RE: Asbestos Survey for Demolition
Residential Home
20 Gabriel Forest
Georgetown, Texas 78628
SSCI Project No.: 53268
TIPS Contract No. 170602

Mr. Gossett:

Separation Systems Consultants, Inc. (SSCI) respectfully submits this proposal to perform an Asbestos Survey prior to the Demolition of the residential home located at 20 Gabriel Forest in Georgetown, Texas 78628 (Site). The Site is identified on the Williamson Central Appraisal District (WCAD) as property ID no. R039286. SSCI understands that the survey is being performed to identify Asbestos Containing Materials (ACM) prior to the demolition of on-site building. The proposed survey includes identification of ACM within permanent structures located on the Site, including houses, garages, and warehouses, and excludes non-permanent structures such as trailers. At the request of the client, this project will be performed under SSCI's existing The Interlocal Purchasing System (TIPS) contract (contract no. 170602). SSCI's proposed services are provided below.

Asbestos Survey for Demolition

The Asbestos Survey will be conducted in accordance with the Environmental Protection Agency (EPA) National Emissions Standards for Hazardous Air Pollutants (NESHAP) requirements and the Texas Asbestos Health Protection Rules (TAHPR). The sampling will be performed by a Texas Department of State Health Services (TDSHS) licensed Asbestos Inspector under the direction of a TDSHS licensed Individual Asbestos Management Planner.

The objective of the survey is to identify friable and non-friable ACMs in advance of the proposed demolition of the on-site buildings. The findings of the sampling event will be

presented in a survey report. If ACMs are identified, the owner will be able to use the survey report to obtain construction permits and aid the preparation of asbestos abatement specifications.

Suspected ACMs to be sampled include surface materials (sprayed-on or troweled-on materials), thermal insulation materials (pipe insulation, wrapping, etc.) and miscellaneous materials (floor tiles, ceiling tiles, drywall, mastics, etc). Samples will be collected using destructive methods necessary to identify suspected ACMs. SSCI will sample only those materials which are reasonably accessible. If additional materials are discovered during the demolition process, SSCI is not accountable for any costs associated with the sampling of those materials, or project delays associated with their discovery.

SSCI estimates that no more than forty-five (45) samples of suspected ACMs will be collected from the interior and exterior of the on-site buildings for analysis. The samples will be collected following EPA and TAPR protocols. The samples will be analyzed using Polarized Light Microscopy (PLM) by a TDSHS-licensed laboratory and analyzed on a standard 5-business day turnaround. Positive stop analysis will be requested at the laboratory. Positive stop analysis means that once a sample has been identified to contain greater than 1% asbestos, the subsequent samples will not be analyzed. The samples will be transported to the laboratory under chain-of-custody procedures.

Friable samples reported to contain >1% but <5% asbestos can be analyzed using the point-count technique (PCT). However, PCT analysis is not recommended on non-friable ACMs. Non-friable Organically Bound (NOBs) materials such as floor tile, mastic, and roofing may contain asbestos fibers that are tightly bound to the matrix and thus are not easily isolated. Fibers may not be detected by PLM resulting in inconsistent results. NOBs may be analyzed at the client's request by gravimetric reduction or similar method, and then analyzed by PLM. Point-count or NOB analysis will be provided upon request and for an additional fee.

Reporting, Cost, and Schedule

SSCI will provide the services outlined within this proposal for a fixed fee of \$2,335.00. SSCI's invoices are payable upon receipt. SSCI is prepared to begin work upon written notice to proceed. Samples will be analyzed on a standard 5-business day turnaround timeframe. A final report for the Site will be provided within two (2) weeks from receipt of final laboratory results. A breakdown of the costs is provided in the following table:
