with vent. The oil will be prevented from leaking by a three lip seal arrangement.

D. Grit Pump Drive Motor

1. The motor will 5 hp (3.7KW, FLA 6.5), minimum continuous duty electric motor suitable for a 460/3/60 supply and rated for a Class 1 Div.2 environment. As a minimum, the motor will have an IP55 enclosure rating and will conform to NEMA MG-1 requirements.
2. The V-belt transmission will transfer the power from the motor to the pump. The V-belt will have two belts and safety factor of 1.5. The drive transmission will be supplied with removable guards with openings less than ½ an inch.

E. Grit Pump Construction

1. The materials of construction will be as follows:
   a. Casing – Gray Iron No. 30
   b. Suction flap – molded neoprene with steel reinforcement.
   c. Cover plate – Iron 30 with replaceable wear plate
   d. Impeller – Cast ADI (Austempered Ductile Iron) with minimum Brinell hardness of 400.

DRAFT

e. Pump shaft – Alloy steel No. 4150
f. Shaft sleeve – Alloy steel No. 4130
g. Mechanical seal mating faces – Silicon Carbide
h. Replaceable seal plate.

2.04 THE GRIT CLASSIFIER SYSTEM

A. The Grit Cyclone

1. The grit pump will pump the grit mixture directly to a flanged inlet connection situated on the side of the cyclone through a 4-inch delivery pipe, supplied by the CONTRACTOR. The cyclone will be mounted on a support placed over the inlet hopper of the Grit Classifier.
2. The cyclone will be capable of receiving and processing pumped flow up to the maximum capacity per section 1.07.B.2. The excess water will be separated and returned to the main flow via a vortex finder and through a 6-inch flanged outlet connection situated on the top of the cyclone inlet head. The CONTRACTOR will supply and install the return pipe with siphon break. The remaining concentrated grit mixture will be removed and directed via the cone and apex into Grit Classifiers inlet hopper. The apex will have a fixed neoprene rubber liner and include quick release toggle clamps.
3. The cyclone will be designed to remove at least 98% of grit entering the feed inlet that is larger than 100 micron and having a specific gravity of 2.65 or greater.
4. The cyclone will work on the constant centrifugal principle and have no moving parts. Pressure must be maintained above 5 psi.
5. The cyclone casing will be fabricated from carbon steel plate sections. All sections shall be constructed with replaceable neoprene rubber liners.
6. The inlet adapter will include a 1.25” pressure gauge connection and the manufacturer shall supply a pressure gauge assembly complete with protective diaphragm, 0-30 PSI dial.
7. Cyclones must be painted with one coat gray Primer, 2-3 mils nominal dry film thickness. Finish Coat will be one part enamel, color blue, 2-3 mils nominal dry film thickness.

B. The Grit Classifier

1. The partially de-watered grit mixture will fall by gravity from the underside of the cyclone into the main body of the Grit Classifier. The main body is comprised of an inlet hopper and a screw trough that will be manufactured from stainless steel plate.
2. The inlet hopper will have sloping side walls and a minimum pool area of 6 ft^2. The design will guarantee retention of 95% of 100-micron grit particles (silica sand with specific gravity of 2.65) at the maximum inflow without added internal baffle plates.
3. The grit particles will settle on the bottom of the inlet hopper. The excess liquid will spill over an internal weir within the inlet hopper and be returned to the sewage flow. The manufacturer will terminate with a flanged 4-inch pipe connection within 12 inches of the main body of the Grit Classifier.
4. The retained grit particles will be elevated from the inlet hopper by a rotating screw that runs the full length of the Grit Classifier. The full pitch screw will be installed at a nominal 16 degree angle to the horizontal.
5. The screw assembly will move the grit particles from the submerged inlet hopper to the “drying zone” section of the screw trough. The length of the “drying zone” must be no less than 2 feet to ensure adequate de-watering. The dry grit will discharge from an outlet at the end of the screw trough and be directed into the dumpster (supplied by others).

