ADAM D. BRYANT

Research and Professional Experience

Feb 2018 - Current	Mechanical Engineer III, Thermo Fisher Scientific
Jul 2014 - Feb 2018	Research Engineer V, Center for Electromechanics, The University of Texas at Austin
Sep 2010 - Jul 2014	Research Engineer IV, Center for Electromechanics, The University of Texas at Austin
Mar 2008 - Aug 2010	Research Engineer III, Center for Electromechanics, The University of Texas at Austin
Jan 2005 - Feb 2008	Research Engineer II, Center for Electromechanics, The University of Texas at Austin
2002 - 2005	Graduate Research Assistant, Mechanical Engineering Dept, Texas A&M Univ
2001 - 2002	Undergraduate Research Assistant, Mechanical Engineering Dept, Texas A&M Univ

Skills and Software

- ♦ Mechanical Design
- ♦ System Engineering
- ◆ Drawing Generation with GD&T
- Bill of Material management
- ♦ Procurement / fabrication management
- ♦ Nuclear and high vacuum
- ♦ Design of hydraulic and electrical actuators
- ♦ Metallurgy and Strength of Materials
- ♦ SolidWorks with Product Data Managment (PDM)
- frequency, response spectrum
- ♦ SolidWorks Simulation: static, frequency, thermal, flow
- ♦ Matlab with Simulink

- ♦ Dynamic Analysis Dynamic Sim. (DADS)
- ♦ ADAMS Car with Tracked Vehicle Toolkit
- ◆ ANSYS: static, thermal, dynamic, ◆ Photo / video editing and production
 - ♦ Manual machine operation: Mill, Lathe
 - ♦ Welding: stick, TIG, MIG

Recent Project Experience

Mass Spectrometry – Design of next generation mass spectrometry for HPLC and GC

- Lead mechanical engineer for HPLC hardware upgrade project
 - o Designing new hardware to fit current platform
 - Leading prototype development

Oshkosh – Active Suspension Demonstration 6x6 90,000lb Airport Firefighting and Rescue Vehicle

- Chief simulation and analysis mechanical engineer
 - o Built rigid body dynamic models using DADS and integrated with active suspension Simulink model for cosimulation
 - o Trade study evaluation of system topology and performance requirement specifications
- Power and cooling system lead mechanical engineer
 - o Designed, evaluated, managed construction, and led installation of enclosure, structural system, electrical buss-work, and energy safety strategy for 700 Volt 10 Farad ultracapacitor bank, series connected generator charging system, and actuator cooling system
 - o Retrofit environment with tight space and weight restrictions

Horstman – *Vehicle modeling and simulation, passive and active*

- Chief simulation and analysis mechanical engineer
 - o Dynamic Model Generation & Evaluation for Active Suspension Development, Lead Analyst
 - o Tracked and wheeled vehicles, 5,000 lb to 80,000 lb GVW
 - o Integration of control systems and active components with modeled stock vehicle hardware
 - o Trade study evaluation of system topology and performance driving specifications
 - o Generation of final actuator and power system performance requirements
 - Automated simulation tasks to increase throughput capabilities 2 orders of magnitude over previous manual method

FCS - Future Combat Systems in-arm Magnetorheological fluid actuator

- Program Technical Lead
 - o Designed, prototyped, and tested magnetorheological actuator concepts
 - o 20,000 PSI actuator integrated magnetic flow path element into pressure vessel end-cap
 - o Proof tested key design features to 58,000 PSI in custom in-house built pressure vessel

LAMPS - High temperature selective laser sintering machine

- Unique features
 - o 300C intended operating temperature for PEEK compatibility
 - o Independently rotatable powder-spreading roller
 - Modular, removable build box
- Chief mechanical engineer
 - o Designed custom machine components with input from industry partners and university faculty
 - o Created detailed solid models, performed structural and thermal analysis, generated drawings
 - Orchestrated component purchasing
 - o Supervised machine shop fabrication and component assembly

ITER - Electron Cyclotron Emission Hot Calibration Source

- Program highlights
 - o High energy neutron fluence (14MeV)
 - o Ultra-high vacuum (10-9 torr)
 - o 20 year, 5000 hour design life without ability for maintenance
 - o 700°C silicon carbide emitter, 1000°C molybdenum heater
 - O High vibration / shock loading environment
- Chief mechanical engineer
 - o Designed custom high vacuum, high temperature laboratory prototypes
 - o Supervised fabrication and modification throughout experimental iteration
 - o Integrated experimental results into production prototype design
 - o Evaluated multiple design areas with FEA

Education and Training

- Texas A&M University, College Station, TX, Mechanical Engineering, MS, 2005
- Texas A&M University, College Station, TX, Mechanical Engineering, BS, 2002
