TECHNICAL DATA SHEET: **Chip Seal Emulsion "CWE-2"**

Description: CWE-2 is a high performance asphalt emulsion that can be used in lower temperature applications. CWE-2 can be used at 40 degrees and rising (road surface temperature). This lower temperature product allows crews to chip seal roads during the winter months. This product has a tack time of 30 minutes to 1 hour opening a workability window unlike other rapid setting products. Other benefits of this product are a lower likelihood of warm-weather bleeding, a longer lasting road and lower maintenance.

Application/Cost: The rate of application for CWE-2 is .40 - .45 gallons per square yard for a #3 clean rock (usually for first course) and .35 - .38 gallons per square yard for a #4 clean rock (usually used as the second course). If any other size or grade of rock is used, please call P² Emulsions for a proper application rate. This is a proprietary product manufactured exclusively by P² Emulsion Plants, LLC.

=====

Specifications: **Cold Weather Chip Seal Emulsion "CWE-2"**

Test Property		Min	Max
Viscosity	ASTM D244	15	250
Sieve	ASTM D244		0.10%
Miscibility	TEX-521-C	no coagulation	
Color		Brown turns Black	
Residue by Distillation	ASTM D244	65	
Tests on Residue:			
Flash Point	C.O.C. F	400	
Viscosity @ 140 CST		75	250
Viscosity @ 275 CST			10.0
DO NOT CONTAMINATE WITH DIESEL.
