Field-based narcotics ID enables speedy prosecution while saving valuable lab resources

The Controlled Substances Officer (CSO) program within the Phoenix, AZ, Police Department is an innovative, cost-effective operation that enables rapid charging of drug offenders. Officers in the program receive annual training on the field identification of narcotics, and must pass written and hands-on competency tests each year.

Originally, four drugs were designated for field identification: cocaine, cocaine base, marijuana and methamphetamine. CSOs test approximately 7,000 items of drug evidence annually. Supported by a preliminary test, the program achieves a pre-arraignment adjudication rate of about 85 percent.

The success of the program has led to partnership with the National Forensic Science Technology Center, where the CSO program is used as the model for the Center's Field Identification Drug Officer training.

Case Profile and Problem

The Phoenix Police Department Crime Laboratory receives samples every day for in-custody narcotics cases. The lab aims to provide test results within 48 hours in order to charge suspects prior to their release from jail.

Monthly, the lab receives about 120 in-custody cases, 60 percent of which are eligible for CSO field testing. Evidence from these CSO-eligible cases does not require immediate confirmatory testing by the Crime Lab, reducing potential backlogs and freeing up resources for confirmations on pieces of evidence required for trial, as well as other high-priority cases.

With the cost of testing at \$264 per sample, laboratory testing costs for CSO items alone come to about \$19,000 per month (72 x \$264). Officers spend another \$3,000 transporting these drugs to the Crime Lab, bringing the total monthly laboratory cost for CSO items to more than \$22,000.

In 2012, concerned with higher case volumes, rising costs and limited resources, the Maricopa County Attorney's Office asked the Crime Lab to find a solution for the field identification of opiates, especially heroin, which now accounted for one-third of all in-custody cases. As fortune would have it, the Phoenix PD was hosting a demonstration of the Thermo Scientific™ TruNarc™ analyzer about this same time, so the Department invited the Crime Lab to the meeting. A formal validation ensued.

Validation Leads to Pilot Program

As part of a formal validation in May 2012, the Crime Lab tested 126 items of evidence with the TruNarc analyzer. Results were then confirmed by traditional laboratory methods. The study demonstrated that TruNarc was an accurate, effective testing solution for a number of commonly encountered drugs.

Subsequently, the County Attorney's Office accepted the validation and agreed to a pilot test of TruNarc for the field identification of 21 controlled substances on a specific, approved list. (See Table 1, next page)