DRAFT

6. The screw assembly will be supported within the main body by a top and bottom bearing arrangement specially designed to avoid premature wear by abrasive grit particles. The bearing arrangement must support the entire length of the screw and maintain a ½-inch nominal clearance between the screw flights and the full length of the Grit Classifier main body. This will allow a permanent grit layer to accumulate and act as a natural wear liner protection.
7. The bottom bearing shall be mounted externally to the main body of the classifier. A 2" full port drain and flush valve will be mounted below the bottom drive shaft bearing on the main body of the classifier.
8. The bottom drive shaft bearing shall be mounted to the main body of the classifier and will consist of a (4) bolt flanged housing that is accessed externally to the hopper.
9. The entire Screw Classifier will be provided complete with the support legs suitable for mounting directly to the concrete floor.
10. The manufacturer shall provide lightweight minimum 16 gauge stainless steel covers that are easily removed for maintenance and totally enclose the Grit Classifier.
11. The motor shall be 1/2 hp (0.37KW, FLA 0.81), continuous duty electric motor suitable for a 460/3/60 supply and rated for a Class 1 Div.2 environment. As a minimum, the motor will have an IP55 enclosure rating and will conform to NEMA MG-1 requirements.

2.05 THE CONTROL PANEL

A. The manufacturer will supply two (2) UL-listed main control panels and fourteen local control stations that shall automatically control the coarse and fine screen equipment and the grit system in this section. Details are included in the screening specification.

B. Sequence of operation and control:
1. The Grit Trap will run continuously.
2. The grit pump can be controlled manually but will normally operate automatically in timed on/off adjustable cycles as selected.
3. In automatic mode the grit pump cycle will be initiated by a 24 hour time clock.
4. The grit agitation cycle will start (0-5 minutes) and then stops.
5. The grit pump and screw classifier will then start immediately (0-10 minutes).
6. The signal is received to stop and the grit pump stops immediately.
7. The Screw Classifier initiates a run on cycle (0-5 minutes) and then stops.
8. End of cycle.

2.06 SURFACE PREPARATION AND PAINTING

A. The majority of stainless steel materials, flanges and piping shall be pickled by means of a four tank system that is in accordance with ASTMs A380. This process is for quality control, removal of heat affected discoloration, surface treatment for corrosive environments and to provide a uniform finish to the stainless steel surfaces. Stainless steel components must be fully submerged in the tanks for complete coverage. Electro-chemical wanding is acceptable on weld finishes that cannot be submerged due to size. Sandblasting, pickling pastes and abrasive cleaners will not be accepted as forms of metal finishing.

Tank 1 – Detergent bath for the removal of soils, greases, oils, and dirt
Tank 2 – Rinsing process to remove detergent and residual soils
Tank 3 – Two part acid solution for the removal of tightly adhere oxide films
Tank 4 – Final rinse process to remove all residual acid

B. All ferrous surfaces (except stainless steel) shall be coated with a pre-primer, primer, and an exterior top coating, or fusion bonded polyester coating suitable for humid/wet environments for superior corrosion protection.

DRAFT

C. Motor(s) and gearbox(s) shall be surface prepared to withstand humid/wet environments for superior corrosion protection.

2.07 SPARE PARTS – The manufacturer will supply the following spare parts:

A. One (1) rotating assembly O-Ring(s)

B. One (1) set of impeller clearance adjustment spacers

C. One (1) set of spare V-belts

2.08 ACCESSORIES **–** The manufacturer will supply the following accessories with the equipment:

A. One (1) 1” explosion proof brass body solenoid valve (GT Fluidizing)

B. Two (2) 1” manual isolation valve (GT Fluidizing)

C. Bagger system on Grit Classifier

D. One (1) lot of anchor bolts.

PART 3 – EXECUTION

3.01 WARRANTY – The Manufacturer of the equipment supplied under this specification shall provide a warranty for a period of twenty-four months commencing on acceptance and/or beneficial occupancy by the OWNER but no later than 90 days from the date of shipment by the Manufacturer. The Manufacturer shall guarantee that the equipment furnished is suitable for the purpose intended and free from defects in design, materials, and workmanship. In the event that the equipment fails to perform as specified the Manufacturer shall, at his option, promptly repair, modify, or replace the defective equipment.

3.02 FACTORY TESTING

A. The grit removal system and all components shall be factory assembled and operationally tested prior to shipment. The equipment shall be shipped fully assembled and shall be capable of being set in place and field erected by the CONTRACTOR with minimal field assembly.

B. During the factory test period the grit removal system shall be adjusted as required assuring proper operation on completion of the field installation. The Manufacturer shall supply a certification of the completion of the factory testing of the assembled system and appurtenances and shall certify as to the equipment being in satisfactory operating condition at time of shipment. The ENGINEER and/or OWNER may, at their own option and expense, witness the factory test.

3.03 DELIVERY AND STORAGE

A. The grit removal system shall be appropriately crated and delivered to protect against damage during shipment.
