RE: CR 255 Fence Replacement Agreement

Dear Ms. Dyess:

Please allow this letter to set out an agreement between you and Williamson County regarding payment for fence relocation costs in connection with the construction improvements to CR 255. There is an existing platted road widening easement along your property that the County intends to use for the CR 255 construction project. A copy of the plat is shown in "Exhibit A" attached to this agreement.

The County has offered to cover the cost at \$4,463.80 as shown in Exhibit "B" (invoice) for replacement of the fence located within the road widening easement area and will pay the contractor James Daniels Construction, LLC. directly for the materials and labor. If this is acceptable, please execute this agreement where indicated and return it to our office .

Upon receipt of this agreement executed, Williamson County will authorize and process your payment and will return a copy of the fully executed agreement for your records.

Please feel free to contact me at any time if you have any questions or concerns.

Sincerely,

Lisa Dworaczyk

STATE OF TEXAS COUNTY OF WILLAMETTE LEWIS AND MEYER

JUNE 1959.

The observations are based on data for 2002, because of the lack of data for 2001. The first column reports a regression of $\Delta \ln \text{GDP}$ on the 12 factors, and the second column reports a regression of $\Delta \ln \text{GDP}$ on the 12 factors and the first column.

The second stage of the study, analysis of recent change within the wild lands, each province, and the whole of China, was carried out in a third stage. In this stage, the authors examined the spatial pattern of land-use change within the wild lands, and the spatial pattern of land-use change within the whole of China. The authors also examined the spatial pattern of land-use change within the whole of China, and the spatial pattern of land-use change within the whole of China.

Figure 10.499. Histogram of χ^2 values from the bootstrap confidence intervals for the parameter θ of the exponential distribution. The histogram is centered around the true value of θ , which is 1.0. The x-axis is labeled θ and ranges from 0.5 to 1.5. The y-axis is labeled χ^2 and ranges from 0 to 100. The histogram shows a distribution of χ^2 values that is roughly bell-shaped and centered around 1.0.

1. The first part of the paper is a review of the literature on the effects of the 1997 Asian financial crisis on the economies of the Asian countries. It shows that the crisis had a significant negative impact on the economies of the Asian countries, particularly on the economies of the newly industrialized countries (NICs) and the emerging market economies (EMEs). The second part of the paper is a review of the literature on the effects of the 1997 Asian financial crisis on the economies of the Asian countries. It shows that the crisis had a significant negative impact on the economies of the Asian countries, particularly on the economies of the newly industrialized countries (NICs) and the emerging market economies (EMEs).
