#### Training Lab™ Master Instructor Initial Certification Course (3 Days)

Ti Training Corp.'s course of simulation instruction is designed to train selected students in the set-up, function, operation, and maintenance of the Training Lab™ and Training Room™ interactive simulation systems, manufactured by Ti Training Corp. These systems utilize the latest advances video, laser, RF and programming technology to provide an intuitive, easy to maintain training tools. These tools are designed to aid in teaching Public Safety Personnel to effectively and safely perform their duties. This course begins with classroom theory and progresses to "hands on", proficiency based exercises. We at Ti Training Corp recognize that even the most advanced technology is useless in the hands of someone who cannot effectively operate and maintain that technology.

In addition to setup, operation and troubleshooting of the simulator, this course includes an Instructor development block entitled "Effective Simulation Training." Developed in conjunction with an accredited college and backed by scientific research, this portion of the course contains the latest training techniques and methodologies for providing effective training in a simulated environment. Some of the components of this section of the course are listed below for reference:

Need and Justification for Simulation Based Training
Training Area Set Up
Training Objectives
Training Evolution Lesson Planning
Scenario Implementation
Effective Debriefing and Documentation of the Training

Successful completion of the entire course of instruction provided by Ti Training Corp. certifies the attendees as "Master Simulation Instructors." As such they can not only provide training to members of your agency but they are also able to certify others within your agency as "Simulation Instructors."

### Ti "Mile High" Support
